AMERICAN STATE PAPERS.

NAVAL AFFAIRS.

3d CONGRESS.]

No. 1.

[1st Session.

NAVAL FORCE AGAINST ALGIERS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 20, 1794.

Mr. FITZSIMONS, from the committee appointed to report the naval force adequate to the protection of the commerce of the United States against the Algerine corsairs, together with an estimate of the expense, and the ways and means for defraying the same, made the following report:

THAT, by the best information the committee could obtain, it appears that the naval force of the Algerines consists of light vessels, of different size and force, (exclusive of galleys) carrying in the whole two hundred and eighty-two guns; and that it has not varied considerably for many years past; that the vessels (except two or three) are slenderly built, smaller in size than vessels of war belonging to the Christian Powers, carrying the same number of guns, and principally manned with people little accustomed to the management of large ships.

From a consideration of these circumstances, the committee are of opinion that four ships, capable of carrying forty-four guns, each, and two ships, carrying twenty-four guns, each, will be sufficient to protect the commerce of the United States against the Algerine corsairs.

That the cost of the naval armament aforesaid, including six months' stores and provisions, and three months' pay to the officers and seamen, will amount to	\$600,000
That the annual expense of the said armament, as the same may probably be kept in service, will amount to	247,960

The particulars of which estimate are detailed in the papers submitted with this report.

The ways and means proposed by the committee for defraying the cost and annual expense of all the said armament are,

An additional duty of one per cent. on all goods which now pay a duty of seven and a half per cent.

An additional duty of five per cent. on all stone and earthen ware, and marble and slate, bricks, &c. imported.

An additional duty of three cents per bushel on salt; of twenty-five cents per ton on all ships or vessels, other than ships or vessels of the United States; and of six cents per ton on all ships or vessels of the United States, employed in foreign trade; which said several duties they estimate to produce three hundred and three thousand seven hundred and thirty-two dollars, agreeably to the estimate No. 1, herewith.

In pursuance of all which, the committee submit the following resolutions:

Resolved, That a naval force, to consist of four ships of forty-four, and two ships of twenty guns, each, be provided, for the protection of the commerce of the United States against the Algerine corsairs.

Resolved, That, for the purpose of defraying the cost of a naval armament, and the annual expense thereof, after the — day of —, —, there be levied, collected, and paid, upon all goods, wares, and merchandise, imported into the United States, and on which a duty of seven and a half per cent. is now payable, an additional duty of one per cent.

Upon all marble, slate, and other stone; on bricks, tiles, tables, mortars, and other utensils of marble or stone; and, generally, upon all stone and earthen ware, an additional duty of five per cent. Upon salt, three cents per bushel, estimating the bushel at fifty-six pounds.

On ships or vessels of the United States, employed in foreign trade, six cents per ton; on all other ships and vessels, twenty-five cents per ton.

That the like drawbacks and allowances be made of the said additional duties as are now made of the duties upon goods exported from the United States, and upon fish and salted provisions.

That a separate account of the said duties be kept.

That the President of the United States be authorized to receive, on loan, a sum not exceeding — dollars, to be applied towards the building and equipment of the said naval armament, at an interest not exceeding — per cent. per annum; and that the said loan be open to any individual, body politic or corporate, within the United States. That the revenues herein before recited be pledged for the payment of the interest on the loan aforesaid, and the annual expense of the said armament; and that the surplus of such revenue be applied to the repayment of the principal, and to no other purpose whatever.

That a committee be appointed to bring in a bill or bills in conformity with the foregoing resolutions.

3d CONGRESS.]

No. 2.

[2d SESSION.]

CONSTRUCTION OF FRIGATES UNDER THE ACT OF MARCH 27, 1794.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 29, 1794.

The Secretary of War, in obedience to the orders of the President of the United States, submits to the House of Representatives the following report respecting the frigates authorized by the "Act to provide a naval armament."

That the passing of the said act created an anxious solicitude that this second commencement of a navy for the United States should be worthy of their national character. That the vessels should combine such qualities of strength, durability, swiftness of sailing, and force, as to render them equal, if not superior, to any frigates belonging to any of the European Powers. Researches, therefore, have been made for the best principles of construction, and such proportions adopted as have appeared best, upon the most mature advice and deliberation.

The largest ships, of forty-four guns, will be constructed upon a scale to contain thirty cannons of the caliber of twenty-four pounds upon the gun deck. The others, of thirty-six, twenty-eight cannons, of the same caliber, upon the gun deck. The remaining force will be made up of twelve pounders and brass howitzers.

The frigates will be built of live oak and red cedar, in all parts where they can be used to advantage. These valuable woods afford the United States the highest advantages in building ships, the durability being estimated at five times that of the common white oak. Besides these woods, the best white oak, pitch pine, and locust, are directed to be used in the construction.

Expendients have been devised for seasoning the plank, as expressed in the letter of Joshua Humphreys, herewith submitted.

But the procurement of the live oak and cedar, being of Southern growth, has been retarded by the circumstances specified in the letter of the Commissioner of the Revenue.

The building of the ships has been directed in the several following ports of the Union, in order, as well to distribute the advantages arising from the operation, as to ascertain at what places they can be executed to the greatest advantage, to wit:

- One thirty-six at Portsmouth, New Hampshire;
- One forty-four at Boston;
- One forty-four at New York;
- One forty-four at Philadelphia;
- One thirty-six at Baltimore; and
- One forty-four at Portsmouth, or Norfolk, Virginia.

The following arrangement has been adopted for the building and equipment of the frigates:

1. All contracts for the principal materials of construction and equipment have been made in pursuance of law, under the direction of the Secretary of the Treasury.
2. All labor, and inferior materials, not otherwise provided by the Secretary of the Treasury, are to be procured by agents whose compensations are two and a half per cent. conformably to their instructions, hereunto annexed, marked No. 1.
3. The captains of the frigates are to superintend the construction and equipment, in pursuance of their instructions, No. 2.
4. The constructors, or master builders, are to be regulated by their general instructions, No. 3.

It has been endeavored to take these characters from the best qualified of their profession; and in order that the public should derive all the advantage of their whole time, they have been detached from all private pursuits by a liberal compensation, at the rate of two thousand dollars per annum. It is possible that, in one or two instances, *agreements for their services* might have been obtained at a rate somewhat lower; but the invidiousness of the distinctions of different rewards for men performing the same services would but ill comport either with the invariable feelings of the human heart, or the public service; they have, therefore, all been placed upon the same footing.

A clerk to each yard, or place of building, is to receive, issue, and to account for, all public property belonging to the ship, according to his instructions, No. 4, at the rate of seven hundred and fifty dollars per annum.

The progress which has been made in the business is generally stated in the letter of the Commissioner of the Revenue, and the letter of the captains and constructor of the port of Philadelphia, herewith submitted.

It is to be understood that no expenses were authorized until the appropriation of the 9th day of June last, although the act for building the frigates was passed the 25th day of March.

That few or no materials of any sort, either for construction or equipment, existed in their proper shape.

That every thing, if not to be created, was to be modified. That the wood of which the frames were to be made was standing in the forests; the iron for the cannon lying in its natural bed; and the flax and hemp, perhaps, in their seed. That the materials will be soon collected, and the building vigorously pushed, so that the frigates, according to the opinions contained in the documents herewith submitted, may be afloat in the course of the year one thousand seven hundred and ninety-five.

That, from the expenditures hitherto made upon the naval armament, no accurate judgment can be formed at present what further sums, if any, will be wanting to complete the same.

It is respectfully suggested, that the idea contained in the letter of the Commissioner of the Revenue, respecting the publicity of some of the measures upon this subject, merits consideration.

All which is respectfully submitted.

H. KNOX, *Secretary of War.*

DEPARTMENT OF WAR, *December 27th, 1794.*

Instructions from the Secretary of War to the Agents, Superintendents, Constructors, and Clerks of the Yards, for building the frigates of the United States.

No. 1. *To the Agents.*

SIR:

You having accepted of the agency of the ship of war to be built at —, are to consider the rules herein specified, as the general principles whereby to govern yourself in the execution of the agency.

1st. You are to provide all the artificers and laborers of all descriptions, excepting the constructor or master builder, necessary to build a ship of — guns, the number to be such, from time to time, as will be able to operate with the greatest effect; these workmen to be provided upon the best terms, by the day, week, or month, as you shall judge conducive to the public interests.

2d. You are also to purchase such materials for the construction and equipment of the said ship, as shall not otherwise be provided by special contracts, under the orders of the Secretary of the Treasury, and to pay all other incidental or contingent expenses.

3d. All the workmen and materials for building the said ship are to be obtained by you upon the estimate or requisition in writing by the constructor, countersigned by the captain or superintendent. Other articles, or labor, necessary for the rigging or equipping of the ship, are to be obtained by you upon the estimate of the principal artificer in each branch, and also countersigned by the captain.

4th. The clerk of the yard will receive, distribute, and account for, every article of public property.

5th. The shipwrights, and all other artificers employed in working at the yard upon the body of the ship, will be under the immediate direction and control of the constructor. His certificate, therefore, signed by the clerk of the yard, will be your voucher for payment of the wages, according to the agreement you shall make.

6th. You will keep fair accounts of all transactions, stating all expenses for labor in one account, and all purchases for materials in another. Every expenditure must be accompanied with the requisition of the superintendent, or constructor, as the case may be, for which purpose you will take duplicate receipts for all expenditures, and, also, the receipts for the sums paid. Abstracts of the expenditures must be transmitted monthly to this office, and every three months the accounts and vouchers must be transmitted to the Auditor of the Treasury, for the purpose of being adjusted and settled.

You will, in the first instance, receive — dollars, and such further sums shall be advanced, from time to time, as the nature of the case may require. But all moneys which you shall receive on this account must be kept by itself, and deposited in the —, as naval agent, and a bank book kept exclusively for this object.

You will be allowed two and a half per cent. commission on the sums expended, as full compensation for your services on this occasion. You will, in all respects, consider yourself as charged with the general superintendence of the public interests, as far as the building of the said ship, and will correct and report any conduct which may be improper in any of the branches.

No. 2. To the Superintendents.

SIR:

You are to consider yourself as the superintendent of the frigate to be built at the port of —, and which is to mount — guns.

Your constant attendance will be necessary for the purpose of observing that all parts of the business harmonize, and are conformed to the public interests.

The frigate will be built and equipped under the following regulations:

The treasury of the United States will make special contracts for the principal materials which will be used in the construction and equipment of the ship.

The agent will provide all the materials, not otherwise provided by the treasury. He will, also, excepting the constructor, procure and pay all the workmen, and laborers, of all sorts, necessary for the building and equipping the ship.

The numbers and qualities of the workmen and laborers are to be furnished by the agent, in pursuance of requisitions, in writing, by the constructor for the hull, or master mechanic, in each branch of equipment, but, in both cases, to be countersigned by the superintendent.

The materials for the equipment, not provided by the treasury, are to be obtained by the agent, in pursuance of the estimate of the master mechanic in each branch, countersigned by the superintendent.

The constructor will have the immediate direction of all the workmen employed on the hull of the ship; the rolls of the workmen, and of the laborers, must be called every day, at the commencement and termination of their labor, and after returning from dinner. This must be done in the presence of the constructor and clerk of the yard, whose certificate will be an indispensable condition of payment.

The clerk of the yard will receive, issue, and account for, all the public property. The order for the issue of articles for the hull must be signed by the constructor, and countersigned by you.

The articles for the equipment to be issued on the estimate of the principal mechanic in each branch, with your order thereon.

You will, as well as the constructor, be particularly careful that none but the best materials be used in the construction of the hull, and you will observe the same precautions with respect to the equipments of all sorts.

You will also carefully observe that there be no deviation from the directions which shall be issued with respect to the proportions of the hull, and equipments of all sorts.

You will report to me, weekly, the number of workmen employed, and the progress made in the execution, either of the hull or equipments.

No. 3. To the Constructors.

SIR:

You having been appointed constructor, or master builder, of a — frigate, to be built at the port of —, are to consider these as the general principles whereby you are to govern yourself:

Particular directions will be given to you relatively to the proportion of the ships, a draught and moulds for the same, to which you are, undeviatingly, to adhere.

As you are established upon a salary, as a public officer, you will, in all respects, observe the highest degree of economy in all the objects which shall come under your direction, whether of materials, or labor of the workmen, and others, of which you will have the principal direction.

Your constant attendance will be necessary, in order to direct the application of the respective workmen and laborers.

The rolls of the workmen and laborers are to be called at the commencement and termination of the labor of the day, and upon their return from dinner, for which they will be allowed — hour, the labor to commence at —, and terminate at —.

You, and the clerk of the yard, will attend always at these roll calls, making suitable deductions from every absentee. Your certificate will therefore be required by the agent, as a voucher for their payment.

Besides yourself, the following persons will be concerned in building the ship:

An agent will be appointed to procure, upon the best terms, all the materials which shall not otherwise be provided by the treasury of the United States. And he will also procure and pay all the workmen who shall be employed in the construction or equipment of the said ship.

The Captain will be the superintendent, to observe that there be a due application of all the means employed to the end intended.

A clerk of the yard will be appointed, to receive, distribute, and account for, all public property.

The materials for building the ship, not procured by the treasury, will be purchased by the agent, in pursuance of your estimate to him, countersigned by the captain or superintendent.

All the artificers of the respective branches, and laborers, necessary for the construction of the frigate, are also to be procured upon your estimates, and countersigned by the captain.

You, particularly, will be responsible to the public, that no materials, of any sort, enter into the construction of the said ship, but of the best quality; that a substantial foundation be laid for the ship, so that there shall be no danger of settling when the frost comes out of the ground; that all parts of the great fabric are mechanically and perfectly executed.

The view of the Government, besides distributing the advantages by building the six frigates in different places, is to ascertain where similar work may in future be done to most advantage.

The present attempt, therefore, is to be considered as an experiment; and the place where the business shall, under all circumstances, be best performed, may derive permanent and great benefits.

It will be expected that the utmost harmony shall prevail among the different characters concerned in building, so that their united efforts may produce a satisfactory result.

No. 4. *To the Clerks of the Yards.*

Sir:

You having been appointed clerk of the yard for the frigate to be built at —, are to observe these instructions as the general rule of your conduct:

You are to receive, issue, and account for, all the public property relatively to the said ship, whether belonging to the hull or equipment, which shall be placed in your possession, either by the orders of the Secretary of the Treasury, the Naval Agent, or in any other way or manner.

All the materials for the construction of the hull are to be issued by the orders of the constructor, countersigned by the superintendent, who is the captain.

All the materials for the equipment are to be issued on the estimates or returns of the principal mechanic in each branch, signed by the superintendent.

Accounts are to be opened for each principal article used in the construction, such as timber, iron, masts, spars, booms, yards, cordage, hemp, sail cloth, tools, or implements, anchors, ship chandlery, &c. And, on the first Monday in each month, you are to transmit me an account of all articles received and delivered, by whose orders, and to whom, and all articles remaining on hand.

You are also to attend the roll call of the workmen and laborers employed in the yard, and to countersign the returns of them for the agent to regulate his payments by.

Your accounts and vouchers are, every three months, to wit: on the first days of October, January, April, and July, to be transmitted to Samuel Hodgdon, Esq. in Philadelphia, who is the superintendent of the military and naval stores of the United States. You will be very particular in attending to the above instructions, and such other instructions as the captain may think proper to add from time to time, for the good of the service, or his convenience in superintending the same.

Copy of a letter from Captains Barry, Dale, and Truxtun, to the Secretary of War, dated

PHILADELPHIA, December 18, 1794.

Sir:

As soon as the appropriation act was passed, for furnishing money to build the six frigates, in consequence of an act of Congress, passed the 27th of March last, we observed a navy constructor was immediately employed, who has been steadily at work, drawing the draughts, and making the necessary moulds for building the ships on the most eligible construction; all of which are now completed, and sent on to the different yards where the ships are to be built. And we appeal to all those who have any knowledge of the science of naval architecture, of the great precaution that was absolutely necessary, in laying the foundation of our infant navy, and the time it would consequently take to digest a good plan, avoid errors, and fix dimensions, founded on the experience of all maritime Europe, as well as that of this country, so as to have the ships the best adapted for the service of any that was ever built of the kind, which we are of an opinion has been happily effected, and that the arrangements to commence the building the frigates has been judiciously made, and every pains taken to procure the most durable wood in the world (the live oak of Georgia;) but the summer season having commenced, before the appropriation act was passed, at which time it is so very sickly in and about the islands of Georgia, that it was impossible to procure, and would have been both expensive and useless to have sent men thither to cut wood, if they could have been procured during the summer months. Early in October, however, a number of wood cutters, that had previously been engaged in Connecticut, arrived in Georgia, commenced their operations, and have made such progress that one vessel has already arrived here with a full cargo; the master of which reports favorably as to the despatch of others, that have been sent on by the Treasury Department, for to take the timber to the different yards. The building these frigates of live oak will certainly be a great saving to the United States, as we are well satisfied (accidents excepted) that their frames will be perfectly sound half a century hence, and it is very probable they may continue so for a much longer period. On the contrary, we are as fully convinced, from experience, that if they were to be built of the best white oak of America, their durability at the utmost would not exceed one-fourth of that time, and the expense of building and equipment is the same, whether the ships are of the best or of the worst wood of this country; but had it been determined, in the first instance, to have built the ships of common oak, no greater progress could have been made, as there was no timber cut, in any of the States, large enough for the purpose; and to have cut it in the summer season, when the sap was up, and built the ships of wood in that green state, they would have proved rotten, and totally unfit for the public service, in less than five years from the laying of their keels.

The undersigned, John Barry, has made a visit to Georgia, at the request of the Secretary of the Treasury, and is so well satisfied with the exertions of Mr. Morgan, who superintends the cutting and shipping the timber, that he has not a doubt but the whole quantity will be cut, between this and the month of February, and if so, we are all of opinion that the ships may be built, and completely equipped, in the course of the next year; as every preparation is made in the different yards, and for procuring all the materials in the various branches, for going on with spirit and despatch.

It must be remembered that, in the first maritime countries in Europe, where they have regular establishments for building ships of war, with dock yards and large stocks of timber thereon, they seldom complete a frigate, of the magnitude of any of ours, in less than twelve months after she is raised; contract ships, built in the time of war, to answer the purpose of the moment, only excepted.

It would be highly gratifying to us, sir, who have thrown aside our former occupation, and the prospects that promised fair for increasing our fortunes, with a view of serving our country, and who have no desire of being mere sinecure officers, if we could at this moment embark, and obey the commands of our country, in going in pursuit of a barbarous enemy, who now holds in chains and slavery so many of our unfortunate fellow citizens; the relieving and restoring of which to the bosom of their families and friends, are, with that of having an opportunity to chastise their cruel oppressors, objects of our greatest ambition, and which we anticipate with all the ardor of officers, of seamen, and of citizens. We therefore assure you, sir, that every exertion shall be made by us, in our department, to facilitate the building and equipment of the ships, to which we have had the honor to be appointed commanders and superintendents.

We have the honor to be, &c.

JOHN BARRY,
RICHD. DALE,
THOMAS TRUXTUN.

The Report of Joshua Humphreys, Naval Constructor, on the progress made in building the Frigates.

DECEMBER 23, 1794.

As soon as Congress had agreed to build frigates, it was contemplated to make them the most powerful, and, at the same time, the most useful ships. After the most extensive researches, and mature deliberations, their dimensions were fixed, and I was directed to prepare the draughts; which was accordingly done, and approved. Those plans appear to be similar with those adopted by France, in their great experience in naval architecture; they having cut down several of their seventy-fours to make heavy frigates; making them nearly of the dimensions of those for the United States. From the construction of those ships, it is expected the commanders of them will have it in their power to engage, or not, any ship, as they may think proper; and no ship, under sixty-four, now afloat, but what must submit to them: these reasons are paramount to all objections, and annihilated opposition.

The next object was the materials that those ships should be composed of; accordingly it was agreed that the frames should be of live oak and red cedar; that is, the stern post, and all the stern frames, the upper piece of stem, and all the frame, (except the lower piece) the first, second, and third futtocks, three-fourths of the top-timber, stanchions, counter-timbers, bow-timbers, hawse-pieces, night-heads, breast-hooks, partners for masts and knees, all of live oak; and one-fourth of the top timbers, the half top timbers, and half counter-timbers, of red cedar.

It was supposed that live oak floor-timbers could not be procured, therefore white oak was ordered for them in the first instance; but, on the return of Captain Barry, from Georgia, he says that there would not be any difficulty in procuring them of live oak. After this information, it would have been unsuitable to the other parts not to have put in live oak. There are recent instances of white oak decaying in a few years; and as the duration of live oak and red cedar may be computed from forty to fifty years, the difference of cost was of no consequence, compared with the durability of the material. The keel, keelson, beams, ledges, carlings, plank for the sides, bottom, ceiling, deck-plank under the guns, dead-woods, lower piece stem, and wales, of the best white oak; decks of the best Carolina pitch pine. The next object was to provide a mould loft, which was contemplated to be built; but such a building could not be completed under two thousand dollars; this price was considered more than was prudent to give; therefore, the best and largest loft that could be found was rented, in which the ships were laid down, and the whole of the moulds made and marked, amounting to about five hundred; and upwards of one hundred bevelling boards, with the bevellings marked on them. This complicated piece of business being finished, the moulds were shipped to the different ports where the frigates are to be built.

