As Governor Call has been allowed, upon his suggestion, to conduct an expedition against the Indians during the summer, it would not be proper for this department to carry into effect any arrangements looking to a campaign in the fall until it is ascertained that the state of things will require that measure. The whole matter has, therefore, been committed to Governor Call, with full authority to make such preparations as may be necessary for a vigorous prosecution of operations against the Indians in the autumn the moment he finds that such a course will be required.

I shall state to the proper committee the difficulties that are now experienced in the enlistment of men, in the hope that some arrangements will be adopted to obviate them.

Very respectfully, &c.,

LEWIS CASS.

Major General Scott, *Columbus, Georgia.*

No. 228.

HEADQUARTERS, *mouh of the Cowagee, South Alabama Brigade, June 25, 1836.*

SIR: I received your communication, dated Roanoke, June 25, 1836, in which you express some doubts as to the position I hold in the service. In answer, I have to inform you that I was ordered into service by the governor of Alabama, and blank rolls furnished by his excellency to have the troops enrolled into

the service of the United States; which rolls have been filled agreeably to orders. I was instructed at the same time to obey the orders of Major General Patterson or General Jesup, and that General Winfield Scott would give general direction to the war. I have received orders from both Generals Patterson and Jesup, with discretionary power; all of which I have endeavored to comply with. A return of strength and condition has been made to the governor, to General Patterson, and General Jesup. I was furnished with arms, to a certain extent, from the arsenal at Mount Vernon, Alabama. The strength of my command at this time is about 1,300 privates, of which 600 are mounted infantry. Since my arrival at Irwinton I have occupied a point, with a detachment, on the frontier of Pike county; a detachment at Irwinton; with the main body of my force I have occupied different positions, viz: Irwinton; Cowaggee fort, 12 miles from the river; Fort Barbour, 15 miles from Irwinton; and have visited High Log town; burnt sixty or seventy houses at that place; passed over the south, middle, and north branches of the Cowaggee; encamped twenty-four hours on the Hatchychubby—there was sign of the Indians having made a precipitate retreat from their houses. I am now at the mouth of the Cowaggee, and have just learned from a party of my scouts that a part of your army is at present in position on the upper side of the creek, about two miles distant. I send this letter to the commanding officer of the detachment, with a request that he will forward it immediately to you. I will again remark that I have visited High Log town, burnt the houses, and scoured the creek (Hatchychubby) for eight or ten miles up and down; crossed all the branches of the Cowaggee, and entered their forks. Few Indians were seen. My advance guard fired upon some on the north prong of the Cowaggee. A detachment of my troops arrested and made prisoners of 300 Eufaula Indians, 200 of whom were warriors, and 5 chiefs—Elky-hago, Hartismicco, Tustinuggee-hago, &c. Among them were the two Indians who were identified as the murderers of the Watsons, in Pike county. These Indians were delivered over to Walker, by the order of General Jesup. I think it would be nothing but right that the Indians thus identified should be delivered up to the civil authorities of Pike county.

Your most obedient servant,

JOHN W. MOORE, *Brig. Gen., Com'g Alabama Volunteers.*

Major General WINFIELD SCOTT, *Commanding Army of the South.*

---

No. 229.

ORDERS No. 8.

HEADQUARTERS ARMY OF THE SOUTH, *Columbus, Georgia, June 16, 1836.*

All the troops of the Georgia line will hold themselves in readiness to take the field the moment the arms and ammunition, now daily expected, shall arrive.

As an indispensable preparation, every mounted officer of every rank, and every mounted man, will immediately provide himself with a wallet capable of carrying three days' supply of corn for his horse. Commanding officers will see that this preparation be made at once.

Haversacks are provided for all the volunteers and drafted men, whether mounted or on foot. To obtain them, requisitions will be made on the United States quartermaster at this place. Each man will be careful to mark his wallet and haversack with his name as soon as they come into his hands.

The baggage of officers and companies at the commencement of the first march must be reduced to the smallest amount. All heavy and superfluous articles will be left behind. Troops, to pursue an enemy with success, must move lightly; no company, therefore, can be allowed to take into the enemy's country more than four tents for officers and men. Commanders of every rank will look strictly to the due execution of this order, or the army will be rendered utterly incapable of active movements by the overwhelming weight of its baggage train.

Light camp-kettles and mess pans have been provided for the troops. Cast-iron ovens, skillets, and the like, are too heavy to be allowed to go into the wagons, which are principally to be loaded with ammunition and subsistence for men.

WINFIELD SCOTT.

---

No. 230.

ORDERS No. 11.

HEADQUARTERS ARMY OF THE SOUTH, *Columbus, Georgia June 20, 1836.*

Major General Sanford will, as fast as he can arm and equip the troops of his division, put them in march by detachments on this side of the Chattahoochee for Roanoke, and a point below, which will be given in time. All the regular troops which have already arrived, and which are daily expected, including the United States marines, will take the same route without delay.

The quartermaster will furnish the necessary land transportation for those several detachments, including three days' subsistence in wagons. Besides this provision, every man will commence the march with two days' rations in his haversack; and every mounted officer and mounted man will take corn in his wallet sufficient for his horse for two days.

Major General Sanford will, as soon as practicable, designate two companies, in addition to the three now in Columbus, to be left for the defence of this city; and he will designate one other company to proceed to Fort Mitchell as a part of the garrison of that place. These companies will all be infantry, and not mounted men. They probably will not long be left stationary, but, if practicable, shall have an opportunity of participating in the events of the field.

WINFIELD SCOTT.

## No. 231.

## ORDERS No. 13.

HEADQUARTERS ARMY OF THE SOUTH, *Columbus, Georgia, June 20, 1836.*

Colonel A. H. Kenan, one of the aides of his excellency the governor of Georgia, has been appointed the volunteer aide-de-camp of the major general commanding this army. The regular aides of the latter are Lieutenant T. J. Lee, of the United States 4th artillery, and Lieutenant W. H. Betts, of the United States 1st artillery.

Major Ansart, of the United States 3d artillery, is appointed to act as inspector general.

Any orders, whether oral or in writing, which may be communicated by either of those officers in the name or by the authority of the commanding general, will be obeyed as if they were given by him in person or under his own signature.

Dr. Lawson, the senior surgeon of the United States army, is appointed *medical director* to this army. He will have the general control over all hospitals, and the distribution of duty among the surgeons, assistant surgeons, and surgeons' mates of this army, as well as the distribution among the medical officers of medicines and hospital stores.

WINFIELD SCOTT.

## No. 232.

## ORDERS No. 15.

HEADQUARTERS ARMY OF THE SOUTH, *Columbus, Georgia, June 21, 1836.*

Major General Scott has received with great satisfaction a report of the zeal, gallantry, and general good conduct of the Alabama troops in their march through the enemy's country upon the waters of the Hatchychubby, under the able command of Major General Jesup.

Major General Jesup will march his forces by the best practicable route down to the country to a point a little below the enemy, where, in a very few days, he will come into line with the Georgia volunteers and a brigade of regular troops. This brigade is destined to constitute a part of his command.

On the union of the forces mentioned, the whole will move up the country in concert against the enemy, when it is confidently hoped that no feeling other than a generous rivalry will be entertained by the forces of the different States, or between those of a State and the troops of the United States. The whole will be engaged in a common cause against a common enemy, whom all must be equally desirous to punish and to crush for the innumerable atrocities which that enemy has committed.

WINFIELD SCOTT.

## No. 233.

## ORDERS No. 17.

HEADQUARTERS ARMY OF THE SOUTH, *Columbus, Georgia, June 22, 1836.*

On the arrival of the wagon train from Hawkinsville, Major Alford's battalion of mounted volunteers will receive the number of rifles with flasks necessary to arm it.

The remainder of the rifles, with their flasks, &c., together with thirteen hundred musket accoutrements, two hundred camp-kettles, a hospital tent, four wall tents with poles and pins, five thousand rifle flints, twelve thousand musket flints, — kegs of rifle powder, and all the muskets cartridges that can be furnished by the ordnance officer here, will be put on board the steamboat Reindeer, and instantly despatched to overtake the army at or near Roanoke.

There will be likewise shipped on board the same boat, which will take two of the new flats in tow, one ferry-rope, and as much corn and other essential supplies as will complete her load. The remainder of the corn collected here will be shipped in other boats and sent to the same destination.

The unarmed troops stationed on the river above will be armed out of the next supply of muskets and rifles which may arrive at this place. The muskets will be accompanied by accoutrements, and a suitable number of cartridges.

By order of Major General Scott.

THOMAS J. LEE, *Lieutenant and Aide-de-camp.*

## No. 234.

## ORDERS No. 27.

HEADQUARTERS ARMY OF THE SOUTH, *Columbus, Georgia, July 6, 1836.*

Under orders already given, Major Erving's battalion of the United States artillery will take up a good position (with reference to health, wood, and water) at or near Adams's or Elliot's stand, about twelve miles from Columbus, and the battalion of United States artillery under the command of Major Whiting will occupy a position at or near McClellan's or Caswell's, about fourteen miles from Tuskegee.

The objects of these positions are to open and hold secure the communication by mail on the great post road from Columbus to the west.

Both battalions will remain under the command of Lieutenant Colonel Brooks, and each will daily send out patrols to the distance of some miles, both ways, on the post road. They will take subsistence with them as follows: Major Erving's battalion for eight and Major Whiting's for ten days.

Captain Garmany's company of mounted volunteers will march by the great post road from Columbus for Tuskegee on the 8th instant. Each man will take on his horse subsistence and corn for three days. On his return march from Tuskegee he will find similar supplies at McClellan's to last his company back to Columbus, and which supplies will be sent in advance by the United States quartermaster and commissary at this place. The same company will repeat the same tour, after resting two days at Columbus, taking care to report, in going and returning, everything they may observe at all interesting to the service to the commanders at the two ends of the route and at the two intermediate posts.

By order of Major General Scott.

A. H. KENAN, *Colonel and Aide-de-camp.*

No. 235.

ORDERS No. 23.

HEADQUARTERS ARMY OF THE SOUTH, *Columbus, Georgia, July 6, 1836.*

The second regiment of Georgia foot volunteers, under Colonel Williamson, will be immediately mustered for an honorable discharge from the service of the United States, by the acting inspector general of the army, Major Ansart. The companies will be paid off in succession, as fast as mustered, or as fast as practicable, by Paymaster Major Randall. The officers of every grade will lend such assistance in writing to Majors Ansart and Randall as will facilitate the discharge and payment.

The commanding general hopes to be able, in a few days, to discharge the other regiments of volunteer infantry of the Georgia line, and, at a period a little later, to begin the discharge of the mounted troops. But he can give no pledge to that effect, and he is sure that no patriotic Georgian will murmur at any little delay which may be dictated by the high considerations of public safety and public good.

Paymaster Major Muhlenberg will report himself to Major General Jesup for duty in the pay department.

Colonel Williamson's regiment will, upon being discharged, turn over to the United States quartermaster, and the United States ordnance officer, all the public property in its possession.

By order of Major General Scott.

FELIX ANSART, *Acting Inspector General.*

No. 236.

HEADQUARTERS ARMY OF THE SOUTH, *Fort Mitchell, June 24, 1836.*

SIR: I left Columbus yesterday with a small escort, (forty mounted men,) now eight miles below, which I shall overtake this morning, and proceed rapidly to the point of crossing the Georgia line, and some regulars who have preceded me two or three days, to this side of the river. I had arranged a meeting with Major General Jesup, who has been three days at the ferry, a mile and a half from this fort, but missed the turn-off road, and had got five miles below, when I received despatches of importance; turned back, met him, and was induced to come here for the night. Copies of the letters contained in that despatch will be found enclosed.

General Jesup and many of the officers with him consider the war as mainly over. They estimate that there only remain out some one hundred and fifty decidedly hostile warriors, under the noted and atrocious leader Jim Henry, besides the party of Neomico, who have for some time stood fast in their camp, in a state of doubtful inactivity or neutrality. They will probably in a short time unconditionally surrender themselves. They are nearer to Tuskegee than to the Chattahoochee.

The numbers of the hostile parties yet to be compelled to surrender or to be beaten are, however, differently estimated by others. Captain Page, and some other well-informed persons in Indian affairs in this quarter, think that there may yet be outstanding as many as one thousand hostile warriors. As the number, whose hostility was well known a few weeks ago, was certainly as great as two thousand five hundred, if not three thousand, and as not more than eight hundred or nine hundred are known to have surrendered themselves here and at Tuskegee, (not reckoning the principal part of Neomico's band mentioned above, and which may amount to six hundred or seven hundred,) there must be remaining about one thousand who are yet to come in or to be subdued. Of the three hundred and ten who, the day before yesterday, voluntarily gave themselves up to Major General Patterson and Colonel Hogan, both of this State, at the two camps some twenty-odd miles southeast of this place, and who were yesterday put under a strong escort of Alabamians and friendly Indians, to be brought here, it is thought that not less than eighty escaped on the way. At the time of surrender, there were about that number of warriors more than there were arms. It is now believed by Major General Jesup and others that these warriors concealed their arms before the surrender; and their object in coming in was to get information and then to escape. It is admitted by the prisoners themselves that, before coming in, they sold or gave to the hostile parties still out all their powder and lead. These hostile parties, whatever their numbers, are admitted to be among the most desperate of the nation. They are known to be now between the Hatchy-chubby and Cowaggee creeks; principally on the waters and in the swamps of the latter. They still cherish the hope of escaping to Florida, and must give us a great deal of trouble to capture, if they do not voluntarily come in. I think, with the measures already adopted and in contemplation for guarding the river, it will be impossible for them to escape to Florida.

The Georgia line and two battalions of regulars, already below, will still be crossed, as I have heretofore contemplated, below the Cowaggee—that is, below the enemy, to scour the country upwards,

whilst General Jesup moves with his forces in the opposite direction. No time will be lost in putting this combined movement in execution. The flats for crossing the river will pass down to-day.

I am only restrained, since recent events, from discharging a part of the Georgia line—say six or seven companies of horse, left at Columbus, without arms—from the fear of giving offence to brave and patriotic men who have come a great distance to seek an opportunity of distinction. They, moreover, may be useful in guarding the left bank of the river whilst operations are going on on the right; and if the corn expected daily from New Orleans should arrive not sweated, I shall have no difficulty in feeding horses. On this point I shall be better able to decide in a day or two, and after consulting his excellency Governor Schley, still at Columbus, whose judgment and dispositions are worthy of all respect.

General Jesup has received, through Major Brandt, at Montgomery, news of the approach of a body of Tennessee horse, but he does not know precisely by what route. I shall desire the general to write to the commander of the Tennesseans, through Major Brandt, who may have received later and more precise information of the position of those troops. I would prefer to stop them; but if they are near us, measures must be taken for their reception and subsistence.

I remain, with high respect, your most obedient servant,

WINFIELD SCOTT.

Brigadier General JONES, *Adjutant General United States Army.*

P. S.—The movements of Major General Jesup, the strong guards placed on the river below, rendering an escape towards Florida hopeless, and the large assemblage of troops all around the Creek country, showing that their early subjugation was inevitable, has caused the early surrender of the hostile parties who have come in. Besides those who gave themselves up to the Alabamians and friendly Indians, between fifty and seventy came into this place previously without an escort. The number of warriors who are now in confinement here is a little more than three hundred. There are a greater number of their women and children. I cannot get an exact return of their numbers, ages, and sexes.

W. S.

No. 237.

HEADQUARTERS, *Fort Mitchell, June 23, 1836.*

SIR: I have the honor to enclose copies of reports from Major General Patterson and Captain Parrott, by which you will observe that little remains to be done. Jim Henry is still out, with about one hundred and fifty warriors; but my Indian warriors, who have halted and await my orders at the Big Spring, say they can take him. I have just received information that a Seminole chief, with a number of his warriors, is with Henry. The information comes from a negro taken last night.

I have the honor to be, general, your obedient servant,

THOMAS S. JESUP, *Major General, Commanding.*

Major General SCOTT, *Commanding Southern Army on the march.*

No. 238.

CAMP NEAR HATCHYCHUBBY, *June 22, 1836.*

SIR: I have the pleasure to inform you that the hostile Indians, with the exception of a part of the Hitchitees and a small party of the Uchees, under Jim Henry, have all come into camp and surrendered themselves unconditionally as prisoners. Their number, including women and children, is about eight hundred to one thousand. It is stated by the prisoners that the Hitchitees have gone to Fort Mitchell, for which place I shall march with my command, together with the prisoners, on to-morrow morning.

B. PATTERSON, *Major General, Commanding.*

Major General JESUP, *Fort Mitchell.*

No. 239.

HEADQUARTERS SECOND ARMY CORPS OF THE SOUTHERN ARMY,  
*Camp on the Hatchychubby, June 22, 1836.*

GENERAL: Soon after your departure yesterday the prisoners whom you had despatched the day before to the hostile camps returned. They brought with them a few of the hostile party, and their object appeared to be to understand fully the terms on which the hostile Indians generally would be received. General Patterson repeated to them what had been said by yourself—that they must surrender their arms and submit unconditionally, and that justice should be dealt out to them. Those who came in yesterday represented the Uchee, Hitchitee, and Chehaw towns. They stated the Uchee warriors to be 200, and the Chehaw and Hitchitee 60 each, making 320 in all, and that these composed the great body of the hostile Indians.

To day nearly all of the Uchees have come in, as well as some of the Hitchitees, and many of the Chehaws. The Uchees are the most numerous and warlike of the enemy. We have reports that several of the hostiles have gone to Echa Hadge camp and Fort Mitchell, rather than surrender here. Two have been captured to-day by Opoth Yoholo's Indians, and sent to this camp. General Patterson will march from Fort Mitchell very early in the morning.

There are a great many Indian women and children and many negroes in camp, who have come in with the hostile Indians. It is expected here, from a hasty examination, that two hundred and fifty Uchees

and fifty-four Hitchitees and Chehaws, capable of bearing arms, have surrendered. These are the numbers—very nearly several hundred women and children and about sixty negroes have accompanied them. The best informed in camp consider this a finishing to the war.

With great respect, your obedient servant,

R. P. PARROTT, *Captain and Acting Adjutant General.*

Major General JESUP, *Commanding, &c.*

No. 240.

HEADQUARTERS, *Fort Mitchell, June 25, 1836.*

Sir: In obedience to your instructions and the command of the President, I departed from Washington for this frontier on the 22d of May, to take command of the army and the direction of the operations against the Creek Indians. At Augusta, Georgia, I found Major General Scott, on his way to the same point and for the same purpose. We proceeded in company to Columbus, Georgia, where Major General Scott established his headquarters and assumed the command of the army. He ordered me to proceed to the western frontier of the Creek country and assume the command of the troops assembling in Alabama. The communication between Columbus and Tuskegee being in the possession of the enemy, and commanded by one of his hostile camps, an escort was required to accompany me through.

On the 4th instant I set out, accompanied by about one hundred and twenty mounted men, and dashed directly through the hostile country, passing within three miles of Neah Mico's camp, where there were several hundred warriors assembled. I arrived at Tuskegee on the evening of the 5th instant, where I found Major General Patterson, of the Alabama militia, in command of about seven hundred volunteers and militia. On the 7th I departed for Montgomery, to confer with his excellency Governor Clay. I was so fortunate as to meet the governor at Line creek, and returned with him on the 8th. On the 9th I assumed the command of the frontier. At this time a general panic pervaded the whole country; the Indians were plundering, murdering, and burning in all directions, and there seemed to me to be great danger of several of the frontier counties breaking up entirely unless some decisive movements were made. I determined to move forward to the vicinity of Neah Mico's camp, to hold it in check, to cover the frontier of Pike county, and to obtain a supply of corn for the horses of the mounted men. Major General Patterson had but about seven hundred and twenty men disposable, after furnishing a sufficient garrison to protect the depot and the inhabitants at Tuskegee; but I had previously held councils with the Indian chiefs Opoth Yoholo, Jim Boy, Tucabatchee Hadjo, and others, whom I understood to be favorable to our cause, and had authorized Captain William Walker, formerly an officer of the army, and General Woodward, of Tuskegee, and Colonel John B. Hogan, inspector general of the Alabama volunteers, to raise and bring into service from one to two thousand Indian warriors. I advanced into the Indian country on the 12th, and proceeded about five miles. On the 13th I advanced to Stone's, on the old Federal road, and on the 14th to Long's, the Indian chiefs Jim Boy and Tucabatchee Hadjo having joined, during the march, with about four hundred and fifty Indian warriors. Not finding a supply of corn at Long's, as I had been induced to believe I should, I determined to proceed direct to Irwinton, the point indicated by General Scott as that whence operations should commence. I moved forward on the 15th to the Big Spring, and being then among the hostile Indians, expected an attack during the march; but the conduct and countenance of both volunteers and Indian warriors were such as to give me no apprehension of the result should the enemy venture to dispute the ground. About one o'clock the advance of the army, under General Woodward, succeeded in capturing Enea Mathla, the principal and most determined of the hostile chiefs. I encamped at the Big Spring, and having received information there that the camp of Enea Mathla was directly on our route, the next day was spent at the Spring, waiting the arrival of five companies of mounted men then on their march and reported to be near.

On the morning of the 17th I moved forward (the five companies not having come up) and encamped on the waters of the Hatchychubby, on the Irwinton road, about eight or nine miles from Enea Mathla's camp. Here the Indian chief Opoth Yoholo joined me, with eleven hundred and fifty warriors. On the evening of this day I received a despatch from General Scott censuring me for my movement and directing me to stop all offensive movements. In the situation in which I then found myself, to comply with those instructions would have been fatal. I had fifteen hundred friendly warriors, who, had I halted, would have become dissatisfied, would have lost all confidence in me, and would have left me. The volunteers were animated by the most admirable spirit. To have checked them at that moment would have been productive of the greatest disappointment, and would have depressed their *morale*, if it had not elevated that of the enemy. As General Scott was necessarily unacquainted with the circumstances under which I was placed, I felt it to be my duty to disregard the order to "*stop all offensive movements.*" I accordingly put the army in motion on the morning of the 18th, my force being increased to twenty-three hundred men, including the Indian warriors, and advanced to the ford of the Hatchychubby; the enemy fled before me, and in the afternoon I took possession of Enea Mathla's camp, and obtained there and in the vicinity a small supply of corn and about a hundred head of cattle. Whilst in the enemy's camp I received a second peremptory order from General Scott to halt and "encamp" my "forces somewhere in the neighborhood of Fort Mitchell until further orders." My dispositions at the time I received General Scott's order were such that I could not have failed to bring the enemy to action in twenty-four hours, and victory was certain. I, however, did not feel myself at liberty to disobey the second order, but directed Major General Patterson to encamp the troops and assume the command of them, and I proceeded to Fort Mitchell to confer with General Scott, and to obtain his sanction to the prosecution of the operations which I had commenced. He had returned to Columbus before I arrived at Fort Mitchell, and I was compelled to go to camp without having had an interview with him.

On my return to camp I found that General Patterson, with the mounted men of his division, had made an excursion down the north side of the Hatchychubby, and the Indian warriors had been thrown below, to scour the country on the south side. The latter succeeded in capturing several Indians, among them a principal chief. By the advice of the friendly chiefs, I sent out messengers on the morning of the 20th to advise the hostile Indians to surrender. On the 21st, before they returned, I left the army, and came to this place to see General Scott, and become acquainted with his future plans. On the 22d the

messengers returned to camp, and upwards of three hundred warriors and five hundred and fifty women and children surrendered prisoners, and were sent hither by General Patterson on the 23d, accompanied by six companies of mounted men. I ordered General Patterson to this post with the troops of his division, and the Indian warriors under Jim Boy, where he arrived on the evening of the 24th, Opoth Yoholo with his warriors having been previously ordered to the Big Spring. On the 24th, having received information that one of the hostile chiefs was between the mouth of the Uchee creek and Hatchychubby, below this post, determined to make a reconnoissance of the country in that direction. Accordingly I proceeded with six companies of mounted men, and about sixty Indian warriors under Jim Boy. I scoured the country for many miles, and a part of my force fell in with a party of the enemy, and captured upwards of thirty warriors, which, with the women and children taken at the same time, amounted to one hundred and thirteen.

I consider the war at an end. My operations have broken the power of the hostile chiefs, dissolved their formidable confederacy, and given entire security to the country. The hostile Indians that have not surrendered are wandering without concert or object, and I believe only wait a favorable opportunity to come in.

I have been severely censured by General Scott for my movements, but I feel that I have done my duty to the best of my abilities; to have acted otherwise would have doubled the Indian force against us, and have caused the destruction of the fairest portion of Alabama.

To disregard the positive order of a military superior is, I am aware, a high military offence; but in the circumstances in which I found myself surrounded, the best interests of my country required of me prompt and decisive action. I have acted on my own responsibility, and am willing to meet the consequences; and whatsoever of censure may be cast upon me, I never can regret what I have done. I desire that this communication be laid before the President, that my motives as well as my acts may be understood by him; and I beg you to assure him that whatever his decision in my case may be, I shall be satisfied. I would infinitely prefer to lose my commission for what I have done, than to receive the highest honors of the country, had I remained inactive, and permitted the country around me to have been devastated.

To Major General Patterson, and the officers and soldiers of his division, I feel deeply indebted for their kindness, liberality, and good conduct. Every individual performed his duty with promptness and energy; and I have never served with any body of men in whom I had greater confidence, or who, I am persuaded, would have given a better account of the enemy had he ventured to meet us in battle.

To my acting adjutant general, Captain Parrott, and my acting quartermaster, Lieutenant Chambers, as well as to my aide-de-camp, Captain Lane, and my volunteer aids, Colonel Goldthwait and Major Baykin, I am under the greatest obligations for the promptness and ability with which they have discharged their respective duties, and the good temper and prudence which they have on all occasions displayed in their intercourse with the troops.

To the able arrangements of Governor Clay, made before my arrival, and to the energy and talent of Major General Patterson, and the gentlemen of his staff, much of the success which has attended my operations, it is but justice to say, is due.

To Colonel Hogan, General Woodward, and Captain Walker, who commanded the Indian warriors, as well as to the chiefs Opoth Yoholo, Tucabatchee Mico, Jim Boy, and Tucabatchee Hadjo, I am under great obligations; they all deserve the notice of the government.

The censures passed upon me by General Scott have, I understand from him, been recalled, and his letters to the War Department withdrawn; had this not been done my personal feelings should not have influenced my public conduct. Having no object in view but the public good, I should have co-operated with him, as I shall now co-operate most heartily in the consummation of all his plans. But if a single doubt remains on the mind of the President, or on your mind, as to the entire propriety and necessity of my course, I owe to myself as well as my children, to ask for an immediate investigation.

I have the honor to be, with high consideration and respect, your obedient servant,

T. S. JESUP, *Major General.*

Hon. LEWIS CASS, *Secretary of War, Washington City.*

---

No. 241.

HEADQUARTERS ARMY OF THE SOUTH, *Camp Sanford, opposite to Roanoke, June 26, 1836.*

SIR: I have received your two letters of the 24th and 25th instant, and write by the return express who brought me the letters.

I think with you it is time to seize Neo Mico and to disarm his party, and I also highly approve of your proposition to establish stockades on the post road between Columbus and Tuskegee for the deposit of subsistence for men and horses. I shall give instructions henceforth for the next boat that may ascend the river to leave some rations and corn at this place, and to deposit one half of the remainder at Bryant's Landing, (Colonel Henderson's post,) and the other at Fort Mitchell, provided that the boat can ascend so high, or a boat of a smaller draught of water should offer for transhipment.

I think it desirable, under any circumstances, that a part of the Alabamians should be retained, say a detachment of mounted men, to escort, in conjunction with a portion of the regulars, the Indian prisoners as far as the dense settlements of Alabama, whence the Indians may be escorted to the Mississippi or Montgomery for embarkation by the regulars alone. The remainder of the Alabamians you may honorably discharge (and their good conduct deserves it) as soon as you may deem it prudent to do so, retaining the friendly Indians as auxiliaries. But the information received in this vicinity, and from Fort Twiggs by express to-day, represent the outstanding hostile Indians as not contemptible in number. A party of four or five hundred, including women and children, were but a few days ago between the north and middle forks of the Cowaggee creek, and to-day I learn upon good evidence that there was a considerable party opposite to Fort Twiggs yesterday.

Besides the Georgia line, which of itself is sufficient to scour this lower country and rid it of the enemy, (although his numbers were more numerous than estimated above,) I have just learned that

Brigadier General Moore, with some seven hundred or eight hundred troops, crossed the main Cowaggee creek to-day to operate north of all the branches, or between the upper and middle. This is just the direction I was about to give the Georgians and regulars who have crossed, or will cross, the Chattahoochee in the morning. I have written to General Moore requesting him earnestly (I believe that he has not been mustered into the service of the United States) to recross that creek, and to extend his forces well to the west below the south fork. I shall probably see him in the morning. If he should not comply, I shall be much thwarted, and a portion of the enemy may escape below.

I had yesterday undoubted evidence that some forty or sixty Indians, including women and children, had crossed the Chattahoochee one or two days before, three miles below Roanoke, notwithstanding the detachments posted to guard the river above and below. I immediately despatched two parties of horse in pursuit, (the trails pointed towards Florida,) and I hope to hear good news from them in a few days.

I should not have crossed into Alabama above the Cowaggee but for the certainty that I thought I had that General Moore, to whom I had written, was still at or near Irwinton. All the branches of the Cowaggee I have ascertained to be more difficult to pass and to scour than I represented to you a few days ago.

Organize emigrating parties as soon as the contractors shall be ready to take charge of them, and as soon as you can furnish the proper escorts. The two companies of regulars under Major McClintock, and the next detachment commanded by Major Dearborn, are at your disposition for that service. Before, however, sending off the prisoners, I wish you to make inquiries of his excellency Governor Schley whether there be any individuals among them who are amenable to the penal laws of Georgia. If there be any such, you will turn them over to the authorities of that State.

I remain, with great respect, your most obedient servant,

WINFIELD SCOTT.

Major General JESUP, *United States Army, Commanding, &c.*

P. S.—I wish you to stop the Tennesseans marching to take post against the hostile Creeks at some suitable place in respect to subsistence, to await further orders.

W. S.

No. 242.

HEADQUARTERS, *Fort Mitchell, June 28, 1836.*

GENERAL: Having observed in the Globe of the 20th instant an order directing all officers of the second regiment of dragoons to join their regiment for the recruiting service, I must ask the favor of you to represent to the general and the Secretary of War my extreme desire that Captain Lane be allowed to remain with me until the operations in this quarter be brought to a close. I consider the war over, if ordinary prudence and energy mark our future progress; but there is much to be done before the body of the Creeks be removed; and Captain Lane has that acquaintance with the duties in detail with which I am charged, that I could not, without great inconvenience, dispense with his services. It is the more necessary that he remain, as Captain Parrot's services are required in his own department, and he necessarily leaves me in a day or two.

I hope to hear from you on this subject by the return mail.

I have the honor to be, most respectfully, your obedient servant,

TH. S. JESUP, *Major General, Commanding.*

Brigadier General R. JONES, *Adjutant General, Washington City.*

No. 243.

HEADQUARTERS ARMY OF THE SOUTH, *Fort Mitchell, July 2, 1836.*

SIR: Since my last letter I have been down the river to organize the service as low as Irwinton, and to put the disposable force of Georgia, after nearly doubling the guards on the left bank of this river, handsomely in the field. I am now but just emerged from the creeks and swamps to the south and southwest. The Georgians moved in two columns, with three small battalions of United States artillery, under Majors Pierce, Lomax, and Erving. I retained the immediate command of one of those columns, and gave the other to Major General Sanford. The two amounted to about 1,200 men. We moved with pack-horses, the country being so deluged with rain that no wagon could accompany either column. I shall be back at Roanoke to-night, (by means of a steamboat,) where I shall receive General Sanford's report. I saw no recent trail of more than two or three Indians, which were directed towards this place or Tuskegee, no doubt for the purpose of surrender. One hostile warrior only we picked up, who declared that he was going in to give himself up.

The number of hostile warriors now here in confinement is about 480, most of them with their families. The whole number of prisoners at Tuskegee, the Alabama and friendly Indian camps west of this, Major General Jesup is unable to give me with accuracy. He thinks there might have been yesterday about 350 warriors at the three places, besides women and children, and the party of Neah Mico, (150,) whom I desired him some days ago to cause to be disarmed. This service will probably be performed to-day. I enclose a note from Major General Patterson to Major General Jesup, which shows that 100 warriors may be added to the foregoing number, including a noted leader, Jim Henry.

I received yesterday a letter from Colonel Henderson, who is engaged in erecting a shed, &c., on this side of the river, at the head of the summer navigation, for the reception of army supplies from New Orleans. It contains this paragraph: "I am led to believe that the position you directed my command to occupy has been productive of important results. The day after the expedition of our two companies and part of Captain Love's troop, 250 of the hostile Indians, men, women, &c., belonging to Jim Henry's band, surrendered to General Watson without firing a gun."

I am afraid that Colonel Henderson has written this upon an unfounded report. He does not state where those prisoners are, and General Watson has not taken them to Columbus, or we should know it here. The latter has a farm in the neighborhood of Colonel Henderson, resides in Columbus, and has written to no one at this place on the subject. The transaction, if it occurred at all, took place on the 26th ultimo.

It is now thought by the best informed that there cannot be in the Creek country more than from forty to sixty hostile warriors. Some of these have sent word that they will soon be here, and are probably only delayed by the swell in the Uchee creek, which renders it difficult to pass.

The contractors for removing the Indians west of the Mississippi having reported themselves in readiness, about 1,900, including families, will be put in march, under a suitable escort, as soon as the creeks shall have subsided. A detachment of regulars is now engaged in repairing the bridges across the two Uchees, on the old Federal road, to save time.

A few minutes after my arrival at Roanoke, fifteen miles above Irwinton, on the 25th ultimo, two Indian trails leading to Florida were reported to me—one three and a half, the other one and a half miles below me, and respectively one and two days old. Not a minute was lost in organizing two detachments of horse to give pursuit. I have a note from Colonel Beall, who commanded one of the detachments, (three companies and six friendly Indians, with subsistence for four days,) from which I am afraid he halted at Fort Gaines, and hearing that the fugitives were killing the inhabitants of Baker county, contented himself with sending 30 men to their assistance, instead of marching with his whole force, about 175 men. His note is inexplicable, and I trust I shall not find him as criminal as that would represent him. He was instructed specially and minutely, in a letter written with my own hand, never to give up the pursuit till stopped by starvation. I have better hopes of the other detachment, commanded by an excellent partisan, Captain Jernigan. No report is received from him. It was expected, however, that the two trails would unite and the two detachments become one. I think that no other party has got across the river, and such are now the numbers (since the Georgians got their arms) and the vigilance displayed on the other side, that it would seem impossible for emigrating parties to escape to Florida.

I believe there has hardly been a sharp skirmish on this side of the river, whilst there have been many short rencontres on the Georgia bank. The latter were made by the more desperate of the enemy, and in every instance, probably, to cover the passage of families endeavoring to emigrate to Florida, or to capture the horses, provisions, &c., necessary to facilitate emigration. Partial successes were obtained by the enemy in several of those affairs. In others they were repulsed, and in all it was seen that, to escape with families, packs, &c., it would be extremely hazardous. Consequently the Hitchitees have generally sent in or abandoned their families, and with a few individuals of other tribes have, by some extraordinary neglect at and below Roanoke, succeeded in getting over the Chattahoochee.

The general surrender, in most cases voluntary, of the enemy, may be attributed to many movements and arrangements on our part. It was known that large forces were gathering all around the country; the river was early pretty well guarded by the Georgians, aided by two well-manned steamers cruising up and down. One of these destroyed many canoes, rafts, &c. Major General Sanford crossed the bridge at Columbus and took up his camp four miles further early in June; and although he had about 2,000 unarmed men, with but 400 armed, the enemy thought all Georgia was pouring into their country. About the same time Major General Jesup made his entry into the heart of the nation, with a large force of Alabamians and friendly Indians. This latter movement precipitated and favored a general surrender.

I shall necessarily be absent from this place after a few minutes to complete arrangements below for two days. As it is the centre of correspondence and business, I shall return at the end of that time.

Brigadier General Moore, of this State, whose basis of operations has been at Irwinton, is placed by my order below the south branch of the Cowagee, extending himself far to the right and left. I shall instruct him to send a company of horse or two as far to the southwest as Pea river. He appears, from his movements and correspondence, to be an officer of much merit. His force, mostly mounted, consists of about 1,300 men.

I shall direct Major General Sanford to keep out small detachments on the branches of the Cowagee and on the Hatchychubby to precipitate the surrender of the small parties of the enemy yet out. General Jesup will take measures of a similar character on the upper parts of those streams which are nearer to his depots at Tuskegee, &c.

I have twice written to the governor of Florida in great detail. The copy of my last letter is herewith enclosed, and I would send a copy of the other but that I am separated from my books and papers. A copy of an order is enclosed respecting the West Tennesseeans.

I have directed Major General Jesup to post two small battalions of artillery here in positions on the post road from Columbus to Tuskegee. This will be done in a few days, and I have caused the agent of the General Post Office to be advised of the directions.

On my return to this place I shall open a correspondence with Brigadier General Wool, and hope soon to be able to spare him the detachment of the United States marines, and some companies of Georgia and Alabama volunteers, should they be needed in the Cherokee country.

General Jesup never received the Secretary's original letter to him, dated the 25th of May, and addressed to Milledgeville. The copy that I received last night was immediately shown to him.

I have the honor to be, with great respect, your most obedient servant,

WINFIELD SCOTT.

Brigadier General JONES, *Adjutant General United States Army.*

No. 244.

HEADQUARTERS ARMY OF THE SOUTH, *Fort Mitchell, July 1, 1836.*

Sir: Major General Jesup has just turned over to me the letter of your excellency to him of the 25th ultimo.

The War Department, as I perceive by the copy of a letter to Brigadier General Wool, has charged him with certain duties in the Cherokee country, and has placed the Tennessee troops under his command.

They were to rendezvous at Athens on the 7th instant, and it is possible, though not probable, that, under the instructions of the department, I may have to reinforce him from this quarter.

My last information from the Cherokees, which is not recent, represented them as inclined to be quiet.

In my letter to you, dated some ten or fifteen days ago, (my books and papers are not at hand,) I reported that his excellency Governor Schley had been obliged to pledge himself to the Georgia volunteers and drafts now in the field that they should not be sent to Florida, except in the hot pursuit of the Creeks, to induce those troops to be mustered in the service of the United States. Major General Jesup, who is in the immediate command of the Alabamians, informs me that he was obliged, under the same circumstance, to make the like pledge to the latter.

Should I be obliged to reinforce Brigadier General Wool, I shall send him a portion of the regulars and some part of the Georgians from the upper country. The remainder of the regulars and United States marines cannot fail to be wanted to escort the hostile Indians who have surrendered themselves, and to wind up the war in this quarter, until late in the summer.

Of the hostile Creek warriors, we have here about four hundred and seventy. A part of them have been captured; but the greater number, seeing that they would be inevitably crushed, voluntarily surrendered. How many may be at Tuskegee, under like circumstances, I may not learn in a day or two. This war, however, is believed to be virtually over. Yet there are, doubtless, many small parties yet to come in or to be subdued. Two, making about sixty individuals, succeeded in getting across the Chattahoochee between two of our posts at and below Roanoke on the 23d and 24th ultimo. From that place, the instant that the trails were observed, I despatched two parties of horse in pursuit. Having just emerged from the woods to the southwest of this, I have received no report from those expeditions; but have no doubt, from the strength and character of the pursuing detachments, that the fugitives have been overtaken and captured or killed. I have every reason to believe that not five other Creeks have escaped towards Florida, and from the means now employed it seems almost impossible for another individual to follow. I have more than doubled the forces on the Georgia bank of this river, and steamboats are daily passing up and down.

I have the honor to remain, with high respect, your excellency's most obedient servant,

WINFIELD SCOTT.

His Excellency R. K. CALL, *Governor of Florida.*

P. S.—I have just heard from the prisoners here that if the fugitives who crossed this river should not be overtaken, their object will be to take up a temporary residence in the Opekeenokee swamp.

2d P. S.—I have this moment received a letter from the Secretary of War requesting me to send you one thousand of the West Tennessee brigade, at least, should you not be likely to raise a similar force in Florida. This is the first notice I have had of western and eastern brigades being ordered from that State. The latter is designated to act under General Wool. I shall immediately send orders to the western corps to despatch one thousand men by a route that I shall give them, and order them to report to you for (at) Tallahassee. This brigade we have unofficially heard of before, and by my desire Major General Jesup wrote to the quartermaster at Montgomery to cause it to halt, if coming in that direction, in some place where it could be conveniently subsisted, and to await further orders.

My intention then was to hold in reserve for events in the Creek and Cherokee countries. I am now satisfied that it will not be required in either of those quarters.

I am also directed by the Secretary to send you one or more steamboats from the three ordered to be armed and manned by the navy commander at Pensacola, for this river. I am inclined to believe that but one has been purchased at New Orleans and sent for those purposes to Commodore Dallas. Should she arrive here, I shall send her immediately back to you; and I beg your excellency, if there be any other boat at Pensacola, to take her into the service of Florida.

WINFIELD SCOTT.

No. 245.

HEADQUARTERS ARMY OF THE SOUTH, *Fort Mitchell, July 1, 1836.*

SIR: Major General Jesup has just turned over to me your letter of the 10th ultimo, which probably came to him at this place *via* Montgomery.

I have now employed, partly in cruising and partly in transporting army supplies, four small steamboats belonging to this river, and there are two others, not specially hired, that bring up stores from St. Joseph's.

I heard, a week ago, that a steamer purchased by the United States for the purpose of cruising up and down this river, had gone from New Orleans to Pensacola, to be armed and manned by the United States, under your orders. This boat may now be daily expected below, and I shall send her instructions (to Irwinton) for her government. The war against the hostile Creeks is supposed to be virtually over. Nevertheless, there are several hostile parties which have not surrendered themselves, and who are seeking opportunities to escape across the Chattahoochee towards Florida. The boat last mentioned will be highly useful in observing the river, and giving prompt intelligence to the posts on the Georgia side, in case any such party should succeed in crossing.

The zeal and promptitude which have uniformly been displayed by yourself and officers in co-operating with the land service deserves a higher commendation than any that I could bestow.

I shall therefore subscribe myself, with the highest respect,

WINFIELD SCOTT.

Commodore A. J. DALLAS, *Commanding, &c.*

P. S.—If a second or third steamer should arrive at Pensacola, to be armed and manned for this river please report them (or the one) to Governor Call for his orders.

W. S.

No. 246.

HEADQUARTERS ARMY OF THE SOUTH, *Fort Mitchell, July 2, 1836.*

SIR: The enclosed order is issued in conformity with express instructions from the War Department. As brigadier general, you may either accompany the detachment to Florida, or send the officer next in rank to command it

I remain, sir, respectfully, your most obedient servant,

WINFIELD SCOTT.

The BRIGADIER GENERAL of the *West Tennessee Brigade, expected at Montgomery.*

No. 247.

ORDERS No. 22.

HEADQUARTERS ARMY OF THE SOUTH, *Fort Mitchell, July 2, 1836.*

A brigade of West Tennessee mounted volunteers or militia may soon be expected to arrive at Montgomery. It will probably be at Shelbyville about the 8th instant. On its arrival at Montgomery, Major Brandt will muster it into the service of the United States for three months, unless sooner discharged.

One thousand men of this brigade, with the proper officers, will, without delay, take up the line of march, by the best practicable route, for Tallahassee, in Florida, in order to place themselves under the order of his excellency Governor Call.

The remainder of the brigade will remain in position, in the neighborhood of Montgomery, until further orders.

Before the arrival of those troops at Montgomery, Major Brandt will ascertain the best route to Tallahassee, so as to be able to advise the commander of the detachment destined to Florida, to whom he will give all the aid and assistance that may be required of the quartermaster's department.

WINFIELD SCOTT.

By command.

THOS. J. LEE, *Lieut. 4th U. S. Artillery, Aide-de-camp.*

No. 248.

HEADQUARTERS ARMY OF THE SOUTH, *Fort Mitchell, July 4, 1836.*

SIR: I have this moment returned here from Roanoke below, where I think I have so arranged the service with Major General Sanford, of the Georgia line, and Brigadier General Moore, at the head of an Alabama brigade, as to secure the remaining objects to be accomplished in those directions in this war.

No official report had been received up to the time of my leaving Roanoke from Colonel Beall and Captain Jernigan, who commanded the two detachments of horse sent by me on the 25th ultimo in pursuit of the parties of Indians who had crossed the Chattahoochee on the 23d and 24th. I know, however, through respectable channels, that the two detachments had overtaken the Indians about the 28th, in Baker county, and had surrounded the latter in a large swamp. The fugitives, probably, do not exceed sixty warriors, although represented by rumor to amount to more than three hundred. Colonel Beall, I again hope, will give a good account of them. He was collecting the forces of the neighborhood to make sure of his game. By a singular mistake, into which I was led by a letter supposed to be from this officer, but which was written by another, I did him great injustice in my last report of events in this quarter. I hope soon to be able officially to speak of him with all the praise due to success.

Parties will be continually kept scouring the Indian country to force in the handfulls of the enemy remaining out. Major Generals Jesup and Sanford, as well as Brigadier General Moore, have my instructions to that effect. The former, after a detention here of ten or twelve days, proceeded last evening to the headquarters of Major General Patterson to the west.

Yesterday a party of United States marines, a few mounted volunteers and friendly Indians, scoured the country between the Euchee and Hatchychubby thoroughly, and to the extent of about twelve miles up those creeks. Coming up last night in a steamboat, I learned from Colonel Henderson, at his camp, that sixteen women, boys, and children were captured on the Chattahoochee; the warriors of the same party having escaped across the river, abandoning their families. I immediately sent off an express to give the intelligence to all the posts as low as Roanoke, with precise instructions for discovering the trail and pursuing. I do not doubt that two or three companies of horse were in motion by daylight this morning, in pursuit of the fugitives.

I have not time to add more, nor have I anything material to add, except that the armed steamer the American, from Pensacola, is above, and that I shall immediately order her to Florida to report to Governor Call, and that I shall to-morrow send off Colonel Broome, (a volunteer,) of the marine corps, with a communication addressed to Brigadier General Wool.

With high respect, I remain your most obedient servant,

WINFIELD SCOTT.

P. S.—General Scott, who is much occupied at this moment, desires me to add that his objects in sending Colonel Broome to General Wool are to learn the state of things in the Cherokee country, and to say to General Wool that probably the detachment of United States marines (about four hundred) and some companies of Georgia and Alabama volunteers may soon be spared from this quarter to reinforce the Cherokee army, should they be required.

Most respectfully, your obedient servant,

A. H. KENAN, *Aide-de-camp*

Brigadier General JONES, *Adjutant General, U. S. A.*

No. 249.

HEADQUARTERS ARMY OF THE SOUTH, *Columbus, Georgia, July 6, 1836.*

SIR: I came up from Fort Mitchell last evening, on business with his excellency Governor Schley, and shall return this evening.

I have had no report from Major General Jesup since he left Fort Mitchell to join the Alabamians, 22 miles west, on the 3d instant.

By a letter just received from Colonel Beall I learn that he has the party of Indians he was sent in pursuit of shut up in a large swamp in Baker county, about 110 miles below this, and a little southeast of Fort Gaines. He has had several affairs with that party—killed nine, and wounded many more. The swamp being long and deep, he has called for reinforcements, and I am in the act of sending off, in two steamboats, which will probably ascend the Flint river some twenty or forty miles, about 160 foot volunteers and 40 friendly Indians to him. The Indians in the swamp, who may amount to about 150 warriors, are supposed to have with them not only nearly all the Creek slaves, but most of the blacks taken in the war from our people.

I think it impossible for the hostile fugitives to escape. Below the swamp, towards Florida, there is a wide tract of open pine-wood country, and Colonel Beall will have, by to-night, about 400 volunteer horse with him, besides many individual volunteers of Baker county.

I send copies of letters addressed by me to Brigadier General Moore and Lieutenant Johnson, of the navy. It seems, however, that I have not brought with me the copy of my communication to Brigadier General Wool, which was despatched from this place yesterday morning. [Perhaps it was sent by my aide-de-camp with a previous letter to you; I shall inquire on my return to Fort Mitchell.]

In that letter I gave him a statement of affairs in this quarter, and said that I should probably be able to send him, if needed, the detachment of United States marines and some companies (belonging to the upper country of Georgia and Alabama) of volunteers.

I have no report from the parties of horse ordered to pursue the sixteen hostile Creeks who got across the Chattahoochee on the 3d instant, eighteen miles below this. This party of fugitives cannot escape.

In haste, I remain, with great respect, your most obedient servant,

WINFIELD SCOTT.

Brigadier General JONES, *Adjutant General U. S. A.*

No. 250.

HEADQUARTERS ARMY OF THE SOUTH, *Fort Mitchell, July 4, 1836.*

SIR: I addressed a letter to you yesterday from Roanoke, and despatched it by a party of Georgia horse.

That letter was, in great haste, an answer, by anticipation, to yours of the 2d instant, which I had the pleasure of receiving this morning by the hands of Major Huger.

If the outstanding hostile parties of Creek Indians can be captured or forced to come in and to surrender in eight or ten days, (and I think they may by great activity on the — of the Georgia and Alabama volunteers,) it will give me great pleasure to have all the volunteers discharged at the end of that time. But little remains to be accomplished, and the mounted troops are the best calculated to perform what remains to be done. I therefore, and I think you will concur with me, adhere to the opinion expressed to you in my letter of yesterday.

I have made many suggestions to Major Huger, which he will communicate to you, respecting, among other things, the payment of your brigade on its discharge from the service.

I remain, sir, with high respect, your most obedient servant,

WINFIELD SCOTT.

No. 251.

HEADQUARTERS ARMY OF THE SOUTH, *Fort Mitchell, July 5, 1836.*

SIR: I should be glad to avail myself of the services of the armed steamer under your command for a week or two on this river; but apprehending that she will be still more important to his excellency Governor Call in the prosecution of the war against the Seminole Indians, I have to request that you repair to St. Mark's in her, and report yourself to him.

In descending this river, I wish you to stop at Colonel Henderson's post, a few miles below this, and bring up the detachment of United States marines under his command, or so much of it as your boat can conveniently accommodate, to Fort Mitchell.

If, in descending this river, you should discover any party of hostile Creek Indians crossing, I need not say that you will do what you can to capture or destroy them, but I will beg you to give the promptest information of the movement to the nearest military post, that pursuit may be made by land without delay.

I do not know that any other armed steamer may be expected in this river from Pensacola. Should you, however, meet with one, you will direct her to accompany you to St. Mark's, and report her for service as above. If you should speak another, please let her proceed to report to me, or rather send to me the boat of the lightest draught of water of the two. She may be highly useful if here in the next two weeks.

Wishing you a prosperous return to Florida, I remain, sir, with great respect, your obedient servant,

WINFIELD SCOTT.

Lieutenant JOHNSON, *U. S. Navy, Commanding the armed steamer the American.*

No. 252.

HEADQUARTERS ARMY OF THE SOUTH, *Fort Mitchell, July 5, 1836.*

SIR: I have the honor to report, by direction of Major General Scott, that, owing to the position of the troops, and their having been continually in motion, it has been impossible to obtain a correct return of the force under his command.

As an approximation, there are of United States artillery, at and about this post, 547, and 156 of infantry, about 400 United States marines eight miles below, 4,155 of the Georgia line at and between Columbus and Roanoke, including the three companies of mounted volunteers detached in the direction of Baker county, in this State, and about 600 Georgians at West Point, twenty miles above Columbus on this river. Major General Patterson's command of Alabamians at and about Tuskegee consists of about 3,000 men, and Brigadier General Moore's brigade south of the Cowackee of about 1,300 men, making in all an aggregate of 10,158, of whom 1,103 are regulars, 4,755 Georgians, and 4,300 Alabamians.

A return of this force will be forwarded as soon as the necessary information can be obtained.

I am, sir, with great respect, your obedient servant,

THOS. J. LEE, *Lieut. 4th Artillery, Aide-de-camp.*

Brigadier General JONES, *Adjutant General.*

ADJUTANT GENERAL'S OFFICE, *Washington, July 18, 1836.*

No. 253.

HEADQUARTERS ARMY OF THE SOUTH, *Fort Mitchell, July 4, 1836.*

SIR: I have received a copy of your instructions from the War Department, and been directed to open a communication with you. Lieutenant Colonel Broome, of the United States marines, from the mere impulse of patriotism, has volunteered to bear this, my first letter. It will probably be agreeable to him to bring me your reply.

I think it probable that you will find the Cherokees very generally disposed to observe the relations of amity with our people about them. My latest information is to that effect, and I have not the time to refer to his excellency Governor Schley, now at Columbus, for better and more recent intelligence. It is my belief, however, that some, if not many of the hostile Creeks have taken refuge among the Cherokees; and had you not been specially charged with representing the United States in that quarter, I should have inquired at the proper time into this matter, and have marched against the Cherokees, if every fugitive had not been delivered over to my orders. As it is, I can only call your attention to the subject.

By far the greater number of hostile Creek warriors have voluntarily and unconditionally surrendered themselves; another portion has been captured without resistance, and the remainder, probably less than two hundred, are yet to be captured or forced in. Some of the latter, we know, have crossed the river in the hope of finding their way into Florida. I have, in two or three cases, despatched strong parties of horse in pursuit, with, I think, good hope of success; and I shall constantly scour the country lately occupied by them, in search of the handfulls who are lurking in the swamps for concealment, or watching opportunities to get off to Florida. These employments occupy a very large number of troops; for example, the left bank of the Chattahoochee, for more than forty miles, is kept lined with Georgia mounted men; an Alabama brigade, consisting, mostly, of the same kind of troops, is kept extended from east to west a little above Irwinton. Scouring parties are kept constantly out between this place and that line, and two or three small battalions of regulars are immediately to take positions on the great mail road between Columbus and Montgomery, in order to restore the communication between those places. Besides the troops so employed, detachments of regulars are needed to escort the Indian prisoners and emigrants, at least as far as Montgomery, if not all the way to Arkansas. The West Tennesseans have not arrived at

Montgomery. A thousand of these, by direction of the War Department, I have ordered to Florida. The remainder will be held for a short time in reserve.

Notwithstanding all the calls for troops, and which will be continued perhaps for ten or twenty days more, some of them for a much longer period, I shall, I do not doubt, very soon be able to send you very efficient reinforcement: about 400 United States marines certainly; 2d, some three or four companies of volunteers from Georgia, and as many from Alabama, (all from the neighborhood of the Cherokees,) probably; and, 3d, the remainder of the West Tennessee brigade, to be held in reserve, near Montgomery, pretty certainly.

I have requested Lieutenant Colonel Broome, whom I have pleasure in presenting to you, to get, in going and returning, the best information as to the routes leading to the Cherokee country, the means of subsistence, &c.

I remain, sir, with great respect, your most obedient servant,

WINFIELD SCOTT.

Brigadier General Wool, *United States Army, Commanding, &c.*

No. 254.

HEADQUARTERS ARMY OF THE SOUTH, *Fort Mitchell, July 6, 1836.*

SIR: With the effective men of your battalion, which has so handsomely volunteered for the service, you will, on board the *Metamora* and *Reindeer*, embark without delay, and proceed by water and land to that part of the Chikasahatchee swamp where Colonel Beall, of the Georgia volunteers, is now operating against a party of hostile Creek Indians, who have been pursued to that fastness. In preference you will approach the swamp from *below*, unless the position of Colonel Beall and his forces should take you in a different direction in order to join him; of course you will report yourself to him and receive his orders.

At or before your arrival at Fort Gaines you will inquire and satisfy yourself as to the best route of reaching the theatre of operations in the shortest time. Perhaps the information you may receive will lead you to debark your detachment on the Chattahoochee, and thence proceed by land; but more probably you will find it best to ascend the Flint river as high as practicable, and thence to march to the theatre of operations.

You are at liberty to employ a few wagons from the point of landing, sufficient to take your surplus provisions and ammunition, a portion of which, no doubt, is much needed by the troops already with Colonel Beall.

If you can find the means of communicating to Colonel Beall (or commanding officer) *by express* the route by which you are approaching him, you will not fail to do so. Inform him of the surplus stores you may have with you.

I leave it to your discretion to retain the two steamboats for your return, directing them to meet you at such point as you may designate. The boats may also be needed to bring up all the sick and wounded of the detachments now engaged with the Indians in that quarter.

Wishing you and your gallant battalion success, and fully persuaded that everything will be done to insure success, I remain, sir, with great respect, your obedient servant,

WINFIELD SCOTT.

I have directed the medical director of the army, Dr. Lawson, in concurrence with your surgeon, to have a good supply of medicines and hospital stores to be put on board your two boats.

I have sent Paddy Carr to you to say I have directed him to have ready immediately a party of thirty or forty of his best Indian warriors to accompany you. He will be obliged to obtain a part of them at Fort Mitchell. Please direct one of your boats to stop there a short time to get those warriors. Keep the whole of Paddy's party with your battalion, unless otherwise ordered by Colonel Beall, and please subsist and treat them kindly; they have heretofore behaved well.

W. S.

Major Hoxie, *Commanding Columbus Volunteers, Columbus.*

No. 255.

HEADQUARTERS OF THE ARMY, *Washington, June 25, 1836.*

SIR: It is represented to the War Department that a large force of hostile Creek Indians will probably make their way into Florida, and, in consequence, the Secretary deems it very important that a strong force should be stationed so as to prevent the escape of the Creeks in that direction; it is therefore the order of the Secretary of War that you station a sufficient force so as to prevent them making their escape and taking that direction.

I have the honor to be, sir, very respectfully, your obedient servant,

ALEX. MACOMB, *Major General, Commanding-in-chief.*

Major General Scott.

No. 256.

HEADQUARTERS OF THE ARMY, *Washington, June 28, 1836.*

SIR: I have received, through the Secretary of War, the order of the President to call you to the seat of government. You will, therefore, on the receipt of this letter, turn over to Brevet Major General Jesup the command of the troops serving against the hostile Creeks, and repair to the city of Washington.

I have the honor to be, very respectfully, sir, your most obedient servant,

ALEX. MACOMB, *Major General, Commanding-in-chief.*

Major General WINFIELD SCOTT, *Fort Mitchell, Alabama.*

No. 257.

HEADQUARTERS OF THE ARMY, *Washington, June 28, 1836.*

SIR: Major General Scott having been ordered to the seat of government, the command of the troops serving against the hostile Creeks is, by direction of the President, hereby vested in you. The instructions which you received from the War Department, on leaving Washington for the Creek nation, will be your guide in executing the important duties which are hereby again devolved on you.

I have the honor to be, very respectfully, sir, your obedient servant,

ALEX. MACOMB, *Major General, Commanding-in-chief.*

Major General JESUP, *Fort Mitchell.*

No. 258.

COLUMBUS, *Georgia, July 8, 1836.*

SIR: Late in the evening of the 6th instant I had the honor to receive your letter of the 28th ultimo, and one of the same date from the adjutant general. I had transacted much business that day, besides issuing the orders, copies of which will be enclosed to the adjutant general.

Yesterday I wrote and despatched to Major General Jesup the order turning over the command to him, and have confined myself to the mere business of advising with Major General Sanford, Brigadier General Fenwick, the quartermaster and commissary, (to prevent the public service from suffering, Major General Jesup being at a distance from this place,) since the receipt of the letter recalling me.

To put my successor fully in possession of everything material to his station, I have carefully looked over my books and papers, and have caused copies of a great many papers to be made out for him which will be transmitted.

Many other copies of papers will be transmitted to the adjutant general to-day by Lieutenant Lee, my late aide-de-camp.

I set out this morning for the north in order to reach Charleston this day week, to take the steamboat of that day for Norfolk, and shall lose no time in presenting myself at Washington.

I have the honor to be, sir, with great respect, your most obedient servant,

WINFIELD SCOTT

Major General MACOMB, *General-in-chief United States Army.*

No. 259.

ORDER No. 29.

HEADQUARTERS ARMY OF THE SOUTH, *Columbus, Georgia, July 7, 1836.*

Major General Scott has been called to Washington, and the command of this army devolves, from the publication of this order, on Major General Jesup, to whom, in future, all reports and applications will be made.

The Creek war, though yet to be wound up, may be considered as virtually over. Two parties of the hostile Indians, which have escaped to this side of the Chattahoochee, are now hotly pursued. The larger of those parties is shut up in a swamp, and from the strength of Colonel Beall's detachment, that under Captain Jernigan, and the reinforcement sent hence under Major Hoxie, a capture of the whole body of the fugitives seems to be inevitable. The other hostile party will, probably, from the measures in operation, share the same fate. In the late Creek country the number of the enemy to be captured or forced to surrender is considered quite inconsiderable.

Major General Scott regrets that, from the suddenness of his separation from the army, the opportunity is lost to him of doing that full justice to all the corps he has had the honor to command, which their patriotism, zeal, and gallantry claim at his hands, and indeed from the highest sources—the government and country.

To his excellency the governor of Georgia, who has remained on the frontier in order to lend himself in every way powerfully to the prosecution of the war, the particular thanks of Major General Scott are due. Before the Georgia line could be mustered into the service of the United States his excellency had made dispositions of his armed troops, not only to protect his own frontier, but to prevent the escape of the enemy in the direction of Florida. This was the great danger to be guarded against, and all that zeal and ability could effect on his part has been put in practice and accomplished. It is hoped that this slight acknowledgment made to the chief magistrate of a powerful and patriotic State may not be deemed impertinent because coming from a military functionary of the United States. It is eminently deserved. Of the Georgia line, which has constantly acted under the immediate observation of Major General Scott, he will ever be happy to speak in terms of the highest approbation. That line has, under its immediate and able commander, Major General Sanford, throughout evinced the best dispositions—a readiness to obey orders, to march against the enemy, and to win honor for itself, for Georgia, and the Union. The greater part of it for a long time was held inactive for the want of arms which, by a series of strange accidents, failed to arrive, whilst other portions of the same line, in positions on the river, had frequent and severe combats with the enemy. In these, if the Georgian detachments were not always successful, they at least were ready to oppose an obstinate resistance to superior numbers. Captains Garmany, Jernigan, Ball, and Fluellen, with their companies, won for themselves much distinction on those occasions, whilst Captains Dawson and Pearson, cruising with their companies on board steamboats, rendered highly valuable services. Captain Dawson on several occasions displayed the greatest judgment and intrepidity in marching to the relief of the fixed posts, and landing in the presence of the enemy, in order to destroy his means of passing the river.

Of the Alabama line, with the exception of Brigadier General Moore's brigade, Major General Scott cannot speak either from his own observation or on a direct correspondence. Major General Jesup, himself an able commander and a competent judge, in his reports speaks highly of Major General Patterson and his division, and it is directly known that Brigadier General Moore, placed on the lower line of operations, has, acting almost independently, made able dispositions of his brigade, and has captured more than two hundred prisoners.

To the regular troops, including the United States marines, the usual praise is due: they have exhibited steadiness, discipline, and an eager desire to come in contact with the enemy. Although disappointed in that favorite wish, they have in all other respects rendered themselves highly useful.

It is known that the friendly Indians acting as auxiliaries under General Woodward and others have rendered valuable services. To them a great number of the captures and voluntary surrenders are to be attributed.

With his temporary staff—Colonel Kenan, volunteer aide-de-camp; Major Ansart, acting inspector general, and Lieutenants T. J. Lee and Betts, aides-de-camp; also Surgeon Dr. Lawson, medical director of the army—Major General Scott cannot take leave without expressing his hearty thanks for the zeal, ability, and courtesy which each has displayed in the performance of his particular duties.

Major Ansart, 3d artillery, having tendered the resignation of his commission, which will be forwarded to Washington, he has permission to repair to that place, after having performed the special duties in which he is now engaged, and await the decision of the government.

Colonel Kenan, duly mustered into the service of the United States on the 1st ultimo, is hereby discharged with honor and thanks from that service.

Lieutenant T. J. Lee, at the expiration of a week, and Lieutenant Betts, at the expiration of a month, will join their respective companies for duty.

Surgeon Lawson will report by letter to Major General Jesup.

WINFIELD SCOTT.

No. 260.

HEADQUARTERS EASTERN DEPARTMENT, *Washington, July 20, 1836.*

SIR: For the information of the proper authority, I have the honor to enclose a copy of a letter, dated at Tuskegee the 7th instant, from Major General Jesup to me, and which contains important intelligence.

The letter was written before it was known to General Jesup that I had turned over the command of the army of the south to him, and overtook me at Charleston, South Carolina.

I remain, sir, with great respect, your most obedient servant,

WINFIELD SCOTT.

Brigadier General JONES, *Adjutant General United States Army.*

P. S.—As early as the 26th ultimo, I requested Major General Jesup to order Neo Mico and his band to be disarmed and secured.

W. S.

No. 261.

HEADQUARTERS SECOND ARMY CORPS SOUTHERN ARMY, *Tuskegee, July 7, 1836.*

SIR: I arrived here yesterday with the volunteers of General Patterson's command, and expected to start a party of four hundred Indians, but at least a thousand of Neo Mico's party went off yesterday and last night, and have proceeded up the country to Tuckabatche, Hajo's camp, or town, in Chambers county. I shall send the mounted men in pursuit to-morrow.

If the marines can be spared, I request that they may be placed on the mail road from Columbus to Tuskegee, subject to my orders, say twelve or fourteen miles from Columbus, at the stage-house. I will place a detachment about twelve miles from Tuskegee. Those posts established, an order or proclamation directing all Indians to go north of the mail road, and confine themselves to their camps or villages, and declaring all to be hostile who shall be found south of it, or traversing any portion of the country north or south, and directing that they be treated as such, would have the effect to close the difficulties in this country.

The negotiation with Neo Mico has proved that the best argument with Indians is formed not of words, but of powder and lead; and I have this moment informed the chief, from whose camp Neo Mico's party has fled, that I shall use no other argument in future.

I enclose a letter from General Moore, referred to me by General Patterson; and I am, sir, respectfully,  
TH. S. JESUP, *Major General.*

Major General SCOTT, *Commanding Southern Army, Columbus, Georgia.*

No. 262.

HEADQUARTERS ARMY OF THE SOUTH, *Tuskegee, Alabama, September 9, 1836.*

SIR: I have just received from a friend a Richmond Enquirer of the 15th of July, which contains a report of General Scott, dated at Fort Mitchell on the 2d of July. In that report the general has stated, upon the authority of Colonel Henderson, that two hundred and fifty Indians had surrendered to General Watson.

I enclose a copy of a letter from Colonel Henderson and an extract from a letter of General Watson on the subject.

I have to request that this communication, with the papers enclosed, be laid before the Secretary of War and the general-in-chief; and, if General Scott has not corrected his report, I desire that they may be published.

I have the honor to be, sir, your obedient servant,

TH. S. JESUP, *Major General.*

Brigadier General R. JONES, *Adjutant General United States Army, Washington City.*

[Memorandum.]

The only reply that I have to make to this letter is to request that the court will refer to my letter, in evidence, to the adjutant general, dated July 2, (document No. 243.)

WINFIELD SCOTT.

FREDERICKTOWN, *Maryland, January 19, 1837.*

HEADQUARTERS OF THE MARINE CORPS, *Tallahassee, August 30, 1836.*

GENERAL: I have just received your letter of this date.

In the report made by me to General Scott, dated the 28th June, I was led, by information derived from a lieutenant of Captain Love's company of mounted volunteers, to state to General Scott that two hundred and fifty Indians had surrendered to General Watson without firing a gun. The volunteer officer's statement was so distinct that I did not doubt its correctness.

A day or two afterwards I ascertained that no such event had taken place, and, meeting General Scott on board of a steamboat passing up the Chattahoochee, I told him in what manner I was led into the error. He mentioned at the time that he had seen General Watson, and had found that my statement was erroneous.

I remain, general, with great respect, your obedient servant,

ARCH. HENDERSON, *Colonel Commandant.*

Major General THOMAS S. JESUP, *Commanding Army of the South, Headquarters, Tallahassee.*

*Extract of a letter from General J. Watson, of Georgia, to Major General Jesup, commanding army of the south.*

TALLAHASSEE, *August 30, 1836.*

I was at the taking of no party of hostiles, except that of Jim Henry, some fifteen or twenty miles south of Fort Mitchell, where you were present yourself, and in command. I was with you without rank, as a volunteer private citizen.

With great respect, your obedient servant,

J. WATSON.

No. 263.

*Remarks upon an editorial article headed "The Army," published in the Courier and Enquirer of the 26th of July, 1836.*

The article is offensive in the language used, and incorrect in the statements presented, in reference to the difficulties between General Scott and General Jesup.

But for the injurious character of these misstatements, their correction might be left to the anticipated investigation, or to the voluntary action of General Scott, who will, it is hoped, indignantly contradict imputations upon a brother officer which he well knows to be untrue.

A brief sketch of the facts will at least suspend public opinion until official inquiry shall exhibit a conclusive exposition of the questions in issue.

While there was yet a probability of bringing the Seminole war to a close, General Scott was directed to give his attention to the Creek difficulties. Some time after these difficulties grew more serious, and General Scott being deemed fully occupied by the, as yet, unchecked Seminoles, Major General Jesup was, on the 19th of May, specially charged with the direction of the Creek war.

He met at Augusta, Georgia, Major General Scott, who had left Florida, where much certainly remained to be done, to assume the command in the Creek country. General Jesup willingly consented to take the second place; proceeded with General Scott to Columbus, and thence to Tuskegee, Alabama, and assumed command, on the 9th of June, of the western or Alabama frontier, General Scott reserving to himself the immediate command of the eastern or Georgia frontier.

The editorial assertion that General Jesup, "as soon as he found that Scott had been ordered to conduct the war against the Creeks, \* \* \* determined \* \* \* to procure the recall of his superior officer," is not merely incorrect in every particular, but the extreme reverse is truth.

So far from desiring the recall of General Scott, he willingly served under him; and next to his solicitude for the public service, was his anxious desire to enable an old brother in arms to recover in Alabama the military reputation lost in Florida.

Even in the heat and excitement of the collision with General Jesup, General Scott frankly recognized and acknowledged the chivalric courtesy and self-sacrificing spirit which had marked his conduct from the moment of their meeting at Augusta.

As the collision is at present purely official, it is to be regretted that the partisans of General Scott should render the discussion personal. For this error they will merit the censure of the distinguished individual they mean to serve.

Returning to the sketch of operations, we find General Scott's plan of campaign announced to be—*First.* To man the south and southeast frontier, to prevent the Indians from passing to Florida.

*Second.* The first being accomplished, to unite the disposable forces at the south line and sweep northward through the Creek country.

As a preliminary part of this plan, General Jesup was directed to move southward to Irwinton with such force as he should succeed in raising, and, there uniting with General Scott's forces, move northward.

The number of troops needed to sentinel this extended line of some hundred miles; the time required to raise, organize, equip, and station them; their probable inability when stationed to effect the object proposed; and the intervening unstayed progress of Indian barbarities, were considerations lost on none but General Scott.

It is unnecessary to examine this plan in detail.\* Had all the means been in readiness, and had they been energetically and rapidly applied, it is possible that the result might have been successful. As it was, all felt its inapplicability.

The frequent alarms, the excited state of public feeling, the eager restlessness of the volunteer troops, and, above all, the devastations daily reported, called imperatively for immediate and effective action.

The mode of operations kept in view by General Jesup was, to strike the enemy at once, to check barbarities upon the whites by forcing the Indians to defend their own families; and, instead of forcing them from Florida by sentinels posted from Columbus to Flint river, and from Irwinton to Montgomery, to seek them in their camps, find, fight, and capture them.

Anxious to secure the country and General Scott himself from the evil consequences of a plan which there were neither means nor time to execute, General Jesup determined to protect his frontier by prompt movements upon the Indians, in as far as it was possible to make them without disobeying the orders of General Scott.

On the 9th of June he assumed command of the Alabama troops, the disposable force being seven hundred volunteers, under Major General Patterson.

The friendly Indians were ordered to rendezvous, the warriors to join as auxiliaries—their families to remain at the rendezvous and be fed by the government. The hostile and doubtful Indians in the vicinity were disarmed, and placed in charge of friendly chiefs.

June 12.—Pursuant to General Scott's order, he started to Irwinton, *taking in his route* the camp of Eneah Mico and Eneah Mathla, where the hostile Indians were concentrated with their families, property, plunder, &c.

Eneah Mico's camp was broken up; the chief, with a portion of his band, came into a friendly camp, and asked to be treated as hostiles disarmed.

June 15.—While on the march, Eneah Mathla, the active head of the hostile party, was apprehended by an advance scout of friendly Indians, four hundred of whom joined on the 13th.

June 17.—Approached within five miles of Eneah Mathla's camp—was joined by eleven hundred and fifty Indian warriors.

The singular order from General Scott "to cease all offensive movements," was here received. Confident that if General Scott knew his force and position, he would desire him to improve the sought-for opportunity of striking the enemy, General Jesup despatched an express with a letter, from which the sentence below is extracted, and on the morning of the 18th of June pushed forward to the enemy's camp.

*General Jesup to General Scott, in reply to first letter forbidding offensive movements.*

[Extract.]

"CAMP ON THE HATCHYCHUBBY, five miles from Eneah Mathla's camp, June 17, 1836.

"I would have struck the enemy to-night but for your letter. If he is not struck to-morrow morning he will escape for the present; but the force I have in the field is sufficient to pursue and reduce him."

The answer reached General Jesup in the just-deserted camp of Eneah Mathla, when active pursuit was alone necessary to entire success—containing a peremptory repetition of the order to cease instantly all offensive operations.

General Jesup gave directions for large reconnoitring parties to hold the enemy in check, and hastened in person to Fort Mitchell, eighteen miles distant, to see General Scott. The latter having left for Columbus, a second express was sent to him, with a letter stating frankly General Jesup's opinions, and earnestly entreating him (General Scott) to adopt a different and more efficient course. The question of its publication is referred to General Scott, who can thus satisfactorily answer some of the offensive imputations upon General Jesup's motives.

The memoranda of this date by the writer refute the charge attempted to be made against General Jesup, of taking a position in which subsistence and forage could not be procured. Besides that taken from the enemy, eighty thousand rations ordered from New Orleans, by General Jesup, before he left Washington city, arrived on the 18th of June, five days before his rations were exhausted, within eighteen miles of his camp, and a considerable quantity of forage, pursuant to his previous directions, was provided and ready at a point twenty miles distant.

June 19.—General Jesup returned to camp. The reconnoitring parties brought in several prisoners, and certain information of the hostile parties. This information removed the only serious objection that had been made against General Jesup's operations, viz: that he would force the Indians across the river towards Florida. *Directly the reverse* had actually occurred.

The parties on the river preparing to cross fled inwards to the swamps, under shelter of the main body; in a few instances leaving their families in their flight. Some of them were brought in with the prisoners.

June 20—General Scott continued unshaken in his resolution that the enemy should not be beaten, except by the regular course of his own "plan of campaign."

\* General Jesup was understood to disapprove THE DELAY in executing the plan, not the plan itself.

The communications earnestly urging a change of this determination had elicited only replies of the most exceptionable nature.

As the orders were well known to all, an offensive movement could not be made without avowed disobedience of orders, and this in a camp only preserved from mutiny against the "unaccountable firmness" of General Scott by the most strenuous efforts of the officers.

Even had General Jesup determined to disregard the repeated and peremptory order, it would have been impossible to attack and effectually conquer the enemy before an order for his arrest could have reached him from General Scott, (only twenty-eight miles distant.)

Thus compelled to inaction, he sent out some of the prisoners to summon the enemy to surrender, and kept the troops in position to enforce the summons. The consequence was, that, on the 22d, three hundred hostile warriors laid down their arms, and one thousand of the hostile party surrendered themselves unconditionally prisoners.

The position of General Jesup presented no alternative. He could not remain under the command of one who had alike disregarded the good of the public service, and the personal feelings and professional reputation of those who had labored most zealously and efficiently.

In three days after assuming command General Jesup had marched upon the strongholds of the enemy, with a volunteer force not greater than General Scott could have called together at any point of the Georgia line; had checked the devastations, and effectually secured the Alabama frontier; had raised an auxiliary force of fifteen hundred Indian warriors, from materials alike accessible to General Scott and himself; had seized the principal chiefs; broken up the hostile confederacy; taken and disarmed a portion of the hostiles; and, on the eve of closing the war, is arrested from doing it—because, forsooth, General Scott's plan of operations prescribed a later day and a larger force, (facing north instead of south for effecting it.)

In these measures General Jesup had been greatly aided by the judicious arrangements of Governor Clay, and ably seconded by the prompt and energetic efforts of Major General Patterson, his officers and troops, and by the active and efficient corps of Indian warriors he had called into the United States service. By these the advantages had been obtained. And being thus halted in their consummation, General Jesup determined to ask to be relieved, and to place the immediate command of the Alabama troops with the State officers.

June 20, General Jesup made full report of the operations of the 2d army corps, and closed with the following paragraph :

[Extract.]

"CAMP HATCHYCHUBBY, June 20, 1836.

"As I was placed on this service by the express order of the President, I shall apply to him to be relieved, and shall demand a court of inquiry.

"I shall await your order as to the disposition of force," &c.

The channel of official communication was through General Scott. To make the application through him to the President would have been indelicate, if not improper, especially until it was seen whether he would or would not arrest General Jesup for his advance upon the enemy.

An official communication direct to the President, or through any officers of the War Department, must have, in substance, preferred charges against General Scott, and rendered necessary his immediate arrest.

Desirous of withdrawing himself from the duty with the least prejudice to General Scott and the public service, yet without admitting he was in error, he perceived and determined to adopt the only mode that would relieve the subject from all embarrassments, viz: expressing to the President, in a communication which was not of necessity official, his desire to be relieved. This could only be done through a mutual acquaintance—it was so done—by letter of same date with that to General Scott just quoted.

The President thought proper to render this letter an official document, and as such it is to be considered.

The documents forwarded by General Scott, including his letters to General Jesup, attacking him with the severest censures, and in effect preferring the most serious charges, were then before the government, were considered by the President, and on General Scott's own showing the decision was probably founded.

The editor's assertion that the communication to the President was "a stab in the dark," "an attack upon General Scott," "an attempt to procure his removal," can now be understood and appreciated.

General Scott was advised on the 20th that the application to be relieved would be made. As it was not sent through him, HE KNEW it was an UNOFFICIAL communication, and should have appreciated the motive which induced General Jesup to thus decline preferring charges against him.

General Jesup's opinions of his errors and delays were fully, emphatically, and earnestly urged upon him.

The papers containing the whole correspondence were placed by General Scott before the government; his recall was the revulsion of his own attack on General Jesup, or rather the inevitable result of exhibiting the circumstances.

The request to be relieved having been made, General Jesup left Camp Hatchychubby to report in person to General Scott. Illness, the consequence of excessive fatigue, stopped him at Fort Mitchell, and the writer, a member of his staff, was ordered to Columbus to communicate with General Scott.

In the course of the protracted official conversation with General Scott, the considerations bearing upon the unpleasant difference were mentioned and discussed, especially those having reference to General Jesup's request to be relieved. The occasion being presented, it gave the writer great pleasure to bear witness to the unvarying tenor of General Jesup's expressions and conduct toward General Scott, and still greater pleasure to hear them gratefully acknowledged by him.

The subsequent withdrawal by General Scott of what was personally offensive, reduced the differences to questions purely official, and until decided upon by the government, before which General Scott had laid them, both officers continued in the performance of their respective duties.

SECOND ARMY CORPS, June 23.

Hostile Indian prisoners were brought to Fort Mitchell, and retained there nine days, to enable the civil authorities (of Georgia particularly) to identify and demand the offenders against their laws.

SECOND ARMY CORPS, *June 24.*

General Jesup, with a detachment of Alabama volunteers and Indian warriors, seized Jim Henry's party, the chief and a few men only escaping.

## FIRST ARMY CORPS.

On the same day General Scott moved south and commenced active operations, pursuant to his plan of campaign, without having received the arms and ordnance stores for which he had been some time waiting.

On July 2 he reached Fort Mitchell; having, by fatiguing and difficult marches, swept the country, as proposed in his plan, from the south northward, and captured one Indian and one Indian negro.

## SECOND ARMY CORPS.

The chief Jim Henry, taken by the Indian warriors in the vicinity of General Patterson's camp.

SECOND ARMY CORPS, *July 5.*

A detachment of 600 men passed into the camp where the hostiles had taken refuge. All, with the exception of Neahmicco and thirty men, escaped. Having ascertained their routes, 900 of them were taken on the 9th and 10th of July.

Twenty-seven hundred of the hostile party, including eight hundred warriors, and including forty criminals delivered to the civil authorities, have been taken, sent west, and are now probably at their destined homes.

Their capture closed the Creek war. The subsequent difficulties have grown out of causes connected with the removal.

The incidents of the war are mentioned without any intent to claim credit for any individual—especially not for General Jesup, who, in his official reports, has assigned the merit of what was done by the army corps he commanded, to the officers and soldiers of the Alabama troops, and to the officers and friendly warriors of the Indian bands who composed that corps.

It is doubtless true that the successful issue was aided and hastened by the tone General Jesup assumed towards the Indians, from the day when, to enter upon his command, he, with an escort of 120 men, pushed through the heart of the enemy's country, near the camp of Neahmicco, where were 600 hostile warriors, to the time when his orders were (and are) obeyed by the Indian chiefs with the punctuality and promptness of military discipline; by his measures for raising an Indian force for separating the friendly and the warriors from those decidedly hostile; and by his exertions as commanding general of the corps.

The Georgia troops, however restless under the inaction imposed on them by want of arms, and by Major General Scott's "plan of campaign," have nobly redeemed the time then lost, by their conduct in the Creek country, and more recently in the contest with the Creeks, some of whom, in consequence of the late orders for removal, are endeavoring to make their way to Florida, across the line whose defence General Jesup confided to General Sanford.

The foregoing remarks answer the abusive article of the *Courier and Enquirer*, in all things except the inapplicable epithets which I regret to find in an appeal to "officers of the army" by a person who has served long enough in our ranks to have learned a different language.

I close these remarks as the editor closed his article, by saying they are respectfully submitted to the public, in order that the officers of the army may properly appreciate the conduct of Major General Jesup

J. F. LANE, *Captain United States Army.*

CREEK COUNTRY, *August 8, 1836.*

No. 264.

WASHINGTON CITY, *January 8, 1837.*

SIR: I intended to have attended the court of inquiry at Frederick, in conformity with your notification of the 2d instant, but perceiving from a letter of General Scott, just published in the *Richmond Enquirer*, that interrogatories (by letter) may be propounded to those at a distance who cannot conveniently appear in court personally, I must beg the favor of the court to be permitted to give my deposition in this way. From the circumstance that General Jesup's letter to me (which appears in the *Globe* of September 26) being called for in your summons, I presume that my testimony is only wanted to verify it as his. I know nothing of the causes of the failure of the southern campaigns, and if, as I suppose, the proof that the letter published as General Jesup's is really *his* be all that is expected of me, it can be so readily obtained by my deposition, that I have felt it my duty (being an officer of the House of Representatives and engaged in daily attendance upon it) to decline the journey to Frederick for the present. If it should be the wish of General Scott, at whose instance I am summoned, to interrogate me as to anything I may know of *occurrences in this city*, having relation to the officers, the army, or the campaigns, I will most cheerfully respond by deposition, stating all I know, or respond to particular questions he may propound. If it should turn out that the examination in this way prove unsatisfactory, I will then go to Frederick and answer personally.

I send you the *Globe* of September 26, containing General Jesup's letter, which I am ready to verify as his.

Your most obedient servant,

F. P. BLAIR.

S. COOPER, *Judge Advocate, Recorder of the Court.*

No. 265.

[From the Globe of the 26th of September, 1836.]

TALLAHASSEE, *Alabama*, September 3, 1836.

DEAR SIR: I regret that I should have been the cause of bringing you into difficulty. I wrote to you at the moment information reached me that General Scott had not only sent copies of his extraordinary letters to me to the War Department, but that he was representing me in his conversations as having deranged his plan of campaign, and brought a starving corps of two or three thousand men to consume the small quantity of subsistence and forage which he had collected for the Georgia volunteers and regular troops. Writing under the influence of the exasperated feelings produced by the wrong which I believed he had done me, and which I shall be able to show at the proper time he did me, I used language stronger, perhaps, than I should under other circumstances have thought necessary; but the language used expressed my opinions then; it expresses my opinions now.

Occupied with my public duties, I have no time for defence; and as I do not meddle with the politics of the country, I would not consent to be defended on party grounds. The questions in regard to the campaign should be decided on their own merits. I wrote to you, not as a party man, but as a private friend. It is true, I wrote to you because you happened to be the editor of the *Globe*, in the columns of which I expected to see General Scott's letters spread before the public. I requested you to show my letter to the President, as a measure of defence against the charges contained in General Scott's letters. The result was such as I neither expected nor desired. My command having been halted by General Scott, when in the presence of the enemy's principal force, I believed the Indians would disperse into small parties, and that, in place of fighting their force united, we should have to hunt their parties through the swamps, as had been necessary in Florida. Having been censured for that which I considered the true course of operations, and believing I could render no useful service to the country in chasing small parties through the swamps, I desired, at the time I wrote, to be withdrawn from the army. I informed General Scott officially, on the 20th of June, that I should apply to the President to be relieved, and should demand a court of inquiry. On the evening of the 23d we met, and an explanation took place. About 10 o'clock that night he put into my hands a letter addressed to the Secretary of War or the adjutant general, I do not remember which, to part of which I objected, in the presence of his aide and mine. On the morning of the 24th he informed me he would ask to withdraw from the files of the War Department the offensive letters; and on the 25th I addressed a letter to the Secretary of War, in which I expressed my readiness to continue under his command until the close of the campaign. I considered all personal difference at an end; but I believed, and so expressed myself to those around me, that the government owed it to the country to have the whole subject of the campaign investigated. I considered it no longer a question between General Scott and me, but between him and the country, or me and the country.

Respectfully, your obedient servant,

TH. S. JESUP.

FRANCIS P. BLAIR, Esq., *Washington City*.HEADQUARTERS ARMY OF THE SOUTH, *Columbus, Georgia*, June 16, 1836.

SIR: Since I wrote to you on the 12th, I have heard of the arrival at Hawkinsville and Macon of most of the supplies I had ordered *via* Darien. These are now in wagons, and within two, three, and four days of this place. I have also just heard that the muskets ordered from Augusta may be expected here perhaps to-morrow. With these arms and the 1,800 accoutrements from Hawkinsville, nearly the whole of the Georgia line may be fitted for the field. At present, of the 2,200 men Major General Sanford has in his camp on the other side of the river, only about 400 are armed. All the other armed men have been detached below to guard the river, and which, as yet, from the want of men, is but very imperfectly guarded.

After writing to you on the 12th, I received your letter of the 8th. This would completely have mystified me, but for the explanations given by some of the Georgia gentlemen who accompanied you from this place. For example, you wrote to me on the 6th that you were just about to set out for Montgomery, and yet I find you back at Tuskegee on the 8th. You do not tell me that you had been absent as far as Line creek, and that you there had met the governor. You are silent as to any interviews you had had with him, either at Line creek or at Tuskegee, to which place, I understand from others, he followed you. Some difficulties you undoubtedly experienced in getting the command of the Alabama troops; but what those difficulties were, you carefully conceal from me. You content yourself with saying: "I have not yet obtained the command of the troops, but if I obtain it at all I shall probably enter on duty to-morrow." But why you had not at first obtained the command of the troops, and why the doubt whether you would obtain it at all, you again carefully conceal from me.

In a subsequent part of your letter you say: "I learn from the governor that General Moore will," &c. How did you learn this from the governor? You do not tell me that you had met him at Line creek, and that, turning back yourself, he had followed you to Tuskegee. It might have been by letter.\*

Allow me to say that the whole letter is mysterious and enigmatical in the extreme, and that it is not such a communication as you ought to have made me. If the governor made the difficulties about placing you in the command of the troops, *that* important fact ought not to have been concealed from me; and if he did not, who else interposed difficulties?

You further tell me that "if a movement be determined on, I will send you information of it by a runner." A movement to be determined on by whom? The Alabama commanders, or those in conjunction with yourself? Either you were placed in command, or you have not been. In the first place you would certainly determine on no scheme of offensive operations without my previous concurrence and readiness to co-operate; yet, without receiving any runner from you, or communication of any kind, since the 8th instant, a passenger, in the stage by the upper route, just arrived here, reports that you, at the head of about 3,000 Alabamians and 1,000 friendly Indians, were about to march upon Neo Micco's band, and to

\* NOTE FURNISHED WITH THE COPY.—So the fact was communicated, the importance of adding that it was communicated by letter or orally cannot be perceived.

commence offensive operations on a great scale! I have no doubt there is a gross mistake in this report. You may, perhaps, have been about to make some defensive movement or operation to clear a frontier settlement of a portion of the enemy, but I will not believe that you have declared your independence of my authority.

It is certain that Brigadier General Moore, of Alabama, has commenced a course of offensive operations from Irwinton up the country. From this fact, I have rather inferred that you have not even yet been invested with the command of the Alabamians, or you certainly would have stopped his premature and isolated [movement.] These doubts and conjectures, in the absence of all direct intelligence from you, are sufficiently harassing. I mean to be explicit and precise on my part. I desire you instantly to stop all offensive movements (if you are in command) on the part of the Alabamians until the Georgians are ready to act, say on the 21st instant, when the greater number of them will be armed and ready for the field. By that time, too, there will be on the frontier the greater part of the regulars and marines ordered from the north. On that day, if the movements of General Moore shall not render a modification of my plan necessary, I shall begin to assemble the troops on this side of the nation, somewhere in the neighborhood of Irwinton, and operate up the country. It is my desire that you meet me about that time and place, and that you bring with you any disposable force you conveniently can, or that you hold the whole of the Alabamians in defensive positions on the frontier settlements till I shall bring the war into their neighborhood, when you can come into the general line of operations with me.

No quartermaster has arrived here but Dr. Waite. Captain Page says that, under his instructions from the War Department, his presence in this quarter is indispensable. No flints and no ammunition have yet arrived.

I have heard of shipments from New Orleans of army supplies; but none have arrived. Subsistence, with arms and accoutrements, from Hawkinsville, will begin to come in to-morrow.

I shall cause a large deposit of subsistence to be made at Irwinton, another at Fort Mitchell, and a third at this place. I am inquiring, and may establish a fourth depot at some convenient point between Irwinton and Fort Mitchell.

Six companies of regulars have arrived here to-day, and Monroe's three days ago. They are sent to guard the Indians at Fort Mitchell.

I remain, with undiminished confidence, yours, most respectfully,

WINFIELD SCOTT.

Major General T. S. JESUP, *United States Army, Commanding, &c.*

HEADQUARTERS ARMY OF THE SOUTH, *Columbus, Georgia, June 17, 1836.*

SIR: I have this moment received your two letters of the 15th and 17th instant.

I am infinitely astonished and distressed to hear of your near approach, and in a starving condition,\* to Fort Mitchell. You knew that your forces were not wanted there. You knew that no supplies could reach even Irwinton from New Orleans earlier than the 21st instant, if so soon; and you knew, by my letter of the 10th, that nothing had arrived as high as Hawkinsville, upon the Ockmulgee, and consequently nothing could have reached this place by the present date from that river. I also ought to add that you knew when you left here that the troops, daily increasing, were living from hand to mouth on the precarious supplies of the neighborhood. Under these circumstances, imagine my astonishment to learn that, instead of marching the disposable force of Alabama upon Irwinton, with subsistence for at least ten or five days in advance, you have come through the heart of the Indian country, seeking private adventures, which, if successful, could hardly have advanced the war, and against my known plan of operations, to Fort Mitchell, forty-five miles out of position! It is precisely General Gaines's movement upon Fort King, where there was no subsistence; and there is none, as you ought to have known, at Fort Mitchell.† My grief and distress are at their utmost height. This strange movement you have made without giving me the slightest notice. You had not informed me, you do not even now tell me, that you are in command of the Alabamians; and your last letter, of the 8th instant, stated that it was doubtful whether you would even be invested with that command. All this is infinitely strange, and was the last thing in the world that was to be expected from you.

Well, to prevent starvation, I have called for the quartermaster and commissary, and demanded of them what rations and forage they could supply. Lieutenant Waite, the quartermaster, had with great difficulty provided some corn for my movement at the head of the Georgians, on the 21st or 22d, and Lieutenant McCrabb had just nearly exhausted the market to obtain two or three days' rations for the troops already at Fort Mitchell. At the risk of starving the troops on the river, (the Georgians and regulars,) I have ordered the quartermaster to send you five hundred bushels of corn, and the commissary to move heaven and earth to send two or three days' subsistence for the troops brought with you. To prevent, however, all further erratic movements, I desire you to encamp your forces somewhere in the neighborhood of Fort Mitchell till further orders, or until I can see you. We will keep your forces and those previously on the river from starving, if possible, till the arrival of the Ockmulgee supplies, which I suppose will precede those from New Orleans by some days.

The first and one of the worst effects of your arrival will be to prevent a movement of the Georgians and regulars as early as I intended. The former have pushed their impatience for active operations almost to a state of mutiny—a result which I may not be able to prevent if they should learn that the arrival of the Alabamians is to hold them in a state of inglorious inactivity many days longer.

\*NOTE FURNISHED WITH THE COPY.—When General Jesup arrived at Fort Mitchell, on the night of the 18th of June, he found a steambot with seventy thousand rations, which he had ordered from New Orleans before he left Washington city; and he found in the neighborhood several thousand bushels of corn, which he had directed Captain Page to secure early in June. He was surely entitled to some small share of the benefits of his own arrangements. If General Scott was not acquainted with the resources at his command, it was not the fault of General Jesup.

†NOTE FURNISHED WITH THE COPY.—General Jesup knew that the navigation was good, and he expected the arrival of steamboats with supplies at Columbus by the 15th of June. He had subsistence sufficient for the troops under his command to the 22d of June.

I wrote to you yesterday, and despatched the letter by a runner from Fort Mitchell. I shall endeavor to visit Fort Mitchell to-morrow or the next day.

Though in grief, I still remain yours, with great regard,

WINFIELD SCOTT.

Some wagons with subsistence are despatched to-night, but cannot arrive, I learn from Mr. Waite, till to-morrow morning. Some corn (two hundred and fifty or three hundred bushels) will be down by ten o'clock to-morrow in a boat.

W. S.

---

HEADQUARTERS SECOND ARMY CORPS SOUTHERN ARMY,  
*Camp on the waters of the Hatchychubby, June 17, 1836.*

GENERAL: I have this instant received your letter of yesterday. I regret that my operations have met your disapprobation; but they were commenced and have been continued for the purpose of staying the tomahawk and scalping-knife, and preventing the devastation of entire settlements or neighborhoods on the frontier. They have had the effect of tranquillizing, in some measure, the frontier people, and of inducing them to remain at their homes. I regret the censure implied in your remarks, because it is unmerited. I acted in accordance with what I believed to be the spirit of your instructions; but even were my conduct in direct opposition to your instructions given at a former period, the altered circumstances of the country is, I should think, a full justification. I consider it so, for I have none of that courage that would enable me to remain inactive when women and children are daily falling beneath the blows of the savage. Writing in the open field, where I am interrupted every moment by matters of detail of every kind, even to the placing of a wagon, I cannot now explain the remarks in my letter which *you have considered so enigmatical*, further than to say, in justice to Governor Clay, that he made no opposition to my assuming command, but made every effort to sustain me; and to add that, if successful in my present operations, I shall owe much of that success to his able arrangements. The troops, or rather a part of them, were opposed, not to me personally, but to any officer of the United States taking command of them; and I would take command of militia and volunteers on no other terms than their consent. I would resign my commission first.

I am now within five miles of Enea Mathla's camp, with twelve companies of volunteers and four or five hundred Indian warriors. Eleven hundred Indian warriors, under Hopothle Yoholo, will join to-night, and perhaps five hundred volunteers from Alabama. I made such arrangements for the defence of the settlements in my rear that I feel assured of their entire security. I would have struck the enemy to-night but for your letter; if he is not struck to-morrow morning he will escape for the present, but the force I have in the field is sufficient to pursue and reduce him.

With every disposition to perform their duty, the volunteers and militia are necessarily extremely irregular in their returns, &c. I am not, therefore, able to send you a return in form of the force under my command.

I am sir, respectfully, your obedient servant,

T. S. JESUP, *Major General, Commanding.*

Major Gen. SCOTT, *Commander of the Southern Army, Columbus, Georgia.*

---

No. 266.

TUSKEGEE, *November 27, 1836.*

SIR: I have received your note summoning me to attend a court of inquiry at Frederick city, Maryland; and just as I was preparing to take the stage for that place I was served with a notice to attend the district court at Mobile, Alabama, which last summons I must obey. I do not know that my testimony would be of any service to General Scott, though I am certain it could do him no injury. And should the court of inquiry remain in session till after the court in Mobile is over, and General Scott wishes my attendance, and I can be notified of the fact, I will attend without delay. The court at Mobile will adjourn, or at least I shall be able to leave that place about the fifteenth of December next. As you belong to the army, and I in the habit of giving my opinion candidly about men in office, and, moreover, as to what I say is not offered as testimony in favor of General Scott, or against any one else, but merely my statement to you, I will not close this without stating to you one fact: do General Scott justice, and it would not require my testimony, or that of any one else, to place him far beyond the reach of his accusers. One thing I know, and I have the right to say, that General Scott's orders have been violated or disobeyed; he has been censured for the improper conduct of others, and has been badly treated by those on whom he has bestowed honors and favors, and when, I am inclined to think, they were not merited.

Very respectfully, your obedient servant,

T. S. WOODWARD.

Captain COOPER, *United States Army.*

---

No. 267.

HEADQUARTERS ARMY OF THE SOUTH, *Tuskegee, Alabama, August 2, 1836.*

SIR: Knowing that I had written to you in reply to your communication, I was surprised when I received a copy of a letter you wrote to the President, in which you declare that I had treated with "*silent contempt* the reasonable request of the governor of Georgia." I examined my letter-book, and

found my letters to you recorded in their proper places in the handwriting of my aide-de-camp, Colonel Goldthwait. I felt indignant that a charge so entirely unfounded, as I then thought, should have been made; but I am now induced to believe that by some oversight or omission my letters, or at least one of them, had not been sent to you. Captain Parrott, who acted as adjutant general of my division during the active part of the campaign, left Fort Mitchell for Washington city on the 1st of July. In looking over a file of papers put up by him the morning he left, and not opened since until last night, I found the enclosed letter; the indorsement is in Captain Parrott's hand, and I think it probable that it was put upon file in place of being sent to you. I will be greatly obliged to you to inform me whether you received a duplicate of that letter. Had I been even hostile to you, which was not the fact, the courtesy due from one gentleman to another would have prevented me from neglecting your communications.

I have thought it due to myself to enter into the particulars above stated; and I am, sir, respectfully, your obedient servant,

TH. S. JESUP.

His Excellency W. SCHLEY, *Governor of Georgia, Milledgeville, Georgia.*

No. 268.

HEADQUARTERS ARMY OF THE SOUTH, *Tuskegee, Alabama, August 28, 1836.*

SIR: I received your letter of the 15th instant at the moment I was setting out for Tallassee, on duty connected with the Indian emigration, and, expecting then to return in a day or two, I left it in my office here. I was detained longer than I expected, and only returned this morning. Your letter of the 30th of June was not answered, but the omission was inadvertent, not intentional. I had forgotten that letter until I received yours of the 15th. I can only account for the omission to answer it from the fact that I was then actively engaged in measures for the security of about fourteen hundred hostile Indians, who had been allowed to go into the camp of a friendly Indian chief near Tuskegee, and who, I was informed, would, in consequence of my delay at Fort Mitchell, probably escape. They did escape in consequence of that delay; and my division of the army was occupied in recapturing a part of them until the 17th of July. About a thousand were recaptured; and I have been informed recently, by several friendly chiefs, that the party which crossed into Georgia about the 24th of July was that portion of the party referred to who had not been recaptured.

In my movement from Fort Mitchell, I believed that I was performing my duty. I believe so still. And I could not then, nor can I now, perceive any sufficient ground for the censure which has been heaped upon me for that act. The movement of the troops was required, and the Indian prisoners could not be left without them. Besides, my instructions required that I should remove the prisoners as rapidly as possible. That I was disposed to afford every facility in my power to Georgia will have been seen in my communication to your excellency of the 28th of June. I there informed you that three warriors had been identified, and awaited your order. I had not then received the information which rendered the movement to the neighborhood of Tuskegee necessary.

I regret as sincerely as you do that any circumstance should have occurred to interrupt the harmony and good understanding, at least on my part, previously to my march from Fort Mitchell; but, until I found my letter of the 30th of June, I considered myself greatly aggrieved by your letter to the President.

I have the honor to be, very respectfully, your excellency's most obedient servant,

TH. S. JESUP.

His Excellency W. SCHLEY, *Governor of Georgia, Milledgeville, Georgia.*

*Proceedings of a court of inquiry held at the city of Frederick, Maryland, by virtue of the following orders, to wit:*

GENERAL ORDER No. 65.

WAR DEPARTMENT, *Adjutant General's Office, Washington, October 3, 1836.*

The following order is published for the information of all concerned:

By direction of the President of the United States, a court of inquiry, to consist of Major General Macomb, president, and Brevet Brigadier Generals Atkinson and Brady, members, is hereby ordered to assemble in the city of Frederick, in Maryland, as soon as the state of the military operations against the Indians will permit the witnesses to attend, (of which the president of the court is to judge and determine, and to give notice to all concerned,) to inquire and examine into the causes of the failure of the campaigns in Florida against the Seminole Indians, under the command of Major General Gaines and of Major General Scott, in 1836; and the causes of the delay in opening and prosecuting the campaign in Georgia and Alabama against the hostile Creek Indians in the year 1836; and into every subject connected with the military operations in the campaigns aforesaid; and, after fully investigating the same, the court will report the facts, together with its opinion on the whole subject, for the information of the President of the United States.

Captain Samuel Cooper, of the 4th regiment of artillery, is hereby appointed to act as judge advocate and recorder of the court.

LEWIS CASS.

WAR DEPARTMENT, *October 3, 1836.*

R. JONES, *Adjutant General.*

GENERAL ORDER No. 68.

ADJUTANT GENERAL'S OFFICE, *Washington, October 14, 1836.*

The following order has been received from the War Department, and is published for the information of all concerned:

WAR DEPARTMENT, *October 13, 1836.*

1. It appearing by the public prints that the official report of Brevet Major General Gaines, dated "Headquarters Western Department, Camp Sabine, July 4, 1836," made to the adjutant general of the army, has been published, and the said publication being without the sanction of the War Department or other proper authority, the court of inquiry of which Major General Alexander Macomb is president will, in addition to the duties already assigned to it, inquire into the facts as to the manner and by whose authority the said official report was made public.

2. The court will also report its opinion as to the violation of the rules of the service by such publication, and as to the character of said report, in reference to all its bearings and consequences, as it concerns general military propriety and the discipline of the army.

3. And, further, the court will examine and inquire into any other reports and publications made by Brevet Major General Gaines, or by any other officer of the army, having reference to military affairs, and published without the sanction of the War Department or other proper authority, and give its opinion on the tendency of such reports and publications in the same manner as it is herein required to do in the case referred to in the foregoing paragraph of this order.

C. A. HARRIS, *Acting Secretary of War.*

By order of Major General Macomb.

R. JONES, *Adjutant General.*

FREDERICK, *January 11, 1837.*

The court met pursuant to adjournment.

Present: Major General Macomb, president; Brevet Brigadier Generals Atkinson and Brady, members; Captain Cooper, judge advocate and recorder.

The orders constituting the court having been read, and Major General Gaines making no objections to any of the members therein named, the court was duly sworn in his presence.

The judge advocate then proceeded to read the documentary testimony which accompanies these proceedings.—(See documents.)

The testimony being read, the court adjourned to meet again to-morrow morning at 11 o'clock.

JANUARY 12, 1837.

The court met pursuant to adjournment. All present

Captain E. A. HITCHCOCK, of the 1st regiment of infantry, a witness, being duly sworn, was interrogated as follows:

1. *Question by the court.* Were you with Major General Gaines on his campaign in Florida in 1836; and if so, in what capacity?

*Answer.* I was appointed by Major General Gaines, at Mobile, on the 18th of January, 1836, acting assistant adjutant general. That order was subsequently superseded by another appointing me inspector general of the western department. I continued with General Gaines, in his military family, from the date of the first order, through the campaign in Florida, and until some time after he left that section of the country.

2. *Question by the court.* Will you state to the court, as nearly as you can recollect, the occurrences that transpired on the march of the army under Major General Gaines from Tampa Bay to the Withlacoochee, and afterwards whilst at Camp Izard?

*Answer.* The army under General Gaines left Tampa Bay on the 13th of February. There was nothing of material importance occurred until the 17th of the month, when some Indian villages were burned; they appeared to have been abandoned a number of days. At this time there was a general expectation, so far as I know, in the army, that General Scott would be somewhere in that vicinity, in considerable force, within a short time. While these villages were burning, a detachment of the army was distant about two miles from the main force; I was myself about a mile from the main force, when a loud report was heard, similar to that of a cannon. On joining the army I found this report the subject of conversation, and the opinion seemed to be almost unanimous that it was the report of a piece of ordnance with General Scott. I heard, indeed, but one dissenting voice, and one other that was doubtful, among all those I conversed with. The army continued its march, and on the 19th of February encamped about four miles on the north of the north branch of the Withlacoochee, burning another town just previously to occupying that camp, which appeared, also, to have been abandoned several days. We found at this camp the remains of what appeared to have been the encampment of Major Dade, consisting of a small square breastwork. On the following morning about 9 o'clock the army arrived at the scene of the massacre of Major Dade and his command, which was reported to have occurred on the 28th of December previous. The bodies of the dead found at that place received honorable burial, and the army continued its march, arriving on the 22d of the month at Fort King. The day following, to wit, the 23d, a detachment of the 4th infantry, under the command of Lieutenant Colonel Foster, was despatched to Fort Drane for information and supplies, there being no supplies adequate to the purposes of a campaign at Fort King. Colonel Foster returned on the evening of the next day by a forced march, bringing with him, I think, seven days' rations for the command of General Gaines. He was accompanied from Fort Drane by General Clinch. On the 26th of February General Gaines resumed his march in the direction towards a point on the Withlacoochee river where, it was understood, General Clinch had fought a battle on the 31st of December. The army arrived at this point on the afternoon of the 27th. While the general was reconnoitring the river a little above the crossing, the centre and the left wing were fired on by the Seminoles from the opposite side of the river. The baggage train had been ordered to halt at a convenient place for encampment, as it was understood not to be the purpose of the general to cross the river that night. The firing of the enemy was, of course, returned, and after continuing perhaps half an hour, the general directed Colonel Twiggs, his second in command, and who had been appointed to the immediate command of the brigade, as a light brigade, to withdraw from the river after the men should have become familiar with the new scene that had been presented to them, or words to this effect. The army withdrew and encamped accordingly, having sustained a loss of one man killed and several wounded. The crossing place, at this point of the river, was covered with a dense swamp of about a quarter of a mile in width. It was understood that a few miles below the open pine woods approached the bank of the river upon both sides, where the friendly Indians with us reported it to be the habit of the Indians to drive cattle across. The army, on the morning of the 28th, moved down to this place, perhaps two miles from the point last mentioned. The advance guard, commanded by Lieutenant Izard, of the dragoons, acting brigade major, was here fired upon, and Lieutenant Izard mortally wounded. The advance was sustained by two companies of the 4th infantry, and a portion of the volunteers were this day also on the bank of the river. The firing continued across the river, I think, until between 12 and 1 o'clock. The Indian yell was continuous nearly the whole of this time. At one time it appeared to be very greatly increased, as if by the accession of new force. This was attributed by the friendly Indians to the arrival of Micanopy, the principal chief of the nation, with his warriors, supposed to be eight hundred in number, and the opinion was general that the main force of the enemy was then in our neighborhood. The army encamped that afternoon, and in the evening an express was despatched by General Gaines to Fort Drane, with a communication for General Clinch, or the officer commanding the forces in that part of Florida. On the morning of the 29th of February the Indian yell, which had continued the principal part of the previous night, ceased entirely, until about 10 o'clock in the morning, when a firing was poured into our camp upon three sides. The firing continued about two hours, or a little over, when the enemy was driven off, leaving, contrary to their custom, one of their killed, who fell into our possession. On the evening of this day another despatch was sent to Fort Drane, directed as in the former instance. From about midday of the 29th of February until the afternoon of the 2d of March there was no firing whatever upon our camp. In the afternoon of the 2d a small party of the enemy, from a westerly direction, threw in a volley and disappeared. This mode of annoyance

continued, more or less, from that time until the evening of the 5th of the month, sometimes at night. Up to this time the loss at that camp, on our side, had been Lieutenant Izard, wounded on the 28th, who died on the 5th of March; one sergeant of artillery killed; two Louisiana volunteers also killed, and thirty or forty wounded. In the evening of the 5th of March, about 10 o'clock, a loud voice was heard from the woods, hailing our camp, and some one declared that the Indians had had fighting enough; that they wanted to come in, have a friendly talk with the white people, and make peace. He was answered, by direction of the general, that if their chief would come in with a white flag the next morning they should not be fired upon. The man from the woods answered: "Very well, they would come in after breakfast," and bade us good night. On the morning following, I think about 10 o'clock, Indians were seen filing from the west and east sides of the camp, several hundred yards distant, passing out from the river, and uniting in the rear of our camp, perhaps six hundred yards distant. They were estimated to be about three hundred in number. From this body a few Indians were seen advancing towards the camp with a white flag. They were first met from our camp by Adjutant Barrow, of the Louisiana volunteers, who reported to General Gaines that the Indians stated that they did not wish to fight any more, but they wished him to go away. I was directed by the general to go out and hear what the Indians had to say. I requested two gentlemen to go with me—Doctor Harral, of the Louisiana volunteers, and Adjutant Barrow, before mentioned—desiring them to bear in mind that I had the instructions of the general and would attend to them, requesting them to witness what passed. On this occasion I met, at the distance of about one hundred and fifty yards from the camp, several of the Indian chiefs, with their principal interpreter; among the former were Jumper, understood to be the principal adviser of Micanopy, the king of the nation, and Ocoela, or Powell, who was regarded to be among the principal war chiefs. There was another, who was called Alligator. The names of the others were unknown to me. On the part of the Indians the council was conducted by Jumper, through his interpreter. I had with me an employed interpreter from our camp, who was directed not to make himself known, but to listen to what might be said among the Indians. Jumper at first inquired of me what I had to say. I answered: "Nothing to him, but that I had come to hear what they had to say." They then repeated the purport of what had been declared the night before from the woods, adding that they had lost many of their warriors, killed and wounded, or disabled; that they did not wish to lose any more, but wanted to make peace. I communicated this to the general.

I will state that I had had many conversations with the general on the subject of the proper manner of treating with Indians. In these conversations he had invariably declared that he would not deal with them on any other than the known and acknowledged principles which should govern in the intercourse of civilized nations; declaring that the ignorance and dependence of the Indians made it more obligatory on our part to deal with them honorably and justly. It was in reference to these conversations, as I understood, that the general had directed me to confer with the Indians, observing: "You know my principles," or something to this effect. In accordance with this, I stated in general terms to the Indians that General Gaines was the commanding officer in our camp. The Indians said they knew General Gaines; had seen him many years before; expressed their confidence in him; that he was a good man; and appeared pleased to find that he was the commanding officer in our camp. I stated to them that General Gaines was but one of several chiefs who had been sent by the President of the United States among them to enforce upon them a peace. I desired to show them that they would of necessity be compelled to submit, and for this purpose I endeavored to give them an idea of the extent of territory occupied by the whites, and of their dense population, using the simile perhaps often resorted to in Indian councils, that the whites covered the country like the trees of their forests. After talking to them some little time in language like this, assuring them over and over again that they would be compelled to submit, they answered that they would take council among themselves, would assemble again in the afternoon, and we would have another talk. At this council with the Indians I stated that General Gaines had not come among them for the purpose of investigating the causes of the war. That possibly they might suppose they had been much wronged; but that if so, I presumed they had satisfied themselves, alluding to the destruction of Major Dade, and the like instances of success on their part. Ocoela remarked: "I am satisfied" as it was interpreted. I supposed he alluded to an act attributed to him near Fort King, by which the Indian agent who had put him in chains came by his death.

In the afternoon the chiefs came to council in the same manner as in the morning. I had in the meantime been advised by the general that he did not feel authorized to make any terms with them; that if, however, they persisted in asking for peace, I must give to them conditions, and require them to pledge themselves to obedience to them. These conditions were, that they should cease entirely from all acts of hostility against the whites; that they should cross the south side of the Withlacoochee, and promise to attend a council, when and where they should be sent for by a chief who was soon expected to be there. This referred to General Scott, who was believed to be in the vicinity of our camp, not more than thirty miles distant. The chiefs answered that their principal chief, Micanopy, was not with them, and had not been with them for several days; they wanted time to consult him; that they could not make any permanent arrangement without doing so; but that, for their own parts, they engaged to comply with the terms dictated to them by General Gaines. To prevent any misunderstanding of these terms, I repeated them, one by one, distinctly twice over. On concluding the last, there was an indication of some approaching force from the north. The Indians at a distance called to those in council, and made signs to them to go away. I immediately supposed this to arise from the approach of troops from Fort Drane, and told the chiefs to hasten their men away and put them in security. They accordingly went off, and went into a hammock to the east of our camp. The force, as I supposed, approached our camp, but, contrary to my expectation, instead of being commanded by General Scott, was commanded by General Clinch. General Clinch brought supplies of two days' rations of pork and flour, with about forty head of cattle. The rations in our camp had become almost entirely exhausted, in so much that some of the volunteer companies, from improvidence, or want of acquaintance with the proper means of taking care of their rations, had been three or four days without the proper army ration; the orders of the general, given, I think, on the 28th of the month, for the command to go on half rations, not having been strictly complied with, it was about the 4th of March, if I mistake not, that some horses were killed, and the meat distributed to those who desired it; and this was again done on the 5th.

After the council, stated in my testimony, the troops continued at Camp Izard until the morning of the 10th, during which time I heard not a rifle or an Indian yell. Our own men were on the banks of the river, at pleasure, without being disturbed. About the 10th the command was assigned to General Clinch, under whose orders the troops marched to Fort Draue.

I will remark that, during the councils held with the Indians, there was much repetition, as is usual, I believe, in Indian councils; but the purport is what I have stated in my testimony. At the time I attended this council, besides the two gentlemen who went at my request, there was another, Captain Marks, who went, I believe, of his own accord. Some few weeks ago I thought proper to address letters to two of these gentlemen, requesting them to furnish me a statement of what took place at the council. I did not write to Adjutant Barrow solely because I did not know where a letter would find him. These are the letters which I have received in answer.

[The judge advocate here read the two letters which will be found accompanying these proceedings, Nos. 34, 35.]

3. *Question by the court.* Were there any sorties made from the camp upon the enemy in any one of the attacks made by him whilst the army lay there; and what was the strength of the army at the time.

*Answer.* The army was about one thousand strong, a few over, perhaps, and no sortie was made. It may be proper to add to this answer that one wing of each of the several bodies occupying the faces of the square had been ordered by General Gaines to be held in readiness for a sortie, should he think proper to order one. This order was given on the afternoon of the 29th of February.

4. *Question by the court.* When and how many attacks did the enemy make upon the army whilst fortified at Camp Izard, and with what results?

*Answer.* My answer is embodied already in my testimony. Subsequently to the 29th of February, but very small parties appeared in the neighborhood of our camp, or fired upon us; the largest was on the 3d day of the month, when there was considerable firing, but, I believe no injury was done whatever. During these several days it was a subject of very frequent, and, on my part, anxious [doubt] with the general, as to whether the Indians had not abandoned that part of the country, so few of them appearing about our camp. I was apprehensive that the Indians, finding it impossible to move us, would leave that section of the country and go into what is called the Everglades. I frequently expressed this apprehension to the general, suggesting that activity of movement on his part at that place might be likely to produce that result, in which case the campaign would be lengthened, embarrassed if not defeated, and the blame of it would attach to him. He remarked upon his want of mounted men to pursue any advantage he might gain in a sortie, and referred to his letter of express to Fort Drane, confidently expressing his expectation that General Scott would be there in person to receive his express with the species of force most needed, and that he would certainly come down.

5. *Question by the court.* What effect did it have on the spirit and conduct of the troops, in being held within our lines, when the enemy made his several attacks upon them.

*Answer.* I am not aware of any special effect produced by that state of things. There was the most perfect order prevailing in camp; a prompt obedience to every order, and, indeed, a spirit altogether worthy the soldier.

6. *Question by the court.* Was the army on the Withlacoochee, under Major General Gaines, strong enough and well enough appointed to have attacked the enemy with a prospect of success?

*Answer.* In my opinion the army could have beaten the enemy at that place, and driven him at any time; but there were no means for pursuing him with any effect.

7. *Question by the court.* What do you suppose was the strength of the enemy that invested Camp Izard, and how do you form an estimate?

*Answer.* I believe the enemy was not less than 1,300 strong on the 29th of February, possibly more numerous. This opinion is founded upon the extent of ground occupied by them, to wit: on the east face of the camp, against about the middle of it, rested their left, and from that place they extended around the rear and the right, running into the hammock on the right, at a distance of perhaps from fifty to one hundred yards. The faces of our camp were about two hundred yards in extent. A circumstance occurred on the first of March of this nature: the Indians passed out from the river, east of our camp, in single file, marching past the rear of it about six hundred yards distance, and recrossed the river west of us. They were observed, as I understood from Doctor Heiskell, by a watch, passing a given point of space, and he assured me, on two several occasions, that they were thirty minutes in passing in a rapid movement. From this data it would appear that there scarcely could have been less than fifteen hundred; there might have been four or five hundred negroes among them.

8. *Question by the court.* What was the condition of the troops whilst at Camp Izard in respect to supplies of arms and ammunition?

*Answer.* At Fort King, previously to marching to the Withlacoochee, there was an average of about fifty cartridges to a man. I derive this from personal inspection of the troops at that place. The field-piece, a six-pounder, was furnished with fifty rounds of grape and a few charges of round shot. The arms were chiefly muskets and yeagers—the yeagers having been issued to perhaps three or four of the companies of the volunteers—they were in good firing order.

9. *Question by the court.* Did you think that Major General Gaines had it in his power at any time, with the means in his hands and the appointments of his forces, to have marched upon the enemy and subdued him, had the enemy availed himself of the fastnesses of the country well known to him?

*Answer.* I believe they would have escaped any pursuit he might have made with his force. With regard to the effect of a sortie, it is a problem of which, perhaps, any one may form an opinion from a consideration of the facts which I will state. The Indians appeared to have a great facility in crossing the river; the banks of the river above and below our camp were lined with a dense swamp. Had a sortie been made, the Indians would have rushed into this swamp on the one side or the other; and by their knowledge of the best passages through it, and their facility in crossing the river, would, in all probability, have eluded any pursuit that could have been made from our camp. In the event of a sortie, there would, in all probability, have been a loss on both sides, but, it is my impression, without producing any beneficial results. The Indians were expending their ammunition while our fire was reserved, and we were daily in the expectation of force from Fort Drane, especially of mounted men, a species of force of which we had none.

1. *Question by General Gaines.* Was the river passable without boats or rafts at the place first approached?

*Answer.* It was not.

2. *Question by General Gaines.* Will you state the cause of our eating the meat of horses? whether it was not deemed to be more manly and proper for troops to eat horse-meat than to suffer the enemy to attack the frontier?

*Answer.* I have always considered that the readiness and willingness with which the men sustained

themselves upon that food rather than fall back from the position assumed did them the highest credit, as evincing a noble spirit.

3. *Question by General Gaines.* The witness is desired to state what he knows in reference to my views and wishes towards Major General Scott relating to the campaign in Florida.

*Answer.* The first intimation received by General Gaines of the orders assigning General Scott to duty in Florida was at Pensacola about the 6th of February. I saw General Gaines very soon after he received this information. He made no especial remarks that I remember in relation to General Scott himself at that time. On our way to Tampa Bay he frequently spoke of him and of the difficulties which had existed between himself and General Scott in years gone by. He declared many times, indeed, invariably, in effect, that he had outlived all feelings of personal animosity towards that officer; that on no account whatever would he suffer any private or personal feelings to interpose any obstacles to the accomplishment of the duties then contemplated in Florida, declaring it to be his purpose, without making it a question, to relinquish the command to General Scott on meeting him, should he desire it; or, if General Scott pleased, General Gaines would unite with him in efforts to put an end to the war. These sentiments were expressed repeatedly from Pensacola, by Tampa Bay, at Fort King, and on the Withlacoochee river, where, at this latter place, on one occasion in particular, he spoke of the certainty with which he expected the arrival of General Scott at that place, and declared it to be his purpose to offer him his hand in the presence of a common enemy, and endeavor then and there forever to put an end to their personal difficulties as an appropriate place.

The court here adjourned to meet to-morrow morning at 11 o'clock.

JANUARY 13, 1837.

The court men pursuant to adjournment. All present.

*Captain Hitchcock's testimony continued.*

4. *Question by General Gaines.* What circumstances occurred to change the views and feelings of General Gaines towards General Scott, as expressed by the witness in his last answer?

*Answer.* When General Clinch arrived at the Withlacoochee river, on the 6th of March, he brought with him certain letters from General Scott, addressed to himself, in which the conduct of General Gaines underwent very severe strictures. It was also reported that General Scott had been much in the habit of making extraordinary remarks upon the movement of General Gaines, even in the hearing of his volunteers. One of the letters alluded to was shown to General Gaines by General Clinch; the other, I believe, was not exhibited, in consequence of the extraordinary nature of its contents, but the purport of it was matter of general conversation in the camp. General Gaines appeared to be much inflamed and highly incensed at these letters and rumors.

[The judge advocate here read to the court the letters (referred to in this answer) from General Scott to General Clinch, dated the 1st and 4th of March, 1836.]

5. *Question by General Gaines.* State what were the motives and circumstances which induced me to undertake the campaign to East Florida against the Seminole Indians in the last winter.

*Answer.* Major General Gaines arrived at Mobile on the 17th of January, 1836. A few days previous to this intelligence had been received of the entire destruction of Major Dade and his command in Florida, of about eight officers and one hundred men. I received a message from General Gaines, (being in Mobile myself, and on leave of absence,) requesting to see me. I called upon him immediately, and he stated that he had but a short time previously left his headquarters at Memphis, but with no expectation of being required to take the field against an enemy; that he was without his personal staff, and referring to the intelligence stated above, he did me the honor to request me to join his military family, for purposes connected with the protection of the people of Florida. The day following (the 18th January) further intelligence was received from Florida, to the effect that General Clinch had had a meeting with the enemy; had fought a battle with them; had been abandoned by the volunteers who had joined him, (their term of service having expired;) and that, in consequence, he had been obliged to fall back upon Fort King, where, as the report said, he was invested by the enemy and in danger of being cut off. It was in consequence of this new information, as I believe, that the order of that date, addressed to Lieutenant Colonel Twiggs, in New Orleans, was issued. General Gaines proceeded to Pensacola with the view to request the co-operation of the navy on that station, in the purpose he then contemplated of going to Florida. His wishes in this respect had been anticipated. He returned to New Orleans, arriving there about the 26th of January, and the most active exertions were made to receive into the service, and equip for a campaign, the volunteers alluded to in the order above mentioned. The troops, being in readiness to embark, left New Orleans about the morning of the 4th February. During the whole of this period, and for some time after, the prevailing sentiment of General Gaines, as discovered by the whole tenor of his remarks, and by his conduct, was a profound sensibility to the loss of our brave brothers in arms in Florida, and to the exposed condition of the people in that section of the country. Previous to leaving New Orleans, among other reports that were circulated, it was stated that Tallahassee had been burned and destroyed by the enemy. This and other rumors produced a general excitement throughout the section of country in Louisiana, that induced extraordinary exertions on the part of the executive and legislative authorities of the State; and I suppose it would have been impossible for any officer, situated as General Gaines then was, having proper feelings, and a proper sense of his duty, to have hesitated a moment, but that he must have gone on the expedition to Florida.

In consequence of the indisposition of one of the members of the court, the court adjourned to meet to-morrow morning at 11 o'clock.

JANUARY 14, 1837.

The court met pursuant to adjournment. All present.

*The testimony of Captain Hitchcock continued.*

6. *Question by General Gaines.* You have said that General Gaines, while at Camp Izard, on the Withlacoochee, expected the arrival of General Scott at that place soon after he should hear that the principal force of the enemy were found upon that section of the Withlacoochee. Will you state to the court

the grounds of this expectation? whether it was that he had expressed a wish to know where the principal force of the enemy could be found, or that it was his duty to hasten to that theatre of the war?

*Answer.* The expectation alluded to in this question, that General Scott would arrive on the Withlacoochee very soon after receiving the information from General Gaines that the Indians were there in force, was founded, first, upon a letter from General Scott to General Clinch, and by General Clinch shown to General Gaines at Fort King, in which he inquires where the enemy's force may be found, or to that effect, expressing a strong hope that they would be found in the upper part of the Territory, rather than in what is called the *Everglades*; and from information communicated by General Clinch at the same time and place, that General Scott had despatched a force from Picolata, of mounted men, to Fort Drane; that he himself would be there, as nearly as I can recollect, about the time of the arrival of this force. The time of the arrival, in the opinion of General Clinch, would be within the month of February. The mounted force alluded to in my testimony was referred to, I believe, in one of the despatches of General Gaines from the Withlacoochee.

7. *Question by General Gaines.* Did General Gaines express any other reasons for believing that General Scott would not nor could not, upon known principles of military law, hesitate to repair to the Withlacoochee on hearing of the enemy being at that place? If so, what were the reasons so expressed by General Gaines?

*Answer.* The confidence of General Gaines that General Scott would come down to the Withlacoochee was without reservation. He appeared to have an undoubting belief of General Scott's being at Fort Drane, and often spoke of his duty to come down, under the circumstances, in the most positive terms. His language on the subject was very strong, to wit: that he must come down; he will be disgraced if he does not come down; he will commit suicide upon his military reputation if he fails to come down—or language of similar import. On one occasion I took the liberty of suggesting to General Gaines the expediency of preparing litters to move the wounded, in the event of General Scott's not joining us. He declined authorizing me to give the order, explaining himself by the use of language like that I have stated in reference to General Scott's coming down. In all the conversations had on the Withlacoochee, in reference to the force coming from Fort Drane, General Scott was the officer spoken of as commanding at Fort Drane, and I do not remember a single instance where any doubt was suggested as to his being there. In many conversations with General Gaines at the Withlacoochee, he dwelt with great emphasis upon the great importance and duty of officers complying with their engagements affecting movements in the field, especially in an enemy's country. He considered General Scott under an engagement to be at Fort Drane, the exact day is unknown to me, but about the time of the arrival of General Gaines's despatches to Fort Drane.

8. *Question by General Gaines.* The witness is requested to describe the hammocks near my encampment on the Withlacoochee, and state the time at which that encampment was formed?

*Answer.* The hammocks bordering the river very nearly united immediately in front of the camp; from this point, both above and below, they gained very rapidly in width and were extremely dense, especially to the east or above the camp, where the hammock extends considerably back from the stream, but at a distance of several hundred yards from the camp. The river itself has not the bend as represented in the map I hold, the curve being much larger. A slight breastwork was made around the camp on the afternoon of the 28th of February, according to custom.

9. *Question by General Gaines.* How many Indians does the witness believe could have secreted themselves in either of those hammocks, and within 200 to 600 yards of my camp, without being seen by my troops at any time during the day?

*Answer.* An indefinite number. The hammocks were very extensive, and might have contained, perhaps, three times the whole strength of the nation.

10. *Question by the court.* Do you know anything of the motives which induced Major General Gaines to proceed to Florida, after receiving, at Pensacola, the letter of the adjutant general, dated the 22d of January?

*Answer.* One of the first remarks made by General Gaines on receiving that letter—I mean in the first interview I had with him—he said he believed it to be his solemn duty to go on. I think he spoke of some pledge made, I believe, to the volunteers; but he alluded more particularly to his letter to General Clinch, promising him aid and co-operation. I think all these points were matters of conversation at the very first, and were never deviated from. I took the liberty of urging General Gaines by no means to abandon the expedition at that place, (Pensacola,) giving it as my belief that his presence was necessary to the efficient organization of the troops. I am not positive as to the extent of these remarks at Pensacola; but between that place and Tampa Bay they were more or less referred to. It was my belief that his abandoning the troops would be very nearly equivalent to rendering the expedition fruitless. I placed great stress upon the effect of the reputation acquired by General Gaines during the war with Great Britain, and upon his knowledge and experience as a soldier. I do not wish to imply or convey an idea to the court that the several officers junior to General Gaines were not officers of great merit; but neither one of them possessed all the requisites united in General Gaines for securing success to the campaign.

11. *Question by the court.* What was the amount and character of the force brought by General Clinch to the relief of General Gaines at Camp IZARD?

*Answer.* He brought about five hundred men with him, artillery, infantry, and volunteers, including one troop of mounted men, the number I do not recollect.

12. *Question by the court.* Would not that force, united with the force then at Camp IZARD, have been sufficient to meet the enemy successfully, or to have pursued them to their fastnesses, with a prospect of finding and subduing them?

*Answer.* This question calls for my opinion. I will state that the facility which the Indians seemed to possess renders it, in my opinion, indispensable to have had a force sufficient to occupy both sides of the river at the same time, in order to operate with effect against them. To sustain this opinion, I will refer the court to later operations on the Withlacoochee, about the end of March, when a very much larger force came in contact with a body of those Indians, more or less numerous; being on the same side with them, pursued them several miles, but did not take or subdue them. The more recent operations against those Indians may serve to throw much light upon this question, as in no instance does it appear that a pursuit of the Indians has been successful.

13. *Question by the court.* Do you believe the Indians were sincere in proposing a truce?

*Answer.* I believe they were perfectly sincere. I will remark, in reference to this question, that there was nothing in the manner or matter of the interview which I had with the Indians on the Withlacoochee to give me the smallest suspicion of their sincerity. There seemed to be a peculiar sadness over them, as

if thoughtful of the misfortunes of their tribe, indicating that further hostility on their part was hopeless. I thought them sincere, and in that opinion all who were present entirely concurred with me; and I am the more inclined to continue in that belief from several considerations. Although wars among Indian tribes are, sometimes, of very long duration, it is seldom that active warlike movements among them continue for any great length of time. With tribes at war, there may be years of cessation of the war, when a war-party, as it is called, is got up, with considerable formality, with a feast and a war-dance, and the party will make what they call a strike at the enemy, return from the expedition, and celebrate their success, if successful, with the scalp-dance. But this kind of war cannot be carried on against the whites. To carry on war against the whites the Indians are compelled to embody themselves in large numbers, making it difficult for them to obtain supplies of ammunition, provision, or clothing. In Florida, the enemy had, I believe, been so embodied for some length of time; they had had, I believe, some special causes for the war, which had in part been removed, especially by the conduct of Ocoola near Fort King, and I believed his language to me in council, that "he was satisfied," had reference to that conduct. I have heard of other similar instances. The Indians had been successful in the destruction of Major Dade's command, and they had killed many more than they had lost. General Gaines having taken a position in their neighborhood, which they had found it impossible to move, they must have seen that they could not, in future, have procured from above the supply of provisions, consisting of cattle, which they had before drawn from thence. The opinion among them that this position was likely to be permanently held was calculated to break down their spirit. I have never doubted that the Indians were informed of the movement of General Clinch from Fort Drane on the 5th of March. I believe that the Indians, in the knowledge of this, saw additional reason to suppose that they could not maintain themselves in the country, and that, taking council on the evening of the 5th, they had concluded to make overtures of peace; and I have always believed they would have accepted terms such as would have been worthy of this great nation to dictate to them had there been authority there to conclude a peace. There was not, in the council I held with the Indians, anything said about the terms of a peace. They made no proposition to me whatever. They asked for nothing; stipulated for nothing beyond what I have stated in my testimony. They were told by me that they should be sent for to council; but that, in the meantime, they must abstain from war, and promise to attend the council when sent for. They engaged to all that freely, and with apparent alacrity. During the time that the troops remained at Fort Drane after that, to wit, from the 11th to the 26th of March, as I have understood and believe, there was no sign of any hostility of the Indians in that part of the country. They had abundant opportunities to annoy the troops at that post, which were scattered over an extent of country of several miles in diameter, accommodating themselves with wood and water. Even before I left there, and as I have heard afterwards, the officers and men were passing, at pleasure, between the several corps of the army thus dispersed, and provisions were sent to these several corps without once being disturbed. General Gaines and his staff, a party of four, during that time, travelled from Fort Drane to Tallahassee, through a country that had been before, and was afterwards, in possession of the Indians, without molestation, and without suspicion of danger, so far as I know. I have always believed that the Indians had a right to suppose that no further hostile demonstrations would be made against them until they should have been sent for and heard in council. When the hostile movement took place from Fort Drane, about the 26th of March, the rear was fired upon by the Indians, and, I have understood, a baggage wagon, or perhaps two, cut off. I have regarded this as an evidence that the Indians were fully informed of the exposed position of the several corps around Fort Drane; but as long as they could hope to be sent for to council they abstained from annoying those corps, in compliance with their engagement on the Withlacoochee river.

10. *Question by General Gaines.* What reason had General Gaines for suspending his operations against the Seminole Indians on and after the 6th of March, 1836?

*Answer.* The fact that the enemy had raised a white flag; had asked for peace; had been told the conditions; had promised to abide by those conditions, by which they were to have a council with a view to settle the terms of that peace.

14. *Question by the court.* Were they informed, in council, that a large army was approaching?

*Answer.* I stated, in the body of my testimony, that I informed the Indians that General Gaines was but one of several chiefs sent against them by the President of the United States to enforce a peace upon them. I, of course, intended to convey to the court the fact that those chiefs were not alone, but were accompanied by large forces. The object of this information was that stated in the body of my testimony, to assure the enemy of the great power of the white people; that they, the Indians, could not withstand it, and that they would be compelled to submit. I was not myself informed, and of course did not communicate to the Indians, the time at which these forces would arrive. That information was communicated by the signal guns, which, I have understood, were directed to be fired by the several divisions of the army approaching the Withlacoochee. The Indians occupied a central position, and were much more likely to have heard those guns than the army divisions themselves. I will add to this answer that the Indians are, perhaps, the best scouts and spies in the world, and it would have been next to impossible for a large force to have approached their stronghold, in that stage of the war, without their knowledge.

11. *Question by General Gaines.* Was it or was it not after the Indians sued for peace that they were told that other forces were ordered into the country against them?

*Answer.* It was after they sued for peace.

15. *Question by the court.* While you were in the fortified camp on the Withlacoochee were there any preparations made for a sortie by order of General Gaines? If so, state the force or corps, and the officers appointed to the command of the troops ordered for that purpose.

*Answer.* The troops in the camp were disposed in the form of a square. The order was for one wing of each face of the square to be held in readiness for a sortie, directions being given for the other wing to extend. Colonel Foster would have been one of the officers on the right. I believe General Smith himself would have commanded the sortie on the left. I am not able, at this time, to give the names of the other officers. The order was given on the 29th of February, in the afternoon, and communicated by myself to Colonel Twiggs, commanding the light brigade. A previous order on the subject had, I believe, been communicated by some other officer. It is my opinion that, had the attack been renewed, in character like that of the morning of the 29th, a sortie would have been made; but after that attack there was no serious attack made while we were on the Withlacoochee. There were but small parties engaged, from time to time, in endeavors to annoy us. This circumstance was itself a source of alarm, lest the Indians had abandoned that part of the country, to the disappointment of the hope of General Scott, expressed in a letter to General Clinch, and which had been seen at Fort King. The first order for the

preparation for a sortie was, I believe, given, not through myself, but through some other officer. Colonel Foster came to me and made a suggestion as to a mere detail, desiring me to communicate it to General Gaines. I did so, and received his orders thereon, which were communicated as above stated. General Gaines, on several occasions, spoke of the probability of an arrival of troops other than those expected from Fort Drane, especially speaking of Colonel Lindsay, who was supposed to have arrived at Tampa Bay, and declared it to be his purpose instantly to move in any direction from which reports of firing might be heard. Log canoes were constructed, and were then in the camp, with rived boards, to be used for purposes of making platforms on the canoes to cross the river; the general saying that he would cross the river instantly on hearing a gun from the other side.

The court adjourned to meet on the 17th instant, at 11 o'clock.

TUESDAY, January 17, 1837.

The court met pursuant to adjournment. All present.

Captain G. A. McCALL, of the 4th regiment of infantry, a witness, being duly sworn, was interrogated as follows:

1. *Question by the court.* Will you state to the court, as nearly as you can recollect, the occurrences that transpired on the Withlacoochee, after the army, under Major General Gaines, reached that place, and during the time it remained in Camp Izard?

*Answer.* The army reached the Withlacoochee between one and two o'clock on the 27th of February. On arriving at the encamping ground of General Clinch the column was halted and the rear guard left in charge of the baggage train. With the advance and main column General Gaines proceeded to the river bank for the purpose of reconnoitring the crossing. A half hour or more had been passed in examining the depth of the water where the trail struck, when the general was fired upon by a party of eight or ten Indians, and immediately after the fight commenced from across the river. In half an hour the firing very nearly ceased, after which the troops encamped on the ground formerly occupied by General Clinch. The Indians who had acted as guides then declared that the ford they were seeking must be some miles lower down. The general determined to proceed to the point indicated, and the next morning, a little after sunrise, the columns were in motion for that point. As the advance guard arrived on the river bank the Indians from the opposite bank opened a fire upon them by which Lieutenant Izard, in command of the advance, was mortally wounded. The advance was immediately sustained by two companies of the 4th infantry, and one company of volunteers was posted higher up the river. The fire was kept up, at intervals, across the river until about one o'clock. In the meantime a working party had been detailed to prepare canoes and flooring for a pontoon bridge, and it was expected that everything would be in readiness for crossing by noon the next day. At about four o'clock that afternoon a very loud whooping was heard, as of a party advancing down the river on the opposite side. This was answered by the Indians opposite to us, and the friendly Indians with us declared it to be Micanopy, whose force they estimated at about eight hundred warriors, coming to reinforce the Mickasuky Indians. They remarked, also, that they must be whipped for three days in succession before they would give up. These circumstances determined General Gaines to write to General Clinch for an additional supply of ammunition and provisions, requesting him to bring down any mounted force he might have with him, as he considered that species of troops essential. The following morning I accompanied General Gaines on a reconnoissance of the ground immediately in front and on the left of the encampment on the river. Very soon after he returned, the working party, which was a short distance to the left of the encampment, was fired upon, and immediately afterwards a heavy fire was opened on three sides of the encampment. The troops had been directed not to throw away a shot, and never to fire without good aim and a fair striking distance. This order was observed with great coolness, and a heavy fire was sometimes sustained for several minutes without a shot being returned. The fight continued without intermission for upwards of two hours, when the Indians retired and did not make their appearance again that day. The loss of the troops this day was one sergeant killed and thirty-odd officers and men wounded; among the latter were General Gaines and Lieutenant Duncan. After the action the work was resumed for the purpose of completing the materials for the bridge. That evening General Gaines sent another express to General Clinch, informing him of the occurrences of the morning, saying that he had abstained from a sortie and should continue to do so until he heard from him, lest a sortie might disperse the Indians without resulting in any important advantage. On the following morning the Indians did not reappear, as was expected, nor did they appear in force again until the 3d of March, when they directed upon the camp, for about an hour, a fire nearly as warm as that of the 29th of February, and, at intervals, until the 5th of March; on which day, at about nine p. m., a voice was heard hailing the camp. It was at first supposed to be a return express, and he was desired to advance. The voice of the negro was then heard to say "that the Indians were tired of fighting and wished to come in in the morning and shake hands." He was told that if the Indians appeared in the morning with a white flag they would be heard. About nine o'clock the following morning a body of about three hundred Indians appeared some four or six hundred yards in the rear of the encampment with a white flag. After some hesitation three of their party advanced and were met by Adjutant Barrow, of the Louisiana volunteers, who, after a short time, returned and said that the Indians told him they had lost many warriors, desired peace, and were willing to shake hands. Captain Hitchcock was then directed to meet them and hear particularly what they had to say. On his return he reported that the Indians were apparently subdued in spirit and seemed extremely anxious to make peace; they had told him they would meet him again in the afternoon and give him their final answer. About the appointed time the Indians returned, and, after some time passed in conference, a party of Indians, who were in their rear, were fired on by General Clinch's flankers, approaching from Fort Drane in that direction, which broke up the meeting. On the morning of the 8th of March, the Indians not having appeared since the 5th, General Clinch sent an interpreter to ascertain their situation, numbers, and disposition. On the evening of the 9th General Gaines turned over the command to General Clinch, who assumed command, in orders, on the following morning. That afternoon the troops took up the line of march, under command of General Clinch, for Fort Drane.

2. *Question by the court.* What was the number of Indians that invested the camp on the Withlacoochee, and how many attacks were made by them?

*Answer.* The number of warriors on the morning of the 29th was, in my opinion, between twelve and fifteen hundred, including negroes, judging from the extent of ground they covered, their fire, and their

war-cry. On the morning of the 3d their numbers, though apparently not so numerous as on the 29th of February, were greater than at any subsequent time. They made five or six attacks, or fired into the camp five or six times, altogether; occasional shots were fired both by day and night.

3. *Question by the court.* No sortie was made on the enemy at the several attacks made on the camp. What were the reasons that withheld or prevented such a movement on the part of General Gaines?

*Answer.* He did not explain to me, particularly, his reasons, but my impression was that it would not have resulted in any important advantage.

4. *Question by the court.* Did no officer, during the siege, urge the propriety of making a sortie?

*Answer.* I did not myself hear any officer, and my impression at the time was that there was no officer there who differed with the general on that point.

5. *Question by the court.* What is your opinion of the ability of the forces under General Gaines to drive and beat the enemy, if a sortie had been made?

*Answer.* I have not the smallest doubt that they would have been able to do it; but, from the nature of the ground, the hammocks which bordered the river being thick and extremely difficult of access to the troops, would have enabled the Indians, lying concealed, to deliver their fire, and then, owing to their superior celerity and knowledge of the ground, to have passed through the hammock and crossed the river before the troops could have come up with them, their facilities for crossing the river being great, and the troops without the means of following them.

1. *Question by General Gaines.* What part of the force was out of the limits of my breastwork during the action of the 29th of February; and state whether one or two companies were not often engaged in firing at the enemy across the river prior to the 6th of March?

*Answer.* There was one company without the limits of the breastwork on the 29th of February. Several companies were engaged in firing at the enemy across the river prior to the 6th of March.

2. *Question by General Gaines.* What is your opinion as to the practicability of ascertaining, a week or two weeks after the Seminole Indians had left the battle ground or encampment, what number had occupied said encampment or battle ground? State whether the Indians usually leave at their encampments as much evidence of numbers as the whites usually leave.

*Answer.* I think it would be impracticable, a week or two weeks after a battle, to ascertain from the signs commonly left by Indians what number had been on the battle ground; and, as a principal object of the Indians in encamping in time of war is to conceal their numbers, it would be extremely difficult, perhaps impossible, to make even a tolerable guess at the numbers that occupied an encampment, unless they had occupied it for some length of time. In reply to the latter part of the question, the Indians do not usually leave at their encampments anything like as much evidence of numbers as the whites usually leave.

3. *Question by General Gaines.* What were the sentiments and wishes of the Louisiana volunteers, on board the steamboat Watchman, on the 6th and 7th of February, 1836, as expressed in your presence and hearing, in reference to the continuance of General Gaines to command them in person, on the campaign against the Seminole Indians?

*Answer.* On the arrival of the steamboat Watchman at Pensacola on the 6th of February, 1836, it was ascertained that the steamboat Merchant, with one battalion of the regiment of volunteers, under the immediate command of Colonel Smith, commanding officer of the regiment, had sailed the day before for Tampa Bay. On landing at Pensacola General Gaines received the letter from the adjutant general, notifying him that General Scott had been ordered to proceed to Florida, and directing him to await further orders in New Orleans. On receiving this letter General Gaines remarked to me that he would go, with great readiness, wherever his services might be most useful to his country, and said then that he thought he should return to New Orleans. I left him immediately to attend to some duties. When the troops learned the purport of the letter received, many of the volunteers collected around me, and inquired if the general intended to proceed or return. I replied, "I believed he would return." They then expressed, in strong terms, their regret at this information, and the general opinion, as far as I learned, was that he should proceed. After this the commanding officer of that battalion, Lieutenant Colonel Lawson, came to me and made the same inquiry. I replied as before. He said "he thought General Gaines was bound to proceed, at least to Tampa Bay; that he would be severely censured if he relinquished the command;" and he requested me to urge the general to proceed. He spoke of the confusion that would probably ensue in the event of his giving up the command. Colonel Smith, the next in rank to General Gaines, was willing, through personal regard to Lieutenant Colonel Twiggs, of the 4th infantry, to waive rank with that officer, for the purpose of giving him the command of the brigade; but if General Gaines relinquished the command of the expedition, Major Foster, of the 4th infantry, and Lieutenant colonel by brevet, would assert his right to the command of the brigade, in virtue of his brevet commission, which was senior to Colonel Twiggs's commission in the line, and contention for the command of the brigade would arise, which might cause the separation of the troops, and, in that way, endanger the success of the expedition." He left me, saying he would call on the general and converse with him on the subject. I saw General Gaines very soon after this, and he told me he had determined to proceed, at least to Tampa Bay, and that he would be governed by circumstances in his future determinations. On the passage to Tampa Bay he showed me the rough draught of a letter which he said he intended to address to General Scott in case he found him in the field. That letter was announcing his arrival with the troops under his command, and proposing a co-operation with those under General Scott. He at the same time remarked to me that if General Scott preferred to take the sole conduct of the war, he would, without hesitation, turn over the command to him.

4. *Question by General Gaines.* Did anything occur at Dade's battle ground which tended to confirm General Gaines in the determination to proceed to Fort King?

*Answer.* On Dade's battle ground, whilst a party detailed to bury the dead were collecting the bodies, General Gaines expressed to me his anxiety to know where the enemy was, not having met him, as was expected, on the march to that point, and his desire to know the situation of the command under General Clinch. He stated that the surest means of acquiring this information was to proceed to Fort King, but expressed an unwillingness to draw upon the supplies of that post, which might be slender. I then remarked that it had been that morning mentioned to me that the quartermaster present had been notified by his department that large supplies had been already ordered to Fort King. General Gaines expressed great satisfaction at learning this, and the quartermaster was immediately sent for. He produced a letter from the Quartermaster General's office, dated the 19th of January preceding, informing him that a large supply of provisions had been ordered from New York to Fort King, and thirty thousand rations to St. Augustine from the same point. On receiving this information, General Gaines expressed his determina-

tion to proceed forthwith to Fort King, and the order for the march was given the moment the funeral rites were concluded.

5. *Question by General Gaines.* On General Gaines's arrival at Fort King, finding neither the supplies nor the troops he had expected, what plan of operations did he decide upon?

*Answer.* On arriving at Fort King, finding that the garrison consisted of but one company of artillery, and that the supplies of provisions at that post would only afford him two days' rations, he told me, in conversation, that it was his determination to take up the line of march for Fort Brooke, (Tampa Bay,) where he had supplies; and should he not find the enemy on the route thither, he would then operate in the direction of Talloptchupko, on Pease creek, for the purpose of intercepting the retreat of the Indians towards the Everglades, should they be driven in that direction by the troops operating above. In proceeding to Tampa Bay, the route by Clinch's battle ground was chosen for two reasons: *first*, because it was the shortest route, and, *second*, there was a greater probability of meeting the enemy on that route.

6. *Question by General Gaines.* Was it General Gaines's intention to make a sortie in the event of his hearing General Clinch's or Colonel Lindsay's guns?

*Answer.* General Gaines remarked several times, while lying at Camp Izard, that he should not be surprised at hearing Lindsay's guns on the other side, and in that event he would cross immediately and march to his aid; or should the Indians engage Clinch on his advance, he would immediately march out and support him.

Captain THISTLE, a citizen of Louisiana, and witness, being duly sworn, was interrogated as follows:

1. *Question by the court.* Were you in the campaign in Florida under Major General Gaines, in 1836; if so, in what capacity?

*Answer.* I was. I commanded a company of seventy strong, officers included, in Colonel Smith's regiment of volunteers, commanded by Major General Gaines.

2. *Question by the court.* Please state to the court, as nearly as you can recollect, the occurrences that transpired on the Withlacoochee after the army reached that place, and during the time it remained in Camp Izard.

*Answer.* On the 27th of February, I think, as the advance guard approached the river, it was fired upon from across the river, and sustained some injury. I think there were several wounded. Orders were then given to withdraw, and encamp on General Clinch's old encamping ground. I made some inquiry that evening of the cause of our not crossing the river, (it was understood on our march before we got to the river that we were going to a ford,) and I was informed by Colonel Smith that the Indians had made a mistake in some manner; he was not certain whether purposely or accidentally. They stated the ford was two or three miles further down the river. Next morning, about sunrise or a little after, the order was given to take up the line of march for the ford. We reached the place we started for about 9 or 10 o'clock in the morning. General Gaines and Colonel Smith, with a detachment, went to examine the river, as I was informed by Colonel Smith. As they were in the act of crossing the river, and partly in the water, they were fired on, and, as far as I recollect, the fire was kept up for some length of time, perhaps an hour or an hour and a half, with a tremendous war-yell. It appeared to me to extend for a quarter of a mile up and down the river. Being stationed on a rise of ground, I had advantage in hearing the sound. The firing ceased, and orders were given for us to encamp; whilst there was a party making canoes, and others preparing breastworks. The breastworks were thrown up temporarily for the night, and the canoes principally finished—having worked on them till 10 or 11 o'clock that night. I understood that evening that we would cross the river the next day. Next morning I was called upon early, with an order from General Gaines to have my select marksmen ready to go on the river. About 8 or 9 o'clock I paraded my men opposite to General Gaines's quarters. At that place there were fifty regulars who had volunteered from different companies. Twenty more volunteered from Colonel Williams's company; twelve from Captain Burk's; and from Captain Kerr's and Captain Alexander's enough to make one hundred and ten, including my own men—thirty-six. I was cautioned by General Gaines to use caution; that he did not send me on the river to have my men killed, but to kill the Indians. Colonel Twiggs shook hands with me, and likewise cautioned me to use great caution—to get men on the river bank without being discovered by the enemy, if possible. General Gaines had previously given me the same orders. I was accompanied, for about 150 yards, by Captain Kerr, to show me where I had better enter the hammock, as, the day previously, he had been on the river bank where Lieutenant Izard got his mortal wound. My men were then put in open order. I directed them to get on the river the best way they thought proper, so as not to be discovered—either to crawl or roll, and take their stations as near ten feet apart as circumstances and shelter would permit. I then commenced examining the line, to see if my order had been obeyed. I found that every man had taken caution to get behind a log or tree; and where they had nothing of this kind, they laid up chunks so that they could fire under the chunk and over the bank. I had almost reached the extreme left of my line when one of my men fired. I, being within ten steps of him, asked him, in a low voice, "what he fired at?" He said he saw one Indian, and that, having deliberate aim, fired at him. I returned from him to take my station, when I heard the crack of from fifteen to twenty rifles upon my side. Instantly there was a war-yell, and a heavy fire opened, the whole length of the line, from the enemy on the opposite side of the river. I had a space of about sixty yards of open ground to pass, in which space there was one pine tree standing by itself. I saw one of my men behind that tree. Then I attempted to cross this space, which I did by crawling. I should judge, from the shots fired at me and at this man, partly concealed behind this tree, that fifty or sixty shots were fired during the time I was passing this distance of fifty or sixty yards. I heard a tremendous fire in the rear, which I took to be an attack on the camp. About that time, or a little after, a recall was sounded. I had my non-commissioned officers stationed at intervals, which enabled me to pass the command for every man to keep his place and not leave his shelter, deeming it imprudent to have my men leave their cover under such a heavy fire as was then made on my small detachment. I had estimated the number to be from 375 to 450 of the enemy; across the river, from 35 to 40 yards wide. In about an hour afterwards the Indians principally ceased firing. I had just commenced passing the order to throw out flankers as the second recall was sounded, which was immediately obeyed. I returned to camp in good order; ten men slightly wounded. On reaching the camp I found a number of men that had been wounded, amongst them General Gaines. I perceived that the palmettoes were partly burnt in the enclosure of the camp, on the east side, which was effected by a fire communicated from the outside by the Indians, and, as I was informed, the Indians had come up to

within 30 or 40 yards of the camp, under cover of the smoke, while the palmettoes were burning. That evening I made a verbal report to General Gaines that I was confident that I had done the enemy some considerable injury, for I had seen three fall under my own eyes. He then gave me some instructions, as I was on the reserve, informing me they had had a very severe attack on the camp, and expected one that night; charging me particularly to give orders to my men not to fire in haste; that if the Indians undertook to storm the work, to let them come up to within 25 or 30 yards, so that every man might be sure of his object, as we had not a great supply of ammunition. I was informed that from 1,200 to 1,400 Indians had made an attack on the camp during my absence. The next day we repaired our breastworks, and a few Indians showed themselves and fired on those who were preparing the timber, and the men were driven in. I made some inquiry as to our movements the next day, and I understood an express had been sent to General Clinch to come down with a reinforcement, and that it was not deemed proper to make an attack upon the enemy, or cross the river until such time as we had a force able to pursue him. I will remark, that it was my opinion that we ought not to undertake to charge the enemy unless we had mounted men. My reason for this was that the Indians are lightly clad, and nothing to encumber them but the rifle, powder horn, and the bullet pouch. The general usually cautioned the men, and gave them great praise for not wasting their ammunition. On the 2d of March a few shots were occasionally fired into camp. On the 3d of March a very severe attack was made on the camp. I think it commenced about ten o'clock, and continued for an hour or an hour and a half, keeping at a long distance—some few occasionally coming up under shelter of some underbrush, &c., to within 75 yards of our camp. I took great care that day, as there had been some little argument previously as to the number of the Indians, to estimate their number, and I could not make the number of Indians and negroes less than 1,200 or 1,400. The Indians having ceased firing, the main body of them withdrew; some 15 or 20 would occasionally throw in a few shots on the east side of the camp. I proposed the next day to General Gaines to give me permission to mount about 20 or 25 of my men on the broken-down pack-horses. The general's reply was, that he expected a reinforcement, and this charge which I wished to make could not be very effectual on account of the horses not being in order for a charge. It readily struck me the general was in the right, and I wrong. The next day, the 4th of March, there were a few scattering shots fired, as the staff were dealing out some corn to the troops, but no one wounded to my knowledge. On the 5th, I think, there were some shots fired.

The court here adjourned, to meet to-morrow morning at 11 o'clock.

JANUARY 18, 1837.

The court met pursuant to adjournment. All present.

*Captain Thistle's testimony continued.*

On the evening of the 4th or 5th of March some one hailed the camp, which we took to be a reinforcement from Fort Drane. He was answered by Captain Burk, the officer of the day, asking what was wanted. He said the Indians were tired of fighting, and wished to make peace. He was told to come the next morning with a white flag and they should be heard. The next morning, accordingly, at the appointed hour, I saw a group of Indians, about 300, in the rear of our camp, from five to six hundred yards. Then two or three advanced slowly towards the encampment, and hailed the camp. They were answered by Adjutant Barrow to come nigher; that they should not be fired on nor injured. After some conversation with General Gaines, Adjutant Barrow took a white handkerchief, crossed the breastworks, advanced a few yards towards the enemy, and placed himself on a stump and showed his flag.

After some hesitation on the part of the Indians, they sat upon a log about 275 steps from the breastwork. They were then met by Adjutant Barrow, afterwards by Captain Hitchcock, and some others of the staff. I don't know what there took place, as I was not present at the interview. The same evening they met again, about 3 or 4 o'clock. Whilst they were holding the council this time they were fired upon by General Clinch's advance guard, and instantly they fled to the hammock. Colonel Twiggs was standing, at this time, in front of my company, which was a reserve. General Gaines had always cautioned me to have my company always in readiness, especially during the time they were holding the council, lest the Indians should betray their trust. He had not, however, the least idea they would, but he said there was no harm in being prepared for them. Colonel Twiggs, when the Indians were fired upon, expressed "O, my God, what a pity! what a pity!" He said that if it had not been for this unfortunate circumstance everything would have been accomplished in the way of peace. I made observations myself that I wished that General Clinch had had the good fortune to have killed the whole of them, for I did not believe, myself, that there was any sincerity in them—no more than to suit their convenience. But I would state that those officers, according to the best of my judgment, did sincerely believe that the Indians were sincere. That evening, about 9 or 10 o'clock, our camp was hailed in front by the same one who had previously hailed us, asking for two days to see Micanopy and to hold a council amongst themselves; I heard them agree to return at the end of two days to council; the next day I asked permission from General Gaines to take six men and examine the river to find the crossing place; he told me he had no objection, that Colonel Smith would give me permission, which was done; I selected my men and left the camp about 2 o'clock; I took an easterly direction and entered the hammock; I discovered a large Indian trail, it led into a swamp which was very thick with undergrowth and brier vines; you could scarce see a man ten yards unless it was in the Indian trail; I followed this Indian trail for about a mile; it was miry; I then came to a run or branch of an old river; I found one part of the trail led across this branch, on a large log, the other turned to the left; I followed the one that went to the left, about one hundred yards, where I found a ford; I crossed and came on to a small island about twenty yards wide; this descended from the river; the bank on the opposite side of the river was plain to my view, being seven or eight feet higher than the bank on which I stood; I hesitated, for a moment, to approach the bank; I saw the opposite bank was completely fortified by trees which had fallen accidentally; I likewise placed myself behind a large cypress that stood on the summit of the bank; I had no shelter from the opposite bank, except in front, and, from my view of the river, the enemy could have thrown in fires on me right and left; I then discovered several rafts on the opposite side, which appeared to be lashed together with vines or raw hides, and, apparently, extended across the river; the view I took of this position was, that the Indians had selected it, and that they could make good their crossing, and beat us, if we had pursued them to that point, against all our force, provided they had not been more than 500 strong,

but I always judged their force something like three times that number; I returned to camp between 10 and 11 o'clock that evening; I went immediately and reported myself and my men, and learned that it had been suggested by Colonel Lawson, and, I also understood, by General Gaines and Colonel Smith, that they were afraid I had met with some serious accident; nothing more of any importance took place; we waited three days for the return of those Indians in council, as they had promised us; I had often had conversation between that period with a number of the officers, and they all believed the Indians were sincere; some went so far as to say that I was stubborn, and would not believe the truth when it was so plain before me. After the end of two days I asked Adjutant Barrow, who had great confidence in the sincerity of the Indians, what he then thought of their promise to return; he said he would not hesitate to cross the river and go to the enemy's camp; we waited two days longer, no Indians made their appearance; a negro named Primus, I think, was sent on the evening of the 7th, if I mistake not, to see what information he could obtain from the enemy; he had not returned when we took up our line of march for Fort Drane, under the command of General Clinch, on the evening of the 10th; the evening of the 10th I was informed that Primus had returned; I made some little inquiry, and was informed that the Indians had gone thirty miles into the Wahoo or Black swamp, and were there with their warriors and families; we marched to Fort Drane, where we encamped; we lay there for a number of days; while we were on the Withlacoochee, and after the council was held with the Indians, our men used to fish on the river bank without being molested by the enemy.

1. *Question by General Gaines.* The witness has stated that he did not believe in the sincerity of the Indians in suing for peace on the 5th and 6th of March, 1836, and yet that he, on the 6th, asked and obtained leave to go out of camp, and did go some distance out of camp with his six men. The witness is desired to state whether he would have believed it quite safe or prudent to go out so far with so small a detachment if the Indians were indeed insincere in their attempts to sue for peace?

*Answer* I will first state that I consider myself a first-rate woodsman; I have hunted with the Indians, I have traded with them, and know their character, I think, almost as well as any other person who has not spent the principal part of his life with them; I would consider myself capable of keeping myself concealed from the enemy, if I did not choose to come in contact with them; I would refer to one instance when I was under the command of Major General Scott: after we had effected our crossing, in part, of the Withlacoochee, and the Louisiana regiment of volunteers had crossed the river, my station being on the left, mine was the last company that crossed; I had been previously detailed to cover the landing; after crossing, I took my station on the left; I was ordered to erect a breastwork and send out five or six men as spies or picket guard; after my men had commenced the work, and my picket guard set out, I took the liberty to take with me my first lieutenant; we proceeded in the direction of the crossing place I have alluded to, being then on the opposite side from that at which I had before examined the crossing; we passed between a pond on the right, and the river on our left, about the distance of three-quarters of a mile from camp, where we heard some Indian giving the word of command to his warriors; I took this to be the word of command from the sound rapidly advancing, and being the same tone of voice that we had the pleasure of hearing so often in our camp; we immediately retraced our steps; I gave directions to my lieutenant to tell my picket guard to conceal themselves behind trees; I gave this information of the approach of the enemy to Colonel Smith, and likewise mentioned to him that I concluded this was the Indian's advance guard.

At the request of Major General Gaines, the court here instructed the judge advocate to enter on the record certain extracts from the documents which accompany the proceedings in the case of Major General Scott. These extracts are as follows:

## EXTRACTS.

*From General Scott to the Adjutant General, dated Augusta, Georgia, January 31, 1836.—(Doc. No. 18.)*

"It is now my opinion that the Seminoles cannot be promptly reduced to submission by a force much short of five thousand men, and that the greater part of this force ought to be mounted."

*From the same to the same, dated Augusta, Georgia, February 2, 1836.—(Doc. No. 20.)*

"Cannot the 4th infantry be ordered from Louisiana to the theatre of operations?"

*From General Scott to Colonel Lindsay, dated Augusta, Georgia, February 2, 1836.—(Doc. No. 29.)*

"By the 20th of this month, at the latest, I hope to be in sufficient force on the St. John's, or at Fort King, or at Fort Drane, to commence a system of vigorous operations against the Seminole Indians.

"It is unofficially reported that Lieutenant Colonel Twiggs, with a detachment of the 4th infantry, has been ordered from New Orleans to Tampa Bay. If this should be true, your force may be sufficient to enable you to leave the necessary garrison and to operate a junction with the main army at the distance of three or four marches."

*From General Scott to the Adjutant General, dated Augusta, Georgia, February 6, 1836.—(Doc. No. 34.)*

"The moment we are in force on the St. John's, and take up the expected line of operations, St. Augustine will become an interior position. That line of operations will probably be first from Picolata to Tampa Bay, in order to open communications with Forts King and Drane, and with Colonel Lindsay. My object will be to cut the enemy off from the country to the left of that line, and to force him to the right. If I succeed, the theatre of operations, though favorable to him, will be much less bad for us than the southern part of the peninsula.

"I am more and more persuaded that I have not called for too large a force. By the 25th instant I may, perhaps, have in Florida, in all, 4,000 men, and by March 500 more. It is not probable that I shall delay offensive movements quite so long."

*From the same to the same, dated Savannah, February 16, 1836.—(Doc. No. 38.)*

"Colonel Hawkins, the aide-de-camp of Governor Eaton, arrived here a few days since, bringing despatches, and he has set out on his return with my answer. I had anticipated his inquiries generally

by his letter to his excellency, dated the first instant, (a copy of which has been forwarded,) and I have said to him more in detail that it will be preferable to place any force he may have in the field, or find it necessary to call out, (not exceeding from 400 to 600 men,) in *defensive* positions, for the protection of the settlements of Middle Florida, as it was still my hope to cut off the hostile Indians from the southeast and drive them towards those settlements.

"I learn by newspapers that from 600 to 1,000 men, mostly volunteers, have sailed from New Orleans for Florida, I think, Tampa Bay. I have not called for a single man of the regulars or militia from Louisiana. Perhaps the reported force volunteered for the temporary protection of Tampa Bay, as certain companies sailed hence and from Charleston for the specific defence of Picolata and St. Augustine some weeks ago. Hence I could not rely on the troops from Louisiana for the general purposes of the campaign, and therefore did nothing to arrest the detaching and the march of troops from this quarter. But if Tampa Bay has been reinforced from Louisiana, and to the extent reported, Colonel Lindsay will be in a condition, on arriving with the Alabama regiment, to act offensively in any direction and independent of support."

*General Scott to General Clinch, dated Savannah, February 12, 1836.—(Doc. No. 41.)*

"I am unable, as yet, from the want of recent information from the theatre of war, and better topographical knowledge of that theatre, to lay down any definitive plan of operations. I shall rely much on communications to be received from you on all points necessary to the formation of such plan, but my present idea is that it may be best to move upon the road from St. Augustine to Tampa Bay, till joined by Colonel Lindsay from the latter place, and if possible to cut off the greater number of the Indians from the fastnesses below that line."

*General Scott to the Adjutant General, dated Picolata, Florida, February 26, 1836.—(Doc. No. 47.)*

"Observing by returns from Brigadier General Clinch that his supplies were but limited, and desirous of placing at Fort Drane subsistence for the right wing for at least twenty days, in order to give confidence and effect to any movement to be made from that point, I have been occupied in devising means to send thither additional supplies to the amount of seventy tons. To enable me to do this, I have been waiting for the wagons, horses, and pack-saddles provided at Augusta and Savannah. Some of these wagons have arrived, but as yet no horses. The remainder of that baggage train cannot be expected here from Savannah in less than ten days.

"It seems that Major General Gaines arrived at Fort King from Tampa Bay on the 22d.

"I have time to add no more. All my plans are thwarted, the principal of which was to move in concert from Fort Drane, Volusia, and Tampa, on the 8th of March, upon the enemy, who are supposed to be (at this time) principally upon the Withlacoochee."

*Notes appended to General Scott's Order No. 4, dated Picolata, February 26, 1836.—(Doc. No. 55.)*

"The right wing was intended to be concentrated at Fort Drane, say by March 8, when it was expected that General Clinch would have had all the Georgia troops, companies of United States artillery, and the detachment of United States dragoons; in all, about 1,400 men.

"On the 25th instant it was known that General Clinch would have had, but for General Gaines, 19,000 rations for men and about 3,000 bushels of corn for horses. That amount of subsistence at Fort Drane I should more than have maintained by the 8th of March, by means of the baggage train expected from Savannah and Charleston, and by the aid of *boating* on the Ocklawaha to Payne's Landing."

*General Scott to the Adjutant General, dated Picolata, March 2, 1836.—(Doc. No. 52.)*

"All hope of sending supplies hence by the Ocklawaha is abandoned. We have to rely solely on the road to Fort Drane, which is bad enough; and the horses and mules which were to have followed me closely from Savannah have not arrived.

"The company of Georgia mounted volunteers that arrived here about six days ago, and with which I had expected to march to Fort Drane, refused to be mustered into service, and refused to come under the rules and articles of war, with the exception of a small part that remains. The rest went off without leave from their gallant and patriotic captain (Kenan) yesterday and the day before. The other four companies of the same battalion are this moment reported to have arrived on the opposite shore. I have sent an officer over to muster them into service. If I can get two of the companies I shall be most happy. I may obtain the four, but will march with one to Fort Drane. Some mounted men are indispensable, and I know not that the United States dragoons will arrive in a month. I wish I had never relied upon the arrival of that detachment. Expecting it hourly at Savannah, (I had expected it at Charleston as early as the 4th ultimo,) I left all the horses, in order that the mounts might first be chosen, and the remainder of the lot sent here for the baggage train. That error I corrected, as far as practicable, by an order given to Lieutenant Dimmock on the 21st ultimo. No horses, however, have arrived from Savannah.

