MILITARY AFFAIRS.

24TH CONGRESS.]

No. 619

[1ST SESSION.]

ON THE CLAIMS OF THE HEIRS OF GENERAL WILLIAM EATON ON ACCOUNT OF HIS SERVICES ON THE BARBARY COAST AGAINST TRIPOLI IN 1805.

COMMUNICATED TO THE SENATE JANUARY 12, 1836.

Mr. BENTON, from the Committee on Military Affairs, to whom was referred the petition of the heirs of General William Eaton, reported:

That having carefully examined the contents of the petition, and compared its statements with the official correspondence and public documents of the period to which it relates, they find the history of General Eaton's services on the Barbary coast correctly set forth, and refer to that petition for the principal facts necessary to be known to the Senate. From these facts it appears that General Eaton had the merit of planning, organizing, and leading the expedition to Derne, which had the immediate effect of compelling a peace, by which the future degradation of tribute was avoided; a demanded ransom of two hundred thousand dollars reduced to sixty thousand dollars; the four hundred captives, including the crew of the Philadelphia, immediately set at liberty; and a regulation agreed upon by which future American prisoners were to be exchanged as prisoners of war, and not ransomed as captives.* These were the positive advantages immediately accruing to the United States from the heroic enterprise and success of General Eaton, and probably would have been far greater if the peace with the reigning bashaw of Tripoli had not been precipitated by the negotiator without communicating with General Eaton. But there was another advantage which did result, and the value of which is above calculation; it was to show to the Barbary powers that there was another way, besides ransom, to relieve Americans from Tripolitan dungeons—it was to go and cut them out with the sword.

At the moment when the success of Derne produced these great results, and promised still greater, in the immediate march upon Tripoli, the overthrow of the reigning bashaw, and the establishment of solid peace upon our own terms, General Eaton was required to abandon his expedition, and to come on board the United States frigate Constitution. The embarkation of his Christian followers, of Hamet Caramalli and his principal friends, had to be effected by stratagem, at midnight, and with the loss of everything, to escape the rage and vengeance of the deserted Arab troops and of the inhabitants who had been induced to revolt against the reigning bashaw.*

For all these services and losses General Eaton received the pay of consul, or navy agent, at the rate of one hundred dollars a month and sixteen rations per day. The committee are of opinion that he ought to be paid as a general commanding, and compensated for his losses, and report a bill accordingly.

To the honorable Senate and House of Representatives of the United States:

The prayer of your petitioners, heirs and representatives of the late General William Eaton, respectfully represents: That on the 30th of May, 1804, while the United States were at war with Tripoli, General Eaton was appointed navy agent of the United States for the several Barbary regencies, with the view of aiding the operations of the United States squadron against the ruling bashaw of Tripoli, Joseph Caramalli, who had usurped the throne of that kingdom, and was waging war against the United States.

General Eaton had instructions to find Hamet Caramalli, who was the rightful sovereign of Tripoli, was friendly to the United States, and was somewhere in Egypt, and with such land forces as Hamet could raise, together with such as could be spared from the United States ships, to co-operate with the naval force in the Mediterranean in dethroning the usurper and in reinstating the rightful sovereign in his just rights and authority, and thus secure an honorable and permanent peace, without the degrading necessity of paying tribute.

In obedience to his instructions, General Eaton sailed from the United States in June, 1804, and on the 5th of September reached Malta, where he ascertained that Hamet Bashaw was in Upper Egypt,

* American State Papers, folio, vol. ii, p. 715.

among the Mameluke Arabs, whence it was necessary to bring him in order to prosecute the object of his commission. With this view General Eaton left Malta for Cairo on the 4th of December, 1804, landed on the east side of the Nile on the 7th, and entered Cairo on the 8th, and took measures to bring Hamet from among the Mamelukes, which he finally accomplished, with infinite labor and hazard—an arrangement having once been made to hang him and his companions as British spies.

With a party consisting of five hundred in all, (one hundred of whom were Christians of various nations, and the remainder Arabs,) General Eaton resolved to cross the desert of Lybia and attack the city of Derne, one of the most important towns in the regency of Tripoli, and he commenced his march on the 6th of March, 1805; a convention having been made between the United States and Hamet, on the 23d of February, 1805, by the 8th article of which William Eaton was recognized as general and commander-in-chief of the land forces which were to march against the common enemy. After a march of fifty-one days, (twenty-five of which he was without meat, and fifteen without bread,) and nearly six hundred miles through a barren desert, and enduring incredible sufferings, General Eaton arrived with his heterogeneous army before Derne on the 25th of April, and on the 27th, with a force consisting of about sixty Christians and three hundred Arabs, attacked and carried the fortress by storm, and thus became master of one of the most important towns and provinces in the regency of Tripoli, and held possession of it until the 12th of June, when he was compelled to abandon it in consequence of a treaty of peace being made between the United States, by their agent, Tobias Lear, and Joseph Caramalli, the usurping bashaw. News of the treaty reached General Eaton while thousands of Joseph's subjects were flocking to his standard, and when he was cheered with the reasonable prospect of marching to the walls of Tripoli with a force that would enable him speedily to subdue the town, and proudly to sever with the sword the chains of his countrymen who were groaning in Tripolitan dungeons.

Previous to the capture of Derne overtures of peace had repeatedly been made to the bashaw of Tripoli by agents of the United States, who were authorized to offer one hundred and fifty thousand dollars as a *douceur*, and for the ransom of Captain Bainbridge and the officers and crew of the frigate Philadelphia, and other prisoners who were in captivity and slavery in Tripoli. But the overtures were indignantly rejected, and the large sum proposed as a consideration for peace was insultingly pronounced *too slight* an expression of regard for the friendship of the bashaw. But no sooner had the news of the fall of Derne reached him than he hastened to propose terms of peace, and agreed to take *sixty* thousand dollars as a ransom for the two hundred citizens of the United States whom he held in bondage; the other hundred were to be exchanged for an equal number of Tripolitans who were United States prisoners of war. His proposals were embraced; and the master of Derne, while yet flushed with victory, anticipating a signal triumph of our arms, and meditating a final blow which should at once release his captive fellow-citizens without the degrading resort to *purchase*, and forever relieve the United States of the humbling necessity of paying tribute to an inconsiderable power, was compelled to abandon his post precipitately, take refuge on board the United States ships then off Derne, and leave such of his companions in arms as could not escape in the ships' boats to the tender mercies of an incensed and a cruel foe.

Such was the necessity of secrecy and despatch in embarking from a difficult coast—such the exasperation which would animate his Arab soldiers when they should have the cup of hope dashed from their lips—that General Eaton thought only of securing his Christian soldiers and such of his Arab followers as could be intrusted with the secret of the contemplated abandonment of Derne, and considered himself fortunate in escaping with his life, though his horses, camp equipage, and other property were left to the vengeance and cupidity of a despairing and desperate multitude.

In November, 1805, General Eaton returned to the United States; and the State of Massachusetts, in February, 1806, granted him ten thousand acres of land, as a testimony of the high sense entertained of his services by the people of that State. This land was located in the *then* province of Maine, and falling since within the territory in dispute between the United States and Great Britain, the heirs supposed it exempt from taxation, and giving themselves no uneasiness about it, the State of Maine caused it to be taxed, and it was sold for taxes, and the time for redemption passed before the heirs of General Eaton knew that it had been taxed; and thus this property was lost to them. Half of it, however, had been sold by General Eaton himself, at fifty cents per acre.

General Eaton entered the service of his country during the war of the revolution, when only sixteen years of age, and served as a sergeant, and was wounded in the leg; and all the male members of his family (consisting of two sons and two stepsons) have been in the United States service, three of whom died therein, and the fourth and only remaining son yet survives in that service, and is one of your petitioners.

For his services during the Tripolitan war the United States allowed General Eaton at the rate of \$1,200 per annum and the rations of a lieutenant in the navy. When it is considered that, previous to his success at Derne, the United States paid Tripoli annual tribute; that such tribute has not since been paid; that overtures of peace had repeatedly been made without success, though accompanied by offers of large sums of money and of annual tribute; that, after the capture of Derne, the enemy sued for peace; that General Eaton's best energies and best days were freely spent in his country's service, and that his reputation is the only legacy he left his children, it is humbly conceived that the compensation he received was wholly inadequate to the services he rendered; and your petitioners cannot refrain from mentioning the fact that Eugene Leitensdorfer, his adjutant and inspector general, has, since the death of General Eaton, been paid more than he (the commander of the expedition) received. And they humbly pray that they may be allowed, 1st, the pay and emoluments of a general commanding; 2d, compensation for loss of horses, haggage, and camp equipage, assuming it to be what, by our law, an officer of his rank would be entitled to; 3d, for extra pay on being discharged; and 4th, a grant of public land. And, as in duty bound, will ever pray.

N. J. EATON,

For himself and in behalf of
ALMIRA EATON HAYDEN and
CHARLOTTE EATON SPRAGUE.

WASHINGTON CITY, December 8, 1835.

24TH CONGRESS.]

No. 620.

[1ST SESSION.]

ON MAKING PROVISION FOR THE ERECTION OF FORTIFICATIONS PROPOSED BY THE SECRETARY OF WAR FOR THE PROTECTION OF HARBORS ON THE SEACOAST.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 12, 1836.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom has been referred the subject of fortifications, reported:

That the committee, at the suggestion of the Secretary of War, have considered the propriety of making provisions to cover with suitable fortifications some of the important commercial and other harbors of the Union, which, in his opinion, as well as their own, require protection.

Of these some have been examined, and projects, with estimates, submitted, as will be seen by reference to executive documents, No. —, page —, of the present session of Congress. The rest have all been reconnoitred, but owing to circumstances beyond the control of the War Department the perfection of the necessary surveys has been prevented. By reference to the statistics of the country and their geographical positions, they are all of the first importance to the Union, as will very readily be seen, and necessary to the safety of its commercial and military marine.

Those for which projects have not been made are the mouth of Kennebeck river, Portsmouth, Provincetown, New Bedford, debouche of Chesapeake and Delaware canal, Delaware breakwater, Cedar Point, Potomac river, and the Barrancas, Pensacola; and of this class Portsmouth and the Barrancas already possess old works, which it is proposed to repair and enlarge.

The committee, fully impressed with the belief that the best interests of the country require that these fortifications should be commenced, and ought no longer to be delayed, accordingly beg leave to present the accompanying bill, making appropriation for the defence of the harbors therein enumerated.

24TH CONGRESS.]

No. 621.

[1ST SESSION.]

ON AN INCREASE OF THE NUMBER OF OFFICERS AND A REORGANIZATION OF THE CORPS OF TOPOGRAPHICAL ENGINEERS OF THE ARMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 12, 1836.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom was referred the reorganization of the corps of topographical engineers, reported:

That they refer to their report of the last session,* and to the report from the Topographical bureau of this session as a part of the present report, and they also report a bill.

TOPOGRAPHICAL BUREAU, *Washington, November 2, 1835.*

SIR: In obedience to your instructions of the 4th of September last, I have the honor to submit to you a statement, marked A, exhibiting the amount drawn from the Treasury Department and remitted to the disbursing officers under this bureau, from the 1st of October, 1834, to the 31st of September, 1835, inclusive, and the amount of accounts rendered.

The topographical and civil engineers have been employed upon, and the funds appropriated for, surveys for the year 1835 have been applied to the following objects:

1. An examination of the route for a railroad from Memphis, in Tennessee, to the Atlantic ocean.
2. A report and estimate of the cost of the construction of the Portage summit of the Ohio canal, that is, the canal from Pittsburg to Lake Erie.
3. Survey with a view to the improvement of the Cumberland river from Nashville, Tennessee, to the head of navigation in Kentucky.
4. The report of the geological investigations made of the public lands, and of the Territory of Arkansas.

5. A survey of the harbor of St. Joseph's, in the Territory of Michigan.

6. A survey of the harbor at the mouth of Trail creek.

These surveys and reports, from one to six inclusive, have been completed since the last annual report, and were reported to Congress during its last session.

7. A survey of the Delaware river from Newcastle to Port Penn, and a survey of Pea Patch island.

These surveys embrace an exposition of all the facts necessary in the digesting of a system of the defences of that pass in the river, as well as all those necessary to its navigation. The duty is completed and the maps delivered to the bureau.

8. A survey of the Brandywine shoal. The object of this survey is to determine the best position on the shoal for the construction of a light-house. It is a highly important point in the navigation of the

*For this report, dated December 16, 1834, see antecedent No. 588 of this class.

Delaware bay, but its exposed situation and the composition of the shoal, make it one also of extreme difficulty in the establishing of a foundation which will endure and sustain the superstructure for the light.

The appropriation for this object was made in June, 1834, and in the following words:

"For rebuilding the light-house on Brandywine shoals in the bay of Delaware, thirty thousand dollars: *Provided, however,* That, before the commencement of the work, a resurvey, plan and estimate shall be made, and that then it shall be in the discretion of the proper department to enter upon the rebuilding of the said light-house, or to report such survey, plan and estimate to Congress, as shall be considered best for the public interests."

The survey was commenced as soon as the necessary arrangements could be made, and it was ascertained in a short time that the appropriation was entirely inadequate to the object, which, as a measure preliminary to the building of the light-house, required that an artificial foundation should be established upon a sandy shoal in the mouth of a wide bay, and exposed to the violence of the waves of the Atlantic.

Under these circumstances the alternative presented by the law was adopted, and the survey, plan and estimate were presented to Congress during its last session.

As it was not acted upon, additional investigations have been since made, and their result is the foundation of an item in the estimate from this office for the "rebuilding of the light-house on the Brandywine shoals."

The report, estimate and plan, in all their details, are daily expected from the engineer who had this survey in charge, which, as soon as received, will be laid before you.

The amount appropriated in the act of June 30, 1834, was \$30,000, of which \$1,550 have been drawn out of the treasury for the necessary preliminary surveys. The total amount of the estimate of the engineer is \$123,985 93, leaving for the object a deficiency of \$95,535 93, which amount constitutes an item in the estimates of this bureau.

9. In the drawings and reports of various parts of canal routes across the States of Maine, New Hampshire, and Vermont, in order to complete a series of surveys for the same objects which had been partially attended to some years since. All the field-work of these surveys is completed; the drawings and reports only have to be made; these, it is expected, will be delivered to the bureau during the ensuing winter.

The delay which this work has experienced has been an unavoidable result from the small number of the corps, which forced the bureau to extend the attention of the officer superintending this to other duty.

10. The drawings and reports of the military defences of parts of the coasts of North and South Carolina. The system of army details, which removes our assistants before the completion of the particular duty upon which they have been engaged, together with a diversion of the attention of the superintending officer to other surveys, has occasioned the delays which these works have experienced. There is, however, every reason to believe that they will be completed during the ensuing winter.

11. A survey of a canal route from Cape Fear river, through the Waccamaw lake, to the Waccamaw river, North Carolina. The returns of this are daily expected.

12. An examination of the construction of the canal around the Muscle shoals of the Tennessee river.

13. An examination of the route for a railroad from Portland, in the State of Maine, to Quebec, in Canada.

14. The survey of a route for a railroad from the Connecticut river, to intersect the Concord railroad, in New Hampshire.

15. The survey of a route for a railroad from Boston, in Massachusetts, to Whitehall, in New York.

16. A survey of the harbor of East Thomaston, in Maine.

No. 16 is completed, and the results are expected at the bureau early during the ensuing winter. Numbers 13, 14, and 15 are not in as great a state of forwardness. The extensive views embraced by these three, and the lateness of the season when the attention of the officer who has them in charge was called to 14 and 15, render it highly probable that no definite report will be made by him until during the course of the next year.

17. A survey of the Christiana river, from Wilmington to the Delaware, with a view to improve the entrance of the Christiana. This is completed.

18. A survey of Provincetown harbor and its vicinity. The survey of this position, so important in the military defences of the coast east of Cape Cod, and as a point of shelter for our commerce from a pursuing enemy, or from storms, is now completed. All the field-work is done, and the drawings and reports will also be during the present year.

19. The survey of a route for a ship canal around the falls of Niagara, effecting a junction with the two lakes, Erie and Ontario. The field-work of this duty is completed; the drawings and reports are in progress, and will be delivered to the bureau during the ensuing winter.

20. A survey of the channel between the North and South Hero islands, on Lake Champlain. This duty is also so far completed that the drawings and reports will be delivered to the bureau during the present year.

21. A survey of a route for a road from the Alabama line, by Marianna, to the town of Apalachicola, in Florida. This duty was completed, but, before entering upon the opening of the road as required by the law, it was thought advisable to examine a different route, which would apparently much shorten the distance. This examination is now making.

22. A resurvey of the route of the national road between Springfield, Ohio, and Richmond, Indiana; also from Springfield, by the way of Dayton and Eaton, to Richmond. This duty has been completed, and the drawings and report delivered to the bureau. These last have also, in conformity with the law, been submitted to the President, who has affixed his approbation to the location of the direct route.

23. A survey of the Maumee river, from its mouth to Maumee city, completed, and the drawings received.

24. A survey of the route for a railroad from Detroit to Pontiac.

25. Also the route of a railroad from Detroit to the St. Joseph's river.

These surveys have been completed and the returns duly made.

26. A survey of the route of a road from Chicago to Fort Howard, on Green bay.

27. A survey of the mouth of Gallean river.

28. A survey of the mouth of Black river.

29. A survey of the mouth of Milwaukie river.

These four (26, 27, 28, and 29,) are now in progress, and it is expected will be completed this fall and the ensuing winter.

30. A survey of a railroad from Memphis, Tennessee, to such point on the lines of the States of Virginia and Tennessee as may be best adapted, in the opinion of the engineer, to facilitate the continuation of the road to the Chesapeake. The survey is now in progress.

31. A survey of a route for a road from the Maumee river, through the northern counties of Indiana, to or near the rapids of the Illinois river, and thence to the Mississippi river at some point between Rock Island and Quincy. The field-work of this survey is completed, and the drawings and reports are expected to be delivered to the bureau during the course of the present year.

32. The survey of the following routes for roads in Indiana:

Lawrenceburg and Indianapolis railroad.

Madison and Lafayette railroad.

Evansville and Terre Haute railroad.

Columbus and Jeffersonville railroad.

New Albany and Vincennes turnpike road.

New Albany and Crawfordsville turnpike road.

33. In superintending the construction of the aqueduct over the Potomac at Georgetown. This may truly be considered one of the most interesting and one of the most difficult of civil constructions ever attempted in our country. The object of the work is to conduct the Chesapeake and Ohio canal over the river Potomac, at the upper end of Georgetown, and thereby to furnish to its trade a termination in the fine harbor of deep water at Alexandria.

The length of the aqueduct is 1,700 feet, (including the causeways,) sustained by two abutments and six piers, at a height of 29 feet above the common high tides of the river. These abutments and piers are all to rest upon the natural rock foundation which is found throughout the length of the aqueduct, at a depth nearly uniform of 30 feet below common high water, making the total height of each pier 59 feet.

The successful establishment of a foundation at such a depth, in water and mud, is among the most difficult problems in the practice of the engineer, and the experience of the world has furnished so few instances of similar attempts, that he is comparatively without those guides which are in other instances so easily obtained.

But the persevering efforts of science and mechanical skill supplied the deficiency of information from precedents, and overcoming all obstacles, triumphed in the successful establishment and completion of one pier during the course of the last season, and in a successful issue to the greatest difficulties in the establishment of a second, and of one of the abutments.

This work is the result of the enterprise of an incorporated company; but as the United States furnished a proportion of the funds for its aid, the company considered it advisable, and applied to have its expenditure placed under the direction of an officer of the corps of topographical engineers, that any desired investigation in reference to the faithful and judicious application of the means allowed by the United States could be made independently of their control, and that they might, also, in so difficult and rather unprecedented an undertaking, avail themselves of the presumed science of its officers.

It affords me much satisfaction to add that a frequent inspection, as well of the work as of the expenditures, has resulted in a conviction of the great skill and judgment of the engineer, and of the faithful application of the funds. The books exhibit the most minute detail of expenditure for every object, and his mechanical arrangements have been justly admired by all who have visited the work. The engineer is prepared, whenever it shall be called for, to present the most satisfactory statements, descriptions, reports, and drawings, in reference to the whole.

34. In the survey of a railroad from Pensacola, in Florida, to Columbus, Georgia. Although Pensacola is one of the finest harbors on the Gulf of Mexico, and, in fact, of the United States; and although it is also, at present, an established navy yard and navy depot, yet, as the land in its vicinity is extremely poor, and there is no river leading from its harbor to the interior, its commercial advantages are but partially felt, and the population necessary to its defence exposed to hazardous and difficult, or tedious and dilatory, methods of access. The remedy for these evils is in improving all means of communicating with the richer soil and denser population of the interior, and the road now being surveyed will eminently accomplish these objects. It will open to the products of the interior a cheap and rapid means of access to an uncommonly fine harbor, and will enable that harbor to command for its defence the strength of the interior in the shortest possible time. It possesses, therefore, a highly national aspect, deserving of the patronage which has been extended towards it by the general government, in permitting its officers to superintend the work.

35. In a continuation of the mineralogical and geological investigations of the public lands, the territories, and the Indian country. The highly interesting results from the geological investigations of the last year, under the same officer who has now those of this year in charge, are the best earnest of the manner in which these will be performed.

His instructions were that, "it being desirable to have some knowledge of the mineral structure of the Coteau de Prairie, an elevated ridge which separates the Missouri from the St. Peters, a tributary of the Mississippi, you are directed to proceed to that vicinity, and to make such investigations as the season and the nature of your opportunities will admit. It is desirable, also, that you should take Green Bay in your way, with a view to the examination of the mineral structure in the vicinity of the Wisconsin river." Early history had mentioned the "Coteau de Prairie" as a locality rich in its deposit of copper in its various forms. Records which are presumed to be deserving of confidence state that many tons of this mineral had been taken at an early period of our history to France, and there smelted to advantage. There is no doubt that it exists in that region, but in what quantities and in what particular places have yet to be ascertained.

From the known intelligence, great zeal, and untiring perseverance of Mr. Featherstonhaugh, no doubt is entertained that all that can be will be done in accomplishing the discovery; but he has to contend with the difficulties of an unknown and wilderness country, and in a climate affected early in the season with the inclement weather of winter. Should his report, therefore, not be as much in detail as is desirable, (of which there is some reason to fear,) there is no doubt that every accessible general indication will be ascertained, sufficient to form the most encouraging basis, and the best justification for future and more detailed investigations.

The great interest which is felt by the country in reference to this particular duty, exhibited by an unparalleled demand for the report of the proceedings of last year, is no equivocal proof of the value

which is placed upon it, and the advantages which are anticipated to result from it. Such investigations are beyond the resources of individuals, and the States limit those which they authorize to the extent of their territories. If the United States does not, therefore, complete the chain of knowledge by a continuation of its efforts in reference to the public lands and the territories, an extensive region, rich with the most valuable ores, will continue to remain unknown. Under these impressions, I have hazarded a small item in the estimate from this office, to enable it the more satisfactorily to complete a duty which has been so fortunately begun.

It may probably be observed, that in the foregoing statement of surveys there are many enumerated which were not ordered by a resolution of either House of Congress, or by any law.

The rules which have been prescribed for this office in these matters are as follows: That, 1st, surveys ordered by law and for which there are generally specific appropriations should be attended to.

2d. Surveys ordered by resolutions of Congress. The expenses of these are paid out of the annual appropriation for surveys, including the pay of the civil engineers, which is taken out of the same appropriation.

3d. Surveys of a national or highly interesting commercial character, applied for by States or incorporated companies. In these cases such officers as can be spared (with their instruments) are allowed to be assigned. All other expenses, including those for additional engineers, or additional instruments, are supplied by the parties interested in the survey, the United States being subjected to no charge on these accounts; or, in other words, confining the aid from the United States to the mere loan of such engineers, and of such instruments, as can be conveniently spared.

In the execution of the foregoing duties the whole force of this bureau, in military as well as civil engineers, has been employed. Its military engineers consist of the corps of topographical engineers, and such lieutenants of the army as are detailed for its duties; its civil engineers, of those authorized to be employed under the authority of the law of the 30th April, 1824.

The first embraces, of the corps of topographical engineers.....	10 officers.
Of lieutenants now detailed for this duty from the army.....	26 "
The second, being citizens without military rank, employed under the act of the 30th April, 1824.....	13
	<hr/>
Making the whole force of engineers employed under this bureau equal to.....	49
	<hr/> <hr/>

The evils of these military details arise from,

1st. The shortness of the time in which an officer, being placed on the duty, has to acquire that practical knowledge in the use of instruments, and the habit of applying his scientific knowledge to results in practice, without which he can be of no value.

2d. The apathy which oppresses the temporary detail, from the consciousness that if he labors it is to acquire that which, as soon as it is obtained, he will, in all probability, be removed from the only sphere of action in which it can be applied.

3d. When the temporary detail is endeavoring partially to acquire a knowledge of the duties of the corps to which he is attached, he must, from the very nature of things, lose, by its disuse, much of the knowledge of his proper arm of service, and, when he returns to it, be consequently a less valuable officer than when he left.

4th. The corps is, under this system, continually exposed, in the execution of its duties, to those consequences which must flow from the services of unqualified and consequently incompetent assistants, and is forced from this cause to increase its demands upon the army, that it may compensate partially by numbers for deficiencies in experience. These demands, if complied with, but increase the general evil before alluded to; they cannot be complied with but partially, as the line has duties for which these subordinates were intended, and which it would not do to neglect. We are placed thereby in a continued series of unpleasant bickerings with the line. The corps endeavor to retain its experienced assistants as long as possible, because they are essential to the well-doing of its duties. The line regrets these details, however temporary; it seeks to reduce them to short periodical tours, is continually endeavoring to get back the older assistants. It is a system, therefore, in which the permanent interests of the line and of the corps are diametrically opposed, and which, as might well be supposed, by the occasional success of either, has left one or the other exposed to the reproach of negligence or favoritism.

There is no one more strongly impressed than myself with the efforts which the line now makes in order to aid us in our duties, and that it cannot do more without a sacrifice of its own; but, at the same time, I must acknowledge that, after many years of experience, I am satisfied that the duties of the topographical engineers can only be carried to that extent of perfection and intelligence which the country has a right to expect by a system which shall permanently attach its assistants to the corps.

The effect of these details from the army for the duties of this corps may be expressed in a few words. If temporary and periodical, it is a sacrifice of the duties of the corps; if permanent, while they yet retain their rank and its privileges in the line, it is, to the extent of the number detailed, a sacrifice of the interests and duties of the line.

The civil engineers employed under the act of April 30, 1824, are officers without military commissions or military rank. The law recognizes no distinction of grade or of title between them, although the custom of service has divided them into the two classes of civil engineers and assistant civil engineers. The rules and articles of war, and the army regulations, cannot be extended over them. There is, therefore, an absence of legal authority in relation to their control, and also of defined right in relation to their privileges, from which it will be seen that no subordination or authority can well be established in such a service. No serious evils have yet resulted from it, owing, however, more to the correct moral bearing of the gentlemen who hold these appointments, than to any well-defined power over them. Among the greatest inconveniences of this arrangement is the difficulty of associating the two kinds of engineers on the same duty. The military engineer is unwilling to be placed under the civil, and probably cannot be by law, or in a way that would involve any legal responsibility. The civil engineer is equally unwilling to be viewed as subject only to be commanded, without the hope of ever enjoying the right of commanding in turn. It is a moral prostration of his branch of service to another, without the prospect of ever being relieved from it, and adapted to engender painful and unpleasant feelings, as well as being in itself unjust.

Another evil is, that this mixed arrangement of military and civil appointments is destructive of a

proper *esprit du corps*, and of that united emulation which exerts the whole mass of mind to elevate the duties of that branch to which it belongs.

With a service so constituted, and beset with inconveniences so detrimental to its duties, this bureau has been struggling for years, sparing no efforts, however, to do the best which could be done with the means placed at its disposal.

The means have already been represented generally. I shall now speak of them numerically and economically, with a view of submitting a plan which will, if adopted, remedy all the evils, and without additional cost.

The military engineers consist, 1st, of the corps of topographical engineers, ten in number. Of these, one receives the pay of a lieutenant colonel, five have the pay of majors, and four the pay of captains. The annual compensation of the whole is \$14,496.

2d. Of the temporary details from the army. These vary from 25 to 30. There are now 26 on this service. The annual compensation of these is \$23,344.

The civil engineers consist of those employed under the act of the 30th April, 1824. Taking the average of the last three years, their number is 13, and their annual compensation is \$16,700.

The entire annual cost of the whole number of officers on topographical duty is therefore \$43,540.

In the above statement it will be perceived that the officers detailed from the army are included in the sum of the total cost. All these details receive their pay out of the general appropriation for the army, and it does not therefore appear in any estimate for the corps of topographical engineers or for surveys; yet, as this number is always employed on topographical duty, their pay is justly chargeable to that branch of service, and is therefore included in the sum of its annual cost.

The compensation for the civil engineers is taken from the customary annual appropriation for surveys.

From the foregoing, it will therefore be perceived that the present force and rank of officers for topographical duty consists, in its present mixed and complicated organization, of one lieutenant colonel commanding, five majors, four captains, twenty-six lieutenants of artillery and infantry, and thirteen civil engineers.

Now, the remedy proposed is to incorporate the whole or a part in one regular corps, with the usual grades of military rank, and to subject the whole to the rules and articles of war.

The subject has been treated with much ability by the chairman of the Military Committee, in a report to Congress during the last session. Allow me respectfully to refer you to that report for some views which are not incorporated in this.

But taking the opinion of the distinguished chairman of that committee as the best basis for an improved organization, it results in the recommendation of a corps to consist of one colonel, one lieutenant colonel, four majors, ten captains, ten first lieutenants, ten second lieutenants; in all, thirty-six engineers, of which the total annual cost will be \$40,454. Our present imperfect organization gives forty-nine engineers, of which the total annual cost is \$43,540; making an annual difference in favor of the organization of \$3,086.

The plan submitted presents two questions which require explanation, one referring to the numbers, the other to the cost.

The lesser numbers of the proposed plan are considered capable of doing more duty than the greater numbers of the existing plan, because, 1st, of their better organization; 2d, and of always controlling the experience acquired, which, accumulating to the same individuals, gives that facility and aptness of execution, and readiness in the application of theoretical knowledge, which will enable the lesser numbers in the one case to do more and better work than the greater numbers in the other. It is, in fact, but an application of the simple axiom, that he who is acquainted with the theory and practice of any profession can do more of it, and better, than any number of those who have not this knowledge.

3d. The number is also based upon the consideration that these were now, and would for many years be, fully adequate to the wants of the general government for topographical duties.

In reference to the cost two considerations have been made; one, to be found in the report of the Military Committee of the last session, which reduced the army proportionally to the number transferred from it to the corps. This, of course, would result in a positive reduction of the army estimates, or a transfer of a portion to the estimates of the corps, and would make a positive saving of the amount previously stated; but the army would probably suffer inconvenience from the reduction. It is divided into so many small posts, and extended over so vast a space of country, that it could not feel less the inconveniences of the reduction than it does those of the details. These are already oppressive to its duties. Although the reduction of the army estimate would be thereby a proportional reduction of army expenditure, the reduction would be at the expense of the organization of the army and of its duties, and might, therefore, although a saving, not be considered a true economy.

The other, to leave the army as it is, and organize the corps as it should be. Under this consideration the total amount of present appropriations absorbed by the proposed organization would be, for the corps of topographical and civil engineers, \$31,200; but as the total cost of the proposed corps is stated to be \$40,454, it would leave an annual deficiency over our present appropriations of \$8,254.

Under either view, the authority to employ civil engineers under the act of the 30th April, 1824, is to be repealed; of course, the amount of their annual compensations ceases with the passing of the law for the new organization.

But as a plan which leaves the army in its present form is, under all circumstances, the better, that for the organization of the corps, which will be presently submitted to you, will be made in accordance to it.

The plan submitted last year, while it authorized a complete organization, embraced a feature of periodical promotions, until the organization should be complete. Such a course is not unfrequent in the extension of scientific corps when the materials for supplying places have to be formed. But when, as in our circumstances, we have abundant officers, properly educated, experienced in its duties, and who, in fact, are now performing them, such a course cannot be advisable, but on the supposition that a full organization is not now wanted. As we already are obliged to employ more than the organization contemplated, this supposition cannot be well sustained; and believing, as I do, the whole number are wanted, I have considered it the better course at once to submit a correct plan to your consideration.

It has been previously observed that the present corps consists of one lieutenant colonel commanding, five majors, four captains; to which are attached twenty-six lieutenants of artillery and infantry, thirteen civil engineers.

The plan proposed adds a colonel to the corps, takes away one major, and from the lieutenants and the civil engineers takes six captains, ten first and ten second lieutenants.

I have hitherto confined myself to an exposition of the kind of organization which now exists for topographical duties, its defects and inconveniences. Although many of the advantages of the modifications proposed are to be inferred from these, yet it may be well to state a few of the important public services which this corps has to perform, but to which, from its present defective organization, its attention has been applied but imperfectly.

Heretofore its duties have been principally directed to surveys for the defences of the posts and harbors on the Atlantic, including the water approaches to the positions to be fortified.

These surveys generally embrace some extent of coast as well as of inlets, and from the facts which have to be collected constitute also very valuable but rather limited charts for navigation, but the land approaches to these positions remain yet to be surveyed.

Surveys of our harbors and of our rivers on the coast, with views to their improvement, and also to obtain more accurate charts of them than now exist.—Although much has been done under this head, yet the greater part of our coast, and particularly from the Delaware, south, has yet to be attended to. These surveys form valuable details to be introduced in the great survey of the coast now being made, and which, with a proper understanding with the principal of that survey, may be introduced into his charts with great facility.

Surveys of the harbors and shores of our western lakes.—It is only some of the principal harbors of these lakes to which the attention of the corps has yet been directed; those affecting the present lake navigation and requiring immediate improvement. The connecting links between these harbors, the inlets of a secondary class, and the rivers which empty into them, have hitherto received but little attention. Our imperfect organization and limited numbers were embarrassments to the activity and extent of our operations which could not be overcome.

Surveys for common roads, railroads and canals.—Although these may be considered as purely of a civil character, yet a finer school of practice than they furnish for the topographical engineer cannot well be imagined. He obtains on these duties expertness in the use of instruments, the habit of investigating the resources of a country, commercially, morally, and physically; its supplies in provisions, timber, metals, and means of construction; its population, and the best means by which it can be commanded in cases of emergency; its military aspect, hilly, level, or mountainous, and the various roads which intersect the path of his survey. While he is, therefore, apparently engaged on an object ostensibly of mere profit to its undertakers, he is perfecting himself in the practice of his profession, acquiring exact and persevering habits of investigation, improving his *coup d'œil*, and gathering the most valuable information in relation to the capabilities of self-defence of the locality of the survey, and its ability to aid in the defence of other parts of the country.

Surveys of the inland frontiers of our Atlantic and western States.—Singular as may be the acknowledgment, yet it is nevertheless the fact, that this highly important service has hitherto received but little attention. It embraces not merely a geographical knowledge of the frontiers named, but accurate topographical surveys of the vicinities of all our western posts; of the best routes for roads of communication between the posts and with the interior for supplies and assistance. We have hitherto been able to direct but very feeble efforts to these important objects. The fault is not that of this bureau, but of the inadequate means placed at its disposal. Although there is an annual appropriation of twenty-five and sometimes thirty thousand dollars for surveys, yet, as considerably more than half of this is required for the salaries of the civil engineers, it leaves but a small portion for the expenses of surveys. This small portion is generally absorbed in the execution of those surveys directed to be made by resolutions of Congress, and of some parts of our seacoast; the latter being a continuation of the surveys directed some years since in reference to a regular digested system of seacoast defence. We are therefore left without the means of bestowing our efforts on the western frontier, and the position of appearing to neglect so important a duty, in which this bureau has been placed, is shown by the foregoing remarks to have been beyond its power to obviate.

Should the organization proposed be adopted it will leave the whole appropriation for surveys free from the deductions for the salaries now paid out of it, and the bureau may then place a brigade of officers on the western frontiers, to commence the execution of those important duties. Should it not be adopted, it will be seen that the bureau will be as unable as heretofore to attend to them, unless a separate appropriation is granted, and which is asked, in order to meet the contingencies of the case in the estimate now submitted.

The survey of the coast.—It would be superfluous to speak of the necessity of this survey, of its immense importance to our commerce and navy, and of its extensive influence over any system of defence for the Atlantic frontier.

Of the methods by which alone such a duty ever has been executed by any nation, or ever can be correctly, the books are full; and from the same sources we may also draw the best conclusions of the time, the means, and qualifications which such a labor requires. Applications have been made to this bureau for aid in officers, but it has been unable to furnish but one. It was a cause of serious regret, but yet beyond the power of this bureau to remedy, and only in the hands of Congress by legislative action.

We have but one school in our country which may be considered as thoroughly mathematical in its course, the Military School at West Point; and it is to this school only to which we can look for individuals sufficiently qualified to enter upon the duties of this survey, and justly aspire to a knowledge of its highest practical operations. I do not mean by this to say that there may not be citizens who, of their own taste and own force of mind, are not equally qualified; but these are only rare exceptions to a rule, the correctness of which will stand the proof of a comparison of the course of mathematical instruction and habits of study pursued at West Point with those of any other school or college in our country.

Now, then, if the desire is that this great work should not cease with the life of the present highly informed gentleman who superintends it, and that, in course of time, we should have numbers capable of conducting it, and of executing any of its parts, we must give them the opportunity of acquiring the necessary practical knowledge by placing them upon it. This can be done only by allowing to the corps within whose proper province such duties naturally fall the necessary numbers. We can then place upon this duty a brigade of officers, from whose efforts may be justly anticipated the results of adequate education, facilities in practice, and of order and subordination of conduct.

The superintendence of constructions purely civil.—There is no corps in our country to which the duties

of a corps of *ponts et chaussées*, so properly belong as to the topographical engineers. It is so intimated in the report of the Military Committee of the last year; and it seems to me an unequivocal dictate of common sense to say that the corps which is employed in making the survey, digesting the plan, and forming the estimate of a work, is, from the very nature of the case, more fully imbued than any other can be with the considerations and unity of view which its construction involves, and therefore better qualified to superintend it. The subject does not seem to admit of much reasoning, but stands, like an axiom, upon the clear truth in its annunciation.

Having now exposed generally to your consideration the defects of the present organization of this bureau, its evils to the service, the remedy, and the general duties which the corps will be called upon to execute, I have, in conclusion, appended to this report the form of a short bill, which appears to me best adapted to effect the desired organization.

Respectfully submitted.

JOHN J. ABERT, *Lieutenant Colonel Topographical Engineers.*

A.

Statement showing the amount of money drawn from the treasury and remitted to the officers and agents disbursing under the Topographical bureau from the 1st of October, 1834, to the 30th of September, 1835, inclusive, and the amount of accounts rendered by each within the same period.

A BILL for the better organization of the corps of topographical engineers.

SECTION 1. *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the corps of topographical engineers shall be organized and increased by regular promotions in the same, so that the said corps shall consist of one colonel, one lieutenant colonel, four majors, ten captains, ten first lieutenants, and ten second lieutenants.

SEC. 2 *And be it further enacted,* That vacancies created by said organization, over and above those which can be filled by the present corps, shall be taken from the army, and from such as it may be deemed advisable of the civil engineers employed under the act of the 30th of April, 1824, and that the pay and emoluments to the officers of said corps shall be the same as are allowed to officers of similar rank in the regiment of dragoons.

SEC. 3. *And be it further enacted,* That the authority to employ civil engineers in the act of the 30th of April, 1824, and the authority by law for the employment of the present corps of topographical engineers be, and the same are hereby, repealed, after the passage of this act, and that all letters and packages on public business to and from the chief of the corps now authorized be free from postage.

SEC. 4. *And be it further enacted,* That the officers of said corps shall be subject to the rules and articles of war, and to such regulations in relation to their duties as the President may think proper to adopt.

24TH CONGRESS.]

No. 622.

[1st Session.]

ON CLAIM OF AN INSPECTOR GENERAL OF THE ARMY FOR AN ALLOWANCE OF DOUBLE RATIONS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 13, 1836.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom was referred the petition of Brigadier General John E. Wool, inspector general of the United States army, reported:

By the fifth section of the act of the 16th of March, 1802, and by the fourth section of the act of the 3d of March, 1815, every officer of the army is entitled to a certain number of rations daily, "and to the commanding officers of each separate post such additional number of rations as the President of the United States shall from time to time direct, having respect to the special circumstances of each post."

By an exposition given by the War Department to this law, the quartermaster general, the commissary general of subsistence, the chief engineer, and the colonel of ordnance were considered as coming within its provisions; and accordingly, by an order of the War Department dated the 27th July, 1821, these officers were allowed double rations. At a subsequent period the adjutant general was deemed to come within the rule, as extended to others, and by an order dated the 31st of March, 1826, he was allowed double rations. Although denied to Inspector General Wool, the War Department, by an order dated the 25th February, 1829, allowed Major Nourse, not then in the army, but chief clerk of the War Department, to receive, retrospectively, double rations for the period that he had performed the duties of adjutant general, between the 8th of May, 1822, and the 20th of March, 1825. Under this order other officers of the staff were allowed to receive, retrospectively, double rations.

Such was the practical construction by the War Department of the law of the 16th of March, 1802, and sanctioned by appropriations, for eleven years, by Congress; when the present Secretary of War, believing that Brigadier General Wool came within the rule which extended the benefits of that law to others, at the same time considering it but an act of justice to place him in the same situation, allowed him double rations from the 3d March, 1833.

General Wool is known as a distinguished and gallant officer of the late war, and one who was severely wounded in the service of his country; and he has for nearly twenty years performed the arduous and important duties of inspector general. These have been as diversified as they were extensive, embracing the inspection of the military posts on the lakes, the Mississippi, Missouri, Arkansas, and Red rivers; the military posts on the seaboard, as well as the arsenals, ordnance, and ordnance stores, and armories of the United States. In the performance of these services, it would appear that he was subjected to great expense and severe hardships. Under these circumstances, together with his unremitting attention to every duty required of him—believing, at the same time, that the principles under which the allowance of double rations was made by the War Department to the quartermaster general, commissary general of subsistence, chief engineer, and colonel of ordnance, ought to have been extended to General Wool at the time it was to them—your committee are of opinion that it would be but an act of justice to place him, in regard to rations, on equality with those officers; and accordingly, with the accompanying documents, A and B, report a bill for that purpose.

A.

WAR DEPARTMENT, *January 4, 1836.*

SIR: I have the honor to return the petition of General Wool, which you transmitted to me.

A practical exposition was long since given by this department to the law allowing additional rations to the commanding officers of posts, which brought the heads of bureaux and of departments stationed at this place within its provisions. Believing that General Wool came within the rule which extended the benefits of that law to others, I considered it an act of justice to place him in the same situation, and therefore allowed him double rations from the time stated in his petition. He did not ask this department to make any retroactive allowance; and if he had, the claim could not have been granted, because the President had previously directed that no allowance of that nature should, under any circumstances, be made.

The case of Major Nourse is correctly stated by General Wool, as appears from the enclosed communication from the Second Auditor.

Considering this place as the headquarters of General Wool, it appears to me that the same principles under which this allowance was made to the other heads of the staff departments would justify the extension to him of the relief which he asks from Congress. His duties are arduous and important, and the expenses to which he is liable are probably greater than those of any other officer of the army, with the exception of his colleague, Colonel Croghan.

Very respectfully, your most obedient servant,

LEW. CASS.

Hon. AARON WARD, *Military Committee, House of Representatives.*

B.

SECOND AUDITOR'S OFFICE, *January 4, 1836.*

On the 25th day of February, 1829, a payment was made, by order of the Secretary of War, P. B. Porter, to Charles J. Nourse, for double rations from the 8th of May, 1822, to the 20th of March, 1825, while acting as adjutant general.

WM. B. LEWIS.

[1ST SESSION.]

RECOMMENDATION FOR AN INCREASE OF THE CORPS OF ENGINEERS.

COMMUNICATED TO THE SENATE JANUARY 14, 1836.

WAR DEPARTMENT, *January 14, 1836.*

SIR: Should the estimates depending before Congress for expenditures for fortifications be approved, and the necessary appropriations be made, it will be indispensable to the operations of this department that the corps of engineers should be increased, agreeably to the suggestions in my annual report and to the recommendation of the President. Allow me, therefore, to request that the subject of this increase may be brought up for consideration as soon as your convenience will permit. Should the law for this purpose pass, it will take some time to reorganize the corps and to despatch the officers upon their proper duties and to their proper stations, and in the meantime the numerical strength of the corps is altogether too weak to take charge of the numerous and important works which must be committed to them.

Without competent officers to superintend and direct these operations, either the appropriations must remain useless and the work unexecuted, or the expenditures may be unnecessarily increased and the defences of the country badly constructed. Feeling the heavy responsibility which these preparations impose upon this department, I am extremely anxious that there should be scientific and competent officers enough to take charge of and direct them.

I am, very respectfully, sir, your obedient servant,

LEW. CASS.

Hon. THOS. H. BENTON, *Chairman of the Committee on Military Affairs, Senate.*

24TH CONGRESS.]

No. 624.

[1ST SESSION.]

ON THE EXPEDIENCY OF CONSTRUCTING FLOATING STEAM BATTERIES FOR THE DEFENCE OF BAYS AND HARBORS.

COMMUNICATED TO THE SENATE JANUARY 21, 1836.

IN THE SENATE OF THE UNITED STATES, *December 28, 1835.*

On motion by Mr. Goldsborough,

Resolved, That the Committee on Military Affairs be instructed to inquire what number of floating steam batteries are necessary for the defence of the Chesapeake and Delaware bays and the harbor of New York, together with the estimate of the probable cost of the same, and to report the result to the Senate.

Attest:

WALTER LOWRIE, *Secretary.*

WAR DEPARTMENT, *January 14, 1836.*

SIR: I have the honor to enclose herewith a report from the chief engineer, in answer to the resolution of the Senate of the 28th ultimo on the subject of floating steam batteries, transmitted by you for the views of this department.

I consider this species of force very important in our preparations for defence. The three bays of New York, Delaware, and Chesapeake are those whose position and other circumstances seem principally to require these batteries; and the estimate made by the Engineer department is founded upon the calculation and the number which would be required to place these large estuaries in a complete state of defence. But it is worthy of remark that floating steam batteries constructed upon the plan proposed would be useful, from their draught of water, all along the southern coast, and might be detached there whenever circumstances required. These vessels, agreeably to the *projet* herein presented, are not intended for sea service, but are designed to co-operate with the permanent defences. They may also be stationed at any of the inlets where the approach of an enemy may be apprehended; but their care and management should be committed to the army, as a part of the system of defence—having no relation, however, to the armed steam vessels which it may be found expedient to construct as a part of the system for naval operations.

Very respectfully, your most obedient servant,

LEW. CASS.

Hon. THOS. H. BENTON, *Chairman of the Committee on Military Affairs, Senate.*

ENGINEER DEPARTMENT, *Washington, January 13, 1836.*

SIR: In answer to the call of the Senate of the United States upon their Committee on Military Affairs, instructing them to inquire what number of floating steam batteries are necessary for the defence of the Chesapeake and Delaware bays and the harbor of New York, together with an estimate of their probable cost, which was referred by the chairman of said committee to the War Department, and by you to this office, I have the honor to state that the subject being one on which the department being without practical

information, it finds great difficulty in the investigation of the subject, and in suggesting the number of these batteries that would be required to fulfil the end proposed, which must necessarily depend upon the power and force of the invading fleet; and it is intended rather as an approximation to what might answer to guard the various inlets, bays, and harbors of those waters, than as promising security or complete defence.

That steam batteries would be most effective and powerful auxiliaries to the other means of defence now existing and to be created for the protection of our seaboard there can be no doubt; and the almost necessity of their construction is evident when the length and extent of our bays and harbors are considered. After such an examination of the subject as time would permit, and making use of the best information in my power, I am fully of opinion that they ought to be so constructed that, while they possess the necessary strength, they shall draw the least possible draught, which, when fully equipped, ought not to exceed four feet. They should be provided with at least two guns of the largest caliber and longest range, an apparatus attached to the furnace for heating shot, and a propelling power able to give them a velocity of ten or twelve miles an hour. Vessels of this description would possess the advantages of being able to change their position regardless of shoals and bars, always to be met with in our harbors, placing them beyond the reach of a pursuing enemy; and in case of calms or storms, or any other cause obliging the enemy to anchor, might select such positions as to place their opponents at their mercy. They would likewise be efficient in preventing marauding excursions in boats, so often attended with distress and ruin to the peaceful and unoffending citizen. In relation to the number of such batteries required for each of the waters named in the resolution, I cannot venture to recommend less than ten for the harbor of New York, including the neighboring bays and Long Island sound; six for the Delaware river and bay, and ten for the Chesapeake. The probable cost of each is estimated to be from \$25,000 to \$30,000, though, from want of all experience in naval architecture, this amount is not pretended to be correct.

I avail myself of the present opportunity to communicate a copy of a letter from Major J. L. Smith, of the corps of engineers, in reference to this subject. As Major Smith's scientific attainments and ripe judgment in professional matters are well known to you, they do not need any declaration from me. I accordingly submit his proposition without further remark.

I have the honor to be, sir, your obedient servant,

C. GRATIOT, *Chief Engineer.*

Hon. LEWIS CASS, *Secretary of War.*

GOVERNOR'S ISLAND, *New York, December 27, 1835.*

SIR: The proceedings of the Senate of the 28th instant, which we have just received, contain a resolution offered by Mr. Goldsborough, instructing the Military Committee to inquire what number of floating steam batteries would be necessary for the defence of Chesapeake and Delaware bays and New York harbor, and what the expense of providing them would be. The reference of this subject to the Military Committee will eventuate probably in a call upon the Engineer department for the information desired. Should that be the case, it may be satisfactory to you to have it in your power to state that you can have steam batteries built and fitted by the officers under your command which could not be sunk or set on fire, and which would be cannon-proof for a long time to the extent of almost perfect security to the hull of the vessel, to her machinery, including the propelling wheel or wheels, to the gun or guns that would be mounted, and to the crew. I think I could build such a vessel, of one hundred tons burden, furnish her with a high-pressure engine of forty to fifty horse power, which would give her a speed of ten miles an hour, and perhaps twelve miles an hour, provide a spring platform for mounting a 42-pounder, the pressed straw for breastworks, and everything else requisite to put her upon immediate service, for \$15,000. My report of January last on coastward harbor defence, a copy of which is filed in your office, mentions hulls, and describes them and the mode in which they might be employed. The steam battery above described would be something of the same kind, but having the advantage of self-propelling power, instead of reliance from other craft, for locomotion. Such a boat might be got ready by the 1st of March, and perhaps sooner; but the cost would be increased as the period of completion should be contracted.

I am, sir, very respectfully, your obedient,

J. L. SMITH, *Major of Engineers.*

General C. GRATIOT, *Chief Engineer, City of Washington.*

24TH CONGRESS.]

No. 625.

[1ST SESSION.]

ON OPENING A MILITARY ROAD FROM CANTONMENT DES MOINES TO FORT GIBSON, ETC.

COMMUNICATED TO THE SENATE JANUARY 21, 1836.

IN THE SENATE OF THE UNITED STATES, *December 23, 1835.*

On motion by Mr. Linn,

Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of making an appropriation for the purpose of constructing a military road from Cantonment "Des Moines" to Cantonment Leavenworth, thence to Fort Gibson; and that said committee call on the Secretary of War for information relating to this subject.

Attest:

WALTER LOWRIE, *Secretary.*

WAR DEPARTMENT, *January 14, 1836.*

SIR: I have the honor to enclose a report of the acting quartermaster general on the subject of the proposed road, referred to in your letter of the 30th ultimo, from Fort Des Moines to Fort Leavenworth, and thence to Fort Gibson.

I am not prepared to speak of the precise termination of such a communication on the Mississippi, whether it should be at Fort Des Moines or at some point higher up the river, between there and Prairie du Chien; but I have no doubt that a road from the western bank of the Mississippi to Fort Leavenworth, and thence to Fort Gibson, would be very advantageous to the United States. It need not be an expensive work. Cutting down the timber for a reasonable width, bridging the streams, and causewaying the marshy places, so as to allow the free movement of troops, would be all that would be necessary. The stations of the dragoons are at the two points of termination and near the middle of this proposed communication, and, if it were opened, they could range along it with comparative facility. This is a species of force peculiarly dreaded by the Indians, and I think the peace of the country would be better secured by such measures than in any other manner. The road would, in fact, become a barrier across which parties of hostile Indians would be very unwilling to pass, as they would be liable to be intercepted by a mounted force. The route proposed passes along the frontier of the Sacs and Foxes, who have shown their proneness to commence hostilities upon our citizens; and it is in contemplation to remove a considerable body of Pottawatomie Indians from the vicinity of Lake Michigan to the country northwest of the line of communication. Many of these Indians are restless and discontented, and can only be kept in peace by the display of a force in their neighborhood. From Fort Leavenworth to Fort Gibson the route would pass west of the State of Missouri and the Territory of Arkansas, and through the lands assigned to the emigrating Indians. It will be essentially necessary that the United States should not only possess a respectable force in this quarter, but that they should have the means of transporting it freely along this line of communication. A large body of Indians will be thrown into this region. They will be in contact, on one side, with our settlements, and on the other with the wild and indigenous tribes of that country. Common prudence requires that we should be prepared to meet any occurrences to which we may be exposed under these circumstances.

The resolution is herewith returned.

Very respectfully, your most obedient servant,

LEW. CASS.

HON. THOS. H. BENTON, *Chairman of Committee on Military Affairs, Senate.*

QUARTERMASTER GENERAL'S OFFICE, *Washington, January 8, 1836.*

SIR: In obedience to your instructions to report in reference to the resolution of the honorable the Senate of the United States of the 23d ultimo, which was referred to this office on the 31st, and which is in the following words: "*Resolved*, That the Committee on Military Affairs be instructed to inquire into the expediency of making an appropriation for the purpose of constructing a military road from Cantonment Des Moines to Cantonment Leavenworth, thence to Fort Gibson, and that said committee call on the Secretary of War for information relating to this subject," I have the honor to state that the records and files of this office contain no information which has a bearing on the subject other than a communication dated St. Louis, December 16, 1834, from John Dougherty to Major J. B. Brant, quartermaster United States army, and which was referred to the quartermaster general on the 10th of January, 1835, extracts from which I submit herewith, marked A.

The views and opinions of the writer of that communication are no doubt worthy of much consideration from the fact of his long and familiar acquaintance with the regions of the west, manifesting, as they seem to me to do, much knowledge of the Indians and their habits, connected with which and their future welfare, as well as the mode and manner of defence against their inroads upon our white settlements, is the road contemplated by the resolution.

The connecting of the extremes of our inland frontiers by means of a cordon or chain of posts of more than a thousand miles in extent would certainly add more to the welfare and security of the frontiers than any other measure which could be devised. The establishing of small military posts, (stockades, such as the pioneers of the west made use of in times which tried the souls of men,) having *points d'appui* at proper distances and positions along the whole line of the road, and the sending out from which, daily, small mounted detachments or parties in such manner as to keep up a continual *surveillance* over the road, and by whom information could be transmitted from one extreme of the frontier to the other, would operate as an immense line of defence, and by which all improper persons could be excluded from the territories set apart for the Indians, and the Indians be prevented from intruding within our borders. Under such a state of things, peace, harmony, and good order would predominate over apprehension, disorder, violence, and bloodshed. Indeed, such a road, occupied in such a manner, would be a wall of defence to the far west; and the cost would be small when compared with the immense advantages that would result to the nation, among which may be enumerated the great demand for, and consequent increase in, the sales of the public domains; the great increase in the population, the keeping a portion of the army in constant motion, giving equal protection to the whites and to the Indians.

Should any emergency render it necessary for bodies of troops to move from one extreme of the frontier to the other, from Illinois, Michigan, and Missouri, to Arkansas and the upper part of Louisiana, or from these latter to the former and the country on the west of the Upper Mississippi, or from any one portion to any other portion, such a road would afford great facilities of movement. In short, in case of a general war between the various Indian tribes among themselves, or of a war between the whites and a combination of tribes, or of several tribes with other tribes, or of tribe against tribe, or should a foe from neighboring countries assail us on the west, southwest, or northwest, such a road would be of incalculable advantage. In every view which can be taken of the subject, no work which has been undertaken by the government can surpass it, when completed, in usefulness, not as a military road only—and as such it would be all important—but as a route of travel and communication between the several and various parts of our immense western frontier.

Having made these general remarks, I proceed to be more particular in regard to the immediate object of what I conceive to be your desire in requiring of me a report.

1st. Cantonment or Fort Des Moines is situated on the Mississippi river, a short distance above the junction of the Des Moines river with the Mississippi, about 180 miles by water from the mouth of the Missouri, and about 600 miles by water from Fort Leavenworth. It is estimated to be by land about 200 miles in a right line from Fort Leavenworth. The distance from Fort Des Moines to the mouth of the Raccoon is about 150 miles by land, and by water about 260, at which place, or some other point in that neighborhood below on the Des Moines, it is understood a military post will probably be established, and from such point to Fort Leavenworth the distance is probably between 200 and 230 miles.

Of the character of the country through which the military road would pass from Fort Des Moines to Fort Leavenworth the records of this office do not enable me to give any information. The presumption is that no great obstacle exists to prevent its being constructed, first, to the new post, if established, on the Des Moines river, and thence to Fort Leavenworth, the distance upon which route would be probably from 300 to 350 miles; and, second, direct to Fort Leavenworth, distance about 200 miles. The first route would seem to be the most essential as a route of military communication, and as a means of a continuous connexion between the military posts, because, at some subsequent period, no doubt exists that the post on the Des Moines would be connected with Fort Crawford, at Prairie du Chien, a distance of about 130 miles, which post will, perhaps, be connected in the course of a year with Forts Winnebago and Howard by the military road already authorized from Fort Howard to Fort Crawford, a part of which has been reported finished. From Fort Crawford to Fort Leavenworth is about 900 miles by water.

2d. Fort Leavenworth is about 420 miles by water, above the mouth of the Missouri, and it is from Fort Gibson, by the way of that river, the Mississippi, and the Arkansas, about 1,500 miles. The distance by land between the two posts is about 300 miles.

The character of the country through which this portion of the road would pass I have not the means to give any information of. From general impressions, I think I may venture to say that the difficulties, whatever they may be, could be easily overcome.

Fort Gibson is not connected with Fort Towson by any direct road, and, believing that information on that subject would not be irrelevant, I beg leave to state that the distance between them is about 130 miles over rather a broken country, but not so much so, perhaps, as to prevent the making of a good road; and the distance from Fort Towson to Fort Jesup, in Louisiana, is about 300 miles. From the former post to the northern boundary of the State of Louisiana, in the direction of the latter post, orders have been given for completing a road appropriated for at the last session of Congress.

All which is respectfully submitted, and the resolution is herewith returned.

I have the honor to be, sir, most respectfully, your obedient servant,

THOS. F. HUNT, *Major and Acting Quartermaster General.*

Hon. LEWIS CASS, *Secretary of War, Washington City.*

A.

Extracts from a communication from John Dougherty to Major J. B. Brant, quartermaster United States army, dated St. Louis, Missouri, December 16, 1834.

QUARTERMASTER GENERAL'S OFFICE, *January 8, 1836.*

"Agreeably to promise, the day before you left, I will now proceed to give you some outlines of my views and opinions relative to Indian affairs, and the defence of the frontier.

"As you have been so long in the country, and are so well acquainted with these matters, I shall not enter so minutely into particulars to prove the correctness of the suggestions I am about to make, as I would do were I addressing one uninformed on these subjects.

"When I consider how many lawless and unprincipled white men we have had, during the last twenty-five years, hunting and prowling about among the Indian tribes on our western borders, killing off the game, and not unfrequently killing the Indians themselves, and constantly dealing out spirituous liquors to them, I am really astonished that there has not been more difficulty and bloodshed, particularly when I reflect what a string of white settlements we have, reaching from the Upper Mississippi to Fort Gibson, a distance of nearly one thousand miles, with no other military protection than the few infantry stationed at Fort Leavenworth. This can only be accounted for by the superabundance of game heretofore existing, and which has supplied the Indians with both food and clothing; but, within a few years, the scene has changed, the game nearly exhausted, the Indians hungry and naked, already beginning to feel very sensibly the effects of their intercourse with our hunters and whiskey dealers. Buffalo are almost the only animals of game remaining to supply the wants of those many thousand souls. The range of these animals is now confined to a comparatively small section of country, lying between our settlements and the Rocky mountains, hemmed in on the north by the British, and on the south by the Spanish Indians, traders, and settlements. The number of Indians who inhabit this buffalo country, daily increasing, tribe after tribe, are crowding in from the Spanish and British territories, and from the United States; add to this the many hundreds of white traders, trappers, and outlaws, consisting of Americans, British, and Spaniards, and we may readily conclude that the buffalo hunt will be a warm, but a short one. Very few of these numerous tribes are more advanced in the art of agriculture than they were twenty years ago. When the buffalo are gone, how are they to subsist, if not by pillaging our border citizens? Active measures should be taken to prevent the too sudden extinction of the game, before the Indians are capable of subsisting themselves by farming; if not, they will be thrown altogether on the government for support, which it will certainly be obliged to give, or to destroy them. Hunters and trappers kill a great deal; and the traders, for the sake of the skins, stimulate the Indians to kill many more than is necessary for their maintenance.

"As the trade is now carried on, the Indians derive very little benefit from the skins they are enabled to take, and when the government pay out an annuity to them, the traders and whiskey smugglers soon get it for little or nothing in exchange. Whiskey vendors and drinkers immediately on the frontiers produce nearly all the misery and bloodshed among both whites and Indians; and most of the difficulties

among the more remote tribes are brought about by our own hunters and traders. For the purpose of checking their monopolizing career, and lessening the bad effect such commerce has on the ignorant tribes, government would do well to take the Indians under its own protection, treat them as untutored children, and not as wise, learned, and independent men; establish working and reading schools, give them farmers and mechanics, and encourage them to raise corn, beef, pork, and horses for the supply of the frontier posts; furnish them with goods at cost and charges, in exchange for everything they may have to dispose of; pay off their annuities in the same way; oblige every tribe to reside on its own land, (their limits, too, should be curtailed;) restrain their warring and hunting, and prevent all intercourse with military posts, except by the chiefs, when on special business. Mingling with the soldiers has a most demoralizing effect on all Indians, and no soldier should be allowed to enter an Indian camp, except on duty. For the effectual protection and maintenance of peace and good order on the frontier, I would propose the following plan: Establish a line of military posts along or near the boundary between the settlements and Indians, beginning on the Upper Mississippi, and extending to Red-river; build a compact and well-constructed fort, sufficiently large to garrison about two companies of infantry and one of dragoons, at or near each of the following-named places: At Des Moines rapids, on the Mississippi; at Raccoon fork of the Des Moines; at the point where a due west line from the northwest corner of the State of Missouri would intersect the Missouri river; at Fort Leavenworth; at Harmony Mission; on the Ne-o-sho, below the Osage agency; at Fort Gibson; at a point between the Arkansas and Red rivers; and on Red river. Good land for cultivation, and fine stone and timber can be had in great abundance for building at all these locations. The distance between these several posts would be from one hundred to one hundred and fifty miles; none of them need be more than twenty or thirty miles from the settlements. Most of them would be on the banks of navigable streams, and none would be more than one hundred miles beyond steamboat navigation. Pork, beef, flour, and horses would be furnished at a cheap rate by the frontier citizens. Establish a citizen farmer at each post, with the privilege of raising stock for himself, and he would not hesitate to furnish, yearly, the necessary quantity of corn, hay, and oats for the dragoon horses at a reduced price. Open a good road leading from post to post; bridge all the small creeks, and locate at each of the large rivers a good citizen to keep up a ferry under proper restrictions; build stables at every post sufficient for one company and a half of dragoon horses; keep the dragoons constantly on the trot patrolling along the road by companies or smaller detachments, as may be required; when one detachment is going, let one be returning; their principal business would be to take up every strolling white man or Indian going out from or coming into the settlements, and convey him to the nearest guard-house for punishment; Fort Leavenworth would be the proper place for headquarters; establish one superintendency of Indian affairs on the road at some central point; establish a weekly mail coming in from both ends of the military road to headquarters, bringing information from all the posts of everything that is going on; appoint four Indian agents: one on the Upper Mississippi, one on the Upper Missouri, one on the Arkansas, and one on the Red river, and no more. More than one agent among Indians of the same neighborhood only serve to confuse and make matters worse, from their different views of the same subject. The superintendent and agent should have salaries sufficient to justify them in giving their whole attention to the affairs of the offices confided to them."

* * * * * "The few additional dollars it would require to keep up the cordon of posts contemplated would be a mere nothing compared with the immense benefits that would be derived to the new States; confidence and good order would be established on the frontiers, and emigration would rapidly increase.

"After you have read the above, should you conclude that my fears in regard to the danger on the frontier are too great, recur for an instant to the consternation which Black Hawk, with a few followers, spread over the States of Illinois and Missouri, and the Territory of Michigan. I do not think government ought to break down its dragoons, and expend so much time and money in protecting the mountain trading and trapping, but turn everything to the establishment of peace and tranquillity on the border, and to meliorate the condition of the Indian tribes more immediately in the neighborhood of our settlers."

The foregoing are true extracts.

THO. F. HUNT, *Major and Acting Quartermaster General.*

[24TH CONGRESS.]

No. 626.

[1ST SESSION.]

RECOMMENDATION OF APPROPRIATIONS FOR THE CONSTRUCTION AND ARMAMENT OF FORTIFICATIONS FOR THE NATIONAL DEFENCES.

COMMUNICATED TO THE SENATE JANUARY 25, 1836.

WAR DEPARTMENT, *January 25, 1836.*

SIR: In answer to your letter of the 21st instant, I have the honor to transmit you copies of letters and estimates forwarded to the chairman of the Committee of Ways and Means of the House of Representatives, and which contain the views of the President respecting the appropriations which ought to be made at this time for the national defence.

I am not aware, at present, of any further appropriations which will be required in relation to this object, with the exception of the necessary funds for the transportation of the armament of the fortifications, an estimate of which will be transmitted as soon as it can be prepared.

Very respectfully, your most obedient servant,

LEW. CASS.

HON. THOS. H. BENTON, *Chairman Committee on Military Affairs, Senate.*

WAR DEPARTMENT, *January 21, 1836.*

SIR: I have the honor to transmit, for the consideration of the Committee of Ways and Means, a report from the chief engineer, transmitting an abstract exhibiting the several appropriations which are deemed necessary for the construction of fortifications for the present year. This paper shows the sums already asked for this branch of the service, and the consideration of which has been referred to the Committee of Ways and Means and to the Military Committee; and also those additional ones, which it is thought proper, under existing circumstances, should be presented for the decision of Congress. The amount of the funds asked for, and the consideration of which is before the Committee of Ways and Means, is \$1,870,000. The amount for new objects of that description before the Military Committee is \$950,000, and the amount of new objects presented in this project is \$2,180,000; making in the whole, for this branch of the public service, for the year 1836, \$5,000,000. An estimate of this latter project has been this day transmitted to the Committee on Military Affairs. I am instructed by the President to say that he has considered and approved these estimates.

Very respectfully, your most obedient servant,

LEW. CASS.

HON. G. C. CAMBRELENG, *Chairman Committee Ways and Means, Ho. of Reps.*

WAR DEPARTMENT, *January 21, 1836.*

SIR: I have the honor to enclose, for the consideration of the Committee of Ways and Means, an estimate, prepared by the colonel of the Ordnance department, of the funds which appear to be necessary to be appropriated for the armament of the fortifications for the present year. This estimate is based upon two propositions: First, that it may be necessary to mount 2,679 cannon, in which case an appropriation of \$1,581,314 will be required; and, second, that the number of cannon wanted will be 2,444, and in which case the appropriation required will be \$1,224,301. My own opinion is, that the smaller amount, to wit, \$1,224,301, is the one which it would be proper to appropriate; and this sum includes the estimate of \$200,000, already submitted to the committee for the armament of the fortifications. But all the other estimates of the Ordnance department will remain for the consideration of the committee as though this increase had not been asked for. I am instructed by the President to say that he has examined and approved this estimate, and directs that it be transmitted to the committee for their examination and decision.

Very respectfully, your most obedient servant,

LEW. CASS.

HON. G. C. CAMBRELENG, *Chairman Committee Ways and Means, Ho of Reps.*

WAR DEPARTMENT, *January 21, 1836.*

SIR: I have the honor to enclose, for the consideration of the Committee on Military Affairs, a report from the chief engineer, transmitting an estimate of the funds deemed necessary for the construction of fortifications for the service of the present year. The estimates already before the Committee of Ways and Means and the Military Committee, for similar objects, amount to \$2,820,000, and the amount of those now transmitted is \$2,180,000; making in the whole, for these purposes, for the year 1836, \$5,000,000. I am instructed by the President to say that he has considered and approved these estimates.

Very respectfully, your most obedient servant,

LEW. CASS.

HON. R. M. JOHNSON, *Chairman Committee on Military Affairs, Ho. of Reps.*

ENGINEER DEPARTMENT, *Washington, January 23, 1836.*

SIR: In obedience to your order of this day, I have the honor to hand you copies of the estimates for fortifications and other purposes, submitted to the Committees of Ways and Means and on Military Affairs of the House of Representatives, marked 1 and 2. No. 2 has been reported to the House, in which are granted certain powers to the President of the United States, which I respectfully suggest may be submitted for the consideration of the Senate, and which are enumerated in the second section of the bill. No. 3 is an exhibit of the objects stated in the first two, arranged in geographical order from north to south.

I am, very respectfully, sir, your obedient servant,

C. GRATIOT.

HON. LEWIS CASS, *Secretary of War.*

No. 1.

Estimate of funds that will be required for the service of the year 1836 on account of fortifications for the defence of the seacoast of the United States.

Designation.	Amount.	Remarks.
For Fort Independence, Castle island, Boston Harbor	\$150,000 00	
For Fort Warren, George's island	200,000 00	
For Fort Adams	200,000 00	
For Fort Schuyler, Throg's Neck	200,000 00	
For Fort Columbus and other works on Governor's island	20,000 00	
For Fort Delaware	150,000 00	
For Fort McHenry, Redoubt Wood, and Covington Battery	50,000 00	
For Fort Monroe	210,000 00	
For Fort Calhoun	150,000 00	
For Fort Caswell, Oak island	60,000 00	
For fortifications in Charleston harbor	200,000 00	
For Fort Pulaski, Cockspur island, Savannah river	170,000 00	
For fortifications at St. Augustine	20,000 00	
For Fort Pickens, Pensacola	50,000 00	
For a fort on Foster's bank	160,000 00	
For incidental expenses	500,000 00	
For contingencies of fortifications	6,200 00	
	2,496,200 00	

Respectfully submitted.

ENGINEER DEPARTMENT, *January 20, 1836.*

C. GRATIOT.

VOL. VI—3 d

C. GRATIOT.

No. 3.

Estimate of funds that will be required for the service of the year 1836 on account of fortifications for the defence of the seacoast of the United States.

Designation.	Amount.	Remarks.
For fortifications at Penobscot bay	\$101, 000 00	New work, estimated for by the board of engineers.
For fortifications at Kennebec river	100, 000 00	New work, surveys not finished.
For Fort Preble, Portland harbor	103, 000 00	New work, estimate by board of engineers.
For fortifications at Portsmouth, New Hampshire.	150, 000 00	New work, surveys not made.
For Fort Pickering, Salem	100, 000 00	New work, estimated for by board of engineers.
For Fort Independence, Castle island, Boston harbor.	150, 000 00	The old work at this site to be enlarged.
For Fort Warren, George's island	200, 000 00	Work now under construction.
For fortifications at Provincetown, Cape Cod.	50, 000 00	Collection of information and materials.
For fortifications at New Bedford	100, 000 00	New work, no survey.
For Fort Adams	200, 000 00	Now under construction.
For a fort on Rose island	50, 000 00	Project made.
For Fort Griswold	100, 000 00	Old work.
For Fort Schuyler, Throg's Neck	200, 000 00	Now under construction.
For Fort Columbus, and other works on Governor's island.	20, 000 00	To complete the repairs of these works.
For Fort Tompkins and dependencies	200, 000 00	New work.
For Fort Delaware	150, 000 00	For a new fort to occupy the site of the old one, demolished.
For a fort at the débouche of the Chesapeake and Delaware canal.	100, 000 00	New work, to cover the entrance of the canal and act with Fort Delaware in the defence of the river.
For fortifications to cover the artificial harbor at Cape Henlopen.	150, 000 00	New work, surveys not made.
For a fort on Soller's Point flats	150, 000 00	New work, plan perfected.
For Fort McHenry, Redoubt Wood, and Covington battery.	50, 000 00	To put these works in a state of defence.
For a fort on Point Patience, Patuxent river.	100, 000 00	New work, plan perfected.
For a fort at Cedar Point, Potomac river	100, 000 00	New work, not perfected, surveys not made.
For Fort Monroe	210, 000 00	For completion.
For Fort Calhoun	150, 000 00	Work under construction.
For Fort Caswell, Oak island, Cape Fear river.	60, 000 00	For completion.
For redoubt on Federal Point	12, 000 00	Not commenced.
For fortifications in Charleston harbor	200, 000 00	Forts Moultrie and Sumter.
For Fort Pulaski, Cockspur island, Savannah river.	170, 000 00	Work under construction.
For fortifications at the mouth of St. Mary's river.	50, 000 00	New work, surveys not made.
For fortifications at St. Augustine	20, 000 00	Repair, Fort St. Mark's.
For Fort Pickens, Pensacola	50, 000 00	For completion.
For a fort on Foster's bank	160, 000 00	Work under construction, to complete.
For Fort Barrancas	50, 000 00	Plan not perfected, collection of materials, cannot be prepared in a year.
For Fort St. Philip	77, 800 00	Present fort to be enlarged, cannot be prepared in a year.
For incidental expenses	500, 000 00	Repairs of old and new works, purchase of sites, extending public grounds at old forts, making surveys, &c.
For contingencies of fortifications	6, 200 00	For instruments, stationery, blanks, &c.
For steam batteries	660, 000 00	As auxiliary to the fortifications, for defending the bays, harbors, rivers, &c., along the whole coast.

24TH CONGRESS.]

No. 627.

[1ST SESSION.]

HOSTILITY OF THE INDIANS IN FLORIDA AND MILITARY OPERATIONS AGAINST THEM
IN 1836.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 27, 1836.

St. Augustine, January 13, 1836.

SIR: Agreeably to the resolutions passed at a meeting of the citizens of St. Augustine on the 9th and 10th instant, I herewith enclose to you a copy of the proceedings of that meeting.

I have the honor to be, very respectfully, your most obedient servant,

DAVID R. DUNHAM, *Secretary.*

Hon. JOSEPH M. WHITE, *in Congress.*

The memorial will probably be prepared and forwarded to you by the next mail.

At a meeting of the citizens of St. Augustine, held at the court-house on Saturday, January 9, 1836, the Hon. Judge Gould was called to the chair, and David R. Dunham appointed secretary. After a few pertinent remarks by Judge Smith, a committee of nine was appointed, viz: Judge Joseph L. Smith, Dr. Peter Porchee, Colonel Joseph S. Sanchez, Lot Clark, esq., Thomas Douglas, esq., Judge Strong, Colonel O. S. Rees, Charles Downing, esq., Alexander Watson, esq.

The committee were directed to call on General Hernandez for information, and requested to express in a suitable manner the thanks of this city to the citizens of Charleston for their prompt and magnanimous offers of relief, and to report to this meeting to-morrow, at 3 o'clock p. m.

JANUARY 10.

In consequence of the indisposition of Judge Gould, Frederick Weedon, esq., mayor of the city, was called to the chair, *ad interim*. The preamble and resolutions reported by the committee were unanimously approved and accepted, and it was—

Resolved, That copies be forwarded to our delegate in Congress, to the intendant of the city of Charleston, and published in the St. Augustine Herald, Jacksonville Courier, Charleston Mercury, and Savannah Georgian.

And thereupon the meeting adjourned.

E. B. GOULD, *Chairman.*

DAVID R. DUNHAM, *Secretary.*

REPORT.

The committee appointed by this meeting to consider the dangers which threaten this city and the adjacent country, the devastation and destruction of property, and the sufferings of the people, caused by the hostile operations of the Indian enemy upon our borders, and to report the means that may be adopted to avert or mitigate these evils, respectfully recommend:

That for the immediate relief of the poor families of this community belonging to the country, whose dwellings, provisions, and means of subsistence have been burnt, destroyed, or abandoned, and who have fled for refuge here; that for the relief also of the poor and suffering families of this city, who depended for their daily bread upon the daily labor of their fathers, husbands, and sons, who have been taken from them for the general defence, and who are now held, and must be continued on that service, in behalf of, and by the authority of, this Territory and of the United States, for the protection of all that is most dear to them and our families and firesides; that to all these suffering persons General Hernandez, now in command, be requested to cause sufficient issues of provisions for their relief from the public stores; and that so soon as an officer of the United States army, now momentarily expected, having public provisions in his control, shall arrive, that he also be earnestly solicited to aid, by their distribution, in this work of duty and charity.

The committee further recommend the continuance of the active charities of the females of the city, whose benevolence and means united have done much to sustain those who otherwise would have suffered most severely from want in this time of calamity and distress; and they suggest that their labor of charity may be useful in pointing out to the commanding general and to the public authorities fit objects for the relief recommended.

The committee also recommend that for the government and the Congress of the United States a memorial be prepared, and our delegate requested to urge upon Congress, upon the proper heads of departments, and upon the President, the early consideration of the calamities and ruin in which many of our citizens have been involved by the ravages of an unrestrained savage foe; and especially that he use his best and every exertion to obtain immediate appropriations for the payment of the troops (citizens of Florida) called and continued in service for the public defence for the time they have already been so employed, and monthly or bi-monthly for the future, while they may yet be held in that service.

They recommend this measure, convinced of its necessity and justice, because the greater part of our fellow-citizens composing these troops are of a class depending for their own subsistence and that of their families upon their daily earnings. These daily earnings have ceased, and want and distress have followed, which may be averted effectually by the interposition of government in the mode recommended.

The committee also further recommend that our delegate do also use his best exertions to procure the immediate passage of a law for the compensation (full and adequate, if possible) of those whose plantations or other property has been destroyed or taken from them by the lawless and incendiary enemy, that thereby the country may in some measure be restored and saved from ruin; and that our fellow-citizens, who from a *competence* acquired by industry and persevering enterprise, have, in many instances, been suddenly overwhelmed with absolute poverty and the deepest distress while living in confidence under the pledged protection of their government which has not saved them, may be relieved, and those depending upon them saved from the agony of threatened want.

The committee do therefore recommend the adoption by this meeting of the following resolutions:

1st. That Brigadier General Hernandez, commanding the militia and other troops in this city and east of the St. John's river, be requested to issue provisions from the public stores sufficient for the relief of such persons as are in immediate want, by reason of the destruction of their means of subsistence by the savage enemy, or by reason of the absence in the public service of their husbands, sons, or fathers; and that so soon as an officer of the United States army shall arrive having public provisions under his control, that he also be requested to aid in this necessary work of charity and duty.

2d. That our delegate in Congress be requested to use his best exertions to obtain appropriations for the immediate payment of the troops and citizens of Florida called into military service for the public defence, for the time already passed, and for their future payment, monthly or bi-monthly, while they shall be continued in such service.

3d. That our said delegate be also requested to use his best exertions to procure the early passage of a law providing, if possible, for adequate compensation to the citizens of Florida, whose plantations or other property has been taken or destroyed by the incendiary and lawless enemy that has been loosed upon them; or that in respect to this interesting matter he takes such other course as in his judgment shall be deemed best suited to insure ultimate payment of their losses by the government of the United States.

4th. That Joseph L. Smith, Thomas Douglass, Lot Clarke, David Levy, and O. S. Rees, esqrs., be a committee charged in behalf of this meeting to draft and prepare a suitable memorial for Congress, praying for the appropriations and the passage of a law pursuant to the foregoing resolutions; and that said committee have power to attest the same for this meeting in the name of its chairman and secretary, and to transmit it without delay to our delegate in Congress.

5th. That the thanks of this meeting be presented to the intendant, wardens, and citizens of Charleston, South Carolina, and to the citizens of Savannah, Georgia, for the kindness and sympathy manifested by them towards our fellow-citizens in this trying emergency, and for the aid so promptly and generously tendered by the former and afforded by the latter to our distressed community.

By the unanimous order of the committee.

JOS. L. SMITH.

Copy of a letter from a highly respectable gentleman of Florida.

CHARLESTON, January 20, 1836.

MY DEAR SIR: I scarcely trust that any communications of mine can be of any value to you amidst the mass of others which you must have received from Kingsley and others upon the Indian war in Florida; but I cannot help transcribing to you some of the accounts which arrive to us daily, keeping us in continual alarm.

You will see the account in our *Courier* of to-day, received *via Mobile* from the want of direct communication, of the fatal action of the 28th ultimo, of one hundred United States troops going from Tampa Bay to join General Clinch at Fort King, all cut off and sacrificed to a man, except three, including six valuable officers. In this manner the disasters are actually greater than are painted in private letters. I have seen myself parts which are suppressed. There is a strong belief that the Creeks from Georgia are coming down the Chattahoochee to join the Seminoles. A great error has been committed and a false estimate created by the representations of the agent, General Thompson, who has fallen a victim to his confidence. It continues to be a matter of the utmost astonishment that these Indians should have been permitted leisurely to mature their plans, send off their women and children, purchase rifles and ammunition in the greatest abundance, without a single effort being made to prevent them.

Now just conceive their position—eight hundred or one thousand warriors, animated by sentiments of hatred and revenge, and well aware what is to be their fate on losing their superiority—with them three or four hundred negroes of their own, better disciplined and more intelligent than themselves, to whom there is a daily accession of runaway negroes from the plantations, supplied with arms and ammunition from the deceased whites. Conceive these people living upon roots, if necessary, for weeks entire, flying before regular charges of disciplined troops, or avoiding fortresses or stockades; but from their ambushes and retreats cutting off the most valuable lives of individuals, or attacking and destroying valuable properties.

In this kind of warfare be assured that all the troops in Florida and all the militia which can be superadded will be sacrificed by piecemeal. Even St. Augustine is by no means safe. General Clinch dare not to move one step from his position, and, as you see, any troops moving to join him run the greatest risk. General Hernandez also maintains one position, while the Indians, moving with the greatest celerity, can at any time bring to bear three or four hundred men upon a given point for attack or destruction.

To repair the great error already committed a great effort must be made, bearing in mind that if operations are to be protracted to the summer months the case will be much worse from the sickness of the soldiery. It is of no use to speak now of disbursements of \$80,000; this sum is but as a drop; a million will not now effect the object. I repeat that an overwhelming force must be sent, say two or three thousand regular troops, and that instantly, in steamboats from all parts. You cannot trust the militia, their term is too limited, and they have been panic struck; besides no militia or volunteers will go from these neighboring States. These will go to Texas willingly, when no inducement will make them face the Indians.

A very heavy claim is now preparing upon Congress for the property thus destroyed from the want of the protection of the government. I dare not say to you how much.

Extract from a letter from the postmaster of St. Augustine, dated January 15, 1836.

The Indians are destroying all the plantations around us, and no means of their being prevented from doing so, and their trail has been discovered within eight or ten miles of this place. If the government does not send a force sufficient immediately to stop them in their devastation, God knows where it is to end; General Clinch and the troops under him being compelled now to act merely on the defensive. The Middle Florida militia having returned home, as well as those from East Florida, there can be no active measures taken to curtail them in their waste of life and property until a sufficient force arrives. The planters are ruined, the present crop destroyed, cotton, molasses, sugar, and corn, all burnt; and it is impossible to plant the approaching season; and unless the Indians are immediately put down, you are well aware, sir, that it is impossible to act against them in the summer, so that the year following there can be no calculation on a crop; in the meantime starvation must be the consequence with hundreds who, heretofore, were in comparatively easy circumstances.

I remain, sir, very respectfully, your most obedient servant,

ELIAS WALLEN.

HON. JOSEPH M. WHITE, *Washington.*

[From the *St. Augustine Herald* of January 13, 1836.]

We learn, also, from various sources, that the officers and soldiers behaved with the most determined bravery. General Clinch (who of course had the command) distinguished himself upon the occasion, and the soldiers speak with animation of the coolness and deliberation with which he conducted his men to the charge. General Call and Colonel Warren were also in the action. The latter, we understand, was severely wounded.

We have been furnished with a diagram of the battle ground, and we think nothing could indicate greater skill than the position which the enemy had taken. The approach to the *Ouithlacoochy* is from the northeast side. The crossing to the southwest side was in an Indian canoe which carried *eight men*; of course much time was consumed in the crossing of the two hundred and thirty. After the crossing to an open landing place, a trail led, by a sinuous route, to an open field, in the shape of a horseshoe, in which the whole of our force was posted. The position was surrounded on all sides by a thick hammock. The firing commenced from the hammock, which concealed the enemy, and protected them in a great measure from the destructive fire of our troops.

From the same officer we learn, that the general impression was that an understanding exists between the Creeks and Seminoles; and it was his opinion that during the action the Seminoles were reinforced, as he saw several Indians come into the action with packs on their backs.

This is our opinion, also, and has been from the time that we were advised of the murders committed by the Creeks on the *Chattahoochie* river. There is also reason to apprehend a union of a more alarming nature, and one that may render our position deeply interesting to the southern States generally.

Captain John S. Williams, having just returned from Tomoko and Spring Garden, has obligingly informed us of some particulars which enable us to correct our former accounts.

He confirms the loss of Judge Dunham's house. In relation to the destruction of this place, Mr. Sheldon informs us that the occurrence took place at 12 o'clock at night; that he was on the opposite side of the Hillsborough, and saw by the light of the fire a great number of Indians, as he supposed, as many as 100. The whole premises are a complete ruin. Mr. Sheldon says that when the roof of Dunham's house fell in the yells of the savages were terrific, and he saw them dancing in numbers around the flames.

About 12 o'clock the succeeding day, he says, eleven Indians crossed over to Colonel Dummett's, and laid waste the plantation; demolished everything in the dwelling except two tables, and built a fire upon the floor, evidently with a view to consume it; but the fire, having burnt a hole in the floor, went out.

Captain Williams also says that Depeyster's dwelling-house, out-houses, and sugar works were burnt, and the negroes, with but one or two exceptions, captured and taken off.

Hunter's cotton house burnt, and four or five negroes taken.

The lantern in the light-house at Mosquito demolished.

At Anderson's plantation but little injury was done.

Mr. S. H. Williams's dwelling-house burnt, but sugar works uninjured.

Major Herriot's sugar works, dwelling and small corn house burnt. But his negro houses and principal granary untouched. All the negroes captured and taken off.

At Spring Garden, we learn from Forrester, that the loss was a total one. The plantation laid waste, and the buildings and thirty-five hogsheads of sugar, and the cane sufficient to manufacture seventy hogsheads more destroyed; and the negroes, amounting to one hundred and sixty and horses, and mules taken off. Loss about \$130,000.

The following, being a more particular account, will be read with interest:

On the morning of the 26th or 27th of December, the Seminole Indians, under the chief, Philip, together with a small party of Uchees, and a number of Indian negroes, estimated from eighty to one hundred and twenty, came to New Smyrna, south of Mosquito inlet, took possession of and plundered the house of Mr. Dunham. Parties of them scattered about the neighboring plantations of Cruger and Depeyster, and Mr. Hunter. The Indian negro John Cæsar endeavored to decoy Mr. Hunter from his house on pretence of selling him cattle and horses. He, however, having heard from his negroes that large numbers of Indians were about, refused to go, and in the afternoon crossed the river to Colonel Dummett's. The Indians had possession of Dunham's house all day, and about one in the morning of the following day set it on fire and burned it, together with all the out buildings, to the ground; in the course of that day they burned and destroyed all the buildings on Cruger and Depeyster's plantation, except a corn house; also all on Hunter's, except a corn house. A party of eleven Indians then crossed the river, and plundered and destroyed everything in Colonel Dummett's house, and set it on fire; from some cause or other it did not burn. They also burnt the dwelling-house of Mr. Racliff, a little to the north of Colonel Dummett's, and broke and destroyed the lantern and everything they could at the light-house. The next day they proceeded up the river sixteen miles north, to Anderson's, plundered the dwelling-house, and carried off the boats, flats, and stores of every description, but did no other damage. They burnt the dwelling-house of Mr. S. H.

Williams, but the sugar works, having a large quantity of corn stored in them, they were left unharmed. On Major Herriot's plantation they burnt everything to the ground, sugar works, negro houses, and all except the corn house, and carried off all the negroes, about seventy-five in number. Some of Depeyster's negroes joined them, and they carried off all the rest, about sixty, except one old negro man, whom they shot, and burned in his hut. All the negroes from the other plantations escaped, except three of Hunter's.

In the Herald notice is taken of the killing of Llenovar, on the St. John's. This is a deeply afflicting occurrence. We understand that he was twenty-three years old; had just returned from Picolata, where he had been on duty, and had distinguished himself by his good conduct and soldierly deportment, and had gone to the plantation of Mr. Baya, to endeavor to save as much of the crop of provisions there as could be brought away. Two brothers of this young man were then absent in another part of the country for the purpose of protecting the plantations south of us.

The Indian Chief Powell.—The character of this chief is but little known, and not sufficiently appreciated. He is represented to be a savage of great tact, energy of character, and bold daring. The skill with which he has for a long time managed to frustrate the measures of our government for the removal of the Indians beyond the Mississippi entitle him to be considered as superior to *Black Hawk*. *Charley Omatha*, a chief of the friendly party, interposed difficulties to the execution of his plans, and he at once shot him. He bore an inveterate hatred towards General Thompson, the agent, and yet he concealed his antipathies so skilfully as completely to deceive the agent, and to induce him to consider *Powell* as personally friendly. General Thompson fell by the hands of *Powell*. This warrior chief was present three days after at the battle of the Outhlacouchy, a detail of which, so far as we are able to collect the same, is contained in this day's paper. It is proper to observe that he ought not to be called *Powell*, as that is only a nickname. His Indian name is "OSEOLA," and by that he should be distinguished. It is apprehended that he will give the government much trouble, if they do not act with that decision and energy that becomes the power and force of the country. The devastation and ruin that he has already caused will not fall short of a million of dollars.

Spring Garden burnt.—This valuable plantation belonged to an enterprising citizen from the State of South Carolina. It is situated on Spring Garden creek, which empties itself into the St. John's, about twelve miles above Lake George. The settlement was made at great expense and labor, and under the active and judicious management of Mr. Forrester had advanced to great value. Besides cotton, corn, and other articles of provisions, which the place had yielded in very great abundance, the present season the proprietor reasonably calculated on upwards of one hundred hogsheads of sugar.

The settlement is in the way of an old and constantly used crossing place of the Indians, and as a frontier position a station might have been formed here which would have been advantageous to the public service; and it is the opinion of many that if the government had afforded the means of stationing twenty men there, and at two or three other points on the St. John's, it would have afforded complete protection to all the settlements east of the St. John's. The estimated loss of Colonel Rees is from \$130,000 to \$150,000.

[24TH CONGRESS.]

No. 628.

[1ST SESSION.]

ON THE ERECTION OF A MOLE AND FORTIFICATION FOR THE PROTECTION OF THE
DELAWARE BREAKWATER.

COMMUNICATED TO THE SENATE JANUARY 28, 1836.

WAR DEPARTMENT, *January 26, 1836.*

SIR: In obedience to a resolution of the Senate of the 20th instant, calling for information upon the subjects of a mole near Cape Henlopen, and fortifications for the protection of the Delaware breakwater, I have the honor to transmit reports from the quartermaster general and the chief engineer.

Very respectfully, your most obedient servant,

LEWIS CASS.

HON. M. VAN BUREN, *President of the Senate.*

QUARTERMASTER GENERAL'S OFFICE, *Washington City, January 25, 1836.*

SIR: In compliance with that part of a resolution of the Senate of the 20th instant, referred to this office on the 23d, requesting a report as to the expediency of constructing a mole or pier at or near Cape Henlopen, to facilitate the communication between the Delaware breakwater and the main land, and an estimate of the probable expense of the same, I have the honor to state that to facilitate the communication with the shore, and to enable vessels to take in or discharge their cargoes, it is not only desirable but absolutely necessary that a mole be constructed. At present, in consequence of the many sand-bars along the shore, landing in small boats when the waves run high is dangerous, and at times impracticable.

The most desirable location for a mole, so far as the convenience of the people of the town of Lewes and the adjacent country are concerned, would be at some point near the Atlantic Hotel; and were the entrance between the breakwater and the ice-breaker closed there would be no objection to this site. Under present circumstances, however, that point is not sufficiently protected from prevailing winds. A point about equidistant from the Atlantic Hotel and the breakwater house would be entirely protected, though it would not afford the same facilities to the inhabitants of Lewes for the purposes of trade as that above-mentioned.

If the mole be constructed near the Atlantic Hotel, and be extended out to twelve feet water, 45,000 tons of stone would be required, which, at two dollars per ton, and ten per cent. for contingencies, would cost \$99,000. If it be extended to ten feet water, 33,000 tons of stone would be required, which, at the

same rate, and with the same addition for contingencies, would cost \$72,600; the length in the former case would be 1,800 and in the latter 1,500 feet; the work estimated to be raised 10 feet above low water, and to be 22 feet wide at top.

The expense of constructing it at the other point mentioned would be about \$60,000 if carried out to 12 feet water, and about \$50,000 if carried out to 10 feet water; the length in the one case would be 1,200 feet, and in the other 1,050 feet. From the data already obtained, I think it will be ultimately determined to close the opening between the breakwater and the ice-breaker; and in that event I would recommend that the proposed mole be constructed near the Atlantic Hotel, and be carried out to 12 feet water. If an appropriation be made, I would therefore recommend the larger sum of those mentioned.

I return the resolution, and I am, sir, most respectfully, your obedient servant,

TH. S. JESUP, *Quartermaster General.*

Hon. LEWIS CASS, *Secretary of War.*

ENGINEERING DEPARTMENT, *Washington, January 23, 1836.*

SIR: In answer to so much of the Senate's resolution of the 20th instant requesting the Secretary of War to report on the expediency of establishing some fortification or means of defence for the protection of the breakwater near Cape Henlopen, I have the honor to state that the subject of protecting that position has already attracted the attention of this department, and an estimate of \$150,000 was accordingly submitted, on the 20th instant, to the Committee on Military Affairs of the House of Representatives, for that special object.

I am, very respectfully, sir, your most obedient servant,

C. GRATIOT, *Chief Engineer.*

Hon. LEWIS CASS, *Secretary of War.*

24TH CONGRESS.]

No. 629.

[1ST SESSION.]

APPLICATION OF THE CITIZENS OF EAST FLORIDA FOR THE PROTECTION OF THE GOVERNMENT AGAINST THE HOSTILITY OF THE INDIANS IN THAT TERRITORY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 2, 1836.

To the Senate and House of Representatives of the United States in Congress assembled:

This memorial, in behalf of the people of East Florida, ordered by a meeting composed of inhabitants of various parts of that district, assembled in the city of Saint Augustine, on the — day of January, 1836, most respectfully represents:

That the people of East Florida, some of whom, resigning their allegiance to the Spanish monarchy upon the transfer of the Floridas, preferred to shelter themselves under the free Constitution of the United States, upon whose readiness to foster them, and power to protect them, they were taught to rely; and others of whom, invited here by the offer of the public lands for sale, felt a pledged assurance, on the part of the government, that in coming to a country under its own especial care and guardianship they might repose in safety, and reap the benefits of their enterprise without disturbance; have thought themselves warranted in resting confidently and securely upon the protection and power of the great nation to which the Territory they inhabit appertains and is subject; that, in this dependence they had gone on in the improvement of their habitations and property, with that confidence and spirit which their reliance upon their government naturally inspired, until by the free expenditure of their means, and the industrious application of their time, they had, in some measure, subdued the hardships attending the settlement of a wild country, and were gradually gathering around their families the comforts and competence necessary to render health secure and life agreeable. Suddenly, when prosperity and success were crowning their labors, and the country was at last rising superior to the difficulties and accidents which had for years embarrassed its advancement, they find themselves surrounded by a savage foe, bearing the firebrand and tomahawk through the land with unrestrained fury, and their whole country enveloped in the horrors of a warfare at which the imagination of civilized man revolts and humanity sickens. They have been forced almost universally to abandon their habitations and their property to the licentious rage of the enemy, and flee with their families to places of temporary security. In this emergency they looked around them for the protecting arm of the government to shield them from ruin, but discovered, to their dismay, that the commanding general of the forces in Florida, in whose bravery and conduct they repose the most lively confidence, was, at this trying crisis, supported by a force too utterly inconsiderable to restrain the ravages or check the progress of the foe, and barely sufficient to maintain itself in safety. The consequence of this has been that desolation has covered the country, and numbers of their fellow citizens, who a few weeks since were in the enjoyment of competence and independence, are now reduced to want and absolute ruin. Nor has the misfortune and misery of the condition in which they have been placed rested here. By far the largest portion of the sparse population of East Florida consists of those who depend upon their own personal labor and industry for the daily support of their families. Those of them that resided in the country have been obliged to flee for safety to fortified posts, in most instances saving and taking with them their clothes only. All have been compelled to forego every other consideration, and take up arms for the defence of their own and the lives that are dear to them. The very aged and cripple have been obliged to forget their years and their infirmities, and shoulder their muskets for the general safety. And a total suspension of all ordinary business occupations has necessarily occurred. The most serious and lamentable distress has been by these means produced. In the picketed posts in the interior, where the inhabitants have flocked together for mutual defence, the provisions they were able to accumulate in the first stages of the war are being fast consumed, and the most serious apprehension may well be entertained that famine will soon be added to the other sufferings which attend the crowding together

of men, women and children, in small enclosures, and without necessary shelter. In this city, which is compelled, from its small population, not only to provide for its own defence, but for the most part to furnish troops for the protection of the whole extended country east of the St. John's river, for the defence of which not a single soldier of the regular army has been able to be spared from the operations of the small United States force on the other side, actual and distressing want has already visited the families of the laboring classes. Forced to abandon their occupations, and cut off from the fruits of the daily labor upon which their subsistence depended, they have to witness the sufferings of those they love, without the power to relieve them; and so far has this distress in some cases prevailed, that there are instances of those who have been obliged to limit their own meal, that they might divide with their families the single ration allowed them from the public stores while on duty. When to these are added the number of families that have sought refuge here from the surrounding country, abandoning their provisions with their other property, and not possessing the means of purchasing supplies here, the list of sufferers is indeed considerable. Private charity is now actively engaged in the succor of these people, but this resource can afford but partial and temporary relief. Nor is it possible to foresee the period to which this general distress may yet be protracted. The supplies of provisions produced by the last year's industry have, to a great extent, already been destroyed by the enemy. It is impossible at this late season that the troubles of the country can be quieted sufficiently early to enable agriculturists to return to their pursuits in time for the crop of the present year, especially when it is considered that many of the farms, with their stock, have been entirely destroyed, and that many more must yet share the same fate, before the government can interpose its might to arrest the hostile career of the savages. How it is, that at a juncture which should long since have been provided for by those whose duty it was to anticipate it, the lives and property of this people have been thus wantonly and inexcusably exposed to destruction, they cannot know; upon whom responsibility for the neglect and supineness which has resulted so disastrously should justly rest, they may not judge; but of this they are advised, that had the recommendations and requisitions of the commanding general of this brigade, made at an early day, as well as those (as they are informed) of the general in command of the regular forces in Florida, received attention, the blood which has unfortunately been shed would have been spared for better purposes, the country would not thus have been devastated, nor this appeal been rendered necessary. It is with strong claims, therefore, upon the sympathy and consideration of the government that they come forward now, in the midst of their distress, to pray, as most respectfully yet earnestly they do, that the officers in command of the forces in Florida be instructed to provide from the public stores for those who may be suffering from the causes above stated; that the militia of East Florida, engaged on duty, be allowed to receive their pay monthly, or bi-monthly, if possible, and an immediate appropriation be made for that purpose; and that a law may be passed, at an early day during the present session, providing for the remuneration of the losses suffered by our citizens, and which may yet be suffered. The two first stated objects of their prayer are called for by humanity, and are eminently necessary for the immediate relief of our suffering people; the last, the remuneration of losses, is a measure supported by precedent and the strongest considerations of justice, and a prompt action upon which is highly important, that those who have lost their all, and are now beggared, may have the means of supporting their families until they are again in the train of their agricultural pursuits.

And your memorialists will ever pray, as in duty they should, &c.

F. WEEDON,
Mayor of the city of St. Augustine and chairman of the meeting.
DAVID R. DUNHAM, Secretary.

24TH CONGRESS.]

No. 630.

[1ST SESSION.]

ANNUAL RETURNS OF THE MILITIA OF THE UNITED STATES FOR THE YEAR 1835.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 4, 1836.

WAR DEPARTMENT, February 1, 1836.

SIR: In obedience to the requisitions of the first section of the act of Congress of March 2, 1803, entitled "An act in addition to an act entitled 'An act more effectually to provide for the national defence, by establishing a uniform militia throughout the United States,'" I have the honor to transmit herewith abstracts of the general returns of the militia of the United States, and of their arms, accoutrements, and ammunition, for the year 1835.

Very respectfully, your most obedient servant,

LEWIS CASS.

Hon. JAMES K. POLK, *Speaker of the Ho. of Reps.*

ADJUTANT GENERAL'S OFFICE, Washington, February 1, 1836.

SIR: I respectfully submit herewith the annual general return of the militia force of the United States, and of arms, accoutrements, and ammunition, in duplicate, for the year 1835, required this day to be laid before Congress, in conformity with the act of March 2, 1803, "to provide for the national defence by establishing a uniform militia."

The general return is compiled from the several returns of the latest date received at the Adjutant General's office.

I am, sir, with great respect, your obedient servant,

R. JONES, *Adjutant General.*

Hon. LEWIS CASS, *Secretary of War.*

Abstract of the general annual returns of the militia of the United States, by States and Territories, according to the act of March, 1803, for the year 1835.

MILITIA RETURNS.

Abstract of the general annual returns of the militia of the United States, &c.—Continued.

States and Territories.	Returns.		Artillery.			Riflemen.						Aggregate.	Remarks.		
	For what year received.	Date.	Commissioned officers.	Non-commissioned officers, musicians, privates, &c.	Total.	No. of divisions.	No. of brigades.	No. of regiments.	No. of battalions.	No. of companies.	Commissioned officers.			Non-commissioned officers, musicians, privates, &c.	Total.
Maine.....	1835	Dec. 31.....	116	1,571	1,687	28	79	1,316	1,395	40,827	
New Hampshire.....	1835	June 27.....	108	1,628	1,736	70	1,190	1,260	28,777	
Massachusetts.....	1835	Dec. 28.....	224	2,761	2,985	146	407	8,591	8,998	44,933	
Vermont.....	1823	Mar. 20, 1834	83	953	1,036	25,581	
Rhode Island.....	1832	Dec. 31.....	19	207	226	1,377	The adjutant general says there are in the State 15 regiments—91 companies of infantry, and 17 companies of light infantry; the whole number of militia enrolled is probably about 9,600.
Connecticut.....	1835	Dec. 21.....	66	601	667	22	63	1,091	1,154	19,315	
New York.....	1834	Jan. 1, 1835	1,037	12,393	13,430	2	5	30	3	145	668	8,905	9,573	181,945	
New Jersey.....	1829	Dec. 2.....	89	1,836	1,925	24	81	1,747	1,828	39,171	
Pennsylvania.....	1833	Feb. 26, 1834	202,281	
Delaware.....	1827	12	176	188	32	511	543	9,229	
Maryland.....	1835	December.....	107	1,536	1,643	2	4	75	50	673	723	46,891		
Virginia.....	1835	Dec. 30.....	216	4,844	5,060	120	101,644	The adjutant general reports no returns from two entire regiments, and two companies in others—their aggregate strength by the returns of last year was 1,018.
North Carolina.....	1835	Dec. 24.....	20	25	45	10	50	791	841	64,415	The adjutant general reports the aggregate number of cavalry to be 930. Also, the aggregate of artillery, 131.
South Carolina.....	1832	Jan. 25, 1833	94	859	953	21	124	1,361	1,485	51,112	
Georgia.....	1834	Dec. 3.....	6	115	121	1	48,461	The adjutant general reports the aggregate 48,676. No returns from the second brigade, first division, and first brigade, eighth division. Reference has been had to the returns for the year 1833. An entire default in nine companies in the second brigade of the first division.
Alabama.....	1829	Dec. 20.....	14,892	The adjutant general reports the aggregate greatly below the real strength of the militia of the State.
Louisiana.....	1829	Jan. 1, 1830	55	719	774	60	784	844	14,808	
Mississippi.....	1830	Dec. 6.....	6	116	122	13,724	
Tennessee.....	1830	Dec. 31.....	60,982	The governor reports no returns from several regiments, and says, "if a complete return could be had, our militia would be at least 85,000."
Kentucky.....	1835	Dec. 10.....	33	510	543	20	51	1,265	1,316	70,323	
Ohio.....	1834	Jan. 12, 1835	121	1,963	2,084	27	242	913	15,120	16,033	132,713		
Indiana.....	1832	Jan. 4, 1833	60	620	680	123	2,592	2,714	53,913		
Illinois.....	1830	Jan. 1, 1831	11	33	27,386	
Missouri.....	1834	Feb. 14, 1835	6,170	The adjutant general says, "after waiting until this late period, I have been only able to receive a return from one division for the year 1834."
Michigan Territory.....	1831	Nov. 23.....	3	38	41	11	198	209	5,476	
Arkansas Territory.....	1825	Dec. 16.....	2,028	The governor reports the first regiment of infantry imperfect; the second only two companies returned; the fifth and ninth, no returns received.
Florida Territory.....	1831	Nov. 8.....	827	The adjutant general reports the militia about 4,000 effective men.
District of Columbia.....	1832	Nov. 20.....	2	23	25	4	32	36	1,249	The first and second brigades not heard from.

ADJUTANT GENERAL'S OFFICE, Washington, February 1, 1836.

R. JONES, Adjutant General of the Army.

24TH CONGRESS.]

No. 631.

[1ST SESSION.]

ON THE CLAIM OF BREVET MAJOR GENERAL ALEXANDER MACOMB FOR PAY AND EMOLUMENTS CORRESPONDING WITH HIS BREVET RANK.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 4, 1836.

Mr. ELISHA WHITTLESEY, from the Committee of Claims, to whom were referred the papers in relation to the claim of General Alexander Macomb, reported:

That the Secretary of the Treasury, in his estimates of appropriations for the year 1836, presented to the House of Representatives on the 8th of December last, under the head of "Military Establishment," Doc. No. 4, page 39, the following item, to wit:

"Brevet compensation to General Macomb..... \$6,080 05"

The estimates being referred to the Committee of Ways and Means, this claim was first taken under the cognizance of that committee. From considering it was not within its jurisdiction, the committee were discharged from the consideration of the claim, and the papers, by order of the House, were referred to the Committee of Claims on the 29th of December last.

The papers mentioned are contained in printed document No. 34 of this session.

It appears the Committee on Military Affairs, on the 8th of January, 1834, reported on the claim, and stated the claim was for the difference between what General Macomb had received as brigadier general and that which he was entitled to as brevet major general, which had been allowed to others under similar circumstances. He claimed it under existing laws and regulations. The committee say it is not for them to decide the question of pay under brevet rank; but that it belonged to the executive officers of the War Department to put a construction on the laws in relation to said pay, and if General Macomb was entitled to relief under said laws, it was competent for the Secretary of War to grant it to him. The committee ask leave to be discharged from the further consideration of the subject, and that the petition and papers be referred to the Secretary of War for adjustment, upon the same principles that have regulated similar allowances to others.

The Second Auditor of the Treasury, on the 15th of December, 1834, reported that General Macomb was entitled to the difference between the pay and emoluments of brigadier general and brevet major general from the 16th of April, 1818, the date of the act regulating the pay of brevet officers, to the 31st of May, 1821, while in command of the fifth military department, amounting to \$6,080 05, the same having been allowed by the Secretary of War on the certificate of the adjutant general.

This sum was admitted and certified by the Second Comptroller on the 2d day of January, 1835.

The decision of the Secretary of War, under the order of the House of Representatives mentioned, is as follows:

"Let General Macomb be allowed the difference in pay between a brigadier general and a major general while in command of the fifth military department; so that his whole pay for that period shall be that of a major general, he having the same command as Generals Scott, Gaines, and Ripley, and entitled to the same compensation. His other claim must be deferred for future consideration.

"LEWIS CASS.

"OCTOBER 22, 1834."

The 1st section of the act of April 16, 1818, is as follows:

SEC. 1. *Be it enacted, &c.*, That the officers of the army, who have brevet commissions, shall be entitled to, and receive, the pay and emoluments of their brevet rank when on duty, and having a command according to their brevet rank." The Secretary of War, under a resolution of the House referring the question to him for decision, has adjudged that General Macomb is entitled under this law to the allowance asked. Such being his decision under the order of the House, the committee see no grounds for reversing it.

A bill is herewith presented providing for the payment.

GENERAL MACOMB'S EXPLANATION.

DECEMBER 29, 1835.—Laid before the House by the chairman of the Committee of Ways and Means, and ordered to be printed.

The account of Major General Macomb for his brevet pay is founded on his services as a brevet major general from the 16th of April, 1818, to the 21st of May, 1821. During this time General Macomb was senior brigadier general of the army, and held at the same time the brevet of major general, and commanded the fifth military department, which was considered a command according to his brevet rank; but the general, not knowing that under the law he was entitled to his pay as major general, did not draw the same while he was on the frontier; but after coming to the seat of government in 1821, he discovered that Generals Gaines and Scott, and afterwards General Ripley, who were also brigadier generals with the brevets of major generals, did, under the law of April 16, 1818, draw their brevet pay, and that as General Macomb's command on the frontier was the most important, and equal to that of any other of the brevet major generals, he claimed his pay according to the account herewith, which was by petition brought before the Military Committee, which committee determined by their report (see document House of Representatives) that the Secretary of War and the accounting officers had sufficient authority under the laws applicable to the same to adjust the account, and *Resolved*, That the same should be referred to the Secretary of War, with directions to settle the accounts of General Macomb on the same principles that the accounts of officers similarly situated had been settled. The examination of the claim of Brevet Major General Macomb by the proper officers, and on the report of the adjutant general, decided the matter in his favor, and the account was duly audited, allowed, and passed.

The law in this case is as follows: "An act regulating the pay and emoluments of brevet officers."

SEC. 1. *Be it enacted, &c.*, That the officers of the army, who have brevet commissions, shall be entitled to, and receive, the pay and emoluments of their brevet rank when on duty, and having a command according to their brevet rank. [Approved April 16, 1818.]

Dr.

The United States to Alexander Macomb.

REMARKS.—This account is for the difference of his pay as major general by brevet, and that of brigadier general, while commanding the fifth military department, General Macomb having, during the time, charged a command, and was on duty according to his brevet rank.

I allow the claim of Major General Macomb, as here charged, for the difference between his pay as a brigadier and that of major general by brevet while commanding the fifth military department, his command being similar to the commands of Brevet Major Generals Gaines, Scott, and Ripley, who all, under the same circumstances, received the pay of major general.

I hereby certify that the foregoing account is accurate and just; that I have not received pay, nor drawn rations, forage, or clothing in kind, or received money in lieu of any part thereof, for any part of the time therein charged; that I actually employed and kept in service the horses and private servant for the whole of the time charged; and that I did not, during the term so charged, or any part thereof, keep or employ as waiter or servant soldier from the line of the army; that the annexed is an accurate description of my servant; that, for the whole period charged for my staff appointment, I actually and legally held the appointment, and that I was the actual and only commanding officer at the double-ration post charged for; and that no officer within my knowledge has a right to claim, or does claim, for said services, or any part of the period charged; that for the whole time brevet pay is claimed I was on duty, and had a command according to my brevet rank, agreeably to law and regulation; that I was actually in the command of a company for the whole time additional pay is charged; that I have not been in the performance of any staff duty, for which I claim or have received extra compensation, during the time an additional ration is charged for; that I am not in arrears with the United States on any account whatsoever; and that the last payment I received was from Paymaster _____, and to the _____ day of _____, 183—.

I at the same time acknowledge that I have received of T. P. Andrews, paymaster, this _____ day of _____, 183—, the sum of _____ ¹⁰⁰ dollars, being the amount and in full of the said account.

(Signed duplicates) ALEX. MACOMB, Major General Commanding.

A. MACOMB.

No. 1838.]

TREASURY DEPARTMENT, *Second Auditor's Office, December 15, 1834.*

I certify that I have examined and adjusted the account of Major General Alexander Macomb, and find that there is due to him as brevet major general the difference between the pay and emoluments of that grade and those of a brigadier general, from the 16th of April, 1818, the date of the act regulating the pay and emoluments of brevet officers, to the 31st of May, 1821, while in command of the fifth military department, amounting to \$6,080 05, which is allowed by the Secretary of War, on the evidence of the certificate of the adjutant general, (B,) showing that the number of companies under the command of General Macomb, during the above period, was greater than the number of companies stationed within

the military department commanded by Brevet Major General Scott, to whom a similar allowance was made in October, 1822; and also, subsequently, to Brevet Major Generals Gaines and Ripley. Being in conformity with the opinion of the Committee of Claims of the House of Representatives, (Report No. 6, 2d session, 22d Congress,) and of the late Second Comptroller of the Treasury, (C,) as appears from the statement and vouchers herewith transmitted for the decision of the Second Comptroller of the Treasury thereon.

JAMES B THORNTON, Esq., *Second Comptroller of the Treasury.*

W. B. LEWIS, *Second Auditor.*

SECOND COMPTROLLER'S OFFICE.

I admit and certify the above balance this second day of January, 1835.

J. B. THORNTON, *Second Comptroller.*

Let General Macomb be allowed the difference in pay between a brigadier general and a major general, while in command of the fifth military department; so that his whole pay for that period shall be that of a major general, he having the same command as Generals Scott, Gaines, and Ripley, and entitled to the same compensation. His other claim must be deferred for future consideration.

LEWIS CASS.

OCTOBER 22, 1834.

24TH CONGRESS.]

No. 632.

[1ST SESSION.]

ON THE JUSTIFICATION OF A PAYMASTER'S ADVANCING FUNDS ON THE ORDER OF HIS COMMANDING OFFICER.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 30, 1836.

Mr. DROMGOOLE, from the Committee on Military Affairs, to whom was referred the petition of Henry Lee, praying to be released from the payment of a sum of money for which a judgment by default was obtained against him, as security of John Ricaud, paymaster to the 36th regiment of United States infantry, commanded by William Carberry, in the district court of the United States, held in the city of Richmond, Virginia, in the month of ———, in the year ———, reported:

That it appears to your committee that the petitioner was the security of Paymaster John Ricaud, as above stated, and that, as such, a judgment was obtained against him in manner as aforesaid, for the sum of ——— dollars and ——— cents, by default; the petitioner made arrangements, through mistake, to appear and make his defence in the circuit court of the United States, held in Virginia, when, in fact, the suit against him was in the district court of that State, in which last-named court a judgment by default was obtained against him without reference to the actual merits of the case.

It further appears that during the cantonment of the aforesaid 36th regiment at Annapolis, in the State of Maryland, and during the confinement of Paymaster Ricaud to his bed by severe illness, it became necessary, in the opinion of Colonel Carberry, that a small payment, of about five dollars, a man should be made, in anticipation of the next quarter-day, to each non-commissioned officer and private composing the regiment then under his command, as necessary to the operations of the said regiment; that Colonel Carberry, being cognizant of the illness and consequent incapacity of Paymaster Ricaud to execute personally the required payment to the troops, went himself to the sick bed of his paymaster and required him to place into his (the colonel's) hands two thousand dollars for the purpose above stated; that, in obedience to the requisition of Colonel Carberry, Paymaster Ricaud made his check in favor of Colonel Carberry, on the Bank of Annapolis, for the two thousand dollars demanded of him, payable to Colonel William Carberry or bearer, and delivered it to the colonel; that Colonel Carberry drew the money on the said check, placed it in the hands of his adjutant, Lieutenant Hooks, who paid it over to the troops; that prior to the regular quarter-day ensuing the said payment made by Lieutenant Hooks, and during the continued illness of Paymaster Ricaud, Colonel Carberry removed with his regiment from Annapolis; that part of the said regiment went to Fort Washington, on the Potomac river, and the residue of it went to the city of Washington, all in the district of Paymaster Satterlee Clarke, who, of course, thereafter made all subsequent payments due to it; that Ricaud ceased to act as paymaster to the said 36th regiment from the time of its removal from Annapolis, and not long thereafter he died.

That under the foregoing statement of facts the account of Paymaster Ricaud was presented to the Third Auditor for settlement; that the Third Auditor would not allow to the said Ricaud a credit for the \$2,000 paid over as aforesaid by the said Ricaud to Colonel William Carberry; whereupon, Ricaud being dead and insolvent, a suit was instituted by the United States against the petitioner, as the security of Ricaud, to recover from him the said \$2,000, and judgment as aforesaid was obtained against him. After an attentive examination into this case by the committee, it seems to resolve itself into a single proposition—that is, was the payment of the \$2,000 by Ricaud to Colonel Carberry, made in pursuance of the facts and circumstances above recited, such a payment as, according to military authority and usage in time of war, entitles him to a credit in the settlement of his account as paymaster to the 36th regiment, of which Colonel William Carberry had command. The committee upon this point are satisfied that Paymaster Ricaud was bound by long-established military usage to surrender the \$2,000 in question to the colonel, whose demand he had no power to resist, upon whom alone the subsequent responsibility rested for the faithful application of the fund so possessed by him to the public service. The committee therefore come to the following resolutions:

Resolved, That the proper accounting officer of the treasury be directed to allow the said John Ricaud a credit in the settlement of his account as paymaster for the sum of \$2,000, paid by said J. Ricaud on the requisition of his commanding officer, Colonel William Garberry.

Resolved, That Henry Lee, as security of Paymaster John Ricaud, ought to be released from the force and effect of the judgment obtained against him and referred to in the foregoing report. For the above objects the committee report a bill.

[24TH CONGRESS.]

No. 633.

[1ST SESSION.]

ON THE LIABILITY OF THE UNITED STATES FOR A CONTRACT MADE BY AN OFFICER
OF THE ARMY WITH CITIZEN SURGEONS TO ATTEND THE TROOPS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 4, 1836.

Mr. THOMSON, of Ohio, from the Committee on Military Affairs, to whom was referred the memorial of Doctors Findley and Deas, reported:

That it appears, from the documents submitted to the committee, that on the 12th day of April, 1834, a written contract was entered into between Major Heileman, of the United States army, then commanding the troops in Charleston harbor, on the part of the United States, and Doctor Findley, of Charleston, S. C., on the other part.

By this contract, (a copy of which was referred to your committee,) it appears that for and in consideration of the sum of one hundred and fifty dollars, to be paid by the United States, Doctor Findley agreed to render his professional services to two companies of United States troops on board the schooner Francis Jane, and bound from Charleston, S. C., to Old Point Comfort, Va.

It also appears that a similar contract was entered into by the same Major Heileman, of the same date, promising a like sum of one hundred and fifty dollars to Doctor Deas, of the same place, for his professional services to two companies of United States troops on board the brig Planter, which was bound from the same place, at the same time, to Old Point Comfort, Va.

It further appears, from the papers referred to your committee, that the services covenanted to be rendered by those gentlemen were faithfully performed, as letters from the Secretary of War and the surgeon general of the army fully show; but the Secretary says that, under the circumstances, the claims cannot be allowed at the department, although he says Major Heileman is an officer of worth and character, and that Congress alone can act favorably on those cases. As the claims of those gentlemen have been disallowed at the department, partly on the ground that their professional services were not necessary to the health and comfort of those troops, your committee sought for some evidence of that necessity, and find by a letter of Colonel Gardener, (commanding at Old Point Comfort,) to the Hon. H. L. Pinckney, that the necessity for the employment of those gentlemen did exist, and that professional services were performed by them on the voyage, but that, owing to the length of time since that service, the names of the sick are not now recollected by Colonel Gardener.

Your committee, after a careful examination of this case, have come to the conclusion that, inasmuch as the services of those gentlemen were necessary, and were on their part faithfully performed under a written contract entered into with them by an officer of the United States, who was presumed to know his duty, and his authority to bind the United States, they are in equity entitled to the sums covenanted to be paid to them by that officer, notwithstanding the regulations of the War Department are against them, and have therefore reported a bill for their relief.

No. 634.

[1ST SESSION.]

ON A CLAIM ON ACCOUNT OF VOLUNTARY SERVICES IN A MILITARY CAPACITY DURING
THE WAR OF 1812.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 4, 1836.