It was thought prudent to contrive some method of seasoning and salting the white oak stuff, above light water, to assimilate it, as near as possible, with live oak and red cedar, in point of duration, and at the same time facilitate the bending of them on the round parts of the ships. A trunk long enough to take the longest timber in, with three large iron plates in each, at equal distance, and a simple air furnace, under each plate, to boil the salt and water, which will penetrate any timber put into it, was considered the least expensive and most useful.

Copper was considered a very essential component, in the securing of these ships, as it is not known to waste or corrode like iron; and, more especially as it is contemplated to copper these ships, iron would be destroyed in a very short time: for, these ships being coppered, every advantage is to be expected; their bottoms always clean and ready for any expedition; if they were not coppered, their guns, and stores of every kind, must be discharged, and they have down every six months, (having no docks to dock them.) This will not only be an expensive job, but strain the ships exceedingly, and injure the hull and rigging more than can be easily calculated, which ought to be avoided by all means; not only so, but an expedition may be lost by the delay. Upon those cogent reasons it was finally agreed to copper them.

Considering the newness of this business, the information, and every material to be obtained, and the whole to be organized, a considerable portion of time must have been required; nothing but great perseverance could have brought it to its present state.

One cargo of live oak has arrived from Georgia, and landed in the ship yard in this port, most of which is now under the workmen's hands. This timber is greatly superior to any in Europe, and the best that ever came to this place.

The foundation for the frigate is laid, and one piece of keel hauled up. There is every reason to believe this ship may be completed next year.

In order to prevent any delay, if it should be contemplated to build more frigates, frames of timber should be provided and placed under sheds, in such ports as shall be directed. It is a fact, timber may be laid in on better terms, if proper seasons are taken for that purpose.

It will be well to consider that great quantities of the finest live oaks are destroyed to clear the land, and that some of the maritime nations must resort to this country for timber, which will, in a few years, put it out of the power of the United States to secure the quantity of timber they will most assuredly want, without paying a most exorbitant price. If they were to purchase some of the islands plentifully timbered with live oak, I have reason to believe the land may be sold for the first cost after the timber is taken off.

Copy of a letter from the Secretary of the Treasury to the Secretary of War.

TREASURY DEPARTMENT, *December 23, 1794.*

SIR:

I send you a letter this moment received from the Commissioner of the Revenue, dated yesterday, which contains the answer to your letter, founded upon the order of the House of Representatives, relative to the measures which have been adopted concerning the naval armament.

I have the honor to be, &c.

A. HAMILTON.

TREASURY DEPARTMENT, *Revenue Office, December 22, 1794.*

SIR:

I have had the honor to receive this day the order of the House of Representatives relative to the measures that have been adopted concerning the naval armament, in your letter of the 20th instant.

It was on the 4th day of April that a participation with you in the treasury business for the War Department was committed to this office.

After the requisite examination into the objects to be procured, advertisements were issued on the 16th of April for the live oak and cedar timber required by the Secretary of War: as also, on the same day, for cannon ball, twenty-four pound cannon, and kentledge, or iron ballast. On the 7th of May, advertisements were issued for the yellow and pitch pine, and white oak materials, and for the locust treenails; and measures were taken for examining into the terms on which the cordage could be procured.

Many other inquiries were likewise made; but no contracts or purchases were, or could be, completed, before the 9th of June; the Legislature not having granted, until that time, the money requisite for the naval armament. On that day, (the first moment when it was legal) an agreement was made with John T. Morgan, a master shipwright, of Boston, to go to Charleston, for the purpose of procuring, in concert with persons in that place and in Savannah, the live oak, red cedar, and pitch pine materials. His business was to search for the timber, to superintend the cutting and forming it by the moulds for the frigates, and to procure it to be shipped for the six several ports at which the frigates were to be built. It was further agreed, with consent of the Secretary of War, that he should be employed to build a frigate at Charleston, if one should be built there. By the concurrence of both Departments, he was to be allowed pay at the rate of two thousand dollars per annum, in full of all claims of services and expenses in the Carolinas and Georgia, or while building. Like this all the principal contracts were made, as you will remember, in concert with you, after the necessary conferences from time to time.

Daniel Stephens, Esq. Supervisor of the Revenue, and Isaac Holmes, Esq. Collector of the Customs, both of Charleston, were appointed by you to make the contracts for the timber in North and South Carolina, and John Habersham, Esq. Collector of the Customs, and Joseph Clay, Esq. both of Savannah, in Georgia, were appointed to make the contracts for the timber in Georgia, and to give all possible aid towards the advancement of the business to Mr. Morgan. No allowance for their agency has been yet made.

On the 16th of June, a letter was written to Jedediah Huntington, Esq. Collector of the Customs at New London, to procure sixty axe-men, and thirty ship carpenters, in the ports of Connecticut, Rhode Island, and the western coast of Massachusetts, and provisions and other supplies were sent from New London, New York, and Philadelphia, as economy and the nature of the articles appeared to require.

The time necessary for the collection of these persons, and their apprehensions from the climate and season, occasioned their departure from New London to be delayed until the 23d day of September.

The agreements for the live oak were made on the 2d day of September, at Savannah, at the rate of six pence, money of Georgia, per foot, to be cut by the United States, but hauled to water navigable for vessels of eleven feet draught by the contractors.

On the 7th day of July, instructions were given to Mr. Habersham and Mr. Clay, to hire such additional wood cutters and other hands as the public service might require and admit, it being deemed more expedient that the business should be effected in a short time, by a certain number, than that it should be effected in a term of twice the length by half the force of hands.

On the 25th day of June, I furnished you with an estimate of the composition metal, sheathing copper, bolts, and nails, bunting, and iron kitchens, for the six frigates, all which were ordered from Europe; and a note of the anchors, which last were postponed for further inquiry whether they could not be manufactured in the United States. The articles ordered are daily expected to arrive.

On the 30th of June, some further measures to procure anchors, by a circular application, were taken, and proposals to make those of the smaller sizes at eight cents per pound were received and accepted: as also proposals to furnish those of the larger sizes, which, though accepted by the United States, were not confirmed by the proposer, from unexpected circumstances.

Immediately after the appointment of the naval agents at the six ports, by the Secretary of War, it was determined, from considerations of economy, to employ the same agents in the treasury business. Instructions were sent to them in consequence, on the 5th and 7th days of July, to procure all the white oak, yellow pine, and tree-nails, it being found that they could be more easily and economically procured by those agents, and in most instances from the country in their vicinity.

On the 15th day of July, other instructions were sent to them to procure the articles usually supplied or made by the mast-makers, block-makers, coopers, and boat-builders; also to pay further attention to the procuring of cordage, and to take measures for the procuring of sail cloth made in the United States.

On the 9th day of July, a contract was executed with Messrs. Levi Hollingsworth, Son, & Company, of Jersey and Pennsylvania, for ninety-two tons of cannon ball, at thirty-seven and one-third dollars, and one hundred and ninety-eight tons of kentledge, at twenty-eight and two-thirds dollars, and, some time after, the contract was further extended to about three hundred and forty tons.

On the 28th of July, a contract was made with Messrs. J. J. Faesch & Company, of New Jersey, for ninety-eight tons of cannon ball, and two hundred and fifty-six tons of kentledge, at the same prices; and authority was since given to Henry Jackson, Esq. Naval Agent at Boston, to purchase one hundred and fifty tons of foreign kentledge, which had laid some time in the hands of a citizen of Boston, and which was sold at the reduced price of twenty-five dollars, because of that circumstance.

On the 28th day of June, a contract was made with the Cecil Iron Company, (Samuel Hughes, Esq. and others, of Maryland) for three-sixth parts of the twenty-four pound cannons.

On the 8th of August, a contract was made with the owners of the furnace Hope, (Messrs. Brown, Francis, & Company, of Providence) for two sixth parts of the same. The prices were one hundred and six and two-thirds dollars, and the difference of expense for boring from the solid. The first contract was made in concert with the Secretary of War and yourself; the second in concert with you. The two parties were then willing to have agreed for the remaining sixth part, but it was postponed, to give to the iron masters in different quarters an opportunity to contract. Since that, contracts for the remaining sixth have been offered to the two parties above mentioned, who are to give answers as soon as they shall have proved some of those cannon for which they have already contracted.

Vessels amounting to about two thousand six hundred tons have been despatched or ordered to transport the timber from Georgia to the six several ports, and they carried to the Southward, axe-men, carpenters, provisions, oxen, forage, and implements.

Captain John Barry was despatched to Georgia, in one of the public vessels, on the 5th of October, to examine into the state of the business, and to give expedition to the procuring and transportation of the timber. He had no allowance but the amount of his expenses. About the time of his return, Mr. Asa Copeland was sent thither to assist permanently in the superintendance of one division of the wood cutters, and to expedite the transportation to the water side, and the shipment and stowage of the timber, as Mr. Habersham and Mr. Clay are too remote to be of any use in that part of the business. His compensation is three and one-third dollars per day.

Oxen, with grain and hay for them, and sets of timber wheels, have been necessarily sent to Georgia for the purpose of transporting the timber, as the contractors were deficient in means of that kind, and on account of the live oak timber for one frigate, which was procured under circumstances that rendered it necessary to provide for its transportation.

On the 30th of August, one hundred tons of kentledge was engaged of Messrs. Gardner & Olden, of Philadelphia, at the price of twenty-eight and two-thirds dollars.

A second party of carpenters have been engaged on the Delaware, twenty in number, by Tench Francis, Esq. and are now about to sail for Georgia.

The Naval Agents have been authorized to contract for blacksmith's work, including the bar iron, when it may have or shall become necessary: also, for composition bolts, so far as the same may be requisite before the arrival of those ordered from Europe.

It is understood that agreements have been made by those agents for the white oak timber, and other articles, in pursuance of the several instructions already mentioned.

It remains only to notice the contract made in the month of September with the Boston company, for sail cloth, sufficient for one entire suit of sails for each frigate. The price which I understand to have been settled, is from thirteen to fifteen dollars per bolt of thirty-nine yards.

Besides the foregoing measures, which have been thus far matured, others are in that train of investigation which the time necessary for the collection of the timber admits in most instances, and which is peculiarly desirable in a new undertaking of so great moment and expense.

I cannot transmit to you this communication without suggesting the inconveniences and injuries to the United States, particularly from external quarters, which may arise from giving publicity to all its details.

I have the honor to be, sir, your most obedient servant,

TENCH COXE, *Commissioner of the Revenue.*

The SECRETARY of the Treasury.

Dimensions and sizes of materials for building a Frigate of forty-four guns.

Height of breadth line—
 amidships, } This line is the upper edge of the second wale, from below all fore and aft.
 on the stem, }
 on the transom, }

Drifts—Quarter deck and forecastle drifts, fourteen inches wide and three and a half inches thick.
 Flush drift, twelve inches wide and four inches thick.
 String, or first moulding strake above the ports, fourteen inches wide, and four and a half inches thick.

Keel—Of good sound white oak, in three pieces; the middle piece to be not less than thirty feet, if to be had; scarfs not less than twelve feet, to be kept clear of the main and fore steps; sided in the midships eighteen inches; at the stem and post seventeen inches, and as deep as can be had; the scarfs all to be tabled and bolted with five bolts, one and one-eighth inches diameter; false keel six inches thick, but not to be put on until after the floor and keelson bolts are drove and riveted.

Keelson—Sided eighteen inches amidships, and sixteen inches fore and after end, and sixteen inches deep; scarfs not within fifteen feet of keel-scarfs, or main or foremast steps; upper keelson eighteen by fifteen inches deep, to be hooped and joggled into the lower one, all fore and aft; scarfs clear of all other scarfs at least ten feet, to be bolted with one and three-eighth inch bolts through every timber, and one in every cross-chock of one and one-eighth inches diameter.

Stem—In two pieces, if to be had; the lower one of good white oak, sided seventeen inches, and moulded not less than twelve inches clear of the rabbet; scarfs not less than four feet, to be tabled and bolted with three bolts, one and one-eighth inches in diameter.

Apron—Sided from twenty-eight to thirty inches at the upper end; and as the piece will work below, moulded at the upper end fourteen inches, and at the lower end seventeen inches.

Stern post—Eighteen inches square at the head, sided seventeen inches below by three and a half feet fore and aft, including false post, and ten inches thick on the aft side, at the keel, to be fitted for a crooked headed rudder.

Inner post—To be twelve inches, fore and aft, to run from the transom to the keel; to be of live oak, sided at head from twenty to twenty-four inches, and at heel twelve inches.

Night-heads—Sided from sixteen to eighteen inches; moulded twelve inches at head, and fourteen inches below.

Hawse-pieces—To be four in number; sided eighteen inches, and to be bolted with one and one-eighth inch bolts into each other; their heels, if possible, to run down below the lower deck breast-hook.

Bow-timbers—Sided twelve inches, and as long as possible; their heels well secured into the dead-wood; to be in number on each side as per draught.

Hawse-holes—Two on each side; fifteen inches diameter, and fourteen inches on a square between each other.

Wing transom—Twenty-nine feet long on the aft side; moulded and sided twenty-two inches to round up, and aft six inches; all the others sided fourteen inches; the lower deck transom moulded as broad as can conveniently be had, for the better securing the ends of the deck plank; two bolts of one and one-eighth inches diameter in the deck transom and all above it; all below, bolted with one bolt of one and one-quarter inches diameter.

Fashion-pieces—Two pair, sided twelve inches and moulded fifteen inches on the cank, as hereafter directed.

Dead-wood, forward—To secure the scarf of the stem and keel together, sided the same as the apron at the heel; at the after end twenty-four inches, and not less than twenty inches moulded over the scarf of the keel, and to run sufficiently aft; midship dead-wood fourteen inches broad and nine inches thick, to run from the dead-wood forward to the stern-post knee, well fayed on the keel.

Rabbet of the main keel—To be cut one inch below the upper edge; the garboard strakes to fay well to the dead-wood all fore and aft; the dead-wood to be tarred and papered with good, thick, substantial tarred sheathing paper, in order to prevent the ship from sinking if she should lose her keel.

Stern post knees—Two good ones; the lower one as long as possible.

Floor and raising timbers—Of good white oak, sided twelve and a half inches; moulded at the floor sirmark fifteen inches, and in the throat, from the top of the dead-wood, twenty-one inches; to be bolted through the keel with one and three-eighth inch bolts; these bolts should be put as near the side of the keel as possible, in order to give room on the other side for the keelson bolts; one floor bolted near the larboard side of the keel, the other on the starboard side; the timber all to be double bolted from the foremast to within ten feet of the mizzenmast.

Lower futtocks—Of live oak, sided twelve inches in the midships, and something smaller at the fore and after ends of the ship, to butt against the side of the dead-wood amidships; to have cross-chocks fayed on the dead-wood, and their heels to be bolted through the keelson and keel with one and one-eighth inch bolts.

Middle and upper futtocks and top timbers—Sided eleven and a half inches; top-timbers moulded at the gun-wale seven inches; at the port sill nine inches; all the other timber sized by a diminishing line from the port sill to the floor sirmark.

Timbers, framed.—Floor timbers, lower futtocks, middle and upper, and top timbers, all to be framed in forms, and bolted with three bolts one and one-eighth inch square in each scarf, except the lower futtocks and floors, which should have one and one-fourth inch bolts. These timbers must be faced fair and true: for if they are not out of winding, it will be impossible to level the timbers with any truth.

Main wales, six strakes on each side, seven inches thick and ten inches wide.

Black strakes, five in number. The first and second five and one-half inches thick; the third, five and one-fourth inches; the fourth, five inches; and the fifth, four and one-half inches thick, by ten inches wide; the upper edge of the black strake to be mitred down to a level, in order to carry the water out of the seam; plank between the black strake and the string, to be three and one-half inches thick.

Thick work under the wales—first strake six inches thick; and second, five and one-half inches; third, of five inches; and fourth, of four and one-half inches; running plank, in the bottom, four inches thick; to be not less than six feet scarf, nor less than four strakes between every two butts on the same timber; the seams to be made all a little out-gauged, and great care must be taken to bevel both edges of the plank that comes together alike: for, if one edge is hewn standing, the other must be under, which makes bad work, the plank with the under bevelling will caulk off.

Bilge strakes outside—one, of six inches thick; two, of five and one-half ditto; two, of four and one-half ditto, on each side, the middle strake to cover the butts of the timbers equally inside and out, to be reduced, fore and after ends, the same as the running plank.

INSIDE WORK—*Limber strakes*—two on each side, six inches thick, and fourteen inches wide, bilge strakes three on each side, six inches thick, and fourteen inches wide, to be bolted through the outside bilge strake, in every third timber, with one inch bolts.

Running ceiling plank—four inches thick.

Lower deck clamps—two strakes on each side, five inches thick, and one strake four and one-half inches, all hooked and joggled into each other, with hooks not less than two inches, reduced at fore and after ends.

Steps of masts—the fore step to be placed between two breast hooks; the main step to be left so as to be set either forward or aft, as occasion may require; mizzen step to be two crotchets, the arms of which ought to be run up as high as possible.

Pillars or stanchions—three tiers under the gun deck, and one under the upper deck, made to shift.

Breast hooks, of live oak, five in the hold, including the deck hooks, from eighteen to twenty feet long, if to be had, and bolted in every timber with bolts of one and one-fourth inch in diameter, as well as through the stem; and two between decks, secured as above, the deck breast hooks moulded as broad as possible, in order to give good hold for the deck plank.

Transom riders—two on each side, under the lower deck, eighteen feet long, and sided twelve inches, bolted in every other timber with one and one-eighth inch bolts.

Diagonal riders—six pair on each side, in the three principal pieces, with two shorter ones to complete the pair, tabled and bolted together with six iron bolts one and one-fourth inch square in each scarf, and three in the short pieces to be bolted through the bottom plank, at every two feet, with one and one-eighth inch copper bolts, the two midship ones to butt against each other; the foremost of the two midship riders to be cut with a bird's mouth, and to fit under the eighth beam from forward; the after one of the midship ones to be cut and fixed in the same manner under the eighth beam from aft the other riders, to be the distance of two beams apart, and fitted in the same manner, to be kept the same distance aft and forward at heel, as they are at the head, to be tenoned and bolted into the keelson.

Lower deck beams, of the best heart pitch pine, sided sixteen inches, and moulded fourteen inches; the longest beam to spring six inches, and the rest by the same mould.

Lodging knees—sided ten inches, body to reach the next beam and arm, six feet hooked into the beam; to lay two inches below the upper edge of the beam for the water ways, and thick stuff to joggle down, to be bolted with seven bolts one and one-fourth inch diameter.

Dagger knees—sided eleven inches, body nine feet long, and arm seven feet, the arm hooked into the beam, and bolted with eight bolts one and one-fourth inch diameter.

Lower deck transom knees—sided twelve inches, body ten and one-half feet long, arm seven feet, and bolted with thirteen bolts one and one-fourth inch diameter.

Carlings, in three tier, six by nine inches, of white oak.

Ledges, five by six inches, two between each beam.

Mast carlings, for the main and foremast, ten by thirteen inches, to be kneed with four good knees; mizzen carling six by twelve inches, and kneed in the same manner; all of which pieces to be of live oak, and bolted with inch and seven-eighth bolts; gun deck carlings the same size, and secured in the same manner.

Spar beams, one of live oak on each side of the main hatch, tabled, kneed, and bolted, on the foreside of the beam, on the after part of the main hatch, twelve inches by fourteen; and for gun deck the same.

Solid waterways, of good long substantial white oak, worked with a feint hollow, rabbeted one and one-quarter inch above the deck, allowing two inches to be let down upon the beams; a good six inch oak strake joggled two inches into the edge of the waterway, and into and over the beams and ledges for the gun deck; a five and one-half inch strake for the lower deck, and a five inch strake for the upper deck, all joggled in the same way, and bolted through the side every four feet, and through every beam, with one and one-eighth inch bolts, upper deck with inch bolts.

Thick strakes on lower deck; two strakes of white oak plank five and one-half inches thick, and not less than ten inches wide, bolted and joggled into each other, and over and into the beams and ledges two inches, running all fore and aft along side of the hatches; two other strakes on each side, fitted as above, midway between the water ways and hatch strakes, a long white oak knee to be fayed at the end of each pair, to be joggled over two beams, well bolted to the bow and stem with one and seven-eighth inch bolts; and two other white oak knees, to run from the mizzenmast to the stern post, joggled over and into each beam, to be let down on the beams sufficient for the ledges to frame into them; one other to reach from the stem to the foremast, worked in the same manner; the arm part of each knee to be well bolted through the stern and post with one and one-fourth inch bolts.

Lower deck plank—to be three and one-half inches thick, of the best heart pitch pine, clear of all defects whatever.

Orlop deck—to be laid six feet two inches below the upper part of the lower deck; beams of the best heart pitch pine, sided twelve inches, and moulded ten inches, laid with two inch common plank, kneed with one good live oak knee at each end, bolted with inch bolts; it will be best to put the clamps on the ceiling three inches thick.

Spirketings—two strakes on each side on lower deck, five inches thick, hooked and joggled into each other, fitting in plank between the list and clamps four inches thick.

Gun deck clamps—two strakes on each side, five inches thick, and one of four and one-half inches, joggled into each other two inches.

Gun deck beams—one under each port, and one between, of the best heart pitch pine, as near as the hatchways and masts will admit, as per draught, sided eighteen inches, and moulded fifteen inches; all other beams to be laid directly over and under the same.

Standard knees—twelve on each side on the lower deck, one to be fayed over each beam, the diagonal riders come under, and the others placed amidships, sided thirteen inches, body to reach the upper edge of gun deck clamps, the arm six feet long, and bolted with eight bolts one and one-fourth inch diameter.