"We have heard nothing recently from Colonel Goodwyn's regiment of mounted South Carolinians, but presume it has reached Jacksonville below.

"I ordered from Savannah the little steamer belonging to the Engineer department, called the *Essayons*, to be sent here for the express purpose of communicating with that post (Volusia) and of supplying it with stores from Picolata, but that boat, like everything else (almost) left behind, has not arrived.

"I have at length received a letter from Colonel Lindsay, dated at Mobile, the 13th ultimo. He was about to set out for Tuscaloosa to hasten the Alabama regiment. It is now evident that he cannot be at Tampa before the 10th, probably the 15th instant.

"Brigadier General Eustis cannot cross the Ocklawaha earlier than the 14th instant."

*General Scott to General Clinch, dated Picolata, March 1, 1836.—(Doc. No. 60.)*

"By the arrival at daylight this morning of the express from Fort Drane I have your note of yesterday's date, accompanied by a letter to you from Major General Gaines, dated the day before.

"I regret, in every point of view, the premature and unauthorized movement from Tampa Bay made

by that general, and the very awkward and responsible position he has placed himself in by his subsequent march from Fort King. I presume that, as instructed, you sent him my Order No. 4, dated the 26th ultimo. By that he saw that if the troops he brought with him from Tampa Bay could not be subsisted at Fort King by means of supplies derived from this place through the Ocklawaha, it was expressly commanded that the column should march to Volusia without delay, where subsistence in abundance would be immediately provided. But he had, before that order reached him, taken from Fort Drane a large part of the subsistence relied upon for a more systematic course of operations and decamped. The order, however, I take it for granted, was sent after him, and in time to reach him within twenty miles of Fort King. In any event, the responsibility of his movements and actual position is his own, for he must have known, as early as the 10th ultimo, if not before, that I had been charged with the general direction of the war in Florida, and that by interfering he constituted himself an interloper.

"Even if you had sufficient stores on hand and means of transportation, I should, under the circumstances, command you to send no subsistence to him unless to prevent starvation; but you have neither. Let him, therefore, in time, extricate himself from the embarrassment he has placed himself in by marching upon Volusia, where I have no reason to doubt that 20,000 rations, sent hence on the 27th ultimo, have safely arrived. As he appears to have a retreat open to him, or is in no peril to prevent his taking that step, you of course will make no detachment or movement to join him.

"The train you have ordered hither is expected to-night. As yet we have here but few wagons to add to your number. The whole train shall be immediately loaded with subsistence and sent back to Fort Drane. I have only time to say that should the troops under Major General Gaines be compelled to march back to Fort King or to Fort Drane, instead of proceeding to Volusia, as heretofore commanded, and as I still wish that they should do, on account of the extreme difficulty of sending subsistence to your neighborhood, you will only issue rations to them for their current subsistence, and not for further false expeditions.

"As the first consequence of the arrival of the troops from Tampa Bay to Fort King, and the demand made upon Fort Drane for subsistence, I was obliged to order back a battalion of Georgia volunteers that had then been nearly two days in route to join you.

"The company of mounted men from the same State, now on the opposite side of the river, refuse to be mustered into service, and refuse to come under the rules and articles of war. The other companies of the same battalion may follow their example. If they do, I shall lose no time in ordering the whole back to their homes.

"Major Gates with his three companies has not arrived, and I have no intelligence respecting the United States dragoons of a recent date. Finally, the horses for some days expected from Savannah have not arrived. These embarrassments may detain me here I know not how long.

"The left wing is moving upon Volusia with system and success. The South Carolina foot constitutes the advance, and I suppose the mounted regiment from the same State is now crossing the St. John's at Jacksonville.

"Send another copy of my Order No. 4 to Major General Gaines, and a copy of Order No 1, which is enclosed for the purpose. The former is reiterated so far as respects the march to Volusia, if this be practicable; and enclose him a certified copy of this letter, for his government and your justification. I remain, in haste, your obedient servant, Winfield Scott.

"P. S.—I am instructed by Major General Scott to say that the quartermaster's return did not accompany your letter of the 27th ultimo. No return has been received of your ordnance or ordnance stores, particularly the fixed ammunition for muskets. Please to send one. Respectfully, A. Van Buren, aide-de-camp."

○

*General Scott to General Clinch, dated Picolata, March 4, 1836.—(Doc. No. 69.)*

"I still presume that Major General Gaines will be obliged to fall back on Fort Drane, which increases my anxiety to send the wagons (with some additions) loaded. I would prefer much that the force brought with him was back to Tampa Bay, or rather that it had not marched from that place; *provided* that the movement fails to crush the enemy, or to terminate the war. The worst result, next to the loss of that fine body of men, or a third of it, would be mere success in driving the enemy into the lower country, where, I suppose, it would be almost impossible for us to follow—I mean *below* the waters of Charlotte harbor. Hence my indignation that an isolated attack should have been made from your vicinity, well calculated to produce that result, and at a time, too, when you knew, and Major General Gaines must have known, through you, (and before,) that my plan, with ample means, was to move simultaneously upon the Withlacoochee in three columns—from Tampa Bay, the upper crossing on the Ocklawaha, and Fort Drane—so as to make it impossible for the enemy to escape to the lower country.

"I have not yet supposed that Major General Gaines has not his retreat upon Fort Drane or King perfectly in his power. On account of subsistence, if he can cut his way through the enemy to Tampa Bay, I should much prefer that his force should be there; and when I wished him to march or send that force to Volusia, it was because it would be infinitely more easily subsisted there than at Fort Drane. Should he, however, be in any difficulty in operating a retreat from the Withlacoochee, I certainly wish you to afford any succor that the slender means within your reach may allow; and this, doubtless, you would render without any special permission to that effect. If the force return to Fort Drane or King, it must be sustained for at least five or six days from the means derived from this place; and hence, I *now* prefer it should become a part of the right wing, rather than take that quantity of subsistence from you, and march back to Tampa Bay."

*General Scott to the Adjutant General, dated Picolata, March 6, 1836.—(Doc. No. 68.)*

"I at length know that the South Carolina mounted regiment reached Jacksonville yesterday. It is destined to make part of the left wing.

"Besides, Brigadier General Eustis has necessarily been compelled to wait for the South Carolina mounted regiment, which cannot reach St. Augustine before the day after to-morrow, and Volusia before the 12th.

"If the column under Major General Gaines had fallen back upon Fort Drane or King, the right wing would have wanted nothing but subsistence, and the forces now in this vicinity and known to be coming up, to act with vigor and effect.

"To add to my numerous vexations, the wagons reported to have been shipped at Baltimore in the Arctic have been left behind.

"I send no more troops, for the present, to Fort Drane, on account of the difficulty of subsisting them there. If Major General Gaines shall not fall back on that point, it will be indispensable to wait for Captain Wharton."

*Aide-de-Camp Van Buren to the Adjutant General, dated Fort Drane, March 25, 1836.—(Document No. 97.)*

"Captain Wharton, with his detachment of dragoon recruits, reached this the day before yesterday."

*General Scott to the Adjutant General, dated between Picolata and Garey's Ferry, March 9, 1836.—(Document No. 71.)*

"I have just set out for Fort Drane, *via* Garey's Ferry, on Black creek, with two companies of regulars, and intending to take with me from the latter place the small battalion of mounted Georgians, (heretofore mentioned,) under the command of Major Douglass. Lieutenant Colonel Bankhead is at the head of the first detachment, and the two together may make a total of about 240. But even this small force may be important to rescue Major General Gaines.

"I had not received the slightest information of the operations on the Withlacoochee (official or otherwise) of a later date than the 29th ultimo up to this morning, and had concluded that he had effected his march, with more or less success, against the enemy upon Tampa Bay; when, at day-light, the steamer that I am now in arrived, and brought the rumor which is confirmed by the two accompanying notes from Paymaster Lytle, received about six hours afterwards. On the reception of the rumor, I immediately commenced preparations for this movement; but being delayed by the necessity of unloading and reloading the boat, I am now at anchor at the mouth of Black creek. I hope to put the troops in march from Garey's Ferry early in the day to-morrow, and to reach Fort Drane with a small escort the day following. It is possible that even these little detachments of horse and foot may reach the Withlacoochee in time to render a valuable service.

"I am aware that the movement that I am making may be condemned, if regarded in any other light than a rescue, as premature. Colonel Goodwyn's mounted regiment only arrived at St. Augustine last night or this morning; and consequently the left wing cannot be in force on the Ocklawaha, in the direction of Pelaklikaha, earlier than the 17th, or up with the enemy before the 20th instant. Colonel Lindsay, who may have already arrived at Tampa Bay, cannot operate more than two days' march from that place, for the want of transportation—Major General Gaines having taken away the horses which were there, and the basis of the right wing is merged in the force brought by that general into the field, and must participate in his success or failure. If it falls back with him upon Fort Drane it must suffer great loss, and if it follow him to Tampa Bay it will be wholly out of position.

"In this, and even a greater state of uncertainty I have been held since the 26th ultimo, the day after I ordered back Major Cooper's battalion of Georgia foot, to prevent starvation at Fort Drane; and though daily from that time in the expectation of receiving from Savannah horses and serviceable wagons, not one has arrived. The quantity of subsistence that will be at Fort Drane (say) to-morrow, will only be that sent from Picolata on the 6th instant, viz: 17,497 rations of bread and flour, 11,000 rations of pork, (with beef-cattle in the neighborhood,) 8,000 rations of beans, some coffee, and vinegar, &c. And the troops now about to proceed, perhaps, as far as the Withlacoochee, will not have the means of taking with them the rations for more than six days.

"I beg leave to recapitulate the causes of my great deficiency in the means of transportation. 1st. The wagons and horses which I knew Brigadier Clinch to possess early in February have been more broken down by hard service and bad roads than I had expected to find them. 2d. I had, upon what was considered in Georgia, and even at Picolata, the best information, confidently relied upon the use of the Ocklawaha as late as the 2d instant. 3d. No bacon has arrived, and the difference between it and pork, including wood and brine, is fifty per centum against the latter. 4th. The wagons purchased at Charleston and Augusta, by Assistant Quartermasters L'Engle and Peyton, are generally poor, and many of them unserviceable. 5th. The six or ten wagons actually reported to have been shipped at Baltimore in, I think, the Arctic, with Major Gates, were all left behind. 6th. Of the 19,000 rations known to be at Fort Drane about the 25th ultimo, nearly the whole have been drawn by a force not expected by the government or myself to appear in that quarter; and 7th. Not a horse for the baggage train left by me at Savannah, or which I have since ordered to be purchased by Assistant Quartermaster Dimmock, has arrived in Florida.

"On the 21st ultimo, when I was but twenty hours from Savannah, I sent back by a steamer that was met an order to Lieutenant Dimmock to ship about forty horses for the baggage train to Picolata. This order was strongly reiterated by a return steamer five days afterwards; and again, on the 2d instant, by another boat, he was instructed to send immediately, and by the speediest conveyance, seventy horses for the train, and six four-horse wagons. I had this morning a report from him, saying, after he had received my first and second orders, that he had sent all the horses wanted for draught and packs by land, except a few, which were to come as packs with Captain Wharton. Now, as the latter was about twenty-four days in New York, after receiving orders for Florida, and expected to remain ten in Savannah, he cannot be looked for in this neighborhood before the 18th or 20th instant. The other parts of the lot were, it seems, given as packs to the tenth company of South Carolina mounted men, and sent forward in a drove. They must, it is feared, arrive in a state unfit for the baggage train (say) about the 16th instant. Such has been the failure of human agents. The weather has been equally adverse.

"If the force on the Withlacoochee should fall back on Fort Drane, it will be seen from the foregoing that a part, at least, must probably march upon Volusia or Garey's Ferry, to be within reach of subsistence. Instructions have been left behind me to send forward rations, should the means of transportation arrive in time, and the troops already in the neighborhood of Picolata—Major Cooper's and the remaining company of Major Gates's battalions. I have also desired Brigadier General Eustis, in the same event, to order to Fort Drane two companies of mounted men of Colonel Goodwyn's regiment, and a fourth order will go back in this boat to Lieutenant Dimmock on the subject of horses and wagons.

"Some rifles and the tents arrived this morning at Picolata; but Colonel Goodwyn had marched through six or eight storms without cover, and now all companies in march are to be reduced to three tents each.

"P. S.—Please remark that, in his letter to Brigadier General Clinch, dated at New Orleans, the 2d ultimo, Major General Gaines speaks of '*an efficient co-operation*,' promises to be 'in readiness' at Tampa Bay 'by the 8th of the present month, to form a *junction at or near* that place with the force under your command, whenever, *and as soon as*, in your judgment, *your force shall be sufficient to justify the movement*;' and concludes by saying: 'A sufficient quantity of ammunition and *provisions* have been transported to Fort Brooke to *divide with you* until further supplies are received.' Yet, he did not wait till the brigadier gave notice that he was 'in force,' came to Fort King, and swept nearly the whole of the subsistence collected at Fort Drane. A copy of that letter is in your office; and I now enclose one from Governor Eaton, from which it will appear that Major General Gaines knew at Tampa Bay, about the 14th ultimo, that I had been charged with the direction of this war. He first heard this at Pensacola, and received Governor Eaton's despatch at Tampa, as I can establish; hence his haste and neglect of the assurances given to Brigadier General Clinch, his isolated attack," &c.

*Paymaster Lytle to General Scott, dated Fort Drane, March 5, 1836.—(Doc. No. 72.)*

"I have been directed by General Clinch to inform you that your communications of yesterday's date reached him at this post after he had mounted his horse, and was on the move with the forces under his command to escort supplies to General Gaines. He directed me likewise to say to you that the distance from this post to Garey's (or Black creek) is about the same as the distance from here to Picolata. As you may wish, however, to obtain all the information possible on the subject, I will take the liberty of adding, from my own knowledge, that the road from Garey's to this place is *sandy*, consequently almost invariably dry, while the road from Picolata here is muddy after heavy rains, particularly such as we have just experienced.

"Colonel Gadsden arrived here from Tallahassee on the 4th, (yesterday,) and accompanied General Clinch this morning to the Withlacoochee."

*From the same to the same, dated Fort Drane, March 8, 1836.—(Doc. No. 72.)*

"By direction of General Clinch I opened your communication of the 6th instant, which arrived late last night, in advance of the wagons. You will perceive by my letter of the 5th that General Clinch, with all the forces at this post, and 100 mounted men from the vicinity, had left for Withlacoochee, to escort a small supply of cattle, ammunition, &c., to General Gaines, having received the night before a third express from that officer. No word has been received from either of these generals since the 5th. When General Clinch left here he expected to be back on the 9th.

"The probability is, that the wagons will return without an escort, there being at present no troops here; and should General Clinch get back before the wagons depart, his men may be too much fatigued to march again immediately; but this, of course, is merely conjecture. I am satisfied, however, that General Clinch would advise that an escort accompany the wagons back to this place when reloaded. Captain Graham being directed by General Clinch to send back the wagons for supplies after their arrival here, will send them to Garey's, it being the best road.

"N. B.—The amount of General Gaines's last express to General Clinch, dated 3d instant, was merely copies of his previous letters, with a note, stating that the Indians were still around them, but little or no fighting taken place since his last communication."

*General Scott to the Adjutant General, dated Fort Drane, March 14, 1836.—(Doc. No. 77.)*

"On my arrival here I found that the force which had been upon the Withlacoochee had fallen back on this vicinity.

"Brigadier General Clinch, with some means of subsistence, and about 600 men, (of whom 150 were mounted Floridians,) joined Major General Gaines on the 6th instant. The force under the latter had already been reduced to the necessity of commencing on horses and dogs for their subsistence. After receiving that timely and important succor, the army remained in position until the 10th.

"It may be remarked that, from the time of entrance into the intrenched camp up to the retreat in this direction, not a sortie was attempted; and that, to save the pride of the higher officer, the command was relinquished to the next in rank, in order that *he* might give the order to retreat.

"A copy of Major General Gaines's order, yielding the immediate command of their joint forces to Brigadier General Clinch, is enclosed. This extraordinary paper I have but little time to comment upon. The poor sneer against me, as the *diplomatic agent of the War Department*, is in character with all his recent acts; for, at the moment of the arrival of the succor on the 6th, he had already opened a negotiation with the enemy, in which it is said, on good authority, he was willing to leave them in the *quiet* possession of the country below the Withlacoochee, until the arrival of the '*diplomatic agent*;' but in which Powell insisted that that river should be the perpetual boundary between us and the Seminoles. But for Brigadier General Clinch, I have no doubt some treaty on the one or the other basis would have been formed between the parties. He alleged the positive instructions of the War Department against all negotiating, and he enabled Major General Gaines to save the original force with him. Not a sortie was made from the intrenched camp, from the time of its formation up to the retreat, and on the approach of the succor a large detachment of the enemy had taken a position to intercept the retreat in this direction. How, under such circumstances, it can be alleged that the enemy *had been beaten*, it would be difficult to reconcile with facts.

"I have reason to hope that the enemy remains nearly in the same position as before the isolated, and therefore false movement of Major General Gaines. This is fortunate.

"I have instructed Brigadier General Eustis, after scouring the country through which he will have to pass to some extent, to place his column in position, somewhere in the neighborhood of Pelaklikaha, about the 25th instant. Colonel Lindsay, by the same day, is to be with his force at Chickuchatty, (about two marches from Tampa,) and means are suggested to each, in order to multiply the chances of communicating with each other.

"The right wing will move hence (say) on the 24th instant to attack in front. This column will pass the Withlacoochee about half a mile below the late intrenched camp, where there is a good ford; and of which Major General Gaines might have availed himself if he had had the strength or inclination.

"The 25th instant is appointed in order that I may be certain of giving Brigadier General Eustis and Colonel Lindsay time to put themselves in position, respectively, and, further, to give time for the harassed troops lately under Major General Gaines to recruit themselves for effective operations. The same interval is equally important to enable Brigadier General Clinch to receive from Picolata or Garey's Ferry the quantity of subsistence indispensable to give confidence to the movements of the right wing. I have time to add no more.

"Enclosed are copies of the order of Major General Gaines, mentioned above, and of Brigadier General Clinch's letter to me."

*General Scott's Order No. 13, dated Fort Drane, March 14, 1836.—(Doc. No. 82.)*

"General Thomas Woodward, of Macon county, Alabama, is authorized, aided by Majors J. H. Watson and W. B. Flournoy, to accept the services of any 500 Creek warriors, to be employed as auxiliaries in the present war against the Seminole Indians. Should General Woodward decline taking the command of the friendly Indians, Major Watson, assisted by Major Flournoy, will take the command of them."

*General Scott to the Adjutant General, dated Fort Drane, March 20, 1836.—(Doc. No. 94.)*

"This wing is waiting to give time for Brigadier General Eustis and Colonel Lindsay to gain their respective positions, Pelaklikaha and Chickuchatty, for the arrival of the wagons sent hence to Garey's Ferry for subsistence; the last of which may be expected by the 24th, with, it is hoped, some additional teams for Savannah, and for the troops from New Orleans to recruit their strength.

"Some wagons (six) and twelve horses arrived at Picolata from Savannah, about the 12th instant, and a few horses or packs, with the last company of South Carolina mounted men, a little before. All those means of transportation were indispensable to the left wing.

"Brigadier General Eustis, in a letter just received, doubts whether he can reach Pelaklikaha earlier than the 27th or 28th. The movement of the right wing may or may not be delayed a few days accordingly. This will depend on a calculation of Lindsay's movements, and the amount of subsistence that may arrive by the 24th from below. The latter may be so small as not to allow of any delay here, as we must take enough to give the right wing time to beat the enemy and to march to Tampa Bay."

*General Eustis to General Scott, dated Volusia, March 22, 1836.—(Doc. No. 98.)*

"Owing to a *misunderstanding* of my orders on the part of Brigadier General Bull, a part of my force, viz: Lieutenant Colonel Butler, with four companies of mounted men, and Major Kirby, with two companies of artillery, have not yet reached this place."

*General Scott to the Adjutant General, dated Tampa Bay, April 12, 1836.—(Doc. No. 103.)*

"The long halt here has been for the purpose of recruiting the horses a little; corn and hay, though of an indifferent quality, being found in abundance. This forage has been sent from New Orleans, by Major Clark, assistant quartermaster, under my orders of the 14th of February.

"The three columns were for several days within thirty miles of each other. Owing to the direction of the wind, Clinch's column heard the signal guns fired by the other two, but neither of the latter could hear any response."

*General Scott to the Adjutant General, dated Picolata, April 30, 1836.—(Doc. No. 116.)*

"That officer (General Gaines) it is said, caused Powell and his chiefs to be informed, by way of inducing them to agree to accept the Withlacoochee as a temporary boundary, that large armies were approaching, which would fill up the Indian country, or crush everything in the way. The wily chiefs profited by the information; sent off their families, and dispersed their warriors into small parties. In this way Powell expects to make good his threat, viz: *that he would protract the war three years.*"

*General Scott to the Adjutant General, dated St. Augustine, May 20, 1836.—(Doc. No. 146.)*

"What I meant to state at the conclusion of my last letter was this: the troops called for by me came into the field at too late a period, generally, to enable me to prosecute the war to a conclusion."

The court adjourned to meet to-morrow morning at 10 o'clock.

JANUARY 19, 1837.

The court met pursuant to adjournment. All present.

Captain HITCHCOCK presented himself before the court and asked permission to add to his testimony the following, as a continuation of his answer to the 15th interrogatory by the court:

I will state to the court that yesterday, on referring to some official documents from Tampa Bay, I saw it stated that General Gaines had an escort from Fort Drane to Tallahassee. That statement is not correct; but, I presume, was founded upon this: that Major McLemore was about to proceed from Fort Drane in the direction of Tallahassee, with a mounted troop; that he tendered to General Gaines, unsolicited, as I believe, on the part of General Gaines, a small detachment of his troop, as an escort. This detachment remained a day, or perhaps a day and a half, and commenced its march as an escort to General Gaines. But General Gaines, after the first day's ride, dismissed the escort, halting himself, permitting the escort to leave him, and afterwards moved on without it. I did not refer to this in my testimony, because the escort was entirely unsolicited, I believe, and not even desired. Major McLemore's troop was returning to their homes at the time; they were not detached as an escort.

In consequence of the absence of witnesses, the court adjourned to meet at a future day.

→ JANUARY 27, 1837.

The court met pursuant to adjournment. All present.

Lieutenant A. M. MITCHELL, of the 4th regiment of infantry, a witness, being duly sworn, was interrogated as follows:

1. *Question by the court.* Were you in the campaign in Florida under Major General Gaines, and in what capacity?

*Answer.* I was in the campaign, and was in command of a company of the 4th regiment of United States infantry.

2. *Question by the court.* When, and how many attacks did the enemy make upon the army whilst fortified at Fort Izard, and with what results?

*Answer.* They fired upon the breastworks, I think, seven days in succession, from the 29th of February until the night of the 5th of March. It was attended with a loss of a few lives and some wounded; and also resulted in their sending in some one to know if we were willing to treat with them.

3. *Question by the court.* What did you estimate the number of the enemy?

*Answer.* I supposed there must have been seven or eight hundred, judging from the yells and from the firing.

4. *Question by the court.* Were there any preparations made for a sortie, and what were the views of the officers generally on the subject of a sortie?

*Answer.* My impression is, that the field officers were called together by General Gaines, to consult on the expediency of making a sortie. It was the impression of many of the officers that a sortie should be made, and might be attended with favorable results.

5. *Question by the court.* What is your opinion of the ability of the forces under Major General Gaines to drive and beat the enemy, if a sortie had been made?

*Answer.* It is my opinion that they could have done it with a great deal of ease, and I don't think it was doubted by any one in the breastwork but that we could have done it.

6. *Question by the court.* Would it have been safe for the troops to have left the breastwork and retired on Fort Drane, without the additional force brought by General Clinch?

*Answer.* Yes.

7. *Question by the court.* Was it the impression generally that the Indians were sincere in proposing a truce?

*Answer.* It is my opinion that it was the general impression of those who were inside the breastwork.

1. *Question by General Gaines.* What was the general opinion among the officers at Camp Izard on the 29th of February, 1836, as to the number of Indians engaged in the action that day?

*Answer.* I heard different opinions expressed. Some supposed that there were one thousand or fifteen hundred; others thought that there were not so many, perhaps not more than five hundred or six hundred. As far as I can recollect, it was Colonel Twiggs's opinion that there were eight hundred or one thousand. As to the opinion of others, I can't recollect their names.

2. *Question by General Gaines.* The witness is desired to state the means he had of judging as to the number of the enemy near Camp Izard, and whether he had ever been much accustomed to seeing large collections of Indian warriors?

*Answer.* The only means I had of judging was what I could see from the breastwork, from their yells, and from their firing at the breastwork. I have never been accustomed to seeing large bodies of Indians.

3. *Question by General Gaines.* The witness is desired to state what officer, if any to his knowledge, expressed to General Gaines the opinion that a sortie should be made?

*Answer.* I don't know of any having expressed to General Gaines that opinion. I referred to the conversation of the officers among themselves.

4. *Question by General Gaines.* The witness having stated that the Indians fired on Camp Izard during several days, he is desired to explain whether the actions of the 27th and 28th of February did not take place before Camp Izard was constructed.

*Answer.* We arrived at the Withlacoochee on the 27th, and approached the river near where General Clinch had crossed it on the 31st of December; and whilst some of the officers were searching for a suitable place to cross the river, (it being very deep, and a very dense hammock on the opposite side,) they were fired upon by the Indians, who were secreted in the bushes. The firing was continued on both sides for, perhaps, two hours. It being late, and not being able to ford the river, it was deemed expedient by the general to march back a short distance, and encamp for the night. On the morning of the 28th we took up the march down the river to seek for a place where there was an open pine woods on the opposite side. After proceeding about four miles, the advance guard, under the command of Lieutenant Izard, whilst marching along the bank of the river, was fired upon from the opposite side by the Indians, and Lieutenant Izard and several others were wounded. The command was then halted at that place, and I think the general called together the field officers to consult whether we should proceed further. This is, however, merely my opinion. The general came to the determination that we should encamp there for the night. The breastwork spoken of was put up that afternoon. We remained there the next day, after putting up the breastwork about three logs high. The Indians commenced firing upon us from every direction about 10 o'clock next morning, after the breastwork was put up; and they fired upon us from that time, as before stated, until the 5th, occasionally, except the first day, when the fire was continuous for three or four hours. On the 5th they commenced firing earlier and continued later than on any previous day—from about 4 o'clock in the morning till about five or six in the afternoon. It was on that night that a negro called to the breastwork to know if a white flag would be a protection to the enemy in case it should be brought in.

5. *Question by General Gaines.* Was the witness with the right wing of the army of General Scott in March and April, 1836; and what is his opinion as to the position of the families of Indians on the Withlacoochee during the movements of that army, and how is the opinion derived?

*Answer.* I was with the right wing of the army under General Scott. After we had crossed the river at Camp Izard, I marched up to the cove and crossed over a swamp the morning after our arrival; there was a well-beaten track, with the appearance that many persons had been in the habit of travelling

over it. I being among the number who crossed over first, had an opportunity of observing small tracks, which I took to be children's tracks, and which gave me the opinion that the families of some of them had not long since crossed that place. In our pursuit of the Indians during that day, we followed a well-beaten Indian trail, leading up the river, that had been recently very much used.

6. *Question by General Gaines.* Was the search made by that wing into the cove of the Withlacoochee for the Indians sufficient to determine whether the Indians or their families were or were not in the cove?

*Answer.* I should say it was not.

7. *Question by General Gaines.* How long was the army in the neighborhood of the cove in March and April; and was its march conducted through the cove or in the adjacent open country; and were any detachments made or other means resorted to in order to ascertain whether the Indians or their families had dispersed from the cove?

*Answer.* We arrived at the cove on the 30th; crossed the swamp I have referred to on the 31st; pursued the Indians three or four miles, as well as I could judge, and returned to our encampment, and proceeded thence to Tampa Bay. There were no other detachments made or other means resorted to, to my knowledge, on that march, to ascertain whether the Indians or their families had dispersed from the cove.

8. *Question by General Gaines.* The witness is desired to state whether any, and if any, how much, subsistence was left at Fort Drane on the 25th of March, 1836; and what quantity, or how many days' rations were received by the troops of the right wing on that day, or prior to their leaving Fort Drane?

*Answer.* I don't know how much subsistence was left at Fort Drane. As well as I can recollect, we started with ten days' provisions.

Captain G. S. DRANE, of the 2d regiment of artillery, a witness on the part of Major General Gaines, being duly sworn, was interrogated as follows:

1. *Question by General Gaines.* It having been stated officially to the War Department, and more recently urged before this court, by General Scott, that the Indians had removed their families from the cove, so called, on the Withlacoochee river, and had also themselves dispersed from that place in March and April last, and thereby eluded the pursuit of the army, and having attributed these alleged facts to the movement of General Gaines, I therefore call the attention of the witness to the following points, and desire his answers, viz: Were you with the right wing of General Scott's army in Florida on its march from Fort Drane to Tampa Bay, and thence returning back to Fort Drane? Did you find any Indians south of the Withlacoochee at or near the cove? Were they pursued? How far and with what effect? State the extent of the cove, and how far it was penetrated by the army; and whether, from the search then or subsequently made by the right wing, any opinion could be formed as to whether the Indians were or were not in force in the cove; and what is the opinion of the witness as to whether the families of the Indians were in the cove or not, and on what the opinion is founded, and whether the opinion was general, so far as the witness knows. Was there a post established near the cove on going down to Tampa Bay? When was the post relieved, and were the Indians and their families, in the opinion of the witness, still in the cove, and was the cove then penetrated by the army? Was the cove, especially south of the Withlacoochee, penetrated by either of the other divisions of General Scott's army, to wit: the left wing or centre in the campaign? And what is the opinion of the witness as to the force of the Indians on the Withlacoochee about the month of March, and upon what does the witness found his opinion? And what, in the opinion of the witness, is the strength of the Seminole nation, including the Mickasuky Indians?

*Answer.* I was with the army under General Scott on its march from Fort Drane to Tampa Bay, and thence back. We met with Indians at what is called the lower point of the cove—probably a force of about two hundred and fifty. They were pursued by the army into the cove about, I think, not more than two and a half miles. I am not able to say with what effect. From the best information I have been able to collect, the cove is about fifteen or twenty miles from its commencement to its termination near the Wahoo swamp. The army penetrated this cove no more than about two miles and a half in pursuit of the Indians. At that particular time, I think, no opinion could be formed as to whether the Indians were or were not in force in the cove. It is my opinion that the families were there. I do not believe that the opinion was general. I formed my opinion on the fact that after Major Cooper had established his stockade, southwest of the cove a short distance, the army had left him but a few hours when he was attacked by the Indians from the cove, or coming from that direction, and believing that the operations of the army on the Withlacoochee were not such as to disturb their families, as we were some distance from their stronghold. The post of Fort Cooper was relieved on the return of the right wing of the army. The Indians and their families were still in the cove at that time, in my opinion. The army at that time marched through a very small portion of the cove, on the south side, in the march to the crossing of the Big Withlacoochee, on the Tampa road. I do not know whether the cove was penetrated by either of the other divisions of the army. I am not able to say what was the force of the Indians on the Withlacoochee in March. Judging of the numbers that usually resort on that river from what I saw on the 31st of December, 1835, I should think they would be able to bring into the field about 1,000 warriors, including negroes. I have always estimated the strength of the Seminoles, including the Mickasuky Indians, from the best information I could collect and from my own personal knowledge, to amount to eighteen hundred or two thousand warriors, including negroes. The whole of this force did not serve on the Withlacoochee, nor do I believe the whole force has ever been there at one time. The Mickasuky tribe, to which I refer, inhabit the country north of the Withlacoochee, in the direction of Fort King. Their range of country extends also in a southwesterly direction from Fort King, better understood as the Wetumpka country.

2. *Question by General Gaines.* The witness is desired to state whether any, and if any, what, number of cannon were fired by the troops at and near the Withlacoochee in the latter end of March, 1836, and by whose order; and whether the Indians in and about the cove were not near enough to hear those cannon; and whether it is not his opinion that they were thereby apprised of the movement of the troops against them under General Scott?

*Answer.* There were cannon fired; the number I do not recollect. They were fired, as I understood, by order of General Scott. I think the Indians were near enough to hear the cannon, and undoubtedly they must have been apprised of the movement of the troops by the firing of those cannon. I do not think, however, that the reports of the cannon affected them much, or that they were much alarmed at the reports.

3. *Question by General Gaines.* Did the witness see any of the Indians near the Withlacoochee, as General Scott's right wing marched towards Tampa Bay, holding up their hands, and thereby intimating a desire to have a parley? The witness is desired to state all he knows in reference to the matter here referred to.

*Answer.* I saw some Indians on the Withlacoochee, while we were crossing. I saw them after we had crossed, and previously to the attack at the foot of the cove. I did not see them holding up their hands, nor do I know myself that they did so. It was the impression of the army generally, and I saw some officers who informed me of the fact that they had seen some few of them come out and hold up their hands and make the sign of peace. The interpreter and guide were sent out to meet them, and, while talking with them, they saw evidently a disposition made among the Indians to capture the individuals, instead of holding a peaceable talk. They were evidently desirous of getting possession of Billy Omathla, the interpreter, and the guide, Nero. I conversed with Nero on the subject afterwards. Both Nero and Billy Omathla were decidedly of opinion that the Indians meant to prove treacherous, and not to hold a talk. The next morning after the Indians had made the signs, the 4th regiment of infantry, on approaching the spot, was fired upon by the Indians. Both Billy Omathla and Nero informed me that while talking with the Indians they saw, both on the right and left, several Indians creeping through the palmetto and grass, with a design to get in their rear. My knowledge of the character of Billy Omathla and Nero is such that I do not believe that fear had any influence over them at all, and I believe they were very sincere in the opinion they gave.

4. *Question by General Gaines.* The witness is desired to state whether the St. John's river at Picolata has at any time within his knowledge been impassable during a whole day, so as to prevent the common ferry-boats from crossing, and whether the steamboat "Essayons" could or could not cross in any state of the winds.

*Answer.* I have known the river to be so rough that the common ferry-boat could not cross for two or three days; but this is not usual. I have never known the river to be so rough as to prevent the steamboat Essayons, or a boat of her class, with the assistance of scows, crossing the river and landing on the opposite bank. The width of the river St. John's at Picolata is about one and three-quarters of a mile. I have crossed it there a number of times myself, and two or three times with my company and baggage, and never was detained.

The court adjourned to meet to-morrow morning at 11 o'clock.

JANUARY 28, 1837.

The court met pursuant to adjournment. All present.

The court was occupied until the 30th with the case of General Scott, when it adjourned to meet on the 31st, at 11 o'clock.

JANUARY 31, 1837.

The court met pursuant to adjournment. All present but the judge advocate, who was prevented by indisposition from attending the court: whereupon the court adjourned to meet to-morrow morning at 11 o'clock.

FEBRUARY 1, 1837.

The court met pursuant to adjournment. All present.

Colonel D. E. TWIGGS, of the 2d regiment of dragoons, a witness on the part of Major General Gaines, being duly sworn, was interrogated as follows:

1. *Question by General Gaines.* What was your opinion of the sincerity of the Indians in their proposition for peace at Camp Izard the 6th of March last; and please state what motive, if any, the Indians could have had for treachery; and, finally, have you heard any observations on the subject from Indian countrymen, or other persons acquainted with the Indian character, calculated to strengthen or destroy your opinion?

*Answer.* The first night, (the night of the 5th,) when the Indians came and hailed the camp, I did not believe them sincere, or that they had any intention of coming in at all. The next morning I went to General Gaines and told him, "whenever you show me men coming from the moon, I will believe the Indians are coming in." Before we separated, some person standing near spoke and said, "here the Indians come." In a short time, having halted some distance from the breastwork, one or two of them came forward with a white flag. One of the volunteer officers (I think Adjutant Barrow) went out and met them. When I saw them conversing with Mr. Barrow, I then changed my opinion, and believed they were in earnest. I have thought a good deal on the subject, and I could think of no motive for their being otherwise than sincere. I judge they were sincere from what I had seen of the upper part of the Creek nation on previous occasions. It was at the Hickory Ground, with General Jackson, I think in 1813—after the first Indian came in there, I never heard of another act of hostility on the part of the nation towards the whites. The next occasion was in the Seminole campaign with General Jackson. I know after the first Indian came in there was no act of hostility. I know this, for I was left in the country. I had a conversation with Colonel Dill at Jacksonville, who has been a long time in that country. After detailing the circumstances to him as they happened at Fort Izard, he said he had not a doubt but that they were sincere in their wish for peace—so much so that he advised the people to go back again on their plantations on the road from Micanopy to Fort Drane.

2. *Question by General Gaines.* Please state what conversation you had, if any, with General Clinch on the subject of the effect of the movement of General Gaines upon the operations of General Scott's army in East Florida.

*Answer.* I had some conversation with General Clinch on the subject, and he stated to me pretty much what he has stated to the court: that General Gaines's movement had no influence on the movements of General Scott. He stated to me a few days ago that he regretted he had not been a little more explicit, and informed the court that the wagon train at Fort Drane had time to go to Picolata or Black creek (I don't recollect which) for provisions, and return time enough for that part of the army to get in position, agreeably to the plan of operations.

3. *Question by General Gaines.* Colonel Twigg is requested to state whether he met a wagon train,

about the middle of March last, between Fort Drane and Black creek; and if so, whether the wagons were or were not accompanied with a guard.

*Answer.* I left Micanopy, ten miles on this side of Fort Drane, on the 19th of March last. On that day I met the wagon train, with the provisions, about twenty miles from Black creek. I inquired of the person having charge of the wagon train, (called the wagon-master,) where the escort was. He said he had none; and I did not see any guard with it at all.

4. *Question by General Gaines.* Be pleased to state whether the Louisiana volunteers were or were not ready or willing to march at any time after the middle of March, 1836, and what are your reasons for the opinion which you entertain in this case?

*Answer.* I have no doubt but the Louisiana volunteers, had they been ordered, would have marched the next day after their arrival from the Withlacoochee near to Fort Drane. I had a conversation with General Smith on this subject, and his opinion and mine coincided, that both our commands, the regulars and volunteers, were ready to march, and that we should not ask to detain the army on their account.

5. *Question by General Gaines.* Colonel Twiggs is requested to state what he knows on the subject of making a sortie at or from Camp Izard in February and March, 1836.

*Answer.* I received an order on the 29th of February, after the Indians had retired from making an attack on us, to hold the command in readiness for a sortie. After the 29th, in a conversation with General Gaines, I think he stated to me he had written to the officer in command at Fort Drane, and he expected him down with some mounted troops; that, as soon as they made their appearance, the command was to leave the breastwork to attack the Indians. I think he stated to me that he had so written, that he would not make the sortie until the troops should come down. I had frequent conversations with the general on the subject, and he stated to me his views: that we could do no good by going out; that the Indians would fly before us, and that as soon as any troops made their appearance we should go out and attack the Indians. It was expected that troops would arrive, from the direction of Tampa Bay, on the opposite side of the river. This was before the 5th of March.

6. *Question by General Gaines.* Be pleased to state whether any, and if any, what officers of the light brigade, expressed a doubt as to the sincerity of the Indians in their desire to fight no more and make peace, after they came in with a white flag on the 6th of March, 1836.

*Answer.* I never heard one express a doubt while I stayed there—not one.

1. *Question by the court.* What is your opinion of the number of the enemy that invested Camp Izard; and were the forces under General Gaines sufficient to have driven or dispersed the enemy, had a sortie been made?

*Answer.* I estimated the Indians on the 29th, that were firing on Camp Izard, at about 1,000. I believe the force was quite sufficient to have driven them at any time.

2. *Question by the court.* Do you believe that the Indians were aware of the destitute situation of the troops as respects provisions before they made overtures for peace?

*Answer.* It is impossible, in my opinion, that they could have had any knowledge of it.

3. *Question by the court.* What is your opinion as to the propriety of making a sortie from Camp Izard, whilst invested by the enemy?

The witness here requested the court to excuse him from answering the question. It would be merely an expression of opinion, and *might* place him in a situation towards General Gaines which it was his wish to avoid.

General Gaines observed that the answer of the witness could make no difference in his feelings towards him; but that he was then preparing a question similar in import to the one just proposed by the court, which would relieve the witness from any delicacy which he might feel on the subject.

The court excused the witness from answering the question, when General Gaines proposed the following:

7. *Question by General Gaines.* Colonel Twiggs is desired to state whether or not it was his opinion, at any time between the 27th of February and 6th of March, that the enemy could have been subdued by making a sortie, or whether it would not have contributed only to disperse the Indians; and state whether the Indians could not have concealed themselves in a thick hammock at any moment in three or four minutes' time; and state whatever opinion he entertained on the subject at the time, and whether he communicated to General Gaines such opinion.

*Answer.* To the first part of the question, from the 27th to the 28th, and including the 28th, the Indians were on the opposite side of the river, and we had not boats to cross the river. From the 29th of February to the 5th of March we could, at any time the Indians made their appearance, have driven them; but we had not the means to follow them. I cannot say whether we should have dispersed them or not; as our camp fronted the river, there was an extensive hammock and scrub on the left. There was a hammock also on the right; both of them two or three hundred yards of the camp, or probably a shorter distance, and the Indians could have taken shelter in either of those hammocks in a few minutes. I never gave General Gaines, while at Camp Izard, any opinion as to the propriety of a sortie.

8. *Question by General Gaines.* Colonel Twiggs is requested to state whether any officers, and if any, who, of the light brigade, at Camp Izard, in February and March, 1836, expressed the opinion that a sortie ought to have been made.

*Answer.* Not one, while I was there, expressed such an opinion. I had, and as far as I could learn from the opinion of the command generally they had, entire confidence in General Gaines, and we were willing to submit to his judgment.

*Captain Drane, a witness, again called.*

5. *Question by General Gaines.* Please state what reasons you had, if any, after returning with the right wing of the Florida army to Fort Drane, for believing the families of the Indians were still in the cove, and whether any doubt remained on your mind as to their being there in March and April last.

*Answer.* The night before the right wing of the army crossed the Big Withlacoochee, returning, I was called at 12 o'clock that night by Major Cooper, who was the officer of the day, to listen to the talk of both Indians and negroes on the north bank of the Big Withlacoochee. The next morning the army had marched but about half a mile, when we crossed a trail of Indians coming out of a swamp, passing to the south. A little further on, about two or three hundred yards, we discovered a trail leading into the swamp. The trails were evidently fresh and made that morning. The second day after crossing the Little Withlacoochee, on our route to Fort King, the army crossed several small trails, some leading

to the east and to the west; those west, leading into Wahoo swamp, or in that direction. The day following (the day we reached Fort King) our left flankers were attacked by a small party of Indians that soon fled, also in the direction of the Wahoo swamp, or Withlacoochee. On our arrival at Fort King we were there informed that Billy Omathla's wife and one other squaw—I believe her sister—had been captured during the absence of the army from Fort Drane, and taken off by the hostile Indians. Some days after the army arrived at Fort Drane, Billy Omathla's wife made her escape and returned to the right wing of the army, to her husband. I had several conversations with her, through the interpreter. She informed me that the Indians had not moved from the Wahoo swamp and the coves on the Wathlacoochee; that their women and children were still there; that they had planted their grounds; that the crops were very fine, and described the corn and rice as being about a foot high. She stated that, in her opinion, they would have a better crop than they had ever had. I inquired of her if the Indians had moved their families from there at any time during the war. She informed me that they had not. She there had had a conversation with Powell, who advised her to quit her husband and join the Mickasukies, and not return back to the white people; that his men had whipped all the white men and driven them out of the country, and that they had gone home; that he meant to assemble his warriors and drive the pale faces from Fort King, and then he would go to Fort Drane and drive them away from there, where they would get a large supply of ammunition; they would then drive all the Alachewa's (meaning volunteers) out of the country as far as the Suwanee, when they would have all the country from the Suwanee south to themselves. She informed me that she had heard Powell repeatedly say, during the time she was in captivity, that he never would make peace with the white man. These are the reasons why I have never had a doubt that the Indians had never quitted the cove or their strongholds on the Withlacoochee. After the army had returned from the Withlacoochee, with General Gaines, I was sent to Oakland, five or six miles northeast from Fort Drane, where I remained until General Scott arrived. During the time I occupied that post with my command, and a few days after I returned from the Withlacoochee, very frequent signs of Indians were discovered on the plantation of Colonel John McIntosh, and crossing the main road leading to Micanopy. I had frequently seen fires on the opposite side of Orange lake during this period, and I felt satisfied they were Indian fires. The Indian women spoken of in this answer were captured during the time the army was absent on its march from Fort Drane to Tampa Bay. They returned from captivity after the army arrived at Fort Drane from Tampa Bay.

6. *Question by General Gaines.* Please state, as far as you know, the disposition of the troops at and near Fort Drane from the 11th to the 26th of March; whether individuals or small parties were exposed to the enemy during that time; whether any attack was made by the enemy; and whether, from your knowledge of the scouting habits of the Indians, they could have been ignorant of the exposed situation of individuals, parties, or detachments during the time specified.

*Answer.* After the army returned from the Withlacoochee they were encamped in a range of country extending, I think, eleven or twelve miles, Fort Drane being the centre. The only troops on the left of the centre were my own command at Oakland. Those encamped in a southwestèrly direction from Fort Drane, or on its right, were the Louisiana volunteers and the regulars that had been at Camp Izard. There were small parties and individuals passing to and from the encampments, and were exposed to the enemy. I never heard of their being attacked or any attempt to attack them. The Indians were not ignorant that these parties were passing back and forth, as frequently, in going between Oakland and Fort Drane, I saw small Indian trails crossing the road in both directions, passing to the north and south. I also saw Indian tracks in many other directions, as far north as within seventeen miles of the ferry at Picolata.

7. *Question by General Gaines.* Is the witness of opinion that it was known or believed at Fort Drane that the general commanding in Florida had required five hundred Creek warriors as an auxiliary force against the Seminoles; and does the witness know or believe that information of that requisition was communicated to the Seminoles by means of a negro named Primus?

*Answer.* Not to my knowledge. I had understood that Primus was sent into the nation, but I was not at that post at the time, nor do I know for what purpose he was sent.

8. *Question by General Gaines.* Does the witness suppose that, from the information likely to be communicated by Primus to the Seminoles, they could have anticipated any other than a spirit of exterminating hostility from the troops on the movement of the right wing?

*Answer.* I am not able to say.

The court here adjourned, to meet to-morrow morning at 11 o'clock.

FEBRUARY 2, 1837.

The court met pursuant to adjournment. All present.

*Lieutenant Mitchell, a witness, again called.*

9. *Question by General Gaines.* Lieutenant Mitchell is requested to state what was said in his presence or hearing, by the Indian women who had been with the hostile party, as to the location and views of the party in the spring or summer of 1836.

*Answer.* On the 12th of October we arrived within about four miles of the Withlacoochee. The advance guard surprised and took some Indian women and children prisoners. These women were interrogated by Governor Call as to the then location of the Indians, and they reported that the Mickasuky tribe was still on the Withlacoochee, in the cove. The Indian families, they said, were on the opposite side of the river from where we were at that time, and the negroes and their families were on the side with us, between the river and a lake that emptied into the river. They said that Micanopy with his party was located in the Wahoo swamp.

10. *Question by General Gaines.* Lieutenant Mitchell is desired to state whether any guards were ordered to accompany the baggage train or other wagons, or other parties that passed to and from Black creek and round about Fort Drane, to and from the several encampments, from four to six miles from Fort Drane, in March, 1836.

*Answer.* I am unable to say whether a guard accompanied the baggage from Black creek; but there never was a guard, that I know of, that accompanied the train from Fort Drane to the encampment occupied by the 4th infantry and the Louisiana volunteers, about four miles from Fort Drane. Individuals and small parties were frequently passing between Fort Drane and the several encampments; individuals were also in the habit of hunting in the vicinity of our encampment.

11. *Question by General Gaines.* Does the witness believe that wagons, or small parties, or single individuals, would have been allowed to pass and re-pass between the camp of the Louisiana volunteers and Fort Drane, if no effort had been made by the enemy to sue for peace?

*Answer.* I know it was the opinion of the Louisiana volunteers and the 4th infantry that there was no danger in passing and re-passing in the vicinity of the encampments, and that it was their opinion that the Indians were sincere in their proposition for peace at Camp Izard. As to whether this impression prevailed throughout General Scott's camp at Fort Drane, I am unable to say.

12. *Question by General Gaines.* Is the witness of opinion that it was known or believed at Fort Drane that the general commanding in Florida had required 500 Creek warriors as an auxiliary force against the Seminoles; and does the witness know or believe that information of that requisition was communicated to the Seminoles by means of a negro named Primus?

*Answer.* I heard it spoken of at Fort Drane by a gentleman named Watson, who said he could go and bring these Indians down, if permitted by General Scott; but it is my impression it was not believed that he would ever bring them. He, however, went off with that intention, but returned without the Indians. The reason why he did not bring them I am unable to say. I don't know of any such information having ever been communicated to the Indians. The reports about camp were, that Watson had gone after these 500 Indians. I think Primus was sent to the enemy after these reports were in circulation, and that he did not return.

Mr. CUMMINGS, of the United States navy, a witness on the part of Major General Gaines, being duly sworn, was interrogated as follows:

*Question by General Gaines.* Were you on an expedition from Tampa Bay to Pease creek, or its neighborhood, about April, 1836; and if so, state what evidences were discovered of Indians being or having been in force in that neighborhood?

*Answer.* I was with General Smith at that time, (the last part of April.) I was at Charlotte harbor when he arrived there; joined him and remained with him until he re-embarked for Tampa Bay. While with General Smith I saw no Indians at all; an old trail, probably of some ten or twelve men, was the only sign of Indians that we met. While I was in the neighborhood there were some signs of Indians in the vicinity of the residence of the collector; these Indians had been there before General Smith arrived. We went up Pease creek in canoes about forty miles, returned to the old encampment, and then went through the country about fifty or sixty miles, and saw no signs of Indians but the old trail I have mentioned.

General Gaines here presented to the court the paper numbered 38, (see documents,) being a copy of the "New York Courier and Enquirer" of April 2, 1836.

At the request of General Gaines, certain passages in that paper (editorial) were read to the court by the judge advocate; after which, at the instance of General Gaines—

Colonel WILLIAM DE PEYSER, of Florida, was duly sworn as a witness, and interrogated as follows:

1. *Question by General Gaines.* The witness is desired to state whether he has or has not reason to believe that the article from the "Courier and Enquirer," of April 2, 1836, was not written by or at the suggestion of Major General Scott; if so, he is desired to state the grounds of his belief.

*Answer.* I do not believe that it was written by General Scott, or with his knowledge; further, I do not believe that General Scott ever published or caused to be published an article of the kind, or that there was ever one published with his knowledge. I have been associated a good deal with General Scott, and have known him to disapprove of any publication of the kind; and have heard him say, himself, that he never did authorize or request any public or private publication, and that he did not believe that any of his staff had published anything. As to this individual publication, I never saw or heard of it until this moment; and it appears to be an editorial article, written by the editor.

2. *Question by General Gaines.* The witness is desired to state whether he has or has not heard Major General Scott express in conversation sentiments similar to those expressed in the article alluded to in the last interrogatory; if so, state when and where.

The witness here asked whether General Gaines expected him to relate a private conversation with a friend. He had no objection on his own account to answer the question.

After some remarks made by General Gaines and the witness, the court was cleared, and decided that the question was not a proper question to be put.

After the court was resumed, General Gaines asked that his case might be laid over until the 9th instant, to give time for an important witness to present himself for examination, and to afford him time also to prepare his final address; whereupon the court adjourned to meet on the 9th of February, at 11 o'clock a. m.

THURSDAY, February 9, 1837.

The court met pursuant to adjournment. All present but General Atkinson, in consequence of whose absence the court adjourned to meet to-morrow morning at 11 o'clock.

FEBRUARY 10, 1837.

The court met pursuant to adjournment. All present.

General P. F. SMITH, adjutant general of the State of Louisiana, and witness on the part of Major General Gaines, being duly sworn, was interrogated as follows:

1. *Question by General Gaines.* General Smith is desired to state what command he had in the campaign in Florida under General Gaines, and by whose request the corps of Louisiana volunteers were raised and called into the service of the United States.

*Answer.* I served as third in command in the army under General Gaines, having waived my rank as colonel in favor of Lieutenant Colonel Twiggs. I had been a long time acquainted with Colonel Twiggs, and highly respected him as an officer, and thought it would be hardly fair that I should derive the advantages of his experience and receive the honors that might possibly accrue by having him with me. The corps of Louisiana volunteers was raised on the requisition of General Gaines.

2. *Question by General Gaines.* General Smith is requested to state his opinion as to the best mode of fighting the Indians at Camp Izard, between the 28th of February and the 5th of March, 1836, inclu-

sively, taking into consideration all the circumstances attending the service there, and particularly whether, in his opinion, a sortie would have been attended with advantages.

*Answer.* I believe that the only mode of fighting Indians is to wound or kill Indian warriors, but that simply to attempt to disperse them would produce no great benefit; therefore, if the Indians occupy a position which we desire to occupy ourselves, we must certainly attack and drive them; but, under other circumstances, whatever method offers the greatest facilities of wounding or killing them is the best method of fighting them. The position which General Gaines occupied at Camp Izard, at the period mentioned, was one that he was desirous of maintaining, and I therefore think that he was likely to do more injury to the Indians in repulsing their advance on his position than he would do in quitting it to follow them through the woods. It is impossible for a soldier on foot in that country to overtake an Indian. The Indian could, at the first attack, withdraw himself from the fire, and the facilities of the hammocks in the neighborhood afford them a retreat in which they could hide themselves immediately. I believe that, as in attacks on positions fortified or not, the loss is always greater on the attacking party than in any other kind of combat, where the object is to destroy the life of the enemy, that species of combat affords more advantages than any other. The battle of New Orleans, the attack on Sandusky, and, in fact, all the attacks which were repelled during the last war, are evidences of this. On the 29th of February, when, I think, the largest body of Indians appeared, I think it likely that fewer of our men would have suffered if we had made a sortie, but far fewer of the enemy would have fallen. The defences that were afterwards made of the camp were hardly then begun, and especially the whole interior of the camp was entirely exposed. General Gaines himself, who was sitting near the centre of the camp, received a wound in his mouth. I therefore think that, under all the circumstances, there was a greater injury inflicted on the enemy, as they approached the camp through the open ground around it, than if the troops had gone out and followed them through the woods. I would remark, however, that the whole of the troops were not in camp; two companies of the Louisiana regiment were posted down on the river, and a part of them were drawn in afterwards to cover a part of the line.

3. *Question by General Gaines.* What is the opinion of General Smith upon the motives of the Indians in seeking an interview and expressing a desire for peace at the Withlacoochee? and state how far the Indians manifested a desire for peace by their conduct previous to the hostile movement of the troops from Fort Drane, the 26th of March, under the orders of General Scott.

*Answer.* I think, indeed I feel assured, that the Indians were perfectly sincere in seeking a peace. I don't know on what terms they may have wished it, but I believe they desired a peace. A great many reasons operated on my mind to produce this conviction. The first was, that on the night of the 29th, after the Indians had retired across the river, I heard some one, in a peculiar voice, by the tones of which I judged it to be Powell's, making an address to his followers, apparently. The friendly Indians and their interpreter lay close by me. I called to them through the interpreter, and desired them to listen and try if they could catch any of the expressions. When the speech was finished, the Indians said to me, through the interpreter, that it was an address of the chief, intended to encourage them; that he told them that no matter if they had suffered on our side of the river, that when we attempted to cross they would then have the advantage; and he suggested to me that it was apparent from this that a portion of the Indians were dissatisfied. The Indians did not appear again the next day, nor until the evening of the second day, when a few shots were fired out of one of the hammocks on the river; nor did there ever seem to be one-fourth of the number of Indians on our side of the river that appeared on the 29th. On the evening when the first offer to treat was made, a voice of a negro hailed the camp in English. He called out that the Indians were tired of fighting, and desired to come in and make friends. He was answered, by direction of General Gaines, that if the chiefs sent in a flag the next day it would be respected. They held a talk next day with the officers sent by General Gaines, precisely as they were directed to do. From all these circumstances, it suggested itself to me that there was a large portion of the Indians who were averse to continue the war, so large that the hostile party was obliged to conform to their desires; that they had nothing to gain, under any view of the subject, by delay; that they were then as well prepared to carry on the war, and better than they would be at any subsequent period; whereas they must have expected that the whites would increase in force and strength every day; that if their object was to gain time in order to escape, that they could always have done that, as they could always outmarch us, and that in fact they did not make use of it for that purpose, for Primus, who was sent to them afterwards, must have found them in the upper part of the cove or in the Wahoo swamp. From the time the Indians held the talk with General Gaines there was not the slightest hostile movement on their part. Our men were fishing and bathing in the river every day by hundreds while we stayed there; and as there was a thick swamp on the other side, in the vicinity where they were bathing, the Indians might at any moment have shot down two hundred men, with perfect security to themselves. We encamped about four or five miles southwest from Fort Drane, between Fort Drane and the Withlacoochee, and small parties, and often single individuals, were often passing between the different encampments and Fort Drane, and were scattered over the whole woods for ten miles around, and I never heard of the sign of an Indian. The first that was heard of or met with after this period was on the evening of the day General Scott commenced his march to the Withlacoochee, when a wagoner, belonging to the Georgia horse, and who was left behind on the road, was shot by the Indians.

4. *Question by General Gaines.* Does the witness know of General Scott's having authorized the employment of 500 Creek Indians against the Seminoles, and does he believe that fact could have been communicated to the Seminoles by a negro named Primus?

*Answer.* The fact was known generally in camp and at Fort Drane; but I don't know whether Primus had been sent then or not. I was in camp four or five miles from Fort Drane, and was but twice at Fort Drane.

5. *Question by General Gaines.* When the right wing marched, the 26th of March, from Fort Drane, was all the transportation made use of by General Scott? and the witness is requested to state what reason Captain Shannon, assistant quartermaster, gave for leaving some commissary stores at Fort Drane.

*Answer.* I asked Captain Shannon, the quartermaster, some questions in relation to the transportation for my own regiment. In his answer he remarked to me that the means of transportation for the army were not sufficient to convey all the provisions that were at Fort Drane; and I understood him that some portion was left for want of transportation. I understood that the great want was the means of transportation rather than provisions. I know that General Scott had used every means in his power to obtain means of transportation.

6. *Question by General Gaines.* To what extent was the cove swamp penetrated by General Scott in

March or April, 1836, and was the search for the Indians by him sufficient to enable him to pronounce upon the position of the Indians or their families?

*Answer.* On the 30th of March General Scott left all the baggage under the charge of Major Wilson and a detachment at what, I presume, may be called the entrance of the cove. We marched without the baggage that afternoon probably about four and a half miles. The next morning we crossed the foot over a deep and difficult bog which was in front of our encampment. The right column, which was under my command, attacked a small party of Indians that was in front, and pursued them three or four miles, to utmost extent of the pursuit. Part of the column had arrived by taking one direction on the banks of the river; the other part, with which I was myself, was pursuing the trail down through the woods to the right, when one of General Clinch's staff brought an order for us to return. We then retraced our steps to where the baggage was, and the next morning took up our march round the outside of the cove; and after leaving Major Cooper with his battalion towards the southern extremity of it, we went to Tampa Bay. The furthest extent to which the cove was penetrated was by the party which I commanded. Both the columns that entered the cove met altogether in the cove about 120 or 130 Indians. We had lost all trace of the Indians in the cove before we were recalled. We were on an old path, but we had lost all trace of the particular party we were pursuing.

7. *Question by General Gaines.* What is the opinion of the witness as to the location of the Indian families in March and April, and does the witness know whether they had or had not gone down to Pease creek?

*Answer.* I had no idea of where they were at that time. They could not have been on Pease creek, unless, possibly, at the very head of it, a point beyond which I went. I do not think there was any large body of Indians on Pease creek, as I ascended it with only about 140 men, and the Indians would have known of our approach. We crossed two considerable trails leading to the south, but they must have been two or three months old.

8. *Question by General Gaines.* General Smith is requested to state in what manner the movement of General Gaines affected the movements of General Scott in Florida.

*Answer.* My impression has always been that every effort that General Scott could make to advance his movement was made by him; but such were the difficulties in obtaining the means of transportation that I do not think he could have been able to commence his movements earlier than he did; that therefore no operation of General Gaines delayed General Scott's movements, and that General Scott would not have been ready sooner or later, whether General Gaines was there or not. General Gaines brought from New Orleans with him some means of transportation; he added to General Scott's forces at Fort Drane about 1,000 effective men; he had acquired some knowledge of the country around the Withlacoochee; his position on the Withlacoochee had restrained the Indians during the period General Scott was occupied in transporting provisions to Fort Drane, and that, therefore, in these respects General Gaines's movements were of great advantage to the movements of General Scott. I might add that, after all, the means of transportation were not sufficient to allow General Scott to operate a long time on the Withlacoochee, and that therefore he was not able to derive those advantages which he otherwise would have derived.

9. *Question by General Gaines.* The witness is requested to state what purpose was expressed to him in maintaining the position at Camp Izard, and what importance was attached to that position by General Gaines.

*Answer.* After we had encamped at Camp Izard, and, I think, on the night of the 29th, General Gaines, a little after dark, came to me and stated that, as it was then evident that the Indians were in our immediate neighborhood, and that, as all the operations, if any, must be in that neighborhood, and that as that appeared to be the most convenient crossing place, whether the operations of the Alabama troops expected from Tampa Bay or from General Scott's coming from the north, that he had made up his mind to maintain that position, provided the troops under his command were disposed to submit to all the privations they might be subjected to in case the convoy of provisions expected from Fort Drane did not arrive. He argued that the position then kept the whole body of Indians in check; that it was evident we must be in the neighborhood of their establishments, and they would not dare to quit them to undertake any predatory expedition as long as the force under General Gaines was so near the position where their families were. But he stated that something might prevent our receiving any supply of provisions for some days; that then we would be obliged to have recourse to killing the horses; that if I thought that my regiment would not willingly submit to these privations, it would be easy to retire to Fort Drane where there were provisions; but that he considered it of the highest importance that he should maintain the position we then occupied on the banks of the Withlacoochee. I told General Gaines that whatever measure he should decide on would be heartily seconded by the whole of the regiment; that they were prepared to do or suffer anything that was necessary for the object of the campaign. He then expressed his determination to remain there and keep the Indians in check until the forces that were expected would be prepared to assemble around that country. General Gaines was principally desirous to maintain that particular position, as it was the best crossing place, and indeed it was afterwards selected by General Scott in crossing his army. It was also General Gaines's belief that if we were to retreat from that point, or to push across to Tampa Bay, the Indians would then be let loose over the whole country; and that then, besides the forces that would be necessary to protect the convoys of provisions coming from the north, it would require a great many men scattered through the settlements to protect them from the ravages of the Indians.

Captain P. MORRISON, of the 4th regiment of infantry, a witness on the part of Major General Gaines, being duly sworn, was interrogated as follows:

1. *Question by General Gaines.* General Scott having endeavored to show that a report of the war being ended caused a detention in New Orleans of supplies called for by requisitions for Florida, the witness is desired to state whether he was commissary in New Orleans from January to April, 1836, inclusive; whether any such detention took place with regard to commissary supplies; whether he had opportunities of judging whether quartermaster's stores were detained, and whether they were so detained; and is requested to state whether he understood from the quartermaster whether he would or would not feel authorized to detain supplies under the supposed circumstances of there being a report like that in question. And the witness will also please state what rations returned to New Orleans with the Louisiana volunteers from Tampa Bay; whether a part was in bulk, and by him issued to the volunteers; and whether

he made any remarks to Captain Thistle on the subject of the bacon so returned, and what remarks he made.

*Answer.* I was assistant commissary at New Orleans from January to April, and have been for ten years past. No detention took place in the furnishing of supplies. Every exertion was used to procure hard bread and bacon, as required by General Scott. The bread and bacon could not be procured in sufficient quantities; the other parts of the ration, consisting of pork and flour, were delivered to the quartermaster to make up the deficiency. A duty which I owe to Major Clark, as he is not present, compels me to state that every exertion was made use of on his part to furnish supplies and transportation. We both felt a deep interest that nothing should be wanted, and that no complaint should be made. From the 7th to the 16th of May, when the regiment of Louisiana volunteers returned to New Orleans from Florida, there were 720 pounds of bacon and 2,160 pounds of bread, surplus rations, which were sent to the commissary's store at New Orleans, besides other rations in proportion. Captain Thistle came to me somewhere between the 10th and 16th of May with a return for back rations. In offering Captain Thistle his choice of pork, bacon, flour or hard bread, I observed that I regretted that the hard bread and bacon had ever come back, after the difficulty I had in sending it to Florida. As to Captain Thistle's asking me why I did not send the bacon, I have no recollection of his having made such an observation to me, neither do I believe he did. No observation was made by me to Captain Thistle that the Florida war was closed. [The witness here presented to the court papers Nos. 39 and 40, (see documents,) as evidence that he had discharged his duties promptly and to the satisfaction of his department.]

2. *Question by General Gaines.* What conversation had the witness with General Gaines in New Orleans in April on the subject of sending supplies to Florida, and what did General Gaines urge?

*Answer.* About the beginning of April I had understood that General Gaines had arrived in New Orleans, and was on my way to pay my respects to him, when I met Major Clark, who requested me to get a requisition from General Gaines, which he had left with the general the evening previous or the same morning. I found General Gaines at his quarters. He was unwell; and, after a little conversation, I asked him for the requisition left by Major Clark. He handed it to me, and observed, very impressively, "furnish everything that you are ordered to furnish." Commodore Dallas, of the navy, came in, and I withdrew. I did not ask General Gaines about furnishing the supplies. His remarks were applied both to Major Clark and myself. [The witness here produced paper No. 41, (see documents,) showing the quantity of certain supplies at Tampa Bay on the 31st of March, 1836.]

Lieutenant GOUVERNEUR MORRIS, of the 4th infantry, a witness on the part of Major General Gaines, being duly sworn, was interrogated as follows:

1. *Question by General Gaines.* General Scott having charged that General Gaines took the public transportation from Tampa Bay, to the disadvantage of the movement of Colonel Lindsay, the witness is desired to state what amount of transportation was taken by General Gaines; also whether it was or was not more than replaced by Lieutenant Casey; when Lieutenant Casey arrived at Tampa; what amount of transportation he brought; whether Colonel Lindsay had the benefit of that transportation; and by whose order, when, and where, so far as witness knows or believes, Lieutenant Casey was sent for said transportation.

*Answer.* There were only four or five indifferent horses taken by General Gaines that belonged to the post, besides the number that was directed to be sent by him from New Orleans. It is proper to state that there were sixty horses sent at first; but from disease and rough weather at sea five or six died, and some of the others were in a poor condition for service. Lieutenant Casey, the acting quartermaster at Tampa Bay, had been sent, I suppose by the orders of the commanding officer, to Middle Florida, (Tallahassee,) to procure means of transportation for General Gaines's army, which was expected to arrive soon. The transportation (six or eight teams complete) arrived a short time after General Gaines's departure with his forces from Tampa Bay. This transportation was put in requisition by Colonel Lindsay, after he arrived there, and formed the principal transportation of his column. To the best of my recollection there were forty-two or forty-eight horses or mules which formed the teams for the wagons which arrived from St. Mark's.

2. *Question by General Gaines.* Was it known at Tampa Bay, at the time Lieutenant Casey was sent for transportation, that any other troops were expected at Tampa Bay than those taken there by General Gaines?

*Answer.* I knew of no other, and I believe it was not known then that Colonel Lindsay's or any other troops were expected to arrive at that time.

The court adjourned till to-morrow at 11 o'clock a. m.

FEBRUARY 11, 1837.

The court met pursuant to adjournment. All present.

Mr. POTTER, a witness on the part of Major General Gaines, being duly sworn, was interrogated as follows:

1. *Question by General Gaines.* Were you at Fort Drane in March, after the council on the Withlacoochee, and previous to the movement of the right wing on the 26th of that month; and what exposure of individuals or small parties to the hostility of the Seminoles occurred, and was any hostility exhibited by the Indians?

*Answer.* I arrived at Fort Drane with General Gaines on the 11th of March. I remained at Fort Drane until about the 10th of April. Previous to the movement of the right wing, on the 26th of March, small parties of from two to five individuals frequently passed between the various camps and Fort Drane. I, myself, mounted the horse of Major Lytle to go in search of Camp Twiggs on some business for Major Mountfort. I took the wrong road, and proceeded a distance of about six miles, as I was afterwards informed, when I met three of the Georgia volunteers. I asked them how far it was to Camp Twiggs; they answered, "eight miles in a contrary direction." They told me they had been nineteen miles that day, and were then returning; they had seen Indian tracks, and had heard of Indians being in the neighborhood where they had been. In short, to the best of my knowledge, there was no hostility exhibited by the Indians before the march of General Scott from Fort Drane. I had never been from Fort Drane to any of the encampments, which accounts for my taking the wrong road.

2. *Question by General Gaines.* Please to state, as far as you know, whether the information likely to

be communicated by Primus, who was sent among the Indians, was calculated to encourage their hopes of being heard in council according to the arrangement of General Gaines, or otherwise; and on what do you found your opinion?

*Answer.* At Fort Drane, on the 14th or 15th of March, I was standing near a squad of friendly Indians and an interpreter. I heard General Scott say to the interpreter, "tell them that I am determined to carry on a war of extermination among them—I will shoot down every man." I will take occasion to remark to the court that I know not what preceded this conversation, but think it more than probable he told them that they must lay down their arms. Not having had sufficient intercourse with the troops generally, my intercourse was principally with the officers at Fort Drane, and they were generally very guarded in expressing any opinion. I am therefore unable to say what impressions were produced on their minds. I merely know that the Creek Indians had been sent for, and I subsequently heard that the order had been countermanded.

3. *Question by General Gaines.* The witness is desired to describe the country in the vicinity of Camp Izard.

*Answer.* The country in the vicinity of Camp Izard is very hammocky. Here is a drawing made by myself; the hammocks laid down in this drawing were about 150 or 200 yards from Camp Izard. I am aware that the map is imperfect as respects the scale. I suppose the encampment was about 200 yards square, and I suppose it to be about 450 yards, or rather more, from the camp to the river on the west side of the camp. I suppose the river to be about 100 to 120 yards from the front of the encampment. There was an opening to the river in front of the camp; but the river could not be seen from the camp.

Colonel J. WATSON WEBB, editor of the "New York Courier and Enquirer," a witness, being duly sworn, was interrogated as follows:

*Question by the court.* You are requested to state whether you know, or have reason to believe, that Major General Scott is the author of the article in the "Courier and Enquirer" of the 2d of April, 1836, or whether it was written or published with his knowledge.

*Answer.* I will state to the court that I saw General Scott a short time previous to his being ordered to Florida; that I did not see him again until after his recall from that country. The article in question was written by myself, and contained my views of what had transpired in Florida up to that period. During the ten months which have since elapsed, I have seen no cause to change, in any respects, those views. I do not know that General Scott has ever seen, read, or heard of the article in question.

*Question by General Gaines.* Had the editor of the Courier and Enquirer a correspondent in Florida during the early part of the campaigns of 1836? Did that correspondent write from St. Augustine in a tone very highly complimentary to General Gaines of the movement of that general in Florida, quoting, in reference to that movement, that it was calling forth golden opinions from all sorts of people, and did not the tone of the letters of said correspondent entirely change after joining General Scott and going to Picolata?

And further, the witness is requested to state whether the article in the Courier and Enquirer, besides the basis it confessedly has upon the official correspondence of General Scott, as published in the Globe, and upon the article from the Richmond Enquirer, published at the residence of General Scott's immediate friends, was or was not founded upon the communications of the correspondent in Florida; and if not, upon what was the said article fabricated?

*Answer.* I had a correspondent in Florida at that time. That correspondent did write from St. Augustine. I have not the slightest recollection of the tone of his correspondence in relation to General Gaines; but I know, from my own feelings at that time, that if he did write anything complimentary to the general, it was very cheerfully published by me. I do not know precisely when the tone of those letters changed, but I am very certain that if they had contained anything favorable to General Gaines's conduct after the affair of the Withlacoochee and the facts in relation to the army's being intrenched there being known to me, I would have considered it unjust to the public to have given currency to such opinions. The article had, as its base, an order issued by General Gaines, and published in the "Savannah Georgian," which order met my eye on the evening of the 1st of April. The article alluded to, and based upon that order, was written after ten o'clock at night, without consulting any person or persons whatsoever. I never wrote any article, either of praise or censure, of either General Scott or General Gaines, founded upon the opinions or judgment of my correspondent, or of any other person or persons whatsoever. I have never exchanged any opinions in writing with General Scott in relation to that campaign, and, to the best of my recollection, have only seen him once for the period of about five minutes, in Broadway, in the city of New York, at which time he refused to express any opinions in relation to General Gaines, General Jesup, or others; but said "that, as regarded himself, he would compel the whole country, by the mere force of truth, to do him justice." The article alluded to is not a fabrication, but contains my views, founded upon the news which I had received from the seat of war, and such opinions in relation to military matters and military conduct as I have acquired during more than eight years' service in the army, and the greater part of it under the immediate command of the officers composing this court. I believed them to be correct then; I believe them to be correct now, as I also do the deductions drawn from the premises assumed in the article.

General Gaines having requested that his case might be laid over till Thursday, the 16th instant, to enable him to prepare his final address, his case was laid over to that day accordingly; and the court adjourned to meet on Monday, the 13th instant, at 11 o'clock a. m.

FEBRUARY 16, 1837.

The court met pursuant to adjournment. All present.

Major General Gaines presented to the court paper No. 43, (see documents,) on the subject of the publication of his letter of the 4th of July, 1836, in the New Orleans Bulletin, September 27, 1836; and, in reference to that publication, made the following remarks:

In submitting the foregoing letter for the consideration of the court, I have to state in writing what I have already intimated in reference to the publication of my letter to the adjutant general, under date the 4th of July, 1836.

That letter was published as an act of *self-defence* and *self-preservation*, in obedience to the first law of nature. This law *authorizes me and my household, my staff, and every other member of my family,*

civil and military, when assailed by assassins or pirates with deadly weapons in their hands, to *repel force by force*, until the assailants are subdued or disarmed; and upon the same principle, when attacked by assassins of reputation, *armed with the weapons of falsehood*, that law authorizes me and my family to *employ the weapons of truth* to disarm the *assassins of reputation*. I availed myself of this sacred right, in giving publicity to my letter of the 4th of July, 1836, to repel the attacks made on me, and my faithful companions in arms by the *author and publishers* of the atrocious calumnies contained in the official letters and orders upon your table, signed by Major General Winfield Scott, or by his authority, and published by certain editors of newspapers, and by the authority of certain persons, not in the power of this court, more especially the letters and reports of Major General Scott of the 1st, 4th, 9th, and 14th of March, which have been laid before this court, and the falsehoods which they contain, detected and exposed by the testimony of General Smith, Colonel Twiggs, Captain Hitchcock, Captain Drane, Captain McCall, Lieutenant Morris, Lieutenant Mitchell, and Mr. W. Potter, to all which the court is referred. In repelling these attacks, however, I have in no case violated any known law, regulation, or order. But even if it were otherwise; if, indeed, I had, in *self-defence*, and in the essential work of *self-preservation*, deviated from a *law*, a *regulation*, or an *order*, I could not but avail myself of the plea that "all human authority ceases at the point where *obedience* becomes criminal." I could not have remained silent under such calumnies as those to which I have referred, without committing a crime of omission, equal to the crime of sitting still in silence whilst assassins or pirates were engaged near me in the act of firing at my house, my children, or myself. My silence under such attacks would have been, in a moral point of view, highly criminal.

The old Army Regulations contain the provision which follows:

"650. *Private letters or reports, relative to military marches and operations, are frequently mischievous in design, and always disgraceful to the army; they are, therefore, strictly forbidden.* And any officer found guilty of making such report for publication, without special permission, or of placing the writing beyond his control, so that it finds its way to the press, *within one month after the termination of the campaign to which it relates, shall be dismissed from the service.*"

I have underscored the parts to which I desire the particular attention of the court.

In referring to the first member of this paragraph it may be remarked, that although "*private letters or reports relative to military marches and operations* are frequently mischievous in design," they are not always so, nor "*always disgraceful to the army.*" This is too obvious to require illustration or argument. All must admit that there may be and often have been "*private letters or reports relative to military marches and operations*" not "*always disgraceful to the army.*" for example, the meritorious soldier, regular or volunteer, who, seeing in a published report, probably from the pen of a secret enemy, assertions that he had deserted the service in the moment of battle, and had at a stated time and place gone over to the enemy, he would naturally feel inclined to contradict the report, if possible, before it should have time to reach his parents, his wife, children, or friends. In doing this, he might deem it proper himself to write or to desire some brother soldier to state that he had discharged his duty faithfully in battle at the time and place referred to in the report, and had afterwards continued to discharge his duty from place to place (naming the places visited by the army) up to the time and place at which his letter is dated. Surely no man in his proper senses would venture to say that such a *private letter* or such a *report* was "*always disgraceful to the army;*" notwithstanding it may have been written "*relative to military marches and operations,*" and in the apparent contemplation of the order or regulation in question. What "*private letters or reports,*" then, are obviously allowed or not allowed to be published? In answer, I have to remark that I have deemed it to be right to inquire what description of "*private letters or reports*" are manifestly "*mischievous in design and always disgraceful to the army?*" and to come to the conclusion that the publication of such as these only were forbidden: for example, the letter written by Captain Hitchcock, my acting inspector general, to my friend Mr. Lyon, of the House of Representatives, dated at Fort Drane, March 13, 1836, and the letter written by Captain McCall, my aide-de-camp, to the editor of the New Orleans Commercial Bulletin, dated Camp Sabine, May 18, 1836, letters voluntarily written with the most scrupulous regard to truth, and without anything like acrimonious animadversion or censure towards any officer, soldier, or citizen, I deemed to be liable to no objection. I was not apprised of the contents of these letters until after they were written and voluntarily submitted to me by the writers respectively. I expressly gave my sanction to their publication, convinced, as I was in giving publicity to mine of July 4, 1836, that they contained nothing that could tend to violate the regulation No. 650, or any other description of military law or orders.

On the other hand, I have considered such letters and *reports* as those upon your table, written by Major General Scott, dated the 1st, 4th, 9th, and 14th of March, to be "*mischievous in design, and always disgraceful to the army.*"

The testimony upon your table, and to which I have expressly referred, will enable the court, in the opinion which they are required to give, to say whether any, and if any, which of the *letters and reports* to which I have referred are such as were written and published in violation of the spirit, the true intent and meaning of the regulation in question.

All which is respectfully submitted.

EDMUND P. GAINES, *Major General by Brevet, U. S. A.*

After the foregoing remarks, Major General Gaines commenced his final address, (which accompanies these proceedings,) and continued its reading for some length of time, when, at his request, the court adjourned to meet to-morrow at 10 o'clock.

FEBRUARY 17, 1837.

The court met pursuant to adjournment. All present.

Major General Gaines took up and finished his address, after which the court adjourned to meet to-morrow morning at 10 o'clock.

FEBRUARY 18, 1837.

The court met pursuant to adjournment. All present.

The court was occupied on this day and on Monday, the 20th, in revising its proceedings in reference to the Greek campaign.

FEBRUARY 21, 1837.

The court met pursuant to adjournment. All present.

The court took up the testimony in reference to the campaign in Florida, under Major General Gaines, and, after a careful examination, finds that Major General Gaines, on receiving, at Mobile, about the 17th of January, 1836, information of the massacre of Major Dade and his command by the Seminole Indians, in Florida, repaired with promptness to the city of New Orleans, where he, with great zeal, organized a force of regular and volunteer troops, amounting to about eleven hundred men, and proceeded without delay to Tampa Bay, where he arrived about the 10th of February, and after making preparations for the field, moved on the Fort King road on the 13th, and reached Dade's battle ground on the 20th, where he buried the meritorious dead with the honors of war. He then proceeded for Fort King, where he arrived on the 22d. After drawing nine or ten days' supply of subsistence from Fort Drane, and receiving a small supply of ammunition, he moved on the Withlacoochee, where he arrived on the 27th, and encountered the same day the enemy across the river in a sharp conflict of half an hour, when the troops withdrew for the night, after a loss of one killed and six wounded. On the morning of the 28th, the troops marched down the river to a point two and a half miles below, where it was understood the crossing was practicable. Here the advance of the army was fired upon from across the river, and an action ensued, which continued until 12 or 1 o'clock, in which Lieutenant Izard was mortally wounded. The army here encamped that afternoon, and an express was despatched by Major General Gaines to General Clinch, or the officer commanding at Fort Drane; the troops in the meantime throwing up a slight breastwork of logs. On the morning of the 29th, at 9 or 10 o'clock, the enemy, in force, estimated at about one thousand or fifteen hundred men, made an attack on three sides of the fortified camp, which was continued for two hours, when he withdrew, leaving one of his dead on the field. On this day another despatch was sent by Major General Gaines to Fort Drane. From the 2d to the 5th of March the enemy made more or less spirited attacks upon the camp, in which several conflicts the loss on the part of our troops amounted to some three killed and about forty wounded. On the night of the 5th of March a proposition was made from the woods, by the enemy, for peace. On the next day a strong party of Indians appeared within five or six hundred yards of the camp, a few of whom advanced with a flag to within one hundred and fifty to two hundred yards, and Adjutant Barrow, of the volunteers, was sent out to confer with them, when they informed him they did not wish to fight any more, but wanted General Gaines to go away; upon which information General Gaines sent out Captain Hitchcock, who was accompanied by two or three officers, to hold a further conference with them. The Indians repeated to him their proposition for peace, and stated they had lost a great many of their men. Before the conference was finally closed, the advance of the troops under General Clinch came up, and commenced a fire upon the Indians standing in the rear, when they and the chiefs in council fled and covered themselves in the hammocks, and were no more heard of up to the 10th of March, when the army (the command of which had been turned over by Major General Gaines to General Clinch the day preceding) fell back upon Fort Drane, where it arrived on the 11th.

The court, after carefully reviewing and collating the testimony of Captains Hitchcock and McCall, Colonel Twiggs, General Smith and others, in reference to the operations and peculiar situation of the army at Camp Izard, finds it difficult to come to a conclusion as to the real causes of the failure of the campaign. It appears, although the army was surrounded and repeatedly assailed by the enemy in its fortified position from the 29th of February to the 5th of March, and straitened in its means of subsistence, that, however important to the chivalry and reputation of the troops, no sally was made to test the result of such a movement, which it is possible might have issued in the defeat and subjection of the enemy, and have brought the war to a close. But the court, however, judging from subsequent events in prosecuting the war under other commanders, and the indomitable spirit of hostility evinced by the enemy, is of opinion that, had a sortie been made by Major General Gaines, though he might have been able to beat and drive the enemy into the surrounding hammocks and swamps, they would have eluded pursuit and retired to their more remote fastnesses. But, if such had been the result of a sortie, Major General Gaines had not the means of subsistence to have enabled him to remain long enough in or about the cove of the Withlacoochee to seek out the enemy and press the war to a successful conclusion. Still, the court, without impugning the motives that influenced Major General Gaines, is of opinion that a sortie, under all the circumstances of the case, should have been made.

The court, therefore, in taking a full and impartial view of all the circumstances appertaining to the operations of Major General Gaines at Camp Izard, is of opinion that the failure of the campaign should rather be attributed to the want of the means of subsistence to prosecute the war than to the contingent result of a sortie.

The attention of the court was next called to a consideration of the publication of Major General Gaines's official report of the 4th of July, 1836, to the adjutant general, in the public prints. The fact of its publication in the "New Orleans Bulletin" of the 27th of September is admitted by Major General Gaines (as will appear in the proceedings of the court) as authorized by him, and without any authority but his own action. The court is not aware that its publication in the public journals as late as the 29th of September is in violation of any rule or regulation of the service; but is of opinion that all publications in the public prints tending to excite public opinion, or to produce recriminations between officers, are prejudicial to the interests of the public service and injurious to the discipline of the army. The publication of the official report of Major General Gaines, of the 4th of July, to the adjutant general, is considered by the court as falling under publications of this description, by its personal allusions.

The court cannot close its proceedings without adverting to the strain of invectives and vituperation used by Major General Gaines, in the language generally of his summary of the evidence touching the operations of his Seminole campaign; particularly the part of it couched in the following terms: "*the atrocious machinations of the second United States general officer who has ever dared to aid and assist the open enemy of the republic in their operations against United States forces employed in the protection of the frontier people. The first great offender was Major General Benedict Arnold; the second, as your finding must show, is Major General Winfield Scott.*" Assertions without facts or circumstances to sustain them, and unbecoming his, Major General Gaines's, high rank and station—remarks and assertions which the court condemn in the most decided terms of reprehension.

The court, in continuation, feels itself compelled to notice the censure in the official letters of Major General Scott (spread upon the record of these proceedings) cast upon Major General Gaines, in reference to his operations in Florida; and in a tone of language that could not be otherwise than offensive to

the latter general, and in terms, the court is of opinion, not called for under the circumstances of the case, and ought not to have been indulged in.

ALEX. MACOMB, *Major General, President of the Court of Inquiry.*  
S. COOPER, *Judge Advocate, Recorder of the Court.*

*Defence of Major General E. P. Gaines, before the court of inquiry of which Major General Macomb is president. Frederick, Maryland, February, 1837.*

MR. PRESIDENT: My first object is to show that the order given me to command the western department, made it my duty, on hearing of the outbreak of savage war upon the troops and frontier inhabitants of East Florida, within the known limits of my department, to collect together whatever disposable force I could obtain near me, and fly to the theatre of the war to "*repel the invasion,*" and beat the enemy, or hold them in check, and stand between them and the bleeding frontier, until the President of the United States should be advised of the state of the war, and of my movements and measures, and thereupon make whatever arrangements he might see fit for affording *protection* to the frontier and terminating the war.

I stand before this court as one of the *accused*. Major General Scott, though placed, as I am placed, in the attitude which the law recognizes as one of the "*accused,*" (see the 91st article of the Rules and Articles of War,) has been erroneously, as I have endeavored to show, suffered by the court to *act as my accuser—and thus to act in my absence*. Protesting again, as I have protested, against this proceeding, I can but avail myself of the restricted means which the court has seen fit to impose in the vindication of my conduct; and since the court has denied me the privilege of meeting my accuser and his witnesses face to face, and thus scrutinizing the accusations against me, and "*cross-examining and interrogating the witnesses,*" as authorized by the 91st article of war, I find myself compelled to proceed under all the disadvantages of repelling accusations that have not only been so far sanctioned by the Secretary of War as to be published by his authority, and then acted on by the court in my absence, and ultimately forwarded to the Department of War, as I have been given to understand, with the final decision of this court.

Notwithstanding all these disadvantages, Mr. President, I do not despair. The strength of my cause, the strict military propriety of my measures, with the patient hearing which the court has given to the testimony before you, assure me that whatever may have been the force of *appearances* against me, I cannot but feel satisfied that the testimony upon your table will convince you of the correctness of my conduct, as set forth in my letter of the 4th of July to the adjutant general, to every part of which, and to my correspondence and orders to which it refers, I desire the particular attention of the court, as a part of this, my final vindication.

Mr. President: When last before this court you notified me, whether with or without the concurrence of the court I did not understand, that Major General Scott was *not considered my accuser*. I then endeavored to convince the court, from a hasty reference to the official letters and reports of that officer, that he was, in fact, my accuser. I have since seen, in an article purporting to be the defence of General Scott before this court, a declaration that he is not my accuser. If this is true, sir, the letters bearing the signature of that officer, dated at Picolata, the 1st and 4th of March, with his letters dated the 9th and 14th of March, which I have seen before the court, must be considered as forgeries; otherwise, the *receiver* of those letters, who authorized their publication, must be my accuser, for I can truly affirm that during the long period of my service I have never known an officer to be more palpably charged with crimes than the writer of those letters has seen fit to charge me. I therefore deem it to be due to the public service, and to my own reputation, aspersed by these accusations, to establish their authorship, whilst I prove them to be false and calumnious. The question between the *writer* and the *receiver* I leave to be settled between them. The *writer* is in the power of the court, the *receiver* is not.

In my letter of July 4, 1836, addressed to the adjutant general, I made the statement which follows: "The Order No. 7 of the present year, requiring General Scott to repair to the left wing of my department, was never seen by me until my arrival at Fort King, the 22d of February. I state this fact simply because it is a *fact* hitherto, I apprehend, unknown at your office, but it is a fact to which I attach little or no importance. Had I received this order at Pensacola, I should have viewed it as a measure of the *Secretary of War*, taken without a full knowledge of the progress of the war upon that frontier, and of the circumstances which had rendered my movement to Florida proper; and that therefore my movement thither ought to continue until I should feel assured that the President was apprised of all the material facts bearing upon the subject, and more especially until the officer authorized to enter upon that part of my command assigned to him, and which formed the principal theatre of the war, should make his appearance in person upon that theatre of the war, unless, indeed, my attention had been called to other and apparently more important military operations, also *in actual war*, than those which called me to East Florida.

"This view of the subject is based upon an essential principle of military law, derived from the laws of nature, and incorporated in our institutions—a principle sustained by the ablest writers of all enlightened nations to whose works I have had access—a principle without the strict observance of which no nation whose geographical limits exceed twenty miles square could be successfully defended—a principle deeply interwoven with the highest attributes of *sovereignty* and of *self-government*, namely, *self-defence* and *self-preservation* as a nation or a state, or, in other words, *protection, immediate, instantaneous protection to the exposed feeble members of the community from savage war*. Yes, sir, *immediate, instantaneous protection* by the military officer intrusted with the command of the particular section of country threatened with savage attack, until relieved *before the enemy* by the new commander.

"Let us look into a few of the principal features of the case in question and see what would probably have been the effect of a contrary rule of conduct on my part. In command of the western department, I had met, at New Orleans, intelligence of a great and unlooked-for disaster having occurred upon the left wing of my department, far distant from the seat of the federal government, from whence alone could I hope to receive new orders, or special instructions, more applicable to the case in all its bearings than the orders of the President embraced in my commission to serve the United States diligently as a general officer, with the orders which he had given me to *COMMAND THE WESTERN DEPARTMENT*. An important white settlement within my department was reported to be *OVERRUN, SACKED, AND BURNED*—a United States agent of Indian affairs, and eight valuable officers, and ninety-eight faithful soldiers, with many worthy frontier citizens, killed, and their property stolen or destroyed; and I was aware that most of the neigh-

boring military posts—namely, Forts Brooke, King, Drane, and Key West, all within my military department—were without any other works of defence than such as an efficient force of five hundred men might have taken and destroyed in a few hours with little loss or risk on their part—the garrisons of two of those posts (Fort King and Key West) being insufficient for their defence. I was, moreover, apprised that there were but about six hundred troops of the regular army at that time in Florida, and that these were separated by a wilderness, supposed to be occupied by the enemy, comprehending near twenty thousand square miles, extending near two hundred and fifty miles from north to south, and from one hundred and twenty to forty miles from east to west—with our six hundred regulars stationed at the opposite angles and sides of this extensive wilderness, without disposable force sufficient to insure a concentration at any one important vulnerable point from one side of the wilderness in question to the other, without the most imminent danger of having such force destroyed in its movements to the point of concentration. The destruction of the brave but unfortunate Major Dade, with his heroic officers and men, affords an impressive lesson upon this view of the subject which no prudent American soldier or citizen should ever lose sight of. Under these circumstances, what was the duty of the commander of the western department? What, I ask, was the proper course for me to pursue? These questions may be most readily answered by asking another: What had I promised upon my oath to do? I had promised upon my oath, prescribed by law, 'to bear true faith and allegiance to the United States of America, and to serve them honestly and faithfully against their enemies or opposers whomsoever, and to observe and obey the orders of the President of the United States and the orders of the officers appointed over me, according to the rules and articles of war.'

"I had with me my sword and my commission, with the orders of the President of the United States to 'command' this department. Now, it is well known that for me to command a military department, or any particular section of country upon the frontier, great or small, is, in a plain military sense, *so to order and employ the men and means confided to my direction as to protect our own people of the United States upon that section of frontier 'against their enemies or opposers whomsoever,'* as set forth in the aforementioned oath; and if it be in time of war, to continue so to command until duly relieved by the new commander, IN HIS OWN PROPER PERSON, and on the theatre of war.

"In failing to comply with this sacred injunction, I well knew that I might thereby have suffered the enemy to kill great numbers of the citizens and troops, in addition to those already slain, within the limits of my command, and burn their houses, and take their property. It was my bounden duty, therefore, without waiting for *new orders* or special instructions, to collect together my disposable force found within my department, which I might deem sufficient to enable me promptly to strike at the enemy, and, if possible, subdue them, or check their devastations, until the President should have notice of them, and of my efforts to arrest them, and then give such new orders as he might think fit.

"But it is contended—principally, indeed, by those who have proven themselves to be better qualified for the quiet vocation of a writing-desk than the turbulent scenes of an Indian war—that I ought to have abandoned the expedition at Pensacola, because I received, on my arrival at that city, your letter notifying me, not that General Scott had actually arrived at the theatre of the war in Florida, but that he had been ordered thither by the Secretary of War! But little reflection is necessary to see the fallacy of this closest-view of the subject. I had embarked, pursuant to my letter of the 2d of February, addressed 'to General Clinch, or the officer commanding the forces assembling on the northeast border of East Florida,' with a view to co-operate with that officer in subduing the enemy; I had, moreover, given a pledge to the principal force then with me, the Louisiana volunteers, that I would not require them to go further than I would myself go, and that I would stand by them as long as they would stand by me in bringing the war to an honorable close. I had thus promised, on the 2d of February, with a force of seven hundred men, so to co-operate; this force had been fortunately increased before the embarkation was effected to near one thousand one hundred men. With this very respectable force embarked, and in its movement for Tampa Bay, and within two days' march (by steam) of that place, I received at Pensacola the notification from you that General Scott had been ordered by the Secretary of War to that part of my command to which I was, under the above-mentioned circumstances, destined. But what assurance could I have had that he was there? Did you notify me that he was at the post of honor assigned to him by the Secretary of War, or that such arrangements had been made as afforded reasonable ground to hope that General Scott would be prepared soon to breast the storm of savage desolation, and protect from the scalping-knife and fire-brand the helpless citizens of both sexes and of all ages in that region, who had looked to me as their protector? Did you tell me that Ocoila and his war chiefs had given to the President satisfactory assurance that they would suspend their massacres and conflagrations until General Scott should complete his plan of operations, and be quite ready to subdue them? No such thing is found in your letter. Nor had I any reason, from the previous northern or western wilderness movements of that officer, to anticipate anything like a prompt movement on his part into the wilds of Florida longer than he should find himself and his forces and supplies propelled by steam-power."

I repeat, sir, I had been notified, not that General Scott was there, but that he had been ordered thither; I was assured, not that Ocoila and his ferocious chieftains and braves had promised to suspend their wonted havoc until General Scott should have full leisure to mature his plan of operations, and be quite ready to surround and annihilate the enemy; but was simply notified that this officer was ordered to extend his operations into my department, without regard to imaginary lines. It is here proper, and essential to my complete vindication, to advert to the well-known fact that, on a previous occasion, when General Scott was ordered into my department against the Black Hawk and his red warriors, that officer did not arrive at the theatre of the war until the enemy had been met and beaten by the gallant troops headed by the commander of the right wing of my department, now a member of this court, seconded and sustained by another member of this court, with Taylor, of the United States army, and Dodge, of the volunteers. Major General Scott with his troops did certainly move with very considerable rapidity from Albany, New York, to Chicago, at the southern extremity of Lake Michigan, as long as he was propelled by steam-power; but, when this mighty power could no longer be rendered subservient to his movement, the general, with a large portion of his army, fell prostrate upon the threshold of the then theatre of the war, afflicted with disease, and mortified that they were thus deprived of the professional gratification of leading in the vigorous chase, and winning the honors of the victory which ensued. He arrived at the theatre of that war not until after the enemy had been subdued, and in time only to perform the diplomatic duties assigned to him by the Secretary of War.

I was warranted, therefore, by his northwestern tardy movements and misfortunes, in the apprehension that the same officer might possibly be tardy and unfortunate while in quest of southern laurels; but

it was enough for me to know, as I did full well know, that, even had each one of us, with our troops, been blessed with the unerring means of flying rapidly as an eagle to the protection of the suffering frontier, it were better to "make assurance doubly sure," and for each of us thus to hasten our movement thither, than that any possible chance of a failure to afford timely protection should be hazarded, and hazarded, too, by uncalled-for haste in my complying with a notification or suggestion like that which met me at Pensacola from Adjutant General Jones requiring no immediate action on my part—a notification which was obviously written without any knowledge of the *extraordinary circumstances and irrevocable arrangements* which made it my duty to proceed to Florida, and to act with all possible effect in protecting the frontier inhabitants and subduing the enemy; until these circumstances and arrangements should be known to the Department of War, and other measures be taken there; or until I should meet with the officer authorized to relieve me; or, finally, until I should beat the enemy and force them to sue for peace, as I ultimately had the satisfaction to do between the 27th of February and 6th of March, 1836, as the evidence upon your table abundantly proves—a fact to which I shall again advert somewhat more in detail.

General Scott left Washington for East Florida on the 22d of January. On the 2d of February he writes officially to Colonel Lindsay, and communicates his expectation of being in readiness to act decisively in East Florida by the 25th of that month. When I heard of his having been ordered to East Florida, I made a similar calculation, and confidently expected to meet him about or before that time upon the theatre of the war. I have shown to this court my readiness and willingness to yield my command to him, or to co-operate with him—leaving the election entirely to himself; my sole purpose being to afford *protection* to the frontier by acting immediately upon the enemy. If General Scott, in the full knowledge of his own resources, and with as ample authority as was ever furnished to any general in the field, was induced thus to anticipate the contemplated time of action in the enemy's country, my own expectations in respect to him can be regarded only as an evidence of my confidence in him, which his subsequent movements most lamentably disappointed, with no fault of mine. Had he fulfilled my expectations, our two forces might have united in a most solemn duty upon the battle ground of the gallant and lamented Dade; for it was upon the 20th of February I performed the deeply affecting duty of giving honorable interment to the bodies of our military brethren sacrificed fifty-two days before by an overwhelming band of savages; and, having thus united our forces at that melancholy scene, we might at once have directed our march upon the enemy and crushed him at a blow.

But to return to the actual movements of General Scott. He arrived at Picolata on the 21st of February, in advance of his troops and in advance of his transportation for his army. On the 26th of February he hears of my arrival at Fort King, and immediately writes to the War Department a denunciatory letter against me, formally reporting that my movement had thwarted his plan of campaign, and stating distinctly that his plan was to have marched upon the enemy on the 8th of March.

I will pause here to call the attention of the court to this formal announcement of his *plan*, and the defeat of it by my movement, in order to connect with it, in the view of the court, the several passages which I have caused to be spread upon the record, all taken from the original letters of General Scott, wherein that general over and over again reports officially to the War Department that, of his means of transportation, "not a horse or a mule has arrived"—"not a wagon, &c., has arrived"—"the steamboat Essayons, like everything else left behind, has not arrived"—"the South Carolina troops have not arrived;" sometimes he writes "they have not been heard of." Captain Wharton and his dragoons had not arrived. Certain troops that had arrived had refused to be mustered into service, and thus crippled him to such an extent that, finally, the strong necessity of the case compelled him to lean upon the brave Louisianians and regulars under my command; for, on the 6th of March, we find him still at Picolata writing that, if the Louisiana troops or those of General Gaines shall not be at Fort Drane, it will be indispensable for him to suspend his movement until the arrival of Captain Wharton. In his strong agony, General Scott, who had been directed to prosecute the war, and had authority to command into service men and means, was obliged formally to report that, unless the troops of General Gaine were at Fort Drane, it would become indispensable for him to await the arrival of Captain Wharton. I have caused to be placed upon your record the official report showing that Captain Wharton did not reach Fort Drane until the 23d of March. Of course, by General Scott's own showing, he could not have marched upon the enemy until that date; and it is upon your record that he did actually move within three days after it. So that under no possible statement of facts can it be made to appear that my movement delayed him over three days' time.

But, Mr. President, since I am upon this topic, I will proceed to show that he was not delayed, by my movement, even those three days. I refer you to General Scott's own letters written from Fort Drane—they are upon your record—reporting officially his reasons for assigning the 25th of March for the movement of his divisions upon the Withlacoochee.

Among those reasons, General Scott dwells upon the necessity of fixing a day that late, in order to be certain that General Eustis and Colonel Lindsay would be in *position*. It is here to be remarked that General Scott's plan contemplated a simultaneous movement from Fort Drane from the north, Volusia from the east, and Tampa Bay from the south. Hence, on a philosophical principle in determining the strength of a beam in architecture, that the weakest point in the beam is the measure of its strength—on the like principle, the slowest, most tardy, or most obstructed division of the three divisions of the army advancing upon the Withlacoochee must necessarily have determined the whole movement. That division was not the right wing, at Fort Drane, into which my force had been merged, and which, of course, was the only one that could in any manner be delayed by my movement; but it was the left wing at Volusia, under General Eustis: for I refer you to your record again, where you will find an official letter from General Eustis to General Scott, reporting his fear that, with all his efforts, he might not be able to reach Pelaklikaha before the 27th or 28th of March. In fact, Mr. President, he did not arrive in *position*, (I use a favorite term of General Scott,) he did not arrive in position at Pelaklikaha until the 31st of March, where he should have been by the 27th of that month, in order to make a simultaneous movement upon the stronghold of the enemy with the other divisions of General Scott's army. Thus I have shown that, while my troops made an essential portion of the right wing of General Scott's grand army, without which that wing would have been the weakest of his three divisions, and altogether below the original design of General Scott, (owing to the disgust or defection of a certain portion of the Georgia volunteers, who refused to be mustered into service,) yet that wing could not have been delayed more than three days; but what still more strikingly illustrates the perverse and untiring efforts of General Scott to throw the responsibility of his delay upon my movement, I have shown that his left wing, that of General Eustis, at Volusia, (and the zeal and energy of General Eustis have often been eulogized by General Scott himself—see his report from Tampa

Bay,) the left wing, I repeat, was not able to get into position until the 31st of March; whereas the right wing, embracing my command, was actually on the Withlacoochee, under General Scott's orders, on the 28th of that month. It is worthy of remark here that General Scott, although he arrived as late as the 28th of March on the Withlacoochee, had appointed the 25th for leaving Fort Drane. But it seems it rained on the 25th, and the movement was deferred that day, possibly because the little steamboat *Essayons* was not there, with her comfortable cabin. It can hardly be urged that I caused it to rain on the day appointed for the march. The 25th being the day appointed for the movement, it may seem strange that the "right wing" did not reach the Withlacoochee until the evening of the 28th, a period of four days, the distance being less than thirty-five miles. Every previous movement between Fort Drane and the Withlacoochee had been accomplished in a day and a half; but, as soon as General Scott presented himself in person, it required four days (including the rainy 25th) to accomplish the same march; and this fact presents a tangible, palpable, undeniable instance of delay, that can in no manner be attributed to me or to my movement. With what pretence, or with what shadow of reason, then, can it be asserted that my movements delayed those of General Scott?

I refer the court to the testimony of General Clinch upon this point, and I will return again to General Scott at Picolata; apologizing to the court for having left him there so long, hastening myself into the enemy's country in advance of him—I can only plead the force of *habit*.

General Scott, as I have said, heard of my arrival at Fort King on the 26th of February, but made no movement from Picolata until the 9th day of March, although he had reported, from Augustine, his expectation of moving by the 20th of February, and although he had also reported that his plan of moving on the 8th of March had been thwarted by my march upon Fort King. Had he thus been ready, why did he not move? I had the men; he should have had the means. Had he been thus ready, it would have been a very simple matter to have left "in position" at Picolata a portion of his force, to be substituted by the troops of my immediate command, at Fort King or at the Withlacoochee, and, taking up his *means*, have rushed to the theatre of the war, there to co-operate with me, or take command of the troops, which I was always, from my first arrival in Florida, ready and willing to turn over to him, on finding him authorized and willing to employ them for the protection of the frontier and in subduing the enemy. Had he been thus ready for absence, his duty was plain; if not, what can justify the perseverance in wrong exhibited by the entire absence from your record of all explanation on his part? In all that voluminous pile of papers upon your table he nowhere has shown the magnanimity to correct the false impression to which he vainly gave currency with the sanction of his official signature. But, Mr. President, I will return to Picolata. I really find it as difficult to remain there as General Scott did to get away from there. It was on the 1st of March that General Scott, still at Picolata, received my despatch from the Withlacoochee of the 29th of February, in which I suggest a co-operation from Fort Drane, in order to occupy both sides of the river at the same time—the enemy having shown so great facility in crossing that river, and requesting, as I did, a supply of 6,000 rations.

It is important for the court to bear in mind that my despatch of the 29th of February was received by General Scott on the 2d of March; and also important to bear in mind that my despatch of the 28th of February, making precisely the same call for supplies as that of the 29th, was received by General Scott on the 1st of March. I now pass to the 9th of March, and I request the judge advocate to read the official letter of General Scott of that date, written between Picolata and Garey's Ferry.

In the letter just now read General Scott declares he had not received any information of the operations on the Withlacoochee of a date later than the 29th of February, (referring to my despatch,) either *official* or *otherwise*. He goes on to state that, on the morning of the 9th, he heard of a certain rumor by a steamboat—a rumor by a steamboat!—which rumor he states was confirmed by letters received by him six hours later, and he refers to the letters. In order to ascertain the character of that *rumor*, I desire the judge advocate to read the two letters referred to by General Scott. They are from Major Lytle, paymaster of the army, a most gallant and distinguished volunteer aide-de-camp to General Clinch in the memorable fight of the 31st of December, 1835.

Mr. President, in neither of these letters is there any allusion to any rumor whatever. Major Lytle, with all possible business-like brevity, simply communicates to General Scott the fact that General Clinch, with the troops at Fort Drane, had gone down to the Withlacoochee to *escort* supplies of provisions and ammunition to General Gaines. The court will not fail to remark that in both letters the same phraseology is used in allusion to General Clinch's movement. *He had gone down to escort supplies*. There is not one word about any matter foreign to that object, in confirmation of any rumor whatever; and in neither of these letters from Major Lytle, expressly referred to by General Scott, is there the remotest hint of necessity for a *rescue* on the Withlacoochee. Yet General Scott officially reported to the War Department that he is moving to the *rescue of General Gaines*; and, to convey an idea of the imminent danger of General Gaines, he reports that of some 240 men ordered on from Picolata, "even that small force may arrive in time to render essential service."

I must stop here to remark that this letter from General Scott, together with others from the same source, was published, as I have recently understood, in all the principal newspapers in the country, and was calculated, if not expressly designed, to misrepresent my efforts to put an end to the war, and to heap calumny and disgrace upon me and the force under my command, as far as the reckless author and publisher had weight of character to give effect to their official calumnies.

This remarkable *rescue-letter*, I go on to observe, was written upon the receipt of two letters from Major Lytle, in which that officer reports, in the simplest manner, without hurry, without urgency, a movement of General Clinch in escort of supplies to General Gaines. But this is not all of Major Lytle's communications. He proceeds to inform General Scott that General Clinch expected to return by the 9th day of the month. In so simple and unsophisticated a light was that movement regarded by Major Lytle, and by General Clinch himself, that without calling upon General Scott for aid of any sort, either of men or supplies, he communicates the expectation of General Clinch, that he would return to Fort Drane by the 9th of March—the very day of the writing by General Scott of the *rescue-letter*. At the very moment of writing that letter, so studiously worded to convey the idea of my being in danger, and of his (General Scott's) hastening, in defiance of all his plans of campaign, to my *rescue*, had he honestly read the letters of Major Lytle, he would have seen that General Clinch was probably back again at Fort Drane with his escort, as he had expected to be on the 9th, and as, in point of fact, he was on the 11th of March. But this is not all—worse, much worse, remains to be told; for, on referring again to the letters of Major Lytle, it will be seen that in a postscript, in a mere memorandum, so little importance did he attach to it, he refers to a third express having been received from General Gaines, but describes

it as a mere copy of the previous despatch of the 28th of February. The court will now see why I desired its attention to the fact that the despatch in question had been received by General Scott on the 1st of March. The very identical information upon which the rescue-letter was written, so far as it called upon General Scott for aid, had been received as early as the 1st of March. But how was it acted upon at that time? This court and my country shall see. I request the judge advocate to read the letters from General Scott to General Clinch of the 1st and 4th of March, 1836.

In these letters the court will not perceive anything like *hastening to the rescue*. Very far from it. The truth is, General Scott, at this stage of the business, imagined he had it in his power, not indeed to starve me and my command *in my position* on the Withlacoochee, but to starve me *out of it*—calling me an *interloper*, and using, in connexion with my name, an expression of his indignation. *His indignation!*

"When Haman saw Mordecai in the king's gate, that he stood not up, nor moved for him, he was full of indignation against Mordecai."

My accuser, Major General Winfield Scott, commanded General Clinch to afford me no supplies, and prohibited his making any detachment to me. There are the evidences upon your table, in the handwriting of General Scott. Let him escape from the consequences if he can. For the honor of my country I could wish it were possible; but, with every allowance that can be made, there must inevitably be in reserve a blank leaf in the annals of war to be foully blotted with the story of that transaction.

I proceed. After attempting to starve me out of my position, and force me back upon Fort Drane—a movement that must have been fatal to the security of the then recently bleeding frontier of Florida—my accuser quietly waited, in security himself, at Picolata, from the 1st till the 9th of March, beyond all doubt hoping daily to hear of my disgrace, and not of the defeat of the Indians. On the 9th of the month, instead of hearing the long and anxiously looked for intelligence of my retreat, he received two letters from Major Lytle, reporting identically the information that had been received by him (General Scott) as early as the 1st of the month, without inducing the smallest effort at a rescue, with the addition that Clinch, in defiance of his orders, and, beyond all doubt, in contempt of them, had gone down, not with a force to the rescue, but in command of an escort with supplies; and if need be, to fight his way to the position which he knew, and General Scott knew, from my despatch of the 29th of February, I had deemed it proper to maintain, where I could hold the enemy in check, and where I ultimately subdued them and forced them to sue for peace. What could General Scott see in the movement of the noble-hearted Clinch, taken in contrast to his own heartless inactivity, but disgrace for himself? And how clearly does it prove the truth of my remarks to the officers of my command upon the Withlacoochee, which you have in evidence, that in failing to move, upon the receipt of my despatch, *he could not but committ suicide upon his reputation!*

I have not introduced these letters and remarks for the purpose of throwing blame upon General Scott. That a deep and abiding odium must, indeed, attach to him, upon this showing of the case, is a necessary consequence, but not the object of this exposition.

General Scott, by the letters here exhibited, had, and intended to have had, a powerful effect, not only upon my movement, but upon my reputation; and down to this day his reports and his showing have had almost exclusive possession of the public attention, excepting, indeed, upon the southern and southwestern frontier, where my conduct has been witnessed and approved.

But there is still another letter which must pass under my examination; and well would it have been for General Scott had he never written it.

I remained on the Withlacoochee until the 10th of March, and moved to Fort Drane on the 11th, where I remained until near 10 o'clock on the 14th. General Scott arrived at that place on the 13th with a mounted escort, having been four days in travelling 65 miles, moving, be it remembered, "*to the rescue of General Gaines.*"

I will here take occasion to contrast with his *rescue*-march of about 15 miles a day the movement of an efficient officer in a recent case. During the past summer Brevet Lieutenant Colonel Pierce, then a major, being at Garey's Ferry, on Black creek, a point at a distance from Fort Drane the same as that of Picolata, (about 65 miles, as shown by one of the letters of Major Lytle,) received by express, at 10 o'clock at night, intelligence of a movement of troops upon Fort Drane, and calling on him for supplies. This call was promptly met by Colonel Pierce. He mounted his horse, packed his supplies, paraded his small body of troops as an escort, and, at 2 o'clock in the morning, but four hours after the receipt of the express, he was on his way to Fort Drane, and, pushing on with all his ability, arrived there the following evening, having in two days accomplished the march, 65 miles, escorting at the time a baggage train with supplies for the troops commanded by Governor Call. Will it be said that General Scott was without the means of transportation? Although much of that which he had ordered from Savannah had not arrived, yet the baggage train of General Clinch from Fort Drane had reached Picolata on the 2d of March, the very day on which my despatch of the 29th February was received by General Scott at Picolata. The baggage train was, however, there detained until the 6th of the month, when it was allowed to move slowly to Fort Drane, where it arrived on the 10th or 11th of March. Besides, some of his own wagons had arrived from Savannah, and there was a mounted corps of about 360 men then at Garey's Ferry, every horse of which, in case of need, was available as a pack or draught animal. There must also have been in Picolata and the neighborhood some horses, mules, wagons and carts within reach, and the town of St. Augustine was but eighteen miles distant.

The river St. John's, which is supposed to be near 3,000 yards wide at Picolata, may have been a little boisterous, but there was a steamboat at Picolata, and it is apparent, from the testimony of Captain Drane, that this small steamboat, (the *Essayons*.) aided by a common ferry-boat, would cross with supplies in any state of the winds or weather. But it seems, from General Scott's statements in his letters before referred to, that he was satisfied with the plea that the river was rough and difficult to cross from the 2d to the 6th of March; and hence it was that instead of my supplies being promptly forwarded by the baggage train of General Clinch, its movement was suspended for four days' time, to enable General Scott to accomplish his *starving-scheme* of the 1st and 4th of March, and then to get up his *rescue-scheme*.

I come now to a new exhibition of the evil genius of General Scott, which I will take leave to designate his *sortie-scheme*. For this purpose I request the judge advocate to read the official letter of General Scott to the adjutant general, dated at Fort Drane the 14th March, 1836.

The court must perceive in this letter the obvious spirit of the rescue-letter, exaggerated to an amazing enormity. In this letter General Scott, believing that he had access to the public through the habit of publishing official correspondence at Washington, availing himself of this advantage, misrepresenting the facts connected with my movement, and defaming, or attempting to defame, my public and military

character—he deliberately states, and certifies that he has it upon good authority, that I had opened a communication with the Indians on the Withlacoochee; that the Indians were stipulating that the Withlacoochee should either be the temporary or permanent boundary between the red and white men; and he falsely records that, but for the timely arrival of General Clinch, he has no doubt General Gaines would have concluded a treaty upon one basis or the other, stating, moreover, that the Indians had taken a position in my rear to intercept my retreat upon Fort Drane.

General Scott wrote this *sortie*-letter at Fort Drane the 14th of March, where he had arrived on the 13th. From the time of his arrival until near 10 o'clock on the morning of the 14th, (the date of his letter,) all the officers who were at the council with the Indians upon the Withlacoochee were present at Fort Drane, and entirely accessible to General Scott. He did not send for nor consult any one of those officers, but made the statement contained in his letter upon some carefully-concealed *anonymous* authority, which, however, he indorses. Of those officers who were at the council, you have, upon your record, the testimony of Captain Hitchcock, my acting inspector general, who had my immediate instructions in conducting the council on my part. You have also two letters from two of the other officers, in all material respects coincident with the testimony of Captain Hitchcock. The fourth officer, you have it in evidence, was not applied to for a statement, because his place of residence was not known; but Captain Thistle has sworn to the belief of that officer in the sincerity of the Indians.

The court will pardon my dwelling a moment upon the extraordinary fact that General Scott, at Fort Drane, should have carefully avoided every known and acknowledged source of correct information upon the subject, and officially have given the sanction of his name to a statement utterly at variance with truth, and that statement not merely calculated or intended to degrade me individually, but to fix a stain upon the American arms. That General Scott could, by any force of prejudice, passion, envy, or disappointment, be induced to place on record in the archives of the War Department a statement calculated or designed to disgrace his profession and country in my person, without making the least exertion to obtain the truth from those only who were acquainted with it—I mean the officers at the council—is a most astonishing instance of folly and malice.

General Scott states that I opened the negotiation with the Indians. You have it on record, gentlemen of the court, that the Indians, and not myself, opened the council. It was the Indians who sought the interview with me at Camp Izard, and the very first declaration they made was, that they did not wish to fight any more—that they had had fighting enough, and wanted to make peace. General Scott states that the Indians stipulated the possession of the country, on their part, with the Withlacoochee as a boundary. The evidence on your record is in positive contradiction to that statement. Not only did they not make such a stipulation, but you have it in evidence that they were told over and over again that they would be compelled to submit to the whites. Well knowing, as General Scott must have known, that the Indians in the rear of my camp were under the protection of a white flag, he makes no hesitation in asserting that those Indians had assumed a position there for the purpose of intercepting my retreat.

I will now pass from Fort Drane to this place, to show the perseverance by which General Scott, not satisfied with writing the letter of the 14th of March, comes before this court and voluntarily condescends to act over again that deliberate scheme of detraction.

General Scott has called before this court, as a witness, a volunteer officer of my command on the Withlacoochee, who was not at the council, and could not, by any possibility, have been informed of the history of it in any other manner than by unauthenticated camp stories. This ignorant man, whose detail of unimportant particulars, carrying on their very face the evidence of their hearsay character, now encumbers your document, was permitted, I must think by some inadvertence of the court, to place on the record his hearsay impressions of what passed at the council; and upon this slender foundation—this *shade of a shadow* of evidence, General Scott has been willing to build the fabric of an argument, when he had himself called before this court Captain Hitchcock, my acting inspector general, who conducted the council, and whose knowledge of what occurred must have been *at least equal* to that of the volunteer officer, but who was not questioned by General Scott on that very important matter. It did not suit his purpose to place on the record the truth. Captain Hitchcock was here before the court, and a sworn witness; a letter attributed to him, giving an account of what occurred at the council, was laid before the court, and Captain Hitchcock, on being questioned on the points, answered that he wrote the letter, and that he was the staff officer alluded to in it, who conducted the council. With all this before General Scott, and knowing, as he did, that not a single fact stated in the letter (such is the rule of evidence) could legally be used as testimony unless sworn to, he failed to put a single question to the witness on the subject of the council.

If, in speaking of the letters of the 9th and 14th of March, I use language of a strong, indignant tone, I have no other apology to offer than the deep provocation arising out of the character of the letters themselves. The *starving-letters* of the 1st and 4th of March, addressed to General Clinch, though disgraceful in the highest degree, have not the peculiar atrocity which attaches to the rescue-letter of the 9th of March, and its *postscriptum* of the 14th of March. The starving-letters could only operate a temporary inconvenience, and, in fact, as they fell into the hands of a man like General Clinch, who despised them, they were powerless in their object, and the disgrace of their depravity must, of necessity, be visited upon their author. But the other letters, designed to work a disgrace upon the American arms, in my person, must, by the ordinary course of things, if not checked and marked as I shall mark them, work evil in one of two ways: either they would be published by the War Department, as the official despatches from a commander in the field usually are, and thus abuse and poison the public mind, certified to as they are by the official signature of the commander, and receiving additional strength from the channel through which they are given to the public; or they must be deposited in the archives of the Department of War, there to be covered up and concealed in their loathsome enormity, for a time, until death shall remove the innocent victim of their falsehood, when some curious searcher after materials for a history brings them to light, spreads them far and wide, and transmits them to posterity beyond the reach of contradiction or question.

In truth, one of the letters, that of the 9th of March, was published, as I understand, by the War Department, and down to this day has been instrumental in spreading the poison of its falsehood. The other, possibly from its very enormity, was not published, and was in a fair way to take the other channel to posterity, and but for the investigations of this court, might have reached, uncontradicted, its destination.

Having shown, as I doubt not, to the satisfaction of the court, that it was my right and my duty, under the deeply-afflictive circumstances of the case, (as the commander of the western department,) to

collect together at New Orleans the force at my disposal, and make to General Clinch the solemn and irrevocable pledge contained in my letter of the 2d of February, 1836, to co-operate with him in subduing the enemy, and for that purpose to march to Fort Brooke, and thence to Fort King; and in pursuance of my plan of operations announced to that meritorious officer in my letter of the 22d of February, "to search for the enemy until I should find them, and then bear them or be myself beaten," and to continue my operations against them whithersoever they might go until I should subdue them, or until I should find General Scott at the theatre of the war, the only proper place for him to relieve me, or if he preferred it, to co-operate with me; and that it was my right and my duty to avail myself of whatever supplies and force I could find within the limits of my department; it remains for me to show that, when so reinforced and replenished, it was my right and my duty to continue my movement to the Withlacoochee; and on meeting at that place the enemy's principal force, to fight them precisely as I did, according to my own plan and my own judgment, in the best possible way to subdue them effectually, and at the least possible risk of dispersing them, until the arrival of supplies and mounted force from Fort Drane, and to subdue them without the useless sacrifice of my troops, who were always more than willing to encounter every privation of food and rest and every danger.

Mr. President, I affirm that there was no law, order, or regulation, tending to restrict me in the full and perfect right of meeting the enemy in the manner I met them at the Withlacoochee. The evidence of Colonel Twiggs, the efficient commander of the "light brigade;" General (acting colonel) Smith, who would do honor to the command of any corps in the regular service; Captain Hitchcock, my excellent acting inspector general, and Captain McCall, my long-tried and faithful aide-de-camp, officers who have proven themselves to possess a high grade of moral courage, and talents, and efficiency, (whose statements are in every material point in accordance with the recollections of every other intelligent officer with me on the campaign, whose impressions were known to me,) concur in the facts that in every conflict I had with the Indians I effected the object in view.

In the first affair (on the 27th of February) I had ordered my rear guard and baggage-train to halt at the nearest open plain adjacent to the river hammock, and within 400 or 500 yards of the river, at General Clinch's crossing place. My object was to examine the place, and then encamp for the night upon the open plain where I had left my rear guard and baggage. The river was examined and found unfordable, when the action commenced. The action continued across the river, where it was but 25 to 30 yards wide, for some 30 to 40 minutes, and until the enemy's slackened fire proved that they had principally retired from the conflict. This fight was without a breastwork. The next day's conflict took place about 2½ miles lower down the river, at a more convenient point for crossing. This fight also took place without a breastwork. Here I deemed it proper to prepare canoes and other means for crossing. These preparations could not be completed until the 29th of February, when I found undoubted evidence of the fact, which I had reason, on the 28th, to suspect, that I had before me the principal force of the enemy, consisting, as I then believed, and as I do still believe, of near fifteen hundred Indian and black warriors. It has been vaguely surmised by my accuser, who, at the time of the several conflicts, was then at Picolata, that the principal force of the enemy was not before me at or near Camp Izard. The principal and most intelligent officers of my command concurred with me in opinion, (see the testimony of Colonel Twiggs, General Smith, Captain Hitchcock, and Captain McCall;) and upon this point permit me to ask, if the principal force of the enemy was not before me on the 29th of February, where is a shadow of proof to be found that any considerable portion of the enemy was on that day, or for weeks after that time, at any other place than the cove or Withlacoochee swamps, near Camp Izard?

I then deemed it proper, as stated in my communication to General Clinch, to await the arrival of that officer or General Scott, with mounted force and supplies, as I felt convinced that these officers would gladly hasten to the theatre of action, having a few days previously seen a letter in the hands of General Clinch, written by General Scott, expressing a wish to know where the principal force of the enemy could be found. I could not doubt that, as he had arrived safely at Picolata, the termination of steam navigation, and but two days' ride distant, he would come promptly to the place, where I was convinced that, with the aid of a small corps of mounted men, either of us could have put an end to the war before the 20th of March. My "Order No. 7," of the 9th of March, gives a concise outline of the result of my operations. Compare that "Order" with the testimony to which I have referred, and you cannot fail to find the facts which I have in that order stated fully and completely established; that, with the chivalric Louisianians under General Smith, the brave infantry and artillery under Colonel Foster and Major Belton, the whole forming the "light brigade" under Colonel, acting brigadier, Twiggs, I did "*subdue the enemy, and did force them to sue for peace.*"

But this honorable court is told, as the War Department and the people of this nation have been told through a thousand channels, (as corrupt as the spirit of party could render them,) that the enemy could not be sincere in their admission that they were tired of fighting, and that they wished to make peace; and for why? Because, forsooth, the alleged beating and suing for peace was accomplished without my having made a sortie!—and that Major General Winfield Scott said so!

The word *sortie* appears to have had in it for General Scott a singular charm. He had seen my letter of the 29th of February, stating that *I had abstained and should abstain from a sortie* until I heard from him or General Clinch. He appears thus to have taken up the idea of a sortie; and instead of reasoning as I did, and as every man of sound principles and military mind would, he endeavors to torture it into an accusation against me. Who authorized General Scott to animadvert upon my measures in the command of my department? Mr. President, do you, does the court know of any law or authority by which that officer could properly interfere with me, or himself sit in judgment upon my conduct? No such authority ever existed. He was never authorized to command me. He was authorized to extend his operations into my department; and it is in proof before this court that I was ready and willing to place under his command the forces near me, whenever he appeared in person, ready and willing to command those forces; but I knew too well what was due to them, the frontier, the service, and my own reputation, to abandon them before the enemy, merely upon the receipt of a report that he was *ordered on* to take charge of the war, when I had also learned that he had halted for some ten or twelve days sixty miles from my department. This court is in possession of the first and only authority ever given to any officer or tribunal to call in question or animadvert upon my conduct in relation to the Seminole war. This court possesses the precise power comprehended in the orders given by the President, to inquire into the causes of the failure of the campaigns against the Seminole Indians.

Mr. President: Your powers in reference to my movements in East Florida hath this extent—no more. If you find that, by any *omission* or by any *act* of mine, a *failure* ensued in any one of the campaigns

against the Seminole Indians in the year 1836, it is your duty to mark and to animadvert on such act or omission. But even this court has no right to animadvert on or object to any such omission as that which General Scott has thus condemned, namely, the omission to make a *sortie*, unless, indeed, this court can upon its oath say, in the spirit of the order, that such omission to make a *sortie tended in some way to occasion a failure*. But when it is obvious from the testimony upon your table a *sortie* would have been attended with no possible benefit to the service, and that it might, on the contrary, have contributed to disperse the enemy, whilst the denounced act of omission was followed by irrefragable evidence that the enemy were subdued and sued for peace, I cannot but anticipate the expression of an opinion by this court approving my conduct, and awarding to my accuser the marked rebuke which his numerous vindictive accusations in his several letters and orders upon the subject so loudly call for. It is obvious, from the labored and long-continued efforts of General Scott to distort the facts connected with my measures on the Withlacoochee, that he must have felt convinced that nothing short of my conviction of some great error or misconduct could save him from inevitable disgrace. Hence it was that, after making use of the most glaring and clumsy pretexts to get up the starving-scheme of the 1st and 4th of March, and then his rescue-scheme of the 9th of March—after exhausting his powers in vain to prevent General Clinch from furnishing me with supplies, the *sortie-scheme* was devised and put forth with a *zeal* and a *perseverance* which, if properly applied to preparatory measures and movements against the enemy during the month of February and first five days of March, would probably have contributed to enable that officer to relieve me, and appropriate to himself the honors of subduing the enemy, and forcing them, as I did, to sue for peace.

Had General Scott arrived at Camp Izard at 9 o'clock on the night of the 5th of March, attended only by his staff or a corporal's guard, and an hour after his arrival the *black herald* of the enemy had announced to him, as in point of fact he did to me, that the *Indians did not want to fight any more, and desired to come in on the next morning and shake hands and make peace*; and had their chiefs the next morning approached the camp with a white flag and stated to General Scott, as they did to me, that they were tired of fighting, and having had many of their warriors killed and others disabled by wounds, and therefore wished to make peace and fight no more—can this honorable court doubt but that General Scott's *modesty* would have yielded to such an appeal? Can it be doubted that General Scott would, in so trying an emergency, have argued himself into the conclusion that *his* arrival in camp had electrified the savage foe and induced them to sue to *him* for peace? Extravagant as such a conclusion would certainly have been under all the circumstances of the case, it would have been viewed by me as a very trivial fault compared with the atrocious fraud and perfidy practiced by that officer upon his government and country, the army and myself, and, though last not least in point of atrocity, upon the deceived and miserable Indians: first, by a false and malicious statement in his letter to the adjutant general of the 14th of March, [see page 405;] and, secondly, disregarding my arrangements with the Indians, and vainly attempting to get up an exterminating war against them.

THE STARVING-LETTER OF MARCH 1, 1836.

*General Scott to General Clinch, (Doc. No. 60), dated*

"PICOLATA, March-1, 1836.

"By the arrival, at daylight this morning, of the express from Fort Drane, I have your note of yesterday's date, accompanied by a letter to you from Major General Gaines, dated the day before.

"I regret, in every point of view, the premature and unauthorized movement from Tampa Bay, made by that general, and the very awkward and responsible position he has placed himself in by his subsequent march from Fort King. I presume that, as instructed, you sent him my Order No. 4, dated the 26th ultimo. By that he saw that if the troops he brought with him from Tampa Bay could not be subsisted at Fort King by means of supplies derived from this place through the Ocklawaha, it was expressly commanded that the column should march to Volusia without delay, where subsistence in abundance would be immediately provided. But he had, before that order reached him, taken from Fort Drane a large part of the subsistence relied upon for a more systematic course of operations, and *decamped*. The order, however, I take it for granted, was sent after him, and in time to reach him within twenty miles of Fort King. In any event, the responsibility of his movements and actual position is his own, for he must have known, as early as the 10th ultimo, if not before, that I had been charged with the general direction of the war in Florida, and that, by interfering, he constituted himself an *interloper*.

"Even if you had sufficient stores on hand and means of transportation, I should, under the circumstances, command you to send no subsistence to him, unless to prevent starvation; but you have neither. Let him, therefore, in time, extricate himself from the embarrassment he has placed himself in by marching upon Volusia,\* where I have no reason to doubt that 20,000 rations, sent hence on the 27th ultimo, have safely arrived. As he appears to have a retreat open to him, or is in no peril to prevent his taking that step, you, of course, will make no detachment or movement to join him.†

"The train you have ordered hither is expected to-night; as yet, we have here but few wagons to add to your numbers. The whole train shall be immediately loaded with subsistence and sent back to Fort Drane. I have only time to say that should the troops under Major General Gaines be compelled to march back to Fort King or to Fort Drane, instead of proceeding to Volusia, as heretofore commanded, and as I still wish that they should do, on account of the extreme difficulty of sending subsistence to your neighborhood, you will only issue rations to them for their current subsistence, and not for further false expeditions.

"As the first consequence of the arrival of the troops from Tampa Bay to Fort King, and the demand made upon Fort Drane for subsistence, I was obliged to order back a battalion of Georgia volunteers that had then been nearly two days in route to join you.

"The company of mounted men from the same State, now on the opposite side of the river, refuse to

\* This move would give the Indians the uninterrupted control of the frontier of Middle Florida.

† Supplies could not be sent to me without the detachment or movement here forbidden.

be mustered into service, and refuse\* to come under the rules and articles of war. The other companies of the same battalion may follow their example; if they do, I shall lose no time in ordering the whole back to their homes.†

"Major Gates, with his three companies, has not arrived, and I have no intelligence respecting the United States dragoons of a recent date. Finally, the horses for some days expected for Savannah have not arrived. These embarrassments may detain me here I know not how long.

"The left wing is moving upon Volusia with system and success. The South Carolina foot constitutes the advance, and I suppose the mounted regiment from the same State is now crossing the St. John's at Jacksonville.

"Send another copy of my Order No. 4 to Major General Gaines, and a copy of Order No. 1, which is enclosed for the purpose. The former is reiterated so far as respects the march to Volusia, if this be practicable; and enclose him a certified copy of this letter for his government and your justification.

"I remain, in haste, your obedient servant,

"WINFIELD SCOTT.

"P. S.—I am instructed by Major General Scott to say that the quartermaster's return did not accompany your letter of the 27th ultimo. No return has been received of your ordnance or ordnance stores, particularly the fixed ammunition for muskets. Please to send one.

"Respectfully,

"A. VAN BUREN, *Aide-de-camp*."

#### THE STARVING-LETTER OF MARCH 4, 1836.

*General Scott to General Clinch, (Doc. No. 69,) dated*

"PICOLATA, *March 4, 1836.*

"I still presume that Major General Gaines will be obliged to fall back to Fort Drane, which increases my anxiety to send the wagons (with some additions) loaded. I would prefer much that the force brought with him was back at Tampa Bay, or rather that it had not marched from that place; *provided* that the movement fails to crush the enemy or to terminate the war. *The worst result, next to the loss of that fine body of men, or a third of it, would be mere success in driving the enemy into the lower country, where I suppose it would be almost impossible for us to follow—I mean below the waters of Charlotte harbor. Hence my indignation* that an isolated attack should have been made from your vicinity well calculated to produce that result, and at a time when you knew, and Major General Gaines must have known, through you, (and before,) that my plan, with ample means, was to move simultaneously upon the Withlacoochee in three columns from Tampa Bay, the upper crossing on the Ocklawaha and Fort Drane, so as to make it impossible for the enemy to escape to the lower country.

"I have not yet supposed that Major General Gaines has not his retreat upon Fort Drane or King perfectly in his power. On account of subsistence, if he can cut his way through the enemy to Tampa Bay, I should much prefer that his force should be there; and when I wished him to march or send that force to Volusia, it was because it could be infinitely more easily subsisted there than at Fort Drane. Should he, however, be in any difficulty in operating a retreat from the Withlacoochee, I certainly wish you to afford any succors that the slender means within your reach may allow; and this, doubtless, you would render without any special permission to that effect. If the force return to Fort Drane or King, it must be sustained for at least five or six days from the means derived from this place; and hence I *now* prefer that it should become a part of the right wing rather than take that quantity of subsistence from you, and march back to Tampa Bay."

*General Scott to the Adjutant General, (Doc. No. 68,) dated*

"PICOLATA, *March 6, 1836.*

"I at length know that the South Carolina mounted regiment reached Jacksonville yesterday. It is destined to make part of the left wing.

"Besides, Brigadier General Eustis has necessarily been compelled to wait for the South Carolina mounted regiment, which cannot reach St. Augustine before the day after to-morrow, and Volusia before the 12th.

"If the column under Major General Gaines had fallen back upon Fort Drane or King, the right wing would have wanted nothing but subsistence, and the forces now in this vicinity, and known to be coming up, to act with vigor and effect.

"To add to my numerous vexations, the wagons reported to have been shipped at Baltimore in the Arctic have been left behind.

"I send no more troops for the present to Fort Drane, on account of the difficulty of subsisting them there. *If Major General Gaines shall not fall back on that point, it will be indispensable to wait for Captain Wharton.*"

*Aide-de-camp Van Buren to the Adjutant General, (Doc. No. 97,) dated*

"FORT DRANE, *March 25, 1836.*

"Captain Wharton, with his detachment of dragoons, reached this the day before yesterday."

◊ And yet, whilst the troops near him are refusing to serve, he is giving orders for the troops in the field to be starved!  
E. P. G.

† This is protecting the frontier with a vengeance!

## GENERAL SCOTT'S RESCUE-LETTER, MARCH 9, 1836

*General Scott to the Adjutant General, (Doc. No. 71,) dated*

"BETWEEN PICOLATA AND GAREY'S FERRY, *March 9, 1836.*

I have just set out for Fort Drane, *via* Garey's Ferry, on Black creek, with two companies of regulars, and intending to take with me from the latter place the small battalion of mounted Georgians (heretofore mentioned) under the command of Major Douglass. Lieutenant Colonel Bankhead is at the head of the first detachment, and the two together may make a total of about 240; but even this small force may be important to rescue Major General Gaines.

"I had not received the slightest information of the operations on the Withlacoochee (official or otherwise) of a later date than the 29th ultimo, up to this morning, and had concluded that he had effected his march, with more or less success against the enemy, upon Tampa Bay, when, at daylight, the steamer that I am now in arrived and brought the rumor, which is confirmed by the two accompanying notes from Paymaster Lytle, received about six hours afterwards. On the reception of the rumor, I immediately commenced preparations for this movement; but being delayed by the necessity of unloading and reloading the boat, I am now at anchor at the mouth of Black creek. I hope to put the troops in march from Garey's Ferry early in the day to-morrow, and to reach Fort Drane with a small escort the day following. It is possible that even these little detachments of horse and foot may reach the Withlacoochee in time to render a valuable service.

"I am aware that the movement I am making may be condemned, if regarded in any other light than a *rescue*, as premature. Colonel Goodwyn's mounted regiment only arrived at St. Augustine last night and this morning, and consequently the left wing cannot be in force on or up the Ocklawaha, in the direction of Pelaklikaha, earlier than the 17th, or with the enemy before the 20th instant. Colonel Lindsay, who may have already arrived at *Tampa Bay*, cannot operate more than two days' march from that place, from the want of the means of transportation,\* Major General Gaines having taken away the horses which were there, and the basis of the right wing is merged in the force brought by that general into the field, and must participate in his success or failure. If it falls back with him upon Fort Drane it must suffer great loss, and if it follow him to Tampa Bay it will be wholly out of position.

"In this, and even a greater state of uncertainty I have been held since the 26th ultimo. The day after I ordered back Major Cooper's battalion of Georgia foot, to prevent starvation at Fort Drane; and though daily, from that time, in the expectation of receiving from Savannah horses and serviceable wagons, not one has arrived. The quantity of subsistence that will be at Fort Drane (say) to-morrow, will only be that sent from Picolata on the 6th instant, viz: 17,497 rations of bread and flour, 11,000 rations of pork, (with beef and cattle in the neighborhood,) 80,000 rations of beans, some coffee, vinegar, &c. And the troops now about to proceed, perhaps as far as the Withlacoochee, will not have the means of taking with them rations for more than six days.

"I beg leave to recapitulate the causes of my great deficiency in the means of transportation:

"1. The wagons and horses, which I knew Brigadier General Clinch to possess early in February, have been more broken down by hard service and bad roads than I had expected to find them.

"2. I had, upon what was considered in Georgia, and even in Picolata, the best information, confidently relied upon the use of the Ocklawaha as late as the 2d instant.

"3. No bacon has arrived, and the difference between it and pork, including wood and brine, is fifty per centum against the latter.†

"4. The wagons purchased at Charleston, and Augusta, by Assistant Quartermasters L'Engle and Peyton, are generally poor, and many of them unserviceable.

"5. The six or ten wagons actually reported to have been shipped at Baltimore in, I think, the Arctic, with Major Gates, were all left behind.

"6. Of the 19,000‡ rations known to be at Fort Drane about the 25th ultimo, nearly the whole have been drawn by a force not expected by the government or myself to appear in that quarter.

"And 7. Not a horse for the baggage train left by me at Savannah, or which I have since ordered to be purchased by Assistant Quartermaster Dimmock, has arrived in Florida.

"On the 21st ultimo, when I was but twenty hours from Savannah, I sent back by a steamer that was met an order to Lieutenant Dimmock to ship about 40 horses for the baggage train to Picolata. This order was strongly reiterated by a return steamer five days afterwards; and again, on the 2d instant, by another boat, he was instructed to send immediately, and by the speediest conveyance, 70 horses for the train, and 6 four-horse wagons. I had this morning a report from him, saying, after he had received my first and second orders, that he had sent all the horses wanted for draughts and packs by land, except a few which were to come as packs with Captain Wharton. Now, as the latter was about twenty-four days in New York, after receiving orders for Florida, and expected to remain ten in Savannah, he cannot be looked for in this neighborhood before the 18th or 20th instant. The other parts of the lot were, it seems, given as packs to the tenth company of South Carolina mounted men, and sent forward in a drove. They must, it is feared, arrive in a state unfit for the baggage train (say) about the 6th instant. Such has been the failure of human agents. The weather has been equally adverse.

"If the force on the Withlacoochee should fall back on Fort Drane, it will be seen from the foregoing that a part, at least, must probably march upon Volusia or Garey's Ferry, to be within reach of subsistence. Instructions have been left behind me to send forward rations, should the means of transportation arrive in time, and the troops already in the neighborhood of Picolata—Major Cooper's and the remaining company of Major Gates's battalion. I have also desired Brigadier General Eustis, in the same event, to order to Fort Drane two companies of mounted men of Colonel Goodwyn's regiment, and a fourth order will go back in this boat to Lieutenant Dimmock on the subject of horses and wagons.

\* See the testimony of Lieutenant Morris, by which it will be found that Colonel Lindsay found near *ten times* as much transportation at Tampa Bay as that which General Gaines found there.

E. P. G.

† This statement is untrue. Pork and flour is a safer and more portable subsistence for a march in the wilderness than bacon and hard bread.

E. P. G.

‡ I took less than 12,000 complete rations.

E. P. G.

"Some rifles and the tents arrived this morning at Picolata; but Colonel Goodwyn had marched through six or eight storms without cover, and now all companies in march are to be reduced to three tents each."

"P. S.—Please to remark that, in his letter to Brigadier General Clinch, dated at New Orleans, the 2d ultimo, Major General Gaines speaks of 'an efficient co-operation;' promises to be 'in readiness at Tampa Bay by the 8th\* of the present month, to form a junction at or near that place with the force under your command, whenever, and as soon as, in your judgment, your force shall be sufficient to justify the movement;' and concludes by saying, 'a sufficient quantity of ammunition and provisions have been transported to Fort Brooke to divide with you until further supplies are received;' yet he did not wait until the brigadier gave notice that he was 'in force;' came to Fort King, and swept nearly the whole of the subsistence† collected at Fort Drane. A copy of that letter is in your office, and I now enclose one from Governor Eaton, from which it will appear that Major General Gaines knew, at Tampa Bay, about the 14th ultimo, that I had been charged with the direction of this war. He first heard this at Pensacola, and received Governor Eaton's despatch at Tampa, as I can establish. Hence his haste, and neglect of the assurance given to Brigadier General Clinch;‡ his isolated attack," &c.

PAYMASTER LYTTLE'S LETTERS OF THE 5TH AND 8TH MARCH, 1836.

*Paymaster Lytle to General Scott, (Doc. No. 72,) dated*

"FORT DRANE, March 5, 1836.

"I have been directed by General Clinch to inform you that your communications of yesterday's date reached him at this post after he had mounted his horse, and was on the move, with the forces under his command, to escort supplies to General Gaines. He directed me likewise to say to you that the distance from this post to Garey's (or Black creek) is about the same as the distance from here to Picolata. As you wish, however, to obtain all the information possible on the subject, I will take the liberty of adding, from my own knowledge, that the road from Garey's to this place is *sandy*, consequently, almost invariably dry; while the road from Picolata here is muddy after heavy rains, particularly such as we have just experienced.

"Colonel Gadsden arrived here from Tallahassee on the 4th, (yesterday,) and accompanied General Clinch this morning to the Withlacoochee."

*From the same to the same, (Doc. No. 72,) dated*

"FORT DRANE, March 8, 1836.

"By direction of General Clinch I opened your communication of the 6th instant, which arrived late last night, in advance of the wagons. You will perceive, by my letter of the 5th, that General Clinch, with all the forces at this post, and 100 mounted men from the vicinity, had left for Withlacoochee, to escort a small supply of cattle, ammunition, &c., to General Gaines, having received, the night before, a third address from that officer. No word has been received from either of these generals since the 5th. When General Clinch left here, he expected to be back on the 9th.

"The probability is, that the wagons will return without an escort, there being at present no troops here; and, should General Clinch get back before the wagons depart, his men may be too much fatigued to march again immediately; but this, of course, is merely conjecture. I am satisfied, however, that General Clinch would advise that an escort accompany the wagons back to this place when reloaded. Captain Graham being directed by General Clinch to send back the wagons for supplies after their arrival here, will send them to Garey's, it being the best road.

"N. B.—The amount of General Gaines's last express to General Clinch, dated 3d instant, was merely copies of his previous letters, with a note stating that the Indians were still around them; but little or no fighting had taken place since his last communication."

GENERAL SCOTT'S SORTIE-LETTER OF MARCH 14, 1836.

*General Scott to the Adjutant General, (Doc. No. 77,) dated*

"FORT DRANE, March 14, 1836.

"On my arrival here, I found that the force which had been upon the Withlacoochee had fallen back on this vicinity.

"Brigadier General Clinch with some means of subsistence, and about 600 men, (of whom 150 were mounted Floridians,) joined Major General Gaines on the 6th instant. The force under the latter had already been reduced to the necessity of commencing on horses and dogs for their subsistence. After receiving that timely and important succor, the army remained in position until the 10th.

"It may be remarked that, from the time of entrance into the intrenched camp, up to the retreat in this direction, not a sortie was attempted; and that, to save the pride of the higher officer, the command was relinquished to the next in rank, in order that he might give the order to retreat.‡

\* I entered Tampa Bay on the 9th of February, 1836.

E. P. G.

† The subsistence belonged to my own department.

E. P. G.

‡ To co-operate efficiently is to search for the enemy, and also to search for the force with whom we propose a co-operation. I did both. General Scott ought to have done the same.

E. P. G.

§ See the testimony of Captain Hitchcock, General Smith, Colonel Twiggs, and Captain McCall, proving this to be false.

E. P. G.

"A copy of Major General Gaines's order, yielding the immediate command of their joint forces to Brigadier General Clinch, is enclosed. This extraordinary paper I have but little time to comment upon. The poor sneer against me, as the *diplomatic agent of the War Department*, is in character with all his recent acts, for, at the moment of the succor on the 6th, he had already opened a negotiation with the enemy,\* in which, it is said, on good authority, that he was willing to leave them in the quiet possession of the country below the Withlacoochee until the arrival of the 'diplomatic agent;' but in which Powell insisted that that river should be the perpetual boundary between us and the Seminoles. But for Brigadier General Clinch, I have no doubt that some treaty on the one or the other basis would have been formed between the parties;\* he alleged the positive instructions of the War Department against all negotiations, and he enabled Major General Gaines to save the original force with him. Not a sortie was made from the intrenched camp from the time of its formation up to the retreat; and on the approach of the succor a large detachment of the enemy had taken a position to intercept the retreat in this direction.\* How, under such circumstances, it can be alleged that the enemy has been beaten, it would be difficult to reconcile with facts.

"I have reason to hope that the enemy remain nearly in the same position as before the isolated and therefore false movement of Major General Gaines. This is fortunate.

"I have instructed Brigadier General Eustis, after scouring the country through which he will have to pass to some extent, to place his column in position somewhere in the neighborhood of Pelaklikaha about the 25th instant. Colonel Lindsay by the same day is to be with his force at Chickuchatty, (about two marches from Tampa,) and means are suggested to each in order to multiply the chances of communicating with each other.

"The right wing will move hence, say on the 24th instant, to attack in front. This column will pass the Withlacoochee about half a mile below the late intrenched camp, where there is a good ford, and of which Major General Gaines might have availed himself if he had had the strength or inclination."†

Mr. President, let us look into the subject of *sorties* or *sallies*, and see what objects are usually attained or sought for in making them. The first is to force the enemy to abandon the siege, or otherwise to beat them; secondly, to retard and embarrass their approaches by driving their guards and working parties from their trenches, in order, if practicable, to prevent or otherwise to delay the completion of their trenches, and thus to prevent or put off as long as possible the apprehended evil hour of a breach or an assault. I was particularly desirous to abstain from forcing the enemy to abandon their supposed siege, as will appear from my letter of the 29th of February, lest I should disperse the enemy; and I am sure nothing could have been more gratifying to me, and to every officer and soldier with me, volunteer and regular, than for the enemy to have opened trenches and attempted a breach or an assault. Whilst I abstained from a sortie, every Indian that approached in view of my breastwork did it at his peril; whereas by making a sortie the Indians could escape to their ambuscades in the thick hammock in two or three minutes' time. Under these circumstances, nothing short of the extreme of folly or a disposition to trifle with the most important duties of the service could have prompted me to make a general sortie without an object—such as the arrival of troops or expresses, as Colonel Lindsay's brigade from Tampa Bay, or that of General Scott or General Clinch, or other troops from Fort Drane or King—until I should have it in my power, by the aid of mounted men with supplies, to continue the sortie or sally for some days in succession, until I should have had it in my power to scour the Withlacoochee swamps, and give a good account of the place called *The Cove*. To speak seriously of any other description of *sorties* or *sallies* in an Indian war is to me something worse than absurd. It will be seen by the testimony of several officers with me, including my staff, that orders were given for the troops to be held in readiness for a sortie on the happening of any contingency, such as those just now alluded to, to justify the measure. Small parties of from 50 to 120 woodsmen and sharpshooters were often permitted to look after the enemy for a short distance up and down the river. It is in proof before this court that a party of this description, composed of the companies of Captain Burt and Captain Thistle, consisting of volunteers and regulars, was out some 200 to 400 yards from camp during the action of the 29th of February, and were engaged in action with a large party of Indians (from 350 to 400, as Captain Thistle believes,) on the opposite of the river. The conflict continued across the river, with some short intervals, for about two hours. Captain Kerr, Lieutenant Grayson, and other officers of volunteers and regulars, were frequently out and employed in firing at the enemy across the river.

But, since the court has been pleased so far to tolerate General Scott's accusations in reference to a sortie as to make it the subject of special interrogatories to several of the witnesses, I have been disposed so far from attempting to throw any impediment in the way of a full and free inquiry into all the bearings and probable tendencies of sorties or sallies, to extend the inquiry still further than my position at Camp Izard, as will be seen by my interrogatories to General Smith, the accomplished commander of the Louisiana volunteers, to Captain Drane, a most efficient and experienced officer, and Lieutenant Mitchell, a young officer of great promise, with their answers. By the testimony of these very respectable witnesses, called before this court by my accuser, it will be seen how far General Scott himself carried out, in *honest matter-of-fact practice*, the theories with which he had been attempting to edify the War Department and the newspaper press of our country upon the subject of sorties.

Mr. President, the testimony of the witnesses last mentioned proves clearly that General Scott's practice was not in accordance with his theories. Sir, that officer, with over 2,000 men, as gallant troops as either of us ever commanded, and an outfit sufficient for at least fifteen days' good service, hurried across the Withlacoochee and thence to Tampa Bay without devoting more than one day to what any officer acquainted with his duty would have deemed the great and leading object of the campaign, namely, an examination of the *Big Cove swamp*. Captain Drane testifies that that swamp, from 15 to 20 miles in width, was penetrated by a part of the force under General Scott but two and a half miles! General Smith estimates the distance at four and a half miles. My accuser, who had written so eloquently to nullify every measure of mine at the Withlacoochee, and to prove that the Indians could not have been beaten without a sortie, and that they could not be sincere in suing for peace without a sortie—this same general devoted but one day to the great duty of "*searching for the Indians*" where he could have had any reasonable ground to calculate on "*finding them*." He could not find them because he would not take time to search for them in the Cove swamp, where, it is in proof upon your record, they have been residing,

\* See the testimony of Captain Hitchcock, General Smith, Colonel Twiggs, and Captain McCall, proving this to be false.

E. P. G.

† The "good ford" was not fordable when found in March, 1836.

E. P. G.

with their families, for the most part of the time since the 6th of March, the day on which they sued for peace. The Big Cove swamp, 15 to 20 miles in width, and near 60 miles in circumference, was penetrated along a large path (exhibiting evidence of recent footsteps of the Indians, adults and children) but four and a half miles. The dismal aspect of that swamp probably contributed to give to my accuser the first really impressive lesson he had ever received upon the intrinsic difficulties attending an Indian war in Florida. The testimony is silent upon the subject of what he wrote or what he said or thought at that swamp in reference to the propriety of making sorties. It is probable, however, that he said nothing upon the subject, as it is proven by Lieutenant Mitchell that arrangements were made to establish a post near the swamp, which was left under the command of Major Cooper, with a battalion of volunteers, whereupon the general, with the residue of the right wing of his grand army, marched forthwith to Fort Brooke, Tampa Bay, as the witness believes, in order to obtain a supply of subsistence. "Hard bread and bacon," it would seem, and not sorties or Indian warriors, then occupied the thoughts of the new commander. My accuser, on his arrival at the Big Cove swamp, found himself in a dilemma. My simple plan of operations, communicated to General Clinch, and by him to my accuser, General Scott, was condemned by the last-mentioned general, who, on his arrival near the Big Cove swamp, found that he would be compelled to act in accordance with my plan, or to act not at all. My plan, the court will recollect, was "to search for the enemy until we should find them, and then beat them, or they would beat us."

The new general could not reconcile it to his views of propriety, after saying all manner of evil things against me, to condescend to search for the enemy, as my plan had suggested. The Big Swamp was accordingly left without being disturbed by "a sortie," "a sally," "a drive," or "a drag." This rough work could not have been accomplished without some considerable labor and difficulty; whereas but very little was necessary for General Scott to write a letter or two, asserting that the Indians were not in that swamp—that 500 warriors had not been within any space of ten miles square since the commencement of the war; and that they had been frightened off to the Everglades by the accounts which, after they had sued for peace, I authorized Captain Hitchcock, my acting inspector general, to give them of the great forces expected soon to be in the country against them. It was easier, while reclining in the shade of a Florida ever-green magnolia, to make these random assertions, (whether true or false is for the court to decide,) than to devote a few days' time, with the consequent labor and privation of food and rest that must have attended a vigorous search throughout the swamp, than by such a search to give a practical illustration of the theory of *sorties* or *sallies*, so adroitly discussed by my accuser in his sortie-letter of the 14th of March, and other productions of equal candor; but one of which remains to be noticed by me. I allude to the notorious *sortie* "Order No. —," of 1836, based upon a nefarious scheme got up by my accuser in order to enable him to divert public attention from himself, by striking at me over the shoulders of Major Gates, and thus to keep up the hue and cry of *sortie! sortie!* Upon the same principle that a *pickpocket*, when amidst the crowd he filches from an unguarded stranger his purse, immediately raises the cry of *stop thief! stop thief!* and thus diverts public attention from himself, the actual offender.

I am aware, Mr. President, how exceedingly improper this view of the subject would be, if it had not truth and reason to sustain it. The evidence is before you. It is for me to perform the disgusting duty of applying the testimony, furnished by my accuser himself, to enable you to do justice to him. It is for me to vindicate my own conduct, and in doing so to correct the vagrant and profligate pretensions of a great public offender.

In desiring your attention to the order in the case of Major Gates, I take leave to precede my remarks by a paper, which is a copy of the rough draught of a letter which I prepared on the 20th of July last, the morning after receiving the order in question. This paper contains my views at that time. My views remain unchanged. After writing the letter, however, I determined, on reflection, that I would not send it until time and opportunity should be given to enable the Secretary himself to correct, unsolicited by me, an irregularity which I was willing to attribute to the haste and hurry of business which I was aware had often, in the War Department, led honorable men into error and apparent irregularity, at or near the close of a long and arduous session of Congress. I therefore retained my letter to the President until the receipt of "Order No. 65" apprised me of the propriety of submitting it through this honorable court.—(See Document No. 45, page 445.)

I have said that *I could not, without the palpable violation of a fundamental principle of military law, abandon the expedition until I should meet with the officer authorized to relieve or succeed me, unless expressly required by the President of the United States so to do, or the receipt of his orders to that effect.*

Where, I may be asked by those who know no law but that which their own prejudices and passions enact, where is this great fundamental principle of military law to be found? I answer, that it is incorporated in the Constitution and laws of the United States, and in the constitution and laws of all the sovereign States of this great and growing confederacy. It will be found inscribed upon the *heart*, and seen in the *mind's eye* of every free white man of the American Union, who feels and who knows how to appreciate his equal share of that sovereignty which gives him the inestimable right of self-government, with the inseparable, the kindred right of self-defence.

We learn from *our federal*, as well as from our State constitutions, that the primary object of the people in the adoption of each was to provide for "the common defence" and "general welfare," to suppress *insurrection* and *repel invasion*, and thus to afford *protection* to the defenceless; to keep the peace. For this purpose the President of the United States is expressly authorized to *command* the national forces, land and naval; and the governors of States are in like manner authorized to *command* the forces of their States respectively. The President has a full and perfect right not only to command throughout every part of the United States and their Territories, from the Atlantic to the Pacific, but also upon the high seas throughout the world, wherever any part of the land or naval forces may be, on duty or otherwise.

My command extended to every section of the western department wherever any part of the forces assigned to me happened to be, and more especially to the whole of the southern and western frontier. Authority is given to Congress to *declare war*, and support an army, to serve under the authority of the President; and being myself honored with a high commission in that army, and ordered by the President to *command* the western department, my right to employ the forces placed under me against a known savage foe at war with the frontier citizens and troops of my department, to "*repel invasion*," was as full and perfect a right as the President and the Congress of the United States could give me. He had ordered me to *command* the western department. This was sufficient to authorize me, on the sudden approach of war, to go whithersoever I deemed necessary to protect the people of that department "against their enemies and opposers whomsoever," as my official oath required me to do; and to see *where*

and how I could do the enemy the greatest harm, and my country the greatest good, with the means at my disposal, keeping myself always within the pale of our institutions and of the laws of war.

From my letter to the adjutant general, dated at New Orleans, January 15, 1836, it will be seen that I there suggest the propriety of immediate measures for the arrest or destruction of the enemy before the dry weather of winter should pass away and the rains of spring and summer cover the swamps and flats with water; and for this purpose I suggest the propriety of ordering the 6th, with parts of the 1st and 7th regiments of infantry, and urged the employment of an army of not less than *four thousand men*, to be aided by a strong naval force.

By a letter from General Scott to the adjutant general, dated at Augusta, Georgia, January 31, 1836, it will be seen that that officer urges the propriety of an army of five thousand men, aided by a naval force, being employed against the enemy.

In my letter to General Clinch, dated at New Orleans, the 2d February, 1836, a copy of which was forwarded to the adjutant general, I announce my intention to embark on the following day on board certain steamboats with a regiment of Louisiana volunteers, and some companies of the 4th United States infantry, for Tampa Bay, making an *irrevocable pledge* to co-operate with General Clinch in bringing the war to a speedy close. In a letter from General Scott to the adjutant general, written on the — of February, that officer expresses a hope that the 4th infantry will be ordered from New Orleans to Tampa Bay. And in a letter written on the 2d of February, also to the adjutant general, General Scott mentions the receipt of a report that Colonel Twiggs had embarked with a volunteer and regular force at New Orleans for Tampa Bay, and expresses a hope that this force will enable Colonel Lindsay to act *independently* in a direction from Tampa Bay towards Fort King, on precisely the same route upon which my movement was made between the 13th and the 22d of February.

Mr. President, it will be seen, by an inspection of these four letters, that they were written by myself and General Scott, without either of us having any knowledge of the views of the other, and that our views and wishes accorded in our letters, written near about the same time, whilst six or eight hundred miles apart, were, for the most part, in strict accordance, so far at least as regarded the forces from New Orleans and the movement from Tampa Bay to Fort King, and variant only in this: that my estimate of the requisite force to terminate the war was four thousand men, whilst that of General Scott was five thousand men; and my plan was to co-operate with General Clinch, or the officer commanding in East Florida; to search for the enemy until I should find them, and then, if possible, subdue them, and thus protect the frontier inhabitants; whereas General Scott's plan was to surround and pen up the enemy near the frontier; a plan which I could not approve, because it was wholly impracticable without an army of ten thousand men, principally mounted; and, even with that force, the Indians could not be hemmed in upon the frontier of Florida, without endangering the lives of most of the remaining inhabitants, for whose protection our troops were employed as a primary duty. It was not my purpose, however, to interfere with General Scott's plan of operations. I intended simply to command, as appeared to me proper, until I should meet with that officer, and then co-operate with him, or, if he preferred it, turn over the troops with me, according to the notification received by me at Pensacola from the adjutant general of the army. Nothing, therefore, appeared to disturb the harmony in which that officer was approaching the theatre of active operations, until he learned that I was at the head of the forces from the west. The patriot spirit of harmonious co-operation seems then all at once to have abandoned that general, leaving him a prey to the furies of anarchy and discord. He immediately reports his plans thwarted by my movement, notwithstanding he had so recently expressed his satisfaction at the prospect of a similar movement on the part of another officer. He immediately set about a scheme to arrest the movement of the supplies ordered for my department, *before he had anything to do with the affairs of the war in East Florida*.

Lest I should be deemed unjust to the general, I will, in due time, employ his own words to explain his object in arresting and withholding from me the subsistence destined for my command.

Mr. President, I have passed in review a point in my vindication fraught with intense interest not merely to myself and my faithful officers and men, but to you and to every member of the army confided to your command, and more especially to every citizen soldier throughout America, whose duty it is, and in all future time will be, to enjoy the inestimable right of participating in the national defence; a point upon which you are solemnly bound to state facts as you find them established by evidence, and to give an opinion which cannot but contribute, as far as you have power, to relieve the army and the republic of a high military offender, who, in the hope of inflicting a wound on the reputation of his senior, and supposed rival, had the childish audacity to withhold, not only from that senior but from the patriotic troops who accompanied and nobly sustained him in action at the Withlacoochee, *public supplies* essential to their existence, supplies ordered to be conveyed to the troops of my department before that officer was ordered thither; and he had the hardihood, also, to direct General Clinch not to afford me any of the supplies which I had required from him at Fort Drane, a post within the limits of my department, and which General Scott had not seen fit to approach nearer than Picolata, a distance of sixty miles within the settlement near St. Augustine, and from ninety to a hundred miles from the theatre of the war, intending thereby not to sustain me himself, and, as far as he possibly could, to prevent the troops of my own department from sustaining me in the position which I had taken against the enemy at the Withlacoochee, but by cutting off my necessary supplies, *to starve my troops out of that position!* a position which I could not abandon without suffering the principal force of the enemy (which I there held in check) to fall upon hundreds of helpless families—evils which must have followed, had not the chivalry of my troops triumphed over the enemy and forced him to sue for peace. In doing so, they achieved at once a triple victory—a victory over their wants of regular supplies, a victory over the savage foe, and a victory over the atrocious machinations of the second United States general officer who has ever dared to aid and assist the open enemy of the republic in their operations against United States forces employed in the protection of the frontier people. The first great offender was Major General Benedict Arnold; the second, as your finding must show, is Major General Winfield Scott.

*Question by General Gaines to Colonel Twiggs.* Colonel Twiggs is requested to state what he knows on the subject of making a sortie at or from Camp Izard, in February and March, 1836?

*Answer.* I received an order on the 29th of February, after the Indians had retired from making an attack on us, to hold the command in readiness for a sortie. After the 29th, in a conversation with General Gaines, I think he stated to me he had written to the officer in command at Fort Drane, and he expected him down with some mounted troops; that, as soon as they made their appearance, the command was to leave the breastwork to attack the Indians. I think he stated to me that he had so written, that

he would not make the sortie until the troops should come down. I had frequent conversations with the general on this subject: and he stated to me his views, that we could do no good by going out; that the Indians would fly before us, and that as soon as any troops made their appearance we should go out and attack the Indians. It was expected that troops would arrive from Tampa Bay on the opposite side of the river. This was before the 5th of March.

*“Question by the court. What is your own opinion as to the propriety of making a sortie from Camp Izard whilst invested by the enemy?”*

The witness begged leave to decline answering the question, and was excused by the court.

*“Question by General Gaines. Colonel Twiggs is desired to state whether or not it was his opinion, at any time between the 27th of February and 6th of March, that the enemy could have been subdued by making a sortie, or whether it would not have contributed only to disperse the Indians. And state whether the Indians could not have concealed themselves in a thick hammock at any moment, in three or four minutes time; and state whatever opinion he entertained on the subject at the time, and whether he communicated to General Gaines such opinion.”*

*“Answer to the first part of the question. From the 27th to the 28th, and including the 28th, the Indians were on the opposite side of the river, and we had not boats to cross the river. From the 29th of February to the 5th of March, we could, at any time the Indians made their appearance, have driven them, but we had not the means to follow them. I cannot say whether we should have dispersed them or not. As our camp fronted the river, there was an extensive hammock and scrub on the left. There was a hammock, also, on the right, both of them two or three hundred yards of the camp, or probably a shorter distance, and the Indians could have taken shelter in either of those hammocks in a few minutes. I never gave General Gaines, while at Camp Izard, any opinion as to the propriety of a sortie.”*

*“Question by General Gaines. Colonel Twiggs is requested to state whether any officers, and if any, who, of the light brigade, at Camp Izard, in February and March, 1836, expressed the opinion that a sortie ought to have been made.”*

*“Answer. Not one, while I was there, expressed such an opinion. I had, and, as far as I could learn from the opinion of the command generally, they also had entire confidence in General Gaines, and we were willing to submit to his judgment.”*

*“Question by General Gaines to General Smith. General Smith is requested to state his opinion as to the mode of fighting the Indians at Camp Izard, between the 28th of February and the 5th of March, 1836, inclusively, taking into consideration all the circumstances attending the service there, and particularly whether, in his opinion, a sortie would have been attended with advantages.”*

*“Answer. I believe that the only mode of fighting Indians is to wound or kill individual warriors, but that simply to attempt to disperse them would produce no great benefit. Therefore, if the Indians occupy a position which we desire to occupy ourselves, we must certainly attack and drive them; but, under other circumstances, whatever method offers the greatest facilities of wounding or killing them is the best method of fighting them. The position General Gaines occupied at Camp Izard, at the period mentioned, was one that he was desirous of maintaining, and I therefore think that he was likely to do more injury to the Indians in repulsing their advance on his position than he would do in quitting it to follow them through the woods. It is impossible for a soldier on foot, in that country, to overtake an Indian. The Indian could, at the first attack, withdraw himself from the fire, and the position of the hammocks in the neighborhood offered them a retreat, in which they could hide themselves immediately. I believe that, as in attacks on positions, fortified or not, the loss is always greater on the attacking party than in any other kind of combat; where the object is to destroy the life of the enemy, that species of combat offers more advantages than any other. The battle of New Orleans, the attack on Sandusky, and, in fact, all the attacks which were repelled during the last war, are evidences of this. On the 29th of February, when, I think, the largest body of the Indians appeared, I think it likely that fewer of our men would have suffered if we had made a sortie, but far fewer of the enemy would have fallen. The defences that were afterwards made of the camp were hardly then begun, and especially the whole interior of the camp was entirely exposed. General Gaines himself, who was sitting near the centre of the camp, received a wound in his mouth. I therefore think that, under all the circumstances, there was a greater injury inflicted on the enemy, as they approached the camp through the open ground around it, than if the troops had gone out and followed them through the woods. I would remark, however, that the whole of the troops were not in the camp—two companies of the Louisiana regiment were posted down on the river, and a part of them were drawn in afterwards to cover a part of the line.”*

*“Question by General Gaines to Colonel Twiggs. What was your opinion of the sincerity of the Indians in their proposition for peace, at Camp Izard, the 6th of March last; and please state what motive, if any, the Indians could have had for treachery; and, finally, have you heard any observations on the subject from Indian countrymen or other persons acquainted with the Indian character calculated to strengthen or destroy your opinion?”*

*“Answer. The first night (the night of the 5th) when the Indians came and hailed the camp, I did not believe them sincere, or that they had any intention of coming in at all. The next morning I went to General Gaines and told him, ‘Whenever you show me men coming from the moon, I will believe the Indians are coming in.’ Before we separated, some person standing near spoke and said, ‘Here the Indians come.’ In a short time, having halted some distance from the breastwork, one or two of them came forward with a white flag. One of the volunteer officers—I think, Adjutant Barrow—went out and met them. When I saw them conversing with Mr. Barrow I then changed my opinion, and believed they were in earnest. I have thought a good deal on the subject, and I could think of no motive for their being otherwise than sincere. I judged they were sincere from what I had seen of the upper part of the Creek nation on previous occasions. It was at the Hickory Ground, with General Jackson, I think in 1814, after the first Indian came in there I never heard of another act of hostility on the part of the nation towards the whites. The next occasion was on the Seminole campaign with General Jackson. I know that after the first Indian came in there was no act of hostility. I know this, for I was left in the country. I had a conversation with Colonel Dill, at Jacksonville, who has been a long time in that country. After detailing the circumstances to him as they happened at Fort Izard, he said he had not a doubt but that they were sincere in their wish for peace, so much so that he advised the people to go back again on the plantations on the road from Micanopy to Fort Drane.”*

*“Question by General Gaines to General Smith. What is the opinion of General Smith upon the motives of the Indians in seeking an interview and expressing a desire for peace at the Withlacoochee? And*

state how far the Indians manifested a desire for peace by their conduct previous to the hostile movement of the troops from Fort Drane the 26th of March, under the orders of General Scott.