Mr. ELISHA WHITTLESEY, from the Committee of Claims, to whom was referred the petition of William Christy, reported:

That the petitioner during the last war, when about the age of twenty years, and an orphan, abandoned his study of the law and joined the northwestern army, then under the command of General Harrison, as a volunteer. He did not belong to any corps, but offered his services to be disposed of as the commanding general should think would best advance the interests of the country. General Harrison assigned to him the duties of military storekeeper, which he says were very arduous, during and after the siege of Fort Meigs, and were discharged by the petitioner with great zeal and fidelity. General Harrison, in a letter addressed to Colonel R. M. Johnson, on the 31st of October, 1834, gives the following

account of Mr. Christy's military services. "But these peaceful labors were not calculated to satisfy his chivalrous spirit and the ardent thirst for military fame which had induced him to abandon his studies and assume the military habit. Every moment which he could spare from the care and distribution of the public stores was employed upon the lines, where he often exposed himself to the enemy's fire from a desire to retaliate upon them with his rifle. It was, however, on the eventful 5th of May that an occasion was presented to him to distinguish himself in a manner more to his taste, by a close conflict with the enemy. A sortie having been ordered to dislodge the enemy from their position on our right flank, composed of regular troops and twelve months' volunteers, I commanded a company of Kentucky riflemen, commanded by Captain Sebree, to join the detachment to cover its right flank in the attack of the British batteries. In its advance this company fell in with the mass of the Indian force commanded by Tecumseh. In the conflict that ensued it was surrounded by the Indians and was forced to divide itself, one part pursuing the enemy to the front, whilst the other, under the command of Christy, faced about and engaged the Indians in the rear. This gallant little band were, however, soon overpowered, and all but two and its heroic leader killed; with these two, himself slightly wounded, Christy broke through the enemy's line and joined the regular troops."

He so distinguished himself afterwards on the same day, under the command of Lieutenant Gwynne, who commanded a company in the 19th regiment, that General Harrison recommended him to the Executive, and he received the appointment of second lieutenant in the army.

Mr. Hagner states, it appears from the Army Register that Mr. Christy's commission bears date the 19th of April, 1814, and that it does not appear he received any compensation before that period.

The day he joined the army does not appear with absolute certainty; General Harrison says it was in the month of April, 1813. The committee requested the Secretary of War to state whether it appeared on the rolls of the army that Mr. Christy was in the military service of the United States before the date of his commission, and what compensation was given to his grade or rank. The letter of Mr. Hagner, referred to above, informs the committee that it does not appear from the rolls of the army that Mr. Christy was in the military service at the time spoken of by General Harrison, and that it was not usual at that time to bear on the rolls the names of the military storekeepers. He says the compensation, under the act of March 3, 1813, was fixed by the Secretary of War, in the northwestern army, at forty-two dollars per month for a military storekeeper, subsisting himself, which was equal to thirty dollars per month and two rations per day.

Although the petitioner has not specifically asked to be compensated for this year of voluntary servitude, the committee think the ardor of youth, in tendering such services gratuitously, should not prevent the country from making a just and legal recompense. In drafting the bill the committee will incorporate a provision directing the accounting officers of the treasury to allow the petitioner the pay and emoluments of military storekeeper for one year, to be applied on the judgment hereafter mentioned.

The petitioner mentions his services on the lines in the northern part of New York, in arresting the smuggling of goods from Canada during the portion of the summer of 1814, of the seizures he made, of the suits that were commenced against him for false imprisonment and assault and battery, for which, he says, he was entitled to extra pay and to a certain portion of the proceeds of all the goods seized and condemned, but before any civil proceedings were had against the property seized, he was ordered to New Orleans to join the first regiment of United States infantry, to which he was attached under the arrangement for the peace establishment.

Of these services and of the goods seized, libelled, or condemned, there is no evidence. The petitioner was appointed paymaster of his regiment; and, he says, on his way to New Orleans, while in Kentucky, he executed a bond, and on his arrival at New Orleans executed and forwarded to the pay department another bond for the faithful accounting for the money that might be placed in his hands and for the discharge of his duties according to law. He received twenty thousand dollars, and was paying off his regiment when he was informed his office of paymaster was abrogated. He says he had paid out about eight thousand dollars. He obtained permission of General Jackson to come to Washington to attend to the settlement of his accounts and to obtain an explanation for the abrupt manner in which he had been dismissed. The paymaster general left Washington the next day, and he was not able to obtain any satisfaction, nor did he have an opportunity to settle his accounts. Being disgusted with the service on account of the ill treatment he had suffered, he tendered his commission in the line, with the understanding his accounts were to be made up in Kentucky, and the balance found due from him paid over in New Orleans, where he had received and left it. He says he proceeded to Kentucky, made up his accounts, and forwarded them to the pay department, and promised to pay over the balance, about \$12,000, on his arrival in New Orleans; but as soon as his accounts were received, and before they were audited, an order was issued for a suit to be brought against him in Kentucky and against his sureties. He heard of the institution of the suit on his way to New Orleans, when he left the boat, returned to Frankfort, and delivered himself up to the marshal, and was permitted to prosecute his journey on giving bonds for defending the suit with George M. Bibb, esq., his surety. He went to New Orleans and made arrangements to establish himself as a commission merchant, when he was arrested in a second suit, as were his second sureties on the second bond, to recover the same balance on which the first suit was commenced.

He here mentions he fell into the hands of injudicious friends, who advised him not to pay the money over until some reparation should be made to him. To this advice he at length yielded, and his friends took the money and died insolvent.

It appears from a communication from Mr. Maxcy, Solicitor of the Treasury, that the suit against Mr. Christy and his sureties was commenced on the 23d of December, 1816, for the recovery of \$12,423 12, of which \$3,423 12 was paid in the year 1818; that the final hearing was not had until December term, 1827, when a judgment was rendered against the petitioner for \$9,000, with interest from the 27th of February, 1816. His sureties were discharged on the verdict of a jury at the December term, 1826. The district attorney reported that Mr. Christy was insolvent in 1828; since then no part of the money has been collected. It is under these circumstances relief is asked.

The committee understood from a verbal conversation with the member who presented the petition that Mr. Christy, by the aid of his friends, would pay the principal, if indulgence could be granted to him and he could receive an assurance that the interest would be relinquished.

A letter was accordingly addressed to the Secretary of the Treasury on the 9th of January, 1836, requesting him to inform the committee, taking all the circumstances of the case into consideration, the situation of the party, and the influence a relinquishment of the interest might have on other debts due

the United States, whether, in his opinion, it would be expedient to relinquish the interest, if an arrangement could thereby be effected and the principal secured. The Secretary in reply says:

"I have the honor herewith to transmit to you a report from the Solicitor of the Treasury in relation to the judgment against William Christy. On the facts stated in this report the department thinks it would be an advantageous arrangement to obtain the principal of the debt."

The committee will not comment on the treatment the petitioner received in the abrogation of his staff appointment, and in being twice arrested for the same debt, and held to bail in two actions at the same time, further than to remark, it was not the best calculated to conciliate the feelings of an ardent young man who had voluntarily devoted a year of his life in the service of his country without rank and without reward.

In coming to a decision in this case the committee take all the circumstances of it into consideration, and by recommending the relinquishment of the interest it would not be considered as pledged to do it in any other case where the circumstances were not in all essential particulars similar to those now presented.

The committee report herewith a bill.

24TH CONGRESS.]

No. 635.

[1ST SESSION.

ARMY REGISTER FOR THE YEAR 1836.

COMMUNICATED TO THE SENATE FEBRUARY 4, 1836.

WAR DEPARTMENT, February 3, 1836.

SIR: I have the honor to transmit a communication from the adjutant general, with fifty copies of the official Army Register, for the members of the Senate, in conformity with the resolution of the Senate of December 13, 1815.

Very respectfully, your most obedient servant,

LEWIS CASS.

Hon. M. VAN BUREN, *President of the Senate.*

ADJUTANT GENERAL'S OFFICE, Washington, February 2, 1836.

SIR: I herewith respectfully present fifty copies of the official Army Register for 1836, required to be furnished by the Secretary of War for the use of the members of the Senate of the United States, as enjoined by a resolution of that body dated December 13, 1815.

I am, sir, very respectfully, your obedient servant,

R. JONES, *Adjutant General.*

Hon. LEWIS CASS, *Secretary of War.*

Register of the army of the United States for 1836.

The western department comprises all west of a line drawn from the southernmost point of East Florida to the northwest extremity of Lake Superior, taking in the whole of Tennessee and Kentucky; and the eastern department all east of such line, including Fort Winnebago.

The headquarters of the general-in-chief are in the District of Columbia.

The headquarters of the western department are at Memphis, Tennessee.

The headquarters of the eastern department are in the city of New York.

Those officers whose stations are changed by transfers and promotions will report for duty accordingly.

By order:

R. JONES, *Adjutant General.*

24TH CONGRESS.]

No. 636.

[1ST SESSION.]

EXPLANATORY ESTIMATES FOR ADDITIONAL APPROPRIATIONS FOR THE QUARTERMASTER'S DEPARTMENT DURING THE YEAR 1836.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 3, 1836.

WAR DEPARTMENT, *February 3, 1836.*

SIR: I have the honor to transmit an estimate of the additional amount required for the Quartermaster's department the present year, and recommend it to the favorable consideration of the committee. Very respectfully, your obedient servant,

LEWIS CASS.

Hon. C. C. CAMBRELENG, *Chairman Committee of Ways and Means, House of Representatives.*

QUARTERMASTER GENERAL'S OFFICE, *Washington, February 1, 1836.*

SIR: I have the honor to present an additional estimate for the service of the Quartermaster department, based upon information received since the annual estimate was submitted. The sums required for barracks, wharves, &c., are necessary to the comfort of the troops, and the convenient despatch of business; and if the appropriation asked for by the Ordnance department for arming the fortifications be granted by Congress, a greater sum than that asked for transportation of ordnance will probably be required to place all the ordnance and stores in their proper positions, but the sum included in the estimate is as much as can be applied judiciously during the present year.

I am, sir, respectfully, your obedient servant,

TH. S. JESUP, *Quartermaster General.*

Hon. LEWIS CASS, *Secretary of War.*

Estimate of funds for objects not included in the quartermaster general's annual estimate, because the information upon which most of the items are based has been received since that estimate was prepared.

1. For erecting a piazza in front of the building occupied as barracks by the troops, at Augusta arsenal, Georgia..... \$450 00
 In reference to this item I would remark, that because of the intense heat of the sun, which is powerfully reflected by the parade ground, in this case it would seem proper that such accommodation as this should be afforded.
2. For barracks, quarters, storehouses, hospital, stables, &c., and materials for the same, at Fort Jesup, Louisiana..... 25, 000 00
 In explanation of this item it is proper to say, that the present quarters, barracks, &c., there are mostly in a ruinous condition, nearly the whole of them having been built in 1822, of pine logs hewn on two sides, and to repair them thoroughly would cost a sum almost, if not quite, equal to that estimated for new ones; in erecting new ones it is contemplated that such of the old materials as are fit to be used would be made use of. New ones are indispensable for the health and comfort of the troops.
3. For rebuilding the wharf, and for materials for the same, at Fort Wolcott, Newport, Rhode Island..... 500 00
 Wharves are indispensable at many of the military posts, and it is believed to be the case in the present instance, for the purpose of landing and shipping public supplies; and they are a means of facilitating the transportation of troops and stores.
4. For constructing a wood-yard and wood-yard wharf, and for materials for the same, at Fort Monroe, Virginia..... 1, 000 00
 It is proper to remark that the present wharf has become, in a manner, useless, in consequence of the filling in with sand, as have all wharves at that point, but which from time to time have been extended out into the bay. The yard attached to the present wharf is of very old materials and unfit for removal, it being in contemplation to change the position of the wharf so as to get rid of the liability to fill up with sand, as well as to take it and the yard from the front of one of the curtains of the work and its bastion.
5. For constructing a wharf, and for materials for the same, at Fort Severn, Maryland. . 1, 000 00
 The present wharf at that post is almost entirely destroyed, and is on a level with low water, hence the necessity of having a new one.
6. For rebuilding and repairing barracks, quarters, hospital, storehouses, &c., and materials for the same, at Fort Brady, Michigan Territory..... 5, 000 00
 Fort Brady is one of the most northern posts now occupied by the United States. It commands an important communication. If a garrison be retained there, the amount estimated for will be absolutely necessary.
7. For the purchase of lots containing between four and five acres, (the precise quantity is not known at this office,) adjoining Fort Sullivan, and the buildings on them, consisting of a block-house, and a frame house..... 3, 750 00
 It was reported to the quartermaster general in April, 1835, that a right of way through a part of the land estimated for was very desirable on account of the facilities which it would afford in getting wood from the wharf to the wood-yard of the garrison, and that should the property be built upon, as was probable, it was supposed the kind of population

that would occupy the buildings would have a most pernicious tendency, and consequently be prejudicial to the service. The quartermaster general gave instructions for the renting of the lots, if a lease could be obtained; if not, to make such arrangements as to obtain a passage way; and he also gave instructions for ascertaining at what price the lots could be purchased. The agent of this department at that post afterwards reported that he had obtained the offer of about four acres of the land for three thousand dollars, and that he had rented it, without the block-house, at sixty dollars per year, the lease of which expires on the fourth day of July, 1836; and at the same time a bond was sent to the quartermaster general, executed by the joint owners, by which they bound themselves, their heirs, and administrators, in a penalty of six thousand dollars, to transfer and make over the said parcel of about four acres, and the block-house upon it, to the United States, for the sum of three thousand dollars, on condition that the United States offer and tender that sum at any time within one year from the fourth day of July, 1835. One of the signers of the bond is since dead. The other part of the land estimated for, of less than one acre, with the frame-house upon it, it is supposed can be purchased for seven hundred and fifty dollars. The commanding officer of Fort Sullivan wrote to the quartermaster general, under date of the 7th ultimo: "If this post is to be continued as a permanent one, I think the addition indispensably necessary, as the back wall of the barracks, hospital, and several other buildings, are on the line of this land, which lies between them and the street."

8. For the transportation of ordnance and stores in the event of an appropriation being made in accordance with the statement of the colonel of ordnance, of January 21, 1836, of the expenditures to complete the armament of the forts therein named..... \$200,000

Should an appropriation be made to the extent of the statement of the colonel of ordnance, this sum, it is proper to say, will not be sufficient to defray all the expenses of transportation; but it is believed the amount asked for is as much as can be advantageously made use of during the present year, and it is not thought advisable to ask for more.

236,700

In regard to barracks, quarters, &c., and for transportation, it is proper to remark that, on March 28, 1812, Congress, by law, made it the duty of the quartermaster's department, under the direction of the Secretary of War, to purchase military stores, camp equipage, and other articles requisite for the troops, and to procure and provide means of transportation for the army, its stores, &c.; and on March 3, 1813, the Secretary of War was authorized to make regulations for the purchase and distribution of supplies. On March 3, 1813, by another act, he was authorized to make regulations for defining the powers and duties of the several branches of the staff, which regulations, when approved by the President, were to continue in force until revoked by the same authority. Regulations were accordingly made which conferred on the officers of the quartermaster's department the power to provide quarters, fuel, transportation, and generally to make various other expenditures. The regulations conferring those powers, and prescribing those duties, were recognized and adopted by the 9th section of "An act for organizing the general staff," &c., approved April 24, 1816, subject to such alterations as the Secretary of War might adopt, with the approbation of the President. The regulations, therefore, made in pursuance of law, and which have been altered from time to time under the legal authority to do so, are, together with the annual appropriations, the authority for most of the expenditures which are made by the Quartermaster's department.

Wharves for military posts come under the general authority to provide fuel, transportation for the army, its stores, &c.

THOS. S. JESUP, *Quartermaster General.*

QUARTERMASTER GENERAL'S OFFICE, *February 1, 1836.*

24TH CONGRESS.]

No. 637.

[1ST SESSION.]

ON THE SERVICES OF THE COMPANIES OF CAPTAINS CRAWFORD AND WALLIS, OF THE STATE OF MISSOURI, AGAINST THE INDIANS IN 1832.

COMMUNICATED TO THE SENATE FEBRUARY 8, 1836.

Mr. TIPTON, from the Committee on Military Affairs, to whom were referred the documents relating to the claims of sundry individuals for services in the companies of Captains Crawford and Wallis, of the State of Missouri, against the hostile Indians in 1832, reported:

That all the evidence before the committee is contained in a copy of a letter from Andrew S. Hughes, agent for the Ioway Indians, to Colonel Shubael Allen, commanding the militia of Clay county, Missouri, dated July, 1832; a copy of a letter from Colonel Allen to General William P. Thompson, dated July 18, 1832; a letter from General Thompson to his excellency Governor John Miller, of Missouri, and extracts from two letters from Governor Miller to Major General Trigg and Brigadier General Thompson, dated July 25, 1832, with muster-rolls of the two companies commanded by Captains Wallis and Crawford.

Taking the above copies and extracts of letters and the rolls of the companies as authentic, the committee see no good grounds to question the truth of the facts stated. It appears that Mr. Hughes, the Indian agent, discovered, as he supposed, a hostile disposition among the Indians of his agency during the progress of the war commonly called Black Hawk's war, and in the month of July, 1832, he

arrested about twenty of the principal men of the Ioway and Sac tribes of Indians, and detained them as hostages for the good conduct of the balance of their tribes, and despatched an express to Colonel Allen, of the militia of Clay county, who ordered the companies above mentioned into service to guard the prisoners, and for the protection of the frontier of Missouri, and reported the fact to his superior officer, General Thompson, and by General Thompson it was reported to his excellency Governor Miller, who approved the steps taken by General Thompson and Colonel Allen. These companies were continued in public service, as appears by the muster-rolls before the committee, from the 18th of July to the 18th of August, 1832, and for this service they claim compensation from the United States government. By a letter from the Paymaster General of the United States, it appears that the sum required to pay these companies for their services is \$3,300.

The committee have had their attention drawn to two other cases in which provision will be necessary for the payment of the militia called out for the defence of the frontiers of Indiana and Missouri. The companies of Captains Matthew P. Long, of Missouri, and D. Siglor, of Indiana, are entitled to compensation for their services; that for the former amounting to \$700, and for the latter to \$300, as appears from letters from the paymaster general which accompany the papers upon which this report is founded.

The committee, therefore, report a bill embracing the several cases above mentioned.

24TH CONGRESS.]

No. 638

[1ST SESSION.]

MILITARY ORDERS AND OPERATIONS AGAINST THE INDIANS IN FLORIDA, AND FOR THEIR REMOVAL WEST OF THE MISSISSIPPI RIVER.

COMMUNICATED TO THE SENATE FEBRUARY 10, 1836.

To the Senate of the United States:

In answer to the call made by the Senate in their resolution of the 3d instant, relative to the Indian hostilities in Florida, I transmit herewith a report from the Secretary of War, accompanied by sundry explanatory papers.

ANDREW JACKSON.

WASHINGTON, *February 9, 1836.*

WAR DEPARTMENT, *February 9, 1836.*

SIR: In answer to the resolution of the Senate of February 3, 1836, requesting the President to communicate to the Senate all the measures taken by the administration to suppress the Indian hostilities in Florida, and also to communicate all the information in his possession relative to the cause of those hostilities, I have the honor to transmit a report from the adjutant general, showing the measures above referred to which have been adopted.

I transmit, also, the accompanying summary of the proceedings with the Seminole Indians subsequent to the formation of the treaty with them at Payne's Landing, concluded May 9, 1832, and ratified April 8, 1834, exhibiting the causes which have led to the present hostilities, so far as they are known at this department.

Very respectfully, your most obedient servant,

LEW. CASS.

The PRESIDENT of the United States.

ADJUTANT GENERAL'S OFFICE, *Washington, February 9, 1836.*

SIR: In complying with your instructions to report the military operations of the department touching the suppression of Indian hostilities in Florida, it may be proper to advert to the first order augmenting the force in that quarter, and to the assignment of an officer of the army to duty there, who, in his capacity of commander of the troops, was required also to afford all proper aid to the agents of government appointed to conduct and superintend the removal of the Seminole Indians west of the Mississippi, in conformity with the stipulations of their treaty with the United States.

In consequence of the state of affairs as reported by the commanding officer of Fort King on the 27th October, 1834, and the officer of the commissary's department charged with duties connected with the removal of the Indians, and also on the report of the Indian agent, it was deemed necessary to increase the military force stationed in Florida. Accordingly orders, dated November 24, were issued directing three companies of artillery to take post at Fort Brooke, Tampa Bay, and the company stationed at Fort Marion, St. Augustine, to join the garrison at Fort King, then consisting of one company of infantry. The same order assigned Brevet Brigadier General Clinch to the command of the troops in Florida, an officer of much experience, and being well acquainted with the Indian habits and character; he was also required to co-operate with the Indian agent in all proper measures relative to the contemplated removal of the Seminole Indians.

On a requisition of General Clinch, received in February, 1835, for six additional companies to strengthen his command, four companies of artillery, under Brevet Lieutenant Colonel Fanning, of the

4th regiment, were, on the 14th of February, 1835, ordered from Fort Monroe to Fort King, with authority, at the same time, to draw in the company of infantry at Key West. The number of companies in Florida was now increased to ten; of which number, six were concentrated at Fort King, three at Fort Brooke, as before stated, and one stationed at Key West.

On the 12th of October Lieutenant Harris, of the artillery, disbursing agent for the Seminoles, recommended that the force in Florida should be increased; but as no additional requisition for that purpose had been received from General Clinch, it was not considered proper to direct this measure. On the 15th of the month the two companies of artillery stationed at Forts Morgan and Pickens, near Mobile and Pensacola, were placed under his orders.

On the 21st of October a letter, dated the 8th, was received from General Clinch, in which he suggested the propriety of being authorized to call into the service one hundred and fifty mounted volunteers, to aid in the removal of the Indians and to suppress any difficulties which might occur. But as this force was required to aid in the removal of the Indians and to prevent difficulties which were anticipated, and not to repress hostilities which had commenced, or which were then impending, General Clinch was informed, in answer, on the 22d of October, that there was no appropriation authorizing the measure, and that the President, under existing circumstances, did not consider that the case came under the constitutional power to call into service an additional force for the defence of the country. But he was authorized to order two more companies, viz: those at Forts Wood and Pike, to join him, which, with the two companies placed at his disposal on the 15th of October, made four companies of regular troops, in lieu of the mounted men. On the 30th of the same month orders were given by the Navy Department to Commodore Dallas to direct one of the vessels of the squadron to co-operate with General Clinch in his endeavors to effect the removal of the Seminoles.

In a letter received on the 31st of October General Clinch requested that three companies of regular troops might be added to his command. He was apprised, however, by previous orders, that four had already been placed at his disposal.

In his communication from St. Augustine, dated 29th November, received on the 9th of December, General Clinch reported that, should he find it necessary for the protection of the frontier settlements, he would assume the responsibility of calling out at least one hundred mounted men, believing that the measure would be sanctioned by the President and Secretary of War. This approval was communicated to him on the same day; and, in addition to it, a letter was addressed to the governor of Florida, requesting him to place at the disposal of General Clinch any militia force that officer might require. Of this General Clinch was informed. He was also informed that, at the request of General Hernandez, orders would be given, through the Ordnance department, to issue five hundred muskets and the necessary equipments to the militia.

It appears that, on the 30th of November, the force in Florida consisted of one field officer and nine companies of artillery, besides two of infantry, and were posted as follows:

At St. Augustine, one company, fifty-three strong, including three commissioned officers; at Fort King, six companies, three hundred and three strong, including one field officer and twelve company officers; at Fort Brooke, Tampa Bay, three companies, one hundred and thirty-three strong, including nine company officers; at Key West, one company, forty-seven strong, including one company officer—making, in the aggregate, five hundred and thirty-six, including twenty-six commissioned officers, then serving in Florida.

The four companies placed under the orders of General Clinch in October were, pursuant to his orders, drawn from their permanent stations, and severally arrived at Fort Brooke on the 27th of November, 12th, 25th, and 28th of December, as did the company from Key West on the 21st of that month.

On the 23d of December a detachment of two companies, commanded by the gallant Major Dade, took up the line of march from Fort Brooke to Fort King, distant about one hundred miles, to join the troops under the immediate command of General Clinch.

The loss of these companies on the 28th reduced the force in Florida to twelve companies, which, on the 31st of December, were distributed as follows: At Fort Brooke, Tampa Bay, five companies, two hundred and four strong, including nine company officers, Captain Belton commanding; at Fort King, one company, forty-eight strong, including two company officers and one field officer, Lieutenant Colonel Crane commanding; in the field, near the Wythlacoochee, six companies, with one field officer of artillery, Brevet Lieutenant Colonel Fanning, under the immediate command of General Clinch. This battalion is estimated to have been about two hundred and eighty-three strong, including thirteen company officers. The regular force in Florida, on the morning of the 31st December, is estimated to have been about five hundred and thirty-five strong, including two field officers and twenty-four company officers. On the 29th of December General Clinch moved forward with the battalion of six companies, and on the 31st crossed the Wythlacoochee with about two hundred regulars, when, being attacked, he engaged and defeated the Indians. The volunteer force with General Clinch on the day of the action is said to have been about five hundred; but his official report, received the 20th of January, does not distinctly state the exact number which crossed the river and joined in the action.

On the 8th of January, in consequence of information received from General Hernandez and General Call respecting the state of affairs in Florida, the War Department, as a precautionary measure, and, as it is understood, upon its own suggestion, extended the authority of General Clinch to call for militia on the governors of Alabama, South Carolina, and Georgia, and requesting them to place at his disposal such force as he might require. And, on the next day, it appears that orders were despatched from the Navy Department to the commanding officers of the revenue cutters at Charleston, Key West, and Mobile, which were transferred by the Treasury Department, to report to General Clinch for instructions; and, on the 13th, Commodore Dallas was requested to co-operate with his squadron. On the 13th of January Governor Eaton was informed that the commanding officer at the arsenal at Augusta had been directed to furnish such arms and ammunition as he might require.

On the 17th of January, unofficial information having reached the War Department of General Clinch's action with the Indians on the 31st of December, the War Department, fearing that the communication with General Clinch might be interrupted, and he, therefore, not be enabled to take those measures which circumstances might render necessary, requested the governor of South Carolina to place at the disposal of General Eustis, the commanding officer at Charleston, such a militia force as he might call for, and directed this officer to proceed with that force, together with the garrisons at Charleston and Savannah, to St. Augustine, thence to open a communication with General Clinch and report to him for instructions.

About the 20th of January the first intimation was received at the War Department that there was

reason to fear that parties of the Creeks might join the Seminoles. In consequence of this information, and from the belief that the operations might become more extended and require an officer of higher rank, Major General Scott was ordered, on the 21st of that month, to proceed to the theatre of hostilities and there assume the command. Authority to call on the executives of Georgia, Alabama, South Carolina, and Florida for what militia force he might find necessary, was given to him, and the governors of those States were requested to place such force at his disposal. At the same time three companies of artillery from Forts Macon and Johnston, North Carolina, and Augusta arsenal, in Georgia, as also a detachment of one hundred dragoon recruits, and three other companies, on the 25th, taken from Forts Washington and Severn and Washington arsenal, under the command of Major Gates, were ordered to Florida. The same instructions that had been given to General Clinch on the subject of the three revenue cutters, and the communication with Commodore Dallas, were also given to General Scott.

In consequence of representations from Florida that measures would probably be taken to transport the slaves captured by the Indians to the Havana, it appears that instructions were given to the armed vessels to prevent such proceedings, and General Scott was directed to allow no pacification with the Indians while a living slave belonging to a white man remained in their possession. Such measures as the laws appear to justify were also authorized to be taken by the governor of Florida to prevent the Indians from receiving supplies of ammunition from the fishermen on the coast of Florida.

It is estimated that the whole number of regular troops already in Florida, and on their way there, amount to about 1,200, including officers

I have not considered it necessary to detail, in this report, the orders given by the various military bureaus of the War Department to provide the necessary means, such as transportation, ordnance, and ordnance stores, provisions, &c., for the operations in Florida. All the measures in relation to these subjects which appeared to be necessary were duly taken.

The annexed copy of instructions (marked A) to General Scott will present a general view of the measures he is authorized to take, and the objects he is to effect.

In conformity with your further instructions, to mention in this statement the probable number of disaffected Seminole Indians, according to the best information in possession of the War Department, on application to the Commissioner of Indian Affairs he reports that Lieutenant Harris, the disbursing agent charged with the distribution of the various articles of supply guaranteed by treaty stipulations, and whose duty it was, therefore, to ascertain, by the best data within his reach, their whole number, states, in a communication to the Commissary General of Subsistence, dated September 29, 1835, that he did not think the population, including men, women, children, and negroes, exceeded three thousand. Of this number, Lieutenant Harris supposes there were sixteen hundred females, leaving the male population, including negroes, at fourteen hundred. The Commissioner further reports that "there are no data in his office for determining what proportion of the number were disposed to emigrate, and what to remain. Assuming, however," he continues, "that they were equally divided, there would then be seven hundred males, including negroes, of the disaffected party. If the statement of the agent be correct, it is not probable that more than one-half of this number could be warriors. But this conjectural estimate, it will be observed, refers to the period of Lieutenant Harris's report of September 29, or before the commencement of hostilities. It does not refer, therefore, to the present number of the hostile party in Florida, as it may have received accessions from the other party of the Seminoles and from the Creeks."

In his communication to the Adjutant General on the subject of the friendly Indians located in the immediate vicinity of Tampa Bay, received on the 8th instant, Captain Belton, the commanding officer, reports that about ninety warriors have offered their services, and that he has directed their whole force to enter the field, believing that they will be of much service in annoying the rear of the hostile party.

Respectfully submitted.

R. JONES, *Adjutant General of the Army.*

Hon. LEWIS CASS, *Secretary of War.*

ABSTRACT.

On the 9th day of May, 1832, a treaty was concluded at Payne's Landing, in Florida, by Colonel Gadsden, with the Seminole Indians, for the cession to the United States of the lands in that Territory, and for their removal to the country west of the Mississippi

This treaty contained a provision that certain chiefs, therein named, together with their agent and interpreter, "should be sent, at the expense of the United States, as early as convenient, to examine the country assigned to the Creeks west of the Mississippi river; and should they be satisfied with the character of that country, and of the favorable disposition of the Creeks to reunite with the Seminoles as one people," then this treaty was to "be binding on the respective parties."

Agreeably to this stipulation, the delegation repaired to the country west of the Mississippi, and, being satisfied on the points referred to their discretion, they concluded, on the 28th of March, 1833, at Fort Gibson, a treaty with Messrs. Stokes, Ellsworth, and Schermerhorn, rendering absolute the above-mentioned treaty of Payne's Landing. The treaty of Payne's Landing was ratified on the 8th of April, 1834, and the supplementary treaty on the 12th of April, 1834.

The treaty of Payne's Landing provided that the Seminole Indians should remove within three years after the ratification of the treaty, and that the emigration should commence as early as practicable in the year 1833, and with certain bands therein specified; so that a proper proportion might be removed in each of the three years.

The treaty not having been ratified until the spring of 1834, and no appropriation having been made, definitive measures could not be taken for the removal of any of these Indians until the proper season arrived; and, indeed, they could not have been removed with any just regard to their health and circumstances till the succeeding winter. In the meantime, however, on the 8th of April, being the day of the ratification of the treaty of Payne's Landing, General Thompson, the Indian agent for Florida, was informed that his return to his agency at an early day was important, as arrangements "will be made for the removal of the Seminoles as soon as the appropriations are made."

On the 8th of July succeeding, being immediately after the adjournment of Congress, regulations were adopted prescribing the operations for the removal of the Indians during that year. Those relating to the Seminole Indians are here inserted:

"9. The season being so far advanced, and there being no appropriation for the removal of the Seminole Indians this year, it is not considered advisable to attempt their removal immediately. General Wiley Thompson, the present agent, will be appointed special agent for removal. His compensation will not commence till such time subsequent to the 31st day of December next as he may be required to begin his duties. Captain Russell will be appointed the disbursing officer.

"10. Captain Russell will be directed to repair immediately to Florida, where he will have a personal communication with General Thompson, who will be advised of the views of the department. They will communicate to the Indians the intention of the government to provide for their removal as speedily as is compatible with their health and other circumstances.

"11. A plan of operations will be projected by General Thompson and Captain Russell, embracing all the details connected with this matter necessary for the sanction of this department. They will ascertain when will be the proper time of commencing the removal; the mode of transportation, whether by land or water; the proper route to be taken; the best mode of procuring subsistence on the road, whether by contract or by open purchase; the best mode of procuring wagons, if wagons are required; and generally all the circumstances necessary to a just view and an economical arrangement of the whole affair. If it is judged best that the transportation should be by land, one of those officers will proceed along the route as far as the Mississippi, in order to ascertain the facilities of transportation and the means of subsistence, and to enable them to determine on the best course with respect to both.

"12. If it should be concluded that the Indians had better be transported by water, by the way of New Orleans, then vessels or steamboats should be procured on the best terms, and, if convenient, by public proposals. If steamboats can be got at New Orleans, so as to ascend the Arkansas, an arrangement had better be made for the whole distance; but if not, the Indians had better be transported so far as to be put in charge of the removing officers west of the Mississippi.

"13. General Thompson and Captain Russell will report the number of persons whom it will be necessary for them to employ, and, in doing so, they will consult the most rigid economy.

"As soon as the plan projected by them is received here, the department will act upon it, and communicate immediate instructions for their operations."

The first information which reached the department, furnishing any authentic evidence of the disinclination of the Seminoles to remove after the ratification of the treaty, was contained in a letter from General Thompson of October 28, 1834, in which he transmitted a formal talk from them to him, and his answer, on the 23d of that month. It will be seen by adverting to these documents, which are herewith transmitted, that the objections made to a removal were very vague, and, in fact, are evidently mere excuses for a non-compliance with the provisions of the treaty of Payne's Landing. Among these were the assertions that, by the treaty of Fort Moultrie, they were to remain in Florida for twenty years. The treaty to which they refer was concluded September, 1823, and secured to them the reservation subsequently ceded by the treaty of Payne's Landing. There is in it no such provision as they allude to; and if there were, the state of the case would not be altered by it, for, by the treaty of Payne's Landing, concluded ten years subsequently, they ceded this reservation and engaged to remove. The only limitation in the treaty of Fort Moultrie is one of twenty years, at which time certain annuities were to cease. Some of them urged that, although the lands west of the Mississippi were good, the Indians in that quarter were bad; that they wanted to keep their families where they were; that it would require much trouble to get there, &c.

From the report of General Thompson, as well as from the tenor of his interviews with the Indians, it was obvious that the Seminoles were divided on the subject of a removal; that a portion were willing to remove, and another portion indisposed to go.

On the 24th of November, immediately after the receipt of these despatches, General Thompson was informed by the Secretary of War, by direction of the President, that the demands of the Indians to be permitted to remain could not be submitted to, and the letter thus continues:

"Every consideration of good faith and expediency with respect to themselves, and the just and humane policy on the part of the United States, requires their removal in conformity with the stipulations of the treaty. I have no doubt that you are right, and that the sentiments disclosed by the Indians are those of interested advisers, and not their own. They have stipulated to remove west. They have ceded their country in Florida, and it will soon be sold and occupied by our citizens. Part of the appropriations for fulfilling the treaty have been made, and others will be asked for as fast as required.* It is nothing less than insanity or an utter ignorance of their own position which can induce them, under these circumstances, to expect to remain. To comply with their wishes, or, rather, what is represented as their wishes, would be utter ruin to them."

General Thompson was also informed that orders had been given for an increase of the military force in the vicinity of these Indians, and he was instructed to communicate freely with General Clinch, who was directed to take the command. He was also informed that their annuities would be withheld until they complied with the treaty.

At the same time a talk from the President to these Indians was sent to General Thompson, in which the views of the President were fully communicated to them, and they were distinctly told that they had ceded their lands in Florida and had agreed to go west, and that these stipulations must be carried into effect. "The effort to remain," said this talk, "would be destructive to you, and the President will not listen to such a proposition."

On the 28th of December General Thompson communicated to the department the result of his interview with the chiefs, when he informed them of the views of the government and the determination that they must adhere to their treaty and remove. After much discussion upon the subject General Thompson states: "The result was, that we closed with the utmost good feelings, and I have never seen Powell or the other chiefs so cheerful and in so fine a humor at the close of a discussion on the subject of their removal."

On the 27th of January, 1835, General Thompson reported that he considered the force stationed in and on the border of the Seminoles not large enough to effect the object for which it was intended. He also stated that a large portion of the Indians were opposed to removal, and he had no doubt that they had been tampered with by designing persons until some projects of speculation or some fraudulent claims for slaves could be successfully prosecuted. The military means, as will appear from the accompanying report of the Adjutant General, were immediately provided, agreeably to the suggestion of

* The appropriations provided were for the purpose of purchasing certain articles promised in the treaty to the Indians.

General Thompson, and to one made by General Clinch about the same time. At this time, and subsequently, the agents of the government were employed in endeavoring to persuade the Indians to remove, and in making such arrangements as were necessary.

In two letters from General Clinch, of 19th March and 1st April, and in one from General Thompson of the 31st March, the then state of affairs of the Seminoles was fully communicated. They reported that they found, in their interviews with the Indians, that the President's talk had produced a favorable effect; but the Indians were desirous of being allowed a short time, with a view to determine upon the measures they would adopt. These letters, copies of which are transmitted, show the views of those officers. General Clinch suggested, among other things, that "perhaps it would be better to let them remain until next spring, provided that they would consent to remove peaceably and quietly on the 1st day of March next. Many are inclined to this plan, and I believe the whole nation will readily come into the measure. It is impossible not to feel a deep interest and much sympathy for this people, but, at the same time, every humane and benevolent man, at all acquainted with their character, must acknowledge that the mild and benevolent course adopted by government is the only one to save them from destruction."

In answer to the views presented by Generals Thompson and Clinch, they were informed by the Secretary of War, on the 14th of April, that the subject had been submitted to the President, and that the views of General Clinch were deemed equally judicious and humane. He was told that there was not the "slightest wish to oppress the unhappy Seminoles who had stipulated for their own removal. But their continuance where they now are for any length of time is absolutely impossible, and the sooner they are satisfied of this fact the better it will be for them. Still, however, I should much prefer a voluntary and peaceable removal to one effected by force. It would only be in the last resort that the government would be willing to compel them to comply with their own engagements; and it would be better to suffer a temporary inconvenience, if thereby their feelings could be quieted, than to require them to be removed without their own consent. The matter, therefore, is referred entirely to your discretion and to that of General Thompson. If they should all be willing to go this year, it would certainly be better to remove them; but if they are opposed to this, and will generally agree quietly to remove by the 1st of March, or as soon thereafter as the necessary arrangements can be made, then they may be suffered to remain until that time. But in that case let a written agreement be drawn up, stating the reason of the delay, their readiness to remove by that time, and to go in a body by such route as you and General Thompson may think best for them and the most economical for the government, and let this agreement be signed, in open council, by all their influential men. It is my decided opinion that they had better go by water, and every proper inducement should be held out to them to assent to that measure. Still, however, if their repugnance should prove to be invincible, that point may be yielded to them.

"Should the Seminoles, however, peremptorily decline to pledge themselves peaceably to remove next season, you will then proceed to carry into effect the instructions heretofore given."

Before the receipt, however, of the above letter, viz: on the 23d of April, an arrangement was made with the Indians, by Generals Clinch and Thompson and the disbursing agent, by which the validity of the treaty of Payne's Landing was recognized, and the Indians agreed to carry into effect its provisions. In consequence of this, instead of removing a part of them at that time, they were allowed until the succeeding winter to make their preparations, when they all agreed to go together, and it was understood they would be removed about the 15th of January.

It will be remarked that, by the treaty of Payne's Landing, the Seminoles were to be allowed three years for their removal; and as the delay in the examination of the country west of the Mississippi, and the consequent ratification of the treaty, could not be imputable to them as a fault, they were entitled, by every fair construction, to three years from the ratification. Consequently, therefore, the only delay which this arrangement occasioned was the non-removal of a portion of their people at that time, and its postponement to the next season of operations. The advantages which there was a reason to expect from it were, that the Indians would be quieted, and voluntarily go, and that they would all be removed in two years instead of three.

The reasons given for this measure by the officers who proposed it were very satisfactory to the President. These were: the duty of yielding something to the situation of the friendly chiefs who advocated the measures of the government; the lateness of the season, which would have brought the operations into the heat of summer, and exposed the emigrants to the dangers of the cholera, and other malignant disorders which had afflicted some of the other emigrating parties; the injury which would have been sustained by their leaving their own country, with the crops in the ground, without any means of disposing of them, and of their arrival at their place of residence in the west at a bad time to prepare their arrangements for their future subsistence; and also the natural desire that the whole tribe, if possible, should go together. The agreement of the chiefs is herewith transmitted.

On the 20th of May the approval of the President was conveyed by the Acting Secretary of War to Generals Clinch and Thompson and Lieutenant Harris on the subject of the arrangement made by them for the continuance of a part of the Seminoles, and their entire removal next season. In that letter the approval, also, of the President was conveyed of the declaration of General Clinch to the Seminoles that, if they declined to remove voluntarily, they would be removed by force. This letter continues: "The President approves of this declaration, upon a full consideration of the circumstances under which it was made. The Seminoles had trifled sufficiently long with the most solemn treaty obligations, to which they had in the first instance acceded with a full understanding of their character, and the consequences which they had, during three years, full opportunity to perceive and appreciate. It is apparent, from our report, that further argument and persuasion would have been fruitless. The government was, therefore, bound by the treaty of 1832 to secure the well-being of the Indians and the prosperity of the Territory from which they had agreed to emigrate."

General Thompson, in a letter of the 3d of June, reported that Powell, one of the most influential chiefs of the Seminoles, had behaved so badly in his office that he was put in irons and confined. On the next day, however, he signified his regret and his willingness to sign the agreement and emigrate. To test his sincerity he was released, and had five days given to him while at liberty, during which he could come forward to affix his name to the instrument the others had signed. "True to his professions," says the agent, "he this day appeared, with seventy-nine of his people—men, women, and children—including some who had joined him since his conversion, and redeemed his promise. He told me many of his friends were out hunting, whom he could and would bring over on their return. I have now no doubt of his sincerity, and as little that the greatest difficulty is surmounted."

During the summer only two incidents occurred to interrupt the harmony which was the result of the

arrangement of the preceding April. These were similar in their character to those feuds which so often prevail upon the border, and afforded no reason to anticipate hostilities. In one case the accused Indians were surrendered by the chiefs, but were eventually discharged, because, as stated by the agent, the proper civil authority would not receive them. In the other case, it appears by the report of General Clinch that a murder was committed by the Indians as an act of revenge, and that they stated "that, having accomplished the purpose of revenge, by the murder of a white man, they were satisfied." General Clinch further remarked that "measures have been taken at Fort King by the officers and the chiefs, conjointly, to apprehend the murderers, and I have no doubt they are secured." It is not, however, known at this department that these persons have yet been actually apprehended.

In other respects affairs with the Indians remained undisturbed, the agents of the government and the Indians anticipating a removal during the succeeding winter.

On the 3d of August, in a letter received on the 26th of that month, Lieutenant Harris, the disbursing agent, reported that the prospects of emigration were promising. The views of General Thompson and of Lieutenant Harris were subsequently submitted to the department, respecting a plan of operations for the removal of these Indians, and the necessary arrangements for carrying into full effect the measures of removal were approved and continued in the process of fulfilment by the agent until the commencement of hostilities.

In a letter from Lieutenant Harris, the disbursing agent, of September 29, 1835, he states: "I consider the population," speaking of the Indians under treaty stipulations to remove, "including negroes, not to exceed three thousand, of which I should suppose sixteen hundred are females."

The first information of any act having a decided appearance to commit hostilities was conveyed in a letter from General Thompson, dated 30th of November, and received at the department the 23d of December, in which he states that from four to five hundred of the Seminoles friendly to emigration, and five of their chiefs, had fled to Tampa Bay for protection; that one of the most intelligent and active chiefs had been murdered by those opposed to their removal, and it was his impression that this act would operate seriously upon the emigration, and that force would have to be resorted to. No reason is given for this murder, but it is probable, from subsequent events, that it was the commencement of a series of hostile efforts which the party opposed to emigration was determined to make. Seven days subsequently General Thompson reported that many of the Indians had disappeared from their usual places of residence immediately after this murder. General Thompson concludes his information by stating that he then considers the Indians in a decided state of hostility. This letter was received on the 30th of December.

Having traced the affair to the first official announcement of hostilities, it is not necessary, in obeying the call, to pursue it further. It is proper, however, to remark that information of this murder of the friendly chief, and of the unfriendly intentions of the Indians, was conveyed in a letter from General Clinch of December 1, and received, likewise, on the 16th of December.

Copies of the letters herein referred to, and necessary to an understanding of the causes which have led to the present difficulties in Florida, are herewith transmitted.

It is obvious, in a recapitulation of the whole subject, that a portion of the Seminoles, after the conclusion of the treaty of Payne's Landing, were indisposed to comply with the stipulations and to remove west of the Mississippi, and to this indisposition is to be traced the origin of the hostilities which are now carrying on in Florida.

WAR DEPARTMENT, *February 9, 1836.*

I have examined the papers on file relating to the causes of the present hostilities with the Seminoles, and the above abstract, together with copies of letters accompanying them, seem to me to furnish all the material information necessary to a knowledge of those causes.

C. A. HARRIS, *Chief Clerk War Department.*

FEBRUARY 9, 1836.

A.

WAR DEPARTMENT, *January 21, 1836.*

SIR: You will please to repair, without unnecessary delay, to Florida, and assume the direction of the operations against the Seminole Indians.

I enclose, for your information, copies of the various instructions which have issued from this department for the suppression of the hostilities of these Indians, and of such other papers as may be necessary to put you in full possession of the state of affairs in that quarter. I enclose, also, duplicate letters to the governors of South Carolina, Georgia, Alabama and Florida, requesting them to call into the service of the United States such militia force as you may deem necessary, and advising them that the authority thus conferred upon you will enable you to increase, modify, or revoke any requisition which may have been made in pursuance to the powers granted to generals Clinch and Eustis to call upon the executives of those States and of the Territory for any militia force.

Their powers, also, to call for such force will cease on your assumption of the command.

It is impracticable here to prescribe the amount of force which ought to be carried into the field. That must depend upon the actual circumstances which you may find existing when you reach the scene of operations. It is, of course, highly desirable that no unnecessary force should be employed, as the expense may be thereby greatly increased. Still, I would not have you hesitate for a moment in calling out such a number of the militia as will enable you, with promptitude and certainty, to put an immediate termination to these difficulties. The horrors of such a warfare are too great to run any risk in its immediate suppression. This subject is therefore committed entirely to your own discretion.

The difficulties with these Indians have arisen from their indisposition to comply with the terms of a treaty concluded some time since with Colonel Gadsden. That treaty provided for their removal west of the Mississippi; but when the period of its execution arrived, it was found that a considerable portion of the Indians were unwilling to remove. As they had ceded their whole country in Florida, it was impossible to permit them to remain there, as they would have become a lawless banditti, liable at all times to commit depredations upon the settlements. After much discussion with the agents of the government, the Indians finally agreed that, if their removal were postponed till this winter, they would voluntarily emigrate.

When the arrangements began to be made for carrying this agreement into effect, a spirit of disaffection appeared, which led first to the murder of one or more of our own citizens, and then of some of their own chiefs who were disposed to carry into effect the agreement that had been made. This state of things was soon followed by open hostilities.

Copies of the earlier communications to and from General Clinch, which are herewith enclosed, will put you in possession of all the necessary facts.

I shall state very generally the measures which have been directed by this department. General Clinch is in command of the troops in Florida. He has had placed at his disposal fourteen companies of the army; but how many of these have actually reached that part of the country, and are now acting with general Clinch, is not known to this department. He was some time since authorized to call upon the governor of Florida for such militia force as he might deem necessary; and more recently similar authority was extended to him to call upon the governors of South Carolina, Georgia, and Alabama; and a sloop-of-war and two revenue cutters have been ordered to report to General Clinch, and to co-operate with him on the southwest coast of Florida, and another revenue cutter on the eastern coast.

You will perceive, by the accompanying copy of a letter to General Eustis, that in consequence of the unofficial, but no doubt authentic statements, which reached here a few days since, respecting the recent action with the Indians, and the destruction of the settlements, authority was given to him to call upon the governor of South Carolina for what militia force he might require, and to accept such volunteer corps as might offer, and to proceed with this force, and with the garrisons of Charleston and Savannah, to St. Augustine, and there assume the command, and open a communication with General Clinch. You will also see that General Eustis has detached one company from Charleston to St. Augustine.

In addition to the duplicates, herewith enclosed, to the several executives above mentioned, another will be transmitted to each of them by mail. On your arrival at Charleston, you will probably be able to ascertain the precise state of affairs in Florida, and to take your measures accordingly. These you will please to adopt without delay.

Should you deem it important to have a personal communication with the governor of South Carolina or Georgia you are at liberty so to do. Your own route, however, to the scene of operations in Florida must depend upon another circumstance. Letters from Governor Eaton, General Call, and Colonel Gadsden, copies of which are enclosed, leave but little doubt that some of the Creek warriors have joined the Seminoles. To what extent this disaffection may have proceeded we have not here the means of ascertaining. But, from the number and position of the Creek Indians, it is highly important, if they evince any disposition to join the hostile Indians in considerable numbers, that the most vigorous measures should be adopted to check this spirit. It is probable that you will be able to obtain such intelligence in South Carolina as may enable you to form a correct estimate of the danger to be apprehended from this source; and if there is reason to believe that the Creeks are in a hostile state, or that they meditate it, you will then call into the field such a militia force as may be necessary to occupy the Creek country in Alabama, and immediately reduce these Indians to submission. Should, however, there be no cause for alarm on this subject, your undivided efforts will be directed to the Seminoles.

Whatever expenditures may be rendered necessary, you will please to direct, and the proper staff officers under your command will be furnished with such funds as may be required to meet them. One hundred and twenty rations were some time since ordered, as a precautionary measure, to the St. John's. Whatever additional supplies may be required from the subsistence department will be procured upon your orders. The arsenals at Augusta, in Georgia, and at Mount Vernon, in Alabama, and the ordnance depot in Charleston, will issue such arms and ammunition as you may find necessary.

I have to request that you will ascertain from the various staff departments at this place the arrangements which have been made, and which are necessary for the transportation, pay, subsistence, and operations of the regular force and militia which will be under your command. The great expense and inefficiency of the militia, when called out for too short a time, renders it indispensable that no force of that description should be received into service for a shorter period than three months from the time of their arrival at the place of rendezvous, to be disbanded previously if their services should not be so long required. You will take care to have the militia regularly mustered into service, and that the number of officers is in the proper proportion.

I have also to request that you will give the necessary instructions for the preservation and accountability of the public property. There is, upon these occasions, too often so great a waste, particularly where a militia force is brought into the field, that great circumspection should be used.

You will see by some of the accompanying documents that many of the negroes have been captured by the Indians, and that there is reason to apprehend they will be transported to Cuba. I have to ask your particular attention to the measures indicated to prevent the removal of those negroes and to insure their restoration.

You will allow no terms to the Indians until every living slave in their possession belonging to a white man is given up.

Governor Eaton has also suggested, as his letter will show, that some of the fishing vessels on the coast of Florida are engaged in co-operating with the Indians. This subject should be immediately investigated, and I refer you, for the proper measures, to the suggestions contained in the letter of yesterday to General Clinch.

I have also to request that you will communicate freely with Governor Eaton, and advise him of your movements. So far as any expense may have been encountered by his direction in the defence of the Territory, which can be met by this department agreeably to the usages of the service, you will order it to be paid on the proper vouchers. But if doubts exist as to whether they are legally payable without a specific appropriation therefor, you will refer them here for consideration.

The line dividing your own department from that of General Gaines is at present an imaginary one, and probably would, if run, actually pass through the scene of hostilities. You will pursue your operations, therefore, without regard to any such divisionary line.

General Clinch has been instructed to allow the Indians no pacification till they are unconditionally subdued, and till they consent to an immediate embarkation for the country west of the Mississippi.

This point you will particularly advert to, as also to that branch of the instructions to General Clinch which directs him to deliver over to the civil authorities such of the Indians as were guilty of individual outrages before the commencement of hostilities. If the Creeks have engaged or should engage in these hostilities, you will, in like manner, promptly subdue them, and make it an indispensable condition of

peace being granted to them that they depart, as soon as the government can make the proper arrangements, for their country west of Arkansas. In both of these cases it will be proper that a vigilant supervision be exercised over these Indians till their removal, and that they be accompanied by such a force as will keep them quiet. Their arms and ammunition will be taken from them, and not restored till they shall have reached their new country; and even then a discretion must be exercised by the military commanding officer in that quarter to withhold them for as long a period as he may think proper, if the Indians evince any spirit of disaffection. Colonel Hogan is the principal agent for the removal of the Creek Indians. He will be directed to report to you and to receive your instructions, and he will be able to communicate to you all the necessary information respecting the views of the government on the subject of the removal of these Indians, and of the mode of their proceeding. General Clinch will give you similar information concerning the Seminoles, as he has been for some time in communication with them, and understands fully the views of the department.

General Thompson, the principal removing agent, has been killed, and General Clinch has been requested to assign an officer to his duty.

Reposing entire confidence in the arrangements you may make, and in the promptness and vigor of your movements,

I am, sir, with high respect, your obedient servant,

LEW. CASS.

Major General WINFIELD SCOTT, *Washington City.*

No. 1.

SEMINOLE AGENCY, *October 28, 1835.*

Sir: On the 1st instant Captain J. B. F. Russell, United States army, and myself arrived at Camp King. On the succeeding morning I called in the adjacent chiefs, gave out broken days for the assemblage of the Indians at Camp King on the 21st instant, to receive their annuity, that being the earliest day they would assent to; and I told them that I did not wish any of them to assemble before that day, as I would not be at liberty to issue provisions to them before the day appointed for the meeting; and I admonished them to be punctual to the appointed time.

Some of the leading chiefs did not arrive until the evening of the 22d, and those that were in attendance earlier would not consent to meet me in council until the absentees should arrive; consequently the first meeting occurred on the 23d, when I delivered to them a talk, the substance of which you have enclosed.

On the succeeding day they, in answer to me, gave in substance what you have appended to my talk of the 23d.

I told them that I could not receive their talk as anything like an answer to the propositions which I had submitted to them, and that I must have a direct answer. They requested that we should take time and deliberate on the subject, under the influence of friendly feelings, &c. I told them that, as some of the propositions were very important to them, it was my duty to give them reasonable time to make up their minds upon those points; but that when they should retire to deliberate upon those propositions, to carry with them the recollection that what I had said to them was in pursuance of instructions from the government, conformable to the stipulations of their solemn treaty, and therefore must stand.

The succeeding day, on their intimation, we again met in council, when they, through the same chiefs, repeated in substance what they had said the preceding day. I expressed to them my regret that they should so openly manifest a total disregard of the obligations of their solemn treaty with the United States. They then requested that I, as their agent and friend, would give them my views and opinion upon the subject of their relations with the United States; in compliance with which, I gave, in substance, what you have in my second talk, herewith enclosed. During the delivery of my second talk I was frequently interrupted by some of the chiefs, especially a leading chief, who was a member of the exploring delegation, a circumstance so unusual in an Indian council as to satisfy me that they were not only afraid that I would produce a proper impression on the minds of the Indians, but that they are obstinately fixed in a resolution to disregard the treaty of Payne's Landing.

While I was portraying to them the inevitable and utter ruin which would overwhelm them, were it possible for them to remain in their present location a few years longer, silence ensued their previous frequent interruptions; they were awestruck by the picture I presented to them of utter desolation and hopeless wretchedness, and their minds, especially Mico-an-opa's, whom the Indians look to as principal chief, seemed engrossed and deeply interested.

At that important crisis I heard Powell, a bold and dashing young chief, who was seated by Mico-an-opa, and who is vehemently opposed to the removal of the Indians, speak to the latter, apparently in much earnestness, and the interpreter informed me, subsequently, that Powell then urged Mico-an-opa to be firm in his resolution. Hola-te Emarthla, one of the principal chiefs, displayed a magnanimity of character and a nobleness of soul meriting a better fate than that which I fear awaits him. He was in very bad health, said but little, but that little was a bold and manly declaration of his determination to adhere in good faith to his engagements with the United States, and it was coupled with a reproof upon those who evinced a disposition to prove faithless. Hola-te Emarthla and Facka-laste Hayo, one of his confidential chiefs, are of opinion that their own people and party embrace about one-third of the nation. These two chiefs informed me secretly that their lives were threatened; that they believed themselves and families, with some of their people, are in danger; and they appealed to me for the protection which would be afforded to them by permission to visit their friends on the Apalachicola river, under expressed stipulations that they will promptly return to the Seminole country, or join the Indians on their emigrating journey when called on by me. This protection I have, on mature deliberation, determined to afford them, when it shall become obviously necessary. But I directed Hola-te Emarthla to be on the lookout, stay as long as he can in safety, as I confidently expect that the government will soon enable me to protect him and his people here, which he seemed delighted to hear. If, however, he finds himself in great danger, before the much-to-be-desired moment when the government will have a sufficient military force in this section, I have determined to permit him, and such of his people as are in most danger, to occupy the

reserve on the Apalachicola river, recently evacuated by Colonel John Blunt and his party, there to remain, under all existing treaty limitations, restrictions, and provisions, until called thereon.

You have herewith enclosed a copy of the opinion expressed to me by Captains Russell and Graham, as to the necessity and propriety of the permission which I have determined to give to Holar-te Emarthla. A full view of all the circumstances leaves me without doubt that these deluded people have determined to resist the execution of the treaty of Payne's Landing, and I now have as little doubt that this delusion has been induced by some of the causes of hostilities to emigration suggested in my report to the superintendent of Indian affairs in Florida, dated the 18th January, 1834. There are many very likely negroes in this nation. Some of the whites in the adjacent settlements manifest a restless desire to obtain them, and I have no doubt that Indian-raised negroes, now in possession of the whites, some of the negroes in the nation, with some of the Indians, have been induced, by bribery or otherwise, to stir up hostilities among the Indians to the intended emigration, for the purpose of detaining the negroes here until the territorial jurisdiction shall be extended over the Indian country, so as to enable fraudulent claimants to prosecute their claims in the territorial courts, or, in the general scramble which may grow out of a *worse state of things*, give the avaricious and unprincipled an opportunity to effect their object by some other means.

It could not have escaped observation that the Indians, after they had received the annuity, purchased an unusual quantity of powder and lead. I saw one keg of powder carried off by one chief, and I am informed that several whole kegs were purchased. I did not forbid the sale of those articles to the Indians, because, as such a course would have been a declaration of my apprehensions, it might produce a sudden and immediate eruption. It may be proper to add that I was heretofore informed that the chiefs have a deposit of forty or fifty kegs of powder, which I did not credit at the time.

Having thus given you a full view of the existing state of things here, I feel it an imperious duty to urge the necessity of a strong reinforcement at this post, and the location of a strong force at Tampa Bay as early as possible. An imposing force, thus promptly marshalled, to coerce these refractory people, will have the effect to crush the hopes of those who have been tampering with them, awe the chiefs into a proper respect for the government, afford protection to the neighboring white settlements, and supersede the necessity of Holar-te Emarthla and his followers fleeing the country.

I was informed that it has been usual to make presents to the Indians during the payment of the annuity. I did not feel myself authorized to pursue the custom, and therefore declined doing so. I did, however, distribute among them a small quantity of tobacco, an article as indispensable, in their estimation, almost as provisions.

In pursuance of your instructions, I am desirous to close the business of the superintendency of Indian affairs in Florida. I cannot, however, accomplish this object until I receive the requisite funds. I did anticipate the arrival here of the funds necessary to effect this object some time ago, but owing, I presume, to the want of mail facilities, I have not received from your department any communication of a later date than the 6th of August last.

I have commenced the settlement of the business of the superintendency, as instructed, up to the date of my arrival here, which was on the 1st instant, opportunely closing the third quarter of the present year. To that date Captain Russell, on my requisition, paid the striker in the Seminole smithery, Eber Beale. The blacksmith whom I left employed abandoned the shop on the 5th of May last; he was consequently only paid up to that date; at which time Captain Graham employed a slave belonging to the sutler here, Mr. Erastus Rogers, to supply Beale's place until I should return to the agency. This slave was employed because a white man could not be obtained who could be relied on. Since my arrival I have sought to employ a white man as gun and black smith, but fear I shall not be able to obtain one in this country who can be relied on. The slave now engaged is a good smith, and I submit to you whether I shall continue him. On my arrival here I found the striker indulging in intemperance, and I discharged him. Captain Graham furnished me with a man from the cantonment to aid in the smithery during the assemblage of the Indians, when there is always much work required to be done. I promised the man some compensation for his services. I have tried to obtain an Indian to serve as striker, and failed, and have been as unsuccessful in my applications to the whites. If permitted, I will continue Mr. Rogers as smith, and employ an intelligent slave in the adjacent white settlements who hires his time of his owner, and is desirous to undertake as striker. I can control these men, should they be employed, and submit the subject to you, because I am aware of the policy which justifies the regulation that requires the employment of the white man when Indians competent to perform the service cannot be found. The compensation due to Erastus Rogers for the service of his smith from the 5th May to the 30th September last was not paid because Mr. Rogers is absent, and left no person duly authorized to sign a receipt.

The existing state of things here has brought me to the conclusion that it will be proper for me to remain at the agency, and receive here the claims against these Indians provided for by the treaty of Payne's Landing, the adjustment of which has been committed to me.

I herewith enclose to you an estimate of all balances within my knowledge, due from the government to this superintendency, with the exception of the claims for salary and expenses in favor of the late sub-agent, Mr. D. M. Sheffield. I have it not in my power here to ascertain what is due to him; to which may be added the regular pay of Stephen Richards as interpreter on the Apalachicola river. Although he was here at the payment of the annuity, such was the press of business and excitement on that occasion that I forgot to ascertain from him the date to which he was last paid.

I have the honor to be, very respectfully, your obedient servant,

WILEY THOMPSON, *United States Indian Agent.*

ELBERT HERRING, Esq.

FORT KING, October 23, 1834.

The council convened this day at 11 o'clock a. m. The agent stated to the assembled chiefs that he had two government interpreters; that if they wished another, and would select one, he (the agent) would invite him to assist in interpreting. Abram was selected by them.

The agent then addressed the council, in substance, as follows:

Friends and brothers: I come from your great father, the President of the United States, with a talk. Listen to what I say. Last winter I visited your country; your people were generally out on their hunting expedition; I saw but few of you. I was obliged to leave here when I did go, because your father, the President, made it my duty to superintend the emigration of Colonel John Blunt and his people, according to the treaty between that chief and the United States. I discharged Blunt and his people at the city of New Orleans, and they are gone to their new homes beyond the Mississippi river. This service engaged my attention until May last, when, under permission from your father, the President, I started to visit my family in Georgia. On my way my horse ran away with my carriage, and came very near destroying me, which caused me much sickness, and obliged me to remain away from you until now. I am glad that I meet you all now in council.

On the 9th of May, 1832, you entered into a treaty at Payne's Landing. I come from the President to tell you that he has complied with all his promises to you in that treaty; that he was bound to do before you move; and that you must prepare to move by the time the cold weather of the winter shall have passed away. I have a proposition to you from your brothers, the chiefs of the western Creek nation; but before I present it to you, I will read to you the preamble of the 1st article of the treaty at Payne's Landing. [That part of the treaty was then read; the treaty at Fort Gibson was read, and the map of the country allotted to the Seminoles was shown to them and explained.] Having thus shown to you that the country which you have acquired beyond the Mississippi for this which you have, by the treaty of Payne's Landing, sold to the United States, lies adjoining your brothers of the west, I now proceed to present to you their proposition.

Instead of settling in the country allotted to you (adjoining to them) in a body by yourselves, they invite you to settle promiscuously among them, and all become, as in by-gone years, one people. They say they are ready with open arms to receive you as brothers, whether you determined to settle by yourselves, or promiscuously among them; but they think all will be more prosperous and happy, and that there will be less strife and contention if you will, on their invitation, relinquish your right to a separate settlement, and settle promiscuously among them. Such an arrangement will, they think, enable the Muscogee people to become, as they were in the days of other years, a great nation. You alone have the right to decide whether you will accept the invitation or not; it is left, as it should be, entirely optional with you, and no person but yourselves has any right to say you shall or shall not accede to the proposition. Take this with you when you retire, reflect upon it, and make up your minds for yourselves and your people.

Though the President does not believe that any of his red children here are so dishonest and faithless as to refuse to go, yet a circumstance occurred last year which induced a belief that some person or persons around here had a disposition to meddle in regard to the removal; that some person had recommended that a delegation should be sent to the President. This made the President angry, and he sent his orders in writing. [Here the letter from the War Department, dated February 21, 1834, to his excellency William P. Duvall, was read and explained.]

This agency will be discontinued after the 31st December next: the lands here will be surveyed and sold, and the laws of the white man will soon be extended over this country; therefore, the sooner you leave this land the better for you. The most comfortable and expeditious mode of travelling for you, your old men, women, and children, is by water. I think that, if you wish, and should request me to ask your father, the President, to send you by water, his consent may be obtained. As to the idle reports that I have heard flying about in regard to an intention to take from you your negroes, as well as the foolish reports that some of the negroes will not consent to go, I have only to say that your father, the President, will defend you and your property from all persons, white as well as others; and as to your negroes, should there be any so foolish as to object to going with you, he will compel them to go, even in irons, if necessary. I have other propositions to present to you, and which I want you also to consult upon, and give me an answer as soon as you have made up your minds.

The next question arises out of the 5th article of the treaty at Payne's Landing; [that article was read and explained.] The question is, whether those among you who own cattle (which are to be given up to the United States here at a fair valuation) will prefer to take cattle at your new home, or there to receive the amount of money which shall be adjudged to be the value of the cattle you give up here? I wish those of you who desire cattle to be returned to you, at your new home, for such as you may have here, to inform me of your wish, that the government may be apprised in time to comply.

The next question is, whether you will petition to go by water as the best mode for getting all the old men, women, the children, lame, sick, and lazy of your people, comfortably along on their journey to your new home?

The next and last question is, how will you have the next annuity paid to you; will you have it in goods or in money? Should you prefer to receive it in such goods as will suit your wants, your father, the President, will have them delivered to you at fair prices, and much lower than you obtain them from the traders. In conclusion, as your friend and brother, I have only to say that Captain Russell and myself are to accompany you to your new home; and for myself, and I will add for Captain Russell, who hears me, we pledge ourselves to be your friends, to share your toils and hardships, and your sufferings, if, unfortunately, any of you should unexpectedly suffer.

The propositions which I present for your decision are—

- 1st. Will you accept the invitation of your brothers of the western Creek nation?
- 2d. Do you prefer cattle or money, when you arrive at your new home, for the cattle which, under the treaty, you must give up here?
- 3d. Will you petition to go by water, or do you prefer to go by land?
- 4th. How will you have the next annuity paid to you, in money or in goods?

These are the questions I wish you to deliberate upon, and give me your answer to them as soon as you have made up your minds. When you retire and enter into private council upon the propositions that I have thus submitted, should you want any further explanation on either point, send for me. I will attend you, give the desired explanation, and retire immediately, so as not to be an intruder on your private councils. You are at liberty to retire.

The speaker of the nation, *Hola-te Emarthlá*, said they would retire, and hold a private council this evening, and also again in the morning, and after that they would attend the agent in council. He then addressed the Indian assembly, by stating that they now had no excuse; that they had heard all that the agent had now said at Payne's Landing; that in their consultation they must not act like fools.

Reported confidentially.

The private Indians met in their camp in the afternoon with their chiefs, and Powell got up and addressed them, by recommending that they should object to the emigration, and to resist all efforts to remove them, and that any person who should consent to remove should be looked upon as an enemy, and should be held responsible to the nation. After a short silence, Hola-te Emarthla was called upon by the assembly for his opinion. He replied, by saying that they were in possession of his candid opinion ever since the treaty was made at Payne's Landing; that he then consented, with all the rest, to that treaty, and every part and clause of it; that he was a man that did not have the talk of a foolish child; that he deliberately thought of everything for the welfare of himself and nation before he gave his consent to that treaty; that he was there and then satisfied, for it was their only alternative for their salvation then and hereafter; that he also deliberately and coolly, and with the balance of the delegation that went west of the Mississippi to examine the country, gave his consent, after a full examination, to ratify, as they were authorized to do, that treaty; that Jumper, another one of the chiefs, who was also with the rest, was fully satisfied, and expressed himself so; and that he had now no other disposition or excuse than what he had then; that he was satisfied then, and is satisfied now; that he did not make talks one day to break them the next; and as for resistance to it, it was an idle thing, and impossible; for they had been told already by the agent that their father, the President, expected them, as chiefs and men of honor, to comply with their bargain; and that if they were so foolish as to heap ruin and disgrace upon themselves and people, their father, the President, would compel them to comply with it; that he advised them, as honest men, not to resist it. Jumper, a chief, then proposed that Hola-te Emarthla should represent in the council, the next day, the objections of the nation to removal; who objected, by saying that he would not show himself so foolish as to deliver such a simple talk. He considered he was a man; and if he should talk, he must talk like a man.

FRIDAY, October 24, 1834.

The Indians again met in council. The agent then told them that he had given them a talk yesterday, and asked them if they were ready to give him an answer to the several propositions which he then referred to them. The first was in regard to the invitation to the western Creeks; the second was on the subject of their cattle; the third was that, if you should wish to go by water, and would say so, I would recommend it to the President; the fourth was as to whether you will have the next annuity paid to you in money or goods. Upon these points I am now ready to receive your answer. Abram was selected as their interpreter.

Holata Micco then arose and said: "God made all of us, and we all come from one woman, sucked one bubby. We hope we shall not quarrel; that we will talk until we get through."

Mico-an-opa said, "that when they were at Camp Moultrie they made a treaty, and was to be paid their annuity for twenty years. That is all I have to say."

Jumper said, "that at Camp Moultrie they told them all difficulties should be buried for twenty years from the date of the treaty made there; that after this they held a treaty at Payne's Landing, before the twenty years were out; that they told them they might go and see the new country, but that they were not obliged to remove. The land is very good. I saw it, and was glad to see it; that the neighbors near them there were bad people; that they did not like them bad Indians, (the Pawnees.) I went and saw the place. I told the agent that I was a rogue; that he had brought me to the place here alongside and among these rogues, the bad Pawnees, because I am a rogue. I went to see the lands, and the commissioners said that the Seminoles must have that land. When we went west to see the land, we had not sold our land here, and we were told only to go and see it. The Indians there steal horses, and take packs on their horses; they all steal horses from the different tribes. We do not want to go among such people. Your talk seems always good, but we do not feel disposed to go west."

Hola-te Emarthla: "The horses that were stolen by the Cherokees we never got back, (the party that went west;) we then told the agent (Phagan) that the people were bad there—the land was good. When they went there we saw the Indians bring in scalps to the garrison. When we were there we had a meeting with McIntosh. He told us that among all their neighbors they had peace; that he and Colonel Arbuckle were to send out to have a treaty of peace with all those Spanish Indians, and when that was done, a report of it was to be sent to Washington. I am sick—I cannot say all I want to say. I am a man that wants to talk coolly and deliberately, and to tell the truth in all things. They promised to send to our nation word when peace was made with all those Indians west of the Mississippi." He then told the chiefs to address the agent, and express their opinions; as they had different opinions, they should talk it over and consult, and try to come all of one opinion.

Charley Emarthla: "The speakers of the nation are all dead, but I recollect some of their words. When they had the meeting at Camp Moultrie I was not there, but heard that we would be at peace, and that we would have our annuity paid to us for twenty years. White people have told me that the treaty at Camp Moultrie, which was made by great men, and not to be broken, had secured them for twenty years; that seven years of that treaty are still unexpired. I am no half-breed, and do not lean on one side. If they tell me to go after the seven years, I say nothing; that as to the proposition made them by the agent about moving, I do not say I will not go, but I think that until the seven years are out I give no answer. My family I love dearly and sacredly. I do not think it right to take them right off. The President has often said to me that he loves his children, that they loved him. When a man is at home and got his stock about him, he looks upon it as the subsistence of himself and family. Then when they go off, they reflect and think more seriously than when quiet at home. I do not complain of the agent's talk. My young men and family are all around me; should I go west, I would lose many on the path. As to the country west, I looked at it. A weak man cannot get there; the fatigue would be so great, it requires a strong man. I hardly got there. When I went there the agent, Phagan, was a passionate man; he quarrelled with us after we got there. Had Major Phagan done his duty, it would all have been settled, and there would have been no difficulty. If I know my heart, I think I am true. If I differ from the agent, he is a free man, and has a right to his talk. I hope this talk will bring all things right, that hereafter we may all live well together. I am pleased with the sight of the agent, and hope we may know each other better."

The agent then said: "I have no answer to make to what you have said to me to-day. My talk to you yesterday must and will stand, and you must abide by it. I am surprised at the chiefs, that after the

solemn treaty they entered into at Payne's Landing, they should come to me to-day with such a talk as they have made. Is it anything like an answer to the propositions and questions which I submitted yesterday for your consideration and decision? The meeting was appointed for the 21st instant; three days have passed away, and the chiefs come to me to-day with a foolish talk about Camp Moultrie. Is this a talk like chiefs? Is it such as I had a right to expect from you after my honest talk to you? I will not, dare not receive your talk to-day as anything like an answer to the questions which I submitted to you yesterday. I must have a direct answer to those questions. The first is, Will you accept of the invitation from your brothers of the west? The second is, Do you prefer money or cattle at your new home for the cattle you will leave here? The third is, Do you wish to go by water? The fourth is, Do you prefer to have your next annuity paid to you in goods suitable to your wants, or will you have it in money? And I want you, when you meet me again in council, to give me a correct account of the number of your people, that the government may provide for you comfortably while on your journey, whether by land or water. Now retire, and take as much time as is necessary to deliberate on the points which I have submitted to you, and when you are ready to meet me let me know. When you come here again, come prepared to act like chiefs and honorable men; don't bring to me any more foolish talks; men do not listen to the talks of a child, and remember that the talk I gave you must and will stand.

OCTOBER 25, 1834.

The council convened at 11 o'clock—interpreters as yesterday.

The agent said to the council, I am ready to receive your answers to the questions which I submitted to you.

Holate Mico.—I have only to repeat what I said yesterday, and to say that the twenty years from the treaty at Moultrie has not yet expired. I never gave my consent to go west; the whites may say so, but I never gave my consent.

Jumper.—We are not satisfied to go until the end of the twenty years; according to the treaty at Camp Moultrie, we were called upon to go to the west, beyond the Mississippi. It is a good country. This is a poor country, we know. We had a good deal of trouble to get there; what would it be for all our tribe?

Mico-an-opa.—I say what I said yesterday. I did not sign the treaty.

Charley Emarthla.—The agent told us yesterday that we did not talk to the point. I have nothing to say different from what I said yesterday. At Payne's Landing the white people forced us into the treaty. I was there; I agreed to go west, and did go west; I went in a vessel, and it made me sick. I undertook to go there, and think that for so many people it would be very bad. The Indians and the whites have spilt no blood; they have stole things from each other. At Payne's Landing the tomahawk was buried, and peace was to prevail, as agreed upon by whites and Indians. They agreed at Payne's Landing that if blood was seen in the path, to think it was because a person had snagged his foot. We wish to hear the agent's views and opinions on the matter.

The agent.—You tell me you wish to hear me upon the subject of your relations with the United States. And you have told me that you want to talk the matter over calmly, and in good humor; I am not mad: I am your friend; I feel here that I am, and that it is my official duty to be so. All the reply required of me, officially, to your foolish and unreasonable talk, is that it is no answer to the questions I submitted to you. I cannot, I dare not receive it as an answer. I have told you that you must stand to your bargain. My talk is still the same. You must go west. Your father, the President, who is your friend, will compel you to go. Therefore, be not deluded by any hope or expectation that you will be permitted to remain here. You have expressed a wish to hear my views and opinions upon the whole matter. As a man and your friend, I will this once deign to reason with you, for I want to show you that your talk to-day is the foolish talk of a child. *Holate Mico* tells me that one God made us all, and that we all descended from one woman, and drew nourishment from one breast. When I admit this truth, as I cheerfully do, I feel here, in my bosom, that you are my brothers, and that I am your friend. We should therefore act towards each other as brothers, and not speak with a forked tongue. If we do, if we try to break our solemn talk, that Great Spirit that made us will punish us. *Mico-an-opa* tells me that he did not sign the treaty at Payne's Landing, and that the twenty years' annuity, according to the Camp Moultrie treaty, is not expired. I hold in my hand the treaty of Payne's Landing; here is *Mico-an-opa's* name and mark to it. It was witnessed by [here the witnesses were named;] they are honest men; therefore *Mico-an-opa* does not tell the truth; he did sign the treaty at Payne's Landing. (*Mico-an-opa* interrupted agent by saying he did not touch the pen, he only reached over and pointed to it.) He did touch the pen; when he attempted to sign by pointing, he was told to touch. *Hicks* bent down out of his way; he did sign the treaty. *Jumper* says they agreed at Payne's Landing to go and examine the country west; but they were not bound to move to it until the nation should agree to do so after the return of the delegation; and he adds, what others of you have said, that the treaty at Camp Moultrie was to stand for twenty years. Such a talk from *Jumper* surprises me, for he is a man of sense; he understands the treaty at Payne's Landing, which he signed; he was the first named in that treaty of the delegation appointed to go west. He knows that that treaty gave him and the other members of the delegation authority to decide whether the nation should remove or not. He visited and examined the country that was proposed to you, and he, with all the other members of the delegation, decided that the country is good; that the Seminole nation should remove to it, according to the treaty at Payne's Landing. The Indian board of commissioners made a treaty with your brothers of the west, by which they agreed to reunite with you, and *Jumper*, with all the other members of the delegation, made a final treaty, which I now hold in my hand, with all their names subscribed to it, confirming the treaty at Payne's Landing. The President, therefore, will be astonished when he hears that *Jumper* has made a different talk now.

Charley Emarthla says that the treaty at Camp Moultrie was made by men, and that it has seven years yet to stand, and that they are not bound by the treaty at Payne's Landing to remove west, because the question was not submitted to the Seminole nation, after their delegation returned, whether they were willing to go. You all say that as there are seven years of the twenty years' annuity stipulated in the treaty of Camp Moultrie yet to run, you are not bound to go until the full term is expired; and yet the whole of you signed a treaty at Payne's Landing, by which you solemnly bound yourselves to remove within three years from the ratification of that treaty; and the whole of the delegation that went west confirmed that promise by entering into a final agreement to do so, by which the whole nation is bound. But why talk about the Camp Moultrie treaty, as if you had not the right or power to make the treaty at Payne's Landing until the term of annuity stipulated by the treaty at Camp Moultrie shall have expired? Was it not in

your power to make the treaty at Payne's Landing? Did you not have the right to do so? If you did not have the right to do so, then you, who signed the treaty at Payne's Landing, were faithless to your people, and are unfit to be chiefs. If I make a trade with you, by which I give you the use of my horse during four or more years for twenty dollars a year, would we not have the right to make another trade before the expiration of the time limited, by which I would take my horse back again? You know you had the right to make that treaty. You did make it, and you know and feel that you are all bound by it. But you say the treaty at Camp Moultrie was made by men, thereby indicating that the treaty at Payne's Landing was not made by men. Was it made by old women and children? If the spirit of Hicks is now fitting around us, how must he grieve at your conduct—how blush to hear you acknowledge you are not men—that you are unfit to be chiefs. But it is said by Charley Emarthla that the white people forced you into the treaty at Payne's Landing. If you were so cowardly as to be forced by any body to do what you ought not to do, you are unfit to be chiefs, and your people ought to hurl you from your stations.

But you know that this is not the truth. You know you were not forced to do it. You know that Colonel Gadsden told you at Payne's Landing that it was the wish of your father, the President, to remove you west of the Mississippi river.

That you had met to make a treaty for that purpose; that it was a proposition in which you were deeply interested; and he told you to take time, therefore, and reflect well upon it; for if you then agreed to it, you would be obliged to comply. You know that Colonel Gadsden is a pure man. You know that the witnesses to the treaty are respectable men. You well understood that treaty then. You understand it now; and you feel that you slander the whites by saying that you were forced to make that treaty. You made the treaty because you were authorized to do so, and because it was your duty to consult the good of your people; this is your justification to your people for having made the treaty. You by this treaty clothed your delegation with power to say whether the nation should move west. They went and viewed the country and found it good; this is their justification to the nation for making the final agreement with the Indian board of commissioners. Having found the country good, they were bound to do as they did. According to the form of the white people's government, each State and Territory has its own boundaries. The States have the right to extend their laws over the Indians located within their respective limits. With the permission of Congress the Territories may do the same. Georgia, Alabama, and other States, have already extended their jurisdiction over the Indians within their respective limits. The Creeks, Choctaws, Chickasaws, and Cherokees who live in the States are removing west of the Mississippi river because they cannot live under the white people's laws. They are gone and going; and the Seminole people are a mere handful to their number. Two governments cannot exist in the same boundary of Territory. Where Indians remain within the limits of a State or Territory until the jurisdiction of the State or Territory shall be extended over them, the Indian government, laws, and chiefships are forever done away. The Indians are subject to the white man's laws. The Indian must be tried, whether for debt or crime, in the white man's court. The Indian's law is not to be known there; the Indian's evidence is not to be heard there; the Indian will in everything be subject to the control of the white man. It is this view of the subject which induces your father, the President, to settle his red children beyond the limits of the States and Territories, where the white man's law is never to reach you, and where you and your children are to possess the land while grass grows and water runs. He feels for his red children as a father should feel. It is therefore that he made the treaty with you at Payne's Landing, and for the same reason he will compel you to comply with your bargain.

But let us look a little more closely into your own situation. Suppose (what is, however, impossible) that you could be permitted to remain here a few years longer, what would be your condition? This land will soon be surveyed, sold to, and settled by the whites. There is now a surveyor in the country. The jurisdiction of the Territory will soon be extended over this country; your laws would be set aside; your chiefs would cease to be chiefs; claims for debt and for your negroes would be set up against you by bad white men, or you would perhaps be charged with crimes affecting life; you hauled before the white man's court; the claims against you for debt, for your negroes, or other property, and the charges of crime preferred against you, would be decided by the white man's laws. White men would be witnesses against you; Indians would not be permitted to give evidence. Your condition in a very few years would be hopeless wretchedness. But let us come down to a single case. Suppose Mico-an-opa could be permitted to take a reserve of a mile square, and he could be permitted to remain here a few years longer. He has many fine-looking negroes; there are persons who have an itching desire to obtain some of the fine negroes in the nation. The white man's law extended over Mico-an-opa; a white sets up a claim to Mico-an-opa's negroes, and exhibits in the white man's court a bill of sale from Mico-an-opa: do you not believe that some white man could be got to prove the bill of sale? Indian evidence would not be admitted, and Mico-an-opa would be compelled to give up his negroes. When I was in this country last winter I was told that Mico-an-opa, on some occasion, asked a white man to draw a piece of writing for him: the man did so. Mico-an-opa signed it, and some time thereafter the man set up a claim to a considerable part of this country; for the writing, instead of what Mico-an-opa wanted, turned out to be a conveyance from him to the man of a large tract of land. This was many years ago; but all bad men are not yet dead, and white men can still write, and Mico-an-opa has likely negroes. Thus you may see that, were it possible for Mico-an-opa to remain here a few years longer, he would be reduced to hopeless poverty; and when urged by hunger to ask, perhaps of the man who would have thus ruined him, (and is perhaps now tampering with him for the purpose of getting his property,) for a crust of bread, he might be called an Indian dog, and be ordered to clear out. (Here Powell, who was seated by Mico-an-opa, urged him to be firm in his resolution.)

Your father, the President, sees all these evils, and will save you from them by removing you west; and I stand up for the last time to tell you that you must go; if not willingly, you will be compelled to go. I should have told you that no more annuity will be paid you here. (Powell replied that he did not care whether any more was ever paid.) I hope you will, on more mature reflection, act like honest men, and not compel me to report you to your father, the President, as faithless to your engagements.

Powell said that the decision of the chiefs was given; that they did not intend to give any other answer

Mico-an-opa said he did not intend to move.

The agent: I am now fully satisfied that you are wilfully disposed to be entirely dishonest in regard to your engagements with the President, and regret that I must so report you. The talk which I have made to you must and will stand; retire and prepare your sticks to receive your annuity to-morrow.

No. 2.

DEPARTMENT OF WAR, *November 24, 1834.*

SIR: Your communication of the 28th ultimo to the Commissioner of Indian Affairs, together with the enclosures containing the proceedings of the council held with the Indians at Camp King, has been laid before the President.

It is utterly impossible to submit to the demands made by the Indians. Every consideration of good faith and expediency with respect to themselves, and the just and humane policy on the part of the United States, requires their removal in conformity with the stipulations of the treaty. I have no doubt but you are right, and that the sentiments disclosed by the Indians are those of interested advisers, and not their own. They have stipulated to remove west. They have ceded their country in Florida, and it will soon be sold and occupied by our citizens. Part of the appropriations for fulfilling the treaty have been made, and others will be asked for as fast as required.

It is nothing less than insanity or an utter ignorance of their own position which can induce them, under these circumstances, to expect to remain. To comply with their wishes, or, rather, with what is represented as their wishes, would be utter ruin to them.

I enclose a speech which you will deliver and explain to them, and the suggestions of which you will enforce by such considerations as may occur to you. Orders will this day be issued from the Adjutant General's office for an increase of military force in the vicinity of these Indians, and Colonel Clinch will be directed to take the command in person. You will communicate fully with him, and furnish all the information in your power.

The object of this movement is to overawe and restrain such of the disaffected Indians as seem by your report to meditate hostilities. My own impression, however, is, that they will operate upon the fears of their own people, and prevent those who are willing to emigrate from doing so. If any hostilities are attempted, they must instantly be checked by force. If illegal violence is used against individuals with a view to prevent their emigration or to excite disturbance, let the trespassers be arrested and tried by the civil authority. Assure the well-disposed that they will be protected. You will also inform the Indians that all their annuities will be withheld until they commence a compliance with the stipulations of the treaty.

I trust that these measures will induce them to relinquish any design they may have to oppose the fulfilment of the treaty. Should they, however, finally determine not to remove, you will, before any other proceedings take place, report the state of things to this department, and await further instructions.

You will communicate to the commanding officer at Camp King the views herein presented.

Very respectfully, I am, sir, your obedient servant,

LEW. CASS.

General WILEY THOMPSON, *Seminole Agency.*

DEPARTMENT OF WAR, *November 22, 1834.*

MY FRIENDS: Your agent, General Thompson, has forwarded to me an account of the proceedings which took place at the council held with you at Fort King on the 28th ultimo, and of the speeches there made by you.

I have laid these before your great father, the President, and I am instructed by him to say to you that he has been very much surprised at the temper which you have manifested. You made a treaty with Colonel Gadsden, by which you agreed, in the event of certain chiefs named by you being satisfied with respect to the country west of the Mississippi, and with the favorable disposition of the Creek Indians living there, that you would remove to that country upon certain conditions stated in the treaty itself. These chiefs visited that country at the expense of the United States, and, being satisfied on the subjects above mentioned, concluded an arrangement with the commissioners of the United States west of the Mississippi for consummating the whole matter. By these stipulations the United States are under obligations to perform certain conditions entered into for your benefit, and you were under obligations to quit your present residence and to remove to the west within three years, and a portion of you designated in the treaty, being those occupying the Big swamp and other parts of the country beyond the limits, as concluded in the 2d article of the treaty formed at Camp Moultrie creek within the year 1833. But your delegation not having acted sufficiently early to enable the United States to ratify the treaty so as to commence the removal in 1833, it will necessarily be postponed till 1835, at which time it must be commenced, and that portion of your people removed who are designated for the first removal in the treaty. The United States stand ready to fulfil all their engagements, and arrangements with that view will be made this winter. The treaty requires you to remove. You have ceded your country, which will soon be surveyed and sold, and which will leave you without a residence where you now are. The effort to remain will be destructive to you, and the President will not listen to such a proposition. It is dishonorable to you, and such as ought not to be entertained. Do not delude yourselves; listen to your agent; he has spoken to you words of truth and wisdom, and his words will come to pass.

As there may be bad men among you, and as, in fact, I am informed that some of your people opposed to removal have threatened the lives of those who are disposed faithfully to carry the treaty into effect, the President has directed that a body of soldiers be sent into your country to protect the well-disposed, to arrest and deliver over to the proper authority those who are guilty of illegal acts, and to take such measures as may be proper and just to enforce the fulfilment of the treaty. I advise you, therefore, to prepare yourselves against the spring to carry into effect on your part the promises made to Colonel Gadsden.

Agents will be with you to execute all that is required on the part of the United States. Shut your ears to bad counsels, keep your promises, and all will be well. You will be removed to a country already occupied by your people, where the climate and soil are good, where the white people cannot trespass upon you, and where you may increase and improve.

I am your friend,

LEW. CASS.

The SEMINOLE CHIEFS, *Florida.*

No. 3.

SEMINOLE AGENCY, *December 28, 1834.*

SIR: On the receipt of your instructions of the 28th ultimo, I immediately summoned a few of the chiefs adjacent to this place. I told them that I had received a written speech, with instructions from you to deliver it to the chiefs of this nation, and I directed them to consult among themselves, fix upon the day of meeting, and send runners with orders to the chiefs to assemble on the day to be appointed. They replied that a large majority of the Indians were out on their annual hunting expedition, and widely scattered as they were, and almost entirely dependent for support upon the game which they can glean from the wild forests, (a precarious dependence,) they could not be assembled under two or three months, as many of them, having roamed to a considerable distance, would not consent to abandon the pursuit, on which alone they can depend to save themselves and families from starvation. I had been previously informed that many of them were roaming that wild tract of country on the peninsula called the Ever Glades, perhaps a distance of a hundred miles or more beyond the Indian boundary. Satisfied that it would be impossible to collect them in time to effect the contemplated object, I directed the chiefs present to assemble all that could be found at the earliest day practicable. They appointed the 26th instant for the meeting, on the evening of which day a few of them arrived. On the succeeding day, chiefs, sub-chiefs, and common Indians, to the number of perhaps about one hundred and fifty, met me in council, to whom I read your speech, explained it, and enforced it by such considerations as occurred to me, of which, however, my talk to them in council in October last may, in substance, be considered a transcript. I repeated what I had told them before, that they would be compelled by force to remove, should they not do so willingly, and I admonished them of the importance to themselves and people of a faithful and honest relation by them to the absentees of what you said to them.

After the business was disposed of in form, Powell, a bold, manly, and determined young chief, who has perhaps been more virulently opposed to removal than any other, made some remarks in the council, evidently under excited feelings. I at once entered into a free and forcible conversation with him, in which I expressed my regret that a chief who had acted so manly and correct in all other matters, should have got his own consent to act so dishonorably in reference to the treaty at Payne's Landing. He replied that he looked to the Camp Moultrie treaty as the one in force. I asked him if he did not consider his people free to change one bargain by making another. Seeing the force of that, he said that as I was bound to obey the President, so he was to obey the chiefs over him. I replied that the President, backed by the Secretary of War and the whole Congress, should never compel me to act so dishonorably as to violate the treaty with his people; that were it possible for this to be required of me, I would spurn the President's commission, and retire to the bosom of my family; and I told him that he was acting dishonorably and beneath the dignity of his character by his obedience to his chiefs in opposition to a solemn treaty. I told him that, even with great fault hanging as a clog on his character, I still loved him; that I still cherished the hope that he would shortly see his error, assume the man fully, and then I could receive him as a friend, and cherish him in my heart as a brother. I asked how such a man as he could get his consent to try to cheat the United States out of the large sum of money they had already paid under the stipulations of the treaty. I told him that it was grossly dishonorable. I then asked him if any act or any word of mine had shown any unkindness or want of friendship towards him or his people. He with emphasis replied, "I know you are my friend and friend to my people." The others gave a like response to a similar question. I then admonished Powell to treat me as a friend, by relying on my professions and counsel. During the conversation the other Indians paid devoted and, I thought, delighted attention. The result was, that we closed with the utmost good feelings, and I have never seen Powell and the other chiefs so cheerful and in so fine a humor at the close of a discussion upon the subject of their removal.

I have the honor to be, very respectfully, your obedient servant,

WILEY THOMPSON.

Hon. LEWIS CASS.

No. 4.

SEMINOLE AGENCY, *January 27, 1835.*

SIR: Your letter of advice of the 7th instant, accompanied by a letter from the Secretary of War, appointing me special agent to superintend the removal of the Florida Indians west of the Mississippi, was received by this day's mail.

As Indian agent, I am under instructions from the Commissioner of Indian Affairs to visit the bands of Indians on the Apalachicola and Chattahoochee rivers, on business connected with Indian affairs; after disposing of which, I shall avail myself of permission given to absent myself from this agency three weeks, and on my return, which will be in five or six weeks, shall be ready and happy to receive your instructions.

With this report of myself to you for duty, permit me to suggest that the military force stationed in and on the border of this nation is not large enough to effect the object for which it was intended. A large portion of these Indians are opposed to their intended removal; and I have no doubt that interested, designing persons tamper with them for the purpose of inflaming that opposition, in the hope that their removal may be retarded until some projects of speculation, and some fraudulent claims for a considerable number of slaves now in the possession of these Indians, can be successfully prosecuted. The command at Fort King and at Tampa Bay is reduced down to a mere handful by details of parties to patrol the country adjacent to the Indian boundary, to drive the Indians and keep them within their limits, and commands to guard suspected trading houses near the Indian border. The chiefs most hostile to the intended removal have very recently, more boldly than heretofore, denounced vengeance against any chief who shall consent to move. There are, as I am informed, many of the Seminole Indians far beyond the Indian boundary, in that wild and swampy region of Florida called the Ever Glades, some of whom have not been within their boundary during several years past. The duty of guarding the lives, scouring the adjacent country, by detachments of troops, to bring strolling Indians within the boundary, protecting the well-disposed by prompt and active interposition, if need be, patrolling the neighborhood of the Ever Glades,

for the purpose of bringing in the Indians who have wandered off to that desolate region, and, at the same time, displaying at the posts military preparations sufficiently imposing to overawe the refractory chiefs, requires a stronger force.

I have heretofore submitted, for the consideration of the Secretary of War, some reasons why the Indians should be removed *all at the same time* by water, and as early as practicable. Do me the favor to inform me at Elberton, Georgia, what the decision of the Secretary of War is upon those points.

If admissible, you will oblige me by forwarding to this agency blank books and printed forms suitable to the business which I have to do as special agent.

I am, sir, very respectfully, your obedient servant,

WILEY THOMPSON.

General GEORGE GIBSON, *Commissary General of Subsistence.*

No. 5.

FORT KING, Florida, March 9, 1835.

SIR: The several communications from the Department of War, the general-in-chief, and from your office, have been duly received, and I have given to them the deepest consideration. Since General Thompson left this, I have not met the chiefs in general council, as I have long since found that I could do more by conversing with them separately. Their old and principal chief, Micanopy, has not attended any of the councils for a considerable time past, but has communicated with the agent through his subordinate chiefs. This I have objected to, and some time since informed Micanopy that whenever he wanted my advice, or wanted to communicate anything he wished forwarded to the government, *he must come in person*. The chiefs have recently held a talk at Micanopy's town, and I have been informed by them that Micanopy, with all the principal chiefs, are to be here in eight days from this date, by which time I am in hopes General Thompson will return; if not, I will read to them the President's talk, and explain and enforce it by every means in my power. In all the conversations I have held with the chiefs, I have held out the idea that, as the three years stipulated in the treaty was about expiring, the whole nation would be required to remove this spring. From the late instructions from the department, the whole subject of removal appears to have assumed a different aspect, and three questions, growing out of this state of things, present themselves so forcibly to my mind that I feel it my duty respectfully to submit them to the consideration of the honorable Secretary of War. Firstly, as to their being removed in detachments. This plan will be attended with much greater expense and inconvenience to the government than if they were removed together, and will, in my humble opinion, be destructive to the interests and comfort of the Indians that are left behind. Having no agent to watch over and protect them, their property, consisting of negroes and cattle, will soon fall a prey to the cupidity of the designing white man who is lying concealed with his false titles to pounce on their negroes, and, with whiskey, to defraud them of their cattle. Secondly, will it not be better to remove them together at once if we can do so, which I now think can be done, as some of the chiefs already begin to waver in their opposition, and I think the appearance of the *four companies* will have much influence in causing them to decide in favor of going? I also believe that the President's kind and fatherly talk will have much influence with them when properly explained and enforced. I further believe that when we get the old chief Micanopy face to face, and explain the *views, wishes, and determinations* of the President, it will have much influence with him. He is a man of but little talent or energy of character, but, from his age and wealth, has much influence in the nation. Or, thirdly, perhaps it would be better to let them remain until next spring, provided they will consent to remove peaceably and quietly on the first day of March next. Many are inclined to this plan, and I believe the whole nation will readily come into the measure. It is impossible not to feel a deep interest and much sympathy for this people; but at the same time every humane and benevolent man at all acquainted with their character must acknowledge that the wise and benevolent course adopted by the government is the only one that can save them from utter destruction. And when all other plans fail, then it is humanity to compel the refractory to conform to the measures that have been wisely adopted for the general good of the whole nation. Whilst I stand prepared to use every exertion in my power to carry out the plans that have or may hereafter be adopted by the department, I beg leave respectfully to state it as *my decided opinion* that the interest, both of the Indians and of the United States, will be served by removing them at once, and all together; or by letting them remain until the 1st of March next, and then removing them in mass. They will then be under the watchful care of their faithful and efficient agent, in whom I have much confidence, and to whom I will render every service in my power. So soon as the four companies arrive I will make such distribution of them as will secure the quiet of the frontier and keep the Indians in awe.

I am, sir, with the highest respect and esteem, your most obedient,

D. L. CLINCH, *Bvt. Brig. General U. S. Army.*

Bvt. Brig. General R. JONES, *Adjutant General, Washington City.*

No. 6.

FORT KING, Florida, April 1, 1835.

SIR: A number of the chiefs and headmen of the Seminole nation commenced assembling at this post on the 27th and 29th ultimo. Micanopy, with all the chiefs that were present, met General Thompson and myself in council, when the President's talk, together with the treaties of Moultrie and Payne's Landing, were read and fully explained to them by General Thompson. The chief, &c., after some deliberation, stated that, inasmuch as a great many of the chiefs and warriors were absent, and as they were very desirous to have the sense of the whole nation on a subject of such deep importance to them, they requested that a further time of thirty days might be given them to enable them to assemble the whole nation. This request was refused, on the ground that the time asked for was longer than neces-

sary to effect the object in view, and that twenty days would give them ample time. We finally agreed to give them twenty-two days from the 27th ultimo, at the expiration of which time the whole nation are to meet us in council at this post. General Thompson and myself had several private interviews with Micanopy and the principal chiefs, and explained everything clearly and fully to them, and used every argument and exertion in our power to convince them of the utter folly of attempting to resist by force the fulfilment of their solemn treaties, as it would certainly bring misery and ruin upon their wives and children, and on their nation.

The reading of the President's talk, and the appearance of the six companies, appeared to have, in my opinion, considerable effect on them. The fact is clear to my mind that a large portion of the nation have never brought themselves to think seriously on the subject of removal, and have not made the least preparation for such a crisis. My own impression is, that they will ask for an extension of time to make their arrangements preparatory to a removal; and I think, under all the circumstances of the case, it will be advisable to give them a few months.

The disbursing officer has not yet arrived, and nothing has been done in procuring transportation, provisions, &c., preparatory to a removal; and in fact, if the disbursing officer was present, and one-third of the nation willing to go, the necessary arrangements could not be made under two months, when it would be too late to risk a movement of this kind, on account of the approach of our hot season. General Thompson accords fully in the views above expressed. Should the chiefs come to the conclusion to remove quietly, it will still be necessary to keep the present force in Florida until they remove, as the only means of compelling them to comply with their engagements; and I *still think* that the two six-pounders would have had much weight in our deliberations.

I am, with high respect, your most obedient,

D. L. CLINCH, *Brevet Brigadier General United States Army.*

Brevet Brigadier General R. JONES, *Adjutant General, Washington City, D. C.*

No. 7.

SEMINOLE AGENCY, *March 31, 1835.*

SIR: Having availed myself of permission to visit my family, I returned to this place on the 20th instant, where I found your communication of the 18th ultimo awaiting my arrival.

The Indians having called a meeting at this place, to be held on the 27th instant, General Clinch determined to seize that occasion to read to the Indians the President's message addressed "to the chiefs and warriors of the Seminole Indians in Florida."

On the 27th the Indians began to assemble, and General Clinch and myself availed ourselves of every opportunity to hold private conversations with the chiefs for the purpose of making favorable impressions on their minds preparatory to the meeting in council.

On the 29th we met about one hundred and fifty Indians (including the principal and several of the leading chiefs) in council, when I read to them the President's message and the treaties, enforced the President's message, explained the treaties, and concluded with an appeal to the chiefs in favor of their women, children, and common people.

Jumper, who is the principal chief law-maker, and (as he is sometimes called) sense-keeper, said that they had listened with attention, but that, as many of the chiefs were absent, they could not then make any reply to what was said to them. He begged that I would not make any report to the government upon the subject, or (as he expressed it) send no talk to their great father, the President, until we could have a full meeting of the chiefs in council. That meeting is to take place on the 20th of the ensuing month, (April,) and every practicable arrangement is made to insure a full council. I have sent express for the interpreter Richards, and for Holate Emarthla, a principal chief, whom I had permitted to withdraw from the nation, in consequence of threats against his life.

If there is any change in the temper and feelings of the Indians, it is favorable; and I indulge the hope that, by prudent management, they may yet be induced to remove voluntarily.

I am much indebted to General Clinch, who, on all occasions, promptly, vigilantly, and efficiently aids me in my operation.

In performance of the duty assigned me of investigating the claims against these Indians, under the treaty of Payne's Landing, it is necessary that I should possess, not only the documents which have been forwarded to the department in support of individual claims, but, to guard against imposition, I should have the use of the printed report made by General Preston on claims, under the treaty of 1821, with the Creek Indians, and a copy of the report upon claims against the Creek Indians for depredations subsequently committed, principally in Lee county, in Georgia. The Commissioner of the Indian Office has recently informed me that all the documentary evidence relating to individual claims will be shortly transmitted to me; but as he makes no allusion to the printed pamphlets to which I allude, (I have requested copies,) I fear they have been overlooked.

I have the honor to be, &c.,

WILEY THOMPSON.

Hon. LEWIS CASS.

No. 8.

WAR DEPARTMENT, *April 14, 1835.*

SIR: Your letter of the 19th ultimo to the adjutant general has been laid before me, and I have conversed with the President on the subjects therein referred to

Your views seem to me to be equally judicious and humane. Certainly there is not the slightest wish to oppress the unhappy Seminoles who have stipulated for their own removal. But their continuance where they now are for any length of time is absolutely impossible; and the sooner they are satisfied of this fact, the better it will be for them. Still, however, I should much prefer a voluntary and peaceable

removal to one effected by force. It would only be in the last resort that the government would be willing to compel them to comply with their own engagements. And it would be better to suffer a temporary inconvenience, if thereby their feelings could be quieted, than to require them to remove without their own consent. The matter, therefore, is referred entirely to your discretion and to that of General Thompson. If they should all be willing to go this year, it will certainly be better to remove them. But if they are opposed to this, and will generally agree quietly to remove by the first of March, or as soon thereafter as the necessary arrangements can be made, then they may be suffered to remain until that time. But, in that case, let a written agreement be drawn up stating the reasons of the delay, their entire readiness to remove by that time, and to go in a body, by such a route as you and General Thompson may think best for them, and most economical to the government; and let this agreement be signed in open council by all their influential men.

It is my decided opinion that they had better go by water, and every proper inducement should be held out for them to assent to that measure. Still, however, if their repugnance should prove invincible, that point may be yielded to them. Should the Seminoles, however, peremptorily decline to pledge themselves peaceably to remove next season, you will then proceed to carry into effect the instructions heretofore given. A copy of this communication will be addressed to General Thompson for his information.

Very respectfully, I am, sir, your obedient servant,

LEWIS CASS.

Brevet Brig. Gen. D. L. CLINCH, *Commanding at Fort King, Florida.*

No 9.

Fort King, Florida, April 24, 1835.

SIR: In compliance with the instructions which we have received from you from time to time relating to the removal of the Florida Indians, we have, under the pacific policy so strongly enjoined by yourself, exercised our capacities to the best of our abilities; and we have now the honor to submit to you the following report:

About the time that the President's talk to the chiefs and warriors of the Seminole nation was received, a council of some one hundred and fifty of the principal of those chiefs and warriors had assembled, by a previous understanding, at this place, to consult with the agents of government on matters touching their national welfare. The opportunity was considered favorable to the reading of the talk, and it was read. The chiefs and warriors listened to it attentively, and the effect produced was evidently favorable to our wishes.

Jumper, upon this occasion, expressed the sentiments of the chiefs, declaring that they had listened attentively to the talk, but that upon so important a question, and when they saw so large a body of their people unrepresented in the council, they could not assume the responsibility to decide. He asked for thirty days to bring together a fair representation of the whole nation. This council was, on the 29th ultimo, until the 20th of April, granted to him to summon a general council of the chiefs of his nation.

Owing to the absence of several chiefs whose presence was desirable, the council did not convene until the 23d instant. Several hundred of the Seminoles were then present, composed of the chiefs and principal warriors of their nation.

The council was opened by the special agent, who explained to the Indians the friendly nature of our relations with them up to the present time; the interest which the government of the United States took in their welfare; its disposition to promote their good; and his own hopes that they had now assembled to fulfil their promises and to act like honest men. The treaty of April, 1832, was then read to them and fully explained; and then they were bade to listen to the last talk that their great father, the President, would make to them on this side of the waters of the Mississippi.

The talk having been read, they were told that we were now ready to hear their decision.

Jumper was again the speaker for his nation. He expressed sentiments opposed to the treaty and to a removal from their present homes, yet sentiments solicitous of our friendship, and averse to a hostile resistance, should we use force to oblige them to go. He was followed by others who spoke as he did, and the day was wasting in unmeaning talk and idle objections, when General Clinch briefly and firmly declared to the chiefs assembled that "the time of expostulation had passed; that already too much had been said and nothing had been done; that the influence of the agents of government, their powers of persuasion and of reasoning had been exhausted, both in public councils and in private interviews, to induce them to do right; that we had lingered long enough in the performance of our duties to have averted, had they been willing, the evils which threatened their foolish resistance to the fulfilment of pledges solemnly and fairly made by them; and that now it was time to *act*. He had been sent here to enforce the treaty; he had warriors enough to do it; and he *would do it*. It was the question now whether they would go of their own accord, or go by force."

With this they were told that they might depart, and until the morning was given to them to think upon what had been said.

On the morrow, the 23d instant, they were called upon to give their final answer. Micanopy, the head chief, was absent on the plea of sickness, but evidently through a shuffling disposition to shun responsibility. In the course of the morning *eight principal chiefs* gave in their assent to abide by the stipulations of the treaty; five remained opposed to it. The special agent, General Thompson, had, upon the first intimation, in the council of this day, of further resistance on the part of the chiefs, demanded of the chief Jumper whether Micanopy, by whom he knew the movements of a number of them to be controlled, intended to abide by the treaty or not; and when Jumper finally confessed that he was authorized by Micanopy to say that he did not, he promptly declared "that he no longer considered Micanopy a chief, that his name should be struck from the council of the nation, that he should treat all who acted like him in the like manner, and that he would neither acknowledge nor do business with him or with any other as a chief who did not honorably comply with the terms of his engagements; that the door, however, was still open to them if they wished to act honestly." In consequence of this, the names of the *five opposing chiefs* were struck from the council of the nation; and to this decision on the part of General Thompson we attach important and highly favorable results, and fully concur with him in deeming the measure both expedient and called for by the occasion.

The friendly chiefs, however, whilst consenting to go to their new country, begged that they might not be hurried away; "they did not expect to have gone this year; the season was far advanced, and they wanted time to make and gather in their corn and to settle all their little business."

The lateness of the season was an objection to the removal that had seriously presented itself to our own judgments, and we had given it mature consideration, but conclusions were that it was a vital objection, and that we were called upon by humanity, by the interests of these unfortunate people, and by the best interests of the service in which we are engaged, to desist from an attempt to remove them until the coming winter. Should the trial be made, we could not, under our present great disadvantages, expect to embark the "one-third of the Seminoles" ordered to be removed (or even one-third of the whole nation, pick them up where we could,) until the middle, perhaps the last of June. We would then have midsummer to accomplish their voyage in, and all the dangers of malignant cholera and the various summer diseases of the western waters to encounter. Under such auspices we had every reason to apprehend a fatal result to our enterprise; and from such a result we have a like reason to dread the most deplorable effects upon the after-interests of the removal. In addition to this, we would have robbed this *one-third* of their present year's crop. We would neither have given them an opportunity to have reaped what they have planted here, or to have reached their new country in season to sow and reap. To have made the trial by land would have been even more objectionable; besides, your orders condemning that mode of removal had been received by the last mail.

Under these considerations, we deemed it our duty to say to the friendly chiefs that we would give their people until the first of December next to reap their corn and to complete their preparations; and that, as soon after that time as we could make ourselves ready, *every Indian in Florida* would be *started* upon his *journey to the new country*; and we strongly urge upon your consideration the policy of this decision, and that the Indians of Florida be moved in a body. Should misfortune then unhappily befall the expedition, we will at best have nothing to dread from its blighting effects upon future emigration.

We would recommend from the fifteenth to the last of January as the most fitting season to embark the emigrants at Tampa Bay. They would then reach their new homes in all probability from the middle to the last of March, thereby avoiding the winter of a more northern latitude, and securing to themselves all the advantages of the spring of the year.

These people are exceedingly desirous that they should be distinct and separate from the Creeks; should have their own agent, and the selection of their own trader and blacksmith. In this wish, in addition to the reasons which would naturally prompt them to such a request, they have one in which their rights and interests are likely to be immediately involved, and perhaps sacrificed. The Creeks have for some time made claim to certain negro property in this nation, the justice of which the Seminoles deny; and the latter are apprehensive that when they and the Creeks become associated, their rights must yield to the stronger party.

The last season was one of great drought in the Seminole country, and there is a great consequent scarcity of corn; and the severity of the winter has been the destruction of many of their cattle; owing to this there is a proportional suffering amongst the Indians for want of provisions. Their situation is truly distressing, and feelingly calls for relief. They ask through us that relief of our government, and that "they may receive bread for a few weeks;" and we earnestly and respectfully recommend both this and their previous petition to your favorable consideration.

There are *eight hundred bushels of corn* in the hands of the disbursing agent, purchased in anticipation of the removal of a portion of these Indians this season, and which will not be disposed of until we can learn the pleasure of the department; and this would do much to allay the pressing cravings of the starving Seminole.

Should our proceedings, as above reported, meet with the approbation of the department, as we honestly hope they will, an early sanction of them will enable us to carry into operation our plans for the ensuing winter with the greater effect.

With every consideration of respect, we have the honor to be, sir, your most obedient servants,
 WILEY THOMPSON, *Superintendent removal of Seminole Indians.*
 JOSEPH W. HARRIS, *Lieutenant and Disbursing Agent, Indians.*
 D. L. CLINCH, *Brevet Brigadier General United States Army.*

HON. LEWIS CASS, *Secretary of War.*

We, the undersigned chiefs and sub-chiefs of the Seminole tribe of Indians, do hereby, for ourselves and for our people, voluntarily acknowledge the validity of the "treaty between the United States and the Seminole nation of Indians, made and concluded at Payne's Landing, on the Ocklawahaw river, on the ninth of May, one thousand eight hundred and thirty-two," and the "treaty between the United States and the Seminole nation of Indians, made and concluded at Fort Gibson, on the twenty-eighth day of March, one thousand eight hundred and thirty-three, by Montfort Stokes, Henry L. Ellsworth, and John H. Schermerhorn, commissioners on the part of the United States, and the delegates of the said Seminole nation of Indians on the part of the said nation;" and we, the said chiefs and sub-chiefs do, for ourselves and our people, freely and fully assent to the above-recited treaties, in all their provisions and stipulations.

Done in council, at the Seminole agency, this twenty-third day of April, 1835.

 WILEY THOMPSON, *Superintendent removal Seminole Indians.*

The above is a true copy from the original, and to show further the strength of the friendly part, the principal chief, Holate Emarthla, who has uniformly been openly in favor of emigration, is, with a large portion of his band absent, and was not therefore present in council.

WILEY THOMPSON, *Superintendent removal Seminole Indians.*

APRIL 24, 1835.

No. 10.

WAR DEPARTMENT, *May 20, 1835.*

GENTLEMEN: Your report of the 24th ultimo, detailing your proceedings with the Seminoles assembled in general council, has been received and submitted to the President, and he has instructed me to communicate to you his views upon the several subjects embraced in it.

From your report it appears that eight of the principal chiefs have signified in writing their determination to abide by all the stipulations of the treaties of Payne's Landing and Fort Gibson, and that five of the principal chiefs refused to acknowledge them. The assent of the chiefs is to be attributed, it would seem, to the declaration of General Clinch that, if they declined to move voluntarily, they would be removed by force. The President approves of this declaration, upon a full consideration of the circumstances under which it was made. The Seminoles had trifled sufficiently long with the most solemn treaty obligations, to which they had, in the first instance, acceded with a full understanding of their character, and the consequences of which they had had, during three years, full opportunity to perceive and appreciate.

It is apparent from your report, that further argument and persuasion would have been fruitless. The government was, therefore, bound to give effect to the treaty of 1832, to secure the well-being of the Indians, and the prosperity of the Territory from which they had agreed to emigrate.

The deposing of the five chiefs by General Thompson is a measure of more questionable character.

Such a proceeding has hitherto been unknown in our intercourse with the Indians, and is an interference in their internal concerns of which neither party has recognized the right. Its immediate effect, by overawing the Indians, may be seemingly beneficial; but it is to be apprehended that the reaction will be injurious.

The influence of the chiefs is hereditary, or has been acquired in the field or in the council, and it is not easily broken. They will be excited by this act, intended as a disgrace and a punishment, to oppose more vigorously the project of emigration; and they will have little difficulty in finding instruments and means for this purpose, in the comparatively wealthy negroes mingled with them, and in the facilities for concealment, which the extent and character of the country affords. It is the opinion of the President, therefore, that the question of deposing the chiefs should be submitted to the chiefs or to the Indians assembled in council, and, if confirmed by a majority of either of them, the vacancies should be filled by an election. This is in conformity with the usual course of proceeding among the tribes, and will obviate the evil results to be apprehended from the course that has been pursued. The deposition will then be the act of the nation, or of its constituted authorities, and not of an agent of the government.

The reasons for delaying the removal which you have stated justify the measure. That such delay might be necessary was contemplated by the department, as you will perceive by the letter to General Clinch of the 14th of April. If, as stated in that letter, the Indians will generally agree quietly to

remove by the time you have designated, and will signify their agreement in writing, in the manner therein pointed out, no objection will be made to the postponement. But the Indians must understand that their removal will then be enforced in conformity with the treaty.

It is considered unnecessary to maintain a separate agency for the Seminoles west of the Mississippi. They will be located in the section of the Creek country assigned to them by the commissioners, in Arkansas, and placed under the same agent. If he fails to protect their property from the encroachments of the Creeks, Major Armstrong, the acting superintendent of the Western Territory, will apply the appropriate remedy. The smith's establishment, provided for the Seminoles by treaty, will, of course, be continued.

The commissary general of subsistence will give instructions for distributing the eight hundred bushels of corn now on hand to the Indians.

Very respectfully, &c.,

C. A. HARRIS, *Acting Secretary of War.*

Generals THOMPSON and CLINCH and Lieut. J. W. HARRIS.

No. 11.

SEMINOLE AGENCY, June 3, 1835.

SIR: A few days ago, Powell, one of the most bold, daring, and intrepid chiefs in this nation, and one that has been more hostile to emigration, and has thrown more embarrassments in my way than any other, came to my office and insulted me by some insolent remarks. He had done so before, and I then apprised him of the consequences, should he venture to do so again. He apologized, and I forgave. On this occasion I confined him in irons, as I was fully satisfied the crisis had arrived when it became indispensable to make an example of him. On the next day after he was arrested, he sent to me a proposition to sign the acknowledgment of the validity of the treaty, and begged that I would release him. I informed him that, without satisfactory security that he would behave better and prove faithful in future, he must remain in confinement. He sent for some of the friendly chiefs and begged them to intercede for him. They did so. I then informed him that I would put his sincerity to the test, by releasing him, and relying on his word to come in five days, meet those friendly chiefs, and, in council, subscribe to the acknowledgment of the treaty. He replied that he would not only do it himself, but that he would bring others with him; for that having been brought to proper reflection, he was perfectly satisfied that the course which he had been pursuing was well calculated to ruin him and his people. True to his professions, he this day appeared, with seventy-nine of his people, men, women, and children, including some who joined since his conversion, and redeemed his promise. He told me that many of his friends were out hunting, whom he could and would bring over on their return. I now have no doubt of his sincerity, and as little that the greatest difficulty is surmounted.

Very respectfully, &c.,

WILEY THOMPSON.

General GEORGE GIBSON.

No. 12.

FORT MARION, June 30, 1835.

SIR: I returned on the 28th instant from a short excursion to Fort King, circumstances having made it necessary for me to visit that post. On the 18th, seven white men, citizens of Alachua county, fell in with a party of five Indians, who had evaded the guard posted on the lines and were roaming through the country in pursuit of game, and occasionally committing depredations on the stock belonging to the citizens. The party of whites deprived four of the Indians of their rifles, and flogged them with their cow-whips; and whilst engaged in taking the rifle from the fifth Indian, two young Indian men, who had separated from the party a short time previous to their falling in with the whites, came in sight, and seeing the situation of the parties, commenced firing on the whites, and succeeded in wounding three of them, but not dangerously. The whites returned the fire, killed one of the Indians, and wounded the other; when they returned into the lines, and reported the facts, as above stated, to their chiefs; all the particulars of which, except as to the numbers engaged in making the attack, are confirmed by the whites. They state, however, that the party of Indians that commenced the attack amounted to fifteen or twenty. On my arrival in the county of Alachua, I found the people much excited and alarmed from the various stories that were put in quick circulation. But these feelings were soon allayed, and the people returned to their usual occupations, satisfied with the arrangements that were made for their protection.

On my arrival at Fort King, I found that General Thompson had been prompt in calling the chiefs together, and a few days after, the general and I met them in council; and after referring to part of their treaty stipulations, and explaining the nature of the outrage committed, a demand was made on the chiefs for an immediate surrender of all the Indians that had been engaged in the affair, which demand was promptly complied with, and they are now in confinement at Fort King, subject to the action of the civil authorities of the county.

The chiefs that met us in council were from various parts of the nation, and evinced much promptness and good sense and feeling on the occasion. General Thompson and myself used every effort in our power to ascertain the truth as to the number of Indians in this unfortunate affair; but the Indians persisted in the number above stated, in which they were sustained by the opinions of all the chiefs present. The statements of the whites are so various that, although I have taken much pains to get at the truth, I find it impossible to form a correct opinion on the subject.

I remain, with high respect, your most obedient,

D. L. CLINCH, *Brev. Brig. Gen. U. S. A.*

Brev. Brig. Gen. ROGER JONES, *Adjutant General, Washington City, D. C.*

No. 13.

SEMINOLE AGENCY, August 1, 1835.

SIR: About the 19th or 20th of June a rencontre occurred between a party of whites and a party of strolling Indians, in which three of the whites were wounded, one of the Indians killed, and one wounded, of which I received information on the 23d. There were at that time five of the principal chiefs at the agency. I immediately despatched runners for others, who promptly attended, to all of whom I made known the outrage which had been committed, and peremptorily demanded of the nation a surrender of the depredators. The chiefs at once disclaimed the outrageous act of their countrymen, and promptly ordered the apprehension of the culprits; and on the succeeding morning (which was the 24th) four of them were brought up and surrendered to me, and two more were brought on the evening of the same day and given up. The examination of these two parties was separately taken, a copy of which you have herewith enclosed.

The wounded Indian was, during the succeeding night, borne on the shoulders of others, who were sent to bring him to within three or four miles of this place, when it was found that he was so ill from a severe wound that he could be brought no further. I permitted him to remain there on a pledge of the chiefs that, when sufficiently recovered, he should be brought to the garrison and be confined. The other six were kept in confinement until the 27th ultimo, when I turned them over to the chiefs, on their giving me a pledge that, when called for, the whole of the seven should be surrendered to the civil authority. The accompanying copy of a correspondence, which will show that I made a tender of them to the civil authority, will, I trust, be a sufficient justification of the course I have taken. I have not yet received an answer from Judge Sanchez. The chiefs began to complain of delay; the prisoners became extremely impatient, and a proper regard to economy seemed to me to require that the post should be relieved from the expense of supplying them with provisions.

The chiefs acted promptly and with energy, for which they merit commendation.

Very respectfully, your obedient servant,

WILEY THOMPSON.

No. 13—A.

SEMINOLE AGENCY, July 27, 1835.

SIR: On the 7th instant I wrote to Francis R. Sanchez, esq., judge of Alachua county court, making a tender of the Indian prisoners now in confinement, through him, to the civil authority. My letter to him was delivered by Lieutenant C. Smith on the 9th instant. Eighteen days have since transpired and I have not yet received an answer, notwithstanding the short distance which separates Judge Sanchez from this post. I have therefore decided to release them to the chiefs now assembled, on their pledge (which they have given to me) to deliver them up should they be hereafter called for.

I request, therefore, that you will order them to be sent to my office, when the chiefs are assembled.

Very respectfully, your obedient servant,

WILEY THOMPSON.

Colonel A. C. FANNING.

No. 13—B.

CAMP KING, July 26, 1835.

SIR: On the 9th of July I delivered your letter to Francis R. Sanchez, esq., judge of the county court of Alachua; also a communication addressed to myself, in which you expressed a desire to co-operate with the civil authority in a full investigation of all the circumstances which lately occurred between a party of Seminole Indians and several citizens of Alachua. After reading the communications referred to, Judge Sanchez stated to me that he should be obliged to postpone writing to you on the subject in question until he could see the parties interested in the affair, and hear their statements and views as to the disposition of the Indian prisoners. At your request, I read your letter to many respectable citizens. The original I herewith enclose.