Gun deck lodging knees—Sided ten inches, body to reach the next beam, arm six feet long, bolted with seven bolts of one inch and a quarter diameter.

Hanging knees—Seven feet body and six feet arm, sided eleven inches, bolted with eight bolts one inch and a quarter diameter; the arms of all knees to be hooked and joggled into their respective beams.

Gun deck transom knees—Sided twelve inches, body twelve feet long, arm seven feet, bolted with twelve bolts one inch and a quarter diameter.

Carlings—In three tiers, six by nine inches, of white oak.

Ledges—Five by six inches, of white oak, two between each beam.

Plank—Four inches thick, six feet from the side, of the best white oak, clear of all sap and other defects whatever, the rest to be laid of the best heart pitch pine, clear of all sap and other defects whatever.

Spirketing—To reach the port sill, and five inches thick; all scarfs should be kept clear of the ports; sill butts well shifted.

Filling-in plank—Between the spirketing and clamps, three inches thick.

Wing transom knees—Sided thirteen inches, body fourteen feet long, and arm eight feet, bolted with fourteen bolts, one inch and a quarter diameter.

Thick strakes—On the gun deck two strakes white oak plank six inches thick, and not less than ten inches wide, bolted and joggled into each other, and over and into the beams and ledges two inches, running all fore and aft

along side of the hatches. Two other strakes on each side, fitted as above, midway between the water way and hatch strakes.

UPPER DECK.

- Clamps*.—Two strakes on each side, four inches thick, hooked and joggled into each other.
- Beams*.—Placed over the gun deck beams, sided thirteen and fourteen inches, and moulded, of the best heart pitch pine.
- Quarter deck transom*.—Ten by ten, one knee at each end, sided eight inches, body and arm six feet, and bolted with eight bolts one inch diameter.
- Lodging knees*.—Sided seven inches and a half, body to reach the next beam, arm five to four feet and a half, hooked and joggled into every beam, and bolted with seven bolts one inch diameter.
- Hanging knees*.—Sided eight inches, body six feet and a half long, and arm five feet, bolted with eight bolts one inch diameter.
- Carlings*.—Three tiers, except where the long coamings are five by eight inches, white oak.
- Ledges*.—Four and a half by six, white oak, two between each beam.
- Mast coamings*.—To be of good white oak as well as the hatch coamings; those for the main and foremast should be at least six inches clear of the mast all round, in order to give room for the mast to play, and more particularly for heaving down; the mizzen partners need not exceed three inches clear.
- Plank for deck*.—Three inches thick, five feet of which must be laid with oak from the side, the rest of the best heart pitch pine plank.
- Long coamings*.—Of heart pitch pine, ten by seventeen inches, to be kept wide enough apart to take down the boat and room alongside for the men to pass from the gun to the upper deck.
- Stemson*.—Of live oak, sided seventeen inches, and moulded ten inches, to shift the scarfs of stem and apron to reach the upper deck breast hook.
- Leadern scuppers*.—On each side on the gun deck, cut elliptical, four by six.
- Seat transom*.—Across the stern, the height of the port sill to be joggled into the counter timbers, nine inches thick, and kned at each end with one iron knee, to lay all along under the gallery door, and long enough to receive three bolts before it of one inch diameter, the thwartship arm four feet, to be bolted with three bolts, one inch diameter.
- Counter timbers*.—Of live oak, sided at the lower part of the windows and heel eleven inches, at the upper end six inches, to be filled in from the lower part of the window to the wing transom with red cedar, except in the wake of the gun room ports.
- Cable bits*.—Two pairs, of good tough strong white oak, twenty two inches square, and to taper below the lower deck beams to sixteen inches, cross pieces to be twenty-two inches fore and aft, and twenty inches deep, to have a standard knee against each bit, sided fourteen inches, to run forward over three beams, and scored down over each two inches, the arm to run to the opposite side of the cross piece.
- Catheads*.—Sided twenty inches and moulded eighteen inches.
- Treenails*.—For the bottom, of the best heart locust, to drive after a one inch and three-eighths auger; for the wales and upper works, to drive after a one inch and a quarter auger; to be all planed to a moot, and not suffered to be overhauled afterwards.

Dimensions and Sizes of Materials for building a Frigate of Thirty-six Guns.

	<i>Feet.</i>	<i>Inch.</i>
Length of the gun deck, from the rabbet of the stem to post,	163	7

} below, fore and aft.		

Drifts.—Quarter deck and forecastle drifts, fourteen inches wide and three and a half inches thick.

Flush drifts, twelve inches wide and four inches thick.

Strings, or first moulding strake above the ports, fourteen inches wide and four and a half inches thick.

Keel.—Of good sound white oak, in three pieces; the middle piece to be not less than eighty feet, if to be had; scarfs not less than twelve feet, to be kept clear of the main and fore steps, sided in the midships eighteen inches, at stem and post seventeen inches, and as deep as can be had; the scarfs all to be tabled and bolted with five bolts, one and one-eighth inch diameter; false keel, six inches thick, but not to be put on until after the floor and keelson bolts are drove and riveted.

Keelson—Sided eighteen inches amidships, and sixteen inches fore and after end, and sixteen inches deep; scarfs not within fifteen feet of keel scarfs, or main or foremast steps; upper keelson eighteen by fifteen inches deep, to be hooked and joggled into the lower one; all fore and aft scarfs clear of all other scarfs, at least ten feet, to be bolted with one and three-eighths inch bolts through every timber, and one in every cross-chock of one and one-eighth inch diameter.

Stem—In two pieces, if to be had, the lower one of good white oak, sided seventeen inches, and moulded not less than twelve inches, clear of the rabbet; scarfs not less than four feet, to be tabled and bolted with three bolts one and one-eighth inch diameter.

Apron—Sided from twenty-seven to twenty-eight inches at the upper end; and as the piece will work below, moulded at the upper end fourteen inches, and at the lower end seventeen inches.

Stem post—Eighteen inches square at the head, and sided seventeen inches below, by three and one-half feet fore and aft, including false post, and ten inches thick on the aft side, at the keel, to be fitted for a crooked headed rudder.

Inner post—To be twelve inches fore and aft, to run from the transom to the keel, to be of live oak, sided at the head from twenty to twenty-four inches, and at keel twelve inches.

Night heads—Sided from sixteen to eighteen inches, moulded twelve inches at head, and fourteen inches below.

Hawse pieces—To be four in number, sided eighteen inches, and to be bolted with one and one-eighth inch bolts into each other; their heels, if possible, to run down below the lower deck breast work.

Bow timbers—Sided twelve inches, and as long as possible; their heels well secured into the dead wood, to be in number on each side as per draught.

Hawse holes—Two on each side, fourteen and one-half inches diameter, and thirteen inches on a square, between each other.

Wing transom—Twenty-seven feet and three inches long on the aft side, moulded and sided twenty-two inches, to round up and aft six inches, all the others sided fourteen inches; the lower deck transom moulded as broad as conveniently can be had, for the better securing the ends of the deck plank; two bolts of one and one-eighth inch diameter in the deck transom, and all above it, and all below bolted with one bolt of one and one-quarter inch diameter.

Fashion pieces—Two pair, sided twelve inches, and moulded fourteen inches on the cant, as hereafter directed.

Dead wood—Forward, to secure the scarf of the stem and keel together, sided the same as the apron at heel, at the after end twenty-four inches, and not less than twenty inches, moulded over the scarf of the keel, and to run sufficiently aft. Midship dead wood, twenty-four inches broad and nine inches thick, to run from the dead wood forward to the stern post knee, well fayed on the keel.

Rabbet of the main keel—To be cut one inch below the upper edge, the garboard strakes to fay well to the dead wood all fore and aft; the dead wood to be tarred and papered with good thick substantial tarred sheathing paper, in order to prevent the ship from sinking if she should lose her keel.

Stern post knees—Two good ones; the lower one as long as possible.

Floor and raising timbers—Of good white oak, sided twelve and one-half inches, moulded at the floor sirmark fourteen and one-half inches, and in the throat, from the top of the dead wood, twenty-one inches, to be bolted through the keel with one and three-eighth inch bolts; those bolts should be put as near the side of the keel as possible, in order to give room on the other side for the keelson bolts; one floor bolted near the larboard side of the keel, the other on the starboard side; the timbers all to be double bolted, from the foremast to within ten feet of the mizzenmast.

Lower futtocks—Of live oak, sided twelve inches in the midships, and something smaller at the fore and after ends of the ship, to butt against the side of the dead wood amidships, to have cross chocks fayed on the dead wood, and their heels to be bolted through the keelson and keel, with one and one-eighth inch bolts.

Middle and upper futtocks and top timbers—Sided eleven and one-half inches; top timbers moulded at the gunwale seven inches, at the port sill nine inches; all the other timbers sized by a diminishing line, from the port sill to the floor sirmark, which is fourteen and one-half inches.

Timbers, framed—Floor timbers, lower futtocks, middle and upper and top timbers, all to be framed in frames, and bolted with three bolts, one and one-eighth inch square, in each scarf, except the lower futtocks and floors, which should have one and a quarter inch bolts; those timbers must be faced fair and true: for, if they are not out of winding, it will be impossible to bevel the timbers with any truth.

Main wales—Six strakes on each side, seven inches thick, and ten inches wide.

Black strakes—Five in number—the first and second five and a half inches thick; the third, five and three quarters inches; the fourth, five inches; and the fifth, four and a half inches thick, by ten inches wide; the upper edge of the black strake to be mitred down to a level, in order to carry the water out of the seam; plank between the black strake and the string to be three and a half inches thick.

Thick work under the wales—First strake, six inches thick; second, five and a half inches; third, five inches; and fourth, four and a half inches. Running plank in the bottom four inches thick, to be not less than six feet scarf, nor less than four strakes between every two butts, on the same timber; the seams to be made all a little outgauged.

Running plank in the bottom—Great care must be taken to bevel both edges of the plank that come together alike: for, if one edge is hewn standing, the other must be under, which makes bad work; the plank with the under bevelling will calk off.

Bilge strakes outside. One of six inches thick,

Two of five and a half inches thick,

Two of four and a half inches thick,

} on each side the middle strake, to cover the butts of the timbers equally, inside and out, to be reduced, fore and after ends, the same as the running plank.

INSIDE WORK. *Limber strakes*—Two on each side, six inches thick, and fourteen inches wide.

Bilge strakes—Three on each side, six inches thick, and fourteen inches wide, to be bolted through the outside bilge strake, in every third timber, with one inch bolts.

Running ceiling plank—Four inches thick.

Lower deck clamps—Two strakes on each side, five inches thick, and one strake four and a half inches, all hooked and joggled into each other with hooks not less than two inches, reduced at fore and after ends.

Steps of masts—The fore step to be placed between two breast hooks, the main step to be left so as to be set either forward or aft, as occasion may require; mizzen step to be two crotches, the arms of which ought to run up as high as possible.

Pillars or stanchions—Three tiers under the gun deck, and one under the upper deck, made to shift.

Breast hooks, of live oak—Five in the hold, including the deck hook, from eighteen to twenty feet long, if to be had, and bolted in every timber with bolts of one and a quarter inch diameter, as well as through the stern, and two between decks, secured as above; the deck breast hooks moulded as broad as possible, in order to give good hold for the deck plank.

Transom riders—Two on each side, under the lower deck, eighteen feet long, and sided twelve inches, bolted in every other timber with one and a half inch bolts.

Diagonal riders—Six pair on each side, in three principal pieces, with two shorter ones to complete the pair, tabled and bolted together with six iron bolts, one and a quarter inch square, in each scarf, and three in the short pieces, to be bolted through the bottom plank, at every two feet, with one and one-eighth inch copper bolts. The two midship ones to butt against each other, the foremost of the two midship riders to be cut with a bird's mouth, and to fit under the eighth beam from forward; the after one of the midship ones to be cut and fixed in the same manner under the eighth beam from aft; the other riders to be the distance of two beams apart, and fitted in the same manner, to be kept the same distance aft and forward, at heel, as they are at the head, to be tenoned and bolted into the keelson.

Lower deck beams.—Of the best heart pitch pine, sided sixteen inches, and moulded fourteen inches, the longest beam to spring five and a half inches, and the rest by the same mould.

Lodging knees.—Sided ten inches, body to reach the next beam, and arm six feet, hooked into the beam, to lay two inches below the upper edge of the beam, for the water ways and thick stuff to joggle down; to be bolted with seven bolts one and a quarter inch diameter.

Dagger knees.—Sided eleven inches, body nine feet long, and arm seven feet; the arm hooked into the beam, and bolted with eight bolts, one and a quarter inch diameter.

Lower deck transom knees.—Sided twelve inches, body ten and a half feet long, arm seven feet, and bolted with thirteen bolts one and a quarter inch diameter.

Carlings.—In three tiers, six by nine inches, of white oak.

Ledges.—In three tiers, five by six inches, two between each beam.

Mast carlings.—For the main and foremast ten by fifteen inches, to be kneed with four good knees; mizzen carlings, six by twelve inches, and kneed in the same manner; all of which pieces to be of live-oak, and bolted with one inch and seven-eighths bolts; gun deck carlings, the same size, and secured in the same manner.

Spur beam.—One of live oak on each side of the main hatch, tabled, kneed, and bolted, on the foreside of the beam, on the after part of the main hatch twelve inches by fourteen inches, and for gun deck the same.

Solid water ways.—Of good long substantial white oak, worked with a feint hollow, rabbeted one and a quarter inch above the deck, allowing two inches to be let down on the beams; a good six inch oak strake joggled two inches into the edge of the water way, and into and over the beams and ledges for the gun deck, a five and a half inch strake for the lower deck, and five inch strake for the upper deck, all joggled in the same way, and bolted through the side every four feet, and through every beam with one and an eighth inch bolts; upper deck with inch bolts.

Thick strakes on lower deck.—Two strakes of white oak plank, five and a half inches thick, and not less than ten inches wide, bolted and joggled into each other, and over and into the beams and ledges two inches; running all fore and aft alongside the hatches; other strakes on each side fitted, as above, midway between the water ways and hatch strakes; a long white oak knee to be fayed at the end of each pair, to be joggled over two beams, well bolted to the bow and stern with one and one-eighth inch bolts; and two other white oak knees to run from the mizzenmast to the stern post, joggled over and into each beam, to be let down on the beams sufficient for the ledges to frame into them; one other to reach from the stem to the foremast, worked in the same manner; the arm part of each knee to be well bolted through the stern and post with one and a quarter inch bolts.

Lower deck plank.—To be three and a half inches thick, of the best heart pitch pine, clear of all defects whatever.

Orlop deck.—To be laid six feet two inches below the upper part of the lower deck; beams, of the best heart pitch pine, sided twelve inches, and moulded ten inches, laid with two inches common plank, kneed with one good live oak knee at each end, bolted with inch bolts; it will be best to put the clamps on the ceiling three inches thick.

Spirketing.—Two strakes on each side on lower deck, five inches thick, hooked and joggled into each other, filling-in plank between the list and clamps four inches thick.

Gun deck clamps.—Two strakes on each side, five inches thick, and one of four and a half inches, joggled into each other two inches.

Ditto beams.—One under each port, and one between, of the best heart pitch pine, as near as the hatchways and masts will admit, (as per draught) sided eighteen inches, and moulded fifteen inches; all other beams to be laid directly over and under the same.

Standard knees.—Twelve on each side on the lower deck, one to be fayed over each beam; the diagonal rider comes under, and the others placed amidships, sided thirteen inches, body to reach the upper edge of gun deck clamps; the arm six feet long, and bolted with eight bolts, one and a quarter inch diameter.

Gun deck lodging knees.—Sided ten inches, body to reach the next beam; arm six feet long, bolted with seven bolts, of one and a quarter inch diameter.

Hanging knees.—Seven feet body, and six feet arm, sided eleven inches, bolted with eight bolts, one and a quarter inch in diameter, the arms of all knees to be hooked and joggled into their respective beams.

Gun deck transom knees.—Sided twelve inches, body twelve feet long, arms seven feet, bolted with twelve bolts, one and a quarter inch diameter.

Carlings.—In three tiers, six by nine inches, of white oak.

Ledges.—In three tiers, five by six inches, two between each beam.

Plank.—Four inches thick, six feet from the side, of the best white oak, clear of all sap and other defects whatever; the rest to be laid of the best heart pitch pine, clear of all sap, and other defects whatever.

Spirketing.—To reach the port sill, and five inches thick; all scars should be kept clear of the ports; all butts well shifted.

Filling-in plank between the spirketing and clamps.—Three inches thick.

Wing transom knees.—Sided thirteen inches, body fourteen feet long, and arm eight feet, bolted with fourteen bolts one and a quarter inch diameter.

Thick strakes on the gun deck.—Two strakes of white oak plank, six inches thick, and not less than ten inches wide, bolted and joggled into each other, and over and into the beams and ledges, two inches, running all fore and aft along side the hatches; two other strakes on each side, fitted as above, midway between the water way and hatch strakes.

UPPER DECK.

Clamps.—Two strakes on each side, four inches thick, hooked and joggled into each other.

Beams.—Placed over the gun deck beams, sided thirteen and fourteen inches, and moulded, of the best heart pitch pine.

Quarter deck transom.—Ten by ten, one knee at each end, sided eight inches, body and arm six feet, and bolted with eight bolts, one inch diameter.

Lodging knees.—Sided seven and a half inches, body to reach the next beam, arm five to four and a half feet, hooked and joggled into every beam, and bolted with seven bolts, one inch diameter.

Hanging knees.—Sided eight inches, body six and a half feet, and arm five feet, bolted with eight bolts, one inch diameter.

Carlings.—Three tiers, except where the long coamings are, five by eight inches, white oak.

Ledges.—Four and a half by six, white oak, two between each beam.

Mast coamings.—To be of good white oak; (as well as the hatch coamings) those for the main and foremast should be at least six inches clear of the mast all round, in order to give room for the mast to play, and more particularly for heaving down; the mizzen partners need not exceed three inches clear.

Plank for deck.—Three inches thick, five feet of which must be laid with oak, from the side; the rest of the best heart pitch pine plank.

Long coamings.—Of heart pitch pine, ten by seventeen inches, to be kept wide enough apart to take down the boat, and room along side for the men to pass from the gun to the upper deck.

Stemson.—Of live oak, sided seventeen inches, and moulded ten inches, to shift the scarfs of stem and apron, to reach the upper deck breast hook.

Lead scuppers.—On each side, on the gun deck, cut elliptical, four by six.

Seat transom.—Across the stern, the height of the port sill to be joggled into the counter timbers, nine inches thick, and kneed at each end with one iron knee, to fay along under the gallery door, and long enough to receive three bolts before it, of one inch diameter; the thwartship arm four feet, to be bolted with three bolts, one inch diameter.

Counter timbers.—Of live oak, sided at the lower part of the windows, and heel eleven inches at the upper end, six inches to be filled in, from the lower part of the window to the wing transom, with red cedar, except in the wake of the gun room ports.

Cable bits.—Two pairs, of good tough strong white oak, twenty-two inches square, and to taper below the lower deck beams to sixteen inches; cross pieces to be twenty-two inches fore and aft, and twenty inches deep; to have a standard knee against each bit, sided fourteen inches, to run forward over three beams, and scored down, over each, two inches, the arm to run to the upper side of the cross piece.

Catheads.—Sided twenty inches, and moulded eighteen inches.

Treenails.—For the bottom, of the best heart locust, to drive after a one and three-eighth inch auger; for the wales and upper works, to drive after a one and a quarter inch auger, to be all planed to a moot, and not suffered to be overhauled afterward.

Copy of a letter from the Secretary of War to Tench Coxe, Esq. Commissioner of the Revenue, dated

WAR DEPARTMENT, July 18, 1794.

SIR:

Agreeably to your request, of the sixteenth instant, I now enclose you a schedule of the dimensions of the masts, yards, and spars, for the thirty-six gun frigates.

Dimensions of the Masts, Yards, and Spars, of a thirty-six gun Frigate.

	Feet.	Inches.		Feet.		Inches.
Mainmast, the whole length,	93	4	Head.	12 $\frac{3}{4}$	Diame-	31 $\frac{1}{2}$
Foremast, the whole length,	86	2		12 $\frac{3}{4}$	ter.	28 $\frac{3}{4}$
Mizzen, the whole length,	86	2		9 $\frac{1}{2}$	"	21 $\frac{1}{2}$
Main yard, the whole length,	80	-	Arms.	4 $\frac{3}{4}$	"	17
Fore yard, the whole length,	76	-		4 $\frac{3}{4}$	"	16
Cross-jack yard, the whole length,	57	-		3 $\frac{1}{8}$	"	12
Bowsprit, the whole length,	57	6		-	"	28 $\frac{3}{4}$
Jib-boom, the whole length,	43	2		-	"	14 $\frac{3}{4}$
Main topmast, the whole length,	56	-	Head.	7 $\frac{1}{2}$	"	18 $\frac{3}{4}$
Fore topmast, the whole length,	53	2		7 $\frac{1}{2}$	"	17 $\frac{3}{4}$
Mizzen topmast, the whole length,	57	4		19	"	13
Main top-gallant mast,	44	8		15	"	10
Fore top-gallant mast,	42	7		15	"	9 $\frac{1}{2}$
Main topsail yard,	56	8		4 $\frac{3}{4}$	"	12
Main top-gallant yard,	40	2		2	"	8 $\frac{1}{2}$
Main royal yard,	30	2		1 $\frac{1}{2}$	"	6 $\frac{1}{2}$
Fore topsail yard,	53	10		4 $\frac{3}{4}$	"	11 $\frac{1}{2}$
Fore top-gallant yard,	38	2		2	"	7
Fore royal yard,	28	8		1 $\frac{1}{2}$	"	6
Mizzen topsail yard,	40	4		3	"	8 $\frac{1}{2}$
Mizzen top-gallant yard,	28	7		1 $\frac{1}{2}$	"	6
Mizzen gaff,	40	4		-	"	8 $\frac{1}{2}$
Spanker boom,	53	9		-	"	11 $\frac{1}{2}$
Ensign staff,	30	3		-		
Jack staff,	15	1		-		
Width of main top,	22					
Width of fore top,	20					
Width of mizzen top,	14	8				

Dimensions of the Timber and Plank.