"*Answer.* I think I feel assured that the Indians were perfectly sincere in seeking a peace. I do not know on what terms they may have wished it, but I believe they desired a peace. A great many reasons operate on my mind to produce this conviction. The first was, that on the night of the 29th, after the Indians had retired across the river, I heard some one—a peculiar voice, the tone of which I judged to be Powell's—making an address to his followers, apparently. The friendly Indians and their interpreter lay close by me. I called to them, through the interpreter, and desired the Indians to listen and try if they could catch any of the expressions. When the speech was done, the Indians said to me, through the interpreter, that it was an address of the chief, intended to encourage them; that he told them that no matter if they suffered on our side of the river, that when we attempted to cross they would have the advantage; and he suggested to me that it was apparent from that that a portion of the Indians were dissatisfied; that the Indians did not appear the next day, nor until the evening of the second day, when a few shots were fired out of one of the hammocks on the river, nor did there ever seem to be one-fourth of the number of Indians on our side of the river that appeared on the 29th. On the evening when the first offer to treat was made, a voice of a negro hailed the camp in English; he called out that the Indians were tired of fighting, and desired to come in and make friends. He was answered (by direction of General Gaines) that if the chiefs sent in a flag the next day it would be respected. They held a talk the next day with the officer sent by General Gaines, precisely as they were directed to do. From all these circumstances, it suggested itself to me that there was a large portion of the Indians who were averse to continuing the war, so large that the hostile party was obliged to conform to their desires; that they had nothing to gain under any view of the subject by delay; that they were then as well prepared to carry on the war, and better, than they would be at any subsequent period, whereas they must have expected that the whites would increase in force every day; that if the object was to gain time in order to escape, that they could always have done that, as they could always out-march us, and that, in fact, they did not make use of it for that purpose, for Primus, who was sent to them afterwards, must have found them in the upper part of the cove, or in the Wahoo swamp. From the time the Indians held a talk with General Gaines there was not the slightest hostile movement on their part, and our men were fishing and bathing in the river every day by hundreds while we stayed there; and as there was a thick swamp on the other side, in the vicinity where they were bathing, the Indians might at any moment have shot down two hundred men, with perfect security to themselves. We encamped about four or five miles from Fort Drane, between Fort Drane and the Withlacoochee, and small parties were constantly passing, and often single individuals, between the different encampments and Fort Drane, and were scattered over the whole woods for ten miles round, and I never heard of a sign of an Indian. The first that were heard of or met with after this period was on the evening of the day General Scott commenced his march to the Withlacoochee, when a wagoner belonging to the general's train, and who was left behind in the road, was shot by the Indians.\*

"*Question by the court to Captain Hitchcock.* Do you believe the Indians were sincere in proposing a truce?

"*Answer.* I believe they were perfectly sincere. I will remark, in reference to this question, that there was nothing in the manner or matter of the interview which I had with the Indians on the Withlacoochee to give me the smallest suspicion of their sincerity. There seemed to be a peculiar sadness over them, as if thoughtful of the misfortunes of their tribe, indicating that further hostility on their part was hopeless. I thought them sincere, and in that opinion all who were present entirely concurred with me, and I am the more inclined to continue in that belief from several considerations. Although wars among Indian tribes are sometimes of very long duration, it is seldom that active warlike movements among them continue for any great length of time. With tribes at war, there may be years of cessation of the war; and when a war-party, as it is called, is got up, with considerable formality, with a feast and wardance, and the party will make what they call a strike at the enemy—return from the expedition and celebrate their success, if successful, with the scalp-dance; but this kind of war cannot be carried on against the whites. To carry on war against the whites the Indians are compelled to embody themselves in large numbers, making it difficult for them to obtain supplies of ammunition, provisions, or clothing. In Florida the enemy had, I believe, been so embodied for some length of time; they had had, I believe, some special causes for the war which had in part been removed, especially by the conduct of Ocoala, near Fort King, and I believe his language to me in council, that 'he was satisfied,' had reference to that conduct. I have heard of other similar instances. The Indians had been successful in the destruction of Major Dade's command, and they had killed many more than they had lost. General Gaines having taken a position in their neighborhood which they had found it impossible to move, they must have seen that they could not in future have procured from above the supply of provisions, consisting of cattle, which they had before drawn from thence. The opinion among them that this position was likely to be permanently held was calculated to break down their spirits. I have never doubted that the Indians were informed of the movement of General Clinch from Fort Drane on the 5th of March. I believe that the Indians, in the knowledge of this, saw additional reason to suppose that they could not maintain themselves in the country, and that, taking council on the evening of the 5th, they had concluded to make overtures of peace; and I have always believed they would have accepted terms such as would have been worthy of this great nation to dictate to them, had there been authority there to conclude a peace. There was not, in the council I held with the Indians, anything said about the terms of peace; they made no proposition to settle limits; they asked for nothing; stipulated for nothing beyond what I have stated in my testimony. They were told by me that they should be sent for to council, but that in the meantime they must abstain from war, and promise to attend the council when sent for. They engaged to all that freely, and with apparent alacrity. During the time that the troops remained at Fort Drane after that, to wit, from the 11th to the 26th of March, as I have understood and believe, there was no sign of any hostility of the Indians in that part of the country; they had abundant opportunities to annoy the troops at that post, which were scattered over an extent of country of several miles in diameter, accommodating themselves with wood and water. Even before I left there, and as I have heard afterwards, the officers

\* NOTE BY MAJOR GENERAL GAINES.—It seems evident from the testimony of General Smith that General Scott confided in the sincerity of the Indians in suing for peace, inasmuch as he suffered these small parties to pass and repass round about Fort Drane for several miles without a guard.

and men were passing at pleasure between the several corps of the army thus dispersed, and provisions were sent to these several corps without once being disturbed. General Gaines and his staff, a party of four, during that time travelled from Fort Drane to Tallahassee, through a country that had been before and was afterwards in possession of the Indians, without molestation and without suspicion of danger, so far as I know. I have always believed that the Indians had a right to suppose that no further hostile demonstrations would be made against them until they should have been sent for and heard in council. When the hostile movements took place from Fort Drane, about the 26th of March, the rear was fired upon by the Indians, and I have understood a baggage wagon, or perhaps two, cut off. I have regarded this as an evidence that the Indians were fully informed of the exposed condition of the several corps around Fort Drane, but that so long as they could hope to be sent for to council, they abstained from annoying those troops, in compliance with their engagement on the Withlacoochee river."

Some days after giving the above testimony, Captain Hitchcock presented himself before the court and asked permission to add to his testimony the following, as continuation of his answer to the 15th question by the court. (The 15th question is that to which the above is an answer.)

"*Captain Hitchcock in reference to the 15th question by the court.* I will state to the court that yesterday, on referring to some official documents from Tampa Bay, I saw it stated that General Gaines had an escort from Fort Drane to Tallahassee; that statement is not correct, but I presume it was founded upon this: that Major McLemore was about to proceed from Fort Drane in the direction of Tallahassee, with a mounted troop; that he tendered to General Gaines, unsolicited, as I believe, on the part of General Gaines, a small detachment of his troop as an escort. This detachment remained a day, or perhaps a day and a half, and commenced its march as an escort to General Gaines, but General Gaines, after the first day's ride, dismissed the escort; halting himself, permitting the escort to leave him, and moved on afterwards without it. I did not refer to this in my testimony, because the escort was entirely unsolicited, I believe not even desired. Major McLemore's troop was returning to their homes at the time; they were not detached as an escort.\*

"*Question by General Gaines to Colonel Twiggs.* Colonel Twiggs is requested to state whether he met a wagon train about the middle of March last, between Fort Drane and Black creek; and if so, whether the wagons were or were not accompanied with a guard?

"*Answer.* I left Micanopy, ten miles on this side of Fort Drane, on the 19th of March last. On that day I met the wagon train with provisions, about twenty miles from Black creek. I inquired of the person having charge of the wagon-train (called the wagon-master) where the escort was? he said he had none, and I did not see any guard with it at all.†

"*Question by General Gaines to Colonel Twiggs.* Be pleased to state whether the Louisiana volunteers were or were not ready or willing to march at any time after the middle of March, 1836. And what were your reasons for the opinion which you entertain in this case?

"*Answer.* I have no doubt but the Louisiana volunteers, had they been ordered, would have marched the next day after their arrival from the Withlacoochee near to Fort Drane. I had a conversation with General Smith on this subject, and his opinion and mine coincided, that both our commands, the regulars and volunteers, were ready to march, and that we should not ask to detain the army on that account."‡

"*Question by General Gaines to General Smith.* General Smith is requested to state in what manner the movement of General Gaines affected the movements of General Scott in Florida.

"*Answer.* My impression has always been, that every effort that General Scott could make to advance his movement was made by him; but such were the difficulties in obtaining the means of transportation, that I do not think he could have been able to commence his movement earlier than he did; that therefore no operation of General Gaines delayed General Scott's movements, and that General Scott would not have been ready sooner or later, whether General Gaines was there or not. General Gaines brought from New Orleans with him some means of transportation. He added to General Scott's forces at Fort Drane about 1,000 effective men. He had acquired some knowledge of the country around the Withlacoochee. His position on the Withlacoochee had restrained the Indians during the time General Scott was occupied in transporting provisions to Fort Drane; and that, therefore, in these respects, General Gaines's movement was of great advantage to the movements of General Scott. I might add that, after all, the means of transportation were not sufficient to allow General S. to operate along the north Withlacoochee, and that therefore he was not able to derive all those advantages which he otherwise would have derived.

"*Question by the court to Captain Hitchcock.* Were there any sorties made from the fort upon the enemy on any one of the attacks made by him whilst the army lay there; and what was the strength of the army at the time?

"*Answer.* The army was about 1,000 strong—a few over, perhaps—and no sortie was made. It may be proper to add to this answer, that one wing of each of the several bodies occupying the faces of the square had been ordered by General Gaines to be held in readiness for a sortie, should he think proper to order one. This order was given on the afternoon of the 29th February.

"*Question by the court.* Was the army on the Withlacoochee under General Gaines strong enough, and well enough appointed, to have attacked the enemy with a prospect of success?

"*Answer.* In my opinion the army could have beaten the enemy at that place, and driven him at any time; but there were not means for pursuing him with any effect.

"*Question by the court.* Do you think that Major General Gaines had it in his power at any time, with the means in his hands, and the appointment of his forces, to have marched upon the enemy and subdued him, had the enemy availed himself of the fastnesses of the country well known to him?

\* NOTE BY MAJOR GENERAL GAINES.—I desired no escort. The discharged men, or those permitted to go to Middle Florida, here referred to, travelled with me the principal part of the first day's journey, the 14th of March, and until breakfast time, about 9 a. m., on the morning of the 15th of March, when I halted and desired them to go on without me. They never travelled with me another mile.

E. P. GAINES.

† NOTE BY E. P. GAINES.—By this testimony it is obvious that General Scott confided in the sincerity of the enemy in their having been subdued, and in their having sued for peace. Otherwise he certainly would not have suffered the baggage train to have passed and repassed so near the enemy without a guard.

E. P. GAINES.

‡ NOTE BY MAJOR GENERAL GAINES.—And yet, notwithstanding this fact must have been known to Major General Scott, he persisted in saying that his delay was necessary to enable these troops to rest and refresh themselves.

E. P. GAINES.

"*Answer.* I believe they would have escaped any pursuit he might have made with his force. With regard to the effect of a sortie, it is a problem which, perhaps, any one may form an opinion from a consideration of the facts which I will state. The Indians appeared to have a great facility in crossing the river; the banks of the river, above and below our camp, were lined with a dense swamp. Had a sortie been made, the Indians would have rushed into this swamp on one side or the other, and, by their knowledge of the best passages through it, and their facility in crossing the river, would, in all probability, have eluded any pursuit that could have been made from our camp. In the event of a sortie, there would, in all probability, have been a loss on both sides; but, it is my impression, without producing any beneficial results. The Indians were expending their ammunition, while our fire was reserved, and we were daily in the expectation of force from Fort Drane, especially of mounted men, a species of force of which we had none.

"*Question by the court.* While you were in the fortified camp on the Withlacoochee, was there any preparation made for a sortie by order of General Gaines? if so, state the force or corps, and the officer appointed to the command of the troops ordered for that purpose.

"*Answer.* The troops in the camp were disposed in the form of a square; the order was for one wing of each face of the square to be held in readiness for a sortie, directions being given for the other wing to extend. Colonel Foster would have been one of the officers on the right; I believe General Smith himself would have commanded the sortie on the left. I am not able at this time to give the names of the other officers. The order was given on the 29th February, in the afternoon, communicated by myself to Colonel Twiggs, commanding the light brigade. A previous order on the subject had, I believe, been communicated by some other officer. It is my opinion that, had the attack been renewed in character like that of the morning of the 29th, a sortie would have been made; but, after that attack, there was no serious attack made while we were on the Withlacoochee. There were but small parties engaged, from time to time, in endeavors to annoy us. This circumstance was itself a source of alarm, lest the Indians had abandoned that part of the country to the disappointment of the hopes of General Scott, expressed in a letter to General Clinch, and which had been seen at Fort King. The first order for the preparations for a sortie was, I believe, given, not through myself, but through some other officer. Colonel Foster came to me and made a suggestion as to mere detail, desiring me to communicate it to General Gaines. I did so, and received his orders thereon, which were communicated as above stated. General Gaines, on several occasions, spoke of the probability of an arrival of troops other than those expected from Fort Drane, especially speaking of Colonel Lindsay, who was supposed to have arrived at Tampa Bay, and declared it to be his purpose instantly to move in any direction from which reports of firing might be heard. Log canoes were constructed, and were then in the camp, with rived boards to be used for purposes of making platforms on the canoes to cross the river, the general saying that he would cross the river instantly on hearing a gun from the other side.

"*Question by General Gaines.* The witness is requested to describe the hammocks near my encampment on the Withlacoochee, and state the time at which that encampment was fortified.

"*Answer.* The hammocks bordering the river very nearly united immediately in front of the camp. From this point, both above and below, they gained very rapidly in width, and were extremely dense, especially to the east or above the camp, where the hammock extends considerably back from the stream, but at a distance of several hundred yards from the camp. The river itself has not the bend as represented in the map I hold, (marked,) the curve being much larger. A light breastwork was made around the camp on the afternoon of the 28th of February, according to custom.

"*Question by the court to Captain McCall.* No sortie was made on the enemy at the several attacks made on the camp. What were the reasons which withheld or prevented such a movement on the part of General Gaines?

"*Answer.* He did not explain to me particularly his reasons, but my impression was that it would not have resulted in any important advantage.

"*Question by the court.* Did no officer during the siege urge the propriety of making a sortie?

"*Answer.* I did not myself hear any officer, and my impression at the time was that there was no officer there who differed with the general on that point.

"*Question by the court to Captain McCall.* What is your opinion of the ability of the forces under General Gaines to drive and beat the enemy if a sortie had been made?

"*Answer.* I have not the smallest doubt that they would have been able to do it, but from the nature of the ground. The hammocks which bordered the river being thick and extremely difficult of access to the troops, would have enabled the Indians lying concealed to deliver their fire, and then, owing to their superior celerity and knowledge of the ground, to have passed through the hammock and crossed the river before the troops could have come up with them, their facilities for crossing the river being great, and the troops without the means of following them.

"*Question by General Gaines.* What part of the force was out of the limits of my breastwork during the action of the 29th of February; and state whether one or two companies were not often engaged in firing at the enemy across the river prior to the 6th March?

"*Answer.* There was one company out of the limits of the breastwork on the 29th February. Several companies were engaged in firing at the enemy across the river prior to the 6th March.

"*Question by General Gaines.* Was it General Gaines's intention to make a sortie, in the event of his hearing General Clinch's or Colonel Lindsay's guns?

"*Answer.* General Gaines remarked several times while lying at Camp Izard that he should not be surprised at hearing Colonel Lindsay's guns on the other side, and in that event he would cross immediately and march to his aid; or should the Indians engage Clinch on his advance, he would immediately march out and support him."

Mr. President and gentlemen of the court: In desiring your attention to the evidence which I have adduced to disprove the accusations against me, it becomes my duty expressly to protest against that mass of papers which have been referred to as *documentary evidence*, consisting of the *official reports, letters, and orders* of Major General Scott. This monstrous mass of *words*, recklessly jumbled together, *no matter by whom they have been indorsed*, embraces not a word of *legal evidence* which the court can, upon their oath, bring to bear *against me*, or against any man in existence save and except the fabricator of those *reports, orders, and letters*. That it is your duty to bring them to bear *against him* is obvious; but against me they can have no legal bearing whatever; not merely because they are palpably *untrue*, but also because they constitute nothing of the character of *legal evidence* as against any other than the writer of such *reports, letters, or orders*.

"*Truth is the basis of all excellence*," and I have shown—I have demonstrated by the testimony of officers of the first character and standing in the army and Louisiana volunteers, that General Scott's statements in reference to me and my movements are in many respects *false* and *malicious*. Look, for example, at what he has said in his letter of the 14th March, in which he endeavors to show the necessity of my having made a *sortie*, and to disprove the facts stated in my "Order No. 7," of the 9th of March, that I had beaten the enemy and forced them to sue for peace. Sir, what is there in this letter that can possibly be found to embrace any of the elements of legal testimony against me? Let us suppose, for the sake of illustration, (what the testimony of General Smith, Colonel Twiggs, Captain Hitchcock, Captain McCall, Lieutenant Mitchell, Mr. Potter, and other witnesses will go far to disprove,) that General Scott was truly and sincerely of the opinion that his statements contained in that *sortie-letter* were correct; then, sir, by what authority can the court *employ against me the mere opinion* of Major General Scott?

Even if he had ever won a battle at the head of a division, or in the command of an army, or any other force, beyond the immediate authority of his senior and superior officer—an honor which he never enjoyed—he would not, in the event of his having achieved such an honor, have been able to give to his reports, letters, or orders any of the essential properties of *evidence* against any man but himself; but he never achieved anything in battle at the head of a division or other independent force.

The opinions of experienced men are often very properly received by courts, both civil and military, in order to elucidate facts based upon legal evidence; but the opinions of *interested witnesses* are of no validity otherwise than as against themselves. Need I tell the court, what General Scott has so fully demonstrated, that he is so much altogether an *interested witness* in the case before you—the case of the *United States regarding the causes of the failure of certain campaigns against the Seminole Indians in 1836*—that nothing but my arrest, trial, and condemnation can possibly save that officer from being found guilty of high military offences.

The testimony of the officers last above named, that, notwithstanding General Scott's extraordinary letter of the 14th of March, in which he endeavors to prove that the Indians *were not subdued* and that *they did not sue for peace*, or that if they did sue for peace *they were not sincere*, most clearly proves that General Scott himself, at the moment of writing that letter, and for twelve days after that time, did in fact confide in the truth and sincerity of the Indians, as the testimony will demonstrate, inasmuch as he suffered wagons, small parties, and individuals to pass and repass to and from the several encampments, from five to six miles round about Fort Drane, without a guard; although that section of the Florida frontier was within twelve hours' march of the Withlacoochee, where the principal force of the Seminole Indians was known to be encamped.

Besides the general evil inherent in all statements made in opposition to truth, there are peculiar evils in the representations of General Scott, arising out of the official sanction given to them by his signature, as the general specially authorized to command in the field, and also out of opinions founded upon them by the executive head of these United States.

It has been suggested to me that the President of the United States, forming his opinions upon the official representations of General Scott, has expressed sentiments unfavorable to my conduct on the Withlacoochee. The fact of my going to Florida, in the execution of my duty, could not easily be misrepresented; and though arguments have been sought and pressed into the question to impugn my motives, they have failed to produce the effect intended, and my movement to Florida, under the extraordinary and peculiar circumstances of the case, has not in any manner been censured by that high public functionary; but my conduct while in the country of the enemy was less visible, comprised a large mass of facts, was pursued at a distance from all direct communication with Washington; and while I was in the heart of the country occupied by the enemy, in hearing of their war-whoop and rife on the Withlacoochee, General Scott was snugly posted at the little quiet place called Picolata, within eighteen miles of the city of St. Augustine, making free use of his facilities for communicating with the government, and writing the letters which I have deemed it proper to designate his *starving-letters* of the 1st and 4th of March; and then from the *little steamer, the Essayons*, on his way from Picolata, his *rescue-letter* of the 9th of March; and afterwards from Fort Drane, his *sortie-letter* of the 14th of March—all which were received with unsuspecting confidence at Washington, and upon which, false and slanderous as they were, my conduct was viewed by the Chief Magistrate with disapprobation. I look with confidence to the developments made before this court for enabling the President to do me justice, and relieve me before the army and my country from the odium which the publication by the War Department of these official slanders, and the suppression of all my correspondence upon the subject, reported for the information of that department, was calculated to produce.

General Scott has said he is not my *prosecutor* nor my *accuser*; and yet, without the slightest pretension of self-defence, he has deliberately fabricated or indorsed the most calumnious accusations, which he only has not prosecuted, because an investigation, as he knew full well, would inevitably throw back upon himself the shafts poisoned by his own venom.

Among the duties assigned to this court it is required to investigate all subjects connected with the campaigns in Florida, and I now therefore solemnly call upon the court to take that notice of the remarkable letters of General Scott of the 1st, 4th, 9th, and 14th of March, which their extraordinary contents deserve.

Thanks to the Almighty, I have lived to enjoy the privilege guaranteed to every citizen and soldier of the republic, to vindicate my conduct, and to expose and demolish the weak and nefarious schemes contrived by my accuser, while in the use and abuse of a little brief authority, for my destruction; and thanks to the high public functionaries of our beloved country for affording this privilege while I am yet in the land of the living; and in time to save my children and my military and volunteer friends the deep affliction, and the abiding mortification, of finding, when I shall be no more, the uncorrected accusations which you have received from the Department of War, and which now lie before you.

That it was the duty of the head of that department, as an act of natural equity and justice prescribed by law, (see the 77th and 79th articles of war,) to have acted upon and notified me of these accusations the moment they were received by him, and to have assembled as soon thereafter as the state of the service would permit the proper tribunal for their investigation, there can be no ground to doubt. The omission of this obvious duty, and the placing me upon a most "delicate and important command," wherein I was honored with the Secretary's notification that the President of the United States had been pleased to approve my views and measures, ought, perhaps, to be considered as the strongest assurance that could be given me of unshaken confidence in my fidelity and honor, and, on the other hand, of the little reliance placed in my accuser. Perhaps, too, the honorable the Secretary of War was apprised, as

I have been long apprised, of the fact that my accuser, never having learned how to govern himself, would, in due time, if allowed much latitude, *defeat himself*, in his overheated zeal to destroy me; for there is no principle in moral philosophy, natural law, or military science, better established, than that the officer who has not learned how to *command himself* is wholly unqualified to *command freemen*, or American soldiers, volunteers or regulars, and will sooner or later, in his unbridled efforts to destroy his imagined rivals, destroy himself.

My accuser charges me with the crime of having contributed to prevent or retard the forwarding of subsistence and other supplies required in East Florida. This charge is disproved by the testimony of Captain Morrison, the late assistant commissary for the post of New Orleans recently examined by this court. That officer testifies that on my return from Florida to New Orleans I directed him to forward promptly all the supplies that had been or might be required in Florida. The captain's testimony upon this point is in the following words:

*Question by General Gaines to Captain Morrison.* General Scott having endeavored to show that a report of the war being ended caused a detention in New Orleans of supplies called for by requisitions for Florida, the witness is desired to state whether he was commissary in New Orleans from January to April, 1836, inclusive; whether any such detention took place with regard to commissary supplies; whether he had an opportunity of judging whether quartermasters' stores were detained, and whether they were so detained; and is requested to state whether he understood from the quartermaster whether he would or would not feel authorized to detain supplies under the supposed circumstances of there being a report like that in question? And the witness will also please state what rations returned to New Orleans with the Louisiana volunteers from Tampa Bay; whether a part was in bulk and by him issued to the volunteers; and whether he made any remarks to Captain Thistle on the subject of the bacon so returned, and what remarks he made.

*Answer.* I was assistant commissary at New Orleans from January to April, and had been for ten years as such. No detention took place in the furnishing of supplies; every exertion was used to procure hard bread and bacon, as required by General Scott. The bread and bacon could not be procured in sufficient quantities; the other part of the ration, consisting of pork and flour, was delivered to the quartermaster to make up deficiencies. A duty which I owe to Major Clark, as he is not present, compels me to state that every exertion was made on his part to furnish supplies and transportation; we both felt a deep interest that nothing should be wanted. From the 7th to the 16th May, when the regiment of Louisiana volunteers returned to New Orleans from Florida, there were 720 pounds of bacon, 2,160 pounds of bread, surplus rations, which were sent to the commissary store at New Orleans, besides other rations in proportion. Captain Thistle came to me somewhere between 10th and 16th May, with a return for back rations. In offering Captain Thistle his choice of pork, bacon, flour, or hard bread, I observed that I regretted that the hard bread and bacon had come back after the difficulty I had in sending it to Florida. As to Captain Thistle's asking me why I did not send the bacon and hard bread, I have no recollection of his having made such an observation to me, nor do I believe he did. No observation was made by me to Captain Thistle that the Florida war was closed. [The witness here presented to the court papers Nos. 39, 40, (see documents,) as evidence that he had discharged his duties promptly and to the satisfaction of his department.]

*Question by General Gaines.* What conversation had the witness with General Gaines in New Orleans, in April, on the subject of sending supplies to Florida, and what did General Gaines urge?

*Answer.* About the beginning of April I had understood that General Gaines had arrived in New Orleans, and was on my way to pay my respects to him when I met Major Clark, who requested me to get a requisition from General Gaines, which he had left with the general the previous evening or the same morning. I found General Gaines at his quarters; he was unwell; and, after a little conversation, I asked him for the requisition left by Major Clark; he handed it to me and observed, very impressively, 'furnish everything which you are ordered to furnish.' Commodore Dallas, of the navy, came in and I withdrew. I did not ask General Gaines about the furnishing the supplies. His remarks were applied both to Major Clark and myself." [The witness produced paper No. 41, to show the quantity of certain supplies at Tampa Bay on the 31st March, 1836.]

Upon this point Major Clark, assistant quartermaster at New Orleans, with a promptness which does his heart and his sense of justice great honor, distinctly asserts, in an official letter to the Quartermaster General's office, written long before this court was ordered, and without my solicitation or knowledge, that I directed him, on my return to New Orleans in the latter end of March, to forward promptly to Florida all the supplies that had been or might be required from this department. The court is particularly desired to examine the testimony of these two officers, Major Clark and Captain Morrison; compare their statements with the vague allegations upon which my accuser relies, and mark how completely the plain simple statements of these most exemplary officers of the general staff disproves the hearsay stories upon which the charge of my accuser is based. By the testimony of these officers it will be seen that their efforts were unremitting to obtain and forward promptly every supply required. They were well aware of the probability that the war in Florida would be renewed. But even had it been otherwise—had they received official notice that a treaty of peace had been concluded, they understood their duty too well to relax in their efforts to forward supplies, as they well knew that troops must have their rations, and public horses their forage, in *peace* as well as in war; besides, they knew that a treaty of peace would create an additional call for subsistence, inasmuch as it would impose on the United States the task of feeding some thousands of half-starved Indians of both sexes and all ages.

Major Clark had been on duty in East Florida for several years subsequent to the year 1820; had superintended the construction of the military road from Fort Brooke to Fort King; had made himself well acquainted with the Indians, and with the topography of a considerable portion of the country they then occupied. My letter to the adjutant general, under date the 15th of January, 1836, now before the court, contains Major Clark's estimate of the number of the Indians and blacks, which he deemed to be over 2,000 warriors. His statement in reference to the accusation in question is as follows:

"ASSISTANT QUARTERMASTER'S OFFICE, *New Orleans, August 16, 1836.*

"Sir: I have this day seen a publication in the National Intelligencer of the 27th July, taken from the New York Star, on the subject of the campaign in East Florida. The writer, in speaking of the arrival of the army at Tampa Bay, says: 'We there learned that the quartermaster at New Orleans, influenced by the representations made or caused (as it was said) to be made by General Gaines that the

war was closed, had abstained from sending on provisions he had been ordered to forward from that place.' The whole of this part of his statement is incorrect. When or how he obtained this information I know not. General Gaines, on his return to New Orleans, told me to continue to send supplies, which was done promptly. Every exertion was made, both by myself and the assistant commissary, to obtain and forward the subsistence and forage required. There was great difficulty in obtaining hard bread, and every barrel that could be had was immediately shipped.

"On the 31st of March the assistant commissary at Fort Brooke forwarded a statement to the assistant commissary at New Orleans of the supplies on hand: 216,750 rations of meat, 304,423 rations of bread and flour, and the small rations in proportion; at this time there were two vessels on the way laden with subsistence and forage, and the bills of lading show that they were received on the 6th of April in good condition. Now, it appears the army arrived at Tampa Bay the 3d, 4th, and 5th April, and remained but a few days before they took their departure, and I cannot conceive where was the scarcity of provisions, unless it was in the hard bread; this was unavoidable, for it could not be obtained; that is, the quantity required.

"My object in making this statement is to correct the error that General Gaines had in any way contributed to the withholding supplies from the army in Florida; also to show that there was no cessation on the part of the commissary or myself in procuring and forwarding the supplies at the earliest period possible. The proofs of this are contained in my list of shipments now at Washington.

"I have the honor to be, sir, with high respect, your obedient servant,

"J. CLARK, *Assistant Quartermaster.*

"Major T. Cross, *Acting Quartermaster General, Washington.*"

General Scott has urged, as among the causes of the failure of his campaign, the necessity of replacing the subsistence drawn from Fort Drane by General Gaines, and of providing for a larger force than was expected there; and has desired the court to remember *who* took from Tampa Bay the means of transportation which were there early in February, and *what* prevented the arrival of new means from New Orleans.

I remark that the subsistence drawn by me from Fort Drane, previous to the arrival of General Scott, was something less than 12,000 rations. By General Scott's letter of the 9th of March to the adjutant general it will be seen that the ordinary baggage-train of General Clinch conveyed in one single trip from Picolata to Fort Drane 17,497 rations of bread and flour, and 11,000 rations of pork, besides a quantity of beans, coffee, &c. The court will perceive that, with the beef-cattle at Fort Drane, (of which the principal part of the meat ration was composed,) this supply of 17,000 rations and upwards of bread and flour, nearly twice replaced the whole amount of supplies drawn by my troops, and that this was done not by the transportation ordered into the country or provided by General Scott, but by a single expedition of the wagon train of General Clinch, which had been despatched from Fort Drane, and had arrived at Picolata on the 2d of March, the day on which my express of the 29th of February was received by General Scott. This wagon train was detained unnecessarily until the 6th of March, and was then four days in removing to Fort Drane, although a movement of the same extent in the summer, the rainy season of the year, was effected some weeks afterwards by Colonel, then Major, Pierce in two days' time. As to the necessity of providing for more force than was expected, this can in no manner be alleged by General Scott as an evil; for, by his letter of the 6th of March, he admits the necessity of a part of that force to complete the right wing, (owing to the defection of the Georgia troops,) and if the force was larger than was desired on account of supplies, he had it entirely in his power to relieve the commissariat by detaching as much to Picolata as he pleased, or dismissing the whole of it if he thought necessary. But he retained the whole of it, merging it into the right wing, and taking it with him on his march to Tampa. There is a disingenuity in the allusion of my having taken the transportation from Tampa in the argument of General Scott; for he would have the court infer that it operated to the disadvantage of the movements of the right wing, whereas, whatever that transportation was, it was at his own disposal after it reached Fort Drane, and necessarily became a part of the transportation of the right wing; so that, while the general had it entirely in his power to diminish the force *ad libitum* at Fort Drane by discharging the surplus, he was actually in the use of all the transportation taken by me, not only from Tampa, but from New Orleans. From Tampa Bay I did indeed take, but one single horse-cart, and I believe one horse and one mule of public property, not placed there by General Scott, and perhaps 8 or 10 Indian ponies. The principal part of my transportation was procured by myself at New Orleans, and General Scott not only had as much or as little of my force as suited his own pleasure, but he had all my transportation at Fort Drane. General Scott admonishes the court to remember what prevented the arrival at Tampa of new means of transportation from New Orleans, alluding to the testimony of Lieutenant Morris; and here is the same disingenuity; for, had the city of New Orleans itself been at Tampa Bay at the time of the movement of the right wing, it could not have aided the operations of that wing in its attempts upon the cove in its downward march to Tampa. That this movement was necessarily and absolutely independent of Tampa is too plain to require proof. But even if it had depended upon Tampa, all of the quartermaster's and commissary's stores, as seen by the letter of Major Clark, were there; and these were all that the government had any control over, all that could have been or were ordered there, all that were at all necessary for the campaign. The only stores not there, even admitting the testimony of Lieutenant Morris, were some sutler's stores, mere articles of convenience or comfort in a permanent garrison—such as tobacco and herring, and sometimes cheese and bacon and crackers; articles that could not have been carried on the campaign, if for no other reason than the want of transportation. It would have been strange, indeed, to have thrown out of the wagons the substantial and necessary articles of pork and flour, and supplied their places with herring and tobacco. On this head, however, I have another remark, that Mr. Morris, the writer of the letter to Lieutenant Morris, in which was enclosed the scrap of a newspaper containing a report that the war was ended, and assigning this as a reason for not sending the herring and tobacco, was not a sutler, and was not in any manner bound to furnish those little comforts. He was a New Orleans merchant, and in the business of turning a penny by sutling, was an intruder, or, to use the more forcible language of General Scott, he was an "interloper." [Upon the subject of means of transportation at Tampa, see the testimony of Lieutenant Morris, by which it is obvious there was near ten times more public means of transportation brought to that place by me, and by order of Major Belton, for my use, than was there upon my arrival.]

*Question by General Gaines to Lieutenant Morris.* General Scott having charged that General Gaines took the public transportation from Tampa Bay, to the disadvantage of the movement of Colonel Lindsay,

the witness is desired to state what amount of transportation was taken by General Gaines; also, whether it was or was not replaced by Lieutenant Casey; when Lieutenant Casey arrived at Tampa; what amount of transportation he brought; whether Colonel Lindsay had the benefit of that transportation, and by whose order; when and where, so far as witness knows or believes, Lieutenant Casey was sent for said transportation.

"*Answer.* There were only four or five indifferent horses taken by General Gaines that belonged to the post, besides the number that was directed to be sent by him from New Orleans. It is proper to state that there were 60 horses sent at first; but, from disease and rough weather at sea, five or six died, and some of the others were in a poor condition for service. Lieutenant Casey, the acting quartermaster at Tampa Bay, had been sent, I suppose by order of the commanding officer, to Middle Florida, (Tallahassee,) to procure means of transportation for General Gaines's army, which was expected to arrive soon. The transportation, 6 or 8 teams complete, arrived a short time after General Gaines's departure with his force from Tampa Bay. This transportation was put in requisition by Colonel Lindsay, after he arrived there, and found the principal transportation of his column. To the best of my recollection there were 42 or 48 horses or mules, which formed the teams for the wagons arrived from St. Mark's.

"*Question by General Gaines.* Was it known at Tampa Bay, at the time Lieutenant Casey was sent for transportation, that any other troops were expected at Tampa Bay than those taken there by General Gaines?

"*Answer.* I knew of no other, and I believe it was not known there that Colonel Lindsay's or any other troops were expected to arrive at that time.

"*Question by General Gaines to Captain Drane.* Please state what reason you had, if any, after returning with the right wing of the Florida army to Fort Drane, for believing that the families of the Indians were still in the cove, and whether any doubt remained on your mind as to their being there in March and April last?

"*Answer.* The night before the right wing of the army crossed the Big Withlacoochee, returning, I was called, at 12 o'clock at night, by Major Cooper, who was the officer of the day, to listen to the talk of both Indians and negroes, on the north bank of the Big Withlacoochee. The next morning the army had marched but about one half mile, when we crossed a trail of Indians coming out of a swamp; passing to the south, a little further on, about 200 or 300 yards, we discovered a trail leading into the swamp; the trails were evidently fresh, and made that morning. The second day after crossing the Little Withlacoochee on the route to Fort King, the army crossed several small trails, some leading to the cove and some to the west; those west leading into Wahoo swamp, or that direction. The day following the day we marched to Fort King, our left flank was attacked by a small party of Indians that soon fled also in the direction of the Wahoo swamp or Withlacoochee. On our arrival at Fort King, we were there informed that Billy Emathla's wife and one other squaw, I believe her sister, had been captured during the absence of the army from Fort Drane, and taken off by the hostile Indians. Some days after the army arrived at Fort Drane, Billy Emathla's wife made her escape and returned to the right of the army to her husband. I had several conversations with her through the interpreter. She informed me that the Indians had not moved from the Wahoo swamp and the cove on the Withlacoochee—that their women and children were still there; there they had planted their grounds; that the crops were very fine. She described the corn and rice as being about a foot high. She stated that, in her opinion, they would have a better crop than they ever had. I inquired of her if the Indians had moved their families from there at any time during the war. She informed me that they had not. She there had a conversation with Powell, who advised her to quit her husband and join the Mickasukies, and not return back to the white people; that his men had whipped all the white men, and driven them out of the country, and then they had gone home; that he then meant to assemble his warriors and drive the pale faces from Fort King; and then he would go to Fort Drane and drive them away from there, where they would get a large supply of ammunition, and they then would drive all the Alachuas (meaning volunteers) out of the country, as far as the Suwanee; and then that they would have all the country from the Suwanee, south, to themselves. She informed me that she had heard Powell repeatedly say, during the time she was in captivity, that he never would make peace with the white man. The above are the reasons why I have never had a doubt that the Indians had never quitted the cove or the strongholds on the Withlacoochee. After the army had returned to the Withlacoochee with General Gaines, I was sent to Oaklands, five or six miles northeast from Fort Drane, where I remained until General Scott arrived. During the time I occupied that post with my command, and a few days after I returned from the Withlacoochee, very frequent signs of Indians were discovered on the plantation of Colonel John McIntosh, and crossing the main road leading to Micanopy. I had frequently seen fires on the opposite side of Orange lake during this period, and I felt satisfied they were Indian fires.

"The Indian women spoken of in this account were captured during the time the army was absent on its march from Fort Drane to Fort Brooke. They returned from captivity after the army arrived at Fort Drane from Fort Brooke.

"*Question by General Gaines to General Smith.* To what extent was the cove swamp penetrated by General Scott in March or April, 1836, and was the search for the Indians by him sufficient to enable him to pronounce upon the position of the Indians or their families?

"*Answer.* On the 30th March General Scott left all the baggage under the charge of Major Wilson, and a detachment at, what I presume, may be called the entrance of the cove. We marched without the baggage that afternoon probably about four and a half miles. Next morning we crossed the foot over a very deep and difficult bog which was in front of our encampment. The right column, which was under my command, attacked a small party of Indians that were in front, and pursued them three or four miles, to the utmost extent of the pursuit. Part of the column had arrived, by taking a direction on the banks of the river; the other part, with which I was myself, was pursuing the trail down through the woods to the right, when one of General Clinch's staff brought an order for us to return. We then retraced our steps to where the baggage was, and the next morning took up our march round the outside of the cove, and, after leaving Major Cooper with his battalion towards the southern extremity of it, we went to Tampa Bay. The furthest extent to which the cove was penetrated was by the party which I commanded. Both the columns that entered the cove met in the cove altogether about 120 or 130 Indians. We had lost all trace of the Indians in the cove before we were recalled. We were on an old path, but we had lost all trace of the particular party we were pursuing.

"*Question by the same to the same.* What is the opinion of the witness as to the location of the Indian

families in March and April; and does the witness know whether they had or had not gone down to Pease creek?

"Answer. I have no idea of where they were at that time. They could not have been on Pease creek, unless, possibly, at the very head of it—a point beyond which I went. I do not think there was any large body of Indians on Pease creek, as I ascended it with only 140 men, and the Indians would have known of our approach. We crossed two considerable trails leading to the south, but they must have been two or three months old."<sup>3</sup>

I have stated that the proper time and place for Major General Scott to enter upon the command of the forces under me, in that part of my department which formed the theatre of the war, was the precise time and place of his arrival in person at the position occupied by the force actively engaged under me at that position; because, until the moment of his arrival at my position, every duty and every responsibility necessarily rested with me, and therefore it was proper that I should be governed in my movements and measures by the movements of the enemy, with a view to the immediate protection of the frontier and to subdue the enemy, or to hold them in check until the arrival of additional force and supplies. This view of the subject is based upon a principle which has from time immemorial governed the interior and exterior police of the armies of the most enlightened nations of the world during a state of war—a principle, therefore, strictly applicable to a state of war. Take, for example, a picket-guard or a small outpost near the enemy: who ever heard of the commander of either being relieved otherwise than upon the personal appearance of the officer authorized to take command? At a post or in a department where there are several officers on duty, the commander may be relieved in time of war by a special order directing him, on the receipt of such order, to turn over his command to a particular officer near him, or to his next in rank; but, without some such special authority, the officer to be relieved would remain in command, if near the enemy, until the new commander arrives in person at the position occupied by the principal force employed near the enemy.

I have sought in vain for a case tending to justify or excuse the pretension of a right on the part of General Scott to assume the command of any part of the forces of my department upon the theatre of the war, whether with me in the field or otherwise, previous to his arrival *within the limits of my department and at the spot where the troops were employed in an active campaign against the enemy*. I have, on the contrary, found many cases tending to establish the principle for which I contend, and upon which I acted, to one of the strongest of which I have desired and again desire the attention of the court. I allude to the case connected with the battle of Vimera, in Portugal, fought in August, 1808, between the British army, under Sir Arthur Wellesley, and the French, under General Junot.

After Sir Arthur embarked at Cork, in Ireland, with an army of ten thousand men, for the Peninsula, General Sir Harry Burrard Neale, senior in rank to Sir Arthur, was ordered to take command of the forces proceeding to Spain, of which Sir Arthur's division formed a part. About the same time General Sir Hugh Dalrymple, then at Gibraltar, received orders to take command of whatever British forces he should find in Portugal. Sir Arthur, on arriving near the coast of Portugal, learned that General Junot with a French army of 14,000 men was in the vicinity of Vimera; whereupon the British army under Sir Arthur landed and was soon after attacked by the French. A severe conflict ensued. It so happened that during the battle General Neale arrived at Vimera; he immediately sent an officer of his staff to the field of battle in sight of Vimera to announce his arrival to Sir Arthur, notifying him, however, that he was expected to continue his operations against the enemy according to his own plan. The battle continued for some hours. Previous to its termination, General Sir Hugh Dalrymple arrived at Vimera. He also announced his arrival to Sir Arthur, who was again notified by a superior that he, Sir Arthur, would continue his operations according to his own original plan until the battle should be over. The French army was ultimately beaten, and was seen by General Dalrymple retiring rapidly in a

◦ NOTE BY MAJOR GENERAL GAINES.—General Scott has labored very diligently to show that the Indians removed their families and dispersed themselves from the cove of the Withlacoochee in March, and has attributed the supposed movement to me. He formally reported his opinions to the War Department on the 30th of April, and has urged the same considerations before the court of inquiry, but without introducing any evidence upon the subject. He has quoted his own letters containing his opinions, and asks, very significantly, how he is to account for not finding, three weeks after General Gaines left the Withlacoochee, any considerable body of the enemy, on any other supposition than that of their dispersion.

The difficulty is very easily solved: and, since General Scott has suggested it in connexion with the effects of my movement, I have thought proper to place on your record the testimony necessary for the purposes of explanation; and the answer to the general's inquiry may be embraced in a single sentence: he did not find the enemy because he did not go where the enemy was to be found. The testimony of Captain Drane and Lieutenant Mitchell has shown that Major General Scott penetrated the cove but two and a half miles, about four miles from the crossing of the river, although Captain Drane, who has been many years in that country and is well acquainted with it, has told you that the cove is fifteen or twenty miles in extent. It has a circumference of not less than forty, perhaps fifty, miles. And this celebrated spot—the known and acknowledged stronghold of the enemy, the object of all General Scott's plans, the theme of his public letters and reports—was penetrated but the short distance of two and a half miles, when the pursuit was strangely abandoned while a portion of the enemy was in view; and the remainder of the march was conducted in the open country, for many miles adjacent to this celebrated hammock, to Fort Cooper, where a useless post was established and supplied with seventeen or eighteen days' provisions for three or four hundred men, instead of penetrating the hammock with that supply of provision and searching for the enemy. In connexion with this subject, I will observe that, if General Scott thought the force was too large in the right wing, he should have left a portion of it at Fort Drane, more especially if he was not able to supply it with provisions. Again, General Scott took with him all the transportation he had at Fort Drane, leaving still some supplies in depot at Fort Drane. Now, this transportation was more than all he had ordered into the country, not only by the addition of that possessed by General Clinch, but by that taken to Fort Drane by myself; so that, if his force was out of proportion large, he could have left a portion of it, and then have moved on the Withlacoochee better provided, in every respect, than it was possible for him to be independent of my movement; yet, with all these advantages of men and means, he only penetrated the swamp two and a half miles, proceeded to Tampa Bay, and there reported to the War Department that he had penetrated the cove to its head, as he thought; and now insists upon it, as a matter clearly ascertained, that the Indians had dispersed. I repeat, in answer to his question why he did not find the enemy, it was because he did not go where they were. They were in the cove. A body of some 250 was actually found at the edge of it by General Scott; and after he left Fort Cooper, that post was assailed by Indians from the cove for some seventeen days in succession.

On the return march from Tampa to Fort Drane, Fort Cooper was absorbed, and the march was thence conducted into the Tampa and Fort King road; in passing to which Captain Drane testifies that the southern edge of the hammock was traversed for a short distance, but the great cove itself was not penetrated.

In this march from Tampa, it might be readily supposed one select corps could have been organized of the three divisions at Tampa, leaving the remainder at Fort Brooke, and, with the whole of the transportation, this corps of choice troops might have been amply provided for an examination of at least a week or ten days in the cove; but no, the divisions returned as they went, and the great cove, as if avoided with special care, was passed on the west in going down and on the east in returning, and, without examination, the Indians were officially reported to have dispersed.

E. P. GAINES.

direction towards *Torres de Vidras*. On making this discovery, General Dalrymple sent his aide to desire Sir Arthur to give up the pursuit and return with his army to Vimera. Sir Arthur remonstrated, and insisted upon the propriety of pursuing and capturing the remnants of the French army as an essential part of his original plan. General Dalrymple persisted in recalling the victorious army, and sent a peremptory order to Sir Arthur requiring him to retrace his steps to Vimera. He complied. But the great error of this retrograde movement was soon demonstrated by the arrival of a flag of truce, with a proposition from the French commander to capitulate on condition that his army should be conveyed by British transports to France as prisoners of war on parole.

This capitulation was arranged at Cintra, and it was termed "The Convention of Cintra." From the proceedings of a board of inquiry, consisting of several general officers, into the operations at Vimera which led to the convention of Cintra, there is no evidence of any effort by either of the general officers ordered to command the forces under Sir Arthur Wellesley to assume or exercise any command whatever until their arrival at Vimera; and even then they both successively deemed it to be their duty to abstain from taking command until the pending battle should be terminated. And General Dalrymple was censured for his interference before the pursuit and capture of the enemy were completed.

Had either of those general officers halted from sixty to ninety miles from the theatre of the war in which Sir Arthur was engaged, it is not to be believed that any respect would have been paid to their orders, nor is it probable that the British government would have tolerated so irregular and inefficient a measure. Suppose, sir, that either of those senior commanders had sat still at the very secure post of Gibraltar and had taken measures to withhold from Sir Arthur Wellesley's army their proper supplies of subsistence, and had thus attempted to starve that gallant army out of its position at Vimera, would it not have brought the author of so atrocious an outrage to a volley of ball cartridges? Yes, sir; even in the monarchical and aristocratic government of England, where favoritism has its all-powerful sway, I venture to affirm that such an outrage on the part of any officer in the British army or navy would have cost him his life; and the ministry that would have sanctioned or connived at such an outrage would have been promptly hurled from power.

I thank the court for the patient hearing which they have given me.

EDMUND P. GAINES, *Major General U. S. Army by brevet.*

#### DOCUMENTS IN THE CASE OF GENERAL GAINES.

##### No. 1.

HEADQUARTERS WESTERN DEPARTMENT, *New Orleans, January 15, 1836.*

GENERAL: I do myself the honor to report, for the information of the proper authorities, that having met, on my arrival at this city yesterday, the bad news of the defeat and massacre of Major Dade, with a detachment of United States troops, consisting of eight officers and nearly one hundred non-commissioned officers and soldiers, by the Seminole Indians, near Tampa Bay, East Florida; and having reason to apprehend that the troops at Fort Brooke, with those which this sad disaster must speedily draw towards that post, will need more arms, ammunition, and subsistence, with axes and other tools, than the supply now there will afford, I have considered it to be my duty to order, and have therefore ordered, the articles specified in the requisitions of which I enclose herewith copies, (marked A, B, and C,) to be obtained and forwarded thither forthwith.

Convinced, as I am, that no time should be lost in applying to these red and black savages the last and obvious means of correction, and not doubting but that the 6th and part of the 1st and 7th regiments of infantry will very soon be ordered, by the way of this city, to East Florida, to co-operate with the disposable companies of United States artillery and territorial volunteers in the arrest or destruction of those Indians and brigands, before the dry weather of winter shall pass away and the rains of spring and summer cover the swamps and flats that surround them with water; and believing that the forces to which I have alluded will not be able to arrest or punish a people so nearly amphibious as these savages are, without the aid of some naval force, with gunboats, to co-operate with the troops along the sea-coast of Florida, I shall, by the first conveyance, request the commander of the naval station at Pensacola to furnish such force and boats as he may feel authorized to order on that service.

Some experience and much reflection have convinced me that the only sure means of terminating speedily and effectually all difficulties with these savages will be to march an army of at least four thousand men along the sea-coast, to which they usually take refuge, to be flanked and supported by the proposed naval force, whose aid will be necessary in crossing inlets, creeks, bays, lakes, and ponds, with which the whole of that sea-coast abounds, and in scouring the tangled thicket-woods and deep swamps into which the enemy would escape and be secure against any force that we would employ on *land*, unaided by naval force; whereas, by the proposed co-operation of land and naval force, we should not fail to take or destroy most of them, and certainly take or destroy their boats and the boats of their allies, the fishermen and other stragglers and idlers from the Island of Cuba, from whom, there is reason to believe, these Indians obtain supplies of ammunition and subsistence. We should thus cut off this source of supply and of escape, and we should thus force them to sue for peace.

Their number of fighting men cannot, I am convinced, be less than two thousand four hundred. Our excellent quartermaster, Major Clark, who spent several years near them and often surrounded by them, deems their force to be between two thousand and two thousand five hundred; recent accounts state their number at near three thousand; but, if they have not more than two thousand, it would be imprudent to send in pursuit of them, in a country so perfectly known to them and so little known to our troops, and, moreover, a country affording them peculiar natural advantages, which might often enable them, with inferior numbers and inferior prowess, to overcome and destroy our troops. Indeed, Colonel Twiggs, who has had the means of appreciating the character of the country, as well as that of the enemy, concurs with me in the opinion that a *land force* of ten thousand men would find it extremely difficult to take or destroy this enemy, contemptible as it is deemed to be, without the co-operation of naval force.

All which is most respectfully submitted for the information of the proper authorities.

EDMUND P. GAINES, *Major General, Commanding.*

The ADJUTANT of the *United States Army, Washington, D. C.*

## No. 2.

## A.

*Requisition for ordnance and ordnance stores for the year 1836.*

Musket-ball cartridges .....	250,000
Musket flints .....	3,000
Cartridges, canister shot, fixed, for 6-pounders .....	2,000
Sticks portfire .....	50
Pounds slowmatch .....	100
Cartridges, grape shot, fixed, for 6-pounders .....	200
Rifles, complete .....	200

This requisition is rendered necessary in consequence of the Seminole Indians and blacks having commenced war in the Territory of Florida, and having recently cut off a considerable force under Major Dade, 4th infantry. Immediate concentration of force at Fort Brooke, Tampa Bay, is necessary, and for which force these supplies will be required.

EDMUND P. GAINES, *Major General, Commanding.*

HEADQUARTERS WESTERN DEPARTMENT, *New Orleans, January 15, 1836.*

The acting ordnance officer at Baton Rouge arsenal will issue and deliver to Lieutenant Myers the ordnance stores embraced in the above requisition.

EDMUND P. GAINES, *Major General, Commanding.*

## No. 3.

## B.

40,000 rations pork, equal 150 barrels; 40,000 rations flour, equal 235 barrels; 40,000 rations beans, equal 26 barrels; 40,000 rations candles, equal 2 barrels; 40,000 rations soap, equal 9 barrels; 40,000 rations salt, equal 7 barrels; 40,000 rations vinegar, equal 13 barrels; 40,000 rations sugar, equal 16 barrels; 40,000 rations coffee, equal 10 barrels: total, 468 barrels.

NEW ORLEANS, *January 16, 1836.*

The above articles of subsistence stores will be required to complete the loading of the transport destined for Fort Brooke, Tampa Bay.

P. MORRISON, *First Lieutenant 4th Infantry, A. C. S.*

## No. 4.

## C.

*Special requisition on the quartermaster's department.*

For 200 pounds 10d nails; 200 pounds double 10d nails; 200 pounds 8d nails; 200 pounds 4d nails; 6 broadaxes; 200 felling axes; 100 picks or grubbing hoes, with an axe one side; 25 augers, assorted; 12 crosscut saws; 200 pounds oakum; 2 dozen gimlets, assorted; 4 grindstones, common size; 50 hatchets; 400 pounds spikes, wrought, for building boats; 200 spades; 12 handsaws; 20 coils (inch diameter) rope; 2 dozen whipsaws; 2 dozen whipsaw files; 6 dozen handsaw files; 3 dozen crosscut files; 2 dozen iron wedges; 2 dozen iron froes; 6 adzes; 6 hammers; 1 set blacksmith's tools, screw-plate, &c.; 4 sets calking irons; 300 pounds iron, bar; 200 pounds rods for bolts,  $\frac{3}{4}$  inch thick.

I certify that the above requisition is correct, and that the articles specified are absolutely requisite for the public service, rendered so by the following circumstances: The Seminole Indians and blacks having commenced war in the Territory of Florida, and having recently cut off a considerable force under Major Dade, 4th infantry. Immediate concentration of force at Tampa Bay, Fort Brooke, is necessary, and for which these supplies will be required.

EDMUND P. GAINES, *Major General, Commanding.*

The quartermaster will issue the articles specified in the above requisition.

EDMUND P. GAINES, *Major General, Commanding.*

Received, New Orleans, January, 1836, of Major J. Clarke, assistant quartermaster United States army, two hundred pounds 10d nails; two hundred pounds double 10d nails; two hundred pounds 8d nails; two hundred pounds 4d nails; six broadaxes; two hundred felling axes; two hundred spades; one hundred picks or grubbing hoes; twenty-five augers, assorted; two dozen gimlets, assorted; twelve crosscut saws; twelve handsaws; twenty coils of inch rope; two dozen whipsaws; six dozen whipsaw files; six dozen handsaw files; three dozen crosscut files; two dozen iron wedges; two dozen iron froes; four grindstones; fifty hatchets; four hundred pounds spikes; two hundred pounds of oakum; six adzes; six hammers; one set blacksmith's tools; four sets calking irons; three hundred pounds of iron, bar; two hundred pounds rod  $\frac{3}{4}$  inch thick.

In full of the above requisitions.

No. 5.

HEADQUARTERS WESTERN DEPARTMENT, *New Orleans, January 15, 1836.*

SIR: Being convinced, from the published reports of the late sanguinary conflicts in East Florida between the United States troops and the Seminole Indians, that an immediate concentration in that quarter of additional force is necessary for the prompt punishment which the habitual faithlessness and inveterate hostility of those brigand tribes merit, I am sure I shall but anticipate the wishes of the President of the United States by soliciting the services of a few corps of the high-minded and chivalric volunteers of Louisiana. I have, therefore, respectfully to request your excellency to give orders authorizing a regiment of eight companies of riflemen and infantry, or of either of these arms, to hold themselves in readiness to assemble, at a moment's warning, at this city, for embarkation from hence to Fort Brooke, near Tampa Bay.

The United States quartermaster and assistant commissary of subsistence will be ordered to have in readiness at this city arms, ammunition, and subsistence, and camp equipage, hospital and medical stores, and medical attendance for the volunteers, who will be expected to provide themselves with a supply of clothing.

Very respectfully, &amp;c.,

EDMUND P. GAINES, *Major General, Commanding.*His Excellency E. D. WHITE, *Governor of Louisiana.*

No. 6.

SPECIAL ORDER.

HEADQUARTERS WESTERN DEPARTMENT, *New Orleans, January 16, 1836.*

The assistant commissary of subsistence at New Orleans will obtain and deliver to Lieutenant Myers, of the 4th regiment of infantry, forty thousand complete rations of provisions, to be forwarded to Fort Brooke, East Florida, forthwith.

EDMUND P. GAINES, *Major General, Commanding.*

No. 7.

SPECIAL ORDER.

HEADQUARTERS WESTERN DEPARTMENT, *New Orleans, January 16, 1836.*

1. Lieutenant A. C. Myers, of the 4th infantry, will repair to Baton Rouge, and receive from the ordnance officer at that post the arms and ordnance stores specified in my requisition of yesterday's date, which supplies he will have shipped to this city and placed on board the transports to be furnished by the United States quartermaster, with the subsistence and tools required for Fort Brooke, Tampa Bay; which supplies will be receipted for, and be in charge of Lieutenant Myers, and be delivered by him to the commandant of Fort Brooke.

2. To guard against accidents, Lieutenant Colonel Foster will furnish Lieutenant Myers with a non-commissioned officer and twenty sober men to accompany him for the protection of the vessel and military stores ordered to Fort Brooke.

EDMUND P. GAINES, *Major General, Commanding.*

No. 8.

ORDER No. 4.

HEADQUARTERS WESTERN DEPARTMENT, *Mobile, Alabama, January 18, 1836.*

Captain Ethan A. Hitchcock is hereby appointed to act as assistant adjutant general. He will accompany the general to Pensacola, and thence on his intended visit of inspection in Florida and Louisiana.

EDMUND P. GAINES, *Major General, Commanding.*

No. 9.

SPECIAL ORDERS No. 5.

HEADQUARTERS WESTERN DEPARTMENT, *Mobile, Alabama, January 18, 1836.*

1. Lieutenant Colonel D. E. Twiggs will receive and cause to be mustered into the service of the United States the corps of Louisiana volunteers requested of his excellency the governor on the 15th instant, and have them supplied with arms, ammunition, and camp equipage, with a supply of subsistence sufficient for two months' issue.

2. To the Louisiana volunteers, or to such four companies of them as may be first ready for service,

Lieutenant Colonel Twiggs will add such regular force as may have arrived at New Orleans previous to the time the volunteers shall receive their supplies, together with such of the 4th regiment of infantry at Baton Rouge and New Orleans as in his judgment can be considered disposable; with which force he will embark on board the most serviceable vessel he can select for the contemplated voyage and peculiar service in view, and repair to Tampa Bay, where he will report to and co-operate with Brigadier General Clinch or the officer commanding the present expedition against the Seminole Indians.

3. Should an immediate communication with the main force now in Florida prove to be impracticable, Lieutenant Colonel Twiggs will in that case take command of such other force as he may find disposable at Tampa Bay, and arrange with the commander of such naval force as he shall find in that quarter a plan of co-operation for the immediate arrest or destruction (in case of resistance) of all the Indian warriors and colored fishermen found in East Florida, with such as may be seen hovering upon the Florida coast without permission.

4. The Louisiana volunteers will be mustered by Lieutenant Buchanan.

EDMUND P. GAINES, *Major General, Commanding.*

HEADQUARTERS WESTERN DEPARTMENT, *Pensacola, January 25, 1836.*

GENERAL: I have the honor to report, for the information of the proper authorities, that, in pursuance of my intention suggested in my letter to you under date of the 15th of this month from New Orleans, I proceeded, by the way of Mobile, to this place, where I had the satisfaction to learn that Commodore Dallas, at Key West, and Commodore Bolton, at the navy yard here, had, with the promptitude, zeal, and judgment for which they have been long and justly distinguished, ordered to Tampa Bay all the force which they deemed it practicable to dispose of, for the desired co-operation with the troops in that quarter, of which I doubt not the Navy Department has been duly advised. These timely aids, added to the force which Lieutenant Colonel Twiggs is now collecting together for that service, with the 6th regiment of infantry, which I trust will have been ordered by the general-in-chief in time to reach New Orleans between the 1st and 5th of February, (next month,) will, I am convinced, be sufficient, with the force which General Clinch has a right to calculate on from the Atlantic posts south of New York, inclusively, to take or destroy the enemy in the course of a few days after the concentration of the forces above referred to; possibly a month may be required for the accomplishment of this service.

Having reason to believe that some volunteer companies of Louisiana were disposed to tender their services in the expedition to East Florida, I, on the 15th instant, requested his excellency Governor White to give orders authorizing a regiment, to consist of eight companies of riflemen and infantry, or of either of those arms, to hold themselves in readiness to assemble at a moment's warning at New Orleans, for embarkation to Fort Brooke, Tampa Bay. On my way to this place, on meeting the news of the sudden abandonment and *homeward rush* of the Floridian militia from Brigadier General Clinch, just when he had most need of them to rush upon the enemy, I, on the 18th instant, issued my Special Orders No. 5, of which I send herewith a copy, directing Lieutenant Colonel Twiggs to receive in service the regiment of Louisiana volunteers, and to proceed with that and all other disposable force at and near New Orleans to Fort Brooke; to report to and co-operate with Brigadier General Clinch; and, with the aid of the naval force sent thither, to take or *destroy* (in case of resistance) the hostile Indian warriors, with all other colored men in East Florida, or found hovering on that coast without authority.

I very much regret to learn from Lieutenant Colonel Twiggs, under date of the 22d instant, that he has reason to apprehend there will be but few volunteers, and that his whole force of regulars will amount to not more than 140 fit for duty. Small as this force is, I shall direct it to proceed to Tampa, with as many of the companies of volunteers required as may be in readiness in the present week; not doubting but that the 6th infantry will follow as soon as practicable after it receives the anticipated orders to march. Should the ice have obstructed the navigation of the Mississippi even as far down as New Madrid, the regiment could march thither without heavy baggage in five or six days, where it would embark on board steamboats, there being always of late years some two or three (more or less) at or near the lower point of the obstructed section of the river. With such an obstruction, the regiment would arrive at New Orleans twelve days from the time it received marching orders; without the supposed probable obstruction, the movement would be accomplished in six or seven days after the receipt of marching orders at Jefferson Barracks. By suitable steamboats for the movement from New Orleans, the regiment, or any part of it deemed requisite to send to Tampa Bay, would be landed there in two and a half to three days.

I shall repair immediately to New Orleans, and avail myself of every proper occasion in my power to meet faithfully all exigencies as they may occur, and to carry into effect whatever plans of operation the constituted authorities may see fit to direct for the defence of the country and for the interests and honor of the service, pursuant to the Constitution and laws of the land, and more especially in accordance with the *oath* under which I have often rendered our beloved country some service against *enemies* and *opposers* without and within her limits, as you and a few other honorable brethren in arms (who, thanks to our Heavenly Father, are yet spared from an untimely grave) can and will testify. Let me have men and means, with the authority hitherto allowed to officers of my grade and station in times of war or threatened war, and my life upon it I will not only soon inflict exemplary punishment on our too-much-despised red foe and his allies, but I will very soon put in a state of defence, for giving our old friends the French a warm reception, our excellent forts on this frontier—forts that are now without the means of defence—whilst every infantry company in my department may be, and shall be, if placed at my disposal, rendered equal in a few weeks time to our artillery companies.

All which is most earnestly and most respectfully submitted.

EDMUND P. GAINES, *Major General, Commanding.*

Brig. Gen. ROGER JONES, *Adjutant General.*

## No. 11.

HEADQUARTERS WESTERN DEPARTMENT, *New Orleans, February 2, 1836.*

SIR: With a view to an efficient co-operation of the forces now assembling in the northeast quarter of East Florida, under your command, with those ordered from this city by water to Tampa Bay, against the Seminole Indians and their colored vassals and allies, I take much pleasure in advising you that a fine battalion of the chivalric volunteers of Louisiana, consisting of eight companies, headed by Adjutant General Smith, are engaged to embark to-morrow with the regular troops at this post, under the command of Colonel Twiggs, on board the steamboats the Merchant, Captain Smyler, and the Watchman, Captain Vincent. These forces, amounting to near seven hundred men, added to two hundred and fifty artillerymen and marines now at Tampa, to be sustained by an efficient naval force promptly furnished by Commodores Dallas and Bolton, for cutting off the enemy's boats and other means of escape to the islands on the coast, are intended to be in readiness at Fort Brooke, Tampa, by the 8th of the present month, to form a junction at or near that place with the force under your command, whenever and as soon as in your judgment your force shall be sufficient to justify the movement.

In the interim I shall be governed by such information as I may receive at Tampa, or in my voyage thither, to effect the desired junction, and as soon as possible to operate against and take or destroy the enemy.

I advise you to move with great caution, fortifying your camp at night, and marching in open order during the day, so as to be always ready for action at a moment's warning. A sufficient quantity of ammunition and provisions have been transported to Fort Brooke to divide with you until further supplies are received.

With great respect, your obedient servant,

EDMUND P. GAINES, *Major General, Commanding.*

Brigadier General D. L. CLINCH, *or officer commanding Fort King, Florida.*

## No. 12.

SPECIAL ORDER No. 7.

HEADQUARTERS WESTERN DEPARTMENT, *New Orleans, February 3, 1836.*

I. On the arrival at this city of the sixth United States infantry, or such part of that regiment as shall arrive within the present month, the commanding officer will detach therefrom a guard, to consist of an officer and twenty-four non-commissioned officers and men, to each of the following posts, viz: Forts Jackson, Wood, and Pike, and to Baton Rouge; and post one company at the barracks in this city, for the defence and protection of the said forts and posts, and to co-operate with the civil authorities in the maintenance of order.

II. In the interim, and until these arrangements can be made, Major Clark, the quartermaster, will take measures for the preservation of the public property at the above-named posts, by the employment of suitable officers or citizens to be stationed there for that purpose.

By order of Major General Gaines.

GEORGE A. McCALL, *Aide-de-camp, Acting Assistant Adjutant.*

## No. 13.

HEADQUARTERS, ON BOARD THE STEAMBOAT WATCHMAN,  
*Lake Pontchartrain, 8 o'clock a. m., February 4, 1836.*

SIR: I have the satisfaction to find that, in addition to the handsome battalion of Louisiana volunteers under Adjutant General Smith which you have had the goodness to raise, and, with the aid of the city authorities, supply with an outfit for the United States service, some other companies had yesterday offered their services.

In the absence of authentic information from the theatre of the border war in East Florida, and being satisfied, under existing circumstances, it is obviously more prudent and proper to have in the field a few companies, or even a *battalion more*, than to risk a *single soldier less* than may be deemed sufficient to take or destroy the brigand enemy in that quarter, and thus terminate the war speedily and effectually, I can have no doubt of the propriety of requesting and accepting of two or three additional companies that have so gallantly offered their services.

In addition to the supplies mentioned in my letter of the 15th ultimo, I have directed the quartermaster to furnish these additional companies with knapsacks and blankets.

I have the honor to be, with perfect respect, your obedient servant,

EDMUND P. GAINES, *Major General, Commanding.*

His Excellency E. D. WHITE, *Governor of Louisiana.*

## No. 14.

ADJUTANT GENERAL'S OFFICE, *January 22, 1836.*

SIR: Your communication of the 5th instant is this day received and submitted to the general-in-chief; and I have the pleasure to inform you that your proposed tour to the southern and eastern portion of your command is approved.

I am instructed to inform you, however, that the state of affairs *west* of the Mississippi may soon require your attention, if not presence, in that quarter; accordingly, you will be pleased to await orders and instructions in New Orleans.

I herewith respectfully enclose "Order No. 7," by which you will see that Major General Scott has been ordered to Florida. The turn which Indian affairs have recently taken in that quarter has required considerable drafts on the neighboring States for a volunteer and militia force, as well as an increase of the regular force drawn from the seaboard.

As the operations against the Seminoles will oblige Major General Scott to cross the line of his command, authority is given to him to that effect by instructions from the Secretary of War. As soon as the state of things will permit, General Scott will order the troops back to their respective stations.

I am, sir, with great respect, your obedient servant,

R. JONES.

Major General GAINES.

*Extract from a letter from the Secretary of War to General Scott, dated January 21, 1836.*

"The line dividing your own department from that of General Gaines is at present an imaginary one, and probably would, if run, actually pass through the scene of hostilities. You will pursue your operations, therefore, without regard to any such divisionary line."

---

No. 15.

HEADQUARTERS WESTERN DEPARTMENT, *on board steamboat Watchman, Pensacola Bay, Feb. 6, 1836.*

GENERAL: I have to acknowledge the honor of your letter of the 22d of last month, written, as I must infer, *by order of the Secretary of War*, (but upon this point you are not explicit,) which letter I met here this day, this vessel having been aground, and come in here to obtain fuel.

In your letter you refer to "Order No. 7;" no such order of the present year has been received by me.

Referring you, for the information of the proper authorities, to my letter written to you for their information, under date the 15th and 25th of last month, and more especially to the copy of my letter of the 2d instant to General Clinch, (reported also for the information of the Secretary of War and general-in-chief,) I have to state that I cannot consistently with my plan of co-operation with General Clinch, or with General Scott—if, indeed, he be the immediate commanding officer of the troops in the northeast border of East Florida—I cannot with propriety abandon the proposed expedition or co-operation until its results are known, or until I am authorized so to do at a time subsequent to the peculiar facts and circumstances of the case being known at Washington; for, in addition to the binding effect of my proposition to *co-operate* with the forces from that quarter, I have made a pledge to the governor and volunteers of Louisiana—a voluntary pledge—that I would not require this fine corps to go further than I myself would go, and that I would stand by them as long as they would stand by me in our contemplated efforts to take or destroy our red and black enemy in East Florida. I cannot but hope that this may be accomplished before the state of affairs west of the Mississippi "*may soon*," as you intimate, "*require my attention, if not my presence*," in that quarter, judging from the style of your letter upon this point, and that I shall arrive at New Orleans in time to receive any orders and execute any duties that may be assigned to me.

In respect to the contents of the extract subjoined to your letter touching the "imaginary line" between the western and eastern departments, about which the honorable Secretary of War has again and again given himself so much trouble, that is a matter which I perfectly understand. The Rules and Articles of War, in accordance with which every *responsible* personage honored with the President's commission is presumed to act under the sanction of an oath and upon honor, make this matter quite plain, the long-continued intrigues of all who have written to mystify the subject to the contrary notwithstanding.

All which is submitted with profound respect.

EDMUND P. GAINES, *Major General, Commanding.*

Adjutant General JONES, *Washington City.*

No. 16.

ADJUTANT GENERAL'S OFFICE, *Washington, February 22, 1836.*

SIR: Your communication dated "Pensacola Bay, on board steamboat Watchman, February 6, 1836," has this day been received and submitted to the Secretary of War and general-in-chief; and, in answer, I am directed to say it is expected that the Secretary of War's instructions to you, dated the 23d of January, have ere this been received, and that you will have proceeded, accordingly, to the western frontier of the State of Louisiana, there to assume the personal command of all the troops which are or may be employed in any part of the region adjoining the Mexican boundary. Lest the instructions herein referred to may not have reached you, the Secretary of War directs that a triplicate copy be now forwarded, and that on receiving this communication you will not delay your departure, but that you will be pleased to proceed immediately to the western frontier as herein required.

I send copies of this communication to you at Fort King and Pensacola.

I am, sir, with great respect, your obedient servant,

R. JONES, *Adjutant General.*

Major General GAINES, *Fort Brooke, Florida.*

No. 17.

ORDER No. 4.

HEADQUARTERS WESTERN DEPARTMENT, *Fort Brooke, Florida, February 10, 1836.*

I. Captain E. A. Hitchcock, of the 1st regiment of United States infantry, is hereby appointed to act as assistant inspector general of the department.

II. The troops at this post, consisting of A, B, G, and H companies of the 2d regiment of artillery, and A, B, E, G, H, I, and K companies of the 4th infantry, with the Louisiana volunteers, under Adjutant General Smith, will constitute a brigade, to be designated the "light brigade," and will be commanded by Lieutenant Colonel D. E. Twiggs, of the 4th regiment of infantry.

III. Lieutenant J. Izard, of the dragoons, will perform the duties of brigade major, and will report to Colonel Twiggs accordingly.

By order of Major General Gaines.

GEORGE A. McCALL, *Aide-de-camp, Acting Assistant Adjutant General.*

No. 18.

ORDER No. 6.

HEADQUARTERS, *Fort Brooke, February 12, 1836.*

Brevet Majors H. Wilson and W. W. Lear, of the 4th infantry, senior captains on duty with their regiment, will do duty as field officers, during the absence of the colonel and lieutenant colonel on other service, or until otherwise directed; to take effect from the 10th instant.

By order of Major General Gaines.

GEORGE A. McCALL, *Aide-de-camp, Acting Assistant Adjutant General.*

No. 19.

SPECIAL ORDER No. 11.

HEADQUARTERS, *Fort Brooke, February 12, 1836.*

First Lieutenant S. McKenzie, of the 2d regiment of artillery, ordnance officer at this post, will issue, for the use of the friendly Indians who have volunteered their services, seventy-three rifles, seventeen wipers and drivers, and ten bullet-moulds, to be returned when their services on the campaign shall be dispensed with.

By order of Major General Gaines.

GEORGE A. McCALL, *Aide-de-camp, Acting Assistant Adjutant General.*

No. 20.

SPECIAL ORDER No. 12.

HEADQUARTERS WESTERN DEPARTMENT, *Fort Brooke, February 13, 1836.*

Lieutenant McKenzie, ordnance officer, will issue to Captain Benjamin Hallett, of the Indian department, fifty muskets and one keg of powder, taking the proper receipts for the same.

By order of Major General Gaines.

GEORGE A. McCALL, *Aide-de-camp, Acting Assistant Adjutant General.*

No. 21.

HEADQUARTERS WESTERN DEPARTMENT, *Fort King, East Florida, February 22, 1836.*

GENERAL: I have the honor to report, for the information of the President of the United States, my arrival at this post this afternoon, with the regular and volunteer force referred to in my plan of operations, enclosed to you from New Orleans, under date the 2d of the present month, all in good health, save two or three cases of chills and bad colds, which I have reason to believe two days of rest and medical attendance will remove—having sought at every point deemed most likely to present to me the principal force of our savage enemy, without being able to find him, or any visible evidence of the direction of his late movements. I shall continue to search for and endeavor to send a satisfactory account of these faithless barbarians.

I shall take an occasion to write to you as soon as I shall have time to collect the information which this place and its vicinity may afford. In the meantime I enclose to you the report of my acting inspector general, giving an account of my visit to the battle ground of Major Dade, and the burial of the gallant band of which he was the unfortunate leader.

Very respectfully, your obedient servant,

EDMUND P. GAINES.

Adjutant General JONES.

## No. 22.

HEADQUARTERS WESTERN DEPARTMENT, *Fort King, East Florida, February 22, 1836.*

GENERAL: I do myself the honor to announce to you my arrival at this place this afternoon, pursuant to my plan of operations communicated to you under date the 2d of the present month, my force, consisting of near eleven hundred regulars and volunteers, all in good health, save and except some few cases of chills and colds, which I doubt not but two days' rest will remove. My march to this place was by way of Warren's Landing, on the Alafia river, and thence to "the military road," near the burnt bridge on the Hillsborough river, thence along the road to this post; having found, nearly forty miles south of this post, the deeply afflictive exhibition of the slain and mutilated bodies of the gallant band who fell in battle under Major Dade, on the 28th of December, without being able to discover the savage foe by whom this and other numerous acts of barbarism had been perpetrated upon this ill-fated frontier.

Hoping soon to see you or hear from you the results of your late movement upon the northern and eastern border of the theatre of war, with the information obtained by you as to the enemy's late movements and present probable position, that we may concert measures for his speedy overthrow, in which I shall take much pleasure in a cordial co-operation with you, I offer you my best wishes that our joint efforts may tend to a speedy and honorable termination of the war.

My present object is to march from this place by way of the lower battle ground on the Withlacoochee, and thence whithersoever any trail or trace of the enemy may be found; and finally to return to Fort Brooke, obtain additional supplies, and then move in a direction to Charlotte harbor, not doubting that, after securing the frontier north and east of this place, you will obtain such information of the movements of the enemy as to lead you from this place by the way of Toloc-chopko, on Pease creek, and thence toward Charlotte harbor, where you will find a supply of subsistence and ammunition, under the protection of a United States naval force. At Fort Brooke you will also find similar supplies, sufficient for your return to this place, or, if necessary, to enable you to remain in that quarter with 1,000 or 1,200 men until you can obtain supplies from New Orleans.

These suggestions are necessarily imperfect; but this must always be the case, more or less, in a war with a people who take no prisoners, who have no fortifications, no intercourse with any other part of the human family; no newspapers, nor any post office or intelligence department. I therefore leave you to act according to the best of your judgment and the information you may from time to time obtain, proceeding, as I shall proceed, upon the principle that to find the enemy we must search for him; and when we find him we must take or destroy him, or he will assuredly destroy us.

I am, very respectfully, your obedient servant,

EDMUND P. GAINES, *Major General, Commanding.*

Brigadier General D. L. CLINCH,

*Or the officer commanding on the northeast border of East Florida, Fort Drane.*

## No. 23.

WESTERN DEPARTMENT, *Fort King, Florida, February 22, 1836.*

GENERAL: Agreeably to your directions, I observed the battle ground six or seven miles north of the Withlacoochee river, where Major Dade and his command were destroyed by the Seminole Indians on the 28th of December last, and have the honor to submit the following report:

The force under your command, which arrived at this post to-day from Tampa Bay, encamped on the night of the 19th instant on the ground occupied by Major Dade on the night of the 27th of December. He and his party were destroyed on the morning of the 28th of December, about four miles in advance of that position. He was advancing towards this post, and was attacked from the north, so that on the 20th instant we came upon the rear of his battle ground about nine o'clock in the morning. Our advanced guard had passed the ground without halting, when the general and his staff came upon one of the most appalling scenes that can be imagined. We first saw some broken and scattered boxes, then a cart, the two oxen of which were lying dead, as if they had fallen asleep, their yokes still on them; a little to the right one or two horses were seen. We then came to a small enclosure made by felling trees in such a manner as to form a triangular breastwork for defence. Within the triangle, along the north and west faces of it, were about thirty bodies, mostly mere skeletons, although much of the clothing was left upon them. These were lying, almost every one of them, in precisely the position they must have occupied during the fight, their heads next to the logs over which they had delivered their fire, and their bodies stretched, with striking regularity, parallel to each other. They had evidently been shot dead at their posts, and the Indians had not disturbed them except by taking the scalps of most of them. Passing this little breastwork, we found other bodies along the road and by the side of the road, generally behind trees, which had been resorted to for covers from the enemy's fire. Advancing about 200 yards further, we found a cluster of bodies in the middle of the road; these were evidently the advanced guard, in the rear of which was the body of Major Dade, and to the right that of Captain Frazer. These were all doubtless shot down on the first fire of the Indians, except, perhaps, Captain Frazer, who must, however, have fallen very early in the fight. Those in the road and by the trees fell during the first attack. It was during a cessation of the fire that the little band still remaining, about thirty in number, threw up the triangular breastwork, which, from the haste with which it was constructed, was necessarily defective, and could not protect the men in the second attack.

We had with us many of the personal friends of the officers of Major Dade's command, and it is gratifying to be able to state that every officer was identified by undoubted evidence. They were buried, and the cannon, a six-pounder, that the Indians had thrown into a swamp, was recovered and placed vertically at the head of the grave, where it is to be hoped it will long remain. The bodies of the non-commissioned officers and privates were buried in two graves, and it was found that every man was accounted for. The command was composed of eight officers and 102 non-commissioned officers and privates. The bodies of eight officers and 98 men were interred, four men having escaped, three of whom reached Tampa Bay; the fourth was killed the day after the battle.

It may be proper to observe that the attack was not made from a hammock, but in a thinly-wooded country, the Indians being concealed by palmetto and grass, which has been since burned.

The two companies were Captain Fraser's, of the third artillery, and Captain Gardiner's, of the second artillery. The officers were Major Dade, of the fourth infantry; Captains Fraser and Gardiner, Second Lieutenant Basinger, Brevet Second Lieutenants J. E. Henderson, Mudge, and Keais, of the artillery, and Doctor J. S. Gatlin.

I have the honor to be, with the highest respect, your obedient servant,

E. A. HITCHCOCK, *Captain First Infantry, Acting Inspector General.*

Major General EDMUND P. GAINES, *Commanding Western Department, Fort King, Florida.*

No. 24.

SPECIAL ORDER No. 13.

HEADQUARTERS WESTERN DEPARTMENT, *Fort King, Florida, February 22, 1836.*

1. Lieutenant Colonel William S. Foster, of the fourth regiment of infantry, with the effective force of his regiment present, will proceed to Fort Drane, Auld Lang Syne, and procure from the officer in command thereof fourteen thousand rations of salted pork, and fourteen thousand rations of hard bread or flour, with a proportional quantity of salt, with which he will return to this post with as little delay as practicable. Colonel Foster will take with him all the public horses and carts at this post. Should these, together with the horses and light carts, or wagons, he may be able to procure at Fort Drane, be insufficient to transport the number of rations above specified, he will return with such number as the means of transportation afforded him will allow.

2. Captain Shannon, assistant quartermaster, will accompany Colonel Foster, and will procure from the quartermaster at Fort Drane, or otherwise, if practicable, twenty-five horses for this command. He will then take such measures as he may deem most expedient to forward provisions and quartermaster stores to the different points designated in his instructions from the quartermaster general.

3. Lieutenant John H. Allen, of the third artillery, will at the same time proceed to join his company at Fort Drane.

By order of Major General Gaines.

GEO. A. McCALL, *Aide-de-camp, Acting Assistant Adjutant General.*

No. 25.

SPECIAL ORDER No. 15.

HEADQUARTERS WESTERN DEPARTMENT, *Fort King, Florida, February 26, 1836.*

Lieutenant G. H. Talcott, acting quartermaster, will purchase three horses, to be used in drawing the field-pieces in possession of the battalion of artillery under the command of Captain F. S. Belton, second artillery.

By order of Major General Gaines.

GEO. A. McCALL, *Aide-de-camp, Acting Assistant Adjutant General.*

No. 26.

SPECIAL ORDER No. 16.

HEADQUARTERS WESTERN DEPARTMENT, *Fort King, Florida, February 26, 1836.*

Lieutenant G. H. Talcott will furnish, on the requisition of Lieutenant Colonel Twiggs, commanding the light brigade, such articles as may be necessary for the troops under his command.

By order of Major General Gaines.

GEO. A. McCALL, *Aide-de-camp, Acting Assistant Adjutant General.*

No. 27.

SPECIAL ORDER No. 17.

HEADQUARTERS WESTERN DEPARTMENT, *Camp Izard, February 28, 1836.*

Lieutenant and Adjutant Buchanan, of the fourth infantry, will perform the duties of brigade major of the light brigade until the recovery of Lieutenant and Brigade Major Izard from the wound received this morning.

By order of Major General Gaines.

GEO. A. McCALL, *Aide-de-camp, Acting Assistant Adjutant General.*

## No. 28.

HEADQUARTERS CAMP IZARD, *on the right bank of the Withlacoochee, Two miles west of General Clinch's battle ground, February 28, 1836.*

GENERAL: I take much pleasure in stating to you that I have reason to believe I have now near me the principal force of the Seminole Indians with their black vassals and allies. I yesterday afternoon, after halting my reserve and rear guard, with my baggage train, in the upper pine woods, near the encampment north of the battle ground, proceeded with the remaining part of my force to the Withlacoochee with a view to inspect and reconnoitre in person the adjacent section of the river preparatory to my intended crossing, which I had designed to attempt this morning. I had been at the river only long enough to examine 250 or 300 yards about and above the usual crossing place, when the enemy commenced a spirited firing upon my party, and kept it up with the war-whoop for half an hour. The fire was, of course, returned.

Having determined this morning, in consequence of the thick woods on the opposite side of the river, to extend my examinations to this point, at which I learned there were open pine woods on both sides of the river, I accordingly marched with my whole force to this place, where I was promptly met by the enemy, whose force appears to have increased very considerably in the course of an hour or two. The river at this place is deemed to be about as wide, but much deeper and less rapid than at the first-mentioned place, with open pine woods on both sides. Neither of the places are fordable. My reconnoissances, in consequence of the narrowness of the river, and the impossibility of finding materials for promptly bridging or rafting the stream, have resulted in the loss of two of the Louisiana volunteers killed and ten volunteers and regulars wounded. Among the latter, I deeply lament to find the gallant Lieutenant Izard, of the dragoons, dangerously.

Being convinced that the principal force of the enemy is now assembled before me, and not doubting that their women and children are placed in a large cypress swamp within a few miles of this place, and that an immediate movement of a force equal or nearly equal to that now with me, consisting in part of mounted men, would enable us to put an end to the war in the next ten days, by a combined and simultaneous movement against them, I have deemed it my duty to propose to you such a movement, should the forces expected at Fort Drane have arrived; otherwise, the force there on the 22d would, I think, be sufficient, but this is doubtful, and the case is one of too much importance to leave the question of force at all in doubt. In the expectation of this co-operation, I shall endeavor to amuse the enemy in completing my boats and preparing to cross; but I shall not cross until I hear from you.

In any event, I request of you six thousand rations of pork, and flour, and sugar, with the quartermaster's stores which follow: 2 whip saws, 2 cross cut saws, 2 hand saws, 6 adzes, 6 froes, augers, assorted, 4 broadaxes, 2 iron wedges, 200 iron spikes, and, if possible, two field-pieces, with 150 rounds canister and 50 round shot, 10,000 musket cartridges.

Killed—Zeno Bouillie, Valentine Beck.

I have the honor to be your obedient servant,

EDMUND P. GAINES.

Brig. Gen. CLINCH, *or officer commanding the U. S. troops assembling at Fort Drane, East Florida.*

P. S.—The forces from Fort Drane should cross the Withlacoochee at the ford eight or ten miles above the battle ground, or at the point, and move down on the left bank of the river to this place.

## No. 29.

HEADQUARTERS CAMP IZARD, *two miles west of General Clinch's battle ground, February 29, 1836.*

GENERAL: I last night stated to you, by express, the occurrence of my meeting the Indians on my arrival at this place, suggesting the expediency of an immediate co-operation on the part of the disposable force under your command, under the strong conviction that, by such co-operation, we should be able, in a few days, to bring the war to a close, having been convinced that the principal force of the enemy is assembled near me on this river. The occurrences of the day confirmed me in the opinion I then expressed to you.

Having occupied myself in preparing a small work to command the crossing place of the river, and making canoes for the purpose of constructing a bridge, I had not deemed it necessary to strengthen my breastworks, not having apprehended that the enemy would have the temerity to attack me in my position. In this conclusion, however, I have been disappointed. At ten o'clock this morning a spirited and vigorous attack was made by the enemy on three sides of my encampment, which continued two hours, with little or no intermission; in the course of which they frequently approached so near to my left flank, commanded by Adjutant General Smith, of the Louisiana volunteers, as to wound several men on the opposite flank, a distance of 200 yards. They were, however, repulsed, I have reason to believe, with considerable loss.

The loss sustained by the force of command was, one sergeant killed, and one officer (Lieutenant Duncan) and 10 men wounded of the regulars, and one officer and 20 men wounded of the volunteers. The troops having been particularly instructed not to throw away their fire, or to fire without correct aim at a short distance, I was happy to find that the order was strictly attended to, and, consequently, but little ammunition was expended. It is impossible to say, with any precision, what was the enemy's force; but the officers best acquainted with the service concur with me in opinion it was not less than 1,500. From the foregoing facts I have no doubt the principal force of the enemy is now in this vicinity; that they are sensible of the desperate situation in which they have placed themselves, and that their temerity will prompt them to make a resistance commensurate with the circumstances in which they find themselves.

I have abstained and shall abstain from a sortie until I hear from you, in the expectation that this course will contribute to keep them together, whilst a sortie might tend to disperse them. I am now satisfied a movement directly to this place will be more advisable than to attempt to cross the Withlacoochee higher up, as suggested in my letter of yesterday. I am, moreover, of the opinion that, if mounted men can be procured in the course of a few days, your force should not move from Fort Drane without this description of troops. I repeat my request that I may be furnished 6,000 rations of flour, pork, and

sugar, five bushels of salt, some corn, with tools to build block-houses, two field-pieces, 150 rounds of canister and 50 of round shot, 10,000 musket-ball cartridges, with as many light wagons as can be spared, as my wounded are increasing daily, and my horses decreasing.

I have the honor to be, &c.,

EDMUND P. GAINES.

General D. L. CLINCH, *or officer commanding troops assembled at Fort Drane, Auld Lang Syne.*

No. 30.

SPECIAL ORDER No. 18.

HEADQUARTERS WESTERN DEPARTMENT, *Camp Izard, on the Withlacoochee, March 9, 1836.*

Lieutenant Colonel D. E. Twiggs, of the 4th infantry, will repair to New Orleans and resume command of the post. Until otherwise directed, he will make occasional visits of inspection to the military posts in his immediate vicinity.

By order of Major General Gaines.

GEO. A. McCALL, *Aide-de-camp, Acting Assistant Adjutant General.*

No. 31.

ADJUTANT GENERAL'S OFFICE, *Washington, March 10, 1836.*

SIR: Your communication, dated Fort King, February 22, reporting your arrival at that post with the regular and volunteer force under your command, (number not stated,) has been submitted to the general-in-chief, the Secretary of War, and by him to the President. Without determining, at this time, on the circumstances which induced you to repair with a considerable volunteer force from Louisiana to Florida, and subsequently to Fort King, the President directs that you will be pleased to report, for the information of the Executive, the circumstances and reasons which have prompted your recent movements in Florida, especially as regards the plan of operations detailed in your despatch to General Clinch from Fort King, under date of February 22, 1836, as seen by the copy this day received through Major General Scott, and to him forwarded by General Clinch—the said despatch to General Clinch being considered by the President as interfering with the previous plan of operations in Florida, and the command of the troops in that quarter, which, by the orders of the President, had, in January, been assigned to Major General Scott, as you have already been apprised.

I am further directed respectfully to request that you will be pleased to state why you did not report your arrival at Tampa Bay, the force there assembled under your command, the condition of the service in general at that post, as well as any intelligence respecting Indian affairs, &c, as circumstances at the time would have enabled the commanding officer to communicate, and as required by the regulations.

I respectfully enclose herewith, for your information, a copy of my letter to General Arbuckle of this date, by which you will see that, in your absence, he has been ordered to the western frontier of Louisiana.

I am, sir, with great respect, your obedient servant,

R. JONES, *Adjutant General.*

Major General GAINES, *U. S. Army, Tampa Bay, via Fort King, Florida.*

No. 32.

ORDER No. 7.

HEADQUARTERS WESTERN DEPARTMENT, *Fort Izard, on the Withlacoochee, Florida, March 9, 1836.*

1. Called to East Florida by the savage massacres and conflagrations of the 28th of December and the following month, the commanding general hastily collected in Louisiana the forces which accompanied him from that patriotic State. These troops, in the short space of thirty-six days, have marched by land and water nearly eight hundred miles, one hundred and forty of which was through the country occupied by the enemy, whose principal force they have met, beaten, and forced to sue for peace.

2. These important objects of the campaign having been accomplished with the hearty and cordial co-operation of Brigadier General Clinch, (to whose sound judgment the defence of this frontier had been wisely confided, and by whose gallantry the enemy had been chastised on the 31st of December, and since held in check as far as his limited means would allow,) the troops from Louisiana are placed under his command, in order to guard against the known faithlessness of the enemy, until the arrival of the forces under the officer charged with the diplomatic arrangements of the War Department. Whenever and as soon as that officer shall mature his plan of operations, and accomplish the duties assigned him, the forces from Louisiana will return to New Orleans.

3. The commanding general cannot, consistently with his views of propriety, take leave of the troops by whom he has been so manfully sustained without tendering them his grateful acknowledgments for the constancy and courage with which they have performed every duty, and borne privations, the recital of which would not fail to command the admiration of the virtuous and wise of every section of the republic. The officers and soldiers of the whole of these forces, (including the artillery from Tampa Bay,) acting as a light brigade, under command of Lieutenant Colonel Twiggs, of the 4th infantry, have per-

formed their duty so much to the satisfaction of the general that he cannot discriminate between the relative claims of corps, of officers, or other individuals, without the risk of invidious distinctions; all did their duty cheerfully and gallantly; and when it became necessary to meet the question whether to eat the meat of their own horses or to abandon an important position, all cheerfully preferred this unpleasant subsistence to any movement that would endanger the frontier; the horse-meat was accordingly eaten by officers and men, until the enemy was beaten and sued for peace. A timely supply of provisions arrived, escorted by the brave Georgians, Floridians, and regulars, under General Clinch, at the moment the pacific propositions of the enemy were in the act of being answered. The Indians were fired on by the general's light troops before he could be notified of the object of their being near the camp. They have since disappeared.

4. The general deeply regrets the fall of First Lieutenant J. F. Izard, of the dragoons, acting brigade major, and in command of the advance guard. He fell at the head of his corps, and though mortally wounded, had the heroic presence of mind to order, "Keep your positions, men, and lie close." Second Lieutenant Duncan, of the second artillery, was slightly wounded; Captain Sanders, commanding the friendly Indians, was severely wounded; Captain Armstrong, of the United States transport schooner *Motto*, was slightly wounded. The two last-named officers were in the advance, where their services had been highly useful during the march. Lieutenant Ephraim P. Smith, of Captain Williams's company of Louisiana volunteers, received three wounds. This officer and twenty-nine non-commissioned officers and soldiers of other companies of the regiment evinced their gallantry by their good conduct as well as by their honorable wounds. The general is convinced that he never commanded a finer corps; its chief would do honor to any service.

The officers of the medical department merit the approbation of the general for the attentive and skilful manner in which their duties were discharged.

*List of killed and wounded.*

*Killed.*—First Lieutenant J. F. Izard, dragoons; Sergeant F. Dunn, of the second artillery; Private Z. Bolie, of the Louisiana volunteers; Privates Val. Beck and Henry Butler: total, 5.

*Wounded*, of officers, non-commissioned officers, and privates.—Second artillery, 8; fourth infantry, 8; Louisiana volunteers, 30: total, 46.

By order of Major General Gaines.

GEO. A. McCALL, *Aide-de-camp, Acting Assistant Adjutant General.*

No. 33.

HEADQUARTERS WESTERN DEPARTMENT, *Camp Sabine, July 4, 1836.*

SIR: I received on the 25th, at Pensacola, on my way to this place, your letter of the 10th of March.

I have delayed replying until now, from a firm conviction that my letters of the 15th and 25th of January and 6th of February to you, with those of the 2d, 22d, 28th, and 29th of February and 2d of March, to General Clinch, with my orders and special orders of the 18th of January to the 9th of March, 1836, inclusively, reported to you by my acting assistant adjutant general for the information of the proper authorities, would fully exculpate me from the imputations of General Scott, that I had "*interfered with his command*" or "*disturbed his plan of operations,*" &c.; more especially as the complainant's accusations were not deemed to be of sufficient importance for me to be furnished with a copy. But having recently seen the attacks made on me through the newspaper called the "*Globe,*" and some other papers of equal respectability and of *all political parties*, since the 1st of April last, purporting to be from the pen of that officer, or from his dictation or sanction, aided by the quartermaster general, a franking bureau officer of the War Department, these insidious publications assure me that I am again wantonly assailed. These combined attacks suggest to me the propriety of making, for the information of the proper authorities, the remarks and explanations which follow, and which I deem necessary and proper, in vindication of my conduct, my movements, and measures, in connexion with the war in East Florida, between the 15th of January and 9th of March last—a task which I was more than willing to abstain from, or leave to others, as I could not, consistently with my own self-respect and justice to my command, repel the calumnious accusations without calling in question the opinions of high public functionaries whose judgment and patriotism I had long sincerely respected; nor, indeed, without seeming disposed to join in an acrimonious controversy, which nothing short of an order from the President or the absolute necessity of *self-defence* could prompt me to do.

The Order No. 7 of the present year, requiring General Scott to repair to the left wing of my department, was never seen by me until my arrival at Fort King, on the 22d of February. I state this fact simply because it is a *fact* hitherto, I apprehend, unknown at your office, but it is a fact to which I attach little or no importance. Had I received this order at Pensacola, I should have viewed it as a measure of the *Secretary of War*, taken without a full knowledge of the progress of the war upon that frontier and of the circumstances which had rendered my movement to Florida proper, and that therefore my movement thither ought to continue until I should feel assured that the President was apprised of all the material facts bearing upon the subject, and more especially until the officer authorized to enter upon that part of my command assigned to him, and which formed the principal theatre of the war, should make his appearance in person upon that theatre of the war, unless, indeed, my attention had been called to other and apparently more important military operations, also in actual war, than those which called me to East Florida.

This view of the subject is based upon an essential principle of military law, derived from the laws of nature, and incorporated in our institutions; a principle sustained by the ablest writers of all enlightened nations to whose works I have had access; a principle without the strict observance of which no nation whose geographical limits exceed twenty miles square could be successfully defended; a principle deeply interwoven with the highest attributes of *sovereignty* and of *self-government*, namely, *self-defence* and *self-preservation*, as a nation or a state; or, in other words, *PROTECTION—IMMEDIATE, INSTANTANEOUS PROTECTION, to the exposed feeble members of the community from savage war.* Yes, sir, *immediate, instantaneous protection* by the military officer intrusted with the command of the particular section of country threatened with *savage attack*, until relieved *before the enemy* by the new commander.

Let us look into a few of the principal features of the case in question, and see what would probably have been the effect of a contrary rule of conduct on my part. In command of the western department, I had met at New Orleans intelligence of a great and unlooked-for disaster having occurred upon the left wing of my department, far distant from the seat of the federal government, from whence alone could I hope to receive new orders, or special instructions more applicable to the case in all its bearings, than the orders of the President, embraced in my commission, to serve the United States diligently as a general officer—with the orders which he had given me *to command the western department*. An important white settlement within my department was reported to be *overrun, sacked, and burnt*—a United States agent of Indian affairs, and eight valuable officers, and ninety-eight faithful soldiers, with many worthy frontier citizens killed, and their property stolen or destroyed. And I was aware that most of the neighboring military posts, namely, Forts Brooke, King, Drane, and Key West, all within my military department, were without any other works of defence than such as an efficient force of 500 men might have taken and destroyed in a few hours, with little loss or risk on their part—the garrisons of two of those posts (Fort King and Key West) being insufficient for their defence. I was, moreover, apprised that there were but about 600 troops of the regular army at that time in Florida, and these were separated by a wilderness, supposed to be occupied by the enemy, comprehending near 20,000 square miles, extending nearly 250 miles from north to south, and from 120 to 40 miles from east to west, with our 600 regulars stationed at the opposite angles and sides of this extensive wilderness, *without disposable force sufficient to insure a concentration at any one important vulnerable point* from one side of the wilderness in question to the other, without the most imminent danger of having such force destroyed in its movement to the point of concentration. The destruction of the brave but unfortunate Major Dade, with his heroic officers and men, affords an impressive lesson upon this view of the subject which no prudent American soldier or citizen should ever lose sight of. Under these circumstances, what was the duty of the commander of the western department? What, I ask, was the proper course for me to pursue? These questions may be most readily answered by asking another: What had I promised upon my oath to do? I had promised, upon my oath prescribed by law, “to bear true faith and allegiance to the *United States of America*, and to serve them *honestly and faithfully* against their enemies or opposers whomsoever, and to observe and obey the orders of the *President of the United States*, and the orders of the officers appointed over me, according to the rules and articles of war.”

I had with me my sword and my commission, with the orders of the President of the United States to “command” this department. Now, it is well known *that for me to command* a military department, or any particular section of country upon the frontier, great or small, is, in a plain military sense, *so to order and employ the men and means confided to my direction* as to protect our own people of the United States upon that section of frontier “against their enemies or opposers whomsoever,” as set forth in the aforementioned oath; and, *if it be in time of war, to continue so to command until duly relieved by the new commander, in his own proper person, and on the theatre of the war.*

In failing to comply with this sacred injunction, I well knew that I might thereby have suffered the enemy to kill great numbers of the citizens and troops, in addition to those already slain within the limits of my command, and burn their houses, and take their property. It was my bounden duty, therefore, without waiting for *new orders*, or special instructions, to collect together any disposable force found within my department which I might deem sufficient to enable me promptly to strike at the enemy, and, if possible, subdue them, or check their devastations, until the President should have notice of them, and of my efforts to arrest them, and then give such new orders as he might think fit.

But it is contended, principally indeed by those who have proven themselves to be better qualified for the quiet vocation of a writing-desk than the turbulent scenes of an Indian war, that I ought to have abandoned the expedition at Pensacola, because I received on my arrival at that city your letter notifying me, not that General Scott had actually arrived at the theatre of the war in Florida, *but that he had been ordered thither by the Secretary of War!* But little reflection is necessary to see the fallacy of this *closet view* of the subject. I had embarked, pursuant to my letter of the 2d of February, addressed “to General Clinch, or the officer commanding the forces assembling on the northeast border of east Florida,” with a view to *co-operate* with that officer in subduing the enemy. I had, moreover, given a pledge to the principal force then with me (the Louisiana volunteers) that I would *not require them to go further than I would myself go, and that I would stand by them as long as they would stand by me, in bringing the war to an honorable close.* I had thus promised, on the 2d of February, with a force of 700 men, so to co-operate; this force had been fortunately increased, before the embarkation was effected, to near 1,100 men. With this very respectable force embarked, and in its movement for Tampa Bay, and within two days’ march (by steam) of that place, I received at Pensacola the *notification* from you that General Scott *had been ordered by the Secretary of War* to that part of my command to which I was, under the above-mentioned circumstances, destined. But what assurance could I have had that he was there? Did you notify me that he was at the post of honor assigned to him by the Secretary of War? or that such arrangements had been made as afforded reasonable ground to hope that General Scott *would be prepared soon* to breast the storm of savage desolation, and *protect* from the scalping-knife and firebrand the helpless citizens of both sexes, and of all ages, in that region, who had looked to me as their protector? Did you tell me that Ocoela and his war-chiefs had given to the President satisfactory assurance that they would suspend their massacres and conflagrations until General Scott should *complete his plan of operations*, and be quite ready to subdue them? No such thing is found in your letter. Nor had I any reason, from the previous northern or western wilderness movements of that officer, to anticipate anything like a prompt movement on his part into the wilds of Florida, longer than he should find himself and his forces and supplies *propelled by steam-power.*

The now well-ascertained fact that General Scott confined his personal operations to the little interior and *unmenaced* places called *Picolata, Volusia, Black creek, and Fort Drane*, and the intervening country within the white settlements, occasionally on board the “little steamboat the *Essayons*” for near six weeks, viz: from about the middle of February until the 25th of March last, without any attempt on his part to search for the enemy, proves clearly, not that I should have abandoned my expedition at Pensacola, at Tampa Bay, at Fort King, or at the Withlacoochee, without subduing the enemy, but that I should, if possible, have redoubled my efforts to accomplish this all-important object sooner than I did; and, in place of leaving them under a pledge that hostilities on our part should cease, if, as they proposed, they would peaceably await the arrival of General Scott, and would attend to the terms he should be authorized by the President of the United States to offer them, [a pledge which appears to have been wholly disregarded by that officer,] I had taken them to Tampa Bay, completed with them a treaty in accordance with my

own understanding of what was due to them and to the United States—a measure which I am convinced I could have accomplished had I not indulged in the fruitless expectation that General Scott would arrive soon after hearing I had found the enemy and employ himself in the performance of the diplomatic and other duties assigned to him by the Secretary of War—I have no doubt that I should by such a movement have relieved the Florida frontier *forever* from all further disturbance on the part of these Indians, and should have placed them in a position calculated in time to change their inveterate hostility, desperation, and distress, to peace and comfort, if not to a sense of respect and gratitude to our government and country for the humanity, care, and kindness extended to them on their having sued for peace. I am well assured that every officer, and every intelligent soldier of the Louisiana volunteers and United States troops then with me upon the Withlacoochee, will concur in the opinion just now expressed.

From the foregoing views it may possibly be inferred that I may have been disposed to attach blame to General Scott for his readiness again and again to solicit or accept a command which he might imagine was calculated to awaken in my mind sentiments of personal ill-will towards *him*, such as he had some years past labored through many acrimonious pages to produce; but which *time*, with that sort of reflection which naturally results from a *rational use of time*, has so mitigated as to induce me on the receipt of your letter notifying me that he was ordered into my department, so far from feeling *dissatisfied with him*, to resolve upon availing myself of the occasion to co-operate with him [though junior to me] in a manner which I felt convinced, if he did his duty correctly, would be the means of enabling us at the proper theatre of action to settle our disputes forever by *our joint efforts in battle to show which of us could do the enemy the most harm and our country the most good*; and thus, in the best possible way of terminating personal enmities, restore between us that harmony which a proper sense of public duty should prompt every high-minded public functionary to extend to each other, so that the public service should suffer no detriment from their intemperate controversies. I knew General Scott too well to imagine *he had ever solicited such a command in the swamps of a wilderness, and against an enemy such as he had long held in contempt*; and I had long since ceased to cherish towards that officer any feeling of hostility. I had triumphed in the controversy which he had forced upon me. I was gratified at my triumph, not so much that *General Scott was vanquished*, as that *the law of the land was maintained and preserved inviolate by the part which I had taken in that controversy*. I shall again triumph, not that I have any claim to that peculiar talent of which some of my reckless enemies may boast—the talent of “*making the worse appear the better cause*”—but that I have the law of the land to sustain me. It is my present purpose to show that the facts of the case were such as to prove that I was constantly within the pale of military law; I cannot, therefore, but prove myself to have been *in the right*, and that all who are opposed to me *are in the wrong*.

It will be seen, by referring to my letter of February 23, that I expressed my purpose *cordially to co-operate with General Clinch or the officer commanding the forces then assembling in the northeast border of East Florida or at Fort Drane*. (I have no copy of my letter near me, and write now from my recollection of its contents, in which I am sure that I am substantially correct.) I also expressed in that letter *my hope that our joint efforts might tend speedily to terminate the war*. This sentiment had been often expressed by me to my staff and to the field officers of my command. True it is that my letters of the 22d, 28th, and 29th of February, and 3d of March, were all addressed to General Clinch or the officer commanding at Fort Drane. They were, however, properly so addressed, and they were obviously intended for the information and government of any officer at Fort Drane in command of the force assembling at or near that post for the defence of that section of the national frontier. Soon after the date of my letter of February 22 I had seen at Fort King a letter from General Scott, in which he expressed a desire to know where the principal force of the enemy could be found; that letter was addressed to General Clinch, and dated at Picolata about the 17th or 18th of February. Not doubting the sincerity of General Scott's *wish to learn where to find the enemy*, I was truly gratified to have it in my power to say that I would search for and endeavor to find their principal force, and would report accordingly. My superior knowledge of the country and of the enemy justified me in the hope and expectation that I should be able soon to relieve General Scott's supposed anxiety upon this point; for my movement by the way of the Alafia and the battle ground of the lamented Major Dade, where there was most reason to believe the enemy would make their boldest stand, (that having been deemed to be the place of their “*greatest good luck*,” as the interpreters had termed it,) having proven that their principal force was not in that quarter, I could not doubt but that I should find them lower down on the Withlacoochee, and I therefore determined to continue my search in that direction, that being in the direction to Fort Brooke, the only certain point from which I could replenish my supplies of subsistence and ammunition; the *great supply* which should have been at Fort King having been withheld from that place, whether *intentionally* to embarrass my operations, or from *ignorance* of the country with its wasted resources, or ignorance of their duty on the part of General Scott and his quartermaster general, I am yet to learn.

It is sufficient for me at present to affirm that large supplies *ought to have been*, and might have been, deposited at Fort King and at Fort Drane before the 22d of February, and that I was unable to obtain at those posts more than eight days' rations of subsistence, with scarce one hour's supply of powder and shot or cartridges. Nor could I take this slender supply without leaving those posts with a short allowance that could not have been justified, but upon the expectation of other supplies being on the road near them, and that my movement would contribute to divert from them the attention of the enemy. My plan of operations, embraced in my letter of the 22d of February, was, under all the circumstances of the case, necessary and proper; and it was also proper for me to address my letters intended for General Scott, who, I am aware, was not in my department, to *General Clinch*, an officer known to be on duty within my department, *or the officer commanding the troops assembled at Fort Drane*, where General Scott was expected to arrive in the course of a few days—where, indeed, he ought to have been before the middle of February. General Clinch, who perfectly understood his duty, lost no time in forwarding my letters or copies of them to General Scott, at Picolata, who, in place of a prompt response, meeting in the spirit in which it was offered my proposition cordially to co-operate with him in bringing the war to a speedy termination, indulged himself in unwarranted animadversions—imputing to me the worst of motives for my movements, and wasting in unavailing murmurs that precious moment for *action, by co-operation with me as I had proposed*, or, if he preferred it, by *taking the field and there relieving me*; he appears to have chosen rather to occupy himself in writing accusations against me, and endeavoring to convince the President of the United States that, in my letter of the 22d of February, above referred to, I had been guilty of some criminal interference with his (General Scott's) authority, as stated in your letter of the 10th of March, and more fully stated in the publications dated at Picolata, Black creek, Fort Drane, and more recently at other places, purporting to be from General Scott and other officers of the

army, all referring to "the plan of operations" and opinions of General Scott, but so artfully mixed up with plausible *fiction* and *reckless calumny*, slightly tempered with a few grains of truth, as to render it impossible to determine the source whence the mass of matter originated, or to discriminate between *the official*, *the semi-official*, and *mere hireling slanders* contained in this mass of matter. I would not willingly, in an official communication to your office, to be submitted to the President of the United States, take any notice of anything contained in those publications that is not strictly official. If I err in my attempt to discriminate in this particular, I will thank you to enable me to rectify myself, by favoring me *with all the official statements* referring to my conduct in relation to the war in Florida, as I may deem it to be essential to my vindication to show to all who may have entertained a doubt, as I trust I have already shown to the satisfaction of every man of military mind who has heard me or seen my vindication upon the following points:

1. That the proper *time* and *place* for me to have suspended my movement, and for General Scott to have entered upon the command assigned to him in my department, was *when he should appear in person near me* at the known theatre of the war, and nowhere else, while the war continued.

2. That, until he thus made his personal appearance near me at the theatre of the war, he had no right whatever to assume the control of a soldier, a public horse, or a public ration, within the limits of my department.

3. That it was my bounden duty to retain the control of every soldier, every horse, every ration, and every other species of public property necessary to the success of my operations against the enemy, connected with the command of the western department; and, above all, to retain and exercise *the command honestly and faithfully*, on the part of the United States, "*against their enemies or opposers whomsoever*;" and (in the language of the 62d article of war) give "orders for what is needful to the service, unless otherwise specially directed by the President of the United States, according to the nature of the case," and *the President had never specially directed it to be otherwise*. The adjutant general's notification of orders given through him by the *Secretary of War* was sufficient. This was, to say the least, a loose way of carrying into effect a solemn provision of law, embracing a subject of great delicacy and importance to the service.—(See the 62d article of war.) When the law expressly forbids a change of command, as in this article of war, *without the special direction of the President*, it is obvious that the spirit of the law cannot be fulfilled without the direction is given *by the President, or in his name*, by a person known to be authorized to communicate the orders or directions of *the President*. The adjutant general wrote *by order of the Secretary of War*. Nevertheless, if the President himself had given the order that General Scott should enter upon the duties of the command against the Indians in the western department whilst I was in the field, I contend that neither myself nor any other officer *engaged as I was in the immediate protection of the frontier, in the pursuit of the enemy, or in action, holding the enemy in check, could, with any propriety, or without a crime, abandon the command merely on receipt of the order*, and before the arrival at the place of pursuit or of action of the new commander, *unless specially directed by the President so to abandon the command!* A direction such as, I venture to affirm, has never been given in any civilized nation whose military history is known to this country. The theatre of the war was the place, the only proper place, for General Scott to enter upon, and for me to abandon the command assigned to him at any time before the enemy was subdued; but that officer did not choose to make his personal appearance at the Withlacoochee, though cordially and repeatedly invited by me, and challenged by the reiterated reports of my cannon, and by the war-whoop and rifle of the Indians, (as announced to him by General Clinch,) *to partake of the professional banquet*, which was regularly spread before me every day, from the 27th of February to the 5th of March, inclusively. I did not choose *to urge or entreat* him to come, because I have never desired to see an officer or soldier near me in action who did not come cheerfully and promptly, or who has been habitually vexing himself in fastidious scruples about *his rank*; and because I had reason to apprehend from the tardiness of his movement that a disease, which General Scott contracted towards me in August, 1814, had not been completely cured.

It was probably that sickness of the spleen which the best of doctors say "*finds ease only in the misery of others*," a sickness which a rapid march to the Withlacoochee, with the animating scenes, the martial music, pure air, and simple food of that region of the wilderness has never, to my knowledge, failed to improve the health of troops afflicted with disease of any kind, including cholera. That General Scott was retarded in his movement to the Withlacoochee by some *secret griefs* I could not doubt. What they were I know not. They will doubtless be disclosed in due time. He appears to have been content, for a time, with the notion that I had most improperly and prematurely interfered with his command and disturbed his plan of operations before it had been brought to maturity!—that it was my duty to consider him as entitled to the command, and the entire control of my troops and supplies, before he arrived in person within the limits of my department!—that my subduing the Indians ought to pass for nothing, because *he was especially authorized*, and *I was not especially authorized, to subdue them!* Childish conclusions these; too trifling to merit any notice, nor should I have noticed them but for the call made on me to explain and vindicate my conduct; and from the hope that my vindication may be read by the well-meaning officers and men of the volunteers and the army—who doubt, if, indeed, any doubt the propriety of my conduct—who, I am convinced, will readily yield their hasty opinions to the conviction which mature reflection on the subject cannot but produce. They will agree with me that my path of public duty was plain—too plain to be mistaken by any honest soldier or citizen not blinded by the spirit of party or some other diabolic prejudice or passion. It was, without waiting for *new orders*, to fly as rapidly as possible, with whatever disposable force and supplies might appear to me necessary and proper to arrest the progress of the apparent growing evil of the late disasters; strengthen the feeble military posts, and, if possible, put an end to the war by a vigorous co-operation with any forces found in that quarter, or otherwise, as circumstances should dictate, according to my own plan of operations, contained in my letters of the 2d, 22d, 28th, and 29th of February, above referred to. The sum and substance of my design was to afford prompt and complete *protection*—that sort of protection which is guaranteed by the *Constitution of the United States to the people of the United States*, including the pioneer, the widow, the orphan, inhabitants of the frontier camp or cabin, as well as the polished and wealthy citizen of the great emporium of party politics, of commerce, and fashion; that complete *protection*, the work of which should, if possible, commence before *the work of destruction upon the frontier is finished or even begun*—*protection to the living citizen rather than to the ashes of the slain!* My plan of operations was expressed as concisely as I could express it in my letter of the 22d of February; it was "*to search for the enemy until I should find them, and then beat them, as otherwise he would beat me*"

4. In carrying into effect this plan of operations, I could suffer no officer to interfere with my troops

military posts, or supplies of any kind, within the limits of my department, until he should appear in person within those limits, duly authorized, and apparently ready and willing to meet the enemy and protect the people of the United States within my department "against their enemies or opposers, whomsoever," or until I had met and beaten the enemy and compelled them to sue for peace.

5. I did meet the enemy, and did several times beat them, and finally compelled them to sue for peace. How this was accomplished I need not now undertake to describe. Grave doubts have been expressed in some of the publications to which I have referred, as to the sincerity of the Indian chiefs in suing for peace, upon which is supposed to rest the fact of their having been subdued. I am willing to leave the issue of these questions to the testimony of the officers and the intelligent volunteer and regular soldiers who served with me, pledging my honor to abide by their concurrent testimony. But I am not willing to be tried and condemned without a hearing, and by persons who were not only not near me, but who have given me good reason to believe they would have been better pleased at my downfall than at the triumph obtained by me over the enemy; persons who know full well that the final decree at which every enlightened citizen and soldier who investigates the subject must sooner or later arrive, establishing the correctness of my conduct, must virtually fix the seal of condemnation upon theirs. Hence it was that many hours and days of precious time which should have been devoted to active operations against the Indians, were sacrificed at Picolata and Fort Drane, and other places, to the fabrication of slanderous essays to forestall and mislead public opinion, to condemn my movements, and cover me with the vilest detraction. The editors of newspapers hitherto professing friendliness towards me have been employed as the leading vehicles of this atrocious scheme of slander. Why is this so? I answer, that it is because I disdain to be the man of a political party! I owe allegiance to the *United States of America*, and not to a party. It may be that I did not require my officers and men at the Withlacoochee to take from the enemy as many lives as they had by their savage conduct forfeited; but where was the bond, or the principle of the laws of war or of nations, binding them to give or me to take the life of any one of them after they had raised the white flag and sued for peace? Their first proposition was made on the evening of the 5th of March. They were then told that if their chiefs would come in the next day they would be heard. They accordingly came with a white flag on the morning of the 6th of March, when they said, in the most subdued tone and manner, "We do not wish to fight any more; we have lost many of our warriors killed, and others disabled by wounds; we do not wish to lose any more in this way, or otherwise than by sickness or by the falling of trees; and we desire to make peace." They were told, in reply, that I was not authorized to treat with them, but that I had learned that an officer was on his way and would soon be there with authority to treat with them; that if they wished for peace they must lay down their arms or cease to make any further use of them, and stay beyond the Withlacoochee until the officer authorized to treat with them should arrive, and that they must then go wherever he should require them; but that if they should commit any more hostilities, our troops, of which we had many, would kill all of them found with arms in their hands. They then counselled among themselves and their warriors until four or five o'clock in the evening. The chiefs then returned and freely assented to my answer to their propositions, the last sentence of which my acting inspector general was for the second time explaining to them when General Clinch arrived in sight with the troops of his immediate command from Fort Drane, some of whom fired in the direction of the Indians, but at too great a distance to hurt them. They then hastily retreated to the adjoining hammock. They, however, manifested no disposition to violate their engagement, nor do I believe there was an officer or soldier with me, who had witnessed their conduct, who entertained a doubt but that they were subdued, and perfectly sincere in the desire they expressed to abstain from further hostilities, and meet General Scott in council whenever and wherever he might direct.

I remained in command, in order to satisfy myself of their sincerity, until the 9th of March, during which time some hundreds of my men were allowed to amuse themselves fishing, for a mile or two up and down the river, without discovering any indication of further hostility on the part of the Indians, some of whom were seen on the opposite side of the river. I, on the 9th of March, turned over the command of the troops then with me to General Clinch, as will be seen by my orders of that date, with a view to repair to this frontier. It is proper here to remark that, in order to obtain accurate information as to the position of the chiefs and warriors, and whether their pacific views remained unchanged, after being fired on by the volunteers with General Clinch, I approved the suggestion of General Clinch to send a black interpreter across the river to their camp. He set out on the 8th and returned on the evening of the 10th of March. He reported that the chiefs and warriors had gone up the Withlacoochee, near thirty miles above Camp Izard, to where their families were stationed; and that the chiefs told him they were waiting agreeably to my directions, and that they would be ready in five days to hold a council with the officer expected on for that purpose. General Scott was that officer, who, in place of meeting them in council, and directing them what to do to enable them to obtain peace, and conform to the wishes of the President of the United States—General Scott openly avowed (as I have been informed, and his official letters imply) a determination to pay no regard to my arrangement with the Indians, but to obtain an overwhelming force and then annihilate them. His blustering threats to this effect were probably known to every person, white and black, in and about the house of General Clinch at Fort Drane; and, as some of the black domestics were in the habits of intimacy with the black interpreters, it was more than probable that in this way the threats of the gallant general reached the ears of the Seminole chiefs. Nothing, therefore, could be more natural than that they should prepare for self-defence, and self-preservation, against a commander regardless of the pledge made to them by me, his immediate predecessor in command, and his senior; a pledge which could not be disregarded without a gross violation of the laws of nature and of war, which no nation can tolerate without a positive disregard of the most sacred of her obligations of good faith towards her neighbors. The sequel has proven the fallacy of such threats, and the truth of the proverb that "the battle is not always to the strong, nor the race to the swift."

6. It may be that I did not expose my officers and soldiers, volunteers and regulars, to as much risk and loss as some of my accusers deem necessary to give eclat to a triumph! Heaven preserve me, I pray, from that eclat which is won by the useless or wanton sacrifice of those placed under my command! If my accusers have reason to believe, from the testimony of those who ventured to accompany and co-operate with me in battle, that I neglected any important duty to save my own life, or the life of any of my officers or men, it would be strictly correct in them to establish, if possible, such a charge. But upon this point, as upon all the imputations of General Scott and his franking and writing friends, I hold towards them the attitude of honest defiance. Had the Constitution or any other law of the land required it, or had I ordered it, I have not a doubt that every officer and soldier with me at the Withlacoochee

would cheerfully have agreed, "if the enemy would stand," to desire them to take the first shot; and would, moreover, have declined the comfort and security of sleeping or fighting behind a breastwork, had not this method of occasional *action* and *rest* been consecrated by the example of our own beloved WASHINGTON, and all other great and good men who have signalized themselves in the defence of our country. I think it more than probable that my brave little army would have subdued the enemy a few days sooner than we did, had I directed them to make a few rapid *sorties*; but I had promised General Clinch to make no *sorties* until I should hear from him, from an apprehension that a *sortie* would have dispersed and driven off the Indians before the arrival of *mounted force*—the only description of force with which a *sortie* could have been made with full effect at the place which I occupied. With the aid of the anticipated mounted force, I had calculated on taking or destroying most of the Indians and terminating the war in the course of a few days. They were, however, subdued, and sued for peace near twenty hours before I heard from General Clinch.—(See my letter to that officer under date of the 29th of February, in which I promised to abstain from making a *sortie* until I should hear from him.) On the subject of a *sortie*, however, I was convinced that I should not have succeeded in rendering it effective without the loss of from 50 to 100 of my officers and soldiers; and I have no hesitation in saying that I would not have had twenty of my excellent Louisiana volunteers or regulars recklessly sacrificed, whilst momentarily expecting the arrival of mounted force, to have had laid at my feet in chains all the Indians in Florida. The troops were for several days held in readiness for a *sortie*, and it would have been made on hearing from General Clinch, or in co-operation with his command, had not the Indians sued for peace before he was heard from.

7. Among the numerous calumnies, official and unofficial, I have seen none more absurd than that I was actuated in my movement to Florida by no higher motive than that of a desire to obtain "*laurels*" to which General Scott had superior claims! I feel convinced that those who know me best know, and will testify, that I have ever been incapable, even while a young subaltern, of that over-weening vanity and officiousness which sometimes prompt the weak or the vicious to attempt to rob their brother soldiers of what may be justly their due. Laurels, indeed! The idea of obtaining laurels in an *Indian war*, I have long deemed to be as a vision never to be realized by any known system of operations embraced in the art of war in its supposed improved state, nor otherwise than by watching the movements of the enemy, and profiting by his example of *vigilance*, *rapidity of movement*, and *privation of food and rest*. No man acquainted with the sufferings of the frontier people of Florida, possessed of a spark of patriotism or humanity, could for a moment be ignorant of the great and only inducement which ought or could have prompted me to make the movement in question. It was obvious to me that protection must be afforded, and quickly afforded, to the bleeding frontier of that neglected Territory, or that her late flourishing settlements would be destroyed, and that delightful region of our national frontier rendered a scene of devastation disgraceful to the military character of our country, and doubly disgraceful to the officer intrusted with its defence.

I have shown, as I doubt not, to the satisfaction of every man of military mind who will take the trouble to read this letter, that it was my bounden duty, under the circumstances of the case, to collect together the forces embarked at New Orleans on the night of the 3d and the morning of the 4th of February, and with them to repair promptly, as I did, to East Florida, and there to employ my best efforts in subduing or holding in check the enemy until the arrival of General Scott *at the theatre of the war*. This being admitted, my right to the entire control of the *subsistence*, and *horses and other means of transportation*, found within the limits of my department, or such as were on their passage thither, is established beyond the shadow of doubt. Upon what ground, then, could General Scott assert that I interfered with and retarded his operations by taking rations and horses belonging to his command? I affirm that his excuse is baseless and his assertion untrue. I affirm, moreover, that if the horses and rations, which he falsely accuses me of having wrongfully taken, had been forcibly seized by me from one of the posts within the eastern department, and to which I could have no claim—the *number of rations and number of horses in question was too small to delay the movement of General Scott's grand army for more than three days' time*. The whole number of rations taken by me from the day of my arrival at Fort King, the 22d of February, to the day I turned over the command to General Clinch, the 9th March, 1836, inclusively, amounted to less than twelve thousand complete rations, and the number of horses, I am assured, was not more than eight or ten taken from Forts King and Drane, (posts of my department,) and less than this number of miserable ponies from Fort Brooke, not one of which had been placed at either of those posts by General Scott, as I have been informed and believe.

His assertion, therefore, that his operations were greatly embarrassed or retarded by my having taken the *rations and horses* provided for his command, is not only not true, but is marked with a *reckless malignity, disgraceful to an officer and dishonorable to a man—not to say a gentleman*.

All which is submitted for the information of the President of the United States.

With profound respect,

EDMUND P. GAINES, Major General, Commanding.

Brigadier General R. JONES, Adjutant General U. S. Army, Washington City.

No. 34.

JACKSON, Louisiana, October 29, 1836.

DEAR SIR: I have the honor of informing you that I received your letter containing a wish that I would make a statement of facts concerning the treaty at the Withlacoochee, in Florida, during our campaign under Major General Gaines.

I will now give you what I understood at that talk.

We, General Gaines's troops, were to cease hostilities, and they, the Seminoles, were to observe a like course of conduct; that we had no right to make a treaty with them, nor they with us, (as their chief was not present,) but that they were tired of the war and did not wish to continue it; and they would meet any authorized agent of our government at the Withlacoochee at any time they were notified to do so, and hold themselves and warriors in readiness to take into effect any treaty then and so made; they were to recross the river and await any message sent them, and not to fire a gun until they heard

from General Scott or his agent; and, so far as I know, they kept their part of the agreement. There never was (in my presence) a word said about any line or boundary, and they were informed that the whole country must be left, and that if not peaceably they would be exterminated; and it was the opinion of every officer with whom I had any conversation that the war was over and the Indians willing to remove.

My own opinion is, if General Scott had not moved down on them with his force, they would now have been over to the Mississippi.

Believe me, sir, yours,

F. MARKS, *Captain of the Bayou Sara Blues, from Louisiana.*

E. A. НИГНСОК, *Esq., U. S. Army.*

No. 35.

NEW ORLEANS, *October 9, 1836.*

DEAR SIR; I received your letter in due course of mail, in which you direct my attention to a communication published in the New York Evening Star of the 2d ultimo, addressed to M. M. Cohen, esq., author of a book called "Notices of Florida and the Campaigns." I have not seen the work alluded to, but previous to receipt of your favor I had perused the article referred to cursorily; since then it has claimed my particular notice. It gives me great pleasure, sir, to have it in my power, from a fresh recollection of all that passed at the council whereat I was present with yourself and another officer, to state with confidence that in every particular in the said communication you have observed a studied accuracy, especially with regard to some leading facts at issue, to wit: that the Indians stipulated to maintain the country with the Withlacoochee river as a boundary line. So far from this being the case, I recollect distinctly that when it was proposed by the Indian chiefs on our first meeting them, that we should "go home where we came from," that you directly remarked that we intended to maintain our position at all hazards, and continue to fight them if necessary. This, sir, must certainly look like anything else but yielding to them "the maintenance of the country."

For fear, however, of prolixity, I will briefly state what took place at the council held by these chiefs in our presence, and leave it for others to draw conclusions. On the occasion of the meeting in council, our camp was hailed the evening previous, in a very audible and clear manner, by one of the enemy, which awakened the attention of all. After being answered by Colonel Twiggs, who desired to know what he wanted, the person replied: "We want to make peace with the white men." The colonel directed him to come in the morning, and bear a white flag, if the red men wanted to hold a talk; that he would then hear what they had to say. He consented, departed, and bade us good night.

The morning following the Indians were seen collecting in groups in the rear of our breastwork, and soon after a deputation from them was discovered advancing slowly and cautiously, displaying a white flag. Adjutant Barrow was ordered to exhibit a white flag from the breastwork in answer, as a token of our promise made the night before, and as an assurance of their safe advance towards the camp. You then, sir, received instructions from General Gaines to go out to meet them, accompanied by the adjutant and myself, and learn what they had to say. About one hundred and fifty yards distant we received seven chiefs, and seated ourselves on a dry log with them. Jumper, called also the Lawyer, opened and conducted the talk, through Abraham, a black chief and interpreter, in a grave and respectful manner, while Ocoola and the others were listening with the greatest attention. They said they had lost many warriors, and did not wish to fight any more—they wanted peace. They wished time to consult together, and agreed to meet us again in the afternoon. Preparatory to that meeting you had reduced to writing certain stipulations, which, section by section, Abraham, the interpreter, explained to the others in an earnest and impressive manner, the amount of which was that they should agree to meet commissioners from the United States, and abide their decision; in the meantime there should be a cessation of hostilities. All present agreed to the terms proposed in a manner which satisfied us of their sincerity, but asked time to see their governor, who was some miles distant, which they would do that night, and meet us with him the next day. They then inquired if we had not more men coming; if so, they wished them to be informed of what had taken place, as they had also many warriors on their way to join them. It was then proposed that a certain number of white and red men should go out together, to prevent a hostile meeting between the advancing parties. About this time the Indians who were seated on the ground at a distance rose up and began to fly, informing their chiefs, who were then in council with us, that the white men were coming. We directed them to take their men into a hammock on our right; but before they had all entered General Clinch came up with his command and fired a few shots upon them, before he could be informed what had been done in council. The next morning they did not appear; but so much confidence had you and I, sir, in their sincerity the day before that we left the camp together for a walk of observation on the bank of the river. Our men, after that, amused themselves fishing and bathing in the river, without the least apprehension; and while we remained there, and during the two weeks in camp near Fort Drane, not a rifle was fired. In truth, sir, there was nothing like treachery on their part; and I believe every officer and private considered them sincere, and looked for a speedy termination of the war.

I am, very respectfully, your obedient servant,

GEORGE E. HARRAL, *late Surgeon Louisiana Volunteers.*

Captain E. A. НИГНСОК.

P. S.—I have given you a hasty sketch, from memory, of what took place at the meeting we had with the chiefs. You are at liberty to do with it as you please, either in part or as it now stands. I did hope, before this, to have had the pleasure of paying my respects to General Gaines, as it has been reported that he was coming to our city. I look back with much pleasure on some portion of our campaign together, and shall always entertain the highest respect for the general and his staff, as well as many others. I hope that my communication contains all you require; if not, write me again, and I may supply any omissions now made. H.

## No. 38.

[From the New York Courier and Inquirer of April 2, 1836.]

*Affairs in Florida.*—The Savannah Georgian contains an order issued by General Gaines, giving a history of his campaign in Florida, from which we make the following extracts:

"These troops, in the short space of thirty-six days, have marched by land and water nearly eight hundred miles—one hundred and forty through the country occupied by the enemy, whose principal force they have met, beaten, and forced to sue for peace.

"All did their duty cheerfully and gallantly; and when it became necessary to meet the question whether to eat their own horses or to abandon an important position, all cheerfully preferred this unpleasant subsistence to any movement that would endanger the frontier. The horse-meat was accordingly eaten by officers and men, until the enemy was beaten and sued for peace."

He further says:

"The object for which I set out from Louisiana being accomplished, I resign the command of the Louisiana troops to General Clinch, until the arrival of the forces under the officer charged with the diplomatic arrangements by the War Department. Whenever and so soon as that officer shall mature his plan of operations, and accomplish the duties assigned to him, the forces from Louisiana will return to New Orleans."

The manner in which the war with the Seminole Indians has been conducted, and the injury which the country has sustained in consequence of the jealousy which General Gaines has exhibited towards General Scott, are subjects of general conversation; and although we have ever entertained a high respect for General Gaines, and justly appreciated his services, we should be wanting in our duty as public journalists if we did not pointedly condemn his conduct while at the head of the troops which have been so disgracefully kept at bay on the banks of the Withlacoochee by an enemy inferior in numbers and without any pretension to discipline.

We will not stop to inquire into the motives which induced General Gaines to proceed into the Indian country after he had received official information at Pensacola that General Scott had been selected to conduct the war against the Seminoles, and that his services were required on the Mexican frontier. Any person who will read the extract from his general orders, must at once perceive, that while patriotism may have been one of the causes for such conduct, yet the moving principle of action with him was a desire to deprive General Scott of any laurels which a successful issue to the campaign might secure to him. We do not say, nor do we believe that he intended to render the campaign unsuccessful; but we have not a doubt that he was determined to make an effort to put an end to the struggle by a forced march of his own, even at the hazard of thereby frustrating for a time the plans of his superior officer. In this it is now certain he might have succeeded if he had acted with vigor; and if so, he probably would have been held excused by the public, who always look more to the results of military movements than to the objects with which they are undertaken and the foresight and talent displayed in their execution.

That General Gaines proceeded into the heart of the Indian country with nearly five hundred volunteers and upwards of six hundred regular troops, well disciplined, and commanded by as brave and intelligent officers as can be found in any army, is already matter of history; and it is equally matter of history, that although the Indian enemy did not in fact muster so large a body of warriors, yet at no time did the general himself estimate them at more than fifteen hundred! Admitting for a moment that they were fifteen hundred strong: has it ever happened in the history of our Indian wars, has it ever entered the mind of the most ignorant, to believe it possible that with this force eleven hundred regulars and volunteers should have been held in check, beaten day after day, and finally compelled to act upon the defensive and starve within a breastwork which they had reared for defensive instead of offensive warfare? The very conception of such a contingency being within the scope of possibility, would, but a few weeks since, have been considered evidence of gross ignorance if not partial derangement; and yet such an event has occurred, and the people in astonishment look at each other and ask in vain for an explanation! They look too, in vain, for any explanation in the letters from the seat of war, or in the orders of the commanding general; unless indeed they are to find such explanation in his boast that his command had "met, beaten, and forced the enemy to sue for peace!"

We would respectfully ask, Are such the facts of the case? Do not the official reports of Generals Scott and Clinch, corroborated by all the letters written from the theatre of events, distinctly proclaim that the enemy has not been beaten or forced to sue for peace, but that he is now in force on the Withlacoochee, flushed with victory, and ready to make another desperate effort, in consequence of the encouragement he has received in his contests with General Gaines's command? It is notorious that day after day General Gaines was met and held in check by an inferior force of Indians; and that instead of sweeping them from the face of the earth and putting an end to the war at once, as he could have done by a gallant attack upon them, he entrenched himself in a hastily-constructed breastwork, and there resolved to starve in presence of his enemy unless relieved by General Clinch. If his men were too short of provisions to fight, how happens it that they succeeded in sustaining themselves for several days in succession within their breastwork? It is not contended that when they entered their breastwork they were in a starving state and too much enfeebled by hunger to meet the enemy; and we cannot but believe that the labor and energies expended in fortifying themselves against the very enemy they sought for the purpose of chastising, would have been far better applied in a brisk pursuit of that enemy and his annihilation. Why, we venture to assert that there was not a solitary officer of the army with the general at the time who did not condemn his proceeding as most extraordinary and calculated to cover their detachment with dishonor; and we are very sure that there cannot be found in service an officer of any rank or standing who will have the hardihood to defend this proceeding. We do not doubt the courage of General Gaines—that is as unquestionable as are his former services to the country; but never has it fallen to our lot since the days of Hull to record such disreputable prudence at the very moment when an opportunity offered to accomplish the great object of the expedition—the total destruction of his foe. There is not, there cannot be a doubt that if Gaines had continued to operate on the offensive instead of ingloriously retiring into a breastwork, Ocoola and his warriors would now have been effectually put down, if not exterminated; and that, too, without his troops suffering as much from hunger as they did in their entrenchments. Had he beaten the enemy, as he says he did, and as he most assuredly could and should

have done, he would have been able to supply his command from *their* stores, for they had an abundance of stolen *beeves* with them, two of which *Oceola* offered him when he treated with and *dictated* terms to his conqueror!

But enough of this disgraceful affair. General Gaines was fortunately rescued from his perilous situation by the timely arrival of General Clinch; and even then, instead of forcing his enemy to yield, he fled from him with precipitation, and published the account of his *glorious campaign*, which has caused his brother officers to blush for the conduct of the third in rank in the army, and at the same time greatly perplexed the people at large, who cannot exactly understand why an enemy which has been "beaten and compelled to sue for peace," should still bid defiance to the army under General Scott.

But, extraordinary as has been the conduct of General Gaines in the field, the detail of that conduct as given by himself is equally open to censure. At Pensacola General Gaines was officially apprised that General Scott had been selected to conduct this war; he subsequently met that officer and saw his arrangements to accomplish what *he* had failed in; and yet he published to the world not only that the enemy had been "beaten and forced to sue for peace," but speaks of his commanding general as "the officer charged with the *diplomatic* arrangements by the War Department." Now, if this means anything, it means that General Scott was only sent to Florida in a civil capacity—as a negotiator, a minister extraordinary or plenipotentiary, for the purpose of treating with King *Oceola*, while he (General Gaines) was selected to do the fighting; had accomplished the object of his visit, paved the way for a gracious reception of Mr. Scott the diplomatist, and bravely borne away the honors of a gallant and chivalrous achievement! Alas, "how are the mighty fallen!" how unfortunate is it that poor human nature cannot resist the ravages of time, and that the noblest of our species, if permitted to remain too long on earth, necessarily relapse into a second *childhood*.

The following is the intelligence from the seat of war received yesterday:

[From the *Globe* of March 31.]

"Despatches were received on Tuesday evening at the Adjutant General's office, dated Fort Drane, March 14, which state that General Clinch, with some means of subsistence, and about six hundred men, of whom one hundred and fifty were mounted Floridians, joined General Gaines on the 6th instant. The force under the latter had already been reduced to the necessity of commencing on horses and dogs for their subsistence. The troops remained in their position until the 10th. General Gaines relinquished the command to General Clinch on the 9th, and departed for Louisiana. The troops under General Clinch fell back to the vicinity of Fort Drane.

"It appears that at the moment of the junction of the troops under General Clinch with General Gaines some communication had been opened with the Indians. The Indians, however, were fired upon by the advancing troops, and afterwards disappeared.

"General Scott reports that he has reason to believe the Indians in the same position they have occupied for some time. General Scott continues, 'I have instructed Brigadier General Eustis, after scouring the country through which he would have to pass to some extent, to place his column in position somewhere in the neighborhood of Pelaklikaha about the 25th instant. Colonel Lindsay, by the same day, is to be with his force at Chickuchatty, about two marches from Tampa, and means are suggested to each in order to multiply the chances of communication with each other. The right wing will move hence, say, on the 24th instant, to attack in front. This column will pass through Withlacoochee about half a mile below the late intrenched camp, where there is a good ford, &c.

"The 25th instant is appointed in order that I may be certain of giving Brigadier General Eustis and Colonel Lindsay time to put themselves in position respectively, and further to give time to the harassed troops lately under the command of Major General Gaines to recruit themselves for effective operations. The same interval is equally important to enable Brigadier General Clinch to receive from Picolata, or Garey's Ferry, a quantity of subsistence indispensable to give confidence to the movements of the right wing.'

*Extract of a letter from General Clinch to General Scott, dated*

"FORT DRANE, March 12.

"I returned last night from the Withlacoochee with the troops composing the right wing, Florida army. The troops turned over to me by Major General Gaines are stationed four miles in advance of this post, and with a little rest and recruiting, will be a very efficient force, and will add much to the strength of the army of Florida.

"The principal force of the Indians is still on the Withlacoochee, and it is my opinion they will remain there until driven from their stronghold by force."

*The following is an extract from a letter received from Dr. Nourse, dated*

"FORT BROOKE, Tampa Bay, March 16, 1836.

"We march in a few days for Fort King, for the purpose of joining General Scott. Colonel Lindsay, of the army, arrived since my last with eight hundred Alabama volunteers, making the force at this post at present about one thousand two hundred."

[From the *Richmond Enquirer*, March 16.]

"There is every reason to believe that Powell (*Oceola*) remains with his people in the same neighborhood. This is most fortunate for Scott's operations. On the 25th, Eustis, with 1,700 men, would be at Pelaklikaha, on the road from Tampa to Fort King, and Colonel Lindsay had been expected to be at Chickuchatty, nearer to Tampa, with about 800 men. There is too much reason to fear that the dispersion of the 700 troops from Alabama would embarrass this part of the arrangement. General Scott could not, by the 16th, have heard of this unfortunate *contretemps*. Clinch, on the same day, (the 25th,) would be back on the Withlacoochee, with about 1,800 men. About 400 of Clinch's wing had been left by General Scott on the St. John's, but they would be up in time. Whilst Scott attacks them in front on the one side, Eustis and Lindsay were to close in the rear—not only to aid in the engagement, but to prevent the escape to the southeast. If the Indians remain in their present position, and everybody believed that they would, the great stroke was expected to be given about the 28th, (yesterday,) and some smaller

bodies would then remain to be picked up. The delay till the 28th was to make it certain that Eustis and Lindsay were in position, and to enable Clinch to receive from Picolata and Garey's Ferry the necessary subsistence. All the wagons have gone to those places. The army was in fine spirits, and Gaines's troops recovering fast from their recent sufferings. If General Scott should succeed in his operations, he expected to be at Tampa Bay by the 7th of April.

"How far the disappointment in receiving the Alabama volunteers will embarrass the operations of the campaign it is impossible for us to determine. We have every confidence, however, in the genius and resources of General Scott."

No. 39.

OFFICE OF THE COMMISSARY GENERAL OF SUBSISTENCE, *Washington, July 1, 1836.*

SIR: Yours of the 11th ultimo is received. I feel confident that no exertions on your part have been spared to meet the wishes of this department; and I have to express my entire approbation of all you have done in the performance of your important and arduous duties.

Very respectfully, your obedient servant,

G. GIBSON, *Commissary General of Subsistence.*

Lieutenant P. MORRISON, *Assistant Commissary of Subsistence, New Orleans.*

No. 40.

[Extract.]

OFFICE OF THE COMMISSARY GENERAL OF SUBSISTENCE, *Washington, September 23, 1836.*

I cannot close this communication without expressing to you my thanks for the prompt, correct, and very efficient manner in which you have conducted the arduous duties confided to you by this department for the last eleven years.

Very respectfully, your obedient servant,

G. GIBSON, *Commissary General of Subsistence.*

Lieutenant P. MORRISON, *Assistant Commissary of Subsistence, New Orleans.*

No. 41.

*Statement of subsistence stores in the harbor of Tampa Bay on the 31st March, 1836.*

Rations of pork.....	216, 750
Rations of flour and hard bread.....	304, 423
Rations of coffee.....	340, 250
Rations of sugar.....	212, 875

The amount of small rations on hand, viz: beans, soap, candles, salt, and vinegar, exceeds this statement, and no additional supplies of those articles will be required.

The commanding general no doubt will give you a statement of the number of troops in the field, and the quantity of rations which will be required at this post. Should, however, an estimate be made for additional complete rations, it will only be necessary for you to furnish pork and flour, or bread.

GOUVERNEUR MORRIS, *First Lieutenant and A. C. of S.*

First Lieutenant P. MORRISON, *A. C. S., New Orleans, La.*

No. 42.

[From the New Orleans Bulletin of September 26, 1836.]

HEADQUARTERS WESTERN DEPARTMENT, *Camp Sabine, July 4, 1836.*

SIR: I received, on the 25th, at Pensacola, on my way to this place, your letter of the 10th of March.

I have delayed replying until now, from a firm conviction that my letters of the 15th and 25th of January and 6th of February to you, with those of the 2d, 22d, 28th, and 29th of February and 2d of March, to General Clinch, with my orders and special orders of the 18th of January to the 9th of March, 1836, inclusively, reported to you by my acting assistant adjutant general, for the information of the proper authorities, would fully exculpate me from the imputations of General Scott, that I had "interfered with his command," or "disturbed his plan of operations," &c.; more especially as the complainant's accusations were not deemed to be of sufficient importance for me to be furnished with a copy. But, having recently seen the attacks made on me, through the newspaper called the "Globe," and some other papers of equal respectability, and of all political parties, since the first of April last, purporting to be from the pen of that officer, or from his dictation or sanction, aided by the quartermaster general, a franking bureau officer of the War Department—these insidious publications assure me that I am again wantonly assailed. These combined attacks suggest to me the propriety of making, for the information of the proper authorities, the remarks and explanations which follow, and which I deem necessary and proper, in vindication of my

conduct, my movements, and measures, in connexion with the war in East Florida, between the 5th of January and 9th of March last—a task which I was more than willing to abstain from, or leave to others, as I could not, consistently with my own self-respect, and justice to my command, repel the calumnious accusations without calling in question the opinions of high public functionaries whose judgment and patriotism I had long sincerely respected; nor, indeed, without seeming disposed to join in an acrimonious controversy, which nothing short of an order from the President, or the absolute necessity of *self-defence*, could prompt me to do.

The Order No. 7 of the present year, requiring General Scott to repair to the left wing of my department, was never seen by me until my arrival at Fort King, the 22d of February. I state this fact simply because it is a *fact* hitherto, I apprehend, unknown at your office—but it is a fact to which I attach little or no importance. Had I received this order at Pensacola, I should have viewed it as a measure of the *Secretary of War*, taken without a full knowledge of the progress of the war upon that frontier, and of the circumstances which had rendered my movement to Florida proper; and that, therefore, my movement thither ought to continue until I should feel assured that the President was apprised of all the material facts bearing upon the subject; and more especially *until the officer authorized to enter upon that part of my command assigned to him, and which formed the principal theatre of the war, should make his appearance in person upon that theatre of the war*, unless, indeed, my attention had been called to other and apparently more important military operations, also *in actual war*, than those which called me to East Florida.

This view of the subject is based upon an essential principle of military law, derived from the laws of nature, and incorporated in our institutions—a principle sustained by the ablest writers of all enlightened nations to whose works I have had access—a principle without the strict observance of which no nation whose geographical limits exceed twenty miles square could be successfully defended—a principle deeply interwoven with the highest attributes of *sovereignty* and of *self-government*, namely, *self-defence* and *self-preservation*, as a nation or state; or, in other words, *PROTECTION—IMMEDIATE, INSTANTANEOUS PROTECTION—to the exposed feeble members of the community from savage war*. Yes, sir, *immediate, instantaneous protection* by the military officer intrusted with the command of the particular section of country threatened with savage attack, until relieved *before the enemy* by the new commander.

Let us look into a few of the principal features of the case in question, and see what would probably have been the effect of a contrary rule of conduct on my part. In command of the western department, I had met at New Orleans intelligence of a great and unlooked-for disaster having occurred upon the left wing of my department, far distant from the seat of the federal government, from whence alone could I hope to receive new orders, or special instructions more applicable to the case, in all its bearings, than the orders of the President embraced in my commission to serve the United States diligently as a general officer—with the orders which he had given me *to command the western department*. An important white settlement within my department was reported to be *overrun, sacked, and burnt*—a United States agent of Indian affairs, and eight valuable officers, and ninety-eight faithful soldiers, with many worthy frontier citizens killed, and their property stolen or destroyed. And I was aware that most of the neighboring military posts, namely, Forts Brooke, King, Drane, and Key West, all within my military department, were without any other works of defence than such as an efficient force of 500 men might have taken and destroyed in a few hours, with little loss or risk on their part—the garrisons of two of those posts (Fort King and Key West) being insufficient for their defence. I was, moreover, apprised that there were but about 600 troops of the regular army at that time in Florida, and these were separated by a wilderness, supposed to be occupied by the enemy, comprehending near 20,000 square-miles, extending nearly 250 miles from north to south, and from 120 to 40 miles from east to west, with our 600 regulars stationed at the opposite angles and sides of this extensive wilderness, *without disposable force sufficient to insure a concentration at any one important vulnerable point*, from one side of the wilderness in question to the other, without the most imminent danger of having such force destroyed in its movement to the point of concentration. The destruction of the brave but unfortunate Major Dade, with his heroic officers and men, affords an impressive lesson upon this view of the subject which no prudent American, soldier or citizen, should ever lose sight of. Under these circumstances, what was the duty of the commander of the western department? What, I ask, was the proper course for me to pursue? These questions may be most readily answered by asking another: What had I promised upon my oath to do? I had promised, upon my oath prescribed by law, “to bear true faith and allegiance to the *United States of America*, and to *serve them honestly and faithfully* against their enemies or opposers whomsoever, and to observe and obey the orders of the *President of the United States*, and the orders of the officers appointed over me according to the rules and articles of war.”

I had with me my sword and my commission, with the orders of the President of the United States to “command” this department. Now, it is well known *that for me to command a military department, or any particular section of country upon the frontier, great or small, is, in a plain military sense, so to order and employ the men and means confided to my direction as to protect our own people of the United States upon that section of frontier “against their enemies or opposers whomsoever,”* as set forth in the aforementioned oath; and, *if it be in time of war, to continue so to command until duly relieved by the new commander, IN HIS OWN PROPER PERSON, and on the theatre of the war.*

In failing to comply with this sacred injunction, I well knew that I might thereby have suffered the enemy to kill great numbers of the citizens and troops, in addition to those already slain within the limits of my command, and burn their houses, and take their property. It was my bounden duty, therefore, without waiting for *new orders* or special instructions, to collect together any disposable force found within my department which I might deem sufficient to enable me promptly to strike at the enemy, and, if possible, subdue them, or check their devastations, until the President should have notice of them, and of my efforts to arrest them, and then give such new orders as he might think fit.

But it is contended, principally indeed by those who have proven themselves to be better qualified for the quiet vocation of a writing-desk than the turbulent scenes of an Indian war, that I ought to have abandoned the expedition at Pensacola, because I received, on my arrival at that city, your letter notifying me, not that General Scott had actually arrived at the theatre of the war in Florida, *but that he had been ordered thither by the Secretary of War!* But little reflection is necessary to see the fallacy of this *closest view* of the subject. I had embarked, pursuant to my letter of the 2d of February, addressed “to General Clinch, or the officer commanding the forces assembling on the northeast border of East Florida,” with a view to *co-operate* with that officer in subduing the enemy. I had, moreover, given a pledge to the principal force then with me (the Louisiana volunteers) that I would *not require them to go further than I would myself go, and that I would stand by them as long as they would stand by me, in bringing the war*

to an honorable close. I had thus promised, on the 2d of February, with a force of 700 men, so to co-operate; this force had been fortunately increased, before the embarkation was effected, to near 1,100 men. With this very respectable force embarked, and in its movement for Tampa Bay, and within two days' march (*by steam*) of that place, I received at Pensacola the *notification* from you that General Scott had been ordered by the Secretary of War to that part of my command to which I was, under the above-mentioned circumstances, destined. But what assurance could I have had that he was there? Did you notify me that he was at the post of honor assigned to him by the Secretary of War, or that such arrangements had been made as afforded reasonable ground to hope that General Scott *would be prepared soon* to breast the storm of savage desolation, and *protect* from the scalping-knife and firebrand the helpless citizens of both sexes, and of all ages, in that region, who had looked to me as their protector? Did you tell me that Ocoela and his war-chiefs had given to the President satisfactory assurance that they would suspend their massacres and conflagrations until General Scott should *complete his plan of operations*, and be quite ready to subdue them? No such thing is found in your letter. Nor had I any reason, from the previous northern or western wilderness movements of that officer, to anticipate anything like a prompt movement on his part into the wilds of Florida, longer than he should find himself and his forces and supplies *propelled by steam-power*.

The now well-ascertained fact that General Scott confined his personal operations to the little interior and *unmenaced* places called *Picolata*, *Volusia*, *Black creek*, and *Fort Drane*, and the intervening country within the white settlements, occasionally on board the "little steamboat the *Essayons*," for near six weeks, viz: from about the middle of February until the 25th of March last, without any attempt on his part to search for the enemy, proves clearly—not that I should have abandoned my expedition at Pensacola, at Tampa Bay, at Fort King, or at the Withlacoochee, without subduing the enemy, but that I should, if possible, have redoubled my efforts to accomplish this all-important object sooner than I did; and, in place of leaving them under a pledge that hostilities on our part should cease, if, as they proposed, they would peaceably await the arrival of General Scott, and would attend to the terms he should be authorized by the President of the United States to offer them, (a pledge which appears to have been wholly disregarded by that officer,) I had taken them to Tampa Bay, completed with them a treaty, in accordance with my own understanding of what was due to them and to the United States—a measure which, I am convinced, I could have accomplished had I not indulged in the fruitless expectation that General Scott would arrive soon after hearing I had found the enemy, and employ himself in the performance of the diplomatic and other duties assigned to him by the Secretary of War—I have no doubt that I should by such a movement have relieved the Florida frontier *forever* from all further disturbance on the part of these Indians, and should have placed them in a position calculated in time to change their inveterate hostility, desperation, and distress, to peace and comfort, if not to a sense of respect and gratitude to our government and country for the humanity, care, and kindness extended to them on their having sued for peace. I am well assured that every officer, and every intelligent soldier of the Louisiana volunteers and United States troops then with me upon the Withlacoochee, will concur in the opinion just now expressed.

From the foregoing views it may possibly be inferred that I may have been disposed to attach blame to General Scott for his readiness again and again to solicit or accept a command which he might imagine was calculated to awaken in my mind sentiments of personal ill-will towards *him*, such as he had some years past labored, through many acrimonious pages, to produce; but which *time*, with that sort of reflection, which naturally results from a *rational use of time*, had so mitigated as to induce me, on the receipt of your letter notifying me that he was ordered into my department, so far from feeling *dissatisfied with him*, to resolve upon availing myself of the occasion to co-operate with him (though junior to me) in a manner which I felt convinced, if he did his duty correctly, would be the means of enabling us at the proper theatre of action to settle our disputes forever, *by our joint efforts in battle, to show which of us could do the enemy the most harm and our country the most good*; and thus, in the best possible way of terminating personal enmities, restore between us that harmony which a proper sense of public duty should prompt every high-minded public functionary to extend to each other, so that the public service should suffer no detriment from their intemperate controversies. I knew General Scott too well to imagine *he had ever solicited such a command, in the swamps of a wilderness, and against an enemy such as he had long held in contempt*; and I had long since ceased to cherish towards that officer any feeling of hostility. I had triumphed in the controversy which he had forced upon me. I was gratified at my triumph, not so much that *General Scott was vanquished*, as that *the law of the land was maintained and preserved inviolate by the part which I had taken in that controversy*. I shall again triumph—not that I have any claim to that peculiar talent of which some of my reckless enemies may boast—the talent of "*making the worse appear the better cause*"—but that I have the law of the land to sustain me. It is my present purpose to show that the facts of the case were such as to prove that I was constantly within the pale of military law; I cannot, therefore, but prove myself to have been *in the right*, and that all who are opposed to me are *in the wrong*.

It will be seen, by referring to my letter of the 22d of February, that I expressed my purpose *cordially to co-operate with General Clinch, or the officer commanding the forces then assembling in the northeast border of East Florida, or at Fort Drane* (I have no copy of my letter near me, and write now from my recollection of its contents, in which I am sure that I am substantially correct.) I also expressed in that letter *my hope that our joint efforts might tend speedily to terminate the war*. This sentiment had been often expressed by me to my staff and to the field officers of my command. True it is that my letters of the 22d, 28th, and 29th of February, and 3d of March, were all addressed to General Clinch, or the officer commanding at Fort Drane. They were, however, properly so addressed, and they were obviously intended for the information and government of any officer at Fort Drane in command of the force assembling at or near that post for the defence of that section of the national frontier. Soon after the date of my letter of the 22d of February, I had seen, at Fort King, a letter from General Scott, in which he expressed a desire to know where the principal force of the enemy could be found; that letter was addressed to General Clinch, and dated at Picolata, about the 17th or 18th of February. Not doubting the sincerity of General Scott's *wish to learn where to find the enemy*, I was truly gratified to have it in my power to say that I would search for and endeavor to find their principal force, and would report accordingly. My superior knowledge of the country and of the enemy justified me in the hope and expectation that I should be able soon to relieve General Scott's supposed anxiety upon this point; for my movement by the way of the Alafia, and the battle ground of the lamented Major Dade, where there was most reason to believe the enemy would make their boldest stand, (that having been deemed to be the place of their

"greatest good luck," as the interpreters had termed it,) having proven that their principal force was not in that quarter, I could not doubt but that I should find them lower down on the Withlacoochee; and I therefore determined to continue my search in that direction—that being in the direction to Fort Brooke, the only certain point from which I could replenish my supplies of subsistence and ammunition, the *great supply* which should have been at Fort King having been withheld from that place—whether *intentionally* to embarrass my operations, or from *ignorance* of the country, with its wasted resources, or ignorance of their duty on the part of General Scott and his quartermaster general, I am yet to learn. It is sufficient for me at present to affirm that large supplies *ought to have been*, and might have been, deposited at Fort King and at Fort Drane before the 22d of February, and that I was unable to obtain at those posts more than eight days' rations of subsistence, with scarce one hour's supply of powder and shot or cartridges. Nor could I take this slender supply without leaving those posts with a short allowance, that could not have been justified but upon the expectation of other supplies being on the road near them, and that my movement would contribute to divert from them the attention of the enemy. My plan of operations, embraced in my letter of the 22d of February, was, under all the circumstances of the case, necessary and proper; and it was also proper for me to address my letters intended for General Scott, who, I was aware, was not in my department, to *General Clinch*, an officer known to be on duty within my department, or *the officer commanding the troops assembling at Fort Drane*, where General Scott was expected to arrive in the course of a few days—where, indeed, he ought to have been before the middle of February. General Clinch, who perfectly understood his duty, lost no time in forwarding my letters, or copies of them, to General Scott, at Picolata, who, in place of a prompt response, meeting in the spirit in which it was offered my proposition cordially to co-operate with him in bringing the war to a speedy termination, indulged himself in unwarranted animadversions—imputing to me the worst of motives for my movements, and wasting, in unavailing murmurs, that precious moment for *action, by co-operation with me, as I had proposed*, or, if he preferred it, by *taking the field, and there relieving me*; he appears to have chosen rather to occupy himself in writing accusations against me, and endeavoring to convince the President of the United States that, in my letter of the 22d of February, above referred to, I had been guilty of some criminal interference with his (General Scott's) authority, as stated in your letter of the 10th of March, and more fully stated in the publications dated at Picolata, Black creek, Fort Drane, and more recently at other places, purporting to be from General Scott and other officers of the army, all referring to "the plan of operations" and opinions of General Scott, but so artfully mixed up with plausible *fiction* and *reckless calumny*, slightly tempered with a few grains of truth, as to render it impossible to determine the source whence the mass of matter originated, or to discriminate between the *official, the semi-official, and mere hireling slanders* contained in this mass of matter. I would not willingly, in an official communication to your office, to be submitted to the President of the United States, take any notice of anything contained in those publications that is not strictly official. If I err in my attempt to discriminate in this particular, I will thank you to enable me to rectify myself, by favoring me *with all the official statements* referring to my conduct in relation to the war in Florida, as I may deem it to be essential to my vindication to show to all who may have entertained a doubt, as I trust I have already shown to the satisfaction of every man of military mind who has heard me, or seen my vindication, upon the following points:

1. That the proper *time* and *place* for me to have suspended my movement, and for General Scott to have entered upon the command assigned to him in my department, was *when he should appear in person near me*, at the known theatre of the war, and nowhere else, while the war continued.

2. That until he thus made his personal appearance near me, at the theatre of the war, he had no right whatever to assume the control of a soldier, a public horse, or a public ration, within the limits of my department.

3. That it was my bounden duty to retain the control of every soldier, every horse, every ration, and every other species of public property, necessary to the success of my operations against the enemy, connected with the command of the western department; and, above all, to retain and exercise the *command, honestly and faithfully* on the part of the United States, "*against their enemies or opposers whomsoever*;" and (in the language of the 62d article of war) give "orders for what is needful to the service, unless otherwise specially directed by the President of the United States, according to the nature of the case," and *the President had never specially directed it to be otherwise*. The adjutant general's notification of orders given through him by the *Secretary of War* was insufficient. This was, to say the least, a loose way of carrying into effect a solemn provision of law, embracing a subject of great delicacy and importance to the service.—(See the 62d article of war.) When the law expressly forbids a change of command, as in this article of war, *without the special direction of the President*, it is obvious that the spirit of the law cannot be fulfilled without the direction is given *by the President, or in his name*, by a person known to be authorized to communicate the orders or directions of the *President*. The adjutant general wrote *by order of the Secretary of War*. Nevertheless, if the President himself had given the order that General Scott should enter upon the duties of the command against the Indians in the western department whilst I was in the field, I contend that neither myself nor any other officer *engaged as I was in the immediate protection of the frontier, in the pursuit of the enemy, or in action, holding the enemy in check, could, with any propriety, or without a crime, abandon the command merely on receipt of the order, and before the arrival at the place of pursuit, or of action, of the new commander, unless specially directed by the President so to abandon the command!* A direction such as I venture to affirm has never been given in any civilized nation whose military history is known in this country. The theatre of the war was the place, the only proper place, for General Scott to enter upon and for me to abandon the command assigned to him at any time before the enemy was subdued; but that officer did not choose to make his personal appearance at the Withlacoochee, though cordially and repeatedly invited by me, and challenged by the reiterated reports of my cannon, and by the war-whoop and rifle of the Indians, (as announced to him by General Clinch,) *to partake of the professional banquet* which was regularly spread before me every day, from the 27th of February to the 5th of March, inclusively. I did not choose to *urge* or *entreat* him to come, because I have never desired to see an officer or soldier near me in action who did not come cheerfully and promptly, or who has been habitually vexing himself in fastidious scruples about *his rank*; and because I had reason to apprehend, from the tardiness of his movement, that a disease which General Scott contracted towards me in August, 1814, had not been completely cured. It was, probably, that sickness of the spleen, which the best of doctors say "*finds ease only in the misery of others*;" a sickness which a rapid march to the Withlacoochee, with the animating scenes, the martial music, pure air, and simple food of that region of the wilderness has never, to my knowledge, failed to improve the health of troops afflicted with disease of any kind, including cholera. That General Scott was retarded in his movement to the Withlacoochee by

some *secret griefs* I could not doubt. What they were I know not. They will doubtless be disclosed in due time. He appears to have been content, for a time, with the notion that I had most improperly and prematurely interfered with his command, and disturbed his plan of operations before it had been brought to maturity! that it was my duty to consider him as entitled to the command, and the entire control of my troops and supplies, before he arrived in person within the limits of my department! that my subduing the Indians ought to pass for nothing, because *he was especially authorized*, and *I was not especially authorized, to subdue them!* Childish conclusions these; too trifling to merit any notice, nor should I have noticed them but for the call made on me to explain and vindicate my conduct, and from the hope that my vindication may be read by the well-meaning officers and men of the volunteers and the army, who doubt, if indeed any doubt the propriety of my conduct—who, I am convinced, will readily yield their hasty opinions to the conviction which mature reflection on the subject cannot but produce. They will agree with me that my path of public duty was plain—too plain to be mistaken by any honest soldier or citizen not blinded by the spirit of party, or some other diabolic prejudice or passion: it was, without waiting for *new orders*, to fly as rapidly as possible, with whatever disposable force and supplies might appear to me necessary and proper to arrest the progress of the apparent growing evil of the late disasters; strengthen the feeble military posts, and, if possible, put an end to the war by a vigorous co-operation with any forces found in that quarter, or otherwise, as circumstances should dictate, according to my own plan of operations, contained in my letters of the 2d, 22d, 28th, and 29th of February, above referred to. The sum and substance of my design was to afford prompt and complete *protection*, that sort of protection which is guaranteed by the *Constitution of the United States to the people of the United States*—including the pioneer, the widow, the orphan, inhabitants of the frontier camp or cabin, as well as the polished and wealthy citizen of the great emporium of party politics, of commerce, and fashion; that complete *protection*, the work of which should, if possible, commence before the *work of destruction upon the frontier is finished, or even begun—protection to the living citizen rather than to the ashes of the slain!* My plan of operations was expressed as concisely as I could express it in my letter of the 22d of February—it was “to search for the enemy until I should find them, and then beat them, as otherwise he would beat me.”

4. In carrying into effect this plan of operations, I could suffer no officer to interfere with my troops, military posts, or supplies of any kind, within the limits of my department, until he should appear *in person* within those limits, duly authorized, and apparently *ready and willing* to meet the enemy and protect the people of the United States within my department “*against their enemies or opposers whomsoever;*” or until I had met and beaten the enemy, and compelled them to sue for peace.