I am, very respectfully, sir, your most obedient servant,

CONSTANTINE SMITH,
Lieutenant 2d Regiment of Artillery.

General WILEY THOMPSON,
Supt of Indian Affairs, Seminole Agency, East Florida.

No. 13—C.

SEMINOLE AGENCY, July 7, 1835.

SIR: Some days ago I sent Mr. Winslett to request some of the citizens who were engaged in the late unfortunate occurrence with a party of Indians in Alachua county to attend an examination of the Indian prisoners at this place, for the purpose of coming to a conclusion as to the propriety of sending them to that county for trial. I did so because, judging from the statements made by the Indians, and the statement I heard the party of the whites give of the affair, I thought it probable that the citizens would be of the opinion that the six Indians who were disarmed by the whites before the firing commenced were guilty of no crime but going beyond their boundary and killing a cow, and that it would therefore be improper to trouble the court with their trial, and charge the public with the expense of their transportation, imprisonment, and trial. The chiefs are ready to inflict the penalty of the Indian laws upon them,

which is severe whipping. The owner of the cow that was killed will have a claim upon the nation for her value. The other prisoner is subject to a more serious charge, and ought to be punished by the civil authority. I wrote to F. R. Sanchez, esq., judge of Alachua county court, making a tender of all the prisoners, through him, to the civil authority of the county; and having heard that you are on your way to his neighborhood, I beg the favor of you to present the letter to him, (and send this to him,) as it more fully explains my views, and request of him an answer. It is important that the subject should be immediately attended to, as the Indians begin to complain of delay. Judge Sanchez lives within three miles of Normansville. I am told that Mr. Winslett stated that if the citizens did not attend on the day appointed I would release the prisoners. He misunderstood me, as I never had an idea of releasing them until I fully discharged my duty in making a direct and regular tender of them to the civil authority. Please bring Judge Sanchez's answer with you.

Very respectfully, your humble servant,

WILEY THOMPSON.

Lieutenant C. SMITH.

No. 13—D.

SEMINOLE AGENCY, July 5, 1835.

SIR: I sent express, some days ago, to request the attendance of such of the citizens who were engaged in the unfortunate affair which recently occurred in your county with a small party of Indians as could come to this place, to do so, for the purpose of making an examination of the Indian prisoners, seven of whom are in custody, with a view to determine whether it will be proper to trouble the court with the trial, and charge the public with the expense of all of them. I have examined six of them, who say there were but eight Indians in the party; that two only fired on the whites; that six were disarmed by the whites before the firing commenced, and that they could not therefore have fired, if they had been so disposed. If this statement be true, and it so far agrees with the statement which, as I have heard, the whites make, the six Indians attacked were only guilty of going beyond their boundary. If so, they would be subjected to no other penalty than that inflicted by the Indian law, which is severe, and the chiefs are ready to inflict that. The wounded Indian is subject to a more serious charge, and ought (as I think) to be punished by the civil authority. I make a tender, through you, to the civil authority of Alachua county of the whole of them, and request that you will inform me whether the whole, and if not the whole, what portion of them will be claimed by it. You are aware that the demand for them must be based upon admissible affidavits, charging them with a crime punishable by the civil authority.

Very respectfully, your obedient servant,

WILEY THOMPSON, *Indian Agent.*

F. R. SANCHEZ, Esq., *Judge of Alachua County Court.*

No. 13—E.

SIR: There were some of my neighbors out in the woods the other day and were fired on by the Indians, and three of them badly wounded, for which they ask satisfaction of you, you being the proper person; and if they cannot get any other satisfaction, they are determined to take it of them, if they do not keep on their own side of the boundary line. We are going on a scout on the 25th instant for to cruise on the line; and if we find any that refuse to be taken, we shall deal with them as they deserve. My company consists of one hundred men, and there are about the same number from the upper country and elsewhere that volunteer their services for to take the route. Please to send me an answer and some advice on the subject.

Yours in haste, this 22d of June, 1835

S. V. WALKER.

General THOMPSON.

SEMINOLE AGENCY, June 23, 1835.

SIR: Your letter of yesterday's date was handed to me this evening by Mr. Warren. I regret the occurrence of the circumstance referred to by you, of which I heard before the arrival of your express. I have made a demand on the nation for the Indians who committed the outrage. To-morrow the chiefs are to assemble here for the purpose of ordering the delivery of the depredators over to the civil authorities. I have no doubt they will be given up. I am much pleased to learn that you, with your company, and a company from an adjoining county, intend to scour the country on the Indian border, in the direction you indicate, as I have no doubt it will have a salutary effect upon the Mickasuky Indians, who are the most troublesome of any belonging to the nation, especially if the operation should be directed by prudence and proper discretion, as I trust it will. You are aware of the delicate character of our relations with those people, and that all causeless irritation should be avoided. The outrage complained of is well calculated to excite indignation and alarm, but I do not consider it as evidence of a settled purpose of any considerable portion of these people to commit hostilities; and I trust that the results of the ensuing three or four days will evince the correctness of my opinion. I have to request, therefore, that you will not, during your excursion, cross the Indian boundary, nor permit any act to be done which would tend to irritate the Indians that can be reasonably avoided. If you can extend your search beyond the Suwannee river, it will enable you to accomplish the object of driving the Indians within their boundary; should you fall in with any, try to get possession of them without bloodshed.

Take their guns and packs from them, and I think it will have a good effect to lodge them in jail. The idea of a jail carries terror to the Indian mind. Be so good as to keep a strict register of the guns, &c., that may be taken, so that they may be turned over to this office and eventually restored to their owners.

Very respectfully, your humble servant,

WILEY THOMPSON, *Indian Agent.*

Captain S. V. WALKER.

No. 13—F.

SEMINOLE AGENCY, June 24, 1835.—Forenoon.

Examination of Wacoochee Hajo, Sapokitee, We Kalitkee, and Copichx Hajo, four of the Indians who formed the party that committed the outrage in Alachua county, on the — day of June, 1835.

THEIR STATEMENT.

Wacoochee Hajo, Sapokitee, We Kalitkee, Fise, and Lecotichee, of Long swamp, went beyond the Indian boundary, near Kenapaha pond, in Alachua county. Before they reached there they killed a cow which belonged to some one of the whites in the neighborhood of Dramond's pond; when they got within three miles of Kenapaha, near a sink-hole where there is water, they encamped. Another party of Indians, viz: Capich Hajo, Chokikee, and Hithlomee, from Big swamp, who had been upon the Santa Fé river, met them and encamped a short distance from the first party. That two of the Long swamp Indians, to wit: Lecotichee and Fise, went out hunting in the morning. The other six, to wit: Wacoochee Hajo, Sapokitee, We Kalitkee, Capich Hajo, Chokikee, and Hithlomee, were together about 12 o'clock at one of the camps, when a party of whites arrived at the camp where the Indians were together, took their guns from three of them, examined their packs, and commenced whipping them, and the Indians ran off; one of them ran but a short distance when he was called by the whites. The whites commenced whipping him again; he called to another Indian who had also ran off. At that crisis the two Indians who had been out hunting, to wit: Lecotichee and Fise, were approaching the camp, and commenced firing on the party of whites. The whites returned the fire, killed Fise and wounded Lecotichee severely; the other three from Long swamp were disarmed before the firing commenced. The three from Big swamp who were at the camp of the Long swamp Indians when the whites arrived, and had left their guns at their own camp, ran off when the firing commenced without their guns. After the whites left the scene of action one or two of the Indians went back and got their guns.

Three guns were taken by the whites before the firing commenced, and were carried off by them. But two Indians, to wit: Fise and Lecotichee, fired, and they fired two or three times each.

JUNE 25, 1835.—Afternoon

Examination of Chokikee and Hithlomee.

They were with Capich Hajo, and had been upon the Santa Fé river. They met Wacoochee Hajo and four other Indians at a sink-hole where there is water, about three miles from Kenapaha pond; two of the Long swamp Indians were out hunting; the three Big swamp Indians were at the camp of the other party, making six at the camp. About 12 o'clock a party of white men came upon that camp. The whites began to whip the Indians, and about the time they commenced whipping the second one the two who were out hunting, to wit: Lecotichee and Fise, or Fix-onchee, approached the camp and commenced firing on the whites; and when they were in the act of firing the second round, they, the said Chokikee and Hithlomee, ran off and did not stop until they reached their town. Wacoochee Hajo, Sapokitee, We Kalitkee, Capich Hajo, and the said Chokikee and Hithlomee, were alone together at the same camp when the party of whites, consisting of seven, came upon them. Capich Hajo and the said Chokikee and Hithlomee had left their guns at their own camp. The other three, to wit: Wacoochee Hajo, Sapokitee, and We Kalitkee, were disarmed by the whites before the other two, to wit: Lecotichee and Fise, or Fix-onchee, approached and commenced firing, and the whites had the guns of said Indians stacked against a tree, where they were guarded by some of the whites. There were but eight Indians in the whole, and none fired but the two before stated. The others were disarmed, and could not have fired if they had been so disposed.

No. 14.

FORT KING, Florida, August 3, 1835.

SIR: I have the honor to acknowledge yours of the 3d ultimo, obligingly granting me permission to pass a month or two at the Virginia Spa, or elsewhere, for the recovery of my health.

In consequence of the lateness of the season, and of my present state of health forbidding immediate journeying, I shall be unable to avail myself of your polite indulgence.

I have also the honor to forward, under cover with this, my account current, statement of agents, and return of provisions, for the second quarter—illness having chiefly prevented my making these returns before.

The present prospects of emigrating are promising. It is probable the superintendent of the removal will shortly make his requisitions upon me for subsistence and transportation. Should he require water-carriage I shall doubtless set out for New York by the close of this or the commencement of the coming month. Should land transportation be required, I cannot too soon be making ready, if it is contemplated

removing the Indians before spring. It must be constantly borne in mind that the Mississippi bottoms, indeed, the road for one hundred miles west after crossing the river, is impassable in the months of January, February, and March.

I am, sir, with great respect, your obedient servant,

JOSEPH W. HARRIS, *Lieutenant, Disbursing Agent.*

Brig. Gen. GEORGE GIBSON, *Commissary General of Subsistence, U. S. Army.*

No. 15.

Extract of a letter from Lieutenant Joseph W. Harris, dated Smithville, North Carolina, September 29, 1835, to Brigadier General George Gibson, commissary general of subsistence.

I consider the population, (Seminoles,) including negroes, not to exceed 3,000, of which 1,600 are females.

No. 16.

FORT MARION, *St. Augustine, September 12, 1835.*

SIR: For the information of the general-in-chief, the particulars of a most atrocious murder, committed by a party of six Mickasuky Indians, of August 11, in the vicinity of Fort Brooke, are submitted, as follows:

On August 11 private Dalton, of the 3d artillery, was despatched on a mule with the mail from Fort Brooke to Fort King, and had gone about twenty miles from the former place when he was met by a party of six Mickasuky Indians, who murdered and scalped him, ripped open his body and threw it into a pond of water. The murderers shot the mule on which he rode also, and carried of the mail and a few other articles which private Dalton had in his possession.

As soon as the murder was reported at Fort Brooke, parties were sent out in pursuit of the murderers, who were ascertained to be the Indians above referred to, but they had made their escape in the direction of Fort King. The body of private Dalton was found in the condition above described, and buried. The causes of this murder are stated to have been a determination on the part of these Indians to revenge the death of a relation of theirs, who was killed in the rencontre between the whites and Indians which I reported to the general-in-chief in my letter of 30th June last. These Indians now say that, having accomplished their purposes of revenge by the murder of a white man, they are satisfied.

Measures have been taken at Fort King by the officers of government and the Indian chiefs, conjointly, to apprehend the murderers; and I have no doubt that by this time they have been secured.

I am, with high respect, your most obedient,

D. L. CLINCH, *Brevet Brigadier General U. S. Army.*

Brevet Brigadier General R. JONES, *Adjutant General, Washington City, D. C.*

No. 17.

SEMINOLE AGENCY, *November 30, 1835.*

SIR: About the 14th instant I was informed that five of the chiefs friendly to emigration, with their people, amounting from four to five hundred, had fled to the vicinity of Fort Brooke, on Tampa bay, for protection. On the 26th instant Charley Emarthla, the most intelligent, active, and enterprising chief in this part of the nation friendly to the removal, was murdered by those opposed to the removal. This murder was effected through the treachery of a sub-chief, (Powell,) who professed to be, and was considered, friendly. The consequences resulting from this murder leave no doubt that actual force must be resorted to for the purpose of effecting the removal, as it has produced a general defection among those Indians, now in the nation, who were pledged to remove voluntarily. What effect it may have on those assembled at the bay, I can only conjecture. They are in a deplorable condition; separated from this post by the whole extent of the Indian territory, a distance of upwards of one hundred miles, remote from those sections where supplies are produced, and in the vicinity of a post which has no extra provisions, and which is dependent upon sea transportation for supplies of every description. Destitute, as they are, of the means of subsistence, it is to be feared they, too, will return to the nation, and from necessity become disaffected.

I had advertised the sale of Indian cattle to commence on the first of the ensuing month, but the murder of Charley Emarthla, and the threats of the hostile Indians, produced such a panic among those who would have surrendered their cattle as to defeat the operation totally. In all probability the obstinacy and treachery of these Indians will supersede the necessity of any valuation and sale of the cattle, as these will be lost or destroyed in the conflict which is now inevitable. If any of the Seminoles should be able to surrender their cattle to me, in compliance with the treaty, during the struggle, I will take such measures as I may think best calculated to secure the interest of all concerned.

We must not lose sight of the removal of at least a considerable portion of those people at the appointed time. These refractory people should, and will, on a concentration of the forces under General Clinch, be forced to yield, or they will be crushed. A determined movement upon them will, perhaps, reassure those disposed to be friendly, and convince those who are hostile of the folly of any attempt to resist.

Very respectfully, your obedient servant,

WILEY THOMPSON, *Superintendent Seminole removal.*

General G. GIBSON.

[1ST SESSION.]

ON CLAIMS OF OFFICERS OF THE ARMY FOR ADDITIONAL PAY AND EMOLUMENTS WHILE DOING DUTY IN THE MILITARY BUREAUS AT WASHINGTON.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 10, 1836.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom was referred the memorial of Captain Thomas Hunt and other officers of the army on duty in the military bureaus of the War Department, reported:

The allowance, in reference to which the officers of the army on duty in the military bureaus have presented their memorial, was fixed at one dollar and twenty-five cents per day on the 10th of August, 1818, by a regulation of the War Department, then under the administration of Mr. Calhoun; and which regulation is in the following words:

"Officers detailed to perform duties in the office of the chief engineer, quartermaster general, adjutant and inspector general, or the chief of the ordnance, will be allowed, while performing such duties, at the rate of \$1 25 per diem in addition to their usual pay and emoluments.

"The quartermaster general will allow officers so detailed fuel and quarters agreeably to their respective ranks."

And subsequently the allowance was extended to other military bureaus either by regulation or special decisions of the head of the War Department.

The officers continued to receive the allowance until the passage of the act of March 3, 1835, entitled "An act making additional appropriations for the Delaware breakwater, and for certain harbors, and removing certain obstructions in and at the mouths of certain rivers, for the year one thousand eight hundred and thirty-five," the proviso to which is as follows: "Provided, That no officer of the army shall receive any per cent or additional pay, extra allowance, or compensation, in any form whatever, on account of the disbursing any public money appropriated by law during the present session for fortifications, execution of surveys, works of internal improvement, building of arsenals, purchase of public supplies of any description, or for any other service or duty whatever, unless authorized by law;" in consequence of which, the payment of the allowance was suspended, or, in other words, it was discontinued.

It may be proper to state why a necessity has existed, and still does exist, for the employment of officers of the army in the offices of the staff departments of the army.

Those chiefs of staff departments, or heads of military bureaus, as they are commonly called, have great and important military and administrative duties to perform. The money accountability of their departments is very great, and so, also, is the property accountability; and in the due and proper administration of their respective departments so as to secure a strict and rigid responsibility in reference to reports, returns, statements, and all things else necessary to guard and protect the public interests, great labor and a perfect knowledge of details are indispensably necessary. The military part of their duties is of so much importance, and of such public utility, that, with the extent of territory which the United States embrace, and the various and multifarious claims upon their time and attention, it is surprising to your committee that they are enabled to perform all that their positions seem to require of them.

Another consideration is well worthy of remark: When members of Congress, either individually or collectively, in their legislative capacity, require information from the Department of War, in order that, on many points, legislation may be had understandingly, the chiefs of staff departments are directed to report, each in his respective sphere, to the head of the department; and, in so doing, much research, industry, labor, and talent, are requisite to afford us early and correct information; or, if calls are made directly by us upon them, we are answered promptly and satisfactorily, in all cases, so far as they have the means.

Your committee are fully satisfied of the absolute necessity for the chiefs of the staffs to have officers of the army as their assistants in the duties of their respective offices, for such aid is of the highest importance to the public interests, combining, as it does, a knowledge of the casualties and details of the service and military usages—a knowledge of accounts as connected with military operations, allowances, the movement of troops, and the transportation and purchase of military supplies; the surveying of routes for, and the opening of, roads and canals; the construction of bridges; fortifications, both permanent and field; drawing of maps of surveys, plans of fortifications and other public works; and of everything under the supervision and charge of the Ordnance department; the clothing of the army; the recruiting service; military orders and correspondence; and, in short, everything connected with military affairs. Besides, when the chief of a staff department is kept from his office by illness, or is absent from it on duty or for other cause, it is very clear that an officer acquainted with all the duties and details of the office should be in it to take charge of it. The good of the service requires this.

The necessity for employing officers of the army in the military bureaus must, therefore, be apparent; the heads of those bureaus cannot discharge their duties efficiently, and to the satisfaction of the public, without such aid. Your committee, consequently, will not dwell longer on this part of the subject.

The reason for the allowance of the per diem of one dollar and twenty-five cents to each officer on duty in the military bureaus is founded in justice and equity, it being in consideration of the increased expenses to which the officers are subject by being placed on duty at the seat of government, separated from the benefits and advantages of messings, which officers at established garrisoned posts can avail themselves of; and, besides the small (comparative) expenses which they need be at by several messing together, messes derive advantages from allowances made to them by the government, to wit: mess rooms and fuel for them.

By reference to the 22d section of the act of Congress of March 16, 1802, which is now in force, it is perceived "that, where any commissioned officer shall be obliged to incur any extra expense in traveling and sitting on general courts-martial, he shall be allowed a reasonable compensation for such extra expense actually incurred, not exceeding one dollar and twenty-five cents per day to officers who are not entitled to forage, and not exceeding one dollar per day to such as shall be entitled to forage."

Your committee are decidedly of opinion that the officers whose case is now under consideration are under as heavy extra expenses as those who are provided for by that law can be, and, indeed, greater; for, to the seat of government officers come from all quarters of the country—some on business connected with the public service, some on leave of absence, and some for other reasons, over which those on duty in the bureaus have no control; and unless they are treated civilly, and receive some attention from their brother officers at the seat of government, the reputation and character of the army suffers in public opinion—but few persons taking into consideration whether their means can justify the expenses of hospitality or not. Your committee are not ignorant of the fact that a prejudice has existed in regard to the employing of officers on bureau duty, but it has been without understanding their true position. They work hard, and are not seen absent from their duties when the public interests require them to be at their posts. Some of them scarcely visit the halls of Congress half a dozen times during a whole session, unless sent on public business. The respectability of the army requires that those who are on duty at the seat of government should show some attention to their associates in arms; and the heads of bureaus or chiefs of staff departments can do this in consequence of the allowance to them of additional rations under the law of 1802; but the subordinates in those bureaus can have no means of doing this now, unless Congress afford them relief, and by the granting of which, the public service, as your committee believe, would be benefited, because it would enable them to have association with those from the distant posts and parts of the country, thereby deriving information that would assist in the administration of the affairs of the departments to which they are attached.

It might be urged that the per diem is "authorized by law," and therefore not affected by the proviso to the act of March 3, 1835, already quoted, because of its having been allowed by *regulations*, and which regulations were made in pursuance of law; for the 9th section of the act approved April 24, 1816, entitled "An act for organizing the general staff" &c., provides "that the regulations in force before the reduction of the army be recognized as far as the same shall be found applicable to the service, subject, however, to such alterations as the Secretary of War may adopt with the approbation of the President;" but, inasmuch as the payment of the allowance has been discontinued by the order of the Secretary of War, predicated on an opinion of the Attorney General, your committee are of opinion that the memorialists are entitled to relief by legislative action; and therefore report a bill.

24TH CONGRESS.]

No. 640

[1ST SESSION.]

EXPLANATORY ESTIMATES OF THE COST AND PLANS FOR A NATIONAL FOUNDRY IN THE DISTRICT OF COLUMBIA, AND OF THE SITE PROPOSED FOR THE SAME.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 11, 1836.

WAR DEPARTMENT, *February 10, 1836.*

SIR: In conformity with a resolution of the House of Representatives of March 3, 1835, I have the honor to transmit a report from Brigadier General Wool and Lieutenant Colonel Talcott, furnishing the information called for respecting the establishment of a national foundry in the District of Columbia.

Very respectfully, your obedient servant,

LEWIS CASS.

HON. JAMES K. POLK, *Speaker of the House of Representatives.*

INSPECTOR GENERAL'S OFFICE, *Washington City, February 9, 1836.*

The undersigned having been directed by the honorable Secretary of War to examine and select a proper site for a national foundry in the District of Columbia, under the authority of a resolution of the House of Representatives, passed 3d March, 1835, respectfully present the following report:

For considerations relating principally to economy, it is deemed proper to assume that water power only should be used at a foundry within the District; and as the supplies of materials and fuel, and the distribution of the manufactured articles, demand that water transportation should be convenient, the only positions within the District of Columbia affording these indispensable facilities at this time, and to the extent required, are found along the margin of the Potomac above Georgetown, between the canal and river, and below the chain bridge.

The ground within these limits presents these sites, viz:

- 1st. From Carberry's west line, near the mill, extending up the river, and embracing about fifty acres.
- 2d. From Carberry's west line, extending downwards, to a point within 230 yards of the guard-lock, and embracing about forty-two acres.
- 3d. The establishment belonging to General Mason, including all his buildings and fixtures; this last may be extended by the addition of ten acres belonging to the canal company, which will afford sites for dwellings—making in all about fifteen acres.

It is deemed proper to state the advantages and disadvantages which pertain to these several sites, admitting, however, that they are all upon a par as regards health, and all in some degree difficult of access.

The first site is accessible by means of a road culvert under the canal near its eastern bounds, and by procuring a right of way from the canal bridge above, it may be reached from the westward. It offers good ground for the location of the needful buildings of all kinds, with suitable landing places on

the river; the necessary water power can be obtained from the canal, and it embraces also a small supply of water from the falls branch, which is susceptible of use to a limited extent.

The principal disadvantage of this site is, its liability to inundation and injury by the ice in times of high freshets; the contraction of the river at the chain bridge has a tendency to turn the current of water and ice across the plat, and the trees and shrubs upon a portion of its surface show indubitable proof of this fact. The excavation for raceways will be expensive in consequence of the width of the plat, and a large portion of this width, next to the river, consists of ground that would not be used for any purpose, except perhaps for proving cannon.

The second site is accessible from the road culvert above mentioned, and also at its eastern extremity, by means of a pivot bridge, to be constructed across the guard-lock of the canal. The water power can be conveniently drawn from the canal, and used at a suitable elevation with moderate excavations for raceways; the plat affords good ground for the requisite buildings and for proving cannon, with convenient access from the river. The lower end of this site, where the principal buildings would be located, is not so liable as the first site to the action of ice and strong currents in time of freshets, being in a measure protected therefrom by the point of land above, which is now covered with trees.

The establishment owned by General Mason is accessible through a road culvert, and offers buildings and fixtures in a state of preparation for the annual manufacture of about three hundred heavy guns, with a corresponding number of shot, &c. The capacity of this foundry may be considerably increased, by the addition of buildings, and the use of water drawn from the canal. It now operates with a small power derived exclusively from other sources, which may be preserved and used when the supply from the canal happens to be interrupted. The buildings and fixtures being now in a state for use, operations on a moderate scale may be commenced immediately.

The objections to this site are the limited extent of ground, forbidding an extension of the establishment to such a scale as may be demanded for a national foundry, and the inferiority of the buildings and machinery, compared with that which may now be constructed, and which it would be deemed proper to provide. This foundry has been in existence for a long period, and successive improvements have made it valuable as a private manufactory; but, taken as a whole, it is not commensurate with the wants of the government.

Upon due consideration of all the circumstances connected with the several sites above described, we give a preference to the second, being that on the land of Mr. Carberry; and the addition of forty acres on the opposite side of the canal would give room for the erection of dwellings for workmen, on high ground, if such a position should be desirable on the score of health.

It may be remarked that all the sites deemed eligible are liable to be affected in times of very extraordinary freshets; and if the piers of the aqueduct across the Potomac should exercise an unfavorable influence on the free passage of ice at such periods, this evil will be increased.

Herewith is furnished the estimated cost of the several sites, and an estimate, in detail, of the whole expense for land, building and machinery, for an establishment to be located on the site selected, or, rather, for the one which is deemed most eligible of the three sites mentioned.

JOHN E. WOOL, *Brigadier General United States Army.*
G. TALCOTT, *Lieutenant Colonel of Ordnance.*

Estimate of cost of sites for a national foundry, and of buildings, machinery, &c., to accompany the report of the officers directed by the honorable Secretary of War to select a site.

GEORGETOWN, D. C, *January 28, 1835.*

SIR: The letter from your department, under date of October 17, 1835, enclosing the following resolution of the House of Representatives, passed 3d March last, to wit:

"Resolved, That the Secretary of War ascertain on what terms, and at what price, a proper site for the erection and establishment of a national foundry can be obtained within the District of Columbia, and that he report the same, together with the plans and estimates for a national foundry, to the next Congress"—

And appointing me the agent to collect the required information, according to the tenor of the resolution, has been received, and the subject duly considered, and I have now the honor respectfully to report:

Your instructions, after directing me to select a proper site, state, as a general guide for the extent of the works proposed, that they shall be on a scale that will admit of the same kind and quantity of work being performed as usually done in General Mason's establishment.

On the inspection of this establishment, I find it to be capable of casting one heavy gun, daily, with a corresponding quantity of shot, shells, carriages, &c., but that it varies considerably in the quantity of work actually performed, depending much on the extent of the orders from the two departments, by whom it is usually employed. It is usually occupied in casting cannon, shot, &c. I have assumed that the quantity intended by you for my guide is that above stated, and the plans, estimates, and selection of a site have been made with reference to that amount of work.

Agreeable to your instructions, the first thing which occupied my attention was the selection of a site for works of the magnitude proposed. In making the selection, I have kept in mind the following points, which are considered of essential importance to the convenience and utility of the establishment:

1. There should be sufficient space not only for the purposes now contemplated, but capable of extension, so as to meet the probable future wants of the government in this branch of manufacture.
2. It should be furnished with an uniform and abundant supply of water, to propel such machinery as might be required.
3. It should be conveniently located for the reception of materials and transmission of fabricated articles at a moderate expense.
4. It should be so situated as not to be liable to injury by inundation or ice; and
5. It should be as free as possible from the autumnal diseases, common to most of the watercourses in this section of the country.

Of the probable future wants of the government, I have not sufficient data in my possession to enable me to form anything like a satisfactory conclusion. But there appears to be sufficient evidence to satisfy me that, with a situation so convenient to the seat of government, and having the other conveniences above enumerated, it is within the scope of ordinary prudence to allow liberally for that contingency.

The space which I have thought proper for the manufacturing purposes of the establishment is about sixteen acres, with the necessary additional space for the dwellings required.

The water power embraced within the limits specified in the resolution, with one or two trifling exceptions, is confined to that in the possession, and under the control, of the Chesapeake and Ohio Canal Company.

This canal forms a channel through which can be drawn, from the Little Falls, four miles above Georgetown, a quantity of water beyond what is required for the ordinary purposes of navigation, equal to 20,000 cubic feet *per minute*, which can be used with a fall to tide water of *thirty-six* feet.

The quantity that would probably be required for the ordinary operation of the necessary works, to fabricate twelve hundred heavy guns per annum, with a corresponding quantity of carriages, shot, &c., would not exceed two thousand cubic feet per minute with that fall, or one-tenth of the whole quantity that could be furnished by the canal, without injury to its navigation.

With this power at command, so valuable for works of this description, and in its connexion with the general interests of the District, it unfortunately happens that the proprietors are expressly prohibited by their original charter from selling to any useful extent. One of the conditions of the charter granted by Virginia, Maryland, and Congress, is, that no water shall be sold for manufacturing purposes, except such surplus as should be necessarily discharged for the *security* of the canal; this exception is vague and uncertain in its terms and application.

If the interpretation given to it by the agents of the company and their counsel, that it conveys the right to draw without limits through all waste wiers *erected* necessarily for the security of the canal, should be confirmed on adjudication, there would then be no difficulty in obtaining from them all the water necessary for propelling the required machinery; but if it should be determined that the right under this grant or exception only extends to the water necessarily discharged for the security of the canal *for the time being*, it is evident that no water, or at most a very small quantity, could be drawn during the *dry seasons* of the year, as the *security* of the canal would not require it, and any buildings erected depending on constant supply would be at the mercy of any litigious fellow who, from interest or a worse motive, might choose to restrain them from using the water, contrary to the spirit of the charter.

Under these circumstances, I could not think it would be prudent to propose the erection of the contemplated works depending on it, without further security that they would not be interrupted in their operations, which could only be done by the legislation of Congress; and, to have complied with your instructions, I should have felt myself compelled to have abandoned the idea of a water power, (there being no other of sufficient capacity to answer the purpose within the limits of the District of Columbia,) and to have resorted to steam or other power for propelling the machinery; but having been informed that the legislatures of Virginia and Maryland had already, by special laws passed subsequent to the original charter, abrogated entirely, so far as they were concerned, the restriction referred to, and that an early application would be made during the present session of Congress for the passage of a law to extend the right or authority to sell the water within the District of Columbia; believing that no reasonable objection could exist to granting this power, and being satisfied that it was the intention of the committee of Congress who reported the above resolution, and that it was also the intention of your department that a site should be selected having the conveniences for applying the waters of the canal for the purposes required, I concluded to make a selection, and propose the plans and estimates, *assuming* that the canal *will have*, by the early action of Congress on the subject, the power to sell the necessary water rights; and they are accordingly made and submitted, *subject to that contingency*.

The officers of the canal company, in fixing the sum embraced in the estimates as a compensation for the water rights, did not wish it to be understood that this sum was *asked* as a compensation. They considered themselves bound to afford every facility to works of national importance that their circumstances would admit of, and would feel satisfied with anything that should be deemed by the officers of the government having the work in charge an equivalent or compensation for the advantages obtained.

The first site to which my attention was called, from its having been referred to in the documents reported to the House of Representatives, was next above the locks of the old Potomac Company, about two and a half miles above Georgetown, lying between the canal and Potomac, and below the causeway leading to the Little Falls bridge crossing the Potomac. This situation appeared to possess all the advantages of location for manufacturing objects that could reasonably be desired, having ample space for the erection of the necessary buildings; the canal forming its northern boundary, through which the water power and the necessary supplies of material from the coal banks of Cumberland and the iron districts of the Potomac and Shenandoah could be conveniently furnished; while on the river forming its southern boundary, about eight hundred feet distant from the canal, could be conveniently forwarded by boats any fabricated articles below the Alexandria aqueduct for transshipment, or to be placed in depot.

With these important advantages, there appeared, on minute inquiry, to be still more important defects in this site, the first of which, and one that appeared to be very serious, if not insurmountable, was the imminent risk to which all buildings erected on it would be exposed from the irruption of immense masses of ice occasionally accumulating at a point directly above, and which, when forced into motion by the swelling of the stream, would sweep over the site with irresistible violence, overwhelming everything in its course. The experience of the last five years has shown that, in addition to the danger from this source, a large portion of the site would be rendered useless by the piling of ice on it to such a thickness as would resist the action of the sun for months.

Within the time stated it is within the knowledge of hundreds of citizens that a collection of this kind, which had covered at least three-fourths of the site, was not entirely dissipated until the June following.

Another objection, which appeared to apply with more force to this than to other situations below or near Georgetown, is its reputed unhealthiness. Georgetown, although not entirely exempt from intermittent bilious diseases, is comparatively so, and reputed healthy, while at the bridge forming the western boundary of this site it is considered dangerous for any person to reside a single season. The general opinion appeared to be that it would not be quite so unhealthy at the lower part of the site as at the bridge, but still sufficiently so to render it unwise to establish expensive works, or those which would probably become so, depending on the labor of many workmen to keep them in operation. Without pre-

tending to comprehend the nice distinctions drawn between contiguous situations in this respect, I came to the conclusion that the course most obviously prudent and safe was to avoid the part known to be unhealthy, and locate as near to that known to be healthy as a situation could be obtained, without sacrificing any essential advantage required in other points of consideration.

Either of these objections, under a proper view of all the circumstances, would, in my opinion, be sufficient to warrant the rejection of this site; but with them combined it would, in my opinion, be imprudence, if not folly, to adopt it, even if the alternative was the adoption of expensive steam power on a site free from such objections.

Some other situations were examined on the line of the canal besides the one finally selected, the principal of which was that owned and occupied by General Mason, above referred to. This place having been employed in casting for the government a great number of years, and having uniformly furnished guns equal, and generally superior, to those made at any other establishment, and it being apparent that the location of a national foundry in this vicinity would materially injure, if not destroy it as a foundry, I felt that I should be consulting the wishes of your department, as well as my own feelings, if it could be adopted without sacrificing the future interests of the government. With these views I gave it the most attentive consideration, but the comparison was too unfavorable with the one finally selected to warrant my recommending it. With a space of ground not exceeding in all six acres, and that inconveniently situated for use; with a broken, uneven, and rocky surface, requiring considerable expenditures to prepare it for the necessary erections; the present buildings and machinery old, inconvenient, and for government purposes almost entirely useless, it had not a point of preference, and, being in almost every one much inferior to the one selected in the same vicinity, I could not feel myself justified in proposing it for adoption.

I have not been able to obtain the terms on which it could be purchased, and no comparison in regard to the cost could be made; but if it could be had at a much lower rate than the selected one, I cannot think that the interest of the government would be consulted in adopting it.

Another situation in Georgetown, near Rock creek, was examined; but its limited space, and the necessity that would exist of removing the cannon to Mason's island, or some other inconvenient situation, for proving, besides the difficulty of obtaining a title from so many different owners, were sufficient causes to reject it.

The one which has been finally selected, and which, in my opinion, possesses more direct advantages, all circumstances duly considered, for the establishment of a national foundry of the description proposed, than any other within the limits specified in the resolution, is situated about half a mile above General Mason's works, commencing about 230 yards above the new guard-lock, extending up the canal 1,600 feet, the upper and lower boundaries being parallel and running at right angles with the line of canal; its average width is about 460 feet between the canal and river, and 1,000 feet from the canal up the hill, and embraces a fine table land for dwellings; the whole containing about 16 acres below or south, and 26¹/₂ acres above, or on the northern side of the canal.

That lying on the river belongs to the heirs of the late Abner Cloud, (Lewis Carberry, esq., one of the heirs, acting as agent for the whole,) which they are willing to sell, as may be seen by their letter annexed, at \$1,000 per acre. That lying above or north of the canal belongs to the heirs of John W. Baker, who propose to sell, as will be seen by their letter also annexed, at \$250 per acre; the aggregate sum for near 53 acres being about \$26,000. These prices I consider as reasonable as any situations of the kind that have come under my notice.

In this site will be found all the advantages for manufacturing purposes that are embraced in any other within the limits of the District of Columbia. It has all the conveniences for applying the water to manufacturing; the materials can be received from the boats into the storehouses; the cannon and other heavy articles can be easily and cheaply conveyed down the river in boats for transhipment, or to be placed in depot; and it has sufficient and favorably situated ground, if appropriated judiciously to the full extent of its capacity, to afford all necessary facilities for fabricating conveniently 30,000 stand of small arms and 3,000 heavy guns, with a corresponding quantity of shot, shells, &c., annually; while it is considered much more exempt from autumnal diseases and injury from ice than any location above, and equally so with that of General Mason's below.

It is to this site that all the plans, estimates, and suggestions, herewith submitted, are intended to apply.

For the necessary operations of the establishment, I propose to erect the following buildings, to wit:

- A foundry building;
 - A boring mill, including machine and carpenter shop, &c.;
 - A forging shop, with tilt-hammers, bellows, &c.;
 - A warehouse for cleaning castings, storing them, and storing patterns, tools, manufactured articles, &c.;
 - A low storehouse for coal, iron, sand, &c., &c.;
 - A superintendent's house;
 - Four houses for paymaster and master workmen;
 - Four for clerks or inspectors;
 - Twelve double ones for workmen; and
 - One large boarding house;
- Besides the necessary out-buildings.

The foundry building will be 140 by 45 feet, with 20 feet wings; the walls of hammered rubble stone, procured in the vicinity, 18 feet high, with a (principal) wooden roof, slated; the whole well lighted, and containing four air furnaces, with two stacks of chimneys; two cupola furnaces of different sizes, and the necessary cranes, rails, drying ovens, &c., for the convenience of carrying on the operations of casting. The arrangements to be adapted to making one heavy gun per day, besides shot, &c., but calculated with no addition to the building, and not very important ones to other parts, to furnish triple that quantity.

The boring mill will be 150 by 45 feet; 40-foot walls, for three stories; the lower story to be 16 feet in the clear, and to be devoted to boring machinery; the second story, which will be level with the canal bank, to contain the machine shop, carpenters' shop, offices, &c.; and the upper one for finishing any description of iron or wood work that may be required. The walls and roof will be of the same kind as in the foundry, viz: hammered rubble walls, and a strong principal roof, slated, with heavy, strong floors and girders, and well lighted with windows. The machinery and water-wheel, comprising the first motions and main gearing, will be: the water-wheel, entirely of iron, except the lining and buckets, 20

feet diameter, and 16-foot buckets, made in the most permanent and substantial manner; the water delivered on it from the canal through stone forebays; the gearing, shafting, and every part of the machinery connected with the water-wheel, to be fitted in the most thorough manner, and of the best materials in use for such purposes.

The machinery for boring will be constructed in sets of five beds or frames, each set to be driven by the same main gearing and belts, and capable of boring and turning five cannon at the same time. The estimates are made for two sets; but without increasing the building or extending the main machinery, the number of sets can be conveniently extended to five, or twenty-five beds or frames; each set will be capable in emergencies, working night and day, to bore and turn one heavy gun every twenty-four hours; but when no such emergency shall exist, it will not probably average more than that quantity in two days. The additional expenditure required beyond the estimates submitted to place the whole number of sets or beds in operation will be about \$24,000; after which, with the addition of two more air furnaces in the foundry, there can be turned out complete as many as four heavy guns per day, or an equivalent in other sizes.

The second and third stories for machine, carpenters', and finishing shops, will afford considerably more space than would be necessary for the extent of work of that description usually done at General Mason's establishment; but as the expense for that quantity of working room would be proportionably much less to build them in connexion with the boring mill, as it would be more convenient in fabrication to have them so situated, besides saving the additional surface of ground which would be covered by dividing them, and as it is more than probable that, in this department particularly, there would be an extension at an early period beyond the limits prescribed, I have thought it best to adopt the plan of combining them in the original construction.

In the machine shop it will be observed, on reference to the estimates, that the sum proposed for the tools is high, in proportion to the number and variety of the articles named, but this expenditure, I am confident, will be found none too much, if they shall be made of the very high class intended, and that they should be of this description I believe to be of essential importance to the usefulness of the institution; they should possess, in the highest degree, firmness and stability, accuracy in their operations and results, facility of nice and minute adjustments in all their parts, and capable of constructing, at the least possible expense of labor, the different parts of such machines, large or small, as the interest of the government might require, with the utmost accuracy and despatch. If those of an ordinary description should be used, the work executed would necessarily partake in a greater or less degree, in proportion to the skill of the workmen employed, of the same character, and this influence would be diffused through every part of the establishment; but if those of the highest class should be procured, and the best workmen employed, there would, undoubtedly, be liberal returns made for the investment in the saving of labor, and increased accuracy and perfection of the work, beyond what could otherwise be reasonably anticipated. True economy, I have no doubt, would be best consulted by judiciously expending the amount estimated for that department.

The forging shop will, as in the case of the foundry and boring mill, be constructed of stone and slated, the walls to be 16 feet high; there will be one water-wheel, principally of iron, 14 feet diameter and 16 feet buckets, which will be supplied with water from the foot of the boring mill wheel, two tilt-hammers of convenient sizes, iron cylinder bellows, and a number of common forges corresponding with extent of work required.

The storehouse for coal, iron, and sand, will be low, and so arranged that these articles can be taken from the boats on cars, and from the same elevation be discharged into the storehouse beneath, with no other handling than the lifting them from the boats into the cars or tubs.

The additional store or warehouse will be necessary for storing manufactured and unmanufactured articles, patterns, flasks, &c., besides affording room for cleaning the castings without incommoding the workmen in the furnace, or exposing the cleaners to the inclemencies of the weather.

All these buildings will be erected in the most permanent and substantial manner that is customary in the construction of the first class of cannon manufacturing establishments in this country. All the arrangements throughout are intended to be of the most permanent and substantial kind. The different kinds of machinery will be composed almost exclusively of iron, and the foundation or supports of stone, but very few parts of wood, and every reasonable expenditure is allowed in the estimate, to render them permanent, durable, and most efficient in their operation.

The dwelling-houses will be plain and substantial, well arranged for the accommodation of the occupants, but no expenditure is intended beyond works of a similar kind, common to this section of the country, for that description of buildings.

In the estimates for walling, embankments, and excavation, are embraced all that is necessary for the river and canal banks, walls, drains, races, roads, streets for dwellings, &c., and including the necessary barriers to protect the workmen and buildings from any possible injury by the bursting of guns in proving.

In the estimates for miscellaneous items are included bridges, railways for moving heavy guns, iron, coal, &c., offices, stables, reservoir of water, with pipes, &c., to protect the buildings from fire, and for the convenience of the works, fencing, &c., &c., all of which, I think, will be found necessary for the establishment.

The time required for the erection of the entire works, I think, will be nearly two years, but the boring mill and foundry, if their erection should be determined on by the 1st of April, I believe, could be put in operation by the succeeding January.

The amount of the different expenditures proposed is comprised under the following general heads:

Foundry, including furnaces, flasks, and fixtures of every kind, ready for operation	\$35, 480 80
Boring mill, including machinery of every description	79, 338 68
Forging shop, with water-wheels, tilt-hammers, bellows, &c.	21, 516 00
Storehouses	18, 048 00
Dwelling-houses	38, 450 00
Site and water power	35, 000 00
Embankment, walling, excavations, &c.	13, 830 75
Miscellaneous items: bridges, railways, fences, fire apparatus, &c.	20, 116 00
Superintendence and contingencies	21, 098 00
Total	284, 823 07

This sum may appear, at first view, to be disproportioned to the limited extent of the work proposed; if no arrangement had been made for the convenient extension of the works, in case of war or other emergencies, or when the interest of the government might require, or had the construction been proposed to have been done in the loose and very imperfect manner which has for many years been practiced in the erection of works at the national armories, there is no doubt that this sum could have been somewhat reduced; but experience has proved that where the means are at command, true economy consists in constructing every portion of a work of this kind in the most durable and permanent manner, and with all the conveniences necessary to economize labor in the different operations of fabrication. If this policy should be adopted, there can be but little doubt that the sum named will be expended; but I am fully satisfied that, should it be applied judiciously in the construction, it will be amply sufficient for the purpose, without further calls on Congress for this object, until it should be found expedient to enlarge it beyond what is now contemplated.

The terms of the resolution, and your instructions, have left it doubtful in my mind whether it was intended that the plans required should extend to any other portion of the arrangements than those relating to the erection of the works, and disposition of the grounds to be occupied; or whether they intended to embrace views in relation to a system of conducting the establishment. Under the impression that a few brief observations on that subject could not be injurious, and might be of some service, I have thought best to add them:

The organization of officers, which I think would be as well adapted to secure the best and most economical fabrication of the work required as any other, is to have a superintendent, paymaster, master founder, master machinist, and master carpenter; the duties of a superintendent are sufficiently expressed in his title; the master founder will be the inspector of all the materials required for the ordinary use of the foundry, such as coal, pig iron, &c.; would direct all the operations of the foundry, and inspect the manufactured castings; the master machinist to inspect all metals not embraced in the foundry department, and superintend the operation of the boring mill, machine, and forging shop, and the inspection of fabricated iron-work of every description; the master carpenter's duties to be confined to the wood-work. Each of the master workmen to be independent of the other, but all accountable to the superintendent. The paymaster and storekeeper will attend to all receipts and issues, payments, &c.

These officers, I believe, will be sufficient for the performance of all the necessary superintendence of such an establishment as is now contemplated, with no other assistance than one clerk each for the superintendent and paymaster; but if any material extension should take place, it might be found necessary to appoint one or more assistant inspectors, or other sub-agents.

In regard to the compensation of these officers, I have to suggest that the superintendent and paymaster would probably be ranked with those at the public armories, and the compensation of the master carpenter might be fixed at the same as an assistant inspector; but the founder and machinist, if they should possess the high grade of talent required, could not be had for the compensation now paid for master armorer's services. The most skilful practical founders of good character and standing can readily command, at private establishments, one thousand dollars per annum, and it cannot be expected that a national establishment can procure the services of such men for a less sum; the master machinist would have much more arduous duties to perform, but as that class of mechanics are more abundant, it is supposed that the same compensation may obtain the services of one of the highest standing in that department. It will, in my opinion, be attended with considerable risk of immediate and eventual loss, if an attempt should be made to carry on the establishment under the superintendence of workmen of doubtful skill or character, or those whose services could be had at less rates of compensation than those stated.

An estimate is also submitted in relation to the probable cost of cannon that may be fabricated at this establishment. The prices varying with the different sizes, I have taken the 32-pounders as the fair average of the difference between the cost of fabrication and the prices now paid to contractors. From this estimate it will appear that the saving to the government, if they become their own founders, will be at least one-third of the sum now paid on contracts; if the works, as arranged in these plans, should be urged to the full extent to which they would be capable, there is but very little doubt the difference would be sufficient to repay the whole expenditure proposed in two years after they should be put in full operation.

In this estimate I have made liberal allowance on every doubtful point; the cost of materials and labor have been ascertained from the best sources, and the superintendence is probably higher than would be found necessary; the only point to which any serious objection could be made is the loss in casting and proving guns, which, in this estimate, is stated at five per cent. The loss at the West Point and Georgetown foundries does not exceed one per cent.

An impression seems to exist that a new establishment will meet with heavy losses before they can become sufficiently experienced to conduct the business safely; this I do not think will be found so; at the time the West Point and General Mason's establishments were put in operation, the knowledge of the principles and details of that kind of business was very limited in this country; losses in the simplest kind of castings were continually sustained where the best workmen of the country were employed, and it is not singular that many difficulties were experienced in those establishments before a knowledge of the property of untried materials could be acquired; the extensive introduction of manufactures, and the growing enterprise of the country, creating new demands for the best kind of castings, has forced the necessary skill and talent in that direction to accomplish what was found absolutely necessary to the successful progress of mechanical improvement; and at this time I have no doubt that many foundries could be selected whose second gun, at most, if not the first, would stand the proof and inspection required, and prove, in every respect, equal to those now furnished your department by old and experienced contractors.

With a careful selection of skilful workmen and good materials, there can hardly exist a rational doubt that the national foundry can be put in full and complete operation with as little loss in the proof, unless the standard should be changed, as any of those now employed in that kind of fabrication.

Having submitted these observations, in as brief a space as the variety of subjects embraced would admit, confined exclusively to the practical points embraced in the resolution and your instruction, I shall close with stating, that the time that I have been able to devote to this subject, since the receipt of the order, has been too limited to enable me to present the plans and drawings accompanying this communication so much in detail as appeared to me desirable, but I hope sufficiently so to answer the purpose

intended. Any explanations that may be necessary I shall be prepared to give whenever required. In the mean time,

I have the honor to remain, very respectfully, sir, your most obedient servant,
CHARLES C. STARBUCK, *Millwright.*

Colonel GEORGE BOMFORD, *Ordnance Department.*

Cost of sites referred to by General Wool and Colonel Talcott.

Site No. 1.—Upper one, including canal mill, 50 acres.....	\$87,000
Site No. 2.—Second one, including 42 acres below canal; 40 acres above canal, total 82 acres..	52,500
Site No. 3.—General Mason's, including buildings and fixtures, 16 acres.....	110,000

Estimates for a national foundry.

Boring mill and building, 150 by 45 feet—three stories.

3,053 perches walls for boring mill, including water-wheel, walls, foundations, &c., at \$4.....	\$12,212 00
114 squares roof for boring mill, including slating, dormer windows, belfry, &c., at \$50.....	5,700 00
192 squares flooring, including stairs, &c., at \$20.....	3,840 00
99 windows and frames with weights, glazed, &c., complete, at \$12.....	1,188 00
18 doors with frames, hung, complete, averaging \$20.....	360 00
2,800 yards lathing and plastering, for ditto, at 33½ cents.....	933 33
72 squares ceiling for sundry partitions, at \$8.....	576 00
28,000 brick for chimneys, forges, &c., laid, at \$12.....	336 00
4 sets gearing for hoisting at doors, at \$185.....	740 00
Fire apparatus, including cocks, pipes, hose, &c.....	1,860 00
62 cast iron story columns, at \$32.....	1,920 00
365 feet cast iron gutters, at \$1 75.....	463 75
240 feet spouts for gutters, at 35 cents.....	84 00
	<hr/>
	\$30,213 08

Water-wheel and gearing, shafts, &c.

Wheel 20 feet diameter, 16 feet buckets, with iron shaft, flanches, arms, shrouding, braces, segments, headblocks, &c., with wooden buckets and lining only.....	5,654 60
Gates, forebay, gearing, regulator, and fixtures.....	2,136 00
Pinion for segments 4½ feet diameter, fitted and hung, with shaft, pedestals, and bearings.....	419 00
Spur mortise wheel, 10 feet in diameter, and fittings for pedestals and bearings.....	256 00
Pinion shaft, pedestals, with plates, keys, bolts, &c.....	237 50
Spur mortise wheel, with fixtures, 8 feet.....	197 00
Pinion and bearings, with 6 feet drum, columns, iron rings, &c.....	694 00
Intermediate drums for boring beds, with hangers, shafts, &c.....	124 00
Main drum in upper story, with bearings, shafts, &c.....	467 00
2 lines of shafts, with hangers, pulleys, couplings, and fixtures, 150 feet each, \$6 25.....	1,875 00
12 cross drums and pulleys, each \$28.....	336 00
Sundry other small drums, bearings, &c.....	243 00
1,800 feet belts for drums, at 40 cents.....	720 00
Patterns for the above.....	1,560 00
	<hr/>
	14,919 10

Ten boring beds or frames.

10 beds or slides, 23 feet long, fitted complete.....	2,563 00
6 connecting beds, 26 feet long.....	220 00
10 cylinders, with pistons, rods, and valves.....	3,810 00
20 stands for pistons, rods, and valves, at \$22.....	440 00
650 feet 3-inch pipe of cast iron or copper, at 85 cents.....	552 50
20 beds of rests for turning cannon, at \$48.....	960 00
10 slide rests for turning cannon, each \$75.....	750 00
10 ring centres with bearings, at \$56.....	560 00
10 sets of gearing, with shafts, clutches, and fixtures, complete.....	1,318 00
4 granite blocks for pedestals.....	218 00
20 extra boring bars.....	1,060 00
Carriage for bringing in cannon, and fixtures complete.....	594 00
150 feet rails for bringing in cannon, and fixtures complete, at \$3.....	450 00
3 sets extra gearing, to connect with drum, including pulley, shaft, pinion, &c.....	438 00
1 lathe for turning trunnions.....	634 00
Gauges, bars, and other tools.....	280 00
Patterns for the above.....	963 00
	<hr/>
	15,810 50

Tools and fixtures for machine shop.

1 lathe of the largest class and most perfect workmanship.....	\$2, 200 00	
1 lathe of the smaller, but of the same workmanship.....	1, 350 00	
1 face plate lathe of first quality.....	1, 350 00	
3 common gauge or engine lathes, 10 feet long, with iron beds, stands, &c., each \$425.....	1, 275 00	
3 common gauge or engine lathes, of small size, at \$180.....	540 00	
1 planing machine of the largest class.....	2, 350 00	
1 cutting engine for teeth of wheels, &c.....	1, 230 00	
1 dividing engine for graduations.....	950 00	
1 heavy drill, with hydraulic feed.....	515 00	
2 common drills, with pulleys, &c., each \$180.....	360 00	
4 common lathes, with common and slide rests complete, each \$150.....	600 00	
2 small slabbing machines, each \$200.....	400 00	
1 screw-cutting engine.....	350 00	
6 sets stocks, taps, and dies, assorted.....	460 00	
2 water stones, fitted complete, each \$165.....	330 00	
6 buffing and polishing wheels, with fixtures, each \$65.....	390 00	
10 vices, at \$20.....	200 00	
Sundry small fixtures, with pulleys, &c.....	619 00	
1 small forge, with bellows, &c.....	127 00	
		<hr/>
		\$15, 596 00

Carpenters' shop.

3 turning lathes, with fixtures, each \$230.....	690 00	
2 circular or ripping saws, with fixtures, at \$165.....	330 00	
2 upright saws of different kinds, at \$160 and \$230.....	390 00	
1 eccentric turning lathe.....	460 00	
2 polishing or buffing machines, each \$85.....	170 00	
Workmen's planes, saws, augers, bits, tools, and benches, say.....	760 00	
		<hr/>
		2, 800 00
		<hr/>
Total for boring mill and fixtures.....		79, 338 68

Estimate of cost of foundry and fixtures.

Building, 140 by 45 feet, 1 story, with 20 feet wings—18 feet walls.

984 perches walls of hammered rubble stone, with foundations, pits, &c., at \$3 50.....	\$3, 444 00	
92 squares roof, (principal,) at \$46.....	4, 232 00	
26 sky-lights for ditto, at \$25.....	650 00	
24 squares roof of wings, slated, at \$26.....	884 00	
800 yards plastering inside, with ceiling, &c., at 35 cents.....	329 00	
42 windows for walls, with frames, weights, &c., complete, at \$13.....	576 00	
6 heavy large doors for each end, 15 by 11 feet, at \$40.....	240 00	
8,400 feet brick paving for floors, at 5 cents.....	420 00	
4 air-furnaces, with chimneys, 105 feet high.....		
196 thousand brick, laid, at \$16.....	3, 136 00	
29 2-10 thousand, fire-brick, laid, averaging \$54.....	1, 576 80	
12,912 lbs. wrought iron for bindings, at 10 cents.....	1, 291 20	
23,752 lbs. cast iron for bindings, at 4½ cents.....	1, 068 84	
15,280 lbs. grates, bearers, &c., at 4 cents.....	611 20	
6,733 lbs. castings for doors, with wrought irons, &c., at 6 cents.....	403 90	
5,824 lbs. castings for cone at top of chimneys, at 5 cents.....	291 20	
2 drying ovens, with doors, grates, rails, &c.....	563 50	
2 cupola furnaces, with chimneys, frames, &c.....	1, 693 00	
Double bellows for ditto, with reservoir, iron pipes, valves, &c.....	2, 254 00	
2 cranes for moulding floor, with chains, bales, &c., at \$418.....	836 00	
2 cranes for casting floor, with chains, gearing, bales, &c., at \$780.....	1, 560 00	
12 flasks of iron, for casting cannon, averaging \$236.....	2, 832 00	
25 flasks of iron for carriages and other work, averaging \$34 25.....	856 00	
192 feet rails, for moving guns, materials, &c., at \$4.....	778 00	
2 carriages for moving guns, complete, with bars, &c., each \$315.....	630 00	
1 drop-hammer (5,000 lbs.) for breaking guns, with chain, gearing, frame, &c.....	1, 164 00	
50 shot-moulds, averaging \$16.....	800 00	
Ladles, skimmers, chains, bars, pokers, shovels, stoves for warming, wheel- barrows, &c.....	1, 560 00	
Patterns for the above.....	1, 654 00	
		<hr/>
Total for foundry.....		\$36, 325 64

Estimate for forging shop, tilt-hammers, forges, &c.

Building, 140 by 40 feet—16 feet walls.

1,076 perches walls of building, including foundations, water-wheel, walls, race, &c., at \$3 50.....	\$3,766 00	
84 squares roof for building, including raised roof, at \$46.....	3,864 00	
24 windows for building, with frames, &c., complete, at \$13.....	312 00	
4 doors, at \$20.....	80 00	
280 feet cast iron gutters for roofs, at \$1 25.....	350 00	
900 yards plastering, with lathing, &c., at 33½ cents.....	300 00	
5,300 feet paving for floors, at 6 cents.....	330 00	
43 thousand brick for forges, furnaces, and chimneys, laid, at \$12.....	512 00	
1,000 fire-brick for furnaces, laid.....	54 00	
3,600 lbs. wrought iron binding irons for ditto, at 10 cents.....	365 00	
6,800 lbs. cast iron, do. do. do., at 5 cents.....	340 00	
1 iron water-wheel, 14 feet diameter, 16 feet buckets, with fixtures complete, fly-wheel, &c.....	4,654 00	
Gearing drums, &c., for water-wheel.....	1,519 00	
1 large tilt-hammer, with iron bed, fly-wheel, stone foundation, wildcat, and fixtures.....	1,864 00	
1 small tilt-hammer, with fixtures.....	1,137 00	
1 bellows of iron for blowing, with fixtures.....	953 00	
Pipes to bellows for the forges, with cocks, &c.....	351 00	
8 common forges, with common bellows added, anvils, &c.....	515 00	
		\$21,516 00

Storehouses for coal, iron, sand, &c.

Buildings, 90 by 35, and 168 by 35 feet—13 feet walls.

438 perches wall for eastern side, with ends and foundation, at \$3 50.....	1,533 00	
124 perches piers for front, with cut stone bearers for doors, at \$4.....	496 00	
108 squares flat composition roof, 3 feet pitch, at \$22.....	2,376 00	
300 feet rails on roof, to deliver coal, iron, &c., at \$3 50.....	1,950 00	
2 cars for rails on roof, with tubs, &c., each \$190.....	380 00	
10 scuttles for ditto, each \$15.....	150 00	
15 large double doors, with hinges, &c., complete, at \$35.....	525 00	
8,000 feet paving for floor, at 6 cents.....	480 00	
Cranes and fixtures for securing coal from doors.....	690 00	
		87,680 00

Store and warehouse west of foundry.

Building, 140 by 40 feet—22 feet walls.

864 perches walls, with foundation, &c., at \$3 50.....	3,024 00	
84 squares roof for ditto, slated and finished complete, at \$38.....	3,192 00	
112 squares flooring, including stairs, &c., at \$20.....	2,240 00	
78 windows with frames, glazed, painted, &c., at \$12.....	936 00	
8 doors, hinges, frames, &c., complete, at \$20.....	160 00	
1,656 yards plastering for ditto, at \$38 33.....	552 00	
12,000 brick for chimneys, with stoves, &c., for warming.....	264 00	
		40,368 00

Dwelling-houses.

1 superintendent's house, with stable and out-houses.....	4,850 00	
4 houses for paymaster, master founder, machinist, and carpenter, at \$1,600..	6,400 00	
4 houses for clerks and inspectors, at \$1,100.....	4,400 00	
12 double houses for workmen, at \$4,700.....	20,400 00	
1 house for boarding.....	2,400 00	
		38,450 00

Site and water power.

For 16 acres of land below canal, at \$1,000 per acre.....	16,000 00	
For 37 acres of upland for dwellings, &c., at \$250 per acre.....	9,250 00	
For water right from canal company.....	9,750 00	
		35,000 00

Walling, embankments, excavations, &c.

6,000 yards earth to level the site, at 20 cents.....	1,200 00	
2,660 perches walling on canal line, at \$1 25.....	2,075 00	
240 perches river wall, in part for scows, &c., at \$1 25.....	300 00	
1,200 yards rock excavation for race of water-wheels, at \$1 25.....	1,500 00	
650 yards earth excavation for race of water-wheels, at 25 cents.....	162 50	
68 perches partial walling for race of water-wheels, \$1 50.....	102 00	
486 perches arch walling for race of water-wheels, at 3 50.....	1,701 00	
185 yards rock excavation for boring mill wheel, at \$2.....	370 00	
580 yards earth excavation for foundation walls, &c., at 25 cents.....	145 00	

117 yards rock excavation for tilt-hammer wheels, at \$2.....	\$234 00	
365 yards earth excavation for shop, at 25 cents.....	91 00	
3,600 yards earth excavation for dwelling-houses, streets, &c., at 25 cents....	900 00	
Excavation for foundry, walls, pits, foundations, &c.....	187 50	
Excavation for storehouse.....	110 00	
Excavation for coal and iron house.....	136 00	
854 perches walling for road to the hill, at \$1 25.....	1,067 50	
Excavation, &c., for road to the hill.....	356 00	
1,060 yards excavation for drain at bottom of canal bank, at 25 cents.....	265 00	
1,600 feet walling and covering for drain, per rod or perch, running, at \$6....	600 00	
480 perches walling for a proving barrier, at \$2 50.....	1,200 00	
460 yards embankments for proving barrier to protect walls, at 30 cents....	138 00	
Excavations to bring water for dwelling-houses.....	320 00	
Sundry small excavations not enumerated.....	650 00	
		\$13,830 75

MISCELLANEOUS ITEMS.

1 pivot bridge for guard gate, with passages to it.....	1,164 00	
1 foot bridge 17 feet high, extending over canal and road.....	1,437 00	
4,600 feet fencing for dwelling-houses, canal bank, boundaries, &c., at 65 cts.	2,990 00	
1,760 feet of rails for transmission of cannon, coal, &c., at \$3 50.....	6,160 00	
2 heavy scows, 15 by 85 feet, with cranes, &c., each \$635.....	1,370 00	
1 stable, with cart sheds, &c.....	857 00	
1 proving machine for trying strength of iron.....	683 00	
Office for superintendent and paymaster, with furniture.....	1,850 00	
1 bell for boring mill, 800 pounds, with hangings complete.....	340 00	
1 clock for boring mill, with fixtures.....	485 00	
Reservoir on hill, with pipes to buildings, cocks, &c.....	2,780 00	
		20,116 09
Superintendence of construction, and contingencies, at 8 per cent.....		21,098 00
		284,823 07
To which is to be added for land included by General Wool and Colonel Talcott.....		27,250 00

GEORGETOWN, D. C., January 27, 1836.

Sir: We, the undersigned, proprietors and tenants in common of the tract of land lying on the north side of the Chesapeake and Ohio canal, about half a mile above General Mason's foundry, near Georgetown, owned by the late John W. Baker, do hereby propose to furnish any portion of the land embraced in that tract that may be required for the establishment of a national foundry, or appurtenances, for the sum of two hundred and fifty dollars per acre, provided that the quantity shall be determined and the payments made by the 1st day of November next; the title shall be full and perfect, and the land free from any incumbrances.

Respectfully, yours, &c.,

SAMUEL CHEW.
 HORATIO BARNES.

Mr. CHARLES C. STARBUCK.

24TH CONGRESS.]

No. 641.

[1ST SESSION.]

ON CLAIM OF A LIEUTENANT OF THE ARMY FOR ADDITIONAL PAY AS AN ASSISTANT COMMISSARY OF SUBSISTENCE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 12, 1836.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom the petition of William S. Colquhoun was referred, reported:

That it appears to the satisfaction of the committee, from the official documents in possession of the committee, herewith presented to the House, and to which reference may be had, as part of this report, that William S. Colquhoun, the petitioner, being a lieutenant in the army of the United States, was, by order of the Secretary of War, detailed, by the commissary general of supplies, to act as assistant commissary in that department; that the petitioner served in that capacity from the 10th day of December, 1819, to the 27th day of July, in the year 1821, when, as a matter of choice, he returned to his regiment; that during the period in which petitioner acted as assistant commissary other duties were assigned to him by the commissary general, for the performance of which he became, while thus engaged, entitled to receive \$1 25 per diem for those services, in addition to his pay as assistant commissary; that the claim of petitioner to this per diem allowance is founded on two orders of the Secretary of War, the one bearing date the 10th day of August, 1818, the other on the 27th day of July, 1819, which expressly directs such allowance; that the amount of this claim of the petitioner is set forth in an account stated and sworn to by him, and admitted to be a true account by the commissary general. The committee are of opinion that, in pursuance of the aforesaid orders of the Secretary of War, and in pursuance of satisfactory evidence that the service contemplated by those orders was rendered by the petitioner, he ought to be paid the sum of six hundred and eighty-seven dollars and fifty cents, being the amount claimed by him, and for which he exhibited his account, in manner and form above mentioned. The committee, therefore, adopt the following resolution:

Resolved, That the prayer of the petitioner is reasonable and ought to be granted, and that a bill for his relief ought to be reported to the House.

Extract from a regulation of the War Department of August 10, 1818.

"Officers detailed to perform duties in the office of chief engineer, quartermaster general, adjutant and inspector general, or the chief of the ordnance, will be allowed, while performing such duties, at the rate of \$1 25 per diem, in addition to their usual pay and emoluments."

JOHN C. CALHOUN.

DEPARTMENT OF WAR, *July 27, 1819.*

SIR: The allowances, under the regulation of the 10th of August last, to officers detailed for extra duty in the quartermaster's, engineer, and commissary general's departments at this place, are extended to the officers detailed for similar duties in the Surgeon General's office.

JOHN C. CALHOUN.

General JESUP, *Quartermaster General.*WAR DEPARTMENT, *August 26, 1835.*

SIR: Your letter of the 10th instant, enclosing an account for services as a clerk in the office of the commissary general of subsistence from the 10th of December, 1819, to the 15th of June, 1821, has been received.

The long interval that has elapsed since the rendition of these services precludes the allowance of this account by this department, and renders a resort to Congress necessary.

Very respectfully, your obedient servant,

LEWIS CASS.

WM. S. COLQUHOUN, Esq., *late Lieutenant U. S. Army, Duinfrics.*OFFICE OF COMMISSARY GENERAL OF SUBSISTENCE, *Washington, October 9, 1835.*

SIR: In obedience to your orders to report the circumstances connected with the enclosed claim of Mr. William S. Colquhoun, formerly a lieutenant and assistant commissary of subsistence, I have to state that this gentleman was on extra duty in this office during the period embraced in the account, viz: from the 10th of December, 1819, to the 10th of June, 1821; during which time he received \$20 per month, being the pay allowed by law, as assistant commissary of subsistence.

Mr. Colquhoun's claim to \$1 25 is predicated on a similar allowance having been made to Captain, then Lieutenant, Hunt, by the Secretary of War, agreeably to his decision below. Captain Hunt was the successor of Mr. Colquhoun in this office, their duties were precisely the same, and both performed them to my entire satisfaction.

I have the honor to be, very respectfully, your most obedient servant,

GEO. GIBSON, *Com. Gen. of Subsistence.*His Excellency ANDREW JACKSON, *President of the United States.*

Copy of the Secretary of War's decision.

"Let Captain Hunt be allowed \$1 25 per day from the commencement of his duties in the office of the commissary general of subsistence, until the allowance made him for that purpose by the Secretary of War in 1825 took effect."

LEWIS CASS.

DUMFRIES, July 4, 1835.

SIR: Hereto annexed is my account for extra service as a clerk while a lieutenant in the army, detailed in the office of the commissary general of subsistence. By reference to that office the fact of the service having been rendered can be fully established, as well as that I never received the per diem allowance. The order referred to in the account, dated July 27, 1819, is on file in your department.

I am, sir, with great respect, your friend and humble servant,

WM. S. COLQUHOUN.

HON. SECRETARY OF WAR, *Washington City.*

The United States to William S. Colquhoun, late lieutenant and A. C. S. United States army, Dr.
1835, July 4.—For 550 days' service, on extra duty, in the office of the commissary general of subsistence, at Washington city, from the 10th of December, 1819, till the 10th of June, 1821, in conformity to an order of the War Department, dated 27th of July, 1819, at \$1 25. \$687 50

PRINCE WILLIAM COUNTY, *Virginia, set:*

Personally appeared before me, a justice of the peace for said county, William S. Colquhoun, formerly a lieutenant, United States army, and made oath that he served as above charged, and that he believes himself entitled to the above allowance, agreeably to the regulations of the War Department and allowances made to others for similar service. Given under my hand this 4th day of July, 1835.

JNO. W. WILLIAMS, *Justice of the Peace.*OFFICE OF COMMISSARY GENERAL OF SUBSISTENCE, *Washington, July 13, 1835.*

I certify that Lieutenant William S. Colquhoun was appointed an assistant commissary of subsistence on the 4th of December, 1819, that he was detailed for extra duty in this office 10th of same month, and that he continued to perform such duty for the period herein charged, viz: from the 10th of December, 1819, to the 11th of June, 1821.

GEO. GIBSON, *Commissary General of Subsistence.*24TH CONGRESS.]No. 642.[1ST SESSION.]

RECOMMENDATION OF THE SECRETARY OF WAR THAT CAMP EQUIPAGE AND KNAPSACKS BE PROVIDED FOR THE MILITIA WHEN CALLED INTO THE SERVICE OF THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 13, 1836.

WAR DEPARTMENT, *February 10, 1836.*

SIR: Major General Scott, to whom the operations against the Seminole Indians have been committed, has applied for the necessary camp equipage for the use of the militia who have been called into the service in Florida. It is found, on adverting to the subject, that there is no law authorizing this department to issue these supplies to the militia, although such a measure is obviously necessary. The third section of the act of Congress of February 2, 1813, respecting the calling out of the militia, provided for these issues, but the section was limited to the period of the war then pending. It can hardly be expected that camp kettles and other articles of camp equipage can be provided by the troops themselves. I have therefore the honor to recommend for the consideration of the military committee the propriety of reviving and rendering permanent the provision of the above-mentioned section.

Knapsacks also have been required for the use of the militia, but I do not find, on referring to the laws, that any authority to issue them has ever been vested in this department. I therefore lay the subject before the committee, for such action as may appear proper to them.

Very respectfully, your most obedient servant,

LEW. CASS.

HON. R. M. JOHNSON, *Chairman Committee on Military Affairs, House of Representatives.*

24TH CONGRESS.]

No. 643.

[1ST SESSION.]

ON THE SUBJECT OF ESTABLISHING AN ARSENAL OF CONSTRUCTION AT CHARLESTON,
SOUTH CAROLINA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 13, 1836.

WAR DEPARTMENT, *January 20, 1836.*

SIR: I have the honor to transmit herewith a report from the colonel of ordnance, in answer to your letter of the 21st ultimo, and to express my concurrence in the views therein presented.

Very respectfully, your most obedient servant,

LEW. CASS.

Hon. H. L. PINCKNEY, *House of Representatives.*

ORDNANCE OFFICE, *Washington, January 20, 1836.*

SIR: In reply to the inquiries contained in the letter of the Hon. H. L. Pinckney, dated the 21st ultimo, referred to this office, I have the honor to state that, by the ordnance regulations adopted by the President of the United States on the 1st of May, 1834, the number of arsenals of construction was limited to six, four of which are now established, viz: one at Fort Monroe, Virginia; one at Pittsburg, Pennsylvania; one at Watervliet, New York; and one in this city.

As arsenals of construction are expensive, it is not thought expedient unnecessarily to increase them, and doubts are entertained whether, under existing circumstances, the city of Charleston is a proper location for such an establishment. There is a depot for arms in Charleston, belonging to the United States, which, however, is on too limited a scale. I would therefore respectfully recommend that an appropriation be asked for, either to add to this depot, or to provide such other site in the vicinity of the city as may be found, on examination, most expedient.

An arsenal on a moderate scale ought to be provided there, and such workshops could be attached to it as might be necessary to repair and keep in order the arms and to construct gun-carriages for some of the southern stations.

Mr. Pinckney's letter is herewith returned.

I have the honor to be, very respectfully, sir, your most obedient servant,

G. BOMFORD, *Colonel of Ordnance.*

Hon. LEWIS CASS, *Secretary of War.*

No. 645.

[1ST SESSION.

ON THE EXPEDIENCY OF ESTABLISHING AN ARSENAL OR DEPOT FOR ARMS IN THE STATE OF MISSOURI.

COMMUNICATED TO THE SENATE FEBRUARY 18, 1836.

WAR DEPARTMENT, *January 22, 1836.*

SIR: I have the honor to transmit a report from the Ordnance office, containing the information called for in your letter of the 30th ultimo, respecting the establishing of a depot of arms in the State of Missouri.

On a full consideration of the subject, I am satisfied that such a measure should be adopted, and I have the honor, therefore, to recommend it.

The vicinity of the frontier where it is proposed to construct this depot to large bodies of Indians, and the additional number which the plan of removing them from the east to the west side of the Mississippi is accumulating in that quarter, require that the United States should place within the reach of the proper authorities the necessary munitions of war for suppressing any hostilities with the Indians which might break out.

Disturbances might occur at times, and, under circumstances, when great injury might be committed before the necessary supplies could be obtained from St. Louis.

Should the Committee on Military Affairs concur in these views, and decide on presenting the subject for the consideration of Congress, it will be necessary that the amount recommended by the Ordnance department, viz: \$25,000, should be asked for.

Permit me, therefore, to suggest the propriety of a motion being submitted for the insertion of that sum in the proper bill on its passage through the Senate.

Very respectfully, your most obedient servant,

LEWIS CASS.

HON. THOMAS H. BENTON, *Chairman Committee on Military Affairs, Senate.*

ORDNANCE OFFICE, *Washington, January 13, 1836.*

SIR: In compliance with your directions, of the 7th instant, to report on the memorial of the legislature of the State of Missouri to the Senate of the United States, dated the 12th of February, 1833, which you referred to this office, asking for the location of a depot of arms near the western and northern boundary of the State, I have the honor to state that copies of the correspondence in relation to this subject, which took place in January, March, and April, 1834, are herewith transmitted, and which contain the information desired. The memorial is herewith returned.

I have the honor to be, sir, respectfully, your obedient servant,

G. BOMFORD, *Colonel of Ordnance.*

HON. LEWIS CASS, *Secretary of War.*

To the honorable the Senate and House of Representatives of the United States in Congress assembled:

Your memorialists, the general assembly of the State of Missouri, would respectfully represent that the exposed and unprotected frontier of this State, lying on the west and north, is an object of great anxiety to your memorialists. Rumors of Indian hostilities are unceasingly coming to our ears. One Indian war is scarcely over before we are alarmed with the portentous news that the savages are making preparation for another. Our frontier inhabitants are unprotected, deficient in arms and other munitions of war. They have not the means of protecting themselves against a sudden incursion of the savages. We respectfully ask, therefore, that the means of self-defence be placed within their reach, and that a depot of arms and the necessary munitions of war be located by Congress on the Upper Missouri and Mississippi rivers, at or near the northern and western boundary of the State. Such an auxiliary in time of war could not fail to afford a speedy and effectual succor, and in time of peace would greatly tend to restrain and preserve within proper bounds the turbulent and revengeful spirit of the border Indian tribes. All which is most respectfully submitted.

Resolved, That the secretary of state forward to our senators and representatives in Congress copies of the foregoing memorial, in order that the same be presented forthwith to that honorable body for their consideration.

Approved February 12, 1833.

STATE OF MISSOURI:

The foregoing memorial is a correct copy of the original now on file in the office of the secretary of state aforesaid.

In testimony whereof, I have hereunto set my hand and affixed my official seal the 18th day of November, A. D. 1833.

JOHN C. EDWARDS, *Secretary of State.*

ORDNANCE OFFICE, *Washington, January 17, 1834.*

SIR: In answer to the letter to the honorable Secretary of War, of the 8th instant, from the honorable R. Johnson, chairman of the committee of the House of Representatives, enclosing a copy of a memorial of the legislature of the State of Missouri to the Senate and House of Representatives of the United States, asking for the location of a depot of arms near the northern and western boundary of the State, I have the honor to state that, by the 9th section of the law of February 8, 1815, "the colonel of the Ordnance department, under the direction of the Secretary for the Department of War, is authorized to establish depots of arms, ammunition, and ordnance stores in such parts of the United States, and in such numbers, as may be deemed necessary."

No application having been made at the War Department stating the necessity of such depot as is referred to in the memorial, and as it has never been known at this office, through any channel, until now, that any inconvenience has arisen from the want of a depot in the west, no orders have been, consequently, given for its location. The supplies of munitions in depot at Pittsburg, St. Louis, and Baton Rouge arsenals are ample; the whole number of small arms, including those in the hands of the army on the waters of the Mississippi, being equal to 97,000 stands, and a transfer of these necessary stores to some convenient point near the northern and western boundary of the State of Missouri might easily be made. To effect this object, I have to recommend that the commanding officer of the St. Louis arsenal be directed to report to the governor of the State, and, in conjunction with such person as he may appoint, to select the location, hire or erect the necessary storehouses, and to determine upon the amount and kind of munitions necessary to be transferred.

In the event of your approbation of this course, the detail of a lieutenant of artillery to take charge of the depot will be indispensable.

I have the honor to be, sir, respectfully, your obedient servant,

GEORGE BOMFORD, *Colonel of Ordnance.*

Hon. LEWIS CASS, *Secretary of War.*

ORDNANCE OFFICE, *Washington, March 3, 1834.*

SIR: I have to acknowledge the receipt of the resolution of the House of Representatives of the 27th ultimo, which you referred to this office, and which relates to the erection of an arsenal in the State of Missouri, and beg leave to state that in my report to you of the 17th January last, upon this subject, it was stated:

"To effect this object, I have to recommend that the commanding officer of the St. Louis arsenal be directed to report to the governor of the State, and, in conjunction with such person as he may appoint, to select the location, hire or erect the necessary storehouses, and to determine upon the amount and kind of munitions necessary to be transferred."

It is therefore respectfully requested that this department may be informed whether Captain Symington shall be instructed to confer with the governor of the State of Missouri, in conformity with the above.

I have the honor to be, sir, respectfully, your obedient servant,

GEORGE BOMFORD, *Colonel of Ordnance.*

Hon. LEWIS CASS, *Secretary of War.*

[Indorsement on the above letter.]

"Let Captain Symington be instructed to correspond with the governor on this subject, and procure his general views, and transmit the same, together with his own, and an estimate of the expense, to this department, before anything further is done.

"L. CASS."

ORDNANCE OFFICE, *Washington, April 29, 1834.*

SIR: Agreeably to your instructions to this office, Captain Symington, of the St. Louis arsenal, Missouri, was directed to confer with the governor of Missouri respecting the establishment of a depot of arms in that State, and to transmit the views of the governor, together with his own, and an estimate of the cost of such an establishment, to this department.

Captain Symington has performed that duty, and reports that the governor and himself concur in the site proper to be selected, under existing circumstances, which should be at the point where the western boundary line of the State crosses the Missouri river—either in Jackson or Clay county.

Captain Symington has also exhibited plans of the proposed arsenal and other necessary buildings, enclosing an area of 160 feet square, and an estimate, in detail, of the cost of erecting the same, which amounts to the sum of twenty-five thousand dollars, (\$25,000.)

The plans and other papers herein referred to are on file in this office.

I have the honor to be, sir, &c.,

GEORGE BOMFORD, *Colonel of Ordnance.*

Hon. LEWIS CASS, *Secretary of War.*

INSPECTOR GENERAL'S OFFICE, *Washington City, January 20, 1836.*

SIR: I have examined the application connected with the above correspondence. I am decidedly of the opinion that the public interest would be promoted by establishing a depot of arms in the State of Missouri, somewhere in the neighborhood of the position as above suggested.

Very respectfully, yours, &c.,

JOHN E. WOOL, *Brigadier General.*

Hon. LEWIS CASS, *Secretary of War.*

24TH CONGRESS.]

No. 646.

[1ST SESSION.]

ON THE EXPEDIENCY OF ESTABLISHING AN ARMORY IN THE WEST.

COMMUNICATED TO THE SENATE FEBRUARY 19, 1836.

Mr. BENTON, from the Committee on Military Affairs, laid the following documents on the table, and they were ordered to be printed with Senate bill No. 145:

On motion by Mr. Linn,

Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of establishing an armory in the western country, and that the State of Missouri be included in the examination for a suitable site.

WAR DEPARTMENT, *January 22, 1836.*

SIR: I have the honor to transmit a report from the ordnance officer, in answer to a resolution of the Senate of the 23d ultimo, enclosed in your letter of the 30th, relative to the expediency of establishing a national armory in the valley of the Mississippi, and to express my concurrence in the views presented in this report

Very respectfully, your most obedient servant,

LEWIS CASS.

Hon. THOS. H. BENTON, *Chairman Committee on Military Affairs, Senate.*

ORDNANCE OFFICE, *Washington, January 18, 1836.*

SIR: The letter of the honorable Thomas H. Benton, chairman of the Military Committee of the Senate, enclosing a resolution on the subject of establishing a national armory in the west, having been referred by you to this office, in answer thereto I transmit the following report.

For reasons stated at large in the letter to you from this office of the 28th December, 1833, it is the decided opinion of this department that the public interest calls for such an establishment, (see also the report of the honorable R. M. Johnson, chairman of the Military Committee of the House of Representatives, of March 18, 1834.) To show the necessity for such a measure it is deemed sufficient briefly to recapitulate that, from the most authentic returns in this office, the militia of the western States constituted, in 1832, more than one-third of the whole number in the Union; and if their rapid increase during the twenty-two years preceding that date be taken as a rule for the future, they will, at the end of the succeeding twenty-two years, fully equal the militia of all the other States. And further, when it is considered that the expense of manufacturing arms in the west cannot be greater and will no doubt be less than the present cost at the national armories, and that all those annually distributed to the militia of the west are now subjected to a heavy charge for transportation across the Alleghany mountains, it is manifest that, from motives of economy, an armory sufficiently extensive to manufacture annually one-third as many arms as are made for the government on the seaboard should be established in the west for supplying the militia in the western States.

The proper location of such an armory is a very important consideration; and here I would distinctly state that the primary object in view is *production*, which involves the providing of materials for the manufacture, and the power to be used, whether it be water or steam. The proportion between the materials and the manufactured arms is about as 22 to 1—that is, twenty-two tons of materials are consumed in manufacturing one ton of muskets; hence, the necessary facilities for transportation are highly important for procuring materials, as well as for distributing the arms to the States. The geographical centre of the tract of country in the west to be supplied with arms is found on the Mississippi, near the middle of the western boundary of Tennessee. The centre, as regards population, is probably on the Ohio, near the mouth of the Wabash; but this centre is now constantly moving westward; and considering the rapid and extraordinary strides making by the western States in the increase of population, and the facilities afforded by the navigation of steamboats throughout nearly all the year, ascending the Mississippi more than 2,000 miles without material interruption, there appears little doubt that at no very remote period the centre of population will be found at some point on that river above the Ohio.

By authority of an act of Congress passed March 3, 1823, entitled "An act to establish a national armory on the western waters," commissioners were appointed to explore the west, with a view to select a suitable site. As the result of their examinations, the following places were presented, with the estimated cost of the same, including the construction thereon of all the buildings and machinery necessary for an armory to manufacture annually 12,000 muskets:

Ohiopile Falls, on the Youghiogeny, Pennsylvania.....	\$204, 699
Falls of Big Beacon..... Pennsylvania.....	279, 849
Zanesville..... Ohio.....	312, 973
North Bend..... Ohio.....	374, 572
Bowman's creek..... Kentucky.....	398, 535
Falls of Ohio, Jeffersonville..... Indiana.....	319, 479
Falls of Ohio above Shippingport.. Kentucky.....	505, 067
Falls of Ohio below Shippingport.. Kentucky.....	394, 813
Harpeth river, (narrows)..... Tennessee.....	357, 940
Cypress creek..... Alabama.....	232, 365

Although the commissioners, by the terms of the act, "western waters," were not thus limited as to the extent of their examination, yet they confined themselves to watercourses falling into the Ohio and its tributaries, for the reason stated in the following extract from their report:

"The large proportion of the whole quantity of materials annually required at an armory which it will be necessary in all cases to transport across the mountains, and partly from the seaboard, furnished a sufficient reason, independent of any other, for restricting our examination to sites within reach of convenient navigation; they were accordingly confined to those watercourses falling into the Ohio, or on their tributaries, below the head of ascending navigation of the principal streams, with one exception," &c.

It should be remarked that at the time when these examinations were completed, the valley of the Ohio was supplied with iron chiefly from the interior of Pennsylvania, and little or no coal had been found below the Muskingum.

Under the authority of a resolution of the Senate of the United States, passed the 18th December, 1827, an officer of the engineer department made an examination of various sites in the west and south deemed eligible for an armory, and the mass of information collected by the commissioners in 1823 was placed in his possession. His report was transmitted to the Senate, by the Secretary of War, May 27, 1830, but was not printed.

It must be conceded that unexampled changes have taken place in the valley of the Mississippi and its tributaries, as regards population and the mechanic arts, since the period when the several examinations were made with a view to the location of an armory; and the discovery of coal and the working of iron mines in various places have developed resources which were then unknown; therefore, if an armory is to be established in the west, it is highly important that suitable persons be employed to explore the region of country bordering on the Mississippi and its tributaries, including the State of Missouri, for the purpose of selecting a proper location.

I have the honor to be, very respectfully, sir, your obedient servant,

GEO. BOMFORD, *Colonel of Ordnance.*

HON. LEWIS CASS, *Secretary of War.*

ORDNANCE OFFICE, *Washington, February 18, 1836.*

SIR: In answer to your communication of the 17th instant, I have the honor to state that it is estimated that the cost for erecting the proposed armory in the west, capable of manufacturing 20,000 muskets annually, will be about \$525,000; and that the sum of \$65,000 will be required for the first year's operations. The above calculations are based upon the report of the commissioners appointed under the act of March 3, 1823, to establish an armory on the western waters.—(Vide H. R. State Papers, 2d session, 18th Congress, vol. 3, document No. 55.)

I have the honor to be, sir, respectfully, your obedient servant,

GEO. BOMFORD, *Colonel of Ordnance.*

HON. THOMAS H. BENTON, *Senate of the United States.*

24TH CONGRESS.]

No. 647.

[1ST SESSION.]

ON THE EXPEDIENCY OF ESTABLISHING AN ARSENAL OF CONSTRUCTION IN NORTH CAROLINA, AND STATEMENTS OF ARTICLES MANUFACTURED AT, AND COST OF CONSTRUCTING, FOUR DIFFERENT CLASSES OF ARSENALS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 24, 1836.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom was referred the resolution instructing the Military Committee to inquire into the expediency of establishing an arsenal in the State of North Carolina, reported:

That after the mature consideration which has been given by the committee to the subject of the resolution, they find that there is no arsenal of general construction in any of the southern States south of the river Potomac; that the arsenal established within the walls of Fortress Monroe is a mere place of construction for the armament of the fortresses, and can never be an arsenal of general construction or of large deposit, by reason of the limited space that can be assigned for the necessary buildings, and their unavoidable exposure to bombardments if established there; that the Bellona arsenal, upon the James river, above Richmond, has, in consequence of its inconvenient and unhealthy location, been abandoned by the government; and that the contracted, inconvenient, and dilapidated storehouse in the city of Charleston does not, in the opinion of your committee, deserve the name of a depot.

There is, consequently, no depot of munitions between the arsenal in the city of Washington and the arsenal at Augusta, in the State of Georgia, or between the Potomac and Savannah rivers, over an extent of country exceeding 500 miles, and throughout three great States of the Union, North and South Carolina and Virginia.

It is obvious to your committee that this is too great an extent of country to be left by the government wholly without the means of military supplies, and that the transmission of munitions of war from the arsenals at the northeast would be attended with the most hazardous delays in the event of a domestic insurrection, or other emergency requiring the immediate armament of the militia in any section of those States.

The geographical features of these States, their great area, the peculiar character of a class of their population, the physical difficulties to be surmounted in the transmission of supplies of munitions of war to their interior from the distant northern arsenals; the delay and tediousness of that operation, at any time, however great the exertions in consequence of any pressing emergency; and its almost utter impracticability, in the dead of winter, when the Potomac and the northern rivers and seaports are closed, as at present: all go to show the necessity of establishing at an early day a depot of general construction at some suitable point within the area of those States.

In the northeastern sections of the Union, in the District of Columbia, Maryland, Pennsylvania, New York, and New England, intersected in every direction by numerous lines of rapid transportation, not less than ten arsenals have been found necessary, it would appear, to meet the exigencies of the country. Yet in the two Carolinas and Virginia, only one-third less in extent of territory, having their lines of transportation few, generally natural, and over physical obstructions difficult to be surmounted, there is not to be found a single place of military supplies. Justice, therefore, in the opinion of your committee, not less than policy, would seem to require the early and favorable action of Congress in establishing within the area of those States an ample place of deposit and general construction for munitions of war.

The site of such an arsenal, in the opinion of your committee, should be fixed at some favorable point in the State of North Carolina. For it is plain that if it were placed in Virginia it would lie too near the Washington arsenal, and too distant from the whole of North Carolina and the northern and the northwestern part of South Carolina, which it would be destined to supply.

On the contrary, if it were placed in South Carolina it would be too near to the Augusta arsenal, and too distant from the whole of North Carolina and the southern and southwestern parts of Virginia, which it would be also destined to supply.

It is obvious, therefore, 1st. That it should be placed at or near some middle point between the Potomac and the Savannah rivers. 2d. That it should be on navigable waters, so as to communicate easily with the fortresses and seaports, and the countries along the sea-coast, which are the principal seat of the objectionable population. 3d. It should, if possible, be on the great mail route leading north and south, that it may readily arm the adjacent States in those directions; and it should be sufficiently interior to communicate easily with the countries near the mountains, and yet not so far in that direction as to make it difficult of access from the sea-coast. 4th. As it will be necessarily placed in the midst of the black population, it should be at or near some town or village, where, in any emergency, its guard may be aided by the citizens, and from whence mechanics may be obtained. 5th. It should be a cheap and healthful position, having the facilities of timber and iron, and other supplies. Your committee are satisfied that Fayetteville, North Carolina, will eminently fulfil all these conditions, as stated in the communication from the Ordnance department, herewith transmitted. The cost of the proposed arsenal, as communicated in the report from the Ordnance department, also herewith transmitted, exclusive of exterior walls, fences, gates, roads, tools, machinery, wharves, &c., which would depend upon the particular properties of the location, would be \$134,581; and your committee would respectfully propose the expenditure of one-third of that sum for the purchase of the site, the collection of materials, and the other operations of the first year. Accordingly, they report a bill for that object.

A.

ORDNANCE OFFICE, *Washington, February 17, 1836.*

SIR: I have the honor to enclose herewith a detailed statement of the probable expenses to be incurred in erecting each of the four classes of arsenals. It has been drawn up with great care, and is believed to contain as exact information as the nature of the subject will admit. Being full and complete, it requires no additional explanation.

As regards the resolution of the House of Representatives, directing a report upon the expediency of establishing an arsenal in the State of North Carolina, I have the honor to state that an arsenal for deposit and construction is required in the southern States, at some central point between the Potomac and Savannah rivers. This is evident, since there is now no arsenal of general construction in any of the southern States south of this city, the arsenal at Fort Monroe being a place of construction for the armament of the fortresses only. It is a military principle not to have, within an exposed fort upon the sea-coast, subject to bombardment, more stores than are necessary for its own defence. As the Bellona arsenal in Virginia has been abandoned for the present, and as the depot at Charleston, South Carolina, is so inconsiderable as scarcely to deserve the name, it will be perceived that between the Savannah and the Potomac, throughout three large States, there is no established depot for the armament of the country in case of any domestic insurrection or other sudden emergency.

It is obvious, therefore, that a place of deposit and construction would be advantageous at some middle point between the Potomac and Savannah rivers.

It should be on navigable waters, so as to communicate easily with the forts, the cities, and counties, along the sea-coast.

It should, if possible, be on the great road leading south and north, so as to arm the adjacent States in those directions.

It should be sufficiently interior to communicate easily with the countries near the mountains; and yet not so far in that direction as to make it difficult of access from the sea-coast.

As it will be necessarily placed in the midst of the black population, it should be at or near some town, where, in any emergency, it may be aided by the citizens; and from whence mechanics may be obtained. Fayetteville, North Carolina, seems adapted to fulfil all these considerations, and is recommended as the most suitable site.

It is proper here to remark that this department would recommend at least one small depot in every State or Territory; built up in such manner as to admit of an extension, at any time when the public service might require it, into a place of construction.

In addition to the munitions of war in such depot belonging to the United States, provision might be made for the reception, preservation, and issue, on the requisition of the governor, of the munitions belonging to the State or Territory. This arrangement would be accompanied with many advantages.

I also transmit, herewith, a list of the ordnance stores which are required to be manufactured at arsenals of construction.

I have the honor to be, very respectfully, your obedient servant,

G. BOMFORD, *Colonel of Ordnance.*

Hon. J. J. McKAY, *House of Representatives.*

B.

Articles manufactured at an arsenal of construction.

FIELD CARRIAGES.

12-pounders, complete.	12-pounders, caissons.
6-pounders, complete.	6-pounders, caissons.
24-pounders, howitzer, complete.	Travelling forges, complete.
12-pounders, howitzer, complete.	

SIEGE AND GARRISON CARRIAGES.

12-pounders, complete.	8-inch howitzer, light.
18-pounders, complete.	8-inch mortar, light.
24-pounders, complete.	10-inch mortar, light.

SEA-COAST CARRIAGES.

24-pounders, complete.	24-pounders, carronade, complete.
32-pounders, complete.	32-pounders, carronade, complete.
42-pounders, complete.	42-pounders, carronade, complete.
18-pounders, carronade, complete.	10-inch mortar, heavy.

ARTILLERY EQUIPMENTS AND IMPLEMENTS.

42-pounder sponges and rammers.	Fuse saws.
32-pounder sponges and rammers.	Fuse augers.
24-pounder sponges and rammers.	Fuse setters, wood.
18-pounder sponges and rammers.	Fuse setters, copper.
12-pounder sponges and rammers.	Fuse extractors.
42-pounder ladles and worms.	Fuse rasps.
32-pounder ladles and worms.	Fuse mallets.
24-pounder ladles and worms.	Lead aprons for field guns.
18-pounder ladles and worms.	Lead aprons for garrison guns.
12-pounder ladles and worms.	Sponge buckets.
6-pounder ladles and worms.	Garrison water buckets.
42-pounder worms and staves.	Tarpaulings for guns.
32-pounder worms and staves.	Tarpaulings for ammunition.
24-pounder worms and staves.	Budge barrels.
18-pounder worms and staves.	Pass boxes.
12-pounder worms and staves.	Linstocks.
42-pounder sponges.	Portfire stocks.
32-pounder sponges.	Portfire cases.
24-pounder sponges.	Portfire clippers.
18-pounder sponges.	Gunners' haversacks.
12-pounder sponges.	Tube pouches.
6-pounder sponges.	Priming horns, complete.
42-pounder tompions.	Thumbstalls.
32-pounder tompions.	Prolongs.
24-pounder tompions.	Bricoles.
18-pounder tompions.	Sponge covers.
12-pounder tompions.	Tongs for hot shot.
6-pounder tompions.	Forks for hot shot.
13-inch mortar tompions.	Shell hooks.
10-inch mortar tompions.	Shell funnels.
8-inch mortar tompions.	Shell scrapers.
8-inch howitzer tompions.	Shell plug screws.
Ladles for hot shot.	Grenade match pipes.
Gunners' calipers.	Kit ladles.
Gunners' plummet.	Artillery harness.
Spirit levels.	

ACCOUTREMENTS FOR SMALL ARMS.

For infantry.

Cartridge-boxes.
Cartridge-box belts.
Bayonet belts.
Belt plates.
Bayonet scabbards.
Brushes and picks.
Gun slings.

Flask and pouch belts.
Waist belts.
Plates for waist belts.
Copper flasks.
Brushes and picks.
Gun slings.

For cavalry.

Rifle pouches.

For riflemen.

Sabre belts.
Brass belt plates.
Pistol cartridge-boxes.
Holsters.

PREPARATION OF AND MATERIALS FOR AMMUNITION.

42-pounder cartridge bags.	Priming tubes.
32-pounder cartridge bags.	Fuses.
24-pounder cartridge bags.	Percussion primers.
18-pounder cartridge bags.	Portfires.
12-pounder cartridge bags.	Slowmatch.
6-pounder cartridge bags.	Quickmatch.
Musket cartridges.	Kit.
Rifle and pistol and carbine cartridges.	Rockets of all dimensions.
Musket bullets.	Blue lights.
Rifle and pistol bullets.	Fire balls.
Buckshot.	Blocks for strapping shot.
Cartridge paper.	

MISCELLANEOUS.

Gins.	Powder carts.
Gin handspikes.	Shot carts.
Sling carts.	Common carts.
Sling wagons.	Common wagons.
Chains for sling carts.	Cannon scrapers.
Truck wagons for cannon.	Ammunition chests.

TOOLS.

Complete sets of artificers' tools.	Complete sets of intrenching and mining tools.
Complete sets of armorers' and smiths' tools.	Complete sets of laboratory tools.

GEO. BOMFORD, *Colonel of Ordnance.*

C.

Statement of the cost of four classes of arsenals, exclusive of exterior walls, fences, gates, roads, tools, machinery, wharves, &c., &c.

FIRST CLASS—*Depot simply.*

Names.	No. of buildings.	Size.	Cost of each.	Total.
Arsenals	2	120 by 40 feet, and 47 feet high...	\$20,000	\$40,000
Great magazine	1	To contain 2,500 to 3,000 barrels of powder	12,000	12,000
Officers' quarters	1	43 by 40 feet, and 40 feet high...	8,000	8,000
Barracks	1	100 by 36 feet, and 35 feet high...	13,000	13,000
Gun-carriage shed	1	100 by 30 feet, and 10 feet high...	3,050	3,050
Office	1	40 by 20 feet, and 29 feet high...	2,430	2,430
Small magazine for fixed ammunition	1	30 by 20 feet, and 14 feet high...	756	756
Connecting walls				1,000
Land, 25 acres at least, see note, estimated at \$40 per acre				1,000
Graduating and levelling the site proper, making drains, culverts, &c.				1,000
				82,236

SECOND CLASS—*Depot and place of repair.*

Arsenals	2	120 by 40 feet, and 47 feet high ...	\$20,000	\$40,000
Great magazine	1	To contain from 2,500 to 3,000 barrels of powder	12,000	12,000
Officers' quarters	1	43 by 40 feet, and 40 feet high...	8,000	8,000
Barracks	1	100 by 36 feet, and 35 feet high...	13,000	13,000
Gun-carriage shed	1	105 by 30 feet, and 10 feet high...	3,050	3,050
Smiths' shop	1	25 by 30 feet, and 14 feet high...	945	945
Office	1	40 by 20 feet, and 29 feet high...	2,430	2,430
Carriage makers' shop	1	25 by 30 feet, and 14 feet high...	945	945
Armorers' and turners' shop	1	50 by 30 feet, and 14 feet high...	1,890	1,890
Painters' shop	1	20 by 14 feet, and 14 feet high...	352	352
Laboratory, viz:				
Driving and filling shop	1	25 by 25 feet, and 14 feet high...	787	787
Finishing room	1	25 by 25 feet, and 14 feet high...	787	787
Small magazine for fixed ammunition	1	30 by 20 feet, and 14 feet high...	756	756
Connecting walls				1,200
Land, 25 acres at least, see note, estimated at \$40 per acre				1,000
Graduating and levelling the site proper, making drains, culverts, &c.				1,200
				88,342

THIRD CLASS—*Depot and place of construction and repair, without water or steam power.*

Names.	No. of buildings.	Size.	Cost of each.	Total.
Arsenals	2	120 by 40 feet, and 47 feet high	\$20,000	\$40,000
Great magazine	1	To contain from 2,500 to 3,000 barrels of powder	12,000	12,000
Officers' quarters	3	43 by 40 feet, and 40 feet high	8,000	24,000
Barracks	1	100 by 36 feet, and 35 feet high	13,000	13,000
Gun-carriage sheds	2	100 by 30 feet, and 10 feet high	3,050	6,100
Smiths' shop	1	80 by 35 feet, and 14 feet high	3,528	3,528
Timber sheds	2	105 by 30 feet, and 10 feet high	2,250	4,500
Office	1	40 by 20 feet, and 29 feet high	2,430	2,430
Carpenters' and carriage makers' shop	1	80 by 35 feet, and 14 feet high	3,528	3,528
Armorer's and turners' shop	1	50 by 30 feet, and 14 feet high	1,890	1,890
Tinners' and casting shop	1	40 by 25 feet, and 14 feet high	1,260	1,260
Painters' shop	1	30 by 25 feet, and 14 feet high	945	945
Saddlers' shop	1	30 by 25 feet, and 14 feet high	945	945
Laboratory, viz:				
Driving and filling shop	1	25 by 25 feet, and 14 feet high	787	787
Finishing room	1	25 by 25 feet, and 14 feet high	787	787
Small magazine for fixed ammunition	1	30 by 20 feet, and 14 feet high	756	756
Guard room	1	30 by 25 feet, and 14 feet high	945	945
Connecting walls				1,350
Land, 25 acres at least, see note, estimated at \$40 per acre				1,000
Graduating and levelling the site proper, making drains, culverts, &c.				1,350
Coal houses				1,000
				122,101

FOURTH CLASS—*Depot and place of construction and repair, with water or steam power.*

Arsenals	2	120 by 40 feet, and 47 feet high	\$20,000	\$40,000
Great magazine	1	To contain from 2,500 to 3,000 barrels of powder	12,000	12,000
Officers' quarters	3	43 by 40 feet, and 40 feet high	8,000	24,000
Barracks	1	100 by 36 feet, and 35 feet high	13,000	13,000
Gun-carriage sheds	3	100 by 30 feet, and 10 feet high	3,050	9,150
Smith's shop	1	80 by 35 feet, and 14 feet high	3,528	3,528
Timber sheds	3	105 by 30 feet, and 10 feet high	2,250	6,750
Office	1	40 by 20 feet, and 29 feet high	2,430	2,430
Carpenters' and carriage makers' shop	1	80 by 35 feet, and 14 feet high	3,528	3,528
Steam-engine, or house for water power	1	100 by 40 feet, and 18 feet high	6,480	6,480
Armorer's shop	1	50 by 30 feet, and 14 feet high	1,890	1,890
Tinners' and casting shop	1	40 by 25 feet, and 14 feet high	1,260	1,260
Painters' shop	1	30 by 25 feet, and 14 feet high	945	945
Saddlers' shop	1	30 by 25 feet, and 14 feet high	945	945
Laboratory, viz:				
Driving and filling shop	1	25 by 25 feet, and 14 feet high	787	787
Finishing room	1	25 by 25 feet, and 14 feet high	787	787
Small magazine for fixed ammunition	1	30 by 20 feet, and 14 feet high	756	756
Guard room	1	30 by 25 feet, and 14 feet high	945	945
Connecting walls				1,450
Land, 25 acres at least, see note, estimated at \$40 per acre				1,000
Graduating and levelling the site proper, making drains, culverts, &c.				1,450
Coal houses				1,500
				134,581

NOTES.

1st. Twenty-five acres of land at least are necessary at each class of the arsenals, in order to be enabled to prove powder, which operation requires a space of 350 to 400 yards.

2d. It is perceived that the expense of the first class may be reduced \$20,000 if only one arsenal building be required in that class. The same remark applies to the other classes.

3d. There are times when several companies of troops may be required, temporarily at least, at each class of the arsenals. The barracks are therefore made of the same size at each of the classes, and large enough to accommodate the companies as well as the troops of the ordnance *proper*. There has always been a deficiency at the arsenals in barracks when they have been occupied by troops.

4th. The above includes everything connected with the buildings and site *proper*, nothing more. The expenses for the apparatus of tools, utensils, engines, &c., &c., which may be necessary to put the several classes into operation are not included.

5th. The extent of the site occupied by each of the classes may be the same, and thus any one class may be enlarged into its next adjacent class without other expense than is required by the additional buildings.

6th. The estimated expenditures in these statements are founded on the prices paid in the vicinity of Philadelphia, and are sufficiently near the truth, it is believed, for all positions which are not in Florida, Louisiana, or Alabama.

G. BOMFORD, Colonel of Ordnance.

24TH CONGRESS.]

No. 648.

[1st Session.]

ON A PROPOSITION TO PURCHASE THE PATENT RIGHT OF AN INVENTION FOR POINTING
HEAVY ARTILLERY FOR THE USE OF THE ARMY AND THE MILITIA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 24, 1836.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom was referred the memorial of William H. Bell, of the State of North Carolina, proposing the purchase for the United States of certain rights of his for inventions for pointing cannon, reported:

That they have attentively considered the proposition of the said William H. Bell, and find that the inventions referred to in the memorial were perfected in 1829, after long and severe application of the memorialist; that they were subsequently, at Fortress Monroe, in the years 1829-'30, submitted, with complete success, to the severest trials of heavy firing and manœuvring, to test their utility and durability, extracts from the reports of said trials as made to the Ordnance department having been laid before this committee; that since that period they have been, with the same success, submitted to still further experiments of severe firing and manœuvring at Fortress Monroe and Castle Pinckney, in the harbor of Charleston, and at Forts Jackson, Wood, Pike, Pickens, and Morgan, on the Gulf of Mexico; that from a period soon after they were perfected by the memorialist, up to the present time, they have been used in our sea-coast batteries, in which, during the last five or six years, they have undergone a continual experiment by the various officers and companies of the different regiments of artillery occupying the forts in which they have been used; that the reports of these various military officers, and of cannon founders and military mechanics, forming a large volume of evidence, (which has been laid before your committee,) present the most satisfactory views of the utility and importance of these inventions, and afford a kind of evidence the more acceptable and convincing, as it proceeds from officers of the military establishment, who should, in consequence, be most interested in its accuracy, and the best fitted by habit and education to arrive at a correct judgment on a military subject.

Among the numerous testimonials submitted to your committee in favor of these inventions are those of the Secretary of War, the general-in-chief of the army, the generals of the eastern and western departments, the senior inspector general, and the chiefs of the ordnance and engineer departments. But notwithstanding your committee are aware of the ample and satisfactory character of the evidence adduced by the memorialist, they have justly considered that it might be attended with advantages to examine for themselves; and that an experiment which might be repeated, not only before your committee, but before any member of Congress at any time, might lead to such investigations and scrutiny, as to the real character of these inventions, as to satisfy the minds of all of their utility and importance, and of the truth of the facts stated in the memorial. Your committee were, in consequence, the witnesses of an experiment conducted by the memorialist at the arsenal in this city, in which his inventions were applied with entire success to the two principal carriages used in the covered and uncovered batteries of our sea-coast defences.

In the minds of your committee there cannot be a doubt of their being applicable to all kinds of carriages intended for the reception of cannon; and that their application is simplified, and the expense of the principal machine greatly reduced, by the recent improvement introduced by the memorialist.

Without descending into details, or allusion to all the advantages which, in the opinion of your committee, appertain to these inventions, denominated the new system of pointing cannon, it may be well, in appreciating its advantages, to place its general properties in contrast with those of the old system; in which, in the first place, the violent, irregular, and rapid movements of the carriages in the recoils, which tend so directly to crush and disable them, are relieved by the pointing spring provided in the new system.

2d. The excessive jars from the discharges of heavy artillery in the upper tiers of fortified places, upon the decks and sides of ships, and the strain upon their breeching, (unavoidable in the old system,) are relieved in a corresponding manner in the new system.

3d. The loss of the elevation or depression of the gun at each discharge of the old system renders it impracticable to correct any inaccuracy in the flight of the last shot; while in the new system the elevation or depression is preserved after any number of discharges; and when the piece is once correctly aimed the gunner, even in the darkest night, or when enveloped in a cloud of smoke, may continue the discharges with unabated efficiency.

4th. In consequence (in the old system) of the defect last mentioned, viz: the loss of elevation and the unavoidable delay and tediousness in regaining it after every fire by the imperfect means afforded in that system, and, on the other hand, of the simplicity and facility of the movements by the new system, in which, after many fires, it may not be necessary to change the elevation in the slightest degree. For these reasons the celerity of fire, and, of consequence, its *efficiency*, is about double that in the old system.

But in the minds of your committee by far the greatest advantages of this new system of pointing cannon arise from the accomplishment and union by the memorialist of the two following principles in the manœuvre and fire of batteries: First. That of the absolute and entire control which it gives to the commander, or best gunner selected by him, over the whole fire of the battery. Second. That of the converging lines of fire crossing over all points in the range of fire at 900 yards from the battery. By the combination which is effected of these two principles in the manœuvres of batteries the commander, by a single word of command, can place his 12 or 14 guns in any desired position of the horizontal or vertical ranges of fire; can rapidly lengthen or shorten, or vary their ranges to the right or to the left; producing, at all times, close, consolidated, converging, and incessant lines of fire. This is the great result of the system; and, in the opinion of your committee, in this consists the principal beauty and power of the invention.

On the contrary, in the old system no such control over the fire can in any case reside in the commander; neither is any such conformity in the movement of the guns under any circumstances possible; the captains or chiefs of the guns to whom the pointing is thus necessarily assigned being severally obliged, in the hurry and confusion of battle, (encumbered by the defects alluded to in the old system,) to

aim their guns according to their own divers notions of the subject—directing their fire upon objects or ships in most cases at several hundred yards asunder, thus producing a wide scattering and random irregular fire. And this, in the opinion of your committee, is the general result of the old system, which being thus placed in contrast with that of the new, it is not difficult to perceive the high ratio of advantage possessed by the latter.

The simplicity, facility, and general order in the service of cannon which is effected by these inventions are eminently fitted for the service of militia in the defence of fortresses; and in a country in which the permanent military establishment must always be small, and in which the extent and line of the fortresses are already great, and still increasing, it is obvious to your committee that the principal force required in any emergency to garrison the fortresses must be drawn from the militia. In this view of the subject the inventions are considered eminently useful.

Your committee would state, in conclusion, that from the examination of the large mass of evidence presented by the memorialist in favor of the inventions, and from their personal inspection of the operation of the same at the arsenal in this city, they are entirely satisfied of the truth of the facts set forth in the memorial; that they appreciate the motives of the memorialist which induced him to postpone the sale of his inventions to a stranger (although a large sum has been offered for the same) until after they should have been unsuccessfully proposed to the government for purchase; and in order that said inventions may not become the property of a stranger, and the government be thus ultimately compelled to pay a much greater sum than they may now be obtained for, your committee have agreed unanimously to recommend the purchase of the same, with all their improvements, for the sum of twenty thousand dollars; this sum being also to be in quittance of all claim of the memorialist against the United States for the use of the said inventions up to the present date. Accordingly, they report a bill for that purpose.

[24TH CONGRESS.]

No. 649.

[1ST SESSION.]

ON A PROPOSITION TO PURCHASE THE PATENT RIGHT OF JOHN H. HALL FOR MAKING RIFLES, AND FOR HIS EMPLOYMENT TO SUPERINTEND THE MANUFACTURE OF THE SAME.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 24, 1836.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom was referred the petition and documents of John H. Hall, of Harper's Ferry, in the State of Virginia, reported:

The committee find that very great improvements in relation to our national arms, and the fabrication of them, have been effected by the petitioner at great expense, and that such are the merits and importance of those improvements, that it is in contemplation by the War Department to adopt them generally, and apply them to *all* the different kinds of our small fire-arms.

For a detailed account of the properties of these improvements and the progress of them, the committee would refer to the documents above alluded to, and which are annexed, viz:

1st. Extracts from the report of the colonel of ordnance to the Secretary of War in January, 1827.

2d. Extracts from the report of a board of officers assembled at Greenleaf's Point in 1819, of whom Colonel N. Towson was president, made to the Secretary of War in that year.

3d. Extracts from the report of a board of officers at Fortress Monroe to the Secretary of War in 1826.

4th. Extracts from the report of a board of commissioners to the colonel of ordnance in 1827.

5th. A report from the chief of the ordnance department in reply to questions by the Hon. James J. McKay, of the "Committee on Military Affairs," in February, 1836.

The inventor of these very great improvements, it appears, has expended about twenty-five years of his life and a large amount of his property, in the first instance, in accomplishing them; and the whole amount received by him during that period, of which during eighteen years he has been most actively and indefatigably engaged at Harper's Ferry, in Virginia, has not been sufficient, beside the economical support of himself and family, to pay off the debts contracted in effecting those improvements—the most difficult, in all probability, that ever have been accomplished in the mechanic arts by one man. The consequence is, he is now not so well off in his pecuniary concerns, after nearly twenty-five years of incessant exertion, as when he commenced. He has been impoverished by it, although he has been "eminently successful" in effecting the great objects alluded to.—(See report from the Ordnance office in 1827.)

Having successfully, for his country, accomplished those objects and rendered the system of fabrication invented by him, and which he terms *identical*, more perfect than any other extensive manufacturing process in existence elsewhere, by the most energetic devotion of great and peculiar talents for mechanical invention, and for exerting which to the best advantage he withheld his attention from all other pursuits, by means of which he might have accumulated property for himself and family, and for nearly one quarter of a century induced to it by strong desires to benefit his country, and also induced by a confidence, strengthened by assurances from public functionaries, of *ultimately* receiving such a recompense as his success and the importance and utility of its results might entitle him to, he now requests, as a reward for his successful exertions and their beneficial effect on the national defence, to be permitted to receive the amount of the savings that the machinery invented by him, for the fabrication of the rifles known by his name, proves to effect in each future year, during a period of twenty years, while he is engaged in manufacturing them at Harper's Ferry, at the rate of about three thousand rifles per year, without any deduction for rent or for interest on capital employed.

It appears to the committee that it would neither comport with justice, nor with the reputation of our country, nor with its welfare, to withhold an adequate compensation from one who has effected, and at such sacrifices, objects of such great importance and great utility, and which conduce so much to its defence and security, and, it may well be added, to its high character for practical invention. They therefore recommend *unanimously* that the sum of ten thousand dollars be paid to John H. Hall for his valuable services rendered to the United States in the invention of the Hall's rifle, and in the invention of the means for fabricating it advantageously, and also *identically*; and that the Secretary of War be authorized to enter into an arrangement with him for his continued employment at the United States armory at Harper's Ferry, in Virginia, in fabricating the Hall's rifles, at the rate of twenty-six hundred dollars per year for each year in future, and with the former privileges for quarters and fuel and land for cultivation, beginning on 1st January, 1836.

With a view to these objects they have prepared a bill.

To the Senate and House of Representatives of the United States of America in Congress assembled :

The petition of John H. Hall, of Harper's Ferry, in the State of Virginia, respectfully represents: Your petitioner has now nearly brought to the highest perfection of which they are susceptible certain improvements made by him in the construction of fire-arms, and in the fabrication of them for the United States service, by means of which, among other objects of magnitude, the desideratum has been effected of the fabrication of small fire-arms *identically*, or in such perfection as to admit of the mutual interchanging of all their component parts.

These improvements, including the rifle that bears his name, and which has been adopted for the United States service, were begun in 1811. From which time to the present he has devoted himself to perfecting them with an intensity of application which the subjects absolutely required, and which was indispensable to their accomplishment. His exertions have been incessant for nearly one-quarter of a century; he, in the first place, applied a large amount from his private property to effecting them, and withholding his attention from all other pursuits, devoted it exclusively to these, engaging in the public service at the national armory at Harper's Ferry, for the purpose of prosecuting them to perfection, in full reliance, strengthened by assurances from public functionaries, of ultimately receiving from his country such a compensation as his success and the importance of the results might entitle him to; and that his efforts have proved highly successful and important to our country is evinced by the reports relative to them, made by gentlemen of high respectability and intelligence, extracts from which are annexed, and are herewith presented.

The great advantages derivable from such an improvement in the rifle as would obviate the delays and difficulties attendant on loading it induced many attempts, in different nations, at different times, to effect it, but, contrary to expectation, always without success; such great and apparently insurmountable obstacles occurred in every instance as to prevent its accomplishment, and, it is believed, it was at length abandoned as hopeless by every nation that had attempted it.

The yet more difficult object of effecting the fabrication of small arms with such accuracy as to have all their component parts mutually interchangeable was considered of so much importance as to induce great and repeated efforts, by different nations, to effect it, and at great expense; but all their attempts proved ineffectual, and at length that object came to be considered as hopeless, and was abandoned as impracticable also.

Your petitioner was, as before stated, induced to attempt effecting these important and most difficult objects for our country, and has accomplished both, and so as to render them adapted to common hands and applicable to *all* our national arms, but in doing it he has expended a large portion of a common life, and all the property that might otherwise have remained to him for the support of his family and of his advanced age. He would therefore request of your honorable body, in consideration of having successfully effected these important objects at such sacrifices, the privilege of being allowed, for a limited period, (twenty years,) annually, the amount which the application of his inventions, under his direction, will save to the United States in the *identical* fabrication of the arms known by his name, to the extent that the machinery constructed for them by him at the United States rifle works at Harper's Ferry will produce, in each year of that period, and such other reward as may appear to your honorable body commensurate to their utility and importance.

WASHINGTON, January 5, 1836.

NOTE.—Among the advantages to be derived from the identical fabrication is that of enabling our country to have all its arms made exactly, in all their dimensions and the relative positions of their various component parts, like to any models established for the national service, however perfect those models may be, thereby securing to each kind of arm, respectively, the important property of mutual interchangeability, in all its parts, and, in consequence of that property, the ability to reconstruct good and complete arms from the uninjured parts of damaged ones of the same kind, whenever they get injured in service, and to do it without much loss of time or the intervention of workshops.

The system of the identical fabrication also furnishes a complete security against that deterioration in manufacturing our fire-arms, to which all manufactured productions are liable, and to which they so constantly tend after they have once arrived at a certain degree of perfection in their construction.

The great exertions made in Europe at different periods, as well as those made in this country, to effect such a degree of perfection in manufacturing small fire-arms, but always unsuccessfully, have fully proved the immense difficulty of effecting it; and the great amounts expended and offered for effecting it show the very high opinions entertained of its value and importance by different nations.

DOCUMENT No. 1.

Extracts from the report of the Colonel of Ordnance to the Secretary of War, in January, 1827, on the subject of the Hall's rifles, and the fabrication of them.

"This description of arms was first presented to the notice of the government in 1813, by Mr. Hall, the inventor. The Secretary of War (then General Armstrong) ordered a few of them to be procured for trial. In 1816 samples were again presented, and in 1817, (January,) a contract for one hundred of them was made by direction of the Secretary of War, with a view to arming a company of riflemen with them by way of experiment; these were completed in that year, and the officer who received and inspected them made a favorable report of them. Mr. Hall was then desired to repair to one of the national armories and attend to the construction of a few of the rifles, with a view of improving their model and to further experiments with them. Four arms were made and tried at the armory, the officers of which made a report of them in favorable terms. After these trials at the armory, the arms were submitted for examination and trial to a board of military officers, then assembled at Greenleaf's Point."

"The result of this examination proving the durability and superior efficacy of this description of arms in a satisfactory manner, arrangements were soon after made for fabricating a larger number of them."

"The arms referred to were completed in the early part of the year 1825, and in September of that year orders were given for a portion of them being sent to Fortress Monroe, in order that they might, in the hands of the troops at that station, be more effectually tested."

"Two of the companies at Fortress Monroe were armed with these rifles in July last, which have continued to use them ever since. A great number of trials have been made with them, a full account of which is contained in the report of the staff of the school of practice."

"This report, made by experienced officers after a constant practice with the arms for five months, exhibits a very full view of the subject, and clearly demonstrates the great superiority of these arms over all others heretofore used in the public service."

"The convenience, safety, and celerity with which these arms are loaded and fired, and the accuracy and effect of their fire, and the durability of the arms, have been most effectually tested, and have proved to be not inferior in any of these respects to the common arms, but generally superior in all of them, and particularly so in all that relates to celerity and effect."

"As a general result obtained, by comparing Hall's rifles with the common rifles, and with muskets, it may be stated that with an equal number of men, firing for an equal length of time, the effective shots made from each description of arms will be in the following proportions, viz: Hall's rifles, 100; common rifles, 43; muskets, 37; being an advantage in favor of Hall's over the common rifle as 9 to 4, and over the musket as 8 to 3; being more than two to one in both cases."

"In conclusion, I would observe that it is now thirteen years since this description of arms was first presented to the notice of the government, and that for nine years past measures have been in operation for perfecting the model, and for determining the effectiveness of the arms. Two thousand stands have been nearly completed, and the recent trials with them at Fortress Monroe, which were designed to test them in the severest manner, have conclusively established their superiority."

"It is but an act of justice to Mr. Hall, the inventor, to state, that during the whole of this period he has devoted himself with the greatest zeal and assiduity to the perfecting of this arm, and of the means for fabricating it; and that in both he has been eminently successful; and to him is due the credit of effecting so great an improvement in fire-arms."

"The machinery used in the fabrication of these rifles has been constructed upon a new and improved plan, by which a very important improvement in the fabrication of fire-arms has been effected. By the use of this machinery, each of the various separate parts, which when united forms one arm, are constructed in that perfectly accurate and uniform manner that every one of the parts of one arm will fit exactly the corresponding parts of any other arm of similar model."

"This degree of perfection in the fabrication of small arms has ever been considered an object of the highest importance in all national armories, and has been frequently attempted in the armories of Europe, but hitherto without success; and the attempt has been generally abandoned from the belief that the object was unattainable."