One piece white oak, for a keel, eighty feet long, eighteen by twenty-four inches.

Two pieces white oak, fifty-five feet, one of eighteen by thirty, and one of eighteen by twenty-three.

Five pieces, for keelson, eighteen inches square.

One piece, for dead wood on keel, twenty-four by nine inches, one hundred feet, or two of fifty.

One lower piece, stem.

Eighty floor timbers and raising timbers.

Wales.—Fifteen pair wales, seven by ten.

Black Strakes.

10 pieces, for black strakes, five and a half by ten inches.

5 do. do. five and a quarter by ten inches.

5 do. do. five by ten inches.

5 do. do. four and a half by ten inches.

Thick Stuff under the Wale.

8 pieces, 6 inches thick, and not less than eleven inches wide.

8 do. 5 $\frac{1}{2}$ do. do. do.

8 do. 5 do. do. do.

8 do. 4 $\frac{1}{2}$ do. do. do.

Outside Bilge Strakes.

6 pieces, 6 inches thick, and not less than fourteen inches wide.

12 do. 5 $\frac{1}{2}$ do. do. do.

12 do. 4 $\frac{1}{2}$ do. do. do.

Drifts and Strings.

6 pieces, 3 $\frac{1}{2}$ inches thick, and not less than fourteen inches long, with a fair hang.

8 do. 4 do. do. twelve do. do.

8 do. 4 $\frac{1}{2}$ do. do. twelve do. do.

Limber strakes.—12 pieces, six inches thick, and not less than twelve inches wide.

Inside bilge strakes.—18 pieces, six inches thick, and not less than twelve inches wide.

Lower Deck Clamps.

12 pieces, 5 inches thick and not less than twelve inches wide.

6 do. 4 $\frac{1}{2}$ do. do. do.

Thick Stuff on Decks.

30 pieces on lower deck, 5½ inches thick, ten inches wide.
 30 do. on gun deck, 6 do. do.
 30 do. on upper deck, 5 do. do.

Spirketings.—24 pieces, five inches thick, ten inches wide.

Gun Deck Clamps.

12 pieces, 5 inches thick, twelve inches wide.
 6 do. 4½ do. do.

Quarter Deck Clamps.—12 pieces, four inches thick, twelve inches wide.

Plank sheers.—2 pieces, four and a half inches thick, eighteen inches wide.

The whole of the foregoing stuff should be at least sixty feet long, if possible.

Gun deck oak plank, four inches thick, - 3,000
 Bottom and ceiling plank, four inches thick, - 22,000

25,000 feet, four inch, as long as possible.

Quarter deck and forecastle, three inch, - 2,500
 Filling between the ports inside, three inch, - 2,500
 For other uses, - 2,500

7,500 feet, three inch plank, for deck, as long as possible.

Filling between the black strake and string, three and a half inches thick, 2,500 feet, long as possible.

Ledges.

Reduced measure.—4,500 feet, 6 by 6, from 10–19 to 27 feet long,
Running measure.—1,000 feet, for carlings, 6 by 9, 10–14 to 19 feet long,
 1,000 feet, for carlings, 5 by 8, 10–14 to 19 feet long, } white oak.
Reduced measure.—2,000 feet, for carlings, 4 by 5, 10–19 to 27 feet long,
 2,500 feet, for carlings, 5 by 6, 9–18 to 26 feet long, }

Plank measure.—10,000 feet heart pitch pine, three and a half inch plank, for lower deck.
 6,000 feet, two inch, common pine plank, for orlop.
 7,000 feet, four inch, heart pitch pine plank, for gun deck.
 7,000 feet, three inch, heart pitch pine plank, for upper deck.

Oak logs.—200 white oak logs for each ship, and one hundred for wharf, if wanted.

JOSHUA HUMPHREYS.

4th CONGRESS.]

No. 3.

[1st SESSION.]

PROGRESS IN PROVIDING MATERIALS AND BUILDING FRIGATES.

COMMUNICATED TO THE SENATE, DECEMBER 15, 1795.

WAR OFFICE, December 12, 1795.

SIR:

By the direction of the President of the United States, I have the honor to present, herewith, a report of the progress made in providing materials for the frigates, and in building them,

And am, most respectfully, sir, your obedient servant,

TIMOTHY PICKERING.

The VICE PRESIDENT of the U. S. and PRESIDENT of the Senate.

A statement of the progress in providing materials for the frigates, and in building them.

If the frigates had been constructed with the timber at hand in the several places where they were destined to be built, they might by this time have been completed. But the design of rendering them permanently useful having determined the Executive to have them constructed with live oak and cedar, the measures deemed necessary and adequate to the procuring of those materials were taken during the last year. The common and easy acquisition of those articles for the ordinary service of the merchants forbade any apprehension of extraordinary difficulty in procuring the same for the frigates. But in the experiment it has been found, that timber of the lengths and sizes necessary for frigates, was greatly dispersed, and grew generally in places difficult of access, and required extraordinary means of transportation to the landing. The natural difficulties of the country have been increased by unusual quantities of rain. Ship carpenters were sent from the Northern States to the islands bearing the live oak, and employed during the last winter in cutting and hewing the timber: but the climate deterred them from staying to prosecute their work; so that three men only, capable of selecting the proper timber and moulding it in the requisite forms, have been prevailed on to remain. These, with negro laborers, have continued the work, and are still employed. With these, however, it was judged practicable to procure the whole of the live oak timber by the month of May, 1796. Such was the report of an intelligent agent employed in Georgia during the last winter, and who has now returned hither to superintend, and, as far possible, to expedite, the operations.

Upon this report, made in June last, it was judged eligible to concentrate the efforts that were making to furnish the yards with live oak timber, and accordingly orders were given to accumulate at two of the yards so much of it as would be necessary to complete two frigates by the ensuing spring. But before these orders could reach the manager, several vessels were despatched to different yards; and one was cast away and her cargo lost. Some difficulty occurred in procuring proper vessels to transport the timber: several of those which had made one voyage having encountered such hardships and sickness as to be deterred from making a second.

Nevertheless, under all these embarrassments, the work is continued, and with the well grounded expectation, before expressed, that all the live oak timber will be cut and transported to the different ship yards at farthest by the next midsummer.

Details of the quantities of timber and other materials already provided, and of the progress in building, will appear in the annexed schedules. The live oak and white oak timber mentioned are generally or wholly moulded and dressed and ready for raising.

Since draughting the foregoing report, a letter has been received from the chief carpenter employed in procuring timber in Georgia, presenting a very favorable account of his progress. Two vessels laden with live oak had recently sailed for the two yards of Philadelphia and Baltimore, and the rest of the timber to complete the frames of the frigates building at those places was cut and ready to be shipped. These were the two frigates which, as before mentioned, it was proposed first to finish. The chief carpenter adds, that if he is furnished with vessels fit for the service, he will have all the timber in the six yards in the month of May next, excepting the knees, all of which he thinks cannot be got of live oak. The agent who engages the vessels for transporting the timber has no doubt of procuring timely all that will be wanted for the service.

Sail cloth has been provided for one suit of sails for each of the frigates. It was contracted for, and manufactured in the United States, in the year 1794. It has been proposed to procure one kind of foreign cloth, of a superior quality, for the second suit: but the purchase has been suspended, to avoid an expenditure of money until it could be ascertained at what time the cloth would actually be wanted to equip the frigates. For the like reason, no more hemp has been purchased than will be required for the cordage of the two frigates the building of which it was intended to advance in preference to the others; and which it was then hoped would be constructed by the close of the ensuing spring. For the same cause, the number of anchors which will eventually be required remains incomplete.

All which is respectfully submitted to the Senate of the United States.

TIMOTHY PICKERING.

DEPARTMENT OF WAR, December 12, 1795.

Statement of the progress made in building a Frigate at Philadelphia, to carry forty-four guns, under the direction of Mr. Joshua Humphreys, Naval Constructor, and Captain John Barry, Superintendent.

The keel is completed and laid on the blocks. The pieces are scarfed and bolted to each other in the best manner. The stern frame is complete and ready for raising. About two-thirds of the live oak for the frame is received, nearly all of which is worked agreeable to the moulds; and many of the frames are together and bolted, and ready to put into the ship; two-thirds of the plank for outside and ceiling are received, and about one-third for the wales; the remainder is nearly ready. The beams for the orlop deck are all procured and worked, and many of the upper deck beams are likewise worked, and the remainder are expected to arrive daily. A large quantity of live oak knees are arrived for the security of the decks, and pieces for coamings for the hatchways, partners for the masts, and several other purposes, are ready. The masts, bowsprit, yards, and the other spars, are procured, several of which are received. The copper necessary for securing the various parts of the ship, and for sheathing the bottom, is in the public stores. The iron work is now preparing and ready for delivery, as fast as it is wanted. The boiler for boiling the white oak plank in salt water, to render it durable in the greatest possible proportion to live oak, is completed. All the anchors are procured, and the hemp for the cables and materials is now spinning and preparing; all the canvass necessary for one suit of sails is in the public stores. The blocks for the rigging are manufacturing, and a great part are ready for delivery. Kettle for ballast is all cast and delivered; a contract for the treenails has been made, and next month appointed for delivery. Bunting for the colors is on hand, and a great number of smaller articles, for the hull, rigging, and equipping the ship, are stored in the public stores.

Statement of the progress made in building a Frigate, to carry forty-four guns, at New York, under the direction of Mr. Foreman Cheeseman, Naval Constructor, and Captain Silas Talbot, Superintendent.

The keel is completed and laid on the blocks. The pieces are scarfed and bolted to each other in the best manner. The stern frame is not yet complete; several transoms are wanting. About one quarter of the live oak timbers for the frame of the ship are arrived; all of which are worked to the moulds. Timber for the gun deck and lower deck beams are received, and the plank for those decks is ready. The copper and the treenails are all in the public stores. The plank for the outside of the ship, as well as the ceiling, are nearly all cut; great part are put into the sea water to draw out the sap and to season them. The carlings, ledges, coamings for the hatchways, and bits, are sawing in the yard. The masts, bowsprit, yards, and the other spars, are procured, and ready for finishing. The kettle for ballast is all cast and delivered; and the iron work for the hull and materials are now in hand; and the articles, when finished, are placed in the public stores. All the necessary contracts are entered into by the agent, and the articles are daily arriving.

N. B. A large schooner with live oak, bound to New York, was unfortunately lost on Cape Hatteras, and every part of the cargo lost. On board of this schooner were many of the principal pieces of timber necessary for the frame.

Statement of the progress made in building a Frigate, to carry forty-four guns, at Boston, under the direction of Mr. George Claghorne, Naval Constructor, and Captain Samuel Nicholson, Superintendent.

The keel is completed and laid on the blocks. The pieces are scarfed and bolted to each other in the best manner. The stern frame is now completing, and will be soon ready to raise. The stern is also putting together, every part being worked to the moulds. About two-thirds of the live oak timbers have been received, and are all worked agreeable to the moulds; great part of those timbers are bolted together in frames, and are ready to put into the ship, but some of the principal pieces for the frame have not yet arrived. All the gun deck and lower deck beams are procured and ready for delivery, and the plank for those decks are received into the yard. The plank for outside and ceiling are also received, and are now seasoning. The copper is all in the public stores. The masts, bowsprit, yards, and other spars, are all ready for working. The bits for the cables, coamings for the hatchways, partners for the masts, are all ready. The caboose, with a forge, hearth, armorer's tools, spare coppers, boilers, &c. are all complete. Most of the iron work is in great forwardness. All the necessary contracts are entered into by the agent, and the articles contracted for are daily arriving.

Statement of the progress made in building a Frigate, to carry forty-four guns, at Norfolk, under the direction of Mr. Josiah Fox, Naval Constructor, and Captain Richard Dale, Superintendent.

The keel is completed and laid on the blocks; the pieces are scarfed and bolted to each other in the best manner. The stern frame is complete and ready for raising. More than two-thirds of the live oak for the frame is arrived, which is worked to the various moulds; great part of the timbers are bolted together in frames, and are ready for raising. The gun deck and lower deck are all finished, and are ready to put into the ship. The plank for the decks is not yet arrived. The outside plank, as likewise the ceiling, are preparing, and some part have been delivered. All the copper necessary for securing the various parts of the ship together, and for sheathing the bottom, is in the public

tores. The keelson and midship dead woods are complete. The masts, bowsprit, yards, and all the other spars, are cut, and several of them are received at the yard. The carlings, ledges, coamings for the hatchways, and the Partners for the masts, are now in hand. The iron work for the hull and materials are getting ready. The caboose, with a hearth, forge, armorer's tools, spare coppers, boilers, &c. are complete. All the necessary contracts are entered into by the agent, and the articles contracted for are daily arriving.

Statement of the progress made in building a Frigate, to carry thirty-six guns, at Baltimore, under the direction of Mr. David Stodder, Naval Constructor, and Captain Thomas Truxtun, Superintendent.

The keel is completed and laid on the blocks; the pieces are scarfed and bolted to each other in the best manner. The stern frame is not quite complete. Near two-thirds of the live oak timber for framing the ship is arrived; great part of which is worked to the various moulds, and some part bolted together in frames, and ready to go into the ship. The beams for gun deck and lower deck are received, and are put to season. The plank for some of the decks is in the yard, and ready for laying; most of the plank for outside and ceiling are ready, and are in the yard. The copper for securing the various parts of the ship together, and for sheathing the bottom, is in the public stores. The masts, bowsprit, yards, and all the other spars, are cut, and ready to be delivered. The boats are building; and the bits for the cables, coamings for the hatchways, carlings, ledges, and partners for the masts, are getting out. The principal part of the iron work is done for the hull, and materials and all the necessary contracts are entered into by the agents, and the articles contracted for are daily arriving.

Statement of the progress made in building a Frigate, to carry thirty-six guns, at Portsmouth, N. H. under the direction of Mr. James Hackett, Naval Constructor, and Captain James Sever, Superintendent.

The keel is completed and laid on the blocks; the pieces are scarfed and bolted to each other in the best manner. The stern frame is nearly ready for raising. The principal framing of the body of the ship is not yet complete. About two-thirds of the live oak timber have been delivered into the yard, which is nearly all worked to the moulds. Great part of the timbers are bolted together in frames, and are ready to go into their proper places. The beams for the gun deck and lower deck are ready, as well as the carlings and ledges, for framing the decks; and the plank for those decks are also procured, and great part are in the yard. The outside plank and the wales are all cut, and will be ready in a few weeks, as is the ceiling; great part of the plank are already received into the yard, and are now seasoning. All the copper necessary for securing the various parts of the ship together, and for sheathing the bottom, is in the public stores. The masts, bowsprit, yards, and the other spars, are delivered by the contractors. The bits for the cables, coamings for the hatchways, partners for the masts, are all received and trimmed. Most of the iron work is in great forwardness, and all the necessary contracts are entered into by the agent, and the articles contracted for are daily arriving.

4th CONGRESS.]

No. 4.

[1st SESSION.]

FRIGATES AND GALLEYS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 29, 1796.

Mr. PARKER, from the committee appointed to inquire into the actual state of the naval equipment ordered by a former law of the United States, and to report whether any, and what, further provision is necessary to be made on this subject, reported:

That, by a law, passed the 27th of March, 1794, it was enacted that six frigates should be built for the protection of the trade of the United States against the Algerines, then at war with the United States; that four of the frigates should carry forty-four guns, each, the two others thirty-six guns, each. By this law it was enacted, that, in case of a peace with Algiers, no further proceeding should be had under the said act.

That, on the 9th of June ensuing, an act passed, appropriating six hundred and eighty-eight thousand eight hundred and eighty-eight dollars and eighty-two cents, for the purpose of carrying on the building and equipping of the six frigates ordered by the preceding law; and the sum of eighty thousand dollars was appropriated, by the said act, for the building of galleys or other vessels, as the President of the United States might direct; the above sum of six hundred and eighty-eight thousand eight hundred and eighty-eight dollars and eighty-two cents, at the time of passing the act, was thought would be sufficient to build and equip the said frigates; and they might have been built and equipped in one year, if common materials had been put together, and the size of the frigates had not been extended.

But it appears to your committee, that, after the law passed, the President of the United States, under whose direction they were to be built, deemed it most advisable to extend the size of the frigates, and determined that they should be near three hundred tons larger, each, than the committee who reported on the naval armament had estimated; that, instead of making use of common timber for building the frigates, he caused the best live oak and red cedar to be got in Georgia, from whence it was to be exported to the different naval yards, established under his direction, at the following places, viz. one at Portsmouth in Virginia, one at Baltimore, one at Philadelphia, one at New York, one at Boston, and one at Portsmouth in New Hampshire; at which places much of the timber has arrived, more is daily expected, and the whole is probably contracted for, and may be expected in the different yards by May or June next; as may more fully appear by a letter from the Secretary of the Department of War, received the fourteenth of December last, to which the committee beg leave to refer.

Your committee further report, that, from the best information they can obtain, in consequence of the increased size of the frigates, the additional expense of live oak and red cedar timber, and the unexampled rise of labor, provisions, and all other articles necessary to the equipment of ships of war, since March, 1794, when the law was passed for providing a naval armament, that the cost of the six frigates, exclusive of provisions and men's wages, when equipped for sea, will amount to one million one hundred and fifty-two thousand one hundred and sixty dollars; hence, if they are to be completed, they will require the further sum of four hundred and fifty-three thousand two hundred and seventy-two dollars—a sum, in the opinion of the committee, which it would be inexpedient to apply to this object, whilst labor, provisions, &c. &c. remain at the present advanced prices; and as the committee are of opinion that many of the articles on hand may be preserved a long time without injury, and such as are of a perishable nature may be sold without loss, if not to advantage; and as the primary cause for which the six frigates were to be built is probably accomplished, although the committee reluctantly give up the idea of finishing the whole for the present, are of opinion that two of the frigates, one of forty-four guns, and one of thirty-six guns, should be finished as soon as possible; which, in the opinion of the committee, may be effected with the money already appropriated, and completed by November next. Therefore,

Resolved, As the opinion of this committee, that, as there is a peace with the Emperor of Morocco, and good reason to believe that there is one with Algiers, that only two of the six frigates should be completed at present, and

that as speedily as possible; and that the President of the United States should be authorized to dispose of such part of the materials procured, as may be of a perishable nature, after reserving a sufficiency to complete one frigate of forty-four guns, and one of thirty-six guns. That the surplus be secured in the best manner the nature of the case will admit, to be ready whenever Congress may deem it advisable to direct the finishing of the other four frigates.

Resolved, As the opinion of this committee, that the surplus moneys appropriated for building of frigates, after completing two of them, should be applied to the sinking fund, for the reduction of the public debt.

WAR OFFICE, January 20, 1796.

SIR:

I have the honor to send, herewith, for the information of the committee to whom was committed the report on the frigates, the best returns of materials provided, and yet wanting, that can be formed, together with an account of the moneys expended, and the sum necessary to complete their construction and equipment, exclusively of men and provisions; this sum being estimated at \$453,272.

I am, very respectfully, sir, your obedient servant,

TIMOTHY PICKERING.

Honorable JOSIAH PARKER, Esq.

No. 1.

Report, &c. agreeably to a request of a committee of the House of Representatives of the United States, appointed to inquire into the state of the Naval Equipment, viz:

To the first inquiry, I am of opinion that, on the most minute calculation that I can possibly make or procure, from a general consultation of the different persons concerned in the building and equipment of the frigates, that their actual cost, when completed, with ordnance and ordnance stores, including powder, &c. (but without being provisioned or manned) will be one hundred and twenty dollars per ton. That the four forty-four gun ships will tonnage, according to the new mode of measurement adopted by the carpenters of this port, six thousand eight hundred and fifty-two tons, and that the two ships of thirty-six guns will tonnage two thousand six hundred and sixty-six tons.

Consequently the six frigates will measure nine thousand five hundred and eighteen tons, which, at the rate of one hundred and twenty dollars, aforesaid, will cost	\$1,142,160
Deduct appropriation made by a former act of Congress for building the said frigates, &c. exclusive of eighty thousand dollars appropriated for galleys, &c.	688,888

Further provision necessary to complete the six frigates for sea, according to above calculation, manning and provisions excepted,	453,272
--	---------

In the accompanying paper, No. 2, is an account of all moneys disbursed, or paid to the different agents and purveyor of supplies, including the sum of _____ dollars, remitted to our minister in England, for the purpose of purchasing copper and sundry other materials, and will be accounted for by them, respectively.

No. 3 will show the materials on hand, and No. 4, such as are still wanting in the yards and stores; many of which are procured and will be speedily received.

No. 5 is an estimate of the further sum supposed to be necessary to completely equip one forty-four and one thirty-six gun frigate, if the others should be discontinued.

From the present arrangements that are made, and apparent prospect, it is expected that the six frigates may be built, launched, and completely equipped, in the course of the present year; and that one forty-four and one thirty-six may be completed with great ease by the month of November next at furthest.