5. I did meet the enemy, and did several times beat them, and finally compelled them to sue for peace. How this was accomplished I need not now undertake to describe. Grave doubts have been expressed, in some of the publications to which I have referred, as to the *sincerity* of the Indian chiefs in suing for peace, upon which is supposed to rest the fact of their having been subdued. I am willing to leave the issue of these questions to the testimony of the officers and the intelligent volunteer and regular soldiers who served with me, pledging my honor to abide by their concurrent testimony. But I am not willing to be tried and condemned without a hearing, and by persons who were not only not near me, but who have given me good reason to believe they would have been better pleased at my downfall than at the triumph obtained by me over the enemy; persons who know full well that the final decree at which every enlightened citizen and soldier who investigates the subject must sooner or later arrive, establishing the correctness of my conduct, must virtually fix the seal of condemnation upon theirs. Hence it was that many hours and days of precious time, which should have been devoted to active operations against the Indians, were sacrificed at Picolata and Fort Drane, and other places, to the fabrication of slanderous essays, to forestall and mislead public opinion, to condemn my movements, and cover me with the vilest detraction. The editors of newspapers, hitherto professing friendliness towards me, have been employed as the leading vehicles of this atrocious scheme of slander. Why is this so? I answer, that it is because I disdain to be the man of a political party! I owe allegiance to the *United States of America*, and not to a party. It may be that I did not require my officers and men at the Withlacoochee to take from the enemy as *many lives* as they had, by their savage conduct, forfeited—but where was the bond, or the principle of the laws of war, or of nations, binding them to give or me to take the life of any one of them after they had raised the white flag and sued for peace? Their first proposition was made on the evening of the 5th of March. They were then told that if their chiefs would come in the next day they would be heard. They accordingly came with a white flag, on the morning of the 6th of March, when they said, in the most subdued tone and manner, “We do not wish to fight any more; we have lost many of our warriors killed, and others disabled by wounds—we do not wish to lose any more in this way, or otherwise than by sickness, or by the falling of trees; and we desire to make peace.” They were told, in reply, that I was not authorized to treat with them, but that I had learned that an officer was on his way, and would soon be there, with authority to treat with them; that, if they wished for peace, they must lay down their arms, or cease to make any further use of them, and stay beyond the Withlacoochee until the officer authorized to treat with them should arrive, and that they must then go wherever he should require them; but that if they should commit any more hostilities, our troops, of which we had many, would kill all of them found with arms in their hands. They then counselled among themselves and their warriors until four or five o'clock in the evening. The chiefs then returned, and freely assented to my answer to their propositions, the last sentence of which my acting inspector general was, for the second time, explaining to them when General Clinch arrived in sight with the troops of his immediate command from Fort Drane, some of whom fired in the direction of the Indians, but at too great a distance to hurt them. They then hastily retreated to the adjoining hammock. They, however, manifested no disposition to violate their engagement; nor do I believe there was an officer or soldier with me, who had witnessed their conduct, who entertained a doubt but that they were subdued, and perfectly sincere in the desire they expressed to abstain from further hostilities and meet General Scott in council *whenever and wherever* he might direct. I remained in command, in order to satisfy myself of their sincerity, until the 9th of March, during which time some hundreds of my men were allowed to amuse themselves fishing, for a mile or two up and down the river, without discovering any indication of further hostility on the part of the Indians, some of whom were seen on the opposite side of the river. I, on the 9th of March, turned over the command of the troops then with me to General Clinch, as will be seen by my orders of that date, with a view to repair to this frontier. It is proper here to remark that, in order to obtain accurate information as to the *position* of the chiefs and warriors, and whether their pacific views remained unchanged after being fired on by the volunteers with General Clinch, I approved the suggestion of General Clinch to send a black interpreter across the river to their camp. He set out on the 8th

and returned on the evening of the 10th of March. He reported that the chiefs and warriors had gone up the Withlacoochee, near thirty miles above Camp Izard, to where their families were stationed; and that the chiefs told him they were waiting agreeably to my directions, and that they would be ready in five days to hold a council with the officer expected on for that purpose. General Scott was that officer; who, in place of meeting them in council, and directing them what to do to enable them to obtain peace and conform to the wishes of the President of the United States—General Scott openly avowed (as I have been informed, and his official letters imply) a determination to pay no regard to my arrangement with the Indians, but to obtain an overwhelming force, and then *annihilate them*. His blustering threats to this effect were probably known to every person, white and black, in and about the house of General Clinch at Fort Drane; and as some of the black domestics were in the habits of intimacy with the black interpreters, it was more than probable that in this way the threats of the *gallant* general reached the ears of the Seminole chiefs. Nothing, therefore, could be more natural than that they should prepare for self-defence and self-preservation against a commander regardless of the pledge made to them by me, his immediate predecessor in command, and his senior—a pledge which could not be disregarded without a gross violation of the laws of nature and of war, which no nation can tolerate without a positive disregard of the most sacred of her obligations of good faith towards her neighbors. The sequel has proven the fallacy of such threats, and the truth of the proverb that “the battle is not always to the strong, nor the race to the swift.”

6. It may be that I did not expose my officers and soldiers—volunteers and regulars—to as much *risk* and *loss* as some of my accusers deem necessary to give *eclat* to a *triumph*! Heaven preserve me, I pray, from that eclat which is won by the useless or wanton sacrifice of those placed under my command! If my accusers have reason to believe, from the testimony of those who ventured to accompany and co-operate with me in battle, that I neglected any important duty to save my own life or the life of any of my officers or men, it would be strictly correct in them to establish, if possible, such a charge. But upon this point, as upon all the imputations of General Scott and his franking and writing friends, I hold towards them the attitude of honest defiance. Had the Constitution or any other law of the land required it, or had I ordered it, I have not a doubt that every officer and soldier with me at the Withlacoochee would cheerfully have agreed, “if the enemy would stand,” to desire them to take the first shot; and would, moreover, have declined the comfort and security of sleeping or fighting behind a breastwork, had not this method of occasional *action* and *rest* been consecrated by the example of our own beloved Washington, and all other great and good men who have signalized themselves in the defence of our country. I think it more than probable that my brave little army would have subdued the enemy a few days sooner than we did, had I directed them to make a few rapid *sorties*; but I had promised General Clinch to make no *sorties* until I should hear from him, from an apprehension that a *sortie* would have dispersed and driven off the Indians before the arrival of *mounted force*—the only description of force with which a *sortie* could have been made with full effect at the place which I occupied. With the aid of the anticipated mounted force, I had calculated on taking or destroying most of the Indians, and terminating the war in the course of a few days. They were, however, subdued, and sued for peace near twenty hours before I heard from General Clinch.—(See my letter to that officer under date the 29th of February, in which I promised to abstain from making a *sortie* until I should hear from him.) On the subject of a *sortie*, however, I was convinced that I should not have succeeded in rendering it effective without the loss of from fifty to one hundred of my officers and soldiers; and I have no hesitation in saying that I would not have had twenty of my excellent Louisiana volunteers or regulars recklessly sacrificed, whilst momentarily expecting the arrival of mounted force, to have had laid at my feet in chains all the Indians in Florida. The troops were for several days held in readiness for a *sortie*, and it would have been made on hearing from General Clinch, or in co-operation with his command, had not the Indians sued for peace before he was heard from.

7. Among the numerous calumnies, official and unofficial, I have seen none more absurd than that I was actuated in my movement to Florida by no higher motive than that of a desire to obtain “*laurels*” to which General Scott had superior claims! I feel convinced that those who know me best know, and will testify, that I have ever been incapable, even while a young subaltern, of that overweening vanity and officiousness which sometimes prompt the weak or the vicious to attempt to rob their brother soldiers of what may be justly their due. Laurels, indeed! The idea of obtaining laurels in an *Indian war* I have long deemed to be as a *vision* never to be realized by any known system of operations embraced in the art of war in its supposed improved state, nor otherwise than by watching the movements of the enemy and profiting by his example of *vigilance*, *rapidity of movement*, and *privation of food and rest*. No man acquainted with the sufferings of the frontier people of Florida, possessed of a spark of patriotism or humanity, could for a moment be ignorant of the great and only inducement which ought or could have prompted me to make the movement in question. It was obvious to me that protection must be afforded, and quickly afforded, to the bleeding frontier of that neglected Territory, or that her late flourishing settlements would be destroyed, and that delightful region of our national frontier rendered a scene of devastation disgraceful to the military character of our country, and doubly disgraceful to the officer intrusted with its defence.

I have shown, as I doubt not, to the satisfaction of every man of military mind who will take the trouble to read this letter, that it was my bounden duty, under the circumstances of the case, to collect together the forces embarked at New Orleans on the night of the 3d and the morning of the 4th of February, and, with them, to repair promptly, as I did, to East Florida, and there to employ my best efforts in subduing or holding in check the enemy until the arrival of General Scott *at the theatre of the war*. This being admitted, my right to the entire control of the *subsistence*, and *horses*, and *other means of transportation*, found within the limits of my department, or such as was on their passage thither, is established beyond the shadow of doubt. Upon what ground, then, could General Scott assert that I interfered with and retarded his operations by taking rations and horses belonging to his command? I affirm that his excuse is baseless, and his assertion untrue. I affirm, moreover, that if the horses and rations which he falsely accuses me of having wrongfully taken had been forcibly seized by me from one of the posts within the eastern department, and to which I could have no claim, *the number of rations and number of horses in question was too small to delay the movement of General Scott's grand army for more than three days' time*. The whole number of rations taken by me from the day of my arrival at Fort King, the 22d of February, to the day I turned over the command to General Clinch, the 9th March, 1836, inclusively, amounted to less than twelve thousand complete rations, and the number of horses, I am assured, was not more than eight or ten, taken from Forts King and Drane, (posts of my department,) and less than this number of

*miserable ponies from Fort Brooke, not one of which had been placed at either of those posts by General Scott, as I have been informed and believe.*

His assertion, therefore, that his operations were greatly embarrassed or retarded by my having taken the *rations* and *horses* provided for his command is not only not true, but is marked with a *reckless malignity disgraceful to an officer and dishonorable to a man—not to say a gentleman.*

All which is submitted for the information of the President of the United States.

With profound respect,

EDMUND P. GAINES, *Major General, Commanding.*

Brigadier General R. JONES, *Adjutant General U. S. Army, Washington City.*

No. 43.

HEADQUARTERS WESTERN DEPARTMENT, *Camp Sabine, September 18, 1836.*

GENTLEMEN: The occurrences in East Florida during the last winter and spring, and more especially the acrimonious and calumnious publications from the pen of General Scott, or from his sanction or dictation, taken in connexion with the *silence* of the War Department, or, in other words, the *suppression* of my orders and communications in reference to the operations in that quarter under my direction, have combined to place me at that point of *moral responsibility* or moral action at which longer silence on my part would be criminal.

I am therefore compelled, in self-defence, publicly to vindicate my conduct—not to *seek a paper war*, or any other description of war; but never to shun a war of any kind when necessary in defence of the legacy of *honor* and of *principle* bequeathed to me by our fathers of the revolutionary war, in the midst of which I was born, (March 20, 1777.) But I think I have seen and done too much good service in battle against the enemies of our country to war with the tools or understrappers of my principal foe. I will do that honor only to the *head* of the cabal arrayed against me, and he only, whoever he is, if he desires it, and will step out of his place of shelter and concealment.

For the purpose of my vindication I desire to have access to the columns of an independent paper, with an editor who has the moral courage to speak and write what truth and justice demand. That you can find such an editor near you I have no doubt—to whom, I pray you, hand the accompanying copy of the first part of my vindication. The residue will be sent to you as soon as it can be copied.

I am, with affectionate respect, your friend,

EDMUND PENDLETON GAINES.

Messrs. General P. F. SMITH and Colonel WILLIAM CHRISTY, *City of New Orleans.*

No. 44.

*Questions by General Gaines to Surgeon General Thomas Lawson.*

*Question 1.* Did you serve with the Louisiana volunteers in the army under command of Major General Gaines in Florida, in February and March, 1836; and if so, in what capacity?

*Answer.* I served with the Louisiana volunteers in the army under command of Major General Gaines, in Florida, in February and March, 1836, and in the capacity of lieutenant colonel.

*Question 2.* Did you have a conversation with Captain McCall (then aide-de-camp to Major General Gaines) at Pensacola, on the 6th of February, 1836, on the subject of the pledge General Gaines had given to the Louisiana volunteers, and his continuing in command of the troops then on their march (by steam) to Tampa Bay; and if so, did you state to him that the Louisiana volunteers would be dissatisfied if General Gaines relinquished the command?

*Answer.* I had a conversation with Captain McCall, with Captain Hitchcock, and with General Gaines himself, at Pensacola, on the 6th of February, 1836, in relation to a communication just then received by General Gaines from the Adjutant General's office, notifying him (General Gaines) that General Scott had been ordered to conduct the military operations against the hostile Seminole Indians, and that his (General Gaines's) services might soon be required on the Mexican frontier, and directing him to await further orders in New Orleans. Being the senior officer present with General Gaines, and in the immediate command of the troops with him, I felt myself authorized to give my views touching the obligations incurred by General Gaines's promise of co-operation with General Clinch, and his pledge to accompany the Louisiana volunteers to the scene of action. And I did so to Captain McCall, as well as to General Gaines, in language to the following import: I said that the communication from the Adjutant General's office did not make it imperative on General Gaines immediately to withdraw from the command of the troops; that the order for General Scott to conduct the war in Florida no doubt had been given without any knowledge of the arrangements that had been made or were making by General Gaines to take the field; and that, inasmuch as he had, on his own responsibility, raised a respectable military force for the purpose of relieving the threatened military posts and frontier settlements, he ought to press forward to the theatre of the war. In the course of this conversation I said that General Gaines could lead on his men until he accomplished the object for which he set out, or at least until he met the officer commanding the troops advancing from the eastern side of the peninsula. I moreover stated that, inasmuch as he had pledged himself to the Louisiana volunteers to lead them on to the theatre of the war, they would expect him to accompany them, and would be dissatisfied if he withdrew from the command of the expedition.

*Question 3.* Did General Gaines, on his passage from Pensacola to Tampa Bay, communicate to you his purpose to co-operate with General Scott, in the event of that officer being found in the field?

*Answer.* On more than one occasion, I believe, General Gaines observed that his personal feelings towards General Scott should not interfere with his public duties. He stated that he would meet General

Scott, if he found him in the field, in a spirit of conciliation, and would cordially co-operate with him in bringing the war to a close.

*Question 4.* Would, in your opinion, any advantage have been gained by a sortie upon the Indians, had one been made from Camp Izard, at any time between the 29th of February and the 5th of March, 1836?

*Answer.* The concentration of three or four hundred men on any point of the enemy's line would have driven them from their position, and dispersed them, without any material advantage resulting to our cause.

*Question 5.* What is your opinion as to the sincerity of the Indians in suing for peace on the 6th of March, 1836, at Camp Izard, on the Withlacoochee?

*Answer.* It is my opinion, and I believe it was the opinion of the army generally, that the Indians were sincere in their proposition for peace.

*Question 6.* Please to state on what grounds your opinion is founded?

*Answer.* I judge that they were sincere from the manner in which they made the overture, and their conduct during the progress of the negotiation; from the fact that they permitted, for two or three days afterwards, the officers and men to fish and bathe in the river, and to cross to the opposite bank and wander for some distance into the woods; from the message sent by Primus to General Gaines, reiterating their desire to make peace, and their willingness, in five days, to meet him on the Withlacoochee; from the fact that the troops remained in three or four separate encampments for two or three weeks, the men individually passing between the several commands day and night without molestation; and again, from the appearances of Camp Izard and the grounds around, on the return of the troops under General Scott, when we found everything in pretty much the same state in which it was left, viz: the canoes that had been made by General Gaines's command uninjured; the slabs gotten out for the bridge or other purposes untouched, and the bodies of the dead undisturbed, which was very uncommon with the Indians.

THOMAS LAWSON.

Sworn to before—

S. COOPER, *Judge Advocate, Recorder of the Court.*

No. 45.

HEADQUARTERS WESTERN DEPARTMENT, *Camp Sabine, July 20, 1836.*

SIR: I did not receive, until last night, the Order No. 37, of which I think myself in duty bound to send you a copy enclosed herewith, marked A, being convinced that you have not been apprised of the fact that this order, issued, as it appears, by your direction, was suffered, by the person to whom you confided the trust of preparing the order for the office of distribution, to contain the extrajudicial opinion of General Scott in reference to the command of Camp Izard, on the Withlacoochee.

That General Scott should employ lawless means to palliate his own unofficer-like conduct, to condemn me without even the color of authority, and attempt thus indirectly to foist into an order issued under the supreme sanction of the executive department of the United States the malignant fictions of his own fancy, was to be expected, and was calculated to excite in my mind neither surprise nor concern, as all the evil of such an intrigue on his part would recoil upon himself, and the ill-designed attempt would redound to my honor rather than to my injury. I cannot suppose it to be possible that you have given your sanction to that part of the order in question referring to the command of Camp Izard, and therefore I am convinced I need only to solicit your attention to the subject to insure its correction, and my relief before the army and my countrymen from the odium which the order, in its present shape, under your sanction, would imply.

Had I been charged with a crime and put in arrest pursuant to the 77th article of war, and tried according to law, and found guilty of having committed a crime in connexion with my command at Camp Izard, or if my official report had been disproved, General Scott and any other officer might very properly refer to the record of the settled case, embracing such crime, and hold it up to the army *in terrorem*, or in palliation of some other established case of crime. But to prejudice me without my having had any intimation from the proper authorities that my conduct at Camp Izard had been called in question, and to obtrude the extrajudicial judgment into orders for the information and government of the army, and thus to forestall the opinion of the army and the nation against me, and in a manner calculated to pollute the streams of public justice, and not only disqualify General Scott himself from sitting in judgment in any such case against me, but tending to bias, mislead, and disqualify such officers of the army as may be disposed to yield to the opinion of General Scott—an opinion, however, as I have before intimated, from which I should feel no concern where that opinion is disconnected, as I trust it will be disconnected, from the apparent support given it by the sanction of the President of the United States, as the order in question, in its present form, implies.

My letter of the 4th of this month to the adjutant general, to be submitted to you in reply to his letter of the 10th of March, written by your direction, and written long before I had any knowledge of the existence of the order in question, or of the inquiry in the case of Major Gates, will show that it was an essential part of my plan to hold the Indians in check and to prevent their dispersion, preparatory to their entire defeat, on the arrival of the mounted men from Fort Drake, that I should abstain from a sortie until their arrival, or until I should hear from them. In my letter of the 28th of February to General Clinch I say, "I shall prepare means for crossing the river, but shall not attempt to cross until I hear from you;" and in my letter of the 29th of February to General Clinch I say, "I have abstained and shall continue to abstain from a sortie until I hear from you." These letters were intended for General Clinch, and for General Scott whenever he should arrive within the limits of my department. He was furnished by General Clinch, as he informed me, with copies. It is evident, therefore, that he made the allusion to my command at Camp Izard with a full knowledge of the fact that I was under a pledge to General Clinch not to make a sortie until I heard from him. My having, however, beaten the enemy and forced them to sue for peace twenty hours before I heard from General Clinch, happily superseded the necessity of making a sortie, which could not have been made without great loss on my part, with but little loss on the part of the enemy.

I have the honor to be, with profound respect, your obedient servant,

EDMUND P. GAINES, *Major General by brevet, United States Army.*

ANDREW JACKSON, *President of the United States.*

## A.

## GENERAL ORDER No. 37.

HEADQUARTERS OF THE ARMY, *Adjutant General's Office, Washington, June 11, 1836.*

I. The proceedings of the court of inquiry held at St. Augustine, East Florida, on the 6th day of May, 1836, and continued until the 7th, assembled by order of Major General Scott, at the request of Major William Gates, and of which court Lieutenant Colonel Crane, of the United States army, was president, have been laid before the President of the United States.

The court, at the request of Major Gates, was directed to investigate the conduct of that officer during and subsequent to the attack on the military post at Volusia, on the St. John's river, in Florida, embracing the 14th, 15th, 16th, and 17th of April, of this year.

The court of inquiry, having been directed to give its opinion on the whole case, came to the following conclusion:

## OPINION.

II. "The court, after mature deliberation on the testimony before them, are of opinion, from the evidence of Adjutant Patterson, Dr. Graham, and Lieutenant Pettes, that the effective force under the command of Major Gates was much greater than the estimated force of the Indians who attacked him on the morning of the 14th of April, 1836; and that, therefore, he was capable of meeting the enemy in the field, if necessary; also, that the bodies of two volunteers, killed, were improperly left exposed, and ought to have been brought in on the morning when they were killed—such exposure necessarily operating injuriously on the garrison."

On which proceedings and opinion, Major General Scott, commanding the troops in Florida, made the following remarks:

"It is clear from the evidence that the garrison of Fort Barnwell was, at the time it was attacked, at least twice as numerous as the assailing party; a vigorous sortie, with two-thirds of the garrison should, therefore, have been promptly made. The moral effect of such movement would have been great on both sides. Many of the enemy would, probably, have been killed or captured, and the garrison thereby inspired with a just confidence in the superior prowess of the white man.

"If for no other object, a strong detachment ought instantly to have been sent out to bring in the bodies of the sergeant and private who were seen to fall near the wood at the beginning of the attack. This imperative duty was neglected for more than forty-eight hours—a delay that is curiously slurred over in the major's official report.

"It is most painful to remark the fatal charm that seems to have hung over every commander in this war who has been attacked behind breastworks or pickets. From the leading case, at Camp Izard, to the last that has been reported, not a sortie—certainly not one of vigor—has been made by any garrison, however inferior the assailing force. Several mortifying cases of this sort have duly followed; and Major Cooper alone, with his Georgia battalion, has ventured for a moment beyond a line of defences to receive or to repel an attack. The series of examples alluded to have inspired the enemy with hardihood, repressed the zeal of our troops, and may slightly excuse the conduct of Major Gates. Certainly a gallant effort is yet to be made by some future commander of a post to break the charm and to check Indian audacity."

III. The President of the United States, on a full consideration of the conduct of Major William Gates, of the 1st regiment of artillery, as disclosed by the evidence before the court of inquiry, has directed that the name of that officer be stricken from the rolls. Major William Gates, therefore, ceases to be an officer of the army.

By order of Alexander Macomb, major general commanding-in-chief.

R. JONES, *Adjutant General.*

---

*General Gaines to the Secretary of War, enclosing letter from Major Graham.*

HEADQUARTERS WESTERN DEPARTMENT, *Frederick, Maryland, February 28, 1837.*

SIR: I have to request your attention to the enclosed letter from Major Graham, in connexion with the proceedings of the court of inquiry of which Major General Macomb is president. It was received too late to lay before the court. Upon reflection, however, I find it constitutes the only evidence known to me as likely to repel one of the many foul slanders alleged against me, namely, that I spoke of the order assigning General Scott to the Florida frontier in terms of disrespect towards the President of the United States. It is on this account I desire you to lay before the President Major Graham's letter.

Very respectfully, your obedient servant,

EDMUND P. GAINES.

The SECRETARY OF WAR.

---

*PENSACOLA, Florida, February 15, 1837.*

GENERAL: I have recently heard, with much surprise and regret, that there was a rumor (which I have reason to apprehend may have reached you) that I had stated or intimated, in speaking of an interview I had with you at this place on or about the 6th of February last, that I knew of your having received an order from the War Department, assigning the command of the army in Florida to another general officer, and that you had treated the order in a manner disrespectful to the authority from whence it emanated. It is a duty I owe to myself to state to you that if any such rumors have been abroad

they are entirely incorrect, and not warranted by anything I have ever expressed or intimated to any one; nor have I ever made a single statement or intimation, in allusion to that interview, tending to your disparagement. On the contrary, whenever inquired of by those who knew I was in Pensacola, when you touched here, in reference to your movement with the troops, I always stated, fairly and emphatically, the high sense of duty by which you appeared to me actuated in going to the relief of a portion of your countrymen who you believed would fall victims to savage butchery, if not relieved in a shorter time than could reasonably be counted on by any other force than that which you had organized and brought thus far on the route to the scene of hostilities.

On the day above alluded to I called on board the steamboat in which you had come with the troops, in order to pay my respects to you, as a superior officer. I had that morning observed a paragraph in a newspaper, (I think the National Intelligencer,) stating that "it was rumored" that General Scott had been ordered to the command of the Florida army, and yourself to hold yourself in readiness to repair to the Mexican frontier, or something to that effect. As the subject appeared to be of universal interest here, I ventured to ask you the question, if you intended to proceed on with the army? To this question you replied that you had, since your arrival at this place, received from the post office a letter from the adjutant general, informing you that an order had been issued by the direction of the War Department, placing Major General Scott in command of the Florida army, and directing that you should remain in New Orleans (as well as I remember) until further orders were sent you. You remarked that you had no intention whatever of interfering with the officer mentioned in the letter of the adjutant general, but added that you found yourself surrounded by circumstances, which the great distance of the seat of government from the scene of Indian hostilities rendered it impossible for the War Department to appreciate fully; that situated as you were, you believed it was a duty you owed your country to continue on with your army at least as far as might be necessary to arrest the depredations which it was understood the Indians were still committing upon our defenceless citizens, and that you conceived you had a right to rely upon the approbation of the War Department when all the circumstances should be known. You then took a rapid view of the probable period that must elapse before General Scott could, even with the greatest possible activity, have his army in the field, and the mischief which the Indians would be enabled to commit in the meantime, if not arrested by the force you had already organized and marched thus far towards the seat of war—mentioned the instructions you had sent to General Clinch, at Fort King, to make a movement in order to co-operate with you in your contemplated march from Tampa Bay; that it was now too late to countermand this order with any certainty of its reaching General Clinch, for the newspapers contained rumors that the Indians were collected in force around Fort King, (where General Clinch was then supposed to be,) either with a view of storming the picket or of preventing any supplies reaching it; that if these rumors were true, General Clinch, with his small force, something like 130 or 140 regulars fit for duty, and nearly one-half that number of wounded to take care of, ought to be relieved without any loss of time; that if the rumors alluded to were not true, then General Clinch would probably make a movement in accordance with the instructions which had been forwarded to him, and counting upon your co-operation, which, if not rendered according to the understanding, might expose him to attack from the united force of the Indians, which was known to be far superior to his in number; that when the Louisiana volunteers (or some of them, for I do not remember whether the remark applied to all or to a part) came to be mustered into the service of the United States, a question arose among them as to what commander they were to serve under; that in order to give confidence and produce unanimity of feeling among them, you had declared to them that you would not require them to march further into the enemy's country than you should go yourself, having, at the time, no reason to apprehend you would receive any orders adverse to this assurance; and that if you were then to quit them, before they had proceeded halfway to the post where their useful services were to commence, it would probably create dissatisfaction among them; in which event, constituting as they did a large majority of your force, the whole object of the expedition would probably be thwarted. These, I think you remarked, were all circumstances of so imperious a nature, and which it was impossible the War Department could have been acquainted with when the letter from the adjutant general was written, that you considered it your duty to your country to yield to them, and, in doing so, felt you had a right to calculate upon the approbation of the Executive or the War Department.

I have given you, general, in the foregoing statement, the true import of all I have ever said in reference to this subject, and I leave it to yourself to judge whether or not I have misrepresented you. I will only add that, on my return to the north a year ago, I had occasion to allude to this subject, in answer to inquiries which were made of me by several distinguished individuals in Washington, in New York, and in Boston, in which (as I can appeal to them to testify if necessary) I uniformly gave the view which I have here presented.

I am, general, with much respect, your obedient servant,

J. D. GRAHAM, *Major United States Topographical Engineers.*

Major General GAINES, *United States Army.*

*Proceedings of a court of inquiry held at the city of Frederick, Maryland, by virtue of the following orders, viz:*

GENERAL ORDER No. 65.

WAR DEPARTMENT, *Adjutant General's Office, Washington, October 3, 1836.*

The following order is published for the information of all concerned :

By direction of the President of the United States, a court of inquiry, to consist of Major General Macomb, president, and Brevet Brigadier Generals Atkinson and Brady, members, is hereby ordered to assemble at the city of Frederick, in Maryland, as soon as the state of the military operations against the Indians will permit the witnesses to attend, (of which the President of the court is to judge and determine, and to give notice to all concerned,) to inquire and examine into the causes of the failure of the campaigns in Florida, against the Seminole Indians, under the command of Major General Gaines and of Major General Scott, in 1836; and the causes of the delay in opening and prosecuting the campaign in Georgia and Alabama against the hostile Creek Indians in the year 1836; and into every subject connected with the military operations in the campaigns aforesaid; and after fully investigating the same, the court will report the facts, together with its opinion on the whole subject, for the information of the President of the United States.

Captain Samuel Cooper, of the 4th regiment of artillery, is hereby appointed to act as judge advocate and recorder of the court.

LEWIS CASS.

WAR DEPARTMENT, *October 3, 1836.*

R. JONES, *Adjutant General.*

GENERAL ORDER No. 69.

ADJUTANT GENERAL'S OFFICE, *Washington, October 14, 1836.*

The following order has been received from the War Department, and is published for the information of all concerned:

WAR DEPARTMENT, *October 13, 1836.*

1. It appearing by the public prints that the official report of Brevet Major General Gaines, dated "Headquarters Western Department, Camp Sabine, July 4, 1836," made to the adjutant general of the army, has been published, and the said publication being without the sanction of the War Department, or other proper authority, the court of inquiry of which Major General Macomb is president will, in addition to the duties already assigned to it, inquire into the facts as to the manner, and by whose authority, the said official report was made public.

2. The court will also report its opinion as to the violation of the rules of the service by such publication, and as to the character of said report, in reference to all its bearings and consequences, as it concerns general military propriety and the discipline of the army.

3. And, further, the court will examine and inquire into any other reports and publications made by Brevet Major General Gaines, or by any other officer of the army, having reference to military affairs, and published without the sanction of the War Department, or other proper authority, and give its opinion on the tendency of such reports and publications in the same manner as it is herein required to do in the case referred to in the foregoing paragraph of this order.

C. A. HARRIS, *Acting Secretary of War.*

By order of Major General Macomb.

R. JONES, *Adjutant General.*

FREDERICK, *February 13, 1837.*

The court met pursuant to adjournment of Saturday. Present: Major General Macomb, president; Brigadier General Atkinson and Brigadier General Brady, members; Captain Cooper, judge advocate and recorder.

The court was sworn in presence of the parties interested in the present investigation, who had stated that they had no objections to offer to any member of the court.

The judge advocate then proceeded to open the investigation having reference to the unauthorized publications of officers of the army on the subject of military affairs, and the tendency of such publications. He presented to the court a letter from Captain Hitchcock, of the 1st infantry, addressed to the honorable F. S. Lyon, dated Fort Drane, March 11, 1836, and published in the *Globe* of the 2d of April, 1836; also, a communication from Major General Jesup to the editors of the *Globe*, and published in that paper of the 8th of April; and further, a letter from Captain Hitchcock to the editors of the same paper, dated Washington, June 2, 1836, and published in the *Globe* of the 4th of June.—(See documents Nos. 1, 2, 3.)

After the reading of these letters, Captain Hitchcock asked leave, and addressed the court to the following effect:

"MR. PRESIDENT AND GENTLEMEN OF THE COURT: As among the duties assigned to this court, that of passing an opinion upon the tendency of publications by officers of the army is one; and there being before the court two letters over my signature—one addressed to the honorable F. S. Lyon, dated at Fort Drane, in March last, and the other addressed to the editors of 'The Globe,' dated in June last, both of which I acknowledge to have written—I request that the facts and views which I am about to state may receive the attention of this court.

"The letter addressed to Mr. Lyon was written under the following circumstances:

"While marching from the Withlacoochee to Fort Drane, the 11th of March, I observed to my friend and associate, Captain McCall, that 'all manner of stories would be put in circulation about the movements of the army, and that unless some one acquainted with the facts would undertake to state them, the newspapers would be all at fault; that much interest must be excited in the country on the subject; and,' said I, 'I am disposed to prepare a statement and send it to some editor.' Accordingly, on arriving at Fort Drane I wrote the letter in question. After completing it, and being desirous of publishing nothing but the truth, I requested General Gaines to permit me to read it to him. He at first declined, but on my urging it he gave me his attention while I read the letter, and at the conclusion he expressed a wish that his nephew, Mr. Lyon, might have a copy of it. Not being disposed to prepare a copy, I determined to send the original to Mr. Lyon, and did so, telling him in a note that I had not written the letter for the purpose of placing my name before the public, but that if he thought it worth while to authenticate the facts with my name, he was at liberty to do it.

"It is my wish, of course, that before passing any opinion that may touch the letter, even indirectly, the court will hear it read, and consider whether the following observations are not perfectly just, and sustained by the letter. It purports in its first paragraph to be a statement of facts. There is nothing in it at variance with that declared object. There are no discussions in it designed or calculated to aid or direct public opinion upon the rights or duties or responsibilities of individuals connected with the movement of General Gaines, or of individuals affected by that movement. There is nothing personal in the letter; nothing directly or remotely designed or intended to *awaken* or *control* any controversy of any sort. There is not a single remark in the whole letter in compliment to General Gaines, except where I record the confidence of the officers in his judgment, &c., and that itself was the mere statement of a fact, attested by the signature of every officer but one in the camp, in a letter to the general after the command was turned over to General Clinch. The principles governing the general in going to Florida are not discussed, nor are there in the letter any discussions upon the expediency of any of the numerous specific determinations resolved upon or executed by him while in Florida; but the letter is what it purports to be—a statement of facts; and had it been my pleasure to have put it forth anonymously, it would have been as silently passed by as hundreds, if not thousands, of similar statements have been since the commencement of the Florida difficulties.

"I need not call the attention of the court to the fact that the public is principally informed of the movements of the army by paragraphs in newspapers, headed by the editors with this announcement: 'We have been politely favored with information from the army by a letter from an officer,' &c. There is scarcely a paper of the present day that does not contain some such announcement, and no one sees anything improper in this, considered in itself. Every newspaper copies these statements, even without a responsible name, and they are thankfully received all over the country, and often furnish materials for history.

"In a recent publication of official correspondence called for by Congress relating to a change of commanders in Florida, the Acting Secretary of War, in one of his letters, refers especially to an article in the *Florida Herald*, prepared, as he had understood, by an aide-de-camp of Governor Call, and expressly states that the facts disclosed in the article relative to the operations of Governor Call, formed the *principal* ground of action by the department. The article was not even signed; and if the present Acting Secretary of War—a man of great legal ability, of scrupulous integrity, and of irreproachable delicacy of character—so far from condemning the article, adopted it as among the sources of information upon which to base an important order; and if the court should think otherwise in reference to a publication of my own, in all respects similar, except that I made myself responsible for the facts I stated by my signature, I shall be compelled to *feel* the truth of a striking observation of Tacitus—that, in early ages, men suffered from the vices of the times; they afterwards suffered from the *snare*s of the law—for in writing the article I did not imagine I was violating any law or rule, or that any law or rule was necessary in the case.

"I deem it not improper here to allude to the fact of there being a weekly paper published in the city of Washington, immediately under the observation of the government, and apparently encouraged and supported by officers of all grades in both the army and navy, and that the pages of this journal are principally employed in inviting, distributing, and preserving for future instruction all manner of communications touching matters of high interest to the service and to the country. Among these communications will be found discussions upon military principles, suggestions for improvements in all imaginable ways, and very numerous letters from officers in foreign countries and at distant posts, giving accounts of military and naval movements beyond the reach of the Post Office Department. In all this no one is for a moment at a loss in drawing a line between the *fact* of *communicating* and the *matter communicated*.

"It would appear, therefore, that there is no necessary evil in the fact of publishing information.

"It might be well to consider that, in time of war, the country must and will have accounts, more or less accurate, of military movements; that editors will get at these accounts by mingling even with the privates of an army returned from the field; that officers and privates cannot be expected to be silent, but will *talk* in the hearing of those who will write of where they have been and what they have done; that many will write to their friends and relatives, who have been, perhaps, weeks or months in suspense and anxiety on account of the war. The court cannot, I apprehend, entertain the question whether it be desirable to prevent the publication of facts so communicated in relation to a campaign. All who are not wilfully blind must see that this is utterly impracticable—absolutely impossible. There is no power on earth that can control this in a country like our own, where the liberty of speech is secured, the public mail is sacred, and the freedom of the press unshackled. In monarchies or despotic governments, some control may be exerted; but in this country, yet new in its discovery, and still more new in its institutions, it every day becomes necessary to modify and often to reverse the usages of foreign nations. It is our boast to improve upon the institutions of other countries, and, without intending any disrespect to the old regulations of the army, annulled by General Order, December 31, 1836, I cannot but think that a rule of Mr. Jefferson's, on a topic of far deeper interest, is strictly applicable in the matter I am considering—that error is not dangerous when truth is left free to combat it. Prohibit publications in the abstract, and the consequence will be that anonymous and false statements will flood the country, and oftentimes become so widely circulated and so universally received as to enter into the regularly-compiled histories of the times, when it will be next to impossible to separate the false from the true. These statements, however, may, in a great measure, be deprived of their mischief, when those over a respon-

sible name are subjected only to that supervision which has regard not to the fact of publication, but to the matter published.

"If my harmless, and I must say unambitious, letter, in which my name only appears in the signature to authenticate the statements I made, be supervised with reference to the views here expressed, I shall have no reason to apprehend that many years of hitherto irreproachable public life are now in danger from my having given my name voluntarily to facts I thought the public would receive with thanks. I will observe that not a single individual in the country has been misled by my letter. The court cannot but see that, although it was written in haste, and is utterly destitute of affectation of fine writing, still it bears the impress of 'studied accuracy' as to facts, which no subsequent events have in any manner invalidated. I stated facts merely, and expressly cautioned readers to *wait events*, as the last paragraph of the letter will show.

"I am reluctant to allude to the circumstance of my having made no mention of General Scott in the letter; but as remarks have been made, as if I had some sinister design in that omission, it is my duty to explain that the first paragraph promises only a statement in relation to the movement of General Gaines. Down to the date of the letter I had no personal knowledge of the operations of General Scott. I had only seen certain letters, and heard certain rumors and reports in relation to him, not likely to be commented upon with much satisfaction; and the court, on bearing in mind the testimony showing my knowledge of those letters and reports, cannot fail to see a virtue in my silence. It made no part of my object to call the attention of the public to a source of conflicting feelings about to become conspicuous between two distinguished commanders. I have never fostered, aided, or assisted in any manner in angry controversies in the army, either among officers of high rank or those of more humble claims to the notice of their government or country. It accords neither with my disposition or principles to lose sight of the paramount claims of the army to the individual exertions of its every member to sustain its reputation as a whole, which must be sacrificed by espousing personal altercations or quarrels.

"I may be excused doing justice to myself at this time by stating that, so far was I from entertaining a disposition to do injustice to General Scott, or to enliven the causes of irritation between himself and General Gaines, that I sought three of his staff officers, Lieutenants Chambers and Temple and Captain Van Buren, and conversed with them at Fort Drane, with the express view of healing the difficulties between the two generals, and sought the same object through Colonel Gadsden, desiring him to aid me in that object. I will also state that, on the Withlacoochee river, I urged upon General Clinch the propriety of withholding from General Gaines the letter from General Scott of the 1st of March, observing to General Clinch that its exhibition could have no other effect than to widen the breach between the generals; and acting consistently with my conduct at that time, I made no allusion to that letter in all my intercourse with General Gaines from that day until the order for the court of inquiry made silence on the subject both unnecessary and impossible. I doubt not it will be in the recollection of the court that General Gaines himself, on hearing the letter read in court, declared in the most emphatic manner his previous ignorance of its existence. In the same spirit on my part I did not even mention the existence of the letter to Captain McCall, although associated with him for weeks and months on the most intimate terms, and through scenes when, if ever, the heart is warmed to the disclosure of whatever a man of honor may communicate to his friend.

"For the truth of these facts and principles I appeal to my past life and to the testimony of all who know me; but will add that, apart from public considerations, I had private reasons, all-important with myself, that influenced me in abstaining, not only in my letter to Mr. Lyon, but on all occasions, from bringing the measures of General Scott into question in relation to Florida affairs.

"If these remarks seem too much extended, and out of proportion to the importance of the letter to which they refer, I beg the court will consider that the principles involved in the matter are the same, my letter to Mr. Lyon occupying but a couple of columns, as if it had filled a whole newspaper—that I am not advised of the precise scope of the inquiry touching the letter; but above all, I trust that mere kindness will make great allowance for an endeavor to avoid a censure from this honorable court, composed of three distinguished officers, an unfavorable opinion from either of whom would be regarded with the most extreme mortification.

"In reference to the letter of the 2d of June, published in 'The Globe' of the 4th of that month, I would observe that the facts stated in it are strictly in accordance with the testimony before the court in the case of both General Gaines and General Scott, and that the manner of my making the statement was necessary, and is not liable to exception. I desire the court to consider that the letter purporting to come from General Jesup, to which mine was a reply, was not called for by my letter to the honorable Mr. Lyon. I appeal to my letter, and to the natural and unprejudiced impressions upon reading it, to sustain me in declaring that nothing contained in the letter was the legitimate cause of the letter having the name of General Jesup to it, and, therefore, I must presume the court will not hold me accountable for that letter, and I trust will find no objection to the explanation it called for of the 2d of June. I have no complaint to make of General Jesup, supposing him to have written the letter to which mine is a reply, and I am ignorant of the existence of any evil as resulting from either of the letters."

The court here adjourned to meet to-morrow at 11 o'clock a. m.

FEBRUARY 14, 1837.

The court met pursuant to adjournment. All present.

The judge advocate presented to the court a letter from Captain McCall, of the 4th infantry, dated "Camp Sabine, May 18, 1836," addressed to the "Editor of the New Orleans Bulletin," and published in the Army and Navy Chronicle of the 11th of August, 1836; also a postscript to said letter, addressed to the Editor of the Army and Navy Chronicle, and published in that paper of the 29th of September, 1836.—(Docs. 4, 5.)

After the reading of these letters, Captain McCall asked leave, and addressed the court to the following effect:

"*Mr. President and gentlemen of the court:*

"As the attention of the court has been directed to the publication by officers of the army of certain letters relating to the campaigns forming the subject of its investigation, with a view to obtaining its opinion as to the tendency of those letters; and as a letter under my signature has been laid before the

court, I have to request that the following remarks, in connexion therewith, may be taken into consideration.

"At the time my letter was written the public prints were teeming with misrepresentations of the operations in Florida as injurious to the character of the army as gross and indecorous in themselves. Paper after paper was filled with either a strange perversion of facts or a tissue of harsh reflections upon the officers and troops who had been engaged in arduous service in Florida.

"In this state of things I was desirous, by a faithful representation of the principal events of the campaign in which I had served, to remove the stigma which I conceived had been wantonly cast upon the arms of the country

"I addressed a letter on the subject of the campaign to a gentleman who had always manifested a deep interest in the honor and welfare of the army. Before sending this letter I read it to General Gaines, and expressed a hope that my statement might tend to remove the injurious impressions likely to be made by the various reports then in circulation. With his permission I afterwards sent a copy of the letter to the editor of the 'New Orleans Bulletin,' likewise with a view (as appears from my note to the editor) to correct the errors which had already found their way to the press.

"My letter purports to be a sketch of the principal features of the campaign in Florida, under Major General Gaines, which terminated on the 9th of March, 1836. The letter was written on the 18th of May, 1836, and did not appear in the Bulletin until the 21st of June following. No army regulation, therefore, was violated by its publication.

"The 650th paragraph of the 'General Regulations for the Army' (1825) prohibits the publication of letters or reports relative to military marches and operations, without special permission, *within one month* after the termination of the campaign to which such letters or reports relate. My letter relates only to the campaign under Major General Gaines, and was not published until *more than three months* after the termination of that campaign.

"In writing the letter I studiously avoided expressions that might reflect upon any officer, in any way connected with the campaign to which my narrative was confined, or any other campaign.

"Had I published the letter anonymously, I should have avoided the responsibility of authorship, as has been the case with great numbers who have written to editors and others since the commencement of hostilities in the south; but conscious of the integrity of my motives, and confirmed in the correctness of my narrative; and, moreover, satisfied that I should violate no known regulation of the army, nor any principle of right or propriety, I did not hesitate to give my name to the contradiction of foul and calumnious statements, which were greedily swallowed by the public, and some of which have even been admitted into a work purporting to be a *history* of the war.

"In the United States, where the liberty of the press is enjoyed in the fullest sense of the word, the rapid dissemination of every description of accounts of military marches and operations, even while the army is in the field, may be expected. Where the militia constitutes the principal numerical force of an army, the novelty of the life and the interest of the scenes through which the young soldier passes, together with a desire to gratify the curiosity or relieve the anxiety of distant friends, offer temptations too great to admit a doubt that the accounts sent from the seat of war to every part of the Union will be as numerous and perhaps as various as the individuals composing the forces in the field. These accounts are circulated in a thousand ways, and tend to impress improperly the public mind. This fact has been fully illustrated during the last twelve months.

"The court needs no argument to satisfy it of the impossibility of *preventing* this evil. It was with a view of applying, as far as in my power lay, a remedy to this evil, that my plain narrative of the campaign was written, and *my name attached to it*; for the country was flooded with anonymous accounts of the operations in Florida, sometimes as intemperate and abusive in their expressions as imperfect and fallacious in their details. Amongst the most violent of these productions was the article that has been laid before the court by General Gaines. And when I state that this article was received at Camp Sabine a few days before my letter was written, I feel confident the court, so far from seeing an impropriety in the honest desire I manifested to place the events of the campaign in their true light, will rather be surprised at the calmness and moderation which marked the tone and language of my letter.

"As Major General Scott, in his defence before this court, has quoted a passage from my letter, and has deduced an argument therefrom which may tend as much to prejudice others as to benefit himself, I must, with all respect to General Scott, remark that the interpretation given this passage (which has been singled out of a long letter, and in itself comparatively of minor importance) is a more liberal interpretation than was contemplated by the writer.

"It was never my intention to convey an idea that 'the Louisiana volunteers were a body of vassals, who owed allegiance to a particular chief,' (see General Scott's defence,) nor can I think it would be inferred from my letter. Nor do I think it would be inferred from my letter that they evinced a determination to violate their engagement with the United States; or that they would have been guilty of mutiny had General Gaines relinquished the command.

"It is well known that these troops had been regularly mustered into service for three months; had received a bounty of thirty dollars, and were to receive the pay of ten dollars per month: they were, therefore, *bound* to obey all officers properly placed over them.

"I stated in my letter, and on the authority of General Gaines, myself, that '*he had pledged himself to accompany the Louisiana volunteers whithersoever they went, &c.*' In alluding to this fact as the *least important* of several reasons General Gaines expressed for continuing his movement from Pensacola, I said the volunteers were (owing to this pledge) unwilling to proceed *without him*. Had I said they were unwilling to *part with him*, I should have expressed my meaning more clearly; and that fact is fully established on your record. Even grammatically criticising the sentence, the freest construction to be put upon it is, that the volunteers would have *proceeded unwillingly* without General Gaines, who had pledged himself to accompany them. Although no one doubts that this fine regiment was bound to proceed, and would have proceeded without General Gaines had he so directed, yet they were unwilling to part with him; and this is the only proper construction that can be put upon the passage. For, if the other interpretation is given it, I must appear to cast upon the Louisiana volunteers a *reflection* altogether inconsistent with the terms of encomium used towards them in other parts of the narrative.

"The slight verbal difference I have noticed I cannot believe has misled the public, for my meaning is clearly conveyed in the spirit and context of the letter.

"As I am not advised of any particular point in my letter to which the attention of the court is directed; and as I am not aware of having violated any known law or order in the production of that

letter, I have confined myself, in the first place, to laying open to the court the *motives* which induced the writing and the publication of the letter, and which I cannot doubt will be found good and sufficient; and, in the second place, to explaining to the court a passage in my letter which has received an interpretation different from that which was contemplated in penning it. This explanation, I trust, is satisfactory, for a thought that a different opinion was entertained by any member of this high and honorable court would be to me a source of the most painful humiliation."

The court adjourned to meet to-morrow at 11 o'clock a. m.

FEBRUARY 15, 1837.

The court met pursuant to adjournment. All present.

The court proceeded to pronounce its opinion on the foregoing cases, as follows:

The court took into consideration a communication from Captain Hitchcock, of March 11, 1836, to the honorable Mr. Lyon, of Alabama, published in the "Globe" of April 2, 1836, detailing the operations of Major General Gaines in his campaign against the Seminole Indians in Florida in 1836, and find that its publication was made with the approbation of Major General Gaines, and does not violate any regulation or rule of service; that it appears to be a narrative of facts assumed by the writer, without any comments or reflections injurious to the public service; and the court cannot, therefore, see that there is any necessity for further investigation into the subject.

The judge advocate laid before the court a number of the "Globe" of April 8, 1836, containing a publication purporting to be from the pen of Major General Jesup, commenting on the letter of Captain Hitchcock of the 11th of March; also a letter of the 2d of June, addressed by Captain Hitchcock to the editors of the "Globe," and published in that paper of the 4th of June, in reply to the publication having the signature of Major General Jesup. In viewing the contents of the letter of Captain Hitchcock of the 2d of June, it purports to be a justification of the premises assumed in his letter to Mr. Lyon of the 11th of March, and contains nothing contrary to the regulations of the army.

The court was called to consider a publication made by Captain McCall, addressed to the editor of the New Orleans "Bulletin," under date of May 18, 1836, and published in the "Army and Navy Chronicle" of August 11, 1836; also a postscript or notes to said letter, published in the "Army and Navy Chronicle" of September 29, 1836. The purport of the letter and postscript is a detail or narrative of the campaign of Major General Gaines against the Seminole Indians in Florida in 1836. But as the publications were made more than a month after the campaign was closed the army regulations were not violated thereby.

ALEX. MACOMB, *Major General, President of the Court.*  
S. COOPER, *Judge Advocate, Recorder of the Court.*

#### PUBLICATIONS OF OFFICERS OF THE ARMY.

No. 1.

[From the Globe of April 2, 1836]

FORT DRANE, *Florida, March 11, 1836.*

SIR: The following statement of facts in relation to the recent movement of troops from Louisiana, under the immediate command of Major General Gaines, you may rely upon, and, if you think proper, may use for the information of the public.

General Gaines left his permanent headquarters at Memphis, Tennessee, on a tour of inspection, and arrived at New Orleans about the 15th of January, where he heard, for the first time, of serious disturbances in Florida, and particularly of the melancholy massacre of Major Dade and his command, which occurred on the 28th of December. He immediately communicated with the governor of Louisiana, and requested him to call upon and hold in readiness a body of volunteers for service in subduing the Seminole Indians, and proceeded to Pensacola to solicit the co-operation of the naval force on that station. At Pensacola he found his wishes had been anticipated, Commodores Dallas and Bolton and Captain Webb having already directed their attention towards Tampa Bay, and other inlets of Florida, whither they had ordered marines and munitions of war.

The general, on his way to Pensacola, feeling called upon to take the most prompt and decisive measures to sustain the military post within his command, and secure the peace of the frontier, issued his orders to Lieutenant Colonel Twiggs to receive into service eight companies of the volunteers requested of the governor of Louisiana, and, together with the regular force at Baton Rouge, New Orleans, and other stations in the immediate vicinity of New Orleans, to hold himself in readiness for a movement to Tampa Bay. The whole force amounted to about eleven hundred men, including about seven hundred volunteers. This order was dated at Mobile the 18th of January.

The general visited Pensacola, as stated, and then proceeded to New Orleans, where he arrived about the 26th. He organized and equipped his force, and moved, on the 4th of February, in three steamboats. He reached Tampa Bay on the 9th, and on the 13th took the field in the enemy's country. It was first designed to search for and defeat a body of Indians reported to have been recently in the neighborhood of Fort Brooke, said to have been in battle only a day or two before the arrival of the general with the friendly Indians. Accordingly, the general marched in an easterly direction upon the Alafia river, but at the end of two days, having found two or three fields of turnips and other vegetables, as also fodder-stacks, not destroyed by the enemy, it was readily concluded he could not have been in that vicinity in any considerable force, and the general directed his march towards Fort King. He had taken ten days' rations only, but had reason to suppose that a large supply of stores was at Fort King, the quartermaster having shown him an official letter from the quartermaster general, advising him that one hundred and twenty thousand rations had been ordered to that post. The letter was dated the 21st of January.

The march was continued to Fort King, passing, on the 20th of February, the battle ground of the gallant band cut off under Major Dade on the 28th of December, where we interred the bodies of 106 heroes.

No language can do justice to the scene. The remains of our mutilated brothers in arms were found where they had fallen, at their posts; the very position of the advanced guard being clearly indicated. Our troops marched to solemn music around the little breastwork, which had been hastily thrown up, and where the last of the party were destroyed—each individual lying at the breastworks, where, beyond a doubt, he fell in the execution of his duty. We continued our march a short distance that day, and on the 22d, as if to celebrate the birth of him who was "first in war, first in peace, and first in the hearts of his countrymen," we arrived at Fort King, and gave an agreeable surprise to one company of artillery, the garrison of that post, which, from its isolated and exposed situation, had been reported in the presses of the country as having been assaulted and destroyed by the Indians. The garrison had indeed been exposed, but was well prepared to give the enemy a warm reception. The guard, on the approach of General Gaines, was paraded, and the customary honor paid in due form. But where were the hearts of all at that moment? The writer of this confesses "he turned aside to wipe away a tear."

The general, contrary to his reasonable expectations, found no sufficient supply of stores of any kind. The next morning, the 23d, all the horses were sent to Fort Drane, (22 miles northwest,) with a suitable convoy, for a supply of provisions. The 24th brought us all that could be procured, and it was ascertained to be but seven days' rations, which, with two days' supply found at Fort King, made up all that could be looked for in that quarter. The general had then to decide upon his next movement. To remain at Fort King without supplies was out of the question; to proceed further north might embarrass the operations of another officer then ascertained to be employed at Picolata in preparing force and supplies to penetrate the enemy's country. After much and mature deliberation, the general decided to move south again, by the battle ground of General Clinch. If the enemy should not be found, the general would, at all events, reach supplies at Tampa Bay. His movements would occupy, and perhaps concentrate the enemy, and tend greatly to give security to the frontier, and enable families to return to their deserted plantations, and in safety recommence their peaceful avocations, which was considered of very great importance, the season having arrived for the commencement of planting operations. Lastly, but not the least of the considerations, we might find and beat the enemy.

The general moved from Fort King on the 26th of February, and on the 27th, at two o'clock, we were on the right bank of the Withlacoochee, at the place where General Clinch crossed the river the 31st of December preceding. The troops had advanced from Tampa Bay, and to this time the same order of march had been preserved, in three columns, a right, centre, and left, respectively, about 100 yards distance from each other, with a strong advance and rear guard; the baggage being in the rear of the centre column. In this order it followed that we struck the river at three points; the advance guard, as the centre, being at the usual crossing place. The baggage and the rear had been ordered to halt, as the general only designed examining the crossing place. Up to this time no attack or annoyance had been offered us since we left Tampa Bay, and but few of us expected it at the Withlacoochee; we were, therefore, many of us, fully exposed while sounding and examining the river, and our exposure was matter of jocular remark, when, for the first time, opposite our left flank, a spirited fire was heard, accompanied by the enlivening war-yell of the savage. The fight was continued about half an hour, the enemy being on the left bank of the river, when the general ordered the troops to encamp near the river. We lost one killed and eight wounded. On the 28th we moved down the river about two miles, where the banks were less covered with thicket, and the advance guard was here fired upon, and Lieutenant Izard, of the United States dragoons, mortally wounded. He fell, but partially recovering himself, commanded his men, with the utmost composure, to "keep their positions, and lie close;" a command scarcely less remarkable than that of the lamented Lawrence: "Don't give up the ship." Lieutenant Izard, after five days of suffering, died on the 5th of March, and was buried on the banks of the Withlacoochee—himself a loss too great for the savage foe ever to compensate.

The fight was continued on the 28th, with little or no intermission, from about 9 o'clock until 1 o'clock p. m., when we encamped again. During this period the Indians kept up a continuous yell, except during an interval, when they retreated for a short time. We lost this day, besides Lieutenant Izard, one killed, and Captain Sanders, commanding the friendly Indians, and Captain Armstrong, of the United States schooner *Motto*, both volunteers, wounded, the latter slightly. In the evening of this day an express was sent to Fort Drane to report to the officer commanding in that quarter that the enemy had been found in force, and to recommend an immediate movement, crossing the Withlacoochee some distance above, and thence to fall down upon the enemy's rear, which it was hoped would terminate the war.

On the 29th, in the morning, the enemy was silent; but the experience of the general looked upon it as ominous, and he ordered one-third of the command to remain at the breastworks, the remainder of the force being employed in preparing timber and canoes for crossing the river. At about 9 o'clock our working parties were fired upon, and simultaneously a vigorous fire poured into camp from three sides—that nearest the river being the only one not assailed. The firing continued a little over two hours, during which we lost one man killed, and three officers and thirty non-commission and privates wounded. The force of the enemy was estimated at twelve hundred or fifteen hundred. General Gaines was wounded by a small rifle ball, which passed through his lower lip, making a very slight wound, but knocking out one lower tooth and slightly fracturing two upper-teeth. This was a most startling incident to all as soon as known, but affected everybody more than the gallant hero himself, who, with the most heart-cheering good humor, observed that it was extremely unkind for the enemy to take a tooth from him which he valued so highly. Lieutenant Duncan, of the artillery, was slightly wounded, and Lieutenant E. Smith, of the Louisiana volunteers, was wounded no less than three times. The enemy at length retired in some haste; for, contrary to their custom, they left one of their dead, after dragging the body some distance. They took his rifle, but we found him well supplied with powder and about sixty bullets.

The enemy, contrary to expectation, having crossed the river, it was evidently unnecessary for the troops from Fort Drane to go higher up; and accordingly General Gaines sent another express that evening, suggesting the expediency of a movement directly to Camp Izard, (the name he had given his own camp,) requesting, as he had done by the previous express, a supply of six thousand rations of pork, flour, and sugar. On the 2d, 3d, 4th, and 5th days of March, the enemy fired at intervals, both day and night, upon our camp, which we secured by breastworks of pine logs, within which most of the command enjoyed themselves in conversation, and speculating upon probabilities as to whether supplies would reach us, while our sharpshooters were amusing themselves in picking off the Indians from behind the trees.

As our provisions diminished we began to inquire into the virtues of roots and the comparative excellence of horse meat. At a meeting of officers, all the corn was thrown into the public crib, and an

issue of a pint made to those men whose bread had been exhausted. At length bread, corn, and meat disappeared, and some of the men were two days without food. What were then the feelings in camp? Let it be recorded to the honor of every man, and let no one from false modesty hesitate to yield his feelings to the gratification of noble pride, when he recollects that not a murmur was heard, and not a whisper of retreat circulated from any quarter. Far from it. Some horses were killed, and a very delicate piece was brought to the general at his tent, who found it remarkably tender and well flavored. We felt very well able to maintain ourselves at least three weeks, if necessary; and by that time, at least, the force from above must certainly come down, and the Indians would assuredly be taken. These were our reflections on the night of the 5th, when, at about 10 o'clock, we heard some one calling from the woods, and wishing to speak with us. The officer of the guard answered the man, and demanded his designs. He distinctly stated that the Indians were tired of fighting, and wanted to make peace. The general ordered the officer of the guard to answer that, if he wanted to say anything, to come in the morning with a white flag, and he should not be fired upon. He replied, "very well," repeating his desire to come in and have a friendly talk, and to shake hands. This was soon circulated throughout the camp; but, from the well-known treachery of the Indians, we were ordered to be particularly on our guard, and continued so all night.

During the day of the 5th we lost one man killed, and had two wounded—the only casualties which had occurred since the 29th. On the morning of the 6th, at about 10 o'clock, about 300 of the Indians fled out from the river and took up a position in our rear, about five hundred yards distant. They were armed, and we were fully in the belief that this was a mere feint—supposing the residue of their force in a neighboring hammock—and were confident of a desperate assault from some other quarter. We were at a stand, waiting their movements, some minutes. At length one or two advanced a short distance, and, after considerable hesitation on their part—the result of their fears lest we should entrap them—they approached near enough to be heard, and, after being joined by three or four others, came within about two hundred yards, and repeated what had been declared the night before. The general then directed a staff officer to go out to them and hear what they had to say. It was soon reported to the general that the Indians did not wish to fight any more, but they wanted him to retire from the Withlacoochee. The staff officer was then ordered to return to them, and, in the plainest language, to tell them the exact truth as to the force ordered into the country to subdue them; that additional force was expected every day; that the time was near when every Indian found with a rifle in his hand would be shot down. This was communicated, with such explanations as were deemed necessary to give it force, and they then said they would go and hold a council, and would assemble again in the afternoon to give an answer. In the afternoon they came as before, including, as in the morning, the celebrated Powell and scarce less celebrated Jumper, with several others, and with the interpreter Abram. The general's staff officer had with him two or three others from our camp to the talk. The Indians repeated much of what they had said in the morning—that they had lost many men by death and wounds, and were tired of the war, and wanted peace; but as their governor, as they called him, Micanopy, was not with them, they wanted time to consult him. They therefore asked a cessation of the war. The staff officer, having been previously instructed by the general, told them that if they would engage to cease from all acts of hostility, retire south of the Withlacoochee, and promise to attend a council when called upon by the United States commissioners, they should not for the present be molested. They answered that, for themselves, they would, and did promise all that was required. At that moment a noise was heard from that portion of the Indians at a distance, and they were seen running towards the river. It was easy to conjecture the cause. Immediately afterwards General Clinch, with 500 men and supplies, came gallantly on; and his advance guard of mounted men seeing Indians, and not knowing the purpose of their being where they were, formed a line promptly to the left, and fired. But the fleetness of the Indians saved them; they were beyond the reach of gunshot, and were soon out of sight and over the river.

Then followed one of the most delightful greetings imaginable. General Clinch's force moved onward, and was soon within hail of friends; and were we not all friends indeed? The new comers were soon divested of their surplus bread, &c., until their haversacks were emptied and our command feasted. General Clinch brought two days' supply of pork and bread, with sugar, besides about forty head of cattle, many of which did not live out that night.

On the 8th a negro man was sent over the river, who had a wife among the hostiles, with orders to account for his appearance among them in any way he might choose; to see and talk with them; to ascertain their location and wishes. The 9th he did not return, and much doubt prevailed as to the position and disposition of the enemy. On this day, the 9th, General Gaines thought proper to deliver the command over to General Clinch. We all regretted, and yet were pleased with the change; regretted to lose the presence of a tried, experienced, and gallant general, whose deportment commanded respect, whose judgment insured confidence, and whose mild and amiable manners won the affectionate regard of every one; but if a change was deemed a public duty, to whom could the command be assigned with so much satisfaction to his troops as to General Clinch, who came nobly to their aid, with all the despatch and all the assistance in his power, and whose manners were an index of his generous and heart-ennobling qualities.

General Clinch, for reasons assigned in orders, directed a movement to this place, to commence on the 10th instant, at 10 o'clock. In the midst of a heavy rain the march commenced, and the troops moved about seven miles and encamped. In the evening the negro man who had been sent among the foe came in, and, to our great satisfaction, confirmed in the most precise manner the truth and sincerity of all the Indians had professed. He went among them, and found they had moved some fifteen or twenty miles up the river, and had dispersed over a space of some two miles or more, in several encampments. They gave the negro every assurance of a pacific disposition on their part, stating that they had ordered their young men to abstain from war, and that they had seen our men fishing in the river, and had abstained from firing upon them. They stated that thirty had been killed in the several battles on the Withlacoochee within the 27th of February and the 5th of March. It must be observed that no terms have been offered the Indians; and, although there can be no doubt of their having been broken in spirit, it is yet to be seen whether they will suffer the dictation of terms which it is understood are to be imposed on them. It is certainly known through the negro man that they do not wish to go west, and they may refuse to comply with a requirement to do so.

General Gaines arrived at this place to-day in good health.

I have the honor to be, &c.,

E. A. HITCHCOCK, *Captain United States Army.*

HON. FRANCIS S. LYON, *M. C., Washington City.*

## No. 2.

[From the Globe of April 8, 1836.]

GENTLEMEN: I have read the letter of Captain Hitchcock, late acting inspector general in Florida, published in your paper of Saturday, and regret to observe that, in the warmth of his zeal for his chief, he attempts to throw the responsibility of the movement on Fort King, with inadequate supplies, upon the officers of the quartermaster's department. Now, most men have as much as they can do to bear the burden of their own errors; I find it so at least, and I confess my shoulders are not quite broad enough to bear the additional weight which the gallant inspector seems kindly disposed to transfer to them. But let him speak for himself. He says, "*the general directed his march towards Fort King; he had ten days' rations only, but had reason to suppose that a large supply of stores was at Fort King, the quartermaster having shown him an official letter from the quartermaster general, advising him that one hundred and twenty thousand rations had been ordered to that post;*" and in a subsequent paragraph he says: "*the general, contrary to his reasonable expectations, found no sufficient supply of stores of any kind*" It is a maxim in war, as old as the science itself, that a general should never separate himself from his supplies without taking care to secure his communications; but it is the high attribute of genius to be able to dispense with those rules which are necessary for the government of ordinary mortals; the commander, however, who disregards them, assumes a responsibility which nothing short of complete success can justify. Reasonable grounds for supposing that supplies would be found at Fort King may palliate but cannot justify a movement contrary to rule, which resulted in failure as this did.

But let us examine the grounds for the supposition of the general. Captain Shannon, the senior quartermaster in Florida, had been advised in a letter of the 19th January, from the Quartermaster General's office, that a large supply of provisions had been ordered from *New York to Fort King*. The following is an extract from that letter of all that relates to the subject: "*Large supplies of provisions have been ordered from New York to Fort King.*" By comparing this extract with Captain Hitchcock's letter it will be seen that he has omitted the material fact, that the supplies were ordered from *New York*. Now, he must pardon me, if, not satisfied with the precise quantum of truth which he has chosen to tell, I claim for the department the benefit of the *whole truth*.

General Gaines, we are told, moved from Tampa Bay on the 13th of February, just twenty-four days subsequent to the date of the letter to Captain Shannon—a time not sufficient to have placed the supplies in depot at Fort King, even in the most favorable season of the year, and with the land communication entirely free from the interruptions of the enemy. Besides, General Gaines must have known that all the settlements in Florida, from near St. Augustine to Fort King, had been broken up, or were kept in constant alarm by the enemy, and that the whole line of the Ocklawaha, as well as the roads from Pilatka and Picolata, were liable to be seized and held by him. It must also have been known that General Scott was in the field, and the least reflection must have led any one to perceive that he would hardly allow his supplies to go without protection, in advance of his force. The date of the letter, the place whence the supplies were necessarily drawn, the state of the roads in Florida, the condition of that country, and the position of General Scott, should all have been considered. Viewing these circumstances together, what grounds were there to justify the supposition that supplies would be found at Fort King? What *reasonable* expectation of the general could have been disappointed, unless, indeed, he supposed General Clinch had obtained supplies before General Scott arrived in the country? But if he, at the head of a thousand men, was obliged to intrench himself on the Withlacoochee, and was neither able to open the communication with his own depot at Tampa Bay nor to keep open that with Fort King, how could he expect General Clinch, with less than half that force, even if the supplies had arrived at Picolata, to keep open the communication, and furnish protection for them on the route, when every brigade of wagon or pack-horses required a military escort?

The fact is, there was no just grounds for the supposition, if it was ever entertained, that supplies would be found at Fort King more than sufficient for its garrison. Tampa Bay was the proper depot for General Gaines's division. When he left that post for Fort King the supplies were abundant; if he chose to leave them there, and allow the enemy to cut him off from them, he no doubt had reason sufficient, in his own opinion, to justify the measure; but the responsibility, as well as the honor, is all his own. I must be excused from sharing either.

THOMAS S. JESUP.

MESSRS. BLAIR &amp; RIVES.

## No. 3.

[From the Globe of June 4, 1836.]

WASHINGTON CITY, D. C., June 2, 1836.

GENTLEMEN: I avail myself of the first opportunity to notice the errors contained in a letter from General Jesup of the 8th April, referring to my letter to the honorable Mr. Lyon, previously published in the Globe.

General Jesup says that General Gaines had no reasonable expectation of finding supplies at Fort King, after seeing a letter from the Quartermaster General's office to the assistant quartermaster in Florida, dated the 19th of January, informing him that large supplies had been ordered from New York to Fort King; and the general charges me with omitting, in my letter to Mr. Lyon, the "material fact," as he calls it, that the supplies were ordered from *New York*, and claims "the benefit of the whole truth."

Notwithstanding the self-complacent formality of the general's principle, as "old as the science itself," I shall set him right very abruptly. He urges three points: 1st, the want of time to send supplies from New York to Fort King; 2d, that the roads in Florida were liable to be seized and held by the enemy, and that every wagon train, therefore, required an escort, 3d, that "the least reflection" would have told any one that General Scott would hardly allow his supplies to go in advance of his force without protection.

1. As to time. The general having claimed the benefit of the whole truth should not have withheld it himself, particularly in the delicate situation of being interested; and, therefore, to the "twenty-four days" from the date of the letter of advice from his office to Captain Shannon, the 19th of January, to the departure of General Gaines from Tampa Bay, the 13th of February (all the time General Jesup "chooses" to consider,) he should have added the *ten days* for which General Gaines took rations on his march to Fort King, more especially as he quoted the fact itself from my letter, and thus passed it manually before his eyes; and he should also have considered that every post, as a matter of course, has some days' supply always on hand; in the present case, *nine* which General Gaines took from, and several that he left at Forts King and Drane. So that, in fact, instead of "just twenty-four days," the quartermaster general had forty-three, and perhaps fifty days allowed him; and yet *the supplies were not placed in depot*. No one can deny but that here was time enough to forward the supplies, even from New York, and therefore my omitting to state the place whence they were drawn was not "material."

2. As to roads and escorts, the only road required was that from Picolata to Fort Drane. This road was entirely under the control of the army, and almost daily passed by expresses; and General Scott's main force was at Picolata ready to furnish all necessary escorts.

3. As to sending the supplies in advance. General Scott's plan made it a most important object to send supplies in *advance* to Fort Drane. For this he labored weeks in succession, embarrassed constantly for the want of transportation due from the quartermaster's department; and in order to insure this very desirable object he even detained his force at Picolata to avoid consuming the supplies at the depot *in advance*.

Thus, it appears, there was *time*; the road was *protected*, and the supplies were required in *advance*. Why, then, were they not forwarded?

It is not true, as General Jesup partly states and partly implies, that General Gaines was *driven* to his breastworks, there besieged, and unable to move. General Gaines had the example, if example were necessary, of the present Chief Magistrate and other distinguished commanders, and habitually intrenched his camp at night in Florida. He was in one of these breastworks when the Indians presented themselves on the 29th of February. He had the *day before* declared, in a letter to Fort Drane, that he would not leave his position until he should hear from Fort Drane, hoping for the means of striking a blow that would terminate the war in "ten days," without the hazard of dispersing the Indians, or driving them to the Everglades. He was not besieged, for after about 12 m. of the 29th of February, not an Indian was seen or heard of about camp until the afternoon of the 2d of March, when a small party threw in a volley and ran away; and on the subsequent days, for hours in succession, the country was equally open, and could have been cleared at any time.

General Clinch went down with five hundred men; General Gaines had a thousand to move with, had he been disposed to move at all; but dispersing, or merely driving the Indians further off, would have been "worse than suffering a defeat," and to retire never once occupied his thoughts.

I will conclude by expressing a hope that when General Jesup wishes again to vent his spleen against General Gaines he will not attempt it over my "shoulders."

E. A. HITCHCOCK.

No. 4.

[From the Army and Navy Chronicle of August 11, 1836.]

CAMP SABINE, near the Sabine river, May 18, 1836.

DEAR SIR: I take the liberty to enclose herewith a copy of a letter to a friend, on the subject of the late movements in Florida under General Gaines.

I had written nothing relative to that campaign with a view for publication, nor should I now send the enclosed had I not lately seen in some of the papers strange misrepresentations of facts which should not be permitted to pass unnoticed.

I have had time only roughly to sketch the principal features of the campaign; but the letter is at the service of the public, and I shall be obliged by your giving it an insertion in your paper.

I am, with great respect, &c.,

GEORGE A. McCALL.

EDITOR of the N. O. Bulletin.

---

MY DEAR SIR: A rapid change of position and almost constant occupation during the last four months have prevented until now my making *the Florida war* the subject of a letter. The first intelligence of "actual hostilities" in that section of his military department was received by General Gaines at New Orleans, whilst on a tour of inspection to the Gulf posts. The news of the massacre of Dade's detachment had burst like a thunder-clap upon the inhabitants of the great southern emporium. On receiving the official report of this sad disaster, General Gaines immediately addressed to the adjutant general at Washington a letter, in which he urged that no time should be lost in applying to the savages on that frontier the last and obvious means of correction, at the same time declaring, from his knowledge of the Seminole Indians and the country they inhabited, his conviction that the only sure means of speedily and effectually terminating the difficulties in that quarter would be to bring into the field an army of at least 4,000 men, aided and supported by a strong naval force. Under this impression he recommended that the 6th and part of the 1st and 7th regiments of infantry be ordered to Florida, to reinforce the United States troops on the Gulf, and such volunteers from the adjoining States as the emergency might call forth. On the same day he made a requisition on the governor of Louisiana for a regiment of riflemen or infantry; and soon after requested of Commodore Bolton, at Pensacola, the co-operation of such naval force as he might feel authorized to order on that service. Some days subsequent to this, the receipt of

intelligence that Fort Brooke (Tampa Bay) was invested by the Indians and negroes, and the garrison in danger of being cut off, determined General Gaines to proceed at once to their relief with what force he might be able to collect at New Orleans. He accordingly wrote by express to General Clinch, who commanded in Florida, and was at that time at Fort King, one hundred miles north of Fort Brooke, that he (General Gaines) would be at the latter post on the 8th of February, with seven hundred men. General Clinch, it was understood, would have, by that time, a respectable force (volunteers) from Georgia and the upper counties of Florida. He was accordingly ordered, if strong enough to take the field, to march to the southward in time to effect a junction with General Gaines at or near Fort Brooke. Under these circumstances, General Gaines embarked at New Orleans on the night of the 3d of February, with a brigade of about eleven hundred men, (to which number his force had fortunately increased,) consisting of six companies of the 4th infantry, under Lieutenant Colonel Twiggs, and a regiment of Louisiana volunteers, under the command of General P. F. Smith, adjutant general of the State. The transports, being steamboats, were obliged to touch at Pensacola for wood; and here it was that General Gaines met the adjutant general's letter of the 22d of January, which purported to cover the "Order No. 7," directing *General Scott to repair to Florida "and take command of the troops operating against the Indians in that quarter."* This Order No. 7 was not enclosed, nor did General Gaines see it until his arrival at Fort King, sixteen days afterwards. This fact may be a matter of no great import; but as the continuance of the movement from Pensacola to Tampa, after his being notified that such an order had been issued, is one of the two prominent features of the campaign that has been very unhesitatingly criticised and condemned in some of the popular prints, it may be well to examine what might have been the consequences had he abandoned the expedition at that advanced stage of its progress.

In command of a military department, he had received at a point far distant from the seat of federal government, whence alone special or new instructions could be sent him, the intelligence of a great and unlooked-for disaster having occurred on the extreme southern frontier of the country occupied by the left wing of his division; he learned the melancholy news that a large white settlement had been *overrun, sacked, and burnt*, and many of the inhabitants killed; the United States agent of Indian affairs murdered; eight valuable officers and ninety-eight brave soldiers of his division cut to pieces by an overwhelming savage foe and he was aware that the military posts on the borders of the Indian country, viz: Forts Brooke, King, and Drane, with the station at Key West, all within his military department, were without any other work of defence than such as a daring leader with 500 men might, at the risk of a little loss, take and destroy in a few hours, the garrisons of three of those posts being insufficient for their defence. What, then, was the duty of the commander of the department? Had he hesitated one single moment he would indeed have merited the stern opprobrium of his fellow-citizens. He did not hesitate. He collected what force he could and marched immediately for the theatre of war. On the route, and within two days' march (by steam) of the Indian borders, he received a notification that General Scott had been ordered to repair from the city of Washington to Florida, "and take command of the troops operating against the Indians in that quarter." At the same time he was informed that "the state of affairs west of the Mississippi might soon require his attention, if not his presence, in that quarter;" and he was directed to await further orders in the city of New Orleans. Had hostilities actually existed on the Louisiana frontier, and General Gaines received an order to repair thither immediately, it is difficult to say whether the historian would have approved or condemned his conduct at that stage of the game had he obeyed the order, and, by so doing, left General Clinch in expectation of a promised co-operation, to extricate himself as he could from any difficulty into which the failure on the part of General Gaines in preconceived movements might peradventure throw him. *And without General Gaines, the volunteers, his principal force, were unwilling to proceed*; for, before they left New Orleans, he had pledged himself to accompany them whithersoever they went, and to stand by them as long as they would stand by him, in repressing the rising spirit of savage devastation. Moreover, he was firmly persuaded that the instructions from the War Department requiring him to wait further orders in the city of New Orleans, were forwarded before that department could possibly have received a detail of the circumstances which rendered the *immediate* movement to Florida not only proper but imperative.

A little reflection determined him to continue the movement until the President should be apprised of all the particular circumstances attending it, or until the officer authorized to operate in his department should make his appearance in person in that part of the country which constituted the principal theatre of the war, or the Indians be subdued and the security of the frontier re-established. This view of the subject is based upon a sound principle of military law, and is supported by the ablest writers of all enlightened nations whose arms have been crowned with success. Had General Gaines failed to comply with this wise precept—had he disregarded this sacred injunction, he well knew that he might suffer the enemy to defeat a body of troops expecting his co-operation, and consequently leave the citizens dwelling within the limits of his command quivering beneath the upraised tomahawk and the blood-stained scalping-knife.

Was it his duty, under such circumstances, to abandon an expedition, on the prosecution of which the safety of the border people possibly hung; or was it his duty to strike promptly at the enemy, if possible subdue him, or at all events endeavor to check his devastations until the President should have notice of his strength and the determined spirit with which he seemed prepared to carry on the war?

General Gaines proceeded to Tampa Bay. On his arrival at Fort Brooke he learned that the day previous a party of about 100 of the friendly Indians had been attacked near the fort, and driven in by a superior force. The country occupied by the hostile tribes lying between Forts Brooke and King, no communication had been kept up between those posts since the massacre of Major Dade's command, and consequently, General Gaines, on arriving at the first-named station, was unable to gather any information from which he could form even a tolerable conjecture of General Clinch's strength or movements. But relying on the co-operation of that officer, he determined, as soon as his horses could be landed, to place a sufficient garrison in the pickets, and with the remainder of his force march out to meet him.

Owing to the expense and difficulties attending the transportation of horses from New Orleans by sea, the baggage train brought with the brigade was necessarily small, and the expectation that the requisite number to complete the train might be procured at Tampa was not realized; the horses and cattle in that vicinity having been stolen or lost during the alarm, which broke up the settlement and drove the families for protection to the fort. Some half dozen Indian ponies were, I believe, all that the quartermaster could procure to add to the number brought from New Orleans. The question, then, among both officers and soldiers was, not "what they might get along with," but "what they could do without on their march?" Ten days' rations were issued to the troops, (five of which were to be carried

in the haversacks,) and on the morning of the 13th the brigade took the field. The order of march was three columns, with an advance and a strong rearguard. The right was four companies of the second artillery, acting as infantry, commanded by Major Belton; the centre seven companies of the fourth infantry, under Lieutenant Colonel Foster; the left and rear being composed of the Louisiana volunteers, under Colonel Smith and Lieutenant Colonel Lawson, Lieutenant Colonel Twiggs acting as brigadier.

The friendly Indians, who to the number of seventy-seven accompanied the brigade, having reported their belief that the war party which attacked them a few days before was not only formidable but was probably still encamped on the Alafia river at a point some fifteen miles from Fort Brooke and seven from the main road to Fort King, General Gaines made a detour to the right for the purpose of breaking it up and driving before him this band of marauders. On the second day's march, however, it was ascertained that the enemy had not been at Alafia in any strength; and the troops, having received two additional rations which had been directed to meet them by water at Warren's, proceeded on their route. On approaching the Withlacoochee, on Dade's line of march and some thirty miles above Clinch's battle ground, the friendly Indians expressed their firm belief that a vigorous attack would be made the following day, and urged strenuously that they might be permitted to return home, *i. e.*, to Fort Brooke. This faltering on the approach of battle created some surprise, not unmingled with distrust of their fidelity. A half-hour's talk, however, reassured them, and they moved on without evincing any further timidity.

The expected attack, however, was not made; and the brigade arrived without annoyance at Dade's battle ground, where funeral honors were paid to the gallant band who had left on the trees around abundant proof of a field nobly contested against an overwhelming foe. The sad scene can never be erased from the memory of those who witnessed it, but its images, still vivid in the mind, recall feelings too painful to permit me to dwell longer upon a scene which has already been described by many.

Up to this time, the eighth day since he marched from Fort Brooke, General Gaines had been in hourly expectation of meeting Clinch; and the fall of a towering pine, which in those extensive wilds produces a sound it is difficult to distinguish from the report of distant artillery, and was on two occasions the cause of long and animated discussion among all ranks, whilst at the end of every mile some further indication of Clinch's approach was looked for. Knowing the promptness of that officer, General Gaines could not now but apprehend that some serious obstacle had arisen to prevent the desired junction. Being only about forty miles from Fort King, the general felt bound to proceed thither to ascertain the situation of Clinch's command and if possible gain some information with regard to the movements of the enemy. His only doubt with regard to the expediency of proceeding thither was on the score of provisions. This he mentioned to me on Dade's battle ground while a party detailed for the purpose was collecting the bodies of the slain for burial. He concluded by saying that the men had with them enough to carry them back to Tampa if he returned immediately, and that there were abundant supplies; but that if he proceeded to Fort King he might not find a sufficient provision to make that position the basis of his operations without embarrassing General Clinch, with whom he desired to co-operate, or General Scott, should he have arrived. I then remarked that an officer had just mentioned to me that the quartermaster had received, before he left Fort Brooke, a letter from the quartermaster general, notifying him that 120,000 rations had been ordered to Fort King in January preceding. This letter was immediately called for. It was from the Quartermaster General's office, and dated the 19th (nineteenth) of January. The passage that had been referred to was as follows:

"Large supplies of provisions have been ordered from New York for Fort King, and 30,000 rations to St. Augustine, from the same place."

This was the first time General Gaines saw the letter in question, or knew that a large additional supply had been ordered from New York to Fort King. He had brought a large supply of subsistence and forage to Tampa Bay, and had written to General Clinch to that effect from New Orleans, intending to make Tampa the basis of his operations. But now, unable to gain the least information of General Clinch's strength or movements, or those of the enemy, in any other way than by proceeding to Fort King, the acquisition of the information above detailed removed the only doubt he had entertained with regard to the expediency of the measure. He decided to push on without delay, and the order to march was given the moment the simple but solemn funeral rites of the band of heroes was concluded. I have been thus precise in this part of my narrative, because a want of knowledge of the circumstances attending this measure has caused the whole movement to be so misconstrued as to lay General Gaines liable to the charge of dashing heedlessly into the wilderness without any plan of operations; suffering himself to be separated by a wide district of the enemy's country from the depot of his supplies, and thus exposing his men to hardships and privations as unnecessary as profitless.

But this is the second principal feature of the campaign that has been most unhesitatingly criticised, of which more anon. To return to the thread of my narrative:

The troops reached Fort King on the 22d of February without meeting with any accident worthy of remark. A single company of the 3d artillery constituted the garrison of this station. General Clinch with his principal force was at Fort Drane, twenty-two miles to the northwest. With great regret General Gaines now learned that Clinch had not received the expected reinforcements from the northern borders of the Territory, but two volunteer companies having joined him from that quarter. His force was four companies of artillery and one of infantry, and the two companies of volunteers I have mentioned. General Gaines was not less disappointed when he was told that the supply of provisions at these two posts (King and Drane) was little more than sufficient for their support. Whether this disappointment was consequent to a reasonable expectation or not, I shall not pretend to determine. The simple facts from which must be determined the reasonableness or unreasonableness of the conclusion drawn from the information received by General Gaines, on the battle ground, are these: the troops had marched from Fort Brooke on the 13th with ten days' rations. At the Alafia they received two days' rations, brought thither by water, making in all twelve. That is, they were provisioned to include the 24th of February. On the 20th of February General Gaines saw the letter of the 19th January already alluded to. From the date of the letter to the day he saw it, inclusive, is 32 days, and to the 24th February, the day to which his troops had been provisioned, is 36 days. The supplies had been ordered on the 19th; how long before that he knew not. The facilities of water transportation from New York to the mouth of the St. John's river, and up that river by steam to Picolata, whence it is about 70 miles to Fort Drane and 92 to Fort King, led to the conclusion that in 36 days the supply would have reached its destination. The roads the troops had travelled were in fine order, the season having been remarkably dry. We were told no rain had fallen from some time in September till the day before we reached Dade's battle ground, when there was a slight rain.

At Fort King it was learned that preparations were making for the campaign at Picolata, under direction of General Scott. It was thought, however, that he would not be enabled to take the field with any considerable force for some time.

Finding he could expect no immediate co-operation from a quarter where he had expected to meet a considerable force—Clinch's command being barely sufficient to supply the necessary escorts to the provision wagons between Picolata and Fort Drane—and unwilling to draw upon the nucleus of supplies here collecting, General Gaines decided on returning immediately to Tampa Bay, and making that the basis of his operations. He informed General Clinch of this, and requested barely a sufficient supply to last him on the march. He had marched from Fort Brooke to Fort King by the main route—the common wagon road. This road is longer by a day's march than the route by Chocochater. He therefore determined to return by the latter. It was, indeed, the opinion at Fort King that the Indians had established themselves near the point at which this trace crosses the Withlacoochee, viz: Clinch's battle ground. If so, so much the better—he might beat them by the way. At any rate the movement of one thousand men through the country occupied by the Indians would have the effect of keeping them concentrated, and therefore relieve the frontier from petty depredations. Of the seventy-seven friendly Indians who accompanied the brigade from Fort Brooke ten returned with it, the balance remaining with General Clinch. These men, who acted as guides, promised to find a ford somewhere near the point at which General Clinch had crossed.

On the 27th General Gaines reached the Withlacoochee at this point, and a half hour or more had been passed in searching for the ford, when the enemy opened a fire from the opposite bank. The stream is about forty yards wide, but deep and rapid. A few companies were immediately brought into action, and very soon the fire became general from the left to the centre. This skirmish (the first bush-fighting the men had seen) lasted half an hour. The loss of the troops was one killed and seven wounded. The troops encamped near the river, and the guides declared the ford must be about three miles below, where a trail leading to the right struck the river. The next morning by sunrise the three columns marched for the point indicated, on reaching which a spirited fire was immediately opened from the opposite bank; it was quickly returned, and continued, with occasional intermissions, till 1 o'clock. In the early part of this action Lieutenant Izard, a gallant soldier, was mortally wounded. The loss this day was one killed and three wounded. The stream at this point also proved too deep to be forded, and the guides, who had been accustomed to hunt in the lower country and had not been in this section for many years, were totally at fault. The banks of the stream, however, at this point were less thickly clad with the customary undergrowth, and the general determined to cross. A detail was accordingly made to prepare canoes and the flooring of a pontoon bridge, and the cheerful sound of the axe was soon mingled with the crack of the rifle and the animating war-cry. At 4 o'clock p. m. a distant but very loud whooping was heard, which indicated the approach of a large reinforcement to the enemy from the opposite side. The friendly Indians immediately declared it to be Micanopy, whose force they estimated at eight hundred warriors.

General Gaines, then satisfied that the whole force of the enemy was in the field, considered the opportunity of bringing the war to a close too favorable to be lost. Under this impression he sent an express to General Clinch, recommending an immediate movement of the force under his command, with an additional supply of ammunition and provisions. Clinch was desired to cross the river some ten miles above, and move down on the left bank. General Gaines added that he would in the meantime endeavor to amuse the enemy, prepare his boats, &c., for crossing, but would not cross until he heard from Fort Drane, where General Clinch expected by this time some accession to his force.

By this movement it was believed the two brigades would be enabled to attack the enemy in front and rear at the same time, and probably terminate the war in a few days. The customary log breastwork was thrown up about three feet high, and the troops slept undisturbed that night. The following morning an attack was thought not improbable from some quarter, and one-third of the men were kept on duty at the breastwork. At 10 o'clock a. m. the working parties were fired upon, and immediately afterwards a dashing attack was made on three sides of the camp. The Indians advanced boldly and fired with great rapidity, but not with precision. At one time they set fire to the high grass and palmetto on the windward side of the camp, and made a bold dash under cover of the smoke, which, mingled with flame, came rolling towards the breastwork like a heavy sea. The fire was coolly extinguished, and the audacity of the assailants punished by Louisiana riflemen. The fight lasted till a few minutes past 12 o'clock m., when the enemy withdrew. Their numbers were estimated by those considered the best judges at fifteen hundred. The troops having the advantage of the slight breastwork before mentioned, lost this day only one sergeant killed and thirty-four officers and men wounded. Among the latter was General Gaines himself. The loss of the enemy was considerable, the troops firing with a coolness and precision that would do honor to veterans. Nor should the 29th of February be passed without bestowing a word of praise on the marked gallantry of these red assailants, who fought (many an old Indian fighter present said) "as Indians never fought before."

As the Indians had crossed the river, a runner was sent that night to General Clinch, informing him of the occurrences of the morning. In concluding this letter General Gaines said: "I have abstained, and shall abstain from a sortie, till I hear from you, in expectation that this course will tend to keep them together, whilst a sortie might contribute to disperse them. I am now satisfied that a direct movement to this place is more desirable than to cross the river higher up, as I suggested in my letter of yesterday. I am moreover of opinion that, if mounted men can be obtained in a few days, your force should not move from Fort Drane without that description of troops." The Indians move with too much celerity to be pursued in that country, with any chance of success, by any other than mounted men. The following day (March 1) there was light skirmishing, and occasional shots were fired at those who passed out of camp.

On the morning of the second of March an attack was made nearly as vigorous as that of the 29th, and was kept up for one hour; but the troops, having raised the breastwork, sustained little loss. It was possible that General Clinch might arrive this afternoon, and many of the men, who were getting hungry, began to look eagerly for his appearance; though, when they were told that if he should be detained by the non-arrival of the mounted men it might yet be some days before they received a supply of provisions, in which case they must be content to dine on horse meat until they could do better, I do not think there was a man but declared his willingness to do so as long as there was a prospect of bringing the war to a successful termination by so doing. All the corn in camp was turned in as common stock, and afforded about a pint per man; and afterwards some horses were killed and the meat regularly issued. The 3d, 4th, and 5th of March did not produce any incidents greatly differing from those of the preceding days,

The Indians were frequently firing into the camp by night as well as by day, generally selecting the hour of guard-mounting or parade, when the men were most exposed. Our sharpshooters, however, kept them at long shots, and their bullets whistled through the camp without doing much execution. On these occasions, as usual, the woods rung with the animating war-cry. During this time the troops lost but one man killed and two wounded.

At 10 o'clock p. m. on the 5th, some one was heard hailing the camp. It was at first supposed to be a return express from Fort Drane, who was thus giving notice of his approach lest he should be fired on by the sentinels. He was told to advance. In a few moments a negro called out at the top of his voice, "the Indians are tired of fighting and wish to come in to-morrow to shake hands." He was told that if they had anything to say they might come in the morning with a white flag, and they would be heard; whereupon he retired, bidding us a hearty "good night." At 10 o'clock a. m. on the 6th, 300 warriors, or thereabouts, drew up in line facing the rear of the camp at the distance of 450 or 500 yards. After some delay and apparent hesitation on their part, two or three advanced about half way with a white flag. Here they were met by Adjutant Barrow, to whom they communicated their desire to have a talk with General Gaines. Captain Hitchcock, acting inspector general, was then sent to hear what they had to say. He returned and reported that the Indians did not wish to fight any more, but that they were desirous that the troops should withdraw from the Withlacoochee. They said they had lost a great many warriors, and were unwilling to lose any more except in the course of nature, or perchance by the fall of a forest tree. The celebrated Ocoola was much dejected, and apparently subdued in spirit. Captain Hitchcock was directed to return and tell them that a large force would soon be in the field, and the inevitable consequence of their refusing to come to terms would be the destruction of a great portion of the nation. They expressed a desire to treat with General Gaines, and said they would hold a council on the subject and give their answer in the afternoon. They returned at the appointed time, and again expressed their desire to make peace with General Gaines, but said their act could not be binding without the sanction of Micanopy, the principal chief, who had gone to his town. They said they would send for him and then sign a treaty. Captain Hitchcock then communicated to them what he had been instructed to say, viz: that General Gaines had no authority to treat with them; but that if they would return to the south side of the Withlacoochee, and remain there without molesting the inhabitants of the country, until the United States commissioners should appoint a time and place to meet them, they should not for the present be disturbed. The chiefs present gave their promise to do so. At this moment General Clinch's advance came in sight of the party that had accompanied the chiefs, and not knowing what was passing at the camp, wheeled into line and poured a volley upon the Indians, who immediately fled and crossed the river, as did the chiefs who were with Captain H., fearing no doubt they would be shot down. This broke up the conference.

The brigade with Clinch were met with heartfelt greetings. He brought the greater part of the garrison from Fort Drane, and a squadron of mounted men, raised in the counties immediately north of Fort Drane, and with them all the supplies his slender means of transportation would allow, together with forty head of beef cattle. From this time up to the 9th of March the Indians remained true to their promise to abstain from hostilities, our men having frequently during these days fished and bathed in the river without molestation. Micanopy, however, did not arrive, and General Gaines decided this day (see Order No. 7) to place the troops under the command of General Clinch, whose gallantry and decision had proved him so worthy of the trust, and prepared to return immediately to New Orleans in pursuance of the instructions he had received at Pensacola.

On the 10th General Clinch took up the line of march for Fort Drane; that night a negro, who had a wife among the hostile Indians, and among whom he had been sent on the 8th, returned and reported that they assured him of their intention to adhere to their promises, and told him they would meet the whites on the Withlacoochee in five days, and bring with them all the principal chiefs. They said they had seen our men fishing, but desiring to be at peace did not fire on them.

The troops encamped about three miles south of Fort Drane; thither General Gaines proceeded, and soon after set out on his return to New Orleans, by the way of Tallahassee and Pensacola. At New Orleans he received the instructions from the War Department relative to this frontier, and immediately proceeded to Fort Jesup.

This is a rough sketch, but you may rely on the facts, and you are at liberty to make use of the letter, if you think proper, for the information of the public.

With constant regard, I am your most obedient servant,  
GEO. A. McCALL, *Acting Assistant Adjutant General.*

No. 5.

[From the Army and Navy Chronicle of September 29, 1836.]

*General Gaines and the Seminole campaign.*

We have received a letter from Captain G. A. McCall, aide-de-camp to General Gaines, requesting us to insert in the Chronicle the letter from him to a friend, which appeared in the New Orleans Bulletin, and furnishing a few additional paragraphs by way of a postscript.

By reference to the Chronicle of the 11th ultimo, it will be seen that the first part of this request had been anticipated. We have, therefore, only to comply with the other portion by publishing the following

POSTSCRIPT.

Although the promptness with which General Gaines repaired to Florida has been very generally commended, and his determination to strike boldly at the enemy whilst the season was favorable for rapid movements has been approved, the very pertinent question has lately often been asked, "Why did he remain idle for several days on the Withlacoochee while the Indians were within striking distance; why did he not make a *sortie*?" To this question the answer is plain. He did not wish, by a premature

move, (the effect of which would have been comparatively unimportant,) to frustrate the ulterior object of the campaign—the complete subjection and removal of the Indians.

There were numbers at Fort Izard on the 29th of February who would have sprung like the young war horse to head a sortie or lead a charge against the Mickasukee and the Seminole, but the general was convinced that a sortie at that time would be productive of consequences that would retard the successful termination of the campaign by dispersing the Indians, and possibly driving them into a part of the country inaccessible to the troops, namely, the Everglades.

One decisive victory over the Mickasukee and Seminole tribes would perhaps have resulted in their complete overthrow. But any one acquainted with the country, and the Indian mode of fighting, knows that this would have been the work of several days. In an engagement between well-disciplined troops, who will stand to it, and take hard knocks upon hard knocks until one or other of the parties is fairly beat down, a splendid and decisive victory may be achieved in a few hours; but an engagement with these Indians, to result in permanent advantages, it was well known, must be a succession of running fights from hammock to swamp, and must be kept up for days. The troops at Fort Izard had neither ammunition nor provisions for perhaps a ten days' pursuit, and a sortie would have been worse than useless, had it not been rigorously and uninterruptedly prosecuted to a successful termination.

As has already been stated, General Gaines received at Fort King a supply barely sufficient to carry him to Tampa. But as soon as it was ascertained that the united Mickasukee and Seminole tribes were in full force in the vicinity, he informed General Clinch of the fact, and requested a further supply, stating his belief that, by a combined movement of the two forces, the war might be terminated in ten days.

Having despatched this letter, General Gaines resolved to do nothing that would tend to disperse the Indians, but quietly to await Clinch's arrival, and then make a *sortie* that would carry him several days' march into the fastnesses of the enemy's country, where it was believed the women and children were secreted; for he was satisfied that the complete subjugation of the savages could be accomplished only by a decisive victory, followed by the capture of the women and children. In the meantime, the Indians were wasting their ammunition without doing material injury. They were almost constantly at it, and fired at least one hundred shots to our one, the men at the breastworks having positive orders not to fire a single shot without good aim at a distant object within fair striking distance.

These are the reasons a sortie was not made during the time the brigade remained on the bank of the Withlacoochee waiting Clinch's arrival. But before General Clinch arrived the Indians *sued for peace*, and promised to remain quiet until the United States commissioners should appoint a time and place to treat with them; and General Gaines, having promised that they should not be disturbed if they remained quiet on the south side of the river until they heard from the commissioners, felt bound to observe towards them the same strict regard to his word that he would have observed to the most powerful people on earth. The Indians complied strictly with their promises; for although the troops were afterwards encamped at different points within five or six miles of Fort Drane, the Indians never fired a rifle until they found accumulated forces in hostile array advancing on the Withlacoochee in different directions.

In conclusion I will merely remark that the idea of the brigade at Fort Izard having been beleaguered and unable either to advance or fall back is ridiculous and without foundation. General Gaines would hardly have ordered General Clinch to move down with five hundred men had he considered himself unable to drive the Indians before him with one thousand.

G. A. M.

GENERAL ORDER No. 13.

HEADQUARTERS OF THE ARMY, *Adjutant General's Office, Washington, March 21, 1837.*

The following order has been received from the War Department, and is published for the information of all concerned.

By order of Major General Macomb.

R. JONES, *Adjutant General.*

WAR DEPARTMENT, *March 21, 1837.*

A court of inquiry, of which Major General Macomb is president, convened at the city of Frederick, Maryland, on the 28th of November, 1836, pursuant to General Orders Nos. 65 and 68 of that year, for the purpose of inquiring and examining into the causes of the failure of the campaigns in Florida against the Seminole Indians, under the command of Major General Gaines and of Major General Scott, in 1836; and the causes of the delay in opening and prosecuting the campaign in Georgia and Alabama against the hostile Creek Indians in 1836, and into every subject connected with the military operations of those campaigns; also, to inquire and examine into the unauthorized reports and publications of officers of the army.

The court, after duly examining all the testimony offered in the several cases, pronounced the following *opinions* thereon:

1. *Opinion of the court in reference to the failure of the campaign in Florida, conducted by Major General Scott, in 1836.*

“The court finds from a review of the testimony that Major General Scott was ordered, on the 21st of January, to take the direction of the Florida war, with full authority to organize a regular and volunteer force sufficient in his judgment, with a view to bring the war to a speedy termination; that under this order he proceeded to Augusta, Georgia, where he arrived near the last of January, and commenced organizing the service; that he proceeded thence to Milledgeville for the purpose of consulting with the governor of Georgia on the subject of the Creek difficulties and in hastening the preparations for operations in Florida; that he returned to Augusta on the 6th of February, and arrived at Savannah on the 9th, where he was occupied in regulating the supplies and movements of the troops for Florida until the 20th; that he arrived at Picolata on the 22d, and was detained there until the 9th of March,

awaiting the arrival of troops, both regular and volunteers, also, transportation and supplies, and in forwarding the same to Fort Drane and Volusia; his plan of campaign being to move in three divisions simultaneously from Fort Drane, Volusia, and Tampa, upon the Withlacoochee, the stronghold of the enemy; that on the 9th of March General Scott proceeded to Fort Drane with a small escort with supplies for the relief of General Gaines's forces on the Withlacoochee, and arrived at Fort Drane about the 14th, where he was detained until the 25th, to give time for the left wing and the centre of his army to put themselves in position, and also in awaiting the arrival of supplies to enable him to commence operations. These supplies were delayed for the want of additional means of transportation momentarily expected from Savannah, the few teams already in use being nearly exhausted by the bad state of the roads and the constant and heavy labor imposed on them. On the 26th of March General Scott commenced his movement from Fort Drane for the Withlacoochee with the right wing of his command, consisting of about 1,968 regular and volunteer troops, and with eighteen days' rations; that he reached Camp Izard, on the Withlacoochee, on the morning of the 28th, where the Indians from the opposite bank of the river fired into the camp. Preparations being made, the troops commenced crossing the river the next morning at 4 o'clock; during the crossing the rear division was attacked, but the enemy was driven. On the morning of the 30th the army, having crossed, proceeded up the river in search of the enemy, whom they discovered about 10 o'clock in small parties on an island in a chain of lakes; the troops advanced to the attack, when the Indians retired and were pursued about four miles, but not overtaken. The next morning the Indians were again discovered on another island surrounded by broad and wet savannas, and so boggy that it was with difficulty the troops could struggle through them. The Indians were attacked, dislodged, and pursued three or four miles, when they eluded the pursuit by crossing the river. In this pursuit the troops became several times engaged, but the enemy was always dislodged and driven from the hammocks. Finding it impossible to pursue the enemy across the river, and being twenty-four hours without provisions, the troops returned to their baggage train and encamped. On the 1st of April the troops proceeded on the march, and established a post of observation, called Fort Cooper, at the southeastern extremity of a chain of lakes, leaving there a part of the force with seventeen days' provisions and reserving only enough subsistence to carry the remainder to Tampa Bay, where they arrived on the 5th of April, after a fatiguing and difficult march, making the road the whole distance. The loss of the troops in the several rencontres was four killed and nine wounded.

"The left wing, under General Eustis, after scouring the country between St. Augustine and Volusia, *via* Tomoca, commenced crossing the St. John's at Volusia on the 22d of March, when it was attacked by the enemy, who was repelled at all points, and retreated to his fastnesses after a loss on the part of the troops of three killed and nine wounded. One Indian was found dead and evidences of four others being thrown into the river. On the 24th a subaltern's command of mounted men fell in with a party of twelve or fifteen Indians and killed two. On the 25th the left wing, consisting of four companies of United States artillery, Colonel Goodwyn's mounted regiment, Colonel Brisbane's regiment of foot, and Elmore's volunteers, concentrated, and on the 26th commenced the march for Pelaklikaha by the upper crossing of the Ocklawaha, with 1,400 men and thirteen days' rations, leaving at Volusia two of Brisbane's companies. The route being difficult the troops made only seven miles by the evening of the 27th, and were obliged to build bridges over the Ocklawaha, the Withlacoochee, and one intermediate stream. On the 29th, after crossing the Ocklawaha, an Indian of note, Ayah Hajah, was killed by Colonel Shelton, who was wounded. On the 30th the advance was attacked at Oakahumpy swamp and three men killed; the hammocks were scoured and the Indians discovered and driven into a swamp inaccessible to the troops, one of whom was wounded. The enemy retreated whenever the troops approached to within 200 yards. On reaching Pelaklikaha the villages were found to have been abandoned, perhaps for several weeks; cattle and ponies were abundant in the neighborhood; the houses and fences were burned by the troops. It being impossible to obtain provisions from Fort King, and the horses being too much exhausted to draw provisions from Volusia, and General Scott having crossed the Withlacoochee south on the 28th with the right wing, the left wing moved on the main road from Fort King to Tampa, where the horse of that wing arrived on the 5th of April, leaving the foot at a position fifteen miles from that place.

"The centre under Colonel Lindsay, consisting of from 1,000 to 1,200 men, organized at Tampa about the 13th of March. Large fires being discovered in the direction of the Alafia, the battalion of Florida volunteers was sent in that direction, where they surprised a party of Indians, killing three and capturing six ponies. On the 15th, the centre moved upon the Hillsborough, on the main road to Fort King, and on the 20th established a post called Fort Alabama, with a view of bringing supplies near to the scene of hostilities in the direction of the Withlacoochee, leaving there the Florida battalion under Major Reed, the remainder of the troops marching back to Fort Brooke, (Tampa,) where a despatch was received from General Scott, giving the plan of the campaign, and requiring the centre to be at Chickuchatty by the 25th to co-operate. On the 22d the march was commenced, the battalion at Fort Alabama was taken up, leaving at that post one company and thirty sick. The route lay through a hilly country abounding in hammocks. After passing Elochuto, the Indians, taking advantage of their coverts, began to annoy the rear and flanks of the column: a flanker was killed and another wounded, whilst passing a dense hammock. The hammock was scoured, and the Indians driven out. During the night, at the encampment, parties of the troops were fired on by the Indians from a hammock contiguous to a pond which furnished water for the troops. The Indians were dispersed by a round of canister. On the 27th, the Indians still continuing their annoying attacks, always firing from ambush, one of our men was killed and two wounded. The column halted at noon, when an attack was made upon the rear, but, upon a brisk return of the fire, the Indians disappeared. On the 28th, when encamped at Fort Brodnax, near the Chickuchatty, the Indians commenced a fire on the horses, and the party guarding them. A detachment was sent out, which drove the enemy without loss to the troops. On the 30th, provisions being scarce, two parties of mounted men were sent in pursuit of cattle, covered by a force of two hundred and fifty men; they brought in a supply sufficient for four days. During that day the friendly Indians attached to the command killed a chief called Charley Fixico, a leader of about eighty-five men. That night the sentinels were fired upon occasionally, and also on the 31st, but without injury. On the same day an attempt was made to procure more beef. Being sixty miles from the depot, with barely enough provisions to reach it, without any prospect of being able to keep the field, for the purpose of co-operation, and having obtained no response to the signals made for eight days in succession, Colonel Lindsay deemed it advisable to return to Tampa, where he arrived on the night of the 4th of April. In the interval between the departure from and return to Fort Alabama, that post was attacked by a force of between three and four hundred Indians, which resulted in a loss on the part of the troops, after an action of two hours and

twenty minutes, of one killed and two wounded; the supposed loss of the enemy was fifteen killed. The enemy continued to lie around the work in considerable force, both day and night, until the return of the centre column.

"The several columns which arrived at Tampa about the 5th of April, remained at that place until the 14th, for the purpose of recruiting the men and horses, which had become much exhausted from the heat of the weather, and the fatiguing and difficult marches. The army was here divided into five detachments. Colonel Smith, with the Louisiana volunteers was detached to Charlotte harbor and up Pease creek, accompanied by a naval force, when, after operating some days up the country, and discovering no Indians, he returned to Tampa, and thence to New Orleans, where the volunteers were discharged.

"The Florida volunteers, under Major Read, were sent to the mouth of the Withlacoochee, to operate up that river. The object of this expedition was not effected, and the troops were conveyed to St. Mark's and Tallahassee, where they were discharged.

"The right wing, under General Clinch, consisting of 278 artillery, 43 dismounted dragoons, 202 infantry, 139 Augusta volunteers, and 140 mounted men, marched for Fort Drane, *via* Fort Cooper, on the Withlacoochee, making short marches in consequence of the heat of the weather and the debilitated condition of the horses. On the 18th (three miles from Fort Cooper) General Clinch despatched two companies with light wagons, with instructions to Major Cooper to join him. The detachment was fired upon from a hammock, and one lieutenant and a private severely wounded. The enemy fled. Fort Cooper had been invested from the 5th to the 17th of April, with a loss of one killed and five wounded: the force of the enemy estimated at 250. On the 22d one of the flankers was fired on from a hammock; when prompt pursuit was made, but without effect, the Indians retiring through a thick undergrowth. The troops reached Fort Drane on the 25th, the men and horses much exhausted by sickness and the heat of the weather. Another day's march would have occasioned the abandoning of the train. Fifteen horses and mules died on the road, and eight were turned out that could not be got along by leading. The term of service of the volunteers having expired they returned to their homes. On the 20th the enemy made an attack on Fort Drane, but were repulsed by the garrison; they carried off some negroes and horses.

"The left wing, accompanied by General Scott, moved, *via* Pelakikaha and the upper crossing of the Ocklawaha, for Volusia. On the night of the 22d of April, the camp was fired upon by a party of six or eight Indians. They were pursued at daylight without any result. On the 24th a party of the enemy was met, but with no other result than the capture of their horses and packs, the enemy escaping into the hammocks. A body of the left wing reached Volusia on the 25th. All the volunteers of the left wing marched under Colonel Goodwyn for St. Augustine on the 28th, *via* Tomoca. The regulars were left to garrison Volusia and superintend the evacuation of the post, which had become very sickly.

"The centre column, under Colonel Lindsay, moved for the forks of the Withlacoochee. Passing over the Hillsborough, a wagoner was killed by the Indians, and on that night the Alabama regiment was fired on and a sentinel wounded. The remainder of the march was effected without annoyance from the enemy. No signs of Indians were discovered on the Withlacoochee. Being encumbered with the sick, the troops returned to Fort Alabama. The wagon train was insufficient for the removal of the sick alone to Tampa, and the absorption of the post of Fort Alabama was necessarily deferred until the army could return with its transportation from Tampa, relieved from the encumbrance of the sick. The march to Tampa was uninterrupted by the enemy, and, after resting a day and a half, Colonel Chisholm, with the Alabama regiment and four companies of infantry and twenty artillery, returned to remove all the public property and stores from Fort Alabama. The troops reached Fort Alabama, and on their return march were attacked, about three o'clock in the afternoon of the 27th, as the advance guard was preparing to cross Thlonotosassa creek, the Indians firing from a dense covert on the front and both flanks of the column. The fire was vigorously returned by the troops, and after twelve or thirteen rounds from a field-piece, Colonel Foster, at the head of the infantry, charged into the hammock, attacked and drove the Indians, estimated at three hundred, and thus put an end to the conflict, which had been kept up for an hour, resulting in a loss on the part of the troops of five killed and twenty-four wounded. The troops reached Tampa the next day, and the volunteers returned to their homes, the rainy season having set in and the weather so hot as to render it impossible to keep the field without a great sacrifice of life.

"The strength of the enemy during the campaign is estimated by General Scott not to exceed 1,200 fighting men; and he is of opinion that not more than 500 had at any time, since the commencement of hostilities, been brought within the same ten miles square, and that in all his operations for thirty days, no party larger than 130 had been found, but that parties from 10 to 30 had been encountered almost everywhere.

"After the return of the troops from Tampa to their several positions, General Scott deemed it necessary, in consequence of the extreme heat of the weather and the sickness of the troops, to put them into summer quarters, which was approved by the Secretary of War, in a letter of the 5th of May from the adjutant general, and thus closed the campaign.

"The court, after a full consideration of the foregoing facts and the testimony from which they are drawn, comes to the following opinion:

"The court, after a careful review of the great mass of testimony taken in the foregoing investigation, finds that Major General Scott was amply clothed with authority to create the means of prosecuting the Seminole war to a successful issue, but is of opinion that at the time he was invested with the command the season was too far advanced for him to collect, appoint, and put in motion his forces until a day too late to compass the object. It appears that after using great diligence and energy, he was not in a condition to take the field and enter the enemy's strongholds before the 28th of March, and then without sufficient means for transporting the necessary supplies to enable him to remain there long enough to seek out the scattered forces of the enemy.

"The court, therefore, ascribe the failure of the campaign to the want of time to operate, the insalubrity of the climate after the middle of April, the impervious swamps and hammocks that abound in the country occupied by the enemy, affording him cover and retreat at every step, an absence of all knowledge by the general or any part of his forces of the topography of the country, together with the difficulty of obtaining in time the means of transporting supplies for the army.

"The court is further of opinion, from the testimony of many officers of rank and intelligence who served in the campaign, that Major General Scott was zealous and indefatigable in the discharge of his duties, and that his plan of campaign was well devised, and prosecuted with energy, steadiness, and ability."

2. *Opinion of the court in reference to the delay in opening and prosecuting the campaign in Georgia and Alabama, against the hostile Creek Indians, in 1836.*

"The court finds, from a careful review of the testimony, the following facts: That under instructions from the War Department of the 16th May, General Scott arrived at Augusta, from Florida, on the 25th May, on his way to take the direction of the Creek campaign, having, previously to leaving Florida, ordered essential stores from Picolata, St. Augustine, Charleston, and Savannah to Hawkinsville, on the Ockmulgee, within seventy-five miles of Fort Mitchell; and had also ordered 250,000 complete rations from New Orleans to the highest navigable point on the Chattahoochee; that he despatched ten wagons with subsistence from Augusta, on the 23th May, for Columbus, and appointed an agent and sent him to Hawkinsville to hasten on supplies and purchase subsistence; that he proceeded himself to Columbus, where he arrived on the 30th May, and directed the Georgia volunteers already assembled there, about 1,500, to be mustered into service and distributed over a line of forty miles on the river above and below Columbus to prevent the escape of the Indians towards Florida, and also the employment of two armed steamers cruising up and down the river for the same purpose; that on the 1st of June he ordered General Jesup to Montgomery to take command of the Alabama troops and to operate up the country from a point below Irwinton; that he was engaged in organizing the Georgia militia and collecting supplies and arms up to the 23d June; that on the 12th June there had arrived at Columbus 3,300 Georgia volunteers, but not more than one-third were armed; that General Moore arrived at Irwinton about the 14th June, with 750 mounted Alabamians, with a view of commencing operations forthwith, but that he was instructed by General Scott to await his arrival in that quarter; that General Jesup, unexpectedly to General Scott, arrived about the 17th June in the neighborhood of Fort Mitchell, with the Alabama forces from Tuskegee, calling on General Scott for supplies, which had not then arrived from New Orleans; that on the night of the 20th of June 1,000 muskets arrived, and were distributed to the Georgia volunteers on the 21st June, who were immediately ordered to the mouth of Cowagee creek, on the Chattahoochee, below the enemy; that companies of the regular troops commenced arriving on the 14th and to the 20th, when two battalions were marched down the river. The first detachment of marines arrived on the 23d, and marched immediately below; the last detachment of marines arrived some days after.

"That General Scott left Columbus on the 23d to commence operations below, and was actively engaged from that time until the 6th of July, when he was recalled from his command by the instructions of the President of the 28th of June, and that he turned over the command to General Jesup on the 8th of July.

"The court, after a full consideration of the foregoing facts, and of the testimony from which they are drawn, comes to the following opinion :

"Upon a careful examination of the abundant testimony taken in the foregoing case, the court is of opinion that no delay which it was practicable to have avoided was made by Major General Scott in opening the campaign against the Creek Indians. On the contrary, it appears that he took the earliest measures to provide arms, munitions, and provisions for his forces, who were found almost wholly destitute; and as soon as arms could be put into the hands of the volunteers, they were, in succession, detached and placed in positions to prevent the enemy from retiring upon Florida, and whence they could move against the main body of the enemy, as soon as equipped for offensive operations.

"From the testimony of the governor of Georgia, of Major General Sanford, commander of the Georgia volunteers, and many other witnesses of high rank and standing, who were acquainted with the topography of the country, and the position and strength of the enemy, the court is of opinion that the plan of campaign adopted by Major General Scott was well calculated to lead to successful results, and that it was prosecuted by him, as far as practicable, with zeal and ability, until recalled from the command."

3. *Opinion of the court in reference to the failure of the campaign in Florida, conducted by Major General Gaines, in 1836.*

"The court took up the testimony in reference to the campaign in Florida under Major General Gaines, and, after a careful examination, finds that Major General Gaines, on receiving at Mobile, about January 17, 1836, information of the massacre of Major Dade and his command by the Seminole Indians in Florida, repaired with promptness to the city of New Orleans, where he, with great zeal, organized a force of regular and volunteer troops, amounting to about 1,100 men, and proceeded without delay to Tampa Bay, where he arrived about the 10th of February, and after making preparations for the field marched on the Fort King road on the 13th, and reached Dade's battle ground on the 20th, where he buried the meritorious dead with the honors of war. He then proceeded for Fort King, where he arrived on the 22d. After drawing nine or ten days' supply of subsistence from Fort Drane, and receiving a small supply of ammunition, he marched on the Withlacoochee, where he arrived on the 27th, and encountered the same day the enemy across the river, in a sharp conflict of half an hour, when the troops withdrew for the night, after a loss of one killed and six wounded. On the morning of the 28th the troops marched down the river to a point two and a half miles below, where it was understood the crossing was practicable. Here the advance of the army was fired upon from across the river, and an action ensued which continued until twelve or one o'clock, in which Lieutenant Izard was mortally wounded. The army here encamped that afternoon, and an express was despatched by Major General Gaines to General Clinch, or the officer commanding at Fort Drane, the troops in the meantime throwing up a slight breastwork of logs. On the morning of the 29th, at 9 or 10 o'clock, the enemy, in force estimated at about 1,000 or 1,500 men, made an attack on three sides of the fortified camp, which was continued for two hours, when he withdrew, leaving one of his dead on the field. On this day another despatch was sent by Major General Gaines to Fort Drane. From the 2d to the 5th of March the enemy made more or less spirited attacks upon the camp, in which several conflicts the loss on the part of our troops amounted to some three killed and about 40 wounded.

"On the night of the 5th of March a proposition was made from the woods, by the enemy, for peace. On next day a strong party of Indians appeared within five or six hundred yards of the camp; a few of whom advanced with a flag to within one hundred and fifty to two hundred yards, and Adjutant Barrow, of the volunteers, was sent out to confer with them, when they informed him they did not wish to fight any more, but wanted General Gaines to go away; upon which information General Gaines sent out Captain Hitchcock, who was accompanied by two or three officers, to hold a further conference with them. The Indians repeated to him their proposition for peace, and stated they had lost a great many of their men. Before the conference was finally closed, the advance of the troops under General Clinch came up, and com-

menced a fire upon the Indians standing in the rear, when they and the chiefs in council fled, and covered themselves in the hammocks, and were no more heard of up to the 10th of March, when the army (the command of which had been turned over by Major General Gaines to General Clinch the day preceding) fell back upon Fort Drane, where it arrived on the 11th.

"The court, after carefully reviewing and collating the testimony of Captains Hitchcock and McCall, Colonel Twiggs, General Smith, and others, in reference to the operations and peculiar situation of the army at Camp Izard, finds it difficult to come to a conclusion as to the real causes of the failure of the campaign. It appears, although the army was surrounded and repeatedly assailed by the enemy in its fortified position from the 29th of February to the 5th of March, and straitened in the means of subsistence, that, however important to the chivalry and reputation of the troops, no sally was made to test the result of such a movement, which it is possible might have issued in the defeat and subjection of the enemy, and have brought the war to a close. But the court, however, judging from subsequent events in prosecuting the war under other commanders, and the indomitable spirit of hostility evinced by the enemy, is of opinion that had a sortie been made by Major General Gaines, though he might have been able to beat and drive the enemy into the surrounding hammocks and swamps, they would have eluded pursuit and retired to their more remote fastnesses. But, if such had been the result of a sortie, Major General Gaines had not the means of subsistence to have enabled him to remain long enough in or about the cove of the Withlacoochee to seek out the enemy and press the war to a successful conclusion. Still, the court, without impugning the motives that influenced Major General Gaines, is of opinion that a sortie, under all the circumstances of the case, should have been made.

"The court, therefore, in taking a full and impartial view of all the circumstances appertaining to the operations of Major General Gaines at Camp Izard, is of opinion that the failure of the campaign should rather be attributed to the want of the means of subsistence to prosecute the war, than to the contingent result of a sortie.

"The attention of the court was next called to a consideration of the publication of Major General Gaines's official report of the 4th of July, 1836, to the adjutant general, in the public prints. The fact of its publication in the 'New Orleans Bulletin' of the 27th of September is admitted by Major General Gaines (as will appear in the proceedings of the court) as authorized by him, and without any authority but his own action. The court is not aware that its publication in the public journals as late as the 29th of September is in violation of any rule or regulation of the service; but is of opinion that all publications in the public prints tending to excite public opinion, or to produce recriminations between officers, are prejudicial to the interests of the public service and injurious to the discipline of the army. The publication of the official report of Major General Gaines, of the 4th of July, to the adjutant general, is considered by the court as falling under publications of this description, by its personal allusions.

"The court cannot close its proceedings without adverting to the strain of invective and vituperation used by Major General Gaines, in the language generally of his summary of the evidence touching the operations of the Seminole campaign; particularly the part of it couched in the following terms: '*the atrocious machinations of the second United States general officer who has ever dared to aid and assist the open enemy of the republic in their operations against United States forces employed in the protection of the frontier people. The first great offender was Major General Benedict Arnold; the second, as your finding will show, is Major General Winfield Scott.*' Assertions without facts or circumstances to sustain them, and unbecoming his (Major General Gaines's) high rank and station—remarks and assertions which the court condemns in the most decided terms of reprehension.

"The court, in continuation, feels itself compelled to notice the censure in the official letters of Major General Scott (spread upon the record of these proceedings) cast upon Major General Gaines, in reference to his operations in Florida; and in a tone of language that could not be otherwise than offensive to the latter general; and in terms, the court is of opinion, not called for under the circumstances of the case, and ought not to have been indulged in."

#### 4. *Opinion of the court in reference to unauthorized reports and publications of officers of the army.*

"The court took into consideration a communication from Captain Hitchcock, of the 11th of March, 1836, to the honorable Mr. Lyon, of Alabama, published in 'The Globe' of the 2d of April, 1836, detailing the operations of Major General Gaines in his campaign against the Seminole Indians in Florida, in 1836, and finds that its publicity was made with the approbation of Major General Gaines, and does not violate any regulation or rule of service; that it appears to be a narrative of facts assumed by the writer, without any comments or reflections injurious to the public service; and the court cannot, therefore, see that there is any necessity for further investigation into the subject.

"The judge advocate laid before the court a number of 'The Globe' of the 8th of April, 1836, containing a publication purporting to be from the pen of Major General Jesup, commenting on the letter of Captain Hitchcock of the 11th of March; also, a letter of the 2d of June, addressed by Captain Hitchcock to the editors of 'The Globe,' and published in that paper of the 4th of June, in reply to the publication having the signature of Major General Jesup. In viewing the contents of the letter of Captain Hitchcock of the 2d of June, it purports to be a justification of the premises assumed in his letter to Mr. Lyon of the 11th of March, and contains nothing contrary to the regulations of the army.

"The court was called to consider a publication made by Captain McCall, addressed to the editor of the New Orleans 'Bulletin,' under date of the 18th of May, 1836, and published in the 'Army and Navy Chronicle' of the 11th of August, 1836; also, a postscript or notes to said letter published in the 'Army and Navy Chronicle' of the 29th of September, 1836. The purport of the letter and postscript is a detail or narrative of the campaign of Major General Gaines against the Seminole Indians in Florida, in 1836. But as the publications were made more than a month after the campaign was closed, the army regulations were not violated thereby."

The proceedings and opinions in the foregoing cases have been submitted to the President, and are approved.

The court of inquiry is dissolved.

J. R. POINSETT, *Secretary of War.*

25TH CONGRESS.]

No. 739.

[1ST SESSION.]

ESTIMATES OF APPROPRIATIONS FOR SUPPRESSING HOSTILITIES OF THE SEMINOLE INDIANS IN FLORIDA, AND FOR THE REMOVAL OF THE RAFT IN RED RIVER.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES SEPTEMBER 18, 1837.

WAR DEPARTMENT, *September 15, 1837.*

SIR: The Seminole Indians having a second time failed to comply with their engagements, this department has been compelled to make extensive preparations for a vigorous prosecution of the war in Florida. The success of the measures adopted by the government, in pursuance of a humane policy towards the Indians, and our duty to protect the persons and property of the citizens of that territory from outrage and violence, leave us no alternative other than the enforcement of the treaty; and an effort is being made to enable the officers charged with its execution effectually to accomplish this object. The nature of the country and of the climate has enabled the enemy to prolong this contest to an unexpected length; but the experience of the officers who, with so much constancy and courage, have hitherto conducted the military operations there, the knowledge of the country they have acquired, and the means which will be placed at their disposal, all give reasonable hopes of bringing the war to a speedy and successful close.

The disastrous consequences of an unsuccessful summer campaign involved the country in great expenses, that were much increased during the protracted negotiations which terminated so unfortunately, by the Indians again violating their treaty obligations. During this period vessels were kept in readiness at great cost, and other means provided to facilitate the emigration of the Indians, while the ordinary expenses of the war establishment were necessarily continued. These unavoidable expenses, with those incurred by the preparations now making to collect a sufficient force and ample supplies for the ensuing campaign, have exhausted the means placed at the disposition of this department for the suppression of Indian hostilities, and will render further legislative provision necessary.

There will be required for the suppression of Indian hostilities, under the following heads, the sum of \$1,588,848 22, to wit:

For forage, means of transportation, and various other objects of supply, to be procured by the Quartermaster's department, and to meet the contingent expenses of the service...	\$800,000 00
For pay of volunteer force that will be employed in Florida.....	600,000 00
For clothing and equipage to be provided by the Purchasing department.....	153,848 22
For supplies to be furnished by the Ordnance department.....	25,000 00
For medical supplies .....	10,000 00
	1,588,848 22

With a view to an economical prosecution of the important work now in progress on the Red river, the removal of the raft, it is respectfully suggested that the sum of \$25,000 be appropriated at the present time. This amount, it is confidently believed, if applied now, will enable the department to complete that object: whereas if the works be suspended for want of funds until the usual period of making the annual appropriations, much precious time will be lost, and great additional expense incurred.

Very respectfully, your most obedient servant,

J. R. POINSETT.

Hon. C. C. CAMBRELENG, *Chairman of Committee of Ways and Means, &c.*

25TH CONGRESS.]

No. 740.

[1ST SESSION.]

REPORT OF A BOARD OF OFFICERS ON IMPROVEMENTS IN FIRE-ARMS BY HALL, COLT, COCHRAN, HACKETT, FISHER, AND LEAVITT, AS COMPARED WITH THE UNITED STATES MUSKET AND RIFLE, AND THEIR RELATIVE QUALITIES AND EFFICIENCY, AND THE COST OF MANUFACTURING EACH ARM.

COMMUNICATED TO THE SENATE SEPTEMBER 19, 1837.

WAR DEPARTMENT, *September 19, 1837.*

SIR: I have the honor to transmit the report of a board of officers appointed in conformity with a resolution of the Senate of the 21st of January, 1837, requiring "an examination to be made by a board of officers into the improvements in fire-arms made by Hall, Cochran, Colt, and the Baron Hackett," &c.

Very respectfully, your most obedient servant,

J. R. POINSETT.

Hon. R. M. JOHNSON, *President of the Senate.*

*Report of the board of officers appointed to examine the improvements in fire-arms made by Hall and others.*

The board of officers appointed by the following "orders," in conformity with a resolution of the Senate, to inquire into and report upon the improvements in fire-arms made by Hall, Cochran, Colt, and the Baron Hackett, and to show the advantages of each in all important military points of view, have the honor to report that the results of the various experiments to which the board have subjected the arms named in the resolution, and which have not failed to establish a decided opinion with regard to their merits and demerits as weapons to be applied to the armament of troops for service in the field, are herewith presented in tabular form, as required by the aforesaid resolution.

From these tables the following results have been obtained, being the most favorable view in either case.

In preparing this report the board has felt constrained to follow the order prescribed in the resolution, which has, of necessity, involved some repetitions.

GENERAL ORDERS No. 2.

ADJUTANT GENERAL'S OFFICE, *Washington, February 3, 1837.*

I. The Secretary of War *ad interim* has received the following resolution from the Senate of the United States:

*Resolved,* That the Secretary of War be requested to cause an examination to be made by a board of officers into the improvements in fire-arms made by Hall, Cochran, Colt, and the Baron Hackett; and that the general results be presented to the Senate in tabular statements, showing the advantages of each in all military points of view, and especially as to—

1. The celerity of fire.
2. The extent of the recoil.
3. The efficiency of the fire.
4. The inconvenience of heated barrel in rapid firing.
5. The capacity of being used as a rifle.
6. The simplicity and cheapness of construction.
7. Durability.
8. Saving of ammunition and appendages.
9. The number of charges which may be carried by an infantry soldier.
10. The advantages when used against a charge of cavalry.
11. The advantages when used by cavalry.

II. In conformity with the provisions of the foregoing resolution, the Secretary directs that a board, to be composed of the following officers: Brevet Brigadier General J. R. Fenwick, colonel 4th artillery; Brevet Brigadier General N. Towson, paymaster general; Colonel G. Croghan, inspector general; Brevet Lieutenant Colonel Worth, ordnance; Lieutenant Colonel Wainwright, marines; Lieutenant Colonel Talcott, ordnance; and Captain B. Huger, ordnance, be assembled at the Washington arsenal on Monday the 20th February instant, at 11 o'clock, for the purpose of making a thorough examination of the improvements in fire-arms made by Hall, Colt, Cochran, and the Baron Hackett, in the manner and mode specified in the resolution.

III. The board will report the general results, for the information of the Secretary of War, in tabular form, showing the utility of each fire-arm in all important military points of view, as required by the resolution; and will also report such further information on the subject as they may be able to communicate, with their opinion on the relative advantages of the several improvements submitted to their examination.

First Lieutenant J. N. Macomb, of the artillery, and aide-de-camp, will record the proceedings of the board.

By order.

R. JONES, *Adjutant General.*

SPECIAL ORDER No. 10.

ADJUTANT GENERAL'S OFFICE, *Washington, February 20, 1837.*

The Secretary of War directs that First Lieutenant R. Anderson, instructor of artillery at the Military Academy, be detailed to serve as a member of the board ordered to convene at Washington arsenal for the purpose of testing the value of the improvements of certain fire-arms, in conformity with General Order No. 2, of February 3. It is not intended that this assignment shall interfere with his duties at the academy whenever his services may be required there.

By order.

R. JONES, *Adjutant General.*

SPECIAL ORDER No. 35.

[Extract.]

ADJUTANT GENERAL'S OFFICE, *Washington, May 15, 1837.*

II. Lieutenant Colonel Talcott, of the ordnance, is relieved from serving as a member of the board of which Brigadier General Fenwick is president, and directed to convene, by General Order No. 2, for the examination of certain fire-arms; and Brevet Major Baker is detailed as a member of said board, and will accordingly repair to West Point on the 15th of June next, and report to the president.

By order.

R. JONES, *Adjutant General.*

## I. THE CELERITY OF FIRE.

The tables give the following results in loading and firing:

1. *With the musket.*

No. 1. Hackett's .....	5 times a minute.
2. Hall's .....	5 "
3. Colt's .....	3.1 "
4. Cochran's .....	3 "
5. United States standard .....	3 "

2. *With rifles.*

No. 1. Colt's .....	4 times a minute.
2. Hall's .....	3.4 "
3. Colt's (musket calibre) .....	3.3 "
4. Cochran's .....	3.2 "
5. Leavitt .....	1.22 "

Hackett's and Hall's muskets load at the breech, with single charges, but are constructed upon different principles.

The United States standard musket loads at the muzzle.

Colt's and Cochran's load at the breech, with many-chambered shifting receivers.

The fire with Hackett's, Hall's, and the United States standard was continuous, and at equal intervals.

Colt's and Cochran's require from 2' to 2' 10" to load one receiver, (with the advantage, too, of convenient ground,) and from 25" to 30" to discharge it.

In the experiment to determine comparative celerity, the parties having been placed upon the ground, with each a target, were required to deliver the greatest practicable number of fires in a given time, combining celerity and accuracy; Hackett's, Hall's, and the United States musket being supplied with cartridges, Colt's and Cochran's with loose ammunition, all unloaded, and were required to commence loading at the word "fire."

The board adopted this mode in order to place the respective weapons upon an equality, and in such circumstances as would ordinarily occur, in regard to fire, in actual service.

## II. THE EXTENT OF RECOIL.

As the arms of Hall, Hackett, Colt, and Cochran are all loaded at the breech, they allow the use of a ball of greater diameter than the chase of the barrel, which causes it to slug or fit perfectly tight, thus destroying all windage or escape of the explosive force, and consequently requiring a diminished charge of powder to produce results equal to those acquired with increased charges in the gun of the ordinary kind; consequently, the recoil is less than that of a gun of the same calibre loaded at the muzzle, in which an allowance of windage is indispensable to the introduction of its charge. The recoil is not sufficient in any of them to produce any great inconvenience in service, and may be assumed as being about equal in either kind of arms that load at the breech.

## III. THE EFFICIENCY OF FIRE.

From the experiments made, it appears that, for guns of the large calibre, the penetration (in the same target) of those arms loading at the breech, provided they have the correct charge of powder, is greater than those loading at the muzzle. This effect results from the fact stated in the preceding number, viz: the ball fitting exactly, there remains no windage; consequently the whole force of the charge acts on the ball, and produces a greater penetration.

The following statement shows these results:

*Experiments made at West Point on the 19th of June, 1837.—Target of well seasoned white oak.*

Musket.	Charge of powder.	Distance from target.	Penetration.	Penetration into a package of 1,000 sheets of cartridge paper.
	<i>Grains.</i>	<i>Feet.</i>	<i>Inches.</i>	
United States.....	134	10	2.3	770 sheets No. 2, and 653 sheets No. 1.
Hall's.....	110	10	2.175	386 sheets No. 2, 80 grains charge.
Colt's.....	134	10	2.640	481 No. 2, 80 grains; 717 No. 1, 100 grains.
Colt's.....	110	10	2.750	
Colt's.....	100	10	3	
Cochran's.....	80	10	1.650	

The chambers of Cochran's musket were not capable of containing over 80 grains of powder each.

*Note.*—It will be observed, in the case of Colt's weapon, that a charge of 134 grains gave 2.64 inches penetration; 110 grains gave 2.75 inches penetration; 100 grains gave 3 inches penetration; which is accounted for by the admitted fact that *over* charges give *diminished* velocities.

## IV. INCONVENIENCE FROM HEATED BARRELS.

Guns that receive their charges at the breech have been found to acquire a less degree of heat from a continuous course of discharges than the common arm, from the circumstance of their admitting, during the loading process, a free circulation of air through the barrels.

The temperature of the interior of the several barrels was determined by the introduction of a thermometer, that indicated a very uniform degree immediately after firing for a given period. In the experiment alluded to the time was 10'.

V. CAPACITY OF BEING USED AS A RIFLE.

In constrained positions, such as are not uncommon to light troops, the experiments with Hall's rifles, at Fort Monroe, in 1826, when in the hands of troops, fully prove that this arm is admirably adapted to this service and that of mounted corps, in consequence of the convenience in loading and facility of discharging when on horseback.

The many-chambered arms, on the contrary, requiring a variety of appendages to aid in charging them, and the application of considerable manual force in placing the charge in the cylinders, cannot be loaded either in constrained positions or on horseback without inconvenience; and it is consequently believed that Hall's rifle and Hackett's gun are the only descriptions of arms loading at the breech that can be considered as suitable for the service of light troops, either on foot or mounted. These remarks might not be applicable to the many-chambered guns, could it be supposed that they would at all times be supplied with a number of loaded cylinders, [receivers,] but this is not to be admitted as being practicable at all times and in all situations.

VI. THE SIMPLICITY AND CHEAPNESS OF CONSTRUCTION.

The attainment of simplicity in the construction of fire-arms is unquestionably of the first importance, in order that those who are to use them may readily comprehend their principles and utility. In the examination of Hall's guns nothing appears complicated; on the contrary, one of their greatest merits consists in the simplicity of their component parts and the absence of the various appendages [equipments] which are attendant upon, and indispensable to, the use and service of the arms of Colt and Cochran.

The same may be said of the gun of Baron Hackett, which, in general, possesses many of the features of utility which characterize the arms of Hall, and which is one of the most important conditions that has governed the construction and decided the character of this description of arms. In this character its utility for military purposes mainly and essentially consists. An arm which is complicated in its mechanism and arrangement deranges and perplexes the soldier in its management, requires more than common attention to its care and preservation, and if, perchance, it fail in its operation, which its complexity of construction would necessarily occasion, he loses all confidence in its powers of execution.

The guns of Hall, and apparently of Hackett, presenting in their construction this desired simplicity, are more easily managed, present less accountability to the soldier, are less liable to get out of order, and when they are so are more easily repaired.

The reports of the master armorers, who have been instructed to prepare careful estimates of the cost of each description of arms, are appended to this general report.—(See report of Mr. Hall, marked A.)

VII. DURABILITY.

The means of testing the durability of the several descriptions of arms is not within the control of the board. It can only be determined by requiring the inventors to undertake a fatiguing course of firings, greater than some of them could endure, or by placing the arms in the hands of troops and having them exposed to all the incidents and trials of active service.

The experiments with Hall's gun in 1826 gave results satisfactory with regard to its character for resisting the effects of long firings, and there can be no doubt that the durability of all descriptions of arms will depend greatly upon simplicity and consequent strength of construction.

VIII. SAVING OF AMMUNITION AND APPENDAGES.

A reference to the tabular statements will show that all guns that load at the breech require less powder to produce the same results than guns loading in the ordinary manner.

This peculiarity is accounted for under No. 2, "efficiency of fire," and need not be repeated here.

In the common musket 144 grains of powder constitute the charge for service, inclusive of about ten grains used as priming.

Colt's musket, fired with a charge of 100 grains, (being primed with a percussion cap,) gave proof of equal, and even superior, power of penetration; whence it was determined that that quantity of powder was fully sufficient for the charge of his muskets for service.

The construction of Cochran's musket limited its charge to 80 grains of powder, which was insufficient to impart to his arm a power equal to that possessed by the United States musket with its service charge, or by Colt's musket with a charge of 100 grains; but the reduction of the charge of the latter down to the maximum of Cochran's gave evidence of the possession of equal power by either arm.

These experiments being directed to the attainment of facts in regard to the proper charges to be used in the new description of arms, and likewise with a view to test their relative powers, were conclusive in their results, and prove that in muskets of the same calibre the saving of powder would be, in favor of those that load at the breech, as 100 is to 144; in the one case percussion caps are used, and in the other flints—the expense being probably in favor of the use of the latter; and, secondly, that (the same principle operating in the different arms of Hall, Hackett, Colt, and Cochran) the same charge would produce the same degree of velocity or penetration.

The inventors of Colt's and Cochran's muskets propose that each soldier should at all times have about his person *five* receivers. Supposing one of these receivers constantly attached to, forming part of, and entering into the weight of the gun, there remain four, weighing—

Colt's, each, 3 pounds, or the four.....	12 lbs.
To which add their charges.....	1 lb. 14 oz.
<b>Total.....</b>	<b>13 lbs. 14 oz.</b>

Cochran's, (when increased to hold 100 grains,) each 3 pounds 12 ounces, or the four.....	15 lbs.
Charges as above .....	1 lb. 14 oz.
Total.....	16 lbs. 14 oz.

to supply 35 rounds of ammunition. The same number of rounds of ammunition as five receivers would contain, carried in the ordinary manner, weigh 2 pounds 12 ounces—the increase in the one case being 11 pounds 2 ounces, and in the other 14 pounds 2 ounces, of a substance inconvenient in form and disposition, to the burden of the soldier, ever of necessity too great.

To load the many-chambered guns several implements of a novel and inconvenient form are required, the use and accountability of which would be extremely difficult and oppressive, besides adding still more to the great weight of the appendages already noticed.

In the common musket, and in Hall's and Hackett's, these equipments are not required.

#### IX. THE NUMBER OF CHARGES WHICH MAY BE CARRIED BY AN INFANTRY SOLDIER.

A reference to the remarks under No. 8 will exhibit the relative weight of 35 rounds of ammunition for the standard musket and Colt's and Cochran's muskets, by which it will be seen that it would be utterly impracticable for a soldier to carry the very great weight of metal required to contain only a limited number of cartridges.

This is one of the important objections which render the many-chambered arms, in the opinion of the board, altogether unsuited to the wants and exigencies of the service.

The arms of Hall and Hackett, on the contrary, can carry a number of charges always equal to, and rather exceeding, that carried by infantry soldiers in the established cartridge-boxes.

#### X. THE ADVANTAGES WHEN USED AGAINST A CHARGE OF CAVALRY.

In sustaining an attack from cavalry, arms have an advantage in proportion to their capability of keeping up a continuous fire, preserving at the same time their position of defence with the bayonet; the muskets of Hall and Hackett possess this advantage in an eminent degree, being, even during the process of loading, in readiness for personal defence.

This is not the case with the many-chambered guns, in consequence of the necessity that exists for disconnecting their parts for the purpose of charging them.

#### XI. THE ADVANTAGES WHEN USED BY CAVALRY.

The advantage is believed to be altogether in favor of arms that load at the breech and with receivers that contain only one charge; such arms being conveniently handled and loaded on horseback, are peculiarly adapted to the cavalry service; and the ball being larger than the diameter of the barrel, it is not changed from its position in the receiver by the movement of the horse.

The many-chambered arms, for reasons stated under the fifth head of this report, are deemed inapplicable to the service of cavalry.

#### GENERAL REMARKS.

The various arms under consideration, which have been submitted to the examination and experiments of the board, constitute two classes, viz:

The first class comprises the guns of Hall and Hackett, being arms that load at the breech with single charges.

The second class are "many-chambered," or repeating guns of Colt and Cochran, the breech of which is formed of cylindrical receivers that revolve upon a pivot, and in which are chambers to contain a number of charges which are brought successively in a line with the same barrel.

The first class may be divided into two varieties:

First. Hackett's gun, the breech of which, opening, uncovers the bottom of the bore, into which the charge is inserted in the form of a cartridge—the powder remaining in its paper envelope.

Second. Hall's gun, the receiver of which being raised by means of a spring, receives its charge in its upper end, and may be loaded either by means of a flask or with a prepared cartridge.

The second class also embraces two varieties: the receiver, which contains the chambers for the charges in Cochran's, revolves horizontally on an *arbre* perpendicular to the axis of the bore; while Colt's receiver, having its chambers in the opposite direction to Cochran's, revolves upon an *arbre* parallel to this axis.

As all these arms load at the breech, the advantages of this method are, of course, common to all, viz: that the ball used may be of a diameter so great as to destroy all windage, and thus cause a greater range, more exactness of fire, and, in consequence of less powder being required by the absence of windage, diminished recoil.

In the first class we may add, to the advantages common to all, that they can be loaded with great facility; and that, for the use of light troops or skirmishers, this property might be frequently useful and important.

In the first variety (Hackett's) the charge is inserted in a cartridge, the powder remaining in its envelope, the remains of which, with the residue of the burnt powder, adhere after several fires to the chamber, rendering it difficult to insert the cartridges, and highly probable that the retention of fire by this mass of the burnt envelopes, might cause explosions on the introduction of a new charge.

In the second variety (Hall's) this inconvenience does not exist, as the powder may be first inserted and surmounted by the ball.

Another inconvenience common to guns loading at the breech is, that the deposit of burnt matter which escapes through the joints renders them stiff and difficult to manage.

The guns of the second class have the same disadvantages as to wear and escape of gas, greatly increased by their complication and the danger of explosion of more than one charge at a time.

Of all the arms submitted to the board, that of Cochran is deemed the most unsafe for military purposes, when subjected to rapid discharges with cylinders [receivers] fully loaded.

The slightest defect in the metal of the receiver would render it highly dangerous both to the bearer and to others in contiguous positions; and that such defects would frequently exist will not be doubted by mechanics whose experience every day convinces them of the many circumstances that serve to prevent a perfect union of parts in similar constructions; and even admitting original perfection in this important limb, it is nevertheless liable, from the effects of constant and severe service, to receive fractures or other injuries sufficient to destroy its character for safety, and render it more dangerous to the ranks it is intended to support and defend than to those of the enemy.

One accident of the kind that occurred in our practice of the 19th of June (*vide* tabular statements) would alone not only impair the confidence of the troops in the ability and power of their arms, but, what might be fatal to the reputation of those armed with them, would infuse into their minds such a degree of dread and apprehension of their dangerous qualities as to render them an unpopular, and consequently almost powerless, weapon of war.

This objection, founded upon an occurrence which our experimenter elicited, is deemed conclusive as regards the inaptitude of this arm to the public service; and it is believed that the possession of one quality that detracts from the general merits of an arm, so as to impair the confidence of the soldier in its safety and power, would be fatal to its reputation and consequent utility.

However ingenious in design, therefore, and creditable to the mechanical skill of the inventor, this arm may be, the board is of opinion that it is an unsafe weapon, and unsuited to the use of bodies of men acting in line or in masses.

It is the opinion of the board that the arm of Colt, involving all the merits, and free from some of the objections to the former, may be very usefully applied in *special* cases; as, in fixed positions in defence of a breach; to cover boarders; in tops of ships; or for personal attack or defence; in a word, under any circumstances where the operation is of a special and brief character, and it be desirable to throw a mass of fire upon a particular point for a limited time. In such or similar situations the entire strength of this arm might be so controlled and managed as to render it fully available and highly efficient, while its cumbersome and yet necessary appendages and the massive burden of its parts would condemn it as wholly unsuited to the wants and exigencies of the service *in the field*.

The board is of the unanimous opinion that, from its complicated character, its liability to accidents (one having occurred in practice on the 21st of June) in the hands of soldiers, and other reasons which may be found in this report, that this arm is entirely unsuited to the general purposes of the service.

That the arm of Hackett is one of great merit, possessing in general the qualities of the standard musket, over which it has the advantage of simplicity in construction and manœuvre, and rapidity and certainty of fire, is fully admitted by the board; but it is exposed to the serious objection of a dangerous and doubtful arrangement of its ammunition in respect to packing and transportation, and in not admitting of being loaded with loose powder and ball, the necessity of which often results from the casualties of service; and in using only a charge of a peculiar make, to which is attached a percussion primer, dangerous when in connexion with large quantities of ammunition.

As it is highly probable that the objections to this arm may be overcome, and as the weapon has attracted the serious attention and consideration of other and highly military nations, with a view to possess ourselves of the knowledge and use of a weapon which it may hereafter be necessary to oppose to those who shall adopt it, the board is unanimously of opinion that a number, say 100 stands, should be procured of the inventor and proprietor, and placed in the hands of a selected company or corps, by the direction of the Secretary of War, in order to a thorough course of experiments, to embrace all the incidents of campaign service, both in respect to the weapon and its ammunition.

From the report of the master armorers it appears that the standard musket is not susceptible of alteration so as to apply to it the principles of Hackett's gun; and such is the opinion of the board.

The arms now in use in the United States service, it is assumed, possess the power of being used in skilful hands with all *requisite* celerity and effect.

The experiments just finished teach conclusively that up to 40 rounds of fire, in reference to the usual characters and incidents of service, they have the advantage in several respects and equality in others to those with many chambers.

It is seriously doubted by experienced soldiers whether the celerity attainable with our own arms, or with a weapon, which in being loaded requires to be removed from its firing position, is not carried as far as is consistent with steadiness, coolness, and that self-possession so very necessary and so difficult of inculcation. It is the opinion of the board that a larger proportion of fire from rapidly repeating guns would be thrown away than from those that receive but one charge at a time.

In the instances of the arms under consideration, it is believed that even if there be anything gained by their peculiarities over the common musket and Hall's guns in point of celerity of discharging, such advantage has been acquired at too great a sacrifice of important and indispensable principles; that in the desire to reach perfection in the construction of the arms, the convenience, physical power, and safety of those who are to use them, have been wholly overlooked; and that their liability to be found out of a *state of preparation* for defence would detract greatly from their character for efficiency.

The board is confirmed in the opinion that the arm of Hall is entitled to all the favorable consideration which has heretofore been bestowed upon it by previously constituted boards and commissions.

That the arm requires some modification in its construction, and especially in its equipments, the board is fully convinced; and, with such improvements as are doubtless attainable, the board is of opinion that as an arm for military purposes, it possesses a decided superiority over every other constructed upon the principle of loading at the breech.

The gun of Hackett, with many admirable qualities, is as yet a comparatively untried improvement; but Hall's gun, having successfully undergone the trials of service and the examination and thorough inspection of several competent commissioners, has again exhibited to this board powers and excellencies (capable, doubtless, of augmentation) far superior, in the opinion of the board, to those possessed by any other arm which has been subjected to its examination.

The application of the percussion primer to arms for the use of troops has not yet been made with success. They may, with improved means of attaching them to the nipple or cone, be used by light troops in extended order; but the difficulty of placing an object so small as the cap, during the excitement of action, in excessively cold weather, and in dark nights, has prevented this improvement in fire-arms (for sporting purposes) from being generally adopted in any service.

A.

WEST POINT, June 24, 1837.

SIR: Having attended as carefully as is practicable to the duties enjoined, upon me in the order of the board over which you preside, dated 19th of the present month, I, with due deference, submit the following statements.

Very respectfully, I am, sir, your obedient servant,

JOHN H. HALL.

General J. R. FENWICK.

In estimating the cost of construction of the different arms presented to us, it is necessary to consider the number to be made *annually*, and the *extent* of the works for manufacturing them in, because the expense of fabrication will be much affected by each of these circumstances. It would be less when many arms are made in the same period of time than when but few; a workman can do more, in the same time, when continuing upon the same kind of job, than when obliged to change often from one kind of work to another, as would be the case when making but few arms in a year.

There is a class of expenses incurred in a manufactory the amount of which is greatly influenced by the *extent* of manufacturing to which it is adapted; which expenses will be nearly similar, and to the same amount, whether much work is performed and many arms are made in each year or but few. Such are the expenses arising from the decay of the buildings; of the forebays and the water-wheels, &c.; the expenses of direction or superintendence; clerks' duties; watchmen; laborers to keep the shops in good order; to supply the stoves with fuel in cold weather, &c. My estimates have been made on the supposition of manufacturing three thousand arms of the same kind in each year.

The effect on the cost of the different kinds of the arms, which would be produced by making a smaller number of them in such an establishment, is exhibited in the paper numbered 4, by adding to the direct expenses on different parcels of them, viz: 1,000, 2,000, and 3,000 per year, the amount of the incidental ones annually incurred. From which it appears that Mr. Colt's muskets, without a bayonet, might be made in any quantities at the rate of 3,000 per year, at \$19 03 each; the fusil Robert, with a bayonet, at the rate of \$14 36 each; Mr. Cochran's musket, at \$19 10 each, without a bayonet.

*Exhibit of incidental expenditures, such as would be incurred in an establishment for making three thousand arms per year, and their effect on the cost of the arms when made in different parcels annually, viz: 1,000 per year, 2,000 per year, and 3,000 per year.*

Superintendence or direction.....	\$1,500 00
Inspection.....	1,400 00
Clerk's services.....	800 00
Assistant.....	400 00
Stationery.....	50 00
Watchman.....	600 00
Laborers.....	600 00
Fuel.....	600 00
Oil and tallow for lubricating water-wheel journals, and those of machines.....	100 00
Repairs of buildings, and forebays, and water-wheels, including deterioration of property..	950 00
	<u>7,000 00</u>
Estimated cost of direct expenses in making 1,000 of Mr. Colt's muskets in one year.....	16,520 00
Incidental expenses of one year.....	7,000 00
Total cost of 1,000 of Mr. Colt's muskets.....	<u>23,520 00</u>
Which is equal to \$23 52 for each.	
Cost of 2,000 of them, direct expenses.....	33,040 00
Incidental expenses.....	7,000 00
Total cost of 2,000.....	<u>40,040 00</u>
Which is for 1,000, \$20,020; equal to \$20 02 for each.	
Estimated cost of direct expenses for 3,000 of Mr. Colt's muskets.....	49,560 00
Incidental expenses.....	7,000 00
Total for making 3,000 in one year.....	<u>56,560 00</u>
Which is for 1,000, \$18,853; or \$18 85 3-10ths each.	
Direct expenses for fusil Robert for 1,000 in one year.....	12,030 00
Incidental expenses.....	7,000 00
Total for making 1,000 in one year.....	<u>19,030 00</u>
Or \$19 03 for each.	
Direct expenses for fusil Robert, made at the rate of 2,000 in one year.....	24,060 00
Incidental expenses.....	7,000 00
Total for 2,000 of the arms.....	<u>31,060 00</u>
Which is for 1,000 of them \$15,530, or \$15 53 for each.	
Direct expenses for fusil Robert, made at the rate of 3,000 per year.....	36,090 00
Incidental expenses.....	7,000 00
Total for 3,000.....	<u>43,090 00</u>
Which for 1,000 is \$14,303, or \$14 36½ for each.	
Direct expenses for 1,000 of Mr. Cochran's muskets in one year.....	16,770 00
Incidental expenses.....	7,000 00
Total expenses for 1,000 in one year.....	<u>23,770 00</u>
Or \$23 77 for each.	
Estimated cost of direct expenses for 2,000 of Mr. Cochran's muskets, made at that rate per year.....	33,540 00
Incidental expenses.....	7,000 00
Total for 2,000.....	<u>40,540 00</u>
Which is for 1,000 \$20,270; or \$20 27 for each.	
Direct expenses for 3,000 of Mr. Cochran's muskets made in one year.....	50,310 00
Incidental expenses.....	7,000 00
Total for 3,000 of the arms.....	<u>57,310 00</u>
Which for 1,000 is \$19,103½, or \$19 10½ each.	

WEST POINT, June 24, 1837.

Sir: Subjoined is a list of the appendages of Mr. Cochran's musket, and an estimate of the cost of making each of their component parts.

Also, a list of the appendages to Mr. Colt's musket, and an estimate of expense of making each of their component parts, so far as I could examine them separately. Those of the ammunition flask could not be separated; they have therefore neither been separately mentioned nor separately estimated.

Very respectfully, your obedient servant,

JOHN H. HALL.

General J. R. FENWICK.

*Appendages to Mr. Cochran's musket.*

1 powder-flask .....	\$1 50
1 leather pouch .....	1 10
1 leather belt .....	40
2 leather straps .....	25
2 small mallets .....	25
1 bullet-mould .....	40
	<u>3 90</u>

REMARKS.

In Baron Hackett's gun there is no rod. It is thought that though the rod is unnecessary in loading, it is indispensable in washing or cleaning the barrel. No estimate has been made for it. If it should be thought necessary to add the rod, its cost is about that of the common musket; also, if the rod should be added, there would be some additional expense in stocking, and some in altering the top band.

The whole number of parts will be found in the column of parts.

## REMARKS.

As it appeared to be the opinion of the board that a receiver with six chambers would be preferable to one with seven, in order to reduce the weight of the musket; and preferable, also, to reduce the length of the chambers so as to contain a charge of 100 grains of powder, with ball, &c.; and to reduce the length of the barrel so as to make its length correspond with the length of the present musket barrel, viz., 42 inches; the foregoing estimate has been predicated on these modifications, all of which would reduce the weight of the musket from 15 pounds 5 ounces to 13 pounds 9 ounces.

These modifications would also tend to reduce the cost of the musket, if the receiver were made of iron. But as it appeared to be the general opinion (which opinion is concurred in) that a receiver made of cast-steel would be preferable to one made of iron, in consequence of iron being more liable to have flaws and seams than cast-steel, and these flaws and seams having a tendency to render the charges liable to ignite each other from the interior of the calibre, (an instance of which is thought to have occurred in the examination at West Point,) it is proper to remark that the cost of the cast-steel will probably rather more than counterbalance the reduction of cost by the above-named modifications, though it will not materially add to the cost of the gun.

In the foregoing estimate, wrought iron has been substituted for malleable iron in all the components made of malleable iron in Colt's musket, which will make an additional item in the cost of the manufacture.

Colt's gun has neither bayonet nor rod. It is thought that though the rod is unnecessary in loading, it is indispensable in washing or cleaning the barrel. No estimate has been made for these parts. If it should be thought necessary to add them, their cost will be about the same as that of the bayonet and rod of the musket.

In consequence of Mr. Colt's statement, that, although the guide or rear sight on the gun presented for examination was made of three parts, it was not intended so for the ordinary manufacture of the musket, as it would be more expensive than that of the ordinary kind; in this estimate the guide has been called but one part, and corresponds with the one which was on the rifle and carbine he had with him.

The lock-plate, also, was called but one part, although the plate on the gun presented for examination consisted of two parts, there being a sort of scroll on the tang. This was mere fancy, and not intended as a model for ordinary manufacture of the musket.

The form of the present musket breech-plate was substituted for the one presented for examination on account of its being less expensive in the manufacture; and consequently two screws were estimated instead of three.

As it seemed to be the opinion that a receiver with six chambers would be preferable to one with seven, as noticed above, only six cones were estimated for.

If wrought iron were substituted for malleable iron, it would be found economical to make the guard of two pieces. In this estimate it has been considered as one part; but two rivets have been added to the number of pieces.

The number of parts in the gun presented for examination was fifty-eight; the number of parts intended to be examined, fifty-five; the number of parts actually estimated, by dispensing with one cone and one breech-plate screw, and by adding two rivets, amounted to fifty-five.

Although the guide has been estimated, it is considered to be of no more use to Colt's gun than it would be to the common musket, but rather an inconvenience in the manual exercise.

*Estimate of the cost, &c., of Mr. Cochran's musket, without bayonet or rod.*

REMARKS.

In this estimate, wrought iron has been substituted for malleable iron in all of those components made of malleable iron in Cochran's musket, which will tend rather to increase the cost of the gun.

The form of the common musket breech-plate was substituted for the one presented for examination, on account of its being less expensive to manufacture; and consequently two screws were estimated instead of three.

The stop-bolt consisted of two parts, in consequence of the thumbpiece being made of lectrum; but as this might be more economically made of iron, in one piece with the bolt, they have been estimated as one part.

Cochran's musket, also, has neither bayonet nor rod. It is thought that though the rod is unnecessary in loading, it is indispensable in washing or cleaning the barrel. No estimate has been made for these parts. If it is thought necessary to add them, their cost will be about the same as that of the bayonet and rod of the common musket.

The number of parts in Cochran's musket .....	50
The number of parts estimated, by dispensing with the thumbpiece and breech-plate screw, amounts to.....	48

GENERAL REMARKS.

As there might, at first sight, appear too great a discrepancy in the cost of some of the screws of nearly the same size, it is thought proper to remark that, when the same tools would answer for various classes of screws, the cost of these tools has been thrown wholly or in part upon the first of these classes of screws estimated.

If arms were manufactured of the foregoing pattern, there might be an improvement made in the uniformity of the screws, which would tend to cheapen, as well as equalize, the cost of fabrication.

BENJAMIN MOOR.

HARPER'S FERRY, July 22, 1837.

25TH CONGRESS.]

No. 741.

[1ST SESSION.]

REGULATIONS AND EXPERIMENTS SHOWING THE MEANS AND MANNER OF TESTING, PROVING, AND BURSTING CANNON, UNDER THE DIRECTIONS OF THE ORDNANCE DEPARTMENT.

COMMUNICATED TO THE SENATE SEPTEMBER 19, 1837.

WAR DEPARTMENT, September 19, 1837.

SIR: I have the honor to transmit herewith a report of the colonel of ordnance, in answer to a resolution of the Senate of February 17, 1837, on the subject of the bursting of cannon at Major Clarke's foundery in July, 1833, and August, 1834.

Very respectfully, your most obedient servant,

J. R. POINSETT.

Hon. R. M. JOHNSON, President of the Senate.

ORDNANCE OFFICE, Washington, July 13, 1837.

SIR: In obedience to your orders, and in conformity to the resolution of the Senate of February 17, 1837, directing that the facts concerning the bursting of 16 cannon at Major Clarke's foundery in July, 1833, and August, 1834, be reported, I have the honor to report:

First. The facts concerning the bursting of the 7 guns on the 18th of July, 1833, as follows:

Agreeably to orders from the Ordnance department, the inspectors of cannon (Lieut. Colonel. W. J. Worth and his assistant, Lieut. John Childe) being at the Bellona foundery on the 18th of July, 1833, in presence of Major Clarke, fully explained to him the regulations for proving cannon, informing him at the same time that if he had any objections to them, or to the manner of administering them, the inspectors would delay operations until further orders from the department could be received. The inspectors were permitted to proceed, and Major Clarke was requested to be present, and was present, at the proving of the powder, the weighing of the charges, and at the loading and discharging of the guns.

It should here be premised that, previous to this inspection of July 18, 1833, Colonel Worth and his assistant had made two inspections at the West Point foundery, two at the Pittsburg foundery, and one at the Columbian foundery in Georgetown, in which they had examined 118 guns, 9 of which burst in proving at the Pittsburg foundery. The metal of these bursted guns was afterwards admitted by the founders to be objectionable. Though they evidently were not aware of it until after the proof.—(For the remarks of the founders on this subject see letter of Messrs. McClurg, Wade & Co.)

The guns (32-pounders) of the inspection of July, 1833, were charged with powder and ball according to the following tabular statement, the details of which are in conformity with the regulations of November 29, 1832, which governed at that time.

Number of gun.	Proof range of powder for first charges.		First charges, (powder.)		Proof range of powder for second charges.		Second charges, (powder.)		No. burst.		Number of gun. Extract from the report of the inspectors of July, 1833, marked "B."

These guns were proved with Dupont powder; the charges regulated in strict conformity with tables furnished by the Ordnance department. Twenty barrels of proving powder were recently forwarded to Bellona from Frankford arsenal, where it had been carefully proved by the standard eprouvette. The remainder, about seven barrels, was drawn from the magazine at Bellona and carefully reproved immediately before use. It will be perceived that, generally, the guns conform in measurement very closely to the established patterns. Seven guns burst in proof—six at the first, and one at the second discharge. In several instances the evidence was very conclusive that the breaking had been caused or accelerated by the breaking and wedging of the shot. Two shot and two wads were used at both discharges, agreeably to regulations.

W. J. WORTH, *Brevet Lieut. Col., Major of Ordnance and Inspector.*  
 JNO. CHILDE, *Lieutenant and Assistant Inspector.*

*Second.* The facts concerning the bursting of the nine guns on the 7th of August, 1834, as follows: The two inspecting officers (Lieut. Col. Worth and Lieut. Maynadier) being at Major Clarke's foundry on the above date, in obedience to orders from the Ordnance office, fifty-eight 32-pounder guns were presented for inspection. Forty-two, however, were only proved, the proof being discontinued at the instance of the founder. The powder used in proving these guns was most carefully proved on the ground by the inspectors, and the charges weighed by them in presence of the founder. The powder was of Dupont's manufacture, except that used in eight charges for the second fire, and was selected from the lowest range on hand at the Frankford arsenal.

As stated in the facts concerning the former bursting, (of July, 1833,) the regulations were fully explained to the founder; he was also informed that if he had any objections to the regulations, or to the manner of administering them, the inspectors would await the further orders of the department. The founder was also requested by the inspectors to be present, and was actually present, and assisted in proving the powder, weighing the charges, and in loading and discharging the guns. Of the 42 guns proved, 9 burst—eight at the first and one at the second fire.

As Major Clarke had been unfortunate in the inspection of July, 1833, and as he was prejudiced

against the method of ascertaining the strength of the powder, (by the use of the established eprouvette,) no means were left untried to arrive at the greatest practicable accuracy. Major Clarke formerly made great objections to the use of two round shot in proving his guns, to the breaking and wedging of which he attributed the bursting of his guns. *On this occasion*, at his request, cylindrical shot were used, except (at his suggestion) in the last three guns tried, two of which broke in like manner with the preceding. The eprouvette used in proving the powder was perfectly new, and from less use doubtless gave greater ranges (and consequently greater reductions in quantity by the tables) than that of the same series in use at the Frankford arsenal.

The guns (32-pounders) of the inspection of August, 1834, were charged with powder and ball according to the following tabular statement, the details of which are in conformity with the regulations of November 29, 1832, which governed at that time.

No. of gun.	First proof.			Second proof.			Burst.	
	Proof range of powder.	Weight of charge.	Weight of shot.	Proof range of powder.	Weight of charge.	Weight of shot.	First fire.	Second fire.
329	yards. 273	lbs. oz. 17 13½	66 3	yards. 276	lbs. oz. 13 5	65 12	.....	.....

*Extract from the report of the inspectors of August 7, 1834.*

The founder ascribes the failure of his guns to excessive proof-charges. The inspectors entertain a different opinion, and ascribe the result to defect, either in the metal or in the manner of working it, in which they were sustained by the nature of the fractures. Specimens were preserved, and have been since submitted to experienced founders, who, without knowing anything of the circumstances, or whence they came, at once decided that the metal was good, but had been injured and rendered unfit for gun-metal in melting and casting; that the result arises from this cause cannot be doubted, when it is remembered that the cannon at other founderies are subjected to the like proof, and for the past year without failure. The three last guns were charged with two round shot, and the others with one cylindrical shot, for the weight of which see face of the report.

W. J. WORTH, *Brevet Lieut. Col., Major Ordnance, Inspector.*  
 WM. MAYNADIER, *Lieut., Assistant Inspector of Ordnance.*

The following is a letter from Messrs. McClurg, Wade & Co. on this subject:

WASHINGTON, May 27, 1836.

Sir: In compliance with the request contained in your letter of yesterday, we have to state that Colonel Worth inspected cannon at our works first in December, 1833, also in June and October, 1834, making six inspections in all.

In our opinion these inspections were always conducted with the greatest care, attention, and accuracy by the inspecting officer. He always invited our personal attention to all the proceedings, and desired us to point out anything which we might consider objectionable, or as not being in accordance with the regulations. We have not, however, on any occasion, made any objection to the proceedings of the inspectors, nor to any part of them, being always fully satisfied that they were in strict conformity with the established regulations.

At the inspection made in 1832, the first conducted by Colonel Worth, several of our cannon failed to stand the required proof, and nine burst. All the cannon cast since that inspection, amounting to one hundred and forty-seven in all, have stood the proof, not a single failure having occurred in guns since that time.

We have never attributed the failure of some of the guns cast in 1832, and the undeviating success of all cast since, to any difference in the mode or the accuracy of proving the several parcels, but to a difference in the quality of the material used. When the failure occurred we attributed it to the quality of the iron; and since that time we have taken very good care not to use any iron the strength of which was in the least degree doubtful. This difference in results we have always attributed to our own care and attention in selecting materials, and not to any want of either on the part of the inspecting officers.

Respectfully, your obedient servants,

McCLURG, WADE & CO.

Colonel G. BOMFORD, *Ordnance Office.*

The following are the answers of G. Kemble, esq., of the West Point foundry, in his letter of the 20th of June, 1836, to the queries propounded to him by this office:

1st query. Please state the number of inspections made by Colonel Worth at your establishment, and their periods.

2d query. Your opinion as to the care, accuracy, and attention with which those inspections were conducted?

In answer to the first query, Colonel Worth acted as inspector of ordnance in the years 1833 and 1834; during which time he made four inspections of guns and shot at the West Point foundry, viz: On the 13th of May, 1833; on the 1st of July, 1833; on the 24th of May, 1834, and on the 2d of July, 1834.

In answer to the second query, it becomes me to state that no officer could be more accurate in his examinations, or more attentive to every point relating to the proof, than was Colonel Worth throughout the whole of these inspections.

Such are the facts of these two cases of bursting. They have been collected with great care from original reports of inspectors, letters, &c., marked A, B, C, D, E, and K, accompanied herewith.

Before proceeding to examine the facts of these cases, it should be stated that the 16 guns which burst out of 114 examined must have failed either in consequence of a defective regulation proof, or of incapacity or culpability in the inspectors; in either of which suppositions Major Clarke would be fairly entitled to remuneration from the government—that is to say:

*First.* The regulation charges, under which they failed, may have been excessive, and, though accurately measured and determined in practice by the inspectors, they may have been so powerful as to destroy guns equal in strength to those which the United States were then receiving from other foundries. In this case the regulation would be objectionable, and Major Clarke fairly entitled to compensation.

*Second.* On the other hand, the regulation charges may have been good and unobjectionable, but by the neglect of the inspectors they may not have been used in practice; and in this case the fault would be with the inspectors, and Major Clarke be in consequence clearly entitled to compensation.

It is obvious that under no other than one of these two cases could Major Clarke be entitled to any remuneration.

Let us now proceed to examine the first of these suppositions, that we may determine if the regulation charges were really excessive.

To do this, it will be necessary to look into the composition and strength of the proof-charges, and the recorded statements of their effects or general results, at the various founderies where they have been used during the whole period of their adoption by the government.

*Were the proof-charges excessive?*

*Proof-charges.*—The first guns, under the new system of sea-coast artillery, were cast in 1826, and were proved, each, with two regulation proof-charges, as follows:

1st charge.—Two-thirds weight of shot in powder, two junk-wads, and two shot.

2d charge.—One-half weight of shot in powder, two junk-wads, and two shot; the proof of powder being never less than 200 yards by the eprouvette then in use.

This regulation continued in operation until that of the 29th of November, 1832, (accompanied herewith,) which was as follows: 1st and 2d charges, same as above. The proof of powder being not less than 190, nor more than 290 yards by the new eprouvette, the standard being 225 yards.

This latter regulation continued in force until rescinded by the regulations existing at the present time, adopted by the board of ordnance, and under date of the 1st of May, 1834. This last went into operation at the founderies on the 1st July, 1835, after the bursting of the sixteen guns, and was as follows:

1st and 2d charges, same as above; but the proof of powder increased so as not to exceed 300 yards, nor be less than 200 yards; the standard being 250 yards.