"The machinery constructed for and used in fabricating the Hall's rifles executes the work with such exactness that the component parts of one hundred rifles made some years past have been joined to other parts made recently, without the least difficulty, all the parts fitting as exactly as if each had been separately adjusted to the particular rifle thus formed from the scattered members."

"This subject was considered of so great importance that a board, consisting of practical armorers and intelligent gentlemen, was appointed to inspect the machinery and the work performed by it."

"GEO. BOMFORD, *Brevet Colonel, on Ordnance Service.*"

DOCUMENT No. 2.

Extracts from the report of a board of officers assembled at Greenleaf's Point, 1818-'19, of which Colonel N. Towson, the present paymaster general of the United States, was president.

"On the 3d of November last, at Greenleaf's Point, in the city of Washington, commenced the firing of a musket and a rifle of Mr. Hall's construction, and also that of a musket and a rifle of the manufactory of Harper's Ferry, model 1817. The object the board had in view was to ascertain—

"1. The relative accuracy.

"2. The force of projection.

"3. The celerity of loading; and

"4. The durability of these respective arms.

"On the first subject of inquiry, they perceive no difference between the rifles, but a manifest one in favor of the new over the common musket."

"On the second, no difference whatever between the two muskets and between the two rifles."

"On the third, the advantage in favor of the new over the common rifle is as 2 to 1."

"It was thought proper to dispense with the firing of the common arms after 475 rounds, and the foregoing comparisons had been made. The firing of these new arms was continued from time to time, until the musket had been discharged 7,061 times, and the rifle 7,186 times; this appearing to the board a fatigue at least equal to what these pieces would be exposed to in fourteen or fifteen campaigns, and probably more than they would be required to undergo."

"The advantages of these guns over the common ones now in use are:

"1. The celerity and ease with which they may be loaded in all situations; it is of great consequence in the rifle; the difficulty of loading is the greatest objection to its more general introduction into service.

"2. Greater accuracy and less recoil (in the musket.)

"3. Less weight (in the rifle.)"

"N. TOWSON, *Lieutenant Colonel of Artillery, President.*"

DOCUMENT No. 3.

Extracts from a report by a board of officers at Fortress Monroe, in 1826, to the Secretary of War, relative to the Hall's rifles (December.)

"The officers composing the staff of the artillery school of practice, to whom was confided by general order No. 43, dated July 7, 1826, the duty of testing the principle of construction, the merits and demerits of Hall's rifle, by a series of actual experiments, and of contrasting their advantages and disadvantages with other arms now in use; to determine the convenience and safety and celerity with which each kind may be loaded and fired; the accuracy and effect of each, and their respective durability, have now the honor to report that, on the 21st of July, 1826, eighty-seven of Hall's rifles were placed in the hands of the two light companies of this school, and that since that time they have been in constant use for guards, parades, drill, and practice, subject to all the casualties of service in garrison; that, on the 28th of July, these two companies commenced a course of practice in opposition to an equal number of men armed with the Springfield muskets, and that this practice, with some necessary and unavoidable intermissions, has continued until the present time, (December, 1826.)"

"The common Harper's Ferry rifle having been subsequently issued to one company, a full course of experiments with that arm has likewise been had. From these experiments, varied as suggested in a letter from Colonel Bomford to Captain Baker, ordnance officer at the school, the following results have been obtained:"

"1st. The convenience in loading and firing."

"The convenience attending the loading and firing of Hall's rifle, as compared with the common Harper's Ferry rifle or musket, may be appreciated by a reference to the great superiority which it possesses over both in the celerity of its service. The labor of loading this arm is less arduous, and in constrained positions, such as will frequently occur, particularly with light troops, its convenient use renders its effect much more powerful than that of any other kind of small arm which is known in any service."

"2d. The celerity in loading and firing."

"The advantage in favor of Hall's rifle, in the celerity with which it may be loaded and fired, over the common musket, has been found to be as 36 to 49; that is, the same number of discharges were made from it in 36 minutes as were made from the musket in 49 minutes; and over the Harper's Ferry rifle it has the advantage in proportion of $5\frac{1}{2}$ to 12; and this, too, when loading Hall's rifle with two bullets. In firing at random, 77 discharges were made from five Hall's rifles in $4\frac{1}{2}$ minutes; from five muskets, 54; and from five Harper's Ferry rifles, 37 discharges in the same time. In constrained positions, such as sitting on the ground, &c., the advantage in favor of Hall's rifle is still greater, the same number of discharges having been made from it in $2\frac{1}{2}$ minutes as were made from the musket in $4\frac{1}{2}$ minutes, and from the common rifle in 9 minutes."

"3d. The safety in loading and firing."

"In point of safety, it is believed that the exemption of Hall's rifle from the possibility of being overloaded during the confusion and hurry of action, to which inconvenience other arms are liable, gives it a character for safety which adds to its general merit."

"In muskets, the consequence of overloading, by producing intimidation, and by inflicting wounds, by rendering the bearer unfit for service, and damaging the arm itself, are too serious not to render it important to obviate them; and from the peculiar construction of the Hall's rifle, it is believed that this objection which holds with respect to other arms is completely removed in this."

"4th. The accuracy and effect of the arms."

"In the accuracy of their fire no important difference has been found to exist between the two kinds of rifles at short range; but in a course of experiments with the same number of Hall's rifles and common muskets, it was found that from an equal number of discharges made by either party at equal distances from the object fired at, and always under similar circumstances, the former arm placed 7,501 bullets, and the musket 5,346 bullets in the same sized target—a difference of execution in the ratio of more than 7 to 5 in favor of the accuracy of Hall's rifle. This difference of execution added to the advantages possessed by Hall's rifle in point of celerity of firing, it being as 3 to 2 over the common musket, and as 2 to 1 over the rifle (common,) gives to this arm an immense superiority over both the musket and the common rifle in the effect produced."

"In long ranges of 408 yards, although the rifles were fired with their usual charge of powder, which is about two-eighths the weight of their bullet, and the musket with the greater charge of two-fifths the weight of the ball, the relative execution was found to be yet more favorable to the power of the Hall's rifle."

"The Hall's rifle, after having sustained 8,710 discharges, appears in a fit condition for service. Considering the number of discharges which had been made to equal the service that would be required of the arm in sixteen active campaigns, this practice was discontinued."

"The relative force of projection which the three kinds of arms possess (common rifle or Harper's Ferry rifle, musket, and Hall's rifle) has been determined by firing them at short distances into seasoned

white oak planks, with charges of powder of equal strength, and equally proportioned to the weight of the ball which is used in each. The charge of powder weighed two-fifths the weight of the bullet. In this experiment no important difference was found in the force with which the ball was projected from the different guns, the depth which they penetrated sometimes varying, in consequence of greater or less obstructions, (from the different degrees of compactness of the plank into which they were fired,) in favor of one and sometimes another, producing so near an equality in the experiments that to neither arm can a preference in this respect be awarded; but at a range of 408 yards, and with the reduced proportion of two-eighths the weight of its bullet, the penetration of the shot from the Hall's rifle, as appears by the table of that practice, was found to be equal to that of the musket with its charge of two-fifths; and at all the medium distances its force has been found not inferior to either the Harper's Ferry rifle or the musket."

"In reporting its opinion of the general utility of Hall's rifle, the staff of the school expresses its perfect conviction of the superiority of this arm over every other kind of small arm now in use; and this opinion has been formed after having seen two companies armed with them for five months, performing all the duties to which troops are liable in garrison, and contrasting them in a variety of ways with the common rifle and musket, in all which trials their great and general superiority has been manifest."

"The uniformity which appears to exist in the dimension of all its component parts is peculiar to this arm, and it is considered a great improvement in their construction that the several parts are so exactly similar as to suit equally well when applied to any of the rifles."

"A. EUSTIS, *Lieutenant Colonel Commandant.*

"J. B. CRANE, *Major 4th Artillery.*

"J. F. HEILEMAN, *Major United States Army.*

"R. L. BAKER, *Captain and Director of Artillery.*

"FORTRESS MONROE, *December, 1826.*"

DOCUMENT No. 4.

Extracts from the report of a board of commissioners, in January, 1827, consisting of practical armorers and intelligent gentlemen, appointed by the United States Ordnance department to examine the machinery invented for fabricating the Hall's rifles.

"In making this examination, our attention was directed, in the first place, for several days, to viewing the operations of the numerous machines which were exhibited to us by the inventor, John H. Hall. Captain Hall has formed and adopted a system in the manufacture of small arms entirely novel, and which, no doubt, may be attended with the most beneficial results to the country, especially if carried into effect on a large scale."

"His machines for this purpose are of several distinct classes, and are used for cutting iron and steel and for executing wood-work, all of which are essentially different from each other, and differ materially from any other machines we have ever seen in any other establishment."

"Their general merits and demerits, when contrasted with the several machines hitherto in general use for the manufacture of small arms, will perhaps be better understood by pointing out the difference of the results produced by them than by any very accurate description of the machines themselves."

"It is well known, we believe, that arms have never yet been made so exactly similar to each other by any other process as to require no marking of their several parts, and so that those parts on being changed would suit equally well when applied to every other arm (of the same kind;) but the machines we have examined effect this with a certainty and precision we should not have believed till we witnessed their operations."

"To determine this point, and test their uniformity beyond all controversy, we requested Colonel Lee, (acting) superintendent of the United States armory at this place, to send to Hall's armory five boxes containing one hundred rifles manufactured by him in 1824, and which had been in the arsenal (United States arsenal) since that period. We then directed two of his workmen to strip off the work from the stocks of the whole hundred, and also take to pieces the several parts of the receivers, so called, and scatter them promiscuously over a joiners' long work-bench. One hundred stocks were then brought from Hall's armory, which had been just finished, and on which no work or mounting had ever been put. The workmen then commenced putting the work taken from off the stocks brought from the United States arsenal on to the one hundred new stocks, the work having been repeatedly mixed and changed by us and the workmen also; all this was done in our presence, and the arms as fast as they were put together were handed to us and minutely examined. We were unable to discover any inaccuracy in any of their parts fitting each other, and we are fully persuaded that the parts fitted, after all the changes they must have undergone by the workmen, as well as those made designedly by us in the course of two or three days, with as much accuracy and correctness as they did when on the stocks to which they originally belonged."

"If the uniformity, therefore, in the component parts of small arms is an important desideratum, which we presume will not be doubted by any one the least conversant with the subject, it is, in our opinion, completely accomplished by the plan which Captain Hall has carried into effect. By no other process known to us (and we have seen most if not all that are in use in the United States) could arms be made so exactly alike as to interchange and require no marks on the different parts; and we very much doubt whether the best workmen that may be selected from any armory, with the aid of the best machines in use elsewhere, could in a whole life make a hundred rifles or muskets that would, after being promiscuously mixed together, fit each other with the exact nicety that is to be found in those manufactured by Captain Hall."

"The quality of the work performed.—We have already remarked on this point when speaking of the uniformity of the arms; we will, however, further observe that, in point of accuracy, the quality of the work is greatly superior to anything we have ever seen or expected to see in the manufacture of small arms, and cannot with any degree of propriety be compared with work executed by the usual methods; and it fully demonstrates the practicability of what has been considered almost or totally impossible by those engaged making arms, viz: of their perfect uniformity."

"It appears equally evident to us that ten thousand arms in one parcel may be made by the new machinery, and all so accurately that all their parts will suit equally well when interchanged."

"As a brief description of the several machines, embracing the material peculiarities which distinguish them, is desired, the following is offered as conveying as correct ideas on the most material points as we

are able to give at this time. In the first place, they possess the important properties of great stability and accuracy of construction in all their parts where these properties are necessary; and, in the second place, great durability."

"The system which Captain Hall has carried into complete effect, of making all the component parts of his arms alike, renders it impossible for the workmen to deviate from the established models without being detected."

"It also effectually secures the faithfulness of the inspectors of those parts; and it will enable them to proceed in the discharge of their duties with the utmost security in everything relating to the forms and dimensions and relative proportions of the arms and their component parts."

"JAMES CARRINGTON.

"LUTHER SAGE.

"JAMES BELL."

DOCUMENT No. 5.

Questions proposed by the *Hon. James J. McKay*, of the Committee on Military Affairs, to the chief of the Ordnance department, viz:

Question 1. How long has Captain Hall been in the public service, and the amount of compensation paid him, and for what objects?

Answer. Captain Hall has been in the public service from the 19th of March, 1819, up to the present time. He received as a compensation for his personal services from March 19, 1819, to March 8, 1827, at the rate of \$60 per month; and during the same period he received as a fee for the invention of his rifle the sum of \$1 for each rifle manufactured, amounting to 2,000. He received from March 8, 1827, to October 1, 1834, at the rate of \$1,450 per annum for his personal services, and \$9,000 as a fee for the invention of his "labor-saving" machinery, being \$1 on each rifle manufactured during that time. In addition to which, he was allowed quarters free of rent and the usual allowance of fuel during the period above named. He has also received during the year 1835 the sum of \$2,600, being \$1,600 for his invention and \$1,000 for his personal services; making the total amount he has received for personal services, the invention of his rifle, and the invention of "labor-saving" machinery, from March 19, 1819, to December 31, 1835, \$29,583 90.

Question 2. Have any contracts been made by the War Department with Captain Hall respecting his rifles? How many have been made; and how much money has been paid him therefor, in execution of said contracts? and if the same were in writing, copies of them.

Answer. There have been three contracts entered into by the Ordnance department with Captain Hall, respecting his rifles, (copies of which are enclosed,) and he has been paid for the execution of said contracts the sum of \$26,983 90, which, added to the sum of \$2,600 paid him during the year 1835, makes the total amount he has received \$29,583 90. The number of rifles made at the government armories is 11,002.

Question 3. How many of Captain Hall's rifles will the public service probably require during the next twenty years?

Answer. The number of Hall's patent arms that will probably be required during the next twenty years would, at the rate at which they are now manufactured, amount to about 80,000 stands. That is to say, 3,000 to be made annually by the government at the Harper's Ferry armory, and 1,000 at the private armories. But should Hall's patent be adopted as a substitute for the musket, and ordinary rifle, and ordinary carbine, as its great advantages fully justify, then the number to be manufactured during the next twenty years would be nearly 820,000 stands. Yet, as it might be hazardous to introduce so great a change into the principal weapon of the country, (though in all human reason it would be accompanied with signal advantage,) its adoption therefore, it is believed, should be gradual; and it is thought that at least one-fourth of the small arms to be made during the next twenty years should be of that construction. On this supposition, the number to be manufactured during the next twenty years would be nearly 205,000 stands. In this estimate no allowance is made for the gradual increase of the population, or for the additional number that might be required in the event of a war during that period.

Question 4. Has the department any established usage in making compensation to inventors for the use of their inventions, and what is it?

Answer. The department has no established usage in making compensation to inventors. The usual method has been to enter into contract on the best terms that could be agreed on; though it seems to have been a rule very generally established, and adopted in some cases by the Ordnance department, to grant inventors one-third or one-half the saving produced by the invention.

Question 5. Was the machinery at Harper's Ferry and elsewhere, used in the fabrication of Hall's invented rifle, put up by the government; and if so, the cost and saving effected in the fabrication of said arm?

Answer. The whole of the machinery used at Harper's Ferry in the fabrication of Hall's rifle was put up at the expense of the United States. By the report of the superintendent of the Harper's Ferry armory, of October 12, 1835, it appears that the sum of \$149,410 79 had been expended upon machinery and tools from 1819 to 31st December, 1834. It is proper to remark that no separate account has been kept in this office of tools made from that of machinery, and that that sum must be regarded as including both tools and machinery.

The machinery used "elsewhere," that is, at the private armories, was put up by private individuals.

The *saving* alluded to in this question refers, it is thought, to the difference between the smallest cost of the arm as made by Mr. Hall in the *government armories*, and its smallest cost as made by *private armories* at the present time. In this view of the subject, the "*saving effected*" would be the excess of the cost at the private armories above that at the national armories, and this last is ascertained as follows:

To amount of component parts of arms and flasks on hand 1st January, 1834.....	\$44,637 34
To value of unwrought materials on hand January 1, 1834.....	13,980 64
To amount of payments made by the paymaster for the rifle factory.....	28,088 61
To value of articles received from the storekeeper.....	11,911 39
To value of powder received from the Washington arsenal.....	420 00
To interest on capital employed for the year 1834, estimated at \$190,000, at 5 per cent....	9,500 00
	108,537 98
By amount expended in permanent improvements.....	5,640 19
By arms and appendages made, viz: 970 rifles, at \$21 13.....	20,503 85
By bayonets, screw-drivers, wipers, &c.....	14,048 82
By component parts of rifles and flasks on hand 31st December, 1834.....	53,214 02
By unwrought materials on hand 31st December, 1834.....	15,131 10
	108,537 98

Thus the 970 rifles cost \$20,503 85, or \$21 13 per stand, and the contract price with Colonel North being now \$17 20, there appears, thus far, to have been no saving.

But with regard to the saving effected at different periods at the *national armories*, from the machinery erected by Mr. Hall for the government, the following statement will show that between 1817 and 1833 the cost of the arm has been reduced in the ratio of \$25 to \$14 50, nearly one-half. As the interest of capital employed was not considered in making up the following statement, it shows less than the absolute cost; but it suffices to exhibit the successive reductions of price made by successive improvements in machinery.

In 1817 Hall's rifle, exclusive of interest on capital, cost government by open purchase.....	\$25 00
From 1819 to 1825 they cost, exclusive of interest, manufactured by the government at Harper's Ferry.....	21 57
In 1826 they cost, exclusive of interest.....	17 82
In 1832 they cost, exclusive of interest.....	14 50

Question 6. The general views of the department respecting the value of Captain Hall's inventions, and the amount of compensation that he may be entitled to from the government?

Answer. Captain Hall's invention has been thoroughly tested at the two principal posts of artillery and infantry, viz: Fort Monroe and Jefferson Barracks, by long and severe service in the hands of several companies of artillery and infantry, and by private individuals. Many of his arms have also been applied for by and issued to the States, and the Ordnance department has received from time to time formal reports from boards of officers, and from individual officers to whom the subject has been submitted; and in all the trials and comparisons with other fire-arms to which it has been submitted, whether by private or official persons, it has invariably maintained its decided superiority over all other fire-arms; and, in short, there is no longer any doubt of its being the best small fire-arm now known.

With regard to the "amount of compensation which he may be entitled to from the government," this, it is imagined, is now easy for the committee to determine, from the statement of the number (3,000) now annually made at Harper's Ferry, and of the cost of the rifle as now made. It is probable that from the improvements Captain Hall is constantly introducing, and from the reductions in price he has already made in the arm, that it will not be long before he effects a great saving, and that after a time this saving will not be much increased or reduced.

GEORGE BOMFORD, *Colonel of Ordnance.*

ORDNANCE OFFICE, *February 8, 1835.*

PAPER 1.

ORDNANCE OFFICE, *March 19, 1819.*

It is agreed between John H. Hall and Decius Wadsworth, colonel of ordnance in the service of the United States, acting with the approbation and consent of the Hon. John C. Calhoun, Secretary of War, that in consideration of the sum of one thousand dollars, to be paid to the said John H. Hall, the United States shall be entitled to manufacture, at any of the public armories, a number of rifles or other fire-arms not exceeding one thousand stands, after the plan and model of the fire-arms invented, or improved, or claimed to have been invented or improved, by the said Hall, for which invention he has obtained letters patent from the President of the United States, dated in May, 1811, giving him the exclusive privilege of making and using the said improvement.

It is further agreed that the said John H. Hall shall serve at Harper's Ferry, or such other place as may be judged convenient, in the capacity of an assistant armorer during the fabrication of the said one thousand rifles or other fire-arms, and shall do and perform the duty of an assistant armorer in instructing and directing the workmen to be employed in fabricating the fire-arms above specified, it being understood that during the time of his being so employed as an assistant armorer he shall be borne on the rolls of the armory, and be paid in that capacity at the rate of sixty dollars per month, commencing with the first of the present month.

It is understood that any neglect or default on the part of said Hall in performing the covenant aforesaid shall not prejudice the right of the United States to fabricate one thousand stands of arms as above.

In witness whereof, the parties have hereunto set their hands and seals the day and year above.

DECIUS WADSWORTH, *Colonel of Ordnance.*
JOHN H. HALL.

Witnesses: WM. LITTLE,
J. T. ALEXANDER.

The provisions and conditions of the above contract are extended to an additional number of one thousand rifles.

JULY, 1824.

PAPER 2.

This agreement, made this eighth day of March, in the year of our Lord one thousand eight hundred and twenty-seven, between George Bomford, brevet colonel on ordnance service, in the service of the United States, acting with the consent and under the direction of the Hon. James Barbour, Secretary of War, of the one part, and John H. Hall, of Harper's Ferry, in the State of Virginia, of the other part, witnesseth:

First. That the said Hall grants to the United States, for one year, or till three thousand of the Hall's rifles are completed, or a quantity of the component parts of the rifles equivalent in amount to three thousand of the finished arms, the privilege of using certain machines invented by him, for which invention he has obtained letters patent from the President of the United States, dated on the seventh day of March, 1827, giving him the exclusive privilege of making and using such machines. The said Hall further agrees to relinquish to the United States, during the same period, the free use of any other machines which have been or may be invented or improved by him, and which have been or may be constructed under his direction at the national armory at Harper's Ferry, in Virginia.

Second. It is further agreed that in consideration of the privilege granted and relinquishments made in the first article of this agreement, that the United States shall pay to the said Hall the sum of one dollar for each and every arm made by the aid or use of said machinery, or in lieu of the sum of one dollar for each arm, at the option of the United States, such sum as shall be equal to one-half the amount saved to the public by the use of said machinery. It is agreed, also, that the payments herein stipulated shall be made quarter yearly, and to an amount proportional to the amount of the work done with the said machinery.

Third. It is further agreed that the said Hall shall give his personal services at the armory at Harper's Ferry, in superintending the fabrication of three thousand of the arms before mentioned, and in perfecting the machinery therefor, and also in improving the methods of conducting the business of fabricating said arms; in consideration of which services it is agreed, on the part of the United States, that his compensation shall be at the rate of one thousand four hundred and fifty dollars per annum, and that it shall be paid in equal monthly payments, the first payment to be made on the last day of March, 1827.

It is expressly conditioned that no member of Congress is, or shall be, admitted to any share or part of this contract or agreement, or to any benefit to arise thereupon.

In witness whereof, the parties aforesaid have hereunto set their hands and affixed their seals the day and year first above written.

JOHN H. HALL.

GEORGE BOMFORD, *Brevet Colonel, on Ordnance Service.*

PAPER 3.

This agreement, made this 22d of April, 1828, between G. Bomford, brevet colonel of artillery on ordnance duty, in the service of the United States, acting with the consent and under the direction of the Hon. J. Barbour, Secretary of War, of the one part, and J. H. Hall, of Harper's Ferry, in the State of Virginia, of the other part, witnesseth:

First. That the said Hall grant to the United States for two years from the 8th March, 1828, or till six thousand of Hall's rifles are completed, in addition to those mentioned in the contract of March 8, 1827, or a quantity of the component parts of the rifles equivalent in amount to six thousand of the finished arms, the privilege of using certain machines invented by him, for which invention he has obtained letters patent from the President of the United States, dated on the 7th of March, 1827, giving him the exclusive privilege of making and using such machines. The said Hall further agrees to relinquish to the United States, during the same period, the free use of any other machines which have been or may be invented or improved by him, and which have been or may be constructed under his direction at the national armory at Harper's Ferry, Virginia.

Second. It is further agreed that in consideration of the privilege granted and relinquishments made in the first article of this agreement, that the United States shall pay to the said Hall the sum of one dollar for each and every arm made by the aid or use of said machinery; or in lieu of the sum of one dollar for each arm, at the option of the United States, such sum as shall be equal to one-half of the amount saved to the public by the use of said machinery. It is agreed, also, that the payments herein stipulated shall be made quarter yearly, and to an amount proportional to the amount of the work done with the said machinery.

Third. It is further agreed that the said Hall shall give his personal services at the armory at Harper's Ferry, in superintending the fabrication of six thousand of the arms before mentioned, and in perfecting the machinery therefor, and also in improving the method of conducting the business of fabricating said arms; in consideration of which services it is agreed, on the part of the United States, that his compensation shall be at the rate of \$1,450 per annum, and that it shall be paid in equal monthly payments.

It is expressly conditioned that no member of Congress is, or shall be, admitted to any share or part of this contract or agreement, or to any benefit to arise thereupon.

In witness whereof, the parties aforesaid have hereunto set their hands and affixed their seals the day and year first above written.

JOHN H. HALL.

24TH CONGRESS.

No. 650.

[1st Session.]

STATEMENTS OF THE FORTIFICATIONS, THEIR GARRISONS, STEAM BATTERIES, ETC., NECESSARY FOR THE DEFENCE OF THE COASTS OF THE UNITED STATES, THEIR COST, ETC.

COMMUNICATED TO THE SENATE FEBRUARY 25, 1836.

ENGINEER DEPARTMENT, February 16, 1836.

SIR: To the inquiries put in your note of yesterday, I have the honor to return the following answers, viz:

1. What is the lowest number of troops that would be required to garrison, in peace, all the forts now built, all now building, and all proposed in Senate bill No. 123?

Three thousand six hundred and fifty-five men, provided it is proposed to have at each fort a sufficient number of troops to maintain discipline; but if, on the contrary, to have merely fort-keepers, one thousand eight hundred and twenty will be able to perform the service.

2. The same in war, the full number required for war?

Six thousand seven hundred artillerists and twenty-seven thousand four hundred and forty infantry; in all, thirty-four thousand one hundred and forty men.

3. Lowest number to garrison, in peace, the remainder of the one hundred and eleven forts?

Three thousand and seventy-six regulars. If keepers only, one thousand five hundred and thirty-eight.

4. Number required in war?

Five thousand six hundred and twenty artillerists and twenty-two thousand four hundred and seventy-two infantry; in all, twenty-eight thousand and ninety-two.

Recapitulation.—Regular garrisons, in peace, 6,731; if keepers, 3,366; war, 62,232.

Very respectfully, your most obedient servant,

C. GRATIOT, Chief Engineer.

HON. THOMAS H. BENTON, Chairman Committee on Military Affairs, Senate.

Statement exhibiting the works proposed by the board of engineers and the Engineer department for the defence of the sea-coast of the United States, with estimates for the construction of those for which plans have been perfected; to which is added the probable cost of the others, together with that of the requisite number of steam batteries, the estimates submitted for 1836, the additional amounts necessary, and the aggregate sum required for the service of the year.—(See Doc. 153, H. R., 1st Sess. 19th Cong.)

	4,072,334	6,305,779	3,535,815	20,596,551	34,510,479	

NOTE.—Besides the works enumerated in the above table, there are others proposed by the board of engineers in their report in Doc 153, 1st session 19th Congress, (1826,) which will increase the whole number to 111, and for which no surveys or estimates have been made, nor concerning which is there any data before the department; they have therefore been omitted. There are also a number of field works contemplated to be thrown up in time of war, and which are necessary to the defences of certain points.

24TH CONGRESS.]

No. 651.

[1ST SESSION.]

ON THE WANT OF MORAL AND RELIGIOUS INSTRUCTION IN THE ARMY.

COMMUNICATED TO THE SENATE FEBRUARY 25, 1836.

ANDOVER, Massachusetts, February 17, 1836.

SIR: I have the honor to acknowledge the receipt of your favor of the 9th instant. Accept my thanks for the prompt and obliging manner in which you have complied with my request.

As it is to be expected that those who have long been connected with the army and have experienced the evils which result from a deprivation of the ordinary means of grace should be able to suggest facts and reasons in favor of making provision by law for the religious and moral wants of the army, I take the liberty to present the following:

1. Provision is made by law for the religious and moral wants of the navy, at an expense of ten or twelve thousand dollars annually

2. A chaplain is supported by government at West Point.

3. Chaplains are provided for both houses of Congress. So that the principle of sustaining religious teachers by government is established.

4. Of the thousands of public servants in the civil departments, scarcely any are so situated as to be shut out from religious privileges. The army in this respect stands alone.

5. The estimate put on the means of religion is shown by the fact that almost every community sustains a religious teacher. What would be thought of a proposition to depose every minister of the gospel and close every church in the land? And yet in such an event the community would be in precisely the situation of the greater part of the army.

6. Nowhere more than in the army are the fruits of religion needed: fidelity, temperance, and cheerful obedience are the sinews of its efficiency. At a military post in the north, where a faithful minister was employed, scarcely a man was confined for a military offence for upwards of a year. One hundred instances of confinement, among the same number of men within the same period, have I known at other posts. If fifty temperate and faithful men would be as efficient as sixty, one-third of whom were more or less intemperate, and the temperance and fidelity of the former resulted from Christian principle diffused by the labors of a faithful chaplain, then would the employment of such chaplains at our several military posts be equivalent to increasing the army by more than a thousand men. I state these proportions merely to illustrate the importance of religious influence on the efficiency of the army, and the true economy of

securing it, without intending to affirm that one-third or one-quarter of the enlisted men are intemperate. The proportion of the intemperate may be, and I hope is, *much less* than one in four.

7. Such is the position of a number of our frontier posts that the military come in direct contact with the Indians: how desirable that their influence should be one of unmixed good!

8. The deprivation of religious institutions is felt by a large class who have spent their best days in the service. Many of the older officers and soldiers have families; and who does not appreciate the advantages of public religious instruction on the Sabbath in the education of children?

9. Great is the value of religious instruction to those who are *by their profession* frequently *exposed to death*. More than five hundred men have died at one post in Arkansas in about twelve years; not far from two hundred fell victims to the cholera in the campaign against the Sac and Fox Indians; between one and two hundred have fallen in battle with the Seminole Indians within a few months. How can government expose so many men to death without affording them the ordinary means of preparing for its consequences? Little as we might improve by these means while in health and safety, in the hour of dissolution the truths we had heard might become the foundation of hope, and shed their light upon the valley of death.

10. The plan proposed has been approved by a number of officers to whom it was submitted, among whom is the commanding general of the army.

There are about twenty posts garrisoned by one company; ten posts garrisoned by two companies; ten posts garrisoned by three and four companies; five posts garrisoned by five or more companies.

Those of one company are principally on the seaboard, where the services of a clergyman from a neighboring town could be obtained once a week for \$200 per annum.....	\$4,000 00
Five of the posts with two companies are probably as favorably situated, which at \$200 per annum is.....	1,000 00
The remaining twenty posts might receive \$400 per annum.....	8,000 00
	13,000 00

But as it is not probable that all the posts would avail themselves of the appropriation ten or twelve thousand dollars would suffice.

This plan recommends itself on the following grounds:

1. As to the expense. This at some posts is about equal to the pay of a first sergeant, and at others about half the pay and emoluments of the youngest subaltern.

2. The individual is selected by those most interested—viz: the officers at the posts—so that the majority can be suited in respect to the denomination of the clergyman.

3. It puts religious institutions within the reach of those who are willing to contribute a moderate sum to obtain them, and thus places the members of the army on a footing in this respect with other men.

4. No one can object to the measure, as it is only designed for those who approve of it; none are compelled to receive a chaplain; indeed, none can ordinarily obtain his services who are unwilling to contribute in part to his support.

5. When ministers are not employed the money of course remains in the treasury.

The execution of the plan—the apportionment of the money—should be left to the Secretary of War.

I am persuaded that the subject is important to the army; a similar plan, if I mistake not, has been adopted in the British army, where regular chaplains cannot be obtained. I hope an early report may be had on your resolution. If you think this communication presents any good reasons in favor of the object, it might be well to show it to the Hon. Mr. Goldsborough, of whom you spoke in your letter, and to some member of the Military Committee in the House of Representatives.

I am, with great respect, your most obedient servant,

J. S. GALLAGHER, *1st Lt. 2d Infantry.*

Hon. BENJ. SWIFT, *United States Senate, Washington.*

24TH CONGRESS.]

No. 652.

[1ST SESSION.]

EXPLANATORY ESTIMATES FOR FORTIFICATIONS, ARSENALS AND ARMORIES, AND FOR THE ARMAMENT OF FORTIFICATIONS, ETC.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 27, 1836.

61 8-inch howitzer carriages, at \$230 each.....	14, 030
18,086 barrels powder, at \$20 per barrel.....	361, 720
	<hr/>
	1, 209, 301
Contingencies for fuses, bursting, charges, rockets, &c.....	15, 000
	<hr/>
Total to complete the armament for 2,444 cannon.....	1, 224, 301

G. BOMFORD, *Colonel of Ordnance.**Special estimate for additional appropriations for the service of the Ordnance department for the year 1836.*

NATIONAL ARMORIES

HARPER'S FERRY, VIRGINIA.

A. For the purchase and erection of new and improved machinery for facilitating the manufacture of arms.....	\$23, 725 00
B. For repairs of canal or raceway, and altering it.....	5, 260 00
C. For the erection of a storehouse to contain condemned component parts of arms, defective materials, scraps, &c., of stone, 80 by 30 feet, two stories high, with slated roof.....	3, 400 00
D. For the erection of a house to contain pit-coal, at the tilt-hammer shop, 30 by 20 feet, and 10 feet high.....	650 00
E. For the erection of ten new dwelling-houses for the accommodation of the workmen, at \$1,200 each.....	12, 000 00
F. For the purchase of one acre of land adjoining the workshops and canals.....	5, 000 00
G. For the purchase of buildings erected by private individuals on the public grounds at this armory.....	16, 290 00
H. For the payment for repairs and additions upon the public dwelling-houses, made by workmen of the armory, to whom they have been assigned as dwellings.....	4, 548 00
I. For the erection of a forge and fixtures for working up scrap iron into bars, and for fagotting steel, of brick or stone, with slated roof.....	5, 000 00
K. For sinking a well and putting in a pump opposite the grinding mill.....	1, 000 00
L. For the erection of a drill shop at the rifle works at this armory, 50 feet long, 17½ feet wide, and one story high, of brick, with slated roof.....	1, 024 00
	<hr/>
	\$77, 897 00

SPRINGFIELD, MASSACHUSETTS.

M. For the building of a proof-house.....	\$1, 500 00	
N. For building four brick coal-houses, with apartments for storing charcoal.....	6, 000 00	
O. For the erection of a storehouse for the deposit of articles in charge of the storekeeper, for the current service of the armory.....	4, 000 00	
P. For the construction of two water cisterns.....	1, 500 00	
Q. For building a new flume and renewing part of the dam at middle water shop.....	3, 000 00	
R. For building a house for the fire engine and storage of lumber.....	500 00	
S. For the erection of four brick dwelling-houses, at \$2,500 each.....	10, 000 00	
T. For the purchase of hose for the fire engine.....	500 00	
U. For additional machinery and fixtures, and making new tools.....	15, 000 00	
W. For repairing public buildings, fences, &c.....	3, 000 00	
		\$45, 000 00
X. For the purchase and manufacture of the necessary brass field artillery...	50, 000 00	
For the purchase and manufacture of iron field artillery.....	13, 150 00	
For the construction of 200 field artillery carriages, with implements and equipments complete, for mounting the above cannon, and for constructing 24 caissons and 24 travelling forges.....	74, 040 00	
		137, 190 00
Y. For the construction of 30 furnaces for heating cannon balls, at the fortifications at the sea-coast, \$400 each.....	12, 000 00	
		12, 000 00
		<u>272, 087 00</u>

RECAPITULATION.

For the national armories, viz:		
For Harper's Ferry.....	77, 897 00	
For Springfield.....	45, 000 00	
For the purchase or manufacture of light brass and iron field artillery, and for the construction of field artillery carriages, caissons, and travelling forges.....	137, 190 00	
For the construction of furnaces for heating cannon balls.....	12, 000 00	
		<u>272, 087 00</u>

GEO. BOMFORD, *Col. of Ordnance.*ORDNANCE OFFICE, *Washington, January 11, 1836.*

A. The superintendent in charge of the Harper's Ferry armory represents that a number of new and improved machines are very necessary, and almost indispensable, with regard to the facility, accuracy, and economy, in the manufacture of small arms. They are very essential in extending the improvements now making; they are also required in order to better systematize the condition of the armory, for classification and equalizing gradation of the prices paid to workmen.

By the erection of new machinery, it is estimated that a great saving will be effected, in particular operations, in the fabrication of the various tools made. All these objects, it is believed, would be accomplished by the erection of new machinery, for which an appropriation is now estimated.

B. For repairs to canal, raising the embankments, flagging the pathway on it, cleaning out and walling the lower end, and cleaning obstructions above the head gates; all of which are indispensable.

C. This storehouse is much wanted as a place for the deposit, preservation, and location of various materials, and defective component parts of arms. Its construction can be so arranged that, should an emergency arise requiring the fabrication of an increased number of arms at this armory, it can be converted into a workshop without much difficulty or expense.

D. The erection of a coal-house is very necessary, in consequence of there being none in the vicinity of the tilt-hammer shop, at which place the greater part of the coal used is consumed.

E. The erection of ten additional dwelling-houses for the accommodation of the workmen and their families at this armory is considered indispensable; a number of those now occupied by them being, from their ruinous and dilapidated condition, very uncomfortable and unhealthy, and not worthy of repairs, many of them having been built of wood more than *thirty* years ago. The greater part of these old buildings are situated on the bank of the Potomac, and the site is overflowed by every heavy rain; their lower apartments (partly under ground) are, in consequence, kept damp and unhealthy during the whole year, and this is conceived to be one of the principal causes of the sickness of that establishment.

F. This item—the purchase of Wager's lot—it is situated directly in the rear of the finishing and boring shops, master armorer's office, and storeroom, upon the outer margin of the canal. The purchase of this lot is very important, as it respects the safety of the public armory, in consequence of slight wooden buildings being erected upon it, and occupied by persons regardless of the property of others; and these evils are constantly increasing.

The price asked for the ground appears to be high; but land at this place is very valuable, and possession of it is of much importance to the public works; and as it has been ascertained that it cannot be obtained for a less sum, the item is respectfully submitted.

G. The amount here referred to is the result of a valuation made by disinterested persons. These buildings were erected many years since, and without authority from the chief of this office. They are also good and serviceable, their annual amount of rents being not less than nineteen hundred dollars.

As the owners pay no rent or taxes to the United States, they are perfectly satisfied to hold the property under such advantageous circumstances. To this there could be no great objection if the

ground occupied by the buildings and their enclosures was not necessary to the public service of the armory. It is that part of the public ground which lies between the two rivers, being the only disposable level ground at the armory. It has the advantage of being on the south side of the hill, and is the most suitable ground for dwellings for the mechanics, as it is free from the inconveniences and unhealthiness referred to under the head E, which attaches to the sites of the old buildings there alluded to.

The possession of these buildings and their enclosures would, without doubt, have a marked effect in improving the health of the workmen. And this circumstance would ultimately enable the department to reduce the excess of wages now given at this establishment over and above what is paid at the Springfield armory, this excess being found necessary to be given at Harper's Ferry, principally in consequence of the time lost by the workmen from sickness.

As these buildings and their enclosures occupy the most suitable ground for the erection of dwellings, their purchase becomes a matter of the first importance to the public interest at this establishment, and the amount embraced in this estimate is therefore especially recommended.

H. As mentioned under the head E, many of the dwellings at this armory are old and ruinous, and have, from time to time, received repairs at periods when public funds for the purpose could not be obtained.

Acting under the necessity of circumstances, repairs of public buildings occupied by the workmen have frequently been made by them, but without authority from the chief of this office.

From various causes of incapacities in the workmen, it frequently becomes necessary to discharge unsuitable persons, who in many instances retain possession of the public buildings after their discharge, on the grounds that the improvements they have made to the buildings have not been reimbursed them by the United States; and it is found that the authority of the superintendent of the armory is insufficient to remove them except by a tedious legal process.

This occasions many inconveniences at the armory, and among these the principal is that of the exclusion from the public dwellings of workmen employed in place of those who may have been discharged. To avoid these evils, the sum here referred to is embraced in this estimate.

I. A forge at this armory is much wanted to work up scraps, old gun barrels, borings and turnings, that unavoidably accumulate. Its erection, besides its utility in saving scraps, will enable the superintendent to obtain iron of the quality and dimensions desired without delay.

It is estimated that, by the use of the forge, about three pounds of good iron may be made from the borings and turnings of each musket. The scrap iron at the armory, if sold at public auction, will not command more than two cents per pound; but if worked up into bars, it will be equal in value to three or four cents per pound.

K. The sinking of a well is considered very necessary, in consequence of no pure water for use being within three or four hundred yards of the new tilt-hammer shop and many of the houses.

L. The erection of a suitable building for a drill shop at the rifle factory at this armory is considered indispensable, that at present used for this purpose being an old wooden building very like to take fire, and, from its position, to endanger other shops and machinery. The sum of \$1,024 has therefore been inserted in this estimate for building a new drill shop.

M. The building of the proof-house is indispensable, as the one now in use is in a state of dilapidation, and is considered from this cause, together with its contiguity with other buildings, as unsafe.

N. The erection of the coal-house is very desirable; and it is important that there should be a deposit for the charcoal in charge of the storekeeper. There are four separate and distinct places, distant from each other, where this article is used, and there should be apartments in each house large enough to contain three months' supply, and built in such a manner as to guard against the destruction of the whole, in case any one of them accidentally takes fire; each house should contain from 25,000 to 30,000 bushels, the quantity usually consumed at each shop annually.

O. The storehouse is indispensable, as the cellars and other places now used for the storage of iron, steel, files, and other stores, are not suited to the purpose, and the property should be concentrated under the control of the officer who is responsible for it.

P. The construction of the two cisterns to contain water at this armory is deemed essentially necessary for security against accidents by fire.

Q. The flume on the south of Mill river, at the middle water shop, is worn out, and requires to be rebuilt; and that part of the dam connected with it requires repairing. To effect these objects the sum of \$3,000 has been inserted in this estimate.

R. A house for the fire engine and the storage of lumber, at the middle water shop, is much wanted. The former is kept in a wooden shed, and the latter frequently exposed to the weather.

S. The public quarters occupied by the clerks at this armory are all dilapidated, and some of them not worth repairs. And as the clerks are entitled by the regulations to quarters (free of charge) the sum of \$10,000 has been inserted in this estimate for the erection of four new brick dwelling-houses for their use.

T. There are but a few feet of hose belonging to the fire engine, and it is all-important that there should be enough to carry the water from the cisterns to any part of the buildings. A small expenditure for this necessary article might be the means of saving thousands of dollars in the event of a fire.

U. The superintendent of this armory represents that several new and improved machines are much wanted. And it has been found by the introduction of new machinery that the quality of the work has been greatly improved. For these reasons the sum of \$15,000 has been inserted in this estimate for procuring new machinery, as well as for fabricating the necessary new tools required in the manufacture of small arms.

A critical examination of the armories has been made by the inspector of armories and arsenals; of the various improvements required at the armories; and the several sums embraced in the foregoing estimate are stated to be indispensable to the advancement of those establishments.

W. Several of the dwelling-houses occupied by the workmen at this armory require extensive repairs to make them tenable; they are constructed of wood, and many of the roofs are decayed.

Some of the fences enclosing the public grounds are old and decaying, and require to be renewed. It is therefore estimated that the sum of \$3,000 can be advantageously expended during the current year, for repairing the buildings, fences, &c.

X. The board of officers, recently assembled at the Watervliet arsenal, have recommended the purchase or manufacture of a number of brass field cannon, there being few on hand of this description that are fit for service.

It may also be stated that no brass cannon have been procured since 1812.

It is desirable also to obtain one hundred pieces of iron field cannon, in consequence of there being but few of that description on hand at the arsenals.

The increased strength of the gunpowder recently manufactured renders it necessary to reinforce the iron field guns with additional metal, and it is doubtful whether those of the old pattern would be perfectly safe, under all the circumstances of service.

The construction of the field carriages will be rendered necessary, if the appropriation for the field cannon is granted.

Y. Many of the forts are destitute of furnaces for heating shot, and this addition to their means of defence is indispensable.

Additions to the special estimate presented by the inspector of armories and arsenals for the consideration of the honorable Secretary of War.

A.—KENNEBEC ARSENAL.

For the purchase of 10 acres of land on the north, and 10 acres on the south side of the ground plat at this arsenal, 20 acres, at \$250..... \$5,000 00

B.—FRANKFORD ARSENAL.

For the purchase of 3 acres of land adjoining the eastern side of the ground plat..... 2,000 00
For enclosing the rear of the public ground at this post with a brick wall and coping..... 7,000 00

C.—WATERTOWN ARSENAL.

For constructing a forging shop, one story high, 75 by 40 feet, of brick..... 2,500 00

D.—FORT MONROE ARSENAL.

For the purchase of one steam engine, 8-horse power..... 2,300 00
For quarters for officers..... 8,000 00

Total..... 26,800 00

Remarks in explanation of items in additional special estimate.

A. The ground plat at Kennebec is long and narrow, extending from the river to the county road. The buildings are more numerous than was first intended, and are placed near the margin of the plat. The land on both sides is rapidly increasing in value and will shortly be built upon.

Prudence requires that a wide space be preserved around the public buildings, especially the magazine.

The ravines along the present line make it difficult and expensive to construct a wall; but by procuring more land a good line for the wall will be obtained.

This addition is required with no reference to any future extension of this depot.

B. *Second item.*—The additional ground at Frankford appears to be indispensable, to give more space around the magazine and principal arsenal, and to afford room to prove powder. A lot has been hired for this purpose heretofore, but it cannot be obtained hereafter. The wall is a suitable and permanent enclosure, and the only proper one.

C. *Third item.*—A workshop is indispensable at Watertown. The sum asked for is very low, probably insufficient, and I would increase it to \$3,000.

D. *Fourth item.*—A steam engine at Fort Monroe is necessary to perform work which is now done elsewhere at a greater cost.

A comparison of the cost of work there, and at arsenals using steam or water power, will show the great amount saved in all heavy work, by the substitution of engines for hand labor.

A building for officers' quarters is required, on account of the limited supply; and it will always be useful in case the arsenal is suppressed.

The sum of \$8,000 is believed to be sufficient for this purpose.

The purchase of additional ground at the Kennebec and Frankford arsenals is recommended with no view to the further extension of those establishments, but to provide for their greater safety; and the land is rapidly increasing in value.

Respectfully submitted.

GEO. TALGOTT, *Lt. Col. Ord., Inspector of Armories and Arsenals.*

The foregoing items of appropriation have been presented by the inspector of armories and arsenals in his inspection reports, and are respectfully recommended to the honorable Secretary of War for his favorable consideration.

GEO. BOMFORD, *Colonel of Ordnance.*

ORDNANCE OFFICE, *Washington, January 16, 1836.*

24TH CONGRESS.]

No. 653.

[1ST SESSION.

STATEMENT OF THE EFFECTIVE FORCE OF THE ARMY, AND THE PAY AND EMOLUMENTS OF EACH GRADE THEREIN.

COMMUNICATED TO THE SENATE FEBRUARY 29, 1836.

WAR DEPARTMENT *February 27, 1836.*

SIR: I have the honor to transmit a report of the adjutant general, showing the effective force of the army, and a statement exhibiting the pay and emoluments of each grade.

Very respectfully, your most obedient servant,

LEWIS CASS.

HON. M. VAN BUREN, *President of the Senate.*

ADJUTANT GENERAL'S OFFICE, *Washington, February 18, 1836.*

SIR: In conformity with your instructions, I herewith respectfully submit a statement exhibiting the "efficient force" of the army in such form as it is supposed will best meet the objects of the Senate's resolution of 15th instant, which, it is understood, has reference to the number of troops provided by the peace establishment for the protection of the frontiers and to garrison the forts. Accordingly, the statement includes—

The regiment of dragoons	715 men.
The four regiments of artillery	1,988 "
The seven regiments of infantry	3,598 "
Total rank and file, including non-commissioned officers	6,301 "
Add the complement of commissioned officers	457 "
Aggregate of dragoons, artillery, and infantry	6,758 "

From this number (6,301) of men deduct 550, being the estimated number of recruits now required to fill the rank and file of the army, as also 487 reported sick, and the remainder, 5,264, would constitute the actual available force to garrison the 32 regular permanent works, which, according to the plan of construction, require 3,238 cannon for their armament, and for the protection of the northern, western, and southern frontiers—*i. e.*, from Houlton, Maine, along the boundary line north, *via* the lakes, over to the Mississippi, as far north as Fort Snelling, near the Falls of St. Anthony; thence south to Fort Leavenworth, situated 430 miles above the mouth of the Missouri; thence south 1,200 miles to New Orleans, and to Fort Towson, 530 miles up the Red river, near the Texan line.

If it be desired to see the number of general and staff officers, the number of officers of the medical, pay, and purchasing departments, the number of officers of engineers, topographical engineers, and officers of the ordnance, I respectfully cite the official documents accompanying the President's message to Congress, page 56, table A, of document No. 1, and also the Army Register, page 30.

Respectfully submitted.

R. JONES, *Adjutant General.*

HON. LEWIS CASS, *Secretary of War.*

Statement showing the military force, consisting of dragoons, artillery, and infantry, provided by law for the defence and protection of the maritime, the northern, western, and southern frontier.

	Colonels.	Lieutenant colonels.	Majors.	Captains.	First lieutenants.	Second lieutenants.	Sergeant majors.	Quartermaster sergeants.	Sergeants.	Corporals.	Principal musicians.	Chief buglers.	Buglers.	Musicians.	Farrlers and blacksmiths.	Artificers.	Privates.	Total commissioned.	Total non-commissioned officers, musicians, artificers, and privates.	Aggregate.
The regiment of dragoons	1	1	1	10	11	10	1	1	40	40	1	2	20	10	606	34	715	749
Four regiments of artillery	4	4	4	36	72	72	4	4	144	144	72	108	1,512	192	1,988	2,180
Seven regiments of infantry	7	7	7	70	70	70	7	7	210	280	14	140	2,940	231	3,598	3,829
Grand aggregate	12	13	12	116	153	152	12	12	394	464	15	2	20	212	10	108	5,052	457	6,301	6,758

ADJUTANT GENERAL'S OFFICE, *Washington, February 18, 1836.*

Remarks.

1. In order to furnish more specifically the information called for by the Senate's resolution of the 16th instant respecting the "effective force" of the army, it may be proper to state that, of the 457 officers of dragoons, artillery, and infantry provided by law on the 1st of January, about 118 were reported as detached from their respective regiments, of whom 77 were employed in the Ordnance and Engineer departments, at the Military Academy, and on topographical duty, 18 were on special service, and 23 on the recruiting service.

2. From the number of the rank and file provided by law (6,301) the following deductions should be made, when considering the "efficient force" of the army, to wit:

The number of men reported sick	487
The vacancies, or the estimated number of recruits required to fill the ranks	550
	1,037

To this amount (1,037) the actual "efficient force" is less than the establishment, which leaves the rank and file of the army at this time for actual service not to exceed 5,264.

R. JONES, *Adjutant General.*

FEBRUARY 18, 1836.

Statement showing the pay and emoluments of one individual of each grade of the army.

Grades.	Pay per annum.	Subsistence per annum.	Servants, for pay, subsistence, and clothing per annum.	Forage for horses per annum.	Average assumed cost and value of quarters per annum.	Average assumed cost and value of fuel per annum.	Aggregate amount embarrassed and unembarrassed pay, &c., per annum.	Remarks.

Laborer.....	108 00	108 00	Do.

NOTES.

Additional rations are included in no case, except to surgeons and assistant surgeons of ten years' faithful service, and to them, as grades, they are expressly provided for by law. They are not provided for in any other case as for a grade or for grades, but are authorized "to the commanding officers of each separate post," at the discretion of the President of the United States. When they are allowed to any officer, double the number to which he is entitled in his grade is the usual allowance; as, for example, to a major general fifteen per day, equal to \$1,035 per annum; to a captain four per day, equal to \$392 per annum. Out of about six hundred officers who might be placed in situations to receive additional rations, about one hundred and thirty receive them; the number varies according to the fluctuations of the service.

The average cost and value of quarters and fuel is assumed, because the former either belong to the public or are hired or commuted where there are no public quarters, and the latter is either purchased or procured by the troops. The calculations in regard to the money value of these allowances are not carried out for the non-commissioned officers, musicians, privates, &c., nor is the money value of their subsistence.

In explanation of the expression, "embarrassed or unembarrassed pay, &c.," in the aggregate column, it is deemed proper to remark, that officers, to be entitled to the allowances for servants and horses, must keep them in service; for the act of Congress approved April 24, 1816, section 13, requires that they be "actually kept in service," and hence, to be entitled to receive what is authorized, the officers must incur expenses nearly equal, in some cases more than equal, to what they would receive. Some officers who are entitled to forage do not receive from the public such allowance, because they do not keep the horses to which they are entitled. Quarters and fuel are only allowed when officers are regularly assigned to duty at the places where the allowances are claimed. Officers on leave of absence are not entitled to quarters and fuel.

Transportation of baggage, or mileage, is not embraced in this statement, because it is paid only when an officer is travelling under orders.

Sections 21 and 22 of the act of Congress approved March 16, 1862, allow a per diem to officers when travelling, and sitting on general courts-martial, which allowance is, also, not included in the statement, because that authorized by the 22d section is to reimburse the extra expenses to which officers are subject in the performance of the duty; and that authorized by the 21st section is for the performance of the duties of judge advocate.

This statement is made out and prepared from the reports of the paymaster general and quartermaster general to the Secretary of War, and from other information in my possession, in conformity to the instructions of the Secretary of War.

THO. F. HUNT, Major and Assistant Quartermaster.

24TH CONGRESS.]

No. 654.

[1ST SESSION.]

REPORT ON THE EXPEDITION OF DRAGOONS, UNDER COLONEL HENRY DODGE, TO THE
ROCKY MOUNTAINS IN 1835.

COMMUNICATED TO THE SENATE FEBRUARY 29, 1836.

WAR DEPARTMENT, *February 27, 1836.*

SIR: In answer to the resolution of the Senate of the 16th instant, I have the honor to transmit a report of the adjutant general, with the journal of Colonel Dodge of his expedition into the Indian country in 1835.

Very respectfully, your most obedient servant,

LEW. CASS.

Hon. M. VAN BUREN, *President of the Senate.*

ADJUTANT GENERAL'S OFFICE, *Washington, February 23, 1836.*

SIR: In conformity with your instructions, I herewith respectfully submit the official report of the expedition of the squadron of dragoons, under the command of Colonel Henry Dodge, to the Rocky mountains, during the summer of 1835, with the journal and map accompanying the same, called for by the resolution of the Senate of the 16th instant.

1. The journal and map (B) on which are traced the routes of the dragoons during the summers of 1834 and 1835.

2. Letter from Colonel Dodge to the adjutant general.

3. Letter from General Gaines to the adjutant general, both accompanying the report to this office in relation to the expedition.

With regard to the information respecting the location of the different Indian tribes situated on the frontiers of Louisiana, Arkansas, Missouri, and the northwest frontier, required by the second part of the resolution, in addition to the map accompanying the report, I herewith respectfully submit the one (marked A) recently prepared at the Topographical bureau, which, it is understood, furnishes the best information on that subject.

I am, sir, with great respect, your obedient servant,

R. JONES, *Adjutant General.*

Hon. LEWIS CASS, *Secretary of War.*

Journal of the march of a detachment of dragoons, under the command of Colonel Dodge, during the summer of 1835.

Agreeably to general order No. 12, of the 9th March, directing the movement of the dragoons for the ensuing summer, the detachment under Colonel Dodge left Fort Leavenworth on the 29th May. The strength and organization of the command as follows:

Company "G," 37 men, commanded by Captain Ford.

Company "C," 40 men, commanded by Captain Duncan.

Company "A," 40 men, commanded by Lieutenant Lupton.

Lieutenant Wheelock, doing duty in company "C;" Lieutenant Steen, ordnance officer, in command of two swivels; Lieutenant Terrett, assistant commissary of subsistence, &c.; Lieutenant Kingsbury, acting adjutant, and Dr. Fellows, assistant surgeon. Major Dougherty, Indian agent, was to accompany the command as far as the Pawnee village, and Captain Gantt, Indian trader, who was well acquainted with the country over which we were to march, accompanied the detachment in the capacity of guide.

The companies were directed to take 60 days' rations of flour and 10 days' rations of pork, and the assistant commissary of subsistence to take 25 beeves and two wagon loads of flour.

Commenced the march in a direction northwest, over a high rolling prairie, with frequent ravines skirted with timber. Marched 15 miles and encamped on a small creek. Commenced raining during the night and continued during the whole of the next day, so as to prevent our marching.

May 31.—Commenced the march in a direction N. 20° W. over a rough, broken country; crossed several small creeks skirted with timber, with flats or bottoms of considerable extent, the soil of which was very fertile. Marched 17 miles and encamped on Independence creek.

June 1.—Marched 25 miles, and June 2d, 12 miles, in a direction N. 30° W., and arrived at the Big Nemahaw. The general face of the country passed over was that of a high rolling prairie, in some places rough and hilly, with numerous small creeks and ravines, most of which were skirted with timber of a low growth; the soil generally fertile, especially in the valleys of the small creeks; the banks of the Nemahaw were skirted with groves of timber of considerable extent and of a larger growth and greater variety than we have met with heretofore. The Nemahaw is a deep, muddy stream, about 200 or 300 yards wide, the current rapid, and the banks high and steep; it was at a high stage of water at the time of our arrival, and we found that it would be impossible to ford it.

The country between Fort Leavenworth and the Big Nemahaw belongs to the Kickapoo Indians; it is sufficiently large and well adapted to afford them all the necessities and many of the luxuries of life. There is a sufficient quantity of timber for fuel and for building purposes. The soil is fertile, and will produce all sorts of grain; the pasturage good, and large numbers of cattle could be raised with but little labor. As the game is becoming very scarce, they will necessarily be obliged to depend upon the cultivation of the soil for their future sustenance.

June 3.—Crossed the baggage over the Nemahaw in a boat made of a beef's hide and a small wagon-box belonging to Captain Duncan; swam the horses; and the command reached the opposite side without loss of horse or damage done to the baggage.

June 4 marched eighteen miles, and *June 5* twelve miles, in a direction N. 50° W.; arrived at the Little Nemahaw, found it swimming, and encamped upon the banks. The country between the Big and Little Nemahaw belongs to the half-breeds of the Otto, Omaha, &c., tribes. The character of the country is that of a rolling prairie, less rough and broken than that between the Big Nemahaw and Fort Leavenworth. Crossed numerous small creeks and ravines, with high precipitous banks, which retarded our march; the soil of this portion of the country is very fertile, and there is a sufficient quantity of timber for fuel. Lieutenant Wheelock was permitted to return to Fort Leavenworth upon tendering his resignation.

June 6.—Crossed our baggage in skin boats, swam the horses, and arrived upon the opposite side of the Nemahaw without loss or damage to either. On the 7th commenced our march over a beautiful and fertile country, diversified with all the accidents of wood and plain, creeks and ravines. During the day we saw a large herd of elk, probably thirty or forty, but were unable to approach near enough to shoot them. Our course was N. 60° W., and but a short distance from the Missouri, the high banks of which were in full view during the day. Marched twenty-five miles, and encamped on one of the forks of the Little Nemahaw.

June 8.—Marched twenty miles in a direction N. 65° W., the country more broken and hilly than that of yesterday. Our march considerably retarded by the high, steep banks of the numerous ravines. Encamped on a small creek called by the Indians the Weeping Water.

June 9.—Marched twenty-four miles, in a direction N. 30° W.; crossed the Saline river, a small shallow stream about one hundred and fifty yards wide, the water of which has a saline taste; after crossing the Saline we entered the valley of the Platte, a few miles from the mouth; the valley near the mouth is about two miles wide, perfectly level, and terminated by a high rolling prairie, the soil sandy, and but little wood; encamped upon the river bank seven or eight miles from the Otto village. In the evening the Otto chiefs came out to meet us. Jutan, the principal chief of the Ottos, has been a bold and successful warrior, and is considered one of the most intelligent Indians on the frontiers; he is about fifty years of age, tall, well made, with a fine and intelligent cast of countenance.

June 10.—Arrived at the Otto village, large numbers of the Ottos came out to meet us two or three miles from their village, dressed in their gayest costume; they were all mounted on their horses, formed themselves into an extensive line, and met us at full gallop; they appeared rejoiced at our arrival, and manifested their joy by galloping around us, and shaking every one by the hand they met. Marched eleven miles and encamped on the Platte, about two miles from the village.

The next day, *June 11*, Colonel Dodge held a council with the Ottos; he went to the lodge of their principal chief, Jutan; and after the chiefs and warriors were assembled together he addressed them as follows:

“Chiefs and warriors of the Ottos: I am happy to meet you in your village in the presence of your father, Major Dougherty; he has come directly from Washington, and knows the wishes of your great father, the President of the United States, with respect to all his red children in his agency. My advice to you is, to listen well to your father, and do as he directs you; your great father, the President, is doing everything in his power to make his red children happy; he wishes you to be at peace with all your neighbors, and to raise corn and cattle for the support of your families; you have now to travel a great distance in search of buffalo and other game; you must cultivate the soil and raise cattle, and not always depend upon the uncertainty of the chase, or your children will suffer. Last year your great father sent me to the country of the Comanche, Kiowa, and Pawnee Peet Indians; I invited some of their chiefs to accompany me to Fort Gibson, where they met their old enemies the Cherokees, Creeks, Choctaws, Osages, and Senecas. They smoked the pipe of peace and buried the war hatchet, I hope, forever, and promised to live like friends and brothers; you are at peace with all your neighbors; this friendly feeling should be cherished by you by paying a proper regard to the rights of those Indians with whom you may have intercourse; and should acts of injustice be done you, your father Major Dougherty will make known your grievances to your great father the President, who will redress your wrongs. His wish is that all his red children should be prosperous and happy, live in the same country like brothers, and that you should exchange your warlike arms, intended only for the destruction of each other, for implements of husbandry; a great people will always pay a proper regard for the weak; you see but a small part of the dragoons which your great father can send every year to see that the Indians do not intrude upon the frontier settlers, and that they do not intrude upon the Indians, nor introduce whiskey into your country, which will lead to the ruin and destruction of your people. All unlicensed traders found in your country will be taken and delivered to the civil authorities, to be dealt with according to the laws of the country.”

To which Jutan, the principal chief, replied: “That he would listen well to his advice; that they were making preparations to raise large quantities of corn; and that next year they intended to have a big field and raise cattle and horses.” Presents were then distributed among them by Major Dougherty, consisting of blankets, knives, tobacco, strouding, &c. They appeared well pleased, and requested permission to give the colonel a war dance.

The Otto village is situated on a high prairie ridge, about two miles from the river, and overlooks the surrounding country for many miles. In front lay the green level valley of the Platte. The broad river running through the middle, and the valley terminated on the opposite side by hills covered with groves of timber. In rear nothing could be seen but an extension of the vast prairie until its smooth, undulating surface became almost blended with the distant horizon. To the right and left the river could be seen for many miles wending its course along through the valley, its broad shining surface here and there darkened by island groves of timber, the whole element combined forming the most beautiful landscape I had ever seen. The village was very neat in its appearance. The lodges were built of wood, thatched with prairie grass, and covered with dirt. They were of a circular form, with a pointed roof about ten or twelve feet high to the break of the roof, and about fifteen or twenty feet high in the centre. They build their fires in the middle of the lodge, leaving an opening in the roof for the smoke to escape.

The soil of the Platte valley is very rich and productive, and the Indians can raise large quantities of corn with but little labor. They usually plant their corn near the small creeks, under the hills, and wherever they can find a rich and fertile spot. They have no fences, and are obliged to watch their horses to prevent them from destroying their corn. At the time of our arrival they were preparing for their

summer's buffalo hunt. They usually start by the first of June for the buffalo country, and remain absent killing buffalo and drying meat until about the first of September, when they return to their village, bringing with them large quantities of dried meat.

Remained encamped near the Otto village until the 17th June awaiting the arrival of the Omahas, with whom the colonel wished to hold a council. The Omahas are in number about eighteen hundred or two thousand, and occupy the country between the Missouri and Platte, extending some distance west of Council Bluffs. They are much like the Ottoes in their manners and customs and state of civilization. There is a missionary establishment near Council Bluffs, at which a number of the Otto and Omaha children are educated. As the game in this portion of the country is becoming scarce, they begin to feel the importance of turning their attention to the arts of civilization. They already raise a sufficient supply of corn to satisfy their immediate wants; and, if cattle were procured for them, and they were taught the method of raising them, they could soon have a large quantity of stock, as no country could be better adapted to that purpose.

The Ottoes and Omahas are at peace with all the neighboring tribes, and have long been friendly with the whites.

About fifty of the principal chiefs and warriors of the Omahas arrived at our camp on the morning of the 17th. They had swum the Platte, which, at this place, is about a mile and a half wide, bringing their baggage in skin boats. Immediately after their arrival the colonel directed some provisions to be issued to them; and, after they had eaten, he collected them together, and addressed them as follows:

"Chiefs and warriors of the Omaha nation of Indians:

"I am happy to meet you in council in presence of Major Dougherty, your father. He has lately come from Washington, and knows the wishes of your great father, the President of the United States, which he will no doubt communicate to you. My advice to you is to listen well to what he says. Your great father, the President, is doing everything in his power to make his red children happy. He wishes you to be at peace with all your neighbors, and to raise corn and cattle for the support of your families. You have now a great distance to go to hunt buffalo and other game. You must cultivate the soil and raise cattle, and not depend upon the uncertainty of the chase, or your children will want something to eat. Last year your great father sent me to the country of the Comanche, Kiowa, and Pawnee Peet Indians. I invited some of their chiefs to accompany me to Fort Gibson, where they met their old enemies the Cherokees, Creeks, Choctaws, Osages, and Senecas. They smoked together the pipe of peace, and agreed to bury forever the hatchet of war. You are at peace with all your neighbors. This friendly feeling should be cherished by you, by paying a proper respect to the rights of the Indians with whom you have intercourse; and, should acts of injustice be done you, your father, Major Dougherty, will make known your complaints to your great father, the President, who will redress your wrongs. His wish is that his red children should be prosperous and happy, live in the same country like brothers, and that you should change your warlike arms, intended only for the destruction of each other, for agricultural implements."

To which Big Elk, their principal chief, replied:

"I wish to say something, but I don't know that any good will result from what I say. You tell us that our great father feels for us and has compassion upon us. That is good; for it is in this way that the lives of men are prolonged; and it is because the powerful have compassion upon the weak that I have been suffered to live to the age you see me. I am like a large prairie wolf, running about over these barren prairies in search of something to eat, with his head up anxiously listening to hear some of his fellows howl, that he may dart off towards them, hoping to find a friend who has a bone to divide with him. When I was young and my father living, he often made my heart glad by little kindnesses. Since his death my heart has often been made glad by my white friends in the same manner. You have no doubt owned a good young swift horse. When he becomes old he begins to flag. We have an ancient custom among us of going to neighboring villages and adopting sons. I have now one in this village, (meaning the Otto.) I believe his friendship to be sincere—that he is a true son. I have one in the village towards which you are travelling, (meaning the Pawnee,) whose sincerity and friendship I doubt. You tell us to listen to the advice of our great father, and live at peace with our neighbors, but you know a man cannot always do as he would wish. You have no doubt rode an unbroken, vicious horse, that would run backwards when you would urge him forward; and, when you would try to stop him, would run faster, and, meeting a bad place, would go first one side and then the other, and just as you had whipped him up to the spot, and you thought he would jump over, he dodges to the one side and brings you to the ground. I believe the presents you have spread before us have been the cause of creating a great deal of evil in our country. When I receive these presents I know that they are given by good men, and I feel grateful for them; but it has a contrary effect upon some of my neighbors, and they do not feel grateful when they receive these things for nothing, but think they are entitled to them. These things all please me, as I do not know how to manufacture any of them; and I shall not forget these favors as some of my neighbors do. I did hope to see my people settled before I died, but I am now getting old, and am afraid I shall never see that period arrive. I hear that you are in a hurry, and I will say no more."

Big Elk, the principal chief of the Omahas, is remarkable for his sound practical sense. He appears to be in advance of most Indians in his knowledge of the relative situation of the white and red men, and the necessity of learning some of the arts of civilization. He is about sixty years of age, and has sixteen wives and many children.

After the council with the Omahas we commenced the march up the Platte river for the Pawnee village. The Platte, near the mouth, is a broad shallow river, from a mile and a half to two miles wide; its average depth is not over two or three feet. The current is rapid, and the bottom very uneven, in some places barely covered with water, in others six or eight feet deep. The Platte is not navigable for boats of any size in low water. In the highest stage of water the traders sometimes descend the river from above the forks in small rafts or skin boats. The Horn river, which empties into the Platte on the opposite side, near the mouth, is a much deeper and more rapid stream than the Platte, not so wide, and navigable for small boats to a considerable distance.

Our course to the Pawnee village lay along the valley of the Platte, in some places approaching close to the river bank, at others keeping at the distance of half a mile or a mile. The valley is of a variable width, from one mile to three or four miles wide, and terminated on both sides by a high prairie ridge. From one of the high points near the river the eye could wander over a vast extent of country,

possessing almost every variety of feature. Could view the broad surface of the river, studded with islands covered with groves of timber; the green level valley, terminated by hills of every variety of shape, beyond which there was a successive range of hills, until the view was terminated by the distant horizon. The soil, which is alluvial, appears to be very fertile, and the whole valley appears once to have been the bed of the river. The proof of this is the irregular formation of some of the hills which terminate it. They appear to have been worn in this shape by the continual washing of the water. There is but little timber on this side of the river, only a few scattered trees on the banks of the creeks. Upon the opposite side the timber appears to be more abundant. Saw several herds of antelope and a number of deer. The principal chief of the Grand Pawnees, whose name is the *Angry Man*, met us about ten or fifteen miles from his village, and appeared rejoiced at our arrival. He appeared to be a shrewd, intelligent old fellow, and very talkative for an Indian. He had a long talk with Colonel Dodge. He told him that the Pawnee Loups had been stealing horses from the Pawnee Peets, and were otherwise rather troublesome and disposed to war. He endeavored to prepossess the colonel in his favor by telling him how well he had conducted himself, while his neighbors had behaved very badly. In explaining the relations he stood in to the neighboring tribes, he appeared to possess all the ingenuity of a modern politician. We arrived in sight of the Pawnee village about twelve o'clock on the twenty-first, having marched eighty miles since leaving the Otto village. We were met two or three miles from the town by the son of the principal chief in full dress. He had on a scarlet-colored coat, trimmed with silver lace, a hat decorated with bands of tin and red feathers, with leggings and moccasins ornamented with different colored beads. He wished the command to wait a short time until his young men could prepare to receive us in due form. It could be observed from their delay in turning out that they were rather suspicious of our intentions, seeing so large a body of troops come rather unexpectedly amongst them. After waiting for nearly two hours they turned out to the number of one hundred and fifty or two hundred, mounted on their best horses, and dressed in their gayest costume. They formed themselves into an extended line, and advanced to meet us in the same manner that the Ottos did—at full speed. On arriving at the head of the column they broke to the right and left, and galloped around us two or three times. The chiefs then collected together in a group at the head of the column, lit their pipes, and, after smoking a few whiffs, advanced alternately to Colonel Dodge and their agent, Major Dougherty, and offered them the pipe. After this ceremony was finished we continued the march to their village. The principal chief, the *Angry Man*, then invited Colonel Dodge to his lodge to a feast, which invitation he deemed it advisable to accept, as they had evinced some signs of distrust at our arrival, and he wished to put them perfectly at their ease. The old chief conducted us to his lodge, seated us around the fire, conforming strictly with the rules of etiquette, by giving to Colonel Dodge the highest seat. He then set before us a large bowl of boiled corn, which we found to be very good. Marched about five miles beyond the Pawnee village, and encamped on the banks of the Platte. The Pawnee village is built after the same plan with that of the Ottos, but it is not so neat in its appearance. The space between their lodges is occupied by horsepens, where they confine their horses every night to prevent their being stolen by the neighboring tribes, with whom they are at war. The Pawnees, at the time of our arrival, were in rather a turbulent state. The Pawnee Loups had been stealing the horses of the Pawnee Peets, which had produced some difficulty between them and the Grand Pawnees.

The Pawnees are divided into four different tribes, who live in separate villages and have different chiefs. There are the Grand Pawnees, who live in the village through which we passed, and whose principal chief is called the *Angry Man*; the Pawnee Republics, whose chief is called the *Blue-coat*; the Pawnee Loups, whose chief is the *Axe*; and the Pawnee Tappeiges, at the head of which is the *Little Chief*. The Arickaras had been living with the Pawnee Loups all winter, but were scared away previous to our arrival by a lying Kansas, who told them that Colonel Dodge was coming to their village with a large body of troops, and would kill every one of them. It also alarmed the Pawnees considerably until they were satisfied of the peaceful intentions of Colonel Dodge. The different villages are of about the same size, with the exception of the Little Republican village, which is much smaller than the others, containing only a part of the Pawnee Republics, the others living with the Pawnee Tappeiges. The Pawnees have been for a long time at war with the neighboring tribes. They have carried on a predatory warfare with the Sioux for many years, sending out frequent parties to steal horses and murder any stragglers they may find. They often return with a few scalps and a great number of horses. They appear to be inveterate in their hostility on both sides, and it would be difficult at present to make peace between the two nations. They were also, at the time of our arrival, at war with the Cheyennes and Arapahas, but Colonel Dodge afterwards established a peace between these tribes. They are the most numerous nation of Indians originally west of the Mississippi, with the exception of the Sioux and Blackfeet, and, if not restrained by the influence of the whites, would be very formidable to their enemies. They have a very high opinion of their agent, Major Dougherty, and he exerts a strong influence over them, and will doubtless ultimately, if assisted by the influence of the government, succeed in effecting a peace between them and all the neighboring tribes. They are already impressed with a high opinion of the power of the United States, and it will not be difficult for the government in a short time to exert a controlling influence over them. They occupy a country possessing a rich and productive soil, well adapted to the cultivation of every species of grain, and one of the finest grazing countries in the world. There is a sufficient quantity of wood to supply all their wants. There is consequently nothing wanting but a little instruction and industry to make them a wealthy and prosperous people. The buffalo live within three or four days' ride of their village, and they now subsist principally upon that meat. They have parties out killing buffalo and drying the meat most of the time during the summer and fall, and they sometimes move with their whole village into the buffalo country, and remain several months, for the purpose of killing buffalo. As the buffalo, however, are receding from them and becoming fewer every year, this will be a very precarious method of procuring their food, and they will be obliged to resort to some other method of sustaining themselves.

The colonel informed the *Angry Man* that he would hold a council with all the different tribes of Pawnees as soon as they could be collected together. Runners were immediately despatched to the other villages to inform them of the arrival of Colonel Dodge.

The next day, June 22, it rained so as to prevent the chiefs from assembling together in council. Remained encamped about five miles from the Pawnee village.

June 23.—Continued to rain until 12 or 1 o'clock. The chiefs of the different tribes of Pawnees came to our camp. As the weather had the appearance of being rainy, Colonel Dodge informed them that he would hold the council in their village. He accordingly repaired, with most of the officers, to the lodge

of the Angry Man; and after the chiefs and warriors were collected together and seated around the lodge in due council form, he addressed them as follows:

"To the chiefs and warriors of the Pawnee nation of Indians:

"I am happy to meet you in your village in presence of Major Dougherty, your father. He has lately seen your great father, the President of the United States, and knows his wishes, which he will no doubt communicate to you. A Kansas Indian informed you I intended making an attack upon your people with the dragoons. This report was false and without foundation. Your great father, the President, is at peace with all his red children; and his wish is that they should all inhabit the same country, and live in peace with each other. Last year I was sent to make peace with your friends, the Pawnee Peets, the Comanches, and Kiowas. A few of the chiefs accompanied me to Fort Gibson, where they met in council their old enemies the Cherokees, the Choctaws, Creeks, Osages, and Senecas. They smoked the pipe of peace and promised to bury the hatchet of war. I am now on my march to the Rocky mountains, and would be pleased to make peace between you and your old enemies, the Arepahas and Cheyennes. I recommend to you to cultivate the most friendly understanding with your neighbors, the Ottos and Omahas, and it is of the first importance to you that the most friendly union should exist between the different bands of which your nation is composed. Should you make war with each other, it will cause you to lose your standing with your friends, and make you an easy prey to your enemies. You now cultivate the soil and raise corn; could you also learn to raise cattle, you would be able to support yourselves and families without depending upon the uncertainty of the chase. The buffalo are constantly receding from your country, and you will be obliged soon to raise cattle to support yourselves and families, and the sooner you commence the better for your people. If you have bad men amongst you, you must punish them, and not permit them to intrude upon the rights of others. Examples must be made of those who steal or war; my advice to you is to listen well to what your father, Major Dougherty, tells you; his counsel will be good, for he knows what is best for you. I am going to the forks of the Platte, and wish to see the Arickara or Ree Indians. I wish you to let them know that I am friendly to them, and am not going to make war upon them, as they have been told. You see with me but a small part of the dragoons which your great father can send every year to see that the Indians do not intrude upon the frontier settlers, and that the whites do not intrude upon them, to prevent the introduction of ardent spirits into your country, which is the ruin and destruction of your people. All unlicensed traders found in your country will be taken and delivered to the civil authorities, to be dealt with according to the laws of the country."

To which the Angry Man, chief of the Grand Pawnees, replied:

"You see me, my father, a poor man. I was in doubt, my father, until I heard you were near here, whether you would come or not. But you are now here with our agent and we are satisfied. You see your children around you, and we will see whether they heard your advice or not. Time will prove it. You see all my friends and children around you, of the different tribes, and my heart opens and I feel glad. You have been for a long time, and are still, endeavoring to make us one people, and if you succeed we will be indebted to the whites for it. You are the cause of my name's being heard among so many different tribes. You have made peace between them and us. Here are my friends. There is my son-in-law, (pointing to the "Axe," chief of the Pawnee Loups.) They are my friends. I would like to know what they have against me. I wish the "Axe" to explain why his people go to war, while the others remain at home. It is for him to say why his war parties follow our peace parties. I go because I am advised to do so by the whites. I hope my son-in-law, the "Axe," will explain all these matters. You, my friends, the Loups, are here around me, and I wish you to explain to the whites the cause of my speaking to you."

The Axe, chief of the Pawnee Loups, then replied:

"It is true, my brother-in-law, I have heard you. It is true, my father, what my brother-in-law has said. You see me and know me. You know that this stealing is done without my consent; that I am as ignorant of the causes as if I were under the ground. They have changed, but I have not—I have but one heart. But that there is a change among my people I have no doubt. It is true, my brother-in-law, that my young men have disregarded my counsel. They have thrown me up to be scattered by the winds of heaven. It is true, my brother-in-law, we have injured you in this way. But do you believe there is a chief in our village who advised the young men to slip off and steal horses from the Pawnee Peets? It is true that some of my young men who were on a war party had stolen horses, but you know that the chiefs took the horses away and punished them for it. What you say, my brother-in-law, is true. I know you took horses from our young men and punished them for it; but I said nothing. It hurt some of my people, but it did not hurt me, as I knew they ought not to have stolen them. Some days I have pity on myself, and feel sick at heart. All that I do is in defence of what is right. Sometimes I get a knock here and there, but it is because I defend what is good. I am very happy to hear, my brother-in-law, that you listen so well to the whites; I listen to them myself and like them. Our forefathers never knew these people, or they would have liked them as well as we do. My father, I have but one heart, and that is leaning towards you, and if I would die it would follow your advice. Most of the redskins are said to receive arrows, but they shoot them too high. I have an arrow in my heart, and it is on account of the whites. I have nothing else in my mind but leaning constantly towards the whites. I have always liked them and fought for them. I have sometimes thought that I would die away from home in the battle-field, but I think now I shall die in my own village. My brother-in-law, I know you well; you are more happy than I am; you have more riches and a better situation; but let me give you one piece of advice, do not listen so much to bad men, and pay more attention to the advice of the good."

To which the Angry Man replied:

"That is what I wanted to hear when I spoke before, and I have heard it. There has been a great deal of this work going on for the last year, but I have said nothing, and waited for a time like this to mention it. It is true that all these young men listen to the words of their great father. It is the words of our great father (the President) that has caused us to throw our weapons behind us and make peace. Here are our brothers around us, they go where they choose without the fear of being killed. It is our friends (the whites) that have produced all this change. I am desirous to have as many red friends as possible wherever I go. Here is our father who is travelling all over this country. What is it for? It is for our good; to make peace with all the different tribes and to see his friends. Some of our friends accuse us of being squaws; but it is because the whites have given us this advice. You advise us to make friends with those around us. I wish to do so; but that makes some of our neighbors say we ought to wear petticoats. I don't know

what they mean; I never talk ill of them. These are the things I want you (the Axe) to explain, why your young men had talked of us in this manner; you can't think too much of the advice the whites give us. Don't you see they are coming every day amongst us, making presents? I thank you, my father, for coming here. I was fearful some evil might result. I thank you for treating these people so well; you could not have been blamed if you had been more severe. If you will give me a gun I will promise that I will never point it at a white man. But when you give guns to these people I am always afraid they will kill some of my people. I love you, my father, and so do most of these young men; and why should they not? They know that when you come amongst them they always receive presents."

The principal chief of the Pawnee Tappeigcs, whose name is Little Chief, then said:

"My father, I was lying sick in my lodge, and could not for a long time get up; but I heard you were coming and I got up immediately. These men that have been talking to you are great men, much superior to me; but when I see you my heart swells up to be as big as any of them. Your arrival has saved my life, and I thank you for it. I should have been dead if you had not come, but now I have got well all at once. I have grown to be a considerable man among my people, and I have no one to thank but you—you pay our annuities and I distribute them among my people. They listen to me, but you are the cause of it after all. Yes, my father, I am proud of my young men, and I feel proud of my conduct, but you are the cause of it. I keep behind, myself, to see how the other villages get along. I am satisfied and well pleased with all, both red and white men. I am between the people you see backbiting each other, but have nothing to do with it. If it comes into my lodge I kick it out again, and have nothing more to do with it than if I were dead. The Loups cannot say anything against me."

After which, the chief of the Republican village, called the Mole in the Face, said:

"I have got up, my friends and relatives, to thank my great father for what he has said. He has said nothing but what is good and just. You are all great chiefs. Our chiefs were all killed and our people lived like wolves, when I was taken pity of, cared for, and became a great chief. As to you, Blue-coat, (chief of the Little Republican village,) you ought to be thankful for having been treated as well as you have been; you ought to take good advice better in future. I have one thing to ask of you, my father, and I have been waiting some time for your arrival to ask it of you. I know that what I ask belongs to you, and have been waiting a long time to see what you could do. Early last spring the Arickaras stole the whole of my horses, but I have never taken any steps to recover them. They have got the horses, and they have sent me word if I would come up and bring something with me, I could get them back again, but I have never been."

After the council, presents were distributed by Major Dougherty, consisting of blankets, strouding, knives, tobacco, &c.; they appeared well pleased, and promised to be more friendly with each other in future. They appeared desirous of making peace with the Cheyennes and Arapahas, and informed Colonel Dodge that they would send one of their principal men with him for that purpose.

June 24.—Captain Gantt started for the Loup fork, for the purpose of bringing in some of the Arickaras who were at that village, and who were afraid to come to council with the Pawnees, on account of their late hostility to the whites. Commenced the march in the evening, in a direction NW. along the valley of the Platte. Marched eight or nine miles. Rained severely during the night.

June 25.—Continued the march along the valley of the Platte, over a country almost perfectly level; the soil of a sandy nature, but generally fertile; the valley of variable width, at some places four or five miles, at others not more than a mile, and terminated by a high bluff bank, presenting a steep and angular appearance. Passed large numbers of islands, some of them about three miles in length, and a mile in width. They are mostly covered with timber. The general level of the valley is but a few feet above the level of the river, and the extended view, which had the appearance of an ocean scene, was only terminated by the distant horizon. The scattered trees along the banks of the small creeks appeared of a larger growth than that heretofore passed; saw several large herds of antelope; marched about eighteen miles, and arrived opposite the lower end of Grand island.

On the 26th marched thirty, and on the 27th twelve miles. The country, at this stage of the march, began to assume a more barren appearance. The principal ingredient of the soil was fine yellow sand. The grass thin and short, and mixed with plants and flowers that indicate a barren soil. Found but little wood on this side of the river during these two days' marches; but upon the islands and upon the opposite side there appeared to be an abundance. Captain Gantt returned to camp, and informed the colonel that the two Arickaras he was sent for were a few miles in the rear, and would be up during the day. They would then go to where their people were, inform them of the peaceful intentions of Colonel Dodge, and collect them together by the time he arrived.

June 28.—Remained encamped. The two Arickaras arrived in the morning, accompanied by three Pawnees—one of them the brother of the Axe. The Pawnees wished to accompany Colonel Dodge to the country of the Cheyennes and Arapahas, for the purpose of making peace with these nations. One of the flour wagons was unloaded and sent back.

June 29.—Passed the head of Grand island, at which place the valley becomes much wider, the soil sandy, with frequent efflorescences of sulphate of soda, which is said to indicate the proximity of salt springs. Grand island is about sixty miles long, and, in many places, two or three miles wide. It is covered with timber, consisting of oak, mulberry, cottonwood, &c., and hides the opposite bank of the river entirely from our view. The river above this island is from a mile to a mile and a half wide, and very rapid, probably from three to three and a half miles an hour; very shallow, the general depth now, though unusually high, not more than three or four feet. But little timber on this side of the river. Marched thirty miles.

June 30.—Were detained by muster and inspection until twelve or one o'clock, when the march was commenced in a direction S 85° W. The country similar in its general appearance to that of yesterday. The soil principally composed of dry yellow sand. The grass short and thick, with recent appearance of buffalo; but little wood. Marched fourteen miles, and encamped.

July 1.—Marched twenty, and 2d, twenty-three miles, in a direction N. 65° W. The valley wider; the soil the same. The sand-hills, which terminate the valley on this side of the river, were much higher and more irregular and angular in their appearance than heretofore, resembling large rocks at a distance. Wood more abundant. Captain Gantt left the camp with the Arickara chief, the Star, for the purpose of collecting the Arickaras together, whom we had heard were near the forks of the Platte.

July 3.—Commenced the march in a direction N. 70° W. Crossed two small creeks, upon one of which we found the deserted camp of the Arickaras, and about half a mile beyond it another, which appeared to have been recently occupied. Their lodges, which they make of bushes, covered with blankets

and skins, were placed around in the circumference of a circle, the diameter of which was three or four hundred yards in length. In the centre of their encampment was placed what is called their medicine lodge, a large circular lodge, built of poles, in the form of a cylinder, surmounted by a cone. The cylinder was about fifteen feet high, and the axis of the cone about eight feet. They had tied one of their red coats upon the top of the centre pole, and had suspended red blankets and buffalo skins from different parts of the lodge. One of the Indians had cut off his finger near the second joint, and had suspended it, together with a little crooked stick, on the centre pole, about eight feet from the ground. There were traces of blood around the whole interior of the lodge. Some one, while bleeding, appeared to have run around the centre pole. They had two buffalo heads arranged on one side of the lodge, pointing towards the east. This was for the purpose of bringing the buffalo from the west, towards this point. These Indians frequently scarify their bodies, and inflict corporeal pain upon themselves, for the purpose of appeasing the anger of the Great Spirit, that he may make them successful in their hunts, and against their enemies. The valley at this point is terminated by a succession of irregular hills of considerable height. The intermediate valleys or ravines are covered with timber of a small growth, and on the side of the hills we saw fruit of various sorts, such as plums, cherries, &c. The Kansas river takes its rise in these hills, and runs in a southeasterly direction, nearly parallel with the Platte. The Platte is divided at this point into two forks, nearly equal, called the North and South forks. From the top of one of the highest hills we had an extensive view of the country for many miles. In front we saw the two forks of the Platte, gliding gently along through their separate valleys, until they met and mingled with the broad stream itself; beyond this a high ridge of hills, forming a dark outline along the horizon, gave a fine background to the picture. In rear of us there was a long succession of hills, covered with scattered groves of timber; and we saw the feathery outline of some tall trees, at an immense distance, just shooting up above the horizon. At the top of this hill we found more medicine. The Indians had collected a large number of buffalo heads, and arranged them around in a circular form, their heads pointing towards the centre. This was for the purpose of bringing the buffalo from every direction to this point, that the Indians might find a plenty of them here next year when they came here to hunt. The soil upon the surface of this hill is composed of fine yellow sand; but upon digging to the depth of one or two feet we came to a mass of rock of a coarse, sandy texture, a dull, glimmering lustre of a grayish color, and so brittle as to yield to the nail; it was supposed, from its external characters, to be magnesian limestone. The whole of this range of hills appears to be composed of it.

July 4.—Marched in a direction N. 80° W. a distance of twenty-five miles. The valley of the river wider, the country more level, and the soil more fertile during this day's march. In the evening saw a large herd of buffalo, the first we have seen.

July 5.—Remained encamped. Captain Gantt arrived with the chiefs and principal warriors of the Arickaras. The Arickaras are considered the wildest and most savage tribe of Indians west of the Mississippi, and have always been characterized by a want of faith in their promises, and an inveterate hostility to the whites, killing all they could meet. They are at war with most of the surrounding nations, and large numbers of them are killed every year. They formerly lived on the Missouri river, but were driven from this country by the Sioux, with whom they have long been at war. They have now no land that they can call their own, and are wandering about like the Arabs of the desert, killing and robbing almost every one they meet. They were originally a band of the Pawnee Loups, and had been living with them for some time previous to our arrival, and had, no doubt, by their influence kindled that warlike spirit which seemed to exist among the Pawnees at the time we were at their village. The Loups, it appeared, had treated them with great hospitality and kindness, in return for which they had stolen a number of the Pawnee horses. They were the best looking tribe of Indians we had seen, and were dressed in a more gay and fantastic manner. Their dress consisted of a shirt made of buffalo skins, finely dressed, either of a white or yellowish color, and ornamented with different colored beads; it was trimmed along the sides and around the neck with long coarse hair of several colors. Their leggings and moccasins were made of the same material, but were generally white, beautifully embroidered with beads. There are now about two thousand two hundred of them in all, numbers of them having lately been killed by their numerous enemies. They begin to feel sensible of their true condition, and the necessity of making peace; and if they could get the piece of land they desire so much they would probably reform and become a peaceful and industrious nation. The colonel held a council with them, at which he addressed them as follows:

"Chiefs and braves of the Arickara nation of Indians: I am happy to see you on my march to the Rocky mountains. I expected to have met you near the Pawnee village. On my arrival at the village of the Grand Pawnees I was informed a Kansas Indian had told you I was coming with the dragoons to kill you and your people. This report was false and unfounded. Your great father, the President of the United States, is at peace with all his red children. He has pity on them, and wishes to extend to them the hand of protection and friendship. A great nation will always protect and never kill the defenceless. It is cowards alone who do so. Your great father wishes to see you living at a permanent home, where you can cultivate the soil and raise corn and cattle; he wishes you to change your course and live at peace with your red brethren. You have been and are now at war with many nations of Indians; you have had many of your people killed, and you have killed many of your enemies; and you are now, as a nation of people, in a worse condition than you were when you first engaged in war. You have been driven from your country by the Sioux, and are now without a home, and are constantly travelling in search of buffalo and to avoid your numerous enemies. By pursuing this course your nation will be reduced as to numbers, and you will ultimately fall a prey to your enemies. I will inform your great father, the President, of your true situation. If you follow his advice you may still exist as a nation, and have a home where you can raise corn and live at peace. I advise you to cultivate the most friendly understanding with the Pawnees. They are now friendly to you, and will no doubt continue so if your conduct merits their friendship. I will recommend to your great father that you should have a small country set apart for you, if possible, near your friends, the Pawnees. Situated as you are, travelling over a large extent of country, you are viewed as the common enemies of all nations; you are charged with killing small parties of the Americans, when you find them weak and defenceless; stealing their horses, robbing and plundering them. Should you continue this course, ruin and destruction must await you. You are now charged with stealing horses from the Delawares, and your friends, the Pawnees. These horses you should not hesitate to deliver to their owners. If you do acts of injustice to all nations, you may expect them all to unite to destroy you as a people. I am now speaking to you the language of truth; I have but one heart and one tongue, and hope my words will be listened to and remembered when I am far from you. It is my duty

to be plain with you, and not to speak to you with a forked tongue. I am on my march to the Rocky mountains. My object is not to make war upon the different nations of Indians, but to extend to them the hand of peace and friendship, and to make peace with the different nations that are at war with each other, as far as it may be in my power. Should an attempt be made to kill any part of my command, or to steal my horses, the guilty shall not escape. The warrior who is slow to anger is the most terrible when forced to action; such is the character of your great father, the President of the United States. He is mild in peace, but terrible in war; his enemies have always fled before him from the field of battle. You see but few mounted men with me; it was not the wish of your great father to alarm you and other remote nations of Indians with the appearance of a large army, which he could have sent here with as much ease as the few warriors you see with me. The cannon you see here are small in comparison with the large guns that could be sent to this country. Your great father sent me last year to see the Pawnee Peets, Comanches, and Kiowas, who had been at war with the United States. They made peace, and some of their chiefs accompanied me to Fort Gibson, where they smoked the pipe of peace with their old enemies, the Cherokees, Creeks, Choctaws, Osages, Senecas, and Delawares. These nations agreed to bury the war hatchet forever. It is the wish of your great father that you bury the hatchet of war with your numerous enemies. It is your good alone that he desires. You have no country; you are poor. Your great father wishes all his red children to inhabit the same country, to cultivate the most friendly understanding with each other, and that the Indian race should not be destroyed, but be a prosperous and happy people. His wish is to promote the welfare of all the red people, without expecting any advantage from them. I am done. I will give you a few presents and some tobacco, as an evidence of the great regard your great father has for his remote red children. His wish is, that when you meet the Americans you will consider them your friends. Your future prospects will greatly depend upon your conduct this year. You have your choice between good and evil. I hope you will choose the good and avoid the evil. Your fate as a nation depends upon your choice. The day is fine, the sky is clear of clouds, and I hope, as we are all in the presence of the Great Spirit, that truth alone will be spoken upon this occasion."

The Bloody Hand, principal chief, replied:

"My father, I did not think I should see you; but I see you to-day. I have for a long time been travelling over this country, and to-day the Great Spirit came to me and told me to listen. My heart feels large upon seeing my father here; I am glad you have spoken, and I hope it will enter the young men's ears. I have not much to say, more than what has been said. I have always been as if I was dead; I have been wishing to see you for a long time, and to-day I expect to remember the words you have spoken to us.

"My father, I was glad you sent the interpreter to our village for us, and that you would give us some land to live upon; I am travelling all over this country, and am cutting the trees of my brothers; I don't know whether they are satisfied or not, but we have no land of our own. I am travelling on their land and killing their buffalo before my friends arrive, so that when they come up they can find no buffalo. We want land, so that we can kill buffalo with them. My father, I am very poor, and would like to get a piece of land, that I might live with my brothers. We would like to live upon land near the Pawnees, and have the privilege of hunting as well as them."

The Two Bulls, another chief, then said:

"My father, who would not listen to what you have said? Yesterday I was following your trail; to-day I have come to you; I am always behind, but what you have said to-day has entered my ears. It is true our village has always been a great way off, but to-day we can understand what you say. Now, if you give us a piece of land near you, so that when we do wrong you can find us, our young men will conduct themselves well. My father, to-day I am surrounded entirely by the whites; let me go where I will I find them. It is true, my father, I have been travelling for a long time all over this country, and never had ears. It is true that you love us, as you give us tobacco to smoke, and you give us land. Who would not love you for this? My father, I have been very poor; it is as if you had taken us out of the ground. If you take us and put us on a piece of ground, and tell us where it is, next year you will find us there. It is true our young men have stolen horses, but we have returned them to the Grand Pawnees. My father, we wish you would give us the land on this side of the river below here, (meaning the south side of the Platte, near the forks.) My father, all that you have said to-day is true, and we have listened well to what you have said. We had heard that one of our young men was killed, and we were going to war again, but now we will not go. My father, we are all very poor. When we kill buffalo we have no knives to butcher them with, and we have no tobacco to smoke. We were very glad to hear to-day that you would give us a piece of land, but we have no axes to cut wood and make lodges. My father, the whites are always travelling through this country, and should we meet them in the prairie, they will have no cause to complain of us. I am very glad to hear what you have said, as we will now be able to go out and kill buffalo and sell their skins for axes and hoes, with which we can build lodges and raise corn. My father, we are very glad to hear what you have said to us. Now, when we see a white man, we will not be afraid to go out to meet him and get a pipe full of tobacco and some powder to put in our horns."

The Big-head or Star, another chief, then spoke:

"My father, you see me here, a poor man; we are all very poor; and I am glad to hear from you and our great father that you will give us an ear to hear and a heart to understand. I am glad to hear, my father, that you are trying to make peace with us and the surrounding nations, and I shall not now be afraid to go among all the different tribes. My father, I have been travelling from nation to nation, trying to make peace, and when I had made peace, my young men would steal horses. I hope, now they have heard you, they will listen to what you have said. All the chiefs and braves are here, and they have ears to hear as well as myself. My father, I never yet have killed a white man; when I have seen them in danger I have always tried to save them. I love the whites, and have always endeavored to do them good. I have heard of my great father, the President, ever since I was a little child, and to-day I see mine; for that reason I have always endeavored to act correctly. My father, I never was afraid to go to the whites; I always loved them, and knew if I did right they would not hurt me. It is true, my father, that I am very poor, but what I have said is correct. My father, to-day is a fine day for our talk; the sky is clear, and heaven and earth hear what we say; and to-day we will leave the evil behind and take to the good. My father, what you have said to-day is all true. We were very poor, but now that you are to give us land, we will no longer be poor. All the chiefs and braves are here, and they will listen to what you say; and hereafter they will be able to buy knives, tobacco, &c., of the

traders. My father, when you come next time, you will perhaps bring some hoes and axes for our squaws; they are now very poor, and have nothing."

The Two Bulls gave Colonel Dodge a hunting shirt, finely ornamented with beads, and a pair of leggings, the only one he had, and said: "My father, you see me here to-day; I have but one old shirt, which I give to you. All of my young men are just like me. When I started for the Platte, in following your trail, I found this old knife, and having no knife to butcher my buffalo, the Great Spirit told me to take this." He then gave the knife to Colonel Dodge, who returned it to him, and told him to keep it, and gave him another in addition to reward him for this exhibition of his honesty.

After the council, presents of blankets, strouding, knives, tobacco, &c., were distributed among them, at which they were greatly pleased. It was treating them so much better than they knew they deserved that they were quite overjoyed, and it will no doubt produce a very beneficial effect upon them.

This council was held on the 5th of July, about twenty miles above the forks of the Platte. The day was beautiful, the sky clear and cloudless, the air fresh and balmy. On one side of us was the river, on the other a vast extended prairie, not a tree in sight, or a moving being save ourselves. It was the stillness and solitude of nature. The Indians were seated around in a circle, with their pipes in their hands, listening with the most profound attention to every word that was uttered. They appeared like prodigal children returning once more to their father's home. The whole scene was one of the most grand and impressive I had ever witnessed, and such a one as the pencil of the painter or the imagination of the poet would delight to portray.

July 6.—The Indians left us this morning with many thanks and expressions of gratitude. They told some Delawares that were with us if they would accompany them to their village they would return them the horses that had been stolen from them last year. Marched twenty miles; on the 7th we marched sixteen, on the 8th eighteen, and on the 9th seventeen miles, in a direction about S. 80° W. The country, at this period of our march, began to assume a different character. We had heretofore been marching through a level and fertile valley, terminated by hills alternating from high to low, with a sufficient quantity of wood for fuel. The elements of the scene now were an unbounded prairie, a broad river, with innumerable herds of buffalo grazing upon its banks, and occasionally a solitary tree standing in bold relief against a clear blue sky. These elements, combined with the skill of nature's artist, formed one of the finest landscapes I had ever seen. Our command, at this period of the march, was in a perfect state of health; not a man upon the sick report; the horses in fine order; the weather fine. Had established friendly relations with all the Indians in the section of country through which we had passed. Everything, in fact, contributed to lend to the scene around us all its additional charms. The buffalo surrounded us in large herds, making the prairie almost black by their immense numbers. Saw, also, great numbers of antelopes and some deer. The soil was of coarse, dry sand or gravel. The grass short, thick, and dry. No timber; were obliged to make use of buffalo dung in cooking. This section of country is what is called the neutral ground, and extends from the forks of the Platte almost to the foot of the mountains. It will not admit of the permanent residence of any Indians, and is only frequented by the war parties of different nations. The Arapahas and Cheyennes sometimes move into this country for a short time during the summer to hunt buffalo. On the evening of the 9th arrived near a cottonwood grove, the first timber we had seen since we left the forks of the Platte. The country here began to exhibit a more rugged and rocky appearance.

July 10.—The grazing being good and the buffalo numerous, the colonel determined to remain encamped during the day. Two parties of hunters were sent out who brought in an abundance of buffalo meat. Saw a large drove of wild horses. The weather remarkably fine, the air clear and pure, with a fresh breeze from the mountains.

July 11, marched twenty; July 12, twenty-two; July 13, twenty; and July 14, twenty miles in a direction S. 60° W. The general face of the country more broken and irregular in its appearance than heretofore. Passed a long high range of hills on the opposite side of the river, containing a considerable quantity of rock. The valley more narrow and terminated by sand hills, which gave to the country a barren appearance. Prickly pear and wild sage—plants that indicate a barren soil—begin to abound. Crossed several dry creeks, some of them of considerable size. These creeks, most of them, contain water near the mouth; but before it reaches the Platte it is all absorbed by the soil, which at this place is very sandy. Saw immense herds of buffalo during the whole of this stage of the march. No wood, except the drift that was picked up along the banks of the Platte. Saw more wild horses.

July 15.—Marched twenty miles in a direction S. 70° W. Crossed a serpentine creek of considerable size, entered upon a high prairie, and came to an old deserted Indian camp, supposed to have been lately occupied by the Arapahas. The poles of the medicine lodge were still standing, and some of the emblems of their worship, such as buffalo heads, painted arrows, &c. After we had encamped, towards night, the clouds which had been lowering around the western horizon cleared away, and discovered to us a beautiful bird's eye view of the Rocky mountains. This sight was hailed with joy by the whole command. We saw the end of the march—the long-wished-for object of all our hopes. They at first resembled white conical clouds lying along the edge of the horizon. The rays of a setting sun upon their snow-clad summits gave to them a beautiful and splendid appearance.

July 16, marched twenty, and July 17, twenty-two miles in a direction S. 70° W. The valley of variable width and terminated by sand-hills, which appear to extend back as far as the eye can see. The only vegetation upon them is a species of wild sage, which the buffalo eat in winter, and a few prickly pear.

July 18.—Left the flour-wagon, burnt it, and cached the irons. Marched twenty miles in a direction N. 80° W., the country uneven, and sand-hills in the background. Passed the mouth of the Cache de la Poudre, a large stream, emptying into the Platte on the opposite side, with timber on its banks. The buffalo numerous.

July 19, marched twenty, and on the 20th marched eighteen miles in a direction about S. 40° W. The river here makes a considerable bend to the south, and runs for some distance nearly parallel with the mountains. Passed over a large sand-hill, upon the top of which we found oyster-shells that appeared to have lain there for ages. They were so brittle that they broke when pressed between the fingers. The face of the country variable; it appears to be arranged in a succession of benches, commencing at the river. There is at first a low flat from a half to a mile and a half wide, where the grass is good. It is generally wet with streams running through it. Above this there is another bench of about the same width, of dry, hard prairie, with a gravelly soil. The grass upon this, which is called buffalo grass, is short, thick, and dry. Above this there is still another bench, where the sand-hills commence and rise gradually as they recede from the river. The only vegetation upon them is a species of wild sage.

July 21.—Remained encamped—the weather warm. From this place it is about twenty miles to the mountains. The river at this point is clearer, narrower, and more rapid than it is below, and the water much colder. Saw immense herds of buffalo in every direction.

July 22, marched twenty miles, and *July 23* twenty miles, in a direction about S. 15° E. The country as we approach the mountains begins to assume a more rough and broken appearance; timber more abundant; saw several sorts of wild fruit, such as plums, cherries, gooseberries, &c. Passed several creeks that were dry; some of them skirted with timber. One of them the traders usually ascend in passing from the Platte to the Arkansas. The distance from the Platte to the Arkansas is about ninety or one hundred miles, and this is considered the nearest and most accessible point between them.

July 24.—Marched in a direction S. 70° W. for about five miles, until we came to a small valley near the mountains, then made a detour to the left, and took a direction parallel to the mountains about S. 20° E.; left the Platte at this point, and commenced crossing to the Arkansas close under the mountains. Passed near the point where the Platte issues out of the mountains. It takes its rise in a valley some distance back, and before it reaches the foot of the last range it becomes a considerable stream, running with the rapidity of a mountain torrent; the water is very cold, and clear as crystal. The valley of the creek which we ascended was terminated on both sides by a high range of mountains. On the west, at the distance of four or five miles, the first range of the Rocky mountains commenced. On the east were the mountains of the dividing ridge between the Arkansas and the Platte. The mountains of the first range are covered with pine of a low growth. In the valley, upon the banks of the creeks, and near the base of the mountains, there is a considerable quantity of timber of various sorts, such as oak, cottonwood, black-jack, &c. The soil in the bottoms, which is of an alluvial nature, is very fertile. Upon the sides and tops of the mountains there is vast quantities of loose rock, which appears to be principally sandstone, and has the appearance in many places of having been worn into different forms by the washing of water. The creek we ascended we called the Crystal creek, from the circumstance of our finding some fine specimens of rock crystal of a considerable size. There was formerly large numbers of beaver upon this creek, but they have all been caught by the different trappers who frequent it. Saw no buffalo, but the deer are numerous.

July 25.—Marched eighteen miles in a direction parallel to the mountains, S. 20° E.; crossed several small creeks, most of them skirted with timber. The water coming directly from the mountains was clear and cold. The first range of mountains, which is about 1,500 or 2,000 feet high, hides the second range almost entirely from our view; but we could occasionally, through the deep ravines and passes, discover the snow tops of the second and higher ranges. The mountains appear to possess every variety of form and shape; the ascent to some is gradual and covered with timber; others appeared to be formed of immense masses of rock superimposed upon each other. We encamped in the evening in a valley surrounded on every side with mountains, with narrow passes between them. The high, broken range of mountains appeared like ruined castles, with turrets and rock-crowned battlements. Through the green passes we caught distant views of mountains in the background, forming a dark line along the horizon, relieved by a cloudless sky of pure cerulean blue.

July 26.—Marched twenty-five miles in a direction S. 30° E.; passed through a narrow valley between two high ridges of mountains, and ascended a hill of considerable height, from the top of which we had a beautiful view of the surrounding scenery. Beneath us lay a green, verdant valley that appeared to have been scooped out of the mountains, and resembled the hollow between two large ocean waves. At a distance terminating the valley were mountains of various form; some in the shape of pyramids, others like truncated cones with circular and elliptical bases. As we descended the hill and wound along through the narrow valley, the scene opened with new beauty. The main valley appeared to branch off to the left into passes or narrow valleys, terminated by mountains of various shapes, some of them with a smooth, regular contour; others consisting of large masses of rock piled one upon the other. Every turn of the road presented a new variety of scenery. After passing through this valley, we ascended another hill, from the top of which a new scene was presented to our view. The mountains were in the form of an immense fortification with turrets and rock-crowned battlements, and pine trees along the covered line relieved against a clear blue sky. The different passes between the mountains appeared to be guarded by large terraced watch-towers. Crossed the dividing ridge between the waters of the Platte and Arkansas. Upon the summit level there is a lake about half a mile long and four or five hundred yards wide. The small streams on one side of this run into the Platte, and on the other into the Arkansas. After crossing the dividing ridge the view becomes more extended; the hills on our left not so high, and the country began to assume the appearance of a high, rolling prairie. We struck the headwaters of one of the branches of the Fontaine que Bouille, down which we continued our course to the main valley.

July 27.—Marched eighteen miles in a direction S. 25° E. The country more level, the valley of greater width. Arrived at the main valley of the Fontaine que Bouille, which is five or six miles wide; extends in a direction nearly perpendicular to the general direction of the mountains, and gradually widens as you recede from them. It is terminated on the right by a high and broken range that has an irregular and undulated appearance, projecting up to a considerable distance in the background. Pike's Peak was in full view, its snow-clad summit towering up to an immense height. From this valley it is but two days' ride to the waters of the Rio del Norte, and but three to Taos, one of the Mexican provinces.

July 28.—Remained encamped; visited the Fontaine que Bouille, or spring that boils, a mineral spring near the foot of Pike's Peak. The water boils up out of a limestone rock, forming a basin two or three feet in diameter, and of about the same depth; it has a pleasant acid taste, and was thought to possess properties similar to the waters of Saratoga; it is directly in the pass leading from the Fontaine que Bouille to Rio Salard, a large valley in the mountains, where the Arapahas frequently pitch their lodges and remain encamped for a considerable length of time during the summer. We ascended the mountains along the ravine that forms the bed of the Fontaine que Bouille, and saw the mountain torrent washing down through the pass, forming numerous cascades and waterfalls as it came tumbling down over the high rocks. From this we ascended one of the peaks to the distance of about a mile above the level of the plain. From the top of this we had a beautiful and extensive view of the country for many miles; we saw the timber upon the Arkansas and the Platte, and a large extent of waving prairie country lying between the two rivers. To the right, at an immense distance, we could see the feathery and indistinct outline of the Spanish Peaks just rising above the visible horizon; while in our rear there lay a long succession of high ranges of mountains, until the snowy summits of the last and highest appeared to meet and mingle with

the clouds. Nature appears here to have thrown aside her wild and sportive mood, and to have given to the whole scene the deepest impress of grandeur and sublimity. As we had no barometer or mathematical instrument for taking heights, it was impossible to form an accurate estimate of the altitude of any of these mountains; but upon ascending one of the first and lowest, and travelling constantly for five or six hours at an angle of ascent of nearly 45°, we found the apparent distance to Pike's Peak (the lowest that was covered with snow) but little diminished. Another proof of their immense height is the long distance the snow extends below the tops of the mountains. Upon some of the highest it appeared to extend more than halfway down their apparent heights, probably for the distance of a mile or more. Upon the top of the mountains we ascended we found immense masses of primitive rock piled up to a great height; but near the base of the mountains, and upon some of the lesser heights, the rock appears to be of a sandy texture. Found a number of fine specimens of mineral of different species near the base of the mountains, on the banks and in the beds of the small creeks. We saw also a species of goat which is said to live entirely in the mountains, leaping from rock to rock, and living upon the shrubbery which grows upon the side of the mountains. The valley of the Fontaine que Bouille is very much frequented by the Indians, especially by the Arepahas, who come up here in the fall to gather the wild fruit that grows in abundance near the base of the mountains. The whole route from the Platte to the Arkansas is frequented by large parties of the Blackfeet, Crows, Snakes, and sometimes the Eutaus, who live upon the waters of the Rio del Norte, but frequently come over through the mountain passes to steal horses from the Arepahas and Cheyennes.

July 29.—Marched twenty miles in a direction southeast, along the valley of the Fontaine que Bouille; the soil fertile, consisting of gravel and clay, in some places the gravel in others the clay preponderating. Two Spaniards from Taos arrived at our camp; they came over for the purpose of trading with the Indians, for whom they were then looking. Their stock, which consisted of whiskey and flour, they had left on the opposite side of the Arkansas.

July 30.—Marched in a direction S. 50° E.; left the valley of the Fontaine que Bouille and crossed the dividing ridge between that and the Arkansas. From the top of the ridge we had a fine view of the valley of the Arkansas and the surrounding country. Encamped on the Arkansas. Shortly after we had encamped we were visited by three Arepahas; they informed us that there were fifty lodges on the opposite side of the river; that the remainder of the nation, with a large number of Cheyennes, were hunting buffalo about two days' ride from here, between the Platte and the Arkansas.

July 31.—Remained encamped. Fifty lodges of the Arepahas came over from the opposite side of the river and encamped about two or three hundred yards from us. These Indians have long been friendly to the whites. They have a large number of horses, having lately stolen about one hundred and seventy from the Eutaus, with whom they are at war. They subsist upon buffalo meat, and when out of the range, live upon dogs, of which they have a great number, and of a large size.

August 1.—Captain Gantt started this morning for the purpose of collecting the other villages of the Arepahas together; marched four or five miles; passed a deserted trading establishment. The Arkansas at this point is five or six hundred yards wide, deep, rapid, and the water clear. It was only fordable at the most shallow places. Saw no buffalo in this portion of the country, but there is plenty of deer.

August 2.—Took up our line of march for Bent and St. Vrain's fort, a distance of sixty miles in a direction down the Arkansas, and arrived there on the 6th. This portion of the valley of the Arkansas possesses many of the general features of the valley of the Platte. Its width, which is variable, is about the same, and terminated like the Platte by a range of hills of variable height. The soil near the river is composed mostly of clay, but further back upon the high prairie it consists of dry, hard sand or gravel. The terminating ridge of the valley is not continuous, but divides into detached hillocks, some of them resembling haystacks, others more elongated. The general level of the valley appears to be much lower than that of the Platte, the timber more abundant, and of a larger growth. Crossed several dry creeks, some of them skirted with timber. The country between this and the Platte is said to be hilly with but little timber and water. The buffalo are very numerous in that portion of the country, and the Indians frequently move their whole villages there, and remain and hunt there for a considerable length of time. Met a war party of Cheyennes who were going out against the Comanches. The Cheyennes have always been friendly to the whites, and this party appeared rejoiced to meet us. On our arrival at Messrs. Bent and St. Vrain's trading establishment, or fort, we found two villages of Cheyennes encamped near them—the one upon this, the other upon the opposite side of the river. A party of Spaniards from Taos had been selling them whiskey upon the opposite or Mexican side, and we found a number of them intoxicated. They are very fond of whiskey, and will sell their horses, blankets, and everything else they possess for a drink of it. In arranging the good things of this world in the order of rank, they say that whiskey should stand first, then tobacco, third, guns, fourth, horses, and fifth, women. Remained encamped from the 6th to the 11th, waiting for the Arepahas and Cheyennes to be collected together for the purpose of holding a council with them. Messrs. Bent and St. Vrain have a large trading establishment at this place, and carry on an extensive trade with the Indians in buffalo robes, for which they sell them knives, blankets, tobacco, kettles, &c. On the evening of the 10th Captain Gantt returned with some of the principal men and chiefs of the Arepahas, a few Gros Ventres, and two or three Blackfeet belonging to a band living with the Cheyennes. About one hundred of them started from their village, but not finding Colonel Dodge where they expected, and having left their families in an unprotected state, they returned to their village. The principal chiefs, however, and some of the principal men came on to the fort. The Cheyennes are a bold and warlike band of Indians, and at the time of our arrival were in a state of great disorganization. They had just killed their principal chief, and had separated into three villages, and were wandering about the prairie without any leader. They were at war with the Comanches, Kiowas, Pawnees, and Arickaras; a large war party had gone out against the Comanches, and had not returned at the time of our arrival. The Osages had visited the Cheyennes and Arepahas early in the summer, and have made peace with them. A party of the Arepahas then went with the Osages to visit the Comanches, with whom they wished to establish friendly relations. The Cheyennes are a better-looking race of Indians than any we have seen, and more cleanly in their appearance. The women are remarkable for their beauty and the neatness of their personal appearance. The Cheyennes formerly lived on the Missouri river, where they were visited by General Atkinson in 1825. They left that country shortly after and came to the south fork of the Platte, and have since been living with the Arepahas, with whom they have entered into the strictest terms of alliance, both offensive and defensive, and will doubtless in a few years become incorporated with that nation. There is now about two hundred and twenty lodges,

six hundred and sixty men, or two thousand six hundred and forty souls in all. They range between the Platte and the Arkansas near the mountain, and subsist entirely upon buffalo and the wild fruit they gather along the mountains.

Of the Arepahas there are about three hundred and sixty lodges, one thousand and eighty men, or three thousand six hundred souls in all. They are a less warlike nation than the Cheyennes, and appear to be a small and more delicate looking race of Indians, and are governed in their war movements almost entirely by the Cheyennes. The names of their principal chiefs: Ena-cha-ke-kuc, or Buffalo Bull that carries a Gun; Oe-che-ne, or Old Raven; E-thaw-ete, or Strong Bow; Waw-lau-nah, or Black Dog; Waw-hin-e-hun, or Mad Bear; Naw-tuh-tha, or Buffalo Belly. They are less neat in their appearance than the Cheyennes, and make their clothes of buffalo skins. They range with the Cheyennes between the Platte and Arkansas, and subsist entirely upon buffalo. The bow and arrow is the principal weapon they make use of in war and in killing game. Some few of them have guns and ammunition that they have bought of the American traders for robes and fur. They kill their buffalo upon horses by running at full speed into a large gang and shooting them with their arrows. The Arepahas formerly lived upon Marias river, near the forks of the Missouri, but emigrated to this country a long time since.

The Gros Ventres of Fort du Prairie, now living with the Arepahas, are a band of the Blackfeet. They speak the same language with the Arepahas, emigrated from the same country, and have the same manners and customs. There are now about three hundred and fifty of them living with the Arepahas. Seven hundred lodges came to the Arkansas in the summer of 1824 and returned in 1832, and are expected again on the Platte and Arkansas in September, 1835. The names of the principal chiefs are: Nash-hin-e-thow, or Elk Tongue; Ka-aw-che, or Bear Tooth. There is also a small band of the Blackfeet proper, consisting of about fifty, who live with the Cheyennes and Arepahas. A band of Kiowas, called the Upper band, consisting of one thousand eight hundred or two thousand, and another who are called Appaches of the plains, consisting of about twelve hundred, also frequent this portion of the country. All of these Indians frequent the Arkansas and the Platte near the mountains for the purpose of killing buffalo, upon which they subsist and make their clothes of the skins. They all have large numbers of horses, upon which they hunt buffalo and pack their baggage. The women do all the work and wait upon the men, who do nothing but kill the game.

On the 11th Colonel Dodge held a council with the Cheyennes, Arepahas, Gros Ventres, and a few Blackfeet; most of the principal men of three villages of Cheyennes were present. The Arepahas were represented by their principal chief and several braves, the Gros Ventres by some of their principal men; and the Blackfeet living with the Arepahas had also their representative.

After they were collected together and arranged in due council form, Colonel Dodge addressed them as follows:

"Chiefs and warriors of the Cheyennes, Arepahas, Gros Ventres, and Blackfeet present:

"Friends, I am happy to meet you; your great American father is desirous to be at peace with all his remote red children; he wishes you to smoke the pipe of peace with your enemies, and bury the hatchet of war; your old enemies, the Pawnees, wish to make peace with the Arepahas and Cheyennes; the brother of the principal chiefs of the Pawnee Loups has travelled on foot many hundred miles to see you and to smoke the pipe of peace with you. By making peace with the Pawnees and Arickaras you will be able to meet on the Platte as friends, where there is buffalo in abundance; you will then have no dread on your minds of danger from each other, and you often want something for your children to eat on that account. The Cheyennes are now at war with the Comanches; I would earnestly recommend to them to make peace with this nation, and I wish the Arepaha chiefs, who are friendly both with the Cheyennes and Comanches, to interpose their kind offices to effect an object so desirable for the mutual benefit and advantage of both nations.

"I was much pleased to hear that the Arepahas and Osages have made peace, and that the Osages had gone with the Arepahas to visit the Comanches; I hope the peace they have made will be lasting, and that they will hold each other strong by the hand. The Cheyennes having killed their principal chief, the High-backed Wolf, and as they have no chiefs, I would recommend to them that they would choose from among their principal braves a chief for each band; the present distracted state of their nation requires this course; after they have selected their chiefs it is their duty to obey them in peace and in war. No nation of people can exist without rulers; Indians who trespass on the rights of others should be punished, and good men should be rewarded; I recommend to you to be just to your traders, it is for the mutual advantage of you all to be so; any attempts on your part to injure your traders would deprive you of them; they are here by permission of your great father; the Arepahas have never made a treaty with their great American father; the friendly manner they treat their traders, and the peaceable and friendly disposition they have evinced towards me, shall be made known to him. I present you, in the name of your great father, some valuable presents, which are given as a proof of his great regard for his remote red children; it is his wish you meet all the Americans in friendship, and that the pipe of peace may be smoked between you, and the war hatchet never be raised."

Little Moon, one of the principal men of the Cheyennes, and formerly their chief, replied:

"My father, I believe it was my great father, the President, who sent you here to talk to us to-day, and we are glad to see you; we saw troops once before on the Missouri, and took them by the hand; you have been telling us to hold the whites by the hand; we listen to what you say; you wish us to be at peace with all nations; the Crows have been killing our people; I know but little; what you say is very good; your heart is open; one of our parties has gone to the Comanches, another against the Pawnees and Arickaras; my heart is with them; we have not heard from them; what you say is very good; the whites are all good: there is nothing bad about them; wait until our war parties return: perhaps some of them are killed; winter before last this Pawnee (alluding to the Pawnee who had accompanied us from the Pawnee village) came to our village; we took him by the hand and smoked with him; you have taken this Pawnee by the hand, and have brought him to our village; our hearts are very glad; as soon as we saw him we got off our horses, ran to meet him, and took him by the hand; I know but little; what I do know I have told you; wait until our war parties return; I shall then know what to say; I am glad to see you, my father, and have listened well to what you have said; I am glad you have brought this Pawnee with you; I hope he will give each band a medicine arrow," [it is customary among these wild Indians to exchange arrows in making peace; these are medicine arrows,] "and each band will give him one in return; I wish you to tell the Pawnee to send each of us a medicine arrow; when we meet the whites in the prairie we will take

them by the hand and hold them fast; this is the second time I have seen troops, and my heart is glad to see you; I have nothing more to say; I know but little; what I do know I have told you."