The foregoing is, at the request of the Secretary of War, made out and submitted for his inspection and revision by his very humble servants,

TENCH FRANCIS, *Purveyor*,
THOMAS TRUXTUN,
JOSHUA HUMPHREYS, *Navy Constructor*,
JOSIAH FOX, *Navy Constructor*.

PHILADELPHIA, January 13, 1796.

FRIGATE OF THIRTY-SIX GUNS, BUILDING AT PORTSMOUTH, (N. H.) ¶¶																																
Materials actually delivered into the Navy Yard.	453, among which are several knees.		-	-	390 pieces of white oak timber for various purposes, among which are included the beams, bits for the cables, &c.				26	17	-	30	-	-	8,024	6,327	1,014	10,573	410 pieces pine plank not specified in sizes.		-	-	4	-	-	356	1,851	895				
Materials yet wanting to complete the requisitions.	The number not inserted.		148	81	-	-	-	-	4	57	65	61	47	20	6	7,081	-	6,486	-	-	-	2,000	9,000	-	4 or 5	50,000						

*There is, exclusive of the 1,529 lbs. of copper delivered into the Navy Yard, 57,670 lbs. of copper in the public stores, which is thought sufficient to complete the ship. Most of the other materials not delivered into the yard are procured, and are daily arriving.

†There is a large quantity of white oak plank that has been saved in the yard, exclusive of the 30,910 feet; of the precise quantity of which no returns have been made, the timber from which it was sawed having been already accounted for under white oak timber.

‡The beams are all cut, and many of them delivered; the remainder are expected to be delivered in a short time. A vessel laden with live oak timber, bound to Baltimore, having met with unfavorable weather, was under the necessity of going to Boston, and the cargo was landed there for the use of the frigate.

§Nearly the whole of the white oak plank is cut, and is expected at the Navy Yard as soon as the weather will permit transporting it with safety down James River to Norfolk.

¶A large quantity of plank is saved in the yard, but of the precise quantity no returns have been made. The beams are cut out, and are put into sea water to season. The remainder of the copper necessary for securing and sheathing the vessel is in the public stores.

¶¶A considerable quantity of plank has been sawed in the yard, the particular quantity has not been transmitted by the clerk; the remainder of the copper is lodged in the public stores.

No. 5.

One frigate of 44 guns, being 1,713 tons, and one of 36 guns, 1,333 tons, making 3,046 tons, at \$120 per ton, will cost, exclusive of provisions and men, as aforesaid, \$365,520. What proportion of this sum is already expended and contracts made for, cannot immediately be well ascertained, as many of the materials have been purchased in common with those for the other frigates, in Europe, accounts of which have not as yet been received; and the same difficulty arises with respect to the live oak being engaged for the ships generally; but it is judged that the balance of moneys already appropriated for the naval equipment will be sufficient to complete the two ships above mentioned, should the other four be suspended; but, if the six frigates are carried on in the manner contemplated, the further sum of \$453,272, as stated in No. 1, will be necessary to carry the whole business into full effect.

WAR OFFICE, *January 20, 1796.*

TIMOTHY PICKERING.

4th CONGRESS.]

No. 5.

[1st SESSION.]

PROCURING MATERIALS AND BUILDING FRIGATES SUSPENDED.

COMMUNICATED TO CONGRESS, MARCH 15, 1796.

Gentlemen of the Senate and House of Representatives:

By the ninth section of the act, entitled "An act to provide a naval armament," it is enacted "that, if a peace shall take place between the United States and the Regency of Algiers, that no further proceedings be had under this act."

The peace which is here contemplated having taken place, it is incumbent upon the Executive to suspend all orders respecting the building of the frigates, procuring materials for them, or preparing materials already obtained, which may be done without intrrenching upon contracts or agreements made and entered into before this event.

But, inasmuch as the loss which the public would incur might be considerable from the dissipation of workmen, from certain works or operations being suddenly dropped or left unfinished, and from the derangement in the whole system, consequent upon an immediate suspension of all proceedings under it, I have, therefore, thought it advisable, before taking such a step, to submit the subject to the Senate and House of Representatives, that such measures may be adopted in the premises as may best comport with the public interest.

G. WASHINGTON.

UNITED STATES, *March 15th, 1796.*

4th CONGRESS.]

No. 6.

[1st SESSION.]

THREE FRIGATES DIRECTED TO BE COMPLETED.

COMMUNICATED TO THE SENATE, MARCH 17, 1796.

Mr. BINGHAM, from the committee to whom was referred the message of the President of the United States, of the 15th instant, made the following report:

That it is the opinion of the committee it will be expedient to authorize the President of the United States to cause to be completed, with all convenient expedition, two of the said frigates of forty-four, and one of thirty-six guns.

That a discretionary power be committed to the President of the United States to cause the others to be finished, having a due regard to the existing price of labor and materials.

That so much of the sum of six hundred and eighty-eight thousand eight hundred and eighty-eight dollars and thirty-two cents, as, by the act of June, 1794, was appropriated to pay the expenses to be incurred by the act to provide a naval armament, remaining unexpended, as well as so much of the sum of eighty thousand dollars, appropriated for a provisional equipment of galleys, by the before recited act, be appropriated for carrying into effect the provisions of the aforesaid resolution.

4th CONGRESS.]

No. 7.

[2d SESSION.]

PROGRESS MADE IN BUILDING FRIGATES, THE ESTABLISHMENT OF A NAVY YARD, AND THE PURCHASE OF LIVE OAK PLANTATIONS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 25, 1797.

Mr. PARKER, from the committee appointed to inquire into the state of the naval equipments ordered by former acts of Congress, and whether any, and what, other naval force is necessary for the protection of the commerce of the United States, and support of their flag, reported:

That, in consequence of the act of the 20th of April, 1796, the President of the United States directed that the frigates building at Philadelphia, Boston, and Baltimore, should be completed; that the building of the frigates at

New York, Portsmouth in Virginia, and Portsmouth in New Hampshire, of course were discontinued. Upon inquiry, the committee find that the frigate building at Philadelphia, of 44 guns, and called the United States, is in such forwardness that she may possibly be launched in April, and that, in two months after, she may be made ready for sea; that it will require, to finish this frigate, so as to receive her crew and stores, fifty-five thousand nine hundred and fifty dollars.

The frigate building at Boston, called the Constitution, of 44 guns, is not in such forwardness as the United States; and, by the accounts from the proper office, it is not supposed she can be launched till July, and that it will be two months after before she can be put in a condition for sea: to complete her, exclusive of men and provisions, will require ninety-six thousand six hundred and seventy-one dollars and seventy-one cents.

The frigate Constellation, building at Baltimore, of 36 guns, it is supposed, by the officers of the Department, may be launched in May next, and that, in two months after, she may be so far finished as to be ready to receive her crew and stores: for this ship the sum of forty-seven thousand three hundred and seventy-five dollars is required.

The committee beg leave to observe, that the foregoing report is made from statements in their possession from the Department of War; but the committee do not believe that either of the ships can be ready to launch by the time mentioned, on account of the severity of the weather: but, admit they should, a further sum of money will be necessary, and must be speedily supplied; as it appears by the report of the Secretary of War, that all the money hitherto appropriated has been expended, except twenty-four thousand one hundred and thirty-three dollars and seventy-one cents. In order that the House may have the necessary information on this subject, the committee give the following statement:

Appropriated 9th of June, 1794, for the purpose of building six frigates,	\$688,888 82
For the purpose of building galleys, or other vessels, by the same act, and applied to this object,	80,000 00
Appropriated by act of June 1st, 1796, to pay captains,	5,000 00
Total of appropriations,	\$773,888 82
Required to finish the United States,	55,950 00
Do. do. Constitution,	96,571 71
Do. do. Constellation,	47,375 00
	973,385 53
Out of which deduct:	
So much unexpended,	\$24,133 71
Materials sold, per report,	4,214 05
	28,347 76
	<u>\$945,437 77</u>

Thus, it appears, by official statements, to your committee, that, to build the three frigates ordered by the act of Congress of April 20th, 1796, it will cost the United States, with the materials now on hand, the value of which they have no estimate, the sum of nine hundred and forty-five thousand four hundred and thirty-seven dollars and seventy-seven cents, exclusive of fitting, manning, and providing them with provisions and stores. That the House may have all the information as to the probable cost, and yearly expenditure, the committee have on this subject, they state it, as given in to them by the Secretary of War, which will accompany this report.

That each frigate, of 44 guns, will cost, for wages, per month, four thousand and ninety-six dollars, estimate twelve months' pay.

For two frigates of 44 guns,	\$98,304
For one do. of 36 guns, \$3,513 per month,	42,516
Twelve months' subsistence for three frigates, 400,770 rations, at 20 cents, is	80,154

Annual expense for two frigates of 44 guns, and one of 36 guns, 220,974

In addition to this:

For the salary of two persons to take care of the naval yards at Portsmouth and New York,	1,000
Rent of the naval yards at Portsmouth in New Hampshire, and New York,	1,200

\$223,174

The committee refer to the report from the War Department to show the timber on hand in the different yards, as well as what has been sold, the value of which they have no estimate, except as to what has been sold, nor have they been furnished with an estimate of the naval stores which are on hand; but, if the House should require those documents, they may be had at the proper office.

The committee beg leave to report, as their opinion, that the sum contemplated by the War Department, as necessary to man the ships, will be insufficient, under existing circumstances, as the rate of seamen's wages are estimated much lower than has been given by merchants, for their ships, within the last two years, and but little more than the usual wages in the most tranquil times; but, from all circumstances, especially from the forwardness of three of the ships, and most of the materials being ready, they think it would be proper to finish them as speedily as possible, as an aid to our commerce, and a support to its flag. Therefore,

Resolved, That — dollars be appropriated to finish, and equip for sea, the frigates United States, Constitution, and Constellation.

Your committee further report, as their opinion, that a sum of money should be appropriated for the purpose of purchasing and fitting up a naval yard; and, also, that it would be expedient for the United States to secure some of the lands in South Carolina and Georgia, well clothed with live oak and red cedar timber, for the purpose of building ships of war. Therefore,

Resolved, That — dollars ought to be appropriated for the purpose of buying, and fitting up for the United States, a proper site for a naval yard.

Resolved, That — dollars ought to be appropriated for the purpose of purchasing live oak and red cedar timber, or lands stored with it, for naval purposes.

WAR OFFICE, January 11th, 1797.

SIR:

In compliance with your letter of the 21st ultimo, I have the honor to submit the enclosed statements, which exhibit as particular a view of the material objects of your inquiries as could be obtained, without occasioning a delay that might have counteracted your intentions.

The measures that have been taken to prepare the rigging and sails, and to procure the necessary stores, and the advances made towards the final equipment of the frigates, render it probable that they may be got ready for sea in about two months after being launched.

While on this subject, permit me to observe that, if Congress perceive advantages in the extension of their marine, or think it expedient that early precautions should be taken to secure to the United States a lasting fund of live

oak for future use, it will be proper that authority should be given for the purpose, as well as to purchase a site for a navy yard.

The probability is, that an article so important to maritime nations as live oak will be sought after with much avidity, and that the land which is clothed with it may pass into hands that may make its attainment hereafter more expensive, if not impracticable.

But whether it is right that the United States should be the purchaser of such land, is a question which no doubt you have examined.

I am, sir, with great respect, your obedient servant,

JAMES McHENRY.

Hon. Mr. PARKER, *Chairman of the Committee
for inquiring into the state of Naval Equipments, &c. &c.*

Statement of the progress made in building a Frigate at Philadelphia, to carry forty-four guns.

The hull is all planked, inside and out, and all the principal decks are laid and calked, excepting a part of the gun deck; the upper deck beams are in, and a part of them kneed; about half of the bottom is dubbed off, and a considerable part calked; the braces and pintles for the other are all cast; the knee of the head, together with the figure, are nearly ready. All other parts of the hull are in such forwardness, that it is expected she may be launched by the beginning of April next, provided the winter does not prove severe. The rigging is all made, and nearly fitted; the yarns for the cables are spun; the anchors and iron ballast are on hand; and the blocks, dead eyes, water casks, boats, lanterns, and all the tin work, are provided. The other materials are in part procured, and the work in general progresses rapidly towards a completion.

Statement of the progress made in building a Frigate at Boston, to carry forty-four guns.

The whole of the frame is raised, and is ready for planking; the wales are prepared, and it is expected will be on and fastened this month; the keelsons are in their places and bolted off; the masts are now in hand, and the boats are building; all the dead eyes for lower and topmast shrouds are made and strapped; the knees for all the decks are procured, as well as the beams, carlings, ledgers, &c.; iron ballast sufficient is in store, and the necessary materials for completing the hull are procured and received.

The hemp for the cables, rigging, &c. and blocks, are in the hands of the respective tradesmen, manufacturing; and if the winter should prove favorable, there is no doubt but this frigate may be launched in July next.

Statement of the progress made in building a Frigate at Baltimore, to carry thirty-six guns.

The whole of the frame is raised; the wales, black strakes, flush, quarter and fore drifts on, and dressed off; the ceiling, clamps for guns, lower and orlop decks, are all in and dubbed off; the beams are prepared and ready to be put into their respective stations; the bottom is now planking, and the knees are getting ready for the decks; other parts of the hull are progressing as fast as the workmen can be employed to advantage; and from present appearances, this ship may be launched in May next. The lower topmast and topgallant shrouds, with all their respective stays, are fitted, and ready to go over the mast heads. The other rigging is also in great forwardness.

The boats are all built; water casks mostly made, together with the blocks, dead eyes, hearts, &c. The cannon for the gun deck are all in the navy yard, trimmed, and ready for mounting on the carriages, which are made.

Estimate of the sums necessary to complete and equip the Frigates United States and Constitution, of forty-four guns, and Constellation, of thirty-six guns.

5th CONGRESS.]

No. 9.

[2d SESSION.]

ADDITIONAL NAVAL FORCE, AND THE ESTABLISHMENT OF A PUBLIC FOUNDRY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 16, 1798.

The committee to whom was referred that part of the President's speech which relates to the protection of commerce, and the public defence, submit the following report:

That further appropriations are necessary to enable the President of the United States to complete the three frigates, part of the naval armament finally authorized by the act of Congress of the 1st day of July last. The committee beg leave to refer to the documents from the Department of War, submitted herewith, for a view of the actual state of those vessels at the latest report, and for some details of the deficiencies which remain to be supplied for their respective finishing and equipment. With these statements, estimates are exhibited of the pay and subsistence of the complements of officers and men as allowed by law, and of the other current expenditures which will be unavoidable whenever the frigates shall be employed.

The committee also submit a letter addressed to them from the Secretary of the Treasury, relative to the execution of the authority given by the same act to the President of the United States, for increasing the force of the revenue cutters, as a defence of the sea coast. It appears that only two of the vessels of that description are found capable of this alteration and employment. Of these, one only, namely, the revenue cutter on the Virginia station, has been armed; the other, namely, the revenue cutter stationed at and near the Bay of Delaware, is not yet armed. It is observable that, in this instance, as well as in the equipment of the frigates, the United States experience the want of a foundry for the casting of cannon suitable for the public service.

With a view to fulfil the intentions of Congress, as expressed in the act aforesaid, and to continue the preparations for the public defence, under circumstances of apparently increasing dangers to our independence and welfare, the committee, for the further provisions necessary, in their opinion, to be made as soon as may be, suggest the following resolutions:

Resolved, That there be appropriated a further sum, not exceeding ——— dollars, to complete and equip for sea, with all convenient speed, the frigates, the United States, the Constitution, and the Constellation.

Resolved, That there be appropriated a further sum, not exceeding ——— dollars, for the pay and subsistence, for the term of one year, of the officers and crews which shall be engaged in the service of the United States on board the said frigates; and a sum not exceeding ——— dollars, to defray the wear, losses, expenditures of ammunition, and other current and contingent expenses of the naval armament.

Resolved, That the President of the United States be authorized by law to purchase, whenever, in his opinion, the public service shall require it, for account of the United States, not exceeding ——— vessels, suitable to be employed as public armed vessels, for the defence of our sea coast, and to cause the same, from time to time, as occasion may require, to be armed, equipped, manned, and employed, in the like manner, and on the same terms of pay, subsistence, and other proportionable allowances, as are directed for the naval armament already established; and that there be appropriated a further sum, not exceeding ——— dollars, towards defraying the expenses which may be incurred therein.

Resolved, That the President of the United States be authorized, by law, to establish, in some eligible station within the United States, a foundry, to be more especially employed in the casting of cannon for the use of the United States, and that there be appropriated a sum not exceeding ——— dollars, to purchase and provide the necessary buildings, implements, and materials, and defray the other expenses of such establishment.

WAR OFFICE, December 26, 1797.

SIR:

I have the honor to communicate herewith the present state of the frigates United States, Constitution, and Constellation, together with an estimate of the sums that are deemed necessary to complete, equip, and man the same, for twelve months. It may be proper to observe, that the greatest part of the amount required for arming and completing is to meet various bills remaining unpaid.

The great length of time that has elapsed since your communication was received has been occasioned by a desire to ascertain, as near as possible, the sums necessary for the Marine department for the ensuing year. I flatter myself that the one enclosed will prove competent to that purpose.

I have the honor to be, sir, with the greatest respect, your obedient servant,

JAMES M'HENRY.

HON. SAMUEL SEWALL, *Chairman of the Committee on the Protection of Commerce.**State of the Frigates United States, Constitution, and Constellation.*

UNITED STATES.

The progress made in fitting the United States for sea during the summer led me to hope that she would have been complete for service some time in autumn; measures were therefore taken to equip her in the most expeditious manner that the nature of the service would admit. Several of the officers were appointed, and some part of the crew actually enlisted. The ballast and water casks were got on board and stowed, and the riggers had nearly completed the rigging, when unfortunately all further progress was impeded by the contagious fever attacking several of the officers and crew that were on board; several of the tradesmen employed in the equipment were, also, from the same cause, prevented from attending to their respective occupations, until the latter end of October, when it was found to be too late in the season to get the ship in complete order to meet a winter at sea.

CONSTITUTION.

The Constitution was launched at Boston on the 21st of October last, since which time the various artificers have been employed in finishing the hull, and the store rooms, &c. in the interior of the vessel; all the lower masts are in their places, and the riggers employed in rigging them. This ship will be ready in a short time to receive her officers and crew, and consequently fit for service early in the ensuing spring.

CONSTELLATION.

The Constellation was launched at Baltimore on the 7th of September, and has been so far completed as to be now ready to leave the Patapsco to receive on board her stores, officers, and crew; she may therefore be sent to sea at a very short notice.

An estimate of the sums necessary to complete and equip the Frigates United States, Constitution, and Constellation, for sea; also, the pay and subsistence for their officers and crews for twelve months.

To complete the United States,	- - - - -	\$23,557 00	
To complete the Constitution,	- - - - -	26,275 00

JAMES M'HENRY, *Secretary of War.*

TREASURY DEPARTMENT, *December 7, 1797.*

SIR:

I have the honor to inform you, in reply to your letter of the first instant, that the revenue cutter on the Virginia station is a new and complete vessel, and has been armed with six six pounders on the main deck, and four four pound howitzers in the cabin. The number of officers and men at present employed, do not exceed what are necessary for the ordinary service of protecting the revenue; but, if circumstances shall arise to render an increase of force expedient, an additional number of men will be engaged with reference to the emergency.

The cutter stationed at and near the Bay of Delaware is a new and complete vessel, sufficient to carry eight four pounders. This vessel will be armed as soon as suitable cannon can be procured.

It is believed that none of the other cutters can be armed with any prospect of advantage; some of them are worn out, others require extensive repairs. The fund originally allowed for building ten cutters was so moderate, that none but small light vessels could be procured within the terms prescribed by law. Measures are in train for procuring a sufficient number of cannon; when it shall be ascertained that these measures are effectual, of which there is at present but little doubt, other and more efficient vessels will be built or purchased in lieu of such as have become unfit for service.

In answer to the second point of inquiry, I have the honor to transmit a copy of a circular letter from the late Secretary of War to the Governors of the respective States, dated July 21st, 1794, also, a copy of a circular letter from this Department to the Collectors of the Customs, dated April 8th, 1797. These are the only orders within my knowledge which have ever been issued to restrain the sailing of armed merchant vessels from the ports of the United States. It may, however, be proper to mention, that the exception in favor of vessels, *bona fide* destined to the East Indies, has been extended to vessels bound to the coast of Africa.

I have the honor to be, with perfect respect, sir, your obedient servant,

OLIVER WOLCOTT, Jr.

The Hon. SAMUEL SEWALL,

Chairman of the Committee to devise measures for the protection of Commerce.

5th CONGRESS.]

No. 10.

[2d SESSION.

COMMISSIONER OF MARINE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 8, 1798.

Mr. SEWALL, from the committee to whom was referred that part of the President's speech which relates to the protection of commerce and the defence of the country, further reported, in part:

That, considering the increasing dangers which threaten the peace and security of the United States, and to which their extensive sea-coast, and their domestic as well as foreign commerce are alarmingly exposed, the necessary provisions of a maritime defence ought to receive the earnest and immediate attention of Congress, and especially recommend a concurrence, without delay, in the resolutions now before the House of Representatives, reported to them on the twelfth day of January last.

The committee further report, that a considerable sum remains unexpended of the sums heretofore appropriated for fortifying the ports and harbors of the United States, as appears by the statement from the Department of War, exhibited herewith;* and that, in the opinion of the committee, a further appropriation, and a more vigorous regard to this important object, has become immediately necessary.