*Powder, proof-charges.*—The above regulation of the 29th November, 1832, under which the sixteen guns burst, was not intended to increase, nor did it increase the charges, but rather the contrary, as will be seen. It was intended—

*First.* To restate the proof ranges of the powder intended for the proving of cannon which had been changed by the then recent adjustment of the eprouvettes, that had been effected with great care. By this adjustment, the powder, which was 200 yards by the old eprouvette, became 225, without any increase of strength by the new eprouvette; and as none could be used in the proof of cannon less than 200 yards before the adjustment, so it would have appeared reasonable that none should have been used after it of

a strength less than 225 yards; yet so favorable was the regulation to the founders, that it admitted powder so low as 190 yards, and so high as 290; 225 yards being the standard proof. But as the new eprouvette gave proof ranges for the same powder  $12\frac{1}{2}$  per cent greater than those of the old, it is hence perceived that the above minimum proof range of 190 yards, (new eprouvette,) is equal to  $166\frac{1}{2}$  yards of the old eprouvette; and thus it is seen that the minimum powder authorized under the new regulations was really about 35 yards less in strength than the minimum powder of the old regulations, which was 200 yards.

*Second.* It was intended to remedy some inconveniences which had arisen in practice since 1826. The inspectors could not always command powder of a proof exactly 200 yards, and were, in consequence, often obliged to use powder ranging between that proof and the proof of 250 yards and higher; and thus, for this increase of strength, a proportional reduction in quantity became necessary. It was the object of the regulations of 1832 to point out in a scientific way, and with great precision, the amount of this reduction, in every possible case of increased strength; and it was therefore a measure calculated to favor the founders, as well as to assure the government, since it would prevent the mistake of using too great a quantity of very strong powder, or too small a quantity of very weak powder, in the proof of cannon. The regulation was drawn up on scientific principles, with great care, and in conformity with the most exact experimental results. It accompanies this paper, marked M.

Thus, then, while the three regulations provide the same *weight of standard powder*, the same weight of metal, and the same wads, they exhibit the maximum, minimum, and standard powder as follows, by the new eprouvette now in use:

Date of regulation.	Maximum proof range.	Standard proof range.	Minimum proof range.
Regulation of 1826.....	300 yards	225 yards	225 yards
Regulation of 1832.....	300 yards	225 yards	190 yards
Regulation of 1834.....	300 yards	250 yards	200 yards

As, therefore, the maximum proof ranges are equal as well as all the other elements of the proof-charges, except the *standard* and *minimum* proof ranges, the force of the charges under the three regulations must vary as these latter. But the standard proof ranges of the regulations of 1826 and 1832 being equal, the force of the proof-charges, under those regulations, will be as the minimum proof ranges, which, in the regulation of 1832, being 35 yards less than those of 1826, the proof-charges of the former regulation should be less than those of the regulation of 1826, while those of the regulation of 1834, now in force, are probably the strongest of all. Hence, it is very clear that the proof-charges used under the regulation of 1832, with which the sixteen guns were burst, were really of powder weaker than those which either preceded or followed them.

So much for the powder-proof of proof-charges.

We next consider their *effects or general results at the founderies*. They divide themselves into three parts, viz:

Those under the regulation of 1826, those under the regulation of 1832, and those under the regulation of 1834; and are exhibited in the following tabular statement:

At what foundery.	By what officer inspected.	Number and description of cannon presented.			Number rejected.	Number burst.	Total No. received.
		24-pounders.	32-pounders.	42-pounders.			
<i>Under the regulation of 1826.</i>							
Georgetown, D. C.....	Colonel Bankhead.....	248	216	2	.....	1 32-pounder.....	465

#### RECAPITULATION.

Under the regulation of—	Number of guns presented for inspection and proof.	Number burst.	Number rejected.	Number burst and rejected.	Number received.
1826.....	1,366	4	.....	4	1,362
November 29, 1832.....	455	25	4	29	426
May 1, 1834.....	353	2	5	7	346
Total.....	2,174	31	9	40	2,134

In examining this table with a view to the proof-charges, several forcible views are presented:

*First.* It is seen above that the 16 guns were burst under the regulation of 1832, and that the powder used under the preceding or following regulations was clearly stronger than that used under the regulation of 1832. It is hence obvious that the 2,174 guns submitted for proof during the last eleven years were proved with charges either *equal to or greater* than those with which the 16 guns were burst. And it is remarkable that during this long period, out of so great a number presented for proof, only 31 should have burst; and that, out of these 31, nine should be admitted by the Pittsburg founders to be of defective metal; 2 should never be complained of by the West Point and Georgetown founders; 4 should never be complained of by Major Clarke; and that only 16 should have the proof contested by Major Clarke; total burst, 31.

Thus, out of the 2,174 guns submitted for proof, *sixteen* only have been contested—that is to say, one gun of every 136.

There can be no doubt as to the truth of this remarkable fact. Can it prove that the charges are excessive, and ought in consequence to be reduced?

Is it not much more reasonable to infer that the sixteen guns were too weak than that charges, which burst only one gun of one hundred and thirty-six, are too strong? Are we to say “the charges are too strong because the gun breaks?” or shall we not rather say the gun is too weak because the charges have been sanctioned and tested by an experience so uniform and ample? Are we to measure the gun by the charges, or the charges by the guns in a case like this? In reality, this fact can never be a reason for reducing the proof-charges, though it may be in favor of their increase.

*Second.* But let us compare the effects of the proof-charges at the several founderies one with another. They were made up from the same elements and fired by the same inspectors, under circumstances in all respects as exactly the same as it was possible. These effects ought, therefore, to be a correct measure of the force of the proof-charges, as well as of the relative skill of the founders; and perhaps this is the best view that could be taken of the subject.

The tables show that, since the adoption of the new sea-coast artillery, there have burst at the Bellona foundery, where the sixteen guns burst, 20 guns out of 595—that is, 1 out of every 29.

At the Pittsburg foundery, employed only during the last five years, 9 guns out of 281—that is, 1 out of every 31.

At the Georgetown foundery 1 gun out of 621—that is, 1 out of 621.

At the West Point foundery 1 gun out of 677—that is, 1 out of 677.

Thus, with the same proof-charges and the same inspectors, the guns at Bellona foundery (one of the oldest employed) have suffered greater failures than at any one of the other three founderies; and very much greater than either of the other old founderies of West Point or Georgetown. What can be the reason of this evident difference in the strength of the guns made at the different founderies? Does it not prove the existence, in the manufacture or in the material, of causes of weakness at the Bellona foundery which do not exist at the others? The guns made at that foundery, which sustain the proof, are no doubt good and sufficient for all the purposes of war; but these facts certainly show them to be inferior in strength to those made at the other founderies. If the proof-charges be excessive at the Bellona foundery, why are they not so at the others? Why, indeed, do the other founders make no complaint? Why are they perfectly satisfied with the charges? Is this great difference in the resistance of the guns, attributable to the fault of the founder or to excessive proof-charges? If it be to the latter, why have not the same failures appeared at the other founderies where the same charges have been used?

Notwithstanding these striking facts, the subject of reducing the proof-charges is agitated by the founder contesting the proof of the sixteen guns. Let us see what would be the ultimate effects or consequences of such a reduction.

The manufacture of cannon, in consequence of the great difficulties of the operation, is become, in Europe as well as in this country, a profession to which men devote their lives; and which requires extensive aids from chemistry, natural philosophy, and the mathematics. These difficulties arise from the great stress which, by means of gunpowder, is necessarily applied to iron, and to which the strength of the iron must be constantly proportional. But the prodigious increase in the strength of gunpowder during the last twenty years has increased proportionally this stress upon the iron used in cannon; and has thus rendered the strength required in that material proportionally greater, and the profession of a founder much more difficult than formerly. These difficulties are considered so great in the United States, and the procuring good guns for the national defences has been deemed a subject of so much importance, that the government has found it advisable to employ only four founders out of the great number now in the United States; this being done in order that these founders might employ all their time and talents upon a subject of so much difficulty.

So soon, therefore, as we reduce the proof-charges for cannon, the founders will not have the same difficulties to surmount with the new as with the old proof-charges; and, as a matter of course, will reduce their expenditures proportionally. For assuredly they will curtail the expenditures corresponding to the difficulties to be surmounted in the heavier proof-charges, and make only the lighter expenditures corresponding to the lesser difficulties of the lighter proof-charges. Thus the guns will be inevitably weakened, while the government yet pay the same prices for their cannon.

This is a consequence of reduction which can in no way be avoided. Does the government want weaker cannon at the same prices? Would it not be preferable to pay higher prices, if a change be at all necessary, and continue the guns of the same unexceptionable strength as at present? In this manner the unskilful founder might devote greater expenditures, to overcome, without loss, the difficulties of the manufacture.

Finally, seeing that a change in the proof-charges would necessarily produce a change in the manufactures at the founderies; that it would unsettle the existing state of their operations, which are admitted to be accompanied by the most successful results in the manufacture of cannon; seeing that, by the use of these proof-charges for a long series of years, they have given us a system of sea-coast artillery of unexampled strength and beauty of construction; that under this system of proof we have received upwards of 2,000 cannon, and expended nearly a million of dollars: shall we, at this late date, abandon what has proved to be good and unexceptionable, and commit ourselves to uncertainty and the hazards of new rules, which, whether they be those of France or England, (different the one from the other,) will, as they are different from our own, unavoidably produce a change in our manufactures? and which, while they cannot produce better guns, may, and most probably will, produce those which are worse; for it must not be forgotten that the English and French proofs agree only in the use of one shot. They differ

in the important points of *quantity of powder*, and in the *number of discharges*, while those of England and the United States differ in the *quantity of metal* and in the *quantity of powder*, but agree in the number of discharges; and it is as difficult to compare those of France and Great Britain, and to say which is the greater, as it is to compare those of Great Britain and the United States. It is known, too, that, corresponding to these different proof-charges, there is a marked difference in the metal of the three nations; the Swedish metal used in France being better than the English, and the English metal manifestly different from our own. Long experience of these several states in their different proof-charges show them to be good, and severally applicable to their different metal, and they therefore have made no changes. Why, then, shall we displace our own, and take the English or French proof? They have, indeed, been found good for metal different from our own; but, upon our metal, they must necessarily produce different results, which we cannot predict to be good or evil, as we only know that by this change we lay aside that which is certainly good, to take up with that which is not only uncertain, but from which there would be high probability of error and consequent disaster to the country. Besides, if we adopt the English or French proof-charges, why may we not also go on and adopt the entire system of the French or English sea-coast artillery, with all its different dimensions and different apparatus? They are equally applicable to our system of fortifications; and if their proof-charges be good for our artillery, (so different in size from theirs,) they would be still better for their artillery adopted by us.

But it is urged with great earnestness that the American proof-charges are much more powerful than those of Great Britain; and it is hence pretended to be inferred that they are unfit to be used in the proof of cannon. Now, although it has been clearly shown by unquestionable recorded results, extending through a series of years, obtained at various founderies, while controlled by different superintendents, and without complaint from the latter, that these charges have been adequate to all the purposes of government, and are in no way objectionable, yet, for your satisfaction, it may be proper to exhibit them by the side of those of Great Britain. They are so exhibited below:

*British proof-charges for heavy cannon.*

Calibres.	Weight.	Average weight.	First charge.		Second charge.	
			Powder in lbs. and ounces.	Powder in parts of the weight of the balls.	Powder in lbs. and ounces.	Powder in parts of the weight of the balls.
42-pounder .....	<i>Pounds.</i> 7,308	<i>Pounds.</i> 7,308	25 0	.595	25 0	.595
32-pounder .....	6,240	5,792	21 8	.671	21 8	.671
Do .....	5,344		21 8	.671	21 8	.671
24-pounder .....	5,616	5,076	18 0	.750	18 0	.750
Do .....	5,328		18 0	.750	18 0	.750

REMARKS.—For each charge of each gun, two shot and two junk-wads.

In examining these tables, we at once see a remarkable difference, in the great weapon of the two nations, to consist in the weights of the different calibres.

*42-pounders.*—That of the American 42-pounder is 1,396 pounds heavier than that of the English, or heavier by about one-fifth of the English gun.

*32-pounders.*—In the 32-pounders the differences are still greater. The American 32-pounder is heavier than the heaviest English 32-pounder by 1,344 pounds—that is, heavier by one-fourth or one-fifth of the heaviest English 32-pounder. And the same American gun is heavier than the lightest English 32-pounder by the enormous difference of 2,240 pounds; thus making the American 32-pounder about one-half or one-third heavier than the lightest English 32-pounder, (and this, it may be remarked, is the calibre that burst at Major Clarke's foundery.)

*24-pounders.*—The English have as many as four different calibres of 24-pounders; the heaviest being about equal in weight to that of the United States, and the lightest 1,147 pounds lighter than the Ameri-

can gun, which is thus about one-fourth of the English gun heavier, and about 500 pounds heavier than the average weight of the four English 24-pounders. A further view of calibres in English sea-coast artillery is not taken, as we have not as yet cast any 18-pounders.

Thus, while the average weight of the three English calibres is but 5,392 pounds, that of the same three American calibres is 7,294 pounds. And as the principal of these calibres have near about the same length with the American guns, they must consequently have a thickness of metal considerably less; and hence (supposing the material and workmanship equal) the American gun, having a greater thickness of metal, would require and should sustain proof-charges proportionally greater than those for the English guns.

The government of the United States, therefore, having, upon principle, and after due consideration, adopted a system of sea-coast artillery of a weight and thickness of metal considerably greater than those in use in Great Britain for the same calibres, there would hence appear very powerful reasons why the American proof-charges should be greater than those in use for like calibres in the British empire. Yet, on examination, it is a matter of doubt which proof-charges are upon the whole the greater—those of Great Britain or of the United States.

It is perceived, on examining these tables, that the English use two charges to each gun, with one shot and two high junk wads to each charge; that the Americans, in like manner, use two charges and two junk wads to each gun, differing from the English, however, in using two shot in each charge.

*42-pounders.*—As regards the English 42-pounder, it has the first charge of powder three pounds less than that of the United States for this calibre, and the second charge four pounds greater; but it should be remembered that that is 1,400 lighter than the American 42-pounder.

*32-pounders.*—The first charges of the American and English 32-pounders are about the same; but the second charge for this calibre of the English piece is 21 pounds 8 ounces, while that for the American piece is only 16 pounds; the latter gun being, notwithstanding, 2,240 pounds heavier than the lightest English 32-pounder, and heavier than the heaviest by 1,344 pounds.

*24-pounders.*—The English 24-pounder has 18 pounds for the first charge, while that of the American gun of the same calibre has only 16 pounds for this charge; and in the second charge of this calibre the difference is still greater, the English charge being 6 pounds greater than the American, while it must not be forgotten that the American gun is 1,147 pounds heavier than the lightest English gun of this calibre, and 500 pounds heavier than the average weight of the English guns of this calibre.

*18-pounders.*—With regard to the 18-pounder, the Americans have not yet finally fixed on the dimensions of this piece; but its proof-charges have been established to be in the same proportion as for the sea-coast artillery. The English first charge for this piece being 15 pounds, is 3 pounds heavier than the American second charge, which would make it two-thirds greater than the American second charge—the English being 15 pounds and the American 9 pounds.

*It thus appears that in Great Britain the proof-charges of powder are variant, being comparatively high with single shot; while in the United States the proof-charges of powder are uniform, but comparatively low with double shot, our artillery being much heavier, having greater thickness of metal.*

From all which we would conclude, with regard to the proof-charges, that they are far from being excessive, and ought not to be reduced; and this conclusion is confirmed by the able report, (marked L,) on the same subject, of Major General Macomb and Brigadier General Wool, who state: "We believe there must have been some defect in the guns which did not stand the proof. The fact that so many guns have stood the prescribed proof at Bellona arsenal, as well as at every other foundry, is a strong presumption that the proof to which the guns have been subjected is not too great."

If it be shown by these investigations that *the proof-charges were not excessive*, we have next the further question (under the second division of the subject) to examine, viz:

*Were the proof-charges accurately measured and correctly used by the inspectors?*

To make this examination, we must inquire, from the facts in the case—

*First*, if the inspectors had the necessary ability, experience, and carefulness for the transaction of such business; and, *secondly*, if they were culpable, either from public or private motives.

The inspectors were both selected for their general ability and experience. Those of the senior inspector were undoubted, and generally acknowledged. He had been selected to command in some of the most important stations in the army, the cadets at West Point, in the artillery school of practice at Fortress Monroe, and, lastly, for the command of one of the largest arsenals of munitions of war in the country, viz: that at Frankford, Pennsylvania. In the latter situations his information in the affairs of the ordnance, which was before more general, became now necessarily more particular, exact, and in detail; and he was in consequence selected to superintend the operations in inspection of cannon at the foundries. His rank, besides, to which the government, impressed with his abilities and services, had recently advanced him in the ordnance department, gave him a claim to this position in the inspections.

In addition to these views of general ability and experience, the senior inspector had acquired much detailed experience in the proof of cannon immediately before proceeding with the July inspection of Major Clarke, in which seven guns were burst. The facts show that he had, before that inspection, inspected the other three foundries, and proved 118 cannon; and *that* without the slightest objection on the part of the founders, although one of them had nine cannon burst and four rejected.

It must be remarked here, with regard to the bursting of these last-mentioned cannon, that the transaction shows, in a striking manner, the ability and experience manifested by the senior inspector, and their remarkable advantages to the government in the detection of defective cannon, and in the improvement in the manufacture which followed.

The report shows two inspections at the Pittsburg foundry by the senior inspector, preceding the July inspection of Major Clarke. In the first, seven guns were burst, and in the second, two. But though the founders seem to have been satisfied, by the result, that the guns were of defective metal, yet they thought it well to be better assured of the fact, and accordingly presented, with thirty-one other cannon of superior metal, two of the metal of the burst guns. The inspectors knew nothing of any difference in the metal. The thirty-one cannon stood the proof, but the two, of different metal, burst; which perfectly assured the founders of their defective metal.—(See their letter on this subject, page 485.)

It is not, perhaps, possible to exhibit a stronger case going to establish ability, carefulness, experience, and knowledge of his business, in an inspection of cannon. Here, without previously knowing

anything of the metal, he detected the existence of defective metal in two several instances, to the great advantage of the government, and the entire satisfaction of the founders. As a consequence, not a gun has burst at the foundery since, although the proof-charges have been since increased.—(On this subject, of the fitness of the inspector, see also the answers of G. Kemble, esq., page 485.)

The senior inspector did not, therefore, appear at the Bellona arsenal without much experience of a detailed and specific character in the proof of cannon. Having arrived at the foundery, how did he conduct himself? He requested Major Clarke to be present at the proof, as well as at all the operations preceding it. The regulations, all the preparatory operations, were proposed to be explained to him, to any extent he might desire. He had the power to stop the proof or other operations at any moment, and to refer any point of objection to the proper department. Yet Major Clarke, having full power to stop the inspectors, either in the proof or in the initiatory operations, and to correct them in all points, did not do so, until they had proceeded to the extent noted in the facts. The conduct of the inspectors was in accordance with the regulations; it was formal, regular, and uniform. They proceeded, step by step, in the most detailed manner, especially in the second inspection. The proof of each barrel of powder is given in their tables, made upon the spot, and the exact amount, in pounds and ounces, of each of the proof-charges for each gun, according to the strength of each barrel from which it was drawn. All this detailed information is given in the facts, which exhibit a laborious attention to particulars which would seem to leave no room to doubt of the exactness of the inspectors; and yet, in the July inspection, seven guns were burst out of the seventy-two proved.

But if, in the first inspection in which the seven guns were burst, there was no reason to believe that the inspectors had committed errors in the proof, it was still less probable in the second inspection; in which (in consequence of the complaints made by Major Clarke about the result of the first inspection) unusual and extraordinary efforts were made by the inspectors to attain the greatest possible correctness in everything, and yet *nine* guns burst in the second inspection, out of the forty-two proved.

We see in this second (or August) inspection at Major Clarke's foundery the same laborious attention to minute details in the correspondence of the weight of all the charges with the proof of each barrel of powder, and with the tables of proof-charges furnished from this office. We see, also, that to please Major Clarke, and at his suggestion, cylinder instead of round shot were used; that the powder was proved and all the other operations performed in his presence; and that he was invited to see and to object freely to any and everything not clearly correct. Under such circumstances it does not seem possible that the inspectors could have committed an error in a matter so plain, and especially after so much conversation and complaint, on the part of the founder, because of the previous bursting.

But why should we not consider the bursting to proceed not from a mistake, but from defective metal? Only a short time before we see that seven guns out of twenty burst at Pittsburg by the same inspectors and the same charges, the founders inferring, *from the bursting*, that it was in consequence of defective metal; and that they were right in this inference is proved by the fact that from that proving they proceeded to improve their metal, and although two hundred and fifteen guns have been proved since with higher-charges, not one has burst. Is there any difference between the case of Pittsburg, in which seven out of twenty burst, and that of Major Clarke, in which sixteen out of one hundred and fourteen burst? The Pittsburg founders did not, prior to the proof, certainly know of the existence of defective metal any more than did Major Clarke, but they (as the result showed) rightly *inferred that* from the proof; and why should we not make the same inference in the case of Major Clarke, who has also had eighty cannon proved since with higher charges, and without bursting? The cases are precisely alike; only in the former the proof-charges are admitted by the founders to be the tests of the goodness of the metal, which the subsequent proofs of two hundred and fifteen guns have confirmed; and in the latter they are denied by Major Clarke to be so upon vague, indefinite, and general grounds.

But if it be shown that the inspectors had the necessary ability, experience, and carefulness for the transaction of such business, it becomes necessary next to inquire if they were *culpable* either from public or private motives. And here it should be remarked, that no accusation of the kind has been even distantly alluded to against them. Universally acknowledged by all who know them to be correct and honorable in all things, wholly unconnected in their pecuniary relations with the other three founders and with the other departments of the ordnance, it is impossible even to suppose that they could be influenced by unworthy motives.

I have the honor to be, sir, your obedient servant,

G. BOMFORD, *Colonel of Ordnance.*

Hon. J. R. POINSETT, *Secretary of War.*

P. S.—All the papers not named in the above report, and having reference to the subject, are also herewith transmitted, marked as follows: Nos. 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, and 24.

A.—INSPECTION OF CANNON, BELLONA FOUNDRY, AUGUST 7, 1834.

*Dimensions and proof of forty-two 32-pounder iron cannon, manufactured by Major John Clarke, Bellona foundry, for the United States.*

† Burst second fire.

REMARKS.—Fifty-eight guns were presented and inspected, although only 43 appear on this report, the proof having at that number been discontinued at the notice of the founder. Nos. 336, 354, 357, 358, 360, 365, 369, and 370, broke on the first, and 337 on the second fire. The powder used, except eight charges for the second fire drawn from Bellona arsenal, was of Dupont's manufacture: for charges and ranges see face of the return, for proof of three successive periods see table below. The powder was most carefully proved on the ground by the inspectors, and the charges weighed by them in presence of the founder. 367, which broke on the second fire, was charged with 14 lbs. 14 oz. of Bellona powder, marked range 19½, and re-proof 245 yards.

The exterior finish and general appearance of these guns was not of that degree of excellence which might be attained by proper care and skill; *a a* and *b b* exceed the variation allowed below the prescribed dimension generally; *k k*, *D K*, *D P*, and *F P*, generally above. With the exception of *a a* and *b b*, the errors pointed out last year have been corrected.

The founder ascribes the failure of his guns to excessive proving charges; the inspectors entertain a different opinion, and ascribe the result to defect either in the metal or the manner of working it, in which they were sustained by the nature of the fractures; specimens were preserved, and have been since submitted to experienced founders, who, without knowing anything of the circumstances, or whence they came, at once decided that the metal was good, but had been injured, and rendered unfit for gun metal in melting and casting; that the result arises from this cause cannot be doubted, when it is remembered that the cannon at other foundries are subjected to the like proof, and, for the past year, without failure. The last three guns were charged with two round shot, and the others with one cylindrical shot; for the weight of which see face of the report.

The founder presented 637 32-pounder shot: of which were rejected 37 for being plugged, 65, cavities exceeding allowance, 2, too small, and 1, too large; 532 received, average weight of which was 33 lbs. 7 oz. The true point of sight was determined, and marked at the swell of the muzzle and lock-piece of the guns.

Respectfully submitted.

W. J. WORTH, *Brevet Lieut. Col., Maj. of Ordnance, Inspector.*  
WM. MAYNAIDIER, *Lieut., Assistant Inspector of Ordnance.*

\* Burst first fire.

† Burst second fire.

Remarks.—These guns were proved with Dupont powder; the charges regulated in strict conformity with tables furnished by the Ordnance department. Twenty barrels of proving powder was recently forwarded to Bellona from Frankford arsenal, where it had been carefully proved by the standard eprouvette; the remainder, about seven barrels, was drawn from the magazine at Bellona, and carefully proved immediately before use. It will be perceived that, generally, the guns conform in measurement very closely to the established pattern; seven guns burst in proof—six at the first and one at the second discharge. In several instances the evidence was very conclusive that the breaking had been caused or accelerated by the breaking and wedging of the shot; two shot and two wads were used at both discharges, agreeably to regulations.

W. J. WORTH, *Bat. Lieut. Colonel, Major Ordnance, and Inspector.*  
JNO. CHILDE, *Lieutenant and Assistant Inspector.*

*Errata.*

July 24, 1833—Examined this report and found the following errors, to wit:

1st. The dimensions under the columns of *f f* and *h h* vary from the deviations allowed by the regulations. The allowances under those two heads may be either  $\frac{1}{16}$  of an inch more or  $\frac{1}{16}$  less than the prescribed dimensions.

2d. The allowance shown over the heading of the "position of the trunnions above or below the axis of the bore," instead of " $\frac{1}{32}$  of an inch below the axis of the bore," it should be " $\frac{1}{16}$  of an inch."

The guns Nos. 292, 294, 297, and 306, exceed the allowance authorized under the last-mentioned head.

3d. The following differences have also been found in the charges, viz:

Second charge of gun No. 261 should be  $14\frac{1}{4}$  pounds, instead of  $14\frac{3}{4}$  pounds.

First charge of gun No. 276 should be  $19\frac{1}{4}$  pounds, instead of  $19\frac{3}{4}$  pounds.

First charge of gun No. 286 should be  $19\frac{1}{4}$  pounds, instead of  $19\frac{3}{4}$  pounds.

First charge of gun No. 296 should be  $19\frac{1}{4}$  pounds, instead of  $20\frac{3}{4}$  pounds.

(See letter to Colonel Worth of July 26, 1833, pointing out the above differences.)

## C.

BELLONA FOUNDRY, *July 18, 1833.*

SIR: I have the honor to submit my detailed report of the inspection of seventy-two 32-pounder cannon, manufactured by John Clarke, esq., for the United States; of which number sixty-five have been found conformable to the established pattern, sustained the required proof, and been received on account of the United States. Seven burst in the proof—six on the first and one on the second discharge. I have also inspected, proved, and received eight hundred and thirty-four 32-pounder shot, independent of those used in proof.

With high respect, I have the honor to be, your obedient servant,

W. J. WORTH, *Bvt. Lieut. Col., Maj. Ordnance, and Inspector.*

Colonel GEORGE BOMFORD, *Ordnance Corps.*

## D.

PIKESVILLE ARSENAL, *Maryland, May 21, 1836.*

COLONEL: I send you herewith a letter from Mr. John Childe, late a lieutenant in the army, and assistant to Lieutenant Colonel Worth, the inspector of ordnance. This letter gives a statement of the facts connected with the proof of guns at Bellona foundry, at which Mr. Childe was present. It is sent to you under the impression that it may be useful when the claim advanced by Major Clarke for pay for the bursted guns is brought before the Secretary of War for his decision.

I have the honor to be, very respectfully, your obedient servant,

WM. MAYNADIER, *1st Lieutenant 1st Artillery.*

Colonel GEO. BOMFORD, *Chief of Ordnance Department, Washington, D. C.*

YORK, *Pennsylvania, May 10, 1836.*

MY DEAR FRIEND MAYNADIER: Yours of the 7th instant came to hand last night. I will, with pleasure, answer the questions you ask respecting the proof of *seven* guns which were bursted at Major Clarke's foundry in 1833.

1st. The powder was all proved by the regulation epreuve immediately before putting it into the proof-cartridges.

2d. The quantity of powder put into the cartridges was the same as is prescribed by the ordnance regulations, taking 225 yards as the proof range of standard powder. When stronger, the quantity was reduced; when weaker, increased; in accordance with tables furnished for that purpose by the colonel of ordnance. I would here remark that the *strength and quantity* of powder fired in each gun proved at Major Clarke's foundry in 1833 were entered on the margin of the inspection report sent to the Ordnance office, which, I presume, may now be found in that office on file.

3d. The guns were loaded and fired under my immediate inspection, and in strict accordance with the regulations.

4th. The proof and inspection at Bellona foundry was conducted, in every respect, in exact accordance with the ordnance regulations upon that subject, and in precisely the same manner as at all other founderies.

When I left the inspection service there was a manuscript book in Colonel Worth's possession in which had been entered a rough sketch of each inspection that I attended, embracing, with a general outline of procedure, all uncommon circumstances that occurred at the inspections worthy of recollection. This book probably contains some notes upon the inspection of 1833, at Bellona, and I think you will find something therein about the *seven* bursted guns. The circumstances, however, have passed my recollection.

With many wishes for your health and happiness, I am truly yours,

JNO. CHILDE.

Lieutenant WM. MAYNADIER, *United States Army.*

P. S.—I shall endeavor to call and see you before I leave this quarter of the country.

E.

WASHINGTON, D. C., *May 28, 1836.*

COLONEL: On the 29th of April last I addressed you a letter, giving a statement of facts in relation to the proof of cannon at Bellona foundry in August, 1834.

I have since seen a letter from Mr. Clarke, the proprietor of that foundry, addressed to the Secretary of War, in which he advances a claim for pay for the bursted guns, on the grounds that the inspecting officers being newly appointed, were not acquainted with, or experienced in, the inspection and proof of cannon, and that some error in the proof must have been made.

That the inspecting officers were newly appointed was true; but that any error or mistake was made by them in the proof of Mr. Clarke's guns, or any other, I utterly and unequivocally deny. I am positively certain that at every inspection made after I was appointed to that duty, the most scrupulous attention was paid to the performance of it in a correct manner; and the inspectors never lost sight of the idea that, whilst their duty bound them, for the interest of the government, to see to the faithful performance of the duties of contractors, the interest of the latter was not to be jeopardied by any want of attention on their part, or by the undue strictness of the inspection or proof. On the contrary, great solicitude was always felt for their interests and the reputation of their establishments.

That any mistake could have been made in the proof of Mr. Clarke's guns, in August, 1834, is, from the very strict attention paid by the inspectors to the proof of powder and filling of the cartridges, impossible; and he himself, who witnessed both operations, ought to know it. It is not probable that an error so sensibly affecting his interest would have escaped his notice, or have failed to have been corrected by him at the time. Besides, he was distinctly informed by Colonel Worth, (who had burst several guns on the previous inspection at that foundry,) that if he had any objection to urge against the manner of the proof, it should be done before he proceeded further in his operations.

Mr. Clarke seems to think that as Captain Ripley proved sixteen guns of the same manufacture the year following without bursting one, it is clear evidence that the first proof was excessive. Colonel Worth, at the inspection made by him, proved and received *thirty-three* guns, more than double the number received by Captain Ripley of that lot. I have not the least doubt that the sixteen guns proved by Captain Ripley would have been received by Colonel Worth or any other inspecting officer who might have been directed to prove them under the same regulations, unless, perhaps, Captain Ripley's experience (this being the first inspection he ever made) made him a more competent judge of the correct manner of proving cannon. Besides, a year had elapsed since the inspection by Colonel Worth; and it is believed by many that cast iron, especially that of an open, coarse-grained structure, improves in strength by exposure to the atmosphere. On this hypothesis the different results of the two inspections may be accounted for, without calling in question any officer's attention to the correct performance of his duty. In the proof of the guns newly cast, the elastic fluid generated by the ignition of the powder, and urged by its expansive force, penetrated between the particles, and exerted a separate force on each, tending to separate it from the next. After a year's exposure, the absorption of oxygen from the atmosphere had filled the interstices and more firmly united the particles, enabling them to resist a force greater than that to which they had previously yielded.

Finally, the guns bursted at Bellona foundry were proved as guns made by all other contractors are proved, and as all the contractors know that they will be proved, before they undertake to make or offer them to the government. Mr. Clarke, in my opinion, has no just claim on the government for pay for the bursted guns.

I have the honor to be, very respectfully, your obedient servant,

WM. MAYNADIER, *First Lieutenant First Artillery, Inspector of Ordnance.*

Colonel GEORGE BOMFORD, *Chief of Ordnance Department, Washington, D. C.*

K.

WASHINGTON, *May 28, 1836.*

SIR: On the subject of Major Clarke's claim to pay for sixteen broken guns, I have very little to state, other than to affirm that the inspection and proof were conducted in strict and rigid accordance with the established regulations; that those regulations were fully explained to him; that he was informed that if he had any objections to the regulations or the manner of administering them, the inspectors would await the further orders of the department; that he was required by the inspectors to be present at, and was actually present, and assisting in proving the powder and weighing the proving-charges, and loading the guns. The mistake which he supposes may have taken place had no foundation save in his imagination. There was no error except in the quality of his metal.

The major dwells, with apparent confidence, upon the inexperience of the inspector. The undersigned, with his assistants, had conducted *five* inspections at other founderies before his first visit to Bellona, and *fourteen* before his second. One hundred and fourteen guns were presented by Major Clarke on the occasion of the visits in July, 1833, and August, 1834, of which number ninety-eight guns were received, and sixteen broken. The major, however, does not find it convenient to his purpose to notice any want of experience in Colonel Worth's successor, who proved (and no doubt with care and accuracy) the remaining sixteen guns, although this was his first and unprepared effort. The question of fitness, however, was, it is presumed, well considered by those who had the appointing power.

In two several inspections at the Pennsylvania foundry, the result was as follows:

20 guns were presented, 11 broken, 9 received.

33 guns were presented, 2 broken, 31 received.

The two broken at the second inspection were of the same lot of metal whereof the first were made. The founders, instead of seeking payment for broken guns, assured of the inferior quality of the metal, took active and successful measures to remedy their own fault and protect their own interest for the future. Since that period not a gun has been broken at their works.

This case has been referred to as strikingly contrasting with and illustrative of the one in question. I request that all my reports and all correspondence with the office may be submitted to the officers to whom the Secretary has referred this matter. The letter accompanying my report of last inspection at Bellona is annexed to this communication and particularly referred to.

During the period that I performed the duties of inspector the correction of abuses and protection of the government's interest were regarded as a paramount duty; but I never ceased to feel a lively solicitude so to perform this duty as not to infringe on the rights and proper interests of the founders.

I am, sir, your obedient servant,

Colonel GEORGE BOMFORD, *Ordnance Corps.*

W. J. WORTH, *Lieutenant Colonel.*

FRANKFORD ARSENAL, *August 15, 1834.*

SIR: I have the honor to forward a detailed report of the recent inspection at Bellona foundry: fifty-eight guns were presented and inspected, and forty-two proved; of which latter number nine were broken, *eight* on the first, and *one* on the second fire, and thirty-three accepted.

Having in view the misfortunes of this founder on the preceding inspection, and his prejudices against the method of ascertaining the strength of powder, (by use of the established eprouvette,) no means were left untried to arrive at the greatest practicable accuracy. Every circumstance will be found carefully noted on the detailed report. It will be recollected that heretofore Major Clarke raised great objections to the use of two round shot, to the breaking and wedging of which, in the passage through the gun, he mainly ascribed the bursting. On this occasion cylinder shot was used, except, at his suggestion, in the last three guns tried, two of which broke in like manner with the preceding. The powder used (with the exception of eight charges for the second fire) was sent from this arsenal the 29th of April last, selected from among the lowest range on hand by the proof of 1833. I have noted on the detailed report the proof of this same powder in July, 1829, November, 1833, and now at the time of its use. The season, added to partial deterioration, will account for the difference in the first two proofs. The last, the time of use, brings it up again nearly to the first, 1829, which is accounted for satisfactorily to the inspectors: first, by its deposit for the period of three months in one of the best magazines in the United States subject to the action of southern heat; second, its being necessarily exposed some hours, when verifying the proof, to an intemperate heat. Still it did not exceed the proof of 1829, and was within the prescribed limits. The eprouvette used was No. 11 of the seventeen new ones, which, from less use, doubtless gave higher ranges (and consequently greater reductions in quantity by the tables) than that of the same series in use at this arsenal. An opinion as to the true cause of the failure will be found on the detailed report.

The supply of Dupont's powder at this arsenal, whence, by existing orders, it is drawn for proving purposes, is exhausted. I now beg leave again to request authority, either by exchange or purchase, to contract for a sufficient quantity for the next year's proof; and especially for the completion of Major Clarke's proof in December of the precise range of 225 yards. I do not attach much importance to it, but the founder does. Such an arrangement, therefore, will take from him all cause of complaint and relieve the inspectors from painful and unsatisfactory discussions.

The proof was discontinued at the request of the founder. I have taken great pains to possess the department of all the facts in the case in view of a correspondence which I foresee will ensue. Sixteen inspected but unproved guns remain, and nine are to be made to complete his complement.

The practice of plugging shot was observed. All such were rejected, and notice given that in future any such practice would be deemed sufficient cause for abandonment of the inspection. The founder stated that special orders had been given to that effect.

Very respectfully, your obedient servant,

W. J. WORTH, *Brevet Lieutenant Colonel, Major of Ordnance, and Inspector.*

Colonel GEORGE BOMFORD, *Ordnance Corps.*

\* The reasons for the rejection of any gun, shot, or shell, are set forth in full on the detailed report made immediately after each inspection to the colonel of ordnance; which reports accompany this statement.

## L.

WASHINGTON, June 18, 1836.

SIR: The commanding general and inspector general, to whom the case of Major Clarke was referred, would make the following report:

From the statements furnished, it appears that Major Clarke cast for the United States, between the 10th of June, 1829, and the 25th of June, 1832, two hundred and fifty-six 32-pounder cannon, of which only one burst, under the inspection and proof of Colonel Bankhead and Lieutenant Symington. It also appears that he cast for the United States seventy-two 32-pounder cannon, which were inspected and proved by Lieutenant Colonel Worth and Lieutenant Childe the 18th of July, 1833, of which seven burst; and also 42 on the 7th of August, 1834, which were inspected by Lieutenant Colonel Worth and Lieutenant Maynadier, of which nine burst. On the 9th of July, 1835, he furnished forty-five 32-pounders, 16 of which were of the same parcel inspected by Lieutenant Colonel Worth and Lieutenant Maynadier, of which none burst in the proof made by Captain Ripley and Lieutenant Maynadier. The whole number of 32-pounder cannon furnished by Major Clarke for inspection and proof, from the 10th of June, 1829, to the 9th of July, 1835, amounts to 415, of which 17 burst in the proving. Of this number, 16 burst under the inspection and proof of Lieutenant Colonel Worth.

Major Clarke states that the iron, casting, and the manufacture of his guns, throughout the whole number, were in all respects the same: therefore, and from the fact that of three hundred and one 32-pounders proved previous to any inspection made by Lieutenant Colonel Worth, only one burst, and from the further fact, that, of 45 subsequently proved by Captain Ripley, none burst, that Lieutenant Colonel Worth must have committed some error in the preparation of the proof-charges, and that they must have been much stronger than any charges previously used by Colonel Bankhead, or subsequently used by Captain Ripley. Hence he infers the bursting of his guns, for which he claims remuneration.

In answer to which it appears, from the inspection reports of Lieutenant Colonel Worth, Lieutenant Childe, and Lieutenant Maynadier, that the inspection and proof of the guns for which Major Clarke claims remuneration, and inspected by them, was in all respects conformable to the regulations prescribed by the Ordnance department, and precisely the same as used for the proof of cannon at all other founderies. Each and all assert, with the utmost confidence, there could have been no mistake or error committed in the preparation of the proof-charges for any part of the guns proved at the foundery of Major Clarke.

It, however, appears remarkable, and perhaps extraordinary, that so great a difference should appear in the result of the proof of his guns, and that, with the exception of one gun, all should have burst in the two inspections made by Lieutenant Colonel Worth; and yet we have nothing before us to call in question, or in any respect to doubt the accuracy of the inspections or the reports and statements of the inspectors, who, we conceive, could not have had any other motive than a rigid and faithful discharge of their duty.

After a careful investigation of the subject under consideration, we have arrived at the conclusion that the proving of the guns referred to, as having been burst by Lieutenant Colonel Worth, was done in conformity with the established regulations governing the Ordnance department, and we believe there must have been some defect in the guns which did not stand the proof. The fact that so many guns have stood the prescribed proof at Bellona arsenal, as well as at every other foundery, is a strong presumption that the proof to which the guns have been subjected is not too great. This is supported by the further evidence that no complaints of the proof being too great has ever been made to the Ordnance department by any person who contracted to furnish the government with cannon but Major Clarke. The circumstance to which he has alluded, and to which he appears strongly to rely in support of his claim for remuneration, that the British prove their iron guns with a less charge than the United States, will not, we think, add or give strength to his claim. The British prove their 32-pounders, weighing from 6,160 to 6,496 lbs., with 21 lbs. 8 oz. powder, one shot, and two wads. The United States prove the same guns, weighing 7,500 lbs., with 21 lbs. 4 oz. powder, two shot, and two wads. The British repeat the same proof, but the United States reduce the quantity of powder from 21 lbs. 4 oz. to 16 lbs., with two shot and two wads. It may, however, be a subject worthy of consideration whether the proof as established by the Ordnance department ought not to be changed, so far, at least, as to prove with one shot instead of two. This is suggested from the circumstance that it has been found by experience that two shot fired at the same time, under a heavy charge, are subject to be broken, and when thus broken are liable to cut grooves in the iron as they pass through the bore of the pieces, and it is possible that the fragments might be so wedged in as to burst the gun.

It is, however, worthy of particular notice, that the charges used in proving the guns in question was less than any proof, by 25 yards, since used for the same purpose; and since the proof-charge has been increased, not a single gun, as we are informed by the Ordnance department, has burst, under the increased proof-charge, which is now 250 yards.

We have the honor to be, sir, very respectfully, your most obedient servants,

ALEX. MACOMB *Major General.*

JOHN E. WOOL, *Brig Gen. and Ins. Gen. U. S. Army.*

Hon. LEWIS CASS, *Secretary of War.*

## M.

*Letter to Brevet Lieutenant Colonel Worth, regulating the proof-charges for cannon, based on the standard proof range of 225 yards.*

ORDNANCE OFFICE, Washington, November 29, 1832.

SIR: The proof-charges of powder, as established by the present regulations for the proof of the heavy ordnance, are two-thirds of the weight of the shot for the first charge, and one-half of the weight of the shot for the second charge. But since the strength of the serviceable powder now in the magazines varies so much (as indicated by the new eprouvette) as between 200 and 300 yards, the graduation of the charges to be used in the proof of cannon, according to this variety in the quality of the powder, becomes

a matter of importance; for it is obvious that whatever quality of powder is used in the charges, they should be so increased or diminished as to produce, in all cases, if possible, the same explosive force upon the gun. To effect this, it is necessary that some particular quality of powder should be adopted as a standard, so that, of that quality the full charges of two-thirds and one-half the weight of the shot may, in all cases, be used in the proof of heavy cannon. As it is not desired at present to deviate from the standard heretofore in use in this department, that of 200 yards by the old eprouvette will still be continued. But as all the powder now in the magazines is tested by the new eprouvette, which gives a range about  $12\frac{1}{2}$  per cent. greater than the old one, the standard of 200 yards by this last will thus become 225 yards by the new eprouvette, and this, therefore, will be considered, until further orders, as the proof range of the standard powder; of which, the full charges of two-thirds and one-half the weight of the shot will, in all cases when it can be obtained, be used in the proof of heavy cannon.

But as standard powder cannot always be obtained, it hence becomes necessary to increase or diminish the quantity used in the standard charges according as the proof range of the powder to be used is less or greater than the standard proof range.

To be enabled to make this graduation of the charges according to the quality of powder, an experiment was directed by this department to be made with the eprouvette at the arsenal in this city in 1826, the result of which is satisfactory, and is as follows:

Reduced charges of the eleven different kinds of powder; each charge being equal in effect one with another, and also to the standard charge, (E).	Ounce charges of the eprouvette for eleven different kinds of powder, giving ranges as in fourth column.	Weight of the reduced charge of the eprouvette in grains of the same quality of powder.	Medium range.	32-pounder.		24-pounder.	
				Proof-charges, corresponding to two-thirds weight of shot, standard powder.	Proof-charges, corresponding to one-half weight of shot, standard powder.	Proof-charges, corresponding to two-thirds weight of shot, standard powder.	Proof-charges, corresponding to one-half weight of shot, standard powder.
Grains.	Oz. grs.	Oz. grs.	Yards.	Pounds.	Pounds.	Pounds.	Pounds.
335.0	1 = 437 $\frac{1}{2}$	1 437 $\frac{1}{2}$	305	16.33	12.25	12.25	9.18
(D) 351.0	(A) 1 =	(B) 20 417 $\frac{1}{2}$	(G) 288	(H) 17.11	12.84	12.84	9.63
358.7	1	40 397 $\frac{1}{2}$	271	17.97	13.48	13.48	10.11

492.6	1	140 297	190	24.01	18.01	18.01	13.05
528.1	1	160 277 $\frac{1}{2}$	168	25.74	19.31	19.31	14.47

\* Standard charge.

The third column shows the charges used, and the fourth column the result of the experiment. The ranges are perceived to be so regular as to be reduced generally by about seventeen yards for every reduction of twenty grains in the charge.

The second column shows the ounce charges of eleven different kinds of powder, the ranges corresponding being the same with those in the fourth column. The fifth and sixth and seventh and eighth columns show the reduced proof-charges for the thirty-two and twenty-four pounders, as obtained from the data in the other columns.

To explain the principle on which these reduced charges were obtained it is necessary to observe, first, with regard to the third column, that it indicates eleven different charges of the same kind of powder, producing eleven different ranges, as given in the fourth column; and that the same ranges are also produced by eleven ounce charges of eleven different kinds of powder, as in the second column; the effect of each of these last charges, formed from different qualities of powder being equal to that of its corresponding charge in the third column in producing the same change. If, for example, we wished to reduce the charge (B) in the third column to such a degree as, when fired from the eprouvette, it will produce the standard range (C) of 225 yards, we would diminish it by  $(417.5 - 335 =) 82\frac{1}{2}$  grains. But the charge (B), though of a different kind of powder from that of the charge (A), is exactly equal to it in effect, as they both produce the same range of 288 yards. If, therefore, in reducing the charge (B) by  $82\frac{1}{2}$  grains we give it the standard range of 225 yards, we shall in like manner, by reducing its equal in effect, the charge (A), by a proportional quantity, obtain a charge of powder (D) of the same quality with that of (A), which will also give the standard range of 225 yards.

To give an example of the method of obtaining the charges in the first column:

As the charge B,  $(417\frac{1}{2}$  grains):  $(417\frac{1}{2} - 335 =) 82\frac{1}{2}$  grains:: charge A,  $(=437\frac{1}{2}$  grains): 86.4 grains, which is the quantity according to which the charge (A) ought to be reduced in order to make the reduction proportional, to that of (B); 86.4 grains being therefore deducted from charge (A),  $=437\frac{1}{2}$  grains, leaves the charge (D) equal to 351 grains, as seen in the table.

In this manner all the ounce charges, (of the second column,) which are taken from eleven different qualities of powder, are reduced to the corresponding charges in the first column, which last are all of equal strength one with another, each producing the standard range of 225 yards; the standard charge (E) in this column being equal to one ounce, and all above it less, and all below it greater than one ounce.

We have, therefore, in the first column a series of eleven charges of different qualities of powder, (these qualities being indicated in the fourth column,) all giving the standard range, viz: 225 yards, and having, therefore, the same effect upon the eprouvette; and it is next necessary to find a series of proof-charges (for the thirty-two-pounder, for example) corresponding to these different qualities of powder, and all being equal in effect to the standard proof-charge (F,) 21.33 pounds, and exerting, therefore, the same effect upon the gun. Now, as all the reduced proof-charges of the eprouvette in the first column are equal in effect to that of the standard proof-charge (E,) and as all the reduced proof-charges for cannon (for example, in the fifth column) ought to be equal in effect to that of the standard proof-charge (F,)

21.33 pounds, it is hence evident that these last in column five ought to be directly proportional to the former in the first column; and this is the principle on which the charges in the fifth, sixth, seventh, and eighth columns have been determined. To give an example: in finding the charge in the fifth column which corresponds to the range (G) of 288 yards: as the charge E=(437.5 grains): D=(351 grains):: F=(21.33 pounds): H=(17.11 pounds): which, as seen in the fifth column, is the required reduction of powder giving 288 yards; and so for the other charges in this statement, and for all other cases of the reduction of charges for cannon of other calibres.

The general principle used in the above statement, in obtaining the charges for the proof of cannon by reference to corresponding reduced charges of the eprouvette, giving the same range, is esteemed to be the only correct one; and it is believed, if charges so large as these could be tested by the balastic pendulum, that the initial velocities would be found to be nearly equal.

I have to direct, in conclusion, that the several charges set forth in the 5th, 6th, 7th, and 8th columns for the proof of the 32 and 24-pounders, be used in the proof of those calibres until further orders, and that no powder be hereafter used in the proof of cannon giving a proof range greater than 290 yards, or less than 190 yards.

Your report that you consider the charges of powder used in the latter part of the late inspection as insufficient has led to the above investigation of the subject, and it is now hoped that these charges are established with suitable regard to the interest of the government, and to what, in justice, is due to the founder.

Respectfully, I am, sir, your obedient servant,

GEO. BOMFORD, *Colonel of Ordnance.*

Major W. J. WORTH, *Pittsburg, Pennsylvania.*

No. 1.

*To the honorable the Senate and House of Representatives of the United States in Congress assembled :*

The petition of John Clarke, of Virginia, respectfully represents: That your petitioner is the proprietor of a cannon foundry and boring mills on James river, a few miles above the city of Richmond, called the Bellona Works. He was induced to erect them by the solicitation of the government during the administration of President Madison for the manufacture of ordnance for the service of the United States.—(See the letter of the late President Monroe, addressed to your petitioner, dated December 29, 1816, marked A, to which is annexed an extract from Colonel Bomford's (printed) report to the Secretary of War, dated November 29, 1825.)

Before that time your petitioner had been engaged by the government of Virginia to form the plan, construct the works, machinery, &c., and superintend the operations of the State manufactory of arms at Richmond—an extensive establishment, in which more than two hundred artificers were employed in the manufacture of small-arms and field artillery for the militia of Virginia; and which was continued until the general government took upon itself to supply arms to the militia of the States.

The iron used at his works is from the upper counties of Virginia, on and near James river; and he is thoroughly convinced, by the experience of thirty years, and by numerous comparative experiments of the best pig-iron of Great Britain, and of several of the States of this Union, that the James river iron used by him is superior in strength and toughness to any other that he has ever tried. It is chiefly of that iron, mixed and tempered by a uniform process, that his guns are made. And he challenges a comparison of them with any others manufactured either in America or Europe.—(See the accompanying letters of the late Colonel Decius Wadsworth, then at the head of the ordnance corps, to the Secretary of War, marked B and C; also letters and certificates (marked D, E, F, G, H) of the late Captain John Hills, of the ordnance corps—an officer highly qualified by many years of practical experience in the inspection and proof of ordnance.) The original letters may be seen by reference to the records of the War and Ordnance offices.

When 32-pounder cannon were required for the fortifications your petitioner made the first or pattern gun; and when the first parcel thereof, consisting of 58 guns, were proved, in June, 1829, one of them was burst, with too strong a charge, before there was any experience in respect to the strength of the proof-charges proper for those guns.

The whole number of 32-pounder cannon for fortifications manufactured by your petitioner previous to the end of the year 1836 is four hundred and forty-six. The greater part of those guns were proved at different periods between the years 1828 and 1833, under the regulations of the Ordnance department, and by skilful proving officers; and, save the single gun of the first parcel aforesaid, not a gun was burst. But after the formation of the new ordnance corps, the inspection and proof of ordnance for the service of the United States was committed to an officer newly initiated into that corps, and without the aid of experience in the proof of ordnance; he burst sixteen of those excellent 32-pounder cannon. Your petitioner, witnessing the unprecedented destruction of cannon of as good quality as he ever made, objected to the continuation of the proof by that officer; and he accordingly discontinued the proof, leaving sixteen of the same parcel of guns unproved, which 16 guns, together with 60 others, (making seventy-six 32-pounder cannon,) have since that time been proved by another proving officer, and not a gun of the whole number burst.

All those 446 guns were made, not only at the same works, but of the same pattern, in the same manner, of the same kind of iron, and by the same skilful artificers. And when it is considered that, save the single gun of the first parcel aforesaid, the whole 446 guns withstood proof, excepting the 16 guns which were burst by the said newly-appointed proving officer, and that it was only by him that any of those guns were burst, either before or after he acted as proving officer, the conclusion is irresistible that the guns proved by him were subjected to an unusual and excessive test, and that the destruction of the 16 bursted guns was occasioned by some error or defect in the proof, arising from mistake or the want of experience of the proving officer. This conclusion is rendered still more irresistible by the fact that the proofs made by him were attended with evidences of excessive violence, not only unusual, but, in the experience of your petitioner, wholly without example. The recoil of the guns, while undergoing proof, was nearly double what had ever been before or has been since. A fragment of one of the bursted

guns, weighing several hundred pounds, was thrown several hundred yards from the proving ground, through one of the principal buildings of the United States arsenal; and many other fragments were thrown to still greater distances.

Your petitioner does not desire to say anything derogatory of the character of the officer who burst the 16 guns. But, however well qualified for the performance of other duties, he certainly was not experienced in the proof of ordnance; and, in the opinion of your petitioner, there is no service in which the aid of experience is more necessary to counteract the dangerous errors to which the present mode of proving ordnance is liable.

When your petitioner was induced by the highest officers of the government to build the Bellona Works for the manufacture of ordnance for the United States, it was certainly intended that the pieces of artillery made at those works should undergo the usual proof of similar pieces at works where the greatest experience in the proving of cannon had been attained; and that the inspection and proof thereof should be conducted by men well qualified by practical experience in the performance of that important service. Whether that has been done in the case now submitted for your consideration you will decide. The Bellona works and machinery are constructed in the most permanent manner, and on the most improved plan; and the records of the War and Ordnance offices will show that, according to the opinions of the most experienced and able judges, the pieces of ordnance manufactured at those works are, for quality of metal, neatness and exactness of execution, and strength, equal, if not superior, to any pieces of artillery made in the United States.

Your petitioner has faithfully performed his part of the undertaking at great expense, and with profits inferior to the interest upon the original cost of his works. And, as his guns when made are inspected and proved under the sole management and control of an agent of the government, your petitioner conceives himself entitled to indemnity against loss or damage happening by reason of either the error or the want of experience of the proving officer.

In the month of April last your petitioner applied for compensation for the 16 burst guns to General Cass, Secretary of War; and as that application was founded upon the inexperience and unfitness of an officer who was appointed by the ordnance corps to prove the ordnance for the government, it was expected by your petitioner that the Secretary of War, after his making full investigation, would decide the case himself, not that he would refer it to the ordnance corps by whom the said proving officer was appointed, and who, it might be presumed, would be unwilling to admit the fallibility of a proving officer who was but recently appointed by that corps. But to the astonishment of your petitioner the Secretary of War (General Cass) did transmit the papers and refer the case of your petitioner to Colonel Bomford, the head of the ordnance corps, for his report thereon. That officer, however, declined making a report, under an apprehension, perhaps, that if he should make a report unfavorable to your petitioner he might be accused of injustice; and if he should make a report favorable to your petitioner it would be an acknowledgment of the incompetency of said proving officer, and would reflect an imputation upon that department itself for having appointed such an officer to perform duties so highly important to this nation. He therefore caused the said proving officer and his assistants, by whom the guns were burst, to attend in person at the Ordnance office; and after obtaining letters from them in behalf of themselves, those letters, with the two letters which your petitioner had addressed to the Secretary of War, were transmitted by Colonel Bomford (without any written report from himself) to the Secretary of War, who afterwards caused those papers to be sent to Generals Macomb and Wool for consideration and report; and near the termination of the last session of Congress those gentlemen made a report. But that report was founded upon the assertions made in the letter of Lieutenant Colonel Worth, the very officer and his assistants who destroyed the said 16 guns; and, so far as it respects your petitioner, the report of the two generals is, in effect, the report of the said Lieutenant Colonel Worth, who doubtless made every effort in his power to free himself from the imputation of being unqualified for the inspection and proof of ordnance.

But he not only thinks himself qualified for proving cannon, but that he is also qualified to judge of the qualities of the metals proper for their manufacture; for he says in his letter to Colonel Bomford, upon which letter Generals Macomb and Wool have founded their report, "*there was no error except in the quality of his metal,*" by which he endeavors to induce a belief that the guns were burst in consequence of the bad quality of the metal and not by any error or want of qualification in himself. His opinion, however, is in direct conflict with the opinions of numerous persons who, by their long actual use of iron, have become the best judges of its quality. The Bellona works have been in operation about twenty years, and numerous pieces of ordnance, of various descriptions, for the sea and the land service, have been made there and proved by many well-qualified officers; and they, as well as others who are considered to be the best judges, have declared *that iron* to be of the toughest and very best quality. Lieutenant Colonel Worth stands alone in his opinion, which I never knew until I saw it mentioned in his said letter to Colonel Bomford; and had it not been necessary to exonerate himself from the charge of incompetency, he perhaps never would have thought of advancing such a charge against the quality of the iron.

In the same letter he has also asserted that your petitioner "*assisted in weighing the proving-charges and loading the guns,*" which your petitioner positively denies, and solemnly declares that he did not assist in weighing the proof-charges, nor did he know the quantity of powder which Lieutenant Colonel Worth and his assistants put into his proof charges, nor did he assist in loading the guns, which duties belong exclusively to the proving officer, and with which your petitioner never did, on any occasion, meddle or interfere.

The epreuve used in the United States for testing the strength of gunpowder is a small mortar with a calibre suited to fit a 24-pound cannon ball, at the bottom of which calibre there is a small chamber for containing one ounce avoirdupois of powder, which, when the axis of the calibre is placed at an angle of 45°, must propel the 24-pound ball 200 yards, (measured horizontally,) otherwise the powder would not be deemed to possess sufficient strength for standard powder. Such was the kind of proof to which powder was subjected in the year 1816, and the same kind of epreuve is used at this time.

This mode of testing the strength of gunpowder when the epreuve is in its best condition and without windage is subject to great variation and inaccuracy, in consequence of the density or the rarity of the air through which the ball is projected. But by frequent use the calibre of the epreuve is soon worn larger by the friction of the ball, so that much windage is the consequence, and a considerable portion of the force of that small quantity of powder is lost in the windage between the ball and the calibre of the epreuve. And as the distance to which the ball is propelled depends much upon the greater or less degree of the windage, and as the windage is always increased by the use and consequent

wear and enlargement of the calibre, the real strength of gunpowder cannot be ascertained by such eprouvettes.

The calibres of the eprouvettes are so much enlarged that a 25-pound ball instead of a 24-pound ball became necessary to fill the calibre, and as the weight of the ball has been increased, the weight of the powder which propels it should be increased in the same proportion. But that has not been done, and the one ounce of powder must be of such strength as to propel a 25-pound ball 200 yards, whereas it was formerly required to be of sufficient strength to propel a 24-pound ball 200 yards.

But within a few years the standard range by the eprouvette was increased, and the powder was required to be of such strength that one ounce thereof should propel the 25-pound ball 225 yards instead of 200, as formerly; and more recently the Ordnance department has again increased the standard range by the eprouvette, and the powder is required to be of such a degree of strength that one ounce thereof shall propel the 25-pound ball 250 yards instead of 225, to which, not long before, it had been increased from 200 yards.

A 42-pounder cannon (the largest class of our guns) requires for one proof-charge 28 pounds or 448 ounces of powder; and can it be imagined that, by a four hundred and forty-eighth part of such a charge, (only one ounce of powder,) fired from such eprouvettes, and under the circumstances above stated, the real strength of gunpowder can be ascertained.

The British nation, who have manufactured more cannon, and had more experience in the proof as well as the actual use of it than any other nation, *prove their cannon with only one cannon ball in each proof-charge*. For example, they prove a 42-pounder cannon by firing twice a proof-charge of 25 pounds of powder, one ball, and two wads. The Americans (less experienced) prove a 42-pounder cannon with 28 pounds of powder, two balls, and two wads in the first proof-charge, and in the second proof-charge 21 pounds of powder, two balls, and two wads. Thus there are three pounds of powder more and double the weight of shot used in our first-proof charge (which is the most straining charge) than there is in the first proof-charge for the British gun, which the books on gunnery will show, and they shall be seen if required.

The officers who prove ordnance for the United States have informed your petitioner that they were directed by the Ordnance department that, for any excess of strength in the powder beyond the standard range of the ball from the eprouvette, the quantity or weight thereof should be reduced in the proof-charge in proportion to the strength of the powder. Your petitioner, however, knows not by what rule the reductions are made.

But such a procedure, instead of affording a remedy, is attended with most destructive effects, which your petitioner will endeavor to explain: Suppose the strength of the powder used in the proof of cannon should be double as great as the strength of standard powder; then instead of the full weight and bulk of a proof-charge of standard powder, only one-half of that weight and bulk is taken of the extra strong powder, and made a proof-charge, instead of a proof-charge of standard powder. That proof-charge of extra strong powder having all the strength and occupying only half the space or number of superficial inches within the calibre which would have been occupied by a proof-charge of standard powder, every superficial inch, therefore, of the calibre occupied by the extra strong powder is subjected to double the degree of stress or straining force that it would have been subjected to if the gun had been proved with powder of standard strength. And it is not to be expected that cannon whose thickness of metal is proportioned to sustain the strength of standard powder should withstand the force of powder of double that strength.

In Great Britain, whenever the powder exceeds the standard strength, it is *mixed* with a weaker powder, so as to bring it to the standard degree of strength.—(See Beauchant's Naval Gunner, published in London in the year 1829.) And it is much to be regretted that the same method is not invariably practiced in this country. But the powder used in the proof of ordnance here is much stronger than even the very high degree of strength required for standard powder by the Ordnance department; and when this extra strong powder is sent to prove cannon no weaker powder is sent to be mixed with that which is excessively strong, so as to produce the standard degree of strength; and the proving officers proceed to prove the guns with the excessively strong powder alone, or unmixed with weaker powder, in the manner already mentioned, which is attended with most ruinous effects.

It is found that two shot in one charge fired from a cannon range to only half the distance of one shot with the same charge of powder and at the same elevation; therefore, in service, it is only for short distances that cannon are double-shotted, and then they are fired with less than one-third of the weight of their proof-charges in powder; otherwise the balls split within the guns, and the recoil is too violent.—(See Beauchant's, also A dye's, Gunnery, respecting the charges for cannon and the splitting or breaking of shot, which shall be seen if required.) It having been demonstrated that the shot split and break in pieces within the gun when double-shotted and fired with less than one-third of its proof-charge in powder, it is most evident that the gun, when double-shotted and fired with its full proof-charge of powder, will produce effects vastly more injurious; and why, therefore, should guns, when subjected to proof, be double-shotted? It is doubtless for the reasons above stated that the British gunners prove their cannon with only one shot in the proof-charge, which is demonstrated to be fully sufficient for testing the strength of guns without overstraining them, and, in the opinion of your petitioner, that injurious practice ought to be abandoned in our country.

Two cannon balls can touch each other only in a single point; and in the calibre of a gun, when subjected to proof with an excessively strong proof-charge, that small point, unable to withstand the immense and instantaneous impetus with which the hindmost shot is driven against the foremost while it is at rest, the shot inevitably break (as is well known and may be seen if required) into conical pieces or rounding wedges, which, being driven into the shot, split them, and, by enlarging their diameters, burst the guns; and when the guns thus proved do not happen to burst, the angular pieces of the broken shot are driven out with so great a degree of violence as to cut such deep grooves in their calibres as to render them unfit for service. Such was the case in relation to five 24-pounder cannon made at the Bellona works for our sloops of war, and although those excellent guns were ruined and useless, they were paid for by the Navy Department, as well as other guns which *did burst* with such excessive proof.

To prevent the evils resulting from the breaking of the *two shot* in the calibre of the gun while undergoing proof with excessive charges, recourse was had to proving with *one shot of cylindrical form, but of double the weight of one round shot*. Yet the guns thus proved were also burst, and will inevitably burst with the great excess of strength in the charges with which they are proved.

Some years past the Ordnance department caused 17 eprouvettes to be made for proving the gun-

powder manufactured for the United States; and the following table is a list of them, and their several respective *ranges*, furnished from that department, and is as follows:

*Proof ranges of 17 eprouvettes.*

No. 1, range 295 $\frac{3}{4}$ yards.	No. 7, range 284 yards.	No. 13, range 308 yards.
2, range *274 yards.	8, range 275 $\frac{1}{2}$ yards.	14, range 303 $\frac{1}{2}$ yards.
3, range *312 yards.	9, range 292 $\frac{1}{2}$ yards.	15, range 302 yards.
4, range 309 yards.	10, range 292 yards.	16, range 304 $\frac{1}{2}$ yards.
5, range 289 yards.	11, range 290 $\frac{1}{2}$ yards.	17, range 307 $\frac{1}{2}$ yards.
6, range 289 $\frac{1}{2}$ yards.	12, range 303 $\frac{1}{2}$ yards.	

Each of these 17 eprouvettes give a different range to the 25-pound ball; and between the highest range, *i. e.*, 312 yards, and the lowest range, 274 yards, there is a difference of 38 yards. Your petitioner was informed that when those eprouvettes were-made each of them was fired a considerable number of times with one ounce of powder of the same kind and strength; and there being a difference in the distance to which the ball was propelled at each of those fires, the medium of those distances was taken as the range of that particular eprouvette, and so on, respectively, throughout the whole of the 17 eprouvettes.

As the eprouvettes all differ in their respective ranges, how is the standard strength of powder to be ascertained by them? The proving officers were directed to reduce the quantity of powder in the proof-charge in proportion to the excess of the strength of the powder. But by which of the eprouvettes, and what number of yards of the range of that particular eprouvette, is to be taken as the standard range or distance on which they are to make the reduction?

Your petitioner has been informed that the 17 eprouvettes (on each of which is engraved its number, from one to 17, as per the above table) have been distributed—one to each of the United States arsenals, and one to each of the manufactories of cannon. Now, the range for standard powder last adopted by the Ordnance department (*i. e.*, 250 yards) being deducted from the respective ranges of the eprouvettes, (all of which differ,) and the excess or overplus number of yards being taken to determine how much the proof-charge of extra strong powder shall be reduced, there consequently is a considerable difference in the strength of the proof-charges used in proving cannon at the several cannon founderies at which they are made. At some of these founderies the largest class of guns may be subjected to proof with several pounds more of extra strong powder in the proof-charge than guns of the same description are proved with at other founderies.

The manufacture of gunpowder has been greatly improved within a few years, and the great importance of that material in the defence of our national rights requires that its best or most advantageous effects in the use of cannon and other fire-arms should be fully ascertained. That degree of strength in powder which will produce the longest ranges or greatest distances to which balls from cannon can be propelled may, by *experiments*, be ascertained; and when ascertained, that degree (your petitioner humbly conceives) should be established as the standard rate of strength for gunpowder.

By the skilful labors of scientific men, under the authority and patronage of the British government, the art of gunnery and the proof of ordnance have been brought to greater perfection in that country than in any other. Those skilful men, after numerous experiments, have demonstratively ascertained the different velocities, ranges, and effects of cannon balls, when propelled by great, by medium, and by small charges of powder, and that, in consequence of the immense resistance of the air in great velocities, the following effects are produced:

*Maxim 4.* "The ranges of pieces at a given elevation are no just measures of the velocity of the shot; for the same piece, fired successively at an invariable elevation, with the powder, bullet, and every other circumstance as nearly the same as possible, will range to very different distances."

*Maxim 7.* "That action of the air, by which it retards the motion of projectiles, is in many instances an immense force; and hence, the motion of these resisted bodies is totally different from what has been generally supposed."

*Maxim 8.* "This retarding force of the air acts with different degrees of violence, according as the projectile moves with a greater or less velocity; and the resistances observe this law: that to a velocity which is double another, the resistance (within certain limits) is four-fold, and to a treble velocity, nine-fold; and so on."

*Maxim 13.* "If the same piece of cannon be successively fired at an invariable elevation, but with various charges of powder, the greatest charge being the whole weight of the bullet in powder, and the least not less than one-fifth of that weight, then, if the elevation be not less than eight or ten degrees, it will be found that some of the ranges with the least charge will exceed some of those with the greatest."

*Maxim 20.* "No field-piece ought at any time to be loaded with more than one-sixth, or, at the utmost, one-fifth, of the weight of its bullet in powder; nor should the charge of any battering piece exceed one-third of the weight of its bullet."

In the American edition of the New Edinburgh Encyclopædia, under the head of "Gunnery," see the above-quoted practical maxims relative to the effects and management of artillery—the flight of shot and shells.

As the great and variable resistance of the air prevents the strength of powder from being ascertained by the distance to which balls are thrown, even by repeated discharges from the same piece of *long cannon*, loaded each time with the same weight and quality of powder, how can it be imagined that its strength can be ascertained by our eprouvette—a small mortar, with a calibre suited to a 25-pound shot, and by the ignition of only one ounce of powder in that mortar, whose calibre is only a few inches long, and in which the powder cannot exert its full force in consequence of its shortness?

In preference to so uncertain a method for proving powder as projecting a ball through the ever-varying and elastic atmosphere to a given distance, some experienced men in Great Britain have found that a more decisive experiment is to try the penetration of the bullet into some uniform substance placed a small distance before the muzzle of the piece. It would, however, be difficult to procure a perfectly uniform substance at every place where cannon are proved.

But the mode most eligible, in the humble opinion of your petitioner, would be to cause the force of a pound, or perhaps less, of powder to act against gravitation, (which never varies,) by throwing up vertically a heavy weight of iron from a piece of cannon or a tube of iron, whose length should be equal

to the length of the calibre of the cannon, which may be easily done, and would certainly be much more accurate than the method now practiced.

The standard rate of strength for British gunpowder is as follows:

The powder must be of such strength that *four ounces* thereof shall propel, from an eight-inch mortar at forty-five degrees elevation, a 68-pound iron ball 380 feet, or 126 yards and 2 feet.—(See Morton's British Gunner, published in London in the year 1828.)

The standard rate of strength adopted by the Ordnance department for gunpowder for the United States is as follows:

The powder must be of such strength that *one ounce* thereof shall propel, from a mortar of suitable calibre at forty-five degrees elevation, a 25-pound iron ball 750 feet, or 250 yards.

Thus it is seen that the strength of powder required by the Ordnance department is of considerable more than double the strength of British standard powder. Moreover, that department requires that the cannon shall be proved with double the weight of metal or shot in our proof-charges that is used in the British proof-charges.

And with such tremendous charges as are used in proving cannon for the service of the United States the guns are ruined, as those of them which do not burst while undergoing proof are so overstrained as to be liable to burst when in actual service.

A founder of cannon for the United States, after incurring the heavy expense of constructing his works and machinery, is annually under the necessity of selecting and procuring large supplies of the purest and toughest iron to the amount of many thousands of dollars; and, when made into pieces of ordnance, the amount is greatly increased by the price of the coal and other materials, and the labor of many skilful artificers employed in the manufacture. And if this great amount of the founder's property is to be at the mercy of a capricious or incompetent person, who may get himself appointed a proving officer, such person or officer has it in his power to ruin or make a bankrupt of the founder, who has no alternative but an appeal to Congress for justice and relief.

The two letters which your petitioner addressed to General Cass, the Secretary of War, also the report of Generals Macomb and Wool, and the letter of the proving officer, Lieutenant Colonel Worth, to Colonel Bomford, upon which letter that report was founded, accompany this petition, and are marked I, J, K, L.

Since the application was made to the Secretary of War last spring your petitioner has obtained certificates, on oath, of men of high respectability and of undoubted veracity, who have had great experience in the manufacture as well as the inspection and proof of ordnance. They have witnessed the inspection and proof of all the pieces of ordnance manufactured at the Bellona works for many years past, including the guns proved by Lieutenant Colonel Worth at those works, and their several affidavits, marked Nos. 1, 2, 3, accompany this petition.

As no relief has been given by the War Department, your petitioner now appeals to the justice of his country, and prays your honorable bodies to pass a law granting him indemnity for the injury which he has sustained.

JNO. CLARKE.

(I.)—No. 2.

WASHINGTON CITY, April 20, 1836.

STR: I am the proprietor of a cannon foundry and boring mills on James river, about ten miles above the city of Richmond, called the Bellona Works, which were built at the solicitation of the government during the administration of President Madison for the manufacture of ordnance for the service of the United States.—(See President Monroe's letter, marked A, addressed to the subscriber, and dated December 29, 1816.)

Previous to my engagements with the federal government I was engaged by the State government of Virginia to form the plan, erect the works, machinery, &c., and superintend the operations of the Virginia manufactory of arms, (an extensive establishment, in which upwards of two hundred artificers were employed in the manufacture of muskets, rifles, swords, pistols, field artillery, &c., for the militia of Virginia,) which was continued until the federal government determined to supply arms for the militia of the States at the expense of the nation.

The manufacture of good cannon requires the most strong and tenacious or tough metal, judiciously mixed and prepared for the purpose; and, from numerous experiments made by me for testing the strength and tenacity of the best pig-iron made in Great Britain, as well as the pig-iron made in many of the States of this Union, I found that the pig-iron made in some of the upper counties of Virginia, bordering on James river, possesses a greater degree of strength and toughness than any other iron I have yet tried, in the course of more than thirty years' experience in the manufacture of that material into all the varieties of ordnance for land and sea service. And it is of this James river iron chiefly that I manufacture cannon for the service of the United States.

Besides various other experiments for testing the strength of the guns I manufacture, I reduced the size of a field-piece, (a 6-pounder cannon,) after it had been completed and proved, by turning (as in a lathe) one inch in depth from its whole exterior surface, thus rendering it two inches less in its diameter than when it was proved, which made it a thinner and lighter gun of its calibre than I ever heard or read of. Thus reduced in substance or thickness of metal, I proved this gun with various charges of powder and ball, increasing the strength of each charge at every fire. Finding that it did not burst, I then fired this thin, light gun with the full proof-charge, which it withstood; and I repeatedly fired it with the full proof-charges for heavy 6-pounder cannon, all of which it withstood; but they caused this light gun to recoil about thirty-six feet at each fire. This little gun, which is now quite too light for actual service, had, before I reduced its substance, been inspected and proved by the proving officer of the Ordnance department, and would have been received by him for the service of the United States; but I determined to sacrifice the gun to enable me to test the strength of the metal I use in the fabrication of cannon. Colonel Decius Wadsworth, then at the head of the Ordnance department, on being informed of these facts by the proving officer of that department, (who had proved the gun before it was reduced in size and thick-

For short distances guns are sometimes double-shotted, but the two shot are not propelled by a force greater than that of the common service charge of powder, which is not more than half the force of the proof-charge; and, with that degree of force, the two shot will not overstrain the gun, nor will the shot be split in pieces by their contact within the gun.

England has long employed the acute ingenuity of her most scientific and skilful experimenters in the art of gunnery, to ascertain all the facts which relate to the fabrication and proof of cannon, as well as its usefulness in the service for which it is intended. And when we consider the effect of double-shotted guns, and the consequent splitting of the shot, even with the moderate charges of powder mentioned in books of recent date on British gunnery, we are inevitably brought to the conclusion that they have ascertained, by actual experiments, that guns tested by one shot in the proof-charge (as adopted by them) fully and effectually tests the strength of the gun, without its being weakened by it, and that the great superfluous force of the American proof-charge has the injurious effect of overstraining and destroying the strength of the gun.

The officers of our navy have sometimes burst good cannon by excessive proof-charges, which is well known to the officers by whom the guns were proved. I was, however, paid by the Navy Department for the burst cannon.

And if further proof be wanting of the excellent quality of the metal used by me in the fabrication of cannon, or that the proof-charges were excessive, it may be found in the examination of five 24-pounder cannon, made some years ago for sloops-of-war, and which are now lying at the Bellona works. These guns did not burst, although they were proved with charges of excessive strength; but such deep grooves were cut into the calibres of the guns, by the angular pieces of shot split or broken within the guns by the excessive force of the proof-charges, that those excellent pieces of cannon were deemed unfit for service by the officer who proved them. They were paid for by the Navy Department; because guns manufactured for the government are inspected and proved by the agents of the government; and if they are burst or destroyed in pursuance of improper instructions given by those agents, who dictate the mode of proof, the strength and composition of the proof-charges, &c.; or if they are burst by other agents, who, by improperly proving, burst the cannon, the loss is to be sustained by the government, whose agents have improperly caused the destruction of the guns.

In the autumn of 1833, soon after Major Worth had destroyed a parcel of my 32-pounder cannon, of as good quality as were ever made, I applied for payment for them at the Ordnance department, and was informed by Colonel Bomford that the Secretary of War was so much occupied that he could not at that time attend to my case, but imagined that he would find leisure to do so after a week or ten days. I then went to Philadelphia, and after about two weeks I returned to Washington, and again applied at the Ordnance office, and was informed by Colonel Bomford that the Secretary of War was then more busily occupied than on my first application, being engaged in making arrangements with the governor of Alabama relative to Indian affairs. I therefore returned to Virginia; and since that period I have had no convenient opportunity of making further application for payment. I now beg to request that payment may be made to me for the said sixteen pieces of cannon destroyed by excessive proof-charges. As I am now in Washington, if any further information or explanation shall be deemed necessary, I will endeavor to procure it, if required.

I have the honor to be your obedient servant,

JOHN CLARKE.

HON. SECRETARY OF WAR.

P. S.—The powder used by Captain Ripley, *who did not burst a single gun*, was part of the same parcel or lot of powder used by Major Worth, *who burst sixteen guns*.

(J.)—No. 3.

WASHINGTON CITY, May 9, 1836.

SIR: Colonel Bomford, within a few days past, handed me a paper, of which the following is a copy, marked with inverted commas; and stated that he intended to present it to you, without making any report himself on the subject to which it relates:

“ORDNANCE OFFICE, Washington, April 29, 1836.

“COLONEL: Having been present at the inspection and proof in August, 1834, as assistant to Brevet Lieutenant Colonel Worth, of forty-two 32-pounder iron cannon manufactured at Bellona foundry, Virginia, I am enabled to give the following statement of facts in relation thereto:

“The powder used in the proof of all these guns was of Dupont's manufacture, and was carefully proved in the presence and under the direction of the inspecting officers, immediately previous to filling the cartridges to be used in the proof-charges. The proof ranges given by the eprovette were within limits prescribed by the regulations of the Ordnance department for the proof of cannon.

“The cartridge bags were filled in the presence and under the direction of the inspecting officers, with the exact quantity of powder, by weight, required by the ordnance regulations for the proof of cannon of this calibre.

“The guns were in every particular properly loaded.

“The inspection and proof throughout was made in exact conformity with the regulations of the Ordnance department on this subject, and in a manner exactly similar to that in which inspections and proofs had been made at other foundries.

“I have the honor to be, very respectfully, your obedient servant,

“WILLIAM MAYNADIER, *First Lieutenant 1st Artillery.*”

“At the inspection and proof of cannon, in July, 1835, at Bellona foundry, forty-five 32-pounder iron guns were presented by the founder, of which number sixteen had been inspected by Brevet Lieutenant Colonel Worth the year previous, but had been withdrawn by the founder before proof. All these guns were proved in exact accordance with the regulations of the Ordnance department, and withstood the

proof-charges. The powder used in the proof of these guns was principally of the same parcel as that used by Colonel Worth the year before. There not being, however, a sufficient quantity to prove all the guns, a mixture was made of this and other powder from the magazine of Bellona arsenal; all of which, from a proof of each barrel before the mixture, was found to be within the limits prescribed by the ordnance regulations for the strength of powder to be used in proof-charges. This mixture was carefully proved before the proof-cartridges were made, the quantity of powder in which was determined from the regulation range of standard powder—two hundred and fifty yards.

"This inspection and proof was in every particular similar to those at other founderies.

"Very respectfully, your obedient servants,

"JAMES RIPLEY, *Captain, &c.*

"WM. MAYNADIER, *First Lieutenant, &c."*

Lieutenant Maynadier was the assistant of Colonel Worth when they burst the 32-pounder guns with excessive proof-charges. They were newly-appointed inspecting and proving officers, but neither of them acquainted with or experienced in the inspection and proof of cannon, which requires the most critical accuracy. I suppose they both *thought* that they proved the cannon correctly; but are such men competent to judge whether the guns were proved correctly or not?

When Lieutenant Maynadier assisted Colonel Worth in proving the guns which they burst, he thought they were proved in all respects as the other officers who did not burst the guns proved them; for he says in his statement (above) that "*the inspection and proof throughout was made in exact conformity with the regulations of the Ordnance department.*" Afterwards Lieutenant Maynadier assisted Captain Ripley, who proved a greater number of the same kind of guns with the same powder, and under the same regulations, *without bursting a single gun.* And Lieutenant Maynadier unites with Captain Ripley in stating (as above) that "*all these guns were proved in exact accordance with the regulations of the Ordnance department, and without the proof-charges.*"

When guns in all respects the same are proved with the same powder by two different persons, one of whom, in proving a given number, bursts many of the guns, and the other, in proving a greater number of them, under the same written regulations, *does not burst one gun*, the conclusion must be that the guns which were burst were not correctly proved; and that if Captain Ripley had used proof-charges of such enormous strength as those used by Colonel Worth he would have burst the guns; and if Colonel Worth had proved the guns correctly he would not have burst them; and it is most evident, when we consider that hundreds of these 32-pounder cannon, made of the material, by the same artificers, and at the same works, have been proved by officers who had many years of experience in the proof of cannon as well as the proof of powder, *and without bursting the guns*; and consider, also, that soon after Colonel Worth burst the said guns, Captain Ripley, (under the same regulations,) *without bursting a single gun*, proved forty-five of them, sixteen of which were of the same parcel that Colonel Worth began to prove, but left those sixteen guns unproved when I stopped him in his work of destruction.

The error or mistake which produced the bursting of so many excellent pieces of cannon (by those inexperienced provers of guns) may have been made in reducing the quantity of powder in the proof-charges in proportion to its excess of strength; or it might have been that, through mistake, more weights, or not the proper ones, were put into the scales when the powder for the proof-charges was weighed, either of which causes might have produced the same result. But such was the strength of those immensely powerful proof-charges, that the guns, on undergoing proof, recoiled nearly double the distance to which they had ever before recoiled on being proved, which was most obvious to all who were present and were accustomed to witness the proof of ordnance, which circumstance I repeatedly mentioned to Colonel Worth while the proof was carried on. By the tremendous force of these proof-charges, a fragment (weighing several hundred weight) of one of the guns burst by Colonel Worth was projected several hundred yards from the proving ground, and passed through one of the principal buildings of the United States arsenal; and numerous other large fragments were thrown to greater distances around the proving ground while the guns were bursting with those enormous proof-charges.

When I was induced by the highest officers of the government to build the Bellona works for the manufacture of ordnance for the United States, and promised their endeavors to encourage and support those works as long as the government would require cannon, it was doubtless intended and expected by the parties that the guns and other pieces of ordnance were to be of the best quality, and that they were to be fairly and properly inspected and proved by men well skilled by experience in that business. But that has not been done in the case now submitted for your consideration; and I ask of my country remuneration for the injury I have sustained in consequence thereof.

My works and machinery are constructed in the most permanent manner and on the most improved plan; and the records of the War office and those of the Ordnance office will show that, according to the best judges, the pieces of ordnance manufactured at those works are equal, if not superior, to any pieces of artillery made in the United States. It has been generally supposed that the manufacture of cannon for the government is a very profitable business; but I have manufactured ordnance for the government, for sea and land service, for the last nineteen or twenty years, with skilful artificers and with activity and economy, and the profit of the work executed does not amount to as much as the legal interest of the money that was necessarily expended in building the Bellona works; and I would now willingly sell the whole establishment for a reasonable price; although it has the advantages of being situated only a few miles above the city of Richmond, in the immediate vicinity of inexhaustible coal mines, and on the margin of the James river, by the navigation of which iron of superior quality is brought down to the works.

I have the honor to be, very respectfully, your obedient servant,

JNO. CLARKE.

HON. SECRETARY OF WAR.

No. 4.

IN SENATE OF THE UNITED STATES, *February 27, 1837.*

*Resolved*, That the Secretary of War be requested to ascertain the facts connected with the bursting of sixteen cannon at Major Clarke's foundry, in July, 1833, and August, 1834, especially such as may explain the mode of proof used upon that occasion, and the quality of the metal. Also the difference

between the strength of the charges used in proving those guns and the strength of the charges used in proving such guns in Great Britain; and report to the Senate, at its next session, his opinion of the remuneration to which the said Clarke should be entitled upon principles of equity.

MARCH 7, 1837.

NOTE.—It is my opinion that the Secretary of War, in causing to be carried into effect the order of the Senate in relation to the bursting of Mr. Clarke's cannon, would better accomplish the object of that order by construing it to include the additional inquiries mentioned above.

THOMAS H. BENTON, *Chairman of the Committee on Military Affairs.*

No. 5.

WASHINGTON, D. C., June 17, 1836.

GENERAL: I give below a statement of the quantity of powder used in the proof of 32-pounder guns at Bellona foundery, at the proofs and inspections made by Colonel Worth in 1834, and by Captain Ripley in 1835; as also the strength of the powder in each case, as determined by the regulation eprouvette.

Proof range. 1834.	Proof range. 1835.	Weight of charge. 1834.	Weight of charge. 1835.
<i>Yards.</i> 273	<i>Yards.</i> 265	<i>Lbs. oz.</i> 17 13 $\frac{3}{4}$	<i>Lbs. oz.</i> 20 3
279	.....	17 9	
284	.....	17 5	
281	.....	17 7	
281	.....	17 7	
226	.....	21 4	
277	.....	17 10	
277	.....	17 10	
245	.....	14 14	Burst 2d fire.

The powder used in 1835 was a mixture of the powder left in 1834 with that in the magazine at the Bellona arsenal. This mixture gave a proof range of 265 yards, in accordance with which the weight of the cartridges was fixed at 20 pounds 3 ounces, taking the range of 250 yards as a standard. At the proof in 1834, the range of standard powder was 225 yards, which required the weight of proof-cartridges, made of powder ranging 265 yards, to be 18 pounds 8 ounces. Thus the powder used in 1834, though showing a greater proof range, was, both range and quantity considered, less than equivalent in effect to that used in 1835.

I have the honor to be, very respectfully, your obedient servant,

WM. MAYNADIER, *1st Lieutenant 1st Artillery.*

General Wool, *Inspector General United States Army, Washington City.*

No. 6.

WEST POINT FOUNDRY, June 2, 1836.

SIR: I am favored with your letter of the 26th of May, desiring me to answer certain interrogatories contained in Colonel Worth's letter to you of the same date, a copy of which you have done me the honor to enclose.

To the first interrogatory, requiring to know the number of inspections made by Colonel Worth at this place, I should answer, five inspections of guns and shot, viz: in May and July, 1833, in May and July, 1834, and in August, 1835.

To the second interrogatory, requiring "my opinion as to the care, attention, and accuracy with which those inspections were conducted," I would answer that no inspecting officer can be more careful, accurate, or attentive than Colonel Worth has always been in the performance of his duties.

To the third interrogatory, requiring me "to state such casualties in guns, shot, and shells as have occurred, together with an opinion on the quality of the metal and accuracy of proof" To this I would answer that but one gun ever gave way in the powder-proof, and this an experiment 12-pounder, at the inspection of experiment guns in August, 1835; that this gun possessed less relative strength to sustain the powder-proof than the brass 12-pounder; and that, although one of the same size and proportions stood the proof as well on repeated firings afterwards, and that the immediate cause of its failure was the accidental breaking of the shot in the gun, I should not deem it a safe model to be adopted for the service. No shells were ever inspected by Colonel Worth at this establishment. Shot have been occasionally condemned, both on account of cavities and general roughness of the surface; the proportion I cannot precisely state, but it would not be great, as no shot observed to be even doubtful is ever permitted to be presented to an inspecting officer.

Respectfully, your obedient servant,

GOUV. KEMBLE.

Colonel GEORGE BOMFORD, *Colonel of Ordnance.*

## No. 7.

ORDNANCE OFFICE, *Washington, April 29, 1836.*

COLONEL: Having been present at the inspection and proof in August, 1834, as assistant to Brevet Lieutenant Colonel Worth, of 42 32-pounder iron cannon, manufactured at Bellona foundery, Virginia, I am enabled to give the following statement of facts in relation thereto:

The powder used in the proof of all these guns was of Dupont's manufacture, and was carefully proved in the presence and under the direction of the inspecting officers, immediately previous to filling the cartridges to be used in the proof-charges. The proof ranges given by the eprouvette were within the limits prescribed by the regulations of the Ordnance department for the proof of cannon.

The cartridge bags were filled in the presence and under the direction of the inspecting officers, with the exact quantity of powder, by weight, required by the ordnance regulations for the proof of cannon of this calibre.

The guns were, in every particular, properly loaded and fired.

The inspection and proof throughout was made in exact conformity with the regulations of the Ordnance department on this subject, and in a manner exactly similar to that in which inspections and proofs had been made at other founderies.

I have the honor to be, very respectfully, your obedient servant,

WILLIAM MAYNADIER, *1st Lieutenant 1st Artillery.*

At the inspection and proof of cannon, in July, 1835, at Bellona foundery, 45 32-pounder iron guns were presented by the founder, of which number sixteen had been inspected by Brevet Lieutenant Colonel Worth the year previous, but had been withdrawn by the founder before the proof. All these guns were proved in exact accordance with the regulations of the Ordnance department, and withstood the proof-charges. The powder used in the proof of these guns was principally of the same parcel as that used by Colonel Worth the year before. There not being, however, a sufficient quantity to prove all the guns, a mixture was made of this and other powder from the magazine of Bellona arsenal; all of which, from a proof of each barrel before the mixture, was found to be within the limits prescribed by the ordnance regulations for the strength of powder to be used in proof-charges. This mixture was carefully proved before the proof-cartridges were made; the quantity of powder in which was determined from the regulation range of standard powder—250 yards.

This inspection and proof was, in every particular, similar to those at other founderies.

Very respectfully, your obedient servants,

JAMES W. RIPLEY, *Captain, Inspector of Ordnance.*

WM. MAYNADIER, *1st Lieut. 1st Artillery, Assist. Ins. Ord.*

## No. 8.

APRIL 7, 1836.

DEAR SIR: I have examined Major Clarke's papers relative to the bursting of sixteen cannon in proof-charges with double shot. I have no doubt but that cannon so charged, *with double shot*, are subjected to a trial beyond all use, and that the best of guns are so bursted. The globular form of the two balls have the effect upon one another of the hammer and wedge; one splits the other, drives in a section of it, bursts it, and bursts the gun. My opinion is, that Major Clarke's guns were too severely tested with these double shot, and that he has a claim for compensation for them. Being on the Military Committee, Major Clarke has made an exposition of his case to me, upon which this opinion is based.

Yours, truly,

THOMAS H. BENTON.

Hon. Mr. RIVES.

## No. 9.

RICHMOND, *February 28, 1836.*

DEAR SIR: I beg leave to introduce to you Major John Clarke, of Virginia, who goes to Washington on some business connected with your department. I have known this gentleman from my youth, and for twenty years he has been an esteemed and intimate friend. I need not, then, say to you that he is one in whom entire confidence may be placed. He is among the first of our useful and best men. Any aid or facility that you may be able, consistently with the public interest, to give him, will be gratefully received by him, and acknowledged by,

Dear sir, your friend and obedient servant,

A. STEVENSON.

Hon. L. CASS, *Secretary of War, Washington City.*

## No. 10.

RICHMOND, *February 27, 1836.*

DEAR SIR: I do myself the pleasure of introducing to you Major John Clarke, of Virginia. He is engaged in the manufacture of ordnance, and has supplied the government of the United States frequently, on contract. He superintended the State manufactory of Virginia for many years, and is probably the

oldest manufacturer of cannon in the United States; and I have always considered him as one of the most accomplished. Such is his reputation with gentlemen of the highest standing in Virginia. He is a gentleman of the greatest respectability; and I would as soon take his statements for true as those of any other gentleman in my acquaintance. He desires particularly to be known to you, from the high respect he has formed for you, as well as from your peculiar relations to the defence of the nation. I trust, my dear sir, I shall not too much intrude upon your valuable time by asking you to converse with the major, not only upon the fortifications of the country, but upon the matter of a claim which he has upon the government for guns which were burst in consequence of their being improperly proved. Be so good as to examine his several, as well as his particular documents; for you may have it in your power to serve the country, as well as a man of worth.

I am, sir, very respectfully yours,

THOMAS RITCHIE.

Colonel THOMAS H. BENTON, *Senate of United States, Washington.*

(A.)—No. 11.

WASHINGTON, December 29, 1816.

DEAR SIR: I well recollect that when you suggested your intention to establish a foundery on James river, above Richmond, you inquired of me how far you might calculate on encouragement and support from the government: and that I informed you that you might fairly presume on such support, it being essentially the interest of the United States to promote three establishments of the kind, one of which should be on James river. I recollect, also, having communicated at the time with the Secretary of the Navy, if not with the Secretary of War; and being authorized by the former, and, as I think, by the latter, to give you an assurance to this effect, I did it with the greatest confidence. I have no doubt that you made the establishment in consequence of this assurance.

I am, dear sir, with great respect and esteem, your very obedient servant,

JAMES MONROE.

Major JOHN CLARKE.

*Extract from one of Colonel Bomford's annual reports to the Secretary of War, dated November 29, 1825.*

"All the existing cannon founderies, as well as the manufactories of small arms, had been established under assurances of continued support from the government, if their terms and the quality of their work should prove satisfactory. These founderies have, accordingly, continued to furnish all the ordnance required for the public service, both for the War and Navy Departments. The experience acquired in a practice of many years enables them to furnish ordnance of a more safe and durable description, and of a better quality generally than could be expected from new establishments. The cannon founderies now established are capable of furnishing more ordnance than is required in the public service. It was not, therefore, considered either advantageous to the public interest, or just to those who had relied upon the promised support of the government, to depart from the course long since established, and uniformly pursued for a number of years, by inviting proposals from persons unaccustomed to the business, and thereby encouraging the establishment of additional cannon founderies, which the wants of the public service did not require and could not sustain."

(B.)—No. 12.

ORDNANCE OFFICE, August 11, 1818.

SIR: My letter of yesterday, in relation to P. Townsend's contract, will evince that no further reliance is to be placed on him for the performance of his contracts for fabricating cannon.

Messrs. Wirt and Clarke having completed their contract for three hundred tons of cannon and cannon shot, and the work having been executed, not only promptly, but in a style of workmanship, as appears from my own personal inspection of a few of the pieces, as well as the report of the inspecting officer, superior, it is believed, to what has ever been seen before in this country, I feel solicitous they should receive all the encouragement to which they are entitled in consequence.

I would therefore respectfully propose entering into a further contract with them for three hundred tons of caannon, cannon shot, and shells, to be delivered as early as it may be convenient. This quantity will not be sufficient to make up the deficiency on P. Townsend's contract; besides, sufficient attention has not been given by the Ordnance department to obtain the due proportion of small guns for field service. We have already too many 18-pounders and 12-pounders, and too few mortars and howitzers. We want a supply of spherical case shot and canister shot.

Should the government decide to erect extensive batteries and fortifications for the defence of the Chesapeake, many 24-pounders and mortars will be required for that service; and should prefer to give that work to the Bellona foundery, on the James river, rather than to the foundery at Georgetown, because of its proximity to the place where the guns, &c., will be wanted, and because I think the proprietors have spared, and will spare, no pains to give satisfaction in what they may undertake.

They will require an advance of fifteen thousand dollars, which may be spared conveniently enough.

I have the honor to be, &c., &c.,

DECIUS WADSWORTH, *Colonel of Ordnance.*

HON. JOHN C. CALHOUN.

(C.)—No. 13.

ORDNANCE OFFICE, *July 10, 1820.*

Sir: Messrs. John Clarke & Co. have delivered, on their contract, cannon and other castings to the amount of about \$29,000. The amount of advances to them has been \$27,000. There will be, consequently, a small balance due them on their account, which will be paid, of course. In addition to which, they are desirous of having the original advance of \$15,000, from the fund for arming and equipping the militia, renewed to them. I am of opinion it will be expedient to grant them another advance of \$15,000 from the fund for arming and equipping the militia. Besides the cannon, &c., already proved, inspected, and delivered, they have on hand, nearly ready for delivery, cannon, &c., to the amount, when finished, of between \$7,000 and \$8,000, as appears by a statement which has been transmitted to me by Lieutenant Hills. It is known that a large amount of capital is required to enable persons to carry on a cannon foundry; and as the work executed by Messrs. Clarke & Co., for the United States, has been in quality equal, if not superior, to any other in the United States, I think they merit all the favor and encouragement from the government that can with propriety be given. I beg leave, therefore, to recommend that the sum of \$15,000 be paid them in advance, on account of their contract for field-pieces to arm and equip the militia.

I have the honor to be, very respectfully, sir, your very obedient servant,

DECIUS WADSWORTH, *Colonel of Ordnance.*

Hon. JOHN C. CALHOUN.

(D.)—No. 14.

DEPOT NEAR RICHMOND, *August 28, 1817.*

Sir: Herewith enclosed I have the honor to transmit a certificate of the proof and inspection of a quantity of ordnance, cannon shot, and shells, fabricated at the Bellona foundry, in this State, by Major John Clarke and company, agreeably to their contract with the Ordnance department.

It is with much satisfaction and pleasure that I am enabled to add that the quality of the iron of which these castings are made, as also the execution of the work, is equal, if not superior, to that of any other foundry in the United States.

I have the honor to be, sir, your most obedient, humble servant,

JOHN HILLS, *Lieutenant of Ordnance.*

Colonel DECIUS WADSWORTH.

(E.)—No. 15.

DEPOT NEAR RICHMOND, *August 28, 1817.*

I hereby certify that I proved and inspected sixty pieces of cannon, and upwards of sixty tons of cannon shot and bomb-shells, fabricated at the Bellona foundry, belonging to Major John Clarke and company, in the county of Chesterfield, in the State of Virginia, for the Ordnance department of the United States; the whole of which cannon stood an unusually severe proof, as the gunpowder used in that process was of much greater strength than is customarily used in the proof of guns. And I further certify that the quality of the iron, and the execution of the work of said castings, is equal, if not superior, to any in the United States.

JOHN HILLS.

(F.)—No. 16.

ARSENAL NEAR RICHMOND, *June 27, 1820.*

Sir: Enclosed herewith I transmit a certificate of the proof and inspection, to which is subjoined the receipt of the military storekeeper of this station, for the cannon and howitzers, cannon shot and shells which have been fabricated for the United States at the Bellona foundry.

It affords me a high degree of satisfaction in being enabled to state that the castings above referred to are superior, in point of workmanship and quality of iron, to those produced from any other works in the United States.

I have the honor to be, sir, with much respect, your most obedient servant,

JOHN HILLS, *First Lieutenant of Ordnance.*

JOHN CLARKE, Esq.

(G.)—No. 17.

ARSENAL NEAR RICHMOND, *September 5, 1821.*

Sir: I transmit herewith a statement of proof and inspection, exhibiting the number of cannon, howitzers, cannon shot, and shells, received from the Bellona foundry in the present year.

It is with much satisfaction that I have to acquaint you that the castings are of a very superior quality, both in point of excellence of metal and good workmanship; and that castings of a better quality

are not to be found in any of our works of defence, or depots of the Ordnance department, than those which are fabricated for the general government at the Bellona foundery.

I have the honor to be, sir, very respectfully, your most obedient servant,  
JOHN HILLS, *First Lieutenant 3d Artillery, on Ordnance Duty.*

JOHN CLARKE, Esq.

---

(H.)—No. 18.

[Extract.]

“The cannon, shot, and shells, furnished agreeably to the present contract, are of excellent quality, both as respects excellence of workmanship and the superior quality of the iron used in their fabrication. No better castings are to be found in any of our works of defence, or depots of the Ordnance department, than those which have been received from the Bellona foundery.”

The above is an extract from a letter addressed to Lieutenant Colonel George Bomford, transmitting a statement of proof and inspection of castings received from the Bellona foundery, dated 12th of September, 1821.

JOHN HILLS.

Major JOHN CLARKE.

---

No. 19.

ORDNANCE OFFICE, *November 16, 1837.*

At the request of Major Clarke, I state that in the years 1828, 1829, and 1830, or during some of those years, I fired a 24-pounder, new pattern, manufactured by him, about eight hundred times with the service-charges for single and double shot, and powder stronger than ordinary. That during all the firings, examinations of metal, and transactions with that gun, (which is now mounted at Fortress Monroe,) I was satisfied that it was fabricated of exceedingly good metal.

The gun now in the batteries of Fortress Monroe has the history of its firings and trials it has sustained marked upon its carriage, and may be seen by any one. It has, as I understand, been fired many times without injury since my experiments.

WM. H. BELL, *Captain of Ordnance.*

---

No. 20.

WEDNESDAY, *March 15, 1837.*

I certify that I was the inspector of ordnance for the navy of the United States, and repeatedly inspected and proved cannon, shot, &c., manufactured by Major John Clarke, at his Bellona works in Virginia, as well as at other similar works in the employ of the government; and ever found that the metal used at the Bellona works was of very superior quality, the work neatly executed, and the inspection and proof thereof was performed according to the regulations of the commissioners of the navy.

S. GASSIN, *Captain United States Navy.*

---

No. 21.

WASHINGTON, *March 3, 1837.*

I certify that I was the inspector of ordnance for the government of the United States between six and seven years; that I inspected at the Bellona foundery, belonging to Major John Clarke, several hundred cannon of various calibres, including two hundred and fifty-six 32-pounder guns; that the iron of which the guns were made was of most excellent quality, having sustained the proof, which was made in strict accordance with the established regulations, except in one instance, when a 32-pounder gun, of the first parcel proved, burst; and that the dimensions of the guns and execution of the work were correct and faithful.

JAMES BANKHEAD, *Lieutenant Colonel Third Artillery,  
and late Inspector of Ordnance for the Army.*

---

(1) No. 22.

I hereby certify that, for several years past, I have been employed as an artificer in the boring of cannon at Major John Clarke's Bellona cannon foundery, but for want of work from the government I left said foundery in the latter part of last year.

While I was employed at said works I attended and witnessed the inspection and proof of cannon by the government officers at those works; and was present and witnessed the inspection and proof of all the cannon proved at said foundery by Colonel Worth; and I am confident that the guns, when proved by Colonel Worth, recoiled or flew backward to double the distance that I had ever before seen 32-pounder

cannon recoil back when they were proved; which I think must have been owing to the guns being overloaded, or proved with charges much greater than usual.

Witness my hand this twelfth day of July, eighteen hundred and thirty-six.

SUBLETT McGRUDER.

I also certify that when Colonel Worth had bursted sixteen 32-pounder cannon at Major Clarke's foundery, the said Clarke stopped Colonel Worth from proving any more of his guns, at which time Colonel Worth left *sixteen of the guns unproved*; which sixteen guns, with twenty-nine other 32-pounder cannon, making forty-five guns, were afterwards proved by Captain Ripley, who did not burst any of the guns. I also witnessed this proof of guns by Captain Ripley, and am confident that the guns proved by Captain Ripley did not recoil (when proved) more than half the distance to which the guns proved by Colonel Worth recoiled when he proved them.

Witness my hand this twelfth day of July, eighteen hundred and thirty-six.

SUBLETT McGRUDER.

CHESTERFIELD COUNTY, *to wit*:

This day Sublett McGruder (whose name is above subscribed) personally appeared before me, in said county, and made oath to the truth of the foregoing certificate.

Given under my hand this 12th day of July, 1836.

H. HANCOCK, *a Justice of the Peace for the County of Chesterfield, State of Virginia.*

Since the date of the foregoing certificate, thirty-one 32-pounder cannon were proved by Captain Ripley at the Bellona works, without bursting a gun.

(2) No. 23.

BELLONA FOUNDERY, *December 13, 1836.*

I hereby certify that during the last nine years I have been employed in the manufacture of cannon at Major John Clarke's Bellona works, where, for the greater part of that time, I have acted, and do now act, as assistant foreman of those works, and have regularly attended the inspection and proof of the various pieces of ordnance manufactured at the said works.

In the year 1828 we commenced the manufacture of 32-pounder cannon for fortifications, and fifty-eight of them were proved in June, 1829. This was the first time that any of the 32-pounder cannon were proved, and it was before the strength of the proof-charges proper for those guns was ascertained; and in testing the strength of those fifty-eight guns one of them burst and fifty-seven stood proof. Previous to this 13th of December, 1836, we have manufactured at said works four hundred and forty-six 32-pounder cannon for fortifications, which have been proved at ten different periods and by different proving officers; and with the exception of the one gun, which was burst on the first trial of their strength, not one of the four hundred and forty-six guns was burst, excepting the sixteen of them which were burst when proved by Colonel Worth, who, in proving the guns, used proof-charges which, unquestionably, must have been vastly more powerful than usual, being so extremely strong as to cause the guns proved by him to recoil nearly double as far as I ever saw such guns recoil when proved by any other officer than him.

And as the whole of those four hundred and forty-six guns were made of the same kind of metal, (best James river iron,) and were manufactured at the same works, and by the same workmen, and with the exception of the one gun which burst at the first trial of their strength, *none of the guns* burst, excepting those that were burst by Colonel Worth, it is evident that the proof-charges used by him must have been much more powerful than the proof-charges used by the other officers, who proved portions of those guns at different periods, both before and after Colonel Worth proved guns at those works.

RANDOLPH AMONETT.

VIRGINIA, *Chesterfield County, to wit*:

This day Randolph Amonett, who has signed the foregoing certificate, personally appeared before me, Higginson Hancock, a justice of the peace for said county, and made oath that said certificate is true and correct.

H. HANCOCK, *J. P.*

(3) No. 24.

BELLONA FOUNDERY, *December 13, 1836.*

I hereby certify that for many years I have been occupied in the manufacture of cannon, &c., at Major John Clarke's Bellona works, where, for the last fourteen years, I have acted, and do now act, as foreman of the works, and have regularly attended the inspection and proof of the various pieces of ordnance made at said works for the land as well as for the naval service.

On or about the year 1828 the founders of cannon for the United States were required to make 32-pounder cannon for fortifications, and the first gun of that pattern, called the pattern gun, was made at the Bellona works. We proceeded to manufacture those guns, and as soon as fifty-eight of them were completed they were proved by the proving officers of the government, and one of the fifty-eight guns burst by the very great strength of the proof-charges. This happened at the first time of proving 32-pounder cannon, and before the strength of the proof-charges was proportioned to the strength of the gun. Between the years 1828 and the present time we have manufactured at said works four hundred and forty-six 32-pounder cannon for fortifications, some of which were proved every year, as soon as they

were made and ready for proof, and, with the exception of the *one gun* at the first proving, not a gun of them was burst until Colonel Worth (who seemed new to the business) burst sixteen of them. The whole four hundred and forty-six guns were made of James river iron, of excellent quality, and by the same experienced workmen, and were, I verily believe, of as great strength and good quality as any such guns ever yet were made, and I am confident that the sixteen guns which were burst by Colonel Worth were as good as any of the 32-pounder cannon which did not burst on being proved; and, although some of the guns proved by Colonel Worth did not burst, yet, in my opinion, the proof-charges used by him were so excessively strong as to overstrain the guns and render them liable to burst when used in war. Those proof-charges were made of powder greatly exceeding the standard strength of powder, and in proving the guns these proof-charges were made to discharge, from the calibre of the gun, double the weight of shot used in proving guns in Europe, and caused those guns to recoil to a much greater distance than any 32-pounder cannon ever did recoil when proved at these works by any other officer than Colonel Worth himself. Such, in fact, was the vast strength of his proof-charges, that, while the guns were bursting, a fragment weighing several hundred pounds was thrown several hundred yards, and in its progress passed through one of the principal buildings of the United States arsenal, and many other fragments of the bursted gun were thrown still further. The destruction of those excellent pieces of ordnance was so great that Major Clarke forbade Colonel Worth to proceed with the proof of them, at which time sixteen of the guns remained unproved; and the next year, viz., 1835, those sixteen guns left unproved by Colonel Worth, with twenty-nine others, (making forty-five 32-pounder cannon,) were proved by Captain Ripley without bursting a gun; and in October last (the present year, 1836) Captain Ripley proved an additional number of thirty-one 32-pounder cannon without bursting a gun; and, with the exception of the one gun which burst at the first proving of said guns, not one of the four hundred and forty six 32-pounder cannon was burst, excepting the sixteen guns proved by Colonel Worth.

JOSEPH YOUNG, Sr.

VIRGINIA, *Chesterfield County, to wit:*

This day Joseph Young, sr., the signer of the foregoing certificate, personally appeared before me, Higginson Hancock, a justice of the peace for said county, and made oath to the truth of the said certificate. Given under my hand this 14th day of December, 1836.

H. HANCOCK, J. P.

25TH CONGRESS.]

No. 742.

[1ST SESSION.]

ORDERS AND INSTRUCTIONS AUTHORIZING THE EMPLOYMENT OF INDIANS IN THE MILITARY SERVICE OF THE UNITED STATES AGAINST THE SEMINOLE INDIANS IN FLORIDA, AND THE NUMBER SO EMPLOYED.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES SEPTEMBER 21, 1837.

WAR DEPARTMENT, *September 21, 1837.*

SIR: I have the honor to transmit herewith a report of the commanding general, in answer to a resolution of the House of Representatives of the 18th instant, relative to the number of Indians employed in the military service of the United States since the commencement of the present Seminole war, and copies of all orders and instructions under which said Indians have been employed, &c.

Very respectfully, your most obedient servant,

J. R. POINSETT.

Hon. JAMES K. POLK, *Speaker of the House of Representatives.*

HEADQUARTERS OF THE ARMY, *Washington, September 19, 1837.*

SIR: In answer to a resolution of the House of Representatives, dated September 18, 1837, requiring "a statement of the number of Indians employed in the military service of the United States since the commencement of the present Seminole war, and copies of all orders and instructions under which Indians have been employed," &c., I have respectfully to report that an examination of the files in the Adjutant General's office shows that a regiment of Creek Indians, composed of fifteen companies, and amounting in the aggregate to seven hundred and forty-nine, was received into the service of the United States on the 1st of September, 1836, by Major General Jesup's order, of which the following is an extract:

"ORDERS No. 50.

"HEADQUARTERS ARMY OF THE SOUTH, *Fort Mitchell, July 25, 1836.*

"1. A band of friendly Indian warriors will be immediately raised and organized for special service under instructions from the commanding general. They will be mustered into the service, mounted, equipped, supplied, and paid as mounted volunteers, for twelve months, unless sooner discharged. Captain J. F. Lane is appointed to raise, organize, and command them. He will be mustered in for the same period as colonel, subject to the approval of the President of the United States."

It is presumed that authority for the above was derived from the Secretary of War's letter dated July 11, 1836, of which the following is a copy:

“WAR DEPARTMENT, *Washington, July 11, 1836.*

“Sir: It has been suggested that a few Creek warriors might be useful to Governor Call, and might be willing to be employed in the contemplated expedition against the Seminole Indians. You will please to correspond with Governor Call on this subject, and if he should desire it, I would thank you to raise a small corps of this description, not exceeding two or three hundred, and send them to Florida. They may be paid and organized as volunteers, but should be placed under the command of some white man, well acquainted with them, and who has their confidence. It is presumed that enough young men would be willing to go, without requiring their families to be retained in Alabama until their return. This measure of retaining Indian families ought to be avoided, as the immediate removal of the Indians seems to be indispensably necessary.

“Very respectfully, &c.,

“L. CASS.

“Major General T. S. JESUP, *Fort Mitchell, Alabama.*”

About the commencement of the Indian hostilities in Florida a band of ninety friendly Indians was received into the service by Captain Belton, the commanding officer at Tampa Bay, as seen by his letter of the 7th of January, 1836, but no rolls of them have been received, and it is not known for what time they were so employed; it is presumed not long, however.

On the recommendation of General Jesup, made on the 17th of June last, that a thousand northern Indian warriors should be engaged to take the place of the Creek regiment, which was about to be discharged, the present Secretary of War took measures, on the 25th of July, to call into the service of the United States that force, to be composed as follows:

Delawares.....	200
Shawnees.....	400
Sacs and Foxes.....	100
Kickapoos.....	100
Choctaws.....	200

It may be proper here to state that Major General Scott, in the month of March, 1836, called on Colonel Hogan, the agent for the Creeks, to obtain from that nation five hundred warriors, to serve against the Seminoles; but owing to delays and difficulties not within the general's control, they were not raised.

The orders, instructions, and correspondence having reference to this subject, are hereunto annexed, marked from 1 to 17, inclusive.

Respectfully submitted.

ALEX. MACOMB, *Major General, Commanding-in-chief.*

Hon. J. R. POINSETT, *Secretary of War.*

No. 1.

FORT MITCHELL, *Creek Agency, February 1, 1836.*

MY DEAR GENERAL: I have this day received a letter from the honorable the Secretary of War, of which the enclosed is a copy, from which I have learned that you are again in the field, and that the important duty of subduing the Seminoles has been assigned to you, and that I am ordered to report myself to you, and receive and carry into effect such instructions as you may give me. Now, this is all news to me, and is perfect Hebrew, unless the department meant in a modest way to say to me: Take a thousand of your Creek Indians and repair to Florida, and aid General Scott to subdue these rascally Seminoles. If this was their view, why not say so at once, and you should in a very short time have me again alongside of you tugging at the old oar. I have no doubt but that I could in ten days raise you one thousand warriors, and be on the march to join your army, and in as many more days be with you. All that is necessary is an order to that effect. But the Secretary seems to think the Creek Indians are hostile. This is not the fact, although some little skirmishing has taken place on the Georgia side of the river, and some few lives have been lost on both sides; but a peace has been effected here to-day between two militia general officers from Georgia and the chiefs, and an agreement has been signed by all the chiefs present. I was fifty miles below here night before last, and hearing of these murders, I came up yesterday, and to-day effected this peace, which I hope and trust will last at least until we can get them out of the country. I am using every exertion to effect this object, and have no doubt but I shall be successful, in a measure, in the course of this spring. A report is going the rounds of the public papers that a large body of the Creeks have joined the Seminoles. This you may rely on is incorrect. I have recently visited all the lower towns, and there is none of their people absent; and you may rely on it that, including all the stragglers that may have joined the Seminoles during the last summer, they cannot exceed one hundred in all; but I am told that they are reinforced by a number of runaway negroes, who are decidedly the most active, keen, and intelligent fellows among them. Whatever their strength was before this war, their reinforcements cannot exceed three or four hundred of every description.

In relation to the Creeks, there would be no difficulty in procuring their services, or in depending on them after they were procured. Whether, under existing circumstances, the government would be willing to employ them against the Seminoles is more than I can say; but if they should, there would be no difficulty in procuring as many as you might choose to muster into service.

I have the honor to remain your friend and humble servant,

JOHN B. HOGAN, *Superintendent of Creek Removal.*

Major General W. SCOTT, *Commanding in Florida.*

WAR DEPARTMENT, *Washington, January 21, 1836.*

SIR: Major General Scott has been directed to assume the general direction of operations in Florida. Recent intelligence has led to the belief that the Creeks have actively joined, or intend to join, the Seminole Indians in their hostilities. Should such prove to be the case, General Scott has orders to reduce the Creek Indians, as well as the Seminoles, to unconditional submission. In this event, you will please to report yourself to him, and communicate to him all the instructions and information in your possession respecting the views of the government on the subject of the removal of the Creek Indians. You will also carry into effect such instructions on this matter as he may give you.

Very respectfully, your obedient servant,

LEWIS CASS.

Colonel JOHN B. HOGAN, *Columbus, Georgia.*

No. 2.

TALLAHASSEE, *Florida, March 7, 1836.*

DEAR SIR: Major Flournoy and Mr. Watson, of Columbus, Georgia, who will hand you this letter, have applied to me to receive into the service two hundred Indians that they have conditionally engaged. It is a matter over which I have no authority, and, accordingly, have referred them to you. If, as I presume will be the case, the Indians shall betake themselves to the hammocks and swamps, and seek for safety there, those Indians may prove highly serviceable in discovering their retreat; besides, as in war times neighboring tribes are not disposed to be inactive, they may join the enemy if you refuse to take them into your service. I should think, therefore, it would be most advisable to authorize those gentlemen to bring them to Tampa. The Chattahoochee river being now in fine order, they could very soon be transported in a steamboat to Tampa Bay.

I have no news either from the army or elsewhere. Our difference with France is adjusted without war and without apology.

In this Territory horses nor supplies for them could be procured; accordingly, one-half, say three hundred, were sent to Tampa Bay, under Major Read. About two hundred are, or soon will be, on the frontier about the Suwanee, to guard against those marauding straying parties that may attempt any mischief there.

With great respect,

J. H. EATON.

General WINFIELD SCOTT.

No. 3.

ORDER No. 13.

HEADQUARTERS ARMY OF FLORIDA, *Fort Drane, March 14, 1836.*

General Thomas Woodward, of Macon county, Alabama, is authorized, aided by Majors J. H. Watson and W. B. Flournoy, to accept the services of any five hundred Creek warriors, to be employed as auxiliaries in the present war against the Seminole Indians. Should General Woodward decline taking the command of these friendly Indians, Major Watson, assisted by Major Flournoy, will take the command of them.

The United States agents in the Creek nation will give every facility in raising and despatching the auxiliary force mentioned above. The force will proceed, by water, from the Creek country to Tampa Bay, where, on its arrival, it will be reported to any general or colonel who may be in command in that quarter.

Commissions, of course, cannot be granted to the gentlemen who may be employed with this force; but the commander will be considered as having the rank of lieutenant colonel, the next officer the rank of major, and the third that of captain. Should more officers be requisite, one or two lieutenants will be recognized; but this will be a subject for future determination.

WINFIELD SCOTT.

No. 4.

WAR DEPARTMENT, *April 12, 1836.*

SIR: I enclose herewith an extract of a letter received from Colonel Hogan, together with a copy of one this day addressed to him.

As my views are fully expressed in the letter to Colonel Hogan, I need not trouble you with a repetition of them.

Very respectfully, your most obedient servant,

LEWIS CASS.

Major General SCOTT, *Fort King, Florida.*

*Extract of a letter from John B. Hogan to the Secretary of War, dated*

TUSKEGEE, March 28, 1836.

SIR: At this council Mr. John H. Watson, the same young man who commenced all the late disturbances at Columbus by attacking a party of Creeks below Fort Mitchell, in which affair two white men were killed—this Mr. Watson came on the ground with a piece of paper purporting to be a copy of an order recently issued by Major General Scott, authorizing General Woodward, of this place, who is one of the new batch of emigrating contractors, to accept the services of any five hundred Creek Indians as volunteers. General W. declined making any efforts to raise volunteers, by stating that it was a well-known fact that he had no influence with the Indians, but if they were raised, and no better man could be found, he would go with them; but, as far as I could understand his open declarations, he appeared to disapprove altogether of the project, as it was his opinion that it would retard emigration. Mr. Watson, who appears to be a wild, rash, inconsiderate young man, insisted that I was bound to raise the warriors. I referred him to Captain Page, as a military officer, and who was acting as superintendent, but he seemed to think that a word or two from me would induce the chiefs to jump at the offer. In the meantime I consulted Captain Page, who was decidedly opposed to sending Indians under the orders of such a man, and, indeed, seemed to disapprove of it. I also consulted with Opothleholo, who said he did not want his people to engage in any such war at present; that he was anxious to get off for the west; but if the Secretary of War wanted his people to go, he did not wish them to go with men he did not know, and of course had no confidence in. Other chiefs told me the same thing. Mr. Watson continued to follow me about, and insisting that I must get him Indians to go; and at last he became rude and offensive. I then cut him short, by telling him if he had any communications to make me to do it in writing, and I would in the same-manner reply. I also consulted the emigrating contractors, who, I had reason to think, were pushing on Watson, and asked them, if the Indian warriors were raised, if they would give me, from under their hands, a relinquishment of any claim they might hereafter choose to prefer for damages on account of those Indians being carried to Florida. They said they would not give any relinquishment, but the Indians might go if the War Department required their services.

Whatever inclination I might have to obey General Scott's orders—and certainly there is no officer I have ever served under that I more highly love and respect, and whose orders at all times afforded me more pleasure to obey—yet, in the present instance, I have deemed it most prudent to refer the whole matter to you. I can easily perceive General Scott's situation when he gave that order to those young men, Watson and Flournoy, who visited him at Picolata, and no doubt made a display of their patriotism and popularity among the Creeks, and urged the general to give them an order to bring into the field five hundred Indians. The general, seeing but one side, and being pleased with their spirit, gave the order. You will see, too, that the order (a copy of which I herewith enclose) does not embrace an order on the commissariat or quartermaster general's department for subsistence and transportation, or on the ordnance department for arms, or their being mustered into the service of the United States; nor was it personally addressed to Captain Page or myself, nor would Mr. Watson vouch that it was a correct copy of General Scott's order, as he wrote it, he said, from memory. If it is desirable to have the five hundred Creek warriors engage in this war, I have but little doubt they can be obtained, if proper persons are sent to command them; but I do not think that either Mr. Watson or Mr. Flournoy is the right sort of person to be charged with such a command. I have no doubt of the bravery of either, but I should think they lack the other requisites of a commander, viz: prudence, temper, caution, and experience. If, however, you wish the order complied with, it shall be attempted and enforced as far as my influence will go. In my first communication to General Scott I made a tender of my services, should he require Indians in this campaign; not having heard from him, I presume the department would not sanction the employment of them, and thought no more on the subject. If, however, I am mistaken, I again tender my services to go as commander of such a body as the department may order. A matter of that sort is much more to my taste than the duties now assigned me.

I have the honor to remain your obedient servant,

JOHN B. HOGAN.

Hon. LEWIS CASS.

No. 5.

WAR DEPARTMENT, April 12, 1836.

SIR: I have received your letter of the 28th ultimo. With respect to the employment of the Creek Indians under the orders of General Scott I am unwilling to give you any definite instructions. I would rather that the campaign should be brought to a successful termination without the aid of the Creek Indians. Still, if from the nature of the operations this cannot be done without sacrificing our own troops to the unhealthfulness of the climate in the sickly season of the year, the department will consent to have a corps of these Indians raised, if they are willing to be so employed. But the time which has intervened since the authority given by General Scott on this subject, and the great changes which may have occurred in the state of things in Florida, render it inexpedient to give directions here to have any measures taken. I think it is best that you should explain to the Creeks the views of General Scott in relation to the employment of these young men, and request them to have in readiness the force which he required to be called out should General Scott again renew the requisition. In the meantime I shall communicate these views to General Scott, and refer to his own discretion the course which shall be taken.

I have to request your zealous co-operation in whatever measures General Scott may think necessary.

Very respectfully, your most obedient servant,

LEWIS CASS.

Colonel J. B. HOGAN, Columbus, Georgia.

## No. 6.

*Extract from a letter of Major General Thomas S. Jesup to the Hon. B. F. Butler, (Secretary of War ad interim,) dated*

“FORT DADE, *March 7, 1837.*”

“When the Indian regiment was raised in the Creek country, for service in Florida, it was distinctly understood by *them*, as well as by *me*, that they were to be allowed to return to Alabama in time to remove to the country assigned to them, west of the Mississippi, before the season for planting their corn. I have found it necessary to retain them in the service up to this time, and it is important that they remain until the Seminoles remove. Had they left me on the 1st of February, according to the assurances given to them, I must have called into service at least two regiments of militia or volunteers to have taken their places, at a heavy expense; besides, there would have been much loss of time in discharging the Indians and bringing into service the militia. From a careful consideration of all the circumstances in which I found myself, as well as from the situation of the enemy and the nature of the country in which we were operating, I was decidedly of opinion that sound policy, as well as considerations of economy, made it proper to retain the Indian force. To induce them to remain, I assured them that if they should be detained beyond the planting season the United States would not only subsist them for twelve months after their arrival west, but, in addition to that period, until the time of gathering their crops next year. By the arrangement which I have made with them a considerable sum will be saved to the treasury in the end, and I respectfully ask that it be approved by the department.”

## No. 7.

WAR DEPARTMENT, *March 27, 1837.*

SIR: I have had the honor to receive your letter of the 7th instant, respecting the further continuance of the regiment of Creek warriors in the service of the United States. The reasons given by you for adopting this measure are entirely satisfactory, and the department therefore approves it, and will carry into effect the assurances which you have given those Indians respecting their subsistence after their arrival at their homes in the west.

Very respectfully, your most obedient servant,

Major General THOMAS S. JESUP, *Fort Dade, Garey's Ferry, Florida.*

J. R. POINSETT.

## No. 8.

WAR DEPARTMENT, *July 22, 1837.*

SIR: It having been deemed advisable to employ a body of friendly Indians to aid in the operations against the Seminoles of Florida during the next campaign, you are required to endeavor to engage for this service four hundred Shawnees, two hundred Delawares, and one hundred Kickapoos, to be selected from the most intelligent of those best affected towards the United States. You will represent to them that they will be divided into bands of fifty each, including the individual who may have the command of each band, and who will be selected by those composing the bands out of their own number. The compensation of these Indians for six months' service will be as follows: To the chief of each band, four hundred and seventeen dollars, and to all others, each, two hundred and seventy dollars. Besides this pay, they will be subsisted at the expense of the government; and it may be proper to assure them that every effort will be made to give them, should they desire it, the same kind of ration which they now receive; and that, should any of the Indians thus engaged die or be killed while in the service of the government, the amount of pay which may be due them for the six months' service will be given to their families.

These Indians will be armed with their own rifles and implements, so far as they possess them, and those who may not have them of their own will be furnished by the United States, the cost of which to be deducted from their pay. Each band will select its own interpreter, who will be enrolled, and will compose one of the fifty. The compensation of each interpreter, for the six months' service, will be three hundred and fifty dollars.

It is of great importance that the enrolment and organization of this force should be completed sufficiently early to admit of its transportation to Tampa Bay, Florida, by the middle of October next at latest. In the duty of enrolling and organizing, you will be assisted by one or more officers of the army, who will join you at the proper time for the purpose, and who, when this duty shall have been completed, will take charge of the Indians, and conduct them in transports on their way to Florida.

Very respectfully, your most obedient servant,

J. R. POINSETT.

Major R. W. CUMMINS, *Fort Leavenworth, Missouri.*

[Same to Captain William Armstrong, substituting for the names and numbers of the tribes two hundred Choctaws.

Same to General J. M. Street, substituting for the names and numbers of the tribes one hundred Sacs and Foxes.]

## No. 9.

*Extract from a letter to Major General Thomas S. Jesup, dated*

“WAR DEPARTMENT, July 25, 1837.

“Measures have been taken to obtain the Indian force you have recommended, and it is hoped that one thousand warriors will be at Tampa in time to co-operate with the regulars at the commencement of the campaign: say two hundred Delawares, four hundred Shawnees, one hundred Sacs and Foxes, one hundred Kickapoos, and two hundred Choctaws, making in all one thousand warriors.”

## No. 10.

WAR DEPARTMENT, August 1, 1837.

SIR: I enclose for your information copies of instructions that have been issued in reference to the employment of an Indian force during the next campaign in Florida.

Very respectfully, your most obedient servant,

J. R. POINSETT.

Major General THOMAS S. JESUP, *Garey's Ferry, Florida.*

## No. 11.

WAR DEPARTMENT, August 8, 1837.

SIR: Major Brant, quartermaster at St. Louis, has been instructed to turn over to you the sum of three thousand dollars, which is to defray the expenses incident to engaging the Shawnees, Delawares, Kickapoos, and Sac and Fox Indians, for service in Florida.

These expenses will comprise those necessarily incurred by the agent in assembling the Indians at some proper point, the cost of their subsistence while there, until they shall have been regularly enrolled and organized into companies and received into the service of the United States, and of such clothing as they may be in immediate want of. Payments for these objects will be made upon accounts certified by the agent whose duty it is to collect the Indians together. Of the sum mentioned, you will place two thousand five hundred dollars in the hands of Captain Bean, to defray the expenses of clothing the Shawnees, Delawares, and Kickapoos, and the remainder you will take charge of, and pay the expenses incident to the assembling of the Sacs and Foxes.

Very respectfully, your most obedient servant,

J. R. POINSETT.

Lieutenant BENJ. POOLE, *St. Louis, Mo.*

## No. 12.

WAR DEPARTMENT, August 8, 1837.

SIR: For the purpose of defraying the expenses incident to assembling the Choctaw Indians required for service in Florida, for subsisting them till they shall have been enrolled, organized, and regularly mustered into the service of the United States, and of providing them with such articles of clothing as they may be in immediate want of, the assistant quartermaster at Fort Gibson has been instructed to place in your hands the sum of five hundred dollars. You will make the payments for the above objects, and for such other expenses as the agent may necessarily incur, on accounts certified by the agent whose duty it is to assemble the Indians.

With respect to arms for such of these Indians as may not have them, these will be supplied from the arsenal at Baton Rouge, Louisiana; at which place, in transporting the Indians to New Orleans, you will stop, for the purpose of providing the Indians with them.

Very respectfully, your most obedient servant,

J. R. POINSETT.

Captain BENJ. L. E. BONNEVILLE, *United States Army, Fort Gibson, Ark.*

## No. 13.

WAR DEPARTMENT, August 9, 1837.

SIR: Captains Gordon and Bean have been selected to assist you in the performance of the duty of engaging the Shawnees, Delawares, and Kickapoos, for service in Florida, imposed upon you by my letter of the 22d ultimo, and to take charge of those Indians and conduct them to Florida, when they shall have been mustered into the service of the United States.

Measures have been taken for placing in the hands of Captains Gordon and Bean such an amount of funds as will, it is supposed, defray the expenses which it may be necessary to incur previous to the Indians being mustered. These expenses, it is presumed, will principally consist of those incident to the measures for collecting the Indians at one point, their subsistence, and the purchase of such articles of clothing as may be immediately required to render them comfortable and to create a favorable impression

on their part towards the United States. Accounts for these objects will be paid by Captains Gordon and Bean on your certificate; and I have to request that in your expenditures you will be prudent and as economical as circumstances will permit.

Should you not succeed in engaging the requisite number of either of the tribes named, you will use your discretion in making up the deficiency from one or both of the others; and should the number of each tribe which you may prevail upon to enter the service fall short of that required, you will endeavor to provide for the deficiency from other tribes, being careful to employ those who would serve with the Shawnees, Delawares, and Kickapoos, without danger of difficulty from dissensions between them.

Very respectfully, your most obedient servant,

J. R. POINSETT.

Major R. W. CUMMINS, *Fort Leavenworth, Missouri.*

No. 14.

WAR DEPARTMENT, *August 9, 1837.*

SIR: Lieutenant Poole has been selected to assist you in the performance of the duty of engaging the Sacs and Foxes for service in Florida, imposed upon you by my letter of the 22d ultimo, and to take charge of those Indians and conduct them to Florida when they shall have been mustered into the service of the United States.

Measures have been taken for placing in the hands of Lieutenant Poole such an amount of funds as will, it is supposed, defray the expenses which it may be necessary to incur previous to the Indians being mustered. These expenses, it is presumed, will principally consist of those incident to the measures for collecting the Indians at one point, their subsistence, and the purchase of such articles of clothing as may be immediately required to render them comfortable, and to create a favorable impression on their part towards the United States. Accounts for these objects will be paid by Lieutenant Poole on your certificate; and I have to request that in your expenditures you will be prudent and as economical as circumstances will permit.

Should you not succeed in engaging the requisite number of Sacs and Foxes, you will endeavor to make up the deficiency from some other tribe, being careful, however, in engaging those who would harmonize in feeling with the Sacs and Foxes, and serve with them without danger of difficulty from dissensions between them.

Very respectfully, your most obedient servant,

J. R. POINSETT.

General J. M. STREET. (*To the care of General William Clark, St. Louis, Missouri.*)

No. 15.

WAR DEPARTMENT, *August 9, 1837.*

SIR: Captain Bonneville has been selected to assist you in the performance of the duty of engaging the Choctaws for service in Florida, imposed upon you by my letter of the 22d ultimo, and to take charge of those Indians and conduct them to Florida when they shall have been mustered into the service of the United States.

Measures have been taken for placing in the hands of Captain Bonneville such an amount of funds as will, it is supposed, defray the expenses which it may be necessary to incur previous to the Indians being mustered. These expenses, it is presumed, will principally consist of those incident to the measures for collecting the Indians at one point, their subsistence, and the purchase of such articles of clothing as may be immediately required to render them comfortable, and to create a favorable impression on their part towards the United States. Accounts for these objects will be paid by Captain Bonneville on your certificate; and I have to request that in your expenditures you will be prudent and as economical as circumstances will permit.

Should you not succeed in engaging the requisite number of Choctaws, you will endeavor to make up the deficiency from some other tribe, being careful, however, in engaging those who would harmonize in feeling with the Choctaws, and serve with them without danger of difficulty from dissensions between them.

25TH CONGRESS.]

No. 743.

[1ST SESSION.

REPORT OF THE PRESIDENT OF A BOARD OF OFFICERS ON IMPROVEMENTS IN FIRE-ARMS BY HALL, COLT, COCHRAN, LEAVITT, AND BARON HACKETT, AS COMPARED WITH THE UNITED STATES MUSKET, AND THEIR RELATIVE QUALITIES AND EFFICIENCY.

COMMUNICATED TO THE SENATE OCTOBER 3, 1837.

WAR DEPARTMENT, October 2, 1837.

SIR: The president of the board of officers appointed under a resolution of the Senate to examine certain arms, has, with the consent of the board, submitted to this department the accompanying report of their examination. This document appears to me not only to present the result of the investigation in a more condensed shape, but to contain some useful information omitted in the former. I beg leave therefore to withdraw that document and to substitute the report herewith submitted.

Very respectfully, your most obedient servant,

J. R. POINSETT.

Hon. R. M. JOHNSON, *President of the Senate.*

INTRODUCTION.

The board of officers appointed by General Orders No. 2, February 3, in conformity with a resolution of the Senate of the 27th of January, 1837, "to inquire into and report upon the improvement in fire-arms made by Hall, Colt, Cochran, and the Baron Hackett, and to show the importance of each in all important military points of view," have the honor to report that the results of the various experiments to which the board has subjected the several arms named in the resolution, and which have not failed to establish a decided opinion as regards their advantages and faults as weapons proper for arming troops in field service, are herewith presented in tabular form, as required by the resolution.

The board, constrained to pursue the order prescribed in the resolution of the Senate, has involved some repetitions.

I. CELERITY OF FIRE.

The table gives the following results in loading and firing:

1. <i>With the musket.</i>		2. <i>With rifles.</i>	
No. 1. Hackett's .....	5	No. 1. Colt's .....	3.4
No. 2. Hall's .....	5	No. 2. Colt's, (musket calibre) .....	3.4
No. 3. Colt's .....	3.1	No. 3. Hall's .....	3.4
No. 4. Cochran's .....	3	No. 4. Cochran's .....	3.2
No. 5. United States standard .....	3	No. 5. Leavitt's .....	1.2

*Muskets.*—Hackett's and Hall's load at the breech with single charges, though constructed on different principles.

No. 5. The United States standard loads at the muzzle.

Nos. 3 and 4. Colt's and Cochran's load at the breech with many-chambered shifting receivers of their charges.

The firing with Hackett's, Hall's, and the United States muskets was in rapid succession.

Colt's and Cochran's required from 2' to 2' 10" to charge a receiver.\*

To determine the comparative celerity, the parties were each furnished with a target, and were required each to load and fire the greatest number of rounds in a given time; Hackett, Hall, and the United States musket being supplied with cartridges, Cochran and Colt with loose ammunition; all commenced loading at the word "fire."

The board adopted this mode to place the respective weapons upon an equal footing, and under such circumstances as would ordinarily occur in actual service.

\* To charge these receivers 2' to 3' were necessary. Colt, to press the ball down, used a lever; Cochran, a rammer and mallet; these were appendages apparently necessary. A rest was necessary to load the latter, Cochran's, receiver.

## II. EXTENT OF THE RECOIL.

The arms of Hall, Hackett, Colt, and Cochran, being loaded at the breech, receive a ball of greater diameter than a gun which is loaded at the muzzle; the consequence is, a smaller quantity of powder being required to produce the same propelling power necessary for the musket, where, of course, there must be windage, the recoil must, even on that account, be considerably diminished; but, besides, the action of the powder upon the resisting point of these guns is much less than the effect produced by the elastic fluid upon the breech of other guns of the usual construction; the recoil does not appear sufficient in any of them to have occasioned any inconvenience to the persons using the arms.

## III. THE EFFICIENCY OF FIRE.

From the experiments made, it appears that for guns of the same calibre, and in the same resisting medium, the penetration of the arms loading at the breech, and having their correct charge of powder, is greater than those which are loaded at the muzzle; this is supposed to proceed from the powder, in the former case, having its whole propelling force operating on the ball; in the latter case it cannot, owing to the windage.

The statement in the following table shows the results of experiments made at West Point on June 19, 1837.

*Target of well-seasoned oak.*

Arm	Charge.	Distance of target.		Penetration.
		Feet.	Inches.	
United States musket.....	134	10	2.3	
Hall's musket.....	110	10	2.1	
Colt's musket.....	134	10	2.6	
Colt's musket.....	110	10	2.7	
Colt's musket.....	100	10	3.0	
Cochran's musket.....	80	10	1.6	

NOTE.—The chamber of Cochran's gun was not capable of containing over 80 grains.

It is worthy of remark that in the case of Colt's gun has been illustrated and confirmed the experiments and theory of celebrated writers upon artillery and the effect of powder.

134 grains produced.....	2.64 inches.
110 grains produced.....	2.75 "
100 grains produced.....	3.00 "

Thus the declaration is here clearly demonstrated that overcharges produce diminished ranges !!

## IV. INCONVENIENCE FROM HEATED BARRELS.

Guns which are loaded at the breech are supposed to acquire a less degree of heat, after a rapid and continued fire, than the common arm, in consequence of being cooled by a current of fresh air passing through the barrel during the period of loading; in the experiments here, such does not appear to have been materially the case. The temperature of the interior of the several barrels was ascertained by the introduction of a thermometer immediately after firing, in a given period, a certain number of rounds in quick succession, from 25 to 30 rounds. The result was as follows: Hall's, 150°; Hackett's, —; Colt's, 120°; Cochran's, 122°.

## V. CAPACITY OF BEING USED AS A RIFLE.

In positions not uncommon to light troops, the experiments with Hall's rifle in 1826, at Fort Monroe, when in the hands of regular troops, fully proves this arm admirably adapted to that description of service; it will equally apply to the cavalry or mounted corps in all situations where fire-arms may be required.

The many-chambered guns, from causes before mentioned, connected with their complicated construction, are by no means suitable to the service of light troops, and particularly when mounted; Hall's rifle and Hackett's gun (reduced in length) may, it is considered, be very appropriate to the service required; the fulminating primer is, it must be stated, the only apparent objection to the adoption of Hackett's gun.

## VI. SIMPLICITY AND CHEAPNESS OF CONSTRUCTION.

The attainment of simplicity in the construction of fire-arms is unquestionably of the first importance, in order that those who are to use them may readily comprehend their principles and utility.

In the examination of Hall's gun, nothing appears complicated; on the contrary, one is struck with the simplicity and solidity of the component parts, and the absence of the various appendages (equipments) which are attendant upon, and are indispensable to, the use and service of the arms both of Colt and Cochran. As regards simplicity and solidity of construction, what has been said of the arms of Hall may in general be applied to Hackett's gun. It possesses many of the features of utility which characterize the former, and which render them so valuable for military purposes. An arm complicated in its mechanism and arrangements deranges and perplexes the soldier in its management; it requires more than common

attention to its care and preservation; and should it perchance fail in its operation, which its complexity of construction would frequently occasion, he will lose all confidence in its powers of execution.

Hall's and Hackett's arms, possessing, apparently, the desired simplicity, are more easily managed, present less accountability to the soldier, are less liable to get out of order, and when they are they are more easily repaired.

The master armorers at the national manufactories have been instructed to prepare estimates of the cost of the manufacture of each description of arm. Their report, which, it is supposed, will approximate the reality, will accompany this report, C.

#### VII. DURABILITY.

The means of testing the durability of the several description of arms is not within the control of the board; it can only be determined by requiring the inventors to undertake a fatiguing course of firing greater than some of them could endure, or by placing the arms in the hands of troops, and having them exposed to all the incidents and trials of active field service.

The experiments with Hall's gun in 1826 gave results satisfactory as to its power of resisting the effect of long firing; and there can be no doubt that the durability of all description of guns will depend greatly upon simplicity, and consequent strength of construction.

#### VIII. SAVING OF AMMUNITION.

It has been stated that those arms which load at the breech require less powder to produce the same result than those of common construction.—(See No. 2, *efficiency of fire*.)

In the common musket 144 grains of powder constitute the charge for service, including ten grains for priming. Colt's musket, charged with 100 grains, (primed with a percussion cap,) gave proof of equal and even of superior power of penetration; which determined that quantity of powder was fully sufficient for that musket. Cochran's musket could not, from its construction, receive more than 80 grains, which was insufficient to accomplish the range and penetration of the United States musket, or that of Colt, with their respective charges; but the reduction of Colt's charge to that of Cochran's produced equal power.

These experiments being directed to facts in regard to the proper charges to be used in the new description of arms, and likewise with a view to test their relative powers, were conclusive in their results, and prove that in muskets of the same calibre the saving of powder would be in favor of those which load at the breech as 100 is to 144;\* and secondly, the same principle operating in the different arms of Hall, Hackett, Colt, and Cochran, the same charge would produce the same effect.

#### Appendages.

The inventors, Colt and Cochran, propose that each soldier should, when armed, carry five receivers, (cylinders,) four exclusive of that affixed to the gun.

	lbs.	oz.
Colt's 4, each 3 pounds, would be.....	12	00
To which add their charges.....	1	14
	—	—
Would be for Colt—total.....	13	14
Cochran's, when increased to hold 100 grains, would weigh, with their charges as above, a total of.....	16	14

The same number of rounds (35) contained in these receivers or cylinders, weighing in one instance 16 lbs. 14 oz., would, in the common mode of transportation, only weigh 2 lbs. 12 oz. Thus the soldier would be encumbered with near 12 pounds additional weight of a substance inconvenient in form, and in its position oppressive in a high degree.†

To load the many-chambered guns several implements of novel and inconvenient form are required, the use and accountability of which would be equally difficult and oppressive to the soldier, besides adding still more to great weight and appendages already noticed. In the common musket, and with Hall's and Hackett's, these equipments are not required.

#### IX. THE NUMBER OF CHARGES WHICH MAY BE CARRIED BY AN INFANTRY SOLDIER.

The greatest number of cartridges which are carried by a soldier are 60, = 4 lbs. Colt's and Cochran's guns, to transport little more than half that number of charges, would, as has been presented, require the soldier to sustain an additional weight to that of his arms, his knapsack, &c., of from fourteen to seventeen pounds, which it is believed he could not support.

This is one of the serious objections to the arms of Colt and Cochran. The arms of Hall and Hackett are exempt from these objections; they may be provided with as many charges as are allowed for the musket in the usual cartridge-box or other modes of transportation.

#### X. THE ADVANTAGES WHEN USED AGAINST A CHARGE OF CAVALRY.

In sustaining an attack from cavalry, arms which can keep up a continuous fire, preserving at the same time a position of defence with the bayonet, have certainly an advantage greatly superior to those which are obliged to change their position "to load." Hall's and Hackett's muskets possess the above advantage in an eminent degree, being, even during the process of loading, at the charge, and ready for personal defence. This is not the case with Colt's and Cochran's arms, in consequence of the necessity of disconnecting their parts for the purpose of charging them.

\* Percussion caps were used in the chambered guns, flint in the musket; the latter probably is the least expense. It is supposed the regulation charge for the musket is too great

† With this weight of metallic substance, and fixed round the waist, how long would the soldier endure the heat and damp in the swamps of Florida?

## XI. THE ADVANTAGES WHEN USED BY CAVALRY.

The advantage is very great in favor of guns which load at the breech; they are easily managed and conveniently loaded on horseback; they are therefore peculiarly adapted to cavalry service

Another advantage they possess: the ball being larger than the diameter of the barrel, the ball is not deranged in its chamber by the movement of the horse.

For reasons stated in No. 5 of this report the many-chambered arms are deemed inapplicable to the service of cavalry.

*General remarks.*

The various arms under consideration, which have been submitted to the board, constitute two classes, viz:

The first comprises the guns of Hall and Hackett, which load at the breech with single chamber.

The second are the "many-chambered," or repeating guns of Colt and Cochran, the breech of which is formed of cylindrical receivers which revolve on a pivot, and in which are conical chambers to contain a number of charges, which are brought successively in line with the barrel. This first class differ in construction. Hackett's gun, opening at the breech, uncovers the bottom of the bore into which the charge is inserted in the form of a cartridge.

2. Hall's gun, the chamber of which being raised by means of a spring, receives its charge, either of cartridge or powder and ball, from a flask.

The second class also varies in construction. The receiver, which contains the chambers for the charges in Cochran's, revolves horizontally on an axis perpendicular to the bore; whereas Colt's receiver revolves on an axis parallel to the bore.

All these guns load at the breech. The advantages of this system are, therefore, common to all, viz: the ball being larger than the bore prevents windage; and, in consequence, obtains a greater range, more exactness of fire, and, less powder being required, the recoil is diminished. An additional advantage belongs to the first class, namely—Hall's and Hackett's; they can be loaded with great facility, and in any situation or position. This, for skirmishers and light troops, is very important.

Hackett's gun being loaded with cartridge, it often occurs that a part of the paper sticks to the side of the chamber, which, in some degree, chokes it; besides, this paper may at times retain fire, and expose the succeeding cartridge to explosion. This may be avoided in Hall's gun, it being loaded with loose powder.

The guns of Cochran and Colt are equally exposed with the others to the escape of gas through the joints and to a lodgment of burnt matter, rendering them stiff and difficult of movement, and, from the contiguity of the loaded chambers and primers, they are liable to explosion of more than one charge at the same time. This may well happen from defect in the metal or imperfection of workmanship. In that case, these arms become as dangerous and destructive to yourselves as the enemy. One accident of the kind occurred on the 19th of June. A similar occurrence in the field would not only impair the confidence of the troops in the power and safety of their arms, but might render doubtful, at least, the success of their operations. It is shown, also, from the experiments that risk of great injury might be apprehended by the bursting of the caps. However ingenious, therefore, may be the invention, however creditable the skill of the manufacturer, the board is of opinion that the arm of Cochran is an unsafe weapon, and unsuited to the use of bodies acting in line or in masses.

The arm of Colt, possessing all the merits and exempt from some of the objections attending the former, may be usefully applied in special cases, (such as in stationary defence, intrenchments, block-houses, perhaps, too, in the naval service, in the tops of ships, to cover or repel boarders, and in boat service.) Notwithstanding these objects favorable to it, the board is unanimous in opinion that, from the complicated construction of this arm, its liability to accidents (one having occurred on the 21st of June—see note) in firing, and for other reasons before noticed, that it is not adapted to the general purposes of the service.

The arm of Hackett the board considers of great merit, possessing in general the qualities of the musket, and over it, in several instances, advantages; but it is exposed to the serious objection of a dangerous arrangement of its ammunition as regards its packing and transportation, and from the impossibility of loading it with loose powder and ball, the necessity for which often occurs. The primer of fulminating powder, and attached to the cartridge, is considered dangerous when in connexion with large quantities of ammunition. These objections may be overcome by those in Europe who are devoting great attention and consideration to this arm; if so, we should place ourselves on a footing with those military nations who may adopt it, and to whom hereafter we may be opposed. The board is therefore of opinion we should be in possession of this arm, known in Europe as the *Fusil Robert*, and that the honorable Secretary of War be requested to have purchased ——— stand of these guns, and cause them to be placed in the hands of select men, in order to a thorough course of experiments embracing all the incidents of campaign service, both in respect to the weapon and its ammunition.

The arms now in use in the United States service possess the power, in skilful hands, of all the effect of celerity and efficiency.

The experiments just finished are conclusive that up to forty rounds of fire, in reference to the usual character and incidents of service, they have the advantage in several respects, and equality in others to those of many chambers.

In the instances of the arms under consideration, it is believed, if even there be anything gained by their peculiarities over the common musket and Hall's guns in point of celerity, such advantage has been acquired by too great a sacrifice of important and indisputable principles; that in the desire to reach perfection in the construction of these arms, the convenience, physical power, and safety of those who are to use them have been wholly overlooked, and their liability to be assailed when not in a state of preparation to continue their fire would detract greatly from their character for efficiency.

The board confirms the favorable reports and opinion of various commissions established to test the merits of Hall's guns, some modifications and changes in the arm, and the equipments. They are easily effected. Then the board must entertain the opinion that, as an arm for military purposes, it possesses a decided superiority over every other now known construction of the system of guns which are loaded at the breech.

The application of percussion primers to arms for the use of troops has not yet been successful. With improved means of attaching them to the nipple or cone, they may be introduced into the service of light troops acting as tirailleurs. The difficulty of placing and fixing so small an object as the cap during the excitement of action, in excessively cold weather, or in dark nights, is deemed almost impracticable, and has prevented this improvement in fire-arms being generally adopted in any service.\*

Finally, it is the unanimous opinion of the board that the arms now in use in the service of the United States, viz: the musket, the rifle, and Hall's musket, rifle, and carbine, with such improvements in the construction as the latter are capable of, combine, in a higher degree, all the requisites of convenience, durability, simplicity, and efficiency than any that have been suggested for the general armament. All of which is respectfully submitted.

Signed on the part of the board.

JOHN R. FENWICK, *Brigadier General and President.*

C.

† Fired with a patch.

25TH CONGRESS.]

No. 744.

[1ST SESSION.]

PROCEEDINGS OF A COURT OF INQUIRY RELATING TO TRANSACTIONS OF BREVET  
BRIGADIER GENERAL JOHN E. WOOL, AND THOSE UNDER HIS COMMAND IN THE  
CHEROKEE COUNTRY, IN ALABAMA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES OCTOBER 9, 1837.

*To the House of Representatives of the United States:*

I have the honor, in compliance with the resolution of the House of Representatives of the 4th instant, to transmit the proceedings of the court of inquiry in the case of Brevet Brigadier General Wool.

M. VAN BUREN.

WASHINGTON, October, 1837.

WAR DEPARTMENT, October 9, 1837.

SIR: I have the honor to transmit herewith the proceedings of the court of inquiry, whereof Major General Scott was president, to examine into the transactions of Brevet Brigadier General Wool, &c., in the Cherokee country, in compliance with the resolution of the House of Representatives of the 4th instant.

Very respectfully, your most obedient servant,

J. R. POINSETT.

The PRESIDENT of the United States.

*Proceedings of a court of inquiry, held by virtue of the following orders:*

## GENERAL ORDERS No. 49.

HEADQUARTERS OF THE ARMY, *Adjutant General's Office, Washington, July 26, 1837.*

The major general commanding in chief has received from the Secretary of War the directions of the President of the United States to appoint a court of inquiry to examine into the transactions of Brevet Brigadier General Wool, and others under his command, in reference to his and their conduct in the Cherokee country, so called, as set forth in a letter from his excellency the governor of Alabama, dated July 3, 1837, addressed to the Secretary of War, and in the joint resolutions of the Senate and House of Representatives of that State, approved the 30th of June, 1837, which accompanied the said letter, all of which will in due form be laid before the court by the judge advocate.

The court will hold its session at Athens, in the State of Tennessee, or at any other place which the court may deem more convenient; to open at 10 o'clock a. m. on the 25th day of August next, or as soon thereafter as practicable.

The court will consist of Brevet Major General W. Scott, Colonel W. Lindsay, and Major M. M. Payne, 2d artillery; and Lieutenant W. C. De Hart, 2d artillery, judge advocate, will act as recorder.

The court will report the facts in the case, for the information of the War Department.

By order of Alexander Macomb, major general commanding in chief.

R. JONES, *Adjutant General.*

## SPECIAL ORDER No. 62.

ADJUTANT GENERAL'S OFFICE, *Washington, May 17, 1837.*

The court of inquiry instituted pursuant to "General Orders" No. 49, in the case of Brevet Brigadier General Wool, will report its opinion on the matter to be investigated, as well as the facts, for the information of the War Department.

By order.

R. JONES, *Adjutant General.*KNOXVILLE, *Tennessee, September 4, 1837, 10 o'clock a. m.*

The court met pursuant to the above orders.

Present: Major General Winfield Scott, Colonel William Lindsay, Major M. M. Payne; Lieutenant W. C. De Hart, judge advocate.

The orders above written being read, General Wool was asked if he had any objection to any member named, to which he replied in the negative: whereupon the court and the judge advocate were duly sworn. The judge advocate stated to the court that he had been instructed to proceed to this place and prepare the case; that, on the 9th of August, he had addressed the governor of Alabama, advising him of the institution of the court of inquiry to investigate certain acts of Brigadier General Wool, and requesting that he might be furnished with the necessary testimony and the names of witnesses. On the 18th of August, while on the road, he was informed that Governor Clay had passed the day previous on his way to Washington city. He addressed a note to him, and received the following answer.—(See C.)

On the 19th of August the judge advocate stated that he had also addressed a letter to his excellency the acting governor of Alabama, notifying him of the institution of the court, and requesting to be furnished with the necessary evidence to support the allegations made against General Wool by the State of Alabama; to which letter the following answer was given.—(D.)

The judge advocate further informed the court that there was but one witness present, and the only one, as the judge advocate had been informed, who was cognizant of the facts referred to in the letter of complaint; it therefore remained with the court to determine whether they would proceed, or wait another period.

The court was cleared. The court decided that the judge advocate should bring forward any documentary evidence in his possession, and examine any witness on the part of the United States who may be present.

The court was opened. The judge advocate read the letter (A) from his excellency G. C. Clay, governor of the State of Alabama, and also the preamble and resolutions (B) enclosed therein, of the legislature of the State of Alabama.

The judge advocate then said that, in pursuance of a suggestion contained in the letter (C) from his excellency G. C. Clay, ex-governor of the State of Alabama, he had summoned Captain James Morrow, of the East Tennessee volunteers.

General Wool rose and addressed the court. He said that, although he felt certain that the accusation urged against him by the State of Alabama was unfounded, and although that State, as was shown by the letter (D) of the governor, had not a tittle of evidence to support such accusation, yet, with the permission of the court, he was willing and desirous to spread before it and explain every transaction of his while commanding in the Cherokee nation, and, with that view, was ready to indicate persons and exhibit papers. The judge advocate replied, that as the witness now present was the only person alluded to by the person complaining on the part of the State of Alabama from whom information might be derived, he would prefer to examine him.

*Captain James Morrow was accordingly sworn.*

*Question by judge advocate.* In what capacity were you serving in the Cherokee nation?

*Answer.* As captain of a volunteer company, under the command of General Wool.

*Question.* Will you state to the court your knowledge of the instructions given by General Wool in relation to, and of the acts of dispossessing one or any occupant of property in the Cherokee nation, within the State of Alabama, as set forth in the letter of complaint?

*Answer.* General Wool instructed me to investigate all complaints made by Cherokees against whites. The original orders I have.—(E, F.) In consequence of this last letter, I requested General Wool to decide the case himself. The parties agreed upon the manner of taking testimony before a magistrate. I conveyed the testimony to General Wool, and received these instructions.—(G.) The letter explains that Sheriff Riddle was the administrator of the estate of John Gunter, senior, deceased, who had acquired the rights of a Cherokee by having married a native.

*Question.* Did the witness receive any further instructions, written or oral, on the same subjects from General Wool?

*Answer.* I received no other instructions. In obedience to the letter of instructions I dispossessed Colonel Steele of the improvement, and put in possession the purchaser of the same.

*Question.* Who was the purchaser, and by whom was the sale made?

*Answer.* The sale was made by the administrator; the purchaser was Scrimpsher, son-in-law of J. Gunter, senior, deceased. This Mr. Scrimpsher was the husband of a half-breed.

*Question.* Were the improvements of this estate "Indian improvements?"

*Answer.* They were. These improvements were all in Marshall county, Alabama. Sheriff Riddle was the administrator appointed by authority of the laws of Alabama. All the parties resided in the Cherokee nation.

*Question.* Were all the parties interested in this question "Indians," or "Indian countrymen?"

*Answer.* They were, with the exception of the administrator. Mr. Riddle resided without the limits of the Cherokee nation; he was sheriff of Jackson county. I will also state that Mr. Scrimpsher had left before I had completed the removal of Steele's property from the house, and told me to give possession to Major Allen, and he would be satisfied with it.

*Question by the court.* Will the witness please state to the court the *manner* of executing the order for dispossessing the occupant, Colonel Steel, the *means* employed, and what resistance, if any, was opposed to the witness.

*Answer.* When I received the general's instructions I saw Major Riddle and Colonel Steel together, and told them I should be very glad if they could arrange it without any interference on my part. Colonel Steel agreed at that time that he would give possession to whoever might be the purchaser, else I was to dispossess him. The day of the sale Colonel Steel bid the property off himself, but refused to pay his bid, unless Riddle would make him such a transfer as he required. Major Riddle told Steel that he would sell the place the next day. I went down that day, however, and Major Riddle promised to make any transfer be required, if he would pay the money; Steel, nevertheless, refused. They wished to refer it to me; I told them I had nothing to do with it, and Major Riddle went on the next day to resell the place. Scrimpsner then bought it. Some time during that day Major Riddle sent word to me that Colonel Steel was collecting armed men to resist. I took some of my company and went down and found between fifteen and twenty men with guns. The colonel met me on the way, and told me that he had no intention of resisting me, but as he had understood that Riddle intended to take possession without applying to me, he would resist him. The armed men dispersed, and I returned to camp. Scrimpsner had agreed to leave Steel in the house until the next day. The next morning Riddle and Steel came up to the cantonment. Riddle agreed that Steel should retain possession of a dining-room until he could get a place for his family, and Colonel Steel agreed to give up to the purchaser every other part of the improvement. I was indisposed, and sent my lieutenant to see that Riddle or the purchaser received the improvement. Some time during the day my lieutenant informed me that Colonel Steel refused to give possession of any part of it, and used a threat that there were more men in the country than in my company. Upon hearing this I rode down with a few of my men. Colonel Steel had left the premises. I did not complete the removal of the goods until next day, when Colonel Steel returned and apologized for the expressions which he had used. After I had dispossessed him, he expressed himself satisfied with the manner in which it was done, and requested me to give a pledge that I was now done with it; which pledge I gave. I said to some that there was a chance of some difficulty, and that they had better take care of themselves. I will state, however, that neither I nor any of my men were present at an affray which followed. There was an application made to me by a citizen to assist in quelling the affray, which I refused, on the ground that I could not interfere unless summoned by the sheriff, it being an affair between whites, and which terminated in the death of two white men. My camp was three miles from the place where the affray occurred, and it was over before I was applied to. I told them that it was the duty of the sheriff; but if they procured a summons from the sheriff I would render every assistance. In connexion with this affair, I will offer to the court these letters, (H, I, K.) The letter marked I was from the persons arrested under a charge of murder, and the other, K, was from the leaders of the opposite party.

*Question by the court.* Are you acquainted with the character of the population within the limits of the Cherokee nation, in Alabama, and what is it?

*Answer.* I am. A portion of the population is very respectable; but a majority, as I believe, with whom I have come in contact, are very unworthy, who are there for the purpose of robbing and plundering the Indians, and have exercised every species of oppression towards them.

*Question.* When resident there, and not having acquired the rights of Cherokee countrymen, are they considered as intruders, living there by sufferance of the United States, or not?

*Answer.* Why, the State of Alabama does not consider them so, I believe. Her laws have encouraged emigration there, and protect those who make improvements. The laws of Alabama consider all as citizens.

*Question by General Wool.* Were you not with me at the time I called to see Colonel Steel on the subject of the improvement in question; if so, will you state the conversation which took place between him and myself in relation to it?

*Answer.* I was with him; they had a good deal of conversation, I do not recollect all the conversation; I was not in the house all the time; but I distinctly remember that Colonel Steel said he would as soon have you to decide as any body, and he had no doubt but what you would do him justice; and he appeared anxious that you should decide.

*Question.* Did he make any objection to the decision after it was made, or, in other words, did he not appear to be satisfied with it?

*Answer.* Why, I cannot say that he was satisfied with it; I do not recollect any particular expression upon the subject, either of satisfaction or dissatisfaction. He was satisfied that some of the houses were left to him. Colonel Steel declared that he had purchased of John Gunter, jr., his share, and that of others of the heirs. Samuel and Edward Gunter refused to make any compromise with him.

*Question.* Have you any doubt as to the rightful claim of the Cherokees to the improvement of which Colonel Steel was dispossessed, under my instructions of June 3, 1837?

*Answer.* I have no doubt of it at all. It was admitted by Colonel Steel himself, from the fact of having offered to purchase of two of the heirs.

*Question.* Will you state what instructions I gave you in regard to your intercourse with the citizens in the Cherokee nation, and whether or not you were instructed to avoid all collision with the white inhabitants, and that the laws of the State in which you might be called to act should in all cases be respected?

*Answer.* Such were the tenor of the instructions; to avoid all unnecessary collision with the State authorities. I never saw any disposition on the part of General Wool other than to enforce the treaty faithfully, and protect the rights guaranteed by the treaty. I recollect that he often instructed me, in case any depredations on whites or Indians should be committed by men under my command, to make instant and ample remuneration.

The court adjourned to meet to-morrow at 9 a. m.

TUESDAY, September 5, 10 o'clock a. m.

The court met.

Present: Major General Scott, Colonel Lindsay, Major Payne; Lieutenant De Hart, judge advocate.

The proceedings of yesterday having been read, Captain *Morrow* was recalled. He stated that he wished to explain a part of his testimony. The part on the third page of the third sheet and fifth line, which says, "I said to some," means to some of the parties I had put in possession.

*Question by judge advocate.* Did you, by the orders of General Wool, dispossess any others in the Cherokee nation within the State of Alabama?

*Answer.* I did; I dispossessed a great many.

*Question.* Were all such cases for Indian improvements, and claimed by Indians?

*Answer.* Yes; they were Indian improvements, and claimed by Indians. There was a Cherokee made a complaint against a white man, who he said was in possession of his improvement; upon examination, I found that the Cherokee had sold his claim to another white man; that white man had brought suit against the individual in possession, and the suit was then pending in the civil courts of the country. I refused to attend to it, on the ground that the Indian had sold his claim to a white man; I informed the Indian that if the suit was lost by the person to whom he had sold, and if the improvement price was recovered from him by a suit at law, then I would attend to his complaint, as I should consider the improvement as reverting to him. This contingency did not take place in this case.

*Question.* Where was General Wool at the time you dispossessed Colonel Steel of the property in Marshall county?

*Answer.* I supposed the General was at New Town, Georgia, or at Valley river, North Carolina.

*Question.* Where was General Wool when you received the instructions in that case?

*Answer.* He was at New Town. I was there myself.

*Question by General Wool.* You stated that the administrator, Riddle, had exposed this property to sale. Do you mean thereby the fee-simple, or occupant right?

*Answer.* I mean the possessory right, which he sold.

*Question.* Were not the Indians in the habit of selling their good-will, or possessory right?

*Answer.* Yes.

*Question.* You have said that Colonel Steel declared that he had purchased of John Gunter, jr., his share, and that of others of the heirs. Did you not investigate the case; and if so, were you not satisfied that he had no claim to any of the improvements as designated in my order of the 3d June, 1837, and directed to be put in possession of Sheriff Riddle, the administrator?

*Answer.* I did not make a regular investigation of the case. I examined the testimony sufficiently, however, to be satisfied that Colonel Steel had no right to the improvement at all.

*Question.* You have stated that Riddle was an officer acting under the laws of Alabama. Will you state to the court whether his application to me was not grounded upon the fact that the laws of Alabama did not afford adequate protection to the parties whom he represented?

*Answer.* I can't say upon what grounds he made the complaint. The improvement was valuable; and if he had, as administrator, had recourse to the laws of the State, it would have been in the power of the other party to have kept the suit in court until the expiration of the treaty, thereby depriving the heirs of any benefit of the improvement or of the sale of it. And in addition to this, there was important Indian testimony in this case, which would not have been admissible in the courts of Alabama. I have known one or two cases where whites took advantage of the fact that Indian testimony was not admissible; and the property of one Indian has been levied on for the debt of another, as this last one could not prove his right to it. In one of the cases to which I have alluded, there was a trial for the right of property before a jury and magistrate. After the verdict I examined the Indian testimony, and was satisfied that the property belonged to a different individual than the one for whose debt it was executed. I reported the case to General Wool, and he directed me not to interfere, as the case had been decided by the civil tribunals of the country.

*Question by the court.* Was it customary for Cherokees dispossessed of their improvements by whites to appeal to the State tribunals for redress, or did you ever know an instance of such appeal?

*Answer.* There have been instances, but they were rare, because the parties appealing were generally unsuccessful. The principal cause of non-success was, that the juries were composed of residents of the Cherokee county, who, many of them, had been guilty, probably, of taking violent possession of property themselves; and if not, were all under the influence of the prejudices of that country against the Cherokees. Another cause was, that Indian testimony is not admissible in the State courts of Alabama, and that in some, if not many of the cases, they had none but Indian evidence, and therefore they could prove nothing.

*Question.* Were not the delays of judicial process in the State courts, from the nature of the property in question, equivalent to a decision against the Cherokee claimant?

*Answer.* I think so, if the parties in possession wished delay.

*Question.* You have spoken of the constitution of the juries. Were not the magistrates, sheriffs, and all others concerned in the administration of justice the same sort of people?

*Answer.* The sheriff of Marshall county resides without the limits of the Cherokee country. In all the other counties of the Cherokee country within the State of Alabama, with the exception of Jackson county, the sheriffs, magistrates, and jurors are residents of the Cherokee country. I am not acquainted with all in the country. Most of the officers of the country, with whom I have come in contact, I have found under the full influence of the prejudice against the Cherokees.

General Wool here asked the court how far it would be relevant for him to consider, in his defence, the letter of the 17th of April last, as referred to in the letter of his excellency C. C. Clay, of the 3d of July, 1837, and the inference made by the writer thereof.

The court was cleared.

The court decided, in reply to this inquiry, "that, as the letter of the 17th of April had not been submitted to the court by the proper authority, but on the contrary, as it would seem, intentionally withheld, the court cannot go into an investigation of its supposed contents—the court being limited in its range of inquiry to the matters specially indicated and charged in the joint resolutions of the legislature of Alabama, and the letter of his excellency the governor of that State which communicated to the War Department those resolutions."

The court was opened and the decision or opinion of the court made known.

*Question by General Wool.* Are you acquainted with the course I have uniformly pursued as commander of the forces in the Cherokee country?

*Answer.* I believe I am.

*Question.* Do you know of any attempt on my part "to usurp the powers of the civil tribunals, disturb the peace of the community, and trample on the rights of the people" of the States, as charged in the letter of his excellency Governor Clay, of the 3d of July last, to the Secretary of War?