The Pawnee who had accompanied us from the village for the purpose of making peace with the Cheyennes and Arapahas, then said:

"Cheyennes and Arapahas, I am glad to meet you to-day; you have spoken truth about medicine arrows; Cheyennes and Arapahas, this is the third or fourth time we have made peace; but it will not hold; you have never been to see us; we have always been the ones to come and see you; my brothers, I have come to see you to-day; you sent a young man to our village, we gave him arrows, but have never received an answer; you have only stolen our horses and killed our people; it is true last year when I left my village I had my bag full of news; but before I got to where you were I stumbled and lost it all. My brothers, the Cheyennes, you see me here to-day; my father brought me here to make peace with you; although you see me here as nothing, when I am in my village I am not afraid of you; everything I say to you is true: I hide nothing from you; I have come to see you, my brothers, and I hope you will come to see us. It appears you have been afraid to come and see us, but come there now, and we will not kill you: we will receive you well; my brothers, the road is now good; it has been made good by our father; I hope you will go and come without fear; may it always remain good."

The colonel requested the Cheyennes to select a chief for each of the three bands that were at the council. But, after waiting for a considerable length of time, and finding no one willing to step forward, he told Little Moon to select three chiefs, (one for each band,) and, if they pleased the nation, they might be appointed. He accordingly took three of them by the hand and led them forward to Colonel Dodge, and seated them near him. The colonel then asked them if they had any objections to these men; no objections were made. They were not only the choice of the Cheyenne nation, but the very men that the traders who were acquainted with them would have selected. The colonel then put around their necks the representation of a medal, and told them they were chiefs, and would be regarded as such by the whites. He also told the Cheyennes that they must consider these men as their chiefs, and respect them accordingly. Their names were, the White Crow, the Flying Arrow, and the Walking Whirlwind; all of them distinguished warriors, friendly with the whites, and popular with the nation. The presents were then distributed, consisting of blankets, tobacco, knives, &c., according to the number in each nation. They appeared much pleased, and went away delighted with the goodness and generosity of the whites. They gave the Pawnee twelve horses, and seemed desirous of establishing a permanent peace with that nation. They had sent out war parties against the other nations with whom they were at war, and wished to wait until their return before they could agree to make peace.

If an agency were established at this place, in a few years peace might be restored among all the different tribes in this portion of the country. This appears to be a favorable position for establishing an agency, as it is a central point, where the Indians near the mountains all collect. The Kiowas, Comanches, (upper bands,) Cheyennes, Arapahas, Gros Ventres, and Blackfeet, all frequent this section of the country, and come to this trading establishment for the purpose of exchanging their buffalo robes for goods. Another advantage it possesses is, that it being close to the boundary line, the movements of the Mexicans could be watched; and in case any encroachments were committed, the earliest intelligence might be received. The Indians have the highest opinion of the Americans—think them the first people in the world, and would pay the greatest regard to what they were advised by the whites.

August 12—Saw one of the traders who had just returned from trading with the Comanches. He informed us they were very friendly disposed towards the Americans. They told him their nation had made peace with the United States; (alluding to the peace made by Colonel Dodge, at the Pawnee Peet village, last summer.) This peace, the traders informed us, has been strictly kept by the Comanches, they having neither killed nor robbed any of the whites since that time. This peace has been of great advantage to the traders, as they have since opened an extensive trade with two of the largest tribes of Indians west of the Mississippi. Took up our line of march in the evening for Fort Leavenworth. The command at this stage of the march was in a most perfect state of health—not a man upon the sick report; the horses in fine order, nearly as good as when they left Fort Leavenworth. The colonel had seen all the Indians he expected to see, and had established friendly relations with them all; had marched one thousand miles over a beautiful and interesting country, and we started for home with that joyous and self-satisfied feeling which resulted from a consciousness of having accomplished the full object of the expedition.

Just before our departure, the Arapaha chief and the Gros Ventre came down to our camp to bid us farewell. They said their hearts were very glad; that the Americans were very good; that they would go home and tell their people how well the whites had treated them, and they thought their people would cry because they did not come with them.

Continued our march down the Arkansas. The valley continued to retain the same general appearance it possesses above; the timber, however, less abundant than heretofore, the soil more fertile, and the valley a little narrower. The terminating ridge of the valley seems at this place to be composed of regular layers of rock superimposed upon each other. They appeared to be mostly sandstone, of a fine texture. The debris of the rocks appears to be of various sorts and species. Saw no buffalo, but discovered recent traces of them. The country back from the river between this and the Platte is mostly a high prairie, in some places rough and uneven, in others perfectly level. There is but little timber, and a great scarcity of water. Some of the creeks, however, we passed, which are dry at the mouth, are said to contain some water near their source. The distance across the country from the Arkansas to the Platte is said to be from one hundred to one hundred and twenty miles, and the buffalo numerous.

About forty miles from Bent and St. Vrain's fort we passed one or two good positions for a military post, should it ever be the policy of the government to establish one in this portion of their Territories. This location is upon a high bluff bank, with extensive flats on each side, covered with timber. It is situated on a point near the bend of the river, and could command the river above and below for a considerable distance, and would be difficult of approach on either side. There are large quantities of stone for building immediately on the ground, and an abundance of timber close at hand. Another advantage it possesses is, that it is on the most direct route from Fort Leavenworth to Santa Fé, and would be a favorable depot for the dragoons on their march through that section of the country.

Arrived at another Cheyenne village on the evening of the 14th, having marched about fifty miles since leaving Messrs. Bent and St. Vrain's fort. This was the band of Cheyennes that were absent at the council. There were about fifty lodges of them. They had large quantities of buffalo meat hanging up to dry all around their village, and their encampment was surrounded by a large number of horses, many of which they had just stolen from the Comanches. Soon after we had encamped the principal men

and warriors of the village came down to visit us. Colonel Dodge held a talk with them, in which he told them that he was happy to meet them; that he had come a long way to see them and the other tribes; that he had been sent by their great father, the President; that he had met the Arepahas, Gros Ventres, and other tribes of the Cheyennes in council; had made a chief for each of the three bands that were there, and that if they would select one of their principal men he would make him a chief, and he would be regarded as such by the whites; that Mr. St. Vrain would give them presents equal in amount to the presents received by the other bands. They pointed to five men sitting together, saying they were the principal men; they appeared reluctant to make the selection from among these five. The colonel then told them they must select some one to receive the presents and have them distributed. One of the braves was finally led forth to whom the medal was given, together with the presents, and a letter from Colonel Dodge stating that he had been made a chief. His name was White Man's Chief. They appeared well pleased with their reception, and went away highly gratified.

August 15.—This morning while a large number of the Cheyennes were collected at our camp, and the colonel talking to the new-made chief, we heard the report of several guns immediately over the ridge, about a mile distant; soon after a large volley; then another. The Cheyennes who were in camp mounted their horses immediately and rode off in the direction of the firing at full speed. Not knowing who it was, the colonel ordered the command under arms. Soon after some of the Indians returned, and gave us to understand by signs that it was a party of Pawnee Loups and Arickaras, who had come over to make peace with the Cheyennes. They came to the top of a hill in sight of the village, fired their guns in the air, and raised their flag as a sign that they wished to make peace. The Cheyennes ran out to meet them, took them by the hand, and conducted them to their village, where they commenced by smoking the pipe of peace, and giving them horses. After they had given them about one hundred horses they invited them into their lodges, and commenced giving them feasts. In return for which the Pawnees and Arickaras gave them a number of guns. They spent the whole day in this manner, feasting and making presents.

August 16.—Colonel Dodge held a council with the Cheyennes, Pawnees, and Arickaras. He went to the lodge of the new-made chief and requested him to collect the principal men together. Sent, also, for the chiefs of the Pawnees and Arickaras. After they were collected together the colonel addressed them as follows:

"To the chiefs and principal men of the Pawnees, Arickaras, and Cheyennes:

"Friends, I am happy to meet you. My advice given to the Pawnees and Arickaras on my march to the Rocky mountains has been followed. The Cheyennes, your former enemies, have met you as friends; you have smoked the pipe of peace together, and, I hope, forever buried the hatchet of war. The road is now open for the Cheyennes to go and see the Pawnees and Arickaras. I am assured by their chief that the Cheyennes will be treated with the same friendship and kindness that they have extended to the Pawnees and Arickaras. Your great American father will be pleased to hear that his remote red children are making peace with each other; it is his wish that you should all live in the same country. The Pawnees, Arickaras, and Cheyennes, making peace, can hunt the buffalo without the dread of being killed; a friendly intercourse between you will make your children friends; they will, when grown, take each other by the hand; and a state of war will give way to good feeling with you all; you have never profited by killing each other; it will always terminate to the injury of you all. The Pawnees have been stopped, by the advice of their agent, from going to war with the Cheyennes and other nations; I gave them the same advice when at their village. I was pleased, yesterday, to find that my words had been listened to; I told the Cheyennes what they find to-day is true. The Great Spirit has providentially brought us all together at the same time, and has proved to the Cheyennes the truth of my words. Your great American father is desirous that a lasting peace should be made with all the redskins, with a view of helping their condition. You are poor: you have no country that your great father wants; the dragoons you see here were sent for the purpose of ascertaining your true condition; should you have bad men among you who will not listen to good advice, and who will kill and steal, you must punish them; the chiefs and braves are pledged for the strict observance of treaties of peace when made between you, and you should not permit the evil-disposed to destroy all the good that has been done; bad men among all people must be made examples of. I am going to part with you; I hope to hear that the good counsel I have given you will be remembered by you all when I am far from you. You will be convinced that your true interest is to hold each other strong by the hand as brothers and friends, and never again to stain your hands by the blood of each other."

The Cheyennes, having not yet learned the practice of speech-making, did not directly reply to Colonel Dodge; they said, however, they were very glad to see the whites, and wished the colonel to remain several days that they might hunt buffalo and bring in meat for him. They appear desirous of making a permanent peace with the Pawnees and Arickaras. A large party accompanied a party of Arickaras and Pawnees who were going to visit the Arepahas for the purpose of making peace with them. The Cheyennes and Arepahas are to meet the Pawnees and Arickaras on the Platte next winter and hunt buffalo with them. The Pawnees are to bring along with them a large quantity of corn, to give feasts and trade with the Arepahas and Cheyennes.

The Arickaras were formerly on very friendly terms with the Cheyennes, and lived with them for some time; many of them still speak the Cheyenne language well. After the Cheyennes had concluded an alliance with the Arepahas, the Arickaras commenced stealing their horses. Still they would not go to war; they said they did not care for a few horses. The Arickaras soon after killed several whites who were trading with the Arepahas. They then determined to declare war against them; and soon after the Arepahas meeting a war party of twenty or thirty Arickaras, who were coming to steal their horses, they attacked them and killed them all—not one escaping. The Cheyennes soon after met a war party of Arickaras and killed them all, except one: him they told to go home and tell his people that it was the Cheyennes who had killed the party. Since that period they have carried on a predatory warfare until the present time. This peace is no doubt the result of the advice given them by Colonel Dodge. At the council with the Pawnees and Arickaras, he advised them strongly to make peace with their enemies, especially the Cheyennes and Arepahas. He represented to the Arickaras their deplorable situation; if they still persisted in war, that they must inevitably lose their name as a nation. This advice had a great effect upon them, as they had already commenced to experience the truth of it.

The Star (one of their chiefs) afterwards told Colonel Dodge that he would go out to meet the Cheyennes with a peace party, and would get there as soon as he did. He proved the truth of this remark

by his arrival. The Star has always been more friendly to the whites than the other chiefs. And he informed the colonel, since he has been here, that the Arickaras had listened well to his advice; that it had sunk deep into their hearts; that he (the Star) had acquired a great influence among them, and was now one of their principal chiefs, and that he was constantly impressing upon their minds the necessity of listening to the advice their father had given them, and of making peace with their enemies.

The good effects of the expedition are thus becoming apparent, and it will probably have the effect to establish peace among all the different tribes between the Arkansas and the Platte. This will be of immense advantage to these Indians, as they will thereby have an extensive country opened to them, covered with innumerable buffalo, where they can hunt in safety without the fear of being attacked by their enemies.

August 17.—Commenced our march down the Arkansas, the valley still retaining the same general feature it possessed above. The timber less abundant, in many places none at all; were obliged to use drift for fuel. Upon the opposite side of the river, the sand-hills commence near the bank, and extend to a considerable distance back. On this side the valley is of variable width, from a half to two miles, terminated by a rough, broken country, which is supposed to extend to the sand-hills of the Platte. There is no wood and but little water in dry seasons between this and the Platte, and the buffalo are obliged to come to the river to get water; but in wet weather there is water in the dry creeks, the mouths of several of which we passed. Saw but few buffalo; as the weather has been wet for four or five days, they have not been obliged to come in to the river for water. The soil of this portion of the valley appears to be composed principally of gravel; no grass but the short buffalo grass, and prickly pear in abundance. Near the river, however, there is a narrow flat, which is very fertile—the grass high and good. Arrived at Chouteau's island on the evening of the 19th, having marched seventy-five miles since leaving the last Cheyenne village.

August 20.—The weather being wet and foggy, we remained encamped; a party of men were sent out hunting, who killed two buffalo bulls; no buffalo cows were seen.

August 21.—Took up our line of march down the Arkansas. The river at this point is broad and shallow, with a large number of islands, some of them covered with timber; the valley more narrow and terminated on this side by hills of an irregular appearance, composed principally of gravel or stone. On the opposite side the valley is terminated by sand-hills, extending as far back as the eye could reach, and presenting a barren and desolate appearance. No wood on this side the river except the drift along the banks. Saw a few buffalo. Arrived at the point where the Santa Fé trail crosses the Arkansas on the evening of the 23d, a distance of fifty-five miles from Chouteau's island.

August 24.—Took up our line of march on the Santa Fé trail, which conducted us over a high barren prairie, with no wood. Were obliged to make use of buffalo dung for cooking. Arrived at the Pawnee fork on the evening of the 29th, a distance of about seventy-five miles from the crossing. We approached the river but once or twice during the march. Remained encamped one day for the purpose of killing buffalo to provision us to Fort Leavenworth; found the Pawnee fork swimming. In dry weather the Pawnee fork is a small muddy stream, with high banks, bordered with timber; the late rains, however, had swollen it to a considerable height.

August 30.—Crossed our baggage over the Pawnee fork in boats made of buffalo hides; swam the horses, and continued the march again on the Santa Fé trail. Continued down the Arkansas for forty or fifty miles, where the trace left the river, and bore off towards the north. Crossed several small creeks skirted with timber; arrived at the little Arkansas on the evening of the 2d September, a distance of about eighty miles from the Pawnee fork. The country during this stage of the march was a high prairie, with no wood except on the banks of the small creeks; the soil more fertile than heretofore, the short, thick buffalo grass giving place to the high, coarse grass of the common prairie. Saw large herds of buffalo.

September 3.—Continued the march; the buffalo began to disappear, and before night none could be seen. Commenced raining, and continued during the day and night. Next day had two creeks to swim, and arrived at the Cottonwood fork of the Neosho about 10 o'clock at night, having marched a distance of forty-five miles since leaving the Little Arkansas. No wood between the Little Arkansas and the Cottonwood fork. Remained encamped two days the (5th and 6th) at Cottonwood fork for the water to fall, that the creek might become fordable. On the 7th forded the creek, and took up our line of march along the trace. Arrived at Council Grove on the evening of the 8th, a distance of fifty miles from Cottonwood fork. The country between Cottonwood fork and Council Grove is more rough and hilly than the country beyond it. The grove extends along the river Neosho as far as the eye can see, and is about a mile wide; it is composed of various sorts of timber of a large growth, and its vicinity would afford several fine situations for a plantation, the soil being very fertile along the valley of the river.

On the 9th and 10th made a march of forty miles, the country still continuing rough and hilly; the creeks numerous; most of them bordered with a considerable quantity of timber. On the 11th a man of company "A" died—the first death that has occurred on our whole march, and the only severe sickness. The colonel directed him to be buried on a high prairie ridge, and a stone placed at the head of the grave, with his name and regiment engraved thereon. Continued the march; crossed the Hundred-and-ten-mile creek, and entered upon the dividing ridge between the Kansas and Osage rivers; passed Round and Elm Groves, and arrived at the crossing of the Kansas, at Dunlap's Ferry, on the 15th; crossed the river, and on the 16th arrived at Fort Leavenworth.

Since leaving the fort, the command had marched upwards of one thousand six hundred miles over an interesting country; had visited all the Indians between the Arkansas and Platte, as far west as the mountains; had made peace between several tribes, and established friendly relations with them all, and returned to Fort Leavenworth in a perfect state of health, with the loss of but one man. Our provisions lasted until the day of our arrival; and our horses (most of them) returned in good order. The expedition had exceeded in interest and success the most sanguine anticipations.

HEADQUARTERS UNITED STATES DRAGOONS, *Fort Leavenworth, October, 1835.*

SIR: I have the honor to inform you of my arrival at this fort on the 16th ultimo, with the companies of United States dragoons commanded by Captains Ford and Duncan and Lieutenant Lupton. I marched from this post on the 29th of May last, in obedience to general order No. 12, and believing that I would meet with large war parties of Indians on my march to the west, I thought it advisable that two swivels

(3-pounders) should accompany the expedition, mounted on wheels. I believed these light field-pieces would secure my camp should the Indians make a sudden attack on the command, and enable me to force my passage across rivers or difficult passes, should any attempt be made to stop me. On my march up the Missouri from this post, I found some of the small streams swimming. I crossed my command over them in skin-boats, and my light field-pieces by hauling them over with ropes. On my arrival at the Platte or Shallow river, I found it high, almost overflowing its banks, and to have crossed it at that time I would have run the risk of losing some of my horses and part of my baggage.

I met the Otto Indians at their village, and held a council with them on the 12th of June, in company with Major Dougherty, United States Indian agent. Here I remained awaiting the arrival of the Omaha Indians, Major Dougherty having sent his interpreter for them on my arrival at the Platte river. The dragoon horses, having to swim several small streams, required a few days' rest.

On the 17th of June I held a council with the Omaha Indians, and on the same day commenced my march for the village of the Grand Pawnees. Believing the general-in-chief had permitted me to exercise my discretion as to the extent of the detour I should make to the left, on arriving at the Platte or Shallow river, I determined to march up to its forks, and afterwards continue up the south fork to the Rocky mountains; then make a detour to the left, near the mountains, until I arrived at the Arkansas river, the boundary line of the United States, a short distance from where the Arkansas leaves the Rocky mountains, and thence down that river to where the road leading to Santa Fé crosses that river from the State of Missouri to the Mexican States, and pursue that road to the settlements.

I continued my march, and arrived at the Grand Pawnee village on the 21st of June. Major Dougherty, United States Indian agent, had sent his interpreter in advance to notify the different bands of the Pawnee Indians of my intention to meet them in council on the 23d of June; which I did, at the Grand Pawnee village.

On the 24th of June I marched for the forks of the Platte river, where I was informed I would meet the Arickara or Rees Indians. I despatched a messenger, with two Arickara chiefs, in advance of my command, to convene these Indians. My messenger arrived, with the principal chiefs and braves of the Arickaras, about one day's march above the forks of the Platte river. I remained in council with these Indians on the 6th of July, made them a few presents, and marched on the 7th up the south fork of the Platte.

On the 16th of July I was in full view of the Rocky mountains, covered with snow, and then at least one mile distant from my command.

On the 24th of July I could see where the south fork of the Platte river left the mountains. I then changed my course south, near the foot of the mountains, in the direction of the head of the Arkansas river.

On the 28th of July I encamped in full view of Pike's Peak, on the Rocky mountains. The next morning two Spaniards arrived at my camp, and stated that they had been sent by traders from the Arkansas river in search of the Arepaha Indians. On the 30th of July I arrived at the Arkansas river, about five miles from the point where that river leaves the Rocky mountains. Here I saw about sixty lodges of the Arepaha Indians, with their families. This nation claims the country from the south fork of the Platte river to the Arkansas, and numbers about eleven hundred warriors. They have never entered into a treaty with the United States. They are said to have come from the Rocky mountains, and are the descendants of the Blackfeet Indians, whose tongue they speak. I found them desirous of cultivating the most friendly understanding with me. From this place I despatched a messenger, with a few dragoons, in search of some of the principal chiefs of the Arepahas, with some of the Cheyenne and Blackfeet Indians, who were on the waters of the Platte.

On the 31st of July I commenced my march down the Arkansas, and arrived at the fort of Bent and St. Vrain on the 4th of August. This fort is built on the Arkansas river, about one hundred and thirty miles from the Rocky mountains, and its owners are trading under a license from the superintendent of Indian affairs at St. Louis. They have erected the fort to protect them against a sudden attack of the Indians, and have a six-pounder and several small, light field-pieces; they trade with the Arepaha and Cheyenne Indians, and also with the Comanches of the Red river. At this place I met a number of the Cheyenne Indians. On the 6th of August my messenger arrived with one of the principal chiefs of the Arepaha Indians, and some of the Blackfeet who reside with the Arepahas. At Fort William, on the 7th of August, I met a large assembly of Indians in council, and endeavored to explain to them the views and wishes of the government in relation to them. A small deputation of Pawnees accompanied my command from the Pawnee village, and had a friendly understanding with their old enemies, the Arepaha and Cheyenne Indians. I made a few presents to them, in the name of the great father, the President of the United States, which appeared to have a great effect on them, they being the first ever made to the Arepahas or Blackfeet. At this council I learned that the Osages and Arepahas, who had been at war for many years, had made peace, and that a party of the Osages had gone to the Comanches, on Red river, to confirm the peace made between them last year. Mr. Bent, of the trading-house of Bent & St. Vrain, arrived at Fort William, on the Arkansas, the day after I had held the council with these Indians. He had visited the Comanches on the Red river, and stated that he had seen upwards of two thousand, and they had treated him with great kindness, and expressed a desire to be included in the peace made by me with the Comanches last year.

When the boundary line is run between the United States and Mexico, I believe that more than one-half of the country now claimed by the Comanches will be within the territorial limits of the United States.

On the 12th of August I took up my line of march down the Arkansas, and on the 14th arrived at a village of the Cheyenne Indians, composed of about sixty skin lodges. In the evening after my arrival I held a council with the principal braves of this band. About eight o'clock next morning my attention was directed to the firing of a number of small arms in quick succession at the distance of about one-half a mile; more than one hundred guns were fired in one or two minutes. Supposing this firing to be an attack on the Cheyenne Indians by some of their enemies, and that this band might ask protection from me, I instantly formed the dragoons in order of battle, until I could be informed as to the cause of the firing. It was, however, soon ascertained to be a party of the Pawnees and Arickaras, about one hundred in number, under the command of one of the principal chiefs of the Pawnees, which Indians, on arriving in the vicinity of their enemies, the Cheyennes, had fired their guns, to prove to them their friendly disposition by approaching with empty guns. I was much gratified to meet the Pawnees and Arickaras at a village of the Cheyennes, on the Arkansas river. I had advised them, in council on the river Platte, to make peace with their old enemies, the Arepahas and Cheyennes. This I considered a fortunate meeting

of the old enemies, as it enabled me, as the mutual friend of all, to effect, I hope, a lasting peace between them. The Cheyennes made presents to the Pawnees and Arickaras of upwards of one hundred horses, and the latter made a present of fifty of their guns to the Cheyennes. I endeavored to impress strongly on the minds of these Indians the mutual advantage that would result to them by making a lasting peace.

On my march down the Arkansas to the point where the road leading from the State of Missouri to Santa Fé crosses that river nothing of moment occurred, except the death of one of the dragoons, who was taken sick suddenly, and died in two days. I have had the honor to command eleven mounted expeditions, and I have never seen mounted troops enjoy such good health. I had seldom more than two or three sick men on the sick report, and frequently not one. The dragoon horses performed well, and few of them were left behind on the march. The mules were generally in better condition than when they left the post.

On my arrival here I found Captain Hunter in command, and prepared to take up his march for the frontiers. His company having suffered some by sickness, and from the information I could collect as to the conduct of the Indians on the frontiers of Missouri, and the Territory of Arkansas, south of this post, I thought it advisable to detain him. The Indians on this frontier are peaceable and appear well disposed.

The officers who accompanied the expedition were Lieutenant G. Kingsbury, acting adjutant and journalist; Lieutenant Terrett, acting assistant quartermaster and acting assistant commissary of subsistence; Lieutenant Steen, ordnance officer; Captains Ford and Duncan, and Lieutenant Lupton, commanding companies; and Assistant Surgeon Doctor Fellows.

The duties of the company commanders were arduous, being without the aid of subalterns. It gives me great pleasure to state that the conduct of the officers has met with my entire approbation. The non-commissioned officers and dragoons of this command have done their duty and proved their ability to perform the active duties of the field.

On this tour of service the dragoons marched more than 1,600 miles.

Enclosed you will receive the journal of the expedition, with my talks to the different nations of Indians, and a map of the country over which I marched.

I have the honor to be, with great respect, your obedient servant,

H. DODGE, *Colonel commanding U. S. Dragoons.*

Gen. ROGER JONES, *Adjutant General U. S. Army, Washington City.*

HEADQUARTERS WESTERN DEPARTMENT, *November 12, 1835.*

SIR: I have the honor to transmit, for the information of the proper authorities, the letter and journal of Colonel Henry Dodge, commanding the United States light dragoons, reporting the details of his late tour of service, the results of which are not only altogether deeply interesting, but are, in part, *extraordinary*, and, I may add, unprecedented. For example, the expedition, embracing a traverse of sixteen hundred miles of continuous wilderness, alternate prairie and woodland, in which many nations of Indians were conferred with, and most judiciously impressed with the *justice, magnanimity, humanity, and power* of our government and country, and then passed by without sustaining any injury or loss by any casualty, excepting only the short illness and death of one of the brave dragoons, and without loss or any material injury done to the horses of the battalion.

If we are to regard, as worthy our constant attention, the maxim "*In peace prepare for war,*" and in our efforts to conform strictly to this maxim should avail ourselves of fit and striking occasions to notice, with marked approbation, particular officers or corps who may be so fortunate as to discharge very difficult or delicate duties in a manner so worthy of imitation, I know of no officer or corps of my command to whom such a mark of distinction is more justly due than to Colonel Dodge and his officers and soldiers engaged in this expedition. For it is not probable, if it is possible, that such an expedition could have been crowned with so many favorable results to the service, to the Indians, as well as to the frontier inhabitants, without very great vigilance, care, and prudence, on the part of the colonel and his officers, and constant attention, obedience, and fidelity on the part of the non-commissioned officers and soldiers.

That it requires at least as high a degree of *moral courage*, that description of moral courage which, on all occasions, marked the character of our beloved Washington, to perform such a tour of service in the manner this has been accomplished, as to fight battles and win victories, there can be little doubt among men of experience. Indeed, it is not uncommon for idlers, and tipplers, and others, destitute of the moral courage to do their ordinary duty even tolerably, who, on the spur of occasion, have turned out and made a respectable fight.

I am decidedly of the opinion that a sword given to Colonel Dodge, a brace of pistols to each one of his commissioned officers, and a month's pay extra to each one of the non-commissioned officers and soldiers who accompanied him, would contribute much to the good of the service, by inspiring all officers and men with that spirit of increased vigilance and emulation so necessary to the preservation of health, and life, and public property, and which is essential to insure success of all wilderness movements.

The approaching disturbances in Texas would seem strongly to admonish us of the immense importance of our officers and men being thoroughly acquainted with the whole line of our southwestern frontier, from the Sabine bay to the Rocky mountains.

All which is submitted with due respect.

EDMUND P. GAINES.

Adjutant General JONES, *United States Army, Washington City.*

24TH CONGRESS.]

No. 655.

[1ST SESSION.]

APPLICATION OF AN OFFICER OF THE ARMY FOR PAYMENT FOR A HORSE WHICH WAS ORDERED TO BE SHOT ON ACCOUNT OF A CONTAGIOUS DISEASE.

COMMUNICATED TO THE SENATE MARCH 2, 1836.

Mr. NAUDAIN, from the Committee on Claims, to whom was referred the petition of John L. Elbert, late a lieutenant of light dragoons in the service of the United States, praying compensation for a horse lost by him while in the service of the United States, reported:

That the petitioner represents that, while in the service of his country as a lieutenant of light dragoons, in the year 1814, on a march from Plattsburg to Fort Erie, a very valuable horse he owned became diseased with glanders, and that the said horse was ordered to be shot by his captain, lest the contagion should spread to other horses in the service, and prays Congress to make him compensation for the loss of the said horse.

In the regular service of the United States all officers who, by law, are entitled to be mounted furnish their own horses at their own expense and at their own risk. The United States do not insure them against disease or the ordinary risk of injury or death. The only cases in which compensation to such officers has ever been made has been for horses killed in battle, and for such losses provision is made by the act of May 12, 1796.

The committee are therefore of opinion that the prayer of the petitioner ought not to be allowed, and recommend the adoption of the following resolution:

Resolved, That the prayer of the petitioner ought not to be granted.

[1ST SESSION.]

ON THE EXPEDIENCY OF CONVERTING THE ARSENAL AT ST. LOUIS INTO AN ARSENAL OF CONSTRUCTION, ETC.

COMMUNICATED TO THE SENATE MARCH 2, 1836.

WAR DEPARTMENT, *February 25, 1836.*

GENTLEMEN: In answer to your inquiries of the 17th instant, I transmit a report of the colonel of ordnance on the subject of the arsenal at St. Louis.

Very respectfully, your obedient servant,

LEWIS CASS.

Hon. THOMAS H. BENTON, }
L. F. LINN, } *Senate.*

ORDNANCE OFFICE, *Washington, February 23, 1836.*

SIR: The letter of the Hon. Messrs. Thomas H. Benton and L. F. Linn, dated the 17th instant, asking an opinion as to the expediency of converting the United States arsenal at St. Louis into an arsenal of construction, with an estimate of the amount necessary to effect the alteration, has been duly considered.

The only arsenal of construction in the west is at Pittsburg, Pa., and the navigation of the Ohio is so much impeded by ice in the winter, and by the lowness of the water at other seasons of the year, that the expediency and advantages of another arsenal of that class in the west are obvious and unquestionable.

The arsenal at St. Louis was built with a view to its being converted into an arsenal of construction, although not formally established as such. About \$40,000 for the purchase of machinery and the erection of some additional buildings, with the amount heretofore estimated for, would be sufficient to complete it for the purpose suggested without altering its original structure.

I have the honor to be, very respectfully, sir, your obedient servant,

G. BOMFORD, *Colonel of Ordnance.*

Hon. LEWIS CASS, *Secretary of War.*

[1ST SESSION.]

ON THE EXPEDIENCY OF PROVIDING FOR THE APPOINTMENT OF CHAPLAINS FOR THE ARMY.

COMMUNICATED TO THE SENATE MARCH 3, 1836.

IN THE SENATE OF THE UNITED STATES, *March 3, 1836.*

On motion by Mr. DAVIS,

Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of providing for the appointment of chaplains for the army of the United States.

Attest:

WALTER LOWRIE, *Secretary.*

Fort Towson, January 12, 1836.

SIR: The appointment of chaplains for the United States army has been frequently recommended by the different Presidents and Secretaries of War; but I believe Congress has never acted upon the subject, and I presume it has been more from want of time than any other cause.

I now take the liberty to request that you will use your influence for the passage of a law authorizing the appointment of chaplains for the army, provided the subject should be brought forward and you should be of opinion that such appointments are expedient. I have been in the army for nearly twenty-four years, and I am now convinced, from past experience, that nothing will add so much to the respectability and efficiency of our army as the appointment of chaplains and the regular public worship of God at our military posts on the Sabbath.

It is found that where the Sabbath is properly observed, and public worship held, that there are few desertions, less intoxication, and a more healthy and efficient command. Saturday is the inspection day; and as military duties are prohibited on the Sabbath, and labor usually suspended on that day, the men, unless they attend public worship, will pass their time in idleness and dissipation.

Let there be chaplains appointed for every military post, and let officers, as well as men, be required to attend public worship on the Sabbath, and we shall see, very soon, an astonishing change in the moral character of our army: provided, however, that the chaplains are the right kind of men. They should not be men who seek the office merely for its emoluments; they should be men of talents, of social habits, and, above all, of *undoubted piety*. Such men would do good, and such men can be found, who would cheerfully enter the service for a compensation of \$800 or \$1,000 per year. The whole cost to the government would not be more than fifty to sixty thousand dollars per annum.

As we have an overflowing treasury, and money that our legislators will find difficulty to dispose of, it is to be hoped that in their wisdom they will consider the moral condition of the poor soldier, and pass a law which may be instrumental in making them better men, and preparing them for another and a better world.

Much more might be said upon this subject, but I will not take up your time, which, I am sensible, is fully occupied by your public duties.

I indulge the belief that you will excuse the freedom I have taken in writing to you, and that you will give the measure I have proposed, if it should be brought up during the present session, your cordial support.

With high respect, I have the honor to be, sir, your most obedient servant,

J. H. VOSE, *Lieutenant Colonel 3d Infantry, Commanding.*

Hon. JOHN DAVIS, *United States Senate, Washington, D. C.*

24TH CONGRESS.]

No. 658.

[1ST SESSION.]

ON CLAIM OF A LIEUTENANT OF ORDNANCE FOR ADDITIONAL PAY AND DOUBLE RATIONS FOR DOING DUTY AS ASSISTANT ENGINEER ON DELAWARE BREAK-WATER.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 3, 1836.

Mr. FORESTER, from the Committee of Claims, to whom were referred the papers of Captain William H. Bell, reported:

That claimant, who was an officer of the government, acted as assistant engineer at the Delaware breakwater, from the 4th of April to 24th of July, 1831, making one hundred and eleven days, for which he claims \$1 25 per day and double rations, equal to eighty cents per day. The President admits the justice of his claims, but says he has no authority by law to allow it, and refers him to Congress. Offices under our government are in the nature of a contract. The government creates the office, prescribes the nature of the duties, and fixes the compensation; but the amount of services is generally contingent, and the government has a right to increase or diminish them at pleasure, because the officer agrees to this when he accepts the appointment. But the government has no right to demand services of a different character from that of his office, merely because he is already one of its officers, for that would be contrary to the understanding of both at the time he entered on the discharge of his duties; were it otherwise, an officer of humble station and small compensation might be required to perform the duties of a highly responsible one, which, owing to its magnitude, has a large salary attached to it; and that, too, contrary to his understanding when he accepted the one of less responsibility. This can neither be just nor legal. The committee therefore think that an increase of duty or labor, strictly in discharge of the office he holds, should not be a ground for extra pay; but where services of a character entirely different from those pertaining to the office he holds are performed, he is entitled to an extra allowance.

In this case the claimant was a lieutenant in the ordnance department, for which the committee presume he was paid, and what additional compensation he should receive when he discharged the duties of engineer they are at a loss to determine. The department has allowed Lieutenant Dimmock, while he discharged the same duties at the same place, \$1 25 per day; whether he received eighty cents for double rations does not appear. The committee would think his services worth as much as Dimmock's, and report a bill accordingly.

No. 659.

[1ST SESSION.]

ON THE ESTABLISHMENT OF A LINE OF POSTS AND MILITARY ROADS FOR THE
DEFENCE OF THE WESTERN FRONTIERS AGAINST THE INDIANS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 3, 1836.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, having taken into consideration the exposed condition of our inland frontier, reported:

The objects of military establishments with despotic nations are twofold: the suppression or prevention of domestic insurrections, and the repulsion of foreign enemies.

The first of these constitutes no part of the object of our establishments. In this happy republic the people are the sovereign; all power emanates from them and returns to them. American citizens are identified with the government, and they need no armies and bulwarks to fortify against themselves. Our government rests on the broad basis of public sentiment, and no intestine commotions can mar the fabric or endanger its safety. A great military establishment is therefore unnecessary in time of peace. But the history of the world shows that nations subject to the ambition and caprice of despotic and irresponsible rulers are inclined to hostility, and that the nation whose interest and disposition could preserve the olive must present a frontier as impregnable as circumstances will permit.

This sentiment so far prevails that our whole maritime border is in a progressive state of defence, which, it is believed, will be continued with increased energy till the whole shall be perfected. But our greatest exposure to sudden incursions, the committee believe, has been too little regarded; it is our inland frontier.

The savage tribes which border upon our settlements, from the Canada line to Louisiana, are more dangerous to the lives and property of our citizens than the whole civilized world. Their numbers at any one point are not so great as to give the most distant prospect of eventual success to any of their incursions; and if they were well informed of what must inevitably be the end of every hostile movement on their part, no danger would be apprehended from their depredations. But they are savages, uncivilized and unenlightened—creatures of passion and momentary impulse; and the late sufferings from the Black Hawk war in the north, and the more recent barbarities of the Florida Indians in the south, admonish us of the necessity of furnishing more effectual protection to our inland borders.

In both of these cases it is believed that, besides the great loss of lives and of individual property, the expense to the government in subduing the savages will have been ten times as great as would have been requisite to have prevented the catastrophe.

In the Florida war the force of the enemy was so perfectly insignificant in point of numbers that anything like a system of defence with such military force as might, at a very inconsiderable expense, be placed along the line, would have effectually prevented it. But for want of these preparatory measures, numbers of valuable lives have been lost, which cannot be estimated by any amount of money; great destruction of individual property has been sustained, which is as much a national loss as if it had flown from the treasury; and no less than five thousand militia have been called into the field, which, besides individual sacrifices, will take from the public coffers, at a moderate estimate, not less than a million of dollars.

The Black Hawk war presented a scene equally appalling. The savages were indeed subdued; but the lives which were lost could not be restored, and the expense to the treasury was not less than a million of dollars. These two wars alone, if they may properly be called wars, cost the nation twenty times as much as is now called for in the arrangement of a regular system of defence.

The policy of the government, to remove the Indians from the interior of the States beyond our western boundary, renders a regular system of defence still more necessary.

The number that will eventually have emigrated, in conformity with that policy, is estimated at nearly two hundred and fifty thousand. The honor of the nation is pledged to provide for their safety, and to extend to them all possible benefits.

To prevent the miseries which would result from feuds among themselves, as well as the depredations which they might be tempted to commit against our own citizens, there must be a military force within their observation; and the committee do not see any plan so economical, and at the same time so effectual, as that which may be anticipated from that which is suggested by the War Department, viz: by a military road, and strong posts and deposits upon it, embracing the whole frontier of Michigan, Wisconsin, Missouri, Arkansas, and Louisiana. The letter of the Secretary of War, marked A; the letter of the commissary general, marked B; and the statement marked C, are appended as a part of this report.

Bordering, as we do, upon an Indian frontier so extensive, and having so often felt the effects of their sudden impulses in bursts of the most cruel passions, the committee regard it alike the dictate of humanity and of sound policy to present to their view such an aspect of strength as will tend at once to restrain their savage ferocity and to supersede the painful necessity of retaliation.

The expense will be of small consideration compared with the utility of the object. A line of posts marking that frontier, and facilities of communication between them by a continuous military road, may be accomplished at an inconsiderable expense, less than a tithe of the proceeds of the sales of the public lands in the very domains which most require this protection.

The committee, in conformity with these views, beg leave to report a bill.

A.

WAR DEPARTMENT, *February 19, 1836.*

SIR: In answer to so much of your letter of the 11th instant as relates to the defence of the western frontier, I have the honor to transmit a copy of a letter addressed to the chairman of the Committee on Military Affairs of the Senate, which conveys the views of the department on this subject. The residue

of your letter, concerning the increase of the army, shall be answered as soon as the necessary information can be procured.

Very respectfully, your most obedient servant,

LEWIS CASS.

Hon. R. M. JOHNSON, *Chairman Committee on Military Affairs, House of Representatives.*

WAR DEPARTMENT, *February 19, 1836.*

SIR: In conformity with your letter of the 10th instant, I have the honor to submit for your consideration the following views upon the best method which can be adopted for the protection of the frontiers exposed to the hostile incursions of the Indians.

As I presume that in this question you refer to such measures as the nature of the country and the habits of the Indians render necessary, independently of any increase of the numerical strength of the army, and as the subject of that increase is specially referred to me by a resolution of the Senate, I shall in this communication confine my suggestions to the proper distribution and employment of a military force, and to the means which can be provided for its operation, so as to interpose the most effectual barrier against the incursions of the Indians.

The period has arrived when a systematic plan for the protection of our frontiers ought to be devised and adopted. Heretofore posts have been established upon our extensive inland boundary as circumstances from time to time required, without regard to any general arrangement; and, indeed, from the position of the Indians, any other course was probably impracticable. No line could be drawn upon one side of which the Indians could be kept, and our citizens the other. Positions were therefore selected with relation to their geographical advantages, and to the moral effect they were calculated to have upon the Indians. Among other inconveniences, however, which attended this plan was one that has occasionally produced considerable difficulty in our Indian intercourse. Changes of policy are the necessary result, more or less, of a change in the persons upon whom the administration of a general course of measures depends. As different views have been entertained, posts have been advanced into the Indian country and then withdrawn. Wherever this withdrawal has taken place, excitement among the Indians and sometimes more serious difficulties have occurred. They cannot comprehend the motives which dictate these operations, and they attribute such measures to a sense of our weakness or to a fear of them. It is only, therefore, in extraordinary cases that posts once established in the Indian country should be withdrawn. If moved at all, the movement should be in advance.

Annexed to this report are tables showing the number of Indians who now are, or probably soon will be, placed in contact with our settlements west of the Mississippi river. It will be seen, by reference to them, that there have already been removed to that region from the country east of the Mississippi 31,348 Indians, and that the indigenous tribes between them and the Rocky mountains amount to 150,341, making already an Indian force of 181,689, requiring precautionary measures to restrain them. There are yet 62,181 to emigrate, and when their removal is effected the whole Indian force west of the Mississippi and east of the Rocky mountains will probably be about 244,870.

Although many of these reside far from the settled frontier, yet all of them are roaming in their habits, and the nature of the country as well as the general possession of horses enables them to extend their war excursions to great distances. And, besides, we must adopt the policy of preventing the various tribes from committing hostilities upon one another. If this cannot be effected by remonstrance, it should be done by force. We owe such a decisive procedure not less to ourselves than to them. Our remote settlements will never be safe so long as the petty tribes in contact with them are permitted to engage in hostilities at pleasure, nor will our citizens residing in or passing through the Indian country. A war party, when once it has commenced its march, cannot return without scalps unless at the sacrifice of its honor. And if an enemy cannot be found, or cannot safely be attacked, the necessary trophies must be furnished by a friend. Many feuds upon our borders have been occasioned by outrages of this character. We have also promised protection to the emigrated tribes, and this guarantee, deemed so highly important by them, cannot be preserved without the adoption of vigorous measures, and the establishment of a system of defence adequate to any exigency that may occur.

The above estimates, although conjectural, are yet made from the best data that can be obtained, and may be considered as sufficiently approximating to the truth for all the purposes of this communication.

Independently of the obligations upon the government of the United States to afford protection to the whole country, there are peculiar reasons why occurrences upon the western border should excite peculiar solicitude. After a full consideration of the best means fitted to improve the condition of the Indians, and to place them in circumstances where they can do least injury to the people of the United States, it has been determined to transfer them to the country beyond the limits of our settlements west of the Mississippi. The system has already been pursued to such an extent as to insure its final success. When consummated, an immense body of Indians, whose estimated amount I have already stated, will be placed upon the borders of our settlements. We must expect that they will return in some measure to many of their former habits. They will in a great degree be strangers to one another and to the primitive tribes occupying that region. They will form little quasi independent communities, and will, of course, be liable to all those accidents and excitements which, even in more advanced societies, are calculated to lead to collisions. These will be increased by the peculiar views and feelings of the Indians. Their institutions have a tendency to war. No warrior arriving at manhood can enjoy any estimation until he has been present where the blood of an enemy has been shed. From that period he dates his distinction, and his fame is after that proportioned to his success in war. Their civil polity is feeble, seldom providing punishments for offences unless through the medium of the injured party. This, of course, leads to all those acts of revenge and retaliation which disturb barbarous communities.

It is obvious from these remarks, as well as from our own experience, that we must anticipate, after the removal of the Indians, that causes of difficulties, both among themselves, and between them and our citizens, will arise, and be in continual operation. These must be counteracted by the proper distribution along the frontier of a sufficient military force, and by such arrangements for its employment as circumstances may call for. We must not make any calculations upon the mere comparison of our strength with the weakness of the Indians, and upon the consequent forbearance of the latter. The

Indians have no conception of our actual power. They judge by what they see about them; and experience has shown that they are prepared to commence hostilities under circumstances which, as we well know, leave them no chance of success. They are, in fact, a people of impulse, and are brought into difficulties by the passions of the young men who act in opposition to the opinions and advice of those who are better disposed and more experienced.

Assuming, therefore, that the system of Indian emigration will soon concentrate upon our western frontier the powerful force already described, and that common prudence requires the adoption of a plan of defence adequate to any exigency which will probably arise, I proceed to submit to your consideration such views as have occurred to me upon this subject.

The country upon the border of which these transplanted tribes have been and will be stationed extends from Red river, passing the frontiers of Arkansas and Missouri, and the cession made by the Sacs and Foxes in 1832, to the tract west of Prairie du Chien, assigned by the treaty with the Winnebagoes in 1832 for their residence.

The great object is to make such arrangements as will distribute along this line a sufficient force to overawe the Indians, and to intercept any parties who might be disposed to make irruptions upon our settlements; and also to facilitate the necessary communication, and to allow a speedy concentration of troops upon those points where it may be required.

It is my opinion that, by opening a proper communication from some place upon the Red river, not far from Fort Towson, passing west of the ceded country in Arkansas, Missouri, and Michigan, to the right bank of the Mississippi, above the mouth of the Des Moines, and below the St. Peter's, and by the establishment of proper posts along this communication, better protection will be afforded to the frontiers than in any other manner; and with a view to effect this measure, I have the honor to submit for the consideration of the committee the accompanying bill.

The length of the route will probably be upwards of eight hundred miles, but this conjectural estimate will be varied by changes of direction necessary to accommodate the road to the nature of country, and the situation of the frontier inhabitants and Indians, and by any variations that may take place in the points of commencement and termination upon the Red river and the Mississippi. An examination of the country can alone furnish the necessary information upon these subjects.

After the road is surveyed, and its route determined, it should be opened for military purposes—that is, to facilitate the movement of troops along it. For this purpose the trees should be cut down, so as to give a proper width in the timbered country, and the marshy and wet places should be causewayed or otherwise rendered passable, and occasionally, perhaps, the earth should be thrown up in the centre of the road. The smaller streams, where there are not good fords, should be bridged. But it is believed there is a great deal of the country over which this road will pass so favorable that scarcely any work need be done upon it. It will be seen, from this description, that such a mode of construction is contemplated as will be economical, and at the same time sufficient for the object.

I propose that a sufficient number of positions be selected along this line for the establishment of military posts, and that the necessary works, similar in their character to those at our stockaded forts, be constructed. At or near each end of the route, and at an intermediate point, the dragoons should be stationed, while the other posts will be occupied by infantry. As far as circumstances will permit, the garrisons in the Indian country, east of this line, ought to be transferred to it. This will occasion the removal of Fort Towson, should the road commence at any considerable distance from that place; of Fort Gibson, if not upon the line, and of Fort Coffee. The position of Fort Leavenworth is probably sufficiently favorable to anticipate its continuance. It has already been determined to abandon Fort Armstrong, on Rock island, as the ceded country has extended considerably west of it, and to remove the garrison to St. Peter's.

This latter post will, under any circumstances, continue, and the temporary position occupied by the dragoons at the Des Moines will be the only remaining one in the Indian country west of the Mississippi. The detachment of dragoons occupying it will, of course, be transferred, as soon as proper arrangements can be made, to some point near the northern termination of the proposed road.

The following are the places north of the Ohio and east of the Mississippi where garrisons are now maintained on account of the vicinity of the Indians, namely: Fort Gratiot, at the outlet of Lake Huron; Michilimackinac, on the straits connecting Lakes Huron and Michigan; Sault Ste. Marie, at the foot of Lake Superior; Chicago, at the head of Lake Michigan; Green Bay, at the mouth of the Fox river; Winnebago, at the portage between the Fox and Wisconsin rivers, and Prairie du Chien, upon the Mississippi.

It will probably be many years before all these military positions can, with safety, be abandoned, and the garrisons occupying them stationed upon the communication proposed to be opened. This, however, may be done, from time to time, as the Indians in their vicinity retire west of the Mississippi. Fort Gratiot will not probably be long retained, and Chicago may be evacuated in the course of this season or the next, if the Pottawatomie Indians emigrate peaceably in conformity with their treaty. The positions at Michilimackinac and the Sault Ste. Marie must be held as long as those places are depots of Indian trade, and places of resort for the Indians during the open season of the year. The country about Green Bay is settling with much rapidity, and its advantages of soil and climate hold out the prospect of a dense population. The Indians have already left the immediate vicinity of the fort, and although it is proper it should be occupied for the present, with a view to its moral effect upon them, still it cannot be necessary long to retain possession of it.

The nature of the country on the upper branches of the Wisconsin, and the indisposition of the Indians to leave it, will probably postpone for some time the cession of their title. Until this takes place, Fort Winnebago, or some position in its neighborhood, must be maintained. Prairie du Chien, under this arrangement, may be considered a temporary post, to be transferred to the line of communication at some future period, which cannot be distant, when the Indians shall have left the country in its vicinity and withdrawn to that at a distance from the Mississippi.

A barrier thus interposed, and resting upon the right bank of the Mississippi, would cut off all communication between our settlements and the Indians west of that river, but would still leave open the frontier from Lake Huron to the Mississippi, passing north of the settlements at Green Bay and of the portage.

But the great difficulty to be anticipated is from the Indians west of the Mississippi, and not from those occupying this region. Little is to be apprehended from the Chippewas of Lake Superior, from the Menominee, or from the Indians upon the peninsula of Michigan. In a few years both of the latter will probably have been removed, and the progress of our settlements will have indicated whether any

further cessions of Indian titles are necessary east of the Mississippi. We shall then be enabled to determine upon the permanent arrangements to be made for the security of that part of the country. It is to be observed, however, that propositions are already before Congress for purchasing a part or the whole of the Indian possessions in the neighborhood of Green Bay, and of the country upon the Mississippi above Prairie du Chien.

There is not before the department the necessary information for determining the number of posts which ought to be occupied between the Mississippi and Red rivers. This can only be ascertained by a careful examination of the country. Presuming that Fort Snelling, at St. Peter's, Fort Leavenworth and Fort Towson will continue to be occupied, it is not probable that more than four or five others will be found necessary. The object will be to establish them at proper geographical points, where the supplies may be most easily furnished, and sufficiently near to the Indian settlements to produce a proper effect upon them, and also at such distances from one another that the necessary communications may be preserved with facility. The dragoons, during the open season of the year, when Indian aggressions are to be feared, should be employed in ranging along the road, and, if necessary, in making lateral excursions to the Indian towns and settlements. Proper supplies of forage and subsistence should be deposited at each of the posts, and the dragoons would thus be enabled to move promptly and rapidly, without any danger of destroying their horses, which is the necessary result of severe marches in the woods, where grain cannot be procured. It may be found advisable to erect block-houses, for temporary occupation, at intermediate points, as places of deposit, and to facilitate the passage of streams too large to be bridged. These, however, can be constructed by the troops.

If any unusual occurrence should render necessary the concentration of the infantry force stationed upon the line, they could be promptly moved, and, for that purpose, should always be prepared with the means of transportation. These, however, might be very limited, as the several posts would be provided with all the *materiel* necessary to efficient action. But it would probably be found that the employment of the dragoons in this service would be sufficient for all the purposes contemplated. This is a species of force peculiarly dreaded by the Indians, and its movement along the road would operate to restrain them, and to prevent their war parties from passing this barrier. Although constitutionally brave, yet in their war excursions they are very cautious, and are unwilling to expose themselves to a force in their rear.

I consider these remarks as practicably applicable, although, in fact, the road will pass beyond our frontier, and thus leave a small portion of the Indians within it. These, however, will belong to the emigrant tribes, from whom the least danger is to be apprehended; and there is little fear, with our settlement on one side, and this road thus secured and traversed on the other, that these Indians will engage in any hostile aggressions.

A portion of the work contemplated may be done by the troops; but to what extent must depend upon their health and upon the other duties they may be required to perform, and also upon the time within which it may be deemed proper to complete the whole plan.

I submit herewith a report from the quartermaster general, containing some valuable suggestions made by that experienced officer, which I cannot but recommend to your consideration. He estimates that the whole work, including the construction of the road and the establishment of the posts, may be completed for the sum of \$100,000. Fort Gibson ought not to be included in this computation, because it must be reconstructed, either upon its present site or upon some other to be hereafter selected, and an estimate for that purpose is already before Congress. For the same reason a new station upon the Des Moines should be excluded from the calculation. There is in the military appropriation bill a proposition for the establishment of a post in that quarter.

It is proper, however, to remark that these estimates made by the quartermaster general are, necessarily, very uncertain, because there is little precise information upon the subject in the possession of the department. Colonel Dodge, whose opinion is entitled to great weight, considers the whole country as affording great facilities for the construction of a road, and he thinks that one may be made at a very little expense. But even if the expenditure should ultimately exceed the estimate of the quartermaster general, viz: the sum of \$100,000, still the measure is sufficiently important to justify its adoption. And I am satisfied that no other plan can be devised which will afford adequate protection to the frontiers, and not involve far greater expenditures than this.

It will be observed that I have not proposed any defensive measures for the western frontier of Louisiana adjoining the Mexican boundary. I have supposed that your call relates to protection against Indian incursions, and have therefore confined myself to that subject.

Very respectfully, your most obedient servant,

LEW. CASS.

Hon. THOMAS H. BENTON, *Chairman Committee on Military Affairs, Senate.*

QUARTERMASTER GENERAL'S OFFICE, *Washington, February 15, 1836.*

SIR: In obedience to your order requiring my opinions and views as to the general route of a road from St. Peter's to Red river, and as to the number and the proper positions of the military posts required for the defence of that flank of our country, with an estimate of the cost of making the road and establishing the posts, I have to remark that our whole western frontier, extending from Lake Superior to the Gulf of Mexico, through seventeen degrees of latitude, is, as you are well aware, either bounded by a foreign territory in a state of civil war, or in direct contact with powerful and warlike Indian tribes. Should those who are in arms against their government on our borders be beaten, they will naturally fly to our country for protection; and if the bands of Indians under the control of their government be employed against them, the whole of our frontier south of Fort Towson will be exposed to their incursions, and to the indiscriminate slaughter characteristic of Indian warfare.

The Indians north of Red river, if united, might bring into the field perhaps twenty thousand warriors; and their numbers are daily increasing by the emigrating tribes from Ohio, Indiana, Illinois, Michigan, Tennessee, Mississippi, Alabama, Georgia, and Florida. Many of the emigrants occupy their new positions under the influence of hostile feelings, the result of real or imaginary wrongs; and, for the purposes of vengeance, would readily unite with the native tribes, who naturally view with jealousy the steady progress of our population westward, in any measures against us which should promise even temporary success;

and even were the mass of them inclined to preserve peace with us, danger is to be apprehended from the collisions among themselves, and their misunderstandings with frontier settlers. The better, and, indeed, the only way to preserve peace among them, and to protect them and ourselves, is to establish a strong cordon of posts along the whole line, with one or more advance posts on the Missouri; and if found necessary, on the Arkansas and Red rivers also, with good roads communicating between them, and from them to the interior. The posts should be fortified, and the garrisons should be sufficiently strong and well supplied to resist any sudden attack, and hold out if besieged; and there should be a mounted force constantly patrolling the road, and whenever circumstances should render such a measure advisable, strong detachments of dragoons or mounted riflemen should make excursions even into the remotest Indian country.

Taking Fort Snelling, at the junction of the St. Peters with the Mississippi, as the most northern point of the cordon, and Fort Jesup, near the Red river, as the most southern, the intermediate posts already established are Fort Leavenworth, on the Missouri; Fort Gibson, on a principal branch of the Arkansas; and Fort Towson, near the Kiamichi branch of Red river. To complete the line, a post is required about midway between Fort Jesup and Fort Towson; another between Fort Towson and Fort Gibson; a third near the Osage agency, on the Neosho; and a fourth on the river Des Moines, between Fort Leavenworth and Fort Snelling. Three positions on Des Moines have been mentioned, either of which, if properly fortified and garrisoned, would exercise a decided influence over the Indian tribes between the Missouri and Mississippi rivers, viz: at the Raccoon fork, the North fork, and the Upper fork. I should prefer the latter, because it is on the direct line of defence, and is within the neutral hunting ground of several tribes of Indians.

This office furnishes no data on which an estimate could be made with any tolerable degree of accuracy of the cost either of making the road or establishing the posts. The labor, however, would, in both cases, be performed by the troops, and but little expense would therefore be incurred, except for the wages of master workmen, the extra pay of the soldiers employed, the means of transportation required, and the tools and materials to be taken from the interior, such as glass, nails, iron, &c.

A road has already been opened between Fort Jesup and Fort Towson, a distance exceeding three hundred miles, which is now undergoing repairs by authority of an act of the last session of Congress. The length of the road from Fort Towson to Fort Snelling will exceed eight hundred and fifty miles; but the greater part of the route lying over a high and open country, where the work to be performed will be limited, in a great measure, to erecting bridges over streams and causewaying low and marshy places in their vicinity, thirty-five thousand dollars, it is believed, will be sufficient for the road, and for the four posts, about sixty-five thousand will suffice; making, together, a hundred thousand dollars for the road and posts—a small sum when compared with the important objects expected to be obtained.

In addition to the cordon indicated, the Council Bluffs should be reoccupied; that position is in the immediate vicinity of several tribes of Indians; it is within one day's march of the Ottos, one and a half from the Great Pawnees, two from the Mohas, two from the Pawnee Loups, and at a convenient distance from the hunting grounds of the Sioux. During the whole time it was held by our troops, scarcely an instance occurred of difficulty between the Indians enumerated and our traders or other citizens. From the number of tribes it may control, I consider it the most important military position on the Missouri; and whether we establish other posts or not, it should be seized and maintained. Prairie du Chien, though within this line of defence, cannot safely be abandoned; and a garrison of one or two companies will be required for some time at the mouth of the Des Moines.

Five thousand men, of whom fifteen hundred should be mounted, are necessary for the defence of this line, and it cannot safely be trusted to less. It will therefore be readily perceived that, in the views I have taken, I have had no reference to the existing military establishments, for experience has shown that it is entirely inadequate to the defence of the country. We have neither artillery sufficient for the forts on the seaboard, nor infantry and cavalry sufficient for the interior frontier. If the companies were placed on a war establishment, and provision made to arm one of the regiments of infantry with Hall's rifles, and mount it when the service should require it, complete protection might be afforded to the whole country. The expense may perhaps be objected to, but I have yet to learn that the blood of American citizens is to be estimated by dollars and cents; and if it were, that system which is most efficient will be found the cheapest in the end.

The ill-judged economy which arrested the measures projected for the defence of the frontier in 1819, and broke down the army in 1821, has caused all the difficulties which have occurred with the Indians since; had those measures been carried out, and the force then in service retained, competent garrisons might have been placed wherever necessary, and at least two regiments have been disposable, and ready to reinforce any point requiring their aid; and the bloodshed, devastation, and consequent expense, attending three Indian campaigns, might have been avoided.

I have the honor to be, sir, your obedient servant,

TH. S. JESUP, *Quartermaster General.*

24TH CONGRESS.]

No. 660.

[1ST SESSION.]

ON THE APPLICATION OF THE OFFICERS OF THE NATIONAL ARMORIES FOR AN INCREASE OF COMPENSATION.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 3, 1836.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom were referred the petitions of the officers of the national armories, beg leave to present the following report:

The two national armories at Springfield, in Massachusetts, and at Harper's Ferry, in Virginia, were established about forty years ago, and have grown up from inconsiderable beginnings to their present flourishing condition. The principal officers consist of a superintendent, master armorer, and paymaster and military storekeeper. The duties of these officers were originally far from being burdensome, in consequence of the limited operations of the establishments. Indeed, for a few years all the duties were devolved upon the superintendent and master armorer. During the *first ten years* not more than an average of *seventy-one* armorers were employed annually, whilst for the *last ten years* an average of nearly *three hundred* have been regularly employed in the armory operations. This statement applies to each establishment.

Notwithstanding this great extension of the business of the armorers, involving necessarily a corresponding increase of duties and responsibilities, the compensation of the superintendents and master armorers remains the same at this time as that fixed by the act of 1794, with only some very inconsiderable additions. The first paymaster was appointed in 1798, and he is allowed the pay and emoluments of a captain of infantry. In consequence of the new ordnance regulations, the duties and responsibilities of this disbursing officer have been recently greatly increased, he being now the keeper of all the ordnance and ordnance stores, except such as are issued for immediate use, and having charge of all materials of every kind, wrought and unwrought, and being accountable therefor.

The duties of these officers, as brought to the knowledge of the committee by consultation with the Ordnance department, and from other sources, require their constant attention and indefatigable exertions; and a reasonable increase of their compensation is justified by the great extension of the armory operations within the last forty years, and by the nature of the services required and the responsibilities incurred.

Several hundred thousands of dollars are annually disbursed at the armories, and the number of workmen employed is nearly six hundred.

By existing laws the superintendent receives, in monthly allowance and rations, the sum of fourteen hundred and ninety-two dollars. In the same mode the master armorer receives seven hundred and forty-six dollars, and the paymaster and military storekeeper nine hundred and forty-seven dollars. The committee are of opinion that the present mode of payment should be done away; that a moderate increase of compensation should be allowed; and that a specific salary should be fixed for each officer, in addition to the quarters provided; and for these purposes they report a bill.

A.

To the honorable the Senate and House of Representatives of the United States in Congress assembled:

The petition of George Rust, junior, superintendent, and Benjamin Moor, master armorer, of the United States armory, Harper's Ferry, Virginia, respectfully represents: That the compensation which they receive as officers of the national armory aforesaid is entirely disproportioned to the value of the services which they render, the responsibilities which they are compelled to assume in the discharge of their official duties, and, in short, too small to defray the unavoidable expenses necessarily incident to their respective stations; that heretofore an application has been made for an increase of their pay, but although the justice of their prayer was then admitted, yet, from causes unknown to your memorialists, their petition was unsuccessful.

Your memorialists beg respectfully to renew their application for an increase of their pay as officers of the armory aforesaid, and in so doing, would state their firm conviction that no agents of the United States have stronger claims upon the justice and liberality of your honorable body than the officers of the national armories.

Your memorialists would further represent that the Harper's Ferry armory has gradually risen to its present importance from a very small and limited beginning; that for the *first ten years* succeeding its estab-

lishment not more than an average of *seventy-one armorers* were annually employed, whilst for the *last ten years* an average of very nearly *three hundred* have been regularly employed in the operations of the armory. And that notwithstanding this extension of the business of this armory, producing, consequently, a corresponding increase of the duties and responsibilities of its officers, nevertheless, the compensation of your memorialists remains, at this day, the same as that fixed by the act of the 2d of April, 1794, with the exception of certain inconsiderable provisions made by the acts of 1800 and February, 1815.

Your memorialists further represent that the pay of the military storekeeper and paymaster of this armory is, in their opinion, an inadequate remuneration for the very important services which he renders, and the heavy responsibilities which he incurs as the disbursing officer of this establishment; and that the duties and responsibilities of this officer have been recently greatly increased by his being made the keeper of all the ordnance and ordnance stores of the armory, except such stores as may be issued for the current quarter.

For the reasons stated in the premises, your memorialists respectfully ask to present their petition to your honorable body, praying such an increase of the pay of the officers of the Harper's Ferry armory as will give them (as compared with the pay of others in the employment of the United States) a compensation proportioned to the dignity and importance of the offices which they respectively hold.

And your memorialists will ever pray, as in duty bound, &c.

GEORGE RUST, JR., *Superintendent.*
BENJ. MOOR, *Master Armorer.*

HARPER'S FERRY ARMORY, *January 4, 1836.*

B.

WASHINGTON CITY, *January 7, 1836.*

SIR: Herewith I enclose you a petition of General Rust, superintendent of the armory at Harper's Ferry, and Benjamin Moor, master armorer, praying for an increase of salary. To this petition allow me to add, that I know of no officers in the service of the United States, considering the services performed, the importance and responsibility of their stations, who are so poorly paid as the superintendents and master armorers of our national armories. The one who superintends the disbursement of more than \$200,000 per annum, and the work of 300 hands, receives about \$1,500 per annum. The other, on whom greatly depends the quality of your arms, and who inspects the work of 300 hands, receives about \$720 per annum. In the one case the pay is wholly inadequate to produce a faithful superintendence of the public works, and in the other to procure that skill, at least to retain it, which is indispensable to procure good workmanship in the manufacture of muskets. Mr. Moor, who is one of the first workmen in the country, and all-important to the armory at Harper's Ferry, finds that the pay now received from the government is insufficient to support his family, and consequently will be obliged to leave the establishment unless his pay is increased. Allow me to recommend this subject to your particular attention.

I have the honor to be, very respectfully, your obedient servant,

JOHN E. WOOL, *Brigadier General U. S. Army.*

HON. EDWARD LUCAS, *House of Representatives.*

24TH CONGRESS.]

No. 661. ◉

[1ST SESSION.]

ON AN INCREASE OF THE NUMERICAL FORCE OF THE ARMY—ITS EXPENSE, ORGANIZATION, DISTRIBUTION AND POSITION ON THE SEABOARD, AND FOR THE PROTECTION OF THE FRONTIERS AGAINST THE INDIANS, AND AN ESTIMATE OF THEIR NUMBERS, ETC.

COMMUNICATED TO THE SENATE MARCH 14, 1836.

WAR DEPARTMENT, *March 8, 1836.*

SIR: In conformity with a resolution of the Senate of the 2d ultimo, I have the honor herewith to transmit a tabular statement giving the information called for respecting the number and situation of the Indians upon the frontiers of the United States, so far as this department can furnish it, and a report from Major General Macomb containing a plan for an increase of the numerical strength of the army, accompanied by tables showing the positions now occupied by it, the number to which it is proposed to increase it, its distribution, should such an increase take place, and the additional expense which will attend the measure.

It is, of course, impracticable to furnish anything like accurate information concerning the number of the Indians. All that can be expected is such an approximation towards the truth as our means of communication with them will permit. The population of those tribes which are in contact with our settlements, and more particularly of those to whom annuities are paid, may be estimated with considerable probability; but all computations of this nature respecting the remote and wandering tribes must be received with much doubt.

It appears, as a general result, from this statement, that about thirty-one thousand Indians have been removed from the eastern to the western side of the Mississippi river, and that about seventy-two thousand

yet remain to be removed. With a majority of the latter, treaty stipulations already exist for their removal, or for such arrangements as will necessarily lead to it; and there is little doubt but that nearly all of them will, within a few years, quit their present residences and withdraw to the country west of Missouri and Arkansas. I would remark here that this statement shows an increase of about ten thousand over the tables heretofore prepared at this department upon this subject. This increase has been occasioned by a census recently taken of the eastern Cherokees, and which shows the population of those Indians to be about eighteen thousand. It is estimated that the indigenous tribes of the region between the Mississippi and the Rocky mountains amount to about one hundred and fifty thousand. These, added to the emigrants already removed, will make upwards of one hundred and eighty-one thousand; and, when all the tribes are removed, there will be an aggregate Indian population in that country of more than two hundred and fifty thousand. This, it will be observed, is independent of the Indians upon the peninsula of Michigan, upon the shores of Lake Huron and Lake Superior, upon the northern coast of Lake Michigan, and of the various bands of the great Chippewa family occupying the regions south of Lake Superior and upon the heads of the Mississippi. Much of this country is of such a character that we cannot look forward to any reasonable time within which all these Indians will be required to emigrate. Those, however, in the peninsula of Michigan will, no doubt, remove within a few years, and will still further increase the aggregate of the Indian population in the west.

It is difficult, from the mode of life and consequent dispersed condition of the Indians, to state their positions accurately with relation to the inland frontier of the United States—extending from Arkansas to Maine. Beginning, however, at Red river, it will be found that almost all this force is in contact or may be in communication with the western and northwestern frontier of the United States. The Indians are very sparsely scattered along the shore of Lake Superior and towards the sources of the Mississippi. The Chippewas and Sioux, extensive families, and separated into many bands, divide those regions among them. These Indians are brought into contact upon the Mississippi, about the Falls of St. Anthony; and, as feuds have existed between them for ages, they frequently send war parties against each other; and, by this means, outrages have been committed upon our citizens. This state of things renders Fort Snelling, at the mouth of the St. Peter's, an important point.

It will be seen by the tabular statement that the Indians in the State of New York are supposed to be about four thousand. But this department has not the means of ascertaining, with any precision, the number upon the northeastern frontier in the State of Maine. They have generally been computed in the statistical tables at about one thousand.

The statements herewith furnished embrace all the tribes who now occupy or who it is supposed will occupy the country west of the Mississippi and extending to the Rocky mountains. It may be safely estimated that this amount of Indian population can furnish fifteen thousand warriors, who may be considered so nearly in contact with our settlements as to render them at all times dangerous neighbors, unless kept in check by a proper disposition of our military force; and it is probable that double that number could be supplied, if any circumstances should occasion a general war in that region in which the Indians could be brought to unite. Such a result, however, is altogether improbable, as many of these tribes are hereditary enemies, and are in a constant state of hostilities with one another; and, from the dispersed condition of the Indians, as well as from their habits and the nature of their institutions, a general coalition is not to be anticipated; nor, indeed, if it existed, could such a force be collected and brought to act together. Still, however, it is obvious that even now there is upon our western frontier a large force, which has been augmented and is yet augmenting by the action of the government, and upon whose peaceable or friendly disposition no reliance can be placed. And the scenes which are now going on in Florida, and those which have frequently taken place elsewhere, show that the Indians are totally ignorant of their own relative strength and that of the United States, or that, in a moment of impulse, they are totally indifferent to it. A just regard to the tranquillity of an important section of the Union requires that measures should be permanently adopted for preventing a renewal of those predatory incursions which have occasioned so much loss of life and property.

In further obedience to the resolution of the Senate, I have the honor to report that I consider the "present military force of the United States" insufficient "to garrison the fortifications of the seaboard, and at the same time give protection to the inhabitants residing in the States and Territories bordering on the Indian frontier."

The aggregate number of the non-commissioned officers, musicians, and privates of the army, according to the existing laws, is 6,301. This is exclusive of the men engaged in the ordnance service, who are principally artificers, and are employed in duties relating to the custody, preservation, repairs, &c., of the public arms. Owing, however, to sickness, to occasional absence, and to the time lost in recruiting and in marching to join their respective corps, as well as to other causes, the actual disposable strength does not average more than 5,260. This is now organized into one regiment of dragoons, four regiments of artillery, and seven regiments of infantry, occupying fifty-three stations, extending along the whole frontier of the United States inland and Atlantic. If equally divided, the force actually in service would allow to each post a little less than one hundred effective men.

Extensive and permanent fortifications have been constructed upon the seaboard; and it seems to be generally conceded that our most important points of communication with the ocean should be gradually rendered secure by similar works against the advance of an enemy. These forts as they are finished should be occupied by troops, not only to prevent such insults and injuries as large commercial places are exposed to, whose approaches are not sufficiently guarded, but also to keep the works in a proper state of preservation. These duties, it is believed, will require the artillery force proposed to be maintained. Experience has shown that we are perpetually liable to occurrences which demand the concentration and movement of the troops. Whenever these happen, the positions occupied must remain defenceless, unless a greater force is raised. This is now the state of things along almost all our Atlantic border.

With respect to the inland frontier, circumstances of a still more imperative character require an augmentation of the army. Events have shown that our force in that quarter is not sufficient to keep the Indians in check. Disturbances are continually occurring at comparatively short intervals, some of which terminate merely by alarming and agitating the country, while others lead to hostilities more or less extensive. On these occasions the regular troops are collected from great distances, and a militia force is usually called out. Heavy expenditures are the necessary consequences, besides the loss of property and derangement of business in the section of country where these troubles exist. Instead of having a force at all times embodied sufficient to overawe the Indians, or if they commence hostilities immediately to subdue them, much time is lost in the necessary arrangements, while the spirit of disaffec-

tion is spreading, and the hostile force becomes thus greatly increased. Within the last nine years we have had four difficulties of this nature—one with the Winnebagoes, two with the Sacs and Foxes, and one with the Florida Indians, which, altogether, have occasioned great loss of property, great derangement of business, a heavy expenditure of money, and much inconvenience in those portions of country affected by these troubles, and which furnished the militia whose services were required to aid the regular troops in their operations. An augmentation of the army to a reasonable extent, if it did not prevent these occurrences altogether, would certainly render them less frequent as well as less injurious and extensive. And this policy is not less humane than useful. It is far better by the display of force to render its actual employment unnecessary than it is to be compelled to resort to it with the usual accompaniments of an Indian campaign.

The army is so constituted that a very considerable addition may be made to its rank and file, with but little increase in the expense of the officers. It is proposed to augment its numerical strength to 9,955; to leave the regiment of dragoons as it now is, and so to distribute the additional force as to make five regiments instead of four of artillery, and nine regiments instead of seven of infantry. A regiment of artillery now contains 497 non-commissioned officers, musicians, and privates, divided into nine companies; and a regiment of infantry, 514 non-commissioned officers, musicians, and privates, divided into ten companies. The plan submitted proposes to add 2,032 men to the artillery, and 1,622 to the infantry, and to divide the regiments of both arms into eight companies each, giving to each regiment of the former 804 non-commissioned officers, musicians, and privates, and to each regiment of the latter 580 non-commissioned officers, musicians, and privates. This organization into companies will have the advantage of uniformity, and it is believed will be found more advantageous to the service than the existing one. The whole artillery force now authorized by law is 1,988, and that of the infantry 3,598, which, with the addition proposed, will make the whole artillery force 4,020, and the whole infantry force 5,220, thus raising the legal establishment of the army to 9,955. These numbers, it will be observed, are exclusive of the commissioned officers. By authorizing the President to require one of these regiments to do duty as riflemen, and one as light infantry, our military establishment would be rendered more complete and in some situations more efficient, and this might be done without any addition to the expense of maintaining the troops.

The proposed augmentation of the non-commissioned officers, privates, and musicians may be so distributed as not to require any change in the number of the regiments or in the grades of the officers, by simply adding a given number to each company. The only advantage, however, of this plan over the proposed one is, that it may be carried into effect at a little less expense. This consideration is always important, and when not counterbalanced by other circumstances should be decisive. But I think that in this case the difference in the expenditure is not sufficient to outweigh the other advantages which are presented by the *projet* herewith submitted.

It is proposed to reduce the number of second lieutenants from 142 to 112, making a diminution in that grade of thirty; and at the same time to add twenty-five other officers, making an actual reduction of five in the existing establishment. But, as those who are added will be of higher grades, this arrangement will occasion an increase in the annual expense of \$8,573, as is shown by one of the accompanying tables. But it will give more efficiency, by the increased rank, authority, and experience of the officers, while, at the same time, it will probably be found that the number of men proposed to be added to each regiment will be sufficiently great for the attention of all the officers. It will also prevent, in some degree, that dispersion of the regiments which is very injurious to our service, as it materially impairs the personal superintendence of the field officers. These advantages will be greater as the sphere of command is removed to the more remote frontiers, where circumstances necessarily require higher responsibility and more experience.

All the information necessary to a full knowledge of the increased expense which will attend the addition herein proposed to the numerical strength of the army will be found in the accompanying tables.

I beg leave to remark that the plan of organization above proposed proceeds upon the assumption that the whole force of the non-commissioned officers, musicians, and privates of the army, will be about ten thousand. That is the smallest number which, under present circumstances, the public interests will, in my judgment, allow. Should Congress, however, think it proper to add to that number, then I would recommend that the infantry companies be placed upon the same establishment as the companies of artillery. This would render the organization uniform in all respects, and, from the casualties of the service, would not probably give more than two-thirds of the number for active field operations.

Very respectfully, your most obedient servant,

LEWIS CASS.

Hon. M. VAN BUREN, *President of the Senate.*

HEADQUARTERS OF THE ARMY, *Washington, March 7, 1836.*

The undersigned, in conformity with the instructions of the Secretary of War to submit a *projet* for augmenting the military establishment to *ten thousand men* without increasing the number of officers, has, after fully considering the subject, come to the following conclusion :

The present establishment consists of four regiments of artillery, of nine companies each, each company of fifty-five men, making an aggregate in the four regiments, including the non-commissioned staff, of.....	1, 988
Seven regiments of infantry, of ten companies each, each company of fifty-one men, making an aggregate in the seven regiments, including the non-commissioned staff, of.....	3, 598
One regiment of dragoons, aggregate.....	715
Aggregate of the army.....	<u>6, 301</u>

The organization of the regiments of artillery into nine companies is not convenient, nor do the four regiments furnish a sufficient number of companies for the seaboard; it is therefore proposed to add one regiment of artillery, and make each company to consist of 100 men instead of 55, as now organized. This organization will give a force of 4,020 non-commissioned officers, musicians, artificers, and privates in the artillery, as will be seen by the accompanying paper, marked A.

The organization of the infantry might also be improved, and the regiments rendered much more useful and efficient, by making each regiment to consist of eight companies instead of ten, and by adding two regiments to be armed as light infantry or riflemen, to consist also of eight companies each, which can be done by simply adding two companies to the infantry, there being at present seven regiments of infantry on the establishment, consisting of ten companies each, which give an aggregate of seventy companies. By the addition of two companies, the required number of companies—to wit: seventy-two—will be obtained, to constitute nine regiments of eight companies each; and each company to consist of seventy-two non-commissioned officers and privates, making the whole of the infantry force 5,220 men, as will be seen by paper marked B.

The formation of regiments into eight companies is conformable to our established system of tactics, and is every way much more convenient for manœuvring than either a formation of nine or ten companies, as is now the case with our artillery and infantry. A uniform organization into eight, both for artillery and infantry, is preferable and more systematic than the irregular formations now existing in the regiments of those arms in our service, as shown above.

If this organization should be adopted, the military establishment would then consist of five regiments of artillery, of eight companies each, or 40 companies 100 strong, giving a force, including 20 non-commissioned staff, of.....	4, 020
Of nine regiments of infantry, eight companies each, each company 72 men, making 72 companies, including 33 non-commissioned staff, giving a force of.....	5, 220
Of one regiment of dragoons.....	715
Making an aggregate of.....	<u>9, 955</u>

Although the number of regiments is increased by the proposed plan for augmenting the army to 9,955, the number of officers is rather diminished than increased, as will appear by the following statement:

There are in the existing four regiments of artillery—	
Colonels	4
Lieutenant colonels	4
Majors	4
Captains	36
First lieutenants	72
Second lieutenants	72
	192
There are in the present seven regiments of infantry—	
Colonels	7
Lieutenant colonels	7
Majors	7
Captains	70
First lieutenants	70
Second lieutenants	70
	231
Aggregate officers in artillery and infantry	423
In the proposed five regiments of artillery there will be—	
Colonels	5
Lieutenant colonels	5
Majors	5
Captains	40
First lieutenants	80
Second lieutenants	40
	175
In the proposed nine regiments of infantry there will be—	
Colonels	9
Lieutenant colonels	9
Majors	9
Captains	72
First lieutenants	72
Second lieutenants	72
	243
Aggregate officers of artillery and infantry as proposed	418
Aggregate in the present establishment	423
Difference	5

As the number of men in all the companies of infantry and artillery is considerably increased, an additional number of non-commissioned officers becomes indispensable. In lieu of the non-commissioned staff officer, heretofore denominated *sergeant major* of a regiment, it is proposed to substitute that of *sub-adjutant*, to have the rank, pay, and emoluments of a cadet, with a suitable allowance of clothing, not exceeding the cost of that now allowed a *sergeant major*. To this office the sergeants may look as the reward of merit, and as the stepping-stone to promotion of lieutenant. It will give great encouragement to the non-commissioned officers of companies, as well as the rank and file, when they see before them a prospect of promotion to the rank of commissioned officer through the non-commissioned staff. For the same purpose, and with a view to facilitate and distribute more properly the company duties, it is proposed in the organization that the first sergeant of each company be styled *sergeant major*, with the pay and allowances as now provided, which are somewhat greater than those allowed to other sergeants. His duties to the company are analogous to those of an adjutant of a regiment, he having to attend, under the direction of the captain, to all the company details as it regards the duties of the non-commissioned officers and privates, and the making out of reports, &c. To each company there is also provided a *quartermaster sergeant*, an indispensable non-commissioned officer, whose duty it is, under the direction of the captain, to take charge of the camp equipage, spare arms, extra clothing, and other property belonging to the company, and keep the accounts of them, as well as to attend to the distribution of the rations, straw, wood, &c., and on the march to take charge of the company baggage; his pay to be the same as that of the other sergeants. In the French army these two non-commissioned officers are allowed to every company, under the title of *sergeant major* and *fourrier*. There is no service in which these officers are more wanted than in ours, because our troops are frequently separated from their baggage, in marching through the wilderness, where it is impossible to transport it, and consequently obliged to be sent round to meet the troops, either by land or by water, when it is much exposed to be lost or damaged; and thus the troops arriving at the points where they may expect to meet their baggage, without these officers to take charge of it, will be often disappointed, and suffer for the want of essential comforts.

Although, according to the instructions of the Secretary of War, the organization here proposed is limited to *ten thousand men*, and which may be considered as a minimum force for the purposes for which the army is intended, it is respectfully recommended that, in order to have the amount of force always effective, eighteen men be added to each company of infantry and artillery, which would increase the nominal force to something below *twelve thousand men*; but owing to the fact of the men being enlisted for only three years, the great distance the recruits have generally to march, and the time consumed in joining the regiments on the frontiers, and the necessity of keeping within the authorized numbers, it hardly can be expected that *ten thousand men* would ever be exceeded, should Congress authorize twelve thousand men, as here recommended.

Upon a review of the fortifications which have been erected, and which are now in progress for the defence of the sea-coast, it is found that there is a considerable deficiency of artillerists to serve the guns, and to guard and preserve the forts, as well as the valuable property in them. It is therefore proposed,

as above recommended, to augment the number of companies in the artillery from 36, as now authorized, to 40. These companies of artillery it is proposed to distribute along the seaboard, from Eastport, in Maine, to the delta of the Mississippi; and in order to show the proposed distribution, two tables are here annexed, marked C and D; that marked C shows how the existing 36 companies may be most advantageously disposed of; and that marked D, how it is proposed to distribute the 40 companies. Also a list of forts on the sea-coast, prepared by the adjutant general, marked E.

The infantry force, with that of the regiment of dragoons, is best adapted to the defence of the frontiers, including the Gulf of Mexico. The present amount of infantry is not sufficient, in the opinion of the undersigned, to afford adequate protection to the inhabitants residing in the States and Territories bordering on our Indian and other frontiers, and guarding the arsenals in the southern and western States.

If the project above recommended, of organizing the infantry, as exhibited in paper marked B, be adopted, making the infantry consist of nine regiments, instead of seven, it is proposed that they be distributed on the frontiers and on the Gulf of Mexico, as shown in paper marked F, which organization and distribution, it is believed, will be the most effectual for maintaining the discipline of the army, and affording protection to our extensive frontiers.

Paper marked G contains a summary of the expense of the present and proposed regiments of artillery and infantry.

Respectfully submitted.

ALEX. MACOMB, *Major General, Commanding-in-chief.*

Hon. LEWIS CASS, *Secretary of War.*

A.

A comparison of the present and proposed organization of a regiment of artillery, with a comparative estimate of the expense.

PRESENT ORGANIZATION—NINE COMPANIES TO A REGIMENT.

NOTES.

- Column No. 3 of the table exhibits the distribution and position of the artillery arm as now organized, being according to the military arrangement deemed the best to meet the exigencies of the service, if the companies were in their permanent stations. But this arrangement of garrisons is not actual, on account of the temporary withdrawal of the troops from the thirteen forts designated by numbers 15, 16, 20, 21, 22, 23, 24, 25, 26, 28, 29, 30, and 31, for field service in Florida. Nos. 4 and 13 have been evacuated for more than a year, being turned over to the Engineer department, and now undergoing repairs. No. 7 has never been occupied, and is not yet ready to receive a garrison; and No. 9 has only one company instead of two, as represented.
- The eleven permanent works numbered 10, 11, 16, 17, 20, 21, 26, 28, 29, 30, and 31, have been constructed and occupied since the reduction of the army in 1821, and, according to the plan of construction, require for their armament 1,541 guns, of which number 375, it is said, are or will be ready to be mounted in the month of March. The aggregate of the respective garrisons of these eleven new fortifications would consist of nineteen companies of the present peace establishment if they had not been withdrawn for temporary field service, making, supposing the companies to be full, 1,146 officers and men.
- Column No. 4 represents the number of cannon with which each garrison will be furnished by March next, as reported by the Ordnance department.
- Column No. 5 specifies the strength of the proper garrisons deemed to be necessary in time of peace, which should consist of not less than forty companies of the proposed increased organization, twenty of which number (or 2,000 men and company officers) being now required to garrison the eleven new works constructed since the reduction of the army in 1821, which makes 800 men and company officers less than the present establishment can furnish for the new works, and only 168 less than the whole number of artillery now provided for by law for all the fortifications in No. 33.
- Column No. 6 gives a statement of the number of guns for each work, according to the engineer's plan of construction.

Respectfully submitted. R. JONES, Adjutant General.

ADJUTANT GENERAL'S OFFICE, March 5, 1836.

Major General ALEXANDER MACOMB, Commander-in-chief.

F.

Disposition of the nine regiments of infantry and the regiment of dragoons.

One and a half regiment on the lakes, including the portage of the Fox and Wisconsin rivers. Some of these positions will be temporary, and the garrisons may be removed, as the Indians recede, to the cordon of posts intended to be established from St. Peter's to the Red river.

Half of a regiment at Prairie du Chien.

One regiment at Jefferson Barracks, as a disposable force, to be moved up or down the Mississippi, or up the Missouri, whenever circumstances may require.

One regiment at Baton Rouge and New Orleans.

One regiment upon the Gulf of Mexico, and in Florida, to garrison some of the southern arsenals, and also temporarily to occupy forts in the Creek and Cherokee country till those Indians remove.

One regiment on the western frontier of Louisiana.

Three regiments, together with the dragoons, to be stationed upon the line of communication proposed to be established from the St. Peter's to Red river, and this force to be increased from time to time, as the Indians congregate, by removing the garrisons in the lake country to the posts west of the Mississippi, and by withdrawing a part or the whole of the regiment assigned for the Gulf of Mexico and Florida, for the occupancy of the southern arsenals, and a garrison for the Creek and Cherokee country.

G.

GENERAL SUMMARY.

Present organization of four regiments of artillery and seven regiments of infantry.

Commissioned officers of artillery.....	192	
Commissioned officers of infantry.....	231	423
Non-commissioned officers, musicians, privates, &c., of artillery.....	1, 988	
Non-commissioned officers, musicians, privates, &c., of infantry.....	3, 598	5, 586
Aggregate of officers and men.....		<u>6, 009</u>

Proposed organization of five regiments of artillery and nine regiments of infantry.

Commissioned officers of artillery.....	175	
Commissioned officers of infantry.....	243	418
Non-commissioned officers, musicians, privates, &c., of artillery.....	4, 020	
Non-commissioned officers, musicians, privates, &c., of infantry.....	5, 220	9, 240
Aggregate of officers and men.....		<u>9, 658</u>

Diminution in the number of artillery officers.....	17	
Increase in the number of infantry officers.....	12	
Diminution in the number of officers.....	<u>5</u>	
Increase of artillery.....	2, 032 men.	
Increase of infantry.....	1, 622 men.	
Total increase.....	<u>3, 654 non-commissioned officers, &c.</u>	

Estimate of expense of present organization of four regiments of artillery and seven regiments of infantry.

Pay, &c., of commissioned officers.....	\$401, 457 00
Pay of non-commissioned officers, privates, &c.....	451, 176 00
Clothing of non-commissioned officers, &c.....	167, 580 00
Subsistence of non-commissioned officers, &c.....	265, 055 70
Straw for bedding for non-commissioned officers, &c.....	8, 095 44
Fuel for commissioned officers, non-commissioned officers, &c.....	68, 950 00
Stationery for commanders of regiments, companies, &c.....	4, 400 00
Amount.....	<u>1, 366, 714 14</u>

Estimate of expense of proposed organization of five regiments of artillery and nine regiments of infantry.

Pay, &c., of commissioned officers.....	\$410, 030 00
Pay and subsistence of warrant officers.....	9, 464 00
Pay of non-commissioned officers, privates, &c.....	732, 864 00
Clothing of non-commissioned officers, &c.....	277, 200 00
Subsistence of non-commissioned officers, &c.....	437, 109 40
Straw for bedding for non-commissioned officers, &c.....	12, 804 00
Fuel for commissioned officers, non-commissioned officers, &c.....	93, 380 00
Stationery for commanders of regiments, companies, &c.....	5, 320 00
Amount.....	<u>1, 978, 171 40</u>
Expense of present organization.....	1, 366, 714 14

Difference, increase of expense.....	611, 457 26
Difference, increase for artillery.....	\$319, 569 66
Difference, increase for infantry.....	291, 887 60
	<u>611, 457 26</u>

In these statements no calculation is made for an increase of expense for quarters; some would, no doubt, result from a change in the organization and an increase in the numerical strength of regiments, but to what amount cannot be stated. The same remark is applicable to the transportation of troops and stores, the medical department, the recruiting service, the supply of arms, &c., and camp equipage. The law of April 29, 1812, authorizes the attaching of graduates of the Military Academy to companies, and limits the number to one to each company; and promotions and resignations frequently occurring, by which the numbers diminish, no estimate is made of the present expense on that account, nor of that which would result from the adoption of the proposed change in the organization of regiments; that, in both cases, it is presumed, would be about equal.

Number and grades of officers of artillery and infantry now in service.

	Colonels.	Lieutenant colonels.	Majors.	Captains.	First lieutenants.	Second lieutenants.
Artillery.....	4	4	4	36	72	72
Infantry.....	7	7	7	70	70	70
Total.....	11	11	11	106	142	142
Deduct.....						112
Making.....						less 30

Difference brought over.....	\$6, 917
Add, for three additional adjutants, \$312 each.....	936
Add, for six additional commanders of companies, \$120 each.....	720
Total difference in pay, &c., of officers.....	<u>8, 573</u>

Number and grades of officers of artillery and infantry proposed.

	Colonels.	Lieutenant colonels.	Majors.	Captains.	First lieutenants.	Second lieutenants.
Artillery.....	5	5	5	40	80	40
Infantry.....	9	9	9	72	72	72
Total.....	14	14	14	112	152	112
Deduct.....	11	11	11	106	142
Making.....	3	3	3	6	10	more.

Pay of 3 colonels, at \$2,072 each.....	\$6, 216
Pay of 3 lieutenant colonels, at \$1,723 each.....	5, 169
Pay of 3 majors, at \$1,530 each.....	4, 590
Pay of 6 captains, at \$947 each.....	5, 682
Pay of 10 lieutenants, at \$827 each.....	8, 270
Excess.....	29, 927
Deduct 30 second lieutenants, at \$767.....	23, 010
Difference of expense.....	<u>6, 917</u>

24TH CONGRESS.]

No. 662.

[1ST SESSION.]

ON A CLAIM OF THE SUPERINTENDENT OF THE ARMORY AT SPRINGFIELD, MASSACHUSETTS, FOR EXTRA PAY FOR INSPECTING ARMS MADE BY CONTRACT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 21, 1836.

Mr. GRENNELL, from the Committee of Claims, to whom was referred the petition of Roswell Lee, reported:

The petitioner states that, in January, 1818, being superintendent of the United States army in Springfield, in Massachusetts, he was directed by Colonel Decius Wadsworth to take the charge and responsibility of the inspection of arms made by contract for the United States, under an expectation that a reasonable compensation would be allowed for that extra service; that, although the subject was frequently brought before the Department of War, it passed on without decision until different measures were adopted, at the close of the year 1830, for the performance of the said services, and at the request of the petitioner; that another officer has since been charged with the same duties, and has received for the performance of them at the rate of eighty cents per day. The petitioner further alleges that he per-

formed the services for which he claims compensation during the period of twelve years, or three thousand seven hundred and fifty-six working days, for which he asks to be allowed fifty cents per day.

This claim, which is made on account of services rendered before the present Secretary of War came into office, was formally presented at the department for allowance in 1831; and the Secretary then noted upon the papers that it was of such standing he could not allow it—that Congress only could grant relief. The petitioner accordingly presented his claim; and at the first session of the last Congress the Committee on Military Affairs, to whom it was referred, reported a bill for his relief, agreeably to the prayer of the present petition. The bill did not receive the final action of the House for want of time.

This committee have sought information respecting the services alleged to have been performed by Colonel Lee at the Department of War, and the communications there received are subjoined as a part of this report. By their request, too, the petitioner's account was stated at the department, and is as follows:

"The United States to Roswell Lee, Dr.

"1831, December 21.—For extra services, in superintending the inspection of arms made on contract by E. Whitney, of New Haven, Conn.; Simeon North, of ditto; Nathan Johnson and R Starr, of Middletown, Conn.; Lemuel Pomeroy, of Pittsfield, Mass.; and Asa Waters, of Millbury, Mass.; and corresponding with them in relation to their contracts and the inspection of their arms, and making the necessary returns to the Ordnance department, from January 1, 1818, to December 31, 1830; being 12 years, or 3,720 working days, at 50 cents per day. \$1, 860"

The petitioner undertook the services above set forth by direction of Colonel Wadsworth, who, at the date of their commencement, was chief of the Ordnance department, having properly in charge this species of public duty. The ground of claim is to be considered as correctly stated, and is so recognized at the department. It is regarded as just and equitable in the report of the present chief of the Ordnance office to the Secretary of War of the 15th December, 1831.

This paper, together with his communications to the committee respecting the details of service and merits of the claim, is annexed as a part of this report. As the claim is stated for a small per diem allowance for services running through a series of years, the committee desired to know the number of arms inspected under the superintendence of the petitioner in all the time. In a letter of Colonel Bomford of the 5th January, 1836, the number is stated as follows, viz:

Muskets	75, 575
Rifles	20, 782
Pistols	34, 050
Sabres and swords	14, 600
	145, 007

This service concerned contracts for the manufacture of arms for the government in different and distant places in Massachusetts and Connecticut. The statement, though brief, of the petitioner's account, with the sanction of the department, may show to a good extent the importance of the services, and the care and responsibility involved in their performance. But the committee are more particularly informed, as to the detail of these duties, by the answers of Colonel Bomford to questions proposed to him by the chairman, which are annexed to this report. From these it appears that Colonel Lee often visited the private factories, which were about fifty miles distant from his official station, and in different directions, though the number of these journeys cannot be ascertained; that he was required on some occasions to furnish inspectors from the armory at Springfield to oversee their operations, to make the necessary reports and returns to the department, which must necessarily have occupied much time. It would appear, moreover, from the same paper, that the usual allowance for travelling expenses, which is believed to have been made on these occasions, could cover only a part of the expenses to which he was subjected. Two of the returns have been furnished the committee as a specimen of that branch of duty in this adjunct office, containing tabular statements of arms inspected, and of the various appendages of the fire-arm, involving great care and precision. For these services eighty cents per day are now paid to the military officer who performs them, in addition to his pay in the line.

The petitioner received a stated salary of fourteen hundred and ninety dollars per year as superintendent of the national armory at Springfield. Shall he, therefore, be denied special compensation for the services last above mentioned?

Every office under the government implies a contract between it and the incumbent. In principle, it is a case of hire and reward. And it is generally easy to decide how extensive such contract is: whether the duties to be performed under it are minutely prescribed by law, or whether they depend on usage, or are determined by law and usage combined. But in the petitioner's case no law, usage, or regulation had made these extra services a part of the official duties of the superintendent of the Springfield armory. His acceptance of that office, then, could have implied no requirement on the part of the government, and no assent on his part, to perform the duties of superintending the inspection of contract arms at the six separate and distinct private factories, onerous and difficult as they are found to have been. Having held a high rank in the army, and having also been a practical armorer, it might have been supposed Colonel Lee was well qualified to discharge them. It might have been most convenient and important to the government that he should do so, for during much of that period there was no regularly-constituted ordnance corps, from which qualified officers might have been detailed for these services. But it does not seem that they would devolve on the petitioner by any necessity, or even justice or propriety. And if they were so, it would be difficult to set limits to official duties. They might be indefinitely extended. And it would have been no very great stretch of official authority to have required him to extend his labors to the other public armory, at Harper's Ferry.

The services for which pay is demanded were new and extraordinary, and, it should seem, could not originally have been in the contemplation of either of the parties; they were imposed upon the petitioner after his appointment. No stipulation was made for compensation in consideration of their performance. But his salary as superintendent of the armory was deemed no more than a fair equivalent for the labors and responsibilities of that office. And if the new class of services had been only an increase of those undertaken by Colonel Lee, on assuming his principal office, by the regular growth and progress of the

establishment; and if they had been such in kind and character as properly belonged to the station, then, indeed, he might be supposed to have undertaken them, and to have run the risk of their accumulation, and his salary should be his only reward. But it appears to the committee that they became the subject of a distinct contract.

Another view may be taken of this case which would justify the committee in the result to which they arrive. The latter engagement of Colonel Lee was not only distinct from that implied in the acceptance of his office, but it had all the qualities that are found to exist in contracts for services for which compensation is demandable, and where a promise of it is fairly implied. It has been seen that the first engagement was local, confined to one establishment, and embracing a certain round of duties. The new services of supervising the inspection of contract arms brought damage to the officer, by labors and expenses of a new and extraordinary kind. He performed journeys often to the factories; he exerted labor and care, as well as skill, and incurred expenses which could not have arisen under his office. On the other hand, he rendered benefits to the government of pecuniary value in a most delicate and important service, saving to it, doubtless, much more than the sum he demands. Thus the petitioner shows two grounds of consideration, either of which, in legal contemplation, would be sufficient to raise a promise of payment by fair and just implication, a damage to the demandant party and a benefit to the other, whence a moral as well as legal obligation results, which it would be unconscientious to resist, and which it is believed could not be resisted if the case could be brought before the judicial tribunals of the country. This, then, is not a common case of claim for extra pay, in consideration of an extra amount of labor of an office which the claimant had undertaken for a stipulated salary.

Does an objection exist against the claim in consequence of the lapse of time without demand of payment? The committee remark that no evidence favorable to the government is lost by the lapse of time. And there is no pretence of false testimony got up in support of the claim. It cannot be alleged of this, as it is said of some claims against the government, that the proof becomes clearer and stronger as the case grows older, for all the proof comes from recorded facts and the testimony of official men. The claimant only suffers. He first presented his account in form for allowance in 1831. The declining of the Secretary of War to make the allowance is said to be by reason of the long standing of the account, not that the claim was unmeritorious. As the whole transaction, the appointment to the services, as well as the performance of them, took place before he came into office; and inasmuch as the case was not specially provided for by law, he might well suggest that Congress only could grant relief. It is stated, however, by the chief of the Ordnance office that Colonel Lee often spoke of his claim to compensation, but as no specific charges were made, the matter was suffered to rest; and that he was annually entertaining the hope that the pay of the superintendents would be increased in a way to cover all his claims, and that he deferred making the charge till the duties were assigned to other officers of the department. In these facts we find a sufficient answer to objections on the ground of long delay. The claim for extra services was no after-thought, but was kept in view through the whole series of years.

Considering the petitioner as entitled to relief, the committee are to inquire how the amount may be settled. That the whole round of duties, which need not again be enumerated, would involve a care, labor, and responsibility, constant, if not severe, must be undeniable. During most of the period in question the United States had no distinct ordnance corps, and those duties were to be performed by some one enjoying the fullest confidence of the government for intelligence, fidelity, integrity, and honor. Such was Lee, the petitioner. To this effect the committee have the amplest testimony from the department, along with the assurance that the claim has ever been regarded there as in every respect equitable and just. A per diem allowance of fifty cents will produce \$1,860, the amount claimed, which would be at the rate of \$155 per year.

A bill is herewith reported. The petitioner having deceased since the presentment of his claim, the bill is drawn in favor of his legal representatives.

WAR DEPARTMENT, *January 7, 1836.*

SIR: I have the honor to acknowledge the receipt of your letter of the 28th ultimo, in which you ask for information upon certain points connected with the claim of the late Colonel Roswell Lee.

In answer, I transmit a report from the colonel of ordnance, which answers the questions you have proposed.

Very respectfully, your obedient servant,

LEW. CASS.

Hon. GEORGE GRENNELL, of *Committee of Claims, House of Representatives.*

ORDNANCE OFFICE, *Washington, January 5, 1836.*

SIR: In answer to the letter of the Hon. G. Grennell, jr., of the 28th ultimo, which you referred to this office, I have the honor to state that the records of this department show that 75,575 muskets, 20,782 rifles, 34,050 pistols, and 14,600 swords and sabres, were inspected under the superintendence of the late Colonel R. Lee, from the 1st of January, 1818, to the 31st of December, 1830, and were manufactured under contract at the private factories of E. Whitney, S. North, N. Starr, R. Johnson, L. Pomeroy, and Asa Waters.

In reply to the inquiry, "whether the arms so inspected were conveyed to Springfield for that purpose," I have to state that all the inspections of small arms were made at the several places of manufacture.

I have the honor to be, sir, respectfully, your obedient servant,

G. BOMFORD, *Colonel of Ordnance.*

Hon. LEWIS CASS, *Secretary of War.*

P. S.—The papers relating to the claim of the late Colonel Lee are herewith returned.

G. B.

ORDNANCE OFFICE, *Washington, December 22, 1835.*

SIR: I have to acknowledge the receipt of your communication of the 21st instant, enclosing sundry papers in relation to the claim of the late R. Lee for extra pay; and, in answer, beg leave to state that the claim for extra services rendered, as per account marked A, and amounting to \$1,860, has always been, and is still, considered by this department as equitable and justly due, and that the compensation charged is very reasonable for the services rendered.

It is due to the deceased to state that, in the performance of the various duties to which he was assigned, he always manifested integrity, promptness, and great ability, and gave entire satisfaction to this department, and that the claim being considered just, it is hoped it may receive the favorable consideration of the Committee of Claims.

Agreeably to your request, an account has been stated for this claim. This as well as the papers in relation thereto are herewith enclosed.

I have the honor to be, sir, respectfully, your obedient servant,

G. BOMFORD, *Colonel of Ordnance.*

HON. GEORGE GRENNELL, JR., *House of Representatives.*

ORDNANCE OFFICE, *Washington, January 1, 1831.*

SIR: Agreeably to the suggestions heretofore made, you are now relieved from the supervision of the inspection of contract arms; Lieutenant Daniel Tyler has been assigned to this duty, and you will please to deliver to him such copies of contracts and other papers relating to this business as may be necessary to enable him to conduct it.

Messrs. Luther Sage, Asabel Hubbard, and Justin Murphy are also assigned to this duty, and will be continued as inspectors of arms.

It is desired that these inspectors, when not engaged in the inspection of contract arms, may be employed in the armory, as heretofore.

You will please to inform Messrs. Murphy and Hubbard of this arrangement. Mr. Sage will be instructed from this office. The latter will remain in Pennsylvania some few months, when he will remove to Springfield.

In relieving you from this duty, at your request, I avail myself of the occasion to say that the acknowledgments of the department are due for the zeal and ability with which you have performed this extra service.

Respectfully, I am, sir,

GEORGE BOMFORD, *Brevet Colonel, on Ordnance Service.*

Colonel R. LEE, *Superintendent Springfield Armory.*

ORDNANCE OFFICE, *Washington, December 15, 1831.*

SIR: In regard to the subject of the letter to the War Department from Colonel R. Lee, superintendent of the Springfield armory, of the 26th October, 1831, and enclosing a claim for compensation for extra services in the superintendence of contract arms, I have the honor to state that the claim set forth by Colonel Lee (in the account and letter which are herewith returned) is considered by this department in every respect just and equitable in principle and correct as to facts.

The general superintendence of the contract service in charge of Colonel Lee, for many years past, constituted no part of his duties as superintendent of the Springfield armory; and it has always been considered just by this department that he should be specially compensated for that service. The charge of fifty cents per day for that service is considered moderate and reasonable, as it is less than is now paid for superintending the same service. For these reasons the claim of Colonel Lee is respectfully recommended to your favorable consideration.

I am, sir, very respectfully, your obedient servant,

GEORGE BOMFORD, *Brevet Colonel, on Ordnance Service.*

HON. LEWIS CASS, *Secretary of War.*

Indorsement by the Secretary of War.

The claim of Colonel Lee is of such a standing that I cannot allow it. It should have been presented and acted upon some years since; and as this has not been done, Congress can only grant relief.

L. C.

JANUARY 18, 1832.

Questions proposed by the Hon. E. Whittlesey to the chief of the Ordnance office.

Question 1. Was it any part of Colonel Lee's duty, as superintendent of the armory at Springfield, to inspect the arms fabricated under contract at other places, or to have any concern with, or control over, said contracts?

Answer. It was no part of Colonel Lee's duty, as superintendent of the Springfield armory, to supervise the inspection of contract arms.

Question 2. Did Colonel Lee go abroad to inspect arms fabricated under contract? if so, where and how frequently were such inspections made?

Answer. He visited the private factories often, but there is no record in this office of the precise number of visits.

Question 3. Why was Colonel Lee detailed for that service?

Answer. Colonel Lee was directed to furnish the inspectors from the armory at Springfield in many cases, and to oversee their operations and make the necessary reports and returns. Two returns of arms, inspected under his direction, are herewith transmitted, marked B. This duty was confided to him on account of his being well qualified for it, (being a practical armorer,) and to insure a rigid inspection of the arms made by contract.

Question 4. When his duty required him to go abroad to attend the inspections mentioned, was he paid for transportation of baggage or travelling expenses?

Answer. He no doubt received the usual allowance for his journeys; but this is only a part of the expense to which he was necessarily subjected.

Question 5. Is the sum charged more or less than the sum he necessarily expended when abroad to inspect said arms?

Answer. The duty of making the necessary reports and returns of inspections of contract arms was performed by Colonel Lee at his post, and from their nature must have required considerable time. No estimate can be formed of his expenses while visiting the private armories, as the number of his visits is not known.

Question 6. Would the account have been paid if regularly presented?

Answer. It is believed that his charge for these services would have been paid had it been presented earlier.

Question 7. Do you know, or have you understood, why Colonel Lee did not regularly render his accounts for these services or expenses?

Answer. Colonel Lee often spoke of his claim to some compensation for these services; but as no specific charge was made the matter was suffered to rest. He was annually entertaining the hope that the pay of the superintendents would be increased in a way to cover all his claims, and deferred making the charge in question until the duty was assigned to other officers of this department. Colonel Lee was a zealous and faithful officer, wholly devoted to his duty, and the pay allowed him was inadequate to the support of a numerous family. When he presented his account it received the sanction of this department; but the Secretary of War was not disposed to pay arrearages of so long a standing, and he suggested an application to Congress.

It is proper to remark that the officer who succeeded Colonel Lee received eighty cents per day, when performing the same duties, in addition to his regular pay as an officer in the army.

GEO. BOMFORD, *Colonel of Ordnance.*

ORDNANCE OFFICE, *February 6, 1836.*

24TH CONGRESS.]

No. 663.

[1ST SESSION.]

ON THE EXPEDIENCY OF ESTABLISHING AN ARSENAL OF CONSTRUCTION AT CHARLESTON, SOUTH CAROLINA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 21, 1836.

MR. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom was referred a resolution directing them to inquire into the expediency of establishing an arsenal of construction at or in the vicinity of Charleston, South Carolina, reported:

That they have considered the same, and finding that the arsenal in Charleston is in a state essentially requiring repairs, they are of opinion that provision should be made to put it in proper order, in lieu of establishing an arsenal of construction. They are also of opinion that the existing establishment should be somewhat extended, and made a proper depot for arms belonging to the United States, and that such workshops should be attached to it as may be necessary to keep the arms in order, and to construct gun-carriages for some of the southern stations. Your committee annex to this report a communication from the War Department, showing the necessity and propriety of this measure; and to accomplish the object recommended, they ask leave respectfully to report by bill.

Letter from the Secretary of War to the honorable H. L. Pinckney, upon the subject of establishing an arsenal of construction at Charleston, South Carolina.

WAR DEPARTMENT, *January 20, 1836.*

SIR: I have the honor to transmit herewith a report from the colonel of ordnance, in answer to your letter of the 21st ultimo, and to express my concurrence in the views therein presented.

Very respectfully, your most obedient servant.

LEW. CASS.

Hon. H. L. PINCKNEY, *House of Representatives.*

ORDNANCE OFFICE, *Washington, January 20, 1836.*

SIR: In reply to the inquiries contained in the letter of the Hon. H. L. Pinckney, dated the 21st ultimo, referred to this office, I have the honor to state that, by the ordnance regulations adopted by the President of the United States on May 1, 1834, the number of arsenals of construction was limited to six, four of which are now established, viz: one at Fort Monroe, Virginia; one at Pittsburg, Pennsylvania; one at Watervliet, New York; and one in this city.

As arsenals of construction are expensive, it is not thought expedient unnecessarily to increase them; and doubts are entertained whether, under existing circumstances, the city of Charleston is a proper

location for such an establishment. There is a depot for arms in Charleston belonging to the United States, which, however, is on too limited a scale. I would therefore respectfully recommend that an appropriation be asked for, either to add to this depot or to provide such other site in the vicinity of the city as may be found, on examination, most expedient.

An arsenal on a moderate scale ought to be provided there, and such workshops could be attached to it as might be necessary to repair and keep in order the arms, and to construct gun-carriages for some of the southern stations. Mr. Pinckney's letter is herewith returned.

I have the honor to be, very respectfully, sir, your most obedient servant,

G. BOMFORD, *Colonel of Ordnance.*

Hon. LEWIS CASS, *Secretary of War.*

24TH CONGRESS.]

No. 664.

[1ST SESSION.]

ON THE CLAIM OF A QUARTERMASTER FOR THE PAY OF QUARTERMASTER GENERAL
WHILE PERFORMING THE DUTIES OF THAT OFFICE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 21, 1836.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom was referred the memorial of Major Trueman Cross, praying compensation for services rendered as acting quartermaster general of the army, reported:

That it appears from the documents accompanying the memorial that, between April 9, 1819, and December 15, 1832, in the absence of the quartermaster general of the army, Major Cross has, at various times, performed the duties of acting quartermaster general, amounting in all to the period of three years, two months, and ten days, for which services he claims the *difference* between the pay and emoluments actually received by him during that time, and those due, under existing laws and regulations, to the rank of quartermaster general. In support of his claim, the petitioner adduces several precedents of similar allowances having been made by the War Department to officers who acted in grades higher than those held by them at the time, and refers to several acts of Congress granting like allowances to officers acting in higher grades, among which is the act of the last session fixing the compensation of the navy, wherein it is provided that "officers temporarily performing the duties of those of higher grades shall receive the compensation allowed to such higher grades while actually so employed." It also appears, from the documents furnished, that Major Cross performed, at the same time, his own regular and appropriate duties as quartermaster, besides those of acting quartermaster general; and it is stated, in a letter from General Jesup, that the petitioner's ordinary duties were arduous of themselves, and important to the public interests.

The committee, however, have not felt themselves bound, by the precedents cited, to acknowledge the general principle that full compensation is due in all cases where officers are required to perform the duties of higher grades, as such a principle, if established, might be very extensive in its operation, and involve heavy additional expenditures. But they are, nevertheless, of the opinion that it would not be just nor reasonable, in a case like the present, to impose upon an inferior grade, for a series of years, the duties of a much higher grade, in addition to his own duties, without some additional compensation; and as the quartermaster general has, under the provisions of the regulations, forfeited his allowance of quarters, fuel, and double rations, while absent, which remain in the treasury unapplied, the committee think that those allowances may be safely and justly bestowed upon the officer who performed the duties of the office; and they accordingly report a bill to that effect, leaving the amount withheld under those several heads to be ascertained by the accounting officers of the treasury, by whom alone they can be accurately computed.

To the honorable the Senate and House of Representatives of the United States of America in Congress assembled:

The memorial of the undersigned respectfully represents: That, between the month of April, 1819, and December, 1832, he has, from time to time, in consequence of the absence of the quartermaster general of the army from the seat of government, discharged the duties of acting quartermaster general for three years, two months, and ten days; that for these extra duties, imposing upon your memorialist, as they did, heavy additional labor and responsibility, in nowise appertaining to the subordinate station which he held in the public service, he has not been compensated; and he therefore prays your honorable body to pass an act for his relief, and grant him what has been allowed to others in similar cases, namely, the *difference* between the compensation which he actually received in the grades held by him, and that due, under existing laws and regulations, to the rank of quartermaster general, for the time your memorialist performed the duties of that grade.

TRUEMAN CROSS, *Major and Quartermaster U. S. Army.*

WASHINGTON, January 2, 1836.

No. 1.

WASHINGTON, January 6, 1835.

SIR: My memorial, praying compensation for services rendered while acting quartermaster general of the army, having been referred to the committee over which you preside, I beg leave to state, for their information, the grounds of my claim.

I humbly conceive that the abstract justice of the claim is too apparent to require any illustration from me. It might be rested upon the single fact that the public has received the benefit of my services, faithfully rendered, without compensation. But as precedents usually have weight in such cases, I will refer the committee to several which will be found directly in point.

1st. Lieutenant Levi Whiting, while aide-de-camp to Major General Ripley, and receiving pay as such, acted in the capacity of assistant adjutant general in the eighth military district in the year 1818, and was allowed the difference between his own pay and emoluments as lieutenant and those of assistant adjutant general or major of cavalry.—(See a treasury settlement made with him by the Second Auditor on April 9, 1832, papers marked A and B, herewith.)

2d. Lieutenant Edmund Kirby, while aide-de-camp to Major General Brown, acted as adjutant general at Washington city in the year 1821, for which he received the *difference* between his own pay and emoluments as lieutenant and those of adjutant general or colonel of cavalry.—(See a treasury settlement made with him by the Second Auditor on August 17, 1821; and a report from the Second Auditor to the Secretary of War, dated September 9, 1831, paper marked C, herewith.)

3d. Captain Charles J. Nourse, of the second artillery, acted as adjutant general at Washington city in the year 1824, for which he received the full pay and emoluments of the latter grade as colonel of cavalry.—(See letter from the Second Auditor, marked D, herewith.)

The foregoing precedents are derived from Executive decisions. The number might be greatly extended by a little research; but these are presumed to be sufficient to show that the principle on which my claim rests is well established. I will, however, refer you to a few others, derived from your own legislation, in further illustration of the justice of the claim preferred:

1st. By an act approved May 28, 1812, entitled "An act for the relief of Captain Ninian Pinckney," he was allowed for extra services rendered as brigade inspector, from August 20, 1808, to May 31, 1810—(See Laws United States, volume 4, page 438.)

2d. By an act approved April 5, 1820, entitled "An act for the relief of Lieutenant John A. Dix," he was allowed for extra services performed as adjutant in Portsmouth harbor in the year 1814.—(See Laws United States, volume 6, page 469.)

3d. By the act approved March 3, 1835, entitled "An act to regulate the pay of the navy of the United States," it is provided that "officers temporarily performing the duties of those of a higher grade, shall receive the compensation allowed to such higher grade while actually so employed."

I could not well describe how much these extra duties have cost me in the way of labor, health, and comfort. It was enough to be confined, without intermission, year after year in my ordinary vocation precisely at that season when others were enjoying relaxation from their labors; but to have an extraordinary amount of duty in nowise appertaining to my station imposed upon me, under those circumstances, was peculiarly harassing.

The quartermaster general had claims to indulgence, founded upon long and faithful services, too strong to be resisted; and in granting it to him the government was but discharging its own obligation, and was bound to provide for the performance of his duties in his absence. This was done by assigning them to me by a formal regulation having the authority of law; but no provision being made for compensation, I am constrained to seek it by an appeal to Congress.—(See extract herewith, marked E.)

Although I have discharged my own appropriate duties besides those of acting quartermaster general, you will perceive that I seek only the *difference* between my own pay and emoluments and those of the grade whose duty I performed. In a word, I only ask what has been repeatedly allowed to others under like circumstances, and this I trust there will be no indisposition to accord to me. It surely will not be expected of me, while holding the humble rank of captain, and, subsequently, of major, to perform the duties and incur the responsibilities of a brigadier general for upwards of three years without compensation.

I am, very respectfully, your most obedient servant,

TRUEMAN CROSS, Major United States Army.

Hon. R. M. JOHNSON, Chairman of Committee on Military Affairs, Ho. of Reps.

Memorandum of the time for which Major Cross performed the duties of Acting Quartermaster General.

From April 9 to November 4, 1819.....	6 months, 25 days, (a)
From May 16 to June 30, 1820.....	1 " 16 " (a)
From November 1 to November 30, 1820.....	1 " 0 "
From October 17, 1821 to, February 12, 1822.....	3 " 25 " (a)
From May 1 to September 20, 1822.....	4 " 20 "
From October 17 to November 27, 1822.....	1 " 10 "
From June 6 to July 28, 1823.....	1 " 23 "

From August 27 to October 27, 1832.....	2 " 0 "
From December 4 to December 15, 1832.....	0 " 10 " (a)
Total.....	3 years, 2 months, 10 days.

NOTE.—It is due to the quartermaster general to state that, for a portion of the time embraced in the above memorandum, (the periods marked *a*,) his absence was occasioned by duty, sometimes relating to his department, at others having no such relation. But it is nevertheless true that, for the whole time, his ordinary and appropriate duties, which, being administrative in their character, can only be performed at the seat of government under the established system, were carried on by me, as the records of the office will abundantly show.

T. CROSS, *Major United States Army*

A.

TREASURY DEPARTMENT, *Second Auditor's Office, April 9, 1832.*

SIR: Your claim for the difference between the pay and emoluments of a first lieutenant and aid to a brigadier general and those of an assistant adjutant general, from June 11 to December 26, 1818, inclusive, has been adjusted, and the amount of \$193 35, reported in your favor pursuant to the decision of the Secretary of War, will be transmitted to you by the Treasurer of the United States, the receipt of which you will be pleased to acknowledge to this office.

I am, &c.,

W. B. LEWIS, *Second Auditor.*

Captain LEVI WHITING, *4th Artillery, Fort Hamilton, New York.*

I certify that the above is a true copy from the records of the Second Auditor's office.

JAMES EAKIN, *Chief Clerk.*

B.

QUARTERMASTER GENERAL'S OFFICE, *Washington, February 1, 1821.*

SIR: Your letter to the Secretary of War, dated December 20, has been received at this office. As the barracks at New Orleans were amply sufficient for the accommodation of all the officers stationed there during the time for which you have charged, your account for quarters cannot be admitted. You are, however, entitled to the difference of pay between that which you actually drew and that of assistant adjutant general for the whole time you acted as such. If you will make out your account and forward it to this office, I will present it to the Secretary of War for his sanction.

I am, sir, &c.,

THO'S S. JESUP, *Quartermaster General.*

Lieutenant L. WHITING, *New Orleans.*

I certify that the above is a true copy from the records of the Quartermaster General's office.

THO. F. HUNT, *Captain and Assistant Quartermaster.*

C.

TREASURY DEPARTMENT, *Second Auditor's Office, September 9, 1831.*

SIR: The facts in the case of Lieutenant Kirby, referred to as a precedent in support of the claim of Captain Whiting for the difference of pay and emoluments between a lieutenant and aide-de-camp and an assistant adjutant general, are as follows:

Mr. Kirby, while aide-de-camp to General Brown, performed the duty of adjutant general from June 1 to August 14, 1821, for which he presented an account claiming the difference of pay and emoluments between a lieutenant and aide-de-camp and a colonel for the above period. The claim was allowed by Secretary Calhoun, and the amount (\$152 46) paid at this office.

With respect, I am your most obedient servant,

W. B. LEWIS, *Second Auditor.*

Hon. LEWIS CASS, *Secretary of War.*

I certify that the preceding is a true copy from the records of the Second Auditor's office.

JAMES EAKIN, *Chief Clerk.*

D.

TREASURY DEPARTMENT, *Second Auditor's Office, January 21, 1834.*

SIR: In reply to your letter of yesterday's date, I have to state that Captain C. J. Nourse, of the 2d regiment of artillery, who performed the duties of acting adjutant general in 1824, was allowed the full pay and emoluments of a colonel of cavalry.

I am, sir, very respectfully, your obedient servant,

W. B. LEWIS.

Major T. CROSS, *Quartermaster United States Army.*

I certify that the above is a true copy from the records of the Second Auditor's office.

JAMES EAKIN, *Chief Clerk.*

E.

Extract from the General Regulations of the Army, page 212, par. 973.

“One assistant quartermaster shall be attached to the office of the quartermaster general, who, in addition to his other duties, shall be charged with the disbursements at Washington, *and in the absence of the quartermaster general shall have the direction of the office.*”

No. 2.

QUARTERMASTER GENERAL'S OFFICE, *Washington, October 31, 1834.*

SIR: In obedience to the order of the President requiring a report in the case of Major Cross and Lieutenant Colonel Whiting, I have the honor to state that when I came to Washington, by order of the government, to take charge of the Quartermaster's department, in June, 1818, I found the situation so laborious, and the details so multifarious, that the assistance of an officer uniting business habits with talents and some military experience, in the feeble state of my health, became necessary. Major Cross had served in my staff when I commanded the 1st regiment of infantry at New Orleans and Baton Rouge, in 1816-17. I believed he possessed all the qualifications which I should require in an assistant, and with the approbation of the Secretary of War I invited him to join me. He accepted the invitation, and early in the autumn of 1818 he entered on duty in the office with a zeal, industry, and ability rarely equalled.