They further report, that, in the view which, on several occasions, this committee have taken of the subject of providing a naval armament, they have not failed to observe the apparently enormous expenses and unaccountable delays which have attended every attempt of this kind. It has appeared to them that a better economy might be introduced in this branch of the public expenditure, by establishing in the War Department some officer who should be employed in the immediate superintendence of the naval concerns of the United States.

* See Military Affairs, No. 32.

The Department of War, as at present established, is unsuitable to this purpose, especially considering its stationary situation, and how much it is occupied by numerous cares of a nature very different.

On these subjects, they recommend the following resolutions to be adopted, viz:

Resolved, That the sum of ———, in addition to the sum of ———, remaining unexpended of former appropriations, be appropriated to fortifying the ports and harbors of the United States.

Resolved, That there be established, in the Department of War, a Commissioner of Marine, who shall have charge of the construction, equipment, and supplies, of the public vessels of the United States, and all other matters relating to their naval concerns, which shall be entrusted to him according to law.

5th CONGRESS.]

No. 11.

[2d SESSION.]

ADDITIONAL NAVAL FORCE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 9, 1798.

WAR DEPARTMENT, 9th April, 1798.

What measures are necessary and proper to be adopted by Congress, in the present conjuncture, to preserve character abroad, esteem for the Government at home, safety to our sea property, and protection to our territory and sovereignty?

France derives several important advantages from the system she is pursuing towards the United States. Besides the sweets of plunder, obtained by her privateers, she keeps in them a nursery of seamen, to be drawn upon, in all conjunctures, by her navy. She unfits, by the same means, the United States for energetic measures, and thereby prepares us for the last degree of humiliation and subjection.

To forbear, under such circumstances, from taking naval and military measures to secure our trade, defend our territory, in case of invasion, and prevent or suppress domestic insurrection, would be to offer up the United States a certain prey to France, and exhibit to the world a sad spectacle of national degradation and imbecility.

The United States possess an extensive trade; heavy expenses must be submitted to for its protection. The United States border upon the provinces of great and powerful kingdoms; heavy expenses must be incurred, that we may be, at all times, in a situation to assert our rights to our own territory. The measures which appear indispensably necessary for Congress to take are as follows, viz:

1st. An increase of the naval force, to serve as convoys, protect our fisheries, coast, and harbors. 2d. An augmentation of the present military establishment. 3d. Arrangements which, in case of emergency, will give to the President the prompt command of a further and efficacious military force. 4th. The more complete defence of our principal forts by fortifications. 5th. A supply of ordnance, small arms, powder, salt petre, copper, and military stores. 6th. Additional revenue.

To answer the 1st, Congress ought to provide for the building or purchasing, equipping, &c. of two vessels of twenty-two guns, eight of twenty guns, and ten of sixteen guns, in addition to the three frigates.

Congress ought also to vest the President with authority, in case of open rupture, to provide, equip, and by such means as he may judge best, a number of ships of the line, not exceeding six, or an equivalent force in frigates.

The first may be either built or purchased in the United States. The latter may, perhaps, be obtained in Europe; for which purpose, the law should use general expressions, admitting this mode of procuring them.

To build the twenty vessels, equip, man, and provision them, for twelve months, will require, as per annexed estimate, \$1,941,181.

It may, under this head, be also advisable to make a provision for six galleys, carrying, each, one or two twenty-four pounders. This will require, for galleys carrying one twenty-four pounder, each, as per annexed estimate, \$68,826.

2d. An augmentation of the present military establishment. This ought to consist of one regiment of infantry, one regiment of artillery, and one regiment of cavalry. The artillery is considered as indispensable; and the cavalry may be highly useful in the Southern States. These will require, agreeably to the annexed estimate,* \$517,998.

3d. An arrangement which, in case of emergency, will give to the President the prompt command of a further and efficacious military force. This ought to be a provisional army of twenty thousand men, and may be organized agreeably to the principles of a bill proposed in the Senate, during the late extraordinary session, to which I beg leave to refer.

4th. The more complete defence of our principal ports by fortifications. This may require one million of dollars, but, should the naval force be rendered respectable, much of this sum may be saved.

5th. A supply of cannon, small arms, salt petre, copper, &c. which severally will require,

For cannon, as per annexed estimate,	\$308,900
For small arms, say fifty thousand stands, at twelve dollars,	600,000
For powder, salt petre, copper, for sheathing, &c. &c.	200,000

In framing the law to furnish our magazines with ordnance, it will be proper to employ such expressions as will enable the President to procure brass cannon, mortars, &c. with the necessary quantities of ball, shells, &c. These have not been specified in the estimate, but the sum may, perhaps, be sufficient to comprehend them.

To render the regiment of infantry as useful as possible, it is proposed that the men should be enlisted to act in the double capacity of marines and infantry. By an arrangement of this kind, and having the men stationed at the principal sea ports, they will be always ready to be put on board such vessels as want them; and, when not so wanted, will serve to defend the coast, work upon the fortifications, or in dock yards, and guard the public property from thefts or embezzlement.

All which is respectfully submitted.

JAMES M'HENRY.

Honorable SAMUEL SEWALL, *Chairman of the Committee*
for the protection of commerce, and the defence of the country.

*For this and the subsequent estimates, see Military Affairs, No. 33.

Estimate of building, rigging, and equipping, three ships of war, to carry twenty-two, twenty, and sixteen guns, together with the cost of manning and victualling the same for twelve months.

	Ship of 22 guns.	Ship of 20 guns.	Ship of 16 guns.
The ship of twenty-two guns may be built for thirty five dollars per ton; ship of twenty guns, at thirty-five dollars, and the ship of sixteen guns, at thirty dollars,	\$17,010	\$14,910	\$9,210
Smiths' bill, iron and working, including hand work, &c.	6,000	5,000	3,000

NAVAL EXPENDITURES, AND THE DISPOSITION OF MATERIALS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MAY 1, 1798.

WAR OFFICE, *March 22, 1798.*

SIR:

I had the honor to receive your letter of the 15th of January, ultimo, enclosing the following resolution of the House of Representatives of the same date:

“Resolved, That a committee be appointed to inquire into the expenditure of the moneys heretofore appropriated for the naval armament, and also into the causes of the delay in completing the same; and that they report their opinion thereon to the House.”

In pursuance of this resolution, the committee request to be furnished, as soon as convenient, with such detailed accounts of the expenditures therein referred to, as will enable them to perform the duties of their appointment; and, also, with a statement of the leading causes that have retarded the completion of the naval armament, beyond the several periods mentioned in the estimates submitted to the House of Representatives.

I have also had communicated to me by the committee, on the 16th of March, instant, the annexed resolution of the House of Representatives.

“Resolved, That the committee appointed on the 15th of January last, to ‘inquire into the expenditures of the moneys heretofore appropriated for a naval armament; and also into the causes of the delay in completing the same,’ be instructed to report to this House what naval materials or apparatus may be left on hand after fitting out the frigates United States, Constitution, and Constellation; also what articles purchased for the six frigates directed to be built by the act of the twenty-seventh of March, one thousand seven hundred and ninety-four, have been disposed of, and how disposed of, except what may have been, or may be, used for the frigates United States, Constitution, and Constellation, designating at what places the remaining materials are, and what they consist of.”

The first request of the committee will be found, generally, anticipated by the report of the Secretary of the Treasury, made in conformity to a resolution of the House of Representatives, passed on the third of March 1797.*

This report, to which I take the liberty to refer, exhibits, statement G, a summary view of the moneys advanced to the naval agents, and other persons employed in procuring supplies for the naval establishment, prior to the first day of January, 1797. Statement H, the sums accounted for prior to the first of January, 1797, of the moneys previously advanced on account of the naval establishment. Statement I, the balances which remained to be accounted for on the first of January, 1797, of; the sums previously advanced on account of the naval establishment. Statement P, an account of moneys advanced for the naval establishment, to the first of January, 1797, the accounts for which remain unsettled with the Department of War. Statement Q, the ultimate application of moneys advanced by warrants of the Department of War, for the naval establishment, to the first of January, 1797, the accounts of which have been settled. Statement R, a summary view of the expenditures on account of the naval establishment, by the Department of War, to the first of January, 1797. Statement S, a continued view of the sums advanced from the treasury, on account of the naval establishment, during the year 1797, with a statement of the appropriations remaining unexpended at the close of the said year.

With a view to a more particular elucidation of this subject, and in conformity to the two resolutions of the House of Representatives, aforesaid, I have subjoined certain statements, arranged under the following heads:

Statement AA, a general abstract of the expenditures for the naval armament, comprising, 1st. The cost of the timber procured from Georgia. 2d. The cost of the freight of ditto, from ditto, to the several navy yards. 3d. The moneys expended in fixtures, implements, &c. at the several navy yards of Portsmouth, Boston, New York, Philadelphia, Baltimore, and Norfolk. 4th. The cost of the labor, materials, and freights, for the ships Constitution, United States, and Constellation, respectively. 5th. The cost of labor, materials, and freights, for the ships commenced at Portsmouth, New York, and Norfolk. 6th. The amount of expenditures that apply generally to the several ships and navy yards. To this general abstract is also subjoined—

Statement A, abstract of expenditures in procuring timber in Georgia.

Statement B, abstract of the freight money paid for the transportation of Georgia wood to the several navy yards.

Statement C, abstract of expenses of the several navy yards instituted at Portsmouth, Boston, New York, Philadelphia, Baltimore, and Norfolk.

Statement D, abstract of moneys paid for timber, (other than Georgia wood) iron, and other materials used in building the frigates.

Statement E, abstract of moneys paid by several agents to ship carpenters, mechanics, and laborers, employed at the several navy yards in building the frigates.

Statement F, abstract of moneys paid by several agents for freight, (other than Georgia wood) including the rafting of timber to the navy yards.

Statement G, abstract of moneys paid for copper and other articles imported; and for sail-cloth, and other articles of domestic manufacture.

Statement H, an estimate of the application of balances.

K. A letter of instructions to Josiah Fox, respecting the arranging and securing the timber, materials, &c. in the navy yards.

L. Exhibits statements of live oak timber, and other materials on hand in the navy yards at Portsmouth, N. H. and New York, arranged agreeably to the foregoing instructions.

M. A statement of live oak timber, and other materials deposited in the navy yard at Norfolk, in Virginia.

N. An estimate of the timber and materials on hand in the navy yards at Philadelphia, Boston, Baltimore, and in Georgia.

O. An account of the timber and materials sold, to whom, and its amount.

It may not, perhaps, be improper to remark, previous to any observations respecting these estimates, that, on the 27th of March, 1794, when the act passed to provide the naval armament, the public were without magazines of timber, materials, or system, which could, in any wise, give facility to the building and equipping of heavy ships of war, circumstances extremely unfavorable, but necessarily attendant on the commencement of the work.

This situation of things, and a certain portion of inexperience, common to all new undertakings, will no doubt be duly appreciated, in examining the causes that have rendered the expenditures, upon this occasion, “apparently enormous.”

The extraordinary expenditures may be considered as resulting from the following causes:

1st. The building of the ships in different places. 2d. The size of the ships. 3d. The quantity of live oak used in their construction. 4th. The rise in the price of materials and labor. 5th. Certain losses and contingencies.

1. *The building of the Ships in different places.*

Had it been determined to build the ships in one place, and in succession, instead of each in a different place, and all at the same time, it is certain that a considerable saving would have thereby accrued to the public. What

* See Finance, No. 123.—G, page 526; H, page 527; I, page 529; P, Q, R, page 545; and S, page 546.

induced a more expensive arrangement? The law, which directed the armament, appears to have intended that the vessels to compose it were to be built and got ready for sea with as little delay as possible; consequently, it was incumbent upon the Executive to build and equip them nearly at the same time. Under such a construction of the law, the only remaining point to be determined was, whether they should be all built at the same place.

It would have been desirable, no doubt, on account of saving the expense of several establishments, to have built the vessels at one place, and wishes may now be entertained that this had been attempted. To this measure, however, several objections may have presented. Could Philadelphia, New York, Boston, Portsmouth, Baltimore, or Norfolk, or any other of our maritime towns, have furnished the necessary complement of workmen, to have carried on the building of six large frigates at the same time, without its putting a stop to, or sensibly interfering with, their merchant-ship building? Was not the arrangement to build in different towns more likely to keep the general price of wages and labor, in all of them, nearer to its customary level, and, in a less degree, to affect the merchant service? May it not, also, have been an object of some importance, at that moment, to have shown that the United States were in earnest, to resist aggressions, or meet hostilities? And was not the laying the foundation of the six ships, at the same time, calculated to favor this impression?

I find, besides, on referring to a report of a predecessor, in the year 1794,* that it was thought the money to be expended on the armament would be more equally diffused by building the ships in different places, and that such an arrangement would produce greater efforts in the different constructors and workmen of each town, to get their respective vessels first into the water, whilst it would serve as a criterion to judge where, and by whom, such ships, on future occasions, could be best, cheapest, and most expeditiously built.

All these considerations, probably, had their influence in producing the different establishments.

2. *The size of the Ships.*

It appears that the first estimate rendered to Congress, was for frigates of the common size and dimensions, rated at thirty-six and forty-four guns; and that the first appropriations for the armament were founded upon this estimate. It appears, also, that, when their size and dimensions came to be more maturely considered, due reference being had to the ships they might have to contend with, it was deemed proper so to alter their dimensions, without changing their rates, as to extend their sphere of utility as much as possible. It was expected, from this alteration, that they would possess, in an eminent degree, the advantage of sailing; that, separately, they would be superior to any single European frigate, of the usual dimensions; that, if assailed by numbers, they would be always able to lead ahead; that they could never be obliged to go into action, but on their own terms, except in a calm; and that, in heavy weather, they would be capable of engaging double deck ships. These are the principal advantages contemplated from the change made in their dimensions. Should they be realized, they will more than compensate for having materially swelled the body of expenditures.

3. *The quantity of live oak used in the construction of the Ships.*

I find that the original estimate for the frigates was calculated upon the ground that their floor timbers, lower piece of stem, and fore and after dead woods, were to be of white oak. Had this plan been executed, or had no live oak been employed in their construction, the expenditures would have been considerably abridged. It was thought, however, advisable, that these pieces should be wholly of live oak, as being, in the end, more economical, though, in the first instance, more expensive. This opinion is well supported. Heavy ships of war, built of live oak and cedar, are, unquestionably, capable of sustaining much harder service, and ruder shocks, and will last much longer, than ships of the same size, constructed of white oak. The durability of ships built of live oak and cedar, compared with those built of the common white oak, may be estimated as five is to one.

Induced by such considerations, contracts were made in Georgia, for live oak, under the direction of the Treasury Department, and workmen sent thither to cut and mould it into the requisite pieces for the frigates. Numerous and successive difficulties, great and unexpected expenses, seem to have marked the commencement and progress of this undertaking. Trees suitable for the purpose were found to be greatly dispersed, and to grow, generally, in situations from whence the pieces, after being moulded, could not be removed but by extraordinary labor. The workmen employed to cut and fashion the wood could not bear up under the climate; some of them died, and others deserted; those were to be replaced with fresh hands. Oxen were also to be sent from hence, to assist in hauling it to landing places convenient for shipping it. Many, too, of the largest live oak trees, cut down for the floor timbers, proved to be defective, after much labor had been consumed in preparing them for the places they were designed to occupy in the frigates.

The effect of these, and similar circumstances, was to increase the expense of the wood vastly beyond its original value, or estimated cost. But will not the public be always, more or less, exposed to like expenses, if, when ships are ordered to be built, the timber and other materials necessary for their construction and equipment are to be sought for and purchased? When every thing is thus to be suddenly procured, will there not be found, in every community, too many persons ready to profit by the occasion? And who, under such circumstances, can estimate, with precision, what an article will finally cost, or say, with certainty, when a work can be finished?

4. *The rise in the price of labor and materials.*

There can be no doubt entertained but that the rise of the price of most, if not all the materials and labor employed in building and equipping the frigates, has added considerably to the expenditures. The rise of wages alone, between the date of the first estimate, and the time the frigates were launched, taking Philadelphia for the example, was from nine shillings to fifteen shillings per day; the rise in wrought iron and hemp, about forty per cent; and on freight, one hundred per cent.

But changes in the price of articles, which almost every person has experienced, either as an inconvenience or advantage, in his private transactions, must be too well understood to stand in need of illustration. It may, however, be satisfactory to the committee to learn, from the annexed document, (P) that, if the hull of the frigate United States had been built by contract, the labor must have cost the contractor as much as it has the public.

5. *Certain losses and contingencies.*

Under this head may be comprehended the loss of two loads of live oak in its passage from Georgia; the loss of about fifty tons of hemp, by fire, in Boston; the cost of an additional wharf, to ensure the safe launching of the frigate United States; the expense of heaving down the United States to repair an injury done to her false keel and rudder braces, by striking the ground in launching; the expense occasioned by repeated trials to launch the frigate Constitution, and the additional means necessary to procure for her a safe descent into the water; the expense of double freight, in removing some of the live oak, and other timber, from one yard to another, to complete the three frigates; the expense incurred from some of the live oak being transported from Georgia in unsuitable vessels for such service; and from a great proportion of the timber being shipped from twenty to forty per cent. larger than the models prescribed, upon which excess freight was to be paid.

I have now concluded a brief enumeration of those causes that appear to have been most instrumental in producing the difference between the estimated and real cost of the armament. The sum composing this difference is certainly much greater than was foreseen, and proportionably enhances the expenditures.

Perhaps it may not be judged irrelevant to this subject, or improper in this place, to endeavor to distinguish how much or what proportion of the expenditures upon the armament is fairly chargeable to the frigates that have been built.

To do this, or to form a reasonable estimate of the real cost of the three frigates, it will be necessary to deduct from the actual expenditures the amount of the following items.

*See No. 2.

1st. All sums laid out in the formation and establishment of the three navy yards that have been disused. 2d. All sums expended on the superintendence and safe keeping of the materials and property remaining in these yards, since that period down to the present. 3d. The amount of the pay of the captains, constructors, &c. of the ships, the building of which has been suspended. 4th. The actual cost, as well of those articles that have been sold, as of those remaining on hand, after the completion of the three frigates. 5th. The expenses of every kind attending the procuring and transportation of all timber and articles not used in their construction. 6th. The money expended for workmanship upon the frigates, the construction of which has been suspended.

In addition to these deductions, would it be unreasonable to admit a proportional credit to the frigates which have been built, for the use that may be made of their ways, wharves, boilers, &c. in constructing and launching other ships of the same kind? it not being customary to lay upon the first articles of a new manufactory, all the expenses of the buildings and machinery employed in carrying it on. The estimates already presented and subjoined will exhibit most of these particulars, in as perfect a form as it was practicable to arrange and obtain them. It would indeed have been desirable, for the sake of a literal compliance with the resolution of the House of Representatives of the 16th of March, to have added to these an estimate of the value of the wood and materials on hand. This, however, it was thought best to omit, inasmuch as it was only in my power to have rendered a conjectural valuation.

As connected with this inquiry, it may be proper to refer to the course that has been pursued, to procure the materials and supplies for the armament, and the regulations under which the business was commenced and has been conducted. This will appear from the following documents:

QQ. A letter from the Secretary of War to the Secretary of the Treasury, dated April the 21st, 1794, relative to the timber and materials required for the six frigates, and the appointment of the agents necessary, &c.

*R. A letter from Tench Coxe, Commissioner of the Revenue, 22d December, 1794, respecting the arrangements made, and contracts entered into, for the naval armament.

*S. A report of the Secretary of War, made to Congress, December 24, 1794, relative to the naval armament.

*T. Letter of instructions to the agents appointed for building the frigates.

*U. Instructions to the superintendents.

*W. Instructions to the constructors.

*X. Instructions to the clerks of the yards.

Y. Letter from the Secretary of War to the Secretary of the Treasury, dated the 6th of May, 1794, specifying the conditions for a contract for cannon; with a copy of the contract.

Z. A letter from the present Secretary of War to the Secretary of the Treasury, dated the 13th of September, 1796, respecting the conditions for a contract for cannon; with a copy of the contract.

There remains to be stated "the leading causes that have retarded the completion of the naval armament beyond the several periods mentioned in the estimates submitted to the House of Representatives."

The law to provide the naval armament passed the 21st of April, 1794. It has been observed, that the United States were at that time wholly unprepared to execute with rapidity such a measure. Every thing was to be purchased and prepared. It appears, that the person chosen to superintend the cutting of the live oak in Georgia, left Philadelphia upon that business in June 1794. That the first season was nearly spent in making preparations for commencing to cut, and the land where the trees grew so inundated during two other seasons, as to leave but little time for the workmen to operate. In short, that almost every kind of obstruction, of an expensive and procrastinating nature, attached itself to this undertaking.

The last load of live oak necessary to complete the frame of the frigate United States did not arrive at the port of Philadelphia until the last of July, 1796; several pieces for other parts of the ship, not for a considerable time after; and the masts in particular, from failures in contracts, were not received before the middle of June, 1797. The yellow fever soon after making its appearance, suspended her final completion.

The frame of the frigate Constellation did not get into the yard at Baltimore until the latter end of October, 1796. In November following, the weather setting in extremely severe, little work could be done before the month of March, 1797. In September; after she was launched, the yellow fever discovered itself, and interrupted the work until the middle of October, when the closing up of the river by the ice, prevented her leaving the Patapsco, to be equipped for sea.

Similar delays were experienced in obtaining the live oak for the construction of the frigate Constitution; the last load of which did not arrive at Boston, before some time in December, 1796. But besides the want of wood, another circumstance intervened, as explained in the annexed letter Ab. which prevented her being launched before the 21st of October, 1797.