*Answer.* I do not know of any such attempt. General Wool always appeared very anxious to avoid any collision with the citizens, to avoid any violation of their rights, and to faithfully and honestly execute the treaty. He was always very industriously employed. I was with General Wool at all the posts except at Ross's Landing; his course at the different places was the same. The only objection I

had to him as an officer was, that I thought he did not carry the execution of his power, which I thought him possessed of, far enough in restraining the whites at New Town, Georgia, where the sale of spirits was tolerated on account of avoiding difficulties with Georgia, at least while the Tennessee troops were there; and I think the reason given by the general was, that there had been complaints made of the exercise of military authority as illegal by the Tennessee troops in Georgia. I have no doubt that all the officers, as well as myself, had the utmost confidence in the zeal and ability of General Wool, (I have had frequent conversations with them,) and that he had no object but a faithful discharge of his duties.

General Wool stated to the court that he would be ready to proceed with his evidence to-morrow; and, as there was no further evidence on the part of the complaint,

The court adjourned to meet to-morrow at 10 o'clock a. m.

WEDNESDAY, *September 6, 10 o'clock a. m.*

The court met pursuant to adjournment.

Present: Major General Scott, Colonel Lindsay, Major Payne; Lieutenant De Hart, judge advocate.

General Wool presented to the court the following documents, to wit: Nos. 1 to 6, inclusive, which were read in the order enumerated.

THOMAS C. LYON was duly sworn on the part of the defence to explain a discrepancy between the date of the letter marked 5, and the date of the same as referred to in the letter marked 6. He says: "I was serving with General Wool as his aide-de-camp. The letter of the Secretary of War of the 1st of September (6) is, I believe, in answer to General Wool's letter dated the 15th of August, (5.) In the letter of General Wool of the 15th, I believe the instructions which General Wool sent to different officers were sent with this letter. These instructions were one to Captain Vernon, one to Colonel Byrd, one to Captain Morrow, and one certainly to General Dunlap. The mistake of the date might have occurred with myself in transcribing the letter. All these letters were sent to the Adjutant General's office. I perceive that the letters of the 4th and 12th of August to General Dunlap (4) are marked as having been sent to the Adjutant General's office."

The documents marked 7 to 26, inclusive, were read.

The court adjourned to meet to-morrow at 12 m.

THURSDAY, *September 7, 12 o'clock m.*

The court met pursuant to adjournment.

Present: Major General Scott, Colonel Lindsay, Major Payne; Lieutenant De Hart, judge advocate.

The paper marked 28 was read—the protest.

*Alexander Riddle was duly sworn for the defence.*

*Question by General Wool.* Will you state to the court your knowledge of the facts attending the dispossessing of Colonel Steel of certain improvements in Marshall county, Alabama, by my order?

*Answer.* It is near two years since the orphans' court of Jackson county, Alabama, appointed me administrator of the estate of Mr. Gunter; my recollection does not serve me as to the exact time. I went on to take possession of the estate and papers; the former administrator gave me possession of everything, excepting the improvement; that he told me there would be, he presumed, some difficulty in getting possession of. He stated he did not know whether I could get possession without difficulty. I, after examining the case fully, and taking legal advice, determined I could not get possession of it, unless through General Wool, or some of his officers. I had frequent conversation with Mr. Steel, who went on the place without consent. When Mr. Potter, my predecessor, told me that Steel said he had a contract with young Gunter to buy the place, and asked him if he would be safe in buying from young Gunter, Mr. Potter said he pulled out the old man's will, and Steel read it. The contents of the will was that the improvements should be sold among the heirs. Steel, when he read this, said he would have nothing to do with it. After I got in possession of everything, except the improvement, he had frequent intercourse with me, and refused to give me possession, saying I must look to John for my rights. I told Colonel Steel I had nothing to do with John; but as administrator, I claimed the right of selling it; and told him he well knew John Gunter had no right to sell the place, or any other man but the administrator. I told him I wished possession that I might sell the place without difficulty, as he knew I ought to have the privilege of selling it. About this time John Gunter and Steel, who lived together, would ask me why I did not sell the place according to the provisions of the will. I told them the reason was that he would not give possession; but if he gave possession, I would sell it as soon as I could advertise it. About this time the heirs, with the exception of John Gunter, wrote to me not to sell the place until I could get possession, as it would not fetch a fair price encumbered as it was. Steel at that time asked me to assist him in trying to buy some of the heirs' interest; they refused to me to sell, and wanted me to sell according to the will, and would do nothing else. I thought now that I could not get possession, except through General Wool. When I came up to New Echota, General Wool was not there. I made my complaints known to Colonel Williams, and he thought it most likely that I could get possession that way. I determined to go back again some time in the month of February; when I went back I told Colonel Williams I did not know General Wool, and he made out a statement of the case and presented it to General Wool; General Wool seemed to think it was his duty to give possession, and gave me a letter to Captain Morrow to give me possession, unless he saw it was likely to produce too much excitement; he said he believed it his duty to give possession, but to what extent he could not say—he would see when he came down; Captain Morrow determined, when I saw him, not to have anything to do with it. At the time General Wool appointed to meet me at Gunter's we all went to Colonel Steel's house—the improvement I was contending for; there General Wool told Mr. Steel he conceived it was his duty to give possession to me of all the improvements old Mr. Gunter had made, and that he would give me possession; General Wool remarked to Mr. Steel that it seemed a very valuable improvement, and he was willing to call in and consult others about it, as he wished to do nothing but justice, and wished no hard thoughts about it. Colonel Steel replied, in substance, that it was useless for General Wool, for, said he, "I am perfectly willing that you should decide it as soon as any man in the world—I will submit to your decision cheerfully." General Wool then agreed, in all our presence, that Captain Morrow should take down all the proof on both sides, and bring it to New Town, and he would try, if

possible, to have the decision final against the day I had advertised to sell the property; Steel requested I would not have him dispossessed if it went against him; that he intended to purchase, and if he was not the purchaser he would give up the possession without any trouble; he stated that he had bought out some of the heirs, and if he did not purchase he would give possession on any day I should name; he stated that if I was afraid, he would give me a bond for \$20,000 that he would give possession two or three days after the sale; he tried me three or four times to get me to take a bond; he had a bond drawn out once, but I refused to take it; I said, you told me you would give possession; if you do not, I can only look to General Wool for these Cherokee people to give me possession.

The place was advertised to sell on the 5th of May, 1837, but I had promised General Wool to postpone from day to day until Captain Morrow should return with his decision; on Monday, the 5th, I called the sale and postponed it until the 6th at 12 o'clock, and on the 6th postponed to the 7th, when I sold; Captain Morrow arrived on Tuesday evening and sent for me to go up; I went up before the sale. Colonel Steel came to me, on the premises, in the presence of Captain Morrow; the decision was read in the presence of Colonel Steel and myself; he asked me how I liked it—he had seen it previously; I told him that, so far as General Wool had decided, I believed it was right, and he expressed himself fully satisfied with it; I then told Colonel Steel I should offer the place that day, and said, "Colonel Steel, if I confine this sale to the heirs, I shall require of you to produce a power of attorney to act as John Gunter's agent;" he seemed to be much pestered at that, and said I had no right to require such a thing as that, and that I knew he was John Gunter's agent; I then offered the place and the place, was bid off to Nathaniel Steel, by his brother Alexander Steel, for \$2,540 25, or thereabouts; Mr. Steel asked me to walk up to the house with him; I told him I would make him as good a right as the administrator could make, or as good as old Mr. Gunter could make if he was alive; I told him I was waiting for his own lawyer to write the conveyance to him from me; his own lawyer refused, and I then called on Judge Wycer, who wrote it, and I presented it to him, and made a demand of the money, and he refused to pay the money; I then told him if he did not pay me I should be compelled to go and offer the place again; I went back again to the company and made a demand of the money in presence of several gentlemen, and tendered the deed of conveyance; he took the deed and wrote on it "*protested*," and signed his name "Nathaniel Steel;" I then made known that the purchaser had not complied with the terms, and I offered it again; I could not get that evening a fair price, and I postponed the sale to next day at 11 o'clock, at which time I offered it again and sold it to Martin Scrimpsheer, who bid it off for six hundred and between seven and eight dollars; Mr. Scrimpsheer paid me the money, and I made him a right, though after I had sold it and received the money Captain Morrow and myself told Mr. Steel that if he paid the money he should not be dispossessed. Before the sale, from Monday to Friday, there appeared signs of hostilities, and there were a number of men assembled with guns; I was cautioned against this, and although Steel had never offered me any insult, I was told that Steel had threatened to kill me; I had reason to believe that my life had been threatened more than fifty times, and that those persons were gathered there for the purpose of deterring me; the signs of hostilities were so strong on Thursday evening that I sent for Captain Morrow to come down; he rode down in the evening with some of his men; Steel denied having any intention of interrupting me, and pledged himself that he would not; on Friday morning Steel and myself rode up to Captain Morrow's camp; I asked Captain Morrow to go down, or send down a part of his men, as I thought there would be difficulty; Captain Morrow then told Steel that he would not dispossess him if he would pay the money, \$2,500; Steel then said he might send as many men as he pleased, but it was unnecessary, as he would give possession; he wanted me to give him as long a time as I could, in order that he might get away a part of his plunder; Captain Morrow sent two of his men—Steel and myself rode down to the place where he lived, and Steel and Mr. Scrimpsheer and the two men commenced moving Steel's goods out of the house; I then thought the matter was finally settled, and got on my horse to go home between 11 and 12 o'clock; I got between two and three miles, when there came a runner after me; Mr. Scrimpsheer sent me word that Steel refused to give him possession, and if I did not come back and put him in possession he would sue me for the money he had paid me.

*Question by judge advocate.* Was there no remedy for the heirs under the laws of Alabama?

*Answer.* No; I do not think there was, not any that I could avail myself of; the part of the improvement which Steel holds yet I cannot get a lawyer who thinks that I can bring a suit successfully; and that if the general government does not protect the Indians, and does not give possession under the treaty, I cannot get it.

*Question.* Were you an officer of the courts of Alabama, or under her laws?

*Answer.* Yes. At that time I was sheriff of Jackson county, and by virtue of that office was appointed administrator. The sheriff, by the court, was compelled to take it.

*Question by the court.* Had the witness any interest other than that of administrator in the improvements occupied by Steel?

*Answer.* I had not.

*Question.* In calling upon General Wool to give you military assistance in getting possession of the improvement in question, did you consider yourself as acting in the usual and legal way, according to the understanding of the country, before and after that time?

*Answer.* I did not know of any other way. I thought that the only way of getting justice for the parties whom I represented. From my understanding of the treaty, I pursued the course I should pursue again. Such was the opinion of every body who had noticed the treaty, with whom I had consulted.

*Question.* The witness has stated many of the facts and circumstances, but, in general, what was the character of General Wool's temper and manner in the transaction in question; was it harsh and overbearing, or mild and considerate?

*Answer.* Mild and considerate; he acted with as much caution as I ever knew a man in any transaction whatever.

*Question by General Wool.* The governor of Alabama, in his letter to the Secretary of War of July 3, 1837, has charged me with usurping the powers of the civil tribunals of Alabama, disturbing the peace of the community, and trampling on the rights of the people. Will you state to the court how far my conduct, whilst commanding in the Cherokee country, was considered by yourself, or the people of Alabama generally, liable to such charges?

*Answer.* I have never known of any instance where he has usurped any authority which did not belong to him. I know of no person, who can be relied on, who has ever complained of him. There are some people, to be sure, who are his enemies, but they are such as have imposed upon the rights of the Cherokees. Except at one time, there was an excitement among the people when he stopped the sale of spirituous

liquors, which afterwards subsided. I have no doubt but that a great majority of the community in that section of the country would be glad if he would remain there.

*Question.* Will you state whether or not the people expressed regret at my recall?

*Answer.* They did. I believe a large majority of them would be in favor of his being stationed there.

*Question.* You have stated that part of the improvement of John Gunter, senior, deceased, is still in the possession of Mr. Steel, and that the most eminent lawyers have advised you not to bring suit under the laws of Alabama. Whilst giving you this advice, was not the justice of your claim to the possession always admitted?

*Answer.* Report says the transaction was made in fraud, but the deed shows, as recorded in our courts, that there was a valuable consideration; and I recollect that General Wool said because it was a litigated case he would not give possession.

*Question.* In all controversies between the whites and Indians, do you not consider that, from the situation of the country, the constitution of courts and juries, &c., that the Indians rarely obtain justice?

*Answer.* There have been very few trials. They can bring suits, but their evidence is not received in our courts, and they are cut off without any remedy whatever.

*Question.* Is there not now considerable excitement prevailing throughout the Cherokee portion of Alabama, in consequence of white men unjustly dispossessing the Cherokees of their property?

*Answer.* There are complaints, in several instances, to my knowledge. I have not been a great deal there latterly, but there are complaints.

*Question by the court.* Are you aware of any law passed at the last session of the legislature of Alabama, interdicting or limiting the exercise of authority on the part of the United States officers, and what are its provisions?

*Answer.* I do not know. I have not seen that act.

*Question by General Wool.* Was the justice of your claim, as administrator, to such parts of the improvement still held by Steel admitted to be just?

*Answer.* It is thought that if there was any law there I should be entitled to it. I know nothing to the contrary of its being a fair transaction, except what rumor says.

The court adjourned to meet to-morrow at 11 o'clock a. m.

FRIDAY, September 8, 11 o'clock a. m.

The court met pursuant to adjournment.

Present: Major General Scott, Colonel Lindsay, Major Payne; Lieutenant De Hart, judge advocate.

The proceedings of yesterday were read.

The paper marked 27 was read.

*Alexander Riddle* was again called. He stated that he wished to make some correction of his evidence, and says: "I was mistaken in the time I was appointed administrator; upon examination of my memorandum-book, I was appointed something more than twelve months ago. When I carried Captain Morrow the letter of General Wool, he said he would take all the evidence and submit it to General Wool, but he would not decide on the case, as Steel had said that if he decided against him he would take an appeal against Captain Morrow."

*Question by General Wool.* Was the improvement of John Gunter, senior, valued as other Indian improvements, and returned to the commissioners for settlement; and if so, were the heirs paid for the same as guaranteed by the late Cherokee treaty?

*Answer.* Yes; the agents valued the improvements about which this contest arose. They valued it in the name of John Gunter, junior. They stated that the reason it was valued in his name was, their instructions from the commissioners was to value improvements in the name of whoever they found in possession of them. I objected to their valuing the improvement in John Gunter, junior's, name, and gave the agents a certified copy of the will and of the transfer of the improvement by John Gunter, junior. They then told me that they had no doubt but that I would be able to maintain it, but, according to their instructions, they must make it out in John Gunter, junior's, name. After they made a return, I filed a bill against John Gunter for the valuation of the improvement. The commissioners decided that the property was the property of the estate, and I, as administrator, was entitled to the valuation. I have never seen the decision of the commissioners on the books, but they told me they had awarded the valuation to me, excepting some works John Gunter had done after he had sold the improvement to his father.

*Mr. Joseph Byrd was duly sworn.*

*Question by General Wool.* In what capacity were you serving with me in the Cherokee nation?

*Answer.* As colonel of the second regiment of East Tennessee volunteers.

*Question.* The governor of Alabama, in his letter of complaint, has charged me with usurping the powers of the civil tribunals of Alabama, disturbing the peace of the community, and trampling on the rights of the people; you will please state to the court what my course of conduct was as military commander in the Cherokee nation, and whether it was considered by yourself, or the people of the Cherokee country, liable to such charges.

*Answer.* All the orders and communications I received from General Wool were mild and conciliatory, always directing me to take great care and caution not to have the rights of the citizens intruded upon; General Wool's course and conduct, so far as came to my knowledge, was not complained of by any person in the Cherokee country, either by the whites or natives. The volunteers, the citizens, and the Cherokees, unanimously regretted the recall of General Wool from the Cherokee nation.

*Henry B. Shaw was duly sworn.*

*Question by General Wool.* In what capacity were you serving with me in the Cherokee country?

*Answer.* As lieutenant of the Georgia volunteers since the 1st of December last. From the 2d of May until the 1st of July I was acting aide to General Wool.

*Question.* The governor of Alabama, in his letter of complaint, has charged me with usurping the powers of the civil tribunals of Alabama, disturbing the peace of the community, and trampling on the rights of the people; you will please state to the court what my course of conduct was as military commander in the Cherokee nation, and whether it was considered by yourself, or the people of the Cherokee country, liable to such charges.

*Answer.* I believe I am very well acquainted with the course of General Wool from the time I entered the service until he left it. I saw nothing, nor knew of anything to afford foundation for such charges, but everything to refute them. I have been on several occasions employed by General Wool's order in preserving the peace of the community, and sustaining the authority of the civil tribunals. I never knew of any act of General Wool, or of any other person by his order, in violation of the laws of the country. In every case where the State laws could operate, I know that General Wool not only preferred that they should operate, but assisted the officers of the country in executing them. There was no dissenting opinion in the country on this subject within my knowledge.

*Question.* You will please state whether the circumstances, as within your knowledge, and the state of feeling in the Indian country, were such as to warrant the statements in my letter of the 31st March, 1837, transmitted to the Hon. J. R. Poinsett, Secretary of War.

*Answer.* I have read that letter over; I was not in the staff of General Wool when it was written, but was consulted by him, having the honor of his confidence. In relation to that letter, which I copied for him, I would say, most unhesitatingly, that the circumstances referred to, and whose existence I knew, and the state of feeling in the country, did fully warrant it. I was charged with delivering over to the civil authorities the murderer referred to in that letter.—(See No. —.) I also examined the case fully, in order to lay it before the civil authorities. In that case, every proceeding was according to the laws of the State of Georgia; which laws were found, in that case, as in many others, to my knowledge, totally insufficient to answer the ends of justice towards that oppressed people. I believe, upon my knowledge of the country at that time, that the views of General Wool, in relation to that condition, are positively correct; that the Indians had been goaded almost to madness by the oppression of the whites, and, but for the justice afforded by General Wool, I believe there would have been serious difficulties in the country.

*Question.* Will you state whether or not, during your term of service in my staff, my time was not assiduously employed to promote the objects of the government, and execute the treaty faithfully, so far as its execution was intrusted to me.

*Answer.* I would state that during that time General Wool was constantly employed in executing the treaty as far as it was intrusted to him; he appeared to have no other objects than carrying out the purposes of the government as made known to him; he was generally employed from early in the morning to late at night in the duties of the command.

*Question.* Were there not almost daily complaints by the Indians from all sections of the country of having been dispossessed of their property by the whites; and were they not generally restored upon investigation by some officer of my command?

*Answer.* There were complaints almost every day of that kind, which General Wool always directed to be investigated by officers under his command, if he did not investigate them himself. Where they came under the provisions of the 16th article of the treaty they were always restored, which restorations I never knew controverted or resisted.

*Thomas C. Lyon was recalled.*

*Question by General Wool.* In what capacity were you serving with me in the Cherokee nation?

*Answer.* I served in the capacity of aide-de-camp from the 10th of July, 1836, I believe, until he left the country.

*Question.* The governor of Alabama, in his letter of complaint, has charged me with "usurping the powers of the civil tribunals of Alabama, disturbing the peace of the community, and trampling on the rights of the people;" you will please state to the court what my course of conduct was as military commander in the Cherokee nation, and whether it was liable to such charges.

*Answer.* I do not think it liable to such charges myself, nor do I think that the people of that country do. During General Wool's whole course as commander in the Cherokee nation he acted, I think, with great caution, as far as the rights of States or of individuals were involved. In all the instructions to his officers he particularly enjoined it upon them not to infringe the rights of individuals, or violate the laws of the States. If he committed any error in first coming to the country, I think it was an over-caution on these points.

*Question.* You will please state whether the circumstances, as within your knowledge, and the state of feeling in the Indian country, were such as to warrant the statements in my letter of the 31st March, 1837, transmitted to the Hon. J. R. Poinsett, Secretary of War?

*Answer.* Yes; I concur in the general tone and sentiments of that letter entirely.—(See —.) I think that the Indians were laboring under great excitement against the whites on account of the oppression they had suffered; and I think that nothing but fear of the consequences, and the influence of their leaders, would have prevented them from committing acts of hostilities. The case referred to of murder I was acquainted with, having examined the persons brought up to General Wool's headquarters. It was a very aggravated and unprovoked murder; and that case, taken in connexion with others, convinced me that the civil tribunals were inadequate for the protection of the Indians. General Wool's conduct in all cases towards the Indians had a tendency in restraining them and softening their animosities towards the whites and the government.

*Question.* Will you state whether or not, during your time of service in my staff, my time was not assiduously employed to promote the objects of the government and execute the treaty faithfully, so far as its execution was intrusted to me?

*Answer.* It was; I never served with a person whom I thought more devoted to business and the fulfilment of his duties. I believe the officers and soldiers of General Wool's command, and the citizens of the neighboring country, expressed a very general and decided regret at his recall.

*Question.* Were there not almost daily complaints by the Indians, from all sections of the country, of having been dispossessed of their property by the whites; and were they not generally restored upon investigation by some officer of my command?

*Answer.* Complaints of the kind referred to were very numerous; generally they were ordered to be investigated by some officer of the command, and possession restored when it was thought they were entitled to it.

*Henry B. Shaw was recalled.*

*Question.* Was not my recall from the command in the Cherokee nation generally regretted by the citizens of the country, as well as the officers and soldiers under my command?

*Answer.* It was; I know of many citizens writing to the War Department and remonstrating against it; I know that some of the Indian chiefs did so; and I know that I, in common with others of the Georgia volunteers, addressed a remonstrance to the Secretary of War and sent it; because we, officers, soldiers, citizens, and Indians and all, were fully satisfied with General Wool's course, and approbated it in every particular.

The letter marked — was read.

*Mr. Thomas C. Lyon was again called.*

*Question by General Wool.* Was the letter just read sent to the person to whom it is addressed?

*Answer.* I believe it was, though I did not put it in the office. I copied the letter. I have no reason to doubt its being duly despatched.

General Wool having stated that as it was not probable he would present any further testimony, and as the judge advocate had no other evidence on the part of the complaint, in order to give time for the copying of the documents, and for the defendant to prepare his papers,

The court adjourned to meet on Monday, the 11th instant, at 12 o'clock m.

MONDAY, September 11, 12 o'clock m.

The court met pursuant to adjournment.

Present: Major General Scott, Colonel Lindsay, Major Payne; Lieutenant De Hart, judge advocate.

As General Wool was not prepared to present his defence the court adjourned to meet to-morrow at 10 o'clock a. m.

TUESDAY, September 12, 10 o'clock a. m.

The court met pursuant to adjournment.

Present: Major General Scott, Colonel Lindsay; Lieutenant De Hart, judge advocate.

General Wool not being prepared with his defence, the court adjourned to meet to-morrow at 10 o'clock a. m.

WEDNESDAY, September 13, 10 o'clock a. m.

The court met pursuant to adjournment.

Present: Major General Scott, Colonel Lindsay; Lieutenant De Hart, judge advocate.

The court adjourned to wait for General Wool to prepare his defence, to meet to-morrow at 9 o'clock, a. m.

THURSDAY, September 14, 9 o'clock, a. m.

The court met pursuant to adjournment.

Present: Major General Scott, Colonel Lindsay, Major Payne; Lieutenant De Hart, judge advocate.

General Wool having appeared, and stated to the court that he was ready to proceed, presented the following defence. (No. 29.)

The court was cleared, and after mature deliberation on the testimony adduced, find this

#### OPINION.

The court, after fully weighing and considering the whole of the testimony submitted in the case, are of opinion that not one of the imputations on the conduct of General Wool, contained in the preamble to the joint resolutions of the legislature of Alabama, or the letter of his excellency Governor Clay to the War Department, which enclosed the said resolutions, is founded in justice or in fact. It will be seen that on the application of the judge advocate to the executive of Alabama for documents and the names of witnesses to support the accusation against General Wool, the late governor (the honorable C. C. Clay) replies: "The only official information I ever received in reference to the conduct of General Wool will be found in the executive archives. I am not informed of the names of the witnesses to prove the charges against General Wool, but presume the officers who served under him in that part of the Cherokee nation lying in Alabama would be competent to prove the orders which were the subject of complaint." And the acting governor (his excellency H. McVay) says: "Having caused an examination to be made, nothing can be found on file in this department which will enable me to furnish the information desired, nor am I able to comply with your request from other sources." Pursuing, however, the suggestion of the honorable Mr. Clay, that "the officers who served under him (General Wool) in that part of the Cherokee nation lying in Alabama would be competent to prove the orders which were the subject of complaint," the judge advocate, principally at the instance of General Wool, summoned many witnesses, and the latter has also freely submitted to the court every paper in his power which, as it would seem, belongs to the matter under investigation.

From this mass of evidence, parol and documentary, it appears that in his conduct towards Alabama, so far from "disturbing the peace of the community" and "trampling on the rights" of her people, General Wool's acts were so strikingly marked by caution, temper, and mildness, as to receive the almost universal approbation of the very people whom he is charged with having outraged.

Another, and the principal accusation contained in the letter of Governor Clay to the War Department (evidently founded on the preamble of the said joint resolutions) is, that *General Wool had usurped the powers of the civil tribunals of Alabama*; and the said preamble sets forth that "a company of volunteers in the service of the United States, under the command of (Brigadier) General Wool, have been stationed in the country lately owned by the Cherokee tribe of Indians in this State, for the pretended purpose of keeping peace between the said tribe of Indians and the citizens of the State, and have taken upon themselves the authority to adjudicate upon the claims of our citizens to their right to the possession of improvements; and in the enforcement of those adjudications have brought about a most ruinous and fatal conflict between our most worthy citizens, the consequences of which have already resulted in the taking of each other's lives."

The case here referred to has been most fully developed in the evidence; from which it appears that the Indian children of one John Gunter, deceased, through the sheriff (Riddle) of Jackson county, administrator *ex officio*, under the orphans' court, claimed the possession of certain *improvements* of which Nathaniel Steel, a white man, was in the actual occupancy; that on the application to that effect to General Wool by the sheriff-administrator, General Wool decided the case, with the previous approbation of the said Steel, giving the right of possession to a certain part of the improvements to the administrator, with which decision Steel expressed himself to be satisfied; that Captain Morrow, who commanded a volunteer company three or four miles off, received instructions from General Wool to put the administrator in possession of that part of the improvements adjudged to him; that Steel quietly, and without the application of military force, consented to give up the possession, and began accordingly to evacuate the premises, upon which Captain Morrow and the small detachment that was with him withdrew to his camp, distant as aforesaid; and that the conflict which afterwards occurred was neither in the presence nor, at the moment, within the knowledge of any officer or soldier in the service of the United States.

It is further in proof, and indeed fully admitted by General Wool, that he decided many other claims preferred by Indians to improvements wrongfully possessed by citizens of the States, and it would appear that in all these cases his decisions were acquiesced in, not only without conflict, but without complaint. The question now occurs: By what authority did General Wool take upon himself to give decisions on the class of cases just recited; and in doing so, did he, as is solemnly charged from a high quarter, usurp the powers of the civil tribunals of Alabama?

The sixteenth article of the treaty between the United States and the Cherokees, ratified May 23, 1836, allows those Indians to remain in the country therein ceded to the United States, up to May 23, 1838, and the United States stipulate "to protect and defend them (the said Indians) in their possessions and property and the free use and occupation of the same." This treaty is repeatedly referred to in the instructions from time to time addressed to General Wool by the War Department, and once emphatically by President Jackson himself, in a letter to the same commanding officer, and in each case as a rule of conduct for the latter.

In this letter from the then President, and also in that from the War Office, October 12, 1836, General Wool is directed to consider the sixth article of the said treaty, which confers even a higher power on the commanding officer than the sixteenth, as applicable to the Cherokees whilst yet residing within the geographical limits of North Carolina, Georgia, Tennessee, and Alabama, and consequently that he (General Wool) was, by the sixteenth article, fully invested with the inferior power of repossessing an Indian claimant of improvements wrongfully withheld by a white intruder, not recognized by the Cherokees as one of their people. Again, the instrument agreed upon by the United States and the Cherokee nation, and ratified by the Senate of the United States May 23, 1836, being called, upon its face, a *treaty*, and repeatedly referred to as such by the President and Secretary of War, General Wool naturally considered it as such an instrument as is spoken of in the second clause, article six, of the Constitution of the United States; that is, as the supreme law of the land; and, consequently, believed himself, under it and his instructions, to possess the right as well as the power to do justice, in the Cherokee country, to Indian complainants, without usurping the power of the civil tribunals of Alabama or that of the tribunals of the other particular States mentioned. Without, however, pushing this view of the subject any further, which might be improper in a military tribunal, this court is of opinion that General Wool, in the acts recited and complained of, cannot be justly charged with having usurped powers belonging to the courts of Alabama.

In the letter of his excellency Governor Clay to the Secretary of War, dated July 3, 1837, before the court, there is an incidental mention of another letter from the same to the same, complaining of other acts of General Wool, perhaps of the same or a similar character to those already noticed; but this letter not having been submitted to this court by the proper authority, and its contents unknown, except by conjecture, no testimony has been taken, and no opinion is here given on its subject.

The attention of the court, in its order of appointment, has also been directed to "others under his (General Wool's) command, in reference to" the matters complained of; but the name of no other officer is given in that order, or mentioned by the legislature or executive of Alabama in the papers from them submitted to the court. It has, however, been incidentally disclosed by the evidence that Captain Morrow, commanding a company of Tennessee volunteers, in the temporary service of the United States, was the individual charged with the execution of General Wool's decision relative to the improvements of John Gunter, deceased, which were in the possession of Nathaniel Steel. In reference to this excellent officer, (Captain Morrow,) it is sufficient to say that he acted in strict conformity with the orders of his superior, and in such manner as to demand and receive the emphatic approbation of all the parties claiming those improvements, as may be seen in their respective letters to him, annexed to the proceedings of this court.

The court adjourned *sine die*.

WINFIELD SCOTT, *Major General and President of the Court.*  
W. C. DE HART, *Judge Advocate, Recorder of the Court.*

#### *Synopsis of the evidence and documents.*

July 3, 1837.—Governor C. C. Clay, of Alabama, encloses resolutions of the legislature of Alabama to the Secretary of War, and accuses General Wool of having "usurped the powers of the civil tribunals, disturbed the peace of the community, and trampled upon the rights of the citizens."—(Doc. A.)

June 30, 1837.—Resolutions of the legislature of Alabama.—(Doc. B.)

August 19, 1837.—Hon. C. C. Clay to W. C. De Hart, judge advocate, referring him for evidence to the executive archives of the State of Alabama.—(Doc. C.)

August 28, 1837.—His excellency H. McVay, acting governor of Alabama, to W. C. De Hart, judge advocate, states that there is no evidence on file in the executive archives of Alabama against General Wool.—(Doc. D.)

January 23, 1837.—General Wool to Captain J. Morrow, instructing him to investigate all complaints, to restrain the Indians in disorders, both Creeks and others, and to prevent the whites from encroaching on their rights.—(Doc. E.)

March 21, 1837.—General Wool to Captain J. Morrow, instructing him to examine the case of N. Steel,

in possession of the estate of John Gunter, senior, deceased, and to give the administrator possession, if right.—(Doc. F.)

June 3, 1837.—General Wool to Captain J. Morrow, being his opinion and instructions to him relative to the estate of J. Gunter, senior, deceased; directs him to give possession to Sheriff Riddle, the administrator; excepts a part of the improvements.—(Doc. G.)

July 3, 1837.—N. Steel to Captain Morrow; thanks him for his conduct at the time of giving possession to the purchaser, and dispossessing him of the estate of John Gunter, senior, deceased.—(Doc. H.)

June 21, 1837.—N. Steel and others to Captain J. Morrow, thanking him for the manner in which he acted towards them.—(Doc. I.)

June 21, 1837.—A committee on the part of the citizens of Claysville, Alabama, to Captain Morrow, inviting him and his company to a public dinner.—(Doc. K.)

June 20, 1836.—Secretary of War to General Wool; directs him to proceed and take command in the Cherokee nation; general instructions for his government; encloses the treaty.—(Doc. No. 1.)

May 23, 1836.—Extract of a treaty with the Cherokees.—(Doc. No. 2.)

July 30, 1836.—Acting Secretary of War to General Wool; says no force or intimidation must be used to remove the Indians, who shall, until the expiration of the treaty, be protected in the peaceable possession of their country.—(Doc. No. 3.)

August 4, 1836.—General Wool to Brigadier General Dunlap; directs him to proceed to New Echota to give protection to the Cherokees; to be careful of coming into conflict with the Indians, and to prevent interference by the Georgia troops. If the Georgians are raised by authority of Georgia, they are to report to General Wool; to respect the sovereignty of the State.—(Doc. No. 4.)

August 12, 1836.—General Wool to Brigadier General Dunlap. Directs him to protect Ridge in the enjoyment of his property on the Coosa river.—(Doc. No. 4.)

August 15, 1836.—General Wool to the Acting Secretary of War. Reports his arrival at New Echota. The Indians dispersed at a council without coming to any conclusion; arrested several of the chiefs, and required the guns of the Indians to be given up; about one hundred were brought in; great opposition to the treaty; they will not receive anything from the United States; proposes four hundred regulars as necessary for the quiet of the country; wrote to General Jesup for troops, but was refused; will discharge a part of the forces at Fort Cass; has not yet heard of the commissioners; a force must be kept in the country while the commissioners are there; the paymaster inexperienced in his duties.—(Doc. No. 5.)

September 1, 1836.—Secretary of War to General Wool. Expresses gratification at the tenor of General Wool's orders; speaks of the different nature of his duties, as the Cherokees may be hostile or peaceable.—(Doc. No. 6.)

August 27, 1836.—General Wool to the Acting Secretary of War; says the Secretary has misapprehended his views, that few of the Indians are disposed to go; that they must be convinced that a treaty has been made, and will be executed, and recommends that a part of them go in the fall; that the whites should be restrained, and the Indians have all the rights secured by the treaty; the commanding officer ought to have discretionary powers, or not remain there.—(Doc. No. 7.)

September 13, 1836.—Acting Secretary of War to General Wool, in reply to him of the 27th of August, and approves of his views.—(Doc. No. 8.)

August 30, 1836.—General Wool to the President, in answer to him of the 7th of August; says that he has warned John Ross against holding a council, unless his views are to explain and carry out the treaty; asks instructions from the President how to act; encloses a circular from John Ross to Ridge and others; that Ross has sent runners through the country disseminating his views; that, by his instructions, he is very much restricted; the commissioners not yet arrived; the Indians very anxious for them.—(Doc. No. 9.)

September 7, 1836.—General Jackson to General Wool; says the treaty must be religiously fulfilled, and that intruders must be put out of the nation.—(Doc. No. 10.)

September 12, 1836.—General Wool to the Secretary of War; says it would be imprudent to discharge the troops until the treaty is executed. The force will depend upon the course of John Ross. If he is pacific, six or eight companies of United States infantry would be sufficient; if the contrary, eight hundred men will be required—winter quarters required. Governor Lumpkins says the commissioners will locate themselves at New Echota, and want two companies for their protection; selects Fort Cass as another station. Anxious to know if regular troops can be supplied. Objects to Governor Lumpkins's proposition to pay the committee out of the fund appropriated for that purpose, who have furnished rations. The opinion of the Secretary on these subjects asked for.—(Doc. No. 11.)

September 3, 1836.—Acting Secretary of War to General Wool. Informs him that the Indians may assemble in council if he thinks it may be conducive of good, otherwise he put a stop to. Expresses the confidence of the War Department in the judgment and energy of General Wool.—(Doc. No. 12.)

October 12, 1836.—The Acting Secretary of War to General Wool, authorizing him to call for militia forces, if necessary; that all citizens or others opposing the execution of the treaty shall be put out of the country; and that any officer of the army doing so shall be arrested, and a court instituted; and if the facts be duly established, the President will dismiss him from the service. He forbids, also, any council of the Indians, or a delegation to be sent to the Cherokees west of the Mississippi.—(Doc. No. 13.)

September 18, 1836.—General Wool to Secretary of War. That the Cherokees are fast coming in to the council. Endeavored to persuade John Ross against the course he is pursuing. Proposes that a distinction should be made in the case of the Creeks who have married in the Cherokee nation, and become naturalized. It is expected that the Valley River Indians will not give their names to the appraisers. Asks the Secretary for a decision of the questions embraced in the letter.—(Doc. No. 14.)

November 2, 1836.—General Wool to Acting Secretary of War. That he wishes the Secretary to assure the President of his willingness to obey all his commands; but as he seems not to possess his confidence, he desires to be recalled.—(Doc. No. 15.)

November 16, 1836.—The Secretary *ad interim* to General Wool, in answer to him of the 2d of November. Expresses the confidence of the President in General Wool, and that his measures taken in execution of the instructions of the 12th October are satisfactory.—(Doc. No. 16.)

November 6, 1836.—General Wool to the Secretary of War *ad interim*, being a detailed report of his proceedings under his instructions of the 30th June, 1836. Arrives at Knoxville, Tenn. On the 4th of July arrived at Athens. No preparations had been made to receive the volunteers. At the request of Governor Cannon, furnished the troops with forage and subsistence. At first objected to receive the volunteers, but upon the pledge of the governor received them, being one brigade of three regiments.

Reorganized it into two regiments of ten companies each, and ordered the remainder home. Established depots of provisions at Valley River, Ross's Landing, and New Echota. Requests to be recalled, if he has no discretion invested in him. Protests against the instructions which require obedience to the commissioners, as too humiliating to be submitted to.—(Doc. No. 17.)

*November 23, 1836.*—The Secretary of War *ad interim* to General Wool. Expresses the confidence of the War Department in General Wool.—(Doc. No. 18.)

*November 28, 1836.*—General Wool to Secretary of War *ad interim*. Encloses the "Athens Republican" of the 23d of November, and asks if the Secretary authorized the publication referred to. Expresses astonishment at the adoption of such a course towards an officer.—(Doc. No. 19.)

*December 24, 1836.*—The Secretary of War *ad interim* to General Wool, authorizing him to publish certain letters from the War Department.—(Doc. No. 20.)

*March 31, 1837.*—General Wool to the Secretary of War. Has discharged the volunteers, except one company of East Tennessee. That the Indians have been much abused by the residents among them. Refers to the case of the murder of an Indian by whites without provocation; had arrested them, and turned them over to the civil authority, but fears the prejudices of the country are too strong to allow justice to be done in the case. Renews the application for a regiment of United States troops. Lieutenant Deas, of the United States army, with agents for emigration, had arrived. The Creeks, about 1,000 in the nation, are adverse to removal and have fled to the mountains, and but few have been taken.—(Doc. No. 21.)

*October 17, 1836.*—Acting Secretary of War to General Wool; expresses the astonishment of the President that General Wool should have forwarded a communication from John Ross and others, (see 28,) and has determined that the treaty shall be executed without modification.—(Doc. No. 22.)

*July 19, 1837.*—General Wool to the Secretary of War. Requests a general investigation of his conduct while in the Cherokee nation.—(Doc. No. 23.)

*July 27, 1837.*—Secretary of War to General Wool, in reply to him of July 19. Refuses an investigation as asked for.—(Doc. No. 24.)

*August 6, 1837.*—General Wool to the Secretary of War. Renews his application for a general investigation of his conduct.—(Doc. No. 25.)

*August 11, 1837.*—The Secretary of War to General Wool. Refuses General Wool's application for a general inquiry, as asked for the 6th August.—(Doc. No. 26.)

*October 13, 1836.*—General Wool to General Maccomb. Says he proceeded to Red Clay, and there endeavored to persuade John Ross of the necessity of carrying out the treaty. Many complaints made by the Indians; and he has restored considerable property taken from them, and protected them in the possession of their lands, houses, and ferries.—(Doc. No. 27.)

*September 30, 1836.*—Protests against the treaty, and a request of General Wool to return the arms of the Indians, by John Ross and others.—(Doc. No. 28.)

*Captain James Morrow* says that he served with General Wool as captain of East Tennessee volunteers; that General Wool instructed him to investigate a question between Steel, who kept possession of the improvements of John Gunter, sr., deceased, and the administrator; that he refused to decide, but sent the evidence to General Wool; who directed Steel to be dispossessed, with the exception of some buildings; that Steel refused to give up the property after it was sold; and that after some delay and difficulty he did dispossess Steel. That neither he nor any of his men were present at any affray which took place afterwards between Steel and others; that the Indians cannot get redress under the laws of Alabama, as their testimony is not admissible. He also says that he never knew of General Wool's encroaching upon the laws of the State; that he was very cautious and prudent; and that all the officers and himself had full confidence in him.—(Record, p. 4.)

*Alexander Riddle* says that he was sheriff of Jackson county, Alabama, and appointed administrator of the estate of John Gunter, sr., deceased, by the orphans' court; that Steel kept possession of the property and refused to give it up. He took legal advice upon the subject, and finally was obliged to apply to General Wool for assistance, who gave an order to Captain Morrow to dispossess Steel of the property. He says that the parties whom he represented could not get a remedy, under the laws of Alabama, as their testimony is not admissible in their courts; and that under the treaty their only recourse was to General Wool; that General Wool acted with great prudence and discretion; that he has never known any instance in which General Wool has usurped any power; nor ever heard any person who can be relied on complain of him; that a great majority of the people would be glad if he would remain there.—(See Record, p. 10.)

*Joseph Byrd* says he served with General Wool as colonel of a regiment of East Tennessee volunteers; that General Wool was always mild and conciliating; and that he never knew any person in the Cherokee country complain of him, either whites or natives. The volunteers, citizens, and Cherokees, all regretted his recall.—(See Record, p. 15.)

*Henry B. Shaw* says he was a lieutenant of Georgia volunteers, and served with General Wool for two months as his aide; that he is acquainted with the course of General Wool in the Cherokee country, and saw nothing, nor knew of anything for the foundation of such charges as Governor Clay has preferred; that he was, by General Wool's order, on several occasions employed in sustaining the civil authorities and preserving the peace of the community. He never knew of any act of General Wool, or of others by his order, in violation of the laws of the country; that General Wool preferred the State laws should operate; that the laws of Georgia are insufficient to protect the Indians; that General Wool was constantly employed in the discharge of his duties; and that Indian property was restored after proper investigation; that a remonstrance was sent to the Secretary of War, on the recall of General Wool, because everybody approbated his course.—(See Record, p. 15.)

*Thomas C. Lyon* says he served as aide to General Wool in the Cherokee country; and that General Wool's conduct, he thinks, is not liable to the charges preferred by Governor Clay. That General Wool acted with great caution in respect to the rights of States and of individuals, and enjoined it upon all to be careful not to violate their rights. He thinks that General Wool's course tended much to allay the excitement of the Indians against the whites; that General Wool was very diligent in the discharge of the duties of his office; and that the citizens expressed regret at his recall; that many complaints were made by the Indians of the whites, and General Wool always caused them to be investigated, and their property to be restored when they were entitled to it.—(See Record, p. 17.)

## GENERAL ORDERS No. 63.

HEADQUARTERS OF THE ARMY, *Adjutant General's Office, Washington, October 2, 1837.*

I. The court of inquiry, instituted by direction of the President of the United States, whereof Brevet Major General Winfield Scott is president, and which convened September 4, 1837, at Knoxville, Tennessee, pursuant to "General Order No. 49," to examine into the transactions of Brevet Brigadier General Wool, and others under his command, in reference to his and their conduct in the Cherokee country, so called, as set forth in a letter from his excellency the governor of Alabama, dated July 3, 1837, addressed to the Secretary of War, and in the joint resolutions of the senate and house of representatives of that State, has reported the following

## OPINION.

"The court, after fully weighing and considering the whole of the testimony submitted in the case, are of opinion that not one of the imputations on the conduct of General Wool, contained in the preamble to the joint resolutions of the legislature of Alabama, or the letter of his excellency Governor Clay to the War Department, which enclosed the said resolutions, is founded in justice or in fact. It will be seen that on the application of the judge advocate to the executive of Alabama for documents, and the names of witnesses to support the accusation against General Wool, the late governor (the honorable C. C. Clay) replies: 'The only official information I ever received in reference to the conduct of General Wool will be found in the executive archives. I am not informed of the names of the witnesses to prove the charges against General Wool; but presume the officers who served under him in that part of the Cherokee nation lying in Alabama would be competent to prove the orders which were the subject of complaint.' And the acting governor (his excellency H. McVay) says: 'Having caused an examination to be made, nothing can be found on file in this department which will enable me to furnish the information desired, nor am I able to comply with your request from other sources.' Pursuing, however, the suggestions of the honorable Mr. Clay, that 'the officers who served under him (General Wool) in that part of the Cherokee nation lying in Alabama would be competent to prove the orders which were the subject of complaint,' the judge advocate, principally at the instance of General Wool, summoned many witnesses, and the latter has also freely submitted to the court every paper in his power which, as it would seem, belongs to the matter under investigation.

"From the mass of this evidence, parol and documentary, it appears that in his conduct towards Alabama, so far from 'disturbing the peace of the community' and 'trampling on the rights' of the people, General Wool's acts were so strikingly marked by caution, temper, and mildness, as to receive the almost universal approbation of the very people whom he is charged with having outraged.

"Another, and the principal accusation contained in the letter of Governor Clay to the War Department, (evidently founded on the preamble of the said joint resolution,) is, that *General Wool had usurped the powers of the civil tribunals of Alabama*; and the said preamble sets forth that 'a company of volunteers in the service of the United States, under the command of Brigadier General Wool, have been stationed in the country lately owned by the Cherokee tribe of Indians in this State, for the pretended purpose of keeping peace between the said tribe of Indians and the citizens of the State, and have taken upon themselves the authority to adjudicate upon the claims of our citizens to their right to the possession of improvements; and in the enforcements of these adjudications have brought about a most ruinous and fatal conflict between our most worthy citizens, the consequences of which have already resulted in the taking of each other's lives.' The case here referred to has been most fully developed in the evidence; from which it appears that the Indian children of one John Gunter, deceased, through the sheriff (Riddle) of Jackson county, administrator *ex officio* under the orphans' court, claimed the possession of certain improvements, of which Nathaniel Steel, a white man, was in the actual occupancy; that on the application to that effect to General Wool by the sheriff-administrator, General Wool decided the case, with the previous approbation of the said Steel, giving the right of possession to a certain part of the improvements to the administrator, with which decision Steel expressed himself to be satisfied; that Captain Morrow, who commanded a volunteer company three or four miles off, received instructions from General Wool to put the administrator in possession of that part of the improvements adjudged to him; that Steel quietly, and without the application of military force, consented to give up the possession, and began, accordingly, to evacuate the premises; upon which Captain Morrow and the small detachment that was with him withdrew to his camp, distant as aforesaid; and that the conflict which afterwards occurred was neither in the presence nor, at the moment, within the knowledge of any officer or soldier in the service of the United States.

"It is further in proof, and, indeed, fully admitted by General Wool, that he decided many other claims preferred by Indians to improvements wrongfully possessed by citizens of the States; and it would appear that in all these cases his decisions were acquiesced in, not only without conflict, but without complaint. The question now occurs, by what authority did General Wool take upon himself to give decisions on the class of cases just recited; and in doing so did, he, as is solemnly charged from a high quarter, usurp the powers of the civil tribunals of Alabama? The 16th article of the treaty between the United States and the Cherokees, ratified May 23, 1836, allows those Indians to remain in the country therein ceded to the United States up to May 23, 1838, and the United States stipulates 'to protect and defend them (the said Indians) in their possessions and property, and the free use and occupation of the same.' This treaty is repeatedly referred to in the instructions from time to time addressed to General Wool by the War Department, and once emphatically by President Jackson himself, in a letter to the same commanding officer, and in each case as a rule of conduct for the latter. In this letter from the then President, and also in that from the War Office, October 12, 1836, General Wool is directed to consider the 6th article of the said treaty, which confers even a higher power on the commanding officer than the 16th, as applicable to the Cherokees whilst yet residing within the geographical limits of North Carolina, Georgia, Tennessee, and Alabama, and consequently that he, General Wool, was, by the 16th article, fully invested with the inferior power of repossessing an Indian claimant of improvements wrongfully withheld by a white intruder, not recognized by the Cherokees as one of their people. Again: the instrument agreed upon by the United States and the Cherokee nation, and ratified by the Senate of the United States May 23, 1836, being called, upon its face, a *treaty*, and repeatedly referred to as such by the President and Secretary of War, General Wool naturally considered it as such an instrument as is spoken of in the 2d

clause, article 6, of the Constitution of the United States—that is, as the supreme law of the land; and consequently believed himself, under it and his instructions, to possess the right, as well as the power, to do justice in the Cherokee country to Indian complainants, without usurping the power of the civil tribunals of Alabama, or that of the tribunals of the other particular States mentioned. Without, however, pushing this view of the subject any further, which might be improper in a military tribunal, this court is of opinion that General Wool, in the acts recited and complained of, cannot be justly charged with having usurped powers belonging to the courts of Alabama.

“In the letter of his excellency Governor Clay to the Secretary of War, dated July 3, 1837, before the court, there is an incidental mention of another letter from the same to the same, complaining of other acts of General Wool, perhaps of the same or a similar character to those already noticed; but this letter not having been submitted to this court by the proper authority, and its contents unknown, except by conjecture, no testimony has been taken, and no opinion is here given on its subject.

“The attention of the court, in its order of appointment, has also been directed to ‘others under his (General Wool’s) command, in reference to’ the matters complained of; but the name of no other officer is given in that order, or mentioned by the legislature or executive of Alabama in the papers from them submitted to the court. It has, however, been incidentally disclosed by the evidence that Captain Morrow, commanding a company of Tennessee volunteers, in the temporary service of the United States, was the individual charged with the execution of General Wool’s decision relative to the improvements of John Gunter, deceased, which were in the possession of Nathaniel Steel. In reference to this excellent officer, (Captain Morrow,) it is sufficient to say that he acted in strict conformity with the orders of his superior, and in such manner as to demand and receive the emphatic approbation of all the parties claiming those improvements, as may be seen in their respective letters to him, annexed to the proceedings of this court.”

II. The President of the United States approves the proceedings in the foregoing case.

III. The court of inquiry, of which Brevet Major General Scott is president, is hereby dissolved.

By order of Alexander Macomb, major general commanding-in-chief.

R. JONES, *Adjutant General.*

#### DOCUMENTS ACCOMPANYING PROCEEDINGS.

##### A.

EXECUTIVE DEPARTMENT, *Tuscaloosa, Alabama, July 3, 1837.*

SIR: I have the honor to forward, herewith, a preamble and joint resolutions of the senate and house of representatives of the State of Alabama in general assembly convened, in relation to certain transactions of the military force of the United States employed in the Cherokee country, within the limits of this State. I am not in possession of any order of General Wool, or any of his subordinate officers, referred to in the preamble or resolutions; but it is represented, in substance, that General Wool has assumed the power of adjudicating and determining the right of possession or ownership of land, and improvements thereon, and of dispossessing one claimant and supplanting him with another *by military force*. Under one of those decisions a contest has taken place in the county of Marshall, which resulted in the death of two individuals, certainly, besides the most serious injury to others, some of whom it is feared may yet die of their wounds.

Having addressed you, on the 17th of April last, in reference to another unwarrantable assumption of General Wool, and received your reply, under date the 25th of the same month, assuring me that you had “*despatched instructions to that officer not to infringe in any respect the rights of the citizens of Alabama, and so to modify his order as not to conflict with the laws of this State,*” I was not prepared to expect another attempt on his part to usurp the powers of our civil tribunals, disturb the peace of the community, and trample on the rights of the very people with whose protection, to some extent at least, he must have considered himself charged. I feel assured the exercise of arbitrary power complained of has been without the sanction of your authority or that of the President; and, to prevent any misunderstanding on the part of the citizens of this State, I have published our correspondence just alluded to.

I trust, sir, the necessary steps will be taken, at as early a moment as practicable, to restrain all military officers in the service of the United States in the Cherokee country or elsewhere within our limits from further infraction of our laws or outrage upon the rights of our citizens. It is also due to the violated sovereignty of the State of Alabama that the conduct of General Wool, or any other officer of the United States who may have assumed such powers as I have mentioned, should be promptly investigated, and receive merited condemnation.

Very respectfully, your obedient servant,

C. C. CLAY

Hon. J. R. POINSETT, *Secretary of War, Washington.*

##### B.

A PREAMBLE AND JOINT RESOLUTIONS of the senate and house of representatives of the State of Alabama in general assembly convened.

Whereas a company of volunteers in the service of the United States, under the command of Major General Wool, have been stationed in the country lately owned by the Cherokee tribe of Indians in this State, for the pretended purpose of keeping peace between the said tribe of Indians and the citizens of the State, and have taken upon themselves the authority to adjudicate upon the claims of our citizens to the right of their possession to improvements, and in the enforcement of those adjudications have brought about a most ruinous and fatal conflict between our own most worthy citizens, the consequences of which have already resulted in the taking of each other’s lives: Therefore—

*Be it resolved by the senate and house of representatives of the State of Alabama in general assembly convened,* That for all purposes of keeping the peace, and for the adjustment of any of the conflicting claims of any of the citizens of this State, the courts of our State are invested with ample powers, and are not wanting in inclination to enforce those powers, in the administration of justice to the Indian as well as the white man, and we cannot recognize the right of authority in any military court or volunteer company to exercise those powers.

*Resolved, further,* That the stationing of an armed force in any portion of our State, for the purposes aforesaid, is uncalled for and unnecessary, and a wanton interference with the powers and authorities of our courts, and should not be permitted to continue.

*And be it further resolved,* That the continuance of said armed force in our State, exercising the powers aforesaid, is well calculated to produce a breach of the peace, rather than the maintenance of good order, and a violation of rights, rather than the administration of justice, and is a grievance to our citizens and an infringement upon the judicial powers and authorities of this State, and should not be tolerated in a community of ample laws.

*Resolved, further,* That the governor be requested to address the Secretary of War on the subject of the foregoing preamble and resolutions, and forward to him a copy of the same, and request him either to remove from the limits of this State any volunteer company in the service of the United States, exercising the powers aforesaid, or so restrict their powers as not to conflict with the constituted authorities of the State; that the governor be, and is hereby, directed to take immediate steps to prevent the further progress of said military force in deciding legal controversies within the limits of this State.

A. P. BAYLEY, *Speaker of the House of Representatives.*

H. McVAY, *President of the Senate.*

Approved June 30, 1837.

C. C. CLAY.

SECRETARY OF STATE'S OFFICE, *Tuscaloosa, State of Alabama:*

I, Thomas B. Tunstall, secretary of state, do hereby certify that the foregoing is a true copy of the preamble and resolutions on file in this office.

[L. S.] Given under my hand and the seal of the State, at Tuscaloosa, this 3d day of July, in the year of our Lord 1837.

T. B. TUNSTALL, *Secretary of State.*

C.

GRANGER COUNTY, *Tennessee, August 19, 1837.*

SIR: I have had the honor to receive your note of yesterday. Your letter from Washington, of the 10th instant, to which you allude, has not been received.

You are, perhaps, not aware that I have ceased to be the chief magistrate of Alabama. I resigned the office of governor on the 17th ultimo, and was succeeded by the Hon. Hugh McVay, who now performs the functions of that office, and whom you can address on the subject of your note at Tuscaloosa, the seat of government of that State. The only official information I ever received, in reference to the conduct of General Wool, will be found in the executive archives.

I am not informed of the names of witnesses to prove charges against General Wool; but I presume the officers who served under him in that part of the Cherokee nation lying in Alabama would be competent to prove the *orders* which were the subject of *complaint*.

Very respectfully, your obedient servant,

C. C. CLAY.

Captain W. C. DE HART, *Knoxville, Tennessee.*

D.

EXECUTIVE DEPARTMENT, ALABAMA, *Tuscaloosa, August 28, 1837.*

SIR: I have the honor to acknowledge the receipt, on the 24th instant, of your communication of the 9th, dated at Washington city, and directed to my predecessor, Governor Clay, informing him that a court of inquiry was to be held at Athens, Tennessee, on the 25th instant, to investigate the conduct of General Wool, and requesting him to forward to you "specifications," "names of witnesses," &c.; also, by the succeeding mail, your communication of the 19th instant, dated at Knoxville, Tennessee, directed to and informing me that a court of inquiry was to be held at *that place*, on the 25th instant, "to investigate certain acts of Brigadier General Wool, complained of by the State of Alabama," requesting me to furnish you with the necessary testimony "in the case," names of witnesses, &c.

Having caused an examination to be made, nothing can be found on file in this department which will enable me to furnish the information desired, nor am I able to comply with your request from other sources.

I have caused a copy of your letters and of this to be forwarded to Governor Clay, who is now on his way to Washington city.

I am, very respectfully, your obedient servant,

H. McVAY.

M. C. DE HART, *Judge Advocate, Knoxville, Tennessee.*

## E

HEADQUARTERS ARMY OF THE C. N., *New Echota, Georgia, January 23, 1837.*

SIR: I am instructed by General Wool to send you the enclosed letter from James Spencer, a Cherokee Indian, with directions to investigate the case, and cause justice to be done. For all necessary information in relation to the case mentioned in the letter, you are referred to General Moore.

I am also instructed by General Wool to say to you that you have authority to investigate all complaints made to you by the Cherokees, and decide upon the merits of each, and transmit to general headquarters, with your monthly return, the result of each case. All cases upon which you doubt your authority to act will be referred to General Wool.

The general instructs me to say to you that you will afford to the agent, General Moore, who is engaged at that place in collecting and emigrating the Creek Indians, such aid as will be necessary to keep them within their camp and prevent their running through the country, and to restrain all disorders both of the Creek and other Indians, and to prevent the whites from encroaching upon their rights and privileges.

All Creeks who were settled in the Cherokee country prior to the 24th March, 1832, are considered citizens and entitled to protection.

I have the honor to be, sir, with great respect, your obedient servant,

P. M. WEAR, *Acting Aide-de-camp.*

Captain JAMES MORROW.

## F

HEADQUARTERS, *New Echota, March 21, 1837.*

SIR: Herewith I transmit a copy of an application of Colonel John Williams, attorney of the administrator of the estate of John Gunter, deceased, to dispossess Nathaniel Steel, who is said to be in possession of the resident plantation of the said John Gunter, deceased, and put Alexander Riddle, the administrator, in possession. This, it would appear, is a litigated case, and possibly may be of such a character as to cause some excitement, and, perhaps, some difficulty. I wish you to give it a careful examination, and, if the application is a just one, to put Alexander Riddle in possession. If, however, there should be any doubt as to the justice of the application, or if it is one likely to give you much trouble, or to produce unnecessary excitement, you will defer turning out Steel and giving possession to Riddle until further orders, or until I may visit you.

I am, very respectfully, your obedient servant,

JOHN E. WOOL, *Brigadier General.*

Captain JAMES MORROW, *Commanding at Gunter's Landing.*

## G.

HEADQUARTERS ARMY OF THE C. N., *New Echota, Georgia, June 3, 1837.*

SIR: I have examined the testimony and documents which you laid before me the 1st instant in the case of Sheriff Riddle, administrator of the estate of John Gunter, senior, deceased, *vs.* Nathaniel Steel.

Sheriff Riddle, as administrator, claims, for the benefit of the heirs, (they being Cherokees,) possession of the dwelling-house and other improvements, with the plantation, of John Gunter, senior, deceased. On examination of the testimony, I am of opinion that Sheriff Riddle, as administrator, is entitled to the possession of the dwelling-house and plantation, for the purpose of selling the same, agreeably to the provisions of the will of John Gunter, senior, deceased, for the benefit of the heirs. You are, accordingly, directed to give him possession of the dwelling-house and plantation, together with the field or fields on the island in the Tennessee river, opposite Gunter's Landing.

In giving Sheriff Riddle possession of the plantation, you will reserve the gin-house near the dwelling-house, and the warehouse and storehouse called the white house, it being doubtful to whom these buildings rightfully belong; that is, whether to the estate of John Gunter, senior, deceased, or to John Gunter, junior, and not include them among the buildings or improvements delivered into his possession. You will also reserve from such possession the stone house occupied by Captain Patterson, the buildings in possession of Kelly and Willoughby, and also all separate buildings erected by Colonel Steel by way of improvement to the place. Such buildings the colonel will be allowed to remove or otherwise dispose of in any way he may deem proper, provided such disposition does not interfere with the interest of the heirs of the estate.

It is, however, to be distinctly understood that, in ordering these reservations, I do not intend to interfere with any rights or claims which the heirs or administrator may have to those buildings. Nor is it to be understood that, by giving possession to the administrator of the dwelling-house and plantation of John Gunter, senior, deceased, that I intend to express any opinion on the litigated points growing out of the case presented for consideration. These belong to the civil courts of the country to settle. My duty as well as my power over the case is limited to restoring the Cherokees where they have been dispossessed, and protecting them in all their rightful possessions, as guaranteed by the treaty of 1835, and ratified by the Senate of the United States on the 23d day of May, 1836.

I am, sir, very respectfully, your obedient servant,

JOHN E. WOOL, *Brigadier General, Commanding.*

Captain JAMES MORROW, *Commanding at Gunter's Landing, Alabama.*

## H.

HUNTSVILLE, *Alabama, July 3, 1837.*

MY DEAR SIR: On my arrival at this place I proceeded forthwith to consult my attorneys upon the different subjects which most interested me at the time; the two most important points being that of a charge for murder and the recovery of my property—I mean my improvement. The first measure advised was, that I bring suit against you, as an officer of the United States, for putting me forcibly out of possession, not, my dear sir, with a view to injure you or to wound your feelings; but being advised that, by bringing suit against you for executing General Wool's order, that, although you might be acting perfectly correct as an officer acting under the general, that the United States was nevertheless bound to pay me suitable damages. Being under this impression, I deem it a duty that I owe to myself and my much-injured family, to pursue the course advised, and would have written you upon this subject at the time the writ was sent on, but for the want of time. But, my dear sir, be perfectly assured that you have my best feelings, and I do firmly believe that you did nothing in the execution of that order but what you believed to be strictly your duty; as such I cannot attach any blame to you whatever; but, on the contrary, I do and shall forever feel more than ordinary friendship and gratitude to you for the kind and gentlemanly protection afforded myself and family and friends in an hour of peril and danger; and let me assure you that your conduct in our behalf has called forth the applause of many of the citizens of Marshall county.

Mr. Lemon was discharged on Wednesday last; the balance of us calculate upon getting out upon bail to-morrow. My brother has had a severe attack of fever and bowel complaint whilst in prison, which has reduced him very low. Our case is very much changed in our favor, as regards public opinion, which appears to be almost entirely in our favor at present. The Claysville party came down for the purpose of having us all ironed down in the dungeon; but instead of effecting their object they were severely reprimanded for bringing the prisoners down in irons. We are permitted to stay in the debtors' room, and frequently I am permitted to walk out in town.

Please to tender my best respects to as many of your company as you may see, and let me beg leave to assure you that you have my best wishes for your health and prosperity.

N. STEELE.

Captain JAMES MORROW, *Commanding at Gunter's Landing, Alabama.*

P. S.—My brother was taken out of prison several days ago, and carried to a private house, to facilitate his recovery.

## I.

HUNTSVILLE, *June 21, 1837.*

DEAR SIR: Permit us to tender to you, and through you to your company, our sincere regard and esteem for the prompt, decisive, and manly manner which you have taken to see the civil laws enforced, and the protection afforded us from the hand of our assassins.

Much credit is due to Thomas Lowrey, esq., deputy sheriff, for his humane treatment in conducting N. Steele to Huntsville as a prisoner.

Yours truly,

N. STEELE.  
WM. S. COLLINS.  
D. WILLIS.  
PETER H. LEMON.  
G. W. STEELE.

Captain JAMES MORROW.

P. S.—Please not to forget to give my wife or my brother the papers I asked you for, and oblige yours truly. You shall hear from me again.

Yours truly,

N. STEELE.

## K.

CLAYSVILLE, *Marshall County, Alabama, June 21, 1837.*

DEAR SIR: At a large and respectable meeting of the citizens of Claysville, it was unanimously resolved that the undersigned should be appointed a committee to invite you to partake of a public dinner at this place, at any time you should be pleased to select, as a token of their friendly feeling towards yourself, and of their esteem for your conduct in the discharge of the important official duties of your station. It was also further resolved that the members and officers of your corps be also respectfully invited to accompany you.

In pursuance of the pleasing duty thus assigned us, we beg leave to tender you the invitation of your fellow-citizens, and add the assurance of our individual esteem.

D. S. DICKINSON,  
JOHN S. GOFORTH,  
A. C. BEARD,  
A. H. MACFARLANE,  
W. P. MACFARLANE, } *Committee.*

Captain JAMES MORROW.

## No. 1.

WAR DEPARTMENT, June 20, 1836.

SIR: You will repair to the Cherokee country without delay, and ascertain the condition and probable designs of the Cherokee Indians. Rumors have reached here that these Indians are meditating hostilities against the United States, and that depredations have actually been committed. It is very desirable that any excitement which exists among them should be allayed; and you are requested to use all proper means, by representation and remonstrance, to allay it. You will please to seek interviews with the principal men, and to urge upon them the necessity of their interfering, and prevailing upon their people to remain quiet and to comply with the treaty stipulations. A treaty has been recently ratified with them, providing liberal sums for their present relief and future support. The moment the necessary appropriations are made, arrangements will be adopted for carrying into effect all these treaty stipulations. In the meantime, as it is probable that the scarcity of provisions among the Cherokees may lead them to commit depredations, you are authorized to issue to such of them as may require this aid, and as evince a friendly disposition, a reasonable quantity of provisions. A copy of the Cherokee treaty is herewith enclosed. By adverting to the eighteenth article you will find a stipulation for these issues of provisions. The amount for provisions and clothing is limited to \$75,000; but a far less sum than this will be sufficient for the issues required to be immediately made. The purchases, if any, will be made upon the best terms, and will be paid for in bills to be drawn upon this department, which will be met as soon as the appropriation is made. It is presumed that pork, beef, flour, corn, and salt, are all the articles that it will be found necessary to distribute. You will cause the provisions to be issued and accounted for upon provision returns, corresponding, as near as may be, with the army practice; and you are at liberty to employ such persons as you may find necessary to perform this business under your directions, and to allow them a reasonable compensation for their services.

You will apply at the offices of the adjutant general, the commissary general of subsistence, and the colonel of ordnance; and you will ascertain in detail the arrangements that have already been made to meet any difficulties among the Cherokees.

You will find that the governor of Tennessee was some time since requested to raise a body of volunteers under the late volunteer act. A portion of these—the number depending on the organization, and amounting to from one thousand to twelve hundred, one-half mounted and one-half infantry—were assigned to East Tennessee. It appears by the governor's letter received this day that he is about organizing this force, and that he will call into immediate service the quota assigned to East Tennessee. These troops will rendezvous at Athens on the 7th July. You will take the immediate command of them, and station them in such parts of the Cherokee country as you may think best. You will find from Governor Cannon's letter that these troops will be supplied with arms.

A quantity of arms, ammunition, and provisions, were directed some time since to be sent to that quarter, and to be deposited at Hiwassee, under the direction of Major Payne, of the army. These provisions you are authorized, in case of necessity, to issue to the Cherokees, in lieu of those above referred to.

Should the Cherokees commence hostilities, you will employ the above-mentioned force in reducing them to unconditional submission; and if you should, not deem it sufficient for that purpose, you are authorized to call upon the executives of Tennessee, Georgia, and North Carolina, for such additional force as you may judge necessary. I have this day written to the governors of those States, requesting them to call into the service of the United States such militia force as you may require. The volunteers under the late act must serve for one year, the ordinary militia force must serve at least three months after reaching the place of rendezvous, unless such volunteers or militia shall be sooner discharged. Provision has already been made for mustering the brigade of Tennessee volunteers. If that, however, should not have been done, you will have it attended to; and you will likewise cause the other troops to be mustered into service by some competent officer of the United States. I need not insist upon the necessity of all proper economy in your expenditures, and likewise upon the due preservation and accountability of the public property.

Should the conduct of the Cherokees require the application of force, you will proceed to subdue them with as much expedition as possible. When this is effected, their arms will be immediately taken from them, and they will be kept together, under proper guards, till you can complete your arrangements for their removal west. A copy of the general instructions for the removal of the Indians will be furnished you from the office of the commissary general of subsistence; and you will conform, in this duty, as far as possible, to these regulations. Should a portion of the Cherokees remain friendly, you will still require them to deliver up their arms; but they will not be confined, and will be allowed a reasonable time to remove themselves, in conformity with the stipulations of the treaty.

You are aware that General Scott and General Jesup are in the Creek country, conducting the operations against the Creek Indians. Copies of these instructions will be sent to each of them, and they will be requested to communicate fully with you. Should you find that any troops, in addition to the Tennessee volunteers, will be required in the Cherokee country, I think it probable that a portion, or the whole of them, may be furnished from the forces under the command of General Scott; and if so, it may render it unnecessary for you to call into service any other militia troops. The state of affairs in the Creek country will, I hope, soon render unnecessary the employment there of the whole force now in the field.

The President directs that you be assigned to do duty as a brevet brigadier general. During your command as such, you will receive the pay and emoluments of a brigadier general, and will be allowed to select an aide-de-camp.

You will immediately consult with the heads of the respective bureaus, and take care that every necessary arrangement is made for furnishing all the supplies that may be required. You will look particularly to these arrangements yourself, so as not to run the risk of any disappointment. The necessary orders upon this subject will be given to these bureaus. I desire that you will keep the department informed of your proceedings.

Very respectfully, sir, your obedient servant,

LEWIS GASS.

Brevet Brigadier General JOHN E. WOOL, *Washington.*

## No. 2.

*Extract from a treaty concluded between the United States and the Cherokee tribe of Indians on the 29th day of December, 1835, and ratified on the 23d day of May, 1836.*

ARTICLE 6. Perpetual peace and friendship shall exist between the citizens of the United States and the Cherokee Indians. The United States agree to protect the Cherokee nation from domestic strife and foreign enemies, and against intestine wars between the several tribes. The Cherokees shall endeavor to preserve and maintain the peace of the country, and not make war upon their neighbors. They shall also be protected against interruption and intrusion from citizens of the United States who may attempt to settle in the country without their consent, and all such persons shall be removed from the same by order of the President of the United States; but this is not intended to prevent the residence among them of useful farmers, mechanics, and teachers for the instruction of Indians, according to treaty stipulations.

ARTICLE 16. It is hereby stipulated and agreed by the Cherokees that they shall remove to their new homes within two years from the ratification of this treaty; and that during such time the United States shall protect and defend them in their possessions and property, and free use and occupation of the same; and such persons as have been dispossessed of their improvements and houses, and for which no grant has actually issued previously to the enactment of the law of the State of Georgia of December, 1835, to regulate Indian occupancy, shall be again put in possession, and placed in the same situation and condition, in reference to the laws of the State of Georgia, as the Indians that have not been dispossessed; and if this is not done, and the people left unprotected, then the United States shall pay the several Cherokees for the losses and damages sustained by them in consequence thereof. And it is also stipulated and agreed that the public buildings and improvements on which they are situated at New Echota, for which no grant has actually been made previous to the passage of the above-recited act, if not occupied by the Cherokee people, shall be reserved for the public and free use of the United States and Cherokee Indians for the purpose of settling and closing all the Indian business arising under this treaty between the commissioners of claims and the Indians.

## No. 3.

WAR DEPARTMENT, *July 30, 1836.*

SIR: I have the honor to acknowledge the receipt of your letter of the 19th instant.

In reference to your remark that "with a less force we shall have difficulty to induce the Indians to emigrate, for I have little doubt they will resist removal as long as they can with safety," I beg leave to observe that your instructions of the 20th June contemplated the application of a military force only in the event of hostilities being commenced by the Cherokees. The treaty provides that they shall remove within two years, and that during that time they shall be protected in the peaceable possession of their country. Unwillingness to remove, or even resistance to a removal, will not authorize the employment of force. No intimidation nor coercion must be used.

I may have misapprehended your remark, but it seemed proper to call your attention to one obvious construction of it, and to its incompatibility, so construed, with the stipulations of the treaty.

Your draft for \$10,000 for provisions will be paid on presentation.

The other subjects in your letter have been answered in previous communications from this department.

Very respectfully, your most obedient servant,

C. A. HARRIS, *Acting Secretary of War.*

Brevet Brigadier General JOHN E. WOOL, *Commanding Army, Athens, Tennessee.*

## No. 4.

HEADQUARTERS ARMY OF E. T. AND C. N., *Valley River, August 4, 1836.*

SIR: You will proceed without delay to New Echota and such other parts of the Cherokee nation within the limits of Georgia as may be necessary to give protection both to the Cherokees and the white inhabitants residing in that section of the country. You will allow no encroachments upon either side. Both will be protected in their persons and property. You will prevent, as far as practicable, all collisions between your troops and the Indians. You will also prevent any interference on the part of the Georgia troops with the Cherokees. You will ascertain by whose authority they have been raised and stationed in that country, and if not legally authorized to maintain themselves and exercise military control, you will order them to disband or leave the country. If authorized by the authorities of Georgia, they will immediately report to me and receive my orders. At all events, you will prevent every improper exercise of military control over the Indians or the white inhabitants. The whole subject is left to your sound discretion, taking care to do nothing which will bring you in conflict with the authorities of Georgia. The sovereignty of the State and its laws must be respected. You will recollect in your proceedings that the State and the citizens are still laboring under a state of excitement caused by the cruelties of a savage warfare. Therefore great prudence and discretion should be exercised in all your intercourse with the nation, and particularly in all measures which might have a bearing upon the rights and interests of the State and people of Georgia.

I will visit in a few days that part of the country, with the view of ascertaining the sincerity of the professions of the people residing therein.

I have the honor to be, very respectfully, your obedient servant,

JOHN E. WOOL, *Brigadier General, Commanding.*

Brigadier General DUNLAP, *Commanding East Tennessee Volunteers.*

HEADQUARTERS ARMY OF E. T. AND C. N., *Valley Town, N. C., August 12, 1837.*

SIR: Captain Vernon, stationed at New Echota, informs me that John Ridge has complained to him that some white man is about to take forcible possession of his ferry on the Coosa river. You will, without delay, inquire into the case; and if you should find the complaint to be just, you will, until further orders, protect Ridge in his rights and property. This order will apply to all cases of a similar character in the Cherokee country.

You are further directed that, in case you should find any troops within the limits of the Cherokee nation, whether in Georgia, Alabama, Tennessee, or North Carolina, not belonging to the East Tennessee brigade, to notify them that they are exclusively subject to my authority, and, unless they report to me without delay and become subject to my orders, will either leave the nation or be disbanded. In your proceedings you will be governed by your instructions of the 4th instant.

I am, very respectfully, your obedient servant,

JOHN E. WOOL, *Brigadier General, Commanding.*

Brigadier General DUNLAP, *Brigade East Tennessee Volunteers.*

No. 5.

HEADQUARTERS ARMY OF E. T. AND C. N., *Valley Town, N. C., August 15, 1836.*

SIR: Being on the eve of a tour through the Cherokee nation, I herewith forward to you copies of such letters and orders, from 1 to 5 inclusive, as may give the Department of War a correct idea of the course I have pursued towards the Cherokees and the white inhabitants residing among them. I do this lest some false impressions may have been made in relation to the course I would adopt by some hasty remarks in my correspondence with the department. I can assure the Secretary of War, notwithstanding anything I may have said in my correspondence with him since my arrival in this country, I have done nothing which is not in strict accordance with the treaty and my instructions, and which will not meet with the approbation of the people of the United States, as well as that of the Department of War.

On my arrival here I informed the Cherokees that I had been sent by the President of the United States to carry into effect the late treaty concluded with them; that I came not to make war upon them, but to preserve peace and to protect them in the enjoyment of all their rights. For this I only exacted of them a declaration of submission to the terms of the treaty, and a promise that they would remain peaceably and quietly at their homes until the time arrived for their removal to the west.

Several meetings were held with the chiefs and headmen in this part of the nation upon the subject of submitting to the terms of the treaty and of distributing rations and clothing among the poorer Indians. At the last of these meetings they abruptly separated without coming to any conclusion, although they had promised me to do so. Such conduct I could view in no other light than as exhibiting strong feelings of opposition to the treaty, if not a disposition to resist its execution by force, and such as required prompt and decided measures. I instantly sent a detachment in pursuit, and had the principal men brought to my headquarters and detained under guard for the night. In the morning they admitted their error, and promised a compliance with the treaty. Although I could place but little confidence in declarations made under such circumstances, I nevertheless permitted them to return to their homes, with orders that they should require the young men to bring in their arms. About one hundred have been brought in, and the remainder in this section of the country, including those of the Che-o-ee Indians, will be in in the course of the week. This measure will, in all probability, prevent hostilities and enforce a compliance with the treaty. Yet it is not to be disguised that nineteen-twentieths, if not ninety-nine out of every hundred, of the Indians in North Carolina are opposed to its execution, and will not comply with it unless compelled to do so by the presence of a military force. They say they will go to the west, but not by their own consent; and none but a few miserable creatures will receive anything from the United States, lest it might be construed into an act of submission to the treaty, or of having consented to its ratification. Without four or five hundred men present at the time when the greater part of the nation must set out for the west, I would not guarantee that we shall not have the same scenes enacted in this country which have taken place in Georgia, Alabama, and Florida. With four hundred regular troops I can insure peace and quiet, and the removal of the Indians to Alabama without difficulty.

I have mentioned regular troops, because it appears to be the desire of the Secretary of War that the volunteers should be disbanded whenever regular troops could be obtained to supply their places. I called on General Jesup for the number which I supposed would be requisite, who returned me for answer that he had not any to spare at this time, and would not until about the 10th of September next.

I have now about nine hundred men, including a company of regular troops at Fort Cass. A part of this force I shall discharge as soon as the Indians of this country have delivered up their arms, and as soon as I have completed the tour of the nation, which I shall commence to-morrow. This tour I had contemplated to have made before this, and would have, but for the opposition I meet with here, which is the most troublesome part of the nation.

In the course of next week I shall call together the committee mentioned in the twelfth article of the treaty, to advise on the subject of furnishing rations and clothing to the poor of the nation. That part of the committee residing in this part of the country, except Timpson, are unwilling to act. Roman Nose and Siteewagee were both, previous to the reception of your communication of the 25th ultimo, consulted on the subject of issuing rations to the poor Indians, but they would neither take themselves nor advise others to do so. As soon as the committee have been consulted on the subject, regulations will be made in regard to the issues, a copy of which will be transmitted to the War Department. It may be proper to remark, however, that I have little doubt, from information received from the Cherokees in Georgia, that demands will be made to consume the whole of the seventy thousand dollars in the course of the fall. I shall not fail to distribute this sum in clothing and rations among the poor throughout the nation as equitably and economically as may be practicable. As it may be attended with less inconvenience to the War Department as well as myself, I would, as you have suggested, recommend to have the seventy thousand dollars passed to my credit in some bank either in Philadelphia or New York. I would recommend this course more particularly, from the circumstance that the deposit bank in Knoxville charges

one and a quarter per cent., as you have already been apprised, on bills of exchange, when they will take checks on eastern banks at par.

I have as yet heard nothing from the commissioners appointed under this treaty, nor have I seen Major Currey, although I understand he has arrived at the agency.

It may be proper to remark that, from the temper manifested at present by the Indians, independent of any other consideration, a force would be required to be kept in this country during the operations of the commissioners and the appraisers of improvements.

In conclusion, I beg leave to remark to the Secretary that, from the total inexperience of the paymaster ordered to this country, I apprehend that much difficulty will arise in the payment of the volunteers—a service at all times perplexing, and should have been intrusted to an experienced paymaster.

I have the honor to be, very respectfully, your obedient servant,

JOHN E. WOOL, *Brigadier General, Commanding.*

C. A. HARRIS, Esq., *Acting Secretary of War.*

No. 6.

WAR DEPARTMENT, *September 1, 1836.*

SIR: I have had the honor to receive your letter of the 16th ultimo, with its enclosures, and have to express my high gratification at the tenor of the orders which you have issued for the preservation of quiet in the Cherokee country, which appear to me very judicious.

I am glad to perceive that your views correspond with those expressed in my letter to you of the 23d ultimo, which you have not yet received. The distinction laid down in your original instructions from this department must not be lost sight of; that is, the different nature of your duties in a state of peace and of war, or of a condition leading to war. While the Cherokees do not disturb the public tranquillity, and while you have not just grounds to suspect that they are preparing to do so, you will regulate all your movements, so far as regards them, by the stipulations of the treaty. When, however, this state of things is interrupted by their own conduct, then the law of self-defence will justify us in subduing and removing them.

Very respectfully, your most obedient servant,

LEWIS CASS.

Brigadier General JOHN E. WOOL, *Athens, Tennessee.*

No. 7.

HEADQUARTERS ARMY OF E. T. AND C. N., *New Echota, August 27, 1836.*

SIR: I have the honor to acknowledge the receipt of your communication of the 13th instant, received yesterday on my way to this place from Ross's Landing.

Your impressions are altogether erroneous as to the course I would pursue in relation to the Cherokees; no man can feel more kindly to these people than I do, and no man will go further to secure to them the benefits of the late treaty; but, in doing this, it is necessary to be firm and decided, or you will not convince them that the government is serious in its intentions of having the treaty executed. A large majority of the nation are still under the delusion that the treaty will be modified, if not altogether rendered void; and John Ross, it would appear, is not without such hopes. The War Department does not understand these people, and no man can understand them until he goes among them. For three weeks after my arrival at Athens, from the daily reports made to me, I was induced to believe that a large proportion of the nation was prepared to submit to the treaty and to remove west at the proper time; a few days at the mouth of Valley river convinced me I was mistaken. A few white men and some few half-breeds only could be found to advocate a submission to the treaty. This is not fiction but truth. The same remarks, although not to the same extent, will apply to this section of the country; that is, at least a large majority are opposed to the treaty and against removing to the west. What course, under such circumstances, would you pursue? Would you permit these people to remain until the period arrived for their removal before you undertake to convince them that you are serious, and that a treaty has been made with them which must be executed? I would be just to these people; but before they will allow me or any one else to be so, they must be convinced that a treaty has been made with them (which they disavow) and that within two years it must be fulfilled. How would you do this? Would you merely say to them that they shall not be molested or interfered with if they will remain peaceably and quietly at their homes until the expiration of the two years? Such a course, I have no hesitation to say, would produce the same scenes which have just been exhibited in Florida and the Creek country. Not a man would be ready to move; nor will one of them, with some few exceptions, move without compulsion. If possible, that is, if the government would avoid war, some four or five thousand should be prevailed upon to go this fall. If all remain, and all should be required to move at the same time, a much larger force than I now have will be required to preserve the peace of the country. Again, if we would serve and promote the interests of these people, we ought to use every honorable means to induce them to leave this country as soon as practicable. They are the prey of the white men; and if they remain in this country two years very few would have anything left to carry with them to the west; the white men would have debts against them sufficient to cover all that they would receive from the government. It is in vain to say that you would not pay these debts; the Indians would be claimed by the civil authorities of the several States in which they reside under the expectation that the government would pay these debts. I hope you do not understand me to say that I would hurry the people unnecessarily to the west, or that I would use harsh measures to force them out of the country. On the contrary, I would convince them that they must go; and in the next place, I would endeavor to convince them that it was for their interest that a part should go this fall. In the meantime I would protect them in the full enjoyment of all the rights secured to them by the treaty; and, above all, I would prevent the white men from turning them out of doors and taking possession of their property, which has

been done so often in this State. If such proceedings on the part of the whites cannot be stopped, these people will be driven to a state of desperation, when the result may be learned by reading the history of the late Creek war.

If the officer in command has no discretionary power over the white or red men, he ought not to remain here, for it would be utterly impossible for him to do his duty either towards the government, the Indians, or the white men residing in the Cherokee country.

I have the honor to be, very respectfully, your obedient servant,

JOHN E. WOOL, *Brigadier General, Commanding.*

C. A. HARRIS, Esq., *Acting Secretary of War.*

No. 8.

WAR DEPARTMENT, *September 13, 1836.*

SIR: I have the honor to acknowledge the receipt of your letter of the 27th ultimo, and am happy to perceive that your views of your duty, in the execution of the Cherokee treaty, accord with those of the department. I think it will occur to you, upon reflection, that the determination of the government to carry into effect the treaty may be as strongly manifested by fulfilling its provisions respecting the payment of claims, debts, and for improvements, as by requiring or urging an immediate removal, which the treaty does not authorize. As these provisions are all beneficial, it would seem that their prompt and just execution could hardly fail of conciliating many who are now opposed to the treaty. The arrangements in the power of the department for removing all who will go willingly have been made, and it only remains, by every proper precaution, to prevent any infringement of the treaty by any portion of the Cherokees.

Very respectfully, your most obedient servant,

C. A. HARRIS, *Acting Secretary of War.*

General JOHN E. WOOL, *Athens, Tennessee.*

No. 9.

HEADQUARTERS ARMY OF THE CHEROKEE NATION, *New Echota, Georgia, August 30, 1836.*

SIR: I have the honor to acknowledge the receipt of your communication of the 7th instant, on my way to this place from Valley river, with a copy of one to the Acting Secretary of War. In reply to so much of the latter as relates to the apportionment of the ten thousand volunteers among the several States, allow me to say that I knew nothing of such a measure until some time after I had received the volunteers assembled at Athens. In what number and to what States these were apportioned I was wholly unacquainted with until I received yours of the 7th instant.

When at Fort Cass (or Calloun) on my way to Ross's Landing I met with Mr. John Ross, just arrived from his visit to Washington. He, like many others of the nation, expressed a strong desire to have a council of the Cherokee people for the purpose of laying before them the whole proceedings of the delegation assembled at Washington in relation to the late treaty; at the same time asked me if I had the authority to prevent such a meeting, which, he said, would be in accordance with the practice and laws of the nation. I replied that I had no authority to prevent such a meeting. I advised him, however, to be careful how he advocated such a measure if he had for object any other course than merely explaining the treaty and with reference to an entire submission to its terms. That any discussion or explanation tending to a different result I was confident would find no favor with the President, who was determined to have the treaty executed. He merely replied that he thought the President would be convinced that he had been in error, and that he would finally yield, and be willing to do justice to the Cherokees. I answered that it was a subject upon which I would not converse; that the President I knew was determined to have the treaty executed, and I was sent, with others, to aid in carrying his intentions into effect.

Since my arrival at this place I have been informed that Mr. Ross has sent runners through the country, disseminating his views, which I am apprehensive will do much injury, and very much retard emigration to the west, particularly this fall. Will there not be a danger, if such a course is allowed, that he will make good his declaration, which will be found at the close of his letter dated "Washington, June 21, 1836," in answer to inquiries by a friend, viz: "The delegation must repeat, the instrument entered into at New Echota, purporting to be a treaty, is deceptive to the world, and a fraud upon the Cherokee people. If a doubt exists as to the truth of their statement, a committee of investigation can learn the facts; and it may also learn that if the Cherokees are removed under that instrument it will be by force." Your attention is called to the subject, in order that I may more particularly learn your wishes in regard to the course I ought to pursue under such circumstances. I ask it because, as you will perceive by the enclosed abstract of a letter from the War Department, I am very much restricted, and have little or no discretionary power left me in any case, except actual hostilities. No man can be more kindly disposed to these people than I am, and it certainly is my intentions, as all my proceedings will prove, to be just towards them, and as far as it is in my power to protect them in all the rights secured to them by the treaty. Still they ought to be convinced that a treaty has been made with them, and that it is the intention of the government to have it executed. Certainly no commander will be respected without some discretionary power. Circumstances may arise when firmness, decision, and promptness may be indispensable to the preservation of peace and to prevent hostilities. By the extract I am restricted from action, except only in case of actual hostilities.

The commissioners have not yet arrived. Governor Lumpkin, it is expected, is on his way to this place. We have heard nothing as yet from General Carroll. The friendly Indians are extremely impatient for their arrival. Everything must be retarded until they do arrive. If they do not enter upon their duties soon, I am apprehensive that very few will pass the Mississippi the approaching season. I think it all important to the interests of these people that they should be sent away as soon as possible; and particu-

larly in this section of the country, where they are constantly annoyed by the white people, who are daily taking possession of their property and improvements, in violation of the treaty. I particularly wish instructions on this subject.

In conclusion, allow me to call your attention to the latter clause of the 16th article of the treaty and the 4th article of the supplementary articles, both of which relate to the agency at Fort Cass. The question under consideration is, whether it is contemplated by those articles to permit the occupant to erect other buildings on the premises than were there at the ratification of the treaty. If not, Major Currey desires that Lewis Ross may be stopped from erecting a large house or store at the agency. By my instructions I do not consider myself authorized to act in the case, and therefore would respectfully request your opinion on the subject.

Mr. Rogers, who takes this with other letters express, will wait for any communication the President may think proper to make in return.

Herewith I enclose to you a circular from John Ross to John Ridge and others, inviting them to meet in council for the purpose of giving an account of the conduct of the delegation, and of laying before it the whole proceedings in relation to the treaty. It is thought that this meeting and its proceedings will do much mischief, and will very much interrupt the business of the commissioners, and consequently retard emigration. John Ridge and Major Currey are both of opinion that it will do much. Your instructions are requested on the subject.

I have the honor to be, with considerations of the highest respect, your obedient servant,

JOHN E. WOOL, *Brigadier General, Commanding.*

General ANDREW JACKSON, *President of the United States.*

---

No. 10.

HERMITAGE, *September 7, 1836.*

SIR: Your letter of the 30th ultimo has just been handed to me by Mr. Rogers, the express. Being in a state of preparation for setting out for Washington, and surrounded by much company, I have but a moment to reply to it.

In relation to your observations respecting the apportionment of the ten thousand volunteers, I need not say more here than that the requisition on the governor of the State was a sufficient guide for the organization of the part allotted to Tennessee. This requisition was for twenty-five hundred men, to be raised in two brigades, one in East and the other in West Tennessee, and there could be no authority to muster more into the service. The remainder of the ten thousand had been required from other States and Territories.

I have turned to the letter of the adjutant general to which you have called my attention. You will find, I think, that it relates to the volunteers called for agreeably to the requisition on the governor of Tennessee for twenty-five hundred. I cannot suppose that it was expected of you to receive a greater number than this into the service.

As you have the treaty before you, and the instructions of the Acting Secretary of War, I do not see that I can add anything more on this subject at present. The treaty is to be religiously fulfilled; you may assure all concerned that no modification or alteration in it will be made by me. Of this Mr. John Ross is fully advised. His friend, Mr. Standefer, who waited upon me at Washington and made the inquiry whether I would agree to a supplemental article admitting the Rosses and their delegation in as chiefs, was informed that I would not. You will therefore make known to the Cherokee people that no alteration in the treaty will be made, but that all its terms and conditions will be faithfully and fully executed. Should you find any evil-disposed white man in the nation exciting the Indians not to comply with the treaty, you will forthwith order him or them out of the nation; and if they refuse to go, the facts being thoroughly established, you will take the steps necessary to put them out. Such characters must be considered in the light of intruders, prohibited by the treaty from living within the limits of the nation.

You will caution John Ross from calling any council of the Cherokee people with the view of opposing or altering the treaty. He knows that there will be no further negotiation on the subject; that the Cherokees are to emigrate in two years from the ratification of the treaty, and will be obliged to go within that period; that the collisions between them and the whites have been too long continued for the gratification of himself at the expense of the poor in the nation.

I have had a letter from Governor Carroll. He will leave Pontotoc at as early a moment as he can, and expects to meet Governor Lumpkin early in October next.

With these hasty remarks, I remain your obedient servant,

ANDREW JACKSON.

General J. E. Wool, *East Tennessee.*

---

No. 11.

HEADQUARTERS OF THE ARMY OF E. T. AND C. N., *New Echota, Georgia, September 12, 1836.*

SIR: To-morrow I shall leave this place for the encampment which I have ordered to be formed near the council ground at Red Clay. The council, as I have already informed you, will take place on the 15th instant. Previous to my departure I would call your attention to so much of your previous communications as relates to the continuance of the volunteers in service. You appear to be anxious to have them discharged. However pacific the Cherokees may appear, I think it would be highly imprudent, until the treaty is executed, to leave this country entirely without troops. I have again and again informed you of the feelings and disposition of a large majority of the nation. The people are opposed to the treaty, and are unwilling to leave this country for the Arkansas. The amount of force necessary to be kept in this country will entirely depend on the course which John Ross and his party will pursue. If the policy

of John Ross should be pacific, and not in opposition to the execution of the treaty, a comparatively small force only will be required to preserve peace and guard the commissioners whilst in the discharge of their duties. On the other hand, if the course of John Ross—for he can control the nation—should be in opposition to the execution of the treaty, the force required will be comparatively large. If Mr. Ross should pursue the pacific course, perhaps six or eight companies of United States infantry, commanded by a vigilant and discreet officer, would be sufficient to give ample protection to the country. But if his course should be hostile, I would not guarantee the preservation of the peace short of eight hundred men. Six hundred might answer, with a very efficient officer to command them; this force, however, should be composed of four hundred regulars and two hundred mounted volunteers. If, under these circumstances, the War Department should deem it prudent and proper to keep a military force in the Cherokee country, whether it is to consist of regulars or volunteers, or of both, I ought to know it soon, because it will soon be time to make preparations for quartering them during the winter.

Governor Lumpkin, who is here, is under the impression that the commissioners will locate themselves here to transact the business of the nation. In such a case, he says he shall consider two companies necessary at this place for their protection and to facilitate the execution of their duties. Should the commissioners determine to select this place to transact their business, and consequently two companies be stationed here, which I think will be necessary, winter quarters must be built and provisions deposited for them before the roads become impassable for wagons. Besides this place, I would select Calhoun for another position for four companies, which we have at this time. Should this be approved, it will be necessary to build winter quarters for them. I would also station two companies in North Carolina, either at Camp Armistead or near the mouth of Valley river—the latter place would be the most suitable position in regard to the Indians. It commands the passage of the Hiwassee, the Valley river, and the roads to Georgia and to Tennessee. The only objection to it is the difficulty of getting supplies to it in the winter season. If we establish a post at this place or Camp Armistead, winter quarters must be built for the troops.

After the council of the 15th instant I shall be able to inform you of the force which I think will be necessary for the Cherokee country. At the same time I will order estimates to be forwarded for building winter quarters for the same. They will, of course, be of temporary construction, and put up at the smallest possible cost.

That which I am the most anxious to know, however, is whether any regular force can be sent to this country in the course of the fall. As I have already informed the War Department, agreeably to instructions from the Secretary, I made a call on General Jesup for four hundred. He returned me for answer that he could not spare any until about the 10th instant; I have heard nothing from him since on the subject. He certainly cannot require the force which he has under his command to control the Creeks. Is it possible that the whole of General Jesup's command is intended for Florida? Independent of the force he now has in Florida, he has fifteen hundred Tennesseans destined for that country, and how many Georgians and Alabamians I know not. I should think that a part of his regular force might be sent to this country, which will enable me to dispense with nearly or quite all of the volunteers, which, as you know, are very expensive.

Governor Lumpkin, in one of his communications to the Secretary of War, says he has suggested whether it would not be expedient to allow some of the committee, or all of the members, who may have furnished subsistence to the poor and needy Cherokees, previous to my issuing rations to them, to be paid out of the fund appropriated for that object, agreeably to the eighteenth article of the treaty. In calling your attention to the subject, I would remark, that if you allow such debts to be paid in one case, would you not be compelled to allow debts in all cases of a similar character? There are many of this character, and they would give me or whoever may attend to the duties endless trouble. Debts of this kind against the Indians would consume more than \$72,000.

Again: some of the committee are anxious to have a part of this fund appropriated to feeding all those who may attend upon the commissioners to transact business. If this was established and generally known, no man would come prepared to subsist himself, and the consequence would be that this fund would be distributed but partially, and to those persons who are not properly entitled to it. Besides, if the Indians should come in and submit to the terms of the treaty, the fund would not last two weeks, the number of visitors would be so great. If they knew they would be subsisted they would come whether they had business or not. I must positively set my face against such a proposition. My object is to distribute it impartially, and in such a way as to do the most good. The great body of the poorer class resides in North Carolina, and would not get their due proportion of subsistence if I should accede to the proposition above alluded to. I know not whether it has been submitted to you for your consideration. I can only say it would never do if you will be just.

On all these subjects I could wish your opinion as soon as circumstances will permit.

On the 1st instant I discharged one company of mounted volunteers, and on the 8th instant General Dunlap and staff.

I have the honor to be, very respectfully, your obedient servant,

JOHN E. WOOL, *Brigadier General, Commanding.*

Hon. LEWIS CASS, *Secretary of War.*

No. 12.

WAR DEPARTMENT, *September 3, 1836.*

SIR: I have just received your letter of the 20th ultimo, and approve entirely the views taken by you in the conversation with John Ross, concerning the council proposed by him to be held with the Cherokees. If the Indians are to be assembled with the fair intention of explaining to them their duty under the treaty, and the necessity of an immediate compliance with its terms, the measure may perhaps be useful. Of this, however, you can better judge from the temper that may be displayed there than I can. If you think good can result from it, you are at liberty to encourage the measure. But if the object is to discuss the validity of the treaty, and thus to excite the Cherokees ultimately to opposition, it is certainly proper that you should express your decided disapprobation of the proposition. I would not,

however, have you use actual force till you are satisfied that the measure will have a tendency to provoke disturbances; in that event it must be put a stop to.

I imagine you misunderstood Mr. Harris's views in the letter to which you allude. This department certainly never expected that you should sit still and see the Indians prepare for hostilities without interruption. The distinction which you suppose was drawn between hostilities actually commenced and those meditated was not intended to be laid down. The distinction was between hostilities, whether meditated or commenced, and a state of peace, from which no danger was to be apprehended. You command in an important section of the country and at a moment of much anxiety. While everything is quiet, and no appearance of hostile designs meditated, your measures will be adapted to a state of peace; or, in other words, nothing more will be necessary than to keep your force upon the alert and to watch the movements of the Indians. But if you have just grounds to believe that they are preparing for disturbances, you will then adopt measures adequate to the emergency. I have great confidence as well in your judgment as in your energy, and I am satisfied that the result will prove that confidence to be well founded.

The circumstances you state respecting the employment of the additional Tennessee troops, although they will not enable this department to recognize their services, yet furnish strong considerations which may well have produced an effect upon you.

Very respectfully, your most obedient servant,

LEWIS CASS.

Brevet Brigadier General JOHN E. WOOL, *Athens, Tennessee.*

No. 13.

WAR DEPARTMENT, *October 12, 1836.*

SIR: I have had the honor to receive and to submit to the President your letters of the 12th, 18th, 21st, and 25th ultimo.

It has never been the intention of the department that the military force in the Cherokee country should be withdrawn or reduced, while its presence was necessary for the accomplishment of any objects connected with the treaty. A proper regard to economy, however, requires that no more should be retained than is sufficient for this purpose.

The marine corps having proceeded to Florida, there is no portion of the regular army that can be placed at your disposal.

The number of volunteers that you may require will, in accordance with the suggestion of Governor Lumpkin, in which you seem to concur, and which is approved by the President, be drawn from the States respectively in which they are to be stationed. And the President has directed me to request that you will muster, pay, and suffer to return to their homes such portion of the Tennessee troops as, in the opinion of the commissioners and yourself, will not be wanted within the limits of that State while the execution of the treaty is in progress. Having engaged to serve twelve months, unless sooner discharged, they must be distinctly informed that they are liable to be called into service at any time during the period of their original engagement. It would be improper to part with any of the Tennessee troops until ample arrangements are made to guard the other States, unless yourself and the commissioners should think that less than the whole number can effect this object.

It is apprehended that many, if not all the volunteers from Georgia and Alabama, lately in service, have been finally discharged. Should this not be the case, you will call upon the governors of those States, respectively, for as many of these yet liable to serve as may be required within the limits of each. Should they have been discharged, you can then make your requisitions for the same number of new troops. As none have yet been in service from North Carolina, those called out for that State will, of course, be new troops.

The letter from this department of the 20th of June last gave you authority to call for militia from the States of Tennessee, Georgia, and North Carolina, but it will now be preferable to make your requisitions for volunteers under the act of Congress of the 23d of May last. I enclose a copy of the act, an extract from a letter to the governors of some of the States from which volunteers were called, and a copy of a memorandum that accompanied it, in which the principles of the organization of volunteer troops are distinctly laid down, by which you will be guided so far as they are applicable. The number you may call for will be received into service for twelve months, unless sooner discharged.

This arrangement, however, so far as it respects North Carolina, will not be carried into effect if you and the commissioners should be of opinion that, in consequence of the small number of Indians in that State, every necessary service can be rendered by the troops from the other States.

I understand from your letter of the 12th ultimo that your present impression is that eight hundred men are sufficient for a permanent force for the whole Cherokee country. This number, therefore, will not be exceeded in carrying out the arrangements indicated in this letter, and I presume it will not be necessary to keep a greater number of the Tennessee troops in service until it can be completed. As many of the eight hundred men may be mounted as you and the commissioners may think proper.

In determining upon the various points herein presented, the number and kind of volunteers to be employed, and the stations of the several detachments, I would recommend that you consult the commissioners, whose character and knowledge of Indian temper and habits and of the localities of the country entitle their opinions to great consideration.

You are authorized to have the necessary winter quarters provided for the troops you may call into service.

The declarations made by you to Mr. John Ross, as stated in your letter of the 18th ultimo, will be sustained. The President will not depart from the determination expressed in his letter to you of September 7: "The treaty is to be religiously fulfilled." No delegation sent to this place with a view to obtain new terms or a modification of those of the existing treaty will be received or recognized, nor will any intercourse be had with them, directly or indirectly, orally or in writing. You will repeat this determination of the President to Mr. Ross and to all others in the strongest terms. If any of our own citizens enter the Indian country and incite opposition to the execution of the treaty, you will ascertain

whether there is no law of the State which can be brought to bear upon them and under which they can be removed. If they cannot be reached in this way, it is the opinion of the President that they may be removed under the sixth article of the treaty, in which the United States guarantee that the Cherokees shall "be protected against interruption and intrusion from citizens of the United States who may attempt to settle in the country without their consent." It is not to be presumed that this consent will be given by those of the committee who are acting under the twelfth article, and by the terms of that article they alone are authorized to give it.

If any officer of the army should countenance resistance or opposition to the treaty, you will arrest him and order a court of inquiry. If the fact be established, the President will dismiss him from the service. And the commissioners will be instructed to suspend any of the agents employed under the treaty who may be guilty of the like offence.

I am instructed to express the surprise of the President that you permitted the council of the Cherokees to remain in session a moment after it became apparent that it was determined to declare the treaty void. This was the contingency contemplated in the letter of the department of September 3, in which you were instructed to interfere and disperse such assemblage. If upon any future occasion the non-execution of the treaty should be discussed in council you will immediately close its session. You will inform Mr. Ross that the President regards the proceedings of himself and associates in council as in direct contravention of the plighted faith of their people, and a repetition of them will be considered as indicative of a design to prevent the execution of the treaty, even at the hazard of actual hostilities, and they will be promptly repressed. You will also inform him that if a delegation proceed to the Cherokees west of the Mississippi for the purpose of procuring their co-operation in an attempt to set aside or modify the existing treaty or to obtain a new one, the acting superintendent of the western territory will be instructed to enforce the provisions of the 13th section of the intercourse law of 1834, and to employ military aid, if necessary, under the authority of the 23d section.

I annex copies of these sections, which, as well as a copy of this letter, you will deliver to Mr. Ross.

The direction you have given to Major Nelson, and your general views respecting the Creeks residing among the Cherokees, meet the concurrence of the President, so far as they may affect Creeks settled in the Cherokee country prior to the extension of the jurisdiction of the States over the Indian country, and to the treaty with the Creeks of March 24, 1832. Those who have settled there since will be required to join their people west of the Mississippi, and military force will be applied to effect that object if necessary.

Very respectfully, your obedient servant,

C. A. HARRIS, *Acting Secretary of War.*

Brevet Brigadier General JOHN E. WOOL, *Athens, Tennessee.*

No. 14.

HEADQUARTERS ARMY OF E. T. AND C. N., *Red Clay, Tennessee, September 18, 1836.*

SIR: It is with peculiar pleasure that I acknowledge the receipt of your several communications of the 1st and 3d instant from Athens, by express. They have, indeed, revived my hopes, for I had begun to think that all confidence was lost in both my judgment and discretion. I am happy to find that it is otherwise.

The Cherokees are fast coming in from all parts of the nation to attend the council. I presume at least three thousand are present. My camp is within a quarter of a mile of the council ground.

I have had two interviews with Mr. John Ross. I endeavored to convince him of the folly of any attempt to resist the execution of the treaty, or to obtain a modification of it; at the same time informed him of the determination of the President to have it executed in all its parts, and cautioned him, as the President directed in his communication of the 7th instant, an extract of which is herewith submitted. I have little doubt that the council will declare its dissent to the treaty, and appoint a new delegation to go to Washington for the purpose of making a new treaty, or to procure a modification of the present one. This, Mr. Ross informed me, was the wish of the people and, of course, his wish, for, as he says, he has always conformed to their desires. He has unquestionably unbounded influence over them, and can wield them as he pleases. I told him that the destinies of these people were in his hands. It was in his power to do them much good or much evil, and the latter would be the result if they adopted at this council the plan he had suggested. The last interview was held in the presence of Lowrey, Taylor, Lewis Ross, and the two Gunter. I read to all the President's letter. I called their attention to the situation of the Creeks, not only those who had sought refuge in the Cherokee country, but those who had long resided with them, and were connected with them by marriage; who were now hunted up like wolves, in all directions, and carried to the west, leaving all they had behind them. The policy he was about to pursue would, beyond all question, lead to the same result. His people would not be ready, and the consequence would be that they would be hurried off without the benefits now offered by the treaty. All which did not appear to produce the slightest impression. His only reply was, that he should leave the whole subject to his people and abide the result. What that will be I have already informed you.

On the subject of the Creeks, I would call your attention to the enclosed letters, from 1 to 3 inclusive. Some check ought to be put to the course now pursued. Humanity revolts at such a course. Many of these Creeks have not participated in the late hostilities, but have lived many years in the Cherokee nation, and are connected with that people by the ties of blood and marriage. They ought not to be hunted and dragged like so many beasts to the emigrating camp. Certainly a distinction ought to be made in favor of those who have become nationalized, and, according to the laws and customs of the Cherokee nation, are permitted to partake of the benefits of the treaty.

I hope the subject will receive your immediate attention, in order that a decision may be had upon these delicate and intricate questions. What possible objections can the government have to their being permitted, if the Cherokees are willing, to come in and remove under the treaty with them to the west?

It is expected that the Valley River Indians will not give their names to the appraisers appointed to value their property in that section of the country.

On Monday next the council will commence business. I can only look on and guard against any disturbance which might grow out of so large an assemblage of Indians.

I have the honor to be, very respectfully, your obedient servant,

JOHN E. WOOL, *Brigadier General, Commanding.*

Hon. LEWIS CASS, *Secretary of War.*

No. 15.

[Extract.]

HEADQUARTERS ARMY OF E. T. AND C. N., *Fort Cass, Tennessee, November 2, 1836.*

SIR: I have the honor to acknowledge the receipt of your communication of the 12th and your several communications of the 17th ultimo. In answer to which, I would respectfully request that you will do me the favor to inform the President of the United States that it has not only been my pleasure, as it will be so long as I hold a commission in the service of the United States, to obey all orders emanating from the President of the United States, and to spare no exertion to discharge every trust confided to me in such a manner as to merit his high approbation as well as that of my countrymen in general. It was with such feelings that I entered upon the important duties assigned me in the Cherokee country; and I can assure the President that, since I have been in command, I have zealously, perseveringly, faithfully, and firmly discharged my duties, at the same time pursuing a just and honorable course towards both the red and the white man, and such a one as I believe would have accomplished in due time all the objects contemplated by the late treaty with the Cherokees. Of this I am sure the President will be convinced when he is made acquainted with all the facts in relation to my course, which I will transmit in a report to the War Department, with a request that it may be laid before the President, as soon as I can complete the arrangements required by the last instructions from the War Department. As it is evident, however, from the communications received from the department, and the restrictions imposed upon me, that I do not possess that confidence which should belong to a military commander in this country, peculiarly situated as it is, I would most respectfully but earnestly request, in order that another may be sent possessing more of the President's confidence, that I may be recalled from this command.

JOHN E. WOOL, *Brigadier General, Commanding.*

G. A. HARRIS, Esq., *Acting Secretary of War.*

No. 16.

WAR DEPARTMENT, *November 16, 1836.*

SIR: I have had the honor to receive your letter of the 2d instant, which has been submitted to the President. He directs me to assure you that he has full confidence in your capacity, fidelity, and zeal, and that so far as your proceedings, since you assumed the command in the Cherokee country, have been made known to him, they have met his decided approbation, with the exceptions indicated in his communication addressed to you from the Hermitage, and in the letters from this department of the 12th and 17th ultimo. In regard to the points there excepted to, he instructs me to say that the errors of judgment into which he supposes you to have fallen were not such as to lessen his confidence in your character as an officer, or in your general ability and prudence. He therefore sees no adequate reason for recalling you from the command; and he trusts that, on a review of the whole matter, you will be satisfied that you may remain in it with honor and satisfaction, so long as the public service shall require.

The particular measures stated in your letter to have been taken by you in execution of the instructions of the 12th ultimo are entirely satisfactory.

Very respectfully, your obedient servant,

B. F. BUTLER, *Secretary of War ad interim.*

Brigadier General JOHN E. WOOL, *Athens, Tennessee.*

No. 17.

HEADQUARTERS ARMY E. T. AND C. N., *Fort Cass, Tennessee, November 6, 1836.*

SIR: Agreeably to my communication of the 2d instant, I have the honor herewith to transmit a report relating to my conduct as an officer, and the course I have pursued since I took charge of the important trust confided to me in this section of the country, connecting therewith a part of the correspondence relating thereto between the Secretary of War and myself, with the confident expectation that, so far from finding cause to censure me for the course I have pursued since I have commanded in the Cherokee nation, my conduct throughout will command your high approbation and praise, as well as that of my countrymen in general.

By my instructions from the Hon. Lewis Cass, Secretary of War, dated June 20, 1836, I was directed to repair to this country without delay, and take command of the troops destined to operate in the Cherokee nation; to allay all excitement which might exist among the Cherokees; to seek interviews with the principal men of the nation, and to urge upon them the necessity of their interference, and prevailing upon their people to remain quiet, and to comply with the late treaty stipulations; and, in case the necessities of the people should require them, to furnish them, conformably to the 18th article of the treaty, a reasonable quantity of provisions to all such as evinced a friendly disposition to the United States; and in case of

hostilities on their part, to employ such force as I might deem necessary to suppress them and subdue them to unconditional submission; and in case I should deem the force to be raised by the governor of Tennessee insufficient, I was authorized to call for such additional force as I might deem necessary, upon the executives of Tennessee, Georgia, and North Carolina.

Agreeably to my instructions, I set out, accompanied by Assistant Quartermaster Hetzel, on the 20th of June, the day on which I received them, and travelled night and day over the very worst possible roads, until I arrived at Knoxville. Here I met Lieutenant Howe, assistant commissary, stationed at Fort Cass, from whom I learned that it would be necessary to purchase at that place various supplies for the troops of whom I was about to take command. This occupied me and my assistant quartermaster for three days, when I left for Athens, the place of rendezvous for the brigade of East Tennessee volunteers, where I arrived on the 4th of July. Although twenty-five hundred men were marching on that place, instead of twelve hundred as called for by the Secretary of War, no preparations had been made to receive them. Everything therefore was to be done immediately, with only Major M. M. Payne, Lieutenant Howe, assistant commissary, and Lieutenant Hetzel, assistant quartermaster, to assist me. Subsistence, forage, store-houses, tents, and camp equipage, were to be provided before the 7th of July, the day the troops were to be assembled. They commenced arriving on the evening of the 5th, and on the 7th all were present; and all were mounted except two companies, and without the means of providing themselves with either forage or subsistence. At the request of Governor Cannon I furnished them with both.

On the 8th and 9th of July Governor Cannon organized this force, according to the laws of Tennessee, into a brigade of three regiments, and turned it over to me, with Brigadier General Dunlap at its head. I objected to receive it. But on the urgent solicitations of the governor, with a solemn pledge that the State of Tennessee would pay the expense if the President would not authorize it; a letter from General Gaines to the governor, requesting him to have (I believe) a brigade of mounted men in readiness for the southwestern frontier; and the rumors of the day of a general war with the Indians on our western borders, all conspired to induce me to receive the whole number, on conditions that the supernumeraries, over and above the call of the Secretary of War, should return to their homes, and there await, without pay, the future call of the President of the United States, or the commanding general of the Cherokee forces. It was an organized force, and ready to be called into service at any moment, with no other expense than is allowed for going to and returning from the place of rendezvous to their homes. It was at least a precautionary measure, and, as I conceived, warranted by circumstances, independent of the pledge of a chief of a sovereign State, which no officer could well refuse without giving offence to the State. Besides, it prevented an excitement, the extent of which no man could foresee, and which I have little doubt would have been turned, under the circumstances, against the administration and myself, and more especially if I had disregarded the pledge of the governor. For, I would ask, what justification could I have offered to the volunteers for not receiving them, after the State of Tennessee was pledged through its chief to pay the expense? Besides, I had little doubt, whether or not I received them, that Congress would, under the circumstances, pay the expense of their going to and returning home from the place of rendezvous. And in this opinion it would seem that I am sustained by the high authority of the President himself, for, although he censured me for receiving them, he says, in a communication to the Acting Secretary of War, dated the 7th of August: "Those men obeyed the summons of their country, and ought not to suffer for the indiscretion of those who caused more of them to turn out than could be received into the service." "They ought to be paid for their travel and expenses to, at, and from the place of rendezvous, and Congress will doubtless pass the necessary law. Their promptness in tendering their services and equipping themselves for the field is a high evidence of patriotism, and deserves the thanks of their country." I may have done wrong in receiving those troops, and yet I am unable to perceive how I could have avoided it.

It was under such circumstances that I received the brigade, and immediately ordered Brigadier General Dunlap to reorganize it into two regiments of ten companies each, and ordered the remaining companies, fourteen in number, besides one rejected, to their homes, and there to await, without pay, the future call of the President, &c. This occupied General Dunlap two days. During that period I ordered Lieutenant Howe, assistant commissary, to establish depots of provisions for the troops which I intended for active service at the mouth of Valley river in the mountains of North Carolina, at Ross's Landing in Tennessee, and at New Echota in Georgia. At the same time I ordered ten thousand rations to be deposited at each of the above depots for the poorer class of the Cherokees.

The brigade being organized, but having no ammunition for their muskets, and not being able to learn that any was on the way between any of the United States arsenals and Athens, I armed such of the companies as I intended for immediate service with rifles, and ordered the necessary ammunition and equipments to be purchased and prepared at Athens. On the 16th of July Captain Morrow, an intelligent, discreet, and vigilant officer, being ready, I directed him with his company to make a tour of the greatest part of the Cherokee nation, in order to ascertain the temper and disposition of the people, and to disseminate the views of the government amongst them, and to urge them to remain quiet and submit to the terms of the treaty. On the same day I ordered the two infantry companies to proceed and repair the road through the mountains of North Carolina to the mouth of Valley river, which was necessary before provisions could be transported to that section of the country.

On the 20th of July Lieutenant Howe, assistant commissary, and Lieutenant Hetzel, assistant quartermaster, having previously made, agreeably to my orders, the requisite arrangement for transporting the supplies to the several points designated, I ordered five companies, under the command of Colonel Bird, to Ross's Landing; one company, under the command of Captain Vernon, to New Echota, Georgia; and five companies, under the command of Colonel Smith, to the mouth of the Valley river. Each command arrived at its destined position about the same time—the 27th of July. The remaining five companies I ordered to be discharged the 31st of July—leaving myself with only eleven companies of volunteers and one of United States infantry. This force I conceive indispensable to make the necessary impression upon the Cherokees, and, as I informed the Secretary of War on the 19th of July, to induce the Indians to emigrate; for I had little doubt they would resist removal as long as they could with safety.—(See my letter to the Secretary of War on the 15th of July.)

On the 22d of July, in consequence of the information received from officers and agents in the Cherokee country, I was induced to make the following remarks to the Secretary of War: "From information recently received, growing out of the force assembled at this place, a favorable change, it would appear, has been produced in the minds of many of the friends of John Ross, notwithstanding he has recently encouraged them with the hope that he would obtain a rehearing, and eventually set aside the late treaty. I have cautioned the Cherokees in regard to the advice of John Ross, and informed them that they

had no hope but that of removal according to the treaty. Any other hope would lead to their destruction and all those concerned with them. The treaty must be executed, and that as soon as circumstances would permit. Such communications have had their effect, and the Cherokees are now willing to be advised. *If I am not interfered with, one-half of the Cherokees will, if necessary, go this fall, notwithstanding a powerful influence is excited against it.*"—(See also my letter to the Secretary of War dated the 25th of July.)

On the 27th July, a little more than a month after I received my instructions from the Secretary of War, having travelled eight hundred miles, armed and equipped a brigade of volunteers, established several depots of provisions for both troops and Indians in the Cherokee country, appointed agents to issue rations to the Indians, made regulations for their government as well as the volunteers, and repaired thirty miles of road, I established my headquarters in the mountains of North Carolina, near the mouth of Valley river, in the midst of the most savage and troublesome part of the Cherokees, who are nearly or quite all opposed to the late treaty. Conformably with my instructions of the 20th of June, I assembled the chiefs and headmen residing in that section of the country, and endeavored to prevail on them, as well as their people in general, to submit to the terms of the treaty, and send their poor to receive rations and clothing. After three several meetings, without coming to any conclusion on the subject, although they promised me they would, at the last of which they abruptly departed, without waiting for my arrival at the time appointed, or furnishing me with any excuse for their sudden departure. Such conduct, after my giving them every assurance of protection, and promising to guard them against any and every violence, either in person or property, as guaranteed in the treaty, I could view in no other light than as exhibiting strong feelings of opposition to the treaty, if not a determination to resist its execution, and which I conceived called for prompt and decided measures. I immediately ordered a force to pursue them, which brought the principal men to my headquarters, whom I placed under guard for the night. The next morning they apologized for their conduct, and promised submission to the terms of the treaty. As I could not rely on promises made under such circumstances, I permitted them to return to their homes, but with directions that their young men should bring in and deliver up their arms, which was complied with to nearly one hundred stand. This measure had a decided effect, and did more than anything else to convince them that a treaty had been made with them, and that it was to be executed; and if I had been permitted to pursue the same determined course throughout the nation, we should never have heard of the council of Red Clay, and I should have been spared the censure of the President of the United States. The course pursued on that occasion commanded not only their respect but their obedience; nay, more, it commanded the confidence and respect of all the white men as well as the red men. Not a murmur was heard against it in this section of the country. All parties, including Governor Lumpkin, Ridge, Boudinot, Bell, and Currey, approbated it, and declared it was the true course, and the only one which would insure a peaceable and quiet execution of the treaty. It convinced a large proportion of the Cherokees that a treaty had been made with them, and that they had to go to the west; and they began to think seriously of removing as soon as the commissioners could settle their claims, and the emigrating and disbursing agents furnish the means. Everything, in fact, was going on as well as the government could possibly desire, when I received the following communication from the Department of War :

"WAR DEPARTMENT, July 30, 1836.

"SIR: I have the honor to acknowledge the receipt of your letter of the 19th instant.

"In reference to your remark, that 'with a less force we shall have difficulty to induce the Indians to emigrate, for I have little doubt they will resist removal as long as they can with safety,' I beg leave to observe that your instructions of the 20th June contemplated the application of military force only in the event of hostilities being commenced by the Cherokees. The treaty provides that they shall remove within two years, and that during that time they shall be protected in the peaceable possession of their country. *Unwillingness to remove, or even resistance to a removal, will not authorize the employment of force; no intimidation or coercion must be used.*

"I may have misapprehended your remark, but it seems proper to call your attention to our obvious construction of it, and to its incompatibility, so construed, with the stipulations of the treaty."

The Secretary of War can, under the circumstances, easily imagine what my feelings must have been when I received this communication, which deprived me of all power, except "in the event of hostilities." "*Unwillingness to remove, or resistance to a removal, will not authorize the employment of force; no intimidation or coercion must be used.*" Nothing was left me but to stand and look on until the Indians had raised the tomahawk and scalping-knife. This was not all. Another of the 1st, and still another of the 13th August, with private letters from the War Department, filled with the most alarming and foreboding apprehensions of the course I was pursuing. I frankly confess that these communications not only surprised me, but excited in me the most painful anxiety. I foresaw that what followed would be the result: that the people, so soon as they knew I was divested of discretionary power, would lapse into the arms of John Ross. Hence I wrote to the Secretary of War, dated the 20th August, at Fort Cass, calling his attention to my peculiar situation, and particularly in relation to the council proposed by John Ross. In that letter I remarked as follows, on the communication of the War Department, dated 30th July, speaking of John Ross: "I cautioned him to be careful how he advised such a procedure, (alluding to a council,) unless it was for the purpose of explaining to the people the late treaty, with reference to their entire submission to its terms. That any discussion having for its object a different result would, I was confident, meet with no favor on the part of the government of the United States." I said thus much to Mr. Ross; more I could not say with propriety, after the letter of the Acting Secretary of War, dated the 30th July, upon which I shall make no other comment than, if I understood my instructions of the 20th June last, and understood the Secretary of War, I was not only sent to suppress hostilities, but to prevent them, and to preserve the peace of the country. If I am to do nothing until hostilities have commenced, I can only say that I cannot be recalled too soon from this command. I will never consent to risk my reputation as an officer with the restrictions embraced in the Acting Secretary's letters. By timely and decided measures the Florida and Creek wars might have been prevented. One Cherokee, (alluding to John Ross,) whenever he pleases, can unite the whole nation, at least a large majority, in a war against the United States."

Again: on the 27th August, after I had seen and consulted with Governor Lumpkin, showing him the instructions I had received from the War Department, expressing to him my great anxiety on account of the restrictions which had been imposed on me, and which appeared as unaccountable to him as to myself,

for he declared there had been but one voice in relation to my conduct, and that was universal approbation, saying for himself he did not believe any other officer could have done better, if as well as myself, I wrote to the War Department in answer to the Acting Secretary's letter of the 13th August, when I endeavored to convince the Secretary that there was but one course which ought to be pursued towards this people, and that was a firm and decided one, at the same time to protect them in all the rights and privileges secured to them by the treaty, and concluded by observing: "If the officer in command has no discretionary power over the white or red men, he ought not to remain in the country, for it would be utterly impossible for him to do his duty, either in regard to the government, himself, the Indians, or the white men."

Again: on the 1st of September I wrote to the Acting Secretary, when I remarked: "Since my last to you, Mr. John Ross has issued his circular, calling a council of the nation, for the purpose of laying before it the proceedings of the delegation at Washington, and at the same time to give an account of their conduct in relation to the late treaty. This council is to meet on the 15th instant. I have sent one of the circulars to the President of the United States by express, with a request that he would give me his views on the subject, and advise the course I ought to pursue in relation to it. One thing is certain: no good will result from it, and much evil may be anticipated. Major Currey and John Ridge have been here; they both predict much evil from the meeting. We shall be disappointed if a formal protest of the council be not made and published against the treaty. This is the time for decision and action. Those who are opposed to the treaty should be told that the time has passed for discussing the question, and that they have nothing to do but to comply with its terms. This, you may rely upon it, is the true course. I shall however wait, and do nothing until I have further instructions from the War Department or the President." And why did I say I would "do nothing until I have further instructions from the War Department or the President?" It was because of the instructions of the 30th July, which would not allow even of "intimidation or coercion."

In my letter of the 30th of August, forwarded by express to the President of the United States, to which I have alluded above, I transmitted to him one of John Ross's circulars calling a council; and in order to show him the extent of the restrictions imposed on me by the War Department, I forwarded a copy of the Acting Secretary's letter of the 30th of July, with a request that he would give me his wishes in regard to the course I ought to pursue. I asked it because, as I remarked in my letter, I was very much restricted, and had very little or no discretionary power left me in any case except "actual hostilities." At the same time I informed him that it was thought that the meeting and its proceedings would do much mischief, and would interrupt very much the business of the commissioners, and retard emigration. At the time I sent this letter no one doubted that the President would give me all the authority necessary in the case. Such was the opinion of Governor Lumpkin, Ridge, Boudinot, Rogers, and others. The President, however, did not think proper to do so. In his reply, dated September 7, he says: "As you have the treaty before you, and the instructions of the Acting Secretary of War, I do not see that I can add anything more on this subject at present. The treaty is to be religiously fulfilled. You may assure all concerned that no modification or alteration in it will be made by me. Of this Mr. John Ross is fully advised. His friend, Mr. Standefer, who waited upon me at Washington and made the inquiry whether I would agree to a supplemental article, admitting the Rosses and their delegation in as chiefs, was informed that I would not. You will, therefore, make known to the Cherokee people that no alteration in the treaty will be made, but that all its terms and conditions will be faithfully and fully executed.

"You will caution John Ross from calling a council of the Cherokee people, with a view of altering or opposing the treaty. He knows that there will be no further negotiation on the subject; that the Cherokees are to emigrate in two years from the ratification of the treaty, and will be obliged to go within that period; that collision between them and the whites has been too long continued for the gratification of himself at the expense of the poor of the nation." I could view this letter in no other light than as a full confirmation of the Acting Secretary's letter of the 30th July, which deprived me of all power except in case of hostilities.

It appears, however, by the communication of the Acting Secretary of the 12th October, that the President expressed his surprise that I should have "permitted the council to remain in session a moment after it became apparent that it was determined to declare the treaty void. This was the contingency contemplated in the letter of the department of September 3, in which you were instructed to interfere and disperse such assemblage." Surely, from the course I had previously pursued at Valley river, and where I told the Cherokees they could not counsel with John Ross, for I would not permit it, at the same time I informed them that I was the only one with whom they could advise, (the commissioners had not then arrived,) and I advised with no one but the President, and he was determined to have the treaty executed. I repeat, surely, after so firm and decided a course, together with my earnest appeals against the restrictions imposed upon me by the War Department, no one will believe that I would have permitted the council to remain in session a moment if I could have drawn from the letter of the 3d of September the same conclusions that the President did. It would have been contrary to my whole course since I have been in the country, in words, actions, and feelings, and which caused so much alarm at Washington that it was apprehended that I might commit some rash and indiscreet act, which would not only compromise myself but the government.—(See my letter of the 30th of July.) It was a peaceable assemblage, conducting its proceedings with order and decorum, without noise, commotion, or disturbance. It is true that it decided the treaty was no treaty, but not until the last day of the session, when the council immediately dispersed, and before I was made acquainted with its decision. Although I well understood the object of the meeting, yet no one could tell until the vote was taken what the final result would be. The subject was not discussed in general council, but, as I understood, in private and around the family fires. Not one circumstance, however, occurred during the whole sitting that, according to my construction of the Secretary's letter, would have justified me in breaking it up. He says, in the second paragraph, "You command in an important section of the country, and at a moment of much anxiety. While everything is quiet, and no appearance of hostile designs meditated, your measures will be adapted to a state of peace, or, in other words, nothing more will be necessary than to keep your force on the alert, and to watch the movements of the Indians. But if you have just grounds to believe that they are preparing for disturbances, you will adopt measures adequate to the emergency." I had no grounds to believe that they were preparing for disturbances, although their measures might eventually lead to such a result. The letter, although it expresses great confidence in my judgment as well as my energy, contains many qualifications. In one sentence it gives power, and in another it takes it away. I thought it more of a *diplomatic* than a *military* letter. On examining, however, and comparing all the letters referred to, I

could not discover that any of them invested me with the necessary power. Whether or not the Secretary's letter contained the authority, I did not consider it the letter by which I was to be governed. The President's letter was the proper and only one to which, under the circumstances, I could look for authority. He was nearer the scene of action. He had been sent to by express, in order to obtain his views on the subject. He had the circular of John Ross before him, as also the Acting Secretary's letter to me of the 30th July, which deprived me of all power except "in the event of hostilities." Mr. Rogers, the bearer of my letter, was with the President. He was anxious to have the council broken up, and was particularly requested to call the attention of the President to the subject, and more especially as I had no power to act in the case. Mr. Rogers returned; no one doubted that he had brought with him the requisite authority. Governor Lumpkin saw Mr. Rogers before he arrived at my camp with the reply of the President, and under the impression that it contained the necessary power, wrote to me on the subject, anticipating that I would give the death-blow to the influence of John Ross. He, however, was mistaken, as well as the rest of us. The President's letter contained no such authority. On the contrary, it only contained a confirmation of the restrictions of the Acting Secretary, with a caution to John Ross, and orders to inform the Cherokee people that the treaty was to be "religiously fulfilled without alteration or modification." It being the last letter, and coming from the President of the United States, according to military rules it could neither be disregarded nor disobeyed. It was obeyed to the letter, and to the exclusion of all others; and, as I could not doubt, properly and rightly under the circumstances.—(See my communication to the department of the 18th of September.)

As to the transmission of the communication of John Ross and his associates, I can truly say that I intended no disrespect to any one, much less to the President or the Senate of the United States. Of such an act I am wholly incapable. My object in sending it to the War Department was merely to let them see what had transpired at the council, in order that such measure might be adopted, in the opinion of the Secretary, the circumstances required.

In relation to the instructions of the President, as communicated through the War Department, of the 17th of October, by which I am required to consult the commissioners, and "acquiesce in their judgment, and carry into effect any measures or operations, civil or military, they may determine to be proper;" I would observe, they are too humiliating to an officer who has served his country honorably and faithfully, both in peace and in war, for more than twenty-four years without the slightest censure from a superior, to be submitted to without at least a remonstrance, lest the blood which flowed from his veins at Queenstown should rise in judgment against him. For a military commander to be held responsible for the peace, protection, and defence of a country, and at the same time to be placed under the control of civil officers, has no parallel in the military annals of our country. I will not believe the President intended to impose upon me, as military commander of this country, such degrading conditions. I have done nothing to deserve it. If I am culpable, let me be arraigned and tried, but do not degrade me until I am proved guilty. I have yet to learn that I have been wanting in judgment, firmness, or decision, or that I have, in a single instance, neglected my duty or the interest of my country. Nor have I been wanting in courtesy or attention to the commissioner, who has been waiting for many weeks for his colleague to enter upon the duties of his office. His high and responsible station is a sufficient guarantee to command my respect, and induce me to consult him on all proper occasions. I am sure Governor Lumpkin will not say that I have not consulted him on all proper occasions, or that there has been any want of union or action between him and myself. On the contrary, we have communicated freely and frankly with each other on all subjects connected with our stations and our duties, without disagreement or difference of opinion. I have no objection, however, to the military command of this country being given to one or both of the commissioners; and I have no doubt, if they should be invested with it, they will do honor to themselves and their country; but I hope and trust the President will not require me to act the subordinate.

In closing this communication to the Secretary of War, I would respectfully observe that I hope nothing therein will be construed as intended to be disrespectful to any one, and certainly not to the President of the United States, who is the last person I would think of treating with disrespect. The object of this communication is, a vindication of my honor, and, if possible, to remove suspicions which appear to hang over me, and to convince the President, as well as the Secretary of War, that I am not deserving of censure in any respect whatever, and that my whole course, since I have been intrusted with the command of this country, has been directed with a single eye to the accomplishment of the objects of the government, and to promote the interests of my country. That I have faithfully, honestly, and fearlessly discharged all my duties, doing justice to the red as well as to the white man, and protecting all, as far as it was in my power, in their rights and privileges, as secured to them by the late treaty, I am confident will be awarded to me by the people of this country.

With considerations of the highest respect, I have the honor to be, very respectfully, your obedient servant,

JOHN E. WOOL, *Brigadier General, Commanding.*

Hon. B. F. BUTLER, *Secretary of War ad interim.*

No. 18.

WAR DEPARTMENT, November 23, 1836.

SIR: I have had the honor to receive your communication of the 6th instant, containing a detailed report of the course you have pursued in your present command, and explaining certain measures to which exception has heretofore been taken by the President and by this department. In consequence of the severe illness of the President, I have not yet been able to submit your letter, as you desired, to his inspection; but will do so, as soon as the state of his health will permit. In the meantime, I beg leave to refer you to my letter of the 16th instant, in which the President authorized me to express to you, in decided terms, his continued confidence, and his desire that you should remain in command in the Cherokee country. The favorable views there expressed will, no doubt, be greatly strengthened by the various considerations stated in your report, which abundantly shows (what, indeed, was never doubted by this department) that, throughout your arduous and important duties, you have been influenced by the most honorable motives, and have acted with great fidelity and zeal.

Very respectfully, your most obedient servant,

B. F. BUTLER, *Secretary of War ad interim.*

Brigadier General JOHN E. WOOL, *Athens, Tennessee.*

## No. 19.

HEADQUARTERS ARMY OF THE C. N., *New Echota, Georgia, November 28, 1836.*

SIR: Herewith I have the honor to enclose the Athens Republican of 23d instant. Under the editorial head will be found the following observations, viz: "The inference deducible from the various propositions taken by the writer, (An Observer,) induced the superintendent of the Cherokee removals to call on us, while in this place last week, when he showed to us a communication from the War Department instructing him to give publicity to the views of the President of the United States, as contained in the copy of a letter from the Acting Secretary of War to General Wool, dated October 12, 1836, in which this language is employed: 'I am instructed to express the surprise of the President that you permitted the council of the Cherokees to remain in session one moment after it became apparent that it was determined to declare the treaty void. This was the contingency contemplated in the letter of the department of September 3, in which you were instructed to interfere and disperse such assemblage.'"

I cannot believe the War Department has adopted this new and most extraordinary mode of giving publicity to the censures of the President of the United States against an officer of the army. Still it comes in such a shape that I am constrained to ask the Secretary of War if a communication was transmitted from the War Department to the superintendent of Cherokee removals, instructing him to give publicity to the views of the President of the United States, as contained in the copy of a letter from the Acting Secretary of War to General Wool, dated October 12, 1836? If such instructions had been given, it appears to me that my instructions and the correspondence between the President, the Secretary of War, and myself, on the subject would have been transmitted with them. To order the publicity of one without the other, especially through a civil officer, would be no less unjust than it would deprive me of the only mode left of defending myself and vindicating my honor, and the course I have pursued since I have commanded in this country. Surely the President does not intend to condemn me unheard, nor without affording me an opportunity of showing that I am innocent; and I cannot only prove that I am wholly guiltless, but that I have not, in a single instance, lost sight of the objects which I was sent to accomplish in this country. Nay, more, I will prove that I have not, in a single instance, nor for a single moment, neglected my duties, nor the interests of my country.

I have the honor to be, very respectfully, your obedient servant,

JOHN E. WOOL, *Brigadier General, Commanding.*

Hon. B. F. BUTLER, *Secretary of War.*

## No. 20.

WAR DEPARTMENT, *December 24, 1836.*

SIR: I have had the honor to receive your several letters of the 16th, 20th, and 28th ultimo. Conceiving that the two former have been sufficiently anticipated by the communications of this department, addressed to you under date of November 16 and 23, I deem it unnecessary to make any particular reply to them. The like observation is applicable, in some respects, to your letter of the 28th.

In regard to the publication contained in the newspaper transmitted with your last letter, it is due to the department, as well as to yourself, to state that a copy of the letter from the Acting Secretary of War, of October 12, 1836, was furnished by the Indian office to the superintendent of Cherokee removals, in order to keep him advised of the measures taken and contemplated by the department on subjects connected with his official duties; and that he was instructed to give publicity to the views therein expressed, for the purpose of enabling him, in his intercourse with the Indians and others, to counteract any injurious effects which might result from the proceedings of John Ross and his associates, and to impress on all concerned the determination of the President to enforce the execution of the treaty, and not to allow its validity to be called in question. The publication of an extract from that letter, in the manner and under the circumstances in which it has been made, was not contemplated, and is not approved by this department, and the superintendent has been so advised by a letter this day addressed him. On the other hand, there is room to question the propriety of the publication previously inserted in the same newspaper, which led to the communication of the extract above referred to, if, as seems highly probable, it emanated from an officer under your command. The superintendent evidently supposed that the publication of that article made it proper to give publicity, through the same medium, to the extract selected by him from the letter of October 12.

Should you deem it necessary to your character and usefulness as an officer, you are at liberty to publish the whole letter of October 12, together with the letters of this department of November 16 and 23, or either of them, and this letter, which will be included in any publication you may make. It is not perceived that any necessity exists for the publication of any other part of the correspondence.

Very respectfully, your most obedient servant,

B. F. BUTLER, *Secretary of War ad interim.*

Brigadier General JOHN E. WOOL, *Athens, Tennessee.*

## No. 21.

HEADQUARTERS ARMY OF THE C. N., *New Echota, Georgia, March 31, 1837.*

SIR: I have the honor to inform the Secretary of War that I have this day discharged, except one company, the East Tennessee volunteers, ordered home agreeable to Order No. 66, issued the 1st November last. This order has not been issued in consequence of any apparent change of feelings on the part of the Cherokees in favor of removing to the west, but because I do not apprehend any danger or disturbance from them until about the time they will be called on to take their departure for their new homes. As long as they have a ray of hope of remaining in this country, and will not be obliged to remove to the west, there

will be no danger of war or disturbance with the Cherokees. But when the period arrives when all hopes of remaining in the lands of their forefathers shall be dissipated, and they find that they must go, whoever may be in command in this country at that time may consider himself more than fortunate if he should succeed in removing them without the shedding of human blood. I will not trouble you with a detail of circumstances which are to produce such a scene. It is sufficient to say that the rights of this people have been too often disregarded, too often trampled upon, too often violated without a cause or justification, with impunity, not to have sunk deep into their hearts, and which, I have little doubt, will be made most signally manifest before they finally take their departure, unless prevented by the most efficient and judicious measures. By these remarks I only intend reference to the acts of individuals who reside among them, and who seem bent on drenching this country with blood.

Recent occurrences, which are but repetitions of those which have heretofore taken place, show plainly that it is in vain to appeal to the civil authorities of the country to repress the disposition of the whites to oppress this people and trample on their rights. In illustration, I would refer to a case of an aggravated cast which occurred a few days since within a few miles of this place. An Indian at his home was shot down and basely murdered by a party of white men, who had not the semblance of provocation, unless an attempt to escape from their barbarity be so considered. These men were arrested by my order, and immediately turned over to the civil authority to be dealt with according to their deserts; but so strongly have the prejudices of the people, stimulated by avarice, been excited against the Indians, that it is exceedingly doubtful if justice can be done in the case. With these people it really seems to be no crime to kill an Indian. They do not look to the probable consequences. This circumstance, together with the daily efforts of the whites to dispossess the Indians of their houses and lands, has created a state of feverish excitement which it will be exceedingly difficult to repress when the hour of their departure arrives. To check these aggressions on the part of the whites, and to allay the consequent excitement of the Cherokees, and, if possible, induce them to prepare to remove peaceably to the west, have induced me to propose making the tour through the Cherokee nation, to which I alluded in my last communication. In the meantime I would most earnestly renew my application, made through the Adjutant General's office, to Major General Macomb, in my letter of the 18th of February last, for a regiment of United States infantry to be sent to this country. Such a force, together with the volunteers I can always have at my command in Georgia and Tennessee, will perhaps enable me to preserve the peace of the country, and remove the Cherokees without the horrors of another Indian war.

In addition to the above, I would observe that Lieutenant Deas, of the United States army, has arrived with agents to receive for emigration the refugee Creeks scattered through this country. From the information I have recently received, I think there cannot be less than one thousand. These, it would appear, like many of the Cherokees, are determined not to leave the country until they are forced out of it. On the first intimation of a design to collect them for removal, they fled to the mountains of Georgia and North Carolina. But few have yet been taken. I have little doubt, however, that the greater part will be taken in the course of a month. I have several parties of volunteers in pursuit of them.

I have the honor to be, with considerations of the highest respect, your obedient servant,

JOHN E. WOOL, *Brigadier General, Commanding.*

Hon. J. R. POINSETT, *Secretary of War.*

No. 22.

WAR DEPARTMENT, *October 17, 1836.*

SIR: I have had the honor to receive and to lay before the President your letter of the 2d instant, enclosing a communication of John Ross and others to you.

I am directed by the President to return the communication to you, and to express his astonishment that you should have received or transmitted a paper so disrespectful to him to the Senate, and through them to the people of the United States. You will immediately return it to those who have signed it, and express to them his decided disapprobation of their proceedings and those of the council, and of the measures contemplated by Ross and his associates.

The expression in your letter, "if the government intended seriously to execute it (the treaty) within the period prescribed," leaves room to suppose that you yet entertain a doubt as to the intentions of the President. To prevent any misapprehension on this subject, I am instructed to repeat, in the most explicit terms, that it is the settled determination of the President that the present treaty shall be executed without modification, and with all the despatch consistent with propriety and justice.

You will deliver a copy of this communication to Mr. Ross, and will thereafter cease to hold any communication with him, either orally or in writing, in regard to the treaty.

Very respectfully, your most obedient servant,

C. A. HARRIS, *Acting Secretary of War.*

Brevet Brig. Gen. J. E. Wool, *New Echota, Georgia.*

No. 23.

HEADQUARTERS, *Washington, July 19, 1837.*

SIR: I have, since my arrival in this city, seen a letter, dated July 3, 1837, from his excellency C. C. Clay, governor of Alabama, in which it is represented that, in consequence of certain orders of mine, issued whilst in command of the Cherokee nation, "a contest has taken place in the county of Marshall, which resulted in the death of two individuals certainly, besides the most serious injury to others, some of whom it is feared may yet die of their wounds," and requests that the affair should be promptly investigated, in order that those concerned in it "may meet merited condemnation."

With a view that justice may be done to myself, and that my conduct whilst in command in the Cherokee nation may be duly appreciated, at the same time to prevent false impressions from growing out

of the affairs complained of, I earnestly request that the President of the United States will institute a court of inquiry, not only to investigate my conduct in relation to the case in question, but in relation to all my conduct as commanding general in the Cherokee country, from the time I entered it until I relinquished the command to Colonel Lindsay, the 1st of July instant.

I have the honor to be, with considerations of the highest respect,

JOHN E. WOOL, *Brigadier General U. S. Army.*

Hon. J. R. POINSETT, *Secretary of War.*

No. 24.

WAR DEPARTMENT, *July 27, 1837.*

Sir: I have attentively considered your letter of the 19th instant, and, after mature reflection, feel myself constrained to refuse your request to extend the inquiries of the court, which, at the instance of the State of Alabama, had been previously ordered, so as to embrace a general investigation of the whole of your conduct as commanding general in the Cherokee country, from the time you entered it until you relinquished the command to Colonel Lindsay. Such a course is unusual, and, as a precedent, might be prejudicial to the service. No accusation has been made against you with regard to any other part of your conduct while in command in the Cherokee country; nor was it intended by this department, in any orders given to Colonel Lindsay, to convey any censure of your proceedings. By the laws, regulations, and usage of the service, every officer who is accused is entitled to a court of inquiry; but, in the entire absence of all charges against him, it is unusual to ask, and it is deemed inexpedient to grant, a court to inquire generally in relation to his conduct during the period of his particular service.

Very respectfully, your most obedient servant,

J. R. POINSETT.

Brevet Brigadier General JOHN E. WOOL, *Nassau, New York.*

No. 25.

NEW YORK, *August 6, 1837.*

Sir: I have the honor to acknowledge the receipt of your communication of the 27th ultimo, by which it appears that the President refuses to grant my request for a court to inquire into my conduct as commanding general in the Cherokee country, from the time I entered it until I relinquished the command to Colonel Lindsay, because "no accusation has been made against me with regard to any part of my conduct while in command in the Cherokee country;" excepting one from the governor of Alabama, on which an investigation has been ordered.

It appears from a communication addressed to the officers of the Georgia volunteers by the Secretary of War, dated May 20, 1837, that I was recalled at my own request. It is true that, in consequence of the censures and degrading orders of the President of the United States, as contained in the communications of the War Department, dated the 12th and 17th of October, 1836, and circulated by the order of the Acting Secretary of War through the Cherokee nation, and partially published in the Athens Republican of the 23d of November, 1836, I did request to be recalled. The President, however, did not deem it expedient to comply with my request, "as he saw no adequate reason for recalling me from the command," and I remained in the country.

After the lapse of several months the recall is ordered, and one of the reasons assigned is the application made in November, which was then refused. As something new must have occurred subsequently to November, which has been deemed by the President of sufficient importance to induce a recall even on an application which had been refused, and which had not been renewed; and as Colonel Lindsay, my successor and junior in rank, has been directed, upon the complaint of Mr. John Ross and others, to investigate certain parts of my conduct, and report the facts to the department; and as all partial inquiries may lead to injustice, it would be but an act of palpable justice to make the inquiry general. Therefore I again respectfully but earnestly request that the court which is to assemble at Athens, in Tennessee, on the 25th instant, may be authorized to make such inquiry, and report their opinions, with the facts.

I am, very respectfully, your obedient servant,

JOHN E. WOOL, *Brigadier General U. S. Army.*

Hon. JOEL R. POINSETT, *Secretary of War.*

No. 26.

WAR DEPARTMENT, *August 11, 1837.*

Sir: I have received your letter of the 6th instant.

Your application for a general inquiry into your conduct while commanding in the Cherokee country has been reconsidered, but the President still sees no reasons for changing the determination already communicated to you.

There is no charge brought against you, and the mere circumstance of your recall from the command, and the appointment of a successor, though your junior, does not furnish any ground either for complaint or for a right to call for a court of inquiry. No censure was intended by this measure, nor by the order to Colonel Lindsay to report the facts in a matter in which this department desires information.

Very respectfully, your most obedient servant,

JOEL R. POINSETT.

Brigadier General JOHN E. WOOL, *City of New York.*

## No. 27.

[Extract.]

HEADQUARTERS ARMY OF E. T. AND C. N., *Fort Cass, October 13, 1836.*

SIR: "From New Echota I proceeded to Red Clay, where I had ordered a camp to be formed of four companies to watch the movements of the Cherokees and to prevent disturbances at the council held from the 15th to the 25th ultimo. During the whole of the session of the council the volunteers conducted themselves with great propriety.

"I had several interviews with Mr. John Ross and other principal men of the nation on the subject of the council, the object of which was to explain the conduct of the late delegation at Washington, and to denounce the treaty made with the Cherokees and ratified by the Senate of the United States the 25th of May last. I endeavored to convince them of the extreme folly of any attempt to set aside or modify it; that if he persisted in the plan suggested, he would not only bring down ruin upon himself, but on his friends also. I informed him of the determination of the President to adhere to the treaty, and 'to have it executed in all its parts, terms, and conditions.' I called his attention to the situation of the Creeks, not only those who had been engaged in the recent hostilities, but those who had been friendly and had resided for many years in the Cherokee nation, who were now hunted up and carried to the Creek emigrating camp and forced to the west. I asked him if he was prepared to witness such scenes among his own people, which would inevitably be the result if he persisted in his present course of policy. He replied that his will was that of his people; he should submit the question to them, and abide the result. That result has been transmitted to the War Department.

"From Red Clay I proceeded to this place, where I have been busily engaged since the 7th instant in examining and signing abstracts of issues and making out my accounts with the government of the United States.

"I have only to add to the above that I have done everything in my power not only to conciliate the Cherokees, but to protect them in all the rights and privileges secured to them by the treaty. This they have no hesitation to acknowledge. Scarcely a day passes that some complaint is not made that a Cherokee has either lost a horse, a hog, or a cow, or his house or lands, which require my interference. I think I have restored four stolen horses within the last two weeks, and protected numbers in the possession of their houses, lands, and ferries. This, with the supplies which have been furnished in rations and clothing, has given me a claim to their confidence, and my decided course has commanded their respect and obedience."

JOHN E. WOOL, *Brigadier General, Commanding.*Major General A. MACOMB, *Commanding the United States Army.*

## No. 28.

RED CLAY COUNCIL GROUND, *Cherokee Nation, September 30, 1836.*

SIR: The undersigned, chiefs and representatives of the Cherokee people, beg leave to address you, as the commanding general intrusted with the execution of the orders of the President of the United States, concerning the instrument purporting to be a treaty between the United States and the Cherokee nation east of the Mississippi, and have the honor to state that your communications of the 19th instant to the Cherokee people, respecting your instructions on the subject, were promptly read and interpreted to them in general council assembled. The result of their deliberations, and the expression of sentiments adopted by upwards of twenty-one hundred male adults on this occasion, the undersigned would also most respectfully communicate, through you, to the government of the United States, as follows, to wit: The chiefs, national committee, and council, and the people of the Cherokee nation in general council assembled, have resolved that the instrument purporting to be a treaty made at New Echota, on the 29th day of December, 1835, by the Rev. John F. Schermerhorn, commissioner of the United States, and the chiefs, headmen, and people of the Cherokee tribe of Indians, is a fraud upon the government of the United States and an act of oppression on the Cherokee people; that those who are represented as acting on the part of the Cherokees, and who assumed the style of "chiefs and headmen," hold no such title or designation from the Cherokees, nor have they received authority from the nation to form said instrument; therefore said instrument is null and void, and can never, in justice, be enforced upon the nation, as they do most solemnly disclaim and utterly reject said instrument in its principles and all its provisions; that a respectful memorial to the government of the United States be prepared, on behalf of the Cherokee people, praying that the said instrument may be set aside; that a delegation, consisting of John Ross, principal chief, Richard Taylor, Samuel Gunter, George Sanders, Walter S. Adair, John Binge, James Brown, and Stephen Foreman, be and are appointed, with full powers, to represent the Cherokee people before the government of the United States, and to enter into arrangements for the final adjustment of all their existing difficulties; that this delegation are instructed to confer with the Cherokees west of the Mississippi on the subject of their acting in concert for the interests and happiness of the whole Cherokee family; that any irresponsible individuals assuming to themselves the power to act in the name of the nation, without authority first legitimately obtained, will be deemed guilty of infringing the prerogatives of the nation and violating the rights of the Cherokee people, who will assuredly never sanction such usurpation, nor acquiesce in the doings of such persons; that in the course they have adopted in reference to the instrument in question, no departure from the most respectful and friendly feelings towards the President, the government, and the people of the United States is contemplated; but, on the contrary, their determination is to maintain and cultivate those friendly relations which have long subsisted between the government and people of the United States and their nation; that, in compliance with a law of Congress which directs that "Indian annuities shall be paid to the chiefs, or such persons as the tribe shall appoint," the above-named delegation have been authorized and appointed to receive from the proper officers of the government of the United States all sums of money due the Cherokee nation east of the Mississippi, and to receipt for the

same for and on account of the said Cherokee nation; that the doings of the general council now assembled render the meeting of the committee and council on the second Monday in October next inexpedient, and said meeting is therefore dispensed with.

In thus frankly communicating the sentiments of the Cherokee people and the doings of the general council, the undersigned beg leave to reassure you that they are actuated from the purest motives and the most friendly feelings towards the public functionaries and the private citizens of the United States; that the only hope of the Cherokees for a further hearing from the government on the subject of their grievances, and for a more satisfactory and final adjustment of their existing difficulties, rests on the justice of their case, and the unremitting confidence entertained in the good faith, magnanimity, and justice of the President and the Congress of the United States, and to realize which they desire that the whole truth may be fairly stated respecting the manner and circumstances under which the instrument complained of was negotiated, and that the same may be fully understood and impartially investigated.

The Cherokees are deeply sensible of their peculiar and dependent situation, consequently are not ignorant that their very existence as a people is at the mercy of the United States, and subject to their will and pleasure. Their course is plain, and has ever been directed in the path of peace and friendship, though not influenced by the dastardly feelings of fear, but by those pleasing ties of confidence and social relations which have so long and so happily subsisted between them and their white brethren. Much may be said, by way of objections in detail, of the instrument in question, but it is deemed unnecessary. The mutual interests and welfare of the whole Cherokee family, those in the east as well as those in the west, would require that in any final arrangement that their approbation should be equally consulted, in order that harmony among themselves may be insured; policy as well as common justice would seem to require this.

In conclusion, will you please to permit us to state that, in compliance with the desire of the Cherokees of the valley towns, it is respectfully asked that their guns may now be restored to them, which have been surrendered up in compliance with your orders, as it is to be hoped there will not be found any necessity for retaining them longer. The undersigned beg you to accept their cordial thanks and sincere regard for your honorable course in the discharge of your military duties here, and also for the gentlemanly deportment of the officers, and the orderly conduct of the soldiers under your command during the sitting of the general council.

With great respect, they have the honor to be, sir, your obedient, humble servants,

#### No. 29.

#### DEFENCE OF BRIGADIER GENERAL WOOL.

MR. PRESIDENT: It was very far from my expectation, when I took leave of my command on the 1st of July last, in obedience to instructions from the War Department, that I should so soon again be compelled to revisit this country, particularly under the circumstances in which I now appear before you. I frankly confess that, when I took my departure, I was flattered with the pleasing reflection that I carried with me the approbation and kind wishes of all—the Tennesseans, the Georgians, the North Carolinians, and the Alabamians. It appears, however, that I was mistaken; and the pleasing allusion which I had so fondly cherished was soon and rudely to be dispelled; for, on my arrival at Washington, I learned from the Secretary of War that I had been charged by the executive of Alabama with usurping the powers of the civil tribunals of the State, disturbing the peace of the community, and trampling upon the rights of its citizens; and that a court had been instituted to inquire into the circumstances, and report the facts to the War Department. My surprise was great; for, of all that could be alleged against me, during the period I commanded in the Cherokee nation, the charges preferred against me were the most foreign to my feelings and intentions, and which every measure adopted, with reference to the Cherokees and the white inhabitants, will clearly prove. I did not go to that country, Mr. President, to tarnish what little reputation I may have previously acquired, by acts of oppression or cruelty, nor by violating the laws of my country. My object was a faithful execution of the treaty with the Cherokees, to protect all in their rights, as guaranteed by it—the white men and the red—the weak as well as the strong. These were the cardinal rules for my conduct, which I steadily kept in view, and which I never lost sight of for a single moment, from the time I entered the country until I left it.

But it is not my intention, Mr. President, to detain this court, or weary its patience by attestations of my innocence, or a labored defence of my conduct whilst commanding in the Cherokee nation. The President of the United States having refused my request for a general inquiry into my conduct, and the present inquiry being limited to a single complaint, I will at once proceed, in as brief a manner as circumstances

will permit, to present my views of the subject to the consideration of the court. The facts by which this court is to be guided in the formation of its opinion are now upon its records. I await the result of its deliberations and the judgment of the American people, when your proceedings shall be made public, with undoubting confidence.

My instructions, Mr. President, of the 20th June, 1836, in which a copy of the late treaty with the Cherokees was enclosed, are before you, marked 1. With what energy, zeal, and promptitude I discharged the important duties thus assigned me, the court will be able to judge from the facts and the documents before it. As directed, I repaired to Athens, in Tennessee, with as much despatch as practicable; and after organizing a brigade of volunteers, arming and equipping such a force as I considered the nature of the service required, and establishing depots of provisions in suitable places for both the troops and the poorer class of Cherokees, distributing the troops in such positions as would afford the greatest facilities for operating and controlling the Cherokees, in case of hostilities, I established my headquarters on the 27th of July, (a little more than a month after I left Washington,) near the mouth of Valley river, North Carolina, in the midst of the most obstinate and warlike of the Cherokees, and the most devotedly attached to their country. I was not slow in discovering that the command I had assumed was one of delicacy in its nature, and extremely troublesome in the execution. I found the Indians laboring under a state of excitement produced by the means adopted to force upon them the late treaty, which they most explicitly disavowed, "declaring that they had made no such treaty with the United States, and that the paper which purported to be one was made by a few unauthorized individuals, without the sanction of the nation, assisted by corrupt agents of the government." This state of feeling was heightened by the daily encroachment of the whites, who were flocking into the nation and driving them from their homes. This excitement was still greater in Georgia and Alabama, where the Indians were not only dispossessed of their houses and fields, but, in consequence, also, of the conduct of the troops of those States, who, in pursuit of Creek Indians who had fled for refuge among the Cherokees from the war that was raging in their own country, not unfrequently captured the Cherokees and conveyed them to the Creek emigrating camp for transportation to the west. By this means husbands were frequently separated from their wives, and children from the parents. Such was the perplexed and embarrassing state of things with which I had to struggle on my entrance into the Cherokee country.

To allay this excitement, to correct these abuses, and to induce the Cherokees to acquiesce and submit to the conditions imposed by the treaty, the best energies of which I was master were put in requisition. The testimony before the court will show that I devoted myself unceasingly to accomplish the objects of my mission to the Cherokee country, to execute the treaty honorably to the government and justly to the Indians. I have the satisfaction of believing that the measures adopted would have produced the desired effect. The Cherokees were beginning to relax in their opposition, and were making preparations for removal to the west.

I have thus endeavored, Mr. President, briefly to lay before you the state of the Cherokee nation in August and September, 1836. If, at that time, I had been sustained in my course by the government of the United States, and the commissioners had been present to enter upon the discharge of their duties at the same time, I have no doubt, and I think I will be sustained in the declaration by the more intelligent part of the nation, that at least five thousand of the Cherokees would have removed to their new homes during the last fall and winter. This would have induced the removal of the residue of the nation without trouble or difficulty.

As an indication of the course pursued by me during my command in the Cherokee country, and as showing the means by which I acquired the confidence of the Indians, and the approbation of the white citizens of the nation and the neighboring country, I would call the attention of the court to my communications to Brigadier General Dunlap, of the 4th and 12th of August, 1836. In that of the 4th of August the following directions will be found: "You will proceed without delay to New Echota, and such other parts of the Cherokee nation within the limits of Georgia as may be necessary to give protection both to the Cherokees and the white inhabitants residing in that section of the country. You will allow no encroachments on either side. *Both will be protected in their persons and property.* You will prevent, as far as practicable, all collisions between your troops and the Indians. You will also prevent any interference on the part of the Georgia troops with the Cherokees. At all events, you will prevent any improper exercise of military control over the Indians or the white inhabitants. The whole subject is left to your sound discretion, taking care to do nothing that will bring you in conflict with the authorities of Georgia. The sovereignty of the State and its laws must be respected. You will recollect in your proceedings that the State and the citizens are still laboring under a state of excitement caused by the cruelties of a savage warfare; therefore great prudence and discretion should be exercised in all your intercourse with the nation, and particularly in all measures which might have a bearing upon the rights and interests of the State and people of Georgia."

Again: on the 12th of August, the court will find I transmitted to General Dunlap the following instructions: "Captain Vernon, stationed at New Echota, informs me that John Ridge has complained to him that some white man is about to take forcible possession of his ferry on Coosa river. You will, without delay, inquire into the case, and if you should find the complaints to be just, you will, until further orders, protect Ridge in his rights and property. This order will apply to all cases of a similar character in the Cherokee country. *In your proceedings you will be governed by your instructions of the 4th instant.*" Ridge's ferry was in Alabama.

By examination of the testimony of Captain Morrow, Colonel Byrd, Captain Shaw, and Major Lyon, the court will discover that I gave similar instructions to every officer ordered on command, and particularly to Captain Morrow, stationed near Gunter's Landing, Alabama, and yet I have been charged by his excellency C. C. Clay, now Senator Clay, (in violation of the laws of Alabama,) of assuming the power of adjudicating and determining the right of possession or ownership of land and improvements thereon, and of dispossessing one claimant and supplanting him with another by military force. Under one of these decisions a conflict took place in the county of Marshall, as the governor states, "which resulted in the death of two individuals certainly, besides the most serious injury to others, some of whom it is feared may yet die of their wounds."

The letter of his excellency is so far correct in this, that I did on the occasion alluded to, and at other times, dispossess white men of Indian improvements which they had unjustly taken, and "supplanted them," not with another white man, as it might be inferred, but with an Indian claiming the benefits and protection of the late Cherokee treaty; and for this I believe that I was fully warranted by the letter and

spirit of the treaty, and that justice demanded the exercise of such a power. On this point I shall have occasion to speak more fully hereafter.

The facts of this case are simply these : The heirs of John Gunter, sen., deceased, through their administrator of the estate, Mr. Riddle, applied to me to restore them to the possession of a certain improvement which they claimed as Cherokees under the treaty of 1835, then in the possession of Nathaniel Steel. Having satisfied myself by a thorough investigation that it was an Indian improvement, and that it rightfully belonged to the heirs of John Gunter, sen., deceased, and that Steel had no claim whatever to it, I considered it my imperative duty, having the treaty before me, which I could view in no other light than part of my instructions to transmit the instructions before the court of the 3d of June, marked G, to Captain Morrow. You have it in testimony before the court that these instructions were obeyed, and the administrator put in possession. I would, however, call the attention of the court to the concluding paragraph of those instructions, as clearly indicating my desire in nowise to interfere with that which properly belonged to the civil tribunals of the country.

It will be remembered by the court that Mr. Riddle was an officer acting under the laws which I am charged with having outraged and trampled upon ; that he states in his testimony, most explicitly, that he applied to me for relief, because he believed he had no adequate remedy under the laws of Alabama. I also refer to the very clear testimony of Captain Morrow on this point. I wish it also to be understood that the government of the United States was distinctly informed, and approved of the course for which I have received the denunciations of the governor of Alabama. For this purpose I would refer the court to my letter of the 15th of August, 1836, to the honorable Lewis Cass, (marked 5,) enclosing instructions to General Dumlup, of the 4th and 12th of August, and the answer to that letter, dated the 1st of September, (marked 6 ;) also, to my letter of the 27th of August, (marked 7,) and the answer of the Acting Secretary of War, of the 13th of September, (marked 8,) to the letter of the President of the United States of the 7th of September, (marked 10,) the following extract of which is very explicit : "Should you find any evil-disposed white man in the nation exciting the Indians not to comply with the treaty, you will forthwith order him or them out of the nation; and if they refuse to go, the facts being thoroughly established, you will take the steps necessary to put them out. Such characters must be considered in the light of intruders, prohibited by the treaty from living within the limits of the nation."

Again : In my instructions of the 12th of October, (marked 13,) it will be perceived I was authorized not only to have dispossessed Steel, but to have turned him out of the country; for it is there laid down that, "*If any of our citizens enter the Indian country, and incite opposition to the execution of the treaty, you will ascertain whether there is any law of the State which can be brought to bear upon them, and under which they can be removed. If they cannot be reached in this way, it is the opinion of the President that they may be removed under the sixth article of the treaty, in which the United States guarantee that the Cherokees shall be protected against interruption and intrusion from citizens of the United States who may attempt to settle in the country without their consent.*"

Thus it will be seen, Mr. President, that my course was not only approved, when I informed the War Department of my intention to protect the Cherokees in their property from the lawlessness of intruders, but the President of the United States, who is my superior officer, and whom I am bound to obey, directed me, in the most positive manner, to turn any white man out of the nation who should incite opposition to the treaty ; and the important principle is there recognized, that the United States, having guaranteed that the Cherokees shall be protected from all interruption and intrusion of the white man, has the authority to turn them out of the nation, unless they are there by the assent of the Cherokees themselves. Surely, if I had the power to turn them out of the nation as intruders, I had also that less obnoxious, but more useful power to dispossess them of an Indian house, when they had violently and unjustly obtruded themselves.

Mr. President, before I close this brief defence, upon an intimation to that effect from one for whose opinion I have the greatest respect, I will, as concisely as I can, bring to view the reflections which brought to my mind the convictions that the laws of Alabama, extending her jurisdiction over the Indians and their country, are contrary to treaties and the statutes of the Union, and therefore void. I approach the discussion of such a question as this with much embarrassment. It is properly and purely a judicial question, and I make no pretensions to legal attainments. Besides, I am well aware of the angry discussions which it has elicited, and of the jealous sensitiveness of the States upon this point, which at one time threatened to overthrow the Union. Neither can I suppose, for a moment, that I shall be able to convince the court upon a question which has divided the most eminent statesmen of the day, and has undergone the rigid scrutiny of such minds as Marshall and Story, and Wirt and Sergeant, and many others, who have adorned the bench, the bar, and the Senate of our country, and whose names give lustre to the age. My object shall be to present to the court my own reflections, with a reference to such decisions, treaties, and statutes as the court may conveniently consult, should it be inclined to pursue the investigation.

I shall pass by the discussion of the rights which discovery or conquest conferred upon the nations of Europe over the aborigines of this continent, barely remarking that all the powers of the British crown over the savage tribes inhabiting this country passed by the revolution to the United States of America, and not to the individual States. All subsequent rights have been acquired by treaty stipulation or conferred by the Constitution upon Congress.

The Constitution of the United States declares that laws made in pursuance of it, and treaties made or to be made, are the supreme law of the land, anything in any State constitution or law to the contrary notwithstanding.

The Indian tribes inhabiting this continent have been always recognized as independent communities capable of making treaties and of sustaining the relations of peace and war. "The United States," says Chancellor Kent, "have never dealt with these people within our national limits as extinguished sovereignties. They have constantly treated with them as independent nations, governed by their own usages, and possessing governments competent to make and maintain treaties. They have considered them as public enemies in war and allied friends in peace."—(Godell vs. Jackson, 20 Johns's Rep., 714.) The Supreme Court of the United States declared (6 Peters's Rep., 554) that, "by the ninth article of the treaty of Hopewell a surrender of self-government was never intended by the Cherokees, and so to hold would be a perversion of the necessary meaning of the Indians." In the same case the court used the following language: "Is it credible that they should have considered themselves as surrendering to the United States the right to dictate their future cessions, and the terms on which they should be made, or to compel their submission to the violence of licentious and disorderly intruders?"

All the treaties with the Cherokees, from 1785 up to this time, recognize them as a nation capable of living under their own laws. The principal provisions in those treaties have been thus summed up: "Perpetual peace; grant of land by the nation; express designation of boundaries; to give up offenders taking refuge among them; that retaliation shall cease; the exclusion of the whites from the lands retained by the Indians; acknowledgment of the protection of the United States, and of no other sovereign whatever; that Congress shall have the sole and exclusive right of regulating trade with them, and managing all their affairs as that body shall think proper, (treaty of 1785;) a solemn guarantee to the Cherokees of all their lands not ceded; that it shall be against the law for white men to settle on such lands, and such intruders to be punished as the Indians think proper."—(Judge Peck's opinion, 8 Yer. Rep.) "In the treaty of Hopewell the Cherokees are treated as a nation, and throughout that instrument their distinctive character as a separate political community is kept up and clearly acknowledged. The treaty of Holstein, 1791, recognizes them as a nation, and guarantees the Cherokees all their lands not thereby ceded. All subsequent treaties recognize and acknowledge the operative force of these treaties."—(Judge Green's opinion, chapter 8, report 344.)

Is it necessary for language to be stronger? Where can you find rights more clearly defined or more solemnly guaranteed? Lands are ceded, boundaries are expressly designated, a guarantee for those retained, and assurance of protection from the intrusion of the whites. Are these, then, treaties, and have they the operative force of such an instrument as known to the Constitution? It has never been doubted. They have been approved by the President, ratified by the Senate, published to the world as such, and recognized in the highest judicial tribunals as the supreme law of the land.

Was the United States competent to enter into stipulations of this kind; and is it able to perform them? Or did this magnanimous government designedly bind itself to terms which it could not enforce with a handful of rude, unlettered savages, while it compelled performance on their part; and, when they demanded a fulfilment of the conditions, coldly to inform them we cannot comply, you must rely upon the justice of the States, and the tender mercies of the bordering white men?

Was it ever contemplated by the Indians, when they received the solemn assurance of the United States of protection from all intrusion of the whites, that they were to become subject to a body of laws imposed on them by the States, the language of which they did not even understand, and so entirely dissimilar to all their habits and customs? In the language of the Supreme Court of the United States, "it is incredible." It would be a perversion of language to suppose so, and a fraud upon the Indians to give it that operation; or, did this government, in the formation of these treaties, condescend to "palter in a double sense to keep the word of promise to the ear, and break it to the hope?" I trust that such punic faith will never stain our national character.