I found the department in the utmost confusion. To introduce system and enforce accountability required constant vigilance and incessant application. In all the labors of reform, in all the measures of improvement, Major Cross was associated.

In addition to other duties, Congress imposed by law upon the department that of preparing and enforcing a system of accountability for clothing. Major Cross was charged with the execution of that duty; he prepared the regulations and forms and superintended the administration of that branch of the service, with no other agency on my part than to legalize his acts by my official sanction. Some idea may be formed of the importance of the duty by the fact that a separate bureau has been established and charged with a portion of the labors formerly performed by Major Cross. I consider the accountability for clothing better than that of any other branch of the public service, civil or military; and I am sure I can demonstrate that from twenty to thirty thousand dollars a year has been saved in that item alone by the system which Major Cross prepared, and the execution of which he superintended.

While Major Cross was attached to this office I was absent on duty nearly sixteen months, and in consequence of ill health nearly eight months, and about fifteen months on furlough, in addition to which I have been confined to my room in this city and Georgetown, by severe illness, upwards of five months. During those periods the charge of the office and the direction of the department devolved on him, when every duty was performed by him with his characteristic zeal and ability.

Lieutenant Colonel Whiting is a highly valuable officer; he has been in the quartermaster's department since 1821, and has performed all the duties which have devolved upon him with zeal and ability; but his sphere of action has been very limited compared with that of Major Cross, and it is but common justice to the latter to say that his duties as quartermaster of this post, throwing out of view entirely all the duties which he has performed in my office, have been at least equal to the duties performed by the former.

With sentiments of the most respectful consideration, I have the honor to be, sir, &c.,

TH. S. JESUP, *Quartermaster General of United States Army.*

HON. LEWIS CASS, *Secretary of War,*

For the PRESIDENT of the United States.

NOTE.—This letter was not written with any reference whatever to my claim. It is a copy of a report made on the order of the President in reference to a question of rank then under his consideration. But as it testifies to the nature of my services, and the fidelity with which they were rendered, I trust I shall be excused for submitting it on this occasion.

T. CROSS, *Major of United States Army.*

No. 3.

WASHINGTON, *January 23, 1836.*

SIR: As my claim is entirely of a *military* character, I deemed it enough to sustain it by precedents drawn from the military and naval service, not supposing that it would be assimilated to cases of civil officers. But since my interview with the committee I have collected the following precedents from the civil service, which go to fortify those of a military character on which I relied. They clearly establish the principle that *extra* compensation is due for *extra services* rendered to the public.

1. By act of March 3, 1817, \$500 were granted to Peter Hagner, then additional accountant of the War Department, for extraordinary services rendered by him in the settlement of the accounts of the War Department.—(See Laws U. S., vol. 6, page 224.)

2. By act of March 14, 1826, making appropriation for the support of government, Thomas H. Gillis, chief clerk of the Fourth Auditor's office, was allowed \$950, in addition to his salary, for performing the duties of the said Fourth Auditor during his last illness, from October 8, 1823, to June 23, 1824.—(See Laws U. S., vol. 7, page 447.)

3. By act of March 3, 1827, \$1,000 were granted to Peter Hagner, Third Auditor of the Treasury, as compensation for extra services performed by him under the provisions of the act of March 3, 1825, relative to lost property.—(See Laws U. S., vol. 7, page 607.)

4. By act of March 2, 1831, making appropriation for the support of government, \$1,000 were allowed to Judge Cranch, in addition to his salary, for preparing a code of laws for the District of Columbia.

5. By act of March 3, 1831, for the relief of William J. Carroll, clerk of the Supreme Court of the United States, he was allowed \$2,000 for bringing up minutes, &c., &c., on the ground that said services did not pertain to the *regular and official* duties of the said Carroll.

6. By act of March 3, 1835, making appropriation for the support of government, General Scott was allowed \$5,000 for preparing and superintending the printing of the System of Discipline and Tactics of the Army.

It appears from the foregoing references that Mr. Hagner, while additional accountant of the War Department, was allowed extra compensation "for extraordinary services rendered in the *settlement of the accounts* of that department." This is more than I claim. It might, perhaps, have been said of him that he was laboring in his proper vocation, since the settlement of the accounts of the War Department would seem to pertain, of right, to the additional accountant of that department, but the high and responsible services for which I claim compensation could not, by any possible construction, be brought within the line of my appropriate duties in the humble grades which I held.

In the second case of Mr. Hagner, cited above, it appears that while he was receiving a salary of \$3,000 as Auditor, he was allowed \$1,000, in addition, "for extra services performed by him." And it is to be observed that the services referred to had been specially assigned to him by law.

In the case of Mr. Gillis, he was receiving a salary of \$1,700, and was allowed \$950, in addition, for eight months and fifteen days' services as *acting* Auditor, during the last illness of the legal incumbent. The circumstance that he was paid out of the surplus of the appropriation for the Auditor's salary makes no difference in the case, since that surplus belonged to the public just as much as if it never had been appropriated. It was a mere financial expedient, in nowise affecting the principle of the claim, and equivalent to a new appropriation.

In the case of Mr. Carroll, to whom \$2,000 was granted, the law expressly declares it to be "for services not pertaining to his regular and official duties;" thus distinctly recognizing the validity of a claim for services rendered beyond the sphere of the regular and official duties of an officer.

The case of General Scott is of a military character, but rests upon the same principle as the civil cases cited, namely, that extra compensation is due for extra services rendered.

I have thus shown that my claim is supported by every variety of precedent: first, in the military service to which it belongs; secondly, in the naval service, which is of a strictly kindred character; thirdly, in the civil executive departments of the government; and, lastly, in the judiciary department. And if there be any virtue in the force of precedent, surely my claim is entitled to admission.

I have the honor to be, very respectfully, your obedient servant,

TRUEMAN CROSS, *Major United States Army.*

Hon. R. M. JOHNSON, *Chairman Military Committee, House of Representatives.*

24TH CONGRESS.]

No. 665.

[1ST SESSION.]

ON THE EXPEDIENCY OF MAKING THE PAY OF MILITARY STOREKEEPERS AT THE ARSENALS OF CONSTRUCTION THE SAME AS THAT ALLOWED TO STOREKEEPERS AT THE ARMORIES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 21, 1836.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom was referred the subject of increasing the pay of military storekeepers at the several arsenals of construction, reported:

That they have examined into the subject, and find that there are three arsenals of construction in the United States; and they find that the responsibility and duties of such storekeepers as aforesaid are similar and about equal to the storekeepers at the national armories, and they refer to the following papers and make them a part of this report. The committee therefore instruct their chairman to make such a motion and offer such amendment as will place the storekeepers at the arsenals of construction upon the same footing, as to compensation, with storekeepers at the national armories, whenever the bill shall be acted upon reported by the same committee to regulate and increase the pay of the superintendent and other officers of the national armories at Springfield and Harper's Ferry.

A.

To the honorable Senate and House of Representatives of the United States:

The undersigned respectfully represents that he was a few years since appointed military storekeeper, and assigned to the Bellona arsenal. He gave bonds, with security, to the amount of \$5,000, and received the pay of a captain of infantry. About eighteen months since he was ordered to Washington arsenal, which is an arsenal of construction, and is directed to be made the model arsenal of the United States. Here he is required to do the duties of paymaster as well as military storekeeper, without increase of compensation, and his bonds increased to \$15,000, the amount of property at the post being

very large, (according to the last annual report \$1,323,336 47½, and the disbursements may amount to from \$50,000 to \$150,000.) The care and preservation of this property,* keeping the accounts in a number of books, making the disbursements, and preparation of monthly and quarterly returns, involve an amount of labor and responsibility which is believed to be as great, if not greater, than that of any armory or arsenal in the United States, and for which, it is humbly believed, the present compensation is entirely inadequate. At the most reduced rate of commission allowed to an agent or disbursing officer, the commission on the amount of disbursements alone, without computing the \$1,323,336 worth of property for which he is responsible, would amount to three times the pay that he is now allowed. District paymasters of the army receive a much greater amount. Under these circumstances, he respectfully solicits that his compensation, as well as that of other military storekeepers at the principal arsenals of construction, whose duties are also laborious and responsible, may be increased to an amount more nearly commensurate with the duties performed and responsibilities incurred.

MARCUS C. BUCK, *Military Storekeeper and Paymaster.*

B.

WAR DEPARTMENT, *March 2, 1836.*

SIR: In answer to your letter of the 29th ultimo, I have the honor to transmit a report from the colonel of ordnance furnishing the information you required.

Very respectfully, your most obedient servant,

LEWIS CASS.

Hon. R. M. JOHNSON, *Chairman Committee of Military Affairs, House of Representatives.*

ORDNANCE OFFICE, *March 1, 1836.*

Annual disbursements at Harper's Ferry, about	\$200, 000
Amount of property in hands of storekeeper, about	1, 370, 000
	<hr/>

Annual disbursements at the Allegheny arsenal, about	\$20, 000
Amount of property in hands of storekeeper, about	1, 200, 000
	<hr/>

Though the amount of property at some of the arsenals of construction is *now* smaller than at the armory, yet it is constantly increasing by the removal of the property at the armories every two or three years to the arsenals, and by the annual appropriations for property or articles which can be made at the arsenals alone.

2. In the duty of *preservation*, which belongs to the storekeepers, there is also this difference, that at the arsenals there are every kind of ordnance stores whatsoever; whereas at the armories there are but one species of ordnance stores to any great extent, viz: small arms. This makes the business of preservation much more complicated at the arsenals.

3. There is much greater communication between the storekeepers at the arsenals and the army and militia, since they have to issue and receive every species of ordnance stores at all times and under all circumstances; and in case of war or public disturbance the storekeeper of the arsenal is extremely active. At the armories, on the contrary, they issue only small arms, and those not so often. *In short*, at the armories the responsibilities of disbursements are much greater; but at the arsenals the duty of preservation is much greater, as well as that of *issue* and reception of ordnance and ordnance stores.

G. BOMFORD, *Colonel of Ordnance.*

C.

INSPECTOR GENERAL'S OFFICE, *Washington, March 1, 1836.*

SIR: In answer to your communication of this date, relating to increasing the pay of storekeepers acting as paymasters at the principal arsenals of construction, I would here remark that they are subject to the same responsibilities, and liable to the same losses in the disbursement of the public moneys, that storekeepers acting as paymasters are at the national armories, and, consequently, ought, in my opinion, to be placed on the same footing in regard to pay and emoluments.

I have the honor to be, very respectfully, your obedient servant,

JOHN E. WOOL, *Brigadier General U. S. Army.*

Hon. G. Y. LANSING, *House of Representatives.*

D.

DEAR SIR: In answer to your letter of yesterday, asking my opinion respecting the relative duties of the military storekeepers and paymasters at the principal arsenals and at the national armories, I have to state that the duties at the principal arsenals are unavoidably more arduous and responsible as respects the following points:

* He has receipted for it, and is charged with every article that may be deficient from any cause.

1. With regard to the amount of property, which will average about \$1,500,000, at the three principal arsenals, whereas the armories are cleared out every two or three years of all small arms, which are deposited at the arsenals, and go to increase the responsibility of the storekeepers there.

2. As to the preservation of ordnance stores. This is an arduous duty at the arsenals, in consequence of the exceeding great variety of articles which require almost all a different method of preservation. At the armories, on the contrary, the item of preservation is very small, since the stores are but of one kind, viz: small arms, and since these are retained but a short time at the armories after being finished.

3. The duty of supplying the fortifications, the army and militia, belongs almost exclusively to the storekeepers of arsenals; a few small arms are now and then sent from the armories to the militia, but that is seldom convenient.

4. The disbursements are much greater in amount at the armories, being nearly \$200,000 per annum. The business, however, of disbursing that sum is not more arduous, though it be more responsible, than that of disbursing some \$40,000 or \$50,000 at the arsenals, since the latter is generally paid to a greater number of persons and in much smaller sums, the objects to be accomplished being generally more numerous. At the armories the payments are made on muster-rolls, which are small, or the articles purchased are in large quantities.

I should say, therefore, upon the whole, that the mere responsibility for money is greater at the armories; but the business of disbursing, as well as that of preservation of stores and of issue and reception, is much the greatest at the arsenals.

I have the honor to be, respectfully, your obedient servant,

WILLIAM H. BELL, *Captain of Ordnance.*

WATERVLIET ARSENAL, *March —, 1836.*

The subscriber begs leave respectfully to represent that he was, some time since, appointed military storekeeper, with the pay and emoluments of a captain of infantry, and assigned to the Watervliet arsenal, which is an arsenal of construction.

About four months after his appointment he was directed to perform the duties of payment without any additional compensation, and to give bonds in the sum of \$15,000 for the faithful performance of his duties. The amount annually disbursed at the post varies from \$60,000 to \$100,000, which is distributed in small monthly, or more frequent payments, and subjects the disbursing officer to risk of loss, and to trouble and expense, in procuring the funds from the deposit bank at Albany, a distance of six miles.

Taking into consideration the care and preservation of the large amount of public property, (over \$1,500,000,) keeping the accounts, together with the preparation of the monthly papers and quarterly returns, it is humbly believed that the compensation now received is not commensurate with the duties required.

The undersigned therefore respectfully solicits that his compensation, as well as that of other military storekeepers at arsenals of construction, may be increased to a sum more nearly proportionate to the duties and responsibilities performed and incurred.

S. LANSING, JR., *Military Storekeeper and Paymaster.*

F.

WASHINGTON, *February 28, 1836.*

SIR: I perceive a movement is made to increase the allowance made to the armory military storekeepers. The allowance is insufficient, and ought, as a matter of justice, to be increased, and should be made to include, with stronger reasons, that of the storekeepers to whose duties have been superadded, by regulations, that of paymaster to the *three principal arsenals of construction*. In regard to my own post, Watervliet arsenal, I can testify to the onerous nature of the duties and the inadequacy of the pay. By the assignment of paymaster's duties the responsibility has been greatly increased without any added compensation.

Very respectfully, your obedient servant,

W. J. WORTH, *Lieutenant Colonel.*

Hon. G. Y. LANSING.

G.

ARSENAL, *Pittsburg, Pa., March 8, 1836.*

DEAR SIR: I have just been informed that a bill has been reported in favor of the military storekeepers at the national armories in exclusion of those stationed at *arsenals*, doing duties of *paymaster*. Now, as our duties are certainly quite as great if not greater, may I beg your interest in our behalf. I know, as to myself, my duties are constant and laborious; I attend to keeping all property returns, issuing to the current service of the arsenal, and to all the posts and militia of all the western States, without any assistance whatever; making every invoice with my own hand, and superintending the weighing of every pound for transportation.

I will refer you to Colonels Talcott and Worth, and General Wool, who can give you all the information necessary.

Your friend,

JAMES R. BUTLER, *Military Storekeeper and Paymaster.*

Col. R. M. JOHNSON.

24TH CONGRESS.]

No. 666.

[1ST SESSION.

ON THE EXPEDIENCY OF REMOVING THE TROOPS FROM FORT GIBSON TO THE WESTERN BOUNDARY OF ARKANSAS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 21, 1836.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom was referred the memorial of the legislature of Arkansas, praying for the removal of the United States troops from Fort Gibson to some eligible point on the Arkansas frontier, near the western boundary line of that Territory, reported:

That before Arkansas was formed into a territorial government, the protection of our citizens, and the interest of the United States in that quarter, induced the government to establish a military post at the junction of the Poteau and Arkansas rivers. This post was called "Fort Smith," and, for several years after its establishment, was on the extreme western boundary line of that Territory, and entirely west of the settlements of the citizens of the United States. By an act of Congress, approved in 1825, the western boundary line of Arkansas was removed forty miles (in a straight line) further west; and after the passage of that act, and after the line had been run, it was deemed expedient by the government to remove the garrison from Fort Smith to the extreme western boundary line of that Territory. The troops were removed, Fort Smith was abandoned, and Fort Gibson was established, and all the intermediate country thus acquired, or added to Arkansas by the act of Congress aforesaid, was organized into counties by the legislature of Arkansas, and settled by our citizens. Afterwards, in 1828, the government, in opposition to the firm and spirited remonstrance of the legislature of Arkansas, and the strenuous efforts of her delegate, ceded the country, added as aforesaid to Arkansas, to the Cherokee Indians; and by a clause in the treaty with that tribe the western line of that Territory was brought back and permanently fixed where it originally was before the passage of the act of Congress of 1825. The garrison, however, has not been brought back with the line; the troops intended for the protection of the citizens of Arkansas are still stationed at Fort Gibson, in the midst of the Cherokee nation, forty miles in a straight line, and about eighty by the military road, from the settlements of our citizens. The garrison, situated where it now is, can afford but little protection to the citizens of Arkansas. It is believed by the committee to be bad policy to have an armed force stationed so remote from the frontier, and in the midst of an Indian country.

As the present western boundary line is fixed by treaty, and probably will never be extended further west, and as the policy of the government has been, and will be, to settle various tribes of Indians permanently upon that frontier, and as, on that account, there will ever be a necessity to keep up a garrison there for their protection, the committee have no hesitation in unanimously recommending the removal of the garrison from Fort Gibson to some eligible point on the Arkansas river, near the western boundary line of Arkansas. They believe such a disposition of our troops would more effectually protect our citizens, and at the same time bring the troops nearer to the point from which they draw their subsistence and support. The committee refer to the memorial of the legislature of Arkansas Territory, and make it a part of this report. They therefore report a bill.

To the honorable the Senate and House of Representatives of the United States in Congress assembled :

The memorial of the general assembly of the Territory of Arkansas respectfully represents to your honorable body that, from the exposed situation of the western frontier of the Territory of Arkansas, and the want of arms and other munitions of war, to place the country in a state of defence in case of a war with the Indians, located on our western frontier, by the United States, is absolutely necessary that a fortification, at the expense of the United States, should be established and garrisoned with troops at some point on the western boundary line of the Territory. Your memorialists represent that Fort Gibson, the only fortification on the west, is situated forty miles within the Indian country, and, in the event of a war with any of the tribes of Indians on our west, would afford little or no protection to our citizens. Your memorialists would therefore respectfully request your honorable body to pass a law making an appropriation for the purpose of erecting a fortification at some point on the line between the Territory of Arkansas and the Indians. And your memorialists, as in duty bound, will ever pray, &c., &c.

JOHN WILSON, *Speaker of the House of Representatives.*
CHAS. CALDWELL, *President of the Legislative Council.*

Approved November 3, 1835.

WM. S. FULTON. °

WAR DEPARTMENT, *March 4, 1836.*

SIR: In answer to your inquiries in relation to Fort Gibson, I have the honor to remark that, in the project for the defence of the western frontier, submitted to the chairman of the Committee on Military Affairs of the Senate, and a copy of which was transmitted to you on the 19th ultimo, I suggested the propriety of opening a communication west of Arkansas and Missouri, and running from the Mississippi to the Red river, and of establishing a cordon of posts along this line. I proposed, also, that the posts now existing in that country, and which would not be found upon this line when established, should be removed to it. Complaints have, for some time, been made of the unhealthful site of Fort Gibson, and an estimate was submitted, at the commencement of this session of Congress, for the amount necessary to rebuild it, either in its present position, or in some other place, as might be found most expedient on an examination of the country.

Should the plan of opening a communication be approved by Congress, and be authorized to be carried into effect, a proper examination of the country will be made in view of all the considerations which ought to weigh in the matter. Wherever this road may pass, in the vicinity of Fort Gibson, the present position ought, no doubt, to be abandoned, and a new and healthful one selected upon the road. I would therefore suggest that the proposed bill should correspond in its features with this plan, and that the appropriation to be made should be the same as the one before mentioned, to wit, \$50,000.

Very respectfully, your most obedient servant,

LEWIS CASS.

Hon. R. M. JOHNSON, *Chairman of Military Committee, House of Reps.*

HEADQUARTERS OF THE ARMY, *Washington, February 12, 1836.*

SIR: Your letter of the 5th instant, covering a communication from Captain Phillips, of the 7th infantry, on the subject of the unhealthiness of the post on the Arkansas, called Fort Gibson, I have attentively perused.

The situation of the troops in that quarter has occupied our attention for some time past; but for want of the necessary information as to the best site on which to erect the proposed barracks for their better accommodation, as well as the want of means, have prevented any definitive measures being taken. We are now better informed, and an appropriation has been asked, with a view for making a new establishment somewhere in that quarter, where it is expected the health of the troops may be insured as well as their comfort.

I have the honor to be, very respectfully, your obedient servant,

ALEX. MACOMB, *Major General.*

Hon. R. M. JOHNSON, *House of Representatives.*

P. S.—The letters enclosed to me in your letters of the 17th January and 5th instant are herewith returned.

A. M.

FORT GIBSON, *January 3, 1836.*

DEAR SIR: I had the honor, on the 8th ultimo, to transmit you a letter on the subject of the removal of the seventh regiment of infantry from this frontier, and requesting your aid in behalf of the regiment in the accomplishment of this object. I send you herewith a copy of an application which Lieutenant Colonel Whistler, commanding the regiment, has made to the general-in-chief, in order that you may be in possession of all the information in my power to give you on this subject. I beg leave, also, to refer you to a communication from the same source, announcing the death of the late Lieutenant Kinny, of the seventh regiment infantry, which portrays the sentiments and feelings of the officers in regard to this post; which will be found in the Adjutant General's office.

The principal objection which is urged by General Arbuckle to this measure, I am informed, is that he is afraid *he will die* if the regiment is ordered to the north!

Ought not the deaths of the officers and soldiers who have fallen victims to the diseases of this climate be considered as a sufficient sacrifice on the altar of personal interest and private welfare to satisfy the selfishness of such a feeling?

For the honor of human nature I fain would forego the pain of recording such a sentiment from any individual, and especially from an officer of the army, and he, too, a general! I pray that such a sentiment may never be attributed to me while I have the honor to command in the service of my country.

I believe if the President of the United States were advised of our situation, his high sense of justice would prompt him to direct that the necessary orders should be given for our removal from this country.

With high consideration and esteem, I am, sir, your obedient servant,

J. A. PHILLIPS, *Captain 7th Infantry.*

Colonel R. M. JOHNSON, *Member of Congress, Washington.*

HEADQUARTERS 7TH INFANTRY, *Fort Gibson, January 3, 1836.*

SIR: Deeming it but a duty I owe to the seventh regiment of infantry, (which I command,) I have the honor to apply for a removal of it to some other station; and, as the regiment has come from the south, that it may be ordered north of the latitude of this place.

I base this application on the extraordinary length of time the regiment has been stationed on the Arkansas and Red rivers, which has been since February, 1822, and the onerous detached duties in the prairies west, and fatigue duties at this post it has to perform incident to the service required by troops stationed on this frontier. But the state of the command as to discipline, instruction, and military knowledge, forms a far stronger reason why I should urge upon you the necessity of a removal. This is owing to the great fatigue duties that the regiment has performed and still continues to perform.

I need not assure you, sir, that it is from no personal motives that I make this application. I cannot regard this as a question whether a particular officer likes or dislikes this part of the country, or whether he has been at this post one, two, or fourteen years; but whether this regiment has perfected its title to the same indulgence which has been extended to others; or whether the condition of the regiment is not such as to make it necessary, for the good of the service, that the same military policy should govern in regard to it which has governed in the changes of other parts of the army.

I am, sir, respectfully, your most obedient servant,

WM. WHISTLER, *Lieutenant Colonel 7th Infantry, Com. Reg.*

Major General A. MACOMB, *Com. Chief U. S. Army, Washington.*

A true copy.

J. A. PHILLIPS, *Captain 7th Infantry.*

Fort Gibson, December 8, 1835.

Sir: The friendly interest which you were pleased to take in my private views in relation to the appointment of paymaster of the army, and your well known reputation for dispensing justice in the administration of public affairs, have induced me to address you on a subject of great importance to myself, as well as the whole regiment to which I belong. I have always felt a reluctance to ask of my friends their political influence in the accomplishment of my wishes either of a public or private nature; but it does seem, in this instance, at least, as if justice is not to be awarded us, and our rights to be disregarded by the general-in-chief or the War Department, without a resort to our friends in Congress.

My object in addressing you is, to ask your influence, either in or out of Congress, as you may deem most advisable, to obtain a *removal of the seventh regiment of infantry from the southwestern frontier*. In asking of you this favor, allow me to give you, as briefly as I can, an outline of the service and duties of this regiment for the last *thirteen* years and upwards, the period of its service (I was about to say *servitude*) in this country; and I have no doubt, from its perusal, your sense of justice will induce you to give to this subject the serious consideration which I think it deserves.

Since the headquarters of the seventh infantry were established at Fort Gibson the troops have been constantly exposed to a sickly post and climate, engaged in the performance of the most toilsome duties, and especially during the last two years. During this period the soldiers have been employed in building and repairing barracks, (for the quarters here began to rot down before they were finished!) cutting roads, and keeping peace among the different tribes on this frontier; and for the last two years (summers) they were cutting roads into the *Indian country*, extending far into the prairies to the west, for the ostensible object of making a treaty of peace with the savage tribes who roam those wilds from the borders of Arkansas to the Rocky mountains. I do not know what the views of the general government may be in regard to our relations with *these* Indians, but unless they are of more importance than my penetration has been able to discover, the United States have dearly paid for the sacrifice of so many lives among the troops, and the destruction of the constitutions of many of those that have survived. The surgeon who accompanied these expeditions recently informed me that the health of both officers and men has become so much impaired by exposure in the *prairie* that very few would be able to endure the hardships of another campaign; and yet I suppose this is inevitable if the seventh infantry remain in this country! How is it to be expected that soldiers, unused to the prairies at any season, could avoid disease and death when exposed to the scorching rays of a midsummer sun? The Indians themselves avoid this exposure.

Besides the unhealthiness of this post, there are other reasons which induce the officers to wish for a removal. The fact of some of the most important duties pertaining to a military post (such as drills and the discipline of the soldiery) being neglected at this station is sufficient, in my opinion, for officers who take any pride in their profession to desire a change. I have been in the seventh regiment of infantry upwards of twelve years, and I believe I can say it without fear of contradiction, that there has not been a day, not always excepting the *Sabbath*, when the soldiers have not been employed at hard work! And even now there seems to be as little prospect of getting through it as the day on which it was first commenced! The morning reports of my company generally show about eight or ten for military duty out of fifty men present; the remainder are on "extra and daily" duty, or, in other words, at hard labor.

This is no new state of affairs here; it has long been so, and will continue to be so as long as our regiment remains in this country. We are losing our best men here, in consequence of this incessant labor, who go off to other stations and enlist, to avoid these toilsome duties. In fact, I have almost come to the conclusion that the troops at *this* post, instead of being enlisted as soldiers to perform military duty, are received into service to become only "hewers of wood and drawers of water." Nor are we allowed to have our wood furnished by contract, as at other posts, but our soldiers are sent out to cut it in the middle of winter, instead of its being procured in sufficient quantities in the fall for the use of the garrison during the inclement season!

And now, my dear sir, to what circumstance or to whom do you suppose may be attributed the cause of the seventh regiment of infantry having been kept so long on this frontier, and especially when all the other regiments in our service have changed their stations, and most of them, too, have had the advantages of being sent to the "schools of practice" to learn *military* duty? Is it not proper and just that there should be a proper distribution of the arduous duties among the regiments of the same corps, and not suffer all the evils of the service to be forced upon one? There is at this time an order in existence which I think was published to the army the year before the death of the late General Brown, which directs that *no regiment shall remain more than two years at any one station; and yet we have been at this post nearly twelve years!*

I will not charge the colonel of my regiment with being indirectly instrumental in keeping us here, but I believe if he were to express a desire to have the regiment removed that it would be acceded to. All his interests, I believe, as an officer and a citizen, are in this country. By virtue of the first, he commands the southwestern department; and as he has a plantation on the Arkansas river, which he has under cultivation, I must believe that these have *some* effect in influencing his motives. He who would rise superior to these considerations is superior to human nature, and he who would be inferior to them is not a man.

I have taken the pains to procure from the public records of the post a statement of the number of deaths that have occurred among the troops stationed at *Fort Gibson*, from the time of its establishment to the present date, which is annexed. I do not wish you to rely on my information exclusively, but if you will call for the reports made to the Adjutant General's and Surgeon General's offices you will find my statement fully corroborated.

As a captain of the seventh regiment, I feel that I should be recreant to my duty if I did not claim for my company and myself all the rights and privileges which the laws of the country and the orders of the War Department bestow upon us.

May I hope, sir, that you will spare time from your important and various duties to acknowledge the receipt of this communication.

With the highest regard, I have the honor to be your obedient servant,

J. A. PHILLIPS.

STATEMENT OF DEATHS.

During the last two years, to this date, two hundred and ninety-two soldiers and six officers died.

From the year 1824 (when this post was established) to the 8th December, 1835, five hundred and sixty-one soldiers and nine officers died.

During the third quarter of the present year the surgeon reported six hundred and one distinct cases of disease at this post, among the infantry exclusively.

J. A. PHILLIPS.

FORT GIBSON, *December 8, 1835.*

HEADQUARTERS OF THE ARMY, *Washington, February 29, 1836.*

SIR: In compliance with your instructions, I have examined into the state of the western frontier of the Territory of Arkansas, with a view of reporting on the defence of the same, in conformity with the wishes of the general assembly of that Territory, as set forth in its memorial to Congress, approved the 3d of November, 1835.

The position of the post on the Neosho, called Fort Gibson, has been represented to be very unhealthy and difficult of access by water, owing to the navigation of the Arkansas, above Fort Coffee, being interrupted by difficult rapids and shoals, which only can be passed by steamboats at high water; and as instructions had been given to the commanding officer and others connected with the service in that quarter to report as to the best position for the posting of the troops, it is only lately that information has been obtained by which a judgment could be formed at headquarters as to the position the best adapted for the protection of the frontiers above alluded to, and for fulfilling the intentions of government with regard to the Indians established under its auspices west of the Mississippi.

A small post was established some years since on the right bank of the Arkansas, about ten miles beyond the territorial line, called Fort Coffee, which has proved thus far not only to be healthy but convenient, it being more accessible than Fort Gibson, and being also on the line of communication between Forts Leavenworth and Towson, possesses many advantages over a position more advanced into the Indian country, and covers more directly the frontier of the Territory from interruption by the Indians, as well as provide the means of preventing any interference with the Indians on the part of the white people.

In establishing a post at this point, which I would respectfully recommend, regard ought to be had to its permanency, and therefore should be built of such materials as would insure its durability and strength, as well as the comfort of the troops that may occupy it. Indeed, a general system ought to be adopted for all the forts which may be established on the frontiers. This system should possess the essential qualities of strength, durability, and comfort, with a capacity not only sufficient for the accommodation of a large garrison, say of a regiment at least, but also for the supplies of provisions, arms, and ammunition, which may be proper to be deposited on the frontiers. By pursuing such a system, it is believed that the health of the troops will be insured, and the frontiers, in consequence, will be better protected; nor is it believed that the expense of the system will materially differ from that incurred by temporary, weak, and uncomfortable establishments, when the health of the troops, the expense attending the hospitals, and the constant repairs are considered, to say nothing of the moral effect which a respectable establishment may be expected to produce on the minds of the Indians, as well as the pride of the troops, which cannot be too highly estimated, and ought not to be lost sight of in the construction of new establishments on the frontiers.

I have the honor to be, most respectfully, your obedient servant,

ALEXANDER MACOMB, *Major General, Commander-in-chief.*

Hon. LEWIS CASS, *Secretary of War.*

The inspector general accords generally in the views as entertained by the major general in the above communication. The present position of the seventh regiment unquestionably ought to be changed. Whether the position as designated by the major general would be the best, he is not prepared to say; he presumes it is. He would not, however, establish any post as a permanent post in the Indian country. Every post thus established must necessarily be temporary in its character, and to be changed according to circumstances. Whether the buildings and defences of a post so established should be of permanent materials, or otherwise, should entirely depend upon the expense of procuring the materials and construction. All posts in the Indian country should be established some ten, fifteen, or more miles from the line separating the Indians from the whites.

JOHN E. WOOL, *Brigadier General U. S. Army.*

24TH CONGRESS.]

No 667.

[1ST SESSION.]

EXPLANATORY SPECIAL ESTIMATES FOR SUPPLYING THE ARSENALS WITH INDISPENSABLE ACCOUTREMENTS AND STORES DURING THE YEAR 1836.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 21, 1836.

Special estimate for supplying the arsenals with certain indispensable stores, viz :

7,000 sets infantry accoutrements, each set consisting of one cartridge-box, one cartridge-box belt, one bayonet belt, one bayonet belt plate, one bayonet scabbard, one brush and pick, one gun sling, at \$3 01 per set.....	\$21, 070 00
3,000 sets of Hall's rifle accoutrements, each set consisting of one rifle pouch, one flask and pouch belt, one waist belt, one plate for waist belt, one plate for pouch and flask belt, one copper flask, one brush and pick, one gun sling, one bayonet belt, one bayonet scabbard, at \$4 05 per set.....	12, 150 00
1, 500 sets of cavalry accoutrements, each set consisting of one sabre belt, one brass belt plate, one pistol cartridge-box, one pair of holsters, at \$4 79 per set.....	7, 185 00
Total amount.....	<u>40, 405 00</u>

The above estimate for accoutrements is in addition to the 5,000 sets of infantry, 1,000 sets of Hall's rifle, and 2,500 sets of cavalry accoutrements, which were embraced in the general estimate for this year, and submitted to Congress, making in all 12,000 sets of infantry accoutrements, 4,000 sets of Hall's rifle accoutrements, and 4,000 sets of cavalry accoutrements, allotting to each of the principal arsenals about 1,600 sets of accoutrements, and is deemed the minimum number which should always be in depot at each of the principal arsenals to meet the exigencies of the service.

Nearly the whole of the accoutrements estimated for have recently, on the occasion of the Indian hostilities, been ordered to be made in anticipation, and hence an additional supply is necessary for the western and northwestern frontiers in the event of any similar emergency among the Indians.

[1ST SESSION.]

APPLICATION OF MISSISSIPPI FOR THE ESTABLISHMENT OF AN ARSENAL OR MILITARY DEPOT IN THAT STATE.

COMMUNICATED TO THE SENATE MARCH 23, 1836.

EXECUTIVE DEPARTMENT, *Jackson, March 2, 1836.*

GENTLEMEN: In compliance with a resolution adopted by the legislature of this State at the late session, I have the honor herewith to transmit a copy of a resolution relative to the establishment of a military depot at or near Columbus.

I am, gentlemen, very respectfully, your most obedient,

CHARLES LYNCH.

Resolved by the legislature of the State of Mississippi, That our senators in Congress be instructed, and our representatives requested, to desire the government of the United States to establish a military depot at or near Columbus, on the Tombigbee river, in this State.

Resolved, That his excellency Charles Lynch be requested to furnish our delegation in Congress with a copy of this resolution.

JOHN L. IRVIN, *Speaker of the House of Representatives.*
JOHN A. QUITMAN, *President of the Senate.*

Approved February 27, 1836.

CHARLES LYNCH.

I certify the foregoing to be a true copy of the original resolution as is now on file in my office. In testimony whereof, I have hereunto set my hand, at the town of Jackson, the 2d February, 1836.

B. W. BENSON, *Secretary of State.*

WAR DEPARTMENT, *April 15, 1836.*

SIR: I have had the honor to receive your letter of the 31st ultimo, and, in answer, beg leave to inform you that, in my report to the President of the 8th instant, I have entered into a consideration of the general question concerning the establishment of depots for the reception of public arms. It is therefore only necessary for me to state that I consider the establishment of a depot in the State of Mississippi at or near the point recommended by the legislature as called for by the circumstances.

The resolution of the Mississippi legislature is herewith returned.

Very respectfully, your most obedient servant,

LEWIS CASS.

Hon. THOMAS H. BENTON, *Senate.*

24TH CONGRESS.]

No. 669.

[1ST SESSION.]

ON THE REORGANIZATION OF THE QUARTERMASTER GENERAL'S DEPARTMENT, WITH
THE ADDITION OF RANK AS FIELD OFFICERS.

COMMUNICATED TO THE SENATE MARCH 29, 1836.

MARCH 29, 1836.

In handing the enclosed letter from Major Brant to Colonel Benton, I avail of the occasion to present him a brief memorandum of my own views upon the same subject, founded upon long experience and observation.

J. CROSS, *Major and Quartermaster U. S. Army.*

(T.)

MEMORANDUM.

In respect to number and compensation, the present organization of the quartermaster's department is all that could reasonably be asked for it, but there is still a radical defect, in what may be called the *symmetry* of organization, which not only impairs the present usefulness of the department, but will, it is believed, ultimately prove fatal to its efficiency. I refer to the extraordinary disparity which exists between the rank of the first and second grades of its officers.

The organic law provides for one quartermaster general with the rank of brigadier general, and four quartermasters with the rank of major. It will be perceived that there is nothing like that regular *gradation* which is deemed so important in organizations of the line, and which obtains in almost every other branch of the staff. In the corps of engineers, for example, whose chief has only the rank of colonel, there is the usual intermediate grade of lieutenant colonel between him and the majors; so likewise in the ordnance department. Why should it be otherwise in the quartermaster's department, which is, after all, the great department of labor and responsibility? If there be a single reason for the distinction, I confess it has never occurred to me; and that there are many cogent reasons against it, I will endeavor briefly to show.

It is obvious, from the nature of things, that there cannot be a difference in the duties and responsibilities of the first and second grades of the department correspondent to the great disparity of their rank, and mere justice to the latter might therefore be deemed to require some alteration. But casting out of view all considerations of that sort, it is confidently believed that the welfare of the public service imperiously calls for a change.

The organization of any department is wrong in principle, and essentially defective, which looks beyond its own members for a chief in case of casualty; and such, it is more than probable, would be the effect of the present organization of the quartermaster's department. Whatever might be the merits of the individuals holding the next grade, the immense chasm which separates them from their chief would operate to preclude them from promotion. To raise a major at once to the grade of brigadier general, though it would violate no one's legal rights, might be deemed offensive to the pride and feelings of the intermediate grades in other corps, and this should be avoided; but it should be avoided by filling up the chasm in time, and thus give the department the faculty of furnishing its own chief, like other analogous departments.

Besides the abstract justice of the measure, one cannot fail to perceive the very injurious tendency of an organization which shuts out from the junior members all hope of advancement in their own department, and dooms them to perpetual servitude in an inferior grade, with the superadded humiliation of occasionally changing masters. The first effect of such treatment would be to drive from the department some of its most efficient members; and the second, to render those who would remain, under the pressure of necessity, discontented with their condition and lukewarm in the discharge of their duties, by which the economy of the service would be seriously affected, if nothing worse. But it might not stop here. It is a *dangerous* experiment to proclaim to a class of officers yet in humble rank, who are intrusted with heavy disbursements of the public money, that they have reached the *ne plus ultra* of their career, and

have nothing in prospect before them as a reward for their zeal and fidelity. I need not enter into detail under this head; it requires but a small acquaintance with human nature to enable one to conceive the corrupting tendency of such a state of things.

But the idea of placing a *novice* at the head of so important a branch of service, involving, as it does, the expenditure and administration of near a million a year, will be found to be a *fatal* error, try it who may. It is at war with all our theories about organization. If we can safely rely upon putting an individual without experience in its duties at the head of the quartermaster's department, then we may do so in relation to all other departments of the staff, and even to the army itself; and there is at once an end to the argument in favor of retaining offices, more with reference to the future contingencies than to the present necessities of the service.

I submit, then, whether it be not both just and expedient to advance two of the present majors of the quartermaster's department to the intermediate grades between them and their chief, and secure them all in the right of regular promotion, as is the case in other departments of the staff. The expense which would be occasioned by the change is very small indeed, and is really unworthy of consideration when compared with the important objects that would be accomplished by it. It would consist of the *difference* merely between the pay of two majors and that of a colonel and lieutenant colonel, and would amount to but \$942 per annum, including every object of allowance.

Respectfully submitted.

J. CROSS, *Major and Quartermaster U. S. Army.*
(T.)

St. Louis, *March 4, 1836.*

DEAR SIR: To one less acquainted with military affairs than yourself, it would perhaps be necessary to present a detailed statement in order to show the necessity there exists for a more perfect organization of the quartermaster's department than that now in being, but I am satisfied that your own experience and observation will abundantly suffice without any such statement. A comparison of the present organization of the engineer and ordnance departments with the one in question will fully exhibit the defects of the latter. As at present constituted, the chief of the quartermaster's department has the rank of brigadier general, between which and the next subordinate rank, that of quartermaster, there are no intermediate grades; hence the last-named rank is the ultimate one to which an officer can aspire; and having attained that, his hopes of further promotion in that arm of service are entirely closed. Were the chasm between those two grades filled by, say, one colonel and one lieutenant colonel, the colonel to be stationed at Washington, or to be ordered there during the temporary absence of the quartermaster general, it would give symmetry to the department, hold out the expectation of promotion to the lower grades, and not increase its expenses over, perhaps, some \$1,500 per annum. Moreover, it would prevent the recurrence of an anomaly which frequently takes place in the absence of the quartermaster general, namely, the assigning of his duties to a junior officer of the staff, thus necessarily compelling his seniors to receive their orders from him. And should the present incumbent retire, and a new chief be selected either from the line of the army or from citizen life, it will compel every officer of any rank or character in the department to resign or submit to degradation. A new organization, something similar to the one just hinted at, would, it appears to me, remedy these evils by placing the department on an equal footing with others, to which, in point of importance, it is certainly not inferior. With these brief outlines, I submit the matter to your better judgment in the hope that you will devise such an organization as will best promote the public interest and do justice to the officers of the department.

With respect and esteem, dear sir, your most obedient servant,

J. B. BRANT, *Major and Quartermaster U. S. Army.*

Hon. THOS. H. BENTON, *United States Senate, Washington City.*

24TH CONGRESS.]

No. 670.

1ST SESSION.

ITEMS OF ALL ACCOUNTS AND CLAIMS FOR PAY AND ALLOWANCES OF EVERY KIND
WHICH WERE PAID IN 1833 AND 1834 TO OFFICERS OF THE ARMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 4, 1836.

WAR DEPARTMENT, *April 4, 1836.*

SIR: In compliance with a resolution of the House of Representatives of January 17, 1835, I have the honor to transmit a statement, compiled from the reports of the Second and Third Auditors, exhibiting the items of all accounts, and claims for compensation, and allowances of every kind, which have been actually paid and allowed to officers of the army, for the two fiscal years ending September 30, 1834.

Very respectfully, your most obedient servant,

LEWIS CASS.

Hon. JAMES K. POLK, *Speaker of the House of Representatives.*

A statement of pay and allowances of all kinds made to officers of the United States army between October 1, 1832, and September 30, 1833, and also from October 1, 1833, to September 30, 1834, compiled from the reports of the Second and Third Auditors of the Treasury Department; prepared in pursuance of the resolution of the House of Representatives of the 17th of January, 1835.

The foregoing consolidated statement has been by us carefully compared with the reports of the Second and Third Auditors, and has been found to be correctly compiled therefrom:

W. A. RIND,
A. BALMAIN,
Clerks employed for the purpose.

WAR DEPARTMENT, *April 4, 1836.*

WAR DEPARTMENT, *April 11, 1836.*

SIR: I have the honor to transmit herewith a copy of a letter of the Third Auditor, explanatory of that part of the statement respecting the pay of officers of the army which relates to the supplying of fuel in kind, and which should have accompanied my communication of the 4th instant in answer to the resolution of the House of Representatives of January 17, 1835.

Very respectfully, your most obedient servant,

LEWIS CASS.

Hon. JAMES K. POLK, *Speaker of the House of Representatives.*

TREASURY DEPARTMENT, *Third Auditor's Office, January 8, 1836.*

SIR: I have the honor to hand to you herewith a statement (in separate sheets, numbered one to seven) of payments made to officers of the army for allowances between the 1st October, 1832, and 30th September, 1833, and between the 1st October, 1833, and 30th September, 1834, on account of transportation of their baggage; per diem allowance for travelling on court-martial duty; per diem as members and as special judges advocate to general courts-martial, and as recorders to courts of inquiry; commutation allowed in lieu of quarters and fuel at certain places; per diem in lieu of quarters and fuel and transportation while on topographical duty in the field, and payment for rent of quarters and purchase of fuel at stations and places where no public quarters could be furnished, or fuel was issued in kind by the quartermaster's department; commissions and extra pay as compensation for disbursing public money on account of fortifications, internal improvements, and in the quartermaster's department; per diem as extra pay for superintending the erection and repairs of fortifications, barracks, storehouses, and working parties on the Cumberland and military roads; per diem as extra pay when detailed on duty in the military bureaus; forage issued in kind, compensation for medical aid rendered to persons hired and employed in the engineer service, &c., as ascertained from accounts settled in this office, and prepared in pursuance of the resolution of the House of Representatives of the 17th January, 1835. a copy of which was referred by you to this office. This statement, it will be perceived, does not embrace the fuel allowances issued in kind on the monthly requisitions of the officers, because it was found impracticable in some cases to ascertain, with any degree of accuracy, what each officer had received, the requisitions of the commanding officer of the post, in many instances, embracing in the aggregate the allowance of the officers according to their rank, without naming them; and the cost of the fuel, in many situations, was extremely difficult to be arrived at, it having in some cases been procured at an expense by the troops, and in others by purchase, and difficult to trace to the particular issues made to each officer.

I have the honor to be, most respectfully, your obedient servant,

PETER HAGNER, *Auditor.*

Honorable LEWIS CASS, *Secretary of War.*

24TH CONGRESS.]

No. 671.

[1ST SESSION.]

ON THE MEANS AND MEASURES NECESSARY FOR THE MILITARY AND NAVAL DEFENCES
OF THE COUNTRY.

COMMUNICATED TO THE SENATE APRIL 8, 1836.

To the Senate:

I transmit herewith reports from the Secretaries of the War and Navy Departments, to whom were referred the resolutions adopted by the Senate on the 18th of February last, requesting information of the probable amount of appropriations that would be necessary to place the land and naval defences of the country upon a proper footing of strength and respectability.

In respect to that branch of the subject which falls more particularly under the notice of the Secretary of War, and in the consideration of which he has arrived at conclusions differing from those contained in the report from the Engineer bureau, I think it proper to add my concurrence in the views expressed by the Secretary.

ANDREW JACKSON.

WASHINGTON, *April 8, 1836.*

DEPARTMENT OF WAR, *April 7, 1836.*

SIR: In conformity with your instructions, I have the honor to transmit reports from the Engineer and Ordnance departments, furnishing so much of the information required by the resolution of the Senate of February 18, 1836, as relates to the fortifications of the country, and to a supply of the munitions of war. The former branch of this subject has required laborious investigations on the part of the officers charged with this duty, and their report has therefore been longer delayed than, under other circumstances, would have been proper; but the whole matter was too important to have the interests involved in it sacrificed to undue precipitancy.

The Engineer report was received at the department on Friday last, and I have embraced such portions of the intervening time as other official calls and a slight indisposition would allow me to devote to its examination. I did not consider that any suggestions I could make would justify a further delay at this advanced stage of the session, while, at the same time, I am aware that this letter will need all the allowance which these circumstances can claim for it.

It is obvious that, in the consideration of any general and permanent system of national defence, comprehensive views are not only necessary, but professional experience and a knowledge of practical details; such information, in fact, as must be obtained by long and careful attention to the various subjects which form the elements of this inquiry. Although, therefore, I do not concur in all the suggestions contained in these reports, and more particularly in those which relate to the nature and extent of some of our preparations, still, I have thought it proper to lay them before you, rather than to substitute any peculiar views of my own for them. Both furnish facts highly interesting to the community, and if they anticipate dangers which it may be thought are not likely to happen, and suggest preparations which future exigencies will not probably require, they are still valuable documents, presenting the necessary materials for the action of the legislature. The report from the Engineer department, in particular, evinces an accurate knowledge of the whole subject, while, at the same time, its general views are sound and comprehensive. I consider it a very able document.

Under these circumstances, I have thought it proper to submit some general remarks, explanatory of my own views, concerning a practical system of defence, and which will show how far the plans and details are in conformity with my opinion. I feel that this course is due to myself.

I shall confine my observations to the maritime frontier. Our inland border rests, in the southwest and northeast, upon the possessions of civilized nations, and requires defensive preparations to meet those contingencies only which, in the present state of society, we may reasonably anticipate. In the existing intercourse of nations, hostilities can scarcely overtake us so suddenly as not to leave time to move the necessary force to any point upon these frontiers threatened with attack. I am not aware of any peculiar position upon either of these lines of separation which commands the approaches to the country, or whose possession would give much superiority to an invading or defensive force. In fact, the division is in both cases an artificial line through much of its extent, and a portion of the natural boundary offers scarcely any impediment to military operations. Under such circumstances, it seems altogether inexpedient to construct expensive fortifications, which would do little more than protect the space under cover of their guns; which are not required as places of *depot*; which guard no avenue of communication, and which would leave the surrounding country penetrable in all directions. Without indulging in any improper speculations concerning the ultimate destiny of any portion of the country in juxtaposition with us, or looking for security to any political change, we may safely anticipate that our own advance in all the elements of power will be at least equal to that of the people who adjoin us; nor does the most prudent forecast dictate any precautions founded upon the opinion that our relative strength will decrease and theirs increase. The lake frontier, indeed, presents some peculiar considerations; and I think the views submitted by the Engineer department respecting Lake Champlain are entitled to much weight. This long, narrow sheet of navigable water opens a direct communication into the States of New York and Vermont, while its outlet is in a foreign country, and is commanded by a position of great natural strength. It is also within a few miles of the most powerful and populous portion of Canada, and open to all its resources and energies. With a view, perhaps, to possible rather than probable events, it may be deemed expedient to construct a work at some proper site within our boundary, which shall close the entrance of the lake to all vessels ascending its outlet. As such a work, however, would be an advanced post, and, from circumstances, peculiarly liable to attack, its extent and defences should be in proportion to its exposure.

There is already a considerable commercial marine upon the four great lakes, Ontario, Erie, Huron, and Michigan, which are opened to the enterprise of our citizens. And this will increase with the augmenting population which is flowing in upon the regions washed by these internal seas. It is obvious that, from natural causes, the physical superiority will be found upon the southern shores of these lakes. The resolution of the Senate embraces the inquiry into the expediency of constructing permanent fortifications in this quarter. And this inquiry properly divides itself into two branches:

- 1st. The policy of fortifying the harbors upon the lakes; and
- 2d. The policy of commanding, by permanent works, the communications between them.

Both of these measures presuppose that the naval superiority upon these waters may be doubtful. But it is difficult to foresee the probable existence of any circumstances which would give this ascendancy to the other party. It is unnecessary to investigate the considerations which bear upon this subject, as they are too obvious to require examination. They are to be seen and felt in all those wonderful evidences of increase and improvement which are now in such active operation. A victorious fleet upon these lakes could disembark an army at almost any point. If a harbor were closed by fortifications, they would only have to seek the nearest beach and land their men from boats, so that no defences we could construct would secure us against invasion; and temporary block-houses and batteries would probably be found sufficiently powerful to repel the attacks of any vessels seeking to enter the narrow harbors upon the lakes, if we could foresee the existence of any circumstances which would induce an enemy to endeavor to force an entrance into them.

As to the communication between the lakes, the inquiry, from geographical causes, is necessarily restricted to that from Lake Erie to Lake Huron, and to the straits of Michilimackinac. Of the former, almost sixty miles consist of two rivers, completely commanded from their opposite banks, while the entrance into one of these, the river St. Clair, is impeded by a bar, over which there are but about eight feet of water. No armed vessels could force their way up these rivers while the shores were in an enemy's possession, who might construct batteries at every projecting point, and who, in fact, might in many places sweep the decks with musketry. As to the straits of Michilimackinac, they are too broad to be

commanded by stationary fortifications, even if any circumstances should lead to the construction and equipment of a hostile fleet upon the bleak and remote shores of Matchedask bay, in the northeastern extremity of Lake Huron.

I am therefore of opinion that our lake frontier requires no permanent defences, and that we may safely rely for its security upon those resources, both in the *personnel* and *materiel*, which the extent and other advantages our country insure to us, and which must give us the superiority in that quarter.

It may, perhaps, be deemed expedient to establish a *depot* for the reception of munitions of war in some part of the peninsula of Michigan, and to strengthen it by such defences as will enable it to resist any *coup de main* which may be attempted. From the geographical features of the country our possessions here recede from their natural points of support, and are placed in immediate contact with a fertile and populous part of the neighboring colony. In the event of disturbances, the ordinary communications might be interrupted, and it would probably be advisable to have in deposit a supply of all the necessary means for offensive or defensive operations, and to place these beyond the reach of any enterprising officer who might be disposed by a sudden movement to gain possession of them. The expenditure for such an object would be comparatively unimportant, even should the contingency be judged sufficiently probable to justify precautionary measures.

I had the honor, in a communication to the chairman of the Committee on Military Affairs of the Senate, dated February 19, 1836, a copy of which was sent to the chairman of the Committee on Military Affairs of the House of Representatives, to suggest the mode best adapted, in my opinion, to secure our frontier against the depredations of the Indians. The basis of the plan was the establishment of a road from some point upon the Upper Mississippi to Red river, passing west of Missouri and Arkansas, and the construction of posts in proper situations along it. I think the ordinary mode of construction ought not to be departed from. Stockaded forts with log block-houses have been found fully sufficient for all the purposes of defence against Indians. They may be built speedily, with little expense, and when necessary by the labor of the troops. Our Indian boundary has heretofore been a receding, not a stationary one, and much of it is yet of this character. And even where we have planted the Indians who have been removed, and guaranteed their permanent occupation of the possessions assigned to them, we may find it necessary, in the redemption of the pledge we have given to protect them, to establish posts upon their exterior boundary, and thus prevent collisions between them and the ruder indigenous tribes of that region. I think, therefore, that no works of a more permanent character than these should be constructed upon our Indian frontier. A cordon established at proper distances upon such a road, with the requisite means of operation deposited in the posts, and with competent garrisons to occupy them, would probably afford greater security to the advanced settlements than any other measures in our power. The dragoons should be kept in motion along it during the open season of the year, when Indian disturbances are most to be apprehended, and their presence and facility of movement would tend powerfully to restrain the predatory disposition of the Indians; and if any sudden impulse should operate to drive them into hostilities, the means of assembling a strong force, with all necessary supplies, would be at hand. And as circumstances permit, the posts in the Indian country now in the rear of this proposed line of operations should be abandoned, and the garrisons transferred to it.

But it is upon our maritime frontier that we are most exposed. Our coast for three thousand miles is washed by the ocean, which separates us from those nations who have made the highest advances in all the arts, and particularly in those which minister to the operations of war, and with whom, from our intercourse and political relations, we are most liable to be drawn into collision. If this great medium of communication—the element at the same time of separation and of union—interposes peculiar obstacles to the progress of hostile demonstrations, it also offers advantages which are not less obvious, and which to be successfully resisted require corresponding arrangements and exertions. These advantages depend on the economy and facility of transportation, on the celerity of movement, and on the power of an enemy to threaten the whole shore spread out before him and to select his point of attack at pleasure. A powerful hostile fleet upon the coast of the United States presents some of the features of a war where a heavy mass is brought to act against detachments which may be cut up in detail, although their combined force would exceed the assailing foe. Our points of exposure are so numerous and distant, that it would be impracticable to keep at each of them a force competent to resist the attack of an enemy prepared by his naval ascendancy and his other arrangements to make a sudden and vigorous inroad upon our shores. It becomes us, therefore, to inquire how the consequences of this state of things are to be best met and averted.

The first and most obvious, and in every point of view the most proper method of defence, is an augmentation of our naval means to an extent proportioned to the resources and the necessities of the nation. I do not mean the actual construction and equipment of vessels only. The number of those in service must depend on the state of the country at a given period. But I mean the collection of all such materials as may be preserved without injury, and a due encouragement of those branches of interest essential to the growth of a navy, and which may be properly nurtured by the government, so that on the approach of danger a fleet may be put to sea without delay sufficiently powerful to meet any force which will probably be sent to our coast.

Our great battle upon the ocean is yet to be fought; and we shall gain nothing by shutting our eyes to the nature of the struggle, or to the exertions we shall find it necessary to make. All our institutions are essentially pacific, and every citizen feels that his share of the common interest is affected by the derangement of business, by the enormous expense, and by the uncertain result of a war. This feeling presses upon the community and the government, and is a sure guarantee that we shall never be precipitated into a contest, nor embark in one, unless imperiously required by those considerations which leave no alternative between resistance and dishonor. Accordingly, all our history shows that we are more disposed to bear while evils ought to be borne, than to seek redress by appeals to arms. Still, however, a contest must come; and it behooves us, while we have the means and the opportunity, to look forward to its attendant circumstances, and to prepare for the consequences.

It is no part of my object to enter into the details of a naval establishment. That duty will be much more appropriately and ably performed by the proper department. But as some of the views I shall present on the subject of our system of fortifications must be materially affected by any general plan of naval operations which, in the event of hostilities, might be adopted, I am necessarily led to submit a few remarks, not professional, but general, upon the extent and employment of our military marine.

There is as little need of inquiry now into our moral as into our physical capacity to maintain a navy, and to meet upon equal terms the ships and seamen of any other nation. Our extended commerce, creating and created by those resources which are essential to the building and equipment of fleets, removes all

doubt upon the one point, and the history of our naval enterprise, from the moment when the colors were first hoisted upon the hastily-prepared vessels at the commencement of our revolutionary struggle to the last contest in which any of our ships have been engaged, is equally satisfactory upon the other. The achievements of our navy have stamped its character with the country and the world. The simple recital of its exploits is the highest eulogium which can be pronounced upon it.

With ample means, therefore, to meet upon the ocean, by which they must approach us, any armaments that may be destined for our shores, we are called upon by every prudential consideration to do so. In the first place, though all wars in which we may be engaged will probably be defensive in their character, undertaken to repel or resent some injury or to assert some right, and rendered necessary by the conduct of other nations, still the objects of the war can be best attained by its vigorous prosecution. Defensive in its causes, it should be offensive in its character. The greater injury we can inflict upon our opponent, the sooner and the more satisfactory will be the redress we seek. Our principal belligerent measures should have for their aim, to attack our antagonist where he is most vulnerable. If we are to receive his assaults, we abandon the vantage ground, and endeavor, in effect, to compel him to do us justice by inviting his descent upon our shores, and by all those consequences which mark the progress of an invading force, whether for depredation or for conquest. By the ocean only can we be seriously assailed, and by the ocean only can we seriously assail any power with which we are likely to be brought into collision.

But independently of the policy of making an adversary feel the calamities of war, it is obvious that, even in a defensive point of view alone, the ocean should be our great field of operations. No one would advocate the project of endeavoring to make our coast impervious to attack. Such a scheme would be utterly impracticable. A superior fleet, conveying the necessary troops, could effect a landing at numerous points upon our shores even if the best devised plan of fortifying them were consummated. And, from the nature of maritime operations, such a fleet could bring its whole strength to bear upon any particular position, and by threatening or assailing various portions of the coast, either anticipate the tardy movements of troops upon land, and effect the object before their concentration, or render it necessary to keep in service a force far superior to that of the enemy, but so divided as to be inferior to it upon any given point. These dangers and difficulties would be averted or avoided by the maintenance of a fleet competent to meet any hostile squadrons which might be detached to our seas. Our coast would thus be defended on the ocean, and the calamities of war would be as little felt as the circumstances of such a conflict would permit.

As to the other advantages of a navy in the protection of commerce, they do not come within the scope of my inquiries, and are not therefore adverted to. Nor is it necessary or indeed proper that I should present those considerations of distance, of exposure, and of station, which would render a fleet numerically inferior in the aggregate to that of the enemy, yet still sufficiently powerful upon our own coasts to meet and overcome any armament which could probably be sent here.

It seems to me, therefore, that our first and best fortification is the navy. Nor do I see any limit to our naval preparations, except that imposed by a due regard to the public revenues from time to time, and by the probable condition of other maritime nations. Much of the *matériel* employed in the construction and equipment of vessels is almost indestructible, or at any rate may be preserved for a long series of years; and if ships can be thus kept without injury upon the stocks by being built under cover, I do not see what should restrain us from proceeding to build as many as may be deemed necessary, and as fast as a due regard to their economical and substantial construction will permit; and to collect and prepare for immediate use all the munitions of war, and other articles of equipment not liable to injury or decay by the lapse of time. Nor do I see that these preparations should be strictly graduated by the number of seamen who would probably enter the service at this time or within any short period. To build and equip vessels properly requires much time, as well with reference to the execution of the work as to the proper condition of the materials employed. And the costly experiment made by England, when she too hastily increased her fleet about thirty years ago by building ships with improper materials and bad workmanship, ought to furnish us with a profitable lesson. These vessels soon decayed, after rendering very little service. Naval means should therefore be provided at a period of leisure, to be ready for immediate employment in a period of exigency; and a due regard to prudence dictates that these means should so far exceed the estimated demands of the service as to supply in the shortest time any loss occasioned by the hazards of the ocean and the accidents of war. We may safely calculate that the number of seamen in the United States will increase in proportion to that rapid augmentation which is going on in all the other branches of national interest. If we assume that at a given period we may expect to embark in war, our capacity to man a fleet will exceed our present means by a ratio not difficult to ascertain. And even then, by greater exertions and perhaps higher wages, a larger portion may be induced to enter the naval service, while no exertions can make a corresponding addition to the navy itself but at a loss of time and expense and a sacrifice of its permanent interest.

But whatever arrangements we may make to overcome any naval armaments sent out to assail us, we are liable to be defeated and to be exposed to all the consequences resulting from the ascendancy of an enemy. And the practical question is, what shall be done with a view to such a state of things? As I have already remarked, any attempt by fortifications to shut up our coast so that an enterprising foe with a victorious fleet conveying a competent force, and disposed to encounter all the risk of such an expedition, could not make his descent upon the shore, would be useless in itself, and would expose to just censure those who should project such a scheme. And, on the other hand, the government would, if possible, be still more censurable were our important maritime places left without any defensive works. Between these extremes is a practical medium, and to ascertain where it lies we must briefly look at the various considerations affecting the subject.

What have we to apprehend in the event of a war? Is it within the limits of a reasonable calculation that any enemy will be able and disposed to debark upon our coast an army sufficiently powerful to lay siege to our fortifications, and to endeavor by this slow and uncertain process to obtain possession of them? I put out of view the enormous expense attending such a plan; the distance of the scene of operations from the points of supply and support, with the consequent difficulties and dangers, and the possibility that the conveying fleet might be overpowered by a superior force, and the whole expedition captured or destroyed. All these are considerations which no prudent statesman directing such an enterprise will overlook. But beyond these is a question bearing still more directly upon the point under examination. Is there any object to be obtained sufficiently important to justify the risk of placing a body of land troops before one of these works, too strong to be carried by a *coup de main*, and endeavoring to destroy its defences by a regular investment? I think there can be none.

I take it for granted that no nation would embark in the Quixotic enterprise of conquering this country. Any army, therefore, thrown upon our coast would push forward with some definite object to be attained by a prompt movement and by vigorous exertions. Our experience, more than half a century ago, demonstrated that an invading force could command little more than the position it actually occupied. The system of fortifications adopted in Europe is not applicable to our condition. There military movements must be made upon great avenues of communication, natural or artificial, and these are closed or defended by fortresses constructed with all the skill that science and experience can supply, and with all the means that wealth and power can command. An invading army must carry these positions by escalade or by siege, or leave sufficient detachments to blockade them, or must turn them and move on with all the difficulties attending the interruption of their communication, and with the dangers which such a force in their rear must necessarily occasion. Works of this character are keys to many of the European states, whose political safety depends upon their preservation. Their possession enables their governments to meet the first shock of war, and to prepare their arrangements, political or military, to resist or avert the coming storm. And, although during some of the wars which arose out of the French revolution, when, from causes which history is now developing, the armies of France set at defiance the received maxims of military experience, and justifying their apparent rashness by success, reduced with unexampled facility, or carried on their operations almost in contempt of the strongest fortifications, the subjugation of each of which had been till then the work of a campaign, still the opinion is yet entertained by many that this system of defence is best adapted to the condition of the European community.

There is also a striking difference between the political situation of those countries and that of ours which gives to these defensive preparations a character of importance which can never apply to the United States. The possession of a capital in the eastern hemisphere is too often the possession of the kingdom. Habits of feeling and opinion, political associations, and other causes, combine to give to the metropolis an undue ascendancy. Internal parties contending for superiority, and external enemies aiming at conquest, equally seek to gain possession of the seat of government. And the most careless observer of the events of the last half century must be struck with the fact that the fate of the capitals and the kingdoms of modern Europe are closely connected together. Under such circumstances, it may be prudent, by powerful fortresses, to bar the approaches to these favored places, and frequently to construct works to defend them from external attack, or to maintain their occupation against internal violence.

But there is nothing like this in our country, nor can there be till there is a total change in our institutions. Our seats of government are merely the places where the business of the proper departments is conducted, and have not themselves the slightest influence upon any course of measures, except what is due to public opinion and to their just share of it. If the machine itself were itinerant, the result would be precisely the same. Or if, by any of the accidents of war or pestilence, the proper authorities were compelled to change their place of convocation, the change would be wholly unobserved, except by the few whose personal convenience would be affected by the measure. Nor have our commercial capitals any more preponderating influence than our political ones. And although their capture by an enemy, and the probable loss of property and derangement of business which would be the result, might seriously affect the community, yet it would not produce the slightest effect upon the social or political systems of the country. The power belongs to all, and is exercised by all.

It follows, therefore, that an enemy could have no inducement to hazard an expedition against any of our cities under the expectation that their capture and possession would lead to political results favorable to them. Washington may indeed be taken again, and its fall would produce the same emotion which was everywhere felt when its former capture was known. But an enemy would retire from it with as few advantages as marked its first abandonment, and if his course were the same, with as few laurels as he won by its possession. I make these remarks because it seems to me that some of the principles of the European system of fortifications may possibly be transferred to this country without sufficient attention having been given to those circumstances, both geographical and political, which require a plan exclusively adapted to our own condition.

I consider some of the existing and projected works larger than are now necessary, and calculated for exigencies we ought not, with the prospects before us, to anticipate. If such is the fact, the objection is not only to the expense of their construction and preservation, but also to the greater difficulty of defending them, and the increased garrisons which must be provided and maintained. The hypothesis upon which their extent has been determined is that they may be exposed to investment both seaward and landward, and that they ought to be capable of resisting a combined attack, or, in other words, that their water batteries should be sufficient to repel an assailing squadron, and that their land defences should be sufficient to resist a besieging army.

It is certain that whatever works we erect should be so constructed as to be beyond the reach of any *coup de main* that would probably be attempted against them. And this capacity must depend upon their exposure and upon the facility with which they can be relieved. But this proposition is far different from one to construct them upon a scale of magnitude which presupposes they are to be formally invested by a powerful land force, and which provides for their ability to make a successful resistance. A dashing military or naval officer may be willing to risk something to get possession of an insulated post by a prompt movement, expecting to accomplish his enterprise before his adversary can be prepared or succor obtained; and this, even when he looks to no other advantage than the capture of the garrison, and the effect which a brilliant exploit is calculated to produce, and when he is aware that he must abandon his conquest with as much celerity as he attained it. But formal investments of fortified places, with all their difficulties, and expense, and uncertainty, are only undertaken when there is some object of corresponding importance to be expected. We have works constructed which it would require armies to reduce. Have we any reason to anticipate that they will be assailed by a force proportioned to their magnitude?

I have already remarked that a European power cannot expect to retain permanent possession of any part of this country. If, therefore, he succeed in overcoming or eluding our fleets, and is prepared with a respectable land force, and ready to risk its employment upon our territory, he can land at many points which we cannot close against him. His debarkation is not a question of practicability but of expediency. If a safe harbor or roadstead offers itself, and there is no defensive work to prevent his approach, he will, of course, land at the nearest point to the object of his marauding enterprise. If there is such a work, it will be a question of calculation whether it is better to attack and carry it, or to seek another, though more distant point of debarkation. I think there can be little doubt but there are few, if any, positions in our country which an enemy would not under such circumstances avoid. He would be aware of the facility of communication which our rivers, canals, and railroads afford, of the powerful use we should be

prepared to make of steam in its various forms of application, and of the immense force which in a short time could be concentrated upon a given point, and it is scarcely within the limits of possibility that he would venture formally to besiege one of our forts, or, if he did, that he would not repent his rashness. Neither the co-operation of his fleet nor the nearer proximity of the place of landing to the object of attack would induce him to seek these advantages at the cost which must attend the slow process of besieging a fort, when, by removing to another position, he would land in safety, and save in time, in promptness of movement, and in his escape from the perils of a doubtful contest, more than he would lose by the difference in distance.

I am aware it may be objected that the weakness of a work might tempt an enemy to attack it, and that it may be supposed the power of some of our fortifications to resist a siege may hereafter furnish the true reason why they may not be compelled to encounter one. Certainly the stronger a work is the less will it be exposed to danger; but this would not furnish a sufficient reason for making its defences out of reasonable proportion to its exposure. The true inquiry is, what circumstances will probably induce and enable an enemy to assail a given point, and with what force; and how can we best meet and repel him? And I believe a just consideration of this proposition will lead to the conclusion that there are scarcely any positions in our country where an enemy would venture to set down before a work too strong to resist a *coup de main*. In the view, therefore, which I take of this whole subject, it will be perceived that I do not merely suppose an enemy will not invest our larger works, but that they would not do so were these works much inferior to what they are, both in their dimensions and construction.

What object would justify an enemy in attempting to land an army upon our coast? He would not expect to lay waste the country, for such a mode of warfare is not to be anticipated in the present state of society. All that, under the most favorable circumstances, he could accomplish, would be to gain sudden possession of a town and levy contributions, or to destroy a naval establishment, commercial or military, and precipitately retire to his ships before his operations could be prevented, or his retreat intercepted. I cannot therefore concur in the suggestion made in the Engineer report, that the first of the three great objects to be attained by the fortifications of the first class should be to "prevent an enemy from forming a permanent or even a momentary establishment in the country." It is not suited to the present and prospective situation of the United States. I understand the establishments herein contemplated are not the temporary occupation of naval arsenals and cities for the purpose of destruction or plunder, because these objects are specially enumerated, but are lodgements where armies may be stationed, and whence they may issue to commit inroads into the country.

I refer in these remarks to our maritime coast generally. There are, no doubt, certain points less equal to self-defence than others, and where the preparation must be greater. Of this class is the delta of the Mississippi, not only in consequence of its many avenues of approach, but because its great natural highway does not, at present, allow those lateral supplies of the *personnel*, which, from geographical formation and from the state of the settlements, can be speedily thrown upon most other points of the country. This region, however, is admirably adapted to the use of steam batteries, and they will form its principal means of defence.

To apply these remarks to the plan of fortifications partly completed and partly projected. Fort Monroe, at Old Point Comfort, covers about sixty-three acres of ground, and requires, by the estimates of the Engineer department, two thousand seven hundred men to garrison it in time of war. Its full armament consists of 412 pieces of different descriptions and calibre. I have been desirous of comparing its superficial extent with some of the European fortresses, but the necessary information could not be obtained within the short time that could be allowed for the inquiry. I understand from General Gratiot, however, that it is probably larger than almost any of the single works in Europe which do not enclose towns within their circuit. Drinkwater, in his History of the Siege of Gibraltar, states that 572 guns were mounted upon that fortress.

The object to be attained by Fort Monroe, in conjunction with Fort Calhoun, intended to mount 232 guns, is to prevent an enemy from entering Hampton Roads, a safe and convenient roadstead. This object is important because this bay is perfectly landlocked, and has sufficient depth of water for the largest vessels, and is withal so near the capes of the Chesapeake that it furnishes the best station which an enemy could occupy for annoying our commerce, and for committing depredations upon the shores of that extensive estuary; but these works do not command the entrance into the Chesapeake, nor is Hampton Roads the only safe anchorage for a hostile fleet. Their possession, therefore, does not exclude an enemy from these waters, though they will compel him to resort to less convenient positions from whence to carry on his enterprises. A hostile squadron reaching the Chesapeake and finding the entrance into Hampton Roads guarded by sufficient works, though much less extensive than those at Fort Monroe, would necessarily consider whether the possession of that roadstead is so important as to justify the debarkation of a large body of land troops, and to attempt to carry the works by regular approaches, and this in the face of the strenuous efforts which would be made to relieve it by all the aids afforded by the most improved facilities of communication, and by the light and heavy steam batteries which, upon the approach of war, would be launched upon the Chesapeake, and which, during periods of calm or in certain winds, could approach the hostile ships and drive them from their anchorage, or compel them to surrender, and most of which, from their draught of water, could take refuge in the inlets that other armed vessels could not enter. And even if the works were carried, they could not be maintained without the most enormous expense, nor, in fact, without efforts which no government three thousand miles off could well make; and all this while Lynnhaven bay, York bay, the Rappahannock, Tangier island, the mouth of the Potomac, and many other places, furnish secure anchorage, and are positions from which an enemy having the superiority could not be excluded, and while, in fact, a great part of the Chesapeake may be considered as affording good anchorage ground for large ships. Neither of them is equal to Hampton Roads, but most or all of them furnish stations for occupation and observation which would render it unnecessary to purchase the superior advantages of Hampton Roads by the sacrifice and hazard which would attend the effort. The occlusion of this roadstead does not secure Norfolk, important as it is from its commerce and navy yard. It only prevents the access of ships-of-war to it; and against these there is an interior line of defence, which may be considered as accessory to, and if necessary, independent of, the other. And a land force, deeming the destruction of the navy yard at Norfolk a sufficient object to justify such an expedition, would not sit down before Fort Monroe, if its scale of defence were far inferior to what it now is, but would debark at Lynnhaven bay, where there is no impediment, and march in five or six hours through an open country to Norfolk.

New York is, in every point of view, our most important harbor, and its defences should provide for every reasonable contingency. The Engineer report recommends three classes of works: an exterior one for the protection of the harbor; an interior one to shut up Raritan bay; and a third to prevent a hostile fleet from approaching the city through the sound nearer than the vicinity of Throg's Point. The importance of the first class cannot be doubted. That of the second depends on the value of Raritan bay to an enemy as an anchorage ground, and on the utility of excluding him from a lauding at Gravesend bay, upon Long Island, whence an army could march, without obstruction, to Brooklyn and New York. The third is proposed to be erected in order to bar his access to the lower part of the sound, or, more accurately speaking, to prevent his reaching Hell Gate, a natural barrier which no fleet could pass, and which is within ten miles of the city. Here, if his aim were New York, he would land, and would find no works to prevent his approach. The two forts proposed to be erected at Throg's Neck and Wilkins's Point, eight miles further up the sound, would compel him to debark beyond the reach of their guns, and would thus add that distance to his march, while, on the north shore, Harlem river would be interposed between him and the city. On the Long Island side there would be no difference but that occasioned by the distance.

It is obvious, then, that, in the consideration of this plan, involving an estimated expenditure, in the aggregate, of \$5,807,969, and efficient garrisons in time of war of 9,000 men, a close investigation should be made into all the circumstances likely to influence the operations of an enemy. Is the anchorage ground between the Narrows and Sandy Hook of sufficient value to an enemy, looking to the risk of his occupation of the coast, and to the doubts that may be reasonably entertained of the result of so great an experiment, to be carried on, in fact, in the sea, to authorize the commencement of these works without a new examination? Or is the probability of the disembarkation of an army at Gravesend bay, in preference to some other point upon the coast of Long Island, if a convenient one exists, so great as to require these preparations? The same questions may be asked respecting Wilkins's Point. The work at Throg's Point is in the process of construction; and as the river is only about three-fourths of a mile wide at this place, I think its completion will be sufficient for this line of defence till the proposed general examination can take place.

The situation of New York affords a fine theatre for the operation of floating batteries; and whether a sufficient number of them would secure it from the designs of an enemy better than the full completion of the extensive system of permanent fortifications recommended, is a question deserving investigation. Such an investigation I recommend; and after all the necessary facts and considerations are presented, the government should proceed to place this commercial metropolis of the country in a state of security.

The works at Newport cover about twenty acres, and will mount 468 guns, and will need for their defence about 2,400 men. I cannot myself foresee the existence of any circumstances which now call for a fortress of this magnitude in the very heart of New England, constructed, not merely to command the harbor of Newport, but to resist a siege which would probably require nearly 20,000 men to carry it on. I am at a loss to conjecture what adequate motive could induce a foreign government to detach a fleet and army upon this enterprise. The expense would be enormous. The French army that invaded Egypt was less than 40,000 men, and required for its protection and transportation between 500 and 600 vessels. The army that conquered Algiers was about equal in force, and required, it is said, about 400 transports besides the ships-of-war. This scale of preparation for enterprises against the shores of the Mediterranean may enable us to form some conception of the arrangements that would be necessary to send across the ocean to this country, in the present day of its power, an expedition strong enough to form an establishment upon our shores, and to furnish it with supplies necessary to its subsistence and operations.

It has been supposed, indeed, by the board of engineers, that an army would find sufficient reason for the occupation of Rhode Island in the consideration that it would afford a secure lodgement whence expeditions could be sent to every part of our coast. But it is to be observed that no part of Narraganset bay is necessary for the safety of a hostile fleet watching that part of our coast. Gardiner's bay, in that vicinity, is a most safe and convenient station, which was occupied by the British during almost the whole of the late war; and it is pretty clear that it cannot be defended by any stationary fortifications that can be constructed. If it can be by floating batteries, so may Narraganset bay, and the enemy thus prevented from occupying the latter also, without these extensive arrangements, requiring, after Fort Adams shall have been completed at an expense of \$1,312,000, four other forts and a sea wall to be constructed, and \$1,157,000 to be expended.

I do not think that the most prudent forecast ought to lead to the apprehension that a force competent to seize such a position would be sent to our country, or that any circumstances could enable them to maintain it in the face of the vigorous efforts that would be made to recover it, and in the midst of a country abounding in all the means to give effect to their exertions. But perhaps the most striking objection to the completion of this extensive plan is, that under no possible circumstance can it effect the desired object. That object, if I understand it, is not the mere exclusion of an enemy from Rhode Island, but it is to prevent him from taking possession of a safe and convenient position whence he could detach his forces, by means of his naval superiority, to any other part of the coast which would thus be exposed to his depredations.

The value of Gardiner's bay as a place of naval rendezvous I have already described. Block island, in its neighborhood, could be occupied by troops desiring only a lodgement; and so could Nantucket island and Martha's Vineyard; and these are only a few hours' sail from Narraganset bay. Buzzard's bay is also a safe and capacious harbor which cannot be defended, and Martha's Vineyard sound affords commodious places of anchorage. A fleet riding in these moorings would have under its command all the islands in this group, and could secure its communications with its land forces encamped upon them, which would thus be enabled at any proper time to throw itself upon other parts of the coast. It may be doubted, if there were not a cannon mounted upon Rhode Island, whether an enemy acquainted with the topography and resources of this country would select it as his place of arms, if I may so term it, when there are islands in the neighborhood which would answer this purpose nearly as well, and where he would be in perfect safety as long as he could maintain his naval ascendancy; and longer than that he could not, under any circumstances, occupy Rhode Island. And if I rightly appreciate the strength and spirit of that part of the country, his tenure in any event would be short and difficult. I do not mean to convey the idea that Rhode Island should not be defended. I think it should be; but I do not think that precautions should be taken against events which are not likely to happen. As there is no naval

establishment here, it is not necessary to enter into any question concerning defensive arrangements exclusively connected with that object.

It will be perceived, also, that it is proposed to fortify Mount Desert island, on the coast of Maine, and that the expense is estimated at five hundred thousand dollars, and the number of the garrison competent to maintain it at one thousand men. This proposition is founded not on the value of this harbor to us, for it possesses little, and is, in effect, unoccupied; but on account of its importance to the enemy. Were there no other secure position they could occupy in that quarter, and which could not be defended, I should think the views submitted upon this branch of the subject entitled to great weight; but there are many indentations upon this coast affording safe anchorage, and which are either not capable of being defended, or from their great number would involve an enormous expense which no sound views of the subject could justify. An enemy, therefore, cannot be deprived of the means of stationing himself upon this coast; and before this expenditure at Mount Desert island is encountered, it ought to be clearly ascertained that the difference, in its practical advantages to an enemy, between the occupation of Mount Desert island and that of some of the other roadsteads in this quarter incapable of defence, would be sufficiently great to warrant this measure. My present impression is that it would not.

And on the subject of roadsteads generally, with a few exceptions depending on their local positions, I am inclined to the opinion that any attempt to fortify them would be injudicious. I do not speak of harbors and inlets which are occupied by cities and towns, but of mere anchorage grounds, deriving their value from the shelter they afford. If all could be defended, and an enemy excluded from them, the advantages would justify any reasonable expenditure. But this is impracticable; and I doubt whether the circumstances in which most of them differ give such marked superiority to those we can defend over those we cannot as to lead to any attempt to fortify them, in the first instance, and to maintain garrisons in them during a war.

I have adverted to these particular cases in order to present my views more distinctly than I could do by mere general observations; certainly not from the remotest design of criticising the reports and the labors of the able professional men to whom the subject has been referred, nor of pursuing the investigation into any further detail.

I consider the duty of the government to afford adequate protection to the sea-coast a subject of paramount obligation; and I believe we are called upon by every consideration of policy to push the necessary arrangements as rapidly as the circumstances of the country and the proper execution of the work will allow. I think every town large enough to tempt the cupidity of an enemy should be defended by works fixed or floating, suited to its local position and sufficiently extensive to resist such attempts as would probably be made against it. There will, of course, after laying down such a general rule, be much latitude of discretion in its application. Upon this branch of the subject, I would give to the opinion of the engineer officers great and almost controlling weight, after the proper limitations are established. These relate principally to the magnitude of the works; and if I am correct in the views I have taken of this branch of the subject, a change in the system proposed is necessary. Works should not be projected upon the presumption that they are to be exposed to, and must be capable of resisting, the attacks of a European army with its battering train and all its preparations for a regular siege. Neither our relative circumstances, nor those of any nation with which we shall probably be brought into conflict, can justify us in such an anticipation. All the defences should be projected upon a scale proportioned to the importance of the place, and should be calculated to resist any naval attack and any sudden assault that a body of land troops might make upon them; but further than this it appears to me we ought not to go. The results at Stonington, at Mobile Point, at Fort Jackson, and at Baltimore, during the late war, show that formidable armaments may be successfully resisted with apparently inferior means. These, indeed, do not furnish examples to be followed as to the scale of our preparations, but they show what stationary batteries have done in our country against ships-of-war.

It is to be observed that the great object of our fortifications is to exclude a naval force from our harbors. This end they ought fully to answer; and in this problem there are two conditions to be fulfilled:

1. That they be able to resist any naval batteries that will probably be placed against them; and
2. That they be also able to resist any *coup de main* or escalade which might be attempted by land.

An open battery, under many circumstances, might fulfil the first condition, but not the second; and therefore these works should be closed and regularly constructed. It is not to be denied that the proper boundary between the magnitude and nature of the works necessary to attain the objects indicated and those required to resist successfully a formal investment will sometimes become a matter of doubt, nor that circumstances may not be stated which might induce an enemy to open his trenches against one of these works because its capacity for defence was not greater. That capacity, however, with relation to the question under consideration, has a far more intimate connexion with the magnitude than with the form of the works, because, if unnecessarily large, they entail upon the country a serious evil in the increased means for their defence, independently of the additional expense in their construction. It is principally, therefore, in the latter point of view that I have presented the doubts which I have expressed upon this point.

Among the hypothetical cases heretofore stated by the board of engineers was one which supposed that an army of twenty thousand men might be assembled upon one of the flanks of our coast, and that we ought to be prepared, at every important point, to resist the first shock of such a force. I have already glanced at the reasons, geographical, political, financial, and prudential, which, in my opinion, leave little room to expect that any enemy will, hereafter, project an enterprise of this magnitude, so certain in its expense, so uncertain in its result, and so disproportioned to any object which could probably be attained. And the suggestion which was made by the board of defending the city of Washington by works erected near the mouth of the Patuxent proceeds upon similar views. Our navy, our floating batteries, our means of communication and concentration, seem to me far better adapted to the defence of this city than forts at the distance of nearly fifty miles, whose principal effect, if an enemy were resolved upon the enterprise, would be to compel him to make a *detour* in his expedition, or which would send him to some part of the coast of the bay between the Patuxent and Annapolis, or into the Potomac, where his descent would be uninterrupted, and where he would be but little, if any, further from Washington than at the head of navigation of the Patuxent.

Even during the last war, when the navy of Great Britain rode triumphant upon the ocean, but one serious attempt was made to force an entrance into a fortified harbor, and that was unsuccessful. The greatest possible force which can be brought, and the greatest possible resistance which can be applied, do not constitute a practical rule for the construction of our fixed defences. Moral considerations must also

have weight. Probabilities must be examined. The power of the permanent batteries is one of the elements of security. So are the dangers of dispersion, and shipwreck, and all the hazards of a distant expedition, as these must operate on the councils of any country meditating such an enterprise, the efforts of our navy, the co-operation of the floating defences, and the troops which may be ready to meet the enemy upon his debarkation or march.

In submitting these reflections, I am desirous only of discharging the duty confided to me. I am gratified that the whole subject will be presented for the consideration of Congress in a systematic form, and that the principles of its future prosecution can now be settled. The plan originally devised was recommended upon great consideration, and, at the time its initiatory measures were adopted, was calculated for the state of the country. We had just come out of a severe struggle, and had felt the want of adequate preparation, and, above all, we had seen and deplored the circumstances which gave the enemy undisturbed possession of the Chesapeake, and its disastrous consequences. And it was to be expected that our arrangements for future defence should be planned upon the then existing state of things. I imagine there were few who did not concur in this sentiment. Because, therefore, some of our works, from the wonderful advancement of the country in all the elements of power, and from the development of new means of annoyance, are larger than are found necessary at this time, still this does not bring into question the wisdom of the original measure. And, as it is, they are most valuable and useful; but the experience we have acquired may be profitably employed in re-examining the plans proposed for the prosecution of the system, and in inquiring whether the change which has taken place in the condition of the country will not justify a corresponding change in the nature of our preparations, and whether we may not depend more upon floating, and less upon stationary defences.

During the period which has intervened since the last war we have nearly doubled in our population, and all our other resources have probably increased in a still greater ratio. Certainly some of the facilities and means of defence are augmented beyond any rational expectations. The power of transporting troops and munitions of war has already opened new views upon this subject; and such is the progress and probable extent of the new system of intercommunication, that the time will soon come when almost any amount of physical force may be thrown, in a few hours, upon any point threatened by an enemy. Nashville may succor New Orleans in sixty hours; Cincinnati may aid Charleston in about the same time; Pittsburg will require but twenty-four hours to relieve Baltimore; and troops from that city and from Boston may leave each place in the morning and meet in New York in the evening. This wonderful capacity for movement increases, in effect, some of the most important elements of national power. It neutralizes one of the great advantages of an assailing force, choosing its point of attack, and possessing the necessary means of reaching it. Detachments liable, under former circumstances, to be cut off in detail, may now be concentrated without delay, and most of the garrisons upon the seaboard may be brought together, and, after accomplishing the object of their concentration, be returned to their stations in time to repel any attack meditated against them.

The improvements which are making in the application of steam have furnished another most important agent in the work of national protection. There can be but little doubt that floating batteries, propelled by this agent, will be among the most efficient means of coast defence. In our large estuaries, such as the bays of New York, of the Delaware, and of the Chesapeake, they will be found indispensable; and of the most important advantages to be anticipated from the works at Old Point Comfort is the security they will afford to the floating batteries co-operating with them, and which will find a secure shelter in Hampton Roads. A hostile fleet, about to enter the Chesapeake, would certainly calculate the means of annoyance to which it would be exposed by these formidable vessels. During a calm they would take a distant position, insuring their own safety, while, with their heavy guns, they might cripple and destroy the enemy; and their power of motion would enable them, under almost all circumstances, to approach the fleet, and to retire, when necessary, where they could not be pursued. I think it doubtful whether a squadron would anchor in the Chesapeake, or proceed up it, if a competent number of these batteries were maintained and placed in proper positions.

These considerations may well lead us to doubt the necessity of such extensive permanent works, while their non-existence at the time the system was adopted justifies the views which then prevailed; and, without advancing any rash conjecture, we may anticipate such improvements in this branch of the public service as will make it the most efficient means of coast defence. These vessels, properly constructed, may become floating forts almost equal to permanent fortifications in their power of annoyance and defence, and in other advantages far superior to them. Being transferable defences, they can be united upon any point, and a few of them be thus enabled to protect various places. We have been brought by circumstances to a more rigid investigation of our means of defence, and to a re-examination of the whole subject. After an interval of twenty years of tranquillity, public sentiment and the attention of the government were, by unexpected circumstances, more forcibly directed to this matter. The result cannot fail to be advantageous. The whole subject can be now re-examined by Congress, with all the benefits which much experience has brought, and with the advantage of adapting the system to the advanced state of the country.

There are two bills for fortifications now pending before Congress. One before the House, amounting to \$2,180,000, and intended to prosecute works already actually commenced. The estimates for this bill may, therefore, be considered necessary in themselves, under any view of the general subject, and not unreasonable in amount for the present year, because they include the operations of two years. The incidental expenses, however, may be safely reduced one-half, as it will not be necessary to make such extensive repairs as were considered requisite when the estimates were prepared.

The bill pending before the Senate contains appropriations for nineteen new works, and for the sum of \$600,000, to be expended for steam batteries. The estimates on which this bill was founded were prepared at a time when prudence required that arrangements should be made for a different state of things from that which now exists. An examination of the general system of defence was not then expedient; and the means of protecting the most exposed points, agreeably to information previously collected, were asked of Congress. It was no time then to stop, and, instead of prosecuting established plans vigorously, to lose the period of action by surveys, and examinations, and discussions. But the opportunity is now afforded, without danger to the public interest, of applying the principles suggested to the works under consideration.

It cannot be doubted but that fortifications at the following places, enumerated in this bill, will be necessary:

At Penobscot bay, for the protection of Bangor, &c.; at Kennebec river; at Portland; at Portsmouth;

at Salem; at New Bedford; at New London; upon Staten Island; at Sollers's flats; a redoubt on Federal Point; for the Barrancas; for Fort St. Philip.

These proposed works all command the approach to places sufficiently important to justify their construction under any circumstances that will probably exist. I think, therefore, that the public interest would be promoted by the passage of the necessary appropriations for them. As soon as these are made, such of these positions as may appear to require it can be examined, and the form and extent of the works adapted to existing circumstances if any change be desirable. The construction of those not needing examination can commence immediately, and that of the others as soon as the plans are determined upon. By this proceeding, therefore, a season may be saved in the operations.

The other works contained in this bill are:

For Provincetown.—And this proposition may be safely submitted to another inquiry, as the practicability of excluding an enemy from any shelter in Massachusetts bay, a matter of deep interest, and as a work at Provincetown are closely connected.

For Rhode Island, Narraganset bay.—This work may await the result of the views that may be eventually taken on the subject of fortifying this bay.

For a work at the Delaware outlet of the Chesapeake and Delaware canal.—This may be postponed without injury till next season; and in the meantime a project for the floating defences of the Delaware considered, and perhaps the size of the proposed work reduced.

For a work at the breakwater.—Until the effect of the deposits which are going on in this important artificial harbor are fully ascertained, I consider it injudicious to erect a permanent work for its defence. Another year will, perhaps, settle the question, and if the result is favorable an adequate fortification should be constructed here without delay.

For forts on the Patuxent river and at Cedar Point.—Both of these works are liable to some of the objections stated, and I think they had better be postponed for more mature consideration.

For fortifications at the mouth of the St. Mary's, Georgia.—This proposition may also be safely submitted to examination.

The estimate for steam batteries may be reduced to \$100,000 That sum can be profitably employed. If these appropriations are early made, most if not all these works can be put in operation this season, and the money usefully applied as fast as their progress will justify; and I think the measure would be expedient. But it is to be remembered that the power of the department to push them during the present year will depend on the reorganization of the corps of engineers. If that corps is not increased it will be unnecessary to make the appropriations in the bill before the Senate, as the objects contained in the other bill will be sufficient to occupy the time of the present officers of the corps.

Should it be deemed proper to re-examine the subject of the proposed fortifications generally, I would then recommend that an appropriation of \$30,000 be made to defray the expenses of a board, including surveyors, &c.

My reflections upon the whole subject lead to the following practical suggestions on the great subject of the measures for the defence of the country:

1. An augmentation of the navy upon the principles before stated.
2. The adoption of an efficient plan for the organization of the militia.

Having already, in two of the annual reports I have had the honor to make to you, expressed my sentiments upon this subject, I have nothing new to lay before you, either with relation to its general importance or to the necessary practical details. I consider it one of the most momentous topics that can engage the attention of Congress; and the day that sees a plan of organization adopted suited to the habits of our people and the nature of our institutions, and fitted to bring into action the physical strength of the country, with a competent knowledge of their duty, and just ideas of discipline and subordination, will see us the strongest nation, for the purposes of self-defence, on the face of the globe. Certainly such an object is worthy the attention of the legislature.

3. The cultivation of military science, that we may keep pace with the improvements which are made in Europe, and not be compelled to enter into a contest with an adversary whose superior knowledge would give him pre-eminent advantages. War is an advancing science. Many an original genius and many an acute intellect are at all times at work upon it; and the European communities have such a relation to one another that the profession of arms is peculiarly encouraged, and every effort made to place their military establishments, not at the highest numerical point, but in the best condition for efficient service, both with respect to its *morale* and *materiel*. It is not by the mere reading of professional authors that the necessary instruction in this branch of knowledge can be obtained; there must be study and practice; a union of principles and details, which can best be obtained by a course of education directed to this object. This, I think, is one of the greatest advantages of the Military Academy. It cannot have escaped the recollection of those who were upon the theatre of action at the commencement of the last war that the first year was almost spent in a series of disasters, which, however, brought their advantages. We were comparatively ignorant of the state of military science, and we did not fully recover our true position till we had received many severe lessons; at what an expense of life and treasure need not be stated.

4. The skeleton of a regular establishment, to which any necessary additions may be made, securing, at the same time, economy, with a due power of expansion, and the means of meeting a war with all the benefit of a regularly organized force. This object is attained by our present army.

5. The preparation and proper distribution of all the munitions of war agreeably to the views hereinafter submitted.

6. I think all the defensive works now in the process of construction should be finished agreeably to the plans upon which they have been projected.

7. All the harbors and inlets upon the coast where there are cities or towns whose situation and importance create just apprehension of attack, and particularly where we have public naval establishments, should be defended by works proportioned to any exigency that may probably arise.

Having already presented my general views upon this branch of the inquiry, I need not repeat the practical limitations which I propose for adoption. But before any expenditure is incurred for new works, I think an examination should be made in every case, in order to apply these principles to the proposed plan of operations, and thus reduce the expense of construction where this can properly be done, and also the eventual expense of maintaining garrisons required to defend works disproportioned to the objects sought to be attained. I would organize a board for this object, with special instructions for its government.

8. Provision should be made for the necessary experiments to test the superiority of the various plans that may be offered for the construction and use of steam batteries; I mean batteries to be employed as accessories in the defence of the harbors and inlets and in aid of the permanent fortifications.

The progressive improvement in the application of the power of steam renders it inexpedient, at any given time, to make extensive arrangements, connected with this class of works, with a view to their future employment. The improvement of to-day may be superseded by the experience of to-morrow; and modes of application may be discovered, before any exigency arises, rendering a resort to these defences necessary, which may introduce an entire revolution into this department of art and industry. Still, however, experiments should be made, and a small number of these vessels constructed. Their proper draught of water, their form and equipment, the situation and security of their machinery, the number, calibre, and management of their guns, and the best form of the engines to be used, are questions requiring much consideration, and which can only be determined by experience. And there can be little doubt that suitable rewards would soon put in operation the inventive faculties of some of our countrymen, and lead to the tender of plans practically suited to the circumstances. As we acquire confidence by our experience, arrangements could be made for collecting and preparing the indestructible materials for the construction and equipment of these vessels, as far as such a measure may not interfere with any probable change which at the time may be anticipated in the application of the power of steam.

9. I recommend a reconsideration of the project for fortifying the roadsteads or open anchorage grounds, and its better adaptation to the probable future circumstances of the country.

And I would suggest that the works which are determined on be pushed with all reasonable vigor, that our whole coast may be placed beyond the reach of injury or insult, as soon as a just regard to circumstances will permit. No objections can arise to this procedure on the ground of expense, because, whatever system may be approved by the legislature, nothing will be gained by delaying its completion beyond the time necessary to the proper execution of the work. In fact, the cost will be greater the longer we are employed in it, not only for obvious reasons arising out of general superintendence and other contingencies, but because accidents are liable to happen to unfinished works, and the business upon them is deranged by the winter, when they must be properly secured; and the season for resuming labor always finds some preparations necessary, which would not have been required had no interruption happened.

But the political considerations which urge forward this great object are entitled to much more weight. When once completed we should feel secure. There is probably not a man in the country who did not look with some solicitude during the past season at our comparatively defenceless condition when the issue of our discussions with France was uncertain, and who did not regret that our preparations during the long interval of peace we had enjoyed had not kept pace with our growth and importance. We have now this lesson to add to our other experience. Adequate security is not only due from the government to the country, and the conviction of it is not only satisfactory, but the knowledge of its existence cannot fail to produce an influence upon other nations, as well in the advent of war itself as in the mode of conducting it. If we are prepared to attack and resist, the chances of being compelled to embark in hostilities will be diminished much in proportion to our preparation. An unprotected commerce, a defenceless coast, and a military marine, wholly inadequate to the wants of our service, would indeed hold out strong inducements to other nations to convert trifling pretexts into serious causes of quarrel.

There are two suggestions connected with the prosecution of our works which I venture to make:

First. That the corps of engineers should be increased. The reasons for this measure have been heretofore submitted, and the proposition has been recommended by you to Congress. I will merely add, upon the present occasion, that the officers of this corps are not sufficiently numerous for the performance of the duties committed to them, and that, if an augmentation does not take place, the public interest will suffer in a degree far beyond the value of any pecuniary consideration connected with this increase; and

Secondly. I think that when the plan of a work has been approved by Congress, and its construction authorized, the whole appropriation should be made at once, to be drawn from the treasury in annual instalments to be fixed by the law. This mode of appropriation would remedy much of the inconvenience which has been felt for years in this branch of the public service. The uncertainty respecting the appropriations annually deranges the business, and the delay which biennially takes place in the passage of the necessary law reduces the alternate season of operations to a comparatively short period. An exact inquiry into the effect which the present system of making the appropriations has had upon the expense of the works would probably exhibit an amount far greater than is generally anticipated.

The report from the Ordnance department shows the quantity and nature of the munitions of war estimated to be eventually necessary, and their probable cost, including new establishments necessary for their fabrication and preservation. The conjectural amount is \$29,955,537.

Believing it not expedient at present to make any preparations upon a scale of this magnitude, I have deemed it proper to accompany this report with a brief statement of my own views, where I depart from the suggestions that are presented in this document.

As our fortifications are constructed, their armaments should be provided; and the amount in depot should at all times exceed the anticipated demand, to meet the casualties of the service. We have now on hand 1,818 new cannon for sea-coast defence, and about 1,000 others, most of which are either useless or of doubtful character. The works actually finished, or so far completed as to admit of a part of their armament being placed in them, require about 2,000 guns. They are calculated ultimately to mount about 600 more. Others in the process of construction will require about 1,400. So far we have certain data for our estimates, unless, indeed, which I am inclined to believe, it should not be found necessary ever to provide the full complement destined for the largest of these works. Beyond this, the subject is conjectural, and the quantity needed must depend upon the principles that may be adopted in the further progress of the system of fortifications. There are four private founderies at which the public cannon are cast. These, if their whole attention were devoted to the object, could manufacture from 1,200 to 1,500 annually. As to carriages and other supplies, the amount that could be procured within a reasonable period is almost indefinite. Iron carriages are now made for all the casemate batteries, and they have not only the advantage of indestructibility from the atmosphere, but, requiring no seasoned materials, they may be supplied by the founderies through the country to almost any extent.

We have two armories for the manufacture of small arms, and there are seven private establishments which fabricate arms for the government. All these supplies are of the best description, and are submitted to a rigid inspection, which prevents imposition. The armories can at present turn out about

27,000 arms annually, and probably 11,000 or 12,000 could be made at existing private establishments. Should any exigency require larger supplies, the quantity can be much increased. We have now on hand about 700,000 small arms, and there have been issued to the States about 180,000 muskets, 25,000 rifles, 30,000 pistols, and 378 field cannon and carriages, under the act for arming the militia. If 100,000 of these muskets and rifles are preserved, there are in the country 800,000 of those species of arms belonging to the general or State governments.

What may be considered a proper supply is a question admitting much difference of opinion. It will be seen that the Ordnance department fixes the amount at about 600,000, in addition to what are now on hand, and including the number necessary to arm the militia. We had, at the commencement of the last war, 240,000 muskets, and during its progress 60,000 more were made and purchased. At its termination there were but 20,000 at the various arsenals. The residue were in the hands of the troops, or had been lost in the service. This consumption was greater, I think, than was necessary, or than would probably again take place. A plan of accountability has been introduced by which the men are charged with the arms they receive, and if these are improperly lost or injured, the value is deducted from their pay. The paymasters cannot settle with them till this matter is adjusted.

The stock of small arms in Great Britain in depot, in 1817, was.....	818, 282
In the public service.....	200, 974
Total.....	<u>1, 019, 256</u>

The number in depot in France, in 1811, was 600,000, not including the great number in service.

My own impression is, that 1,000,000 small arms may be considered a competent supply for the United States; and if so, a large deduction may be made from the estimate of the Ordnance department under this head of expenditure. Although the component materials of these arms are almost imperishable, still it is not expedient to keep a stock unnecessarily large on hand, because there is not only some risk and expense in their preservation, but because, like every other article manufactured by man, they are no doubt susceptible of great improvement; and it may be that those now made may be superseded by an improved model, which, once introduced, must be adopted, at whatever expense or inconvenience, by all nations. And the ingenious invention lately exhibited in this city, by which a series of balls in separate charges are brought by a rotary motion to a common place of discharge, suggests the possibility of a revolution in the form of our fire-arms.

On the subject of depots for these arms, I accord with the general suggestions made by the colonel of ordnance. I think the number should be increased, and arms placed in every part of the country ready to be used as circumstances may require.

It will be observed that in the estimate I have made I confine myself to the armament for the public service connected with the actual defence of the country, whether to be used by the army or militia in time of war; but I do not extend my views to a supply for arming the militia, in order to discipline them in time of peace. The extent of this policy is a question not necessary in the consideration of the subject before me.

As the arms in depot approach whatever number may be assumed as the proper maximum, the necessity for additional armories becomes less. When our stock is once completed, the present armories, without any aid from the private establishments, will be able to supply the annual consumption. I think, therefore, that two additional armories, as suggested by the Ordnance department, are not wanted; and, indeed, although there are considerations attending the transportation of the rude and the manufactured article, and other circumstances which would justify the establishment of a new armory upon the western waters at present, yet, if the measure is not carried into effect soon, its importance will annually diminish.

But a national foundry for cannon, both for the military and naval service, and, perhaps, two in different sections of the country, should be erected without delay. The best interests of the public require it. But I have nothing to add to the suggestions made upon this subject in my last annual report.

As to field artillery, the extent to which it shall be provided must depend upon the views of the legislature concerning the expediency of issuing it to the militia. If a more efficient organization does not take place, I think the expenditure on this account may well be saved to the public treasury. I consider all attempts to improve the condition of the militia, upon the present plan, as so nearly useless, that the whole system has become a burden upon the public, without any corresponding advantage. The principal benefit which results from the existing state of things is the power to call into service such portions of the population as may be wanted. But this may be attained by a simple classification, without the cumbrous machinery which at present creates expense and trouble, and which, while it promises little, performs still less.

Very respectfully, sir, I have the honor to be, &c.,

LEWIS CASS.

The PRESIDENT of the United States.

ENGINEER DEPARTMENT, Washington, March 30, 1836.

SIR: In compliance with your instructions, I have the honor to submit herewith the copy of a report prepared in fulfilment of the requirement of the first inquiry contained in the resolution of the Senate of the 18th of February last. The views presented by Colonel Totten on the subject are full and explicit, and are consonant with the principles heretofore advocated by this department. The report is therefore respectfully submitted, without any further comments.

Very respectfully, sir, your most obedient servant,

C. GRATIOT, Chief Engineer.

Hon. Lewis Cass, Secretary of War.

WASHINGTON, *March 29, 1836.*

SIR: In compliance with your request, I have the honor to hand in some remarks on the fortification of the frontier of the United States.

And am, sir, very respectfully, your most obedient,

JOS. G. TOTTEN, *Lt. Col. Eng., Brevet Colonel.*

Brig. Gen. CH. GRATIOT, *Chief Engineer, Washington.*

In presenting a summary statement of the general system of the defence of the country by fortifications, as proposed and in part executed, it is proper to refer for much information as to localities, as to particular projects, and for statements and arguments somewhat elaborate, to communications made at different times by the board of engineers for fortifications.

These communications, of a nature forbidding too great publicity, are to be found in the records of the War Department, in the shape of reports of the board of engineers of 1817, 1819, 1820, 1821, 1822, 1823, 1824, and 1825. Reference may also be made with advantage to the revised report of the board of engineers presented in 1826, and published as document No. 153, of the state papers of the first session of the 19th Congress. The report of 1826, just referred to, was drawn up by the undersigned, and was the work of much research and of mature deliberation; and in giving it now a careful perusal, he thinks that the information now called for by the Senate cannot be better afforded, at least by him, than by again presenting that report, occasionally condensing, curtailing, or omitting portions of the argument and certain descriptions, and adding such new facts as may have been developed by further research, or made more prominent and interesting by the progress of improvement in the country.

The elements going to make up the general system of maritime defence are a navy, fortifications, interior communications by land and water, and a regular army and well-organized militia.

The *navy* must be provided with suitable establishments for construction and repair; stations, harbors of rendezvous, and ports of refuge. All these must be covered by fortifications having garrisons of regular troops and militia, and being supplied with men and materials through the lines of interior communication. Not being required to remain in the harbors for their defence, the navy, pre-eminent as an offensive arm, will be prepared to transfer the war to distant oceans, and to the shores of the enemy, and to act the great part which its early achievements have foretold, and to which its high destiny will lead.

Fortifications should—1st. Close all important harbors against an enemy, and secure them to our military and commercial marine.

2d. Should deprive an enemy of all strong positions, where, protected by naval superiority, he might maintain himself during the war, keeping the whole frontier in constant alarm.

3d. Must cover the great naval establishments from attack.

4th. Must protect the great cities.

5th. Must prevent, as far as possible, the great avenues of interior navigation from being blockaded at their entrances to the ocean.

6th. Must cover the coastwise and interior navigation by closing the harbors and the several inlets which intersect the lines of interior communication, thereby further aiding the navy in protecting the navigation of the country; and

7th. Must shelter the smaller towns along the coast, and also all their commercial and manufacturing establishments which are of a nature to invite the enterprise or cupidity of an enemy.

Interior communications will conduct with certainty the necessary supplies of all sorts to the stations, harbors of rendezvous and refuge, and the establishments of construction and repair for the use both of the fortifications and of the navy; will greatly facilitate and expedite the concentration of military force, and the transfer of troops from one point to another; will insure to these troops supplies of every description, and will preserve unimpaired the interchange of domestic commerce, even during periods of the most active external warfare.

The *army and militia*, together with the *personnel* of the marine, constitute the vital principle of the system.

It is important to notice the reciprocal relation of these elements of national defence; one element is scarcely more dependent on another than the whole system is on each one. Withdraw the navy, and the defence becomes merely passive. We expose ourselves the more to suffer the evils of war, at the same time that we deprive ourselves of all means of inflicting them. Withdraw *interior communication*, and the navy will often be greatly embarrassed for want of supplies, while the fortifications will be unable to offer full resistance for want of timely reinforcements. Withdraw *fortifications*, and the interior communications are broken up, and the navy is left entirely without collateral aid.

That element in the system of defence which is now to be attended to is the *fortification* of the frontier. It may not be unprofitable here to go somewhat more into detail, as to the relation of this with the other members of the system; the rather, as the reasons for some conclusions hereafter to be announced will be the more apparent.

In considering the relation of fortifications and of the navy to the defence of the country, it will appear that the functions of the latter are not less appropriately offensive than those of the former are necessarily defensive; that the latter loses much of its efficiency as a member of the system the moment it becomes passive, and should in no case (referring now to the navy proper) be relied on as a substitute for fortifications.

This position, it is thought, may be easily established.

If our navy be inferior to that of the enemy, it can offer, of course, without collateral aids, but a feeble resistance—single ships being assailed by fleets or squadrons. Having numerous points along our extended frontier to protect, all of which must be simultaneously guarded, because ignorant of the selected points of attack, the separate squadrons or vessels may be captured in detail, although the naval force be in the aggregate equal or superior to the enemy's. Should we in such a case venture to concentrate, under the idea that the particular object of the adversary was foreseen, he could not fail to push his forces upon the places thus left without protection. This mode of defence is liable to the

further objection of being exposed to fatal disasters, independent of assaults of an enemy, and of leaving the issue of conflicts to be determined sometimes by accident, in spite of all the efforts of courage and skill. If it were attempted to improve upon this mode by combining with it temporary batteries and field-works, it would be found that, besides being weak and inadequate from their nature, the most suitable positions for these works must often be neglected, under the unavoidable condition of security to the ships themselves. If the ships take no part in the contest, the defence is, of course, relinquished to the temporary batteries; if the ships unite in the defence, the batteries must be at hand to sustain them, or the ships must strike to the superior adversary. Placing these batteries in better position, and giving them greater strength, is at once resorting to defence by fortifications; and the resort will be the more effectual as the positions are better chosen, and the works better adapted to the circumstances.

On the great comparative expense of such a mode of defence, which will be quite apparent after a little reflection, only one or two very brief remarks will be made, viz: The expense incurred by the nation defending itself on this plan will, from the first, greatly exceed that incurred by the attacking party, because, to resist a single fleet threatening the coast, there must be provided as many equal fleets as there are important objects inviting the attack of the enemy, and even with this costly preparation all lesser objects are thrown upon his forbearance. These defences, moreover, being perishable in their nature, will need frequent removal and repair.

On the other hand, the proper fortification of the coast preventing the possibility of a blockade so strict as not to afford frequent opportunities for our navy to leave the harbors, our ships, no longer needed for passive defence, will move out upon their proper theatre of action, though inferior to the enemy, with confidence, knowing that, whether victorious, whether suffering from the violence of tempests, or whether endangered by the vicinity or the pursuit of a superior force, they can strike the extended coast of their country (avoiding the more important outlets, where alone a considerable blockading force may be supposed to lie) at numerous points where shelter and relief await them; hovering around the flanks and in the rear of blockading fleets, and recapturing their prizes; falling upon portions of these fleets, separated for minor objects or by stress of weather; watching the movements of convoys, in order to pick up straggling vessels; breaking up or restraining the enemy's commerce in distant seas; meeting by concert at remote points and falling in mass upon his smaller squadrons, or upon his colonial possessions, and even levying contributions in his unprotected ports; blockading for a time the narrow seas, and harassing the coasting commerce of the enemy's own shores. These are objects which our own history shows may be accomplished, although contending, by means of a navy as to numbers apparently insignificant, against a marine whose force and efficiency have never been paralleled. Our own history shows, besides, that the reason why our infant navy did not accomplish still more was, that the enemy, possessing himself of unfortified harbors, was enabled to enforce a blockade so strict as to confine a portion of it within our waters. That this portion, however, indeed, that all was not captured, can be attributed only to respect (so misplaced that it could be the result of ignorance only) for the then existing fortifications—a result amply compensating the nation for the cost of those imperfect works. It would be difficult, nay, impossible, to estimate the full value of the results following the career of our navy when it shall have attained its state of manhood under the favorable conditions heretofore indicated. The blockade of many and distant parts of our coast will then be impossible, or rather can then be effected only at enormous cost, and under the risk of the several squadrons being successively captured or dispersed; the commerce of our adversary must be nearly withdrawn from the ocean, or it must be convoyed not by a few vessels, but by powerful fleets. In fine, the war, instead of resulting in the pillage and conflagration of our cities and towns; in the destruction of our scattered and embayed navy, and of the expensive establishments pertaining to it; in the interruption of all commercial intercourse between the several portions of the maritime frontier; in the frequent, harassing, and expensive assemblage of militia forces, thereby greatly lessening the products of industry, and infusing among this most valuable portion of our population the fatal diseases and the demoralizing habits of a camp life; instead of these and innumerable other evils attendant upon a conflict along and within our borders, we should find the war and all its more serious evils shut out from our territory by our fortresses, and transferred by our navy to the bosom of the ocean, or even to the country of the enemy, should he, relying on a different system, have neglected to defend the avenues by which he is assailable.

Our wars, thus becoming maritime, will be less costly in men and money, and at the same time more in unison with our institutions—forging no weapon for defence capable of being turned, under other circumstances, against the life of the State, and keeping our domestic industry and relations, under our internal financial resources, beyond the reach of assault from without.

It is an incontestable principle in military science, and one fully illustrated by military history, that the worst mode of waging war, although strictly a defensive one in its origin and its object, is to permit its field of action to lie within our own borders; and that the best mode is that which longest sustains an offensive attitude. In our own case, war can be excluded from our territory only by fortifications; and we can assume the offensive with the greatest portion of mankind only through our navy. The construction of the former secures the means of creating, equipping, and repairing the latter, and leaves it unencumbered with duties which it imperfectly performs, to the full exercise of its great and appropriate functions. In accordance with these principles, what, in general terms, is the extent to which the government may be called on to prepare itself in fortifying the coast and in building up the navy?

It is not in human forecast to decide upon the station of the latter a generation hence. Political events may force the nation to place herself more nearly on a level with some of the greatest of maritime powers, or the prevalence of peaceful relations may restrict the growth of the navy to that demanded by the increase (rapid and extensive) of our commercial interests. But whatever may be the amount of enlargement of the naval force, whether greater or less, or whatever the mode, whether progressive and regular, or by sudden expansion, its increase will involve no corresponding extension in the number or strength of the fortifications, because these must be adequate to their object, of themselves, and must consequently be, with some exceptions, as numerous and as strong, while the navy is small, as when the navy shall have attained its maximum. A considerable enlargement of the naval force might build up new naval establishments, thereby, in raising the importance of certain positions, calling for stronger defences.

The growth of the country in wealth and numbers will convert certain places now presenting no inducements to the enterprise of an enemy into rich and populous cities. But with the exception of

these cases, and such as these, it may be assumed that a good system of fortifications applied now to the maritime frontier will be equal to its object in all future times.

Conceiving it unnecessary to enlarge further on this part of the subject, a few remarks will be offered on the correlative influence of *fortifications* and *interior communications*.

The most important of these communications in reference to a system of defence, are: first, such as serve to sustain in all its activity that portion of domestic commerce which, without their aid, would be interrupted by a state of war; and, second, such as serve, besides their great original purposes, to conduct from the interior to the theatre of war necessary supplies and timely relief. The first, which are among the most important national concerns of this nature, lie parallel to, and not far from, the coast; the second, which, when they cross the great natural partition-wall between the east and the west, are equally important, lie more remote from the coast, and sometimes nearly or quite parallel to it, but generally fall, nearly at right angles to the line of the seaboard, into the great estuaries, where, in some cases, their products are arrested, or whence, in others, they flow or mingle with those of the first. To fulfil the object of the first-mentioned lines of communication, it is obviously necessary to prevent an enemy from reaching them through any of the numerous inlets from the sea which they traverse, including, of course, the great inlets wherein these unite with the communications coming from the interior. The security of the coastwise line, therefore, involves the security of the other, and is in a great measure indispensable to it. From such considerations as have been already presented, it is inferred that for the security here required we must, as in the case of cities, harbors, naval establishments, &c., look to fortifications. But it fortunately happens, as will appear in the sequel, that wherever both objects exist, the works necessary for the one may often, if not always, be made to accomplish both. In reference to a system of defence for the protection of these lines of communication, it must be observed that, from the facility with which they may be broken up, and the serious evils consequent thereon, they offer to the enemy great inducements to enterprises of that nature. An aqueduct, an inclined plane, a tide-lock, a dam, an embankment blown up, is the work of an hour, and yet would interrupt the navigation perhaps for months.

The necessity of a regular army, even in time of peace, is a principle well established by our legislation. The importance of a well-organized militia is incident to the nature of our institutions, well understood by the people, duly appreciated by the government, and finely illustrated in our history. Nothing, therefore, need be said on these subjects, considered as general principles. It may, however, in a succeeding part of this communication, be deemed proper to hazard a conjecture or two touching the expediency of a peculiar organization of the latter.

Before going further, it is proper to be more explicit as to the sense in which the terms "*navy*" and "*fortifications*" have been employed.

By the term *navy*, only that portion of our military marine which is capable of moving in safety upon the ocean, and transferring itself speedily to distant points, is meant. Floating batteries, gunboats, steam batteries, &c.; these, and indeed all other modes of defence which are restricted in their sphere of action, tied down to local defence, and are produced chiefly in cases where the localities deny to fortifications their best action, are regarded as auxiliary to fortifications, and as falling within the same category. Under the term "*fortifications*," used as expressive of security afforded thereby to the seaboard, have been included permanent and temporary fortifications, the auxiliaries just mentioned, and both fixed and floating obstructions to channels.

The circumstances which must govern in framing a system of fortifications are—

1st. The importance of the objects to be defended. Great naval establishments, great cities, &c., invite to greater preparation on the part of an enemy, and demand corresponding means of resistance.

2d. The natural advantages or disadvantages of the position to be fortified. It will often happen that the defence of a position of great consequence can be effected with smaller works and at less expense than a place of much less value. It will not follow, therefore, that the *expense* of fortifications will be proportionate to the importance of the object, though it is indispensable that the strength should be.

3d. The species of attack to which the place is liable. Some places will be exposed only to capture by assault; others by siege; others to reductions by cannonade, bombardment, or blockade; and some to a combination of any or all these modes. If the enemy against which we fortify be unprovided with artillery, the mode of fortifying becomes peculiar.

4th. Whatever may be the circumstances, it is of vital importance that all the work should be fully adequate to the object, and that they should, even with a small garrison, be perfectly safe from a *coup de main*.

Proceeding now to a concise description of the maritime frontier, considered as a whole, the several sections will be afterwards separately examined, applying, as we go, to the several positions, the works already projected, and pointing out as far as practicable such as remain to be planned. The sea-coast of the United States is comprised within the 24th and 46th degrees of north latitude, and spreads over 27 degrees of longitude. The general direction of that part which lies on the Atlantic, north of the peninsula of Florida, is N.NE. and S.SW. This peninsula stretches out from the continent in a direction a little east of south, while that part which lies on the Gulf of Mexico corresponds nearly with the 30th parallel of north latitude.

Without estimating any of its indentations not properly belonging to its outline, and carrying our measure from point to point wherever the breaks are at all abrupt, the line of coast may be stated to be 3,300 miles in length.

Nearly parallel with the Atlantic coast extends a chain of mountains separating the sources of rivers flowing, on the one hand, directly into the ocean, from those which run into the Gulf of St. Lawrence or Gulf of Mexico. Even in the most lofty portions of this chain numerous gaps afford facilities for crossing by roads or railways.

Occasional expansions at high elevations presents sufficient surface to afford the water required for crossing by canals; and in other places the rivers themselves have severed the chain, leaving no impediments to communications of either kind. On both sides of these mountains the country offers numerous natural means of intercommunication, and facilities and inducements for the creation of artificial ones in endless combination.

From this general description it may be deduced that, notwithstanding the great extent of our seaboard, the safety of each section of it is a matter not devoid of interest to every portion of the people, however remote, geographically, at least so long as the nation shall continue her commercial relations with the rest of the world; and, indeed, until she shall find it her interest to interdict the circulation

of domestic commerce through the avenues which nature or art may have created; a commerce of inestimable value at all times, becoming more necessary as well as more valuable on every interruption of foreign traffic.

As lying closely connected with the coast, it will be convenient to describe briefly in this place that line of interior communication on which, in time of war, reliance must be placed as a substitute in part for the exterior coasting navigation of peace.

Beginning in the great bay to the north of Cape Cod, it passes over land either into Narraganset Roads or Buzzard's bay; thence through Long Island sound to the harbor of New York; thence up the Raritan, over land, to the Delaware; down this river some distance, over land, to the Chesapeake; down the Chesapeake, up Hampton Roads and Elizabeth river, through the Dismal Swamp, to Albemarle sound; thence through the low lands, swamps, or sounds of the Carolinas and Georgia, to the head of the peninsula of Florida; thence over land to the Gulf of Mexico; thence through the interior sounds and bays to New Orleans, and thence through low lands, swamps, and bayous, to the western boundary. Some of the few and brief natural interruptions of this extensive line have already been removed; some are rapidly disappearing before the energy of local or State enterprise, and to the residue the public attention is directed with an earnestness that leaves no reason to fear that they will not in due time be overcome. In all cases where this line becomes much exposed to an enemy from the difficulty of fortifying broad waters, communications more inland are even now afforded, or are in progress, by canals or railroads, which will be perfectly safe.