Further, it may be proper to mention, that anchors, and a number of other articles, which have been contracted for as long since as the year 1794, or directed to be procured, have not yet been obtained or delivered.

That, of three contracts for cannon, two of which were concluded in the year 1794, and the other in 1797, one only has been complied with.

That some of the cannon, furnished under one of the contracts made in 1794, and appropriated for the ship United States, have been brought to Philadelphia, and found not to correspond with the conditions of the contract, notwithstanding they had been proved, examined, and passed, by an experienced agent.

It is, sir, to these various causes that we are to ascribe the delays which have attracted the attention of Congress, and retarded to this time the completion of the frigates.

The frigates are now nearly finished, and from the best judgment that can be formed respecting them, promise to prove the most complete of their kind that have appeared on the ocean; and such as would do credit to the most skillful workmen, of countries more experienced in naval architecture than ours. In offering this remark it is not meant to insinuate, either that they are without defects, or that the arrangements under which they have been built are the best that could have been contrived. In all human plans or superstructures, after wisdom can always discover something to be corrected, or something that might have been executed better.

Before closing this letter, permit me to use the opportunity it presents, to suggest a few observations connected with its subject.

The great delay that has occurred in the present undertaking must always be more or less experienced, when heavy ships of war are required to be suddenly built, and the Government not previously possessed of the necessary timber and materials. It is certainly an unfit time to look for these, and prepare a navy yard, when the ships are required for actual service. It is not to be expected that the large pieces of heavy timber suitable for ships of war will be found at market, or accumulated in private magazines for sale, when wanted on pressing occasions. Do not these circumstances point to the expediency of a legislative provision, commensurate to so important an object?

There is combined with a measure of this kind, another, essential to its due execution, and therefore deserving of consideration.

If the United States contemplate an arrangement for gradually providing a naval protection to their commerce, suitable to the resources of the country, and its relative situation with foreign Powers, the marine business, in such a case, ought to be separated from the Department of War, or the Department of War enabled, by proper institutions, to conduct it in a manner more conformable to the practice of other nations.

The statements and documents necessary to this communication have kept it from the committee much longer than was intended. Should these be still incomplete, or other statements or documents wanted, to satisfy the inquiry, I solicit information, that they may be furnished as soon as possible.

I have the honor to be, with the greatest respect, sir, your obedient servant,

JAMES M'HENRY.

The Honorable EDWARD LIVINGSTON, Esq.
Chairman of the Committee.

* For these statements see No. 2.

TREASURY DEPARTMENT, Register's Office, March 6th, 1798.

The foregoing statement, with the documents therein referred to, marked from A to H, have been prepared at the request of the Secretary of the Treasury, from an examination of the accounts remaining in this office, or depending in the other offices of the Treasury Department. In respect to the sums for which no accounts have been rendered, the application to particular heads is made by estimate.

JOSEPH NOURSE, Register.

A.

Abstract of Expenditures in procuring Timber in Georgia.

Henry Jackson, Naval Agent, Boston,	For this amount paid by him for provisions and other articles,	\$1,100 49
Jedediah Huntington, Agent for procuring axemen and carpenters,	Wages paid by him to the carpenters and axe-men, \$20,091 72 Sundry articles purchased for their use, 3,671 90	23,763 62
Nicholas Fish, Agent at New York,	For provisions shipped for the use of the wood cutters,	3,000 82
Tench Francis, Purveyor of Public Supplies,	Tools purchased, provisions shipped, and other expenses for the wood cutters,	16,614 86
John F. Morgan, Superintendent of the wood cutters,	He received, on account of his superintendance,	8,698 50
Joseph Copperthwaite, Agent for procuring timber in Georgia,	He received on account of his agency, \$18,556 69 Paid to him for this purpose, by T. Francis, purveyor, &c. 48,160 84	66,717 53
John Habersham, Agent at Savannah, in Georgia,	For this amount paid by him, for provisions and other supplies to the wood cutters,	4,522 55
		<u>\$124,418 37</u>

B.

Abstract of the freight money paid for the transportation of Georgia wood, to the several Navy Yards.

Jacob Sheafe, Naval Agent at Portsmouth,	Freight of Georgia timber, for the frigate at Portsmouth,	\$13,297 50
Henry Jackson, Naval Agent at Boston,	Do. do. do. at Boston,	10,020 84
Tench Francis, Purveyor of Public Supplies,	Do. do. at Norfolk, \$6,661 33 at Baltimore, 6,047 99 at New York, 8,991 88 at Philadelphia, 19,996 00	
	41,697 20	
	Freight and expenses of storing Georgia wood at Mud Island,	9,168 80
		50,866 00

Daniel Stevens, South Carolina, Georgia wood, - - - -	500 00
	<u>176,081 43</u>

K.

SIR:

You will be pleased, forthwith, to proceed to New York, Portsmouth, in New Hampshire, and Boston.

The general objects of your journey to these towns, are—

1st. To examine, assort, and arrange into distinct parcels, the ship timbers and planks, the property of the United States, in the different yards in New York, Portsmouth, and Boston.

2d. To examine into the state of the naval stores at those places; and procure for them greater protection and security, where wanted.

3d. To obtain from the principal ship-builders of New York, Portsmouth, and Boston, upon what terms, and within what time, they will agree to build a thirty-six gun frigate of the dimensions described in sketch A.

You will arrange the ship timbers and planks according to the following classes:

Class No. 1 will comprehend the number of pieces of live oak at the respective yards, fit for the frigates whose building have been suspended, and exclusive of the pieces requisite for those under construction.

In this class, as well as in all the other classes, you will assort the timbers or planks agreeably to their names and uses, viz: floors, futtocks, knees, &c. specifying the exact number of each.

Class No. 2 will comprehend the number of pieces of live oak suitable for the frigates building or suspended, but which may be used in the construction of the frigate, sketch A.

Class No. 3 will comprehend the number of pieces of live oak unsuitable for any of the frigates, including sketch A, by reason of defects or other causes—noting those causes.

Class No. 4 will exhibit—1st. The number of pieces of white oak suitable and wanted for frigate, sketch A. 2d. The number of pieces unsuitable, and not wanted for the frigates under construction, or for frigate, sketch A.

Class No. 5 will exhibit a statement of the plank in each yard, arranged according to their thickness, lengths, and kinds, viz: The kind and quantity wanted for frigate, sketch A, exclusive of the quantity necessary to complete the frigate at Boston. 2d. The surplus, divided into its kinds.

Class No. 6 will exhibit the number, sizes, and kinds of masts and spars.

It being contemplated to dispose of the timber assorted under class No. 3, those under 2d class, No. 4, and the plank under 2d class, No. 5, and such of the masts and spars as may not be wanted, or would be injured by keeping; you will, therefore, endeavor to form an opinion of what these would probably sell for, at the places where deposited, and report the same.

The timbers ordered from New York, for the frigates building at Philadelphia and Baltimore, are to be excluded from your estimates.

You are to see the timbers, destined for future use, carefully piled up, as well as the timbers assorted for frigate, sketch A, and the whole protected against the weather by proper sheds; and against thefts, by enclosures.

In piling it, care must be taken so to dispose of that suitable for frigate, sketch A, that it may be removed at any time without disturbing the other.

It will be proper, also, that you should visit the warehouses where naval materials are stored; examine the state in which they are, and whether they are well secured; and take an exact inventory of the different kinds and quantity of each kind.

In ascertaining the terms on which the ship-builders, at the towns you are to visit, will contract to build a thirty-six gun frigate, conformably to sketch A, you will require—1st. Their terms for such a frigate; they finding the timber and other materials. 2d. Their terms, the United States finding timber and plank. 3d. Their terms, they taking the timber and plank, fit for the purpose, at a valuation. 4th. That their proposals be in writing, and the time they will finish her in, expressed.

But to obviate delay as much as possible, you will, on your arrival at New York, obtain, from one or more of the principal ship-builders, upon what terms, and in what time, they will engage to complete a ship of the dimensions of sketch A, and forward the same to the Secretary of War.

You will also write to Portsmouth and Boston, to the same purpose; stating the size and dimensions, and requesting them to forward to the Secretary of War their terms, and the time when they will engage to deliver such a vessel of well seasoned timber. Their terms, the United States finding the timber, or they taking it at a valuation, may be obtained afterwards.

As it is necessary that there should be responsible persons appointed, to take charge of the timber and naval materials, you will inquire for such, report their names, and what they would consider as a reasonable compensation.

You will also examine into, and report the progress made in the frigate building at Boston, and the probable time when she may be launched.

I have directed a warrant to be made out in your favor, for three hundred dollars, to cover the expenses attending your mission. It will be proper that you should take vouchers or receipts for your disbursements to enable you to settle for this advance with the Accountant of the War Department.

Given at the War Office, this 12th day of July, 1796.

JAMES M'HENRY.

Mr. JOSIAH FOX.

L.

Statement of Materials, &c. on hand in the Navy Yard at Portsmouth, New Hampshire, arranged agreeably to the foregoing instructions.

CLASS No. 1.

Names of Live Oak Timbers.	Moulded and dressed.	Remaining in a rough state.	Total number.
Floors, - - - - -	18	10	28
1st Futtocks, - - - - -	101	5	106
2d Futtocks, - - - - -	94	20	114
3d Futtocks, - - - - -	46	5	51
Top Timbers, - - - - -	105	27	132
Pieces of Partiers, - - - - -	-	17	17
Fashion Pieces, - - - - -	4	-	4
Transoms, - - - - -	5	-	5
Knight Heads, - - - - -	-	7	7
Fore { Upper Cants, - - - - -	4	-	4
{ Lower Cants, - - - - -	9	4	13
Half Top Timbers, - - - - -	10	-	10
Stern Post and inner Post, - - - - -	2	-	2
Upper piece of Apron, - - - - -	1	-	1
Stern (complete) - - - - -	2	-	2
Stanchions, - - - - -	-	3	3
Spare pieces, - - - - -	-	42	42
	401	140	541

N. B. Eighteen pairs of frames are completed, bolted, and ready for raising.

CLASS No. 2.

There is no live oak suitable for frigate, sketch A.

CLASS No. 3.

Three pieces only of live oak comes under this description, and those are serviceable for chocks, viz:

One floor,	} rotten in part.
One third futtock,	
One upper cant,	

CLASS No. 4.

One hundred and forty-seven pieces of white oak timber, suitable and wanted for frigate, sketch A, and which have been delivered to Mr. James Hacket. 2d. Forty-eight pieces of white oak timber remains in the yard, that are not wanted for frigate, sketch A, nor for those under construction. Twenty-three of the aforesaid pieces were provided for gun-deck beams, and are dressed to the moulds. The remaining twenty-five pieces are in a rough state, being intended for beams and keelsons; the contents of those pieces cannot be correctly ascertained, as they are nearly covered with mud. One hundred and sixty-four white oak knees have been delivered to Mr. James Hacket, for frigate, sketch A.

Two hundred knees of white oak remain in the yard, averaging about eight inches diameter, each.

CLASS No. 5.

	Number.	Feet.
8 inch wale pieces,	56	containing 2,345 as plank measure.
7 inch water ways,	16	“ 847 ditto.
6 inch thickstuff,	46	“ 2,220 ditto.
5½ inch ditto,	20	“ 880 ditto.
5 inch ditto,	70	“ 3,210 ditto.
4½ inch ditto,	34	“ 1,431 ditto.
4 inch plank,	215	“ 11,627 ditto.

Exclusive of the above, there are 7,931 feet of plank in the dock, that were received as two-inch plank; some part of which is mill-sawed, the other part hand-sawed.

Oak plank suitable for frigate, sketch A, and which have been delivered to Mr. James Hacket.

1 of 4½ inches,	containing	24 feet.
86 of 4 inches,	“	3,577 feet.
124 of 3½ inches,	“	4,602 feet.
80 of 3 inches,	“	3,316 feet.

Pitch pine plank suitable for frigate, sketch A, and which have been delivered to Mr. James Hacket, viz:

66 plank, containing 7,212 feet.

361 pitch pine plank remains in the navy yard, of 4 inches in thickness, containing 38,250 feet.

N. B. There are none of the aforesaid pine plank wanted for the frigate building at Boston.

CLASS No. 6.

There is, in the great dock, a complete set of masts and yards, together with the smaller spars, proper for a 36 gun frigate, consisting of 29 pieces.

ARTICLES NOT CLASSED.

155 pieces of carlings,	24 pieces of small elm timber,
377 pieces of ledges,	1 ship cabouse, complete,
53 gun carriage sides,	83 cwt. 1 qr. 15 lbs. of iron hoops,
58 pieces of maple timber,	54 white oak butt shooks and heads,
10 harping pieces,	15 do. hogsheads, do.
4 pieces of coamings,	1 large anchor, weight 44 cwt. 2 qrs. 14 lbs.
8 ditto, ditto.	3 bales of bunting,
4 trussel trees,	4 pieces of half thicks,
3 cross trees,	2 pieces of kersey,
2 caps,	1 complete set of mast blocks.

A large quantity of articles are in the stores, necessary toward ship building, consisting of ropes, blocks, iron of various descriptions, tools, and other implements for the workmen, &c.

A complete set of moulds, bevelling boards, and staffs, are deposited in the mould loft; and which had been provided for building a 36 gun frigate.

N. B. All the aforesaid materials are properly secured.

White and Live Oak Timber selected out of the navy yard, Portsmouth, N. H. for the frigate building at Boston, viz:

WHITE OAK.	LIVE OAK.—Continued.
123 white oak knees,	2 3d futtocks,
1 large ditto, for cable bits,	4 top timbers,
7 beams.	2 counter timbers,
	2 knight heads,
	1 breast hook.
	<u>182 pieces.</u>
	<u>182</u>

All of the above pieces are marked and numbered with a rasing knife, and also with red paint. The keel, of white oak, is blocked and protected from the weather; but it may be proper to remark that, in three years. it will be in such a state as to be unfit for the service it was intended for.

PORTSMOUTH, November 4th, 1796.

JOSIAH FOX, Navy Constructor.

IMPLEMENTS, &c.

2 cross-cut saws,	1 cant dog,
6 whip saws,	3 broken hauling dogs,
2 tenon saws,	30 pounds of spikes,
2 capstans,	3 spades,
1 large tool chest,	4 shovels,
4 pit dogs,	8 augers,

2 grindstones and cranks,	20,000 treenail punches, of oak,
4 saw files,	1 double and 1 single tackle blocks,
2 mauls,	24 rough handspikes,
2 scrapers,	17 pine boards, measuring 695 feet,
2 gouges,	12 bolsters, with feathers,
1 saw box and three saw sets,	14 blankets,
1 iron pitch pot,	34 tow and linen sheets,
1 iron pitch kettle,	13 bed sacks,
1 large beam and scales, with a set of iron weights,	1 feather bed,
1 small ditto,	1 bedstead, with canvass bottom,
35 pounds of chalk,	5 large pine bedsteads,
8 barrels of tar,	2 small ditto.
4 oars, measuring 68 feet,	1 set of double and single blocks,
1 moses boat, in bad order,	3 sets of three-fold blocks, consisting of 3 double and 3 single blocks,
1 yawl, 18 feet long, with oars and sails complete,	2 capstans,
1 wherry and oars, in complete order,	2 cwt. 1 qr. 9 lbs. rope,
1 tar bucket,	2 cwt. 1 qr. 2 lbs. rope, nearly worn out.
3 iron crows,	
1 pick axe,	

A complete set of moulds suitable for a 28 gun frigate, with staffs, bevelling boards, &c. complete, which were provided for building the Crescent frigate.

N. B. Since the aforesaid account was taken, some part of the timber and plank have been appropriated towards the completion of the Constitution, the exact account of which has not been received.

Statement of materials applied towards completing the Constitution, which have been drawn from the Navy Yard at Portsmouth, N. H., since the foregoing account was taken.

79 pieces live oak, of various descriptions,	38 white oak plank, of 7 inches,
2 live oak knees,	51 do. do. of 6 do.
36 white oak knees,	31 do. do. of 5½ do.
20 beams,	61 do. do. of 5 do.
22 pieces white oak timber,	36 pieces maple timber,
4 white oak plank, of 8 inches,	36 pitch pine plank, of 4 inches.
9 do. do. of 7½ do.	

Statement of materials, &c. on hand in the Navy Yard at New York.

CLASS No. 1.

Three hundred and sixteen pieces of live oak, of various descriptions, remain in the yard, exclusive of what have been selected out for the frigates under construction. Those timbers, being mostly in a rough state, may be appropriated to various purposes. It may be proper to note that the stem intended for the 44 gun frigate, which was to have been built here, is complete. The stern post is in a similar situation, and several of the transoms are on it.

CLASS No. 2.

There is no live oak suitable for frigate, sketch A.

CLASS No. 3.

Two pieces only come under this description, and those pieces of live oak are serviceable for chock, viz:

2 Floor timbers; shaken by sun and wind.

N. B. No pieces of live oak in a decayed state.

CLASS No. 4.

White oak and pine timber, in logs, 105,864 feet.

Ditto do. of various descriptions, 24,444 feet.

Carlings and ledges, 18,130 feet.

N. B. None of the above timber is wanted, or suitable for frigate, sketch A.

CLASS No. 5.

White oak plank of 7 inches,	13,223 feet, superficial.
Ditto of 6½ do.	4,387
Ditto of 6 do.	35,172
Ditto of 5½ do.	5,599
Ditto of 5 do.	18,305
Ditto of 4½ do.	760
Ditto of 4 do.	92,232
Ditto of 3½ do.	2,670

171,348

White oak plank and scantling, of various sizes, 42,371

Georgia pitch pine plank, - - - 85,930

Yellow pine plank of 2½ inches, - - - 5,764

Yellow pine plank of 2 inches, - - - 17,116

Yellow pine plank of various sizes, - - - 12,889

336,328 feet.

N. B. None of the above plank wanted for frigate, sketch A.

CLASS No. 6.

There are in the navy yard, 17 large spars of various sizes and lengths, which were provided for masts and yards; they are all in a rough state, and may be converted to various purposes.

Articles not classed.

	Tons.	cwt.	qrs.	lbs.
Copper, viz: Sheets for sheathing, -	10	17	0	24
Sheathing nails, -	1	5	3	23
Bars for bolts, -	11	9	3	1
Butt bolts, -	0	5	3	9
Spikes and rings, -	0	14	0	14

Two small anchors, -	0	3	2	14
Iron of various descriptions, -	1	11	3	6
	<hr/>			
Tons,	61	15	2	13

A ship's caboose complete, with cooking utensils, armorer's forge, &c.

A set of large scales and weights, with triangles.

A large cistern for boiling plank, 70 feet long, 6 feet wide.

A complete set of moulds, bevelling boards, and staffs, are deposited in the mould loft, and which had been provided for building a 44 gun frigate.

Keel complete for a 44 gun frigate.

Treenails of locu st, suitable and wanted for frigate, sketch A, viz:

Of 36 inches, -	-	-	-	1,200
Of 24 do. -	-	-	-	3,320
Of 20 do. -	-	-	-	3,480
Of 18 do. -	-	-	-	8,390
Of 16 do. -	-	-	-	1,630

Total number, 18,020

Live oak timber selected out for the Frigate building at Philadelphia, viz:

29 Pieces of various descriptions, containing 428 cubic feet.	
10 Do. do. do. 191 do.	
13 Knees, - - do. 166 do.	
2 Counter timbers, - - do. 29 do.	
<hr/>	
54 Pieces.	814 feet.

Live oak timber selected out for the Frigate building at Baltimore, viz.

17 Pieces of various descriptions, containing 321 cubic feet.

Live oak timber selected out for the Frigate building at Boston, viz:

125 Pieces of various descriptions, containing 2,711 feet.	
1 White oak log, for keelson, -	118 feet.
<hr/>	
126 Pieces.	2,829 cubic feet.

NEW YORK, November, 1796.

JOSIAH FOX, *Navy Constructor.*

IMPLEMENTS, &c.

2 Cross cut saws,	1 Seven pound do.
9 Pair of iron hinges,	10 Pounds lead weights,
1 Iron pot,	1 Pair of shovel and tongs,
4 Shovels,	1 Pair of andirons,
7 Iron plates for boilers,	1 Iron cover for fire place,
651 lbs. of iron spikes,	1 Scale and beam,
676 lbs. of nails, of all sorts,	1 Four wheel truck,
15 Dozen of augers,	4 Chairs,
9 Locks,	2 Wheel barrows,
1 Yard bell,	2 Wooden buckets,

4 casks of sheathing nails,	1	15	3	23
4 boxes of composition butt bolts,	0	8	0	19
1 case of do. not weighed,	-	-	-	-
3 casks of spikes and rings, } 14 8 3 24				
294 bars for bolts,				
	25	15	3	20

Iron.—120 bars of various sizes for bolts,
 33,524 lbs. of iron have been received, some part of which has been applied to bolting the frames.
 A caboose complete, with iron boilers and armorer's forge.

OAK PLANK.

Of seven inches thick, - - - - -	1,127 feet.
Of six do. - - - - -	612
Of five and one-half do. - - - - -	286
Of five do. - - - - -	2,060
Of four and one-half do. - - - - -	459
Of four do. - - - - -	10,428
Of three and one-half do. - - - - -	399
Of three do. - - - - -	474
Of various sizes, - - - - -	2,032
	17,877
Yellow pine plank, of three inches thick, - - - - -	28,877

Total quantity, - 46,754 feet.

A large cistern for boiling plank, seventy feet long, six feet wide.
 A complete set of moulds for a forty-four gun frigate are deposited in the stores.

IMPLEMENTS, &c.