In *Worcester vs. the State of Georgia*, (6 Peters's Rep. 561,) the Supreme Court of the United States held that "the Cherokees are a distinct community, occupying its own territory, with boundaries accurately described, in which the laws of North Carolina could have no force, and which the citizens of North Carolina had no right to enter, but with the assent of the Cherokees themselves." This is, perhaps, the last case involving this question which has been before the Supreme Court of the United States, the only tribunal recognized in the Constitution for the decision of such questions. The opinion was pronounced by that pure-hearted man and most eminent jurist, Chief Justice Marshall, whose expositions of the Constitution will be revered while that instrument itself endures. The time and the circumstances give to this decision unusual solemnity and importance. The court will remember that the Union was agitated from one extreme to the other, and threatened no less than an overthrow of the Constitution. At such a time how calm must have been the deliberations of Marshall, how earnest his convictions!

The Constitution of the United States also prescribes that Congress shall have the power of regulating commerce with foreign nations, among the several States, and with the Indian tribes.

It has been decided that personal intercourse was commerce in the sense of the Constitution. The laws of Alabama are, therefore, void, as being repugnant to the provisions of the act of Congress of March, 1802, commonly called the intercourse act. And it would seem that the Congress of the United States was of the opinion that the act of 1802 was still in force as late as the year 1834, at which time an act was passed regulating trade and intercourse with the Indian tribes west of the Mississippi, and in which the act of 1802 was declared not repealed as to the tribes east.—(See the act of 1834, act of 1802.)

Upon what argument, then, rests the right of the States to extend their laws over these people? We are told that the Indian tribes are within the chartered limits of the States, and that the States are sovereign within those limits, and cannot be restrained. But are they not parties to the formation of these treaties? Where were the senators of these States at the time of their ratification? Does their solemn protest stand upon the records of the Senate against this usurpation of the general government? They were present, and themselves parties to the act.

But the State of Alabama became a member of the Union with this tribe of Indians then in her borders, with most of these treaties existing in full force, pledging the protection of the United States, guaranteeing to them the undisturbed possession of their country and the enjoyment of their usages and customs, prohibiting the intrusion of the whites upon their soil, and laws enacted to carry out these provisions, and penalties prescribed for their infraction. By accepting membership with these conditions before her, she became a party to the acts, and cannot disavow them.

Under the repeated and solemn guarantees of the United States to the Cherokees for the occupation of their lands not ceded, would the government have permitted the State of Alabama to have called upon the military force of her State and expelled these people from her borders by the use of the bayonet? The question need not be answered. It cannot be doubted by any one familiar with the condition of the country that they can be as effectually expelled, though not quite so promptly, by means of legislation as by the point of the bayonet. They have not the privilege of an oath before the judicial tribunals, no voice in the legislative hall. Is it not equally a breach of faith to permit that to be accomplished by indirect means which would be prohibited if attempted directly and forcibly.

The testimony on your records establishes the fact that, if all controversies of which they have assumed cognizance were submitted to the adjudication of the civil tribunals of that country, it would be impossible to execute the Cherokee treaty justly and faithfully. There must be some other less interested power to interpose between them and the white people residing among them, who, from their superior cunning and knowledge of the laws, and the fact that the Indian is not allowed his oath, must of necessity be always successful in defrauding and oppressing them.

With these views of my duty, Mr. President, with my instructions before me, holding in my hand the late Cherokee treaty, which solemnly guarantees to the Cherokees the possession of their property, and

the free use and occupation of the same until the time fixed for their removal to the west, what should have been my course? If I had acted otherwise than I did, I should have considered myself recreant to the sacred trust reposed in me. An Indian presents himself before me, and in the language of nature details his complaint. He says: I have been dispossessed by the white man of the house which I built, and the fields which I have cultivated for years; my property has been taken from me, and my family turned out to the shelter of the forest; your government is pledged to protect me, you have the treaty before you, and you were sent to enforce it; I ask justice at your hands. I say to him, go to the civil tribunals of the States, they will redress your wrongs. What would be his answer, what would be your answer, or that of any other man in the community? It would be the voice of nature, universal as the human family. He would say, you insult me with such protection; it is a miserable mockery. Is this your justice? This your faith, so often, so solemnly pledged to us? In the language of Scripture he might exclaim, I have asked you for bread, and you have given me a stone.

My crime has been not in using the language here supposed, but in listening to his complaints and redressing his wrongs. I have endeavored to do him justice without inquiry into the particular provision of this or that State law. I have not perplexed myself with the subtle arguments of politicians about the indivisibility of sovereignty, or such like cobwebs of the brain; but the path of justice being clear, I but obeyed the still small voice of conscience which frequently, in the advance of reasoning, overleaps those barriers with which subtlety and ingenuity sometimes successfully opposes its progress.

The course of justice and humanity are but the dictates of an enlarged and liberal policy. By such a course the Indians were taught that some remains of justice, some touches of feeling yet existed in the bosoms of white men for their unfortunate and peculiar situation. I trust that it softened in some degree the asperities of their feelings, and caused them to look with some confidence to the future. Suppose a different course had been pursued—that every species of oppression and cruelty was practiced towards them, and they could find no redress. Might they not justly say: We can but die, let us first be revenged? Do we seek in vain in the pages of history for such resolutions prompted by despair?

But, Mr. President, I am happy that no charges which should dishonor me as a man, or disgrace me as an officer, have appeared against me. That I may have committed errors of judgment I cannot doubt, but the case before the court I cannot think is one; and although the consequences of this case were tragical indeed, surely I am not responsible for the violence of human passions which caused such a result. No one can regret it more than I do.

Mr. President, I return the court my thanks for their courtesy and unwearied attention during the investigation.

JOHN E. WOOL, *Brigadier General United States Army.*

25TH CONGRESS.]

No. 745.

[2D SESSION.]

ANNUAL REPORT OF THE SECRETARY OF WAR, SHOWING THE CONDITION OF THAT DEPARTMENT IN 1837.

COMMUNICATED TO CONGRESS WITH THE PRESIDENT'S MESSAGE DECEMBER 5, 1837.

DEPARTMENT OF WAR, *December 2, 1837.*

SIR: In compliance with your instructions, and in conformity with established usage to present annually to you, for the information of Congress, a statement of the transactions of this department, together with such suggestions in relation to the various subjects under its administration as the public interests may seem to require, I have the honor to submit the following report.

It will be seen, by the statement of the commanding general, that the principal part of the regular forces has been drawn from the posts on the frontiers and concentrated in Florida; and his account of the military transactions in that Territory will exhibit the progress of the war to the close of the last, and the events attending the commencement of the present campaign. The proposals made by the Indians to submit to the terms of the treaty, and the negotiations entered into with them to this effect, caused the cessation of hostilities at a period when they might have been carried on to advantage.

This measure on the part of the general commanding the army of the south, although productive of delay and increased expense, was dictated by humanity and a laudable desire to avoid, if practicable, the necessity of further enforcing, by arms, the execution of the treaty, and was approved by the department. Nor can any just blame be attached to the conduct of that officer for keeping his faith with the Indians, and rather suffering himself to be deceived by them than to violate his engagements, by securing the chiefs who had entered his camp and placed themselves in his power, under the pledge of receiving his protection.

The enemy proved faithless, and the season for active operations passed away without any important results. Great expense was incurred in preparations for the removal of the Indians, which their treachery rendered abortive. But the honor of the government, which is beyond all price, was preserved; and it is satisfactory to know that the renewal of hostilities has only taken place after every effort had been tried, in vain, to persuade these deluded people to submit peaceably to the execution of the law. It is unnecessary to recapitulate the circumstances which led to this war, they are already well understood; but it may be important to state the causes which have enabled an enemy, so inferior in number and resources, to baffle the efforts of the government to subdue them, and which have rendered the contest not only so disastrously protracted, but so very expensive. The theatre of war, remarkable for its natural difficulties, was entirely unknown to the commanding officers of our army. They were compelled to move their forces with the utmost caution, in the face of a bold, active, and wily foe, thoroughly acquainted with the passes

of the rivers and morasses which intersect the country, and who hovered about their flanks, concentrating their numbers upon a point of attack with unexampled rapidity, and flying from the open ground with a swiftness that baffled the pursuit of the white man. The difficulties of transportation, on which the success of all military operations must depend, always great, and in such a country involving unusual labor, expense, and delay, were in some cases insurmountable. In several instances, when within reach of the enemy, our troops were compelled to fall back upon their magazines or baggage trains for supplies, and thus lose the opportunity of striking an effective blow, because the subsistence stores could not be brought up for their use. Whenever it was possible, supplies were transported by water to points near the theatre of operations; but having to ascend rivers, steamboats were necessarily employed at an enormous cost to government. From these points the transportation became still more expensive as well as difficult and dangerous. Numerous and well-appointed escorts had to be furnished; wagons to be dragged over pathless tracts of spongy pine barren, through almost impassable swamps and across marshy rivers; temporary magazines to be built; and posts to be established in the wilderness, to which further supplies of provisions and forage were to be brought; for the country is entirely destitute of both, and the baggage train can transport its own forage for a few days' consumption only. When it is considered that these difficulties had to be encountered and surmounted by raw, undisciplined troops, in the face of an active enemy, that destroys unseen, delivering a deadly fire at an unexpected moment, and disappearing in morasses impenetrable to the eye of the white man, the zeal and persevering courage of our officers and men are worthy of all praise. It is under such circumstances that our Indian allies have proved so useful. Their peculiar sagacity in detecting the stratagems of their race, and their untiring vigilance and activity in the field, are the best protection against the ambuscades, night assaults, and surprises which constitute the warfare of these tribes, and are so harassing and destructive to our troops. To the strong arms and brave hearts of our own men we may safely rely for victory in action; but we must depend upon the Indian to detect the lurking place of the Indian; to trace him in his devious path and rapid flight; to guard against his wily approach, and to discover his deadly presence at every difficult pass. For these reasons the friendly Creeks were employed in the army of the south during the last campaign; but as it had been found necessary to retain their families at great expense, until they could all be transported together to the west, they were discharged, and are on their way to their new homes. Before their departure measures were taken to supply their places by engaging Indians of other tribes. In extending the necessary orders a clerical error was made, by which the Indians were offered higher pay than the law allows to volunteers. The error was corrected as soon as discovered; but as about two hundred men have been brought to Florida under the first instructions, I beg leave to suggest that an appropriation be asked of Congress to enable the department to preserve its faith with these Indians; which I venture to hope will not be refused.

Another cause of unusual expense is to be found in the character of the troops employed. At first they were drafted men, or volunteers engaged for so short a period of service as to render their employment not only expensive but inefficient; and when they were engaged for a longer time, the inexperience of their staff officers occasioned great and unnecessary expenditures, while the description of force, chiefly mounted men, augmented very much the cost of the campaign. The remuneration this irregular cavalry received from government merely for the use of their horses amounted in six months to a sum nearly if not quite equal to their real value. The government has had, besides, to pay a large amount for horses that perished for want of forage, which the state of the country rendered it impracticable to transport in sufficient quantities for the supply of so large a body of cavalry. The irregular force thus employed in Florida during the campaign of 1836 amounted to about ten thousand men, one-half of which were cavalry, at an expense greatly exceeding that of regular troops, and by no means so efficient as one-half the number of that description of force.

Notwithstanding the experience gained during the last two campaigns showed the great cost of employing volunteers, the department had no alternative but to engage them again, which the patriotic offers of the citizens from every part of the country enabled it to do. The nature of the climate of Florida requires that the active operations of the campaign should be concentrated into a short period of time, and this can only be effected by bringing into the field a much greater number of troops than would otherwise be necessary. The regular force, although collected from every point, was deemed inadequate, and resort has been had to militia, in order to make up, with the regulars, four columns, having each the component parts of an army sufficient to encounter the whole force of the enemy, and destined to move into the interior of the peninsula from distinct points of the coast. Added to these means of offensive operations, the squadron on that station may confidently be relied upon to scour the coast and intercept all communication from without, and in every way practicable to contribute, by its co-operation, to the success of the land forces.

Throughout the whole conduct of this war the West India squadron has co-operated with the army in the most active and efficient manner, not only by promptly furnishing every aid which the appropriate duties of that branch of the service required, but by the officers taking upon themselves the defence of posts on shore, and lending the aid of their professional skill in every situation in which it could be usefully applied, with that persevering courage, zeal, and ability which have at all times distinguished our gallant navy. The revenue cutters placed under the command of the commodore of that squadron have likewise rendered the most efficient service under the direction of that excellent officer. Part of the marine corps, which volunteered its services in Florida, and distinguished itself during the last campaign, still remains there, and it is hoped that they may be permitted to continue their valuable services to the army of the south until the close of the war.

The events of this war, and the heavy expenses attending it, have shown the propriety and even necessity of increasing and organizing the staff and of augmenting the army of the United States. In the last annual report from this department this measure is strongly recommended, and the reasons for its adoption ably urged. I do not think, however, that the manner of augmenting the forces proposed by the bill, which received the favorable action of one branch of the legislature, ought to be carried into effect. The organization of the army, when it was reduced to the peace establishment, ought not to be abandoned. It is fitted to render the greatest service in time of peace, and to afford a basis for the augmentation of the effective forces of the country to a much greater extent in time of war. This arrangement should not, therefore, be disturbed, but the same system carried out in making new levies. I would recommend the addition of three regiments of infantry, and one company to each regiment of artillery, and that the companies, both of artillery and infantry, should be increased to sixty-four rank and file, with authority vested in the President to augment their number, not to exceed one hundred men, whenever the exigencies

of the country may require it. This would secure all the advantages of the present peace establishment, and enable the Executive on any sudden emergency to place the army on a respectable footing of defence.

Sound policy and an enlightened economy equally require that every department of the staff of the army should be augmented. A properly organized staff would have rendered the conduct of the war in which we have lately been engaged both more effective and more economical. As the army is now constituted, officers are drawn off for staff duties, to the great injury of the service of the line; and these duties are by no means so well performed as they would be by officers properly instructed and entirely devoted to them. The present organization does not give to regiments or companies any supernumerary officers. They are no more than the performance of the various duties of their military command actually requires, and to reduce the number must weaken the army, render it irregular and inefficient in its operations, and greatly impair its discipline. Such, however, is the present defective state of every branch of the staff, that all are supplied from subalterns of the line. The departments of the quartermaster general, the commissary general, the engineers, the ordnance, the paymaster general, and the topographical corps, are all compelled to make drafts from the line of the army for the performance of their indispensable duties; and the returns of the Adjutant General's office of the regiments in the field during the last campaigns in Alabama and Florida exhibit a lamentable deficiency of officers to fulfil the duties properly belonging to them.

The quartermaster's department requires not only some enlargement, but the addition of higher grades, to render it adequate to the duties required of it. The functions of this branch of the staff, comprising, as they do, the quartering, supplying, and moving the army, with all its stores, and the execution of various objects of national improvement, are important at all times, but they become peculiarly so in seasons of active operations, like the present, when large bodies of irregular troops are necessarily called into service to aid our limited regular force.

The deficiency in the number of officers provided for this service has been sensibly felt from the commencement of our late border disturbances, and especially during the past season; and with respect to higher grades than those now authorized, experience has clearly shown the necessity of some clothed with the adequate ranks to enable them to take the charge of remote districts, and supervise the expenditure, and direct and control the complicated operations of the department in the field. It is certain that there can be no effective military operations without a high degree of efficiency in that branch of the staff which is to move and supply the army. I would therefore recommend the addition of some officers of rank, with a limited number of that subordinate but useful class of agents—forage, wagon, and barrack masters.

The department of the adjutant general is entirely inadequate to perform its appropriate duties even to our small army; and I respectfully recommend that it be enlarged, so as to supply assistant adjutant generals to each division and department of the army.

Since the establishment of the commissariat of subsistence, great regularity and economy have been introduced in furnishing the supplies of the army; but in order to render it more complete, and to enable it to perform all the duties assigned to it in the most economical and efficient manner, I recommend an addition to the present establishment of at least four officers.

I would recommend an immediate increase of the corps of topographical engineers. The extensive range of duties which have of late years devolved upon this corps renders its increase a matter of necessity as well as of economy. It is physically impracticable, as the corps is now constituted, to obey the injunctions of Congress. Important surveys are neglected; works of improvement are slowly and imperfectly carried on, and the expectations of the country disappointed.

By a reference to the statements of the officer at the head of that branch of the service it will be seen that the entire corps consists but of ten officers; and to these it has been found necessary to add during the present year about thirty individuals, employed as civil engineers, at compensations greater than are allowed to military engineers; thus making the entire cost of this branch of service much greater than it would be in the form of a properly organized corps. In addition to this consideration, discipline and a proper subordination cannot be introduced in a mixed service where the smaller part only is subject to the rules and articles of war, the greater being entirely exempt, and without those positive distinctions of authority and of rank upon which discipline so eminently depends.

The duties of this corps require the combined knowledge of the military and civil engineers. Their military duties consist in surveys for the defence of the frontier, inland and Atlantic, and of positions for fortifications; in reconnoissances of the country through which an army has to pass, or in which it has to operate, the examination of all routes of communication by land or water, both for supplies and for military movements; the construction of military bridges; the position and erection of field-works; the defences of encampments, fords, ferries, and bridges. For these purposes topographical engineers should always accompany armies in the field; and without their aid the organization of a staff is defective and incomplete. Their civil employment consists in the survey of the coast, rivers, harbors, bays, and watercourses, in order to their being improved for commercial and other purposes, and in superintending the various works for these improvements; in surveys of roads and canals under the law of April 30, 1824; and in conducting all civil constructions connected with the commerce of the country, and such international communications as Congress may direct. This brief recapitulation of the various military and civil duties of the corps clearly points out the necessity of its complete organization, and indicates the propriety of attaching it to the general staff of the army. The direction of all the works, both civil and military herein described, properly belongs to this branch of the service. A simple enumeration of the functions of the quartermaster general will show that the duties of his office cannot be performed without the assistance of the officers of the topographical corps. They are to insure an efficient system of supply, and to give facility and effect to the movements and operations of the army, which cannot be accomplished without a thorough knowledge of the topography of the country. It is his duty, likewise, to select sites for encampments, and to assign to the different corps the grounds they are to occupy; a duty which requires the aid of topographical engineers, as does the superintendence of the works at the several posts, the construction of military roads, the acquisition of such knowledge as the department is expected to possess with regard to the military resources of the country, the means and facilities of transportation, the state of the frontiers, with the most eligible points for concentrating troops and collecting supplies, whether in relation to offensive or defensive operations. This information cannot be obtained without the active co-operation of the topographical corps.

I cannot dismiss this subject without adverting to the opinion of my predecessor in relation to the employment of the topographical engineers of the army by States and incorporated companies, in which I

fully concur. At a period when it became a practice of the government to permit these officers to aid in the construction of the public works in the several States, the description of talent and knowledge which they possessed was uncommon in our country, and works of great public utility would have been suspended or abandoned altogether if this permission had been withheld. A different state of things now exists. The demand for civil engineers has created them; and not only is it no longer necessary to aid States and companies by lending them officers of the army, but, in doing so, an act of injustice is committed towards the civil engineers of the country. There can be no doubt that the practice impairs, very sensibly, the efficiency of the corps as a branch of the army, and deprives the government of their services for military surveys and the erection and superintendence of works of national utility. The commander of the army of the south says, emphatically, in a late communication to the adjutant general: "Had the topographical engineers been employed in their appropriate duties in Florida only one year of the sixteen since we obtained possession of the country, from two to three millions of dollars might have been saved in the expenditures of the war." The ignorance of the topography of the country here complained of exists with regard to other important regions of our country, which will, probably, sooner or later, become the theatres of war; and I earnestly hope the department will have it in its power to remedy this defect by confining the members of the corps to their appropriate duties, of examining and surveying the country, for the purposes of national improvements and national defence, and superintending the erection of national works.

Having stated the increase which appears to me indispensably necessary to render the several parts of the general staff of the army effective, it becomes my duty to submit to your consideration the defects of the present system, and to suggest a better organization of this most useful and important branch of the service. On examining the functions of each of the separate divisions, it will be seen that in the moving and subsisting the army, providing for clothing and supplies, including transportation, barracks, camp equipage, and all things necessary for the health, comfort, and efficiency of the troops, the duties of every branch of the general staff are so connected and dependent upon each other that the best-planned measures may be defeated by the failure or neglect of any one of them. Notwithstanding which, they are distinct bodies, entirely independent of each other, differently organized, governed by different regulations, and, although purely military in their functions, depending only upon the civil authority at the head of the Department of War. Such an arrangement is complex and incompatible with the uniformity and subordination which ought to distinguish the organization of every branch of the military service. I recommend, therefore, that there be created a staff corps, to consist of one brigadier general, (chief of the staff,) six colonels, six lieutenant colonels, eight majors, twenty captains, and twenty first lieutenants, who shall exercise all the functions and perform all the duties at present exercised and performed by the quartermaster general, adjutant general, inspectors general, commissary general of subsistence, and their assistants; and also by the topographical engineers and assistant topographical engineers; and that the commissariat of purchases and the medical staff of the army be attached to the said staff corps; thus uniting under one head a homogeneous body, sufficiently numerous to insure promotion within itself, create an *esprit du corps*, excite emulation, and keep alive hope. This organization, at the same time that it secures uniformity and efficiency to the operations of the staff, is entirely compatible with its present division into separate bureaus, and will not disturb the existing relations of the present officers of the corps with the branch to which they are now attached.

This increase of the rank and file and staff of the army here recommended, by which its efficiency would be greatly augmented, and its administration rendered much more economical, has become necessary, independently of the causes assigned, from our greatly-extended frontier, from the number and description of our maritime fortresses, and from the large body of Indians which the humane and enlightened policy pursued by the government towards that people has concentrated upon our western borders. When in 1821 the army was reduced to 6,127 men, the extent of our frontier did not exceed 6,373 miles; along the inland portion of which the Indian tribes were sparsely scattered, a large proportion of their numbers being within the States, and rendered harmless by the surrounding white population; and the maritime frontier was occupied by a few inconsiderable forts. Since that period, its extent has been increased, by the acquisition of Florida and other causes, to 8,500 miles; most of our principal harbors and bays have been fortified by extensive works, and the Indians concentrated upon the western line so as to present a front of not less than 45,000 warriors. The protection due by the government to the inhabitants of this extensive and exposed portion of our country would require a much larger force than is here proposed, if their safety were made to depend entirely upon the regular army; and I would respectfully recommend the construction of a chain of permanent fortresses along that line, and a competent organization of the militia of the frontier States, as important and necessary auxiliaries for this purpose. If any danger is to be apprehended from an army of 15,000 men, scattered along a frontier of more than 8,000 miles, and commanded by officers educated to reverence the laws and cherish the freedom of their country, it is effectually to be guarded against by a proper organization of the militia. Their aggregate force, now, is little short of a million and a half of men; and whatever may be their efficiency against a foreign enemy, they may always be relied upon when the liberties of the country are assailed.

That the necessity of this measure may be fully understood, I have annexed statements, furnished by the chief engineer, exhibiting the number and names of the different fortifications completed and under construction, and the full armament and amount of force which each requires to arm and garrison it; of the works projected by the board of engineers, but which are not yet commenced; and for the prominent points along the sea frontier which require protection, and for which no plans or *projets* have yet been made; and a list of the posts on the inland frontier of the United States, with a notice of the garrisons deemed necessary for them in time of peace, and to preserve peace, furnished by the acting quartermaster general.

The measures of defence for the border settlements, which the policy of the government towards the Indians has rendered it their imperative duty to adopt, have engaged the anxious consideration of this department, and the matter will be fully treated in answer to a call of Congress for information on that subject.

The report of the chief engineer, which is herewith submitted, contains a summary of the numerous and important works under the superintendence of this branch of the service. It is manifest, from a review of this document, that some further increase of this corps is rendered necessary from the great accumulation of the public works confided to its charge. But the high order of talent, united to great acquirements, which have hitherto distinguished this corps, and which are required in the discharge of duties involving not only large expenditures, but in many cases the safety and honor of the country,

demand that this should be done with the utmost caution. The youth who exhibit the greatest aptitude for such studies, and who, in their progress through the Military Academy, distinguish themselves above their fellows, and are deemed worthy to enter the corps by those who are appointed by government to decide the relative merit of the candidates, ought alone to be added to it; nor should they be placed in charge of any work until they have been at least two years assistants to some older and more experienced officer. It is due to this corps to say that their pay and emoluments are insufficient for their support. Performing duties that require the exercise of talents and attainments which, in civil life, command the highest rate of remuneration, and in a manner honorable to themselves and useful to the country, they receive a less amount of pay than any other branch of the service. I beg leave, therefore, respectfully to recommend that the officers of this corps be placed on the same footing as those of the cavalry of the United States. A proper regard to the interests of this branch of the public service induces me to recommend the appointment of an inspector of fortifications, with the rank of colonel, whose duty it shall be, under the orders of the chief engineer, to make regular and systematic inspections of all the fortifications and public works under the superintendence of that officer.

The very important work of deepening the channel at the mouth of the Mississippi has not yet been commenced. Three plans were submitted by Captain Chase, of the engineers, who was intrusted with the necessary examinations: first, by deepening one or more passes by dredging; secondly, by closing all but one pass where they leave the trunk of the river; and thirdly, by cutting a ship channel from the river. The Engineer department suggested the propriety of adopting the first plan as the least costly and the soonest executed; and preparations were made, and all things in readiness to commence the work by the middle of December. In consequence, however, of representations received by the department from the New Orleans Chamber of Commerce, the whole matter was submitted to a board of engineers consisting of Colonel Totten, Colonel Thayer, and Captain Chase, who have required further preliminary surveys, in order to enable them to form a correct opinion as to the character of the works most likely to be successful in improving the navigation of the mouths of this river; a request which, considering the very important nature of the works, and their bearing upon the commerce of the whole valley of the Mississippi and its tributaries, has been acceded to by the department.

The operations on the great raft in the Red river closed on the 25th of May for want of funds, with the exception of one boat, which worked until the end of June.

During the season twelve miles and a half of this dense mass of wood, comprising the remaining portion of what is styled the old raft, have been removed. The part now remaining, being four hundred and forty yards in length, was formed by the freshet of 1836, and is by no means so dense or difficult to remove; and the timber of this portion of it will be employed to stop up the only bayou which now remains to be closed. It is estimated that the cost of completing the operation, which will effectually open the navigation of this river throughout its whole course, will amount to fifty thousand dollars. If the appropriation be made early in the next session, the work may be completed, or nearly so, by May next; otherwise, it must lie over until the autumn of 1838, to the serious injury of the increasing population of the valley of the river, and to the great detriment of the work itself, from the constant accumulation of drift timber which must necessarily take place until there is a free current in the river. If the work be delayed, the superintendent estimates that the increased expense from this cause alone will amount to twenty thousand dollars.

The act of the 2d of July, 1836, which appropriates \$100,000 for surveying and opening a military road along the western frontier, imposes on the President the duty of selecting situations near it for the military posts which, in his opinion, may be most proper for the protection of the frontier, and for the preservation of the necessary communications. On taking up this subject for consideration, it appeared manifest that the conditions of defence, which it is supposed Congress had in view in making this appropriation, could not be fulfilled if the road were surveyed and opened before the sites for the permanent military stations were determined upon; as, without a knowledge of their ultimate position, the road might not approach them sufficiently near to afford "the necessary communications" contemplated by the act.

The selection of these sites has to be made without regard to lateral communications, but with a view to the tribes in front, and to the facility of approach from the rear. I am also of opinion that the contemplated communications, in reference to the security of the fortresses and the protection of the borders, ought to be perpendicular to the line of defence, and not lateral.

Parties are now making the required examinations, and, as soon as they are completed, and the sites for permanent posts determined upon, the survey and works for opening the road designated by Congress will be commenced; unless, upon a review of the subject, they may think proper to adopt the plan of defence for the western frontier, which, as has been before observed, will be presented to them in accordance with a resolution of the Senate to that effect.

The state of Charleston harbor demanded and received the early attention of the department. It was represented that Sullivan's island was being washed away, and the channels, which form the entrance of the harbor, filling up with the sand from its beach. By direction of the Engineer department a minute examination of the situation of the island was made in June last by Lieutenant Mansfield, who submitted a plan for its protection against the encroachments of the sea that was approved by this department.

It is stated in the report of the engineer that the island and southwestern peninsula will be entirely carried away by the action of the currents and storms, unless timely measures be adopted to arrest the progress of destruction; that this island shelters the port of Charleston from the fury of the northeastern storms; and that its destruction would expose the harbor to the violent gales of the autumnal equinox by leaving it open from northeast to southeast, besides the probability of lessening the depth of water on the bars.

Independently of the necessity of the proposed works for the preservation of the port, they are essential for its defence. The island forms the site of Fort Moultrie, which checked the approach of the British squadron during the revolutionary war, and now constitutes, in conjunction with Fort Sumter, the only defence of this important harbor. These considerations induce me to recommend that an appropriation be asked of Congress to commence these works without delay.

It is my duty to call your attention to the present state of the works for the protection of the waters of the Chesapeake. Fort Monroe will require further repairs and new works to render it even defensible. One front of the fort is peculiarly liable to attack, for it is more exposed to a *coup de main* than any other, and is at the same time the only front liable to siege, and the only one exposed to land batteries within reasonable distance. The works intended to protect this front were commenced, and a large body of

earth collected to complete them, and so arranged as in some measure to shelter the vital parts until the whole should be completed. From some misunderstanding, without the knowledge or participation of the Engineer department, this mound was levelled. Earth has also been placed upon the parapet wall. These operations have proved injurious to the works, and immediate measures must be taken to repair the evils they have produced. In loading the parapet it was found the masonry was not sufficiently dry and consolidated to bear the pressure of the great superincumbent weight; and although, from their original strength and solidity, the walls have not yet sustained any material injury, still it is of a nature to call for prompt repairs. I recommend, therefore, that proper measures to protect this fort from a *coup de main*, to which it is now so evidently exposed as to invite attack, be adopted without delay, together with the necessary repairs to strengthen the existing works.

From an examination of the state of the works at the Rip Raps, it appears that the subsidence of the artificial foundation of stone, on which it is intended to erect Fort Calhoun, has not yet entirely ceased; and orders have been given to replace the mass of materials collected for the completion of the fort upon the arches in such a manner as to render the subsidence uniform; and when this is done, it will be prudent to leave it there for some time longer before recommencing the works.

The great difficulty which has been experienced in fixing upon a suitable site for the new fort ordered to be constructed on or near the Arkansas frontier, and in determining its precise position, has occasioned unusual and unexpected delay in the commencement of the work. The commissioners appointed to make the selection by my predecessor being military men, fixed upon a site with a single eye to its military properties; whereas it is believed to have been the intention of Congress to erect a fortress which should serve as a refuge for the border settlers, who are exposed from their situation to the hostile incursions of the Indians, and it became necessary to direct a subsequent examination in order to meet that object. A board of competent officers was, accordingly, appointed, and proceeded in the execution of this duty. Their report may be looked for daily, and the work will be commenced as soon as the situation is fixed upon by the department.

From a variety of causes not necessary to recapitulate here, but chiefly from a disputed title, which has been only recently decided by the courts, the land on which Fort Delaware is situated has not yet been acquired by the government. The Pea Patch island might have been purchased when the fort was projected for comparatively a small sum, and, since the commencement of its construction, was offered to the United States for a slightly advanced price. Since the decision in their favor, \$100,000, with interest from that date, are asked for it by the proprietors; and it remains to be decided whether this large sum shall be paid for the land, or the works be abandoned.

The importance of having a fort upon this island, in order to protect the harbor of Philadelphia, has been recognized by every board of military engineers that have examined the subject. It is the lowest point at which, in connexion with works upon the main land, Philadelphia is defensible; and, while it covers that harbor, Chester, and Newcastle, prevents an enemy from finding shelter in Delaware bay, secures the debouché of an important link in the great inland chain of water communication—the Delaware and Chesapeake canal—and covers the extensive powder manufactories near Wilmington. For these reasons it is important that the United States should possess it; but whether it is to be acquired at the price now asked for it, or after an equitable appraisement of its real value, is a subject to be decided by the wisdom of Congress. In the meantime the works in progress there will render its abandonment more costly hereafter, and may enhance still further the value of the island. An early decision is therefore highly desirable.

The ordnance corps, organized in 1832, requires some enlargement, in order to render it efficient. At present there is not an officer to superintend each arsenal, and it appears to me that the public interest will be promoted by the addition of two majors and ten first lieutenants. But, above all, this branch of the service demands the creation, by law, of a mixed board of artillery and ordnance, to be composed of officers of rank and experience, to digest a general system of ordnance and small arms for the use of the United States. Similar boards have been formed from time to time by regulations of the War Department; but experience proves the necessity of some legal enactment to insure the due performance of this important duty; for up to this time there exists no general system such as I propose, and such as is absolutely necessary to place this branch of the service on a level with that of other countries, and preserve it there.

Doubts having been entertained by my predecessor in office of the power of the department to enter into contracts for supplies of cannon and arms without previous advertisement, it has become the practice of the Ordnance office to make informal arrangements with the proprietors of founderies and manufactories of arms to receive a certain amount of cannon and muskets on inspection, at a settled price—an engagement equally binding as a written contract on the part of the department, but uncertain in its obligation upon the manufacturer. The former method of contracting for limited periods is, in every respect, preferable. These establishments require expensive preparations, and, having no other market than that afforded by the demand of government, ought to have some assurance of the articles they may manufacture being taken off their hands. A contract for a limited period gives this assurance, enabling them to secure the most competent workmen, and encouraging them to render their machinery as perfect as possible. A recent opinion of the Attorney General declares this method to be legal, and it will be followed in future, unless prohibited by legislative enactment. The existence of our own armories enables the government to establish a standard of comparison to which the private manufacturers are compelled to conform, and secures the acquisition of good arms at equitable prices. With the same view the establishment of a national foundery has been frequently urged, and I beg leave, respectfully, to repeat the recommendation. It is not intended that this establishment should at once furnish the amount of cannon and projectiles required, but it would enable the Ordnance department to make the necessary trials and experiments so as to determine the proper mixture of metals to combine the greatest strength with the greatest lightness, and produce the most perfect models. This would secure, at all times, a sufficient supply of the best arms at fair prices. Intending to submit a plan by which the casting of cannon and projectiles, and the manufacture of gunpowder, shall be placed under the supervision of a joint board of the united service of army and navy, the proposed establishment will, if adopted, be made useful to both branches of the service.

The erection of a manufactory of small arms west of the Alleghany mountains cannot be too strongly recommended. The transportation of the armament required by the western portion of our Union is very expensive, and ought to be avoided. It appears to me that the establishment best suited for that country is one for finishing, polishing, and putting together the several parts of the muskets to be made by indi-

vidual artisans, after models furnished them by the superintendent, and received on inspection. In this manner the works can be curtailed or extended to any amount that may be required, without inconvenience, and this description of manufacture become familiar to a large class of mechanics. The buildings and fixtures suitable for this purpose would be much less expensive than those of the present national armories, and, unlike them, the number of arms fabricated might be increased tenfold without requiring any addition to the original establishment. This armory might embrace the manufacture and inspection of rifles for the supply of the friendly Indians, of which numbers are now purchased annually.

Disputes have arisen with persons who withhold the rent lead due by them to the United States, under the terms of a license to smelt lead ore on lands belonging to government; and, on full consideration of this subject, I think it my duty to state that, in my opinion, the reservations of the lands in the lead region, and the plan now pursued of collecting rent on their produce for the use of government, whatever may have been its former advantages, is now prejudicial to that portion of the country where they are situated, and injurious to the interests it was intended to foster. Individuals will not engage in extensive, systematic, and costly works, such as are required in mining operations, without some better security than a mere license for smelting ore. Nothing more is done, therefore, than to scarify the surface of the earth; and the mine is given up at a time when it yields most ore, because its further extraction would require an outlay not justified by the tenure of the land. The miner then removes to another spot, where the same process is followed, and the whole region is dotted over with these imperfect and abandoned works; whereas, if these lands were brought into market to be sold at moderate prices, in small tracts, to those who will actually settle there and work the mines, they might be purchased by enterprising and industrious individuals, who would erect permanent works, develop fully the mineral resources of that region, and render iron and lead so abundant and cheap that government would be benefited by the reduction in the price there of articles of which it is so large a consumer, as well as by the general improvement of that portion of the country. For these reasons, it appears expedient that authority be asked of Congress to dispose of these lands, and also of all ore banks and lands containing minerals of any description whatsoever under the control of the War Department.

The accompanying report of the Commissioner of Indian Affairs contains a full and lucid statement of the various and important matters under the control of that office. The complicated and arduous duties of that branch of the War Department have been performed in a manner highly creditable to the officers charged with their execution; but there are some important subjects connected with these duties which require the early attention of Congress. The Commissioner represents "that the present system of disbursing through the agency of military officers has proved inconvenient, in consequence of their frequent transfer to other duties;" and it is, in my opinion, liable to still stronger objections, as it imposes upon these officers duties foreign to their profession, and of great responsibility; abstracts them from their regiments, and not unfrequently unfits them to return to them. I would recommend that this method of disbursing these funds be abandoned, and a sufficient number of civil agents be appointed, so that disbursements may be made by persons giving bond for the faithful discharge of their duties. I concur with the Commissioner in the propriety of providing by law for the more liberal compensation of agents and interpreters. On their faithful execution of the trusts reposed in them depends the success of all our efforts to civilize the tribes and maintain the peace of the frontiers; and the price now paid for such important services is not equivalent to that received by the same class of persons in the employment of trading companies, whose interests are not, I am sorry to say, identical with those of the government, and whose conduct too frequently counteracts the humane policy of the United States towards the Indians.

In accordance with the opinion of the Commissioner, I would recommend the passage of a law by which all sums accruing on moneys invested for the use of the several Indian tribes be deposited in the treasury, to be drawn out upon the requisitions of this department in the usual form; and further, that the whole business connected with the investment of the funds for the interest of the Indians, and the management thereof, be transferred from this department to that of the treasury, to which it properly belongs.

Intelligence was received at this department, early in the spring, that the Indians were in an inquiet state on our northwestern frontier, and apprehensions were expressed that the hostile feelings which existed between the Sioux and Sacs and Foxes might endanger the peace of our border settlements. Sensible of the weakness of our forces in that quarter—having been compelled, from the state of our army, to strip both the inland and maritime frontiers of their garrisons, to supply the army of Florida with a sufficient regular force—it was deemed most prudent to bring down to the seat of government the principal chiefs of those warlike tribes. It is believed to be important to exhibit to those people the strength of the nation with which they would have to contend in venturing to attack our defenceless borders, and at the same time to impress upon them the advantages which flow from civilization. With several of these tribes it was made our duty to treat; and it would have been in a high degree imprudent, in the excited state of feeling which existed among them, to assemble large bodies in the neighborhood of our ungarrisoned posts, thereby exposing our utmost weakness at a period when it was important to display our utmost strength. The superintendents were therefore instructed to invite them to send deputations of their chiefs to Washington; and, on their arrival here, treaties were negotiated with several of the tribes, by which large tracts of land have been purchased, and the object so much desired by government, to extinguish the title to all the Indian land east of the Mississippi, nearly accomplished.

The Sioux of the Mississippi have ceded their possessions east of that stream, together with all the islands belonging to them, and are to remove to the western shore. The Winnebagoes have at length agreed to dispose of their lands in East Wisconsin, and retire to the neutral ground on the west of the river. It is probable that their sojourn there will be temporary, and therefore a portion only of the neutral ground has been allotted to them, with permission to hunt upon the remainder. The interests of the country appear to require the existence of a line of frontier States between the Mississippi and the Missouri; and the extinguishment of the Indian title to all the land east of the Missouri, to 43° of north latitude, would effect that object. With that view the Winnebagoes would have been at once removed south of the Missouri, had the country been previously explored and a tract of land of sufficient extent set apart for their future permanent residence. The situation of that tribe—fast sinking under the degrading influences which surround them, and pressed upon by the whites—renders it a measure of humanity to remove them promptly across the Mississippi; but they were given to understand that they were not to consider the neutral ground as their permanent home. A treaty, likewise, has been negotiated by Governor Dodge with the Chippewas, by which that tribe ceded a large tract of country east of the Mississippi, and have agreed to retire to lands west of that river.

A mistake had been committed by the surveyors of the United States in determining the boundary line of the land ceded to the government by the confederated tribes of the Sacs and Foxes by the treaty of September, 1832; and it was immediately determined to do justice to the Indian proprietors of the soil, and correct the mistake. The true line, however, would have excluded a fine portion of country which was already settled and improved; and, whatever may be the ultimate policy the government may think proper to adopt towards the settlers who improve new and unoccupied lands in order to acquire a title to them by future purchase, the department is of opinion that, so long as custom and the practice of government sanction their acquiring rights by such means, their claims ought to be respected, and therefore entered into negotiations with the Sacs and Foxes to extinguish their title to this strip of country. In doing so, it is deemed expedient to establish a line that will no longer be subject to doubt or dispute.

In this treaty, as in all the Indian treaties concluded at Washington, regard has been paid to the permanent benefit of the several tribes. Provision is made for the establishment of schools, as well as for instructing the people in the arts of husbandry, and for the investment of the purchase money so as to secure to the Indians a perpetual rent, a portion of which is to be applied in such manner as you may deem most useful and beneficial to them. Much more remains to be done in order to insure the faithful application of the funds destined for the support and comfort of the Indians. It now appears that their annuities really go into the coffers of the traders, in payment of debts incurred, in a great measure, by the idle and dissolute, but which are charged to the whole nation and paid out of the common fund. The effect of such an arrangement is obvious: it encourages the vicious and deprives the industrious of all incentive to exertion. The whole of this subject is of such vast importance, both as regards the condition of the tribes and the character of the government, that I propose to treat it in a separate report, and to suggest such improvements in the existing laws and regulations as may insure the faithful application of their funds to the individual wants of the Indians.

Of the propriety of persevering in the system of removing the Indians beyond the civil influences which surround them within the States and Territories, and which were fast working their destruction, there can be no doubt. In its origin, the government appears to have been actuated only by considerations of policy and expediency; but subsequently a better spirit prevailed in our intercourse with the red men, and their removal from beyond the limits of the States and Territories—rendered imperative by the peculiar circumstances of their situation—was connected with liberal and beneficial provisions for the amelioration of their condition. From a frontier people—roaming free and unrestrained over trackless forests and extensive plains, and subsisting on the products of the chase—they had suddenly, by the rapid spread of the whites, become communities surrounded by an agricultural, enterprising, and enlightened people, seeking to develop the resources of the country, and, in their eagerness to obtain possession of their lands, pressing them into the narrowest limits. Deprived of their only resource from the diminution of the game, and incapable or unwilling to resort to agriculture for subsistence, their situation became deplorable, and their distress was still further aggravated by the decision which deprived them of the protection of the general government and extended the jurisdiction of the States over them. The inaptitude of the Indian character to conform to a state of society moulded and regulated by a system of laws based on the principles and habits of civilized life, and adapted to give security to its multiform pursuits and interests, all differing from their own, is obvious. The only alternative was removal beyond the limits of the States; and the beneficent hand of the government was extended to relieve that people from the operation of laws beyond their comprehension to understand or their ability to observe, and to remove them to distant lands abounding in game, and guaranteed to them forever from the intrusion of the whites.

The results of this policy have surpassed the expectations of the most sanguine.

The reports of the superintendents represent the early emigrants as living in comfort and abundance, and improving in the useful arts; and hopes may now be entertained of the preservation of the aboriginal inhabitants of this continent, and of their gradual civilization.

Ample provision has been made for their education; and the only duty of the government which remains undischarged is the formation of a suitable territorial government, and their admission to such a supervisory care in the general legislation as is granted by the laws to other Territories of the United States, and for the exercise of which they appear to be sufficiently prepared.

The subject is confessedly difficult and embarrassing; but the bill introduced into Congress at the last session and partially acted upon would seem to offer a fair prospect of success, and to secure to these Indians the enjoyment of all the advantages of free government which the necessity of stretching over them the protecting arm of the government will admit.

This scheme has been submitted to several of the tribes, and been approved by them, and may safely be carried into effect and remain in operation until experience shall point out the alterations and amendments it may require.

Having received information early in the spring of this year, from sources to be relied upon, that the Comanche Indians had committed outrages upon our citizens, and carried off some women, whom they retained as prisoners, and that apprehensions were entertained of their committing other acts of hostility if their complaints were not listened to and their grievances redressed, instructions were given, with your sanction, to Mr. A. P. Chouteau to repair to that country and ascertain the facts connected with these outrages, and the causes of complaint, if any really existed; to give assurances of ample reparation, and exact the same from them; and to obtain the release of the prisoners, and restore them to their families and friends. With a view, likewise, of preserving the peace of that frontier, Mr. Chouteau was instructed to invite this powerful tribe to send a deputation to Washington, that they might represent their own grievances, and at the same time become acquainted with the real strength and resources of the nation they have hitherto deemed lightly of, from seeing only a few posts thinly scattered along the frontiers and feebly garrisoned. It is understood that Mr. Chouteau has succeeded in this part of his mission. These measures of precaution were taken, from the necessity of the case, without any appropriation or legal provision for defraying the expenses, and I respectfully recommend that the subject be submitted to Congress for its sanction, and the necessary appropriations asked to enable the department to discharge its obligations to Mr. Chouteau; and further, that a small sum be intrusted to the direction of the Executive, to be expended on emergencies like this, requiring prompt action to preserve the peace of the country.

The report of the Commissioner of Pensions shows the probable increase of the disbursements for the ensuing year, raising the estimate from \$1,593,936 to \$2,532,149, principally from the operation of the third section of the law of the 4th of July, 1836. It will be seen, likewise, from this report, that

some legislative action is required to deter persons employed as agents of pensioners from defrauding them. This appears to be done both by withholding a portion of the money received in trust for the disabled soldier or destitute widow and orphan, and by charging them an exorbitant percentage for collecting the stipend awarded them by the bounty of the government.

Although I do not concur in a former recommendation to extend the provisions of the pension laws to any other classes than those embraced by the acts now in force, I beg leave to reiterate that which proposes some legal organization for the purpose of establishing a fund for the support of invalid officers, and the widows and children of such of them as may die in the service. This may be done by making a moderate deduction from their pay to such an amount and in such manner as may be agreed upon by the officers themselves. Similar provision may be made in like manner for invalid and disabled soldiers, and the widows and children of those who die in the service, not now provided for by law. This provision will become more necessary should the period of enlistment be restored to five years, a change which cannot be too strongly recommended. It is unnecessary to enter into the details of these plans for providing for the support of invalid officers and soldiers and their families. They may be so framed as to obviate all the objections which have been urged against their adoption, and are called for by every consideration of policy and humanity. Intimately connected with this subject is that of the pay of the officers of the line of the army. The very proper increase of pay made at the last session of Congress for the civil officers serving in the several departments conveys an acknowledgment of the necessity of increasing all salaries of public servants which are below a certain amount—a principle which applies with great force to the condition of the officers of the army. In pursuance of this policy, I would recommend a moderate increase of pay to soldiers, non-commissioned and commissioned officers of the artillery and infantry of the United States, from the rank of second lieutenant to that of lieutenant colonel. The high price of labor, the demand throughout the country for that description of talent possessed, in an eminent degree, by the officers of our army, and which commands the highest rate of remuneration, together with the enhanced cost of all the comforts and necessities of life, render this measure just and necessary, and I confidently ask your concurrence to procure for it the favorable consideration of Congress.

In the present uncertainty which prevails on the subject of the intention of Congress permanently to prohibit by law officers of the army from claiming or receiving any remuneration for disbursing moneys, the different interpretations given to the act render its operation unequal and unjust. In almost all instances where the officers have withheld moneys and brought suits for the recovery of sums charged for commissions on their disbursements, the courts have awarded the full amount claimed; whereas those who have accounted for all they have received remain without any remuneration. If the proviso attached to the appropriation act of 1835, for the improvement of certain harbors, which prohibits any allowance to officers for extra official duties and responsibilities, is intended to be permanent, it ought to be fully and explicitly stated, so as to bind the decisions of the courts of law. But if Congress be of opinion that it is just to allow some remuneration for extra services, in cases where great responsibilities are incurred, then it would appear better to determine that compensation by law. I would by no means recommend that any allowance should be made for disbursing the usual and ordinary appropriations for the military service; but where heavy and extra duties are imposed upon officers, involving great risk from circumstances beyond their control, and against which no human precaution can protect them, it appears equitable that some compensation should be allowed, which, on every account, it would be better to fix by law.

By your instructions, in pursuance of the provisions of the act of the 3d of March, 1837, authorizing you to select and cause to be purchased, for the use and benefit of sick seamen and boatmen, and all other navigators on the western rivers and lakes, suitable sites for hospitals, a commission of able and experienced surgeons of the army was appointed to discharge this duty. The accompanying report shows that they have performed it with the zeal and ability which characterize this branch of the service; and the contracts made by them to effect the purchase of the sites selected would have been sanctioned by the department had the sum been within the amount appropriated by Congress for this purpose. The whole amount required will be \$39,968, being an excess over and above the sum appropriated of \$24,968.

The beneficent object intended to be accomplished by Congress in directing this examination, and the purchase of the several sites selected, will not, I trust, be defeated by this circumstance; and, in this hope, plans and estimates for the construction of the hospitals accompany this report.

All which is respectfully submitted.

J. R. POINSETT.

The PRESIDENT of the *United States*.

*List of documents accompanying the report of the Secretary of War.*

- No. 1. Statement exhibiting the number and names of the different fortifications completed and under construction, and the full armament and amount of force which each requires to arm and garrison it.
- No. 2. List of works projected by the board of engineers, but not yet commenced.
- No. 3. Statement showing the prominent points along the sea frontier which will require protection, and for which no plans or *projets* have yet been made by the board of engineers.
- No. 4. List of the military posts on the inland frontier of the United States, with the garrison deemed necessary for them in time of peace and for the preservation of peace.
- No. 5. Report of the medical board appointed to examine and select sites for marine hospitals.
- No. 6. Plans and estimates for the same.
- No. 7. Report and documents of the major general commanding the army.
- No. 8. Report of the acting quartermaster general.
- No. 9. Report and statement of the commissary general of subsistence.
- No. 10. Report of the acting surgeon general.
- No. 11. Report and statement of the paymaster general.
- No. 12. Report and statements of the commissary general of purchases.
- No. 13. Report and documents of the chief engineer.
- No. 14. Report and statements of the chief topographical engineer.
- No. 15. Report and statements of the chief of the Ordnance department.

## No. 1.

Statement exhibiting the number and names of the different fortifications completed and under construction, and the full armament and amount of force which each requires to arm and garrison it.

No. 4.

List of military posts on the inland frontier of the United States, with the garrisons deemed necessary for them in time of peace, and to preserve peace.

No.	Names of posts.	Where situated.	Garrisons deemed necessary.
1	Hancock Barracks .....	At Houlton, on the northeastern boundary of the United States.....	<i>Men.</i> 300
2	Madison Barracks .....	At Sackett's Harbor, New York .....	100
3	Fort Niagara.....	On the Niagara river .....	100
4	Fort Gratiot .....	Outlet of Lake Huron .....	100
5	Fort Mackinac.....	Island of Mackinac .....	100
6	Fort Brady .....	Sault Ste. Marie.....	200
7	Fort Howard .....	Green Bay .....	200
8	Fort Winnebago .....	Portage of Fox and Wisconsin.....	300
9	Fort Crawford .....	Prairie du Chien .....	500
10	Fort Snelling .....	Falls of St. Anthony .....	300
11	Fort Leavenworth .....	Missouri river.....	1,000
12	Fort Gibson.....	Arkansas river.....	1,500
13	Fort Towson .....	Red river .....	800
14	Fort Jesup .....	Louisiana .....	300
15	Baton Rouge Barracks .....	Baton Rouge, Louisiana .....	300
16	Jefferson Barracks .....	Missouri .....	1,500

NOTE.—The above is the estimate of force for the posts already in existence; 1,500 men might be added for those on an inner line on the western frontier, which, it is believed, will become necessary for the protection of the border settlements.

The force assigned to Jefferson Barracks is intended as a corps of reserve for the Upper Mississippi, the Missouri, and the Arkansas. From its central position and proximity to the mouths of those rivers, reinforcements may be thrown out from that place to almost every point on the frontier with great ease and rapidity. A reserve there is, in fact, an available force, for the whole line of frontier from the Upper Mississippi to the Arkansas. It should, indeed, be even stronger than is here estimated. The whole force assigned to the western frontier from Fort Snelling, on the right, to Fort Towson, on the left, a line of more than one thousand miles in extent, is 5,100 men, including the reserve at Jefferson Barracks. This may appear large; but whoever shall undertake the defence of that frontier, under existing circumstances, with less, will be likely to find himself sadly embarrassed. It is at least but a force to prevent war, not to carry it on effectually. If ever a general war should commence along that extended line, conducted with the skill that many of the tribes are known to possess, it will require an army of 30,000 men, and all our energy to prevent them from making serious inroads upon our settlements.

WASHINGTON, November 3, 1837.

## No. 5.

## REPORT OF MEDICAL BOARD ON MARINE HOSPITALS.

WASHINGTON, November 17, 1837.

Sir: Agreeably to "General Orders No. 28," the board of medical officers appointed in pursuance of an act of the last session of Congress, (approved March 3, 1837,) to select and purchase sites for marine hospitals on the Mississippi and Ohio rivers and Lake Erie, have the honor respectfully to report:

The board assembled, in obedience to orders, at Baton Rouge, Louisiana, and organized for business on the 18th day of June last. Their line of operations extended, on the Mississippi, from Baton Rouge, Louisiana, to Dubuque, Wisconsin Territory; and on the Ohio, from its mouth to Steubenville. From thence, passing over to Lake Erie, an examination was made of the prominent places on that shore.

The act of Congress authorized the selection and purchase, "for the use and benefit of sick seamen, and boatmen, and all other navigators of the western rivers and lakes, of suitable sites for marine hospitals," amounting in all to seven, (exclusive of one in New Orleans;) of which three were to be established on the Mississippi, three on the Ohio, and one on Lake Erie; for the purchase of which fifteen thousand dollars were appropriated.

Although the board were aware of the importance to the western people of the proposed institutions, and of the great amount of suffering which is yearly experienced from disease and numerous casualties, the information which they derived in the prosecution of their duties impressed them still more deeply with the importance of the subject, and of the benefits which would accrue to a numerous class of industrious citizens, by the establishment of a chain of well-regulated hospitals. The hardy and industrious farmer, who, with the fruits of his toil, embarks on the flatboat and seeks a market at the great emporium of the southwest, exposed to the heat of the mid-day sun, and the more baneful vapors of night; and the steamboatman, who, in addition to those causes of disease, is subjected to frequent and dangerous casualties, instead of being thrown upon the charity of strangers, would then have an asylum where skill and attention would unite to restore him to renovated health, and enable him to return with gladness to his expecting friends.

The steady and rapidly increasing commerce of the west is perhaps without parallel in the history of the world. Twenty-six years ago the productions of the country washed by the Ohio and Mississippi and their tributaries were exclusively carried in flat and keel-boats to find a market in New Orleans. Men employed on these boats were obliged either to return to their homes on foot, traversing a wilderness five hundred miles in extent, or to take passage in some vessel bound for one of the northern ports. Sixteen weeks was then the ordinary time required for a keel-boat to ascend from New Orleans to Pittsburg. But with the introduction of steam commenced a new era, as important in its effects as it was magical in its influences. The first steamboat which attracted the gaze of the amazed Indians, and the no less astonished settler, descended the Ohio and Mississippi in December, 1811. Until then, no sound save the report of the hunter's or warrior's rifle, or the woodman's axe, had disturbed the solemn stillness of the primeval forest. The sovereignty of nature seemed complete. But the art of man was at work, and a revolution at hand. Steamboats increased; forests were felled; cities, and towns, and farms, usurped their place; and the tenants of the woods fled before an enterprising, industrious, and thriving population.

According to the most authentic official information which the board have been able to procure, the number of steamboats in commission on the Ohio and Mississippi and their tributaries from 1834 to September 30, 1837, inclusive, was as follows:

In 1834 .....	262 steamboats.
In 1835 .....	399 "
In 1836 .....	502 "
In 1837, (September 30) .....	638 "

The number of flat and keel-boats cannot be ascertained with perfect accuracy. Dr. Drake, who has bestowed considerable attention to the subject, states that "several years ago it was ascertained that 10,000 flatboats arrived at New Orleans in a single year." At Louisville the average number of flat and keel-boats that passed the canal from December 31, 1831, to December 31, 1836, was 400 per annum, and the estimated number that passed over the falls 1,600, making 2,000 per annum. Concurring in the opinion of Dr. Drake, that the increase of steamboats has somewhat diminished the number of flat and keel-boats, the number of these last descending the Ohio and Mississippi may be set down at 6,000.

On Lake Erie, agreeably to official information obtained from the collector of the port of Cleveland, the number of ships, brigs, schooners, and sloops navigating the lake is 300; number of steamboats, 42; boats on the Ohio canal, 256.

## RECAPITULATION.

*Ohio and Mississippi rivers.*

Number of steamboats, 638; average number of officers and hands.....	15, 950
Number of flat and keel-boats, &c., 6,000; average number of officers and hands, 5.....	30, 000
Total .....	45, 950

*Lake Erie.*

Number of ships, brigs, schooners, and sloops, 300; average number of officers and hands, 7.....	2, 100
Number of steamboats, 42; average number of officers and hands, 30 .....	1, 260
Number of canal boats, 256; average number of officers and hands, 7.....	1, 792
	5, 152
Grand total.....	51, 102

In selecting the sites for the proposed hospitals, the board kept in view the following rules for their guidance:

- 1st. A preference for those points that would benefit the greatest number of boatmen and other navigators.
- 2d. Healthiness of position.
- 3d. Appropriate distances between the several sites—the more sickly the region the shorter the distances, and *vice versa*.
- 4th. The resources of the country around for supplying the sick.

In regard to the quantity of land necessary for the buildings and other purposes, eight acres was deemed the *minimum* amount which ought to be purchased, while a greater quantity would be preferable where the position of the ground and other circumstances would permit its being secured. Besides having a sufficiency of ground for the buildings, it was considered indispensably necessary, for the comfort of the sick and convalescent, to secure enough for gardens, walks, &c. Another consideration of no less importance and weight with the board was to make their selections as convenient to the general landing places as circumstances and a proper regard for healthiness of position would permit, so as to lessen as much as possible the fatigue and exposure incident to conveying the sick to the hospitals. Nor was the beneficial effect overlooked of a view of the water, and the impressions and associations it would naturally awaken in the minds of men whose occupations were so intimately connected with it.

Sites thus situated necessarily cost more than if they had been selected at a greater distance from the public landings; but when the national character of the institutions is taken into consideration, and that the comfort and oftentimes the lives of the sick would require that they should be convenient, not only to the great thoroughfares, but particularly to the usual landings, the board confidently believe that in carrying out their own views they only anticipated those of the government. Moreover, to erect costly buildings which would doubtless endure for ages on sites remote and inconvenient, merely to save a few thousand dollars, would in effect be defeating the very object of their creation.

It became early manifest, however, that the amount of the appropriation was utterly insufficient for purchasing the required number of sites, besides defraying the expenses of the commission, including legal services, charges for surveying, &c. When it is considered that, to be useful, it would be necessary for most of the hospitals to be built in the vicinity of the principal commercial cities and towns, where ground is measured and sold by the foot, every one at all acquainted with the value of property in the neighborhood of such places will fully concur in the impossibility of purchasing seven hospital sites, and of defraying the necessary expenses with the appropriation for that purpose.

Under such circumstances, one of two courses was left for the adoption of the board: 1st, to purchase only a part of the number of sites required by the act of Congress; or, 2d, to purchase the whole number, the contracts to be subject to the approval of the Secretary of War. After mature deliberation, it was determined to adopt the latter, not doubting that, upon proper representations being made, Congress would not hesitate to make up the deficiency by an additional appropriation.

The foregoing preliminaries having been adopted, the board commenced their examinations at Baton Rouge, Louisiana, and prosecuted the same as heretofore stated. Their reconnoissance, conducted with all the care which the importance of the trust demanded, resulted in their selecting and purchasing sites

For the Mississippi river—

At Natchez, 10 acres, amounting to .....	\$7, 000 00
At Napeleon, mouth of the Arkansas, 10 acres and a fraction .....	1, 000 00
At St. Louis, 18 acres and a fraction .....	7, 468 00
On the Ohio—	
At Paducah, 10 acres .....	1, 000 00
At Louisville, 8 acres and a fraction .....	6, 000 00
At Wheeling, 11 acres .....	5, 500 00
On Lake Erie—	
At Cleveland, 8 acres and a fraction .....	12, 000 00
	39, 968 00

To this amount are to be added other incidental expenses alluded to in another part of this report, to cover all which will require an additional appropriation of \_\_\_\_\_ dollars.

As the sites were purchased for considerably less than the same ground could have been bought for private purposes, it is respectfully recommended that the early attention of Congress be called to the subject, in order that, if the selections should be approved by the proper authority, the land may be paid for and secured.

According to the best information as to the number of sick likely to require aid at the places above enumerated, the board respectfully recommend that the hospitals be divided into two classes: the largest to be built at Natchez, St Louis, Louisville, and Cleveland, and to be capable of accommodating one hundred patients each; the smallest at the mouth of the Arkansas, Paducah, and Wheeling, to accommodate fifty patients each. The buildings should be planned with a view to their future enlargement, without injury to symmetry, so as to meet any future augmentation of patients. It will be important, also, that they should be constructed to suit the latitude in which they are respectively situated: those on the Mississippi with a special view to coolness and free circulation of air; the others, particularly the one at Cleveland, besides having these important objects attended to, should be capable of excluding cold and of counteracting the vicissitudes of the weather.

In conclusion, the board ask your indulgence for presenting, briefly, a few of the prominent reasons which influenced them in giving a preference to the points they did. Natchez was the first place above New Orleans which was selected, because of its commercial importance, the numerous boatmen trading to that place, its appropriate distance (about 300 miles) from New Orleans, and the large number who are annually taken sick at that place.

Napoleon (mouth of the Arkansas) was next chosen because of its convenient distance from Natchez, (300 miles,) its advantageous geographical position, being at the mouth of the largest tributary of the Lower Mississippi, and only ten miles below White river; the trade of both which is rapidly increasing. A hospital site at this point, therefore, combines many advantages which could not have been secured if it had been selected higher up the river.

St. Louis, as the site for the third and last hospital on the Mississippi, presents such superior and

evident claims over every other town on the upper portion of the river that it is hardly deemed necessary to enumerate them.

In selecting the sites on the Ohio, Louisville, from its position at the falls, being a place of deposit and transfer, is, in a great degree, the central point of trade on that river. These facts being considered indisputable, there could be little hesitation as to the propriety of selecting that place as the central position on the Ohio for the establishment of a hospital.

It was equally manifest that the two remaining sites should be selected above and below this fixed point, and that the latter should be as near to the mouth of the river as circumstances would permit.

In ascending, Paducah is the first point deserving of particular notice after leaving the malaria region. It is forty-four miles distant from the junction of the Ohio with the Mississippi, and upwards of three hundred from Louisville. It is, moreover, for several months in the year, at the head of navigation for boats of the largest class, owing to the difficulty and oftentimes impossibility of passing the Cumberland bar, near the mouth of the Cumberland river. Another most important consideration is its geographical position, being situated at the mouth of the Tennessee river, and thirteen miles below the mouth of the Cumberland, through which the productions of a part of Kentucky and all of Tennessee and North Alabama must pass to find a market, giving employment, consequently, to a very large number of boatmen. For all these reasons, involving the important consideration that a hospital here would benefit a larger number of men than at any other point below Louisville, there could be no hesitation in selecting it as the site of the lower hospital. Any point materially higher up the river would be approaching too near to Louisville; besides that, it would be depriving the boatmen of the Tennessee and Cumberland, as well as a part of the Ohio, of all the advantages to be derived from the hospitals on this river. The same objection cannot apply to the site selected, for all the boatmen above must pass Paducah, both in going to and returning from New Orleans and other ports on the Mississippi.

Wheeling was selected as the third and last site on the Ohio river. In so doing, the board were not unmindful of the importance of Cincinnati or the claims of its citizens. Its proximity to Louisville, and the brief time in which trips are performed between the two cities, (being from twelve to fifteen hours in descending, and from twenty to twenty-four hours in ascending,) would, without great inconvenience, enable the sick to avail themselves of the advantages of the hospital at the former place. For this reason, and believing that the benefits should be diffused as much as possible, a site higher up was preferable. Wheeling was, therefore, selected because of its greater and more desirable distance from the central site, and likewise from its situation at the head of navigation for boats of the ordinary class for a considerable part of the year, which always includes the sickly season.

On Lake Erie, to which the attention of the board was confined by the act of Congress, a site was selected at Cleveland, as it is the terminating point of the Ohio canal, and a central position in its relation to the trade of the lakes, combining to render it a place of great and growing importance.

All which is respectfully submitted.

No. 6.

#### PLANS AND ESTIMATES FOR MARINE HOSPITALS.

CITY OF WASHINGTON, *November 30, 1837.*

SIR: Agreeably to your instructions, I have prepared two designs for the marine hospitals proposed to be erected on the western waters, embracing in their accommodations the two different numbers of patients to be provided for, viz: one building of a size to accommodate one hundred patients, and another building to accommodate fifty patients. The plans are so arranged as to admit of extension at any future time to meet increased accommodations, without deranging or disfiguring the symmetry of the main building.

In arranging these plans, reference has been had to several essential points connected with the hospitals: ample space, free ventilation, separation of patients by classes into distinct wards, and extensive galleries on the level of each floor, as well for shelter as exercise. Besides these, attention has been paid to suitable economy in the construction of the buildings, consistent with a proper regard to architectural decency. A little variation of the two designs is presented, in the style of façade, so as to distinguish them. One plan also represents but two floors, while the other gives three, including the basement story. The nature of the ground and other considerations will determine which would be most proper to adopt.

The openings in the wards are so disposed that all the beds receive the benefit of a free ventilation, without subjecting the patients to injury by the air blowing directly upon them. Not more than eight beds are placed in each ward, which allows five feet for each bed and space between, in their width, and a passage-way between the foot of the beds of near eight feet. All these passages lead, one way, into spacious corridors, and the other into wide piazzas; besides this, every ward is capable of being ventilated over-head. Provision is made also for diffusing a current of warm air in winter throughout the wards, and in summer a current of cool air, so that every disagreeable vapor may be dissipated.

The material of which these hospitals will be built will vary according to location; where stone is on the spot, this may be preferred to brick. As economy is to be observed with durability, we will, in forming an estimate, have reference to brick as the main material for the walls. The price of labor and materials will vary also in the different places where these buildings will be erected. At Natchez, at Napoleon, (mouth of Arkansas river,) and St. Louis, a larger amount would have to be appropriated for each building than at Paducah, Louisville, Wheeling, and Cleveland. Assuming an aggregate sum for the whole, I would estimate the hospital to accommodate 100 patients upon the plan proposed at \$50,000; and the hospital to accommodate 50 patients at \$25,000.

There being four for 100 patients each, these will amount to.....	\$200, 000
And three for 50 patients each will amount to .....	75, 000
Total for the seven .....	<u>275, 000</u>

Annexed to the book of drawings will be found a description of each design. When contracts are required to be made, more detailed drawings and descriptions will be furnished. As they are not necessary at present, they are omitted.

I would respectfully suggest, in the construction of these buildings, that the first or basement story should be, at least, in part made fire-proof, and every floor counter-ceiled and made as safe as possible from the effects of fire.

It is an awful idea to think of a fire taking place in a house like this, filled with helpless sick, where no check is afforded to stay its ravages; special care, therefore, should be used to make the buildings as safe as possible against fire. Heating the rooms with warm air, by its superseding the necessity of fires, will afford much security against accidents of this nature; and if the rooms where large fires are necessarily kept are made fire-proof, there would be little to apprehend from this cause.

All which is respectfully submitted.

ROBERT MILLS, *Architect.*

HON. J. R. POINSETT, *Secretary of War.*

*Description of plan No. 1 for a marine hospital, proposed to accommodate one hundred patients.*

The plan presents the complete parallelogram form, one hundred and fifty feet by eighty feet, including the piazzas, and the elevation of three floors, including the basement or ground story. The first floor provides for the domestic offices of the establishment. The rooms, fifteen in number, and of various sizes, are laid off on each side of a wide corridor. Outside of these rooms, on each front, are the arcaded passages or covered walks, one hundred feet long, terminated by the wing buildings. Two of the entrances are under these arcades, and two at each end of the corridors. In some situations, the rooms in this story designated for the kitchen, washhouse, refectory, &c., may be appropriated to these uses; in other situations, these may be provided for in outbuildings, in which case the rooms may be used for other purposes. The second floor is divided into twelve rooms, besides the vestibules and staircase, disposed on each side of a corridor fifteen feet wide. Fronting these rooms, outside, are the piazzas, one hundred feet long and eleven feet wide. The south rooms on this floor are arranged as wards—four nineteen by twenty feet, containing six to eight beds each, and four thirty by twenty-two feet, embracing ten to twelve beds each. The north rooms are appropriated to the accommodation of the officers and offices of the establishment, viz: the superintendent's and refectory rooms in the wings, twenty-two by thirty feet; the physician's, apothecary's, matron's, and parlor rooms between the wings, all opening into the piazza in front. From without you ascend by steps into this piazza, which leads into a hall nineteen by twenty feet, opening into the corridor fifteen feet wide; and in front is the great staircase, leading to the rooms above. Ascending these stairs, you land in a spacious vestibule, opening outwards into the piazzas, ranging both fronts between the wings. On each side of this vestibule large Venetian doorways open into wide corridors communicating with the different wards, as well as with the nurses' and other rooms. Two large wards in the wings, twenty-two by thirty feet, are capable of containing comfortably ten or twelve beds each; eight other rooms, nineteen by twenty feet, six to eight beds each; and two larger rooms (which may each be divided into two other rooms) for the nurses and physicians in attendance.

By a reference to the plans, the above description may be better understood; and it will be seen that every attention has been paid to comfort and convenience, economy of space and of construction. Spacious promenades, both within and without, are provided; ample passages between the beds in the wards; free ventilation of the rooms in summer, and a supply of warm fresh air in winter, by means of air-furnaces placed in the basement story. It will be seen, also, that the beds are so disposed that the patients will suffer no inconvenience from a draught of air passing through the rooms when this is required. Should the emergency require it, the spaces allotted for corridors, &c., may be allotted to beds, and thus a greater number of sick may be accommodated.

The main stories are each thirteen feet high in the clear, and the basement story ten feet. The floors are proposed to be all counter-ceiled, not only to prevent the passage of sound, but as a safeguard from fire, and avoiding any under-currents through the floors.

The façades, front and rear, present a double piazza or colonnade, in the Greek style of architecture, elevated upon an arcade, and flanked by wings, rising above the centre building and receiving the roof.

The attic story of the wings will provide for additional wards, if required.

Enclosures are provided for every story of the piazzas, and the whole surmounted by an iron railing. A reference to the drawing will give a better idea of these façades than can be conveyed by words.

With respect to the materials for the walls, this will depend upon the facility of procuring brick or stone, or both; but, in any case, one or the other, or both, of these materials is to be used.

ROBERT MILLS, *Architect.*

*Description of plan No. 2 for a marine hospital, proposed to accommodate fifty patients.*

This plan presents nearly a geometrical form, flanked at each angle by a square tower, which projects from the main building in front sufficiently to receive the piazzas forming each façade. The elevation provides for two floors, raised upon a low basement.

A flight of six steps in front lands in a piazza forty feet long, flanked by two small rooms, eleven and a half feet square, for the clerk's and superintendent's offices. Opposite the steps a doorway leads into a

vestibule eighteen by twenty feet, which opens into a corridor twelve feet wide, that communicates with a suite of rooms on one side, three in number, eighteen by twenty feet, containing six or eight beds each, and two rooms on the other for the matron and warden.

The ward rooms open back into a piazza like that in front, at each end of which are two small rooms, eleven and a half feet square, for the nurse and apothecary.

At each end of the corridor roomy stairways lead to the second floor, which is disposed into five wards, 18 by 20 feet, containing from 6 to 8 beds; a physician's room, 18 by 20 feet; and four rooms in the tower wings, 11½ feet square, for the nurses and apothecary.

All these rooms open outwards into spacious piazzas, and inwards into roomy corridors. The whole of this floor presents the appearance of one great ward, yet divided so as to render at pleasure each part private. The beds are disposed in the same way as represented in plan No. 1, and the patients will possess the same advantages in point of comfort. The drawings annexed will explain more particularly the details of the plan, and also show in what manner this building may be enlarged to meet future requisitions to provide accommodation for other patients.

The façade of this building, 68 feet in extent, is in the plain Gothic style, and presents a double piazza of two stories, supported by clustered columns, elevated upon a low basement, and flanked by two wings as towers. The piazzas as well as towers are surmounted with battlement enclosures.

By reference to the drawing, the architectural effect of this arrangement of façade may be judged of. As respects the material to be used in constructing the walls of this building, economy will point out brick as the most probable, except stone is plenty and easily quarried in its neighborhood.

Whatever materials are used in the building they are intended to be of the best quality, and the work done in the best and most workmanlike manner.

ROBERT MILLS, *Architect.*

No. 7.

REPORT OF THE MAJOR GENERAL OF THE ARMY.

HEADQUARTERS OF THE ARMY, *Washington, November—, 1837.*

SIR: In accordance with your instructions dated on the 7th of September last, I have the honor herewith to submit the following statements and returns:

- 1st. A statement showing the organization of the army, marked A.
- 2d. A general return of the army, marked B.
- 3d. Distribution of the troops in the eastern division, marked C.
- 4th. Distribution of the troops in the western division, marked D.
- 5th. A return showing the number of troops under the command of Major General Jesup, serving in Florida against the Seminole Indians, marked Z.

6th. A statement showing the number of recruits enlisted in the army from January 1, 1837, marked E.

My last report shows Governor Call, of Florida, the commander of our forces against the Seminole Indians, to have fallen back upon Fort Drane for a supply of provisions and other necessaries. On the 10th of November, 1836, Governor Call, with some regulars, about 750 Creek Indians, and 1,200 mounted Tennesseans, again left Fort Drane, and on the 13th arrived at the Withlacoochee, which was crossed without opposition by a part of the army. On the 17th a large encampment of the enemy was discovered, and General Armstrong, with one regiment of the Tennessee volunteers, was ordered to attack them in a swamp, to which they had retreated. This was soon done in a spirited manner, and the Indians driven from their strongholds and pursued. In the action, which lasted 30 minutes, the enemy are reported to have lost 20, left dead on the field; our own loss being 11 killed and wounded.

On the 18th another attack was made by 550 Tennesseans on a hammock, which was resisted, it is supposed by Governor Call, by about 600 or 700 Indians. The enemy was driven as before, after an engagement of half an hour, till out of sight. Their loss was considerable: 25 were reported found dead on the field; but as their wounded were carried off, the total loss could not be estimated. Our loss was 15 killed and wounded. On the 20th a junction was formed by the force of Governor Call with the regulars under Lieutenant Colonel Pierce of the army. On the 21st of November the whole command moved towards a swamp in which the enemy awaited its approach. A charge was made forthwith, and the enemy driven at all points. By means of a trail, however, after a considerable time and the utmost difficulty, the Indians were discovered by Captain Brown, of the 4th regiment of United States artillery, commanding the Creek regiment, who attacked them. In the meanwhile the Tennessee and Florida militia and regulars, under brevet Lieutenant Colonel Pierce, of the 1st regiment United States artillery, arrived, and joined in the contest, which resulted in the repulse of the enemy, whose loss in this affair is supposed by Governor Call to have been not less than fifty; our own being 21 killed and wounded. The officers and men engaged throughout are spoken of in the highest terms; and had they not been prevented from holding the position gained by want of provisions, much more might have been effected.

Immediately after the War Department was apprised of the failure of Governor Call to cross the Withlacoochee, when first attempted in October, 1836, he was directed to turn over the command of the Florida army to Major General Jesup, who, about the 15th of October, had entered the Territory with a part of the forces employed in subduing the Creek Indians.

General Jesup was detained, for want of transportation, at Tampa, till the 27th of November, on which day he moved towards the scene of Governor Call's operations on the Withlacoochee. Before he proceeded far he found that Governor Call had been in and scoured that part of the country, and retired with his force on Volusia. General Jesup then ordered a countermarch, and with 400 men joined Governor Call at Volusia on the 4th of December. On the 8th of December he relieved Governor Call and assumed the command, agreeably to the order of the War Department.

From Fort Dade, on the Withlacoochee, General Jesup reports his command, consisting of the Tennessee brigade, 300 regular troops, the Alabama battalion, about 320 strong, and 500 Creek warriors, to have examined the Wahoo swamp without meeting with the enemy.

On the 23d of December General Jesup writes from Tampa that he left Brevet Brigadier General

Armistead, of the army, on the Withlacoochee to make further examination of the country between Fort Dade and Fort King.

On the 1st of January, 1837, General Jesup writes from Tampa that much sickness prevails among the troops, and that the Indians in our service are completely broken down.

On the 17th of January General Jesup reports that the swamps of the Withlacoochee were thoroughly examined, but no Indians found. On the reports received from different quarters, various detachments of troops were sent in different directions without decisive results, the enemy generally having dispersed. Sometimes a few stragglers, women and negroes, were taken, from whom information as to the position of the enemy was received.

On the 22d of January the main body of the army, under the immediate command of General Jesup, marched to the headwaters of the Ocklawaha, where it was supposed were the strongholds of the enemy. Cooper and his band of Indians were surprised; himself and three warriors killed, and seventeen Indian women and negroes taken prisoners. Here it was ascertained that the mass of Indians had gone in a southeasterly direction, and pursuit was accordingly made. The enemy was found on the Hatcheelustee and attacked; his baggage and horses were soon captured, and himself driven into a thick swamp. On the day after the skirmish (28th) a prisoner was sent to his people with an offer of peace; on the night of the 29th he returned, and brought peaceful messages from Alligator and Abraham, two hostile chiefs. On the 3d of February others came in and entered into arrangements to cause hostilities to be suspended until a conference could be had, for which the 18th of February, 1837, was fixed.

On the 8th of February a band of the enemy under Philip, unacquainted, it is supposed, with the temporary suspension of hostilities, attacked the post on Lake Monroe, garrisoned by detachments of the 2d United States dragoons and artillery, under Brevet Lieutenant Colonel Fanning, of the 4th regiment of artillery. In the defence of this post, Captain Mellon, of the 2d artillery, was killed, and Passed Midshipman J. T. McLaughlin, of the navy, a volunteer, wounded; after which the enemy were driven off without much injury to our troops. On the 17th of February General Jesup writes and says, on account of the attack of the Indians on the fort commanded by Lieutenant Colonel Fanning, he doubts the sincerity of the Indians as to their coming in on the 18th, according to agreement. On the 22d of February the general writes that some of the Indian chiefs had come in, but the rest seemed very loath to follow. In March a convention, or agreement, was made between the Seminole chiefs and General Jesup. On the 26th of March General Jesup, on account of the arrival at Tampa Bay of great numbers of the enemy, and some important characters belonging to them, expresses a belief that the war was at an end, and commenced to discharge his volunteers. On the 8th of May he wrote that the Indians continued to come in, and that they would probably be emigrated in the course of the winter. On the 5th of June the general informed the department that the Indians who had surrendered and were in camp near Tampa for the purpose of emigration were surrounded by a party of their own warriors and carried off, thus causing the unsuccessful termination of the campaign.

About this time active operations ceased; the climate during the summer not permitting of them, and the army was so distributed as to render the frontiers as safe as possible. Much sickness prevailed in the interior, the several posts of which were in consequence abandoned. Hospitals were established, and many of the invalids, on the surgeon's recommendation, were removed to Fort Monroe, in Virginia, and Fort Hamilton, in the harbor of New York.

On the 31st of August General Jesup reports that the Creek regiment had been discharged.

Although the hostile Indians acted on the defensive, our mounted men were kept moving from one post to another, making examinations and gaining information for future operations.

Brigadier General Hernandez, of the Florida militia, having learned from some negroes who had escaped from the Indians the position of some Indians under the chief Philip, on the 7th of September organized a small force of dragoons, artillery, and militia, and went in search of them. They soon came to the camp and surprised them. They resisted for a short time, but were all either slain or taken prisoners. Some important chiefs were among the number. The officers and men are reported to have behaved very gallantly. Lieutenant McNeil, of the 2d dragoons, a young and gallant officer, was killed in this affair. From time to time several parties of Indians and negroes have surrendered themselves or been taken prisoners; among others, Yose Ya Hola, (Powell,) who began the war, and many influential chiefs, who are now in confinement at St. Augustine.

On the 21st of October General Jesup reports that since he took the command thirty of the enemy had been slain and about five hundred captured.

The army in Florida, reduced by disease and the discharge of those whose term of service had expired, has been recruited and augmented by detachments of the regular troops, drawn from various points, and by numerous volunteer forces.

In the month of January last seven companies of the 6th regiment of infantry arrived at Tampa Bay from the western frontier, and six companies of the 2d regiment of dragoons, one company of the 2d artillery, and one company of the 3d artillery, recruited at the north, sailed from New York and Norfolk, and arrived in the St. John's. In September last the 1st regiment of infantry, from the Upper Mississippi, left Jefferson Barracks, Missouri, and a battalion of the 2d infantry, from the lakes, left New York for Tampa Bay, and are now at their destination. In the same month three companies of the 2d dragoons, under Colonel Twiggs, left Jefferson Barracks to march or cross the country for Florida, and when last heard from were at Garey's Ferry, in that Territory.

In addition to the above-named organized force, 1,900 recruits for the regiments of the army serving in Florida have recently reached there from Norfolk and New York, and from the interior.

The aggregate force under the command of Major General Jesup in Florida, it will appear by the statement accompanying this report, amounts to 8,993 men, consisting of—

Regulars.....	4, 637
Volunteers.....	4, 078
Seamen.....	100
Indians.....	178
Total.....	<u>8, 993</u>

By the last advices from General Jesup, active operations on his part have commenced; and every hope is entertained that, with the arrangements made by him, and the ample aid furnished by the War Department, the object for which the army is assembled in Florida will, by the close of the season, be fully and completely attained.

In consequence of information having been communicated to Colonel Many, commanding the troops at Fort Jesup, that an insurrection among the negroes was apprehended at Alexandria, Louisiana, that officer ordered thither two companies of his command, to afford the desired protection.

When the vast extent of the frontiers of the United States is compared with the amount of regular force allotted by law for their defence, it must strike every thinking man that the present military establishment is by no means adequate to afford what might be regarded a reasonable means for maintaining peace on the Indian borders and protection to the seaboard, without taking into account the preservation of the great amount of public property which has been collected in our various arsenals and in our maritime fortresses. The number of the rank and file of the army, according to existing laws, is less than 7,000; and these men are organized into two regiments of dragoons, four regiments of artillery, and seven regiments of infantry, occupying, when at their proper stations, between fifty and sixty posts, extending along the whole frontier of the United States, inland and Atlantic. But at present most of these posts are in a defenceless state, in consequence of the Florida war requiring almost the whole military force; in fact, every post on the Atlantic, from Maine to the Sabine, is without a single company to garrison it, or to take charge of the public property. The western frontier, especially that portion which covers the States of Louisiana, Arkansas, and Missouri, and the Territory of Wisconsin, separates from the white population numerous tribes of Indians. These tribes are the original inhabitants of the country, and emigrated Indians sent from among the States to lands allotted to them on that frontier. They are estimated to amount in the aggregate to more than 250,000, and can furnish 30,000 warriors. Such a population cannot be viewed otherwise than as dangerous neighbors, and should be kept in check by a proper disposition of military force.

The disasters and consequences of an Indian war are too well known to be here dwelt on. Disturbances continually occur which produce alarm and agitate the country, and sometimes lead to open hostilities. On such occasions, for the want of sufficient numbers of regular troops on the frontiers, the distant posts are obliged to be evacuated to furnish means of defence, and a militia force called out; and heavy expenditures, by the loss of property near the scenes of these troubles, are the consequence. But if the force permanently embodied on that frontier were sufficient to overawe the Indians, or to subdue them in the commencement of hostilities, much expense would be saved, as well as a proper protection afforded to the frontier States, without the necessity of calling out the militia, which is always attended with heavy expenditure of money and loss of life by disease, and is highly detrimental to the concerns of individuals. An augmentation of the army, therefore, to a reasonable extent, is called for by a policy of humanity and economy.

I would, therefore, respectfully submit to your consideration the propriety of augmenting the numerical force of the army, so as to furnish an effective rank and file of 15,000 men, to be organized according to the accompanying table, marked No. 1. With such a force the frontiers might expect to enjoy tranquility; and by the occasional concentration of the troops in sufficient force to practice the evolutions of the line, a great improvement in the discipline and efficiency of the army would naturally be the result; and if war should break out with any civilized power, the army, thus augmented, would furnish a basis on which could be built a regular force adequate to meet the exigency.

The table marked No. 2 will exhibit the manner in which the proposed force would be distributed.

The regiments of artillery and infantry, since the late war with Great Britain, have been placed, as to rank and file, on the lowest possible establishment consistent with a regard to the preservation of military knowledge and discipline among them; but for operations in the face of an enemy, the rank and file, as experience has proved, were reduced too low for any efficient service—a company of artillery having, when full, only 49 rank and file, and a company of infantry 46. Taking into consideration the shortness of the term of enlistment—which is now but three years—the nature of the service, and the diseases to which the troops are subjected by constant exposure, especially in insalubrious climates, without reckoning the casualties of war, it is not to be expected that any company will be able, one month after taking the field, to present under arms more than two-thirds of its original number. The army, operating for the most part in uninhabited parts of the country, or where the population is very sparse, is obliged to furnish from the line the drivers of trains, and the laborers on all occasions where labor for the service is required—such as opening roads, building bridges and causeways, and other fatiguing duties. It is recommended, in order to render the army efficient, and capable of performing the duties required, that every company of artillery and infantry be augmented to 80 men, with authority to increase them to 100, should circumstances render it proper; so that there may always be in each regiment, for duty with arms, a respectable force.

The propriety of increasing the engineer department, including the topographical engineers, the ordnance department, and the quartermaster's department, has been frequently urged. The duties required of these several staff departments have been so extensive and multifarious that they have not been able to perform them without the assistance of a great number of officers from the line; and consequently it has diminished measurably the efficiency of the regiments from which these assisting officers have been withdrawn.

In consequence of these drafts upon the line, it frequently happens that several companies of a regiment are left without a single officer to command them or take charge of the interests of the soldiers. I cannot, therefore, too strongly recommend that provision be made at once for a sufficient number of officers for the several branches of the staff, and that each branch be organized into a distinct corps or department complete in itself, and sufficient to meet every exigency which has reference to it. The chiefs of the several staff departments will in their reports indicate what is required to render their respective departments efficient.

The duties of the inspector generals since my last report have been various. Brigadier General Wool, until within a short time, has been in command of the forces assembled in the Cherokee country; but having been relieved from that duty by Colonel Lindsay, of the 2d artillery, he has been attached as chief of the staff of the eastern division, under Major General Scott.

Colonel Croghan, since my last report, has completed the inspection of the troops on the Mississippi; he has been likewise engaged in mustering several corps of volunteers called into the service of the United States. He is now attached as chief of the staff of the western division, under Major General

Gaines. According to your instructions, General Gaines, with the assistance of Inspector General Croghan and several topographical engineers, has been ordered to make, as early as practicable, a reconnoissance of the western frontier, with a view of projecting a system of defence for its protection, in conformity with a resolution of the House of Representatives.

Major General Scott, in like manner, has been directed, with the assistance of Brigadier General Wool, inspector general, and a topographical engineer, to make a reconnoissance of the northern and eastern frontiers, for the establishment of a system of defence for that portion of the country, in conformity with a resolution of the Senate.

The recruiting service has been more successful this year than usual, as will be seen by the statement marked E.

The term of enlistment, however, is found by experience to be too short, it being only for three years. The time consumed in recruiting the men, in instructing and transporting them to their respective regiments, some of which are very distant, diminishes the period of actual service nearly one-third; unnecessary expense is thereby created, and the army is filled with raw and inexperienced soldiers. I therefore strongly recommend that instead of *three years*, the term of service of the enlisted soldier be extended to five years, as heretofore. Indeed, it is essential to the character and efficiency of the army that the enlisted men should become habituated to the life of a soldier, and be well instructed in his duties, which cannot be the case if the term of enlistment continue at the short period of only three years; for by the time a soldier is well initiated into all his duties, and is capable of assuming a military air, his term of service expires and a new recruit supplies his place. The cavalry service especially requires a much longer period than three years; for in that time they can hardly be considered anything more than recruits.

It is of great consequence that the several regiments and corps should be effective in officers as well as in men. From age and exposure officers are liable to be rendered unfit for active service, or, indeed, for any service at all; but as there is no provision by law for superannuated or decayed officers who may have spent their best days in the public military service, and thus officers so situated cannot for the want of means retire—their pay during their period of activity having barely supported them—there has occurred to me, and I beg leave to recommend to your consideration, a plan by which such officers might be provided for out of the appropriation for the support of the several regiments, thus: suppose the colonel of a regiment having served thirty years, and finding himself unfit for the active duties of the field, is desirous of retiring, it would be profitable to the government to allow him to do so, and to receive the full pay of his rank without any other allowances during the existence of his regiment or of his own natural life; then the lieutenant colonel highest in rank, who would, according to the established rules of promotion, be entitled to be promoted to his place in case of his death or resignation, should be promoted accordingly, but to enjoy the pay of lieutenant colonel and the rank and emoluments and allowances of colonel; so the major first in the regular course of promotion to become lieutenant colonel, with the pay of major and the emoluments of lieutenant colonel; and the captain first in order of promotion to become the major, with the pay of captain and the emoluments of major; and so on with the first lieutenant, who should become captain; a second lieutenant should become first lieutenant, and the brevet second lieutenant become second lieutenant; and thus the place of every other officer unfit for service would be filled by an effective officer. As soon as any of the retired officers may die, the officers acting in their places should receive the full pay of their respective ranks. Such a plan, while it would refresh the army and render it more vigorous and effective, could not be otherwise than very gratifying to all concerned.

I beg leave to draw your attention to the fact that there is no provision made by law for the widows and orphans of the officers of the regular army who may die in consequence of wounds received or diseases contracted by exposure in the service, while there is a provision of that nature for all other description of troops, whether militia, rangers, sea-fencibles, or volunteers, as will appear by the act of July 4, 1836. There are the widows of several meritorious officers and soldiers now suffering by the deprivation of their natural protectors, who have sacrificed their lives in their country's service, to whom the extension of the provisions of that law would be a great relief; and I am sure, with a knowledge of that fact, you will see the justice of urging on Congress the application of the benefits of that law to the widows and orphans of the members of the regular army who have thus died in the service.

Respectfully submitted.

ALEX. MACOMB, *Major General, Commanding-in-chief.*

HON. JOEL R. POINSETT, *Secretary of War.*

*Memorandum of regular troops serving in Florida, under the command of Brevet Major General Thomas S. Jesup.*

GENERAL AND FIELD OFFICERS OF THE ARMY.

Brevet Brigadier General W. K. Armistead; Brevet Brigadier General A. Eustis; Colonel Z. Taylor, 1st infantry; Colonel D. E. Twiggs, 2d dragoons; Lieutenant Colonel A. Cummings, 2d infantry; Lieutenant Colonel W. Davenport, 1st infantry; Lieutenant Colonel J. Bankhead, 4th artillery; Lieutenant Colonel J. B. Crane, 2d artillery; Lieutenant Colonel W. S. Foster, 4th infantry; Lieutenant Colonel W. S. Harney, 2d dragoons; Lieutenant Colonel A. R. Thompson, 6th infantry; Lieutenant Colonel W. Gates, 3d artillery; Brevet Lieutenant Colonel A. C. W. Fanning, major 4th artillery; Major S. Churchill, 3d artillery; Brevet Lieutenant Colonel B. K. Pierce, major 1st artillery; Major T. T. Fauntleroy, 2d dragoons; Major B. Riley, 4th infantry.

REMARKS.

1. The garrisons have been withdrawn from posts marked (\*), and are now serving in Florida.
2. The troops at these posts, (†) although regarded as permanent stations, so often vary in number, &c., that they are considered as being in the field rather than in garrison, and are therefore omitted in the table. According to the last returns, the force at each was as follows:

	Com'd officers	Men.
Fort Marion, St. Augustine.....	7	82
Fort King, Florida .....	7	159
Fort Brooke, Tampa Bay .....	65	1,596

Troops are also stationed at various other places in Florida, but the specification of the force present is, for the same reason, omitted.

3. Many of the officers reported "absent" by their respective commanders are serving elsewhere in Florida, on duty connected with the service in that quarter.

The number on the sick list, as reported October 31, is about 359 present.

STAFF.

Four aides-de-camp, two quartermasters, six assistant quartermasters, one commissary, five surgeons, twenty assistant surgeons.

R. JONES, *Adjutant General of the Army.*

ADJUTANT GENERAL'S OFFICE, *Washington, November 30, 1837.*

*Memorandum of the volunteer force provided for the service in Florida in aid of the suppression of the hostilities of the Seminole Indians.*

Missouri mounted volunteers, about .....	477
Tennessee mounted volunteers, about .....	504
Alabama mounted volunteers, about .....	906
Washington city, D. C., (foot).....	66
Philadelphia, (foot) .....	425
Louisiana, (foot).....	250

2, 628

The above statement of volunteers is derived from the muster-rolls received at the Adjutant General's office, (except the 250 raised at New Orleans,) which force is supposed to have arrived in Florida in all November. Volunteers for Florida have been authorized to be raised in New York and Baltimore, but it is not known how many will be mustered into service.

Returns of the Florida volunteers are irregular and seldom received, and are supposed to be but partially made; the commanding general reports the difficulties and the delay in obtaining them. The number of volunteers of the Territory may be *estimated* at about.....

1, 400

Total volunteers .....	4, 028
United States seamen, under Lieutenant Powell of the navy .....	100
Of the Indian force authorized to be raised for the Florida service, 178 under Lieutenant Poole, 3d artillery, left Jefferson Barracks for Tampa Bay on October 11 .....	178

4, 306

R. JONES, *Adjutant General.*Major General ALEXANDER MACOMB, *General-in-chief, Washington, D. C.*

\* The inconsiderable number of men enlisted in the western country induced the discontinuance of the recruiting service in this department since the 1st of May, when a portion of the officers were ordered to the eastern department, and the residue to join their regiments. The station and depot at Newport, Kentucky, has been continued, and Louisville recently re-established; and both are under the direction of the general superintendent at New York.

## REPORT OF THE ACTING QUARTERMASTER GENERAL.

QUARTERMASTER GENERAL'S OFFICE, *Washington, November 20, 1837.*

SIR: In compliance with your order, I have the honor to submit a report of the operations of the quartermaster's department during the fiscal year which terminated with the 30th of September last

By the last annual report which embraced in part the expenditures of the third quarter of the year 1836, the aggregate balance in the hands of the various disbursing officers and agents for which accounts had not then been rendered, was..... \$1, 001, 538 71

To which is to be added—

1. The remittances made to those officers, namely:		
In the fourth quarter of 1836 .....	\$837, 213 89	
In the first quarter of 1837.....	1, 309, 577 22	
In the second quarter of 1837.....	815, 386 24	
In the third quarter of 1837 .....	907, 483 99	
		3, 869, 661 34
2. The funds derived from the sales of public property which had become unfit for service, or was no longer required for public use, and from rents for public grounds and buildings not occupied for military purposes.....		38, 769 47
Making an aggregate, comprising the outstanding balances, the remittances, the funds derived from other sources, of.....		\$4, 909, 969 52
Of which the following sums have been accounted for:		
1. By expenditures, namely:		
In the fourth quarter of 1835, and the first, second, and third quarters of 1836, the accounts for which were received after the date of the last annual report.....		284, 687 96
In the fourth quarter of 1836 .....		1, 118, 188 18
In the first quarter of 1837.....		1, 106, 479 46
In the second quarter of 1837.....		837, 411 43
In the third quarter of 1837, so far as the accounts have been received at this date.....		911, 805 17
		4, 258, 572 20
2. By payments into the treasury, and warrants rendered unavailable by the casualties of service, which were returned and cancelled.....		46, 355 13
Making the aggregate accounted for during the fiscal year.....		4, 304, 927 33
And leaving in the hands of disbursing officers and agents, to be hereafter accounted for, an aggregate balance of .....		605, 042 19

The various objects of improvement which were in a state of suspense at the date of the last annual report, from the want of officers to superintend their execution, have remained so during the present year; nor can they be resumed or prosecuted with effect, under existing circumstances, without some augmentation of the force of the department. The only one in which any progress has been made is the contemplated "military road" along the western frontier, extending from the Upper Mississippi to Red river; and you are aware, from a special report lately submitted to you on this subject, that but little has been done towards that object.

The commissioners to whom were assigned the survey and location of the route of this road are now engaged in an examination of that extensive frontier, and in treating with the various Indian tribes through whose country it will pass for a right of way, in conformity to the provisions of the law; but of their precise progress and success I am now unable to inform you, not having received a final report of their operations. It is believed, however, that no injury will result from the delay that has occurred, as it will afford an opportunity of reviewing the subject in connexion with a general plan of defence, and of correcting what appears to me to be an error in the present scheme, which regards this road as a very important element in the means of protecting the frontier.

I have already had occasion, in complying with a previous call on me, to present to you my humble views in detail on this subject. It will, therefore, only be necessary to observe here, that while roads leading *towards* the frontier, from the great sources of supply in the interior, are of the utmost importance as a means of defence, by facilitating military operations, those running *parallel* with the frontier, and passing through the Indian country by a gratuitous concession, cannot be of much utility, even in time of peace, and, from their liability to constant interruption by the enemy, will become wholly useless in time of war.

This feature in the present plan of defence seems to have originated in the idea of making the posts on the line of the frontier, though very widely separated, dependent on each other for support, while, by the plainest principle of military science, they should rely in common upon reserves stationed at eligible positions in the rear, held in readiness to be thrown forward to the point of alarm by rapid water conveyance and by roads diverging to the frontier.

I would therefore respectfully submit for your consideration the expediency of suspending the application of the money appropriated by the act of July 2, 1836, so far as it relates to opening a military road along the frontier, passing west of the States of Missouri and Arkansas, as the law enjoins, and of obtaining authority to apply the amount provided for that object to the construction of roads leading from the depots of supplies and the stations of the reserves to such posts as it may be deemed necessary to establish on the frontier for the protection of the border settlements.

I would respectfully invite your attention to a serious embarrassment under which some of the dis-

bursing officers of this department labor, on account of payments made by them under orders from superior officers for shoeing the horses of mounted volunteers called into service under the act of May 23, 1836. Those payments have been rejected by the accounting officers of the treasury as repugnant to the act of March 19, 1836, which provides forty cents per day to volunteers "for the use and risk" of their horses. As shoeing is indispensably necessary to insure the efficiency of the horses after they are received into service, and appears to me to be no more precluded by the allowance made for their use and risk than forage, which is allowed with a view to the same object, I do not concur in the decision of the accounting officers. But as the difficulty is supposed to result from the law, it will require legislative provision to relieve the disbursing agents from their embarrassment. The volunteers having been discharged from service, the payments, even if they be wrong, cannot possibly be recovered from them; and unless the case be provided for, the losses must ultimately fall on the officers who gave the orders, some of whom have likewise been discharged from the public service.

In the last annual report, which it devolved on me to make to your predecessor, I urged, in general terms, the necessity for enlarging and improving the organization of the quartermaster's department, so as to enable it to discharge its heavy duties with becoming promptness and efficiency; and in a subsequent special report, dated the 14th of January last, I endeavored to show the expediency of the measure by more detailed illustrations. As it would not be proper to repeat my suggestions here, I beg leave to refer you to those reports; they present, very fully, my humble views on the subject, and I could add but little more than to say that those views have been strengthened and confirmed by the experience of another year.

A reference to the fiscal exhibits of the department for the last two years will serve to convey some idea of the vast extent of its responsibilities, though a very inadequate one of its duties, and the labor incident to such heavy operations. The expenditures for that period have somewhat exceeded six million three hundred and fifty thousand dollars. From the want of an adequate organization, a considerable portion of those expenditures has necessarily been thrown upon temporary agents, without sufficient experience to enable them to guard the public interest effectually, and heavy losses have undoubtedly been sustained by want of proper system and arrangement, even where all may have acted in perfect good faith.

But, from discoveries recently made, there is reason to fear that, in spite of all the vigilance that can be exercised by the accounting officers in the scrutiny of accounts, extensive frauds have been practiced upon the public by some of those temporary agents, acting in collusion with claimants in some instances, and in others with officers of the militia and volunteers in the service of the United States, who have thus shown themselves capable of tarnishing an honorable profession by associating with it a sordid spirit of gain. It has already been my duty to bring to your notice two cases of this kind, and under your order civil prosecutions are now in progress against the offenders, for the recovery of the money and the punishment of the crime. As it is due to justice that the guilty should be exposed in order that the innocent may be relieved from suspicion, I annex to this report copies of all the papers in the cases referred to.

With an adequate organization, composed of faithful and experienced officers, the chief of a department may be held to a just responsibility for the proper application to the public service of the funds confided to his administrative control; but if, from the want of such provision, the expenditure of a large portion of those funds is necessarily thrown upon faithless or incompetent agents, in whose selection he has had no hand, that responsibility will be much impaired, if not entirely destroyed.

It is gratifying to perceive that the name of no officer of the regular army is associated with the transactions referred to, except as the detector and exposé of the frauds. Though serving their country for a pittance which is scarcely adequate to a decent support, they yet maintain their integrity unblemished, and show themselves superior to the temptations of gain, as well as the corrupting influence of the vicious associations into which a more than doubtful policy has thrown them.

I have the honor to be, sir, your most obedient servant,

T. CROSS, *Acting Quartermaster General.*

Hon. JOEL R. POINSETT, *Secretary of War.*

*Documents accompanying the Quartermaster General's annual report.*

QUARTERMASTER GENERAL'S OFFICE, *Washington, August 21, 1837.*

SIR: I submit, for your information and order in the case, a letter from Lieutenant S. P. Heintzelman, acting assistant quartermaster at Columbus, Georgia, enclosing sundry papers going to establish the perpetration of an extensive fraud which has been committed against the United States, in that vicinity, by a collusive understanding between Captain James C. Boyd, of the Alabama mounted volunteers, John M. Sanders, lieutenant, and Michael Connel, who styles himself "quartermaster of Captain Boyd's company."

Lieutenant Heintzelman had innocently paid those fictitious accounts, amounting to \$6,570 20, without suspicion, on the joint certificate of Captain Boyd and his self-styled quartermaster, setting forth their general correctness, and specifically "that the forage had been actually purchased of J. M. Sanders, and justly and necessarily issued to the company; and that the team charged for as hired to haul provisions, forage, and baggage, was thus employed in the service of the United States during the period stated, and was necessary to enable the troops to operate against the Creek Indians."

The accompanying letter of Mr. Leonard Abercrombie and the deposition of Jeremiah Walker will show how far those certificates conformed to the truth. The transaction needs no comment. Supposing it to be truly represented, (and, so far, Captain Boyd, though apprised of the imputations against him, has produced no counter-evidence,) it is eminently disgraceful to those concerned in it, considering that they were all at the time holding commissions in the military service, which entitled their certificates to credit in establishing the facts which are to determine the propriety of claims against the United States. I know not whether these individuals are yet in service, nor whether there is any effective mode of reaching them; but if there is, both justice and policy require that they should be made examples of.

Lieutenant Heintzelman cannot be made responsible for the accuracy of facts of which he could know nothing, and which were vouched for by his superior officer with the usual formality. He was, I think, under the circumstances, and the latitude with which militia transactions are always regarded, justified

in making the payments, and should, therefore, receive credit for the amount. But this will involve the very grave principle of admitting a charge against the public treasury, knowing it to be fraudulent.

How else he is to be relieved from the heavy responsibility in which he has thus been involved by the acts of others I am not able to suggest; but that he is entitled to relief cannot, I think, be denied.

I fear, sir, this is but one detected case out of hundreds of like character that have occurred during the late disturbances on the frontiers. Such abuses are incidental to the vicious system of employing a large militia and volunteer force to effect, at an almost countless expense, what might be so much better done by a moderate increase of the regular army. If, in despite of experience, that species of force is to be relied upon, we cannot too soon extend the disbursing departments of the regular staff, so as to have trustworthy agents sufficient to attend them, and thus keep the expenditures in faithful hands.

In no other way, allow me to add, can a just accountability be attained.

I have the honor to be, sir, your obedient servant,

T. CROSS, *Acting Quartermaster General.*

Hon. J. R. POINSETT, *Secretary of War, Washington.*

COLUMBUS, Georgia, July 12, 1837.

Sir: I have the honor to enclose herewith a copy of an affidavit of Jeremiah S. Walker, in reference to some accounts I paid on Captain James C. Boyd's certificate for team hire and forage for the use of his company.

Since I have had the affidavit, Captain Boyd has been here, and assured me he could furnish counter-affidavit to this statement, and that it is all a political affair. I yesterday saw an individual from the neighborhood where the company was stationed, and have had letters from there stating that Captain Boyd had offered half the amount he got for team hire to the individual purporting to have signed the account to induce him to remain quiet, and is obtaining certificates from individuals of his company under the promise of reward; and further, that he seldom had over a dozen men of his command embodied at one time.

The three accounts I have paid are vouchers Nos. 108, 109, and 110, abstract B, 2d quarter 1837. The two forage accounts are signed by John M. Sanders, a lieutenant of the company.

I have no doubt the accounts certified to by Captain Boyd are entirely fictitious, and that no such transactions took place.

He is also accused of having forged the names of several persons to a power of attorney, and has drawn pay for several individuals who never rendered any service. He will probably be prosecuted for this last act.

The above statement, &c., are respectfully laid before you for instructions.

I have the honor to be, sir, very respectfully, your obedient servant,

S. P. HEINTZELMAN, *Lieutenant and A. A. Quartermaster.*

Major TRUEMAN CROSS, *Acting Quartermaster General U. S. Army, Washington.*

P. S.—I also enclose a copy of a letter received from a respectable gentleman in that neighborhood  
S. P. H.

MUSCOGEE COUNTY, Georgia:

Personally appeared before me, George Chatfield, one of the justices of the peace in and for said county, Jeremiah S. Walker, and made oath that he was a private in Captain James C. Boyd's company of mounted Alabama volunteers, in the service of the United States for the suppression of Indian hostilities; and that the men of said company, during their term of service, furnished their own rations of provisions and forage, and that there was no team hired for the transportation of the provisions, forage, &c., and the transportation of the baggage of said company, but that the men of said company furnished and carried, themselves, their own provisions, forage, baggage, &c.; and that the team said to be hired of John Barkley was never employed for the use of said company; and that no forage was furnished by J. M. Sanders, as certified to by Captain James C. Boyd in two accounts against the United States, receipts bearing date June 14, 1837.

JEREMIAH S. WALKER.

GEORGE CHATFIELD, *Justice of the Peace.*

COLUMBUS, Georgia, June 29, 1837.

A true copy.

S. P. HEINTZELMAN, *Lieutenant 2d U. S. Infantry.*

[Voucher 108—Abstract B.]

*The United States to John M. Sanders, Dr.*

March 29, 1837.—For 166½ bushels of corn, at \$2 per bushel, is.....	\$332 50
For 5,320 pounds of fodder, at three cents per pound.....	159 60
	492 10

MONTGOMERY, *Alabama* :

I do certify that the above account, amounting to four hundred and ninety-two dollars and ten cents, is correct and just; and that the forage was actually purchased of said Sanders for the use of Captain Boyd's company of mounted Alabama volunteers, in the service of the United States for the suppression of Indian hostilities; and that it has been correctly and necessarily issued to the command.

MICHAEL CONNEL,  
*Quartermaster of Captain Boyd's company of Alabama volunteers, in service of the United States.*  
JAMES C. BOYD, *Captain, Commanding.*

Received, Columbus, Georgia, June 14, 1837, of Lieutenant S. P. Heintzelman, assistant quartermaster United States army, the sum of four hundred and ninety-two dollars and ten cents, in full of the above account.

JOHN M. SANDERS.

[Voucher 109—Abstract B.]

*The United States to Jno. Barkley, Dr.*

1837.—For the service of one wagon and team, and driver, in hauling provisions and forage, &c., and in transporting the baggage of the troops operating against the Creek Indians, from the twenty-ninth of January to the tenth of June, 1837, being one hundred and thirty-three days, at \$5 per day.....	<u>\$665 00</u>
--	-----------------

I do certify that the above account is correct; that the wagon, team, and driver, were employed in the service of the United States during the period therein stated, and for the purposes therein mentioned; and that the services were necessary to enable the troops to operate against the Creek Indians.

MICHAEL CONNEL,  
*Quartermaster of Captain Boyd's company of Alabama volunteers, in service of the United States.*  
JAMES C. BOYD, *Captain, Commanding.*

Received, Columbus, Georgia, June 14, 1837, of Lieutenant S. P. Heintzelman, acting assistant quartermaster United States army, the sum of six hundred and sixty-five dollars, in full of the above account.

JOHN BARKLEY.

[Voucher 110—Abstract B.]

*The United States to John M. Sanders, Dr.*

1837.—For 1,823 $\frac{3}{4}$ bushels corn, at \$2.....	\$3,657 50
For 58,520 pounds fodder, at \$3.....	1,755 00
	<u>5,413 10</u>

MACON COUNTY, *Alabama* :

I do certify that the above account, amounting to five thousand four hundred and thirteen dollars and ten cents, is just and correct, and that the said forage was purchased of the said Sanders, for the use of Captain Boyd's company of mounted Alabama volunteers, in the United States service for the suppression of Indian hostilities; and that the forage has been justly and necessarily issued to the command.

MICHAEL CONNEL,  
*Quartermaster of Captain Boyd's company of Alabama volunteers, in service of the United States.*  
JAMES C. BOYD, *Captain, Commanding.*

Received, Columbus, Georgia, June 14, 1837, of Lieutenant S. P. Heintzelman, acting assistant quartermaster United States army, the sum of five thousand four hundred and thirteen dollars and ten cents, in full of the above account.

JOHN M. SANDERS.

CUBAHACHA, *July 8, 1837.*

SIR: I have seen a copy of the accounts presented to you by Captain James C. Boyd and Lieutenant Sanders, who commanded a few volunteers in this neighborhood for a short time during the Indian war. A great fraud has been practiced on the government. It is a fact that can be testified to by fifty or more respectable men, that Mr. Barkley had no wagon in the service, and that there never was any forage supplied by Mr. Sanders. I have Mr. Barkley's certificate that he never had any team in the service, and that he never authorized any person to draw or receipt for any money; and the quartermaster, Michael Connel, declares he never made out those forage accounts and certificates accompanying them. Many persons are returned as members of that company that did not belong to the company, and their pay drawn as members and withheld from them. These facts can be established, and this community wishes this fraud examined into and corrected.

You will excuse the liberty I take, as a stranger, with you. Judge Colquett, or Seaborn Jones, esq., can inform you what reliance should be placed in my statement, and who I am.

Yours, respectfully,

LEONARD ABERCROMBIE.

P. S.—Captain Boyd is obtaining certificates from some of the members of his company upon promises of reward.

L. A.

A true copy.

S. P. HEINTZELMAN, *Lieutenant and Acting Assistant Quartermaster.*

COLUMBUS, Georgia, August 21, 1837.

SIR: I have the honor to enclose herewith a paper received from Captain James C. Boyd, in relation to some accounts I paid on his certificate, referred to in a letter addressed to your office dated Columbus, Georgia, July 12, 1837.

I have the honor to be, sir, very respectfully, your obedient servant,

S. P. HEINTZELMAN, *Lieutenant and Acting Assistant Quartermaster.*

Major TRUEMAN CROSS, *Acting Quartermaster General U. S. Army, Washington.*

JULY 6, 1837.

STATE OF ALABAMA, *Macon County:*

We, the undersigned, do affirm, upon a strict examination of all the facts and circumstances relative to Captain Boyd's course of conduct in having his company discharged, and paying them off and drawing the pay from government officers, that he has acted honorably and with a strict regard to the interest of said company. We approve all he has done, being done with the knowledge and approbation of the company.

As regards turning over the amount of money drawn by names on the roll who never did any military duty to others, who did: that that would be the course, was known and approved of months previous to receiving the money. It is unjust any exceptions should be taken to Captain Boyd's using said names. It meets our entire approbation. As regards the affidavit of Jeremiah S. Walker, filed in your office, it is not true. Teams were employed in hauling forage, &c., for the use of company, and Captain Boyd has paid, or is responsible for, the amount of wages, forage, and provision.

Rations were distributed to company.

We do not hesitate to declare all opposition to Captain Boyd in this matter has grown out of the worst feelings—malice, envy, jealousy, &c.; that Walker was influenced by others to take the unwarrantable course he has, which merits the utmost contempt of every worthy citizen.

In testimony of the above, we do hereunto affix our names as members of Captain Boyd's company.

John M. Sanders, first lieutenant P. C. R.	John McPhawl.
Thomas Harris, second lieutenant.	Elijah Sedder.
Samuel McNeil, first sergeant.	Darlen Jones.
John H. Craddock, second sergeant.	Malcolm Gillis.
John Brown, third sergeant.	Stephen Nolen.
Alexander Brown.	Alexander Nolen.
A. J. Durant.	Robert Murphey.
William Durant.	Eleaz. W. Jones.
Z. Green.	John Wolf.
John Heath, substitute.	David Quarles.
Daniel McGill, second corporal.	Toliver Norris.
Benjamin Simmons, third corporal.	C. L. Motley.
William Simmons.	Gilbert Gilchrist.
William Myrick.	Robert Peques.
James Myrick.	M. Connel.
Abram Myrick.	C. Connel.
William Reynolds.	T. Connel.
Alexander McDaniel.	C. S. Reynolds.
John Gillis.	

I do hereby certify Captain Boyd's conduct concerning this matter is correct, to the best of my knowledge.

JULY 12, 1837.

ALABAMA, *Macon County:*

I do hereby certify the above is a correct copy of the original.

JOSEPH P. CLOUGH, *J. C. M. C.*

AUGUST 5, 1837.

*Decision of the Secretary of War on the case of Captain Boyd.*

"August 24, 1837.

"Prompt measures ought to be taken to investigate the facts set forth in this report, and, if they prove correct, to bring the parties to this scandalous fraud to trial." A civil suit ought likewise to be brought against them to recover the money which they have obtained thus fraudulently. Let such a statement be made as will enable the Secretary to place the matter in the hands of the Solicitor of the Treasury, in order to the bringing of a civil suit, and an indictment be lodged against the parties for presenting false accounts.

"J. R. POINSETT."

QUARTERMASTER GENERAL'S OFFICE, *Washington, August 25, 1837.*

SIR: I availed myself of the first moment of time that could be spared from more pressing engagements, in reference to supplies for the next campaign in Florida, to lay your report of the 12th ultimo, together with its enclosures and the vouchers therein mentioned, before the Secretary of War. He has called for such a statement of the case as will enable him to place the subject in the hands of the Solicitor of the Treasury, with a view to a civil suit against Captain Boyd and his colleagues in the fraud for the recovery of the money, and to an indictment against them for presenting false accounts. You will therefore take measures to collect additional testimony in the case, and report any further facts that may disclose themselves in the course of your investigations. Henceforth you will discredit the certificates of all the parties to this fraud, and pay no claim contracted by all or any one of them, or depending upon their testimony. If this company be still in service you will notify Captain Boyd that he must make his requisitions on you for all supplies due to his command, and then you will furnish them in the usual way. I enclose you a printed copy of the act of Congress of March 19, 1836, "to provide for the payment of volunteers and militia corps in the service of the United States," from which you will perceive that where they furnish themselves with forage (which they must do where there is no authorized agent to provide it) they are entitled to a commutation of money, to be received through the pay department.

The accounts in question, even if they had been contracted in good faith, were not accompanied by the collateral evidence which might reasonably have been required by you to warrant their payment. You should, at least, have had requisitions showing the number of horses and the period for which they had been foraged.

As it is, there is nothing to show the proper application of the forage which you paid for, amounting to near six thousand dollars—whether it was fed to the company in a week or a month. You should not have paid for more than the regulated allowance, and this could only be ascertained by the number of horses and the time they had been in service.

The expenditures at your station have greatly exceeded my calculations, and I think it time they had nearly ceased. You will not draw any further drafts for funds. Such as are necessary will be remitted on your estimates, which must be made sparingly. I am, myself, not aware of the necessity of keeping a volunteer force in service in your vicinity. It is presumed, however, to have been called out by competent authority.

I am, sir, very respectfully, your obedient servant,

T. CROSS, *Acting Quartermaster General.*Lieutenant S. P. HEINTZELMAN, *Acting Assistant Quartermaster, Columbus, Georgia.*COLUMBUS, *Georgia, September 14, 1837.*

SIR: I have the honor to acknowledge the receipt of your letter dated August 25, 1837, referring to some accounts presented by Captain J. C. Boyd, of the Alabama volunteers.

Since my former letter I have seen several persons from the neighborhood where these transactions took place. They all assert that the accounts presented by Captain Boyd and his first lieutenant, J. M. Sanders, are fictitious, and that no such transactions took place.

They corroborate, in every particular, Walker's affidavit. Philip H. Raisford, postmaster at Cubahachee, Michael Connel, acting as quartermaster to the company, Nathan Crawford, Daniel Scurlock, L. Abercrombie, with many more in the same neighborhood, can testify to these facts.

Several suits will be commenced by individuals against Captain Boyd for forgery, in signing their names to a power of attorney, on which he drew their pay from the paymaster, as soon as the original power of attorney can be procured from Major Muhlenberg, the paymaster.

The statement furnished by Captain Boyd, and signed by some members of his company, which I have forwarded to your office, is of no weight, as such papers can easily be obtained in this country from the ignorant and vicious. Swindling the government is, by many, considered as no crime.

Captain Boyd furnished me requisitions, showing the number of horses and time for which forage was drawn. From these I made out a statement, and found that the accounts did not quite cover the requisitions. I could have had a formal requisition made out to cover the amount paid for, which the captain, I have no doubt, would have signed without any hesitation; but it would have been no check to the fraudulent transaction.

There has been a much larger volunteer force in this country, and for a much longer period, than I supposed necessary; but they were called out by proper authority, and have been mustered and paid.

It was necessary they should have supplies. If I had not furnished them, they would have procured them from other sources, and the government, in the end, put to a much greater expense.

I have always furnished a much smaller quantity than their estimates called for, but always found that to be enough.

An officer of the army, of rank, with a few regular troops, I have no doubt, would, in a much shorter time, have picked up all stragglers and prevented some outrages, with a great saving of expense.

There are, at present, but two companies of volunteers in service near the line of Alabama and West Florida, and from 100 to 150 miles from Irwinton, from whence they draw most of their forage.

I wished them to draw their supplies from the Gulf of Mexico, by means of the rivers traversing the district of country to which the Indians have fled, which would have saved a very difficult and expensive land carriage; but they objected on account of there being no roads.

Colonel Welborn, who has command, is sick; when he gets well, I understand, he intends to scour the country below, pick up the last stragglers, and disband his forces.

I have the honor to be, sir, very respectfully, &c.,

S. P. HEINTZELMAN, *Lieutenant and Acting Assistant Quartermaster.*

Major TRUEMAN CROSS, *Acting Quartermaster General U. S. Army, Washington.*

QUARTERMASTER GENERAL'S OFFICE, *Washington, October 7, 1837.*

SIR: I enclose you, by direction of the Secretary of War, the National Intelligencer of this date, containing a speech of Mr. Wise, of the House of Representatives, alleging a fraudulent transaction on the part of D. G. Skinner, quartermaster of the Alabama militia, with W. W. Crenshaw, clerk of the steamer Anna Calhoun. On a reference to your accounts (supposing that you might have reimbursed the amount alleged to have been paid) I do not find trace of any such transaction, and the only evidence on file of the agency of Skinner is his receipt to Lieutenant Colonel Henry Stanton for one hundred dollars, placed in his hands, with the sanction of General Jesup, on the 23d September, 1836, for expenditure at Irwinton. For this advance he has not rendered any account.

You will immediately institute a thorough investigation in the case, and report the result to this office as early as practicable.

I am, sir, very respectfully, your obedient servant,

T. CROSS, *Acting Quartermaster General.*

Lieut. S. P. HEINTZELMAN, *Acting Assistant Quartermaster, Columbus, Georgia.*

COLUMBUS, *Georgia, November 3, 1837.*

SIR: In obedience to your instructions in your letter of the 7th October, I have instituted a thorough investigation into Mr. Skinner's case.

Mr. Calhoun, one of the owners of the Anna Calhoun steamboat, has had the books of the boat thoroughly examined, but can find no trace of the transaction in the entries of freight carried, and no such name as A. Y. Smith occurs in the list of passengers carried by the boat.

In February, 1836, Mr. Skinner was a merchant in Irwinton, and had no connexion with the army until some months later. He assisted the militia commissary in May, at Irwinton; and the latter part of June, or beginning of July, was appointed in General Irwin's staff as quartermaster.

In December last he was mustered out of service by Lieutenant Peyton and appointed agent to take charge of some government supplies until I could visit Irwinton and dispose of them. January, 1837, he was, by Captain Page, on the renewal of Creek hostilities, placed in his former situation, in which capacity he still acts.

On the 24th January, 1837, the steamboat Anna Calhoun left for Mount Vernon arsenal, Alabama, under contract for the United States, and has not been on the Chattahoochee since.

I have seen Mr. Skinner upon the subject, but can learn nothing from him.

Mr. Calhoun, who has warmly interested himself in the investigation, and in whose employ W. W. Crenshaw now is as clerk of the steamboat Muscogee, has sent for him; but he will not be here until the river rises, which may not be for two months from this time. This is the only opportunity I can see of throwing any light upon the subject.

When I saw Mr. Skinner I suggested to him a plan to disprove the slander; but he does not appear to take much interest in the matter, or to be willing to follow my suggestion.

With Mr. Calhoun's assistance I think I will be able to arrive at the truth on W. W. Crenshaw's arrival.

I have the honor to be, sir, very respectfully, your obedient servant,

S. P. HEINTZELMAN, *Lieutenant and Acting Assistant Quartermaster.*

Major TRUEMAN CROSS, *Acting Quartermaster General U. S. A., Washington City.*

COLUMBUS, *Georgia, November 8, 1837.*

SIR: I have the honor to enclose herewith an affidavit from W. W. Crenshaw, in explanation of the alleged fraud said to have been perpetrated by Skinner and himself.

Voucher 74, abstract B, second quarter 1837, the account paid A. Y. Smith for transportation, will explain the affidavit.

I have the honor to be, sir, very respectfully, your obedient servant,

S. P. HEINTZELMAN, *Lieutenant and Acting Assistant Quartermaster.*

Major TRUEMAN CROSS, *Acting Quartermaster General U. S. A., Washington.*

MUSCOGEE COUNTY, *Georgia:*

Personally appeared before me, Michael N. Clarke, one of the justices of the peace in and for said county, W. W. Crenshaw, and, being duly sworn, made oath as follows: That I was clerk on board the steamboat Hyperion, Captain J. Y. Smith, when she was chartered at Apalachicola by A. H. Falconer,

United States agent, to transport some sick Georgia volunteers to Columbus, Georgia; and that the charter was eleven hundred dollars, of which amount one thousand was to go to the boat for the transportation, and one hundred to the said Falconer—one thousand being all Captain Smith asked for the transportation; that I had a conversation with A. Y. Smith, at Columbus, Georgia, on the subject of frauds against the United States, but that Skinner's name was not mentioned in connexion with the subject, nor any other name; and, further, that no such transaction ever took place on board the steambot Anna Galhoun as that sworn to by A. Y. Smith in an affidavit dated Wheeling, September 30, 1837, and published in the National Intelligencer, dated October 7, 1837.

W. W. CRENSHAW.  
MICHAEL N. CLARKE, *J. P.*

COLUMBUS, *Georgia*, November 8, 1837.

ORDER No. 92.

HEADQUARTERS ARMY OF THE SOUTH, *Tampa Bay, Florida*, April 24, 1837.

1. The sick of the Alabama and Georgia battalions of mounted volunteers which have been designated by the inspector general as unfit for further service in the field during the present season, with the necessary number of attendants, will be moved immediately to their homes. The detachment of Alabamians will proceed, under charge of Lieutenant Padget, *via* New Orleans, the Mississippi and Tennessee rivers, to Bellefonte landing, on the latter river, where they will be debarked. The Georgia detachment will proceed, under charge of an officer or some competent non-commissioned officer, to be designated by Captain Bishop, *via* the Apalachicola and Chattahoochee rivers, to Columbus, Georgia, where they will be debarked.

By order of Major General Jesup.

J. A. CHAMBERS, *Lieutenant, A. D. C., and Acting Adjutant General.*

Know all men by these presents that James Y. Smith, master and part owner of the steamer Hyperion, now being in this port, hath contracted with A. H. Falconer, agent for the United States at this place, to receive on board said steamer, and transport to Columbus, Surgeon John Maddin and sixty-four men, composing a detachment of Georgia volunteers, just arrived from Fort Brooke in the schooner Henry Lee, Captain Norton; for which said James Y. Smith is to receive eleven hundred dollars on delivery of the above persons (as enumerated in this list now in possession of Sergeant Mays, of said detachment) to any United States quartermaster in Columbus, (say Lieutenant Heintzelman.)

It is understood that the men find their own provisions, and have all the necessary privileges of cooking, and going to and fro on the deck, they being found in necessary wood and water.

In witness whereof, we have signed duplicates of this contract this 30th day of April, 1837, in Apalachicola.

JAMES Y. SMITH.  
A. H. FALCONER.

Witness: JOHN MADDIN, *Surgeon to the M. G. V.*

We hereby certify that the foregoing contract has been fulfilled by the captain, James Y. Smith, and owners of the said boat, and should be paid by the United States.

JOHN MADDIN, *Surgeon to the G. M. V.*  
B. R. MAYS, *Commanding.*

COLUMBUS, *May* 3, 1837.

[No. 74.—Abstract B, 2d quarter 1837.]

*The United States to James Y. Smith, Dr.*

1837.—For hire of the steamer Hyperion, from Apalachicola, Florida, to Columbus, Georgia, transporting troops, per contract with A. H. Falconer, agent for the United States, Apalachicola, Florida, dated April 30, 1837 ..... \$1, 100 00

I certify that the above account is correct and just, and that the transportation was accomplished agreeably to contract.

Received, Columbus, Georgia, May 3, 1837, of Lieutenant S. P. Heintzelman, acting assistant quartermaster United States army, eleven hundred dollars, in full of the above account.  
\$1,100.

JAMES Y. SMITH.

COLUMBUS, *Georgia*, November 2, 1837.

Sir: I have the honor to enclose herewith J. M. Morrison's account for rent of house for hospital, and for mattresses for wounded Alabama volunteers, at Irwinton, Alabama, for your decision.

Mr. Skinner has presented near \$3,000 worth of accounts for forage for the Barbour county rangers.

It is all for fodder. At the time it is said to have been purchased, I do not believe so much could have been obtained in the country.

Some of these accounts seem to be similar to those I paid Captain Boyd's and declined paying Captain Brodnax's companies. Mr. Skinner does not know that it was purchased. He authorized the companies to purchase when they could find, and has certified the accounts to the amount of their requisitions. The plan pursued was for an officer or some member of the company who had funds to purchase all the fodder they met with, and introduce it in one account at some fixed price.

The impression among the volunteers appears to be, that if the government does not furnish all the supplies they are entitled to, they can make out fictitious accounts for the balance, and divide the amount among the members.

My object for making this statement is to inquire whether I shall pay these accounts in their present form; and if not, what evidence I shall require from the claimants to prove that it has not been a fictitious transaction.

The forage accounts of two more companies remain unpaid besides these.

I have the honor to be, sir, very respectfully, your obedient servant,

S. P. HEINTZELMAN, *Lieutenant and Acting Assistant Quartermaster.*

Major TRUEMAN CROSS, *Acting Quartermaster General, Washington City.*

QUARTERMASTER GENERAL'S OFFICE, *Washington, November 29, 1837.*

Sir: After the recent developments of frauds upon the public in your vicinity, it is no longer safe, either for yourself or the public interest, to continue the payment of claims purporting to have been contracted by civil agents and officers of militia or volunteers, and certified by them. You will, therefore, confine your payments hereafter to claims contracted by yourself, or coming so fully under your observation as to enable you to testify to their entire correctness.

You have erred very much in adopting the vouchers of D. G. Skinner, who calls himself quartermaster general of Alabama volunteers, into your accounts, and thus giving them the appearance of being your own transactions. In the present state of the papers, it would seem that you had paid the money directly to the claimants themselves, when in fact, as I infer from your reports, it was paid over by you to Mr. Skinner as a reimbursement of the amount purporting to have been expended by him. Under these circumstances, you will perceive there is no certainty that the money will ever reach the claimants even where the accounts are founded upon *bona fide* transactions connected with the public service; but of this, after what we have seen, there can be no assurance whatever.

You will immediately discharge A. H. Falconer from service, as an agent of the United States at Apalachicola, and all other civil agents who may be in employ in your vicinity. It is not known here by whom Mr. Falconer was constituted a public agent, nor has he ever been recognized as such by this office, or at the War Department. The same may be said of Mr. Skinner's agency before he came into service as quartermaster of Alabama volunteers.

I am, sir, respectfully, your obedient servant,

T. CROSS, *Acting Quartermaster General.*

Lieutenant S. P. HEINTZELMAN, *Acting Assistant Quartermaster, St. Augustine, Florida.*

No. 9.

REPORT OF THE COMMISSARY GENERAL OF SUBSISTENCE.

OFFICE OF THE COMMISSARY GENERAL OF SUBSISTENCE, *Washington, November 20, 1837.*

Sir: In conformity with your instructions of September 7 and 21st ultimo, I have the honor to present to your view a statement of moneys remitted and charged to contractors and disbursing officers of this department during the first, second, and third quarters of the year, together with the balances in their possession December 31, 1836, amounting to..... \$1, 002, 553 95  
To which are to be added the balances due the latter on the settlement of their accounts 116, 287 58

Aggregating..... 1, 118, 841 53  
Accounted for during the same period..... 955, 372 07

Leaving..... 163, 469 46

From which is to be deducted—

This sum, charged to contractors as the difference in price of stores purchased to supply deficiencies arising from failures ..... \$922 77

Remittances made to disbursing officers late in the third, for the fourth quarter of the year..... 52,800 00

This sum, being in possession of officers who have ceased to disburse, and who have been ordered to deposit it in banks, to the credit of the Treasurer of the United States..... 28,363 68

This sum, expended in the removal and subsistence of emigrating Indians, and credited on that account, and to be refunded from that appropriation.... 5,000 00

87, 086 45

Leaving the sum of..... 76, 383 01  
actually in possession of the disbursing officers of the department applicable to the expenditures of the fourth quarter of the year.

Of one hundred and forty officers disbursing the public moneys, under the control of the commissary general of subsistence, during the period above embraced, the accounts of seventeen were not received at the completion of this statement; five have been received since, leaving only twelve whose accounts are not now furnished; but there is no doubt they will reach the office in a few days. These officers have been actively engaged in the operations preparatory to the Florida campaign the approaching winter, and their accounts could not be settled and forwarded with that punctuality and promptitude displayed by them on ordinary service; but it is confidently believed that, if received, they would be productive of but little difference in the result of the statement.

The balance to the credit of the appropriation for subsistence on the 31st of December, 1836, was.....	\$275, 255 05
Appropriated for 1837.....	913, 445 00
Refunded in 1837.....	18, 191 49
<hr/>	
Total applicable to the service of the year.....	1, 206, 891 54
The requests drawn for remittances amount to.....	696, 008 16
<hr/>	
Leaving to the credit of the appropriation on the 30th of September, inclusive.....	510, 883 38
<hr/>	
Total amount applicable to the service of the department during the year, as above.....	1, 206, 891 54
Amount expended per statement.....	955, 372 07
<hr/>	
Which, if it had been drawn from the treasury, would have left no more than.....	251, 519 47
But to this sum is to be added—	
Balances in the hands of assistant commissaries December 31, 1836.....	\$135, 539 26
Balances due to assistant commissaries September 30, 1837.....	116, 237 58
And this sum, being on account of sales to officers and citizens on the frontier posts.....	7, 487 07
<hr/>	
	259, 363 91
<hr/>	
Making the above balance..	510, 883 38
<hr/>	

The balances due to the disbursing officers on the settlement of their accounts arise principally from bills of exchange drawn by them and credited in the third, although not paid until after the commencement of the fourth quarter.

The operations of the department have been carried on upon a scale much more extensive than at any former period; provisions have been supplied with the earliest despatch from every quarter whence purchased, and to every point required; the comfort and health of the troops have been carefully considered; in lieu of the customary ration in Florida, low-priced French and Catalonia wines have been issued during the summer; and onions, potatoes, and other vegetables of an antiscorbutic nature, have been occasionally substituted for beans; and the assistant commissaries have received instructions to provide such change of diet and to add such condiments as might be required to prevent the appearance and to aid in the cure of disease; and every suggestion made by officers in the field to ameliorate the condition of the soldier has been cheerfully and promptly complied with; and it affords me very great pleasure to add that the reports of various officers bear ample testimony to the most beneficial results from the course pursued.

Very respectfully, your most obedient servant,

GEO. GIBSON, *Commissary General of Subsistence.*

Hon. J. R. POINSETT, *Secretary of War.*

Statement exhibiting the moneys remitted to contractors from January 1 to September 30, 1837; the sums charged to them on account of failures, and the amount accounted for by them; the balances in the hands of the disbursing officers of the department December 31, 1836; the remittances to them in the 1st, 2d, and 3d quarters of 1837; the sums charged to them as transfers from one office to another; sales to officers and citizens on the frontier posts; sales of surplus provisions, empty boxes, barrels, &c., and the amounts accounted for by them during the same period; together with the residence of the contractors, the station of the officers, and the balances in their possession at the expiration of the 3d quarter of the year.

GEORGE GIBSON, *Commissary General of Subsistence.*

OFFICE OF THE COMMISSARY GENERAL OF SUBSISTENCE, Washington, November 18, 1837.

## No. 10.

## REPORT OF THE ACTING SURGEON GENERAL.

SURGEON GENERAL'S OFFICE, *November 29, 1837.*

SIR: In compliance with your instructions, I have the honor to report that the medical and hospital supplies for the army during the past year were put up and transmitted to the several posts in due time, and were all received in good order, with the exception of those intended for Fort Towson, which were lost by the sinking of a keel-boat while ascending the Red river. As soon as the fact of their loss was reported to this office; directions were given to the medical purveyor to forward another supply to that post, which was immediately done. These supplies, with the public property previously in charge of the officer of this department, have all been satisfactorily accounted for by the returns of the surgeons and assistant surgeons, which also show that the hospitals have been well supplied with all the necessary articles of the best quality for the comfort and convenience of the sick; and, from the well-arranged system of responsibility adopted, all has been done at the smallest possible expense to the department.

The law requiring an examination of all candidates by a medical board before admission into the medical staff of the army still continues to prove of the greatest advantage, by securing that professional knowledge so essentially necessary to enable officers of this department to perform the very important duties required of them.

Since the last annual report *thirty* applicants, who had been recommended as well qualified for appointment, were invited to present themselves for examination before an army medical board which was convened in the city of New York in the month of May last; of which number fifteen declined the invitation or failed to attend; and of the remaining fifteen who presented themselves, eight were rejected, and two withdrew, leaving only *five* who were found qualified for the appointment they had solicited—being just *one-sixth* of those who had been authorized to attend the board.

The assistant surgeons, as well as the surgeons of the army, being at all times liable to be called on to decide in the most important and critical cases, remote from all professional aid or assistance, it is necessary they should be well versed in the details of practice, in addition to being well grounded in the elementary branches of their profession. The medical board have therefore been instructed in all cases to make the most full and rigid examination of every candidate relative to his professional acquirements, physical qualifications, and moral habits, and to report favorably on no case admitting of a reasonable doubt.

It may here be proper for me to inform you that during the last year two applicants, who had at their own expense attended the examinations, and were approved by the board, declined to accept commissions when tendered to them; and as the number of applicants is far less numerous than formerly, I fear much difficulty will be found in procuring competent persons to fill the department, unless their compensation shall be increased.

The amount advanced on account of the medical and hospital department of the army during the fourth quarter of 1836, and the first, second, and third quarters of the present year, has been \$15,516 12; of which sum \$10,314 66 has been expended, and for which accounts have been rendered and settled, leaving in the hands of the disbursing officers of this department, on the 30th of September last, \$5,201 46, for which they are held responsible.

The amount paid by warrants on the treasury for claims of private physicians and others, presented and admitted during the period above stated, has been \$13,131 87½. There has also been advanced during the year stated to disbursing officers of this department, on account of the appropriation for preventing and suppressing Indian hostilities, \$10,522 24, of which \$9,365 42 has been expended, and for which their accounts have been received and settled, leaving a balance at the end of the third quarter of the present year in their hands of \$1,156 84.

I have again respectfully to call the attention of the department to the regulations relative to hospital stewards. There is no class of persons in the employment of the government so badly paid as they are. Their services are very arduous and important; hence it is necessary they should be intelligent, honest, and sober, and capable of compounding and administering to the sick the prescriptions of the surgeons. As such individuals cannot be obtained for the compensation allowed them by the present regulations, I most respectfully recommend that the steward to a post of four or more companies be allowed the pay, clothing, and rations of a sergeant of ordnance, and the steward at all other posts be allowed the pay, clothing, and rations of the first sergeant of a company.

I must also call the attention of the department to the condition of the hospitals at the different military posts, many of which are entirely without a building for the accommodation of the sick, and at others the buildings used for this purpose are old and totally unsuited for the purpose for which they are appropriated. I must therefore request that an appropriation may be asked for to erect such hospitals during the ensuing year as are absolutely necessary.

The whole number of cases which have been under the medical treatment of the officers of this department during the year ending the 30th of September last has been 18,949, of which number 32 have died of remittent fever, 25 of typhus fever, 14 of pneumonia, 20 of phthisis, 22 of diarrhœa, 19 of dysentery, 3 of epilepsy, 7 of wounds, 8 of dropsy, 9 of gastro-enteritis, 9 of intemperance, 4 of apoplexy, and 22 from other diseases, making 194 deaths during the year. Of these, 10 died at Fort Monroe, 19 at Fort Gibson and the dragoon camp near that post, 113 at the various forts and stations in Florida, 7 at Fort Leavenworth, 12 at Fort Mitchell, 10 at Fort Jesup, 7 at Nacogdoches and Camp Sabine, 6 at Fort Towson, and 10 at other places—the largest number of deaths occurred in the fourth quarter of 1836 and the third quarter of the present year.

Very respectfully, your obedient servant,

BENJAMIN KING, *Acting Surgeon General.*

Hon. J. R. POINSETT, *Secretary of War, Washington.*

## No. 11.

## REPORT OF THE PAYMASTER GENERAL.

PAYMASTER GENERAL'S OFFICE, *Washington, November 30, 1837.*

SIR: I have the honor herewith to lay before you a statement of the transactions of the pay department for the fiscal year ending the 30th of September, 1837.

The balances in the hands of paymasters on the 1st of October, 1836, and the advances made to them within the year, amount to \$3,817,272 16. Of this, \$3,183,618 21 have been expended and accounted for, and \$422,269 35 are applicable to the payments of the present quarter, leaving a balance of \$211,384 60 to be accounted for.

The troops are paid to as late dates as they generally are at this season of the year, with the exception of those in Paymaster Rector's district; and in that district the commanding officer would not permit the paymaster to use the funds furnished for that purpose.

It will be seen by the tabular statement accompanying this that the advances for the regular troops amount to \$1,591,577 59, and for volunteers and militia to \$2,225,694 57. In comparing the expenses of the two forces, it must be recollected that the service of the regular troops is continuous; that of volunteers for short periods; that the latter are allowed clothing to the time they agree to serve, and not for the time they actually do serve; that, on an average, one-fifth of the time paid for is taken up in going from and returning home; and that the pay and allowances of a *mounted* volunteer, including the expenses of his horse, are equal to the cost of four privates of infantry. The reluctance of volunteers to serve on foot has compelled the employment of an undue proportion of *mounted* troops; and to this, in a great measure, may be ascribed the heavy expense of the late Indian wars. Not one cent appropriated for the suppression of Indian hostilities has been expended by this department in payment of regular troops. So far as the *army* has been employed, it has cost the United States no more than is appropriated for it in time of peace, except for transportation.

The heavy duty of the department for the last year made it necessary to obtain the services of officers from the line of the army, as provided for by the 3d section of the act of July 4, 1836. So far as the department is concerned, this is the best arrangement that can be made for cases of emergency, as the knowledge officers possess of military usage enables them to comprehend the duties of the office in less time than any other description of persons; but it produces inconvenience to the line, by depriving it of valuable officers when their services are most wanted; and I respectfully recommend, if any change is made in the army, that the appointment of temporary paymasters shall not be confined to officers of the line. This is the only alteration considered necessary in the organization of the pay department, unless it be the one suggested in my letter to your predecessor, of the 19th November, 1836, which applies to all staff departments.

It is the opinion of paymasters that Congress intended their compensation should be equal to that of other officers of the staff, who received the pay and emoluments of majors, and they have heretofore claimed it. The accounting officers put a different construction on the law; in consequence of which, paymasters do not receive as much as majors of the staff by forty-six dollars per month, including the double rations of the latter. The question has been before the United States courts, and different decisions given. On an appeal, in one case, to the Supreme Court, the decision was adverse to the claim of the officer; but it is believed to have been on grounds that do not affect the merits of the question. Concurring, as I do, in opinion with paymasters, and knowing that the many disallowances in the settlement of their accounts, and other losses, would reduce their compensation, if they received cavalry pay, to less than that of majors of infantry, I consider it my duty to request that the subject may be presented to Congress in the way best calculated to obtain the passage of an act explanatory of the 3d section of the act of 24th April, 1816, fixing the pay and emoluments of paymasters so as to place them on a footing with other disbursing officers of the staff.

Respectfully, your obedient servant,

N. TOWSON, *Paymaster General.*

Hon. J. R. POINSETT, *Secretary of War.*

Statement of moneys drawn from the appropriations for the pay department and remitted to disbursing officers on account of payments for the fourth quarter of 1836 and the first, second, and third quarters of 1837; the amount unexpended and forming part of their estimates for the fourth quarter of 1837; the balances to be accounted for; the periods to which the troops have been paid and accounts rendered.

## No. 12.

## REPORT OF THE COMMISSARY GENERAL OF PURCHASES.

COMMISSARY GENERAL'S OFFICE, *Philadelphia, October 28, 1837.*

SIR: In obedience to instructions from the Department of War, dated on the 11th instant, I have prepared, and have the honor of enclosing, my moneyed estimates for the year 1838, marked A and B, as follows, viz:

A. For clothing, camp equipage, &c., for one year, ending with October, 1839.....	\$318,299 13
B. For the expenses of the Commissary General's office during the year 1838.....	8,000 00
	326,299 13

I likewise enclose twelve statements, numbered 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, and 12, prepared in obedience to your order, viz:

No. 1. Statement of moneys drawn from the appropriation for the purchasing department to the 30th September, 1837.

No. 2. Statement of moneys drawn from the appropriation for additional dragoons, &c., to the 30th September, 1837.

No. 3. Statement of moneys drawn from the appropriation for preventing and suppressing Indian hostilities to the 30th September, 1837.

No. 4. Statement of moneys drawn from the special appropriation for the payment of taxes assessed on the public property (United States arsenal near Philadelphia) to 30th September, 1837.

No. 5. Statement of moneys received and disbursed during the first three quarters of 1837 on account of the purchasing department.

No. 6. Statement of moneys received and disbursed during the first three quarters of 1837 on account of additional dragoons or mounted riflemen.

No. 7. Statement of moneys received and disbursed during the first three quarters of 1837 on account of the appropriation for preventing and suppressing Indian hostilities.

No. 8. Statement of moneys remaining on hand on the 1st January, 1837, belonging to the appropriation for volunteers and militia, with its disbursement, to 30th September, 1837.

No. 9. Statement of moneys received and disbursed during the first three quarters of 1837 on account of appropriation for the payment of taxes on the United States arsenal for the years 1835 and 1836.

No. 10. The United States in account current with the commissary general of purchases to 30th September, 1837.

No. 11. Comparative statement of the cost of clothing, &c., for the United States army during the years 1836, 1837, 1838.

No. 12. Statement of the cost of clothing, &c., for the United States army during the year 1838.

The clothing and materials, therefore, that may remain on hand after the completion of the orders for this year, if any, will be so inconsiderable in their amounts that I have deemed it safer not to make any deduction on that account from the moneyed estimate. The duplicates will be forwarded as early as they can be prepared.

I have the honor to be, sir, with great respect, your most obedient servant,

G. IRVINE, *Commissary General of Purchases.*

Hon. J. R. POINSETT, *Secretary of War.*

COMMISSARY GENERAL'S OFFICE, *Philadelphia*, October 28, 1837.C. IRVINE, *Commissary General of Purchases.*Hon. J. R. POINSETT, *Secretary of War.*

## No. 13.

## REPORT FROM THE CHIEF ENGINEER.

ENGINEER DEPARTMENT, *Washington*, November 30, 1837.

SIR: In conformity with your instructions, I have the honor to submit herewith a report of the operations of this department during the year ending September 30, 1837.

Accompanying it are three tabular statements: the first two relating to the fiscal affairs of the department; the third exhibiting the works projected by the board of engineers, which have not been commenced, and the estimate of their cost.

## FORTIFICATIONS.

No appropriations under this head having been made for the service of the past year, operations have been continued, as far as practicable, with the balances of former appropriations.

They have been prosecuted with energy, as some of these balances were large, but by the close of the season will generally have exhausted all available funds.

*Fort Warren, Boston harbor, Massachusetts.*—Operations were resumed at this work the first of April. The average force employed has been two hundred and forty mechanics and laborers. Up to September 30 there had been laid nine thousand four hundred and seventy-eight cubic yards of stone-work in piers and scarp walls; and two thousand seven hundred and forty-five cubic yards of brick-work, containing 1,781,000 bricks; eight hundred and fifty running feet of scarp wall have been carried up sixteen feet above the ditches along the two channel fronts, and part of another; the piers and arches of nineteen casemates are completed, twelve of which are thirty feet span, and seven smaller. The piers of the other casemates are so far advanced that all the arches for the two channel fronts may be completed the next year.

*Fort Independence, Boston harbor, Massachusetts.*—About one hundred and thirty mechanics and laborers have been employed during the past season at this work; eight thousand one hundred and seventy-two cubic yards of masonry have been laid, comprising the foundation of the scarp wall along two whole fronts, and part of two others; the superstructure of the same in part completed along two fronts, and twenty of the piers of the casemates on the channel fronts nearly completed. The embrasures of one of the channel fronts are finished.

*Fort Adams, Narraganset Roads, Rhode Island.*—There having been no appropriation for the present year for Fort Adams, sixty thousand dollars were, by order of the President, transferred from the unexpended balance of appropriations for Fort Monroe; with this, and the remainder of the last year's appro-

priation, the work has been prosecuted. Most of the excavation and embankment, both rock and earth, and a great portion of the masonry, have been completed, and progress has been made in flooring, partitioning, and plastering the casemates along the face of the northeast bastion. There yet remain to be finished portions of the glacis and of the earthen parapets, a small part of the scarps of the north and the west fronts, the remainder of the parade wall, all the breast height walls, part of the permanent wharf above the water, the interior of the quarters and store-rooms, the gun platforms, and a considerable portion of the redoubt. Much of this could be accomplished the next season with an early and liberal appropriation by Congress.

*Fort Schuyler, Throg's Neck, East river, New York.*—By the purchase of a second steamboat and other auxiliaries, operations have been greatly facilitated at this work, and are now making very satisfactory progress. The sea wall has been finished, with the exception of a small part of the coping, the foundations of a considerable portion of the scarp and counter-scarp walls and piers of casemates laid, and the superstructure commenced. In the graduation of the site nearly all the earth within the space occupied by the fort has been removed; the greater part of the embankment of the glacis and part of the rampart of the coverface have been formed.

*Fort Columbus and Castle William, New York.*—The repairs of these works are nearly completed; a small quantity of coping stone remains to be executed, and some painting is required.

The sea has lately made encroachments upon the base of Castle William, which should be protected at an early day by a substantial sea wall. The old sea wall around the island requires repairing; five thousand dollars would put it in a state of tolerable security. Stone for traverse circles, and iron plates for the same, are yet wanted; and the two wharves on the Buttermilk channel require thorough repair. A detailed estimate for these several objects will be presented; the amount of \$20,000, it is believed, will complete the repairs of these works.

*Fort Mifflin, Delaware river, Pennsylvania.*—During the present year a gun-shed has been erected, the terreplein of the fort has been graduated and gravelled, pavements have been made about the quarters, some necessary outbuildings erected, and all the wood-work of the buildings painted; a mess-house and mess-room are now fitting up, and, on their completion, the fort will be ready to receive its garrison.

*Rebuilding Fort Delaware, Delaware river.*—No exertions were spared to hasten this work the past year, so far as could advantageously be done. It was continued till suspended by the ice in December. Little, however, was accomplished, in consequence of the very late appropriations; of the unusually high price of labor and materials of all kinds; and of the great scarcity of laborers after funds had been furnished. For this season no appropriation was made, but the balance of that of the last year, together with a transfer of \$34,800 from the appropriation for the forts in Charleston harbor, has enabled the officer in charge to prosecute the work vigorously; labor has been abundant and at reduced rates, large supplies of materials contracted for during the fall have been received, and a change in an important part of the operations has been most successful in its results, for economy and rapidity.

The following is a short synopsis of the operations of the season:

1. Excavations for the foundations and the ditches of the fort, amounting to about twenty-seven thousand cubic yards.

2. Driving piles for foundations. In consequence of the nature of the soil, these piles are of the great length of forty-five feet. A great improvement has this season been introduced in the method of driving them, by the substitution of steam power for that of horses; more than fifteen piles per day, on an average, are driven with one pile-engine, which, when worked by horses, drove only three per day; the expense at the same time being very greatly diminished. It is found, too, that from the continuous tremulous motion imparted by the engine, the pile can be driven, not only with greater rapidity, but to a greater depth, without injury. The number of piles driven during the season, up to the 30th of September, is 5,353, the work of about five months, commencing with one engine and never working more than three. The great importance of this change becomes evident when it is considered that at the commencement of the season there were twelve thousand piles to drive. There are now driven the foundations for two fronts, and the others are rapidly progressing.

3. Receiving materials, to wit: Ten thousand six hundred tons of building stone of large dimensions, two hundred and ninety-six thousand bricks, two thousand four hundred and ten piles, and three thousand three hundred cubic yards of building sand.

4. Formation of four jetties projecting from the dike on the north and east sides of the island, to protect it from the abrasion of the river.

*Repairs of Fort McHenry.*—Since my last report, the parapet of the fort has been strengthened by a brick revetment wall, the scarp wall has been thoroughly repaired, the quarters new floored, painted and roofed, an additional battery nearly completed, one thousand three hundred feet of the sea wall built, and fifteen acres of land purchased. The appropriation of 1836, together with the sum of five thousand dollars from the appropriation for "incidental expenses," will be exhausted by the end of the year. An estimate for further repairs which will be necessary will be submitted.

*Fort Monroe, Hampton Roads, Virginia.*—There being no officer at the disposal of the department to take charge of this work, the funds appropriated have been transferred, by order of the President, to other works in progress, namely, \$60,000 to Fort Adams and \$90,000 to Fort Pulaski. An especial board of engineers appointed to examine this work having recommended extensive repairs, and its completion, an estimate will be submitted for the requisite appropriation. The bridge now connecting the site of Fort Monroe with the main land is the property of a private company; it is obviously improper, in a military point of view, that this sole direct communication of the fort with the surrounding country should be in any other hands than those of the government; negotiations have therefore been entered into with the company, who are willing to sell it at a reasonable price. An estimate for the amount is submitted, the payment of which, at once, will, in the end, be more economical than the subjection to the heavy tax now imposed on every person and thing that passes.

*Fort Calhoun, Hampton Roads, Virginia.*—In accordance with previous instructions, the remainder of the stone was this year nearly removed from the foundations of the work, preparatory to commencing the masonry. A board of engineers, appointed in September to inspect it, recommended, however, in the strongest terms, on account of the continued subsidence, the reloading of these foundations; accordingly, with the sanction of the proper department, instructions to this effect were immediately issued, and the reloading is now in progress.

*Fort Caswell, Oak island, North Carolina.*—Since the 30th of September last, 1,360 cubic yards of masonry have been constructed, and 13,038 cubic yards of earth removed; the sheet-piling has been

driven around the foundations of two of the caponnières, and a considerable portion of the lead roofing has been laid.

The masonry constructed comprises the greater part of the counter-forts and relieving arches intended to strengthen the scarp walls, the breast-height walls of the covered way of the gorge, and of face No. 4, and the permanent tide-lock.

The effect of a storm in August last has been such as to prove conclusively the necessity of protecting the site of this fort from the sea abrasion, which has been progressing for several years. A project for securing it will be submitted as soon as received from the local engineer.

*Fortifications in Charleston harbor.*—The department having no officer at its disposal for the superintendence of these works, they have been suspended, with the exception of the labor for the preservation of the site of Fort Moultrie, and the greater portion of the appropriation transferred, by order of the President, to other works, viz: to Fort Delaware, \$34,800; to fort on Foster's Bank, \$27,000; to incidental expenses, \$33,200; and to contingencies of fortifications, \$19,000.

The preservation of *Sullivan's island* has been committed to the superintendence of a civil agent, and some progress made therein. The general superintendent urges in his report the necessity of prompt and effectual measures for protecting this site. An inadequate appropriation will tend only to defeat the plan, as the peculiar nature of the case is such as to require that all the parts should progress as fast as practicable, to afford combined resistance against the desolating effect of the waves and currents. With his views I fully coincide, and submit an estimate in accordance therewith.

*Fort Pulaski, Cockspar island, Georgia.*—The operations at this fort, after preparations were completed in October, 1836, consisted principally in laying masonry of the rampart, embanking the parade, preservation of the island on the north and northeast shore by a breakwater and catch-sand, and constructing the permanent dikes of the island; 4,000 cubic yards of masonry have been laid in completing all the embrasures and piers generally of the north and northeast fronts; in completing seven embrasures, and their corresponding piers of casemates on the southeast front; completion, generally, of piers, and much progress in all the embrasures of the south front; and to the completion, generally, of the piers, walls, &c., of the gorge, to the level of the bottom of casemate floors. Considerable progress has been made in the embankments, and in the construction of the breakwater and permanent dikes.

*Repairs of Fort Marion and the sea wall at St. Augustine, Florida.*—Operations have been confined to the repair of the sea wall. There was completed, on the 30th of September, a length of 1,500 feet, with an average height of eight feet, and forty-eight feet, with an average height of four feet, making 61,344 cubic feet of solid masonry. Of this, 24,000 cubic feet were from the public quarries three miles distant; the remainder was from the old wall. Besides the quantity laid, 17,000 cubic feet of stone have been quarried. The stone is a shell formation, and well laid in hydraulic cement.

*Fort Pickens, Pensacola harbor, Florida.*—The small balance of funds applicable to this work has been or will be expended this season on the finishing of the officers' and soldiers' quarters, and some slight repairs.

*Fort on Foster's Bank, Florida.*—The sum estimated for this work has been found sufficient for its completion, as, by the report of the superintending engineer, it was to have been completed in the month of October. Its site is now considered secure from any inroads of the sea, having been exposed in August last to a very severe gale, from which it sustained no injury. Several parts of the work, subject to the pressure of the arches, have been increased in their dimensions, and the terreplein covered with a terrace of masonry nine inches thick.

Twelve rooms have been fitted up in the casemates for officers' quarters, and six large ones for the soldiers. An appropriation of \$33,000 will be asked for to meet the demand against the work, which, to this amount, has been constructed on the individual credit of the engineer.

*Fort Livingston, Grande Terre, Louisiana.*—Operations have remained suspended at this work during the year for the want of an officer to superintend it. A keeper and one man are employed to take care of the public property and make sundry small improvements near the site of the work.

#### CONTINGENCIES OF FORTIFICATIONS.

The balance of former appropriations under this head and a transfer of about \$3,000 from other appropriations, amounting in the whole to about \$12,500, have been applied to making gun traverses and to repairs of fortifications on the Gulf of Mexico.

*Incidental expenses attending repairs of fortifications, and for the purchase of land in their neighborhood.*—There was no appropriation under this head at the last session of Congress, but a transfer of \$32,000 was made, by order of the President, in conformity with the second section of the act of appropriation of July, 1836, from the appropriation for fortifications in Charleston harbor. This transfer, as well as that of the whole appropriation for Fort Monroe, was made in consequence of the want of officers to superintend the expenditure. These amounts, in addition to an unexpended balance of \$19,000, have been expended as follows: for repairs of Fort Mifflin, \$29,000; repairs of Fort McHenry, \$13,000; purchase of land near Fort Delaware, \$4,000; and for purchase of gun traverses for several works, \$1,500.

#### HARBORS AND RIVERS.

*Chicago harbor, Illinois.*—The season had advanced to the 13th of June, when the present superintendent resumed the charge of this work; and since that time the operations have been confined chiefly to building up and finishing the work left unfinished at the close of the last year, and to opening a channel between the piers by dredging.

About 200 cords of stone have been thrown into the last 500 feet of the north pier, which will be levelled, planked, and completed this fall. The south pier, which was only laid in cribs to the surface of the water at the close of the last year, has been levelled and built up throughout its entire length to nearly its requisite height above water; more than 800 cords of stone have been thrown into it. One thousand six hundred and eighty feet in length of this pier will be completed this year.

The only new work commenced this season is 200 feet on the outer end of the south pier, and about the same length on the extension of the north pier in-shore.

The dredging machine has been kept in active operation, and has opened a good channel 80 feet broad along the inner side of the south pier, the least depth of water along which is ten feet; with a northerly wind, vessels have entered drawing 10 feet 10 inches.

In consequence of the remarkable position which the outer bar has assumed, a still further extension of the piers of 200 feet beyond that contemplated last year is rendered necessary. This will carry out the north pier to 14 feet water, a depth which it is supposed cannot for many years be materially lessened by the encroachment of the bars. The sand is constantly accumulating on the north side of the north pier, and will continue to do so till the piers are carried into the deep water of the lake beyond its sensible influence. The extension here proposed will avert the evil for ten or perhaps fifteen years.

*Harbors on the south shore of Lake Erie.*—For the present condition and wants of these harbors, reference is respectfully made to the accompanying reports of the superintendents, marked A and B.

*Genesee river and Oak Orchard creek.*—The state of these harbors is shown in the interesting report of the superintendent appended, marked C, to which I beg leave to refer.

A light is necessary at the extremity of the pier at the mouth of the Genesee, and it is recommended to construct there a permanent light-house of good materials to serve as a beacon for the entrance of the harbor, and to supersede, eventually, the old light-house on the main land, which is now in a state of decay. The plan and estimate for this have been transmitted to the proper officer of the treasury.

*Big Sodus bay and Oswego, Lake Ontario, New York.*—The reports of the superintendents of these two improvements are also appended, marked D and E, as containing interesting detailed information.

*Monument on Steele's ledge, Maine.*—The unexpended balance of the appropriation for this monument was, at the last session of Congress, reappropriated for "placing buoys in the vicinity of the monument."

The funds have been placed in the hands of an agent, but no report has yet been forwarded.

*Breakwater on Stanford's ledge, Portland harbor.*—A contract for 401 yards of the inner extremity of this breakwater was made in September, 1836; about 400 feet of this were laid last fall, and the whole is now nearly completed.

Two other contracts were made in the spring for 172 yards additional. There will probably be completed this season a distance of 1,700 feet, containing 20,000 cubic yards of stone.

On account of the difficulty of measuring the mass under water, the remainder will probably not be done by contract, but the stone will be purchased and put in place by the government.

The agent reports that the portion of the breakwater already constructed has been found efficacious in keeping off the heavy swell that formerly swept over the ledge at high water, and caused much damage to the shipping in the harbor.

*Piers at Kennebunk, Maine.*—The appropriation of July, 1836, for this work, retained until the present season in consequence of the late period at which it became available, has been entirely expended.

The pier-head and a considerable portion of the pier proper are nearly completed.

Three hundred and sixty-five feet remain to be constructed, of which 100 should immediately be built, as the old pier is very weak, and will soon be washed away. An estimate for the amount will be submitted.

*Deepening the channel of the Cocheco branch of the Piscataqua river, leading into Dover harbor, New Hampshire.*—Operations commenced at a ledge of rocks impeding the navigation, which has been blasted for a depth of about four feet, making a channel 36 feet wide for vessels of far greater burden than could before navigate the river.

They have been carried on also at Trickey's shoal and at the narrows, where the remaining rocks have been raised from the bed of the river.

A quantity of sand has also been excavated. There are still several bars and masses of rock to be removed. Ten thousand dollars, in addition to existing balances of appropriation, will probably meet the expense of the completion of this improvement.

*Merrimack river, Massachusetts.*—The breakwater at the mouth of this river is finished, but it will require some slight repairs the next spring. Ample funds for this are now in the hands of the agent.

*Breakwater at Sandy bay, Massachusetts.*—Two hundred feet of this breakwater are finished, and two hundred more, with the exception of the facing on the inside; some progress has been made with the remainder. About 45,000 tons of stone have been deposited, and it is estimated that the same quantity will be required to finish the work. When completed, it will form a harbor accessible at all times of tide, and capable of sheltering more than five hundred sail of vessels.

*Preservation of Rainsford island, Massachusetts.*—A stone wall for the protection of this island has been built, 1,537 feet in length, about seven feet thick, and from seven to twelve feet high, protected in front by loose ballast stone. The appropriation has been expended to within about \$500, now in the hands of the agent.

To complete the protection of the island, a portion of the wall, of 450 feet in length, will require two more courses of stone, with a pavement of flat stones in the rear. An estimate is herewith submitted.

*Duxbury, Massachusetts.*—To preserve the point of land designated by the act of appropriation, brush fences have been laid during the season, but no report of operations has been yet received.

*Plymouth beach, Massachusetts.*—A small remnant of appropriation has been expended this season in repairing the breakwater, and securing and putting in place the drift seaweed, to prevent the drifting of the sand.

The whole extent of Plymouth beach is represented to be now in fine condition; the brush fence is covered with five or six feet of sand, and a growth of beach grass. The wooden foundation sills of a portion of the breakwater having been nearly destroyed by the worms, an estimate for the amount necessary to replace a length of 320 feet, with a substantial stone wall, is herewith submitted.

*Provincetown harbor, Massachusetts.*—About 220 acres of beach have been planted with grass this year, and the estimate submitted is for the same quantity the next season. The grass grows well, and the protection of the beach will be accomplished, with the necessary appropriations, in 1840.

*Hyannis breakwater, Massachusetts.*—The eastern end of the breakwater is finished to a length of about 1,140 feet. There remain now but 200 feet at the western end to complete it, an estimate for which will be submitted.

The first proposed height of the breakwater having been found insufficient for security, an additional course of heavy stones has been laid on the latest constructed portions, and it is contemplated to raise the whole in a similar manner. The eastern extremity has been arranged to receive a beacon-light, in anticipation of an appropriation for that object. The work has already proved to be a great auxiliary to the safety of this very important harbor.

*Breakwater at the mouth of Bass river.*—Of this work, 50 feet in length have been completed this season, 30 feet are in a state of forwardness, and material for 10 feet more is at hand, and will be deposited. The balance of the appropriation will be sufficient for about 18 feet more, making a total length of 108 feet.

The cost of the linear foot of this work is greater than was originally estimated, in consequence of a misapprehension as to the kind of stone to be used, and the increase in its price. Ten thousand dollars can be advantageously expended the next season, and \$30,000, it is now expected, will complete the work.

An idea of the importance of this harbor may be formed from the fact of there being 223 arrivals of vessels from September 10 to October 9, inclusive.

*New Bedford harbor, Massachusetts.*—The removal of the wreck in this harbor has been effected.

*Breakwater at Church's cove, Little Compton, Rhode Island.*—Owing to the difficulty of obtaining a deed of the land and privilege of removing the stones necessary for its prosecution, this work was not commenced as early as was anticipated; and after its commencement, heavy winds and sea, and a want of shelter for the vessels transporting stone, prevented its being carried on as rapidly as might have been expected; but these difficulties are in part obviated by its present advanced state, which already affords some security for vessels and scows employed in its construction. Much more, it is hoped, can be accomplished the next year. By the end of October, as stated in the report of the superintendent, there were to have been completed 100 feet in length, requiring 5,246 tons of stone. To complete this work according to the plan proposed, 22,000 tons of stone, at a cost of \$26,767, will be required. In consequence of the increased price of stone, the present estimate for completion will exceed the original one about \$7,200. Vessels that are now driven by stress of weather up the eastern channel of the Narraganset bay are obliged to run several miles above this place to find safe anchorage; the delay and danger attending this will be obviated by the breakwater, which will afford ample security.

*Thames river, Connecticut.*—In 1836 two piers were constructed on the east side of this river, one of which is 1,500 feet long; the two containing 3,036 cubic yards of stone. During the present season two others have been constructed on the same side, having an aggregate length of 870 feet, and requiring 2,322 cubic yards of stone; also two on the west side, with an aggregate length of 1,100 feet, and requiring 3,444 cubic yards of stone.

Two dredging machines have been employed, and have deepened the channel across the bar called the Haycocks, through a length of 930 feet, and a width of 60 feet.

The superintendent judges, from the effects already produced, that the success of the project for improving the harbor does not admit of a doubt.

*Saybrook harbor, Connecticut.*—The season was so much advanced when the local agent received the necessary plan and instructions for the contemplated improvement at the mouth of Connecticut river as to render it inexpedient, in his judgment, to commence operations this year. It was concluded, therefore, to make the necessary preparations during the winter, to commence at as early a period in the spring as the weather will permit.

*Bridgeport harbor, Connecticut.*—A channel of eight feet in depth has been excavated nearly across the outer bar that formerly closed the entrance to this harbor at low tides to vessels drawing more than five feet of water.

The agent reports the probability that the channel will be kept open by the current, as it is now deeper than when first made.

*Fairweather island, Connecticut.*—Three hundred and sixty feet of the sea wall for the preservation of this island have been finished this season. The ends of it will be exposed to injury from every gale until the whole is completed, which renders an early appropriation desirable. Five hundred feet in length remain to be built.

In order to secure the harbor, the old breakwater should also be repaired. Storms are now washing it away and filling up the harbor.

*Southport harbor, Connecticut.*—The stone wall for the preservation of the dike has been completed, and, in the opinion of the local agent, will fulfil its purpose. A small sum has been expended upon the breakwater, which is represented as being now strong and permanent. A prolongation of this breakwater is recommended as necessary; to effect which, an estimate will be submitted.

*Harbor of Westport, and beach at Cedar Point, Connecticut.*—The stone wall on Cedar Point is in a state of rapid advancement, and will, in all probability, be completed in November, affording complete security to that point, and requiring no further aid from the government.

Owing to unexpected delays, the canal through the "Great Marsh," which it was anticipated might be finished the present season, cannot be completed before the early part of next summer.

A small additional appropriation of \$770 will be required to secure the work now under construction.

*Hudson river, New York.*—The operations of the season for improving the navigation of this river near Albany, the present state of the work, and the projected alterations in the plan, are fully detailed in the report of the superintendent, which is appended, marked F.