Proceeding now to a more minute examination of the coast, it will be convenient to divide it into four distinct parts, namely: the northeastern, extending from the English province of New Brunswick to Cape Cod; the middle, from Cape Cod to Cape Hatteras; the southern, from Cape Hatteras to Cape Sable; and the Gulf of Mexico frontier, from Cape Sable to the Mexican borders. They will be taken up in the order in which they stand above.

THE NORTHEASTERN SECTION OF THE COAST.

The northeastern section is characterized by its serrated outline and its numerous harbors; and, though differing in these respects entirely from the other sections, is not less distinguished in its climate than by the prevalence, at certain seasons, of dense and lasting fogs. The extent of this section, measuring from point to point, wherever the breaks of the coast are abrupt, is about 500 miles, while a straight line from Cape Cod to Quoddy Head is hardly half that distance. The eastern half of this coast is singularly indented by deep bays, the shores being universally rocky, and having numerous islands, surrounded by deep water, which not only add to the number of harbors, but afford, besides, an interior navigation, well understood by the hardy coasters of this section, and measurably secured by its intricacies, and the other dangers of this foggy and boisterous region, from interruption by an enemy. The western half, though it has two very prominent capes and a few deep bays, is much less broken in its outline than the eastern. It is covered by few islands, in comparison, but contains, nevertheless, several excellent harbors.

The eastern harbors of Maine are exposed in a peculiar manner. They are not only on the flank of our line, but they are also quite near to public establishments of the greatest maritime powers; they are, moreover, as yet, backed by a sparse population only, and are consequently both weak and exposed. The time cannot be very distant, however, when, becoming wealthy and populous, they will be the objects of a full portion of the public solicitude. Works designed for these harbors must therefore be calculated for the future—must be founded on the principle that they are to defend places much more important than any now existing there; that, being very near the possessions of a foreign power, they will be, in a particular manner, liable to sudden and to repeated attacks; and that, lying at the extremity of the coast, they can be only tardily succored. The works erected on this part of the coast should be so strong as to resist escalade, and to hold out long enough for the arrival of relief. Feebler works than these might be more injurious than beneficial; their weakness would, in the first place, invite attack, and it being a great advantage to occupy fortified places in an adversary's territory, the enemy would prepare himself to remedy the military deficiencies of these forts by adding temporary works, by the force of his garrisons, and the aid of his vessels.

No surveys have been made of these harbors, and no plans formed for their defence. It may be well to observe here, once for all, that much confidence is not asked for the mere conjectures presented below as to the number and cost of the works assigned for the protection of the harbors which have not yet been surveyed. In some cases there will be mistakes as to the number of forts needed, and in others the errors will be in the estimated cost; but the errors will probably as often lie on one side as on the other, so that the sum total may be a sufficient approximation to the truth.

This is the place to state, also, that the early estimates furnished for the projected works require considerable augmentation. The explanation of this is easy. In preparing those estimates, the board of engineers obtained lists of prices from different sections of the country and adopted them as accurate. Whether the lists thus furnished referred to materials and workmanship of inferior quality, or because they were drawn up at a period of unusually low prices, it has been found by experience that these prices were almost all too low. The board calculated with great care and labor, and with perfect honesty of purpose, applying the prices just mentioned to all the quantities susceptible of measurement and calculation; and they applied themselves with no less diligence and good faith to the estimate of expenses of a contingent nature, and, for the greater part, not to be foreseen with accuracy, either as to amount or kind. Having no experience in large constructions, these last were at least but conjectures; and, as the history of constructions on several parts of the coast has since shown, they were much too small. In consideration of these deficiencies, of the present great elevation of prices, and of the liability to great increase of cost from occasional interruptions of progress and breaking up of systems of operations, it is thought that about fifty per cent. should be added to the amounts given in the estimates.

Eastport and *Machias* may be brought forward as places that will unquestionably be thought to need defensive works by the time; in the order of relative importance, the execution of them can be undertaken by the government. There are several small towns eastward of Mount Desert island that may, at that period, deserve equal attention; at present, however, the places named above will be the only ones estimated for, and \$100,000 will be assumed as the cost of each.

Mount Desert island, situated a little east of Penobscot bay, and centrally as regards the Kennebec and St. Croix rivers, having a capacious and safe roadstead, affording anchorage for the highest class of vessels, and easily accessible from sea, offers a station for the navy of an enemy superior to any other on

this portion of the coast. From this point his cruisers might act with great effect against the navigation of the eastern coast, especially that of Maine, and his enterprises of every kind could be conducted with great rapidity against any point he might select. These considerations, added to the advantages which would result, in certain political events, from our occupying so advanced a station, whence we might act offensively, together with the propriety of providing places of succor on a part of the coast where vessels are so frequently perplexed in their navigation by the prevailing fogs, lead to the conclusion that the fortification, in a strong manner, of this roadstead, is highly necessary. A survey of this island was begun many years ago, but the party being called off to other duties, it was never completed; the project of defensive works has not been formed. The entire cost may be, as assumed by the Engineer department, \$500,000.

Castine.—It would seem to be impossible, on this coast, to deprive an enemy, enjoying naval superiority, of harbors, or to prevent his using them as stations during the war—insular situations which his vessels would render unapproachable being so numerous; but it seems proper that those positions of this nature, which are at the same time the sites of towns, should be secured against his visitations. During the last war the English held the position of Castine for some time, and left it at their pleasure. It is probable that a work costing about \$50,000 would deter an enemy from again making choice of this position.

Penobscot bay.—Upon this bay, and upon the river of the same name flowing into it, are several flourishing towns and villages. Of the many bays which intersect this coast, the Penobscot is the one which presents the greatest number of safe and capacious anchorages. As before observed, a large portion of these harbors must, for the present, be left without defences; but the valuable commerce of the bay and river must be covered, and to afford a secure retreat for such vessels as may be unable to place themselves under protection of the works to the east or west of the bay, the passage of the river must be defended. The lowest point at which this can be done, without great expense, is at the narrows opposite Bucksport. A project has been given in for a fort at that position, now estimated at \$150,000.

West of the Penobscot comes *St. George's bay*, *Broad bay*, *Damariscotta*, and *Sheepscot*, all deep indentations and leading to towns, villages, and various establishments of industry and enterprise of greater or less present value and future promise. These have not been surveyed, and of course no plans have been formed for their defence. \$400,000 are assigned to the fortification of these waters. The Sheepscot is an excellent harbor of refuge for vessels of every class.

Kennebec river.—This river is one of the largest in the eastern States, enters the sea nearly midway between Cape Cod and the mouth of the St. Croix. It rises near the source of the Chaudiere, a tributary of the St. Lawrence, and has once served as a line of operations against Quebec. The situation and extent of this river, the value of its products, and the active commerce of several very flourishing towns upon its banks, together with the excellence of the harbor within its mouth, will not permit its defence to be neglected. Surveys incomplete; estimated cost of defences, as formed by the Engineer department, \$300,000.

Portland harbor.—A little to the northwest of Cape Elizabeth is the harbor of Portland. The protection of the town, of the merchantmen, and of the ships-of-war that may be stationed there to guard the coast, or that may enter for shelter, (all of them important objects,) may be secured, as an inspection of the map of the town and harbor will show, by occupying Fort Preble Point, House island, Hog Island ledge, and Fish Point. At the same time, if the two channels to the west and east of Hog Island ledge can be obstructed at small expense, which is hardly a matter of doubt, although some final surveys are necessary to decide this point, there will be no necessity for a battery on the ledge; and Fish Point need be occupied only by such works as may be thrown up in time of war. The expense, as now estimated, of the works planned for this defence—not including the defence of Hog Island channel, of which the mode has not been settled—will be \$155,000 for Fort Preble, and \$48,000 for House island. For Hog Island channel, say \$135,000.

The mouths of the Saco, Kennebunk, and York.—Comparatively small works will, it is thought, adequately cover these places, and \$75,000 is assumed as their aggregate cost.

Portsmouth harbor.—The only good roadstead or good harbor between Cape Elizabeth and Cape Ann is Portsmouth harbor, within the mouth of Piscataqua river. Line-of-battle ships can ascend this river as high as Fox Point, seven miles above the town of Portsmouth. Between this point and Shooting Point is a branch of the river communicating with Great bay. This branch, which is one-third of a mile wide, presents for two miles in length an excellent cover for all sorts of vessels. This situation, sufficiently commodious for a secondary depot, designed to repair vessels-of-war seeking an asylum in this river, is too near the sea for a great naval depot; and in other respects does not possess the advantages of Boston, as was shown in the report of the board of engineers, 1820. Still, as Portsmouth is an excellent harbor and station, and as it is indispensable that some at least of these stations be provided with the necessary establishments for repairs, the depot in this river should be maintained. It is to be regretted that the bay to the south of Fox Point was not chosen as the site of the navy yard instead of Fernal's island. Being where it is, it will be necessary, in time of war, to make some particular dispositions for the protection of the yard from an attack from the north shore of the river.

The position of Fort Constitution must certainly, and that of Fort McCleary may possibly, be occupied by these defences, though the works themselves, especially the first named, must give place to such as will better fulfil the object. The other positions for forts are Garrish's Point, — island, and Clark's island; some if not all of which must be occupied. Some final surveys must be made before the necessary works can be accurately determined on, and before estimates can be made; but there is reason for believing that the entire expense of fortifying this harbor will not fall short of \$500,000.

Newburyport harbor.—This is the next port south of Portsmouth. The Merrimack river, the mouth of which forms this harbor, is obstructed at its junction with the sea by a bar, on which there was formerly but six or seven feet water at low tide. This entrance has since, however, been thought to be essentially important, and, at any rate, it leads to a beautiful, prosperous, and wealthy city. The points forming the mouth of the river are continually changing their form and position; near the middle of the present channel is said to be the spot once occupied by a fort. Under such circumstances, it seems advisable to rely, for the defence of this harbor, on forts to be thrown up on the approach of war, unless the works of harbor improvement now in progress shall be found to give stability to the points in question. It is thought that \$100,000 would defend this entrance adequately.

Gloucester harbor.—The position of this harbor, near the extremity of Cape Ann, places it in close relation with the navigation of all Massachusetts bay, and gives it an importance beyond what would be

assigned to it on account of its local interests. No surveys have yet been made, but it is believed that sufficient defences may be provided for \$200,000.

Beverly harbor.—This harbor will be defended chiefly by a portion of the works designed for Salem; \$50,000 in addition will secure it.

Salem harbor.—The port of Salem is distant from Marblehead two miles, being separated therefrom by a peninsula. The occupation of the extremity of Winter island (where are the ruins of Fort Pickering) on one side, and of Naugus Head on the other, will effectually secure this harbor. Projects have been presented for this defence, now estimated at \$225,000.

Marblehead harbor.—Besides covering, in some measure, the establishment at Boston, the harbors of Marblehead and Salem possess an important commerce of their own, and also afford shelter for vessels prevented by certain winds from entering Boston or pursuing their course eastward. The mode of defending Marblehead harbor proposed by the board of engineers consists in occupying on the north side the hillock which commands the present Fort Sewall, (which will be superseded by the new work,) and on the south, the position of Jack's Point. The two works will cost \$313,000.

Boston harbor.—We come now to the most important harbor in the eastern section of the coast, and, considering its relation to general commerce and the interests of the navy, one of the most important in the Union. After a careful examination of all the necessary conditions of such a problem, the board of naval officers and engineers, in their joint report of 1820, gave this harbor a preference over all other positions to the east, and inclusive of New York bay and the Hudson, as the seat of the great northern naval depot. For reasons at large, for this selection, reference is made to the report of 1820. But, even should the recommendation therein contained remain unsanctioned, still Boston is a city of great wealth, possesses an extensive and active commerce, and contains already within its harbor an establishment on which great reliance is placed to give growth and energy to our navy. The present forts in Boston harbor defend merely the interior basin from attacks by water, but as it often happens that vessels enter Nantasket Roads with a wind too scant to pass the Narrows, or are detained in President Roads by light winds or an adverse tide; as the former especially is a very convenient anchorage, from whence to proceed to sea; and, above all, as Nantasket Roads afford the best possible station for a blockading squadron, it was deemed indispensable to place permanent defences at the mouth of the harbor. The project of defence regards the existing works, with the necessary repairs and modifications, as constituting a second barrier, contemplates placing a permanent fort on George's island; another at Nantasket Head, having two advanced works on the Head, and one on Hog island; reducing the altitude of Gallop island, in order to destroy its command over George's island; and filling up the Broad Sound channel, so as to leave no passage in that direction for ships-of-war. These are estimated to cost \$2,337,000. Besides the works of a permanent character, it will be necessary, in the beginning of a war, to erect several temporary works in the lower part of the harbor, in order to make that defence more perfect, and also on certain lateral approaches to the navy yard.

Plymouth and Provincetown harbors.—These are the only harbors on the northeastern section of the coast south of Boston. They have a commerce of some consequence of their own, but they are particularly interesting in reference to the port of Boston, and to the transition from the middle to the eastern section of the coast, in which respect they would become still more important should the proposed canal from Buzzard's to Barnstable bay ever be executed. While these harbors are undefended, an enemy's squadron blockading Massachusetts bay will have ports of refuge under his lee, of which he would not fail to avail himself to maintain his blockade, even throughout the most stormy seasons, knowing that the wind which would compel him to seek shelter would be adverse to outward-bound, and fatal, should they venture near the cape, to inward-bound vessels. While in possession of these harbors, an enemy would have constantly under his eye the harbor of Boston, the passage round Cape Cod, and that through the canal. To these considerations, going to establish the necessity of securing these harbors by proper defences, it must be added that, being thus deprived of the shelter afforded by these ports, an enemy would be unable to enforce a rigorous investment. In the first place, he would often be deterred from taking a station near the land lest he should be caught embayed by the violent easterly winds prevailing at certain seasons; in the next place, he would always take a good offing, on every distinct indication of these winds, thereby leaving a clear coast to be profited of by our own vessels at the first instant of a change of weather. Our own vessels coming in from sea, and finding an enemy interposed between them and Boston, or being turned from their course by adverse winds, would, in case of the defence of these harbors, find to the south of Boston a shelter equivalent to that provided to the north by the fortifications at Marblehead, Salem, Gloucester, and Portsmouth.

The surveys of these harbors have not been handed in, and no plans have been formed for their defence. Plymouth harbor may be suitably defended, it is thought, by the occupation of Gurnet Point, and at no great expense, while it is thought that, to fortify Provincetown harbor in such a way as to cover vessels taking shelter therein, and at the same time to deprive an enemy of all safe anchorages, will involve considerable expense; probably no nearer estimate can be formed at present than that offered by the Engineer department, which gave \$100,000 to Plymouth and \$600,000 to Provincetown.

Should the canal above mentioned be executed, it will be necessary to place a small work at each of its outlets to prevent the destruction of the means by which the transit of vessels in and out of the canal must be accomplished.

MIDDLE SECTION OF THE COAST.

The coast between Cape Cod and Cape Hatteras differs from the northeastern section in possessing fewer harbors, in having but little rocky and a great portion of sandy shore, wherein it resembles the southern section in its milder climate and its clearer atmosphere, and it differs from all the other portions in the depth and magnitude of its interior seas and sounds, and in the distance to which deep tide navigation extends up its numerous large rivers.

The circuit of the coast, not including the shores of the great bays, measures 650 miles, while a straight line from one of the above-named capes to the other measures about 520 miles.

Martha's Vineyard sound.—To the south of Cape Cod lie the islands of Nantucket and Martha's Vineyard, which, with several smaller islands on the south, and the projection of Cape Malabar on the east, enclose Martha's Vineyard sound. The channels through this sound being sufficient for merchant vessels, and one of them allowing the passage even of small frigates, are not only the constant track of coasting vessels, but owing to the relative situation of Long Island sound and Narraganset Roads, and to the existence of two tolerably safe harbors at convenient distances east of Gay Head, namely, Tarpaulin

sound and Holmes's Hole, the sound is generally aimed at by all eastern vessels arriving from foreign voyages in the tempestuous months. There are certain difficulties, however, attending the navigation of this sound, arising from the want of a harbor near the eastern extremity, which have suggested the project of an artificial harbor at the northeast point of Nantucket island. Besides these harbors on the direct route through the sound, there are the harbors of Nantucket, Edgartown, and Falmouth.

In addition to the many thousand vessels which pass this water annually, of which there are sometimes forty or fifty, a portion containing the most valuable cargoes to be seen in the harbors awaiting a change of wind, there is supposed to be at least 40,000 tons of shipping owned in the towns of this sound and employed in the whale fishery. If this portion of the coast is to be defended at all, it must be by fortifications, for there is no population scarcely except that of the towns, and this is believed to be entirely without military organization. A privateer might run into either of these harbors and capture, destroy, or levy contributions at pleasure. \$250,000 may perhaps suffice for the defence of all these places against the kind of enterprises to which they are exposed.

Buzzard's bay.—Interposed between the island of Martha's Vineyard and the main are the Elizabeth islands bounding Buzzard's bay on the south. This bay, although of importance as leading to the proposed canal to Barnstable bay, as covering the flourishing town of New Bedford, and as being one of the natural harbors to be used by an enemy in forcing the blockade of Narraganset Roads, cannot be defended by fortifications, owing to its great breadth.

New Bedford and Fairhaven harbor.—No survey has been made of this harbor, which covers two of the most flourishing towns. It is certainly defensible, and probably for the amount assumed by the Engineer department, namely, \$300,000.

Narraganset bay.—The properties of this great roadstead will be here adverted to very briefly. More minute information may be obtained by reference to reports of 1820 and 1821.

It is the only harbor on the coast accessible with a northwest wind, which is the most common and violent of the most inclement season, and as winds from N.N.W. to S.S.W. round by the east serve for entering both Boston and New York harbors, while this harbor can be entered with all winds from northwest to east round by the west, it follows that, while we possess this harbor, vessels may be certain of making shelter on this part of the coast with any wind that can blow, excepting only between N.N.W. and N.W. From this station the navigation inland of Long Island sound, and especially the communication between that sound and Buzzard's bay or Martha's Vineyard sound, may be well protected. The blockade of the excellent harbor and naval station of New London will be rendered difficult. From this station the navy will command southwardly as from Hampton Roads; northwardly, the great inward curve of the coast between Cape Cod and Cape Hatteras; the influence of which command over the blockading operations of an enemy will be apparent when it is considered that the only harbors of refuge he can have will be the Delaware, Gardiner's and Buzzard's bays, and that it is far from certain that improvements in the auxiliaries of fortifications may not deprive him of these also.

If Narraganset bay were without defence, an enemy would occupy it without difficulty, and, by the aid of naval superiority, form a lodgement in Rhode Island for the war. Occupying the island alone, or connecting therewith the position of Tiverton heights, opposite the northern extremity of the island—a position which is of narrow front, easy to secure, and impossible to turn—he might defy all the forces of the eastern States, drive the United States to vast expense of blood and treasure, and while this position of his troops would keep in alarm and motion all the population of the east, feigned expeditions against New York, through Long Island sound, or against more southern cities, would equally alarm the country in that direction; and thus, although he might do no more than menace, it is difficult to estimate the embarrassment and expense into which he would drive the government.

Of old forts, some of which were never finished, Fort Wolcott and Fort Green are the only ones retained in the projected system of defence.

The project of defence proposed by the board of engineers contemplates for the middle channel on Brenton's Point a strong fort, (now well advanced,) with out-works; another strong fort and out-works on the Dumplings; a smaller fort on Rose island, and the repair and modification of Fort Wolcott and Fort Green. The eastern passage is already shut by the permanent bridge at Howland's Ferry. As to the western passage, three modes present themselves: first, reducing the depth of water by an artificial ledge, so as, while the passage shall be as free as now for merchant vessels, to prevent the passage of ships-of-war; second, relying on fortifications alone to close the channel; or third, resorting in part to one and in part to the other mode just mentioned. Being the least expensive and most certain, the estimate was founded on the first.

The total cost of the Narraganset defences are estimated at \$2,050,000.

Gardiner's bay.—This most valuable harbor to an enemy investing this part of the coast is probably not defensible by fortifications alone. It has not been surveyed, however; and at no distant day it will be an interesting question whether, by steam batteries or some similar means, under the protection of and aided by fortifications, its defence may not be accomplished. The necessity for fortifying this bay will be more evident should the railroad through Long Island, in contemplation, (perhaps in progress,) be constructed.

The Engineer department has assumed the probable cost of the works at \$400,000.

Sag Harbor, New York, and Stonington, Connecticut.—Neither of these have been surveyed with reference to defence. The first is possessed of a considerable tonnage, and the second, besides being largely engaged in commerce, is about to be the termination of a railroad from Boston. To the first may be assigned \$100,000, and \$200,000 to the other.

New London harbor is very important to the commerce of Long Island sound, and, as a port of easy access, having great depth of water, very rarely freezing, and being easily defended, it is an excellent station for the navy. It is also valuable as a shelter for vessels bound out or home, and desirous of avoiding a blockading squadron off Sandy Hook. In the plan of defence the present Forts Trumbull and Griswold give place to more efficient works, whereof the expense is estimated at \$314,515.

Mouth of Connecticut river.—This river has been shown to be subject to the expeditions of an enemy. It has not been surveyed in order to determine on the mode of defending it; and \$100,000 is introduced here as the conjectural cost.

New Haven harbor.—It is proposed to defend this harbor by improving and enlarging Fort Hale, and substituting a new work for the slight redoubt erected during the last war, called Fort Wooster. The expense of both may be stated at \$90,000.

There are several towns between New Haven and New York on both sides of the sound; none of them

are very large as yet, though most, if not all, are prosperous and rapidly increasing. Although, in their present condition, considering their local situation, it might not be deemed necessary to apply any money to permanent defences, yet, as part of the present object is to ascertain, as near as may be, the ultimate cost of completely fortifying the coast, it seems proper to look forward to the time, perhaps not remote, when some of these towns may become objects of considerable predatory enterprise. Bearing in mind the increase of population in the mean time, and the manner in which the places generally are situated, it is thought that \$200,000 will be enough to defend them all.

New York harbor.—The objects of the projected works for the vicinity of New York are to cover the city against an attack by land or sea; to protect its numerous shipping; to prevent, as much as possible, the blockade of this great port, which will have progressively added to the immense wealth of its own rivers greater and greater amounts of the productions of the boundless regions on the lakes, and to cover the interior communication uniting the Raritan with the Delaware. In the present condition of the defences of this harbor an enemy would encounter no great opposition, whether his attack were made by land or water. Coming by the sound, he might land within ten miles of the city, upon the main, upon Long Island, or upon both; and coming into the lower harbor, he might, while the works on Staten Island are in their present condition, risk forcing the passage of the Narrows, as well as the upper works, anchoring in the Hudson or in the East river; or he might land in Gravesend bay, eight miles from the city, and march directly to Brooklyn, where he would find the navy yard lying at his mercy, and whence he might levy a contribution or destroy half the city. The only mode of resistance would be the expensive, harassing, and uncertain one, of arraying a large body of militia upon Harlem and Brooklyn heights; and this could be resorted to only in the event, by no means certain, of receiving timely intelligence of his design.

If we fortify *Throg's Neck* and *Wilkins's Point*, on the East river, and if we complete the works at the Narrows, making them all too strong to be carried by a *coup de main*, we shall secure the means of transferring the neighboring militia upon the flanks and rear of an enemy should he march upon Brooklyn, while we shall secure the same advantage should he pursue the route by Harlem, besides increasing the length of his march to twenty miles through an intersected country.

This arrangement of defensive works, necessary as it is, still leaves the lower harbor open to an enemy's vessels; in which harbor, safe at all seasons, he could enforce the strictest blockade, cut off the lines of interior communication by the Raritan, and avail himself at any moment of a landing place in dangerous proximity to the city and navy yard. In view of these considerations, the board of engineers projected additional works, one for the East Bank, and another for the Middle Ground, which would perfect the defences of the harbor, compelling an enemy attacking on this side to land upon a dangerous coast, near thirty miles from his object, and to enforce his blockade by riding on the open sea, with a dangerous coast on either hand. Before determining on the works last mentioned, the board went into much research in order to ascertain whether the sand-banks mentioned were unchangeable, and it was thought to have been very fully proved that there had been no material change in more than sixty years. This apparent stability of the shoals encouraged them to devise the projects referred to.

Recent surveys, it has been said, have discovered a new channel. If this be so, it may not be prudent to resort to the project, and it may become necessary to devise other means; but whatever they may be, they must, from the nature of the case, be very expensive; and there will be no great error, probably, in taking the estimated cost of the projected batteries as the cost of such mode of defence as may be finally resolved on. The cost of the complete defence of New York, remaining to be incurred, is, according to the estimates, \$5,369,824.

Delaware bay and city of Philadelphia.—The coast from the mouth of the Hudson to the Chesapeake, as well as that on the south side of Long Island, is low, sandy, covered by numerous sandy islands, lying near and parallel to the coast, and having, besides the Delaware, many inlets and interior basins, but none, excepting the one named, affording water enough for sea-going vessels. The Delaware bay itself, being wide and full of shoals, having an intricate channel, and being much obstructed by ice at certain seasons, affords no very good natural harbor within a reasonable distance of the sea. The artificial harbor now in course of construction near Cape Henlopen will, it is hoped, fully realize the expectations of its projectors; in which event, it must be securely fortified. No plans have, however, as yet been made with that object; and as to the probable cost, nothing better can now be done than to assume the conjectural estimate of the Engineer department, namely \$600,000.

The lowest point at which Philadelphia is defensible is at Pea Patch island, about forty-five miles below that city. A fort on that island, to replace the one destroyed by fire; a fort opposite the Pea Patch, on the Delaware shore; a temporary work on the Jersey shore, to be thrown up at the commencement of war, and floating obstructions placed in the channel, under the fire of these works, will effectually cover Philadelphia, the other important places on the river, and the outlet of the canal connecting the Delaware and Chesapeake bays. The plans and estimates for a fort to replace Fort Delaware are not completed. Taking the expense thereof at \$600,000, the expense of the system, inclusive of temporary works, will be \$1,121,000.

Chesapeake bay.—The board of naval officers and engineers intrusted with the selection of sites for great northern and southern naval depots recommended, in their joint reports of 1819 and 1820, Burwell's bay, on James river, for the one, and Charlestown, near Boston, for the other. They also recommended Boston harbor and Narraganset bay at the north, and Hampton Roads at the south, as chief naval rendezvous. In those reports the commission entered at large into the consideration of all the matters relating to these important objects; and reference is now made to those reports for many very interesting details.

Hampton Roads, James river, and Norfolk.—The works projected for the defence of these are: 1st, a fort and advanced lunette at Old Point Comfort; 2d, a casemated battery on the Rip Rap shoals; and 3d, a line of floating obstructions extending across the channel between these works. In the event of a great naval depot being fixed on James river, it might ultimately be desirable to provide additional strength, by adding works on the positions of Newport News, Naseway shoals, and Craney Island flats. Exclusive of these, the cost of completing the works is estimated at \$723,188.

The existing fort, viz: Fort Norfolk, will aid in the defence of the city of Norfolk and of the navy yard. It is a small and inefficient work, but may be made useful as an accessory to the general defensive operations.

Harbor of St. Mary's.—The central situation, as regards the Chesapeake, of this fine basin, its relation to the Potomac, its depth of water, and the facility with which it may be defended, indicate its fitness as a harbor of refuge for the commerce of the bay, and as an occasional, if not constant, station

during the war for a portion of the naval force. A survey has been made, but no projects have been formed. The Engineer department has conjectured that the cost may be \$300,000.

Patuxent river.—The more effectually to protect the city of Washington from a sudden attack by troops landed at the head of navigation of the Patuxent, and to provide an additional shelter for vessels, a fort has been planned to occupy Point Patience, and another to occupy Thomas's Point, both about six miles from the Chesapeake. Their expense will be \$505,000.

Annapolis harbor.—No surveys or plans of defence have been made. The existing works are very inefficient. The estimate made by the Engineer department, viz: \$250,000, is adopted.

Harbor of Baltimore.—The proximity of Baltimore to the bay places that city in a dangerous situation. In the present state of things, an enemy, in a few hours' march, after an easy landing, without being exposed to a separation from his fleet, can make himself master of that great commercial emporium.

Baltimore requires for its security two forts in the Patapsco: one at Hawkins's Point, and the other at the extreme end of the flat off Sollers's Point. Besides the advantages which will result of obliging the enemy to land at a greater distance, thereby delaying his march, gaining time for the arrival of the militia, and preventing his turning the defensive positions our troops might occupy, it will be impossible for him to endanger the city or its shipping by a direct attack by water. The present Fort McHenry, Redoubt Wood, and Covington battery, should be retained as a second barrier. Allowing \$150,000 for putting these in a more efficient state, the expense will be \$1,517,000.

Mouth of Elk river.—The completion of the line of communication from the Delaware to the waters of the Chesapeake makes it necessary to place a fort somewhere near the mouth of the Elk, in order to prevent an enemy from destroying by a sudden enterprise the works connecting these communications with the river. There have been no surveys made with a view to establish such protection; but the Engineer department estimates the cost of a suitable fort at \$300,000.

Cities of Washington, Georgetown, and Alexandria.—Fort Washington covers these cities from any attack by water, and will oblige an enemy to land at some fifteen or eighteen miles from Alexandria, should that city be his object. It will also serve the very important purpose of covering the troops crossing from Virginia, with a view to fall on the flanks of an enemy moving against the capital. All these objects would have been better fulfilled had the work been placed at Lower Cedar Point; as it is, however, the forts in the Patuxent being constructed, and the militia of the surrounding country in a due state of preparation, an enterprise against these cities would be one of great hazard. Still, a work on Cedar Point should on no account be omitted. The department estimates its cost at \$300,000.

From the mouth of the Chesapeake to Cape Hatteras there occurs no inlet navigable by sea-going vessels.

SOUTHERN SECTION OF THE ATLANTIC COAST.

This coast is invariably low and for the greater part sandy, much resembling the coast from Cape Hatteras to Montaug Point. A ridge of sand, here and there interrupted by the alluvion of the rivers, extends through its whole length; this ridge, in certain portions, lies on the main land, while in others it is divided therefrom by basins or sounds of various width and depth, and is cut up into islands by numerous channels of greater or less depth, connecting these interior waters with the sea. Wherever this sand ridge is broken, its place is occupied by low and marshy grounds, bordering the principal and the many lesser outlets of the rivers.

The nature of the country through which the rivers of this coast flow, after leaving the mountains, is such that the banks being easily abraded by the current, the waters are always turbid, and are continually transporting new supplies for the formation of alluvion and the maintenance of extensive submarine banks, shoals, and bars; that these do not rapidly increase is owing to the force of the current, the action of the sea, and the mobility of the particles of matter. It is to the same cause, namely, the wearing away of the shores of the rivers, that is to be attributed the want, on this coast, of harbors unobstructed by bars, and which, as a coast, particularly distinguish this and the Gulf of Mexico frontier (where similar operations have been going on) from the more northern and eastern portions.

Ocracoke inlet.—The shallowness of the water on the bars at Ocracoke effectually excludes all vessels of war from the harbor within. But as this is now an outlet of an extensive commerce, and through this opening attempts might be made in small vessels or in boats to interrupt the line of interior communication, whereon so much might depend in time of war, timely preparation must be made of temporary works equal to defence of it against all such minor enterprises.

Beaufort harbor, North Carolina.—Work completed.

Mouths of Cape Fear river.—The defence of the main channel of Cape Fear requires, in addition to the work nearly completed on Oak island, another fort on Bald Head, and the defence of the smaller channel will require a redoubt on Federal Point. The battery, magazine, block-house, quarters, &c., at Smithville, should remain as accessories. The cost is set down at \$258,000.

Georgetown harbor.—The first inlet of any consequence south of Cape Fear river is at the united mouths of the Waccamaw, Pedee, and Black rivers, forming Georgetown harbor, which is a commodious and capacious bay, having sufficient water within and upon the bar, near the mouth, for merchant vessels and small vessels-of-war. A survey of this harbor, begun many years ago, has never been completed, and no projects of defence have been made. It is probable that a work placed near Moschetto creek, or on Winyaw Point, would give adequate strength, at the cost of about \$250,000.

Santee river and Bull's bay.—About ten miles south from Georgetown entrance are the mouths of the Santee, the largest river in South Carolina. It is not known whether the bars at the mouths of this river have sufficient water for sea-going vessels; the same uncertainty exists as to the depth into Bull's bay. It may be well, however, to consider them, and the other inlets between Georgetown and Charleston, as calling for small works, capable of resisting boat enterprises, and to assign to them \$100,000. Should they prove to be navigable for privateers they will need a larger expenditure.

Charleston, South Carolina.—The city, situated at the junction of Ashley and Cooper rivers, is about five miles in a direct line from the sea. Between it and the ocean is a wide and safe roadstead for vessels of any draught. Upon the bar, lying three or four miles outside of the harbor, there is, however, only water enough for the smaller frigates and for large sloops-of-war. On the southwest side of the harbor is James's island, through which are several serpentine passages, more or less navigable for boats and barges; some of them communicate directly with the sea and Stono river. Whappoo cut, the most northerly passage from Stono to Charleston harbor, enters Ashley river, opposite the middle of the city.

Interior natural water communications exist also to the southwest of Stono river, connecting this with North Edisto river, the latter with South Edisto and St. Helena sound; this again with Broad river, and, finally, this last with Savannah river. On the north side of the harbor of Charleston lies Sullivan's island, separated from the main by a channel navigable to small craft. To the northeast of Sullivan's island an interior water communication extends to Bull's bay, and even beyond, to the harbor of Georgetown.

From this sketch it is apparent that it will not do to restrict the defences to the principal entrance of the harbor. The lateral avenues must also be shut. And it is probable that accurate surveys of all these avenues will show that the best mode of defending the latter will be by works at or near the mouths of the inlets, as the enemy will be kept thereby at a greater distance from the city; the lesser harbors formed by these inlets will be secured, and the line of interior communication will be inaccessible from the sea.

No position for the defence of the principal entrance to Charleston harbor can be found nearer the ocean than the western extremity of Sullivan's island. This is at present occupied by Fort Moultrie, a work of some strength but by no means adequate to its object, its battery being weak, and the scarp so low as to oppose no serious obstacle to escalade. How far this work, by modification of its plan and relief, may be made to contribute to a better defence of the harbor, cannot now be determined.

On a shoal nearly opposite Fort Moultrie the foundation of a fort has been begun, which will have a powerful cross-fire with Fort Moultrie. It is presumed that about \$800,000 would put these works in a complete state.

Stono, North Edisto, and South Edisto.—All these must be fortified, at least in such a manner as to secure them from enterprise in boats or small vessels. To that end \$50,000 may be assigned to each.

St. Helena sound.—The proper defences cannot be pointed out till this sound shall have been surveyed.

Although there is supposed to be no great depth of water on the bar, it is known to be navigable by the smaller class of merchantmen, and to have a navigable communication with the head of Broad river or Port Royal, intersecting the interior navigation between Charleston and Savannah. This sound will require defence, even should it not be of much use as a harbor of refuge for exterior commerce. \$150,000 may be the cost of the defences.

Broad river or Port Royal Roads.—The value of this capacious roadstead as a harbor of refuge depends on the depth which can be carried over the bar, on the distance of this bar outside of the line of coast, and on the means which may be applicable of lessening the danger of crossing it. This is supposed to be the deepest bar of the southern coast. Should there prove to be water enough for frigates, and, by light-houses on the shore and lights or other distinct guides on the bar, should it be practicable to make the passage of the bar safe and easy, this road, situated within sixty miles of Charleston and twenty of Savannah river, intersecting the interior navigation between these great cities, thereby securing the arrival of supplies of every kind, would possess a very high degree of importance, not only as a harbor of refuge, but as a naval station also.

The survey of the exterior shoals constituting the bar should be made with the greatest care and all possible minuteness. It is only when this shall have been done that the true relation of this inlet to the rest of the coast can be known, and on this relation the position and magnitude of the required defences will depend. For the present, the estimate made by the Engineer department is adopted, namely, \$300,000.

Savannah and mouth of Savannah river.—Mention has been made of the natural interior water communication along the coast of South Carolina. A similar communication extends south from the Savannah river, as far as St. John's, in East Florida. Owing to these passages, the city of Savannah, like Charleston, is liable to be approached by other avenues than the harbor or river, and its defences must consequently have relation to these lesser as well as to the principal channels.

The distance from the mouth of Wassaw sound, or even Ossabaw sound, (both to the southwest of Savannah river,) to the city is not much greater than from the mouth of the river, and an enterprise may be conducted the whole distance by water, or part of the way by water and part by land, from either or both. As in the case of like channels in the neighborhood of Charleston, it cannot now be determined where they can be defended most advantageously. It is to be hoped, however, that the localities will permit the defences to be placed near the outlets of the sounds, because the defences thus placed will serve the double purpose of guarding the city of Savannah and covering these harbors, which in time of war cannot but be very useful.

The defence of Savannah river is by no means difficult. A fort on Cockspur island, lying just within the mouth, and, perhaps, for additional security, another on Tybee island, which forms the southern cape at the junction of the river with the ocean, would effectually prevent the passage of vessels up the channel, and cover the anchorage lying between Tybee and Cockspur. The existing Fort Jackson, standing about four miles below the city, should be maintained as a second barrier, both as respects the main channel and the passages which come into the river from the south, which last would not be at all controlled by works on Cockspur or Tybee. A fort projected for Cockspur island is estimated at \$470,000. To defend Tybee island may require \$150,000, and \$50,000 would put Fort Jackson in an efficient state, making a total of \$670,000. South of the Savannah are *Wassaw sound, Ossabaw sound, St. Catharine's sound*, at the mouth of the Medway river; *Sapelo sound, Doboy inlet, Altamaha sound*, at the mouth of the great river of the same name; *St. Simon's sound*, at the mouth of Buffalo creek; *St. Andrew's sound*, at the united mouths of the Scilla and Santilla rivers, and *Cumberland sound*, at the mouth of the St. Mary's river. All these communications with the ocean are highly important as regards the line of interior navigation, and several of them as affording access to excellent harbors. The last especially is known to be navigable by the largest sloops-of-war and merchantmen, and two or three of the others are believed to be but little if at all inferior, either as regards depth of bar or safety of anchorage.

All these inlets are yet to be surveyed. Some of them are probably easily defensible by forts, and others may require the aid of floating defences. An important principle in relation to the defensive system of the whole southern coast, namely, that on a coast possessing few harbors, it is at the same time the more necessary to preserve them all for our own use, and the more easy to deprive an enemy of that shelter which is nearly indispensable to a continuous and close blockade. This principle is enforced as touching this particular part of the southern coast by the two following weighty considerations: its remoteness from the nearest naval rendezvous, the Chesapeake, which is on a mean six hundred miles distant and to leeward, both as to wind and current, and its being close upon the larboard hand as they enter the Atlantic of the great concourse of vessels passing at all seasons through the Florida channel.

While, therefore, this part of the coast, from the concentration of vessels here, is in great need of

protection of some sort, naval aid can be extended to it only with difficulty, and at the risk of being cut off from all retreat by a superior enemy.

Accurate and minute surveys, which will enable our vessels, whether driven by an enemy or by stress of weather to shun the dangers which beset the navigation of these harbors, and properly arranged defences to cover them when arrived, seem to be indispensable. It is worthy of remark, besides, that when these harbors shall be fortified the operation of investing the coast and watching the great outlet of commerce through Florida passage will be a difficult and hazardous one to an enemy on whose part no perseverance or skill can avail to maintain an uninterrupted blockade, or to avoid the occasional shipwreck of his cruisers; while on the part of our small vessels-of-war and privateers, the same sort of supervision will at all times be easy and safe.

Nothing better can be now done than to assume \$200,000 as the average cost of defending each of the nine entrances, giving a total of \$1,800,000.

The board of engineers have not examined the coast from the mouth of the St. Mary's to Pensacola; but in order that the chain of defence for the coast may be here exhibited unbroken, the estimates of the Engineer department of the places and positions intermediate between Cumberland sound and Pensacola will be inserted. St. Augustine, \$50,000; Key West and Tortugas, \$3,000,000; Charlotte harbor, Espiritu Santa bay, Apalachicola, Apache bay, St. Joseph's bay, St. Rosa bay, together, \$1,000,000.

GULF OF MEXICO FRONTIER.

The resemblance of this part of the coast to that which we have denominated the southern section is striking. We may, indeed, refer to the description herein given of the principal features of the latter as a true delineation of this. In respect to the relation of the coast to the interior, there is, however, the greatest difference between these two portions of the maritime frontier: for, while about eight-tenths of the whole territory of the United States is, in one sense, tributary to a part only of the Gulf of Mexico portion, in the southern section of the coast not more than one-tenth is connected with the seaboard by any natural ties. This fact, which shows the very deep interest which a large portion of the people and the government have in the security of this portion, is related to other facts which hardly leave an alternative as to the mode of attaining that security.

From the relative geographical position of this part of the coast and the country interested in its safety—from the unhealthiness of the climate, nature of the adjacent country, mixed character of the inhabitants—it will be some time before that portion within supporting distance, whose welfare may be endangered by an enemy, will, from peculiar circumstances, be competent, of itself, to sustain the assaults of an exterior foe. Upon the Atlantic seaboard, the Alleghanies crowd the people upon the coast and surround every alarm-post of the frontier with a more and more dense population, and the ocean and the interior parallel communication transmit rapid aid to the right and left; while the coast of the Gulf, weak in itself and remote from succor from behind, is almost inaccessible to lateral assistance.

Those reasons, therefore, which tend to establish the necessity of an organized, a permanent, and a timely system of defence for the whole seaboard of the United States (some of which were advanced in the commencement of this communication) will apply to this part of it with a peculiar force so long as any portion of its system of defence is incomplete.

It has already been observed that the board of engineers have made no examination between Cumberland sound, in Georgia, and Pensacola. There are, however, along that shore and in the Florida reef, several very important harbors, which must be accurately surveyed.

Pensacola bay.—The upper arms of this considerable bay receive the Yellow-water or Pea river, Middle river, and Escambia river; and, while the tributaries of the last, interlocking with branches of the Alabama and the Chattahoochee, seem to mark the courses whereby, at some future day, canals will convey a part of the products of these rivers to Pensacola, the face of the whole region is remarkably adapted to the application of railroads.

Santa Rosa sound extends eastward from the lower part of this bay into Santa Rosa bay. On the west the lagoons of Pensacola, Perdido, and Mobile bays, respectively, interlock in such a manner as to require but a few miles of cutting to complete a navigable channel from the first to the last-named bay, and thence, through an existing interior water communication, to the city of New Orleans.

Pensacola bay has rare properties as a harbor. It is accessible to the largest class of sloops-of-war and to small frigates, and, under favorable circumstances, will admit even large frigates; and there is reason to hope that the bar may be permanently deepened.

The bar is near the coast, and the channel through it is straight and easily lit.

The harbor is perfectly landlocked, and the roadstead very capacious. There are excellent positions within it for repairing, building, and launching vessels, and for docks and dock-yards, in healthy situations. The supply of good water is abundant. It is perfectly defensible. These properties, in connexion with the position of the harbor as regards the coast, have induced the government to fix upon it as a naval station and place of rendezvous and repairs.

An excellent survey has been made of the bay of Pensacola, sufficing to form the scheme of defence, while no other objects were sought than the security of the town and harbor. Regarded, however, as a naval station and place of rendezvous and repairs, further surveys, extending a greater distance from the shores, delineating accurately the face of the country, and showing the several avenues by land and water, are found to be necessary.

The defences of the water passage, as projected, are nearly completed, \$210,000 being asked to finish them. A further water defence at the position of the Barrancas, and the works that are indispensable to cover the navy yard from a lateral attack through the western bays, the latter requiring the further surveys above mentioned, are not yet planned. The Barrancas work may be taken at \$100,000 and the others at \$300,000, making a total for Pensacola of \$610,000.

Perdido bay.—This bay is intimately related to Pensacola and to Mobile bays, both as regards security and intercommunication, and should be carefully surveyed with a view to these objects. It must be fortified, and the cost may be \$200,000.

Mobile bay.—The plan of defence for this bay comprised a fort at Mobile Point, which has been finished; another on Dauphin island, and a tower at the Pass au Heron. The estimates for the two last-named amount to \$905,000.

New Orleans and the delta of the Mississippi.—The most northern water communication between the Mississippi and the Gulf is by the passage called the Rigolets, connecting Lake Borgne and Lake Pont-

chartrain. The next is by the Pass of Chef Menteur, also connecting these lakes. Through these passages an enemy entering Lake Pontchartrain would, at the same time that he intercepted all water communication with Mobile and Pensacola, be able to reach New Orleans from the southern shore of the lake; or might continue onward through Lake Maurepas, Amite river, and Iberville river, thereby reaching the Mississippi at the head of the delta; or, landing within the mouths of Chef Menteur, he might move against the city along the ridge of the Gentilly road.

To the southwest of Chef Menteur, and at the head of Lake Borgne, is Bayou Bienvenue, a navigable channel, (the one pursued by the English army in the last war,) not running into the Mississippi, but possessing shores of such a nature as to enable troops to march from the point of debarkation to the city. A little to the south of this is Bayou Dupré, also affording easy access to the city. The avenues just named are defended by a fort at the Rigolets; another at Chef Menteur; another at Bayou Bienvenue, and a tower at Bayou Dupré.

The defences of the river are placed at the Plaquemine turn, the lowest position which can be occupied. Fort Jackson is on the right shore, and Fort St. Philip a little lower down on the left. This last work must be repaired or renewed. The expense is estimated at \$117,000.

The only permanent work required at present west of the Mississippi is a fort to occupy Grand Terre island, for the purpose of defending the entrance to Barrataria bay, an excellent harbor for a floating force guarding the coasting trade on that side, and whence there are several passages leading to the Mississippi, near New Orleans. The estimate for this work is \$400,000.

Before leaving this part of the subject, it is necessary to advert to the important uses which may be made of movable floating defences in aid of fortifications.

The applications of this auxiliary force along the coast of the United States may be very numerous, and, as has been before remarked, would, in certain cases, be requisite to attain full security for all the objects needing protection. In the case we have just been considering, for example, fortifications will enable us to protect New Orleans, even from the most serious and determined efforts of an enemy; but, owing to the great width of the passages, we cannot, by fortifications alone, deprive an enemy of good exterior anchorages, especially the very excellent one west of Chandeleur island, nor entirely cover the interior water communications between the Rigolets and Mobile. We must, therefore, either quietly submit to all the annoyance and injury which an enemy in possession of these passages may inflict, or avert them by the timely preparation of a floating force adapted to their peculiar navigation, and capable, under the favorable shelter of the forts, of being always on the alert, and of assuming an offensive or defensive attitude, according to the designs, conduct, or situation of the enemy. As these means of defence are, however, secondary to fortifications, in every sense; as the extent to which they may be needed must depend on the relation of our naval force to that of other powers—a relation continually varying, as the shapes which these auxiliaries are to assume—the materials of which they are to be formed, the weapons they are to use, the agent which is to give them power, are points on which every ten years of this age of rapid improvement in the arts may effect complete revolutions, it is considered premature to go into details, and premature to go into expense.

From the preceding sketch of the system projected for the defence of the seaboard of the United States, it appears that all the fortifications proposed are not of the same pressing necessity, nor of like importance. Some are required immediately, while the commencement of others may be postponed. In proceeding to class them, it must be observed that the works of the first class are those destined to prevent an enemy from forming a permanent or even a momentary establishment in the country, those which will defend the great naval arsenals, and those which will cover the chief cities and towns.

In the second class will be placed the works which are to defend those naval stations and those cities of a secondary rank which, either from natural or artificial defences, existing works, &c., are not entirely without protection, and may, therefore, wait until the more important points are secured against a first attack; and in the third class will be arrayed the works which complete the defensive system in all its parts, but of which the construction may, without great danger, be deferred until the frontier shall have received all the successive degrees of strength resulting from a gradual erection of the forts of the first and second classes. A fourth class is added, containing such works as will be necessary only conditionally.

Table A, joined to this report, contains the first class, and shows that the works of this class will cost \$11,609,444; will require 2,585 men to garrison them in time of peace, and 30,966 in case of siege.

Table B contains the works of the second class, showing that they will cost \$5,873,000; will require 975 men to garrison them in time of peace, and 10,680 in case of siege.

Table C contains works belonging to the third class, showing that their cost will be \$14,078,324; that their garrisons in time of peace will amount to 2,380 men, and in time of siege to 21,745 men; showing, also, that the total future expense of fortifying the maritime frontier will amount to \$31,561,268; the troops necessary to guard these fortifications in time of peace to 5,940 men, and 63,391 men in time of war, supposing them all (which cannot happen) besieged at once.

The time required to construct the whole system must depend upon the annual appropriation which the nation may grant to this branch of the public service. All that need be said on the subject is, that in an undertaking necessarily involving so much time, and of such vital importance to the safety, prosperity, and greatness of the Union, there should be no relaxation of effort and perseverance. An undertaking of such magnitude must, with every effort, be the work of years. But it may be too much hurried as well as too much delayed. There is a rate of progress at which it will be executed in the best manner, and at the minimum cost. If more hurried, it will be defective in quality, and more costly if delayed.

France was at least fifty years completing her maritime and interior defences.

Some remarks will now be offered on the subject of the expense of erecting a system of defensive works, and garrisoning them for war, comparing it with the expense of defending the coast without fortifications. To simplify the proposition, the defence of Portsmouth, Boston, Narraganset Roads, New York, Philadelphia, Baltimore, Norfolk, Charleston, Savannah, and New Orleans, only will be taken.

Supposing an enemy had concentrated 20,000 men at Halifax or Bermuda, the government must, on hearing of this force, at once prepare to resist it at all the points mentioned above. As it will be impossible to foresee on which the first blow will be struck, it will be necessary to have troops encamped at each, and to meet the attack with a force not less numerically than that of the assailant; the troops, kept constantly under arms, must at least equal one-half of the hostile expedition; while as many more, ready for instant service, must be within call. These points are so immediately accessible in some cases,

and so remote from succor in others, that, after the point of attack is announced by the appearance of the enemy before it, there will be no time for reinforcements to come from the interior.

By manœuvring in front of any of these places, the enemy would induce us to concentrate forces there; when, suddenly profiting of a favorable breeze, he would sail to another, which he would reach in a few hours, and would not fail to seize, if a force were not stationed there likewise, at least equal to his own. No reinforcement can, in this case, arrive from the interior in time, for all the troops under march would have taken up a point he has just quitted.

Our whole coast, from Maine to Louisiana, would thus be kept in alarm by a single expedition; and such is the extent and exposure of the seaboard, that an enemy might ruin us by a war of mere threatenings. If the cities and other great establishments are not garrisoned, they will become a prey at once; and if they are garrisoned, the treasury will be gradually emptied; the credit of the government exhausted; the weary and starving militia will desert to their homes; nor will it be easy to avert the consummation of tribute, pillage, and conflagration.

The table E, joined to this report, shows that, to be in readiness on each of these vulnerable points, it will be requisite to maintain 107,000 men, encamped and under arms, at the ten places mentioned, and 93,000 men ready to march and within call.

This number is, in fact, below that which would be required; for these points being, according to our hypothesis, exposed to an attack from 20,000 regular and disciplined troops, 20,000 militia would not be able to repel them, unless aided by intrenchments, requiring a time to construct them which might not be allowed, and involving expenses which are not included in the estimate. Besides, to have 20,000 men, especially new levies, under arms, it will be necessary, considering the epidemics that always assail such troops, to carry the formation of these corps to at least 25,000 men.

The State of Louisiana, being remote from succor, requires a larger force under arms than the other points. This force is fixed at 17,000, supposing that the State may supply 3,000 within call.

All expenses being reckoned, 1,000 regular troops, including officers, cost \$300,000 per annum, or \$150 per man, for a campaign of six months. 1,000 militia, including officers, cost \$400,000 per annum, or \$200 per man, for a six months' campaign. But, taking into consideration the diseases which invariably attack men unaccustomed to military life, and the consequent expense of hospital establishments; the frequent movement of detachments from the camp to their homes, and from the interior to the camp; and the cost of camping furniture, utensils, accoutrements, &c., which is the same for a short campaign as for a year; regarding all these things, the cost of a militiaman cannot be reckoned at less than \$250 per man for six months.

The 107,000 militiamen necessary to guard the above-mentioned points, the maritime frontier being without defence, will therefore cost, in a campaign of six months, \$26,750,000. In strict justice, there should be added to this expense, which is believed to be much understated, amongst other things, the loss of time, and the diminution of valuable products, resulting from drawing off so considerable a portion of efficient labor from its most profitable pursuits. This, besides being a heavy tax on individuals, is a real loss to the nation.

It would be utterly vain to attempt an estimate of the loss to the nation, from the dreadful mortality which rages in the camps of men suddenly exposed to the fatigues and privations of a military life.

The total expense of constructing the fortifications at the ten places before mentioned will amount to \$21,767.—(See table E.)

The garrisons of these fortifications may consist of the same number of regular troops in time of war as in time of peace: the remainder being furnished by the militia held in readiness to throw themselves into the forts on the first appearance of an enemy. By this arrangement 3,010 regulars, and 32,076 militia, either within the works or in small corps, on advantageous positions, making in all 35,086 men, would suffice, 64,914 men being kept in readiness to march when called upon.

We should, therefore, have only 35,086 to pay and support instead of 107,000, and the expense would be \$8,430,500, instead of \$26,750,000. The difference, namely, \$18,319,500, being only \$3,448,156 less than the whole cost of these defences. It follows that the expense of their erection would be nearly compensated by the saving they would cause in a single campaign of six months.

It is proper to add that, although the expense of these works will be great, that expense is never to be renewed; while with troops, on the contrary, the expense is annually repeated, if not increased, until the end of the war. Besides, the disbursements for fortifications are made in time of peace slowly, and to an extent exactly correspondent with the financial resources of the country. Armies are most wanted, and must be paid, in periods of the greatest emergency, when the ordinary sources of revenue are dried up, and when the treasury can only be supplied by a resort to means the most burdensome and disagreeable to the people.

The defence of the maritime frontier by permanent fortifications, and the disbursements for their construction, will thus tend to a real and positive economy.

The vulnerable points being reduced to a small number, instead of awaiting an attack on every point, and holding ourselves everywhere in readiness to repel it, we shall force an enemy to direct his assaults against those few which, being well understood by us, will, of course, have received timely preparation. There can be no doubt that such a state of things will make an adversary more reluctant to risk his expeditions; and, therefore, that we shall not only be better able to resist, but also less frequently called on to do so.

Some prominent military writers have opposed the principle of fortifying an extensive land frontier, but none have ever disputed the necessity of fortifying a maritime border; the practice of every nation, ancient and modern, has been the same in this respect. On a land frontier, a good, experienced, and numerous infantry, may, in some cases, dispense with fortifications; but though disciplined troops may cover a frontier without the aid of fortifications, undisciplined troops cannot. On a maritime frontier, however, no description of troops can supply the place of strong batteries, disposed upon the vulnerable points. The uncertainty of the point on which an enemy may direct his attack; the suddenness with which he may reach it, and the powerful masses which he can concentrate at a distance, out of our reach and knowledge, or suddenly, and at the very moment of attack, require that every important point be prepared to repel his attempt or retard it until reinforcements can arrive, and adequate means of resistance be organized. By land, we are acquainted with the motions of an enemy; but the ocean is a vast plain, without obstacle, where his movements are made out of our sight; where no trace is left of his path, and where we know nothing of his approach until he is within reach of the eye. In a word, unless the vulnerable points of a seaboard are covered by permanent fortifications, their only chance of safety

must depend on the issue of a battle, always uncertain, even when the best disciplined, most experienced, and best appointed troops have made all possible preparation for the combat.

As for the garrisons which these forts will require in time of war, a small portion, about equal in number to the peace garrisons, should be of regular troops; the remainder of militia practiced in the manoeuvres and drill of great guns; it being indispensable that the greatest part of the troops required for the defence and service of the sea-coast fortifications should be of artillery.

This brings us to a suggestion or two in relation to the organization of the militia forces. Instead of the present small proportion of artillery allowed in the militia organization, the States might, with great advantage, increase the proportion of that force, in the vicinity of each of the exposed parts of the coast, so as to be equivalent to the exigencies and armament of the works, substituting for the usual field exercises as infantry actual drill and practice in the batteries. The number of militia artillery in each case would be determined by the number of guns applied to the defence of that particular place. As soon as a movement on the part of the enemy should threaten the frontier of the State, this force should throw itself into the forts, and there remain, so long as the precise point of attack should be undetermined. In most parts of the seaboard it would be advisable to have, also, a considerable body of militia horse artillery, as being a very useful arm in all cases, and as affording a defence always applicable against minor and predatory enterprises. This force might, in part, be drawn from the ordinary proportion of cavalry.

If, with our general system of permanent fortifications and naval establishments, we connect a system of interior communication by land and water, adapted both to the defence and to the commercial relations of the country; if to these we add a well-constituted regular army, and a militia, perfect in its organization, the nation will not only completely secure its territory from invasion and insult, but will preserve its institutions from those violent shocks and revolutions which have so frequently, in every age and in every country, been incident to a state of war.

Tables A, B, C, and D, following, contain the works constituting the proposed defensive system for the maritime frontier, arranged in four classes.

Table E exhibits a comparison of the cost of defending certain parts of the coast, without fortifications, and with the aid of the projected works.

Table F shows a possible concentration of militia forces in eleven days at Boston, Newport, Rhode Island, New York, Philadelphia, Baltimore, Norfolk, Charleston, South Carolina, Savannah, Georgia, and New Orleans.

NORTHERN FRONTIER.

Not having been the subject of particular care and study, it is with diffidence that a few words are thrown out on the subject of the defence of the frontier which separates the United States from the English possessions.

The first questions that arise are these: is the political condition of the country lying on the other side of the country in question, viz: the condition of colonies of a transatlantic power, to remain unaltered? Or are these colonies to become independent nations? Or is any other important change to be wrought in their political relations? These questions bear directly upon the matter in hand. A generation hence, and there may be no more room for jealousy and watchfulness along that line than there now is along the imaginary lines which separate our contiguous States. Within the same period the Canadas may have assumed the attitude of independent and separate States; and although the United States may recognize in these northern neighbors a youth of much promise and vigor, the period when the relative increase shall have been such as to make their proximity a source of much precaution and solicitude will not, probably, be near at hand. But though it may be possible that the colonial relations may be thrown off within the period for which it is our duty now to provide; and although, in any other relation, the United States might rely for security, at any moment, on the greater power which she might at any moment develop, can it be distinctly foreseen that the existing political connexion is to be soon dissolved? If not, if there be uncertainty on this point, does it become the duty of the United States to proceed at once to the task of securing herself on this frontier, regarding it as separating her from one of the most powerful empires of the earth; or, finally, may she wait and watch, relying on her sagacity to give due notice of impending danger, and on her resources to supply her, in time, with appropriate armor? If it be, indeed, possible to apply, within a brief state of time, all the defences that can be needed on this frontier, the course last suggested would appear to be the best.

What, therefore, is like to be the nature of the danger, and what the nature of the defence?

Along the St. Croix river only local establishments could require to be covered, as there are no objects of consequence to be reached by an enemy penetrating our interior from that border. Then comes the disputed territory, and the great unsettled regions along the northern margins of New Hampshire and Vermont.

Upon all this extent of frontier the exact location of future establishments, of consequence, cannot be foreseen with the certainty warranting their being now provided for by permanent defensive works. This region is to become populous and wealthy, the natural means of communication are to be improved, and numerous artificial means of communication are to be opened by roads, canals, and railways; but while this growth in wealth may invite aggression, the growth in numbers and the increased facilities of intercommunication, the increased power of rendering mutual succor, and of drawing aid from the interior, would, in a still greater degree, make aggression difficult and improbable.

Lake Champlain penetrates the territory in such a way that an enemy, having the naval mastery, might make a deep inroad and greatly harass the country along the shores, although no enterprise, even in the present state of population, could be carried far into the interior. Were it only to relieve a long line of frontier from predatory incursions, access to this lake from the north should be denied. But there are other very strong reasons for this exclusion. By closing the lake at its northern extremity, an expensive and uncertain strife for naval superiority on this lake would be avoided, and the whole lake would remain in our possession, serving as the best possible military line of communication in case the United States should assume offensive operations against the weakest point of the Canadian frontier.

From the northern end of this lake the forces of the United States should march into Canada and intercept the communication by the St. Lawrence, either at or near the mouth of the Richelieu river, at Montreal island, at some point where the ship channel of the river could be commanded, intermediate between these places, or at any two or at all these places, according to circumstances. Maintaining any or all these positions would limit the defence in the province above to the consumption of the means then

in store, and would completely paralyze its offensive power. Although no other object were in view than the defence of the frontier upon the upper lakes, no effort necessary to secure and maintain this position should be spared, because it is only thus that the contest for naval superiority on the lakes (which, if once suffered to begin, is both exhausting and interminable) can be avoided. Without aid from abroad Canada cannot contest such a question with the United States, and, so long as the United States possess that superiority, the defence of the upper portion of the frontier will be complete.

From being the most expensive of all modes of defence, naval superiority, in our hands, may thus become the cheapest; two or three small armed vessels on each lake, employed as convoys to the ordinary navigation and to the transports bearing troops and munitions, being all that would be needed.

Military enterprises would in this way be warded off from the numerous rich and populous cities and towns now embellishing our border, which it would not be easy to protect from the calamities of war by mere military works, without running into great expense, were the enemy's naval means to allow his approaching them at his pleasure.

In the case of the offensive movement supposed above, the fortified position of Isle aux Noix, and any other upon the Richelieu, should be at first left in rear, being reached or mastered by suitable bodies of troops, and should be subjected to immediate investment and vigorous attack, so as to be speedily reduced, and to open the navigable water communication within twenty miles of Montreal.

If the preceding remarks be well founded, it would appear that the peace and safety of the parts of the frontier extending along the river St. Lawrence, Lakes Ontario, Erie, Huron, and Superior might be made to flow from military operations carried on against Canada by the line of Lake Champlain and the river Richelieu; and in order to this military operation being always practicable, and to be taken up at pleasure, nothing more is necessary than the fortification of the outlet of Lake Champlain. It might have been before remarked that the offensive movement in question is not deemed to be difficult or hazardous, nor would it be necessarily restricted to holding positions on the St. Lawrence, active operations against Quebec (to which this is the most convenient road) following, as a matter of course, upon these first successes.

The security, therefore, that may be obtained for the upper frontier by military operations on the lower, may at least justify these upper portions in waiting the progress of events.

The unexampled increase of population upon these very borders, the hundred new ways, already finished or in hand, of connecting these borders with the heart of the country, may so elevate the military resources of the region that, in the event of war, it will matter little in which of the political conditions first supposed the opposite territory may be found—a resistless torrent sweeping it from end to end; and although it might not be prudent to rely, in such a matter, on the mere spread of wealth and numbers, we may be certain that there will exist ample resources to create all such artificial military aids as the circumstances may call for, and we may infer that the application of these aids would now be premature.

The military consequences of the occupation of the outlet of Lake Champlain are so obvious, that it must not be supposed they are not perfectly understood by our neighbor across the border. As it would, consequently, be a great object with him to avert the consequences alluded to, he would, in the event of war, (often breaking out suddenly,) be first, if possible, in taking such a position as would prevent our commanding the issue of the lake; and hence it is that, in the preparation of the only permanent military work now recommended for the northern frontier, it seems advisable to admit no unnecessary delay.

A position for closing the lake, selected during the last war, and of which the fortification was begun soon after the peace, was found, after some progress had been made, not to lie within our territory, and was abandoned. There is, however, a position equally good close at hand, and in all respects admirably adapted to the object in view.

The fortification of this outlet will probably cost about \$600,000.

All of which is respectfully submitted.

A.

First class, comprising works first to be executed, as covering, partially or entirely, great cities and important towns; naval establishments; roads of rendezvous; places and harbors that an enemy might occupy; outlets of valuable commerce, &c., arranged in geographical order.

Designation of works.	Garrison.		Guns, &c.	Cost to complete

Savannah	732,367	10,000	10,000	200	1,360	1,560	3,440	2,500,000	30,000	340,000	370,000
New Orleans	951,529	17,000	3,000	350	2,740	3,090	6,910	4,250,000	52,500	685,000	737,500
	21,767,656	107,000	93,000	3,010	32,076	35,086	64,914	26,750,000	451,500	7,979,000	8,430,500
.....	Total	200,000	Total	100,000

* Supposing all to be militia, serving six months, and costing in the average \$250 per man.

Expense of defending the above-mentioned points during a campaign of six months without fortifications	\$26, 750, 000
With the projected forts	8, 430, 500
Difference	18, 319, 500
Total cost of the projected works	21, 767, 656
Difference	3, 448, 156

N B.—In one campaign of six months the difference of expense between the two systems will amount to within \$3,448,156 of the whole cost of the projected works. The expense of the troops as above supposes the regular soldier to cost \$300 per annum, and the militia soldier \$500, officers included in both. No estimate can be made of the enormous contingent expenses in assembling, organizing, and providing militia forces, of hospitals, waste of property, loss of time, &c. This estimate is undoubtedly below the truth. The forces under pay necessary for defence, with the proposed works, consist of peace garrisons, increased by a proportion of militia, the residue of militia under pay being stationed upon the line of approach of the enemy.

F.

Exhibiting the amount of militia force that may be concentrated at Boston, Newport, New York, Philadelphia, Norfolk, Baltimore, Charleston, Savannah, and New Orleans, successively, from the 1st to the 11th day, each day's march being computed at 15 miles; founded on the census of 1830.

Days.	Boston.	Newport, R. I.	New York.	Philadelphia.	Norfolk, Va.	Baltimore, Md.	Charleston, S. C.	Savannah, Ga.	New Orleans.

ORDNANCE OFFICE, *Washington, March 8, 1836.*

STR: The resolution of the Senate, referred on the 25th ultimo to this office, has been duly considered, and, in answer, I have the honor to transmit the following report:

1. *In relation to armories.*

For reasons fully set forth in the letter to you from this office of the 28th December, 1833, (and as will also appear on reference to the report of the Hon. R. M. Johnson, chairman of the Military Committee, of March 18, 1834,) it is the opinion of this department that, with a view to keep pace in some measure with the rapid increase of the militia and the consequent demand for arms, there should be established at least one additional armory, to be located at the most eligible point west of the Alleghany mountains.

In a country like the United States, where the population is spread over a territory of great extent, the delay necessarily attending the transportation of arms to distant sections may at times materially affect the public interest; it is therefore suggested that if two additional armories are deemed necessary to meet the exigencies of the country, one should be provided in the west and one in the south Atlantic States. Including those now at Springfield and Harper's Ferry, there would then be four national armories, two for the Atlantic States and two for the west; that is, if Harper's Ferry may be considered sufficiently near the western States to furnish their supplies by means of the proposed extension of the Chesapeake and Ohio canal.

Two additional armories are therefore estimated for, at \$525,000 each, \$1,050,000.

This estimate is based on the report of the commissioners, dated January 12, 1825, who were appointed under the authority of an act of Congress passed March 3, 1823, entitled "An act to establish a national armory on the western waters," and directed to explore the western country with a view to the selection of a suitable site.

2. *In relation to arsenals.*

It has been urged upon the department by many whose opinions demand consideration, that every State should have an arsenal or depot of arms and munitions within its territorial limits. Should this opinion prevail, and be carried into effect by legislative authority, it would be necessary to construct fourteen arsenals or depots, including the one proposed for the State of North Carolina, for which a bill has been reported by the Military Committee of the House of Representatives.

A prominent advantage to the public interest in the establishing of these depots consists in their use for the safe-keeping of arms, issued to the States under the law of Congress passed in 1808, "for arming the whole body of the militia," to be held subject to the orders of their several governors, which would insure their being always available in any emergency.

Some additions may be required from time to time at the arsenals already established, which, with the cost of the fourteen above mentioned, are estimated at \$1,746,000.

This estimate is founded on the supposition that the new arsenals are to be, on an average, of a medium extent, when considered in relation to those already established, which are divided into four classes, as may be seen by reference to a tabular exhibit presented herewith. It would be proper to arrange every new depot in such manner as to admit of its increase or extension in case the public service should require it. It could then be passed from one class to a higher by the addition of such buildings, tools, or machinery, as the case might demand.

3. *In relation to field artillery.*

It is estimated that an adequate supply of field artillery for arming the militia and for troops in service, to be provided within ten years, will amount to 926 pieces, which, with their carriages, implements, and equipments, will cost about \$576,175.

This estimate is based on the principle stated in the report before mentioned, and contemplates a supply proportionate to the ratio of the increase of the militia, one piece of artillery being allotted to every 2,000 men.

4. *In relation to ordnance and ordnance stores required for arming the fortifications.*

Agreeably to data derived from two statements received from the Engineer department on the 11th of January and 27th of February last, it is estimated that the expense of procuring the necessary ordnance and ordnance stores for the full and entire armament of the forts which are erected, together with those now building, and others which are contemplated to be built hereafter, embracing cannon, carriages, implements, and equipments complete, and ammunition, after deducting therefrom the quantity of similar munitions now on hand, will amount to about \$17,840,249.

This estimate is founded on the supposition that 12,116 pieces of cannon, with 200 rounds of ammunition for each gun, will be ultimately required when all the forts projected shall have been completed.

It should be stated, however, that this sum may be considered partly conjectural, the plans for the defence of many of the harbors being not yet matured by the board of engineers, as it appears by a letter from the chief of that department, dated February 27 last. There are likewise many other points along the coast which may require defences, the cost of the armament for which has not been embraced in this estimate; nor does it contain any item for the defence of the Mexican frontier.

5. *In relation to small arms.*

To progress with the arming of the militia to a reasonable extent, in accordance with the settled policy of the country and its civil institutions, a considerable addition should be made to the number of arms on hand. Having reference to the annual increase of citizens who may be called to bear arms, there will be required for the next ten years an expenditure of \$7,721,233 for muskets, rifles, and pistols; and \$321,880 for swords, making \$8,043,113.

This last sum is found by allotting five swords to every 100 muskets, or their equivalent in other fire-arms.

6. *In relation to accoutrements for small arms.*

Fifty thousand sets of accoutrements would cost \$200,000.

This number distributed among the several arsenals would afford an adequate supply for any emergency, and being in some degree perishable, it is not considered advisable to provide a greater quantity, as they can be made at short notice, or as occasion may require.

7. *In relation to field ammunition of all kinds.*

The expense of providing a supply of gunpowder, cartridge paper, and other materials for field service, is estimated at \$200,000.

This amount would afford at all times a supply of ammunition for 30,000 men in each of the principal divisions of the country.

The foregoing statements comprise all the estimates for the Ordnance department, except for a national foundry. The amount required for such an establishment will not exceed \$300,000, which sum includes the cost of materials to be consumed in casting guns during the first year after commencing operations. The period of ten years is taken as a suitable time within which the foregoing expenditures may be completed.

The disbursements for the various objects embraced in the resolution which pertain to the Ordnance department are now, annually, little short of \$1,000,000. If a period of fifteen years is assumed for the accomplishment of these purposes, the annual expenditure will be only double what it is at present, and it is believed that such an increase could be made with much advantage to the service. Indeed, that portion of expense which pertains to the manufacture of cannon and projectiles could annually be more than quadrupled, with safety and a due regard to economy.

RECAPITULATION.

2 national armories.....	\$1, 050, 000
14 arsenals.....	1, 746, 000
926 pieces of field artillery, with carriages, &c.....	576, 175
Ordnance and ordnance stores and ammunition for fortifications.....	17, 840, 249
Small arms and accoutrements.....	8, 243, 113
Ammunition for field service.....	200, 000
A national foundry.....	300, 000

29, 955, 537

The resolution of the Senate is returned herewith.

I have the honor to be, sir, &c.,

GEO. BOMFORD, *Colonel of Ordnance.*

Hon. LEWIS CASS, *Secretary of War.*

Statement of the cost of four classes of arsenals, exclusive of exterior walls, fences, gates, roads, tools, machinery, wharves, &c.

FIRST CLASS.—Depot simply.

Names.	No. of buildings.	Size.	Cost of each.	Total.
Arsenals	2	120 by 40 feet, and 47 feet high	\$20,000	\$40,000
Great magazine	1	To contain from 2,500 to 3,000 barrels of powder	12,000	12,000
Officers' quarters	1	43 by 40 feet, and 40 feet high	8,000	8,000
Barracks	1	100 by 36 feet, and 35 feet high	13,000	13,000
Gun-carriage shed	1	105 by 30 feet, and 10 feet high	3,050	3,050
Office	1	40 by 20 feet, and 29 feet high	2,430	2,430
Small magazine for fixed ammunition	1	30 by 20 feet, and 14 feet high	756	756
Connecting walls				1,000
Land, 25 acres at least, (see note 1,) estimated at \$40 per acre				1,000
Graduating and levelling the site proper, making drains, culverts, &c.				1,000
				82,236

SECOND CLASS.—Depot and place of repair.

Arsenal	2	120 by 40 feet, and 47 feet high	\$20,000	\$40,000
Great magazine	1	To contain from 2,500 to 3,000 barrels of powder	12,000	12,000
Officers' quarters	1	43 by 40 feet, and 40 feet high	8,000	8,000
Barracks	1	100 by 36 feet, and 35 feet high	13,000	13,000
Gun carriage shed	1	105 by 30 feet, and 10 feet high	3,050	3,050
Smiths' shop	1	25 by 30 feet, and 14 feet high	945	945
Office	1	40 by 20 feet, and 29 feet high	2,430	2,430
Carriage-makers' shop	1	25 by 30 feet, and 14 feet high	945	945
Armors' and turners' shop	1	50 by 30 feet, and 14 feet high	1,890	1,890
Painters' shop	1	20 by 14 feet, and 14 feet high	352	352
Laboratory, viz:				
Driving and filling shop	1	25 by 25 feet, and 14 feet high	787	787
Finishing room	1	25 by 25 feet, and 14 feet high	787	787
Small magazine for fixed ammunition	1	30 by 20 feet, and 14 feet high	756	756
Connecting wall				1,200
Land, 25 acres at least, (see note,) estimated at \$40 per acre				1,000
Graduating and levelling the site proper, making drains, culverts, &c.				1,200
				88,342

THIRD CLASS.—Depot and place of construction and repair, without water or steam power.

Arsenal	2	120 by 40 feet, and 47 feet high	\$20,000	\$40,000
Great magazine	1	To contain from 2,500 to 3,000 barrels of powder	12,000	12,000
Officers' quarters	3	43 by 40 feet, and 40 feet high	8,000	24,000
Barracks	1	100 by 36 feet, and 35 feet high	13,000	13,000
Gun-carriage sheds	2	100 by 30 feet, and 10 feet high	3,050	6,100
Smiths' shop	1	80 by 35 feet, and 14 feet high	3,528	3,528
Timber sheds	2	105 by 30 feet, and 10 feet high	2,250	4,500
Office	1	40 by 20 feet, and 29 feet high	2,430	2,430
Carpenters' and carriage-makers' shop	1	80 by 35 feet, and 14 feet high	3,528	3,528
Armors' and turners' shop	1	50 by 30 feet, and 14 feet high	1,890	1,890
Tinners' and casting shop	1	40 by 25 feet, and 14 feet high	1,260	1,260
Painters' shop	1	30 by 25 feet, and 14 feet high	945	945
Saddlers' shop	1	30 by 25 feet, and 14 feet high	945	945
Laboratory, viz:				
Driving and filling shop	1	25 by 25 feet, and 14 feet high	787	787
Finishing room	1	25 by 25 feet, and 14 feet high	787	787
Small magazine for fixed ammunition	1	30 by 20 feet, and 14 feet high	756	756
Guard room	1	30 by 25 feet, and 14 feet high	945	945
Connecting walls				1,350
Land, 25 acres at least, (see note,) estimated at \$40 per acre				1,000
Graduating and levelling the site proper, making drains, culverts, &c.				1,350
Coal-houses				1,000
				122,101

Statement of the cost of four classes of arsenals, &c.—Continued.

FOURTH CLASS.—Depot and place of construction and repair, with water or steam power.

Names.	No. of buildings.	Size.	Cost of each.	Total.
Arsenal	2	120 by 40 feet, and 47 feet high	\$20,000	\$40,000
Great magazine	1	To contain from 2,500 to 3,000 barrels of powder	12,000	12,000
Officers' quarters	3	43 by 40 feet, and 40 feet high	8,000	24,000
Barracks	1	100 by 36 feet, and 35 feet high	13,000	13,000
Gun-carriage sheds	3	100 by 30 feet, and 10 feet high	3,050	9,150
Smiths' shop	1	80 by 35 feet, and 14 feet high	3,528	3,528
Timber sheds	3	105 by 30 feet, and 10 feet high	2,250	6,750
Office	1	40 by 20 feet, and 29 feet high	2,430	2,430
Carpenters' and carriage-makers' shop	1	80 by 35 feet, and 14 feet high	3,528	3,528
Steam-engine, or house for water power	1	100 by 40 feet, and 18 feet high	6,480	6,480
Armorsers' shop	1	50 by 30 feet, and 14 feet high	1,890	1,890
Tinners' and casting shop	1	40 by 25 feet, and 14 feet high	1,260	1,260
Painters' shop	1	30 by 25 feet, and 14 feet high	945	945
Saddlers' shop	1	30 by 25 feet, and 14 feet high	945	945
Laboratory, viz:				
Driving and filing shop	1	25 by 25 feet, and 14 feet high	787	787
Finishing room	1	25 by 25 feet, and 14 feet high	787	787
Small magazine for fixed ammunition	1	30 by 20 feet, and 14 feet high	756	756
Guard room	1	30 by 25 feet, and 14 feet high	945	945
Connecting walls				1,450
Land, 25 acres at least, (see note,) estimated at \$40 per acre				1,000
Graduating and levelling the site proper, making drains, culverts, &c.				1,450
Coal-houses				1,500
				134,581

NOTE 1.—Twenty-five acres of land at least are necessary at each class of the arsenals, in order to be enabled to prove powder, which operation requires a space of 350 to 400 yards.

2. It is perceived that the expense of the first class may be reduced \$20,000 if only one arsenal building be required in that class. The same remark applies to the other classes.

3. There are times when several companies of troops may be required, temporarily at least, at each class of the arsenals. The barracks are therefore made of the same size at each of the classes, and large enough to accommodate the companies as well as the troops of the ordnance *proper*. There has always been a deficiency at the arsenals in barracks when they have been occupied by troops.

4. The above includes everything connected with the buildings and site *proper*, nothing more. The expenses of the apparatus and tools, utensils, engines, &c., which may be necessary to put the several classes into operation are not included.

5. The extent of the site occupied by each of the classes may be the same; and thus any one class may be enlarged into its next adjacent class without other expense than is required by the additional buildings.

6. The estimated expenditures in these statements are founded on the prices paid in the vicinity of Philadelphia, and are sufficiently near the truth, it is believed, for all positions which are not in Florida, Louisiana, or Alabama.

ORDNANCE OFFICE, Washington, March 8, 1836.

REPORT FROM THE NAVY DEPARTMENT.

NAVY DEPARTMENT, March 31, 1836.

SIR: In answer to so much of the resolutions of the Senate of the United States of the 18th ultimo as required information as to the probable amount of appropriations that may be necessary to supply the United States with ordnance, arms, and munitions of war, which a proper regard to self-defence would require to be always on hand, and the probable amount that would be necessary to place the naval defences of the United States (including the increase of the navy, navy yards, dock yards, and steam or floating batteries) upon the footing of strength and respectability which is due to the security and welfare of the Union, I have the honor to lay before you a report of the board of navy commissioners of the second instant, which contains the best information upon the subjects referred to in possession of this department; which is respectfully submitted.

MAHLON DICKERSON.

The PRESIDENT of the United States.

IN SENATE OF THE UNITED STATES, January 21, 1836.

The following resolutions were ordered to be postponed to Monday next:

Resolved, That so much of the revenue of the United States, and the dividends of stock receivable from the bank of the United States, as may be necessary for the purpose, ought to be set apart and applied to the general defence and permanent security of the country.

Resolved, That the President be requested to cause the Senate to be informed—

1. The probable amount that would be necessary for fortifying the lake, maritime, and gulf frontier of the United States, and such points of the land frontier as may require permanent fortifications.

2. The probable amount that would be necessary to construct an adequate number of armories and arsenals in the United States, and to supply the States with field artillery (especially brass field-pieces) for their militia, and with side-arms and pistols for their cavalry.

3. The probable amount that would be necessary to supply the United States with the ordnance, arms, and munitions of war, which a proper regard to self-defence would require to be always on hand.

4. The probable amount that would be necessary to place the naval defences of the United States (including the increase of the navy, navy yards, dock yards, and steam or floating batteries) upon the footing of strength and respectability which is due to the security and to the welfare of the Union.

Passed February 18, 1836.

NAVY COMMISSIONERS' OFFICE, *March 2, 1836.*

SIR: The board of navy commissioners have the honor to acknowledge the receipt of your letter of the 26th ultimo, requesting a report on the probable amount that would be necessary to supply the United States with the ordnance, arms, and munitions of war (so far as may be wanted for the purposes of the navy) which a proper regard to self-defence would require to be always on hand; and on the probable amount that would be necessary to place the naval defences of the United States (including the increase of the navy, navy yards, dock yards, and steam or floating batteries) upon the footing of strength and respectability which is due to the security and welfare of the Union.

In conformity to these instructions, the board respectfully state, with respect to the ordnance for the navy, that after a careful examination of the subject, taking into consideration the ordnance and ordnance stores now on hand, and the extent of force for which it may be expedient to make early provision, they are of opinion that the sum of one million eight hundred thousand two hundred and fifty dollars will be required to supply the ordnance, arms, and munitions of war which may be wanted for the use of the navy, and which a proper regard to self-defence would require to have prepared ready for use.—(See paper A, annexed, for the detail.)

The board beg leave respectfully to observe that, for the vessels which are now built, or have been specially authorized, armaments may be provided, with some partial exceptions, from the cannon and carronades already provided; and the deficient ordnance, arms, and other ordnance stores, will be principally required for the vessels which are yet to be authorized or built. It is, therefore, respectfully recommended that any appropriation for this purpose, instead of being special or separate, should be included in an appropriation for "building and repairing vessels, and for the purchase of materials and stores for the navy."

The second object of inquiry, as to "the probable amount that would be necessary to place the naval defences of the United States (including the increase of the navy, navy yards, dock yards, and steam or floating batteries) upon the footing of strength and respectability which is due to the security and welfare of the Union," embraces a wide range, requires an examination of several subjects of great importance, and the expression of opinions upon which differences of opinion may and probably will exist. Before any estimate can be formed of the probable amount that would be necessary for the purposes proposed, an examination must be had, and an opinion formed of the *nature* and *extent* of the naval force which is "necessary to place the naval defences of the United States upon the footing of strength and respectability which is due to the security and welfare of the Union," and the time within which it ought to be or might be advantageously prepared.

Taking into view the geographical position of the United States with reference to other nations with whom we are most likely to be brought into future collision; the great extent of our maritime frontier, and the extreme importance of securing the communications of the whole valley of the Mississippi through the Gulf of Mexico, and the intercourse between all parts of the coast; the efficient protection of our widely-extended and extremely valuable commerce under all circumstances; and the great naval and fiscal resources of the country, the board consider the proper limit for the *extent* of the naval force to be that which can be properly manned when the country may be involved in a maritime war.

In estimating this extent, it is assumed that about ninety thousand seamen are employed in the foreign and coasting trade and fisheries. As the navigation has been generally increasing, there is little reason to apprehend any immediate diminution during peace. In any war which would require the employment of all our naval force, it is believed that such interruptions would occur to our commerce as would enable the navy to obtain without difficulty at least thirty thousand seamen and ordinary seamen; and if it should continue long, it is probable that a larger number might be engaged. The number of 30,000, with the landsmen who may be safely combined with them, will therefore be assumed as the number for which vessels ought to be prepared for the commencement of a state of hostilities.

With respect to the *nature* of the force which it would be most advantageous to prepare, there will undoubtedly be differences of opinion. The materials for the larger vessels, as ships-of-the-line and frigates, would be obtained with great difficulty, under circumstances which should interfere with our coasting trade, whilst sloops-of-war and smaller vessels could be built with greater comparative facility under such circumstances.

The preparation of a considerable number of steam vessels, ready to defend our great estuaries, to aid the operations of our other naval force, and in the concentration or movements of the military force, as circumstances might require, is believed to demand serious and early attention.

Having due regard to these and other considerations, the board propose that the force to be prepared, ready for use when circumstances may require it, shall consist of 15 ships-of-the-line, 25 frigates, 25 sloops-of-war, 25 steamers, and 25 smaller vessels; and that the frames and other timber, the copper, ordnance, tanks, and chain cables, shall also be prepared for 10 ships-of-the-line and 10 frigates.

The force proposed to be prepared, ready for use, will employ and can be manned by the 30,000 seamen and others which have been considered available in a state of war. The materials for the ten ships-of-the-line and ten frigates will constitute a necessary reserve for increasing the number of those vessels, should they be required, or for supplying losses from decay or casualties.

To estimate the amount necessary to prepare this force, it is proposed to ascertain the whole probable cost, including ordnance, by the average cost of similar vessels already built, (steam vessels excepted,) and of materials already procured, and then to deduct the value of the present force, and all other present available means.

Total cost of 15 ships-of-the-line.....	\$8,250,000
Total cost of 25 frigates.....	8,750,000
Total cost of 25 sloops.....	3,125,000
Total cost of 25 steamers.....	5,625,000
Total cost of 25 smaller vessels.....	1,250,400
<hr/>	
Total for vessels.....	27,000,000
For the proposed materials, as a reserve.....	3,315,000
<hr/>	
Total amount required.....	30,315,000
Deduct from this sum the value of the present force and available means, as follows:	
In vessels afloat, valued at $\frac{1}{2}\%$ of original value, about.....	\$4,440,000
In vessels building, at actual cost.....	2,455,000
In materials collected for building, at actual cost.....	2,945,000
In treasury, for these purposes, 1st October, 1835.....	1,215,000
For three years' appropriation "gradual improvement," when due.....	1,500,000
<hr/>	
Total of present value and available means.....	12,555,000
<hr/>	
Leaves still to be provided for vessels.....	17,760,000
<hr/>	

In presenting any estimate for the amounts which may be necessary to place the different navy yards in a proper situation, the board can do no more than give very general opinions, as the objects of expenditure are foreign to their own professional pursuits, and they have no civil engineer to whom they can refer for the necessary detailed information.

From a knowledge of the cost of works hitherto completed or in progress, and of the wants at the respective yards for the proper preservation of materials, and for extending the means for building, preserving, repairing, and equipping vessels, they are satisfied, however, that the public interests would be greatly promoted, and, in fact, absolutely require an average annual expenditure of \$500,000, for some years to come, upon the different yards.

In New York the necessity for a dry dock is severely felt already, and its importance will increase with any increase of the navy. This, with its dependencies, will require nearly a million of dollars. At Pensacola, which nature has designated as one of the naval keys of the Gulf of Mexico, and of the immense commerce of the valley of the Mississippi, large expenditures will be necessary to secure adequate means for repairing and subsisting a naval force upon that station, and thus prevent the many evils which would be severely felt in a state of war, if the vessels were obliged to resort to the Atlantic ports for ordinary repairs or supplies of any kind. In other yards there are objects of great and urgent importance.

Generally, the proposed arrangements for the preservation of all materials and vessels should precede their collection or construction. Whilst, therefore, the board propose \$500,000 as the *average* annual appropriation until the yards should be placed in proper order, they would also state that appropriations of \$700,000 annually for the next four or five years, and a less sum than \$500,000 afterwards, would, in their opinion, be most judicious.

The next subject for consideration is the nature and extent of force proper to be kept employed in a time of peace for the protection of our commercial interests, and to prepare the officers and others for the efficient management of the force proposed for a state of war.

Our commerce is spread over every ocean; our tonnage is second only to that of Great Britain; and the value of articles embarked is believed by many to be fully equal to those transported by the ships of that nation. In the safety and prosperity of this commerce all the other interests of the United States are deeply interested. It is liable to be disturbed and injured in various modes, unless the power of the country, exerted through its naval force, is ready to protect it. It is therefore proposed that small squadrons should be employed upon different stations, subject at all times, however, to such modifications as circumstances may require.

Of these squadrons, one might be employed in the *Mediterranean*, and attend to our interests on the west coasts of Spain and Portugal, and southward to the western coast of Morocco and Madeira.

One in the *Indian ocean*: to visit, successively, the most important commercial points east of the Cape of Good Hope; to China; then to cross the Pacific; visit the northern whaling stations and islands; cruise some time upon the west coast of America; and return by way of Cape Horn, the coast of Brazil, and the windward West India islands.

One in the *Pacific ocean*: to attend to our interests upon the west coast of America; keeping one or more vessels at or near the Sandwich and other islands which are frequented by our whale ships and other vessels; and, in succession, cross the Pacific, visiting the islands and southern whaling stations, China and other commercial places; and return, by the way of the Cape of Good Hope, to the United States.

A squadron upon the *coast of Brazil*, or east coast of South America, might be charged with attention to our interests on the whole of that coast, and upon the north coast so far as to include the Oronoco. If a ship-of-the-line should be employed on this station, it might be occasionally sent round to the Pacific.

A squadron in the *West Indies and Gulf of Mexico* will be necessary for, and may be charged with attention to, the protection of our commerce amongst the West India islands and along the coast of South America, from the Oronoco round to the Gulf of Mexico.

A small *coast squadron* upon our Atlantic coast might be very advantageously employed in making our officers familiarly and thoroughly acquainted with all our ports and harbors, which would be very useful in a state of war. The vessels would also be ready for any unexpected service, either to transmit information or orders, to reinforce other squadrons, or to visit our eastern fisheries. Besides this cruising force, it is recommended that a ship-of-the-line be kept in a state of readiness for service, *men excepted*, at Boston, New York, and Norfolk, and used as receiving ships for the recruits as they are collected. This would give the means of furnishing a considerable increase of force, with a very small addition to the current expense.

For the nature and distribution of this force the following is proposed:

	Line.	Frigates.	Sloops.	Steamers.	Smaller.	Total.
Mediterranean	1	2	2	2	7
Indian ocean	1	2	1	4
Pacific	2	3	2	7
Brazil	1	1	2	2	6
West Indies.....	1	4	1	2	8
Home.....	3*	1	2	3	1	10
Total.....	5	8	15	4	10	42

Considering this force with reference to its power of giving experience to the officers and qualifying them for the management of the force proposed for war, it appears that, for the force proposed to be *actually employed at sea* in peace and in war, the peace force will require and employ about two-thirds the number of commanders of squadrons, about one-third the captains, and forty one-hundredths of the commanders and lieutenants and masters which the proposed war, force would demand, and midshipmen sufficient to supply the additional number of these last classes which a change to a state of war would require.

Supposing the foregoing force to be that which is to be kept in commission, the next question is, what force will be necessary to keep *afloat* to provide the necessary reliefs? The board believe that this force should be the *least* which will answer the object proposed, as every vessel when launched is exposed to a decay which is much more rapid than when left under the cover of a tight ship-house.

We have already six ships-of-the-line afloat, which will be fully equal to our present wants when they are repaired. A reserve of three frigates may be required, but only to be launched when the necessity for it shall arise; for the sloops-of-war and smaller vessels it will probably be sufficient to merely keep up the cruising force as proposed, except some extraordinary demand should arise. The force of steam vessels proposed, when distributed at Boston, New York, Norfolk, and Pensacola, would probably meet all the demands of a state of peace, and furnish useful schools for officers, to prepare them for the proper management of others when they are required. The force to be kept afloat, then, will be assumed at six ships-of-the-line, eleven frigates, fifteen sloops-of-war, four steamers, and ten smaller vessels. The annual amount necessary to keep this force in a state of repair, and to supply the wear and tear of stores of cruising vessels, is estimated at \$950,000.

The estimated expense of the force which is proposed to be kept in commission, exclusive of the repairs as above stated, and for the pay of officers at navy yards, rendezvous, receiving vessels, of superintendents and civil officers at all the shore establishments, and at the present cost of those establishments, is—

For pay of officers and seamen in commission, superintendents and civil officers, and all others at all the establishments, about	\$2, 500, 000
For provisions	750, 000
For medicines and hospital stores.....	60, 000
For ordnance stores, powder, &c.....	120, 000
For contingencies of all kinds.....	390, 000
Total for the navy branch.....	<u>3, 850, 000</u>

If the marines are continued as a part of the naval establishment, instead of substituting ordinary seamen and landsmen for them in vessels and watchmen in navy yards, and transferring the marines to the army as artillery, as has sometimes been suggested, the sum of about \$400,000 annually will be required for that corps.

To determine the *annual amount* which it may be necessary to appropriate to prepare the vessels and reserve frames and other materials which have been proposed, some *time* must be assumed within which they shall be prepared. Believing that reference to the ability of the treasury to meet the probable demands upon it for all the purposes of the government must necessarily be considered in determining what amount may be allotted to the navy, the board have examined the reports of the Secretary of the Treasury, and respectfully propose to establish the ordinary annual appropriation for the navy, including the ordnance, at seven millions of dollars.

The operation of such annual appropriations may be seen by the following recapitulation of the proposed heads of expenditure:

For the force in commission and its dependencies, as before stated.....	\$3, 850, 000
The <i>average</i> appropriation for navy yards	500, 000
For the repairs and wear and tear of vessels.....	950, 000
For building vessels and purchase of materials.....	1, 300, 000
Total for the navy proper.....	<u>6, 600, 000</u>
For the marine corps.....	400, 000
	<u>7, 000, 000</u>

By the adoption of this gross sum for the navy and its dependencies, and the other items as proposed, \$1,300,000 would be annually applied to increasing the number of our vessels and the purchase of materials; and with this annual expenditure the deficiency of \$17,760,000 would not be supplied sooner than between thirteen and fourteen years, or at about the year 1850. The board consider this as the most *remote* period

*As receiving ships.

at which the proposed force ought to be ready, and are of opinion that it might be prepared much sooner, should Congress deem it necessary or advisable to make larger appropriations than have been suggested.

The board have expressed the opinion that no more vessels should be launched than are absolutely necessary to meet the demands for the force to be kept in commission; but, as a necessary consequence, they recommend that the other additional force should be in such a state of readiness that it may be launched and equipped by the time that men could be obtained for it. This arrangement renders an early attention to the completion of all the building-slips, ship-houses, and launching-ways at the different yards, so that the ships may be built, and that our docks, wharves, workshops, and storehouses should be finished; that our ships may be equipped with the greatest economy and despatch whenever they may be required.

Before concluding this report, the board would respectfully offer some remarks upon the form of the appropriations, and suggest some attention to existing acts of Congress.

By the separate acts for the gradual increase of the navy, for the gradual improvement of the navy, for building and rebuilding different vessels, altogether seven in number, each appropriation is rendered separate and distinct, although the general object is the same, and requires the use of the same kinds of materials. It is necessary, in conformity to the law of the 3d of March, 1809, that the vouchers, receipts, expenditures and accounts of each should be kept separately; and, in strictness, no article purchased for one can be applied to the use of another, however desirable or economical such use may be.

It is suggested, therefore, for consideration, whether it might not be very advantageous for Congress to determine, by some general act or resolution, the number and classes of vessels which the President might be authorized to have built, or for which materials might be procured; and then appropriate specially the amounts which might be devoted to those objects, and for keeping the force afloat in repair, under the general head of "For building and repairing vessels, and for purchase of materials and stores."

The adoption of some such plan, and removing the special restrictions which now exist, and requiring, as at present, detailed estimates for the current repairs, and reports of proceedings in building vessels, and for purchase of materials, would, it is believed, greatly simplify and diminish the number of accounts at the Treasury Department and in all the navy yards, without infringing in any degree the principle of special appropriations; would furnish to Congress all the information they now receive, and would enable us at all times to use those materials which are best prepared and most appropriate for the different objects for which they might be wanted.

The board beg leave, also, respectfully to state their opinion of the necessity for the services of a competent civil engineer for the navy, to furnish plans and estimates for all hydraulic and civil objects, and to have a general superintendence of their construction under the direction of the department. The particular character of these works requires the supervision of such a person, not less from motives of economy in the ordinary expenditures, than from the more important consideration of their proper arrangement, solidity of construction and durability.

All which is respectfully submitted.

JOHN RODGERS.

Hon. M. DICKERSON, *Secretary of the Navy.*

A.

Upon the supposition that the naval force, to be so prepared that it might be equipped for sea at short notice, shall consist of 15 ships-of-the-line, 25 frigates, 25 sloops-of-war, 25 steamers, 25 smaller vessels, and that the frames and other durable materials shall be provided for 10 ships-of-the-line, and 10 frigates as a reserve, the following statement shows the total number and character of the armaments which the whole force will require; the number which can be furnished from the ordnance on hand; and the number which will be still required:

	For ships-of-the-line.	Frigates.	Sloops.	Steamers.	S. V.
Total number required.....	25	35	25	25	25
On hand, for.....	11	22	16	0	12
Deficient.....	14	13	9	25	13

Besides the bomb-cannon, guns, and carronades, for these armaments, there would be required shot, shells, small arms, pistols, and cutlasses, and a supply of powder sufficient for equipping a strong force in case of a sudden emergency.

The cost of these objects may be estimated as follows:

Armaments for 14 ships-of-the-line, at \$45,000 each.....	\$630,000
Armaments for 13 frigates..... 16,500 each.....	214,000
Armaments for 9 sloops..... 6,000 each.....	54,000
Armaments for 25 steamers..... 3,000 each.....	75,000
Armaments for 13 smaller vessels.... 1,500 each.....	19,500
For guns, bomb-cannon, and carronades.....	993,000
100 shot to each gun, and 200 shells to each bomb-cannon, and shells for guns.....	427,000
8,000 muskets.....	100,000
3,500 pairs of pistols.....	43,750
3,000 cutlasses.....	34,000
9,000 barrels of powder.....	202,500
	<hr/>
	1,800,250

24TH CONGRESS.]

No. 672.

[1ST SESSION.]

ON A CLAIM FOR SERVICES UNDER GENERAL GEORGE ROGERS CLARKE AGAINST KASKASKIA AND VINCENNES IN 1778.

COMMUNICATED TO THE SENATE APRIL 11, 1836.

To the Senate and House of Representatives of the United States in Congress assembled:

Oppressed with age and infirmity, and in want of the many comforts of life, the undersigned begs leave respectfully to present this petition to the Congress of the United States.

Your petitioner states that in the summer of 1778 Kaskaskia was taken by Colonel George Rogers Clarke, of the Virginia line; he was then young and ardent, and although a stranger to the laws, customs, language, and institutions of the Americans, he became animated in support of the great cause for which they were struggling, and on many occasions manifested his devotion in a way to secure, as he believes, the entire confidence of the army and of its officers.

Your petitioner further states that, in the course of the summer, a company of volunteers was organized, composed of the French inhabitants, on a call from Colonel Clarke. In this company your petitioner was appointed an ensign by his excellency Patrick Henry, then governor of the State of Virginia, which commission is exhibited with this petition. Your petitioner states that this company was required to be ready for active service on a minute's notice; that many of its members were employed as hunters and spies, and required, when necessary, to perform garrison duty. Your petitioner further states that the term of time for which Colonel Clarke's men were enlisted having expired, many of them returned to their homes, which had the effect of weakening his force to an alarming extent, and rendered his situation in that vast wilderness critical in the extreme. About this period Colonel Hamilton, commandant at Vincennes, commenced assembling an army of British and Indians, with the avowed purpose of not *only* expelling his enemies from Kaskaskia and Cahokia, but to drive the Americans east of the mountains. At this juncture Colonel Clarke determined on his daring expedition against Vincennes. Your petitioner further states that, without the aid of the French inhabitants of Kaskaskia and Cahokia, the power of the Americans was unequal to the task of capturing Vincennes, at that time the centre of British influence. But in this emergency Colonel Clarke called upon the French to take part in the expedition as volunteers, which call was promptly responded to. Two companies were accordingly raised and equipped at their own expense—one under the command of Captain Charleville, of Kaskaskia, the other under the command of Captain McCarty, of Cahokia. Your petitioner acted as ensign in the company of Charleville. These two companies, added to the Americans, made a combined force of 170 men. With this small array Colonel Clarke marched, in the month of February, 1779, and after swimming rivers and creeks, wading for miles through waters, amid snow and ice, suffering the extremes of hunger and fatigue, they surmounted every obstacle, and towards the close of the month arrived before Vincennes, where the flag of the United States was planted by the hand of your petitioner within gun-shot of its walls. Your petitioner further states that, after a few days' siege, conducted with consummate skill by Colonel Clarke, this important place fell, and with it, forever, the British power in the valley of the Mississippi. Your petitioner further states that, during the whole period the American troops held possession of Kaskaskia and Cahokia, they were quartered on the inhabitants, or sustained by requisitions. Your petitioner's friends and relations made advances, for which compensation to this day has never been made.

For these services and sacrifices your petitioner prays that his name, during his few remaining days, be placed on the pension roll, or such other provision made for him as the justice of his case would seem to demand. Your petitioner begs leave further to say that, in the year of 1796, he being then a married man, and the father of eight children, removed from Kaskaskia to St. Genevieve, in the Spanish province of Louisiana, with the intention of acquiring lands for his family, under the liberal policy pursued by the Spanish government in making donations to settlers. He made application for a concession of 8,000 arpents, which was granted by the lieutenant governor. On the transfer of Louisiana to the Americans a law was passed by Congress requiring that all concessions should be registered by a certain day. Your petitioner, unacquainted with the English language, never heard of this law, and his claim not being recorded in accordance with its provisions was consequently lost to him. Thus your petitioner served this country in his youth without compensation, and in his old age finds himself deprived by law of that property which was generously bestowed on him by another government.

JOHN BAPTISTE JANIS, Sr., of *Missouri*.

[1ST SESSION.]

APPLICATION OF MAINE FOR LIBERAL APPROPRIATIONS BY CONGRESS FOR THE DEFENCES OF THE COUNTRY.

COMMUNICATED TO THE SENATE APRIL 22, 1836.

STATE OF MAINE, *House of Representatives, April 2, 1836.*

The committee appointed for the purpose of inquiring into the expediency of taking any measures to call the attention of Congress to the subject of fortifying our rivers and frontiers have had that subject under consideration, and ask leave to report. The committee deem this a subject of high importance both to the State and nation, and notice with pleasure that the voice of our State is heard upon this subject in the halls of Congress; and in glancing at some of the important interests which entitled us to

the consideration of the general government, we shall but repeat in part what has been said. We have five hundred miles of sea-coast, following the indentations of the shore, stretching from the Piscataqua to the St. Croix, all along which there are numerous excellent harbors. We have several important rivers, amongst which are the Penobscot, Kennebec, and the St. Croix. The two former take their rise far in the interior, and after wending their way through immense forests of valuable timber lands, fall into the sea near the centre of the State. Upon one of these rivers stands our capital, and upon the other our second city. The banks of both are dotted all along with flourishing towns and villages, and both are, while undefended, easy of access to an enemy, but if fortified would afford a safe retreat to our merchantmen and navy. To our view, much importance is attached to the St. Croix from the fact that it is the dividing line between the United States and a British province. Eastport, one of our principal towns, is situated at its entrance, and Calais at the head of navigation, a town containing about 4,000 inhabitants, which, with the surrounding regions, is rapidly increasing. Ships-of-war of any class can approach within about four miles of Calais. Opposite to Calais, on the English side, is St. Stephen's, and about sixteen miles below stands the city of St. Andrew's, where fleets and armies may rendezvous and bring their power to bear upon us at any time.

A large portion of our territory is yet covered with its native forest. At the same time millions of acres are devoted to agriculture, affording a vast field for industry and enterprise, yielding sustenance to a large population, and contributing to the wealth of the State and nation at large. The developments of every day prove that inexhaustible stores of wealth lie hidden beneath the surface of our soil, which time and enterprise will bring forth, to enrich and build up our seaports and advance our commerce and navigation. The fisheries upon our coast are of high importance both to the State and nation. We possess every natural advantage for carrying on this branch of industry, and of enlarging it to an indefinite extent, thus constituting a nursery of hardy seamen fitted to fight the battles of our country in time of war, and to extend its commerce in time of peace. One of the greatest sources from which Maine is to draw her prosperity for centuries is our immense forests of valuable timber-lands, connected with it, as we have, water power unsurpassed by that of any other country. Already has these important interests attracted the attention of capitalists, and the latter is unquestionably destined at no distant day to be extensively occupied for manufacturing purposes. We have nearly three hundred thousand tons of shipping, making us the third State in the Union for navigation, and increasing more rapidly than that of any other State; and we possess in rich abundance all the natural advantages for its continued augmentation for ages to come. This immense fleet, manned by fifteen thousand to twenty thousand seamen, unrivalled for enterprise and skill by that of any other country, trading to the most distant ports, and daily returning to us the riches of other lands and contributing to the national wealth. We have a population of half a million, rapidly increasing, spread over a territory of upwards of twenty millions of acres, energetic, enterprising, and industrious, and who have already, in the navy and army, and in the battles of the country, "done the state some service." It is worthy of consideration that the circumstances which give to our State its greatest importance, viz: our extensive seaboard and frontiers, render our situation the most exposed, and places us the most in need of government aid and protection. This was painfully demonstrated in our experience during the last war with Great Britain. A portion of our territory, then in a defenceless state, without fortifications or troops, fell an easy prey to the enemy; and though the general government was solemnly bound by the compact to guarantee the integrity of the Union, still for years a foreign enemy was suffered to retain possession and force martial law upon our citizens. While liberal appropriations have been made by the general government all along the Atlantic shore and the Gulf of Mexico, a mere trifle (less than ten thousand dollars) from 1791 to 1833 has been appropriated to Maine for fortifying our seaports and protecting all our great interests. We have on the seaboard but three forts, and even these were built mostly at the expense of the State, and they can now contribute but little to our defence. Upon our own six hundred miles of interior frontier we have but a single military post. If dependent alone upon our maritime fortifications, a small naval force could burn our infant cities, with all the flourishing towns and villages upon our five hundred miles of seaboard, destroy our navigation and prostrate our commerce, and blast for a season the happy prospects of our young and rising State. We deem ourselves, therefore, of all the States in the Union, the most defenceless and exposed—exposed upon the Canadas, exposed upon New Brunswick, exposed upon the seaboard, the outward wall upon which the American standard will first be raised in the event of a war; and though in an emergency we should confidently rely upon the patriotism of our citizens for defence, still it would be at the hazard of great interests, our homes, our property, and our best blood. While the nation was in debt, and while there was nothing which threatened to interrupt our pacific relations with the nations of the earth, we waited long and patiently without complaining; but now, with national means vastly augmented, and with a national treasury literally overflowing, we ask a right guaranteed to us by the Constitution, that we no longer be forgotten in the "common defence" of the country. In view of the whole subject, your committee are forced irresistibly to the conclusion that the time has arrived when the great interests of the State imperiously demand of the general government vastly more liberal interposition for its protection and defence: Therefore—

Resolved, That the government of the United States are solemnly bound, without any unnecessary delay, to establish upon our seaboard and interior frontier such fortifications as will give to the State assurance of necessary protection in time of war.

Resolved, That our senators in Congress be instructed, and our representatives be requested, to vote for liberal appropriations for the defence of Maine and the country.

Resolved, That the governor be requested to transmit copies of the above preamble and resolutions to the President and Vice-President of the United States, the Secretary of War, and to each of our senators and representatives in Congress.

STEPHEN C. FOSTER, *Per order*.

In the house of representatives, April 4, 1836. Read and passed.

JONA. CILLEY, *Speaker*.

In senate, April 4, 1836. Read and passed.

JOSIAH PIERCE, *President*.

April 4, 1836. Approved.

ROBERT P. DUNLAP.

24TH CONGRESS.]

No. 674.

[1ST SESSION.]

STATEMENT OF THE MAXIMUM AMOUNT THAT CAN BE EXPENDED ANNUALLY UPON
THE CONSTRUCTION OF FORTIFICATIONS AND THE ORDNANCE DEPARTMENT.

COMMUNICATED TO THE SENATE APRIL 22, 1836.

WAR DEPARTMENT, *April 21, 1836.*

SIR: I have the honor to transmit reports of the colonel of ordnance and the officer in charge of the Engineer bureau, in answer to the resolution of the Senate of the 19th instant, inquiring the maximum amounts that can be expended annually upon the construction of fortifications, and for the Ordnance department.

Very respectfully, your most obedient servant,

LEWIS CASS.

Hon. M. VAN BUREN, *President of the Senate.*

ORDNANCE OFFICE, *Washington, April 21, 1836.*

SIR: In answer to so much of the resolution of the honorable Thomas H. Benton, of the 19th instant, (referred by you to this office,) as pertains to this department, I have the honor to state that the amount of \$3,000,000, it is estimated, could be beneficially expended annually, provided an adequate number of officers be afforded by an increase of the department, or by detailing permanently a sufficient number to transact the very extensive business which would be involved in such an appropriation; but, with the present number of officers at the disposal of the department, it is estimated that a greater sum than \$2,000,000 per annum could not be expended consistently with the public interest. The resolution is returned herewith.

I have the honor to be, sir, your obedient servant,

GEO. BOMFORD, *Colonel of Ordnance.*

Hon. L. CASS, *Secretary of War.*

ENGINEER DEPARTMENT, *Washington, April 21, 1836.*

SIR: In reply to the resolution of the Senate of the United States of the 19th instant, inquiring "what is the maximum amount that can be beneficially expended *annually* upon the construction of fortifications, provided the corps of engineers is increased according to the bill which has passed the Senate, and that the whole appropriation for each fort is made at once, to be drawn for in annual instalments as required by the progress of the work," I have the honor to state that, under the conditions mentioned, and also provided that the whole amount be distributed along the coast at the several or an equal number of points, and in the proportion embraced in the fortification bills now before Congress, so as not to assign too large a sum to one work, six millions of dollars, at least, may be annually expended, until the system adopted for the protection of our frontier shall have so far progressed as to render it proper to contract the operations.

I have the honor to be, sir, your obedient servant

R. E. LEE, *Lieutenant, Assistant Chief Engineer.*

Hon. LEWIS CASS, *Secretary of War.*

24TH CONGRESS.]

No. 675.

[1ST SESSION.]

INDEMNITY FOR ADVANCES MADE AND RESPONSIBILITY INCURRED BY SEVERAL STATES
AND MUNICIPAL AUTHORITIES FOR THE SUPPRESSION OF INDIAN HOSTILITIES IN
FLORIDA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 24, 1836.

The citizens of the city of Charleston, South Carolina.

General James Hamilton, chairman of the provisional committee of the citizens of Charleston, South Carolina, under date of January 22, 1836, represented to the Secretary of War the measures which had been adopted by the citizens of Charleston, and those contemplated to be adopted, and sent to him a copy of the proceedings of the meeting of the citizens of that city. After speaking of the disasters in Florida, and the defenceless state of the country, he says: "Under these painful apprehensions, the citizens met, yesterday, and passed the resolutions which are contained in the paper I send you. In a crisis of such extreme peril to a neighboring Territory, it would have been little short of barbarity for us to have stopped to have asked who was to indemnify us for the expenses we have incurred and are incurring for the relief of our suffering fellow-citizens. On communicating to General Eustis, he has informed us that he has no means at his disposal for the supply of the militia and inhabitants of East Florida, and that since the departure of Captain Porter's command he has not a man to spare. Under these circumstances, the banks

of this city, with a firm conviction that the President will direct the amount to be refunded out of the appropriation which Congress has made for the defence of Florida, have placed on the assumed faith of the government about \$30,000 at the disposal of the provisional committee of the citizens of Charleston, to be expended, if so much be necessary, for the succor and defence of our fellow-citizens in Florida—in transmitting provisions and munitions of war to the posts on the St. John's and to St. Augustine, and equipping such volunteers as may offer for service."

After speaking of the arrangements for sending succor to Florida, he says: "By the committee, these measures have been provisionally adopted, until the President could be apprised of the very unlooked for and disastrous state of things in Florida, and apply the proper remedy. We trust that what we have done will meet his approbation and sanction, and that both himself and you will find no difficulty in refunding the amount which the committee of the citizens of Charleston have thus expended under an emergency which did not admit of the delay of the officer commanding the United States forces here, either receiving his orders or realizing his resources from Washington."

Again, he says: "You may be assured that the committee will practice every possible economy consistent with the efficient and conservative objects they have in view. The disbursements will pass through my hands, and I will take care to have duplicate vouchers taken for every item, according to the usual forms of your department. You will, I am sure, however, make all due allowance for the urgent exigency under which we are acting; and you have had too much experience, both with militia and the expenditures of the regular army, not to know that those of the former must necessarily be more profuse than those of the latter."

On the 12th March the chairman of the committee, General Hamilton, wrote to the Secretary of War, and enclosed an account current and vouchers, showing that the sum of \$8,352 19 had been expended for provisions—a large part of which was rice; for medicines, for insurance on supplies, for services of expresses, for services of steamboat John Stony, and expenses connected therewith; for tea, for freight of provisions, &c., for corn, and for medical aid and assistance. One of the papers with the accounts shows that two field-pieces, with ammunition, and four thousand rounds of ball cartridges, were sent to Florida.

In his letter, among other things, he says: "The provisions were without restriction sent to the posts, to aid in military operations, succor and sustain the inhabitants, and, in a word, to do as much good as possible; and if the poor and destitute inhabitants received a portion of them, and if they did not all fall in as rations to the troops, I hope this circumstance will not bar our claim for indemnity." And again: "You may rely upon it, that what the troops have not received of the provisions thus sent, the remaining portion is now performing this office towards the people of East Florida."

Remarks.—It is not perceived, from the last communication, or the accounts, that any volunteers were sent to Florida, which were engaged by the committee; if such were sent, the terms and conditions upon which they were engaged do not appear. Provisions for United States troops and militia, when in the service of the United States, are authorized by law, but rice does not enter into the composition of the ration, except to a very limited extent, nor does tea—both are authorized to a certain extent for hospital purposes. There is no law which would authorize the payment of a claim for such articles as were delivered to the people of Florida to relieve them from their distresses, nor for such articles as were furnished for volunteers who were not received into the service of the United States.

The city and the citizens of Savannah, Georgia.

The mayor of the city of Savannah wrote to the Secretary of War, under date of January 25, 1836, and sent copies of resolutions adopted at a meeting of the citizens on the 23d of January, copies of resolutions adopted by the county council on the 24th of January, and copies of resolutions passed at a meeting of the citizens convened by a call of the mayor, all having reference to the then state of things in Florida. The mayor says, "that under those resolutions such sums of money will be advanced by this corporation to the committee of citizens as shall be required to afford present relief and assistance to our fellow-citizens in Florida. The danger in which they are has appeared to us to be so imminent and pressing as to require action on our part without waiting for a requisition."

Afterwards, under date of February 24, the committee wrote to the Secretary of War, and forwarded two accounts of expenses incurred, one by the citizens of Savannah, and the other by authority of the city of Savannah, for the purpose of succoring the people of Florida and protecting the United States depot at Picolata, and the committee say "we are instructed to ask payment for the same from the United States." The committee explain the circumstances under which the expenses were incurred. The accounts show that expenses were incurred for bounty to enlisted men, and for clothing, &c.; and the letter shows that a certain rate of compensation to the enlisted men was agreed upon: none of which are authorized by law. The committee say, "the command of Major Stevens, and the Phoenix Riflemen, were all volunteers; but it must be remembered that a large portion of them were artisans and tradesmen, who depend on their labor for support, and who cannot afford to lose in this climate a large part of the most valuable season of the year." The committee continue, "when fitting out the Mongin, (the steamboat John David Mongin,) it was thought best to make a specific engagement with the men on the faith of the city, and, with the exception of the Phoenix Riflemen, the following engagement was made, viz: "To pay them \$20 bounty and \$20 per month for two months, if not sooner discharged, and we recommend the same provision for Major Stevens's first command, and for the Phoenix Riflemen. It must be borne in mind that these expenditures were made under *pressing emergencies*, when prompt action was all important, and that every object contemplated has been accomplished." They say, "In addition to the sums actually paid by the city, as stated in the paper marked B B, the city of Savannah is bound to pay the enlisted men such sums as may be due them when discharged, under their contract of enlistment." It is further stated by them, "These documents include no compensation of any kind to any officer that has been employed, but we should do injustice not to recommend to your attention Major Stevens, and the other officers with him, who at an hour's notice left their business and possessions to succor the Floridians, and still remain at their posts."

The letter of the committee and a paper which accompanied it show that sundry articles of ordnance, ordnance stores, &c., were received from the State arsenal, in regard to which they say, "The cannon, rifles, and muskets, &c., furnished the Mongin, as per statement, marked A, were obtained from the State arsenal, and will have to be accounted for to the State of Georgia."

Remarks.—Clothing; board for volunteers; provisions for recruits; refreshments; blankets; swords; stuff for knapsacks; drums; flannel, unless for ordnance or hospital purposes; bounty to recruits; com-

pen-sation for enlisting men; musicians for enlisting men, &c., charged in the accounts, are not authorized by law, nor is the compensation of \$20 per month, to enlisted men, authorized by law.

City of Augusta, Georgia.

The mayor of the city wrote, under date of January 23, 1836, to the Hon. Thomas Glascock, who sent the communication to the Secretary of War, under date of February 5, and the mayor says:

"You will be informed through the papers of the military spirit which pervades our community. In addition to the 106 men which left this on Saturday last, the joint committee of the citizens and city council have this day consented to incur the expense of 60 additional volunteers, to leave this on Saturday next. The whole expense incurred by the city council to furnish these troops, including the charter of a steam-boat for their transportation, will be near \$7,000. It is expected that the general government will refund our city this expense."

Remarks.—Accounts, amounting to \$1,690 44, since received, without vouchers for the payments, show that sundry expenditures were made which are not authorized by law, nor by army regulations, even if the troops were received into the service of the United States; amongst which are pint cups, coffee-pots; kettles, unless camp kettles; table spoons, coffee mills, wire sifters, butcher knives, scissors, frying pans, fish hooks, ladles, candlesticks; fish lines, as such; brogans, brass kettles, tobacco, potatoes, knap-sacks, &c. If the troops were not received into the service of the United States, none of the expenditures are authorized by law.

The corporation of Mobile, Alabama.

The mayor of the city wrote, under date of March 2, 1836, to the Secretary of War, as follows:

"On the suggestion of Colonel Lindsay, that the volunteers assembled at this place, on their way to the seat of war in Florida, were in great need of blankets, and that he had no authority to purchase for public account, the corporation of Mobile instructed me to furnish, which I did, and have the honor to enclose the account and vouchers."

The account is for 427 blankets and drayage, amounting to \$880 50.

Remark.—The laws do not authorize blankets for volunteers, though legally in the service of the United States.

The State of Georgia.

The governor wrote to the Secretary of War, under date of January 23, 1836, that he had received his communication requesting him to furnish troops to go to Florida, if General Clinch should call on him to do so; and further, "Before your letter reached me, I had, upon hearing of the difficulties in that Territory, ordered the volunteer companies of Georgia to hold themselves in readiness to march at a moment's warning, and had also given a general invitation to all to go and aid their suffering fellow-citizens. From Augusta, a company of one hundred men, under Captain Robertson, have gone; and from Savannah, also a company has gone, the number of which I do not know.

"As I have not received any communication from General Clinch, I fear he is in a situation that he cannot communicate with me; and under this impression, I have determined to order out such volunteers as I can at present command. Four companies, amounting in the whole to 235 men, will rendezvous at Hawkinsville on Monday the 1st day of February next, and will be ordered from that point to Thomasville, in Thomas county, near the Florida line, and from thence to such place as Governor Eaton or General Clinch shall designate. I hope the force will be increased before it reaches Thomasville.

On the 13th of February the governor wrote to the Secretary of War, and says, among other things:

"You state that the expenses of getting the militia into the field will be met by the United States, so far as the same may be in conformity with the law and the usages of the service. I am aware that the officers of the departments at Washington are bound by the law, and cannot pass any accounts for expenses not authorized by some act of Congress. But I know, also, that it is impossible to get militia into the field, and march them some two or three hundred miles without tents, camp equipage, expenses of transportation, &c., and, in many instances, of very poor men, without also furnishing them with many articles of necessary clothing. The weather was extremely cold when I ordered out the two battalions, one of infantry and one of mounted riflemen, which have gone to Picolata, and I have allowed them to purchase blankets and some articles of coarse clothing. These expenses ought, under the circumstances, to be paid by Congress; because, in the long interval of peace with which we have been blessed, we had forgotten all about military matters; and I, in the great hurry of the moment and anxiety to send succor to the suffering people of Florida, did not stop to read the army regulations, nor to count dollars and cents.

"There was no officer of the United States army in this part of the State who could muster the volunteers into service, and therefore it will not be done until they arrive in Florida.

"I have given instructions to the officers to keep regular accounts, and take proper vouchers. But still, with all that we can do and have done, I know that the accounts will not be in such form as the auditing department will require.

"I will, as soon as possible, collect the accounts and vouchers and forward them to you. Such parts and amounts as can be passed and admitted will of course go to my credit; and those which cannot, I must cause to be placed before Congress, and to be provided for by a special appropriation."

The governor says, in the same letter: "General Scott made a requisition on me for 1,500 mounted men. These I could not promise to furnish, and so I informed him, unless that number should volunteer, because I had no authority to compel a militiaman to furnish himself with a horse."

Under date of February 25 the governor wrote to the Secretary of War, and said:

"The expense of transporting the infantry battalion from Macon to Picolata, in boats, has cost about six thousand dollars; and the balance was expended in purchasing provisions, forage, tents, knap-sacks, canteens, blankets, cooking utensils, axes, spades, and various other articles which were deemed necessary."

Remarks.—As a general remark, it may be proper to quote the act approved April 20, 1818, entitled "An act to defray the expenses of the militia when marching to the places of rendezvous," viz:

"SECTION 1. *Be it enacted, &c.,* That the expenses incurred, or to be incurred, by marching the militia of any State or Territory of the United States to their places of rendezvous, in pursuance of a requisition

of the President of the United States, or which shall have been or may be incurred in cases of calls made by the authority of any State or Territory which shall have been or may be approved by him, shall be adjusted and paid in like manner as the expenses incurred after their arrival at such places of rendezvous, on the requisition of the President of the United States: *Provided*, That nothing herein contained shall be considered as authorizing any species of expenditure previous to arriving at the place of rendezvous, which is not provided by existing laws to be paid for after their arrival at such place of rendezvous." Clothing, knapsacks, blankets, and canteens are not authorized by law for militia or volunteers, nor are tents and other articles of camp equipage expressly authorized for the militia—they are usually accorded in common with the other forces in the service of the United States. No expenses are authorized for militia which are not received or mustered into the service of the United States.

The State of South Carolina.

The governor, under date of February 21, 1836, wrote to the Secretary of War, and said:

"Some little difficulty has arisen on the subject of procuring horses for those volunteers who had not the means of furnishing themselves; and some doubts exist as to the footing upon which the mounted troops are to be placed. In some instances, horses have been impressed and appraised by a warrant from the colonels of regiments, under the belief that they would be paid for at this valuation, whether killed in battle or not. This proceeding has been founded on a mistaken view of a law of the State, authorizing such impressments when the *State* is invaded. In other instances, horses and equipments have been purchased by the voluntary contributions of patriotic citizens for such volunteers as could not furnish their own horses, in the expectation that the government would refund the money advanced. Though neither that proceeding nor this expectation were authorized by any order or opinion of mine, I should be glad to know from you how far the federal government will feel authorized to go in making indemnity for the expenditures thus made, and the responsibilities thus incurred."

Remark.—There is no law which authorizes payments for horses under such circumstances.

Territory of Florida.

The governor wrote, under date of February 20, to the Secretary of War, that, among other things, horses and guns were bought, wagons pressed and hired, and provisions obtained upon scattered certificates, and said: "Now, what shall I do with them? [the certificates.] Can you give any direction? Will you send, or shall there be appointed here, some one to arrange and pay, or to arrange and send on to you for approval, those unadjusted accounts? Daily applications are made to me. But I have not felt myself at liberty to appoint for them any auditing tribunal. The pay, too, of those mounted men—what is to be done with them, and what pay are they to receive? In this country, you will bear in mind, one and a half to two dollars are ordinary day wages; I have to pay that for persons to guard the public arms."

Colonel Gadsden, quartermaster general of Florida, under an appointment of the governor, wrote to the Secretary of War, under date of February 26, that "to one of your experience in militia and volunteer movements on the first Indian alarm it would be unnecessary to detail the confusion and irregularity, almost unavoidable, of assembling and providing of the men. Volunteers rushing in from all quarters, and making or converting every private storehouse into a public depository, from which is taken anything which may be wanted, and upon the simple receipts of even unauthorized agents." He continues: "All these acts are justified by the necessity of the case, and the only error has been the ignorance under which that necessity has been acted under. Volunteers were considered to be entitled to anything they wanted; and from private stores the drafts have been large for blankets and a variety of articles not issued under regulations, but which were in many instances necessary, and without which the volunteers would not have marched. Those who have been thus trespassed on must be indemnified, and therefore I again address you and call your attention to the subject that I may be relieved from the daily importunity to which I am exposed." He says that if the Secretary of War wishes him to attend to the settling of the accounts, "though it will be a work of some time," that he has no objection to contribute his services "on a fair compensation, and with an understanding that the accounts be settled on principles of equity, paid on the certificates wherever the evidence was complete as to the property being seized and appropriated to public use, though it might have been done by those not legally authorized at the time. The blankets ought to be paid for, as volunteers, in their ardor, are often reported at the rendezvous unprepared, under a full understanding that they would be furnished."

Colonel Gadsden, under date of February 26, wrote to Governor Eaton, and the letter was enclosed to the Secretary of War. In it he says: "I suggest the propriety of writing fully to Governor Cass on the subject of the early expenditures during the first rush of volunteers to battle. From the specimen of the accounts presented me, property was seized and appropriated to the public use with a degree of irregularity and illegality rarely witnessed. It is hard that those who yielded to the press should not be indemnified. Considering the distress to which our Territory has been exposed by the Indian war, one mode of indemnification might be the liquidating all these claims on principles of equity, paying upon the certificate wherever the evidence is complete of the property having been used by the public, though seized by illegal authority and unauthorized agents."

Remarks.—There is no law which authorizes the payment of claims upon equitable principles merely, or, if paid, which would release the disbursing or paying officers from the operations of the laws and the rules of the treasury on the settlement of their accounts. There appears to be no remedy but by legislation.

Blankets for militia or volunteers are not authorized by law.

The States of Alabama and Louisiana.

It is known that volunteers have proceeded to Florida from both these States, and that the presumption is that expenses have been incurred for articles and otherwise which are not authorized by law.

General remarks.—The Secretary of War, under date of January 13, wrote the Governor of Florida, and said, among other things "whatever expenditures are necessarily incurred in conformity with usage, and for which there may be an appropriation, shall be met without delay."

He wrote, under date of January 30, to General Hamilton, of Charleston, South Carolina, and among other things said: "With respect to the measures that have been adopted, under the sanction of the

citizens of Charleston, and the advances that have been made, I can only express the readiness of the department to recognize the proceedings and to provide the necessary payments as far as the law and the usages of the service will justify."

To the governor of Georgia he wrote, under date of February 2, and among other things said, "I have had the honor to receive your letter of the 23d ultimo, and, in answer, beg leave to inform you that the arrangements you have made for calling a militia force into the service of the United States for the defence of Florida are approved by the President, and the expenses will be met by the United States so far as the same may be in conformity with the law and the usages of the service."

He wrote to the mayor of Savannah, under date of February 4, and said, among other things, "so far as any funds may be advanced from the treasury of the city of Savannah in aid of the movements for the defence of Florida, and which, agreeably to law and the usages of the service, can be reimbursed by this department, the same shall be done without delay."

The honorable Thomas Glasscock was furnished, under date of February 6, with a copy of the Secretary of War's communication to the mayor of Savannah, as in answer to the letter of the mayor of Augusta.

The second section of an act approved April 22, 1824, entitled "An act to repeal an act approved the 3d of March, 1823, entitled an act for the relief of John B. Hogan," reads as follows:

"*And be it further enacted*, That the proper accounting officer of the Treasury Department be, and the same hereby is, directed to carry to the credit of the said Hogan the amount paid by him on account of clothing to the Tennessee militia volunteers—mounted gun men."

If an officer were by law vested with authority to visit the different parts of the country to adjust, regulate, and settle the various claims which have arisen, with legal authority to administer oaths and to obtain other evidence, and he to be the judge of the validity of the testimony in every case, much embarrassment and delay might be avoided; claimants would the sooner have their claims adjusted, and much money, it is believed, would be saved to the public.

Since the preceding abstract was prepared, the act entitled "An act to provide for the payment of volunteers and militia corps in the service of the United States," approved March 19, 1836, has been published, and which act provides for clothing, or money in lieu thereof, and for "camp equipage, including knapsacks" for volunteers and militia when in the service of the United States; so that it will be perceived a few of the cases embraced in the above abstract are now provided for by law.

APPLICATION OF MASSACHUSETTS THAT AN APPROPRIATION BE MADE FOR THE
WORKS OF DEFENCE OF BOSTON HARBOR.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 25, 1836.

COMMONWEALTH OF MASSACHUSETTS.

IN THE YEAR OF OUR LORD ONE THOUSAND EIGHT HUNDRED AND THIRTY-SIX.

RESOLVES in relation to the fortifications in Boston harbor.

Resolved, That our senators in Congress be instructed, and our representatives requested, to use their exertions to procure, as early as practicable, the passage of a law making appropriations for carrying on the works commenced for the defence of Boston harbor.

Resolved, That his excellency the governor be requested to transmit a copy of these resolutions to each of our senators and representatives in Congress.

[1ST SESSION.]

ON THE CLAIM OF A BREVET MAJOR FOR THE PAY AND EMOLUMENTS AS SUCH WHILE ACTING AS COMMISSARY GENERAL OF SUBSISTENCE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 27, 1836.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom was referred the memorial of Major James H. Hook, reported:

That it appears, by the memorial and accompanying documents, that since May, 1823, when James H. Hook was appointed a major by brevet, he has, at various times, during the absence of General Gibson, the commissary general of subsistence, under acting appointments from the President, had charge of the subsistence department, and performed the duties and incurred the responsibilities of commissary general of subsistence; during all which time he only received his pay and emoluments as a captain in the line. He now petitions for the difference between the pay and emoluments of a captain and the pay and emoluments attached to the brevet he held, and which he conceives himself entitled to under the first section of the law of April 16, 1818, which provides "that the officers of the army who have brevet commissions shall be entitled to and receive the pay and emoluments of their brevet rank when on duty and having a command according to their brevet rank, and at no other time." That Major Hook was on duty there can be no doubt, because he was ordered from his regiment to the subsistence department, and was appointed from time to time by the President, during the absence of General Gibson, to act as chief of the subsistence department; that the duty of chief of this department was higher than that of a captain there can be no doubt, as he held the rank of colonel.

Further, it appears that when General Gibson was absent he relinquished of his emoluments six rations per day, and all his commutation pay for fuel and quarters—an amount much larger than that asked for by Major Hook. These six rations per day, and commutation for fuel and quarters, now remain in the treasury, and were a part of the appropriation for the performance of the duties of chief of the subsistence department. It further appears that had Major Hook remained with his regiment, and not been ordered to do duty in the subsistence department, that for twenty months and twenty-four days of the time he was in the department and received the pay and emoluments of a captain he would have been entitled to those of a major.

Your committee consider the claim of Major Hook just, legal, and equitable, and report a bill for his relief.

[1ST SESSION.]

ON THE LOCATION AND ERECTION OF A MAGAZINE AND DEPOT FOR ARMS IN ARKANSAS.

COMMUNICATED TO THE SENATE MAY 5, 1836.

WAR DEPARTMENT, *May 5, 1836.*

SIR: I have the honor to transmit, for the consideration of the Committee on Military Affairs in the Senate, an estimate for the construction of a depot for the reception of arms and munitions of war in Arkansas, and to request that an item be inserted in the military appropriation bill for this purpose.

Very respectfully, your most obedient servant,

LEWIS CASS.

Hon. THOS. H. BENTON, *Chairman of Committee on Military Affairs, Senate.*

ORDNANCE OFFICE, *Washington, May 5, 1836.*

SIR: In obedience to so much of your instructions on the papers of his excellency W. S. Fulton, governor of the Territory of Arkansas, (referred by you to this office,) as directs me to prepare an estimate to be sent to Congress for the erection of a magazine and depot in that Territory, I have the honor to state that the sum required for the erection of such buildings, &c., will probably be about \$42,236.

This sum is the same as that required for a depot simply, leaving out, however, one of the arsenals and the great magazine and barracks, (see printed documents accompanying bill H. R., No. 372,* reported February 24, 1836,) and is conceived to be the least sum that will suffice for an establishment of such magnitude as will contain a sufficient quantity of stores of every description, and afford every other means to meet promptly any hostile approach from the Indian frontier. The establishment is the more obvious from the fact that the Arkansas river is navigable only from the 15th of April to the 1st June, when that river is flooded, thus rendering it impracticable to send supplies by water from the arsenals on the Mississippi and Baton Rouge, except within the period alluded to.

With regard to the location of such depot, it is conceived that a site at some middle point between Little Rock and Fort Smith would be most advantageous, the former (Little Rock) being considered too far down, and the latter (Fort Smith) being too far up the river Arkansas. The papers of Governor Fulton are herewith returned.

I have the honor to be, sir, your obedient servant,

WM. H. BELL, *Captain of Ordnance.*

Hon. LEWIS CASS, *Secretary of War.*

No. 679.

[1st Session.]

RECOMMENDATION OF AN INCREASE OF THE FORCE UNDER MAJOR GENERAL GAINES FOR THE DEFENCE OF THE WESTERN FRONTIER OF LOUISIANA, FOR THE PRESERVATION OF NEUTRALITY AS REGARDS TEXAS AND MEXICO, AND FOR AN ADEQUATE APPROPRIATION.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MAY 6, 1836.

WAR DEPARTMENT, *May 4, 1836.*

SIR: In January last orders were given to Major General Gaines to take measures for the defence of the western frontier of Louisiana. Events which were then passing in Texas led to the belief that a state of things might arise requiring the interposition of the government to protect the inhabitants of that portion of the United States from the calamities of war.

There were placed subject to General Gaines's orders three regiments of infantry and seven companies of dragoons, and he was instructed to prevent by force, if necessary, any armed parties from crossing the boundary line into the territory of the United States. He was also informed that the 33d article of the treaty with Mexico imposes upon both of the contracting parties the duty of preventing all hostile incursions on the part of the Indians into the possessions of the other; and he was directed to take the necessary measures for fulfilling this obligation on the part of the United States. He was also instructed, if called upon by the civil authority for any aid towards enforcing the laws having relation to the neutral duties of the United States, to render such assistance as the laws prescribe; and he was referred to the district attorneys of the two districts of Louisiana for their opinion upon such points of law connected with his duty as might arise. He was also particularly advised that it was the duty of the United States to remain entirely neutral, and to cause their neutrality to be respected.

By information recently received from General Gaines it appears that he considers it necessary that his force should be increased, with a view to afford proper protection to the frontiers. He has therefore called upon the governors of Louisiana, Mississippi, and Tennessee, for a brigade, and upon the governor of Alabama for a battalion of militia, the whole, or as many of them as practicable, to be mounted. He reports that the Mexican forces are rapidly approaching the border, and he anticipates that as soon as they have reached the vicinity of the Indians that these will join in the contest, and that the Indian force will respect no boundary line. And the operations in Texas, as described by General Gaines, cannot fail to operate powerfully upon the cruel disposition and predatory habits of the Indians.

I have therefore the honor to suggest to the Committee of Ways and Means the propriety of an appropriation of one million of dollars, "to defray the expenses attending the defence of the western frontier of the United States, to be expended under the direction of the Secretary of War, conformably to the provision of the act of April 5, 1832, making appropriations for the support of the army."

I send, for the information of the committee, a letter from the quartermaster general.

Very respectfully, your most obedient servant,

LEWIS CASS.

HON. C. C. CAMBRELENG, *Chairman Committee of Ways and Means, House of Reps.*

QUARTERMASTER GENERAL'S OFFICE, *May 3, 1836.*

SIR: The operations on the frontiers of Texas will require large appropriations. I have a requisition on my table for one hundred thousand dollars for that service, and have not a dollar to meet it. I have received a letter from the assistant quartermaster at Natchitoches, reporting that he had found great difficulty in obtaining land transportation for five companies. The wagons and horses, as well as mules for packing, must be taken from Ohio, Kentucky, or Tennessee. Should the operations be continued through the season on the scale indicated by General Gaines's requisitions, a million of dollars will probably be required for the service of this department alone.

I have the honor to be, sir, your obedient servant,

T. S. JESUP, *Quartermaster General.*

HON. SECRETARY OF WAR.

WAR DEPARTMENT, *May 5, 1836.*

SIR: In consequence of the intimation contained in your note of this date, I beg leave to observe that the request for an appropriation of \$1,000,000, for the protection of the frontier, in my letter of yesterday, was submitted to and approved by the President.

Very respectfully, your most obedient servant,

LEWIS CASS.

HON. C. C. CAMBRELENG, *Chairman Committee of Ways and Means, House of Reps.*

24TH CONGRESS.]

No. 680.

[1ST SESSION.]

ON THE NUMBER OF CANNON REQUIRED TO ARM THE FORTIFICATIONS, THE NUMBER THAT CAN BE SUPPLIED IN A YEAR, AND ON THE EXPEDIENCY OF ESTABLISHING A NATIONAL FOUNDERY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MAY 9, 1836.

WAR DEPARTMENT, *May 2, 1836.*

SIR: In answer to your letter of the 29th ultimo I have the honor to transmit a report from General Wool, one of the inspector generals of the United States army.

Very respectfully, your most obedient servant,

C. A. HARRIS, *Acting Secretary of War.*

Hon. C. C. CAMBRELENG, *House of Representatives.*

INSPECTOR GENERAL'S OFFICE, *Washington, May 2, 1836.*

SIR: In answer to the communication of the Hon. C. C. Cambreleng, dated the 29th ultimo, referred to this office, I would make the following report:

To the inquiry as to "the number of cannon necessary to arm the fortifications which are now in readiness to receive them, or which will be in readiness in the course of a year," I would answer: To complete the armament of the forts now in readiness, and those which might be placed in readiness in the course of a year, would require about two thousand four hundred guns, and would cost, exclusive of what has already been expended, about one million two hundred thousand dollars. This sum, however, includes the expense of carriages, one hundred rounds of ammunition of every description for each gun, and all the implements complete for each gun and carriage.

If this sum, one million two hundred thousand dollars, had been appropriated in January or February last, so as to have enabled the Ordnance department to have made its contracts early in the season, the whole sum might have been properly expended within the present year. But as the season for making contracts to advantage has far advanced, both as it regards materials and workmen, I do not believe that more than six hundred thousand dollars could be advantageously or judiciously expended within the year. But to avoid hereafter unnecessary delay, and to enable the department to carry on its operations economically and without interruption throughout the present and coming year, I would recommend that at least fifty per centum be added to the above sum, which would increase the amount to nine hundred thousand dollars.

To the inquiry, "how many cannon can be procured in the year?" I would answer: If the contracts could have been made early in the season, nine hundred could have been cast at the different private foundries employed by the government; at this advanced period of the season I do not believe that a greater number than six hundred could be obtained of those foundries within the year.

To the inquiry, "whether the cannon to be provided by contract will be of satisfactory quality, equal to those manufactured in Europe, or whether it is expedient to take immediate measures for the erection of a national foundry, and if so, the estimated expense of such an establishment, and the amount necessary to be appropriated during the year towards commencing it?" I would reply: That the cannon generally procured at our private foundries are of good quality, and I have no doubt can be made equal in quality to any made in Europe.

A national foundry for the casting of brass as well as iron guns would no doubt be an important acquisition to the establishments of the country, but much more so for the manufacture of brass than iron guns. For the latter we have all the skill and experience requisite for their manufacture at our private foundries. But not so in regard to the manufacture of brass guns. Of these we shall require for the field and siege service at least twelve hundred guns of different calibres. To prepare the metal, and to cast them in a proper manner, requires workmen of skill and great experience. These we have not in this country. To procure them from Europe, and to obtain the metal, and to make all the experiments necessary before we commence operations, would cost the government a large sum of money, and more than an individual or individuals would be willing to incur without the assurance of being well paid. Again: one of the advantages of a national foundry for brass guns would arise from the circumstance that brass guns when rendered useless by service can again be recast, which cannot be done in the case of iron.

The experience of England and France, as well as most of the powers of Europe, has induced them to adopt brass guns exclusively for field and siege service. They are lighter and not so likely to burst, and do much less injury when they do burst than iron. For these and a variety of other reasons brass guns should, I think, be adopted for the field service of the United States. England and France have established national foundries for the casting of brass guns, but not exclusively for iron. In England most of the guns for the marine and sea-coast service are cast of iron, and by private foundries.

We cannot, however, expect a contractor will make a gun of better metal than sufficient to stand the proof charges. A gun may stand the proof charges, and yet be so strained, without being able to discover the injury, as to burst with the next common charge. Hence the necessity or propriety of a control over the quality of the metal which should be used in the manufacture of iron guns, and perhaps one of the strongest reasons for a national iron foundry.

With the foregoing brief remarks, I think it is expedient to establish a national foundry for the manufacture of brass and iron guns, but more especially for brass.

For this object it is recommended that an appropriation be made of three hundred thousand dollars. Of which one hundred and twenty thousand dollars may be advantageously expended in the course of the present year.

I have the honor to be, very respectfully, your obedient servant,

JOHN E. WOOL, *Brigadier General.*

Hon. LEWIS CASS, *Secretary of War.*

24TH CONGRESS.]

No. 681.

[1ST SESSION.]

ON THE EXPEDIENCY OF ESTABLISHING A NATIONAL FOUNDRY IN THE DISTRICT OF COLUMBIA, WITH A DESCRIPTION OF THE COLUMBIAN FOUNDRY THEREIN.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MAY 12, 1836.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, having had under consideration the letter of the Secretary of War to the Speaker of the House of Representatives, of the 10th of February last, referred to them, together with the report from Brigadier General Wool and Lieutenant Colonel Talcott, therewith transmitted, furnishing certain information called for by a resolution of the House of the 3d of March, 1835, respecting the establishment of a national foundry in the District of Columbia, reported:

The first object of the inquiry of the committee upon this subject was as to the expediency, under the present circumstances of the country, of establishing a foundry on account of the government for the fabrication of cannon, the projectiles required for them, &c.

By the late reports from the Departments of War and Navy, it has been shown to the House that although there are a considerable number of guns and projectiles on hand adapted to these respective services, there are yet required a great quantity of pieces of various calibres, of carriages, of shot, shells, &c.; that heretofore all munitions of this kind have been procured by contract, or purchased from four several foundries, owned and carried on by individuals: one in the northern, one in the southern, one in the western section of the country, and one in the District of Columbia; that these establishments, although conducted with skill and integrity, are all operating on a limited scale, and not capable, on their present footing, of furnishing, for several years, the amount of ordnance and appurtenances required by the public exigencies.

Besides these considerations, the opinions of the Secretary of War and of the Secretary of the Navy, conveyed in their letters to the select committee of this House, appointed at the last session "to inquire into the propriety of establishing a national foundry," favorable to that object, have commanded the attention of this committee, based on reasons of great weight, as they are. It is believed that an establishment of this character, though of moderate extent, would, besides assisting to furnish the large annual public supply required, be of the utmost importance to the government, in enabling it, by the agency of disinterested persons and its own officers, to ascertain with certainty the character of the metals to be used, the description of fuel most suitable for their pure fusion, the machinery best adapted to a perfect execution, and the real value of the article when finished, so "to afford a fixed and unexceptionable standard by which the work of the several contractors may be regulated in respect to the important points of metal, workmanship, and price."

It is stated by the Ordnance department that "the two national armories for muskets answer admirably well this important point, in reference to the contractors for manufacturing muskets for the United States." Moreover, a public armory for the fabrication of cannon would give great facilities in determining by experiments the proper construction and correct dimensions of pieces of ordnance, as well as to form and range, as to fixing the quantity of metal for the various calibres, so as to combine the requisite strength with eligible weights, and the tests of their strength and tenacity; such as might with propriety be prescribed to contractors, so as to insure from them the manufacture of ordnance of the best metal and the most accurate dimensions.

Again: by forming such an establishment, the necessary experience and skilled artisans would be provided and secured to the government to serve against any contingency, adverse to the public interest, that might occur in its connexion with private foundries.

The committee have therefore, on due deliberation, made up the opinion that a national foundry, of limited extent, ought to be established for the purposes just mentioned, and that it should be put into operation in the District of Columbia, and near the seat of government, as soon as conveniently practicable. They recommend this position because it seems peculiarly proper that such an establishment should be immediately accessible to and directly under the eyes of the bureaus of the Ordnance department and the navy commissioners, who have exclusive charge of the construction and distribution of all the ordnance belonging to the United States, so that they may at all times, and with the greatest facility, be able to direct and inspect all desired changes in construction, and every necessary experiment; and moreover, that it has many other advantages: it is central, in a good degree, as relates to the different States of the Union.

The means of transportation of all materials to and of ordnance and munitions from it will be not only very extensive in every direction, but remarkably easy and cheap, by means of the tide navigation of the Potomac river, the waters of the Chesapeake and Ohio canal, the Baltimore and Ohio railroad, a branch of which abuts on Washington, the Winchester railroad, diverging from the canal at Harper's Ferry, up the rich valley of the Shenandoah, into Virginia. And it is most conveniently situated as to the supplies of the two main materials that enter into the fabrication of cannon and their projectiles, to wit, iron and coal. It is well known that the coal on the upper Potomac is of the best quality; and the iron obtained on the Potomac and Shenandoah, at no great distance above the District, is remarkably well suited, from its extraordinary strength and tenacity, to the casting of cannon, as it has been tested during a number of years, at the foundry before mentioned in the District, where it has been exclusively used. To confirm this, the committee have been assured that of the last five or six hundred guns manufactured there, notwithstanding the heavy proofs and rigid inspection to which they are properly put, not one has been rejected by failure to stand the proof and inspection.

Besides these, there is a local advantage which had weight with the committee, as it regards the power to be used in driving the requisite machinery; this may be had to any desired extent from the Chesapeake and Ohio canal, with more or less convenience at any place above the point in Georgetown, where the canal is locked down into the river. The surface of the canal there being about thirty-six feet above tide-water.

The committee, by a part of their body, have personally inspected the three sites on the margin of

the Potomac above Georgetown, brought to the attention of the Secretary of War by the report from General Wool and Colonel Talcott, and, upon due consideration, are of opinion that, taking into view the relative advantages and disadvantages of each, the site lowest down the river is decidedly to be preferred, for many reasons : It is more accessible on the river side from the expansion of the river at that place ; the tide-water navigation is not so frequently interrupted by freshets as at the sites above ; and on the land side, because there is a spacious road culvert *at the spot*, by means of which everything is transported under the canal, which passes directly through the site ; because it is never liable to inundation ; because, from its distance from the low grounds of the river, it is considered the most healthy ; that on it is a valley, on the north side of the canal, lying sufficiently below the water in the canal, to admit of works being conveniently placed on that side to receive their power from it there, as well as may the works be so supplied on the south or river side of the canal from the side next the river ; and because it possesses the peculiar advantage of having a natural stream passing through it, by which the foundry, long since established on it, has been exclusively worked, and which may be used to good effect generally, and particularly, at times, to prevent interruption when the canal may happen to be laid dry. Its more immediate vicinity to Washington and Georgetown are considerations of some moment, particularly as to the last, which it nearly adjoins, for the residence of the workmen.

There is an establishment on this site of long standing, called the Columbian foundry, for the casting and finishing cannon and other munitions for the government before adverted to, owned by General Mason ; of it the following statement is made by General Wool and Colonel Talcott, in their report to the Secretary of War, and it is believed quite correctly : "The establishment offers buildings and fixtures, in a state of preparation for the annual manufacture of about three hundred heavy guns, with a corresponding number of shot, &c. The capacity of this foundry may be considerably increased, by the addition of buildings and the use of water from the canal. It now operates with a small power derived exclusively from other sources, which may be preserved and used when the supply from the canal happens to be interrupted. The buildings and fixtures being now in a state for use, operations on a moderate scale may be commenced immediately."

The area of this site, it is understood, is of something more than seven acres, including the canal which passes directly through it for the distance of about eight hundred feet ; exclusive of the canal there are about six acres : it binds on the river, and has water deep enough for large vessels touching it for about seven hundred feet, part of which is now wharfed, and the whole extent may readily be so prepared at a moderate expense, the materials being at hand. Immediately adjoining this tract, binding on its western side for its whole extent, and bordering on the river for a considerable distance, pervaded also by the canal, is a tract of land belonging to the Chesapeake and Ohio Canal Company, containing some ten or more acres, on which has been constructed waste gates, discharging large quantities of water on the river side from the canal above the line of navigation in it, capable of use as a power to considerable extent. This tract, with the water power at the waste gates, may be purchased if desirable.

The committee, believing that it is not to the interest of the government to do more at this time than to establish a foundry on a moderate scale, for the purposes before adverted to ; but to leave to the private foundries now engaged in its service to furnish the greater part of the supplies wanted, under the checks and regulations which, by the means proposed, it may be found expedient to adopt in its contracts with them, are of opinion that probably the area of the present site of the Columbian foundry might be sufficient ; but if thought requisite, certainly, with the addition of that of the land adjoining just described, making together sixteen acres or more, exclusive of the canal that passes through them, would be of great abundance for the object contemplated.

They have had communications from the proprietor of the Columbian foundry, and after some modification of his terms, he has agreed to receive the sum of seventy-five thousand dollars for the whole establishment as it now stands, including as well the land and water power from the natural stream, as all the buildings, machinery, implements, tools, &c. ; a description of which, furnished by him, is annexed, which is deemed by the committee, considering all its resources and advantages, a reasonable price, as they do the sum of ten thousand dollars for the hereinbefore described tract adjoining, including the water power from the waste gates, which it is understood the Chesapeake and Ohio Canal Company are willing to accept for it. And they recommend the purchase of the Columbian foundry and appurtenances, at a sum not exceeding seventy-five thousand dollars ; as also, if deemed expedient by the President, of the said adjoining tract, at a sum not exceeding ten thousand dollars.

All which is respectfully submitted, and therefore the committee ask leave to report a bill.

General description of the buildings, machinery, implements, tools, &c., at the Columbian foundry.

A capacious and lofty casting house of stone, containing four large air furnaces, with double stacks ; an extensive moulding floor ; deep pit for casting cannon vertically ; drying room, with iron doors, for baking gun moulds ; three powerful cranes, fitted with the requisite iron pinions, sheaves, and chains ; a room for preparing moulding materials ; iron railway and carriage for moving guns in and out of the drying room ; railway and carriage for transporting same from the casting house to the boring mill.

A stone building adjoining the above, containing a cupola furnace, bellows, with horizontal wheel and machinery for working it, and a casting floor.

Two large stone mill houses for boring cannon, both having four floors, including the basement stories, fitted with large water-wheels, enclosed in tight water chambers to secure their continued running in time of frost, geared throughout with iron ; one mill containing four frames, and the other five, for boring cannon, provided with all requisite railways, advancing carriages, racks, levers, rods, bits, and other tools for boring and turning cannon of all dimensions. Attached to the shafts of one of the water-wheels is a complete set of machinery for cutting the heavy screws and nuts of the transoms for iron gun-carriages ; and in the interior is a set of machinery for cutting large flat-threaded screws. In the same mill house is geared, and worked by water power, machinery for turning the trunnions of guns ; and three large lathes for turning gun patterns ; iron shot moulds, and other work of iron and wood, besides a footlathe. On the exterior, against one of the walls, is fitted a machine, with iron sheave and chains, for breaking up, by means of heavy drops, old cannon and other massive castings, so as to accommodate the fragments for reception and fusion in the furnace. In both boring mills are laid, on heavy horizontal

timbers extending through the houses, on the second story, and thence into the yard, iron railways and truck carriages, for moving and hoisting cannon in and out of the boring frame ; and in both are, in the second stories, extensive carpenters' shops for preparing patterns, flasks, &c.; and garret stories for storing and preserving patterns and utensils ; and basement stories for receiving, as they fall from the guns, and storing, the gun borings.

Adjoining the upper mill house is a frame building, used in connexion with it for the purposes before mentioned.

There are two capacious blacksmiths' or forging shops, one of stone and the other of brick ; and a third, of wood, and smaller, all provided with the necessary apparatus and tools.

There is a row of convenient sheds, divided into rooms, some closed, and some open on one side, for cleaning and storing castings ; and for receiving and preparing clay and sand for the furnaces, moulding, &c.; and other sheds for laying away cannon, and storing materials.

There are two office rooms with fireplaces, one near the lower and one at the upper mill, for superintendent and clerks.

Two brick dwelling-houses for workmen, one with four, and the other with three rooms.

Among the quantity and variety of implements, tools, &c., are :

A swing-cart, with high and substantial wheels, with lever ratchet and chains for taking up and moving heavy cannon.

A carriage, with four iron wheels, for moving light cannon.

A gin and dearboon steelyards for weighing cannon, &c., &c.

Machine, geared with iron sheave and clasp tongs, for dropping and proving shot.

A number of cast iron flasks, their parts secured with wrought iron bands, clasps, pins, &c., for moulding and casting cannon, carronades, gunades, howitzers, mortars, mortar-beds, &c., of every description, from the largest to the smallest calibre ; a quantity of iron shot moulds, of all sizes ; a great collection of patterns for guns of every sort ; shells, grape and canister shot, &c., &c., and for wheels and machinery of all kinds.

A large parcel of wooden flasks, iron clasped, of various sizes and forms, for moulding and casting in green sand large and small work ; and all the requisite implements and tools for carrying on the work extensively, as gauges, rods, scales, weights, blacksmiths' tools, carpenters' tools, grindstones, kettles, ladles, skimmers, sledges, crowbars, hammers, gun-chisels, rubbers, spades, shovels, &c., &c.

24TH CONGRESS.]

No. 682.

[1ST SESSION.]

INSTRUCTIONS TO AND CORRESPONDENCE WITH MAJOR GENERAL GAINES AND OTHERS,
FOR PRESERVING NEUTRALITY OF THE UNITED STATES ON THE FRONTIERS DURING
THE WAR BETWEEN TEXAS AND MEXICO.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MAY 14, 1836.

To the Senate and House of Representatives :

In compliance with a resolution of the House of Representatives of the 10th instant, I transmit reports from the Secretaries of State* and War, with the papers accompanying the same.

ANDREW JACKSON.

WASHINGTON, *May 14, 1836.*

REPORT FROM THE SECRETARY OF WAR.

DEPARTMENT OF WAR, *May 14, 1836.*

SIR : In conformity with the resolution of the House of Representatives of the 10th instant, I have the honor to transmit copies of all the orders and instructions of this department, and all the correspondence on its files relating to the defence of the western frontier of the United States.

Every measure taken or authorized by the Executive upon this subject is disclosed by these documents. Agreeably to your views of the resolution, I have not sent copies of the instructions from the quartermaster general to the officers of his department, in order to execute the memorandum of May 9, for that officer. They contain merely the usual official directions, in detail, for carrying the orders into effect.

Very respectfully, your most obedient servant,

LEWIS CASS.

The PRESIDENT of the United States.

No. 1.

WAR DEPARTMENT, *January 23, 1836.*

SIR : I am instructed by the President to request that you would repair to some proper position near the western frontier of the State of Louisiana, and there assume the personal command of all the troops of the United States who are or may be employed in any part of the region adjoining the Mexican

* The report from the Secretary of State will be found in class on Foreign Relations.

boundary. It is not the object of this order to change at all the relations between yourself and the military departments under your command, but to require your personal presence at a point where public considerations demand the exercise of great discretion and experience. An order will be issued, without delay, to the sixth regiment to proceed to Fort Jesup, and this force, together with all the troops in the western part of Louisiana, and in the country west of the Mississippi and south of the Missouri rivers, will be employed, as occasion may require, in carrying into effect the instructions herein communicated to you.

The state of affairs in Texas calls for immediate measures on the part of the government. It is the duty of the United States to remain entirely neutral, and to cause their neutrality to be respected. It is possible that the course of operations may induce one or other of the contending parties to approach the boundary line, with a view to cross it in arms. Should you find that the case, you will give notice to the persons having the direction, that they will not be permitted to cross into the territory of the United States; and if they attempt to do so by force, you will resist them with the means at your disposal.

The 33d article of the treaty with Mexico requires both the contracting parties to prevent, "by force, all hostilities and incursions on the part of the Indian nations living within their respective boundaries, so that the United States of America will not suffer their Indians to attack the citizens of the Mexican States," &c.

The provisions of this article you will cause to be faithfully enforced, and the various Indian agents and officers of the Indian department in that region will be required to furnish you any information in their power in relation to this matter, and to carry into effect any instructions you may give. You will make known to the various Indian tribes inhabiting that part of the United States the determination of the government to prevent any hostile incursions into Texas, and you will call upon the chiefs to inculcate upon all their people the necessity of carefully abstaining from any violation of the above-mentioned engagement, and you will not hesitate to use the force at your disposal for the purpose of preventing any such designs.

Should you be called upon by the civil authority for any aid towards enforcing the laws having relation to the neutral duties of the United States, you will render such assistance as the laws prescribe.

You are requested to communicate freely with the district attorneys of both the districts of Louisiana on all points of law connected with the execution of the instructions, and those officers will be desired to give you their opinion.

I will thank you to keep me advised of any occurrences in that quarter which it may be important for the government to know.

Very respectfully, your obedient servant,

LEWIS CASS.

Major General E. P. GAINES, *Memphis, Tennessee.*

No. 2.

WAR DEPARTMENT, *January 25, 1836.*

SIR: I am instructed by the President to inform you that General Gaines has been ordered to the western frontier of Louisiana, to take the personal direction of the troops in that quarter. Should General Gaines desire your opinion in any point of law connected with the execution of the duties he may be required to perform, under any act of Congress having relation to the neutral duties of the United States, the President desires me to request that you would furnish General Gaines with your opinion accordingly. A copy of the instructions to General Gaines is herewith enclosed.

Very respectfully, your most obedient servant,

LEWIS CASS.

H. CARLTON, Esq., *District Attorney for the eastern district of Louisiana, New Orleans.*

Same to

B. F. LINTON, Esq., *District Attorney for the western district of Louisiana, St. Martinsville, Louisiana.*

No. 3.

WAR DEPARTMENT, *Office Indian Affairs, January 25, 1836.*

SIR: I am instructed to inform you that General Gaines has been directed to proceed to some proper position near the Mexican boundary, and to take command of the troops in Louisiana west of the Mississippi and south of the Missouri rivers. One object of this movement is to prevent the infraction of the treaty with Mexico by the Indian tribes. He has been authorized to call upon the superintendents and agents of the Indian department for information and aid. You are requested to give him immediate notice if you perceive any design on the part of the Indians to make incursions into, and to attack the citizens of, the Mexican States. And you will please give similar instructions to each of the agents and sub-agents in your superintendency.

Very, &c.,

ELBERT HERRING.

General WILLIAM CLARK, *Superintendent of Indian Affairs, St. Louis, Missouri.*

A similar letter to Captain William Armstrong, Choctaw agency, west of the Mississippi.

No. 4.

HEADQUARTERS WESTERN DEPARTMENT, *Baton Rouge, March 29, 1836.*

SIR: I have received, not until yesterday, an official copy of your letter of the 23d of January last, by which I have the satisfaction to be informed that the President of the United States has been pleased

to direct my immediate attention to the western frontier of the State of Louisiana, in order to preserve, if necessary, by force, the neutrality of the United States.

In obedience to this order, I have availed myself of the very first steamboat conveyance that offered, after the receipt of the order, to proceed to Baton Rouge, to enable me to ascertain to what extent the arsenal there will furnish ordnance and ordnance stores, for the prompt and efficient discharge of the duties assigned to me, duties which derive great importance from the recent accounts of the sanguinary manner in which the Mexican forces seem disposed to carry on the war against our Texan neighbors.—(See the accompanying newspapers.) Upon this point I take leave to suggest whether it may or may not become necessary, *in our own defence*, to speak to the contending belligerents in a language not to be misunderstood—a language requiring *force* and military supplies that shall be sufficient, if necessary, for the protection of our frontier, to check the savage operations of each of the contending parties, who may forget to respect the laws of war and our neutral rights, until Mexico and the United States shall, by an adjustment of existing difficulties, put an end to the scenes of barbarism which cannot but endanger the peace and other vital interests of all the parties concerned; scenes of barbarism disgraceful to all who enact or tolerate them.

Should I find any disposition on the part of the Mexicans, or their red allies, to menace our frontier, I cannot but deem it to be my duty not only to hold the troops of my command in readiness for action in defence of our slender frontier, but to anticipate their lawless movements, by crossing our supposed or imaginary national boundary, and meeting the savage marauders wherever to be found in their approach towards our frontier. Should I err in this view of the subject, in which, however, I am convinced the laws of war and nations will bear me out, I shall be gratified to receive the views of the President, to which I shall scrupulously adhere. But if it be otherwise, if my own views are approved, I shall, in that event, have occasion for some mounted volunteers, with other forces sufficient to make my numerical strength equal to the estimated strength of the contending parties, which is now estimated at eight thousand to twelve thousand men, (8,000 to 12,000.) With a view to this possible contingency, I have already desired the fine legionary brigade, commanded by General Planche, of the city of New Orleans, *to calculate on the possibility of my having occasion to invite the legion to join me.* To this suggestion the officers of the legion, with the gallant general at their head, cordially responded that they would, whenever it might be deemed necessary, promptly repair to the frontier, delighted with the opportunity of carrying into effect the wishes of the President, under whose immediate command many of these officers had distinguished themselves in the defence of their city and State in the memorable triumphs of December, 1814, and January, 1815

All which is submitted for the information of the President of the United States.

With profound respect,

EDMUND P. GAINES, *Major General, Commanding.*

Hon. LEWIS CASS, *Secretary of War.*

P. S.—I arrived at the city of New Orleans at 7 o'clock a. m., and departed therefrom on board this steamboat at 7 p. m. yesterday, having taken my passage on board the steamboat *Levant*, bound from New Orleans for Natchitoches, and to be at Baton Rouge on the first of April, Friday next.

E. P. G.

No. 5.

WAR DEPARTMENT, *April 25, 1836.*

Sir: Your letter of the 29th ultimo was received at the department a few days since, but I have been prevented by indisposition from giving it an earlier answer.

I enclose for your information a copy of the memorandum of an official conference between the Secretary of State and the Mexican minister, respecting the present state of affairs upon the southwestern borders of the United States. You will consider as a part of your instructions the declaration made by the Secretary of State, and govern yourself accordingly.

It is not the wish of the President to take advantage of present circumstances, and thereby obtain possession of any portion of the Mexican territory. Still, however, the neutral duties, as well as the neutral rights of the United States will justify the government in taking all necessary measures to prevent a violation of their territory. Recent events induce the belief that the Mexican forces, as well as the inhabitants of Texas, must be in a high state of excitement. In that portion of the country there are many Indian tribes whose habitual predisposition to engage in war is well known, as is, also, their reckless disregard of any of the claims of humanity. And from information which has reached the government there is too much reason to believe that efforts have been made to induce these Indians to join the Mexican troops. It may, therefore, well be, as you anticipate, that these various contending parties may approach our frontiers, and that the lives and property of our citizens may be placed in jeopardy. Should this be the case, the President approves the suggestion you make, and you are authorized to take such position on either side of the imaginary boundary line as may be best for your defensive operations. You will, however, under no circumstances, advance further than old Fort Nacogdoches, which is within the limits of the United States, as claimed by this government. But you will please to observe that this permission will not be exercised unless you should find such an advanced position necessary to afford due security to the frontier, in consequence of the unsettled state of things beyond you.

You will please to explain fully your views and instructions to any armed parties who may be marching towards you, and should they continue to threaten your position, or to manifest a design of crossing into the United States, you are authorized to attack and repel them.

I have this day, by direction of the President, requested the governors of Louisiana and Mississippi to call into service any militia force you may find necessary for the protection of the frontiers. This force must be called out for a term of not less than six months from the day they reach their rendezvous, to be discharged at any time by the United States. The necessary means will be furnished to the officers of the proper staff departments for such supplies as may be required.

I need hardly say that the duty committed to you is one of great importance, as well as of great delicacy; and I do not doubt it will be so executed as to preserve, on the one hand, the proper safety of the frontier, while, on the other hand, as little cause of offence as possible will be given to any foreign authority. I have to request that you would keep me regularly advised of your proceedings.

Very respectfully, your most obedient servant,

LEWIS CASS.

Maj. Gen. E. P. GAINES, *Fort Jesup, Louisiana.*

No. 6.

DEPARTMENT OF STATE, *Washington, April 23, 1836.*

SIR: In compliance with your request, I have the honor to transmit a memorandum of the substance of what I stated in an official conference on the 20th instant with Mr. Gorostiza, envoy extraordinary and minister plenipotentiary of the Mexican republic to the United States.

I have the honor to be your obedient servant,

JOHN FORSYTH.

Hon. LEWIS CASS, *Secretary of War.*

No. 7.

Memorandum for Mr. Gorostiza of what was said to him by Mr. Forsyth in their conference on the 20th of April, 1836.

Mr. Forsyth stated to Mr. Gorostiza that, in consequence of the contest in Texas, the movements of some citizens of the United States on the Red river, and apprehended hostile intentions of the Indians in Mexico against the United States, and of the Indians within the United States against Mexico, orders would be given to General Gaines to take such a position with the troops of the United States as would enable him to preserve the territory of the United States and of Mexico from Indian outrage, and the territory of the United States from any violation by Mexicans, Texans, or Indians, during the disturbances unfortunately existing in that quarter, and that the troops of the United States would be ordered to protect the commissioners and surveyors of the two governments, whenever they should meet to execute the instructions to be prepared under the treaty of limits between the United States and the United Mexican States. Should the troops, in the performance of their duty, be advanced beyond the point Mexico might suppose was within the territory of the United States, the occupation of the position was not to be taken as an indication of any hostile feeling, or of a desire to establish a possession or claim not justified by the treaty of limits. The occupation would be precautionary and provisional, and would be abandoned whenever (the line being run and the true limits marked) the disturbances in that region should cease, they being the only motive for it.

No. 8

WAR DEPARTMENT, *April 25, 1836.*

SIR: I am instructed by the President to request that you will call into the service of the United States, upon the requisition of General Gaines, such portion of the militia of the State of Louisiana (Mississippi) as that officer may deem necessary for the protection of the western frontier of that State. The term of service will be six months, to be computed from the day they reach their rendezvous, unless sooner discharged.

Very respectfully, your most obedient servant,

His Excellency E. D. WHITE, *Governor of Louisiana, New Orleans.*

A similar letter sent to his Excellency Charles Lynch, governor of Mississippi, at Jackson.

No. 9.

HEADQUARTERS WESTERN DEPARTMENT, *Natchitoches, Louisiana, April 8, 1836.*

SIR: I arrived at this place on the 4th instant, since which time I have received information from various sources which leaves no doubt in my mind that a considerable portion of several tribes of the Indians residing within our territorial limits have gone over to the Texan side of the boundary line between the United States and Mexico.

When to this fact is added the reports daily received at this place, that the army of Mexico, commanded by the president, Santa Anna, in person, is rapidly approaching in this direction, through the centre of Texas; that his plan is to put to death all he finds in arms, and all who do not yield to his dictation; that as soon as he comes to the section of country occupied by the Indians in question, on the waters of the Trinidad, or Trinity river, they will unite with him in his war of extermination; and that no boundary line, save such as that they find properly guarded with an efficient force, will be sufficient to arrest the sanguinary career of these savages, I cannot but deem it *my duty to prepare for action.*

For this purpose I have requested of the governors of Louisiana, Mississippi, and Tennessee, each a

brigade, and of the State of Alabama a battalion, making altogether three brigades and one battalion; the whole, or as many of them as practicable, to be mounted; to repair to this place as soon as may be convenient, by battalions or companies.

This force, though not equal in numbers to that which it may be my duty to meet in battle, will enable me, at least, to secure the confidence of the frontier settlements, and keep them at home to plant their crops; and, moreover, to enable me to inflict summary punishment on such of the enemy by whom they are now menaced as may teach them to respect us, and in future to pay more regard than they seem now disposed to pay to our rights and treaties.

I shall, in the course of a few days, address to each one of the commanders of the armies in Texas a note, calling their attention to their duties, and apprising them of the course which I shall pursue towards them, in obedience to the orders of the President of the United States, should they approach our boundary, or suffer the Indians near them to commence hostilities. I have notified the governors of the States to whom I have applied for force that, "should the war in Texas be brought to a close without the apprehended Indian hostilities," the volunteers will, in that case, "be discharged forthwith."

I have the honor to be, very respectfully,

EDMUND P. GAINES, *Major General, Commanding.*

Hon. LEWIS CASS, *Secretary of War, Washington City.*

P. S.—I enclose a copy of my letters to the governors of the States above named.

No. 10.

HEADQUARTERS WESTERN DEPARTMENT, *Natchitoches, Louisiana, April 8, 1836.*

SIR: The war in Texas, which has of late assumed a sanguinary and savage aspect, has induced the President of the United States to require a considerable augmentation of the regular force to be concentrated upon this section of the national frontier, to which my attention has been particularly directed. He deems it to be the duty of the United States to remain entirely neutral, and to cause their neutrality to be respected, *peaceably if practicable, forcibly if necessary.*

The thirty-third article of the treaty with Mexico requires both the contracting parties to prevent, "by force, all hostilities and incursions on the part of the Indian nations living within their respective boundaries, so that the United States of America will not suffer their Indians to attack the citizens of the Mexican States," &c. The provision of this article I am particularly instructed to cause to be enforced; and I have, pursuant to instructions, taken measures to make known to the various Indian tribes inhabiting that part of the United States bordering on the Mexican territory, on the waters of the Red and Arkansas rivers, the determination of the government to prevent any hostile incursions into Texas; and have directed that the chiefs be called upon to inculcate upon their people the necessity of carefully abstaining from any violation of the above-mentioned engagements; and I have moreover informed them, pursuant to the orders of the President, that *I will not hesitate to use the force at my disposal for the purpose of preventing such designs.*

I have learned, from several of our citizens entitled to credit, that one Manuel Flores, a Mexican Spaniard, but for some years past a citizen of "Spanish town," in this State, near the Sabine ridge, has been lately commissioned by persons professing to act by the authority of the Mexican government, for the purpose of enticing the Indians in the western prairies, on our side of the boundary line, to join them in the war of extermination now raging in Texas; and that, with this view, the agent, Manuel Flores, accompanied by a stranger, has lately passed up the valley of the Red river, and has already produced excitement among the Caddo Indians; and I have very recently learned from several intelligent persons in Texas, and others who have lately been there, that many of our Indians have lately gone over to the Texas side of the line.

These facts and circumstances present to me the important question, whether I am to sit still and suffer these movements to be so far matured as to place the white settlements *on both sides of the line wholly within the power of these savages*, or whether I ought not instantly to prepare the means for protecting the frontier settlements, and, if necessary, compelling the Indians to return to their own homes and hunting grounds. I cannot but decide in favor of the last alternative which the question presents; for nothing can be more evident than that an Indian war commencing on either side of the line will as surely extend to both sides, as that a lighted quickmatch thrust into one side of a powder magazine will extend the explosion to both sides.

But I am without *mounted men*, the only description of force which will enable me to interpose an effectual check to the daily increasing danger which every intelligent citizen with whom I have conversed upon the subject apprehends; and apprehending, as I do, that the loss of a month, which it would require to submit the case to the decision of the President of the United States, might prove fatal to a large portion of the frontier inhabitants, I have determined to solicit of your excellency a brigade, to consist of two or three battalions of volunteers, as many to be mounted as practicable, to repair to this place as soon as may be convenient, by companies or battalions; to receive their arms and camp equipage at New Orleans and Baton Rouge. There may be eight or ten companies to a battalion.

Should the war in Texas be brought to a close without the apprehended Indian hostilities, the volunteers will, in that case, be discharged forthwith.

With perfect respect, I have the honor to be your obedient servant,

EDMUND P. GAINES, *Major General, Commanding.*

Their Excellencies the GOVERNORS OF LOUISIANA, MISSISSIPPI, ALABAMA, and TENNESSEE.

No. 11.

WAR DEPARTMENT, *May 4, 1836.*

SIR: I have received your letter of the 8th ultimo, and, in answer, have to inform you that the President will sanction the employment of whatever force may be necessary to protect the western frontier of the United States from hostile incursions. This department has addressed the governors of

the States of Louisiana, Mississippi, Tennessee, Kentucky and Alabama, requesting them to call into service such militia force as you may find necessary in carrying into effect the instructions heretofore given to you. The theatre of operations is so distant from the seat of government that much must be intrusted to your discretion. The two great objects you have to attain are, first, the protection of the frontiers; and, secondly, as strict a performance of the neutral duties of the United States as the great object of self-defence will permit. You will take care and do no act which can give just cause of offence to any other government; and, on the other hand, you will not permit the frontiers to be invaded by any forces whatever. I have to request that the militia you may call out may not be more numerous than the exigencies shall seem to require. They ought to be called into service for six months, if practicable, to be disbanded whenever not wanted. And you will take care that all due economy is preserved, as well in your disbursements as in the preservation and accountability of the public property. It is very necessary that you should communicate freely to the commanding officers of any military parties who may approach the frontiers, and inform them of the nature of your orders. You will state to them that while you have been ordered to that quarter with a view to the execution of the neutral obligations of the United States, you have also been instructed to defend their territory from any invasion whatever; and that this duty will be executed under any circumstances that may happen. You will also remonstrate against the employment of any of the Indians. Although the dictates of humanity forbid the use of this species of force, which cannot be restrained, yet the right of the United States to remonstrate against its service rests upon other grounds. From the habits and dispositions of the Indians, it is well known that the power employing them cannot restrain them within the legitimate rules of warfare. If they approach the frontiers they will pay no regard to a mere imaginary line, but will carry on their depredations and massacres wherever inhabitants can be found, and where there is no force to oppose them. It is altogether idle to expect that, in such a state of things, the frontier settlements of the United States would not be exposed to these calamities. Whoever calls the Indians into service, and induces them to approach our border, cannot but be aware of the consequences that must ensue. All this you will represent to the proper officers, and you will use your best exertions to keep such a force from marching towards your position, and if they do so, to repel and disperse it.

Very respectfully, your most obedient servant,

LEWIS CASS.

Major General GAINES, *Fort Jesup, Louisiana.*

No. 12.

WAR DEPARTMENT, *May 4, 1836.*

SIR: Major General Gaines, to whom the command of the western border of Louisiana has been assigned, has notified this department that he has called upon your excellency for a brigade of militia, the whole, or as many of them as practicable, to be mounted.

I am instructed by the President to request your excellency to call into the service of the United States the number of militia which have been or may be required by General Gaines, to serve not less than three months after their arrival at their place of rendezvous, unless sooner discharged.

Very respectfully, your most obedient servant,

LEWIS CASS.

His Excellency N. CANNON, *Governor of Tennessee, Nashville, Tennessee.*

No. 13.

WAR DEPARTMENT, *May 4, 1836.*

SIR: Major General Gaines, to whom the command of the western border of Louisiana has been assigned, has notified this department that he has called upon your excellency for a battalion of militia, the whole, or as many of them as practicable, to be mounted.

I am instructed by the President to request your excellency to call into the service of the United States the number of militia which have been or may be required by General Gaines, to serve not less than three months after their arrival at their place of rendezvous, unless sooner discharged.

Very respectfully, your most obedient servant,

LEWIS CASS.

His Excellency C. C. CLAY, *Governor of Alabama, Tuscaloosa, Alabama.*

No. 14.

EXECUTIVE OFFICE, *Nashville, April 28, 1836.*

SIR: The enclosed is a copy of a communication which I have just received from General Edmund P. Gaines, who holds the command of the western division of the United States. And I have felt it my duty to take measures forthwith to raise and forward the brigade of volunteers he requires as speedily as possible, and feel very little doubt that, however inauspicious the season of the year may be, when our young men are generally closely engaged in their crops, as well as the horses, but in the course of a few days, or two weeks at furthest, there will be assembled here, or at such point as may be designated, a respectable mounted force, if not the whole brigade required, as the feelings of the people seem to be alive to their duty of entering the service of the United States, as required by this communication, which I have hastened to lay before you, as well as to inform you of the course I am pursuing, in order that it may be submitted to the President of the United States, and his views ascertained as speedily as may be

convenient in relation thereto. Despatch seems to be important, and the mode and means of transporting these volunteers to Natchitoches, the headquarters of General Gaines, is a matter, it seems to me, worthy of some consideration. By water, with the aid of steamboats to tow a certain number of flat-boats, necessary to carry the horses, I have thought would be most expeditious. In the event the Cumberland should be too low, they should embark at Randolph or Memphis, and go as far up Red river as to enable them to obtain a land passage to their destination. At this time the Mississippi is unusually high, so as to inundate a large portion of the country on the west side, which circumstance renders a passage by land very difficult. Hence, at present I am inclined to the opinion that their transportation by water should be preferred. I have required the volunteers to engage in the service for the period of six months, unless sooner discharged; to furnish themselves with horses and clothing; each company to elect their own officers; each regiment its colonels and majors; and the brigade, in the event a whole brigade should assemble, to elect their brigadier general. It is expected that these volunteers will offer themselves, and be received from every section of the State, from east to west; hence some expenses must be incurred in embodying them before they leave the State, as well as transporting them to the headquarters of General Gaines. In relation to which, as well as other matters touching the requisition made by the commanding general on me, and the course which I am now earnestly pursuing, for the purpose of promoting the service of our country, I shall feel much anxiety to learn, as fully as practicable, the views of your department of the general government; also the course required of me in furnishing the transportation and subsistence to said volunteers that will be necessary to any given point, or their destination, as you may deem expedient.

With great respect and esteem, I have the honor to be your obedient servant,
N. CANNON.

Hon. LEWIS CASS, *Secretary of War.*

No. 15.

WAR DEPARTMENT, *May 9, 1836.*

SIR: I have received a letter from the governor of Tennessee, in which he states that he has taken measures to call out the force required by you. He also states that he will call upon the volunteers to serve for six months unless sooner discharged. This course is correct upon the presumption that he will be able to obtain all the force required without resorting to drafting. But should not volunteers enough be obtained so that a call must be made upon the ordinary militia, the term for which they may be required to serve is restricted by law to three months. I have also written to the governors of the other States upon whom you are authorized to make requisitions, advising them of this view.

The quartermaster general has also been instructed to direct proper officers of his department to report to the several governors upon whom you have made requisitions, in order to provide the necessary means for facilitating the movement of the troops.

Very respectfully, your obedient servant,

LEWIS CASS.

Major Gen. GAINES, *Fort Jesup, Louisiana.*

No. 16.

[Memorandum.]

DEPARTMENT OF WAR, *May 9, 1836.*

The quartermaster general will select four officers; one of whom will report in person to the governor of Tennessee, another to the governor of Mississippi, another to the governor of Alabama, and another to the governor of Louisiana.

The quartermaster general will examine the letters this day sent to the governors of these States, and give his directions accordingly. These officers will be provided with the necessary funds, and will make all arrangements for facilitating the movements of the troops.

Such instructions as are required to guide them in the performance of their duties, so as to insure economy in the expenditures and regularity in the settlement of the accounts, will be given by the quartermaster general.

LEWIS CASS.

No. 17.

WAR DEPARTMENT, *May 9, 1836.*

SIR: I have requested the quartermaster general to direct an officer of his department to report to your excellency for the purpose of making the necessary arrangements for the embodying and the movement of the forces called for by Major General Gaines, in his letter to you of — ultimo, which call was approved, by the direction of the President, in my letter of the 4th instant.

This officer will be provided with whatever funds may be required in the performance of his duties. Should you find it necessary to resort to drafting, in order to complete the quota required, I presume that, agreeably to the provisions of the act of February 28, 1795, the term of service of the troops thus called out cannot be extended beyond three months, and this is the term stated in my letter to you of the 4th instant. When, however, the numbers are supplied by volunteers, I am not aware that there is any legal objection to their term of service reaching six months. And this arrangement is certainly more efficient and economical for the United States, and meets the approbation of the President.

You will be pleased, therefore, to have the volunteers engaged for the term of six months, unless sooner discharged; but if there should be any insuperable objection to this arrangement, they must be accepted for three months after their arrival at the place of rendezvous, with the right, however, to discharge them at any time previously.

Very respectfully, your most obedient servant,

LEWIS CASS.

His Excellency C. C. CLAY, *Governor of Alabama, Tuscaloosa, Alabama.*

No. 18.

WAR DEPARTMENT, *May 9, 1836.*

SIR: I have had the honor to receive your letter of the 28th ultimo, and, in answer, beg leave to state that my letter to you of the 4th instant will have conveyed to you the approbation of the President of the call made upon you by Major General Gaines for a brigade of volunteers or militia. Should you find it necessary to resort to drafting in order to complete the quota required, I presume that, agreeably to the provisions of the act of February 28, 1795, the terms of service of the troops thus called out cannot be extended beyond three months, and this is the term stated in my letter to you of the 4th instant. Where, however, the numbers are supplied by volunteers, I am not aware that there is any legal objection to their term of service reaching six months. And this arrangement is certainly more efficient and economical for the United States, and the President approves it. They will, however, be liable to be discharged at any time when their services are not wanted.

In order to relieve the difficulties which present themselves in the raising and marching of these troops, the quartermaster general will immediately despatch an officer of his department, provided with the necessary funds, and charged with the duty of making the arrangements required upon this occasion. He will be directed to call upon your excellency, and procure all the information necessary to enable him to perform his duty.

Very respectfully, your most obedient servant,

LEWIS CASS.

His Excellency N. CANNON, *Governor of Tennessee, Nashville, Tennessee.*

No. 19.

WAR DEPARTMENT, *May 10, 1836.*

SIR: I have requested the quartermaster general to direct an officer of his department to report to your excellency for the purpose of making the necessary arrangements for the embodying and movement of the forces called for by Major General Gaines in his letter to you of — ultimo, which was approved, by direction of the President, in my letter of the 4th instant.

This officer will be provided with whatever funds may be required in the performance of his duties. In my previous letter to you I requested that the troops might be called out for the term of six months, unless sooner discharged. This term you will be good enough to consider as applicable to volunteers, of which species of force I presume enough will turn out. Should you find it necessary, however, to resort to drafting to complete the quota required under the provisions of the act of February 28, 1795, the term of service of the troops thus called out cannot be extended beyond three months.

You will be pleased, therefore, to have the volunteers engaged for the term of six months, unless sooner discharged; but if there should be any insuperable objection to this arrangement, they must be accepted for three months after their arrival at the place of rendezvous, with the right, however, to discharge them at any time previously.

Very respectfully, your obedient servant,

LEWIS CASS.

His Excellency E. D. WHITE, *Governor of Louisiana, New Orleans.*

No. 20.

WAR DEPARTMENT, *May 10, 1836.*

SIR: I have requested the quartermaster general to direct an officer of his department to report to your excellency for the purpose of making the necessary arrangements for the embodying and movement of the forces called for by Major General Gaines in his letter to you of — ultimo, which was approved, by direction of the President, in my letter of the 4th instant.

This officer will be provided with whatever funds may be required in the performance of his duties. In my previous letter to you I requested that the troops might be called out for the term of six months, unless sooner discharged. This term you will be good enough to consider as applicable to volunteers, of which species of force I presume enough will turn out. Should you find it necessary, however, to resort to drafting to complete the quota required under the provision of the act of February 28, 1795, the term of service of the troops thus called out cannot be extended beyond three months. You will be pleased, therefore, to have the volunteers engaged for the term of six months, unless sooner discharged; but if there should be any insuperable objection to this arrangement, they must be accepted for three months after their arrival at the place of rendezvous, with the right, however, to discharge them at any time previously.

Very respectfully, your obedient servant,

LEWIS CASS.

His Excellency CHARLES LYNCH, *Governor of Mississippi, Jackson, Mississippi.*

No. 21.

WAR DEPARTMENT, *May 12, 1836.*

SIR: The President is very solicitous that you should act cautiously in carrying into effect your instructions, and do nothing which can compromise the neutral relations of the United States. Your great objects, as I have before stated to you, are to defend our frontier, and to fulfil the neutral obligations of the government. If the Indians are not employed immediately upon the borders, there will be no need of your advancing beyond the territory heretofore in the actual occupation of the United States, unless armed parties should approach our frontiers so near as manifestly to show that they mean to violate our territory. Such a state of things is scarcely to be anticipated from either of the contending parties in Texas; but it is otherwise with the Indians. In the excitement of war they will not be restrained by boundary lines, but will seek scalps wherever they can find them. The whole history of the employment of Indians in the contests between civilized communities proves this fact. It was principally with a view, therefore, to this state of things that you were authorized to cross the line dividing the country actually in the occupation of the United States from that heretofore in the possession of Mexico, if such a measure be necessary for the defence of the frontier. But I must impress upon you the desire of the President, that you do not advance unless circumstances distinctly show this step is necessary for the protection of the district of our country adjoining the scene of operations in Texas. And should you find it necessary to advance, you will not fail to communicate to any armed parties in the country your orders and objects. But you will under no circumstances co-operate with any of them, or suffer any of them to join you; nor interfere in any manner with any military operations in Texas, except such as may be necessary for self-defence.

Should you pass beyond the above-mentioned boundary line, you will return as soon as the safety of the frontier will permit.

Very respectfully, your obedient servant,

LEWIS CASS.

Major General GAINES, *Fort Jesup, Louisiana.*

No. 22.

NEW ORLEANS, *Louisiana, April 25, 1836.*

SIR: I arrived here the day before yesterday. It was not long after my arrival that I had the honor of seeing his excellency the governor of the State, and learned from him that General Gaines had made a requisition on him for a brigade of volunteers, partly to be mounted and partly on foot. This force the general deemed necessary to be employed in checking the Caddo Indians, who, he had been informed, were about entering Texas to act against the citizens of that State under the auspices of the Mexican authorities. The governor, examining the laws in reference to this call of General Gaines, conceived that he was not authorized by the laws of Louisiana, or those of the United States, to furnish the force called for; nor did he, from the information he had obtained, believe it necessary to send to the frontiers of the State any troops, as the country was not invaded, nor likely, in his opinion, to be invaded; and further, was impressed with the belief that it was a scheme of those interested in the Texan speculations, who had been instrumental in making General Gaines believe that the Mexican authorities were tampering with the Indians within our boundaries, and at the same time exciting, by false representations here, the sympathies of the people in favor of the Texans, with a view of inducing the authorities of the United States to lend their aid in raising in this city a force composed of interested persons, which force should move to the Texan frontiers under the call of General Gaines, and afterwards, under false pretensions, actually march into Texas and take part in the war now raging between the Texans and the government of Mexico; and all this at the expense of the United States, and consequently with the implied sanction of the government. Thus giving to the people of Texas the hope of relying on the government of the United States for their protection and support, and to the government of Mexico a positive evidence that the United States were actually engaged, contrary to the treaty stipulations, in a war against that government.

If I understand the instructions of General Gaines, as communicated to him before I left Washington, it was his duty to see that the treaty stipulations with Mexico were fulfilled; and further, that, as it regarded the contending parties, to preserve a perfect neutrality.

I met here Colonel Darrington, who was formerly in the army, and who gave me the information which you will find in the enclosed printed paper, marked A. He is of the opinion that the Caddo Indians cannot be concerned in attacking the Texans, and that they are but few in number and quite insignificant.

General Gaines has at his disposal the 3d, 6th, and 7th regiments of infantry, and the whole of the regiment of dragoons, which I should think sufficient, if he will properly dispose of them, to enable him to fulfil his instructions without calling for the brigade of volunteers from Louisiana.

From what I can discover, it appears to me that it would be better to extend our military establishment at once to twenty thousand men, instead of ten thousand, as it has been proposed. The conduct of the Seminoles will have its influence with the other nations and tribes, and, knowing the restlessness of the Indians and their proneness to war, I am persuaded it will be most prudent, as well as most economical, to raise and keep up at once a force capable of effecting promptly any course proper to be pursued towards the Indians or blacks, in case of insurrection, and at the same time to defend the maritime frontier against foreign attack.

I have the honor to be, very respectfully, your obedient servant,

ALEX. MACOMB, *Major General, Commander-in-chief.*

Hon. LEWIS CASS, *Secretary of War.*

A.

FROM TEXAS.—“Colonel Darrington informs us that General Houston was encamped on the west of the Brazos, at Groce’s, a very strong position, with an aggregate force of about twenty-five hundred men, and daily increasing. The troops were also in high spirits. The Mexican army, on the 2d of April, were at Bastrop, on the Colorado. Texas is broken up, and all the women and children are fleeing, and in the most deplorable condition. The inhabitants of Natchitoches have subscribed largely, and sent many supplies for the relief of the fugitives. On the 14th of April Nacogdoches was safe, but deserted. On the 1st of April Colonel Darrington left the body of fugitives in the fork between Navasoto and Brazos, in Robinson’s colony. The Indians are openly hostile in the neighborhood, and should the Navasoto continue up, the inhabitants are at the mercy of the Mexicans, should they appear on the San Antoine road. Idle rumors, says our informant, have done more to the injury of Texas than the horde of Mexicans have done. General Gaines was encamped in Wilkinson’s old camp, east of the Sabine, with a force estimated at about six hundred men. As to the gathering of the Indians on the Sabine, Colonel Darrington says he knows nothing, and thinks there is no cause for the destruction and breaking up of Nacogdoches.

“He met between the Sabine and Brazos five hundred men on their way to Houston’s camp.”

ADJUTANT GENERAL’S OFFICE, *Washington, May 14, 1836.*

SIR: Agreeably to your instructions, I respectfully submit herewith copies of all orders and instructions issued through this office relative to the defence of the western frontier, required by the resolution of the Senate of the 10th instant.

I am, sir, very respectfully, your obedient servant,

R. JONES, *Adjutant General.*

Hon. LEWIS CASS, *Secretary of War.*

No. 24.

[Extract.]

ADJUTANT GENERAL’S OFFICE, *Washington, January 22, 1836.*

SIR: Your communication of the 5th instant is this day received and submitted to the general-in-chief, and I have the pleasure to inform you that your proposed tour to the southern and eastern portion of your command is approved.

I am instructed to inform you, however, that the state of affairs west of the Mississippi may soon require your attention, if not your presence, in that quarter; accordingly, you will be pleased to await orders and instruction at New Orleans.

R. JONES, *Adjutant General.*

Major General GAINES, *Commanding Western Department U. S. Army, New Orleans, La.*

The residue of the letter relates to operations in Florida.

R. J.

No. 25.

Extract from general order No. 9, dated “Headquarters of the army, Adjutant General’s office, Washington, January 25, 1836.”

1. The 6th regiment of infantry will be prepared to move from Jefferson Barracks to Fort Jesup, Louisiana, as soon as the season and navigation will permit. Brevet Brigadier-General H. Atkinson will see to the execution of this order as to the time of departure of the regiment, but will remain at Jefferson Barracks, and continue in his present command. Surgeon Findlay and Assistant Surgeon Hughey will proceed with the regiment to Fort Jesup.

R. JONES, *Adjutant General.*

The residue of the order relates to operations in Florida.

No. 26.

ADJUTANT GENERAL’S OFFICE, *Washington, March 10, 1836.*

SIR: In consequence of the unexpected detention of Major General Gaines in Florida, you will repair to some point in Louisiana, near the Mexican frontier, and take command of all the troops in that quarter. You will be governed by the instructions of the Secretary of War to Major General Gaines, under date of January 23, a copy of which is herewith transmitted for your guidance.

It may be proper to inform you that the duty to which you are now assigned may be only temporary, as it is probable that Major General Gaines will now soon repair to Louisiana, and there assume the duties pointed out in the instructions of the Secretary of War, above referred to.

I am, sir, with great respect, your obedient servant,

R. JONES, *Adjutant General.*

Brig. Gen. M. ARBUCKLE, *Comd'g Southwestern Department, Fort Gibson, Arkansas Territory.*

No. 27.

HEADQUARTERS THIRD INFANTRY, *Fort Jesup, March 12, 1836.*

SIR: The enclosed communication was sent to me, with a request that I would forward it to the President of the United States. From the best information to be obtained, I believe that the contents of the letter are true.

Very respectfully, your obedient servant,

JAMES B. MANY, *Colonel Third Infantry.*

Brevet Brig. Gen. R. JONES, *Adjutant General U. S. A., Washington, D. C.*

NEAR CROW'S FERRY, *Louisiana, March 11, 1836.*

DEAR SIR: The undersigned being personally known to you, take this hurried opportunity, while upon our way to Texas, to write you, that you, as the head of the army of the United States, may have such information therein as we have come this moment in possession of. It is this:

A Mr. William Palmer, a gentleman who we learn to be of truth, living in the vicinity of Fort Jesup, informed us that a blank commission came on a few days since from General Santa Anna to a citizen of the United States of that neighborhood, authorizing him to proceed to the Indians up Red river, and stir them up to attack the upper settlements of Texas; that soon after this a Spaniard arrived at the house of this individual from the interior, and they went off, it is supposed, to effect General Santa Anna's views.

Such as it may become your duty to act in this matter is best known to yourself.

Permit us to subscribe ourselves most respectfully, your obedient, humble servants,

THO. JEF. GREEN.

The PRESIDENT of the United States.

Copy of indorsement by the President on the foregoing letter.

Referred to the Secretary of War, that he cause orders to be forthwith given to the commanding officer at Fort Jesup to arrest all individuals who, under the orders of General Santa Anna, are engaged in exciting the Indians to war, and to notify all concerned that all his military force will be employed to put it down or support our neutrality.

A. J.

No. 28.

ADJUTANT GENERAL'S OFFICE, *Washington, April 11, 1836.*

SIR: I enclose herewith, by direction of the Secretary of War, a copy of a letter addressed to the President by Thomas J. Green, esq., dated Crow's Ferry, Louisiana, March 11, communicating certain intelligence touching the alleged interference of the Mexican government with the *Indians* of Red river, to which your attention is specially directed. The President desires that you take all lawful measures to arrest any person who, under the orders of the Mexican authority, may be engaged in exciting the Indians to war, and that every proper effort be used to discover and detect such unjustifiable project, if any be attempted; and that, in maintaining our neutrality on the southwestern frontier of Louisiana, in the quarter you have already been assigned to duty under the instructions of the Secretary of War, heretofore communicated to you, that you employ, if necessary, the force which has been placed at your command. The letter from Mr. Green to the President was forwarded by Colonel Many, under cover, to the adjutant general.

I am, sir, with great respect, your obedient servant,

R. JONES, *Adjutant General.*

Major General GAINES,

Or Commanding Officer of the Troops on the Western Frontier of Louisiana, Fort Jesup.

No. 29.

HEADQUARTERS, SOUTHWESTERN FRONTIER, *Fort Gibson, April 12, 1836.*

SIR: I have the honor to acknowledge the receipt of your letter of the 10th ultimo, and its enclosure, directing me to repair to Louisiana, near the Mexican frontier, which I will comply with without delay, after having closed my duties at this post, which I will do as soon as possible.

With much respect, I am, sir, your obedient servant,

M. ARBUCKLE, *Brevet Brigadier General, Commanding.*

Brigadier General R. JONES, *Adjutant General.*

No. 30.

ADJUTANT GENERAL'S OFFICE, *Washington, April 26, 1836.*

SIR: As the services of the dragoons may be required during the summer on the western frontier of Louisiana, it becomes necessary to vary the annual tours usually performed by the regiment. It is left to your discretion, however, to make short excursions with the squadron under your command, taking care not to be so distant at any time from Fort Leavenworth as not to be able to receive and promptly obey any orders of Major General Gaines, should he deem it necessary to direct the squadron under your command to join him on the western frontier of Louisiana.

I am, sir, very respectfully, your obedient servant,

R. JONES, *Adjutant General.*

Captain M. DUNGAN, *Dragoons, Commanding Fort Leavenworth.*

No. 31.

ADJUTANT GENERAL'S OFFICE, *Washington, April 26, 1836.*

SIR: As the services of the dragoons may be required during the summer on the western frontier of Louisiana, it becomes necessary to vary the annual tours usually performed by the regiment. It is left to your discretion, however, to make short excursions with the squadron under your command, taking care not to be so distant at any time from Fort Gibson as not to be able to receive and promptly obey any orders of Major General Gaines, should he deem it necessary to direct the squadron under your command to join him on the western frontier of Louisiana.

I am, sir, very respectfully, your obedient servant,

R. JONES, *Adjutant General.*

Captain E. TRENOR, *Commanding Squadron of Dragoons, Fort Gibson.*

No. 32.

ADJUTANT GENERAL'S OFFICE, *Washington, April 27, 1836.*

SIR: I respectfully enclose herewith copies of my communications of yesterday's date to the commanding officers of the squadrons of dragoons stationed at Forts Leavenworth and Gibson, by which you will see that these troops will be held in readiness to join you on the western frontier of Louisiana, should you decide that the interest of the service would make it necessary for you to order them thither.

With regard to the Secretary of War's communication to you of the 26th instant, I am desired by him to say that he has omitted any special reference to the legionary brigade, commanded by General Planche, of the city of New Orleans, as his request to the governor of Louisiana to call into service any portion of the militia you may deem necessary for the protection of the western frontiers of Louisiana includes the authority, and of course secures to you the aid of this legion and of any other militia from the State of Louisiana you may require.

I am, sir, very respectfully, your obedient servant,

R. JONES, *Adjutant General.*

Major General E. P. GAINES, *Commanding Western Department, Fort Jesup.*

24TH CONGRESS.]

No. 683.

[1ST SESSION.]

EXPLANATORY ESTIMATES OF REPAIRS OF CERTAIN FORTIFICATIONS, AND [FOR ARSENALS, MAGAZINES, CAMP AND GARRISON EQUIPAGE, KNAPSACKS, HAVERSACKS, AND ACCOUTREMENTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MAY 24, 1836.

DEPARTMENT OF WAR, *February 1, 1836.*

SIR: I have the honor to hand you herewith the explanations of the chief engineer in reference to the items embraced in the estimate for fortifications, submitted to the consideration of your committee by my letter of the 21st ultimo, called for by yours of this date.

I am, very respectfully, sir, your most obedient servant,

LEWIS CASS.

Hon. C. C. CAMBRELENG, *Chairman Committee of Ways and Means, Ho. of Reps.*

ENGINEER DEPARTMENT, *Washington, January 20, 1836.*

SIR: I have the honor to submit herewith an estimate of the funds required for fortification of the sea-coast of the United States, which I request may be substituted for the one presented at the opening of the present session of Congress, and which has been referred by the House to the Committee of Ways and Means.

I am, very respectfully, sir, your obedient servant,

C. GRATIOT.

Hon. LEWIS CASS, *Secretary of War.*

FORT MARION, AT ST. AUGUSTINE.

WAR DEPARTMENT, *February 6, 1836.*

SIR: I return the report of the Committee on Military Affairs, enclosed in your letter of the 27th ultimo, and beg leave to refer you to the accompanying communication of the chief engineer, for the information you have requested respecting the repair of Fort Marion, and the construction of a sea wall at St. Augustine.

Very respectfully, your most obedient servant,

LEWIS CASS.

Hon. C. JOHNSON, *Committee of Ways and Means, Ho. of Reps.*

ENGINEER DEPARTMENT, *Washington, February 1, 1836.*

SIR: In reply to the letter of the Hon. C. C. Cambreleng, chairman of the Committee of Ways and Means of the House of Representatives, of this date, relative to the new objects inserted in the estimates of this department for fortifications, submitted to the committee with your letter of the 21st ultimo, and which are in addition to those previously presented, I have the honor to offer the following explanations for embracing them in said estimates:

1st. *Fort Monroe.*—This work may be considered as completed according to the design of the board of engineers, so far as was then deemed necessary. Experience has shown that the entire counterscarp of the ditch must be permanently revetted in order to be preserved; and that the dimensions given to the scarp wall of the fort are not sufficient to resist the weight of the ramparts; these being formed of sand, every vibration within the fort causes them to act with the power of a wedge against the walls, to thrust them over. The land front is without the means of resisting a regular attack; its scarp wall is entirely exposed; it has no covert way, place of arms, or glacis; and the casemated battery in advance of the adjacent water front, containing the most powerful water battery of the fort, is thereby liable to be taken in flank and silenced. No furnaces for heating shot have yet been provided, nor any other quarters for the garrison except the casemates. The sum asked for in the estimate is for remedying the evils here alluded to.

2d. *Fort McHenry and St. Augustine.*—It was intended to have submitted the estimates for these works to the consideration of the Committee on Military Affairs, but they were inadvertently included with those properly belonging to the Committee of Ways and Means. I have therefore only to remark that they are both essential to the sea-coast defence. They are in excellent preservation, and the sums asked for them respectively are deemed sufficient to place them in a respectable state of defence.

I have the honor to be, sir, your obedient servant,

C. GRATIOT.

Hon. LEWIS CASS, *Secretary of War.*

ENGINEER DEPARTMENT, *Washington, May 24, 1836.*

SIR: In compliance with your instructions of this date, requiring the probable amount necessary to repair Fort Marion, St. Augustine, Florida, and to construct barracks, &c., suitable to the present wants of the service in that section of country, I have the honor to state that it is believed the whole can be accomplished for a sum not exceeding \$50,000.

I am, very respectfully, sir, your obedient servant,

C. GRATIOT.

Hon. LEWIS CASS, *Secretary of War.*

ENGINEER DEPARTMENT, *Washington, February 5, 1836.*

SIR: I have received the letter of the Hon. C. Johnson, of the House of Representatives, of the 27th ultimo, requesting, in behalf of the Committee of Ways and Means, any information that can be furnished as regards the propriety or impropriety of making an appropriation for repairing Fort Marion, and erecting a sea wall at St. Augustine, Florida, referred by you to this department. The condition of this fort has not been overlooked, and \$20,000 have already been asked for to commence the repairs required. It is not supposed that this sum will complete all the work necessary, and should it be deemed expedient by the Committee of Ways and Means, I would respectfully recommend that the estimate presented may be increased by the additional sum of \$25,000, (making the whole amount \$45,000,) agreeably to the estimate

of the officer charged with the operations. It is believed that this sum will place the port in good repair, and rebuild the sea wall, securing its foundations, and connecting it with the landing places and town of St. Augustine. Its position is considered favorable for our internal defence and communication, and as a point of refuge for the steam batteries, upon which must depend the security and protection of that part of our coast.

I have the honor to be, sir, your very obedient servant,

C. GRATIOT, *Brigadier General.*

Hon. LEWIS CASS, *Secretary of War.*

POWDER MAGAZINE, ARSENAL, ST. LOUIS, MISSOURI.

WAR DEPARTMENT, *May 21, 1836.*

SIR: I have the honor to transmit for the consideration of the Committee of Ways and Means a communication from the colonel of ordnance, with accompanying papers, relative to the site of the powder magazine attached to the arsenal at St. Louis, and to request that an appropriation may be made for its purchase.

Very respectfully, your most obedient servant,

LEWIS CASS.

Hon. C. C. CAMBRELENG, *Chairman Committee of Ways and Means, House of Representatives.*

ORDNANCE OFFICE, *Washington, May 18, 1836.*

SIR: In compliance with the instructions (in pencil) on my letter to you of the 28th ultimo, in relation to the land on which the St. Louis magazine is located, I have the honor to report:

That by the act of June 13, 1812, the St. Louis commons were empowered to be sold for the benefit of the city of St. Louis, providing, among other things, that the President of the United States might make any military reservations which would be necessary for the public service. Under this authority, Lieutenant Thomas, on the 8th June, 1827, was directed to select the reservation of the public land for the use of the arsenal at St. Louis, and accordingly on the 4th February, 1829, the reservation was made; but it appeared, from a letter of Lieutenant Thomas, that further instructions should be received from the General Land Office before the reservation would be acknowledged to be properly placed. This letter was referred to the Commissioner of the General Land Office, who, on its reception, directed the surveyor at St. Louis to survey the land in question. When this survey was completed, Lieutenant Thomas notified this office in July, 1829, that the reservation was acknowledged by the register of the land office of St. Louis district to be properly placed on the plat, and requested that measures would be taken to have the title to the land effectually secured. A letter was accordingly addressed to the Commissioner of the General Land Office on the 24th October, 1829, to that effect, who stated, in answer, that "no further measures were necessary to prevent its (the land) being sold by the United States; but that to make a special appropriation of it for the use of your department, the sanction of the President or an act of Congress should be obtained, reserving it for the purposes for which it has been selected." On the 30th October, 1829, a letter was addressed to Major Eaton, then Secretary of War, enclosing a plat of the ground and other relative papers, and requesting that the sanction of the President might be obtained to the reservation, which was done in the following words:

"The described land on this plat, containing eighteen acres and $\frac{2}{100}$ is reserved from sale, and the Commissioner of the Land Office is directed so to consider it.

"ANDREW JACKSON.

"OCTOBER 31, 1829."

Thus everything in relation to this land was considered to be finally settled, and the magazine was accordingly built; but by a late survey, made by direction of the authorities of St. Louis, and which alone they recognize, it was found that the St. Louis commons included the land occupied by the magazine, and that therefore it was not public land, and could not consequently be reserved. On Captain Symington's being notified of this, he addressed a letter to the surveyor general of Missouri, requesting such data as would determine the accuracy of the respective surveys, and the legality of the claim as advanced by the city of St. Louis. The answer to this letter (marked A, in red) is herewith enclosed, and goes to confirm the correctness of the last survey. Under these circumstances, it was considered proper to recommend, in order that the matter might be settled as speedily and amicably as possible, and to prevent the land being sold to private individuals, as well as to comply with the recommendation of Captain Symington, that application might be made to Congress for an appropriation to make the necessary purchase.

The papers enclosed are as follows:

Paper marked A. Letter of the surveyor general of Missouri, with enclosures.

Paper marked B. Letter of the chairman of the committee of the board of aldermen of St. Louis.

Paper marked C. Letter of C. D. Ward, county surveyor, enclosing a plat.

Paper marked D. Letter of Captain Symington to this office.

Paper marked E. Letter from this office to the Secretary of War, of the 28th ultimo.

I have the honor to be, sir, your most obedient servant,

G. BOMFORD, *Colonel of Ordnance.*

Hon. LEWIS CASS, *Secretary of War.*

P. S.—As the present session of Congress is now far advanced, and as there appears to be considerable doubt as to the ownership of the land, it would be advisable, perhaps, to direct Captain Symington to employ a lawyer for the purpose of examining the title; and should it be found that the land does not belong to the United States, application may be made to Congress at the next session for its purchase. The quantity of land reserved was 18.09 acres; but if the land is to be purchased, seven acres will be sufficient, at \$300 per acre.

G. B.

WAR DEPARTMENT, *May 4, 1836.*

SIR: I respectfully ask the favorable consideration of the Committee on Finance for the enclosed communication of the officer in charge of the Clothing bureau, and the estimate that accompanies it.

Very respectfully, your most obedient servant,

LEWIS CASS.

HON. DANIEL WEBSTER, *Chairman Committee on Finance, Senate.*

CLOTHING BUREAU, *Washington, May 4, 1836.*

SIR: To enable the purchasing department to procure the knapsacks and camp equipage provided for in the act of the present session of Congress, approved the 19th March, I have the honor to inform you that the sum of fifty-two thousand dollars will be required.

Most respectfully, sir, I am, your obedient servant,

JNO. GARLAND, *Major United States Army.*

HON. LEWIS CASS, *Secretary of War.*

ADDITIONAL ESTIMATES FOR ACCOUTREMENTS.

WAR DEPARTMENT, *February 19, 1836.*

SIR: I transmit for the favorable consideration of the Committee of Ways and Means an estimate of the amount required for the purchase of accoutrements for the army. The reasons for this application are stated in the accompanying report of the colonel of ordnance.

Very respectfully, your most obedient servant,

LEWIS CASS.

HON. C. C. CAMBRELENG, *Chairman Committee of Ways and Means, House of Representatives.*

Moneyed estimate of camp and garrison equipage, knapsacks, and haversacks, to be provided for volunteers or militia, on the emergency of being called into the service of the United States, as provided for by law of March, 1836.

Articles.	Price.	Amount.
3 marquees	\$41 26	\$123 78
531 wall tents	20 63	10, 954 53
1,806 common tents	9 20	16, 615 20
760 spades	62½	475 00
1,606 axes	1 25	2, 007 50
2,272 hatchets	62½	1, 420 00
1,806 camp kettles	1 00	1, 806 00
3,612 mess pans	34	1, 228 08
10,000 knapsacks	1 55	15, 500 00
10,000 haversacks	25¼	2, 575 00
Total		52, 705 09

JNO. GARLAND, *Major United States Army.*

CLOTHING BUREAU, *Washington, May 4, 1836.*

ORDNANCE OFFICE, *Washington, February 15, 1836.*

SIR: I have the honor to transmit herewith an additional estimate (in duplicate) for accoutrements, and respectfully request that it may be submitted to Congress.

The estimate is explanatory of the reasons rendering the accoutrements necessary.

Respectfully, I am, sir, your most obedient servant,

G. BOMFORD, *Colonel of Ordnance.*

HON. LEWIS CASS, *Secretary of War.*

ORDNANCE OFFICE, *Washington, February 18, 1836.*

SIR: In obedience to your directions, I have the honor to state that the recent issue of accoutrements to Florida exhausted entirely the stock of every description of accoutrements which was on hand, and leaving only a small number of parts of infantry sets on hand at the Detroit arsenal, the greater part of which are old. The letter and estimate are returned herewith.

Respectfully, I am, sir, your obedient servant,

G. BOMFORD, *Colonel of Ordnance.*

DEPOT IN ARKANSAS.

WAR DEPARTMENT, *May 5, 1836.*

SIR: I have the honor to transmit for the consideration of the Committee on Military Affairs in the Senate an estimate for the construction of a depot for the reception of arms and ammunitions of war in Arkansas, and to request that an item be inserted in the military appropriation bill for this purpose.

Very respectfully, your obedient servant,

LEWIS CASS.

Hon. THOS. H. BENTON, *Chairman Committee on Military Affairs, Senate.*

Special estimate for supplying the arsenals with certain indispensable stores, viz:

7,000 sets of infantry accoutrements, each set consisting of 1 cartridge-box, 1 cartridge-box belt, 1 bayonet belt, 1 bayonet belt plate, 1 bayonet scabbard, 1 brush and pick, and 1 gun sling, at \$3 01 per set.....	\$21, 070 00
3,000 sets of Hall's rifle accoutrements, each set consisting of 1 rifle pouch, 1 flask and pouch belt, 1 waist belt, 1 plate for waist belt, 1 plate for pouch and flask belt, 1 copper flask, 1 brush and pick, 1 gun sling, 1 bayonet belt, and 1 bayonet scabbard, at \$4 05 per set.....	12, 150 00
1,500 sets of cavalry accoutrements, each set consisting of 1 sabre belt, 1 brass belt plate, 1 pistol cartridge-box, and 1 pair holsters, at \$4 79 per set.....	7, 185 00
Total amount.....	40, 405 00

The above estimate for accoutrements is in addition to the 5,000 sets of infantry, 1,000 sets of Hall's rifle, and 2,500 sets of cavalry accoutrements, which were embraced in the general estimate for this year, and submitted to Congress, making in all 12,000 sets of infantry accoutrements, 4,000 sets of Hall's rifle accoutrements, and 4,000 sets of cavalry accoutrements, allotting to each of the principal arsenals about 1,600 sets of accoutrements; and is deemed the minimum number which should be always in depot at each of the principal arsenals to meet the exigencies of the service.

Nearly the whole of the accoutrements estimated for have recently, on the occasion of the Indian hostilities, been ordered to be made in anticipation; and hence an additional supply is necessary for the western and northwestern frontiers, in the event of any similar emergency among the Indians.

GEO. BOMFORD, *Colonel of Ordnance.*

ORDNANCE OFFICE, *Washington, February 15, 1836.*

SIR: In answer to your verbal inquiries, I have the honor to state that the four following estimates made by the Ordnance department during the present session, viz: The ordinary annual estimate, dated November 12, 1835; the ordinary special estimate, dated January 11, 1836; the extraordinary estimate for the armament of the fortifications, dated January 21, 1836; and that for accoutrements, dated February 15, 1836; nothing need be said with regard to that of the armament of the fortifications, as it is understood that the Committee of Ways and Means have fixed upon the amount deemed necessary for the objects referred to in that estimate. The items referred to in the two ordinary estimates are still deemed by this department as necessary as at the period when they were made. With regard to the extraordinary estimate for accoutrements, however, new circumstances have arisen on the western and southwestern frontier, since the date of the estimate, which require its enlargement to an amount nearly treble the amount therein stated; so that now there will be required, in addition to this estimate—

12, 000 sets infantry accoutrements, at \$3 01 per set.....	\$36, 120
4, 000 sets Hall's rifle accoutrements, at \$4 05 per set.....	16, 200
2, 000 sets cavalry accoutrements, at \$4 79 per set.....	9, 580
Making, in addition to the above estimate.....	61, 900

Recapitulation.

Original estimate for accoutrements.....	\$40, 405
Additional estimate for accoutrements.....	61, 900
Total.....	102, 305

I have the honor to be, sir, your obedient servant,

WM. H. BELL, *Captain of Ordnance.*

It ought also to be stated, in addition, that on the 5th instant a letter was addressed from the Department of War to the chairman of the Military Committee of the Senate, requesting that the sum of \$42,256 might be inserted for a depot of munitions of war in Arkansas.

It is still desired that this sum be inserted in the military appropriation bills, viz:

For building a depot of munitions of war in the Territory of Arkansas, \$42,256.

GEO. BOMFORD, *Colonel of Ordnance.*

Hon. LEWIS CASS, *Secretary of War.*

QUARTERMASTER GENERAL'S OFFICE, *Washington City, May 10, 1836.*

For the army proper, I should consider my estimate sufficient for the *ordinary* service of the year; for any *extraordinary* service, additional appropriations may be necessary. Should operations be resumed in Florida, the increased expenditure will depend upon the increase of the force; and so of the southwestern frontier. In both cases appropriations for the specific service would, perhaps, be preferable to an increased appropriation for the army at large.

I submit a list of items, in estimates from this office, which it seems have not been included in any bill yet reported. It is also desirable that an appropriation of \$1,500 be obtained for storehouses at Newport, Kentucky. The Cincinnati and Charleston railroad adds much to the military importance of that post.

I have the honor to be, sir, your obedient servant,

THOS. S. JESUP, *Quartermaster General.*

Hon. LEWIS CASS, *Secretary of War.*

Statement of items, in estimates of the quartermaster general, omitted to be provided for in any bill which has been reported, so far as is known at this office.

For lots adjoining Fort McHenry—no amount stated, (presumed to be sufficient).....	\$12, 000
For the purchase of twenty-eight fire engines and the necessary apparatus, at \$800 each....	*22, 400
For erecting a piazza in front of the building occupied as barracks by the troops at Augusta arsenal, Georgia	450
For barracks, quarters, storehouses, hospital, stables, &c., and materials for the same, at Fort Jesup, Louisiana.....	25, 000
For rebuilding the wharf, and materials for the same, at Fort Wolcott, Newport, Rhode Island.	500
For constructing a wood-yard and wood-yard wharf, and for materials for the same, at Fort Monroe, Virginia.....	1, 000
For constructing a wharf, and materials for the same, at Fort Severn, Maryland.....	1, 000
For rebuilding and repairing barracks, quarters, hospital, storehouses, &c., and materials for the same, at Fort Brady, Michigan Territory.....	5, 000
For the purchase of lots, containing between four and five acres, adjoining Fort Sullivan, and the buildings on them, consisting of a block-house and a frame house.....	3, 750
For transportation of ordnance and ordnance stores, in the event of an appropriation being made, in accordance with the statement of the colonel of ordnance, of January 21, 1836, of the expenditures to complete the armament of the forts therein named.....	200, 000
For barracks, quarters, storehouses, hospital defences, &c., at such point on or near the river Des Moines as may be selected under the orders of the Secretary of War, and for the purchase of the necessary site, if the same shall be private property.....	20, 000
The following is a new item not heretofore estimated for:	
(Submitted.) For storehouses at Newport, Kentucky	*1, 500

THOS. S. JESUP, *Quartermaster General.*

QUARTERMASTER GENERAL'S OFFICE, *May 10, 1836.*

NOTE.—All these were included in Doc. No. 99, February 5, 1836, except the two marked *.

WAR DEPARTMENT, *December 17, 1835.*

SIR: I enclose a communication made to me by the chief engineer upon the subject of an increase of the appropriation for incidental expenses.

I ask the favorable consideration of this proposition by the Committee of Ways and Means, and the adoption of the phraseology suggested by the chief engineer in the appropriation bill.

Very respectfully, your obedient servant,

LEWIS CASS.

Hon. G. C. CAMBRELENG, *Chairman Committee of Ways and Means, House of Representatives.*

ENGINEER DEPARTMENT, *Washington, December 16, 1835.*

SIR: Circumstances which have come to my knowledge since I had the honor to present to your consideration the estimates for fortifications for the service of the coming year have suggested the propriety of extending the provisions there made for "incidental expenses." I accordingly respectfully beg leave to make the following substitution, and request, if approved, that the Committee of Ways and Means of the House of Representatives may be solicited to adopt it, viz:

For incidental expenses attending repairs of new and old fortifications, and for the purchase of new sites and the enlargement of old ones at such places as the public service may require on the seaboard of the United States, \$900,000.

The propriety of this suggestion is made manifest from the fact that some of our fortifications are hemmed in by private landholders, and in some cases the batteries are masked by houses, which in time of war must be removed, and as the present is believed to be the most propitious to effect the purchases where they may be indispensably necessary to the public safety, the proposition is accordingly earnestly

recommended for favorable consideration. The particular sites to be purchased or enlarged are not stated, from the belief that the cupidity of speculators would thereby be awakened and the purchases jeopardized, which would not be the case were the points not designated in the act of appropriation.

I have the honor to be, sir, your very obedient servant,

C. GRATIOT.

Hon. LEWIS CASS, *Secretary of War.*

The following is the bill transmitted by the War Department, and referred to, as a substitute for the one reported.

AN ACT making appropriations for certain fortifications for the year one thousand eight hundred and thirty-six.

SECTION 1. *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the following sums be, and the same are hereby, appropriated, to be paid out of any unappropriated money in the treasury, for certain fortifications, viz:

For Fort Independence, Castle island, Boston harbor, \$150,000.	For Fort Caswell, Oak island, Cape Fear river, \$60,000.
For Fort Warren, on George's island, \$200,000.	For fortifications in Charleston harbor, \$200,000; added \$50,000.
For Fort Adams, Newport, R. I., \$200,000.	For Fort Pulaski, Cocks spur island, Savannah river, \$170,000.
For Fort Schuyler, Throg's Neck, N. Y., \$200,000.	For fortifications at St. Augustine, Fla., \$20,000.
For Fort Columbus and other works on Governor's island, \$20,000.	For Fort Pickens, Pensacola, \$50,000.
For Fort Delaware, \$150,000.	For a fort at Foster's bank, Pensacola, \$160,000.
For Fort McHenry, Redoubt Wood, and Covington battery, near Baltimore, \$50,000.	For incidental expenses, \$500,000; added \$300,000
For Fort Monroe, \$210,000.	For contingencies of fortifications, \$6,200.
For Fort Calhoun, \$150,000.	

SEC. 2. *And be it further enacted,* That, whenever the same may be necessary, the President of the United States be, and he is hereby, authorized to purchase land for the enlargement of the sites for any of the aforesaid works, to be paid for out of the appropriation for incidental expenses.

24TH CONGRESS.]

No. 684.

[1ST SESSION.]

CAUSES OF HOSTILITY OF THE SEMINOLE AND OTHER INDIANS IN FLORIDA, AND
MILITARY ARRANGEMENTS AND PREPARATIONS AGAINST THEM.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MAY 26, 1836.

To the House of Representatives:

I transmit, in conformity with a resolution of the House of Representatives of the 21st instant, a report of the Secretary of War, containing the information called for on the subject of the causes of the hostilities of the Seminoles, and the measures taken to repress them.

ANDREW JACKSON.

WASHINGTON, *May 26, 1836.*

WAR DEPARTMENT, *May 25, 1836.*

SIR: In obedience to the resolution of the House of Representatives of the 21st instant, I have the honor to state that this department has not received any information since my report of the 9th of February, to the Senate, in answer to their resolution of February 3, showing the causes that induced the Seminole Indians to commence hostilities, so far as they were known here. The abstract contained in the report I have the honor to enclose, and I beg leave, in addition, to state that it will appear by reference thereto, and to the document submitted with it to the Senate, that the complaints of the Seminole Indians were investigated by General Clinch, General Thompson, and Lieutenant Harris; and that on a full consideration of the whole matter in open council an arrangement was made to the mutual satisfaction of the parties, which was in the following terms:

We, the undersigned chiefs and sub-chiefs of the Seminole tribe of Indians, do hereby, for ourselves and for our people, voluntarily acknowledge the validity of the treaty between the United States and the Seminole nation of Indians, made and concluded at Payne's Landing, on the Ocklawaha river, on the 9th of May, 1832, and the treaty between the United States and the Seminole nation of Indians, made and concluded at Fort Gibson, on the 28th day of March, 1833, by Montford Stokes, H. L. Ellsworth, and J. F. Schermerhorn, commissioners on the part of the United States, and the delegates of the said nation of Seminole Indians on the part of the said nation; and we, the said chiefs and sub-chiefs, do, for ourselves

and for our people, freely and fully assent to the above-recited treaties in all their provisions and stipulations.

Done in council, at the Seminole agency, this 23d day of April, 1835.

Signed by sixteen chiefs and sub-chiefs.

In presence of—

D. L. CLINCH, *Brigadier General, United States Army.*
 A. C. W. FANNING, *Brevet Lieutenant Colonel, United States Army.*
 C. M. THRUSTON, *Captain Third Regiment Artillery.*
 T. W. LENDRUM, *Captain Third Regiment Artillery.*
 JOSEPH W. HARRIS, *First Lieutenant Third Artillery.*
 WILEY THOMPSON, *Superintendent to remove Seminole Indians.*

To the above the following memorandum is appended by the superintendent:

APRIL 24, 1835.

The above is a true copy from the original; and to show further the strength of the friendly part, the principal chief, Holate Em-arth-la, who has uniformly been openly in favor of emigration is, with a large party of his band, absent, and was therefore not present in council.

WILEY THOMPSON, *Superintendent to remove Indians.*

The officers charged with the arrangement of this affair then made an agreement with the Indians, by which they were all to be removed during the succeeding January. These proceedings were approved by the President, and the matter was considered as definitely and satisfactorily arranged.

The proceedings in the council held with the Seminole Indians on the 23d of October, 1834, and which are to be found among the before-mentioned documents, state the objections of the Indians to a compliance with the treaty of Payne's Landing, so far as they disclosed any objection. The nature of these objections is set forth in the accompanying abstract, and they amount to little more than general allegations, which show an indisposition to remove. Whatever they were, however, the above agreement put an end to them, and left to the Seminoles but one course to adopt, which was an entire removal in January, 1836. It is not known that any cause, occurring subsequent to the date of this agreement, has been alleged by them as a reason for not complying with it.

In further obedience to the call of the House of Representatives, I have the honor to transmit copies of the orders from this department, showing the measures that had been authorized for the security of the inhabitants of Florida against the Seminole Indians at the time the resolution of the House was received at the department. Though I have not felt myself at liberty to transmit copies of the orders subsequently issued, in consequence of their not coming within the call, it may not be improper to annex the following abstract of the measures which have been adopted since the passage of the act for raising volunteers.

The governor of Florida has been authorized to raise one thousand volunteers in that Territory—one-half mounted men and one-half infantry—and to place them immediately in the service of the United States. He has been further authorized to employ them in the defence of the frontier until General Scott or General Clinch shall have been enabled to give directions for their operations and for the defence of the country. Should General Scott remain in the Territory, the general measures for its defence will devolve upon him. He has been authorized, however, to leave there, and instructions were some time since given to him to direct his personal attention to the state of affairs in the Creek country, should they require it. If he leaves there, General Clinch has been authorized to assume the command in the Territory, and to employ all the force in it in the best manner for its defence and the subjugation of the Indians. Governor Call suggested in one of his letters his willingness to undertake a campaign against the Indians during the present season of the year. This matter has been referred to General Clinch, and he has been authorized to undertake it, if he considers it practicable, having just regard to the state of the climate and to the exposure of troops to its effects.

In the event of General Scott leaving the Territory, and of General Clinch declining to resume his military command, Governor Call has been authorized to take the command of the regular troops and militia, and to employ them for the defence of the country, agreeably to the suggestions made to General Clinch.

Five steamboats are directed to be employed, and to be manned by seamen from Pensacola, and which will ply up and down the Chattahoochee to intercept the communication of the Indians; to transport supplies; and likewise to enter the harbors and streams of Florida where they can be usefully employed against the Indians.

Two thousand men have been authorized to be raised, under the late volunteer act, in Georgia, and two thousand in Alabama. As these, however, will be employed in the subjugation of the Creek Indians, their aid cannot be immediately expected for the relief of Florida, and therefore the governor of Tennessee has been requested to organize two thousand five hundred men, a part of which will be immediately called into service. From the situation of Tennessee, it has been thought advisable to call for this number from that State, as they can be marched either to the south or west to meet such emergencies as may arise.

Major General Jesup has also been instructed to communicate with the officers in Florida, and to move into that Territory, should it be necessary, with any portion of his force, as soon as the operations among the Creeks will permit. He has been further directed, among his first measures, to station a considerable body of troops in the southern part of the Creek country, so as to prevent all communication between the Creeks and Seminoles.

The Navy Department has also instructed the commanding officer of the squadron in the Gulf of Mexico to station some of his vessels upon the coast of Florida, to prevent any intercourse between the Indians and the fishermen, and others disposed to supply them with arms and ammunition.

It will be seen by the previous instructions that directions have been given for stationing the regular troops at healthful posts, where they can afford the best protection to the settlements.

In addition, authority has been given to the governor of Florida to construct block-houses wherever he thinks necessary, to which the inhabitants may resort for security. Directions have also been given to have mounted men stationed at these temporary posts, and in readiness to follow any parties of Indians who may make their appearance. It is indispensable that arrangements should at all times exist by which these depredating parties can be pursued. So long as they can carry on this warfare without loss we must expect that these scenes of distress will be continued, and in fact multiplied.

One brigade of Tennessee mounted troops will move, as soon as they are organized, into the Creek country, reporting themselves to Major General Jesup for duty. A portion, or the whole of them, will be detached into Florida should Governor Call not be able to raise the number of men assigned to that Territory, and should circumstances require their services there at that time. The commanding officer in Florida and the governor will be requested to communicate from time to time with General Jesup on this subject, and to let him know the progress made in the raising of volunteers in the Territory, and the necessity for making additional reinforcements. Should, however, the progress of events in the Creek country, or the number of men raised by Governor Call, render unnecessary the service of the Tennessee brigade, General Jesup, as soon as the circumstance is ascertained, will stop them by express, if they are upon their march, or he will discharge them after their arrival, when their services are not required.

I am, sir, very respectfully, your most obedient servant,

LEWIS CASS.

The PRESIDENT of the United States.

ABSTRACT.

On the 9th day of May, 1832, a treaty was concluded at Payne's Landing, in Florida, by Colonel Gadsden, with the Seminole Indians, for the cession to the United States of the lands in that Territory and for their removal to the country west of the Mississippi.

This treaty contained a provision that certain chiefs therein named, together with their agent and interpreter, "should be sent, at the expense of the United States, as early as convenient, to examine the country assigned to the Creeks west of the Mississippi river, and should they be satisfied with the character of that country, and with the favorable disposition of the Creeks to reunite with the Seminoles as one people," then this treaty was to "be binding on the respective parties."

Agreeably to this stipulation the delegation repaired to the country west of the Mississippi, and, being satisfied on the points referred to their discretion, they concluded, on the 28th of March, 1833, at Fort Gibson, a treaty with Messrs. Stokes, Ellsworth, and Schermerhorn, rendering absolute the above treaty of Payne's Landing. The treaty of Payne's Landing was ratified on the 8th of April, 1834, and the supplementary treaty on the 12th of April, 1834.

The treaty of Payne's Landing provided that the Seminole Indians should remove within three years after the ratification of the treaty, and that the emigration should commence as early as practicable in the year 1833, and with certain bands therein specified, so that a proper proportion might be removed in each of the three years.

The treaty not having been ratified until the spring of 1834, and no appropriation having been made, definitive measures could not be taken for the removal of any of these Indians until the proper season arrived; and indeed they could not have been removed with any just regard to their health and circumstances till the succeeding winter. In the mean time, however, on the 8th of April, being the day of the ratification of the treaty of Payne's Landing, General Thompson, the Indian agent for Florida, was informed that his return to his agency at an early day was important, as arrangements "will be made for the removal of the Seminoles as soon as the appropriations are made."

On the 8th of July succeeding, being immediately after the adjournment of Congress, regulations were adopted prescribing the operations for the removal of the Indians during that year. Those relating to the Seminole Indians are here inserted:

"9. The season being so far advanced, and there being no appropriation for the removal of the Seminole Indians this year, it is not considered advisable to attempt their removal immediately. General Wiley Thompson, the present agent, will be appointed special agent for removal. His compensation will not commence till such time subsequent to the 31st day of December next as he may be required to begin his duties. Captain Russell will be appointed the disbursing officer.

"10. Captain Russell will be directed to repair immediately to Florida, where he will have a personal communication with General Thompson, who will be advised of the views of the department. They will communicate to the Indians the intentions of the government to provide for their removal as speedily as is compatible with their health and other circumstances.

"11. A plan of operations will be projected by General Thompson and Captain Russell, embracing all the details connected with this matter necessary for the sanction of this department. They will ascertain when will be the proper time of commencing the removal; the mode of transportation, whether by land or water; the proper route to be taken; the best mode of procuring subsistence on the road, whether by contract or by open purchase; the best mode of procuring wagons, if wagons are required; and generally all the circumstances necessary to a just view and an economical arrangement of the whole affair. If it is judged best that the transportation should be by land, one of those officers will proceed along the route as far as the Mississippi, in order to ascertain the facilities of transportation and the means of subsistence, and to enable them to determine on the best course with respect to both.

"12. If it should be concluded that the Indians had better be transported by water, by the bay of New Orleans, then vessels or steamboats should be procured on the best terms, and, if convenient, by public proposals. If steamboats can be got at New Orleans, so as to ascend the Arkansas, an arrangement had better be made for the whole distance; but if not, the Indians had better be transported so far as to be put in charge of the removing officers west of the Mississippi.

"13. General Thompson and Captain Russell will report the number of persons whom it will be necessary to employ, and in doing so they will consult the most rigid economy."

As soon as the plan projected by them is received here, the department will act upon it, and communicate immediate instructions for their operations.

The first information which reached the department furnishing any authentic evidence of the disinclination of the Seminoles to remove, after the ratification of the treaty, was contained in a letter from General Thompson of October 28, 1834, in which he transmitted a formal talk from them to him, and his answer, on the 23d of that month. It will be seen by adverting to these documents (which are herewith transmitted) that the objections made to the removal were very vague, and, in fact, are evidently mere excuses for a non-compliance with the provisions of the treaty of Payne's Landing. Among these were the assertions that, by the treaty of Fort Moultrie, they were to remain in Florida for twenty years. The

treaty to which they refer was concluded September, 1823, and secured to them the reservation subsequently ceded by the treaty of Payne's Landing. There is in it no such provision as they allude to; and if there were, the state of the case would not be altered by it; for by the treaty of Payne's Landing, concluded ten years subsequently, they ceded this reservation and engaged to remove. The only limitation in the treaty of Fort Moultrie is one of twenty years, at which time certain annuities were to cease. Some of them urged that, although the land west of the Mississippi was good, the Indians in that quarter were bad; that they wanted to keep their families where they were; that it would require much trouble to get there, &c.

From the report of General Thompson, as well as from the tenor of his interviews with the Indians, it was obvious that the Seminoles were divided on the subject of a removal; that a portion were willing to remove, and another portion indisposed to go.

On the 24th of November, immediately after the receipt of these despatches, General Thompson was informed by the Secretary of War, by direction of the President, that the demands of the Indians to be permitted to remain could not be submitted to; and the letter thus continues:

"Every consideration of good faith and expediency with respect to themselves, and the just and humane policy on the part of the United States, require their removal, in conformity with the stipulations of the treaty. I have no doubt that you are right, and that the sentiments disclosed by the Indians are those of interested advisers, and not their own. They have stipulated to remove west. They have ceded their country in Florida, and it will soon be sold and occupied by our citizens. Part of the appropriations for fulfilling the treaty has been made, and others will be asked for as fast as required.* It is nothing less than insanity, or an utter ignorance of their own position, which can induce them, under these circumstances, to expect to remain. To comply with their wishes, or, rather, what is represented as their wishes, would be utter ruin to them." General Thompson was also informed that orders had been given for an increase of the military force in the vicinity of these Indians; and he was instructed to communicate freely with General Clinch, who was directed to take the command. He was also informed that their annuities would be withheld until they complied with the treaty.

At the same time a talk from the President to these Indians was sent to General Thompson, in which the views of the President were fully communicated to them, and they were distinctly told that they had ceded their lands in Florida and had agreed to go west, and that these stipulations must be carried into effect. "The effort to remain," said this talk, "would be destructive to you, and the President will not listen to such a proposition."

On the 28th of December General Thompson communicated to the department the result of his interview with the chiefs, when he informed them of the views of the government, and the determination that they must adhere to their treaty and remove. After much discussion upon the subject, General Thompson states, "the result was, that we closed with the utmost good feelings, and I have never seen Powell or the other chiefs so cheerful and in so fine a humor to close the discussion on the subject of their removal."

On the 27th of January, 1835, General Thompson reported that he considered the force stationed in and on the border of the Seminoles not large enough to effect the object for which it was intended. He also stated that a large portion of the Indians were opposed to removal, and he had no doubt that they had been tampered with by designing persons, until some projects of speculation, or some fraudulent claims for slaves, could be successfully prosecuted. The military means, as will appear from the accompanying report of the adjutant general, were immediately provided, agreeably to the suggestion of General Thompson, to one made by General Clinch about the same time. At this time, and subsequently, the agents of the government were employed in endeavoring to persuade the Indians to remove, and in making such arrangements as were necessary.

In two letters from General Clinch, of March 19 and April 1, and in one from General Thompson, of March 31, the then state of affairs of the Seminoles was fully communicated. They reported that they found, in their interviews with the Indians, that the President's talk had produced a favorable effect; but that the Indians were desirous of being allowed a short time, with a view to determine upon the measures they would adopt. These letters, copies of which are transmitted, show the views of those officers. General Clinch suggested, among other things, that perhaps it would be better to let them remain until next spring, provided that they would consent to remove peaceably and quietly on the first day of March next. Many are inclined to this plan, and I believe the whole nation will readily come into the measure. It is impossible not to feel a deep interest, and much sympathy, for this people; but, at the same time, every humane and benevolent man, at all acquainted with their character, must acknowledge that the mild and benevolent course adopted by government is the only one to save them from destruction.

In answer, to the views presented by Generals Thompson and Clinch, they were informed by the Secretary of War, on the 14th April, that the subject had been submitted to the President, and that the views of General Clinch were deemed equally judicious and humane. He was told that there was not the "slightest wish to oppress the unhappy Seminoles, who had stipulated for their own removal; but their continuance where they now are for any length of time is absolutely impossible, and the sooner they are satisfied of this fact the better it will be for them. Still, however, I should much prefer a voluntary and peaceful removal to one effected by force. It would only be in the last resort that the government would be willing to compel them to comply with their own engagements; and it would be better to suffer a temporary inconvenience, if thereby their feeling could be quieted, than to require them to be removed without their own consent. The matter, therefore, is referred entirely to your discretion and to that of General Thompson. If they should all be willing to go this year, it would certainly be better to remove them; but if they are opposed to this, and will generally agree quietly to remove by the first of March, or as soon thereafter as the necessary arrangements can be made, then they may be suffered to remain until that time; but, in that case, let a written agreement be drawn up, stating the reason of the delay, their readiness to remove by that time, and to go in a body, by such route as you and General Thompson may think best for them and the most economical for the government; and let this agreement be signed in open council by all their influential men. It is my decided opinion that they had better go by water, and every proper inducement should be held out to them to assent to that measure. Still, however, if their repugnance should prove to be invincible, that point may be yielded to them.

"Should the Seminoles, however, peremptorily decline to pledge themselves peaceably to remove next season, you will then proceed to carry into effect the instructions heretofore given."

Before the receipt, however, of the above letter, viz: on the 24th April, an arrangement was made

* The appropriations provided were for the purpose of procuring certain articles promised in the treaty to the Indians.

with the Indians by Generals Clinch and Thompson and the disbursing agent, by which the validity of the treaty of Payne's Landing was recognized, and the Indians agreed to carry into effect its provisions. In consequence of this, instead of removing a part of them at that time, they were allowed until the succeeding winter to make their preparation, when they all agreed to go together, and it was understood they would be removed about the 15th of January.

It will be remarked that, by the treaty of Payne's Landing, the Seminoles were to be allowed three years for their removal; and as the delay in the examination of the country west of the Mississippi, and the consequent ratification of the treaty, could not be imputable to them as a fault, they were entitled, by every fair construction, to three years from the ratification; consequently, therefore, the only delay which this arrangement occasioned was the non-removal of a portion of their people at that time, and its postponement to the next season of operations. The advantages which there was a reason to expect from it were, that the Indians would be quieted, and voluntarily go, and that they would all be removed in two years instead of three.

The reasons given for this measure by the officers who proposed it were very satisfactory to the President. These were, the duty of yielding something to the situation of the friendly chiefs who advocated the measures of the government; the lateness of the season, which would have brought the operations into the heat of summer, and exposed the emigrants to the dangers of the cholera and other malignant disorders which had afflicted some of the other emigrating parties; the injury which would have been sustained by their leaving their own country with the crops in the ground, without any means of disposing of them; and of their arrival at their place of residence in the west at a bad time to prepare their arrangements for their future subsistence; and also the natural desire that the whole tribe, if possible, should go together. The agreement of the chiefs is herewith transmitted.

On the 20th of May the approval of the President was conveyed, by the Acting Secretary of War, to Generals Clinch and Thompson and Lieutenant Harris, on the subject of the arrangement made by them for the continuance of a part of the Seminoles, and their entire removal next season. In that letter the approval, also, of the President was conveyed, of the declaration of General Clinch to the Seminoles, that if they declined to move voluntarily, they would be removed by force. This letter continues: "The President approves of this declaration upon a full consideration of the circumstances under which it was made. The Seminoles had trifled sufficiently long with the most solemn treaty obligations, to which they had, in the first instance, acceded with a full understanding of their character, and the consequences, which they had, during three years, full opportunity to perceive and appreciate. It is apparent from your report that further argument and persuasion would have been fruitless. The government was therefore bound, by the treaty of 1832, to secure the well-being of the Indians and the prosperity of the Territory, from which they had agreed to emigrate."

General Thompson, in a letter of the 3d June, reported that Powell, one of the most influential chiefs of the Seminoles, had behaved so badly in his office that he was put in irons and confined. On the next day, however, he signified his regret, and his willingness to sign the agreement and emigrate. To test his sincerity he was released, and had five days given to him, while at liberty, during which he could come forward to affix his name to the instrument the others had signed. "True to his professions," says the agent, "he this day appeared with seventy-nine of his people, men, women, and children, including some who had joined him since his conversion, and redeemed his promise. He told me many of his friends were out hunting, whom he could and would bring over on their return. I have now no doubt of his sincerity, and as little that the greatest difficulty is surmounted."

During the summer only two incidents occurred to interrupt the harmony, which was the result of the arrangement of the preceding April. These were similar in their character to those feuds which so often prevail upon the borders, and afforded no reason to anticipate hostilities. In one case, the accused Indians were surrendered by the chiefs, but were eventually discharged because, as stated by the agent, the proper civil authorities would not receive them. In the other case, it appears by the report of General Clinch that a murder was committed by the Indians as an act of revenge; and that they stated "that, having accomplished the purpose of revenge by the murder of a white man, they were satisfied." General Clinch further remarked that "measures have been taken at Fort King, by the officers and chiefs conjointly, to apprehend the murderers, and I have no doubt they are secured." It is not, however, known at this department that these persons have yet been actually apprehended.

In other respects, the affairs with the Indians remain undisturbed; the agents of the government and the Indians anticipating removal during the succeeding winter.

On the 3d of August, in a letter received on the 26th of that month, Lieutenant Harris, the disbursing agent, reported that the prospects of emigration were promising. The views of General Thompson and of Lieutenant Harris were subsequently submitted to the department, respecting a plan of operations for the removal of these Indians, and the necessary arrangements for carrying into full effect the measures of removal were approved, and continued to be in the process of fulfilment by the agent until the commencement of hostilities.

In a letter from Lieutenant Harris, the disbursing agent, of September 29, 1835, he states: "I consider the population," speaking of the Indians under treaty stipulations to remove, "including negroes, not to exceed three thousand, of which, I should suppose, sixteen hundred are females."

The first intimation of any act having a decided appearance to commit hostilities was conveyed in a letter from General Thompson, dated November 30, and received at the department the 23d of December, in which he states that from four to five hundred of the Seminoles friendly to emigration, and five of their chiefs, had fled to Tampa Bay for protection; that one of the most intelligent and active chiefs had been murdered by those opposed to their removal, and it was his impression that this act would operate seriously upon the emigration, and that force would have to be resorted to. No reason is given for this murder, but it is probable, from subsequent events, that it was the commencement of a series of hostile efforts, which the party opposed to emigration was determined to make. Seven days subsequently General Thompson reported that many of the Indians had disappeared from their usual places of residence immediately after this murder. General Thompson concludes his information by stating that he then considers the Indians in a decided state of hostility. This letter was received on the 30th of December.

Having traced the affair to the first official annunciation of hostilities, it is not necessary, in obeying the call, to pursue it further. It is proper, however, to remark that information of this murder of the friendly chief, and of the unfriendly intention of the Indians, were conveyed in a letter from General Clinch, of December 1, and received likewise on the 16th of December.

Copies of the letters herein referred to, and necessary to an understanding of the causes which have led to the present difficulties in Florida, are herewith transmitted.

It is obvious, on a recapitulation of the whole subject, that a portion of the Seminoles, after the conclusion of the treaty at Payne's Landing, were indisposed to comply with the stipulations and to remove west of the Mississippi; and to this indisposition is to be traced the origin of the hostilities which are now carrying on in Florida.

WAR DEPARTMENT, *February 9, 1836.*

I have examined the papers on file relating to the causes of the present hostilities with the Seminoles, and the above abstracts, together with copies of letters accompanying them, seem to me to furnish all the material information necessary to a knowledge of those causes.

C. A. HARRIS, *Chief Clerk War Department.*