*Ice-breaker on Staten island, New York.*—In consequence of a series of failures on the part of the contractors, but little had been accomplished on this work to the date of the report of the superintendent, (October 28, 1837.) A contract made last fall to construct all the stone piers by this spring was not complied with; another contract was made early in June for the same, with a proviso that either party might withdraw after the completion of one pier; of this proviso the contractor availed himself. An engagement, made late in June with another party, failed through some alleged misapprehension, was renewed in August, and failed again in September through the bad faith of the contractor.

Another engagement has been entered into, and it is now probable that all the stone for the piers will be delivered in the course of November, and the whole eleven piers and the remainder of the piling be finished this year.

*New Brunswick harbor, New Jersey.*—For the operations of this year in the improvement of this harbor, I beg leave to refer to the accompanying report of the local engineer, marked G.

*Little Egg Harbor, New Jersey.*—The appropriation for this work has been expended, with the exception of a small balance; and the protection afforded to Tucker's island, which covers the harbor, is, so far, satisfactory. The improvements were conducted upon the general features of the plan reported to the department, with some slight modification, dictated by the experience of the skilful engineer who superintended them. In addition to the brush fence parallel to the shore, he has constructed breakwaters, projecting from high-water mark to low water, 800 feet apart.

The effect of these has been not only to prevent the previous abrasion of the beach, but to cause a deposit of sand between high and low water mark of at least a foot in depth, and a consequent extension into the sea. For any further information, I have the honor to refer to the detailed report of the superintendent already submitted, in answer to a call of the House of Representatives.

*Chester harbor, Pennsylvania.*—The improvement of this harbor was continued last fall by replacing the defective wood-work of the two northern piers and their connecting bridges and mooring posts until the funds were exhausted.

The appropriation of \$2,000 of March last has been applied to taking down and renewing the sustaining

walls of the southern causeway for a distance of 150 feet; to repairing other parts of it; and to filling in all the wharves, and covering them and the causeways with broken stone. This useful harbor is now in as good order as the nature of the case permits.

*Wilmington harbor, Delaware.*—The improvement of this harbor, as mentioned in my last report, it was determined to restrict to blasting and dredging.

In August and September last the steam-dredging apparatus, with its accompanying lighters, cranes, &c., was put in operation, and found to be well adapted to its purpose. Up to the 30th September 5,000 cubic yards of mud had been removed from the bed of the river and deposited over the dikes along its margin. The estimate for continuing this work the next year embraces the residue of the sum called for by the original estimate of Major Bache. After the expenditure of this, the future estimates may be better determined from the ascertained effects of the present system.

*Harbor of Newcastle, Delaware.*—The pier for sheltering vessels from drifting ice, referred to in the last annual report, was sunk before the close of operations in the fall, and, even in its unfinished state, was found useful in protecting much valuable property from the drift ice during the winter.

The funds available for this season not being sufficient to effect the entire contemplated improvement, the superintendent determined to adopt such course as would secure to the harbor the greatest immediate advantage.

Instead, therefore, of finishing the first pier, he concluded to deposit the stone upon it in such a way as to secure uniformity of settling, and, leaving it in this condition, to apply the residue of the funds to putting a second pier in the same state and to removing some obstructions that prevented the entrance of the current into the harbor. The result of this arrangement has been that a safe harbor now exists for as many vessels as are likely to seek shelter here, though in an unfinished state.

*Delaware breakwater, Delaware bay.*—The officer in charge of this work has not yet been able to furnish a minute account of the present condition of this work, or of the artificial harbor formed by it.

The following facts are, however, extracted from his short memoir, showing generally what has been done and what is yet required:

“The quantity of stone received at the breakwater during the year was 54,766 $\frac{3}{4}$  tons, the whole of which was from the Trappean quarries, in Delaware, and such as I have judged the best for the work. It has been deposited on the breakwater and ice-breaker, raising each of these works, on their entire length, some feet above high water, thereby increasing the capacity of the harbor to the extent to which it is susceptible until the works are prolonged. A portion of each of these works has been raised to the required height. I can discover no change or alteration in the shoals or bottom of the harbor, or about it, during the past year, in any way calculated to affect it as a safe harbor, or differing in the least from former surveys.

“The capacity of the harbor does not keep pace with the necessities and wants of the coasting and foreign trade. At times vessels are so numerous in the harbor as to run foul of and injure each other considerably during the continuance of gales; and some have this season gone ashore for want of shelter under the lee of the works, being compelled to anchor in the seaway near the ends of the work.

“The continued utility of the work is exhibited by the annexed table, giving the number of days' security afforded to vessels annually, from the first season of shelter being formed to September 30, 1837:

	Ships.	Brigs.	Schooners.	Pilot-boats.	Sloops.	Total.
From September 30, 1833, to September 30, 1834.	48	332	735	363	351	1,829
The year ending September 30, 1835.....	111	496	1,176	563	427	2,773
Do.....do.....1836.....	306	1,028	2,923	759	604	5,620
Do.....do.....1837.....	226	576	2,933	754	610	5,099
	691	2,432	7,767	2,439	1,992	15,321

“The wharf or pier that was required to be built from the beach within this harbor has been finished, and some ice-breakers, to guard it from drifting ice, partially finished. No use has been made of this wharf up to the end of October, except by one pilot-boat making fast to it for a short period. A plan of its construction is forwarded.”

*Mooring buoys in the harbor of Delaware breakwater.*—An appropriation of \$2,000 was made at the last session of Congress for placing mooring buoys in the harbor formed by the Delaware breakwater. Three wooden buoys, covered with zinc, of sufficient size and buoyancy to support two men, have been placed in the safest parts of the harbor. They are secured by an inch-and-a-half chain cable to mushroom anchors, weighing each 5,000 pounds. The weight is calculated for the largest class of merchant vessels, and will serve even for a small frigate. The buoys have been made of different shapes, to test their relative advantages in the tide-way and during the period of drifting ice. Their greatest usefulness will be during the winter, but they have already been the means of saving from inevitable destruction one vessel that broke from her moorings.

*Harbor of Baltimore, Maryland.*—The dredging of this harbor has been prosecuted with energy, and the appropriation exhausted. This operation must necessarily be continuous, and, for its furtherance the next year, the sum of \$25,000 will be asked.

*Improvement of the debouches of the Dismal Swamp canal.*—At the southern extremity a dredging machine has been employed since August, at the junction of Joyce's creek and the Pasquotank. Laborers are also employed cutting off some of the most prominent points of land on the creek, with a view of straightening the channel, relieving the current, and making room for vessels to pass in narrow places. This portion of the work will require another year to complete it, as a large force cannot be employed to advantage. When done, the navigation will be very good, and it is supposed will remain so.

At the northern extremity of the canal a channel of ten feet in depth was obtained in Deep creek by dredging; but the bottom, which is of sand, has again filled up to within a foot of its former height, proving that no permanent improvement can be effected in this way.

This can probably only be accomplished by a lock and dam, as recommended in 1829, at a cost of about \$27,000.

The Dismal Swamp canal is an important link in the line of inland water communication, as it connects the sounds of the Carolinas with the Chesapeake bay.

*Ocracoke inlet, North Carolina.*—The jettee recommended in 1835 was commenced in March last, and nearly completed, when a gale in August injured it to such a degree that it was thought inexpedient to proceed with the work.

The depth of water on the shoal to the northwest of the jettee has increased about 18 inches; and it is probable that the jettee in its present state may have very beneficial effects.

The local engineer remarks that the changes which are continually taking place in the navigation of this inlet may, at some future time, present an opportunity of permanently improving it, at a comparatively small expense; for the present, however, he entertains the belief that no immediate benefit can be looked for, and he accordingly recommends a cessation of the work.

*Pamlico river, North Carolina.*—Towards the close of November last the dredging was progressing satisfactorily, and before the end of December there would have been a channel fifty yards wide and eight feet deep; but on the 30th of November the operations were interrupted by the burning of the boat, supposed, after a careful investigation, to be the work of an incendiary. This boat was transferred from the Ocracoke inlet improvement.

Should it be determined to prosecute the work in Pamlico river, the appropriation must cover the cost of another boat, as well as provide for the labor of dredging; the estimate will be made with this view.

*New river and Core sound, North Carolina.*—An act was passed at the last session of Congress, appropriating \$20,000 "for the improvement of the navigation of New river and Core sound." The necessary preliminary survey of New river has lately been finished, and it is judged by the officer in charge expedient to confine his operations for its improvement simply to dredging. A beating channel will be necessary, and it is proposed to excavate one 200 yards wide, to a depth of seven feet at high water; for this 400,000 cubic yards must be removed, at an estimated cost of \$62,500. It is supposed that this improvement will be comparatively permanent, and the amelioration of the navigation relieve the inhabitants of Onslow county alone of an annual transportation tax of \$8,000. A dredging boat has been constructed, for the operation of which the ensuing year the appropriation already made will suffice.

No survey of the Core sound was made by the engineer to whom the charge of its improvement will be intrusted, as one was already in progress by a brigade of topographical engineers. A copy of the map of this survey will be supplied him as early as possible, with instructions to report a plan of improvement based thereon.

*Savannah river, Georgia.*—There having been no action in the legislature of South Carolina relative to the contemplated obstruction between Hutchinson's and Argyle's islands, the operations on this river have this season been confined to dredging.

Eleven thousand two hundred and thirty-two cubic yards of mud and sand have been removed, widening the channel, and giving it an average increased depth of about one foot. A new steamer, to replace the "Essayons," taken away for service in Florida, is now under contract, and will probably be finished by the close of the present month.

*Brunswick harbor, Georgia.*—No officer being disposable, nothing has this year been done for the improvement of this harbor.

*Improvement of the inland navigation between St. Mary's and St. John's, Florida.*—During the last season the dredge-boat has been employed in cutting a channel through the oyster banks between the Sisters, near the St. John's river. The channel is now completed to a length of 680 feet, and is 70 feet broad and three feet deep at ordinary low water; 2,990 cubic yards have been excavated. To open the navigation throughout there are yet to be dredged at the Amelia dividings about 500 yards in length, and at the Talbot dividings 1,400 yards. As most of this excavation is from a bottom bare at low water, and can only be carried on when the dredge floats, the operation is necessarily very slow.

From these considerations of the extent of the work, slowness of operations, and great and increasing importance of this pass, the construction of an additional dredge is recommended, the cost of which is included in the estimate of next year.

*Apalachicola, Florida.*—The application of the appropriation of \$10,000 for removing a shoal called the "Bulkhead," in this harbor, has been intrusted to the intendant and council of the city of Apalachicola; and it is believed that arrangements will be made by which the intended improvement will be speedily commenced. An estimate for its prosecution will be submitted, should it be deemed advisable, after information is obtained of the practicability of removing the existing obstructions.

*Mobile harbor, Alabama.*—A contract was entered into on October 9, 1836, for dredging the Choctaw Pass; but, in consequence of the delay of the contractor to commence operations, it was annulled in June, 1837, and a contract made with another individual, the execution of which will probably commence by the first of December next, and be prosecuted without further delay.

Preparations are also now making for the vigorous prosecution of the dredging of the Dog River bar. *Pascagoula river, Mississippi.*—The attempt to improve the channel of this river by dredging having been attended with no beneficial results, some portions filling up nearly as fast as excavated, operations have been suspended, and the balance of funds passed to the credit of the Treasurer of the United States.

*Red river, Louisiana.*—The annexed report of the agent charged with the removal of the great raft, marked H, shows that there now remain but 440 yards of this obstruction. An early appropriation, sufficient to cut away this, is very desirable, on the score both of economy and of immediate great public benefit. The report of the officer of engineers appointed to inspect the operations on this river is also appended, marked H No. 1.

*Ohio and Mississippi rivers below the falls of the Ohio, and the Arkansas river.*—The reports of the superintendent of these improvements are also appended, marked I and K, together with the inspection report, marked I No. 2, with the estimate for further prosecution.

*Ohio river above the falls.*—The report of the officer charged with the improvement of this portion of the Ohio is appended, marked L, giving a detailed account of the operations during the year and of the further improvements proposed.

*Cumberland river.*—For an account of the work performed during the past season for the improvement of this river, I would respectfully refer to the reports of the local agent, marked M and N.

*Pier in the Mississippi river, near St. Louis.*—An officer of engineers was intrusted with the execution of this work and of several others in August last. It has not yet been commenced, as his time to the present date has been entirely occupied with the necessary preliminary surveys. A matured plan is not

yet submitted, for this reason; but the amount now available being, in his judgment, sufficient for the operations of the next year, no appropriation will be asked for.

*Mississippi river above the mouth of the Ohio, and the Missouri river.*—The officer charged with the last-named improvement has also the superintendence of this, and, for the reason there mentioned, has been enabled only to make minute surveys of several of the most important points and preparations for a vigorous prosecution of the work early in the spring.

Examinations have been made of the Rock river and Des Moines rapids of the Mississippi, which will be among the first objects of attention.

Time has not allowed an examination of the Missouri.

*Deepening the mouths of the Mississippi.*—Three several plans for accomplishing this object were submitted by the officer to whom the execution is to be intrusted: 1st, closing all but one of the passes at the point where they leave the main trunk of the river; 2d, cutting a ship canal from the river; 3d, deepening, by steam dredging machines, one or more passes.

The first two projects being deemed costly, uncertain in their issue, and requiring a greater period of time than the other, it has been determined to adopt the latter, so far as to test the advantages that may be derived, before determining on any other involving hazard and great expenses. The operations have therefore been limited to the construction of a steam dredge, the boat to be of 282 tons burden, with a high-pressure engine, which will propel the boat and work the machinery.

Four vessels are also to be built, to receive the excavation, and are expected to be ready by the 15th of December.

In consequence, however, of the great interest felt in this work by the city of New Orleans, and in order to allay any apprehensions that the proper attention had not been bestowed upon it, the department, willing to subject all the different plans that have been proposed to the severest scrutiny, has now laid the whole matter, with all the information in its possession, before a board of engineers.

This board will issue minute instructions to the local superintendent concerning an examination to be made by him of the whole delta of the Mississippi, upon the report of which examination they are to base a project for this highly important improvement.

*Survey of the Sabine river.*—In fulfilment of your instructions of April last directions were given to Captain H. M. Shreve to examine the upper part of the Sabine, whilst Captain Chase, of the engineers, should cause a survey to be made of the lower part. The duties of the first-named gentleman not allowing him the necessary time, the examination was made by an officer of the line of the army and submitted to the major general. A survey of the mouth, ordered by Captain Chase, was made in April last.

From his report it appears that the debouche of the Sabine is into a lake about twelve miles long and twenty broad, which is connected by a pass with the Gulf.

The obstructions to the navigation of this river are, 1st, bars at the head and mouth of the pass, and shoals in the pass; 2d, the shoalness of the water of the lake; 3d, bars at the debouche of the river into the lake; 4th, two rafts about one hundred miles up the river, very loose, composed merely of logs on the surface of the water.

The result of the survey shows, 1st, that vessels of seven feet draught can ascend the pass to its head; 2d, vessels of five feet draught can cross into the lake and approach to within a mile of the mouth of the river; and 3d, vessels of four feet draught can cross the bar at the debouche of the river into the lake. After passing this bar, eighteen feet of water can be carried a great distance up the river. The soundings, however, about the mouth of this river are subject to very great changes from the winds, tides, freshets, &c. Every heavy gale alters, in some degree, the direction and depth of the channel.

Ten years ago *twelve* feet water could be brought into the pass, and, at a later period, only *five*, where there are now seven. The river could, no doubt, be advantageously improved.

#### LIGHT-HOUSES AND BEACON-LIGHTS.

*Lakes Erie and Ontario.*—For the condition of the light-houses and beacons along the south shores of Lakes Erie and Ontario, the construction of which has been committed to this department, I would respectfully refer to the several reports of the superintendents of the public works at those places, which are appended hereto, marked A, D, and E.

*Pier, dike, and light-house at Goat island.*—The pier on which the light-house is to rest was commenced early in the spring. Its walls, ten and eight feet thick, are built up to low water of cobble work, and the interior filled with boulder stones. The superstructure of the walls is of regular masonry, faced with granite laid in hydraulic mortar, and is nearly completed. The foundation of the light-house is also in a state of forwardness.

Operations for the season were to close with the finishing of the pier.

It is proposed by the local engineer to collect, this winter, sufficient materials to complete the light-house early next summer, and to apply the balance of the amount appropriated to the construction of the dike.

*Light-house on Flynn's Knoll, near Sandy Hook.*—The plan for this important work is not yet thoroughly matured. The project has been laid before a board of engineers for consideration.

The officer charged with the construction will make every preparation during the winter to commence it as early in the spring as the weather will permit.

#### ROADS.

*Roads from Detroit to Fort Gratiot, and to the mouth of Grand river.*—No appropriation was made for either of these roads at the last session of Congress. Some slight repairs have been made on the last named with the small unexpended balance. The arrearages for labor on the Fort Gratiot road, referred to in my last report, are still due, as the balance of a former appropriation carried to the surplus fund has not yet been reappropriated, as there recommended. An estimate to liquidate the same will be submitted.

*Roads from Detroit to Chicago; from Sheldon's to the mouth of the river St. Joseph's; from Clinton to Grand River rapids; from Niles's to the mouth of the St. Joseph's; and from Detroit to Saginaw.*—These roads have been inspected by Lieutenant Colonel Pierce, of the first artillery; and several reports, marked O, are herewith submitted, showing their present condition and the funds necessary for their repair and completion.

*Road from La Plaisance bay to the Detroit and Chicago road.*—For particular information relating to this road I would respectfully refer to the report, marked A, of the superintendent. It appears from this that the road is now almost impassable in places. An estimate for the amount to complete it and to meet the existing liabilities is submitted.

*Road from Memphis to the St. Francis river.*—The report of the superintendent of this road is also appended, marked P.

*Cumberland road.*—For your information respecting this great national avenue, the reports of the several superintendents are hereto appended, marked Q, R, and S.

*Military Academy.*—The present condition of this institution is shown in the annual report of the board of visitors herewith, marked T. The wants of the institution are there fully set forth, and to them I would respectfully urge your attention.

*Sites for fortifications on Lake Champlain, and for a fort on the Gulf coast of Mississippi.*—No reports have been yet received of the surveys for determining either of these sites; as soon as received, the project of defence will be put in train of preparation, and submitted as soon as matured.

*Defence of the western frontier.*—For the project proposed for this important object, I have the honor to refer you to my report of the 31st October last, furnished in obedience to a call of the House of Representatives.

*Waters of Lake Erie.*—The minute examination of the shores of Lake Erie, necessary to ascertain if the works at Black Rock have raised the level of its waters, and called for by a resolution of the Senate of March 2, 1837, has not been commenced in consequence of a want of funds. An estimate for the necessary amount will be submitted.

OFFICE OF THE CHIEF ENGINEER.

I have the honor again earnestly to call the attention of the Secretary to the insufficiency of numbers in the corps of engineers, for a proper performance of the duties imposed upon them.

In consequence of a want of officers, many important works referred to in this report have been intrusted entirely to the care of civil agents, and others to their immediate charge, under a general superintendence of an officer. This latter course, frequently rendered necessary by the number of works under this department, and the impossibility of procuring capable civil agents, imposes upon each officer the most constant and unremitted labor, while at the same time it is impossible that each work can receive from him more than an occasional inspection. To say nothing of the advantage of securing to each of our important national undertakings the personal superintendence of a competent engineer, and the faithful and economical application of the public funds, the increase of the corps of engineers would be attended with a direct economy considered solely with reference to their pay as public agents. I have therefore the honor to reiterate my recommendations of several past years, that the corps of engineers be increased to double its present number, as that is the least force with which operations can properly be carried on.

All of which is respectfully submitted.

C. GRATIOT, *Chief Engineer.*

Hon. J. R. POINSETT, *Secretary of War.*

No. 1.

*Statement exhibiting the fiscal concerns of the Engineer department for the year ending September, 30, 1837, in which the funds that had accrued within that period, and the manner of accruing, are stated and accounted for by showing their application.*

REMARK.—The classification in this table, distinguishing three periods, exhibits the works enumerated in the order of their efficiency to meet the earliest possible emergency.

## REPORTS OF OPERATIONS BY THE ENGINEER CORPS.

## A.

*Annual report, 1837.—Harbors on Lake Erie.*

OFFICE OF SUPERINTENDENT OF PUBLIC WORKS, LAKE ERIE,  
*Monroe, Michigan, September 30, 1837.*

SIR: The general supervision of the works at Black Rock, Buffalo, and Dunkirk, New York, and Erie Pennsylvania, was, in pursuance of the arrangement of the Engineer department, surrendered to Thompson S. Brown, esq., on the 1st of May last. I shall therefore confine this report to the subject of the works on the western portion of Lake Erie, to wit: at the mouth of the river Raisin, Michigan, and Huron, Black river, Cleveland, Grand river, Cunningham creek, Ashtabula, and Conneaut, Ohio.

Until the commencement of the system of improvement of the lake harbors by the government of the United States, the immense extent of country occupying the south shore of Lake Erie, or dependent on it for commercial facilities, was a wilderness. The navigation of the lake was attended with the utmost delay, difficulty, and danger. The mouths of the several streams emptying themselves into the lake were uniformly obstructed by sand and vegetable matter, creating stagnant bodies of water which overflowed the lowlands for miles, generating an atmosphere which rendered the country nearly uninhabitable from disease; at the same time that the streams themselves were entirely inaccessible as a refuge for vessels, and in all respects an evil rather than a benefit to the surrounding country. It is almost unnecessary to say that the judicious improvements made under the acts of Congress have entirely changed all this; and many millions of acres of land of the most fertile description, embracing the western portion of the State of New York, the northern part of Pennsylvania, Ohio, Indiana, and Illinois, and the whole of Michigan, owe their present settlement and improvement, in a very great degree, to this cause. These improvements

have also been the direct cause of the unexampled sales of the public lands in the northwestern States and Territories, lying along or dependent on the great lakes for their principal means of access and commerce. The mouths of the Huron, Black river, Cuyahoga, Grand river, Ashtabula, and Conneaut (across each of which the beach of the lake was continuous, and the only drain for which was by filtration through the sand) were opened, and kept open by piers and other improvements; beacon light-houses have been erected, and these streams, as well as other works at the east end of the lake, now afford secure harbors, accessible at all times to vessels navigating the lake. The improvement at the mouth of the Raisin, the only one on Lake Erie within the State of Michigan, is of similar character, though from its greater difficulties it has been rather more expensive.

These works, originally but experiments, though now found so admirably to answer the purpose for which they were designed, were built of perishable materials; it is generally to render them permanent that the appropriations are recommended on the estimates for the coming year. The nature of the permanent improvement is to remove the wood-work of the piers, already much decayed, to the depth of two feet below low-water mark, and erect on the old foundation a superstructure of stone. Unless this course is adopted without delay, the action of time and the elements will speedily render useless all that has been found of such vast benefit to the commerce of the west. This has been done at Buffalo heretofore, and has, since my last report, been, under the appropriation of last year, fairly commenced at Cleveland. By using the old work as a foundation, permanent works may be erected, at comparatively small cost, sufficient to defy the action of the elements for ages; but I beg leave to urge again that *the commencement should not be delayed for a moment.*

Although the water of the lake continues at its unusually high stage, yet, in consequence of having received the appropriations for the works early in the season, it has been found practicable to expend the several sums with very great advantage and economy. About one-third more work has been done for the same amount of cost this year than was done during the last year at every work on the lake. The months of June and July, and perhaps August, is the season of the most calm weather on the lake, and work can be prosecuted with greater regard to economy, as well as despatch, in those months than at any other season. With this view early appropriations are respectfully and earnestly recommended.

With the foregoing general remarks, I beg leave to offer the report of the condition and progress of each work.

1. *River Raisin harbor, Michigan.*—This work has been diligently prosecuted on the original plan heretofore submitted to the department. The piling along the sides of the canal is complete in its whole length, and the caps framed and placed thereon. The sheet-piling is also entirely complete, except in the distance of 198 feet, which space will also be finished within this month. About 25,000 yards of earth in the canal have been excavated and removed; a portion of this it was found advantageous to *blast* in the solid and indurated clay. The canal will be completed this season, except about 800 feet of its length, making complete this season 3,387 feet. To effect this, the steam dredging machine is relied on to remove the earth remaining in the portion of the work inundated in 1836—about 16,000 cubic yards. The piers have been carried out to the depth of ten feet of water in the lake. The pier on the south side of the entrance is 597 feet in length, and that on the north is 515 feet long. They are decidedly the best constructed piers which I have seen on Lake Erie, made agreeably to the plan submitted by me heretofore to the department. The stone has been principally quarried and transported to the work by the laborers. It is deemed necessary to construct 200 feet of additional pier-work on each side, which will attain a depth of 12 feet of water. An estimate for a beacon light-house, to be placed on the south pier-head, is submitted herewith. The machinery for this work, which has (much of it) been completed since my last report, is excellent.

Estimating the condition in which the expenditure of the entire appropriation for the present year will leave the work, I submit herewith an estimate for its completion, marked A No. 1; also estimate for a beacon. A drawing of the work, exhibiting its present condition, is also submitted herewith.\*

In anticipation of the immediate completion of this harbor, the State of Michigan has passed a law for the construction (by the State) of a railroad from this harbor to New Buffalo, on Lake Michigan, and the road is already commenced. In addition to this, this point appears to be the centre of the commerce of an extended and densely populated country. Railroads are about to be constructed, under charters already granted by this State—one from this place to the navigable waters of the Grand river, a second from this to Ypsilanti, a third to Ann Arbor, a fourth to Detroit, a fifth to the Ohio line, and a sixth to La Plaisance bay. This is furthermore the radiating point for no less than eight ordinary roads, penetrating a country perhaps not excelled in the world for fertility and excellence of soil. The rapidly increasing population is the strongest proof of this. Monroe city has trebled its population within three years; it contains now upwards of three thousand inhabitants.

2. *Huron harbor, Ohio.*—Operations were commenced this season in the month of May, and continued during that month, June, and July, with vigor. Two hundred and ninety feet of the pier-work, which was greatly decayed, (200 on the west and 90 feet on the east pier,) have been taken up to below the surface of the water and rebuilt entirely with new timber, filled anew with stone, and principally planked over; the residue will be planked this season. Sixty feet more of the east pier is also taken up, being entirely decayed, and is in process of repair. It is believed that it will be completed this month, as stone and timber sufficient are on hand. In addition to these labors, stone in large quantities has been purchased and placed on the outside of the west pier, as the commencement of the construction of a permanent work; and to a continuation of this the coming year, after driving a row of contiguous piles at twenty feet outside of the work, to render the inclined plane firm and immovable, the attention of the department, it is respectfully recommended, should be directed; and for this purpose, as well as for the removal of a small bar, I respectfully submit the estimate marked A No. 2.

Accompanying is a drawing exhibiting the present condition of the work.\*

3. *Black River harbor, Ohio.*—The sum appropriated at the last session of Congress (\$6,410) for this work has nearly been expended on the objects of the estimate for 1837, and will probably all be expended before the close of the season. The requisite repairs have been made in both the piers, and the portions of the work filled where the stone had been carried away by the storms of the last year, particularly in the eastern pier. About 306 cords of stone have been purchased and deposited along the outside of the piers, principally at the points indicated in the drawing. The object of this is twofold: to protect the present work from the violence of the northeast storms, which have heretofore injured it; and, secondly, laying the

\*The drawings and maps referred to in this document are omitted to be printed, under the order of the House of Representatives of September 11, 1837.

foundation of additional width for the permanent work. Both these objects are attained. The dredging has been carried on to as great an extent as the high waters of the lake will allow; though the same cause which *prevents* dredging, (to wit, the very high water,) also renders it at *present* nearly unnecessary.

To continue the erection of a permanent harbor, by widening the foundation of the old work, and depositing stone betwixt the piers and a row of contiguous piles to be driven, estimate A No. 3 is herewith submitted. An item is also inserted for the removal of the remains of the gravel-bar, by means of the newly-constructed steam dredging machine, a very necessary improvement. I also forward a drawing by the local agent, designed to exhibit the present condition of the work.

4. *Beacon light-house, Black river.*—This work was not finished during the fall of 1836, as was confidently anticipated; but, as the department has been already advised, no censure should fall on any person for the delay. The season was unusually stormy in the months of October and November. After the work was entirely framed, a constant watch was kept for such weather as would permit the sinking of the foundation; and the first favorable moment was seized, and as many hands employed in sinking as could work to advantage. The labor was continued until midnight, when a storm arose, which scattered our materials in all directions, and completely destroyed the result of our labors. The materials were again collected, and a new attempt made, with better success, so that our foundation was sunk without further accident. The light-house was finished early in this season, and is one of *the best* structures of the kind on the lake. It is placed on the west pier-head, framed and sunk expressly for the purpose, and secured very strongly by stone and piles; to the latter of which the timbers of the light-house are thoroughly bolted and secured. The cost, after placing to the account of the pier what might very properly be charged to it, has not exceeded the appropriation.

5. *Cleveland harbor, Ohio.*—The labors on this work have been directed to the purpose for which the appropriation on the estimate for 1837 was made, to wit: constructing a permanent stone work on the foundation of the wooden piers forming the mouth of this harbor. The materials procured and on hand last fall have been used, as well as a large amount purchased this season. From the head of the eastern pier entirely to the shore stone has been deposited on the outside; the base equalling twice the altitude; and thus, the surface forming an inclined plane, extending from the bottom to above the surface of the water. The wooden superstructure commencing at the inner end of this pier has been removed to the depth of two feet below the surface of the water, and replaced by the permanent work; large rectangular blocks of stone, the faces of which are of uniform thickness in each course, strongly dowelled together, cramped where it is necessary, and the whole laid in hydraulic cement. The work is thoroughly grouted, and a very excellent coping surmounts the whole. This is nearly finished 180 feet in length, and that distance will be entirely finished this fall. On the western side a row of contiguous piles has been driven, at the distance of 30 feet from the outside of the pier, commencing at the pier-head and extending towards the shore 350 feet. In prosecuting this work it has been necessary to avail ourselves of the favorable weather, as it is impossible to make use of the pile machine in bad weather. The space between this row of piles and the pier is also entirely filled with stone, the surface of which forms an inclination, from two feet below the surface of the water, at the piles, to the surface of the pier. This, with some repairs of the decayed wood-work of the old piers, so as to render them serviceable until they can be permanently rebuilt, enumerates the labor on this work during the season. The finished portion is well, serviceably, and durably done, and not a doubt exists that it will answer the purpose for ages without material repair or other expense.

Cleveland is a point of great importance, not only to the State of Ohio, but in the commerce of the whole west and northwest. Its position, as well as the improvements of the State of Ohio, and of private companies, all tending to this point, render it the thoroughfare for an immense amount of commerce, as well as the depot for very large quantities of produce destined for eastern markets, and of merchandise to supply the western States. The great canal through the State of Ohio, from the Ohio river, enters Lake Erie at this place; another canal is nearly completed by the States of Pennsylvania and Ohio, connecting Cleveland directly with Philadelphia; railroads, also in progress, will speedily connect Cleveland with Baltimore, with Pittsburg, with Buffalo, and Detroit. Another railroad, from Cleveland to Euclid, Ohio, is now being constructed. This last work, it is believed, will materially aid the work at Cleveland harbor, by furnishing excellent stone at reduced prices. Turnpike roads along the lake, and others extending interior in every direction, centre here.

Estimate marked A. No. 4 is submitted herewith, and an appropriation of the whole amount respectfully recommended.

6. *Grand River harbor, Ohio.*—The operations on this work have been directed to the following objects: 1st, rebuilding and repairing the damages sustained in the storms of previous years; 2d, securing, so far as possible, the work against similar injuries from the same cause; and 3d, commencing preparations for the *permanent* work on the foundation of the present. It was found necessary to remove the damaged and useless cribs on the end of the west pier, to the depth of from six to nine feet under the water, they being broomed or torn to pieces to that depth, (five in number,) in a distance of 150 feet, and so shattered that no good foundation could be found on which to rest the new work. The stone had (as has been heretofore reported) been thrown by the action of the lake out of the work and over the pier, to the outside, where (it being useful at present, as well as precisely in position for the permanent work) it now remains. The timber was removed until a fair surface was found, the cribs framed and sunk thereon, and firmly secured to the old work by strong iron bolts, passing through each timber of the new and three or four feet into the old work. These cribs were then loaded with stone, and thoroughly secured with piles, caps, and planks. The storms this fall have been violent, but the work remains uninjured. In several portions (as marked on the sketch herewith) of the old work, repairs had become imperiously necessary; at one point, on the east pier, marked on the sketch *c d*, one hundred and twenty feet of decayed and shattered wood-work was removed to below the surface of the water, and rebuilt with new materials, and again filled with stone and secured; at another point on the west pier the old work has been removed in the whole distance of 300 feet, of the upper course of timber, ties, sleepers, and plank, and replaced by new work, well placed and secured. At several other points the necessary repairs have been made. Some very serviceable machinery has been constructed during the season, amongst which is an excellent crane-scow.

It is found, on examination this season, that portions of the piers (also indicated on the sketch) have been undermined on the inner (or river) side and assumed an inclination inwards, displacing the piles, &c.; stone has been thrown on brush placed at these points, and is found, in a great degree, to arrest the

progress of this injury. A further deposit of stone and brush is absolutely necessary the coming season; this, while securing the present work, is a necessary step in prosecuting the permanent work. For completing these repairs, now absolutely necessary, and for continuing the permanent work, I have the honor herewith to submit estimate A No. 5, and to recommend the appropriation thereon. A drawing is also enclosed by the local superintendent of this work.

Grand river, as a place of refuge for vessels on Lake Erie, appears to meet the preference of the navigators of the lake. Its central situation, great width of entrance, and its depth, all tend to render it a very desirable harbor. It is the natural port to which the commerce of a very fine district of country irresistibly tends. Being the point on Lake Erie as near the Ohio river as any other, with the advantages above mentioned, as might be anticipated, its commerce and its importance rapidly increase. A railroad from the Ohio river (the Fairport and Wellsville) terminates at this point; it is in process of construction, and three miles nearest this harbor completed.

7. *Harbor at Cunningham creek, Ohio.*—This work differs materially from all the foregoing in its character. Although being formed at the mouth of a stream, yet that stream is so inconsiderable that not the slightest benefit is derived from its action in forming or continuing a harbor. The shore of the lake, however, is more declivitous at this point than at any other within my knowledge. The water, as is shown by the accompanying map of a survey, attains depth sufficient for any vessel on the lake at about 150 feet from the shore. In forming this harbor, after creating a shelter for vessels, the object has been not, as in other works, to interrupt the currents of the lake and arrest the sand suspended therein, but to erect a structure which should be a protection against the winds, and at the same time allow the currents of the lake produced by those winds to pass uninterruptedly, and thus maintain the original depth of water without depositing the sand against the piers. Two piers running into the lake, the outer ends approaching each other, with a breakwater (solid) protecting their front, and running nearly parallel with the shore, were designed; the piers running from the shore, composed of separate cribs or blocks of timber loaded with stone, and secured at distances from each other about equalling their length, and connected with each other by bridges, thus allowing, as before stated, the water to flow uninterruptedly betwixt these blocks or piers.

This season the eastern pier has been commenced at the shore, and at a distance from the western pier of 608 feet, and has been carried out (so far as to sink and secure the separate blocks or piers) to the length of 590 feet, leaving a vacancy necessary to be filled by one more crib. Each block or crib is 32 feet in length, built of strong timbers, and secured by posts, iron bolts, and three-inch tree-nails, and loaded with stone. The bottom being rock, and, of course, it being impossible to secure by piles, sills of timber 18 inches square and 40 feet long are sunk under the piers, with posts on the outside of the cribs strongly braced to the sills and connected over the cribs by caps. The appropriation of last Congress was not sufficient to allow of the completion of this portion of the work, or of the commencement of the breakwater. The connecting bridge work remains to be constructed the coming year. Some repairs have been found necessary on the western pier, and made accordingly; these consist in replacing decayed planking and some slight replacing of the timber-work.

To finish the east pier and construct the breakwater, without which the work already done is nearly useless, I submit estimate marked A No. 6. A sketch exhibiting the present condition of the work is also herewith forwarded by the local agent, Colonel R. Harper. The appropriation, if made, should be made without delay, and it is believed the work may be completed the coming season. Of the original necessity for this work I was not the judge, but, as the department is aware, found it commenced already when I assumed my present duties. Being fairly begun, I respectfully recommend its speedy completion. Some important iron-works are situated in the neighborhood of this harbor, which is the point of embarkation and shipment of persons and manufactures connected with those works. The region abounds with iron-ore of an excellent quality, and the district is a highly cultivated agricultural one. The great Ohio railroad (along the whole border of Lake Erie) passes within a few yards of this harbor.

8. *Beacon-light at Cunningham creek.*—Some repairs have been made on the light-house from the balance of the appropriation for that work remaining unexpended. These consist principally in strengthening the foundation of the work, in painting the building, &c., and in repairing the roof and sides, so as to render them impervious to the water.

9. *Ashtabula harbor, Ohio.*—The operations on this work have been carried on very satisfactorily during this season. The addition to the west pier, commenced last fall, has been completed this season in the best possible manner for a wooden structure of the kind. The old wood-work of both piers has been carefully repaired at several points and filled anew. Heretofore much injury has been done to this harbor by immense quantities of sand, which, driving along the coast from the west until arrested by the pier-work, was then thrown up by the action of the waves, became dry, and was then borne by the winds over into the channel. This has been effectually arrested by ranges of brush placed like *abattis* at from 200 to 500 yards to the west of the work. But the principal and most important labor has been the continuation of the excavation into the rock bottom of this harbor. In place of the comparatively slow and inefficient process of *chiselling* the rock, blasting has been resorted to with the happiest results. Frequently at a single blast as much of the rock has been torn up and broken to pieces, so as to be removed by the dredge, as was loosened by the chisel in several days. The drawing herewith shows the depth of the channel and the amount excavated this season. To complete the excavation, (rock,) which will be easily done the coming year, as well as to commence the erection of the permanent piers, estimate marked A No. 7 is submitted herewith.

Ashtabula is a harbor of considerable consequence, and the port of a populous and important district of Ohio. The great Ohio railroad passes through the village of Ashtabula on its route from the Pennsylvania to the Michigan line.

A railroad from the interior also terminates at this point, about three miles of which is in good progress; and it is the converging point of a number of turnpike roads.

10. *Ashtabula beacon.*—This edifice has been entirely and well completed since my last report, of 1836. It is furnished with colored lights, (red,) and is inferior to no other on the lake.

11. *Conneaut harbor, Ohio.*—The excavation of a basin by widening Conneaut creek sufficiently to allow vessels to turn or *wind* has been carried on through the season; at first by *dry* excavation, by means of coffer-dams, and subsequently by dredging. About 15,000 cubic yards have been removed, and about 2,000 more will be removed during the 4th quarter of this year. This will be sufficient to enable vessels to *wind*, the original object of this excavation. But it would seem to be desirable that more room should be made to accommodate the number of vessels at times seeking this harbor, and I accordingly offer

the estimate of the superintendent, Judge Dart, which I have carefully examined and compared with the prices of labor and materials at that period; but of the necessity of continuing this excavation I respectfully beg the department to be the judge. That portion of the estimate for repairs I deem very important, and beg leave to recommend an appropriation accordingly. The outer crib on the western pier is undermined, the sand washed away, and the crib itself has slid or settled so as to leave a space of ten feet between it and the remainder of the pier. This will be entirely destroyed, and another and a larger pier-head is absolutely necessary. For this, the item for repairs is included in estimate A No. 8, herewith submitted.

The great Ohio railroad along the south coast of Lake Erie commences in the neighborhood of Conneaut. This road I have elsewhere alluded to. It connects Pennsylvania and Michigan, and must be, during the winter season, almost the only channel of communication through this district of country from east to west. It is already located, and every prospect exists that it will be rapidly carried forward to completion. A survey and location of a railroad from Conneaut to Beaver, Penn., on the Ohio river, has been made. In the rear of this harbor, and directly on the line of the Beaver and Conneaut railroad, are situated some very valuable and extensive coal beds now wrought, and rapidly coming into general notice. The coal is very abundant, of the best quality, and highly esteemed. Several of the finest boats on Lake Erie have been built at Conneaut, where the advantages for building are great. The statistical table herewith submitted explains more fully the commercial, agricultural, and manufacturing advantages of the district dependent on this harbor.

12. *Beacon-light at Grand river.*—A very thorough repair of this edifice has been made, as well as of its foundation, which has been secured anew. The planking has been laid anew so far as was necessary, and the light-house itself has been painted and sanded.

*Steam dredging machine for Lake Erie.*—The contract for this machine was forwarded to the department last fall. Models and specifications had been previously prepared. During the winter the building was commenced by the contractors, Messrs. Lyon & Howard, of New York, and it has been carried on under my own inspection. It should have been completed the 1st of July, but a succession of disappointments and delays, many of them beyond the control of the contractors, has procrastinated the completion of the work. It will be done within the present month if no new disappointment occurs. The delays alluded to arose from difficulty of exchanges, from delays in obtaining the machinery from New York, from disappointment from the maker of the steam-engine in Detroit, and the same cause in relation to the boilers. Lastly, a general prostration of their mechanics and laborers has crippled the contractors, and they are thrown on the forbearance of the government. I owe it to them to say that the hull of the boat and of the dredging lighters, the different and complicated machinery of wood and iron, the engine and boilers, are all constructed in the best and most serviceable and durable manner. The contractors have, of their own accord, in several instances exceeded, in the quality of their work and the amount of labor applied on the machine, that contemplated by the contract.

Though undoubtedly the government has sustained damage by their delay, yet the superior performance of the work may fairly be deemed an offset. A drawing of the work, with a report of its performance, will be forwarded so soon as its capacities are fairly put to the test. The entire cost of the machine complete will be \$15,500, and of the lighter scows \$6,600. The machine has locomotive power sufficient, it is believed, to move with its train of scows from any harbor on the lake to any other, in good weather.

I enclose a report from the contractors.

13. *La Plaisance road, Michigan.*—On this work the entire amount heretofore appropriated has been expended, and the contracts all fulfilled thereon. The labor contracted to be executed on the following portions has been done, viz: 5th, 6th, 7th, 8th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 29th, 41st, and 42d miles. But the department has already been made aware that the sums appropriated have been entirely insufficient to complete this road on the plan originally designed by the Engineer department. Such parts of the work as have been executed agreeably to that plan offer now a fine and useful causeway; but the other parts of the road having had but little labor applied on them, were never serviceable, and now have become almost impassable in places. The estimate marked A No. 9 is submitted; the first class of items in which is for the amount required to complete this very important road as originally designed and as commenced; the second class of items is for the payment of the liabilities of the government absolutely now due, under the decision of the Secretary of War, to refund to contractors the forfeited amounts of 5 per centum per month, respectively, for delays beyond the time specified for the completion of their contracts. The appropriations on this estimate are respectfully recommended.

Accompanying this report are enclosed, besides the estimates and drawings already mentioned, the tabular statements (of the local agents respectively) of appropriations, expenditures, &c., up to the 30th of September, 1837, as well as certain other tables by them forwarded. By this mail is forwarded, also, a map of Lake Erie, with the towns and harbors protracted on an exaggerated scale, with a view to reference for the plan for each work; the relative length of piers, the relative size of towns, and the distances from harbor to harbor. It also exhibits the courses and directions of the different works from the shore.

All which is respectfully submitted by, sir, with perfect respect, your obedient servant,

HENRY SMITH, *Gen. Sup., &c., Public Works, Lake Erie.*

Brig. Gen. GRATIOT, *U. S. Army, Chief Engineer, Washington, D. C.*

A No. 1.

*Estimate for 1838 of funds required to complete the River Raisin harbor.*

1st. Excavation:		
Canal, 29,704 cubic yards, at 20 cents per yard, (by contract).....	\$5,940	80
River, and between piers.....	10,800	00
		<hr/>
		\$16,740 80

2d. Piers:

For 630 feet additional pier-work on outer harbor to 12 feet water: 21 cribs, for each crib 30 feet long, 15 wide, and 14 feet high, hewn timber 1,260 feet, placed.....	\$88 00	
Tie pieces, 70, (5 to each course,) at 75 cents each, placed.....	53 00	
For piles, 10, at \$3 each, driven.....	30 00	
For brush.....	5 00	
For cap pieces, 85 feet, at 12 cents per foot, placed.....	10 20	
For stone, 39 cords, at \$6 per cord, deposited.....	234 00	
For workmanship, not included above, and contingencies.....	130 00	
	550 20	\$11, 554 20
Superintendent, 12 months, at \$75 per month.....	900 00	
Contingencies, repairs, &c.....	1, 500 00	
Commission on disbursements.....	767 37½	
	3, 167 37½	
		31, 462 37½

N. D. CURTIS, *Superintendent.*

MONROE, *Michigan, September 29, 1837.*

Approved and respectfully submitted.

H. SMITH, *General Superintendent.*

MONROE, *Michigan, October 12, 1837.*

A No. 2.

*Estimate of funds required for the Huron harbor, Ohio, for continuing the improvements during the year 1838.*

Nature of workmanship, contingencies, &c., embracing the intended application of funds required for the year 1838.	Amount.
1,200 piles, average length 20 feet, to drive twelve feet outside the west pier, to form a breakwater, at \$1 25 each.....	\$1, 500 00
800 cords stone, to fill in between said piles and the present pier, to form an inclined plane, at \$6 a cord.....	4, 800 00
For a new pile boat, to be built out of the remains of the old one.....	1, 200 00
For dredging.....	475 00
For laborers and mechanics, including contingent expenses, superintendence, &c.....	2, 200 00
	10, 175 00

JOHN B. WILBOR, *Superintendent Public Works, Huron, Ohio.*

HURON, *Ohio, September 30, 1837.*

Approved and respectfully submitted.

H. SMITH, *General Superintendent.*

MONROE, *Michigan, September 30, 1837.*

A No. 3.

*Estimate of funds required for continuing the improvement at Black river, Ohio, in the year 1838, constructing a permanent work on the foundation of the present piers, and also for the purpose of working the steam dredging machine in removing the gravel-bar in the harbor, as follows:*

For 500 piles, 20 feet long, at \$1 each.....	\$500 00
For 500 piles, 25 feet long, at \$1 25 each.....	625 00
For 500 piles, 30 feet long, at \$1 50 each.....	750 00
For 1,800 cords stone, at \$5 each.....	9, 000 00
For contingencies, compensation to superintendent, &c.....	1, 000 00
For driving 1,500 piles, at \$1 each.....	1, 500 00
	13, 375 00
For expenses of the steam dredging machine, in removing the gravel-bar.....	500 00
	13, 875 00

The above estimate for dredging is made for the purpose of removing a deposit of earth which extends into the harbor near the south end of the piers, and obstructs the passage of large vessels.  
Respectfully submitted.

H. SMITH, *General Superintendent, &c.*

## A No. 4.

*Estimate of funds required for securing and rebuilding the public works constructing at Cleveland harbor, in the State of Ohio, in a permanent and durable manner, with stone and masonry, for the year 1838.*

Nature of the workmanship, materials, and contingencies embraced in the intended application of the funds required for the works, not including the present appropriations.	Extent.	Cost.
Perches stone, blocks, at \$3 50 .....	3, 500	\$12, 250 00
Perches stone, rough, at 80 cents .....	30, 000	24, 000 00
Water lime, at \$1 a bushel .....	1, 200	1, 200 00
Quick lime, at 30 cents a bushel .....	1, 200	360 00
Cast-iron dowels .....	2, 600	650 00
Wrought-iron clamps .....	1, 600	1, 000 00
Piles, at \$2 .....	400	800 00
Stone snubbing posts .....	12	96 00
Mechanics and laborers .....		6, 000 00
Superintending .....		1, 500 00
Contingencies .....		4, 000 00
		51, 856 00

CLEVELAND, October 1, 1837.

Approved and respectfully submitted.

A. W. WALWORTH, *Agent, &c.*

H. SMITH, *General Superintendent, &c.*

## A No. 5.

*Estimate of funds required for the service of the public works at the mouth of Grand river, Ohio, during the year 1838.*

1st. For completing the repairs on that part of the west pier which was destroyed in the fall of 1835, and building three additional cribs, will be required—		
50 oak piles, 32 feet long, 1,600 feet, at 10 cents per foot .....	\$160 00	
350 feet of 14-inch square, for capping piles, at 10 cents per foot .....	35 00	
370 sticks for cribs, 30 feet long, 11,100 feet, at 6 cents per foot .....	666 00	
315 oak ties, 20 feet long, 6,300 feet, at 5 cents per foot .....	315 00	
110 oak ties, 30 feet long, 3,300 feet, at 5 cents per foot .....	165 00	
4,280 perches of stone, at 7s. per perch .....	3, 745 00	
10,000 feet of oak plank, at \$15 per M. .... :	150 00	
400 pounds of spike, at 12½ cents .....	50 00	
Iron for bolts and smith's work .....	300 00	
Carpentry, labor of men, and their board .....	2, 000 00	
Contingencies, brush, forage, &c. ....	150 00	
		\$7, 736 00
2d. For repairing the old work of the east and west piers in places where it is absolutely necessary—		
6,730 feet of oak timber, at 6 cents per foot .....	403 80	
75 oak piles, 25 feet long, at 6 cents per foot .....	112 50	
2,766 perches of stone, at 7s. ....	2, 420 25	
6,500 feet of plank, at \$15 per M. ....	97 50	
Carpentry, labor of men, and board .....	1, 250 00	
		4, 284 05
3d. For forming the proposed bank of stone against the piers at certain places on inside, it will require 800 perches of stone, at 7s. ....		700 00
4th. For commencing permanent work agreeably with the directions of Colonel Henry Smith, United States agent for the public works on Lake Erie—		
900 piles, 19 feet long, 17,100 feet, at 5 cents per foot .....	855 00	
Labor in driving piles .....	750 00	
18,753 perches of stone .....	16, 409 00	
Forage and other contingencies .....	250 00	
		18, 264 00
For building a stone scow .....	400 00	
Repairing and furnishing a new set of rigging for the pile-driver scow .....	250 00	
		650 00
For superintendent's commission of 2½ per cent. on disbursing the sum of \$31,634 05 .....		790 85
		32, 424 90

This estimate is made and founded upon actual prices that are now paid for materials, &c., and the quantity required is from actual measurement.

REMARKS.

The object to be accomplished by the appropriation asked for at this time (except for repairing the works) is, to carry out the plan of operations of last season, by excavating a place in the channel of the Conneaut creek for steamboats to wind, and at the same time to afford a more safe and commodious harbor for sail vessels seeking shelter in storms.

A sketch of the harbor and river, showing the proposed excavation, is herewith forwarded. The amount excavated this season, up to the 30th September, 1837, is estimated at fifteen thousand cubic yards, and the funds on hand will complete 2,000 cubic yards more up to the end of the 4th quarter. The appropriation now asked for is believed to be sufficient to complete the basin.

*For repairs.*—This appropriation asked for is to secure the outer crib of the west line of the works, and to repair the breach made by the settling of the outer end of the crib, which has caused a separation of the crib from its fellow of about ten feet wide. To effect the object, it is proposed to sink a new crib or pier-head of larger dimensions than common cribs, strongly built, and well filled with stone, with a sufficient quantity of stone deposited on the outside of it to protect and support the bottom thereof. A pier-head of this description, it is thought, would be sufficiently strong to resist the force and action of the water, even when dashed against it with all the violence of a northeast storm.

A. DART, *Agent.*

Approved and respectfully submitted.

H. SMITH, *General Superintendent.*

MONROE, *Michigan, September 30, 1837.*

## B.

DUNKIRK, *New York, September 30, 1837.*

Sir: I have the honor to submit the following report in relation to the United States works of improvement on the south shore of Lake Erie, under my general superintendence, for the year ending on the 30th of September, 1837.

*Erie, or Presque Isle harbor.*—The works commenced in August, 1836, for securing the breach through the neck of the peninsula enclosing Presque Isle bay, and for forming at that point a navigable channel, have progressed as rapidly as the limited means afforded by the appropriation applicable to that object would allow. The pier which is to close up the breach has been extended 1,740 feet, and for the purpose of giving additional stability nine counterforts or lateral spurs have been added, equal in all to a length of 180 feet, making together 1,920 feet, inclusive of the 600 feet built previous to the 30th of September last; the main line of pier-work at the head of Presque Isle bay is now 2,340 feet long. This is about one-third of the whole length which will be required in addition to the channel piers.

At the old works at the east end of the bay \$420 32 has been expended in rebuilding 180 feet of pier at the south end of the south breakwater, where it joins the main shore. This was rendered necessary by the decay of the old wood-work, in consequence of which a channel had begun to be formed across the sand beach around the extremity of the work. Including this 180 feet, the total number of running feet of pier-work built during the year is 2,100.

The workshops and boarding-houses at the new works at the west end of the bay have been much extended and enlarged, at an expense of \$1,000, and are now quite ample for any probable contingency that will arise during the future prosecution of the work.

The amount of funds available for the year, including the appropriation of \$15,000, was \$20,966 46.

The amount which has been expended is \$20,259 64, distributed as follows, viz: for carrying on the new works at the west end of the bay, \$16,650 01; for rebuilding 180 feet of old work at the east end of the bay, \$420 32; charged to the appropriation for pier as the proportional part of the cost of the steam dredge and scows building at Monroe, Michigan, for the United States works on the south shore of Lake Erie, \$2,189 31; and for building additional quarters, workshops, and stables, at the new works, \$1,000. The amount remaining unexpended on the 30th of September was \$706 82, subject to several charges for work done and materials delivered. The funds being exhausted, the works will be immediately brought to a close for the year.

The whole amount of expenditures by the United States, in connexion with the improvement of this harbor, to the 30th of September, 1837, has been \$112,151 61, as follows, viz: for the works at the east end of the bay, \$84,210 24; charged on account of the steam dredge for Lake Erie, \$2,189 31; for houses, workshops, and stables, at the west end of the bay, \$1,600; for machinery and materials remaining on hand and available on the 30th of September, 1837, \$1,802 50; leaving for the construction of a pier 2,340 feet long, at the upper end of the harbor, \$22,349 56.

The success which so far has attended the prosecution of the work at the head of Presque Isle bay has been entirely satisfactory, and every encouragement is given that the plan now in process of execution will be attended with complete success. As fast as the pier has been constructed the sand has collected against it on the lake side, forming a slope or beach which will protect the work from any

danger on account of ice or of storms; and this accumulation has been so rapid that it has been found expedient to dispense, this season, with the piles which it was originally intended should be driven on both sides of the work to insure its stability. The object in view is to close up a shallow opening, now a mile and a quarter in width, interrupted by a few small sand islets which have recently been formed through the neck of the peninsula which formerly enclosed the harbor of Erie; and by leaving a channel four or five hundred feet wide, guarded on each side by channel piers extending from deep water in the bay to deep water in the lake, a distance of 1,200 feet, to cause a navigable channel to be made by the force of the inward and outward currents, constantly produced in this narrow opening by the tendency of the bay to adjust itself to the ever-varying level caused by the action of winds upon the lake; this being precisely the mode in which the excavation of the eastern channel into the bay was effected. It results from this statement of the nature of the operation now in progress that, in proportion as the pier or dam is extended and the opening thereby diminished, the water, concentrated into a narrower space, will immediately commence to grow deeper by the increased action of the current over the surface of the shoal, and that great economy would result from rapidly extending the pier over the whole of the shoal except the portion which it is proposed to leave for a channel. The difference in the cost between proceeding slowly and with rapidity will in the latter stages of the work be equal to the difference in the expense of constructing the pier in water two or three feet deep, and building it in water eight or ten feet deep. In this instance, therefore, besides the ordinary evils resulting from appropriations incommensurate with the objects in view, the nature of the work itself renders it nearly certain that it will cost twice as much to effect this improvement in six years as it would to do it in three. Governed by these views, the minimum estimate for next year has been placed at \$50,000, and it is earnestly recommended to the department that this amount be asked of Congress.

It appears unnecessary to repeat all that has heretofore been said as to the importance of Presque Isle bay, and of this improvement connected with it, in a commercial and military point of view. When the improvements in progress shall have been completed, the government will have at its disposal, for naval purposes, a perfectly safe roadstead, covering an area of upwards of three hundred acres, with a depth of water of from ten to thirty feet, with entrances at each end having channels sufficiently deep to admit the largest vessels which can navigate the lake; and the immense commerce of the lakes will profit to an extent difficult to estimate by the same advantages. This harbor is every day attracting more attention in the State of Pennsylvania; and besides the Pennsylvania canal, which has been located to this point, the stock has recently been subscribed to secure the charter of a great railroad terminating here, and which, connecting with other works, will form a continuous and direct line from Philadelphia to Erie. This railroad will forcibly illustrate the manner in which the enlightened policy pursued by the general government with reference to the lake improvements is felt in its beneficial consequences throughout the whole extent and in the most secluded portions of our country.

Accompanying my report I forward that of the local agent, P. S. V. Hamot, esq., to which I respectfully refer the department for many interesting details and statistical statements. It appears from Mr. Hamot's report that from the opening of the navigation at Erie, on the 17th of April, to September 30, 1837, five hundred and forty-seven steamboats cleared from the port of Erie, whose tonnage amounted to one hundred and eighty-one thousand seven hundred and ninety-one tons, and the number of passengers on board to seventy-nine thousand three hundred and forty-nine; and that during the same period the number of clearances of ships, brigs, and schooners, was one hundred and seven, whose tonnage amounted to seven thousand eight hundred and sixty-seven tons.

The statements and estimates required by the regulations of the Engineer department are herewith transmitted. I also transmit a map, drawn by myself from a survey which I made for the purpose, showing the condition of the works at the head of the bay on the 30th of September, and also the important changes which have taken place in the shores and shoals in that vicinity since the survey of 1835.

*Dunkirk.*—The operations for the year have consisted: 1st. In continuing last fall, until the lake was obstructed with ice, the repairs of the breakwater, or east pier, which were in progress at the date of the last annual report. 2d. In repairing and refilling with stone two hundred and seventy-three feet of this breakwater, which was carried away in the great gale of December last, in consequence of the decay of the timber. 3d. In adding in ten feet water an extension of three hundred and ninety-four feet of crib-work, twenty feet wide, to the west end of the breakwater, built with timber to the height of between five and six feet above the level of the lake, and filled with stone. This extension leaves for the western or main entrance into the harbor a width of only three hundred and fifty feet, which is as narrow as it is desirable to make it. 4th. In adding in seven feet water an extension of three hundred and thirty feet to the east end of the breakwater. Of this work two hundred and ten feet is built with timber to the height of four and a half feet above the lake, and filled with stone, and the remaining part will be finished in the same manner in the course of the fall. 5th. In adding to the east end of the west pier, in fifteen feet water, a crib forty-five feet by fifteen feet, built with timber, and filled with stone to the surface of the water, intended to give additional support to the pier-head of stone masonry surmounted by a beacon light-house of wood, which have, during the past summer, been erected at this point by the Treasury Department. This beacon was lighted on the 31st of August, and has proved of great advantage to the harbor, the entrance being at all times easy and safe by keeping it and the light-house in range. These additions have increased the length of the breakwater to two thousand and sixty-four feet, and that of the west pier to one thousand nine hundred and thirty-five feet.

Inclusive of the appropriation for 1837 of \$15,000, the amount of funds available for the year was \$22,869 55. The expenditures have amounted to \$21,002 40, leaving in the hands of the agent on the 30th of September, 1837, \$1,867 15, the whole of which will be expended this fall in completing the eastern extension of the breakwater, and in adding two courses of timber to the height of the old part of this work, to enable it more effectually, by that means, to protect the anchorage within the bay, but more especially to give such increased stability to the decayed timber-work above water as will, if possible, enable it to resist the violence of the winter storms.

The whole amount expended by the United States for the improvement of the harbor of Dunkirk has been \$76,579 28, of which \$1,192 20 remains available in materials and machinery on hand, and \$2,040 72 has been paid out of the Dunkirk appropriation towards the building of a steam dredge and scows for Lake Erie, leaving \$73,346 36, which has been applied to the construction of three thousand nine hundred and ninety-nine feet of pier-work in water from six to fifteen feet deep.

The additions during the past year have greatly improved this valuable harbor, but much remains to be done to complete the works in the manner proposed.

The anchorage and wharves are now well sheltered against westerly winds of ordinary violence; but when the waters of the lake are raised, as is occasionally the case in storms of the greatest severity, four or five feet above their ordinary level, the highest of the piers is inadequate to afford the requisite protection. The timber-work above water decays rapidly; and this cause has already been productive of great expense and injury. In the last three years the sum of \$8,000 has been laid out in repairs, which would have been unnecessary if the material used above water had been stone. Nothing can show more forcibly than this fact the propriety of proceeding without delay to place on a permanent footing these government works, which experience has shown to be productive of such immense benefits. On the northeast the harbor still remains open, danger from that quarter having been much less to be apprehended than from the northwest, particularly as easterly winds at Dunkirk lower instead of raise the water of the lake. The amount of the estimate for carrying on the works in 1838 is the same as was stated in the last annual report by my predecessor, Captain H. Smith; and it will be seen that the largest portion of that amount is to be applied to commencing the stone-work which, from the surface of the water upwards, is to replace the present perishable structure of wood. Stone of excellent quality may be obtained from quarries within five miles of Dunkirk; but to enable these quarries to be opened with advantage and economy, a considerable quantity of stone should be contracted for in the first instance.

The importance of the harbor of Dunkirk in a commercial point of view has heretofore been fully set forth. The surface enclosed by the government works will be about two hundred and eighty acres, of which there are eighty acres of excellent anchorage, with clay bottom; and there is wharf room sufficient for the transaction of a very large business. It occupies a position nearly midway between Buffalo and Erie. It is extremely valuable as a port of refuge, and has been much resorted to for that purpose by steamboats and sail vessels, and it has been selected for the termination of the New York and Erie railroad through the southern tier of counties of the State of New York; a work the completion of which will at once place it among the chief harbors on the shores of Lake Erie. The number of steamboats and sail vessels touching at this port has during the past season greatly increased. From the opening of the navigation on the 5th of May to the 30th of September, 1837, the number of arrivals of steamboats was 630, whose probable tonnage amounted to 183,177 tons, and the number of passengers to 78,700. During the same period the number of arrivals of schooners and sloops was 103. Shipping to the amount of 778 tons is owned at the port.

The annual report of the local agent, Thomas Foster, esq., is herewith transmitted, together with the estimates for the year 1838, (marked B No. 1,) and the statements required by the regulations of the department. The report of the agent embraces many important and interesting details which I have omitted. I also transmit a map of Dunkirk harbor, showing the condition of the works on the 30th of September, 1837, together with a plan of those needed for its further improvement.

*Buffalo.*—At this important point there have been no expenditures during the past year. I transmit herewith the report of the local agent, I. S. Smith, esq., (marked B No. 2,) to which the department is respectfully referred.

The unusual height of the waters of the lake for the past season, and the increased force given thereby to the waves during the violent gales of last fall, have caused considerable injury to the pier at a point which was supposed to have been sufficiently strengthened, and which would, no doubt, have proved so had the lake remained in the situation it was when this part of the work was constructed. A small portion of the outer pavement of the mole, at a point about one-half way from its inner to its outer extremity, has been washed out, owing to the small size of the stones which at this point it was judged safe to use. The outer and still more exposed parts of the work have received no injury, having been paved with stones of a larger size. Parts also of the pavement of the towing-path have settled, and will require to be relaid.

These injuries have not as yet been productive of serious consequences, and are such as are liable to occur to the most permanent works in situations of such extreme exposure as that occupied by the Buffalo mole, until every part shall have been subjected to the test of time and the greatest violence of the elements. It is absolutely necessary, however, that the damage should be repaired without delay, as otherwise a breach will be made through the mole, and thus, in a violent gale, all communication with the light-house at the extremity of the pier might be cut off; a result which, in the present state of the commerce of Lake Erie, almost the whole of which centres at this port, might be attended with the most disastrous consequences.

An estimate is submitted for repairing this injured portion of the outer slope with stones of a larger size than those first used, and also for resetting parts of the pavement of the tow-path. This work cannot with prudence be deferred longer than until the next working season.

Besides the sum necessary for repairs, an appropriation is required to reimburse the superintendent for advances made to bring the works to completion in 1836. These advances were productive of the greatest advantage to the government, and the superintendent is entitled to much praise for his public spirit in making them. Owing to some misunderstanding, the amount was not appropriated at the last session of Congress, and he has in consequence been subjected to much inconvenience. The estimate of the superintendent (marked B No. 3) accompanies this report. I also transmit the requisite statements, and an engraved map of Buffalo, accompanying the local superintendent's report.

There are now fifty steamboats on Lake Erie, whose tonnage amounts to 10,509 tons, and eleven more launched and on the stocks, which will be ready next season, whose tonnage will be about 5,000 tons; and there are two hundred and thirty ships, brigs, schooners, and sloops, amounting to 16,931 tons. The steamboats make their trips once a week, and the sail vessels once in two weeks; so that the coasting trade of the upper lakes next season will amount to 75,904 tons per month. To the residents in this section of country it is well known that the whole of this immense commerce owes its safe existence to the United States harbor improvements.

*Black Rock.*—Nothing has been done at this place during the past year, and the different works remain in nearly the same situation they were at the time of the last annual report by my predecessor, Captain H. Smith. The mole on Bird island has not been injured by the storms or ice, and it appears to answer perfectly the purpose for which it was intended.

The traverse pier received some injury at the breaking up of the ice in the spring, owing to the current produced by an extensive breach made in the State works forming the Black Rock basin. A few of the large paving-stones and a small portion of the embankment were removed.

The State of New York has very thoroughly repaired the damage done to its work, and the injury to the traverse pier will be repaired this fall. The pier which projects from the main shore for the

purpose of arresting the sand in its progressive motion along the beach, and preventing it from accumulating in the Black Rock basin, has received no injury. The accumulation of sand against the south side of it has, however, been so great that it begins to pass around the outer extremity of the work; and the pier must be extended, or, which would, perhaps, be more economical, a new one constructed, about three hundred yards to the south of it, as was recommended last year, in order to accomplish the object in view. The cause, however, which produces this motion of the sand is constant and uniform in its action, and I believe that nothing will effectually remedy the evil short of entirely protecting the shore between Buffalo and Black Rock from the surf of Lake Erie, or confining the sand in its place by a series of parallel piers projecting from the beach at suitable intervals over nearly the whole of the distance included between the present pier and Buffalo creek. The effect of this latter mode would be to cut this beach into small portions, each of which would assume such a direction that the surf caused by the prevailing westerly winds would no longer produce a progressive motion towards the north in the particles of sand of which the beach is composed. In the summer of 1835, in obedience to that part of the general instructions of the Engineer department which enjoined upon me the duty of making careful surveys of the different harbors under my charge, with a view of determining the precise amount of the changes which are constantly taking place, I surveyed, among others, the harbors of Buffalo and Black Rock, and the small portion of Lake Erie included between them, with that object, and made such connexions with fixed points as would enable me at any future period to determine the precise amount of the change which in the interval had taken place. Since that period an evident alteration has been produced in the shape and position of the shore; but having had no funds at my disposal to make another survey, I am without the means of accurate comparison.

On the chart which, in 1835, I made and transmitted to the department, I traced a sketch of a work which I thought would be of great utility. The same thing was done on the charts of Dunkirk and Erie, which at the same time were submitted. The work at Buffalo, however, appears not to have found favor with those most interested; and I allude to it only for the purpose of stating, with the sanction of the department, that a discrepancy which apparently exists in document 82, 24th Congress, 1st session, House of Representatives, between the statements made by the department and myself in relation to that survey, has no existence in reality, both statements being correct in the senses in which they were intended.

Not having this year received a report from the local agent, General P. B. Porter, I transmit a copy (marked B No. 4) of the one which he made last season, as being applicable to the present circumstances of the work, and I respectfully recommend that the amount of the estimate therein contained be asked for at the approaching session of Congress.

I am, very respectfully, your obedient servant,

T. S. BROWN, *Gen'l Superintendent of the U. S. works  
at Erie, Dunkirk, Buffalo, and Black Rock.*

Brigadier General C. GRANT, *Chief Engineer, Washington City, D. C.*

B No. 1.—(a)

*Estimate of funds required [at Dunkirk harbor] for constructing a permanent stone wall of nine feet high on the pier at the western entrance into the bay, from the beacon-light, running in-shore.*

6,000 cubic yards large quarry stone, at \$2 per yard.....	\$12, 000 00
6,000 cubic yards mason-work, at \$1 30 per yard.....	7, 800 00
3,000 bushels water cement, at 37½ cents per bushel.....	1, 125 00
1 ton bar-iron, for clamps, at \$200 per ton.....	200 00
12 laborers to carry off stone, lime, sand, working scows, machinery, &c., and perform all the required labor while constructing the work, 2,808 days, at 90 cents per day, boarding included.....	2, 527 20
Superintendence, 312 days, at \$2 50 per day.....	780 00
Add 10 per cent. for contingencies on \$23,682 20.....	2, 368 22

THOMAS FORSTER, *Superintendent, &c.*

B No. 2.

*Report in relation to Buffalo harbor.*

SEPTEMBER 30, 1837.

There having been no appropriation last year, and no balance in the treasury applicable to these works, nothing has been done towards improving them.

The works were constructed with a view to resisting the force of the surf as the level of the lake was several years ago, at which time it was supposed that no wave could reach the summit; but the increased height of the lake (nearly three feet) has of course added that much to the height, and a much greater proportional *force* to the waves; and they have not only reached the top, but have rolled over it in sheets two or three feet deep. The outer part of the mole, paved with large flat stones, has received no injury, although subjected to surf of nearly double the force that was ever anticipated.

The in-shore part of the inclined plane, extending from the eastern angle to the lake, is paved with small flat stones, about one foot in width; it remained entire several years, until the tempest last fall made a break in the paving, and swept out the stones about one-half through the wall; this break, for want of means, has not been repaired. Should the small stones be replaced, it will be constantly liable to damage from the same causes, and cannot be counted upon as permanent. If left as it is, without repairs, the whole work will be exposed to destruction. It is therefore recommended that the whole of that portion of the mole be *repaired* with large stones, like the rest of the work.

The whole area of Buffalo harbor and creek, including the entire surface from the mouth of the creek to the projected south channel, is less than *twenty-eight* acres.

If nothing more effectual be done to enlarge the accommodations for vessels, it will soon be necessary to construct a wall upon the beach or lake side of the peninsula, about one mile in length, at a cost of about forty thousand dollars; some dredging in the creek, cost, perhaps, four thousand dollars; and the wall in front of the government land must be completed, at a cost of about eight thousand dollars.

I present no plan for those operations, preferring to leave the whole until the city authorities (which heretofore opposed the plans for enlarging the harbor) shall have determined upon some that may be feasible.

Herewith I transmit an estimate of funds wanted for the year 1838.

ISAAC S. SMITH, *Agent, &c.*

B No. 3.

*Estimate of funds wanted for Buffalo harbor for the year 1838.*

To pay arrearages.....	\$9, 897 22	
Contingencies .....	502 78	
	\$10, 400 00	
To repave the in-shore inclined plane, 8,000 superficial feet of large deep stones, at 60 cents .....	4, 680 00	
To labor, 16 men, 200 days, each \$1 .....	3, 200 00	
To cranes, tackle, chains, sledges, &c.....	500 00	
To superintendence and contingencies.....	1, 220 00	
	9, 600 00	
	20, 000 00	

ISAAC S. SMITH, *Agent.*

BUFFALO, *September 30, 1837.*

B No. 4.

[Extract.]

BLACK ROCK, *October 31, 1836.*

Sir: The following is an estimate of the expense of completing and strengthening the present works of the Black Rock harbor; and for which it is very desirable that an appropriation should be made at the approaching session of Congress.

The upper part of Black Rock harbor is separated from the Erie canal (which leaves the harbor some distance below its mouth, and passes on to Buffalo, in a line nearly parallel to the lake shore) by a naked sand beach some two or three hundred yards in breadth. The timber and shrubbery which formerly grew on and in the rear of this beach, and which served to arrest and detain the sands in their place, having all been cut off within the last few years, has given greater scope and action to the winds from the lake, which have already driven the sand at the lower part of the beach back in the direction of the canal, to such an extent as to threaten a breach across the sand-bar from the lake to the canal, the effect of which would be to fill the harbor as well as canal with sand.

The object of the work for which an appropriation is now sought is, to guard against this danger by the construction of a mole, three hundred feet in length, along this part of the sand beach, to be composed of piles and stone, and of the expense of which the following is the estimate:

300 piles, twelve feet in length, cost.....	\$300
5,000 feet sheet piling.....	60
300 feet of stone wall, four feet high and four feet in breadth; 60 cords of stone, at \$4 50 per cord.....	270
Pile-driver and hammer, say.....	150
Labor.....	250
Contingencies.....	150
	1,180
Add balance of Colonel Totten's estimate, now required.....	8,000
	9,180

In the summer of the year 1833 Colonel Totten, of the engineer corps, made a survey of the lake harbors under the direction of the War Department, and in his report recommended the construction of certain works in the Black Rock harbor, the expense of which he estimated at \$20,000. In accordance with this recommendation, Congress, at the succeeding session, made an appropriation of \$12,000, which has been expended in conformity with Colonel Totten's views. The complement of this estimate (\$8,000) could now very advantageously be expended.

P. B. PORTER, *Superintendent.*

### C.

ROCHESTER, *October 24, 1837.*

SIR: As the amount required for constructing the pier-head of the western pier, with the view of obtaining a good foundation for the beacon-light, bore so great a proportion to the whole sum available for the public works at the mouth of the Genesee river, New York, for the year 1837, it was found to be impracticable, with a proper regard to economy, to commence the masonry this season; and even had the appropriation been much larger, but little could have been done; for after my arrival here, which was not before the middle of June, arrangements had to be made for obtaining suitable materials. It was therefore determined, as the best course, to finish the pier-head, and expend the balance remaining in the purchase of stone.

The pier-head is now completed; and the contract entered into for three thousand tons of limestone, from the quarries at Chaumont bay, will, in the course of a few days, be fulfilled.

The west pier extends two thousand six hundred and seventy feet into the lake, and the east two thousand six hundred and thirty-four. They are both twenty feet wide, with the exception of a small part of each, which is but sixteen. They consist of crib-work, each crib being sixteen or twenty feet wide and thirty long. The cribs are formed of side pieces, centre pieces, ties, and flooring; to every two side and one centre stick there are four ties; the ties, which run across the piers, instead of being carried up, the one directly above the other, break alternately backwards and forwards, to secure greater strength in the side timbers, and to afford places upon which a portion of the stone with which they are filled may lodge.

Piles have been driven on the outside of the cribs, but they appear to have been productive of no very good effect; stones, thrown in by their sides, preventing the irregular settling of them much better.

The average height of the piers above the surface of the water is nearly three feet. The width of the harbor at its mouth is four hundred and forty-six feet; and, as the piers are not exactly parallel, it becomes broader as you enter.

To obtain a correct delineation of the bottom of the harbor, sections were made across it, sixty-six feet apart, and soundings taken at the end of every ten feet; horizontal planes were passed at one foot apart, and their intersections with the bottom ascertained; the accompanying drawing will, therefore, give a tolerably accurate idea of the present state of the harbor. From it, it will be seen that the greatest depth in the channel, between the piers, is twenty-three feet; and the least, twelve feet four inches; and that at the entrance of the harbor there is seventeen feet water within the piers, and to a distance of about three miles the average depth of the river is twenty-eight feet.

As both piers run across what was once an extensive shoal, it was to be feared that a deposition of sand would take place immediately beyond the mouth of the harbor; but, on examination, it is found that there is no appearance whatever of the formation of any shoal there. From the centre of the channel, between the piers, where the water is seventeen feet deep out to twenty-two feet water, the descent is as gradual and as regular as the natural shore of the lake; the least depth of water beyond the end of the piers is sixteen feet.

The piers have been finished three years; the large shoal over which they run has been entirely removed; and as there is now no evidence of the formation of any bar beyond them, it is reduced to an almost absolute certainty that any further prolongation of the works into the lake will never become necessary.

From the position of the piers and the width of the harbor at its mouth, whether the wind be from the northeast, north, or northwest, it can be entered with equal facility. This is, undoubtedly, a very great advantage, and one of which the navigators of the lake avail themselves; for vessels, when caught in a severe gale, if it be possible to make this harbor, run to it for safety.

For the purpose of contrasting the present state of the harbor with the condition of the mouth of the river previous to the commencement of its improvement, the old line of eight feet water has been laid down on the accompanying drawing. The channel was then crooked, and the depth of water on the bar between eight and nine feet. Besides the want of sufficient water to allow the largest-sized vessels to enter, it was only when the wind was in a particular direction that vessels of any size could enter at all. There is now a channel four hundred and forty-six feet and over wide, perfectly straight, with sufficient depth of water for any vessel that navigates the lake.

The whole work, being an extent of pier something over a mile, has, from its commencement to the 30th of September last, cost one hundred and seventeen thousand eight hundred and twelve dollars. By means of this expenditure a very superior harbor has been obtained at the mouth of the Genesee river; and though the attempt to form an artificial one was at first but an experiment, it is an experiment which has been attended with perfect success.

It now becomes a matter of great importance to secure permanently the advantages that have been obtained.

When the works were examined by Colonel Totten, of the engineer corps, he recommended, as a means of rendering them permanent, the conversion of the wood-work above low-water mark into masonry; his plan was to build on the sides of the piers strong stone walls, using hydraulic mortar, to fill the intervening space with rubble stone, and to cover the top with flagging stone.

The accompanying drawing will show the manner in which it is contemplated to construct the masonry. The average size of the stones obtained from Chaumont bay is five feet long, two feet four inches broad, and one foot nine inches high. With stones of this size for the outside, and smaller ones for the interior, the walls will be built.

They will vary in thickness from three to six feet; three, where least exposed; six, where most. To give the walls a greater bearing on the piers, counterforts, twenty feet apart, two feet deep, and six feet long, will be constructed. They will not only strengthen the walls, but will counteract any tendency they may have to slide; this tendency will arise from the cribs not having in all places settled vertically, the bottom on which they rest being a very fine shifting sand. In some parts the subsidence of the cribs on one side has been considerably more than on the other; and where this inequality is very great, it will be necessary, before building the masonry, to buttress with additional cribs.

The top course is to be three feet wide, and, as each stone of it will be fastened to its adjacent one with two iron bolts, all the stones of this course will be connected together. To prevent the waves from raising and thus displacing any of them, they will be keyed to the course below. As these two courses will then form, as it were, but one, it will be all but impossible for the upper part of the walls to be disturbed, even by the most violent waves.

The most convenient height for the piers above the surface of the water is six feet; and as the waters of Lake Ontario are subject to a change of level of about two feet, they will be built seven feet above the lowest low-water mark.

To render it practicable to reach the end of the western pier, even in the most boisterous weather, a parapet wall, three feet high and three feet thick, will be added.

This is indispensably necessary; for the light at the end of this pier is, of course, much more needed in stormy weather than in fair. The space between the walls will be filled with rubble stone, and the top paved with heavy flagging stone.

The following is a comparative estimate of the funds required for finishing the work, viz:

234,562 cubic feet large sized stone, at 20 cents per foot .....	\$46, 912 40
113,378 cubic feet inferior sized stone, at 19 cents per foot.....	11, 337 80
76,557 cubic feet paving stones, at 30 cents per foot .....	22, 967 10
424,124 superficial feet stone, rough hammered, at 5 cents .....	21, 206 20
382,939 cubic feet masonry laid, at 5 cents .....	19, 146 95
76,557 cubic feet paving stones, at 4 cents .....	3, 062 28
12,934 bushels hydraulic lime, at 37½ cents per bushel .....	4, 850 25
729,119 cubic feet old work removed, at ½ cent per foot .....	3, 645 59
548,134 cubic feet rubble stone replaced, at ½ cent per foot .....	2, 740 67
9,000 iron bolts in place, at 50 cents per bolt.....	4, 500 00
200 feet additional crib-work.....	5, 000 00
	<hr/>
	145, 369 24
Contingencies.....	14, 631 76
	<hr/>
	160, 000 00
	<hr/>
Required for 1838.....	50, 000 00
Required for 1839.....	60, 000 00
Required for 1840.....	50, 000 00
	<hr/>

It is respectfully requested that the whole amount asked for for the year 1838 be appropriated; for though the piers still withstand perfectly well the violence of the waves, the top timbers have in many places become very rotten, and if the masonry be not carried on rapidly, the expense of repairs will, in time, be considerable.

The quantity of rubble stone now in the piers above low-water mark is more than sufficient to fill the space between the walls that are to be built; but if they are allowed to be swept away, another item would necessarily have to be added to the estimate.

In compliance with the request of the department, the following facts are subjoined, viz:

*Population of Rochester.*

Last census.....	17, 160
Increase since 1835.....	2, 764

*Commerce.*—There are twenty forwarding establishments connected with the business either of Lake Ontario, the Genesee river, or the Erie canal.

*Flour trade.*

The number of mills.....	20
The number of runs of stone.....	94

These mills, when in full operation, can grind 25,000 bushels of grain per day, turn out 5,000 barrels of flour, and require a daily outlay of from thirty-five to forty thousand dollars. During the year 1836 between four and five hundred thousand barrels of flour were shipped from Rochester, either by the lake or the Erie canal. The annual sales of flour are estimated at about \$5,000,000.

*Manufactories.*

There is a cotton and woollen cloth and a carpet manufactory, with a great variety of other kinds, the annual sales from which amount to about.....	\$2, 480, 000
Dry goods, &c., annual sales.....	1, 900, 000
Groceries and provisions.....	1, 300, 000
General business of Rochester, estimated at.....	12, 000, 000

*Revenue.*

Canal tolls for 1836.....	190, 000
Receipt of customs at the port of Rochester in 1836.....	60, 000
Receipt of customs at the port of Rochester in 1835.....	24, 000

*Trade with Canada.*—The number of bushels of wheat imported in 1836, 200,000. Besides the importation of wheat, there is something done in the lumber business.

*Steamboats.*—There is one which plies regularly between the port of Rochester and Toronto, and the American boats touch on their way up as well as down the lake.

To facilitate the conveyance of travellers as well as freight between the city of Rochester and its port, a railroad was constructed on the east side of the river, to the head of ship navigation, and is now, and has been for some time, in full operation. A charter was likewise obtained for the construction of another on the west side, to run to the mouth of the river; but this has not yet been commenced. The railroad to Batavia is completed, and it is understood that measures have been taken to carry on with vigor the one that is to be constructed to Auburn.

These two roads form but links of the great chain that will eventually extend from the shores of the Atlantic to Lake Erie.

The Genesee Valley canal, intended to connect the Erie canal at this point with the Alleghany river, is commenced; it will run through a region proverbial for its fertility, and will open another great avenue to the west.

These different improvements, as well as some other of the facts mentioned, cannot be said to have any very direct bearing on the improvement of the harbor; but when it is considered how much the business of Rochester is to be increased by them, and at the same time the mutual effect they must necessarily have on each other, it will not seem irrelevant to have touched upon them. One fact alone will show the increasing importance of the harbor. Previous to the year 1835, the receipts of the custom-house were not sufficient to meet the necessary expenditures; in 1835, about \$24,000 were collected, and in 1836, \$60,000; and there is every reason to believe that, with an increased business, there will be a corresponding increased revenue.

The above facts have been politely furnished me by Henry O'Reily, esq., of Rochester.

As nothing has been done this season at the mouth of the *Oak Orchard creek* towards the construction of the piers, the drawing that was forwarded to the department last year will exhibit the present condition of the work. The sum of money appropriated for this work for the year 1837 being entirely too small to effect any decided improvement in the harbor, it has been expended in procuring timber, building scows, and collecting stone from the lake shore. Of timber, fifty-three thousand feet were received before the 30th of September last, and the whole one hundred thousand contracted for will be delivered by the middle of November. Both the crane scow and the one for carrying stone are finished, and though exertions were made to procure a large quantity of stone from the lake shore, the great height of the water prevented it.

The quarries in this vicinity consist of a red sandstone, which disintegrates almost immediately on exposure to the atmosphere, so that above the surface of the water the cribs will have to be filled with stone from the shores of the lake.

With the one hundred thousand feet of timber twelve hundred and sixty feet of pier can be constructed; and as the timber will be on the spot and ready for use, the work can be carried on vigorously as well as economically next season.

The depth of water on the inside of the bar being over twenty feet, the mouth of the creek is capable of being so improved as to form a very excellent and safe harbor.

The want of a good harbor along this part of the lake is much felt, for vessels in distress have now no place to run to short of Lewistown or Genesee river.

The following is an estimate of funds required for the year 1838, viz:

1,044 ties, 20 feet long, at 75 cents per stick.....	\$783 00
783 side timbers, 30 feet long, at \$1 25 per stick.....	978 75
288 pieces, 24 feet long, at \$1.....	288 00
3,000 cords rubble stone, at \$3 per cord.....	9, 000 00

134,130 feet workmanship, at 5½ cents per foot. ....	\$7, 377 15
33,600 pounds of iron, worked, at 10 cents per pound. ....	3, 360 00
288 piles driven, at \$3 per pile .....	864 00
	22, 650 90
Contingencies. ....	2, 349 10
	25, 000 00

With this sum both piers can be carried out to eleven feet water, the west being eleven hundred feet long, and the east nine hundred. It is to be hoped that the amount of the estimate will be appropriated; for besides the necessity of having such a harbor for the safe navigation of the lake, the surrounding country is very fertile, and the situation at the mouth very good for a town, and nothing seems wanting but a good harbor to make it, in a short time, a place of considerable business.

I have the honor to be, sir, very respectfully, your obedient servant,

WILLIAM SMITH, *Second Lieutenant Engineers.*

General C. GRANT, *Chief Engineer, Washington.*

#### D.

*Annual report of the progress and condition of the United States works at Big Sodus bay, September 30, 1837.*

The entrance of this bay was a half mile in width, and obstructed by a bar of hardpan, gravel, sand, and pebbles; to remove which, and to secure the entrance from obstruction, was the object of the laws of Congress which authorized the construction of piers from both sides of the bay. These piers have answered every purpose of their construction. But the natural decay of the timber has commenced; and to preserve this harbor, that much of the piers from the water's edge upwards should be prevented from further decaying and falling into the channel by the application of stone masonry, for which object an estimate is herewith presented for the year 1838.

The government, in the year 1836, commenced to open and remove the bar between the piers by the use of dredging machinery, and, to the date of the present report, three-fourths of this work has been accomplished, opening a straight channel of fifteen feet in depth of water, leaving the remainder of the deepening and widening to be completed in the year 1838, for which object an estimate is herewith submitted.

The diagram exhibits the work done and to be done. The opening of channels by dredging has become frequent. But this work at Sodus bay has peculiar features, promising durability. The excavation will not fill in again, because there are no elements in sufficient motion to reform a deposit. The bay is an estuary of the lake, and the streams that flow into this bay are so small in comparison with the bulk of the bay and with the dimensions of the channel, that a velocity from that cause would at no time be created equal to the removal of any sand in the bed of the bay; moreover, there is a small current setting alternately from and to both the bay and the lake in every hour of the day, which will be further noticed.

The beacon-light constructed at the north end of the pier is finished, so far as relates to the building, and lantern, and other fixtures. A guarded passage over the pier of 265 yards in length, and a further deposit of stone to secure the foundation pier, are essential, and for which an estimate is submitted.

Since the construction of the piers, an effect has been produced by the motion of the waves and a new current around the head of the pier to the east, which, together with the high water for several years past, have formed an eddy around Point Charles, which has encroached upon the point marked A on the diagram, and which eddy has also extended its effects to the point of sand B of the isthmus, and caused some variation in its position; to prevent an increase of these effects, it is necessary to deposit a pier at each of those points, and for which an estimate is included. During a storm in August last, aided by the eddy just mentioned, a shallow breach was made in the isthmus of 120 feet in width and three deep, which is now filling up by the construction of piers, as marked on the diagram.

To prevent the recurrence to maps and documents I will state the dimensions of Big Sodus bay. This bay extends to the south five miles from its entrance into Lake Ontario, and two and a half miles in width, which forms a sheet of water of twelve square miles, affording an anchorage to any number of vessels of increasing navigation of the lake, in water of from 12 to 40 feet in depth. This bay is surrounded by a fertile country, and a rapidly increasing population, and is now connecting with Lakes Cayuga and Seneca and the river Susquehanna by a canal and railroad, and with an extensive water-power from the lakes into the bay, and will at an early day become an important point of commerce and intercommunication between the western States, Canada, and Chesapeake bay, and the Atlantic harbors.

*Further remarks upon the hourly currents between the piers.*—These currents run alternately in and out of the bay and lake once in every hour; the duration and velocity are influenced by the winds. The causes of these currents are not evident. Perhaps they originate by the combined action of wind, tide, and the current occasioned by Niagara falls. Of the wind—it is certain that, in the absence of the other two supposed causes, the wind would occasion a current corresponding to its course, durability, and strength. As, however, these currents exist in calm weather, the wind cannot be the only cause. The natural course of the water down the lake to its exit in the St. Lawrence is, perhaps, disturbed by the volume of water, the surplus of the upper lakes, that falls over Niagara, and flows violently into the more quiet mass at Lake Ontario, and may thus produce a motion across the lake, and, by reflex action, cause an undulation that may influence the alternate currents alluded to. Of tide—the theory that pertains to the ocean does, of course, produce its ratio of effect in the lakes; the mass in Ontario is more than six hundred cubic miles of water. The flow of tides would produce a sensible influence upon such a volume; the motion of which, interrupted by contiguous shores, would cause an undulatory action of the whole mass, that might be evident in the currents at Sodus bay. Further observations upon these currents and upon the motion of the waters at the commencement of the St. Lawrence, to determine whether the velocity there be equable, might be useful to decide this question.

Respectfully submitted.

J. G. SWIFT.

## E.

OSWEGO, October 16, 1837.

SIR: \* \* \* I resumed the charge of the work on the 17th of June last, but, to save the trouble of making out returns at that time, I received the funds as they were on the 1st of June, and assumed all the payments from that time. Little had been done, except repairing the damages sustained by the works last winter. 1. The pavement, in consequence of the unfinished state in which it was left, and the want of a sufficient quantity of large stone at the foot of that portion of it which was laid down late in the season, was much disturbed and thrown down, and some of the stone carried off into deep water. 2. The east pier was stripped of its flooring and stringers, for about 150 feet in length, and some 20 or 30 cords of stone washed out; and the east pier-head, from some defect of construction of the part below water, settled down on the inner corner about 2 feet, and was otherwise so much injured as to require taking down and rebuilding the upper part of it.

Since I took charge of the work the paving of the mole has been prosecuted and nearly finished, and the work of tearing down the wood-work of the old pier, and substituting masonry for it, has been commenced. About 2,803 tons of limestone for paving mole have been received from contractors since my last report, and about 3,495 tons laid in the mole, which, besides repairing the damages alluded to, has paved about 550 feet in length, or about 19,250 square feet of pavement. There remained on the 30th of September about 110 feet in length of mole unpaved; the materials for finishing it are on hand, and the greater part of it will be finished this fall. There have also been received from contractors about 520 tons of limestone for masonry wall, and about 498 tons of limestone for coping and flagging the top of the pier.

The work of substituting masonry has been commenced at the west end of the west pier. That portion from the shore to the angle, comprising about 230 feet in length, has been removed to a depth of from 3 to 4 feet below the present level of the water, and dry masonry of heavy stones commenced on the timber-work and carried up to the surface, where the masonry in hydraulic lime mortar commences. The exterior wall is composed of heavy limestone, neatly scabbled and laid in courses, and rises 14 feet above the water. The interior wall, against which the vessels lie, is composed of the same materials, and rises 6 feet above the water. The inner wall of the parapet rises 8 feet above the inner portion of the pier, and is composed of common stone from the quarries at this place, neatly hammered and laid in courses. The top is covered with heavy limestone flag, 8 or 10 inches thick, with heavy coping stones 1 foot thick around the edges. I refer you to the plan and profile forwarded with my last annual report. It will form a very beautiful and permanent work.

The plan of the work forwarded with my last annual report contemplated raising the parapet wall 16 feet above the water, and laying the walls of undressed stone. It is now believed that 14 feet is sufficiently high, and that for a wall washed continually by a heavy sea it is necessary to have closer joints than can be made with rough stone, and that, unless the stone be reduced to uniform thicknesses, so as to be laid in courses, the bond cannot be made sufficiently strong. I have therefore introduced the alterations suggested by these considerations into the plan of the work and into the estimate, and submit it for your approval.

On the 30th of September 1,200 perches of masonry had been laid, and 2,500 feet of stone cut. The portion of the wall which is exposed to the action of the waves, about 80 or 100 feet from the angle, will be finished this fall; the rest will be left in an unfinished state for want of funds.

The whole operation, since my last report, involves an expenditure of \$23,681 02; \$22,033 07 of which has been expended since I resumed charge of the work, and for which I now forward vouchers.

The same difficulty has been experienced this year as last, in consequence of the high water in the lake. This has been more felt in commencing the foundations of the walls than in any other part of the work. It has also prevented me from getting out from the quarries the quantity of large stone required for securing the foot of the pavement. Enough, however, has been got out and deposited to insure the paving against any immediate or very serious displacement, but a considerable quantity will be yet required to insure permanency.

The estimate for finishing the work is made with such alterations and amendments of the estimate last furnished as my experience this season in the cost of masonry has suggested. In my last I had estimated too low for the masonry, the labor, lime, sand, and the stone-cutting

*The light-house.*—The new light-house is completed, and was lighted the 15th of July last. The foundation has proved to be a good one; no signs of settling have appeared. The appropriation is entirely expended.

I am, sir, very respectfully, your obedient servant,

R. C. SMEAD, *Lieutenant and Agent for Engineer Department.*

General C. GRATIOT, *Chief Engineer, Washington City.*

E No. 1.

*Estimate of funds required for the operations at Oswego, N. Y., during the year 1838, exhibiting the nature, extent, cost, and probable application, within the time above specified, of the several objects of contemplated expenditure.*

Nature of workmanship, materials, and contingencies embraced in the intended application of the funds estimated for the year 1838.	Extent.	Cost.
Small stone for raising outside of pier, at \$2 50 per cord.....cords..	275	\$687 50
Large limestone for masonry wall, forming exterior perpendicular face of the work towards sea and channel, at \$2 per ton..... tons...	2, 650	5, 300 00
Large limestone for interior wall towards harbor, at \$2 per ton.....do....	2, 000	4, 000 00
Large stone for inner masonry wall of parapet, at \$5 per cord.....cords..	250	1, 250 00
Large limestone flags, eight inches thick, for flagging and coping top of pier, at \$2 50 per ton..... tons...	926	2, 315 00
Large stone posts for fastening vessels to, at \$25 each.....	7	175 00
One-inch copper bolting for dowels to coping, at \$1 25 per foot.....feet...	400	500 00
One by ¾-inch bar iron for cramps to coping, at 13 cents per foot.....do....	2, 250	292 50
Lead for securing cramps, at \$8 per 100 pounds..... lbs....	2, 500	200 00
Water lime, at \$1 50 per barrel..... bbls....	1, 025	1, 537 50
Common lime, at 25 cents per bushel..... bush....	1, 750	437 50
Sand, at 3 cents per bushel..... do.....	17, 702	531 06
Dressing coping stone, at \$1 per foot, (running measure)..... feet...	2, 262	2, 262 00
Cutting limestone for exterior faces of the work, at 37 cents per foot.....do....	13, 434	4, 970 58
Masonry for laying walls, at 75 cents per perch, including tenders.....perch..	6, 328	4, 746 00
Labor of men for completing the paving of the mole, removing the timber-work of old pier, working cranes, unloading vessels, flagging top, &c., at \$1 per day..... days....	12, 000	12, 000 00
Horses for working cranes, at \$80 each.....	2	160 00
Forage for two horses.....		150 00
Per diem allowance of agent, at \$1 per day.....		365 00
Contingencies, 10 per cent. on \$41,879 64.....		4, 187 96
		46, 067 60

F.

ENGINEER OFFICE, *Hudson River Improvement, Troy, N. Y., October 28, 1837.*

SIR: In compliance with the requisitions of the circular of the department of the 15th of August last, I have the honor to present a report of the progress made in the improvement of the navigation of the Hudson river during the year ending September 30, 1837, together with a project for the prosecution of the improvement during the year 1838.

*Progress of the work.*—On the upper section the operations have been very limited, being confined solely to dredging such portions of the channel between the sloop lock and the city of Troy as were necessary to afford temporary relief to the few vessels navigating this part of the river. Two thousand four hundred and twenty cubic yards of coarse gravel and paving stones were removed during the months of October and November, 1836, by the employment of one of the United States dredging machines. Operations were brought to a close on this section on the 5th of the latter month, and not resumed again until the 18th of September of this year, when it became necessary to remove a portion of the obstructions swept into the channel in consequence of a very considerable breach made in the State dam after the breaking up of the ice in the spring. Operations were again brought to a close on the 28th of September, being a working period of ten days, during which time 2,471.70 cubic yards of the same coarse material were removed; making the whole quantity dredged from this portion of the river 7,303.70 cubic yards. The estimate of last year contemplated the construction of the low dike, running from the foot of the sloop lock to the head of Hay island, in order to preserve the channel unimpaired by excluding the introduction of any foreign matter that might be brought over the dam. The limited amount, however, of the appropriation for the year, compared with the estimate, compelled a suspension of this work to another season; it being necessary to apply the means afforded to such portions of the work on the two other sections as seemed best adapted to advance the general interests of the navigation. The failure of the State dam, and consequent influx of coarse gravel into the channel, would seem to indicate more clearly the importance of this dike—the channel not being liable to encroachment from any other source, except the deposit which may be introduced through the tail-races of two or three manufactories situated below the lock, and deriving their supply of water from the level above.

On the middle section operations were continued last year until the close of the month of November, when the rapid formation of ice in the river compelled a suspension of the work. Seven hundred and forty-five feet of the dike at Port Schuyler were completed during the months of October and November, together with the bulkheads forming the opening for the passage of vessels to the dock at that place. The quantity of sand and gravel removed from Washington bar during the same period, and placed in the dike, was 18,653 cubic yards. Two steam dredges were employed—one belonging to the government, and the other to the city of Troy, from the authorities of which it was hired for the purpose. Operations were resumed on this section as soon as the spring freshet had sufficiently subsided to admit of the prosecution of the work. One of the United States steam dredges commenced excavating on Van Buren's bar on the 9th of June, and another on Washington bar on the 24th of the same month; the former, however, was removed to the lower section on the 17th of August, where she now remains; and the latter was employed on the upper section for the short period required for her services above Troy, when she was returned to her berth below. The whole quantity dredged and formed into the dike the present season, ending on the 30th of September, was 56,344.07 cubic yards, making the total quantity dredged from the two bars up to the same period, 91,336.07 cubic yards; all of which, with the exception of 6,208 cubic yards excavated by the Troy city dredge in the fall of the year 1835 from Washington bar, was placed in the dike. On the 30th ultimo this latter work had been carried down to the head of Breaker's island, the grading finished throughout its whole extent, and the revetment nearly laid, requiring but about 1,000 yards of stone for that purpose. At the present date this dike is completed, with the exception of covering a small portion of the revetment with gravel, and securing the foot of the channel slope for two thousand feet in length with rubble stone, which it is expected to accomplish early in the coming month. The length of dike completed this season is 3,541 feet, making the whole length of this structure 4,756 feet, and differing from the estimate of the board of engineers 856 feet, which is accounted for, in part, by the extension of the dike above the head of the dock at Port Schuyler—a change noticed in my former report, and the reasons for the same given in a previous communication. The cost of the work, however, when finished, including the opening in the dike for the passage of vessels, which did not enter into the original design, will exceed but little the estimate of the board. This opening it is feared will lessen in some degree the usefulness of the work, if, indeed, it does not finally jeopard its safety. The water in time of a freshet is drawn with great velocity through the opening, thus diverting the downward course of the current at this point, and consequently diminishing its intensity and the uniform abrading action which it was intended to effect. The bulkheads, although well secured, have already given indications that they will require constant supervision during the prevalence of a flood, in order to counteract the evil which this rush of water through the opening is calculated to produce. It is highly probable, therefore, that the results obtained after the action of the next spring freshet will indicate that this opening should be closed, and that the continuity of the line of dike should be unbroken. A further beneficial effect upon the channel might be produced by running a dike from the north bulkhead, tangent to the most projecting point on the west shore. This, in connexion with the proposed wharfing contemplated to be constructed by a company of individuals from the city of Troy to the bend on the east shore, would render the navigation from the lower part of Breaker's island to the city of Troy as perfect as the nature of the river will admit; a depth of water of at least ten feet would thus be obtained at the ordinary low stage, which is abundantly sufficient for the accommodation of all the trade to this place. As a measure of safety, a portion of the most exposed shore of Hart's island opposite the dike will be revetted this season. This work is not estimated for by the board, but its necessity is obvious from the exposed situation of the island and the alluvial character of its soil. The dike at Port Schuyler was in too unfinished a state last year to judge with any degree of accuracy of its effect upon the bars which it is intended to remove. The deposits being heavier and much less homogeneous than those forming the Overslaugh bars, the action of the water may not be sufficiently great to remove the more weighty deposits, which, in that event, would have to be dredged. Of the capability of the dike, however, to keep this portion of the river free from all future deposits there cannot be the slightest doubt.

On the lower section operations ceased about the same time last year as on the middle section, although a small force was continued until the middle of the month of December in placing the work in a more secure state for the winter. One thousand two hundred and fifty-six feet of the dike connecting Bogart and Beacon islands were completed between September 30, 1836, and the close of operations of that year, leaving 864 feet to finish, nearly midway of the islands—the dike having been carried on from both in order to facilitate the progress of the work. During the same period 20,729.84 cubic yards of sand were removed from the Overslaugh bar and placed in this dike towards its formation. Two of the government steam dredges were employed in this section during the months of October and November, and about the middle of the latter month a third was put in operation after its removal from the

upper section. At the date of my last annual report it was hoped that, before the closing of the river by ice, the dike on this section would be so far completed as to produce a beneficial result to the navigation at this point. This hope, however, was not realized in consequence of the unfavorable state of the season. Fully impressed with the importance of closing the dike before the opening of the river in the spring, an application was made to the authorities of the cities of Troy and Albany for the means of progressing with the work during the winter. This having been granted to a limited extent the work was recommenced on the 3d of January of this year. Recourse was had to a gravel bank on the west shore, near the site of the dike, for a material, which was hauled on the ice in sleds and wagons; by these means the gap was filled to within three or four feet of the top of the dike before the breaking up of the ice in the spring, and the work so well secured as to resist the united action of the ice and flood without sustaining any material injury, although the former was of unusual thickness. The beneficial effects of the course pursued were fully developed after the flood had subsided. Where the greatest obstruction existed last year, opposite the northern reach of the old Overslaugh dam, the water has been deepened seven feet; that is, a depth of water has been attained of eleven feet at ordinary low water where there was only four last season. Below this position, to the head of Beacon island, the terminating point of the dike, the water is not so deep, simply from the fact of its being below the finished portion of the work at the period of the flood; the water, of course, passed freely over the low part of the dike towards the west shore before the freshet had attained within three or four feet of the crest of the work. The consequence was, that the velocity of the water below this point was greatly diminished, and the effect of the flood, as was to be expected, but partial in its operation. The depth of water obtained for this portion of the channel is seven feet at the ordinary low stage of water, being an increase of from two to three feet over that of last year. Operations for the season were recommenced on this section the latter part of April, but not effectively until about the same time as on the middle section.

In consequence of the dis severance of what is called Westerloo island from the main, by the freshet of this year, it became necessary to close the breach thus made, in order to cut off the water from the western passage around this island. The dike, for this object, has been completed, and is 365 feet in length. It is constructed upon the same plan with the dike at the Overslaugh; the material for the purpose was dredged within the eastern line of the railroad wharf at Albany, as being the most convenient place for the work, and, of course, without any benefit resulting to the channel. The cost of the dredging, in this instance, will not, therefore, form a separate item, but will properly enter into the cost of the dike; which being a work created by circumstances, its cost does not form part of the estimate of the board of engineers. The dam connecting Westerloo with Bogart island is completed; its length is 421 feet, differing from that estimated by the board 121 feet in length, and nearly proportionally in cost. The manner of construction is similar to that of the dikes; the only variation being in the additional thickness given to the revetment, and an equality of slope on each side of the crest, being three to one in height. A stone apron of considerable width, on the down stream side, protects the foot of the slope from the action of the water when passing over the crest in time of a flood. The same remark applies to this work, in regard to the dredging, as to the dike at the head of Westerloo island—the sand excavated for the formation of the body of the dam having been taken from between the two islands, and entirely remote from the channel. The object of this work is the accumulation of all the water passing by the city of Albany into the east channel, in order to increase the corroding action of the current on the Overslaugh bars. The dike connecting Bogart and Beacon islands is completed, with the exception of covering a portion of the revetment with sand, and the adjustment of the crest to a uniform longitudinal slope, corresponding to the plane of depression of the surface of the flood. The foot of the channel slope will also be protected with stones, as an additional measure of precaution against abrasion. Eight hundred and sixty-four feet of this dike have been finished this year, making the whole length of the dike 4,324 feet, and exceeding the estimate of the board 724 feet, at an additional cost of about \$19,000. This latter is accounted for, in part, from the different manner of doing the work; from its being an experimental undertaking; and from the many difficulties encountered in its prosecution, which the experience of the past season has enabled us to overcome in the works commenced subsequently. Some progress has been made this season in the removal of Van Wie's pier and the old Overslaugh dam. The latter work, although not estimated for by the board, is absolutely necessary to the formation of a straight channel conforming with the direction of the dike. The salient angle of this dam not only tends to deflect the current towards the opposite shore, thereby creating irregularities in the bed of the river, but, from its proximity to the centre of the channel, must be regarded as a great nuisance to the river navigation. A buoy has been placed opposite the eastern point of the dam, to guard vessels against running upon it. Machinery has been recently constructed for the purpose of removing these old works, which it is intended to do, as far as practicable, by dredging. The cost of raising these dams will no doubt greatly exceed the estimate of the board, being solid masses of timber and stones; the former of which material, at the Overslaugh dam, is strongly connected together with iron bolts. A portion of the shore of Beacon island has been filled in with sand, in order to correct the irregularities of its outline, and thus avoid the eddies which the reaction of the water in its curves would have produced. A further improvement, however, will be required next year. In the latter part of June, the dike running from the lower part of this island towards the west shore was commenced; its direction being nearly parallel with the general course of the opposite or eastern shore. The object of this dike is the removal of the lower Overslaugh bar, and the attainment of a comparatively straight channel to Van Wie's Point; 1,700 feet of this dike were graded on the 30th ultimo, and the revetment for the most part completed. It is contemplated, should the weather permit, to finish from 500 to 700 feet more this season; which, with a range of piling and brushing, that has been carried down on the line of the dike for about 1,500 feet, it is expected will give such direction and force to the current as to open a straight channel into the deep water below Van Wie's pier. Two of the government steam dredges have been employed on this section since the recommencement of the work in the summer; and a third was added from the middle section on the 17th of August. The quantity of sand excavated by the machines during the season, to include the 30th of September, and placed in the several works under construction on this section, was 91,307.98 cubic yards; of which 79,040.83 cubic yards were removed from the Overslaugh bars, and 12,267.15 cubic yards from two other points on the river not immediately benefiting the navigation; making the whole quantity of sand dredged and placed in dikes and dam on this section, to include the 30th ultimo, 176,123.82 cubic yards, of which 163,856.67 cubic yards were taken from the Overslaugh.

The principal embarrassment experienced the present season by vessels navigating the Hudson is attributable to several causes, some of which are not generally understood. For many years after the

construction of the old works, which now embarrass the navigation of the river, the channel, after passing the Overslaugh dam, diverged towards the east shore, running close to the bank of the river on that side; the shore being so bold as to admit steamboats and other vessels to lie close alongside the bank. At the same time an extensive flat existed between this channel and Beacon island. After taking a circuitous course, the channel finally passed near the tail of Van Wie's pier, which runs from the east shore, and thus gained the deep water of what was called the west channel. In course of time the eastern shore was so much worn, probably by the united action of the swell created by steamboats and the abrading force of the flood, as to partially fill up the channel. A new outlet was then dredged near to Beacon island, taking the shortest course into deep water on the west side. This channel is what is termed the "Dug-way." The water having been diverted into the new outlet, and sweeping with considerable velocity around the tail of Beacon island, has reduced the alluvial deposit to its present dimensions, or nearly one-half of its former size. The construction of the dike running from the lower part of this island, necessarily involved the closing up of "the Dug-way" channel; which, from the moment it was crossed, cut off the means of communication with Albany and Troy, by vessels drawing over five or six feet water, except during an unusually high tide brought in by a southerly wind. Vessels seeking an outlet were thus grounded on the extensive flat alluded to; and most of the masters attempted to work their vessels over the bar at the extremity of the dike, as it progressed, in order to reach the deep water sooner. This not only delayed our work some six weeks or two months, but aggravated the evil in consequence of the eddies produced by so many vessels in proximity to each other.

The waste sand from the dike and dredges was carried and lodged around the bottoms of the grounded vessels, creating greater difficulties at every step of our progress. The embarrassment finally became so great as to compel the masters of vessels to resort to the old eastern channel, which, although much filled up since its abandonment, afforded considerable relief to vessels of the lighter draught of water, more especially to steamboats. At the request of the authorities of the cities of Troy and Albany, one of the United States steam dredges was employed about the middle of September in excavating a straight channel parallel with the direction of our dike into the deep water beyond. This has been effected within a few days, and I apprehend but little difficulty will be experienced the remainder of the season at this point. It is proper to remark that the water has been lower in the Hudson this year than has been known since the year 1816. This alone would have produced embarrassment to the navigation under ordinary circumstances; much more so when, by the operation of the dredges, the sand was kept in constant motion, forming an accumulating evil below the work, which the water, at its extreme low stage, was unable to alleviate. As the dike progressed, a depth of from  $6\frac{1}{2}$  to 7 feet water was obtained by the action of the downward current alone. A freshet of about five feet is now in the river, which will, without doubt, have a beneficial effect in correcting any little irregularities that may exist in the channel.

The progress of the work during the season has been entirely satisfactory. The labor on all the sections has been performed by the day, and the work executed in a more thorough manner, and generally at much less cost to the government than last year. The early date at which the appropriation became available has enabled us to accomplish not only much more than could have been effected had the means been withheld until half the working season had elapsed, but with much greater economy. This has been particularly the case on the middle section, where, by taking advantage of the higher stage of water after the partial subsidence of the spring freshet, that portion of the dike passing over the shoal was constructed at much less expense than it could have been done for during the low stage of water.

A table showing the comparative cost of the different descriptions of work on the several sections for each year, since the commencement of the improvement, will be forwarded to the department as soon as it can be prepared.

*Project of operations for the year 1838.*—On the upper section it is proposed to construct 1,000 feet of the low dike running from the foot of the sloop lock towards Hog island, and to excavate as much sand from the bed of the river as will be sufficient for the formation of the body of the dike.

On the middle section it is contemplated to finish the revetting of Hart's island and a portion of the east shore above, extending to near the bend. Neither of these works has been estimated for by the board of engineers, but they are necessary for the security of the shore on that side of the river. It is also proposed to revet Base and Lower Patroon's islands, and, with a view to the removal of "Fish-house shoal," to construct a dike connecting this latter island with Upper Patroon's island. This dike is but partially estimated for by the board; its length will be 6,770 feet, while that proposed by the board is only 2,350 feet, extending about 1,000 feet below the old dam at the Fish-house shoal. The cost of the proposed improvement, however, will not greatly exceed the cost of the dike as estimated by the board, together with that of the dam intended to connect Lower Patroon's island with the west shore; which latter work will be unnecessary should the dike itself be continued to the island.

To remove the numerous shoals in the vicinity of those islands, it is conceived, will require more extensive works than those proposed by the board; a project for which will be submitted at some future day. The annual drawing of this year will, however, illustrate their position and extent.

On the lower section it is proposed to carry down the dike running from the foot of Beacon island to within 450 feet of the west shore, conforming in direction generally with the opposite shore of the river. This would enable vessels, after the removal of Van Wie's pier, and two sunken rocks now incommoding the channel, to run a perfectly straight course from Beacon island to Van Wie's Point. This dike will, when completed, be 6,000 feet in length—differing from that proposed by the board 3,100 feet, and exceeding it in cost about \$14,000. The removal of 700 feet of Van Wie's pier, a portion of the old Overslaugh dam, and the sunken rocks before alluded to, is estimated for the next year. Only the former work enters into the project of the board; but the removal of the two latter obstructions is indispensable to the perfecting of the navigation from below Bogart island to Van Wie's Point. The channel shores of Bogart and Beacon islands it is contemplated to straighten and revet anew.

In order to open a more direct channel from the city of Albany to the Overslaugh, it is proposed to construct a continuous dike, joining on to the main near the railroad depot, and running parallel with the southern line of the same until opposite its eastern extremity; from thence pursuing nearly a straight course to its junction with Bogart island. The construction of this dike will render nugatory the object of the dam between Westerloo and Bogart islands; still it will have had its beneficial effects upon the navigation of the river, by throwing the body of water upon the Overslaugh. It will also greatly facilitate the construction of the dike proposed, by cutting off the cross current towards the west shore. The whole length of this dike will be 6,720 feet, and it will supersede the necessity of the following works estimated for by the board, viz: a dam of 200 feet in length, connecting Westerloo with Small

island; a dike 1,700 feet in length, running from the head of the latter island downwards; and a dike connecting with the head of Bogart island, and running upwards for 1,400 feet. The estimated cost of these works differs but little from the probable cost of the dike intended to be substituted for them.

Two other dikes on the opposite shore, and a modification of the one uniting Bogart and Beacon islands, will be necessary to perfect the improvement of the river between the city of Albany and Van Wie's Point. These works, however, are not proposed to be constructed next year, but will be indicated on the annual drawing in illustration of the general effect to be produced, which is the attainment of a comparatively straight and nearly uniform width of channel and consequent equality in the depth of water—the latter being not less than ten feet at its ordinary low stage. A vessel leaving Albany, with the wind free, will then be enabled to reach the head of Beacon island without any variation in her course.

To accomplish all the work proposed for next year will require the construction of two additional steam dredging machines and twenty-eight lighters, the cost of which is included in the estimate. These were proposed to be built the present year, but the appropriation for the improvement was too limited to admit of any portion of the funds being used for that purpose.

Some legislation seems to be absolutely required in order to preserve the machinery employed from damage by vessels and rafts coming in contact with the dredges and lighters whilst operating on the river. They are, from their position, necessarily very much exposed, and have already sustained injury to a large amount, without taking into consideration loss of time and consequent detention to the work. Considerable damage has also resulted to the improvement from the velocity with which the passenger steamboats have been in the practice of passing the works whilst under construction; the great wave created by their rapid motion through the water sweeps over the unfinished portion of the dikes, destroying the newly-made slopes and otherwise injuring the work and machinery. This may be remedied by restricting the speed of steamboats to six miles per hour whilst passing the works under construction, and at such distances before the approach to and departure from them as may be found necessary for their safety. Another great evil under which the work has labored on the lower section has arisen from the reckless manner in which many of the masters of vessels navigating the river have forced them upon and around the work and machinery, by which our operations have been greatly impeded, and, in some instances, entirely suspended. The pecuniary loss to the government from this cause during the months of August and September has been considerable, and the progress of the work very much retarded. Some law is required by which those disposed to interrupt the operations in the manner pointed out may be restrained, in order that a recurrence of the difficulties experienced the last two seasons may be avoided.

As the present improvement is designed to free the Hudson from existing embarrassments as well as from future obstruction, it would seem desirable that as little foreign matter should be introduced into the river as possible. With this view, a prohibitory law is called for against the deposit of mud or other substance in any part of the river within reach of the current. I have called the attention of the department to these matters, believing that the interests of the improvement require some prompt action on the subject.

The annual statement of the amounts expended and funds available, to include the year ending on the 30th of September, 1837, together with the general statement of appropriations, &c., of each year up to the same period, as also the estimate of the amount required to complete the project of operations for the year 1838, are herewith transmitted.

The annual drawing of the works completed and under construction, with those proposed to be built next year, will be forwarded to the department as soon as it can be prepared.

All which is very respectfully submitted.

HENRY BREWERTON, *Captain of the Corps of Engineers.*

Brigadier General CHARLES GRATIOT, *Chief Engineer.*

ENGINEER OFFICE HUDSON RIVER IMPROVEMENT, *Troy, New York, October 28, 1837.*

## G.

*Memoir—Improvement of the harbor of New Brunswick.*

"For improving the harbor of New Brunswick, by removing the obstructions in the Raritan river, according to a plan reported to the War Department by Hartman Bache."

GOVERNOR'S ISLAND, *New York, October 15, 1837.*

SIR: The improvement of the harbor of New Brunswick, New Jersey, was commenced in April last, upon the plan reported to the War Department, as referred to in the appropriation above quoted.

The obstructions in the Raritan river proposed to be removed in the plan reported consist of a bar just below New Brunswick; rocks a little above South river, represented in the plan reported to be a continuous ledge across the river; a bar about a mile and a quarter below Crab island, called the Middle Ground; and a bar at the mouth of Red Root creek, called the Stakes.

It was proposed, in the plan reported, to remove the bar obstructions by dredging, and the rocks by blasting.

The principal obstruction is the bar near New Brunswick; it is of greater extent than any of the others, and had less water upon it than any of them before the improvement was begun, the depth in some parts of it having been less than four feet at low water. Dredging has been adopted for its improvement, as proposed in the plan reported. About three-fourths of the work required for this bar has been done; vessels drawing five feet can now pass it at low water; when finished, vessels drawing six feet will be able to pass it. The bar is composed, for the most part, of crumbled fragments of slate of an imperfect formation. The course of the channel over the bar is near the bank of the river, which is formed of this slate.

The accumulation of the fragments constantly falling from the bank has caused the bar to be formed. If a channel made by dredging on the opposite side of the river, where the bank is a meadow, could be maintained in other respects, it would be obstructed in but a comparatively limited degree by the accumulation just referred to. But it is believed it could not be maintained, for the reason that the course of the river is such that the currents would flow with greater velocity in the existing channel, and the effect of this would be to cause the alluvial matter suspended in the current to be deposited where there was the least velocity. The existing channel is on the outward side of a bend in the river, where, as in all similar cases, the currents naturally flow with the greatest velocity.

The crumbled fragments composing the bar are heavier than sand, and are not liable to be displaced, except by the freshets that occur on the breaking up of the ice in the spring. These freshets produce, generally, a slight change in the bar, somewhat beneficial, though not of sufficient extent to be worthy of consideration.

I consider the operation of dredging to be adapted only to situations where there is very little or no current, or where the obstruction to be removed by it, on account of its weight or its tenacity, is not liable to displacement by currents existing, or that may be produced by artificial means. The obstruction near New Brunswick may be ranked with the class last stated, and therefore dredging is well adapted to its removal.

But dredging will not answer so well for the bars at the Middle Ground and the Stakes. They are formed of alluvial deposits, liable to constant displacement by the ordinary currents, which have greater velocity at them than at the bar near New Brunswick, and their velocity may be much increased by artificial means.

They might be deepened by dredging, but the effect of the ordinary currents and the waves would soon fill them up again, unless means should be adopted to contract the width of the channel, and in that way to increase the velocity of the current sufficiently to wear away the lighter particles from the bottom, and to keep them suspended until they should be carried to a point where their being deposited would be attended with no injury to the navigation. In that case the dredging would be a superfluous expense, as

the scraping or scratching the bottom, to facilitate the effect of the currents, would answer every purpose, and would cost a great deal less than dredging.

The width of the river is greatly increased below Crab island, and the sudden expansion is one of the causes of the formation of the bar at the Middle Ground.

By the expansion the freshet current is suddenly exhausted, and it is ultimately checked by the sea current somewhere in the vicinity of the Middle Ground. The channel should be contracted so as to carry it beyond that point, and also beyond the Stakes.

The obstruction at the Stakes appears to be produced by the continuance of the ebb tide in Red Root creek for a longer period than in the Raritan; in consequence of which, it meets the flood tide of the Raritan at the mouth of the creek, and the meeting produces still water, which causes any sediment in either stream to be deposited. The position and shape of the bar seem to indicate the result that might be naturally expected from the circumstances just described.

The remedy would be to run a pier from the upper side of the mouth of the creek down the Raritan far enough to produce and maintain distinctness between its current and that of the creek.

The rock obstruction is not a continuous ledge, as it is represented to be in the plan reported. In the soundings made on two occasions with an iron rod, the rocks encountered were discovered in every instance to be detached; they appeared to be fragments, not very large and not deeply imbedded, as was inferred from the fact that the rod readily penetrated the sand alongside of them. I think it would be easy to remove them, and perhaps more so than to find them.

The work carried on this season for the removal of the bar near New Brunswick has been conducted with means furnished by the Delaware and Raritan Canal Company, and under the immediate management of the officers of that company residing at New Brunswick. A very good dredging machine, belonging to the company, was brought from the Delaware river, with two scows, and put upon the work. The machine is worked by a steam-engine of about a six-horse power. Men in the employ of the company, who are accustomed to work of the kind, were also furnished by the company, and their services have been charged for at the same rate the company had to pay them. The fuel consumed in working the engine is also charged at the rate paid for it; and to cover the expense of providing oil, hemp, &c., and casual repairs, and the allowance that should be made for the wear and tear of the vessels and machinery, a daily rate is charged as the equivalent of the value of these several items. The company does not expect or wish to make any profit directly out of the operations carried on, with the means furnished by them, in the manner described. They know the improvements to be made will be chiefly beneficial to them, and from the time they were commenced they have done all they could in aid of their prosecution, and the assistance they have afforded has been essentially advantageous.

I am, sir, very respectfully, your obedient servant,

JNO. S. SMITH, *Brevet Major, Corps of Engineers.*

General C. GRATIOT, *Chief Engineer, &c., City of Washington.*

## H.

LOUISVILLE, *Kentucky, August 2, 1837.*

SIR: My operations in the great raft of Red river were closed on the 25th of May last, excepting the crew of the steam snag-boat "Eradicator," which was transferred to the steamer "Java," to work until the 25th of June, the Java being a much lighter boat, and better calculated to perform a work highly necessary and important to be executed during that period. The Java worked to the date above specified, and arrived at Louisville on the 12th of July. During the last season the raft was removed quite through that part that had been formed previously to the summer freshet of 1836.

On the 25th of May the work was closed. The Java, the headmost boat in the operation, was within four hundred and forty yards of the extreme upper end of the entire formation of the great raft. That part (four hundred and forty yards) that remained unmoved was by no means as dense and difficult to remove as the average of the last fifty miles below. The water is now flowing freely through the whole of the river where the raft was located. In the last year about twelve and three-quarters miles of it were removed, the distance having been ascertained from the field-notes of Mr Alexander, United States surveyor. A canal was also excavated across a narrow point of land, through which the whole channel of the river now flows, and shortens the distance three miles. The bayous that had formerly drained off from the river a very large portion of the water have all been sufficiently stopped, excepting one, (the Willow chute,) which will take in all the timber that now remains at the head of the raft, and which will sufficiently stop it. The water is now operating with full force on the upper section of the river, where the raft was located, a distance of about fifty miles. From the 25th of May to the 25th of June the steamer Java removed nearly all the roots and snags that had then risen to the surface of the water from the Twelve-Mile bayou to the Willow chute, a distance of about thirty miles. The work now remaining to be executed to open a navigation through the whole line of the raft is to remove the four hundred and forty yards left undisturbed on the 25th May last, and what may accumulate from that time until the work is again resumed, which time will depend entirely on the action of Congress. The appropriation of the last session of \$65,000 has all been expended, and exceeded some few dollars. To complete the work will require an appropriation of fifty thousand dollars, viz.: to remove the balance of the raft, and to extract from the bed of the river the snags that will rise from its bottom, by being loosened from the mud by the action of the water on the bed of the river, in the upper fifty miles; and to remove the numerous trees that will fall into the river in all that part of it where the raft was formerly located, (one hundred and sixty miles;) and to fell the trees that are liable to cave in with the banks where the river is now forcing its bed to the original width of the stream, which is occasioned by the action of a powerful current that is now flowing the whole extent of the former location, and which had been excluded from its natural course for centuries. To enable me to accomplish this important work during the next year it will be necessary for an appropriation to be made at the called session of Congress in September.

The importance of the work is so well understood by the department that it is not necessary for me to make any remarks on that subject, notwithstanding I beg leave respectfully to state that this improvement is of the greatest importance to the government in a military point of view. The Red river leads

to, and, by the removal of the remainder of the raft, will open a safe and easy steamboat navigation to the heart of the Indian settlements on the west side of the Mississippi river, as well as to an extensive line of the Texas frontier. The country above the raft is also populating with great rapidity. Its settlers are now shut in from market, which will be of easy access if the remainder of the raft can be removed, which requires nothing but the means to carry on the work. I can now make a calculation, that I am willing to stake my reputation on, that the whole obstruction can be removed in three months after the appropriation is made, if done in the ensuing fall; but if it is postponed to the regular session the appropriation, if then made, would be too late to admit of executing the work during the ensuing winter and spring, and, consequently, must lie over until the fall of 1838. It is impracticable to obtain laborers to execute that work in the summer months. The country where the raft is located affords no labor. The force necessary to remove these obstructions must be taken from the Ohio river. Under all those circumstances, I hope the department will call for and obtain an appropriation sufficient to finish the improvement at the called session in September next. I must be permitted, also, to state further that, in point of economy, it will be some twenty thousand dollars in favor of an early appropriation, so as to enable me to remove the remainder of the raft during the ensuing winter, instead of allowing the work to lie over one year longer, in which time the quantity of timber to be removed will be much increased by the accumulation on the head of the remaining raft.

I am, sir, very respectfully, your obedient servant,

HENRY M. SHREVE.

Brigadier General C. GRATIOT, *Chief Engineer, Washington, D. C.*

---

H No. 1.

MEMPHIS, April 16, 1837.

SIR: The subjoined report embraces such material facts relating to the removal of the great raft in Red river as a careful examination enabled me to collect, and exhibits the present condition of the work, the results produced by what has already been expended upon its improvement, and contains an exact statement of what remains at this time to be accomplished; all of which is respectfully submitted.

That portion of Red river usually denominated the "raft" at the period when the work of improvement commenced, extended from about the mouth of Loggy bayou to a point five miles below the Caddo village—a space of two hundred and fourteen miles.

The precise proportion of this distance occupied by raft it is not possible to ascertain; to estimate it at one-third, it is believed, would be within the true amount.

Any conjecture as to the probable period of its first formation would be uncertain and unimportant; sufficient evidence, however, exists to fix the date anterior to the settlement of the country, and the banks of the river exhibit indubitable proofs that the raft once extended as low as the rapids, within fifty miles of the confluence of Red river and the Mississippi, to which point the back water of the latter stream frequently extends, and there arrests the drift from Red river. Occasionally, even now, when the waters of the Mississippi are higher than those of Red river, rafts of considerable magnitude accumulate at this point. It is not improbable that at this place and from this cause the raft commenced. Once formed, the serpentine course of the stream is such as to secure it against the possibility of removal, except by artificial means or by the slow process of decay. The annual increment has generally been estimated at two miles. This supposition has not been confirmed by facts. When I visited the raft in 1828 it reached within a very short distance of the Cuschatte chute; it now extends three miles above that point, making the average annual increase less than half a mile. The yearly extension of the raft near its present head has been lessened by the immense quantity of drift that is carried into Lake Sheodo through several large bayous, which in that vicinity have broken from the river into the lake. The upward progress of the raft appears less in the aggregate than it would do if estimated by the extent of each year's addition. Occasionally, large portions detach themselves from rafts of recent formation, and, in descending, carry with them, by their weight, such smaller ones as are unable to resist their momentum; thus gathering strength as it descends, the mass moves on until it is arrested by a raft too firmly fixed to give way. In this manner the accumulation of two or three years is sometimes condensed into less space than was at first occupied by the formation of one season.

At the point of impact of the moving and stationary rafts the logs are subjected to an immense pressure, and consequently assume a very compact form; this, I doubt not, is the origin of what is termed a "sunken raft," the timber of which is confined below the surface of the water, in many places filling the river to the bottom by the pressure thus applied and not by its specific gravity.

This is made manifest in its removal, when the extraction of one large and strong log not unfrequently liberates a score of others before unseen, having been held down by the weight of the timber heaped on them.

The raft region may now be considered under three divisions, viz: that from which the raft is entirely removed, extending one hundred and forty-five miles from the commencement; that in which the raft is cut up and pulled to pieces, but not floated off, thirty-three miles in extent, and that which has not yet been commenced, six miles in extent.

Fully to understand the situation of the obstructed portion of the river at the time the work was commenced, it will be necessary to premise that each raft acted as a dam, and expelled the water from within the banks in proportion to the solidity of the raft. The water thus forced from the channel, after passing through the extensive lakes which lie parallel to the general course of the river on each side, finds its way back into the bed of Old river, only to be again expelled by the first raft it encounters, and ultimately falls in entirely below the raft through Cross bayou, Bayou Pierre, Cuschatte bayou, and numerous other smaller inlets.

The expulsion of the water from the channel caused it to contract, and willow bars have formed on one or the other side of the river throughout nearly the whole raft region.

The removal of the obstructions from the bed of Old river opened successively, as it progressed upwards, the mouths of these several inlets. The refuse of the raft was, as far as practicable, placed in the outlets, thus augmenting at each step the volume of water until it reached Cross bayou, the highest

tributary of any importance. To convey off this enlarged stream, a corresponding increase of the channel is required. If this enlargement could be effected by the removal of the willow bars, little additional labor would be required upon that portion of the river from which the raft has been removed, since these bars, being covered with a small growth, their caving in could not seriously injure the navigation.

This, unfortunately, is not the case; the willow bars are generally points; the caving is in the bends directly opposite to these points, where the growth of timber is of the largest dimensions, and forms, when it falls in, a dangerous obstacle. From the mouth of Bayou Pierre, upwards, the banks are giving way under the action of the current; this furnishes a strong evidence of an increase in the quantity of water in Old river, near the foot of the raft. Another, equally conclusive, is drawn from the fact that streams which, before the commencement of the improvement, flowed from Bayou Pierre into Old river, now run in the opposite direction, carrying off a portion of the surplus water from Old river. These outlets will relieve the banks until the channel has become sufficiently large to contain the stream.

The presence of a snag-boat will be necessary in those portions of the river which have been cleared of rafts, as well to remove the large trees which fall in, as to break up the small rafts that are constantly forming from the descending debris of the large one above. These small rafts are easily removed and are slowly progressing down the stream as they are occasionally detached and set in motion by the passage of a boat. At the commencement of this work there was little or no current; and in all cases that portion of clear river contained between the foot of a raft and the mouth of the inlet next below was either dead water, or had a current so sluggish as to be unavailing in carrying off the detached masses of raft as they were disengaged by the boats. The loosened logs could consequently be disposed of in no other way than by towing them out of the stagnant water or by drawing them on shore or into the island chutes. Either alternative was laborious and slow; the latter expedients were adopted generally.

Much of this timber, by a subsequent rise, floated back into the river, and had to be removed the following season; and as it was not cut into short pieces, it is still occasionally found obstructing the navigation and aiding in the formation of small rafts that will render further labor necessary on that part of the river from which all obstructions have been once removed. Merchant boats are constantly passing and repassing, and will prevent the formation of large rafts; the trees which fall in with the banks can only be removed by the snag-boats. The next portion of the river is that in which the raft has been entirely loosened and the logs cut up, but which remains to be removed by the joint influence of the boats and such current as, it is hoped, will soon find its way from the head of the raft.

With a view to secure in the bed of Old river all the water that percolates the raft, the outlets below have been as well stopped as the use of imperfect materials would admit; much water which transpires through the raft is still carried off by Willow chute and Benoit and Jake's bayous. Although the river above the raft is high, that part which lies in it has experienced but little change. Cross bayou, which brings the largest volume of the water from the head of the raft and discharges it into Old river at its foot, backs up the water of Old river to the present foot of the cut-up raft; here it is likely to remain until the fall of the water shall create a current, or the opening of the raft above shall admit a head of water.

Nearly the whole extent of this section of the river is covered with logs and timber cut up short and divested of all roots or limbs, and entirely freed from anything that might retard its course down; nothing now is wanting but a current to carry it off, and this is daily increasing. The removal of a few yards of solid raft, at the point where the boats are now engaged, caused a fall of eighteen inches in the water above it, and a rise of six below. This is a most flattering indication; and as the remaining parts of the raft, with few exceptions, are of more open formation, a sufficient current to remove the cut-up raft may be created even sooner than is expected. That there must ultimately be a strong current is evident from the fact that above the raft the banks are now overflowed in places, while immediately below it, in Old river, they are seven feet above water. Following on down Old river to Cross bayou, which brings in the water forced out of the river at the head of the raft, and we find but three and a half feet banks. This height of bank continues for some distance down.

There was a rise of several feet coming down from the raft which is a favorable circumstance.

There remain but six miles from the point at which the boats are now operating to the head of the raft; of this nearly one-third is clear river; so that there are in reality but little more than four miles of raft. With the exception of a small portion at the lower extremity, this part of the raft is comparatively loose, and admits of the passage of much water.

The head of water raised by the raft gives a fine current where the boats are now at work, and materially aids the operation by carrying off the refuse as fast as it is extracted from the raft.

From its more recent formation, the timber of this part of the raft is sounder, and consequently more difficult to cut or saw; but this is overbalanced by its being less compactly jammed together; so that, all things considered, the progress of the work is likely to be greater here than it was lower down the river. Ten and a half miles have already been accomplished since December; it is, therefore, probable the work will be completed this season before the 25th of May, at which period the engagements of the hands expire. In this part of the raft there are several chutes putting out on the west side, carrying off into Lake Sheodo a large portion of the water of the river.

These will be closed as soon as practicable, by which a very considerable accession of water will be had. Cuschatte, the most important of these chutes, was, at the time of my first examination, in 1828, above the head of the raft, which now extends three miles beyond this outlet. The effects of the raft in raising the water are nowhere more apparent than in this region; banks that are now overflowed were, in 1828, several feet out of the water, which was then about the same stage as at present.

This effect is also manifest in those parts where it has been removed.

Places which in 1828 were overflowed, now that the obstruction which caused the water to rise has been taken away, are entirely above high-water mark.

This is particularly observable below Coates's bluff. In addition to the removal of the remaining portion of the raft, there is work to be done near the lower bluff, at the head of Bayou Pierre. The river above this place passes along under the bluff, nearly to its lower extremity, where it deflects somewhat to the north, while the bluff makes about an equal deflection to the south. The river continues its new course for a mile and a half, then makes a short turn and flows back in a direction nearly parallel to its former course until it strikes and is reflected back from the bluff at the point where Bayou Pierre leaves the river, assuming a direction again parallel to its first course.

At a distance of about a mile from the bluff, in descending, the channel approaches within forty-two yards of a point on the river a mile above the bluff; this is precisely the place at which it makes the first-mentioned turn. To cut across this neck is a work of small magnitude; the advantages are great. Besides saving two miles in distance, it would be the means of withdrawing a large portion of the water from Bayou Pierre, which, it will be recollected, leaves the river just where it strikes the bluff. It will be the means also of avoiding two very sudden and difficult turns; and, by throwing an increased volume of water in Old river, will facilitate the enlargement of its dimensions, thereby improving the navigation, and decreasing the tendency which now exists to the reformation of rafts in narrow parts of the channel. Bayou Pierre, from its position, carries off a large body of water—perhaps nearly one-half of the whole quantity in the river; and this water does not again return to the channel until within fourteen miles of Natchitoches. An attempt was made to stop Bayou Pierre, but with only partial success.

The proposed cut-off will be more effectual.

It is extremely desirable that this work be completed during the present season, since upon its accomplishment depends, in a great measure, the settlement of an extensive and exceedingly fertile region. Independent of this consideration, there are others of sufficient weight strongly to urge the necessity of finishing the work this year.

The accumulation of raft during the present high water will add to the expense if deferred. I would respectfully suggest that it appears to me indispensable that a snag-boat remain constantly on the river until the whole of the logs composing the raft shall have been floated off, and the current shall have enlarged the present channel till it is capable of holding the water which must pass through it. Until this is accomplished, there will be a constant accumulation of small rafts, formed by the drift lodging against the trees that have fallen in. Unless a boat be kept in the river during the summer, to break up and disperse these small rafts while they are of inconsiderable extent, they will be so consolidated before the winter navigation commences as to give much trouble in their removal, and cause serious difficulty in the navigation. The new boat "Eradicator" is well calculated for this duty, and, with a suitable crew, would render essential services during the season.

It is difficult to form a just conception of the magnitude of this work, or fully to appreciate the important results that are to flow from it.

The river is navigable more than a thousand miles above the raft, and through a region not surpassed in fertility by any on the continent.

This extensive country is comparatively unsettled; its vast resources and wealth remain to be developed. Although enterprise has pushed forward, notwithstanding the apparently insuperable barrier opposed by the raft, yet hundreds are looking to its removal as the signal for entering the country. The success of the undertaking, once involved in doubt, and the permanent advantages which must result from it, are no longer matters of uncertainty.

The indefatigable industry, zeal, and perseverance of the superintendent have triumphed over difficulties well calculated to intimidate him; bayous have been closed with masses of timber; islands of huge logs, for centuries imbedded together, and covered with living trees, have been removed; the timber composing them has been dragged on shore, or, being cut up or cast upon the current, has passed away.

Indeed, every mile in ascending bears evidence of the immense labor bestowed upon its improvement. This work will be rendered permanent by keeping a snag-boat on the river a year or two after the removal of the raft. By that time the channel will have enlarged itself, the refuse from the old raft will have passed off, and such banks as were liable to cave will have fallen. When all this shall have been accomplished, there is no reason to apprehend the recurrence of a raft on Red river more than on any other of similar extent.

I am, sir, very respectfully,

A. H. BOWMAN, *Lieutenant of Engineers.*

General CHARLES GRATIOT, *Chief Engineer.*

#### H No. 2.

#### *Estimate of funds required for the removal of the great raft in Red river for the year 1838.*

1. For one steamboat, fitted up with machinery and tools complete .....	\$15,000 00
2. For salary of two assistant superintendents six months, at \$125 per month each .....	1,500 00
3. For salary of three assistants and one physician six months, at \$100 per month .....	2,400 00
4. For four steam engineers six months .....	1,500 00
5. For two carpenters six months, at \$50 .....	600 00
6. For two blacksmiths and four overseers six months, at \$45 per month each .....	1,620 00
7. For 175 men six months, at \$20 per month .....	21,000 00
8. For subsistence for 195 men six months, at \$8 50 per month each .....	9,945 00
9. For cordage, lumber, iron, and steel .....	5,000 00
10. For wood for two boats (same time) .....	4,000 00
11. For engine stores for same .....	635 00
12. For two keel-boats, fitted up for quarters for men .....	1,000 00
13. For repairs and addition to tools, &c. ....	1,800 00
14. For contingent expenses .....	4,000 00
	70,000 00

HENRY M. SHREVE, *Superintendent, &c.*

LOUISVILLE, *Kentucky*, November 8, 1837.

## I.

LOUISVILLE, *Kentucky*, November 8, 1837.

Sir: By reference to the monthly reports of the masters of the steam snag-boats Helepolis and Archimedes, on file at the department, it will be seen that 1,894 snags have been removed from the bed of the Mississippi river, and that 18,141 trees have been felled from its caving-in banks during the year ending 30th September, 1837. On the 14th of November last the snag-boat Archimedes was stove by raising a large snag, which sunk that boat, and of which the department has heretofore been advised.

The appropriation made by act of Congress of the 2d March, 1837, for replacing that boat has been applied to that service. A new boat has been built, which was launched on the first day of this month, and will be finished and ready to proceed to work early in December.

The steam snag-boat Helepolis continued her operations from the 1st of October, 1836, to the 6th of March, 1837, when that boat was run up to New Albany, Indiana, where her engines were thoroughly repaired and removed from the old hull to a new boat built by authority of the department. The new boat left New Albany on the 22d of July last, and proceeded to work in the Mississippi river, where she is now operating. The new boat has been improved in her construction, so as to add to the facilities in removing snags at least twenty-five per cent., which will be seen by reference to Captain Smith's report of work done in August and September last.

I must again beg leave to recommend the felling of timber from the caving banks of the Mississippi river. Time and experience have sufficiently proved that that operation is very beneficial to the improvement of the navigation, or, rather, to prevent the accumulation of obstructions in its channels. The department has, however, had the opinion of several examining officers of the corps of engineers, who all concur with me in opinion on that subject. I therefore hope that provision will be made for resuming that branch of the work, as per my estimate for next year.

The losses by snags in the Mississippi river during the past year have been but trifling; and those which have occurred have been occasioned by boats being run too close to the shores or heads of islands. There are now no obstructions of consequence in that river, except such as accumulate from year to year.

The work in the Ohio river was resumed by the steamers "Java" and "Souvenir" in September, 1836, and continued until the 24th of November following. In that time the dam running from Dog island to the head of Cumberland island was raised to a sufficient height, about one-half the distance across the river from the head of Cumberland island. The channel at the head of that island has been much improved during the last year by raising the dam, and the action of the current on the sand-bar through which it passes. No difficulty has occurred in passing that point by boats that could get over the other shoals above or below its location. The dams at the Three Sister islands, and at Scuffletown bar, stand firm, and the channels over the shoals at those places are of sufficient depth for all boats to pass without touching the bottom. The dam at Three-Mile island has not yet been finished; still that shoal is by no means so difficult to pass as it formerly was. The dams at French island require to be raised, particularly that on the Kentucky shore.

I have not been able to resume the works on the Ohio river this year for want of sufficient appropriation. The sum appropriated the last year, applicable to the improvement of the Ohio and Mississippi rivers, was \$60,000. To rebuild and refit the snag-boat Helepolis required over twenty thousand of that sum. The balance will all be required to work that boat and the Archimedes to the first of March next.

The steamboats formerly bought for the improvement of the Ohio river are all worn out in that service and the Red, Cumberland, and Arkansas rivers, in some of which they were constantly in operation since they were purchased in 1832. To resume the work on the shoals of the Ohio river below the falls, it will be necessary to have two new steamboats, with the necessary small boats to carry rock, quarter men, &c. I must beg leave to recommend that sufficient appropriations be made for recommending that work at the first low water next summer. There is now no longer a doubt of the practicability of deepening the channels of the Ohio river over the bars, so as to afford at least three feet six inches water at its lowest stage, from the Mississippi to Louisville. The works at the Grand chain, Cumberland island, Three Sisters, and Scuffletown bars, are a sufficient test of the entire success of the plan of wing-dams. Those were formerly the four worst shoals on the Ohio river. Three of them, the Chain, the Sisters, and Scuffletown shoals, where the first experiments were made, are now unheard of as shoals in the river. The fourth, Cumberland island, where so much difficulty existed during the progress of the work, and for which I was so much abused by the boatmen, is now a good channel; and during the low water of the past summer no difficulty has existed, nor do I believe it will ever be a shoal hereafter. Still, that work is not yet quite completed. It is necessary to add some rock to the dam to elevate it two feet higher, four hundred yards in length, on the end that joins Dog island.

To enable the superintendent to proceed with this plan of deepening the channels of the Ohio river below Louisville, in 1838, it will require an appropriation of at least \$80,000; and to continue the improvement of the navigation of the Mississippi river, from the mouth of the Ohio to New Orleans, \$50,000, making an aggregate sum for the improvement of the Ohio and Mississippi rivers, from Louisville to New Orleans, of \$130,000, and for which I have submitted an estimate as much in detail as the nature of the work will admit.

I am, sir, very respectfully, your obedient servant,

HENRY M. SHREVE, *Superintendent, &c.*

Brig. Gen. C. GRATION, *Chief Engineer, Washington.*

## I No. 1.

*Estimate of funds required for continuing the improvement of the navigation of the Ohio and Mississippi rivers, from Louisville to New Orleans, during the year 1838.*

1. For safe-keeping and repairing the steam snag-boats Helepolis and Archimedes, from the 1st of March to the 1st of July, 1838.....	\$4, 000	
2. For wages of crews of same boats, from the 1st of July, 1838, to the 1st of March, 1839, at \$1,000 per month each.....	16, 000	
3. For subsisting crews of same boats eight months; eighty men, at \$8 50 per month each.....	5, 440	
4. For wood required for the same boats eight months; 5,000 cords, at \$2 75.....	13, 750	
5. For engine stores, iron, lumber, and cordage, for the same boats eight months....	4, 000	
6. For paying and subsisting fifty men four months, to fell timber on the caving-in banks of the Mississippi.....	6, 810	\$50, 000
7. For purchasing two steamboats to tow stone boats to build dams in the Ohio river	24, 000	
8. For thirteen boats to carry rock and quarter laborers in on the Ohio river.....	6, 500	
9. For wages of two assistants, at \$125 for four months.....	1, 000	
10. For wages of fourteen overseers and mechanics.....	3, 000	
11. For wages of two hundred and fifty men four months, at \$20.....	20, 000	
12. For subsisting two hundred and sixty-six men four months, at \$8 50.....	9, 044	
13. For 2,000 cords of wood, at \$2 50.....	5, 000	
14. For iron, steel, and tools, to be added to the stock on hand.....	5, 000	
15. For engine stores, lumber, and cordage.....	1, 456	
16. For contingent expenses, hospital stores, transportation, my allowances, &c.....	5, 000	80, 000
		<u>130, 000</u>

HENRY M. SHREVE, *Superintendent, &c.*

LOUISVILLE, *Kentucky, November 8, 1837.*

## I No. 2.

MEMPHIS, *August 31, 1837.*

SIR: In conformity with your instructions, I have twice during the past year visited and inspected the works progressing under the superintendence of Captain H. Shreve, for improving the navigation of the Mississippi and Ohio rivers.

The same policy has been pursued in prosecution of these works during the current year that has hitherto been observed, and with the same satisfactory results.

My first inspection from Memphis to New Orleans was in November, 1836, and from the same point to Louisville in December of that year. The Helepolis and Archimedes commenced work in October, and continued, the first until the 7th of March, 1837, and the latter until the 14th of November, when she was snagged and sunk.

During this period the two boats removed from the bed of the river 1,136 snags; and cut from the banks 17,214 trees, which were likely soon to fall. The new boat Helepolis resumed work in July, and by the end of August had removed 334 snags and cut 927 trees. At my second inspection, in March, 1837, the results of the winter and fall work of these boats was manifest in the increased security of navigation. The snags which had accumulated from the caving in of the banks during the spring flood had been generally removed.

After their return from the Red river, the "Eradicator" and "Java," assisted by two machine boats, were engaged on the Arkansas river. On the 1st of September their books exhibit evidence of the removal of 252 snags from the bed of the river, 198 trees felled from the banks, and 823 logs removed from under the banks. I have seen nothing to change my views as to the propriety of continuing the cutting of trees on the banks. A careful observation of the coast, from New Orleans to Baton Rouge, has served rather to confirm the opinion hitherto expressed, that the Mississippi river can be entirely freed from snags only by removing the trees from such points as are liable to cave.

The river from New Orleans to Baton Rouge is not absolutely free from snags, but they form an obstacle to the navigation too unimportant to merit much attention.

The banks of this part of the river have assumed a more gradual slope, and are consequently less liable to cave than those parts where they are perpendicular and loaded with a growth of stupendous trees. In such places the current impinges against the shore with full force, and rapidly undermines and causes it to fall in, together with its covering of trees.

As the settlement of the country advances, the navigation of the Mississippi will improve.

The time is not far distant when, from the mouth of the Ohio to New Orleans, the navigation will be as safe as it now is from Baton Rouge, and from the same cause, viz: the clearing of the banks. In the meantime the usual annual appropriations will serve to keep it clear from snags. I have visited the works on the Ohio but once during the past year, and as the operations had been limited since the former inspection, it was deemed unnecessary to repeat the visit. The channel at Cumberland island was gradually improving.

That at the Sister islands was in perfect order. The dam at Three-Mile island not having been completed, the desired improvement in the navigation had not been realized at that point. Flint island remained much as it had been the previous year. This bar has during the present low water been worse than any bar on the river. It cannot be permanently better until the works already recommended for its improvement shall have been completed. My duties have not permitted me to visit the Cumberland river.

At those periods when my engagements on the Memphis and St. Francis road would have permitted me to be absent for the purpose the Cumberland has been too high for inspecting the works.

Such has been the case during the current month, when it was my purpose to have visited that river.

I am, sir, very respectfully, your obedient servant,

A. H. BOWMAN, *Lieutenant of Engineers.*

General CHARLES GRATIOT, *Chief Engineer.*

K.

LOUISVILLE, *Kentucky, November 13, 1837.*

SIR: The work for improving the navigation of the Arkansas river was commenced in August last by the steam snag-boat "Eradicator," steamer Java, and two machine boats. By reference to the monthly reports of the captains of those boats, on file at the department, it will be seen that during the months of August and September there were removed from the channel of that river 553 snags, 3,068 logs and trees cut away from under its banks and on bars, and 5,015 trees felled from off the caving-in banks.

The laborers employed on the boats in that river have been unusually sickly. The Java, with the machine boats, still continue the operations, and will continue to work until the spring rise in that river, at which time they will be laid up during the high water. The steam snag-boat Eradicator continued her operations up to the 27th of October, ultimo, when she run up to this place for a new crew and a fresh supply of stores; the crew having been shipped in July last up to the 1st instant, it was then contemplated to send that boat to the Red river raft in this month. That boat is now refitting and shipping another crew to work either for the improvement of the Arkansas or Red river, as directed, and will be ready to proceed to either river by the 20th instant. The steam snag-boat "H. M. Shreve," built by Lieutenant John Sanders for the Ohio river, is also preparing to proceed to the Arkansas river, and will be ready in a few days to proceed to work. I am of the opinion that nearly all the most dangerous obstructions in that river, from its mouth to Little Rock, will be removed during the ensuing winter and spring. Still there will remain much work to be done in that river to render its navigation safe. Its banks cave in with every freshet to great extent. Consequently the accumulation of obstructions is very great, and will require more or less work by snag-boats in the channel for many years to come. It is also necessary to fell the timber on its banks, to prevent the rapid accumulation of snags in its bed. I would therefore beg leave respectfully to recommend a further appropriation at the approaching session of Congress of \$40,000, for which I have forwarded a detailed estimate of funds required for that purpose for the year 1838, which I hope will be approved of by the department and appropriated by Congress.

I am, sir, very respectfully, your obedient servant,

HENRY M. SHREVE, *Superintendent, &c.*

Brigadier General C. GRATIOT, *Chief Engineer, Washington.*

K No. 1.

*Estimate of the amount of funds required for continuing the improvement of the navigation of the Arkansas river during the year 1838.*

1. For refitting the steam snag-boat Eradicator.....	\$4, 000
2. For refitting machine boats and furnishing quarters for laborers.....	1, 500
3. For working the steam snag-boat Eradicator six months.....	15, 000
4. For working the machine boats and felling timber from banks.....	8, 000
5. For working steam snag-boat Shreve four months, and refitting the same.....	10, 000
6. For contingencies.....	1, 500
	40, 000

HENRY M. SHREVE, *Superintendent, &c.*

LOUISVILLE, *Kentucky, November 13, 1837.*

OFFICE OHIO RIVER IMPROVEMENT, *Pittsburg, November 4, 1837.*

SIR: In obedience to the circular of the Engineer department, dated 15th August last, I have now the honor to report the progress and state of the operations for the improvement of the navigation of the Ohio river above the falls, on the 30th September, 1837, and to transmit herewith forms Nos. 1, 2, filled up according to the requirements of engineer order No. 4, some drawings of the work and machinery, and an estimate of the funds required for the service of 1838.

The first appropriation for the present improvements was made in 1835, at which time there were neither surveys nor estimates exhibiting the nature of the obstructions, the character of the improvements, or their probable cost. The disposition of this appropriation was placed under the charge of Lieutenant Dutton, who made a reconnoissance of the river, the result of which was reported to the department, with a table exhibiting the number of shoals, the depth of water and nature of bottom, and drawings of some of those points which were considered to present the greatest obstructions to the navigation. The general plan of improvements proposed was to concentrate the water into one volume when divided into several channels, and the removing of snags, logs, and detached rocks, from the bed of the river. Early arrangements were made for effecting the removal of the snags. A drawing of the boat machinery used for that purpose accompanies this report. Five such boats, with the necessary equipments

and tenders, now belong to the river service. In addition to these, a steam snag-boat was constructed this year, so that there is a sufficiency of that kind of machinery to remove all the remaining rocks and snags.

The examination of the river, made by Lieutenant Dutton, was necessarily deficient in many of the details of a survey, which preliminary is of vital necessity in works requiring plans adapted to the irregular features of the bed and channel of the river. Last year the requisite instruments for making a survey were ordered for the works, some of them were received in time for me to have it commenced this summer.

The river has been at a more uniformly high stage this season than during any of the previous ones since the first commencement of the operations for the improvements. Indeed, there has been no extremely low water since the summer of 1833. Throughout the past summer, steamboats either have or could have left this port on any day, the river not having been lower than two feet. It seldom gets below eighteen or twenty inches in the channel. However, the best information I have been enabled to obtain shows that it has been down as low as fifteen inches. It is at this low stage that the best and most satisfactory survey could be made, the bars being then well defined and the water clear. Most of these bars are susceptible of and require improvement. The velocity of the current at each ripple, the fall of the surface, the depth of water, and the area of the cross section, give the elements by which a comparison can be drawn between them. It is found that the shoalest water is at those points where it is most spread; when it is concentrated it is always deep enough, and never so strong that boats cannot ascend it. I doubt whether there is a point above the falls where the surface velocity will exceed five miles per hour. It is not solely the swiftest current that presents the greatest resistance to the passage of ascending boats. The three principal elements of resistance to ascending boats are: 1. The velocity of the stream; 2. The height to be overcome from the fall of the surface; 3. The shoalness of the water. The exact manner in which these are related and combined in making the resistance would be a beautiful but most intricate problem to solve. The steamboat Ploughman, having been found unsuitable for the service, was sold. I had a light draught stern-wheel boat built, particularly adapted to it; this boat has been used to advantage in towing machine boats, stone scows, &c., transporting materials, and in my examination of the river and the works. In January last I made favorable arrangements at Louisville for building a steam snag-boat; the boat was launched in May, the engine put up in June, and all the machinery finished in July, so that on the 1st of August the steam snag-boat "H. M. Shreve," (named in compliment to the worthy and ingenious inventor,) commenced work under an experienced superintendent, Captain J. R. Dillingham. The boat answered my most sanguine expectations; the engine and machinery all working perfectly well. This boat is of sufficiently light draught to work up as far as Letart's falls, drawing but little over three feet. The removal of snags above the falls of the Ohio presents a difficulty and expense not met with in the Mississippi. I refer to the disposition of the root of the snag. In the Mississippi it is dropped into a deep pool, where it immediately imbeds itself in the mud; but in the Ohio there is seldom an opportunity of thus disposing of it; we have to carry the roots ashore, and blast them with powder, so as to prevent them again forming snags. When the root has thus to be disposed of, it causes delay and expense equivalent to double of that when it is dropped into a pool. The removal of large snags in the Ohio will average in cost about fifteen dollars apiece.

The classification of the obstructions removed by the boats is into snags, which are trees anchored by their roots; logs, trees without the root; limbs or branches, parts of a tree; stumps; rocks, varying in size from ten to one hundred cubic feet; piles of drift, consisting of several snags and trees lodged in one place; and sunken boats, generally flatboats laden with coal. The operations for the improvement of the Ohio river are divided into three classes: 1st. The removal of all snags, logs, rocks, and sunken boats from the bed and channel of the river. In addition to which, it is hereafter contemplated to clear away all the leaning and fallen trees from the banks. 2d. The construction of stone dams to concentrate the water into one channel, when it is divided by islands, or from other causes spread over too much space. 3d. A survey of the river, comprising a complete hydrographical and topographical survey, giving the bars, channel, and shores; ascertaining the soundings and velocity of the current; and exhibiting everything necessary for the most judicious location of the dams, and the formation of the best-adapted project of improvements. The removal of snags, &c., was carried on with the steam snag-boat and the machine boats worked by manual power.

The steam snag-boat commenced work at Louisville on the first of August, and worked up as far as Letart's falls, removing only the largest and most dangerous snags from the channel. On the 30th September Captain Dillingham had removed 415 snags, seven branches or tree-tops, two sunken flatboats, and four piles of drift—making a total of 428 obstructions, at a cost of \$4,048 28, being at the rate of \$9 44 for each obstruction. The monthly expenses of this boat are about \$2,000. The most of these snags were very large, many of them having a diameter of six feet at the butt, and being over one hundred feet long.

Machine boat No. 2, under Captain Benjamin Crooks, an experienced pilot and excellent manager of hands, was worked to great advantage. He started in June and worked below Marietta; on the 30th September, having got down as far as Letart's falls, he had removed 317 snags, 85 logs, 20 stumps, 10 rocks, 793 branches, and six sunken boats—making a total of 438 obstructions, (not including limbs,) at a cost of \$3,419 08, being at the rate of \$7 80 for each obstruction.

Machine boat No. 1 commenced at Wheeling on the 1st August, and by the 30th September had got as far down as the Long Reach, having removed 106 snags and logs, seven stumps, three rocks, and two sunken boats—making a total of 123 obstructions, at a cost of \$2,595 43, being at the rate of \$21 10 for each obstruction.

Machine boat No. 3 worked between Wheeling and Brown's island, and on the 30th of September had removed eight snags, sixty-three logs, seven stumps, and fourteen rocks—making a total of ninety-two obstructions, at a cost of \$1,959 11, being at the rate of \$21 29 for each obstruction.

Machine boats Nos. 4 and 5 were not worked this season, being intended to work in low and clear water so as to remove the rocks and logs from the bottom of the river. It was deemed inexpedient to start them out, as the river continued turbid and high.

The steam snag and machine boats were continued at work during the month of October; all the machine boats, boats for quarters, stone scows, &c., are at this time laid up for the winter, in the very safe and excellent harbor of Steubenville. The steam snag-boat will be sent to the Arkansas until she is again required above the falls. From the commencement of the improvement up to the 30th of Sep-

tember, 1837, there have been 3,303 obstructions of various kinds removed from the channel of the river by means of the boats.

In his report of 1835, on the improvement of the Mississippi, Lieutenant Bowman says: "It is a well-established fact that snags do not move far from where they first fall in, the weight of the earth attached to their roots serving as an anchor. It is also well established that trees which once float seldom form snags. Admitting this, it is sufficiently evident that, if the banks are once cleared, there can be no subsequent formation of snags." He estimates the average cost of removing each snag, taken out of the Mississippi in 1834, at \$8, and in 1835 at \$13, the cost increasing as the number in the river is diminished.

His remarks have been confirmed by my own observation on the Ohio. Therefore the cutting down and clearing away all leaning and fallen trees from the banks will hereafter form an essential part of the improvements on the Ohio above the falls. There will be more of this kind of work necessary between Marietta and Maysville than on any other part of the river. The steamboats Baltimore, Roanoke, and William Hulbert, have been sunk by snags during the last year. Several other steamboats have been seriously damaged by running against them. It would be almost impossible to ascertain the exact number of flatboats lost, but there have been a great many.

The construction of the dams at Brown's island for concentrating the water has progressed very favorably and with the most satisfactory result in deepening the water in the channel down the Virginia chute. The bar in this chute, which was heretofore the shoalest in the river, has now more water over it than there is at many other points. The increase in depth of water from the concentration by the dams is between eight and twelve inches. The current has not been increased more than a quarter of a mile an hour at the swiftest place, the greatest velocity being now  $3\frac{3}{4}$  miles per hour. These are the only dams that have yet been attempted. The success is, however, sufficient to establish the full efficiency of the plan for improving the navigation at other points. The accompanying maps and drawing will give a good conception of the character and objects of the works at Brown's island. The wing dam at the middle bar was commenced in September, 1836, and finished in August last. It is 2,246 feet long, between three and four feet high, with a base of about twenty feet, containing 3,158 perches of stone, which was quarried and transported to the dam at a cost of \$11,812 79, being at the rate of \$3 74 per perch. This cost includes the purchase of boats and tools, which are applicable to other works. The stone in this dam is generally small, of such dimensions that two men could easily handle it. It was cast promiscuously in the dam from the scows. The dam over the head of the Ohio chute was commenced on the 14th of August last, the stone having been previously quarried. A quarry on the Ohio shore, a short distance below the site of the dam, was opened in October, 1836, to furnish stone for its construction, and another on the Virginia shore for the same purpose. The quarrying at both quarries was suspended in August, when it was supposed that stone enough had been got out, there being between 12,000 and 14,000 perches of stone quarried. On the 30th of September 4,231 perches of this stone had been boated to and thrown into the dam. The entire expenditure for quarrying and transporting stone to the dam, including the purchase of boats for quarters, stone scows, and tools, (all of which are still applicable to future works,) amounts to \$21,489 20. Allowing \$16,000 for the expense of quarrying, \$5,480 20 for boating to and throwing into the dam, it will make the cost of quarrying and transporting stone to the dam average about \$2 25 per perch. It will take about 6,700 perches of stone to complete the dam, after deducting the work done in October, which amounts to about 2,300 perches. The dam has, therefore, at present about half the quantity of stone intended to be put in it. This dam when completed will be about 2,178 feet long, and about 11 feet high at the deepest place. Its section has a base equal to seven times its height, with a flat rounding top, the slope up stream being the greatest, and made of the smallest stone, the large stone being thrown into the lower part or breast of the dam. The top of the dam is to be on a level with the water when the river is at a four feet stage on the shoals. By reference to the drawing, the position of the dam will be found nearly parallel to the opposite shore, and connecting the Ohio shore with the head of the island bar in such a manner as to gently deflect all the water at a low stage down the Virginia chute. This dam has to meet but little resistance, and is relatively so low and so completely submerged at high water that it will not even make a break—boats of all kinds being then able to pass over it with facility.

On account of the unfinished state in which it is necessarily left, I apprehend that a few slight breaches may be made in it this winter; but after it is completed next year I feel confident of its withstanding any shock it may receive from either drift or ice. The survey of the river cannot be carried on with great celerity except at a continued low stage of water. The repeated freshets very much interfered with the prosecution of it this season. It is quite fully completed as far down as Steubenville, and partially so from Steubenville to Wheeling. As soon as the maps and drawings can be made out, copies will be transmitted to the department, with the projected improvements laid out on them.

The fall of the river from Pittsburg to Wheeling is 79.167 feet, and the distance being 88 miles and a fraction, makes the average fall at the rate of 10.69 inches per mile. The greatest surface velocity as yet ascertained at any ripple is at the rate of four miles per hour, and the greatest fall is at the rate of six feet per mile. I have drawn up a table of the bars, ripples, &c., between this place and Wheeling, giving the average depth of water, velocity of current, and rate of fall. The bars and ripples are numerous and close together in the upper part of the river. In low water the fall of the river is confined to the ripples, the intermediate pools being nearly stagnant and almost level; but as the river rises, the water gradually attains a uniform slope or fall on the surface, which becomes nearly parallel with a line passing through all the highest points of the bottom of the channel. The most irregular of those points can be reduced into that line without altering the regimen of the river, and that is as deep as I would be willing to excavate on the bars. The channel from Pittsburg to Wheeling is narrow, and has many short turns, requiring for low-water navigation narrow and short boats. The width can be increased to 200 feet with safety, and the curves straightened. This, united to the concentration of the water and consequent increase of depth, (which I calculate can be improved so as never to be under 30 inches, and seldom lower than 3 feet,) will afford a navigation that will answer all the purposes of commerce and travelling, as it would enable boats of one hundred tons burden, carrying passengers, to run at the lowest stages of the river. Whenever the navigation throughout the season becomes regular and certain, the expenses of the boats will be greatly reduced, and such rates of freight and passage as were unprofitable to the boats this season might then become customary and yield a fair profit to the owners. Merchandise would be transported at the rate of two-thirds of a cent per ton per mile, and passengers at the rate of one-sixth of a cent per mile. I am now well prepared with boats, machinery, and tools for carrying on the improvements, and am sufficiently familiar with those points most urgently requiring improvement to expedite the work to great advantage. So that I would respectfully suggest that an appropria-

tion should be requested as soon as practicable for that purpose. The accompanying estimate, which amounts to \$253,000, will show how it is contemplated to apply the funds called for—about \$95,000 for removing obstructions from the bed and channel of the river and clearing the shores of the fallen and leaning trees; the remainder for building dams, continuing surveys, &c. All the appropriations and the proceeds of the sale of public property amount to \$119,648 02; the expenditures, up to the 30th of September, to \$131,090, leaving a balance of \$11,441 98 available for this quarter. The greater part of this balance has been expended on account of the operations of last month. The amount now on hand will be required for the current expenses of the winter, in taking care of boats, &c. The disbursements on account of the improvements of the river have continued to be made by the Merchants and Manufacturers' Bank of Pittsburg with their former correctness and punctuality, and always in funds which were at par with the currency at the place of payment. All of which is respectfully submitted.

I have the honor to remain, sir, your most obedient servant,

JOHN SANDERS, *Lieutenant of Engineers.*

General C. GRATION, *Chief Engineer, Washington, D. C.*

*Estimate of funds required for continuing the operations for improving the navigation of the Ohio river above the falls during the year 1838.*

REMOVING SNAGS AND CLEARING SHORES.

Expenses of steam snag-boat, including pay and subsistence of officers and crew and cost of fuel for six months, at the rate of \$2,000 per month.....	\$12, 000
New rigging, tools, materials, and repairs.....	3, 000
Expenses of five machine boats, worked by manual power, including pay and subsistence of superintendents and crews for five months, at the rate of \$1,000 each per month.....	25, 000
Repairing and equipping boats, new rigging, tools, and materials, \$1,000 each.....	5, 000
Cost of five flatboats, fitted up as quarters for sixty men each, with furniture, scows, skiffs, and tools, \$1, 000 each.....	5, 000
Pay, subsistence, and superintendence of five parties of sixty men each, employed in clearing shores of fallen and leaning trees and lodged drift, for six months, at the rate of \$1, 500 per month for each party.....	45, 000

FOR THE CONSTRUCTION OF DAMS FOR THE PERMANENT IMPROVEMENT OF THE CHANNEL.

Dam at head of Brunot's island.....	15, 000
Dam at head of Long island, and improvements at Horsetail ripple.....	10, 000
Dam at Duff's bar.....	10, 000
Dam at White's ripple and trap, and widening channel at trap.....	20, 000

## M.

*Annual report of the work done to improve the navigation of the Cumberland river, in Tennessee and Kentucky, above Nashville.*

The improvement of the navigation of the Cumberland river above Nashville was commenced on the 1st day of September, at Nashville, with eighty laborers, and on the 4th at Carthage, Tennessee, with one hundred laborers. The improvement was confined to cutting down, belting the timber overhanging the channel way, sharp points, deep bends of the river, removing rafts and snags, &c.

The superintendent with his company worked up the river, and cut up everything thought necessary from Nashville to Walton's Ferry, distance ninety miles.

Captain Hone commenced at Carthage on the 4th of September with one hundred laborers, and from that time to September 30, agreeably to his report, cut down 7,168 trees, belted on the banks 1,247 trees, cut loose 15 rafts, and removed 34 snags between Carthage and Buffalo island, distance thirty miles. This gentleman reports this part of the river more difficult and important to improve than any other part of the Cumberland river.

All the laborers under the command of the superintendent, with forty-seven of Captain Hone's company, were paid off at Walton's Ferry on the 30th of September, owing to the river rising. The other company of fifty-three laborers was continued under pay for the purpose of finishing some fifteen miles above the ferry. This company is now at work above Carthage under the command of Captain T. M. Hale.