1 dozen of augers,	2 grubbing hoes,
1 pair of copper scales and weights,	6 large spades,
3 large ox chains,	30 bushels of lime,
4 small draw chains,	5½ dozen of files,
2 large sledges,	3 small tackle falls,
3 cant bars,	1 4½ do. measuring sixty fathoms,
1 pair of iron wedges,	1 keg of red ochre,
1 grindstone,	2 large pieces of cast iron,
6 large water cans,	334 pounds of riband nails,
1 half barrel of turpentine,	16 composition plates,
3 whip saws,	17 small copper bolts,
2 cross-cut saws,	Several wheel barrows,
6 crow bars,	2 large crabs.

COOKING UTENSILS.

2 large iron pots,	6 large pewter dishes,
2 Dutch ovens, with iron covers,	16 tin cups,
2 tea kettles,	2 pewter plates,
2 pots, racks, and runners,	3 dozen of knives and forks,
2 coffee pots and one frying pan,	2 provision kids.
8 pewter basins,	

N.

Estimate of Materials, Apparatus, &c. that will remain on hand in the Navy Yard, Boston, after the frigate Constitution is fitted for sea, agreeably to application from the War Office, March 20, 1798, viz:

- 152 pieces of live oak timber, containing 1,054 cubic feet, of various sizes,
- 2,508 feet of white oak ship timber,
- 6,354 feet of white oak, of various descriptions,
- 654 feet of white pine plank,
- 13,391 feet of Georgia pine plank, for decks.
- 5,370 locust treenails,
 - 1 spare foremast,
 - 1 do. mainmast,
 - 1 do. mizzenmast,
 - 1 do. bowsprit, besides some small spars,
- 1,237 pounds of old copper,
- 8 cases of sheet copper, containing each from 77 to 80 sheets, 48 inches by 14,
- 2 casks of copper rings, weighing 951 pounds,
- 5 boxes of small copper bolts, weighing 1,128 pounds,
- 22,661 pounds of copper bolts, mostly one and three-eighth inches,
- 5 copper dove-tails, plates, and a saucer, as received from Portsmouth,
- 6 iron plates for bottoms of boilers,
- Scale beam, twenty-three 56 pound weights, one of 112 do. and small weights,
- 1 iron stove,
- 1 yard bell,
- Grindstones,
- 9 yard saws,
- 1 brand stamp,
- A blacksmith's shop, with two pair of bellows,
- 2 anvils,
- 1 beak iron,
- 1 vice,
- Sledges and
- Hammers for ship work, with other tools, for two fires,
- 2 large anchors, received from New York, being disproportioned, and otherwise badly made. Captain Nicholson declines taking either of them on board the Constitution, although he is destitute of one large anchor of his complement.
- 8 kedge anchors, from six to seventeen hundred weight each,
- 957 twenty-four pound shot, found too large for the guns,
- A quantity of refuse, broken, and cut to pieces, of live oak, white oak, and pine timber, oak and pine plank, spruce poles, &c. &c.
- Foundation on which the frigate was built, launching and bilgeways, complete, containing large quantities of timber, of oak, hard wood, and pine.
- A platform, to make masts upon, made of pine, and can be taken up,
- A large store in the navy yard, three stories high, fifty-five by thirty-six feet.
- Sheds, saw pits, &c. &c.
- Tools and utensils of wood and iron, say—capstans, hand-trucks, sleds, &c. &c.
- Sundry blocks, falls, &c.
- A float stage, a complete set of frigate and boat moulds.

HENRY JACKSON, *Naval Agent.*

Boston, April 3, 1798.

MEMORANDUM.

- 2 cases of sheet copper, } are deducted from the quantity on hand, will be taken on board the ship.
- 300 pounds of copper bolts, }
- 2,000 pounds of the old copper is also deducted for the carronades for the tops, which are in hand at the foundry.

Statement showing the articles on hand, belonging to the United States, at the Navy Yard at Philadelphia, on the 10th of April, 1798.

7,646 feet of 1½ inch pine boards,	1 frame work shop,
266 do. 3 inch oak plank,	1 do. counting house,
167 do. 4 do.	55 red cedar posts,
31 do. 5 do.	1 white oak bit knee,
250 do. 3 and 4 inch do. short,	10 live oak top timbers,
4,728 do. 3 inch pine plank,	1 do. (condemned)
835 do. 4 do.	9 half top timbers, of live oak,
279 do. 2 do.	1 do. (condemned) do.
104 do. pine scantling,	4 third futtocks, do.
4 small pine beams, containing forty cubic feet, (condemned)	3 small second futtocks, do.
142 shores,	4 do. (condemned) do.
46 blocks,	1 stanchion, do.
53 pine standards,	1 do. (condemned) do.
Bilge ways, launching ways, and chocks,	1 ranging piece, do.
1 rafting boat,	2 brigs' transoms, do.
3 crabs,	1 lower stem piece, do.
1 large boiler for boiling plank,	1 first futtock, (condemned) do.
2 small frame stores,	1 knee, do.

An Inventory of all the Timber, Plank, and other Materials, of every sort, remaining in the Navy Yard at Baltimore, after the completion of the frigate Constellation, December 7th, 1797.

- | | |
|--|---|
| 1 set of double launching ways, including sliding ways, cant pieces, shores, blocking, and wedges, with iron work, all complete, and well calculated to launch any ship, from 74 guns down to a frigate. | 1 machine for driving bolts. |
| 1 excellent pine mast, 73 feet long, and 30 inches diameter. | 3 gins, with benches. |
| 2 excellent pine masts, 76 feet long, and 25 inches diameter, used as sheers. | 3 machines for sliding timber. |
| 53 live oak knees, from 3 to 10 feet long. | 4 treenail moods and horses. |
| 52 do. top timbers, about 14 do. | 1 stove for heating plank, with 1 copper boiler of 90 gallons. |
| 30 do. futtocks, of various kinds, about 14 do. | 4 iron plates for boiler. |
| 2 do. floors, about 19 do. | 2 ten plate stoves. |
| 1 do. counter 18 do. | 1 six do. |
| 1 do. log sent as spar, 21 ft. long and 15 in. thick. | 1 frame guard house, 12 feet by 12 feet. |
| 1 do. do. 19 do. 15 do. | 1 boat-builder's shed, 40 do. 22 do. |
| 3 do. do. 20 do. 12 do. | 1 mast shed, 90 do. 25 do. |
| 1 do. do. 16 do. 16 do. | 1 work house, 66 do. 22 do. with a shed. |
| 4 do. do. 11 do. 11 do. | 1 joiner's shop, 50 do. 25 do. |
| 6 do. do. 12 do. 10 do. | 1 blacksmith's shop, 50 do. 28 do. |
| 165 oak plank, of 3 inch, from 32 to 42 feet long. | 1 clerk's office, 16 do. 12 do. |
| 193 do. do. 4 do. 35 41 do. | 1 batteau. |
| 42 do. do. 4½ do. 33 40 do. | 1 cart. |
| 3 do. do. 5½ do. — 30 do. | 2 ladders. |
| 63 do. do. 6 do. 23 40 do. | 1 pair trucks. |
| 16 do. do. 7 do. — 44 do. | 3 crabs. |
| 96 pine boards, 1 do. 12 20 do. | 3 grindstones. |
| 154 do. do. 1½ do. 15 24 do. | 2 boat sheds. |
| 38 pine plank, 1½ do. — 24 do. | 1 do. do. for caboose. |
| 58 do. do. 2 do. 20 24 do. | 3 temples. |
| 481 do. do. 2½ do. 30 40 do. | 1,302 lbs. copper bolts. |
| 102 do. do. 3 do. 24 45 do. | 3 cross-cut saws. |
| 101 do. do. 3½ do. 45 54 do. | 5 whip saws. |
| 102 do. do. 4 do. — 54 do. | 5 small anchors. |
| 1 white oak log, 26 feet long, about 18 inches. | 800 feet iron chains for rafting timber |
| 1 do. do. 13 do. 12 do. | 4 saw benches. |
| 1 do. do. 16 do. 14 do. | 74 ring bolts. |
| 1 do. do. 13 do. 12 do. | 247 sets do. |
| 12 do. do. 14 do. 8 do. | 11 cant hooks. |
| 7 do. do. 8 to 40 do. 12 do. | 34 rafting platforms. |
| 9 rising timbers, 20 feet by 12 inches. | 54 do. staples. |
| 144 white oak knees, from 5 to 14 feet long, and from 5 to 13 inches. | 15 treenail pinches. |
| 152 short pieces of oak plank, from 4 to 12 feet long. | 4 iron wedges. |
| 89 oak slabs, about 20 feet long. | 6 small claws. |
| 34 do. standards, 45 and 50 feet in length. | 6 dogs. |
| 230 do. shores, about 15 feet long. | 1 bull do. |
| 5 pine standards, 45 and 50 feet in length. | 8 slice irons. |
| 1 do. carling, 27 feet long, and 13 by 6 inches. | 113 augers. |
| 1 do. do. 18 do. 12 6 do. | 105 lbs. iron hoops. |
| 2 do. beams, 33 do. by 12 inches. | 17 mauls. |
| 1 do. do. 29 do. 9 do. | 5 pair bellows, with 4 complete sets smiths' tools, with 2 vices. |
| 29 do. pieces timber, from 2 to 6 feet long. | 12 copper riveting plates. |
| 268 white oak do. do. | 1,190 do. do. rings. |
| 308 live oak, do. do. | 22 six inch copper spikes. |
| 1 brow complete, 104 feet long, 11½ feet broad, made of 3 inch pine plank. | 12 twelve do. bolts. |
| 1 set of moulds, as received from Philadelphia. | 4 four do. do. |
| | 5,000 locust treenails. |
| | A large quantity of spikes and bolts, in various pieces of timber about the yard, which it would be proper to have drawn in the spring. |
| | 2 pine spars, 45 feet long by 10 inches. |
| | 1 horse, saddle and bridle. |

DAVID STODDER,
THOMAS TRUXTUN,
ISAAC GARRETSON,
HENRY SMYTH.

For Samuel and Joseph Sterett,

P. S. The materials per the above list are all in good order, except a few pieces of timber and plank that are sun shaken, owing to their being exposed without any covering; the solid contents may be calculated nearly, by any clerk in the office. It would have cost an immense labor, had men been employed, particularly at this season, to have turned over every piece separately, to measure the same every way; we, therefore, considered the mode we took to be the cheapest, and that it would answer every purpose you could wish or desire, especially as we have been very minute in ascertaining every particular on hand.

We also think it proper to inform you, lest hidden logs, or unknown shelves of sand, of greater extent than we are aware of, should injure the ship, that she only floats at high water, on spring tides; a situation by no means proper or desirable for such a ship as the Constellation to lay in.

The iron that remains on hand, after the several jobs in hand are complete, will be returned in the clerk's monthly report.

DAVID STODDER,
THOMAS TRUXTUN,
ISAAC GARRETSON,
HENRY SMYTH.

For Samuel and Joseph Sterett,

The Hon. JAMES M^rHENRY, *Secretary of War.*

Live Oak Timber deposited at Mud Fort (Philadelphia) and Georgia.

AT PHILADELPHIA AND MUD FORT.

P.

NAVY YARD, January 22, 1798.

SIR:

Enclosed you have a statement of the pay rolls for the different tradesmen's bills, employed in building and finishing the frigate United States, by the day, up to the 19th instant. You will observe that the amount of the carpenter's, laborers', and calkers' wages, amount to \$46,161 63. The frigate measures 1,444 tons, and cost \$31 89

per ton, according to the old mode of tonnage merchant ships, in this port. You will also observe that merchant ships, tonnage by this rule, have only two decks, the depth never taken into consideration; the frigates have twice the number of decks, and ought to have an augmentation of price, or a mode of increasing the number of tons, according to the difference in workmanship. The mode by which the above tonnage is found, is by multiplying the length of keel, for straight rabbet, by the moulded breadth of beam; and that product by half the breadth, (which is taken for the depth, let it be what it may, and without regard to the number of decks) the last product divided by ninety-five, which gives the number of tons required.

Price per ton for building and finishing the carpenters', laborers', and calkers' work, of live oak and red cedar vessels, (floors and first futtocks of white oak) including head, galleries, patent windlass, &c. according to the custom of the port, in the year 1794, when wages was at 6s. 6d. to 7s. per day, was \$20.

Price of labor for carpenters, laborers, and calkers, per ton, at that time, exclusive of wood,	\$10 00
Difference in the labor between building a frigate, with four decks, and a common merchant ship, with two decks,	3 00
Difference in framing and bolting every timber together, as the frigate was done, and with four decks, and the common mode of building merchantmen with two,	1 00
Extra expense it would have cost, at that time, to prepare the foundation, the yard, boiler, &c.	1 00
Difference in workmanship,	1 00
For preparing the bottom and coppering,	50
Price per ton the frigate would have cost, for carpenters', laborers', and calkers' work, in the year 1774, wages as above stated,	\$16 50

Wages on the frigate, as by the rolls will appear, was from 11s. 3d. to 15s. per day; which is nearly double, and may, for cogent reasons, hereafter expressed, be quite so; which will bring the cost of the frigate, for the workmanship, by fair comparative calculation, to \$33 per ton.

It is a known fact that the higher the price of any article, the more indifferently you are served, and the more you are curtailed in weight and measure: this applies to workmen; the higher the wages, the less they will do in a day.

I am convinced that it would have been impossible for any person to have contracted for the labor of the frigate United States for a less sum than what it cost, for so complete a ship, without being a sufferer.

I am, very respectfully,

JOSHUA HUMPHREYS,

Constructor of the United States' Navy.

The Honorable SECRETARY OF WAR.

QQ.

WAR DEPARTMENT, April 21, 1794.

SIR:

I have the honor to transmit you an estimate of the quantity and quality of timber, plank, scantling, and copper, &c. which will be required for each of the four largest frigates contemplated by the act, entitled "An act to provide a naval armament;" nearly the same quantity will, also, be wanted for each of the thirty-six gun ships mentioned in the said act.

It has been decided by the President of the United States, that the said frigates be built in the following ports, to wit:

Boston,	one 44 gun ship.
New York,	one 44 do.
Philadelphia,	one 44 do.
Baltimore,	one 36 do.
Portsmouth, Virginia,	one 44 do.
Charleston, South Carolina,	one 36 do.

It appears to be of indispensable necessity, that immediate arrangements should be made to obtain the articles contained in the estimate, and to have them transported to the ports before mentioned; excepting such articles of the timber as may be obtained at, or in the neighborhood of, the said places.

The live oak and red cedar must principally be obtained from the islands on the coast of Georgia; some parts, however, may be obtained in North Carolina; although it is alleged that the further south the live oak, the better. Different opinions are entertained as to the most certain and the most economical mode of obtaining the live oak and cedar, from Georgia, and transporting the same to the ports where the ships are to be built.

Some persons recommend that one or more persons, in whom due confidence may be placed, should repair to the islands of Georgia, and contract with the proprietors of the timber, as it stands, for such parts as will serve the moulds; and that a sufficient number of axe-men, with their provision, be sent from the northward, in order to cut the same, and transport it to the places where it is to be used. These persons assert that any contract made in Georgia, or other parts to the southward, will be executed by negroes; whose indolence and carelessness will inevitably produce disappointment or loss.

The moulds for the timbers, of both sized ships, are preparing, and nearly finished. These must be transported to the places where the timber is to be cut, otherwise mistakes would arise, and disappointment of course ensue.

Besides the mode before mentioned, there are persons who recommend a contract with some persons, if such could be found, which is said to be the case, to procure the timber in Georgia, and transport it to the respective ports or places.

You will please to judge which of these two modes will be preferable. I have understood that, in 1776, or 1777, the frames of two seventy-four gun ships were cut, under the authority of the United States, part at Sunbury, and part at a place called Kilkenny, near the mouth of the Savannah river, and that, as the said timber was very large, part of it yet remains; it may, therefore, be proper to look it up, and if it should answer for the frames of the proposed frigates, as probable, it would be excellent from its long seasoning.

I have the honor to submit to you a letter from Mr. Wreath, of Georgia, upon this subject, the purport of which is confirmed by Brigadier General Gunn, of the same State.

The manner in which these vessels ought to be built has been under consideration; that is, whether the hull, and other parts susceptible of the measure, should be built by a contract, or by a capable agent or agents appointed for the purpose of procuring the labor and materials. Upon inquiry, however, it appears improbable that a contract could be formed with the ship-builders in this place, for the one directed to be built here. They allege, that, if a contract was offered and accepted, by two or more, it would excite the ill will and envy of those who had no part in it; and, as the frigate would require many hands, the price of that sort of labor would rise, and that therefore it would be in the power of those not employed to raise the wages of the journeymen a shilling or two per day; which would occasion great embarrassment, if not ruin, to the undertakers. Hence it would appear to follow, as a consequence, that, if the ship-builders of Philadelphia, some of whom have considerable capitals, would decline a contract, that it would be almost or quite impracticable to obtain the building, by contract, elsewhere. If this should be so, then agents respectable for their intelligence, activity, and integrity, must be sought in the places in which the said frigates are directed to be built.

The President of the United States has approved of the said vessels being built under the directions of some agent or agents, which I presume will be in your department to nominate to him.

I suppose, however, if you should find it practicable to build them by contract, that the subject will still be re-considered by him; and, as for myself, I should find great satisfaction in a contract, if one upon solid principles could be obtained.

The SECRETARY OF THE TREASURY.

HENRY KNOX.

Y.

Copy of a letter from the Secretary of War to the Secretary of the Treasury, dated

MAY 6th, 1794.

SIR:

I have the honor to transmit you the general dimensions of the heavy cannon which are required for the fortifications and for the frigates; the proof which will be required of each piece, by persons who shall be appointed by me for that purpose, and the time within which they ought to be delivered.

The Cannon for the Fortifications.

THIRTY-TWO POUNDERS.

	Feet. In. parts.
The length from the hind part of the base ring to the extremity of the muzzle,	9 6 00
Diameter of the caliber,	0 6 42
External diameters of the breech at the vent or touch hole,	1 9 8
At the first reinforced ring,	1 7 26
At the trunnions,	1 5 45
Behind and before the muzzle ring, and at the extremity of the muzzle mouldings,	1 1 24
Thickness of the metal, in the direction of the vent or touch hole, and also from the rear of the caliber,	
and in the direction thereof to the extremity of the base ring,	0 7 33
At the first reinforced ring,	0 6 42
At the trunnions,	0 5 51
Behind and before the muzzle rings, and at the extremity of the muzzle mouldings,	0 3 42
The total weight of this cannon estimated at fifty-five hundred.	

TWENTY-FOUR POUNDERS.

The length from the hind part of the base ring to the extremity of the muzzle,	9 0 00
Diameter of the caliber,	0 5 83
External diameters of the breech at the vent or touch hole,	1 7 35
At the extremity of the second reinforce before the trunnions,	1 4 12
Behind and before the muzzle ring, and at the extremity of the muzzle mouldings,	1 0 12
Thickness of the metal, in the direction of the vent or touch hole, and also from the rear of the caliber,	
and in the direction thereof to the extremity of the base ring,	0 6 66
At the extremity of the second reinforce, two inches before the trunnions,	0 5 15
Behind and before the muzzle rings, and at the extremity of the muzzle mouldings,	0 3 15
The total weight of the cannon estimated at five thousand.	

Cannon for the Frigates.

TWENTY-FOUR POUNDERS.

The length from the hind part of the base ring to the extremity of the muzzle, - - - - - 8 0 00
 Excepting in the length, all the other parts to be precisely of the same dimensions as the twenty-four pounders, which are nine feet in length, weight forty-five hundred.

These general dimensions will be sufficient, in the first instance, to enable the owners of furnaces to decide whether to undertake the business or not.

It is to be observed, that the thickness of the metal specified in the dimensions is greater than the thickness contained in the eighteen pounders cast in Maryland during the late war; the metal of which was only the diameter of one caliber, and one-eighth thickness at the vent—whereas, I now propose, it shall be the thickness of one caliber and *one-seventh* at the same place. This is the greatest thickness used at present, either in France or England.

But, in order that no mistakes be committed, it will be necessary that plans and profiles of each size of cannon be drawn at full length for each founder, or undertaker; in which all the mouldings and proportions shall be exactly delineated. Each cannon to be cast solid, with a spruce head of metal, of at least five hundred weight, and afterwards to be bored out by machinery. The proof which will be required for each piece will be as follows:

THIRTY-TWO POUNDERS.

1st Proof, 18 pounds of powder, }
 2d do. 21 do. do. } with two wads and two shot.
 3d do. 24 do. 12 oz do. }

TWENTY-FOUR POUNDERS.

1st Proof, 13 pounds 8 oz. of powder, }
 2d do. 15 do. 12 do. } with two wads and two shot.
 3d do. 18 do. 8 do. }

The deliveries of the cannon for the fortifications to commence on the first of August, or as much sooner as possible; and afterwards in such proportions, monthly, that the whole shall be delivered on or before the 1st of December next, or at furthest, the 1st of January, on any of the rivers or waters of the United States, navigable for sea vessels, so that the cannon may be easily transported to the places where they shall be required.

The cannon for the frigates all ought to be delivered by the first of December.

Articles of agreement, made and executed on the eighth day of August, one thousand seven hundred and ninety-four, between the Commissioner of the Revenue, in the Department of the Treasury of the United States, in their behalf, on the one part; and John Brown, John Francis, and Rufus Hopkins, Nicholas Power, Obadiah Brown, Brown, Benson, and Ives, and Jabez Bowen, being the company of owners of the furnace Hope, of the other part.

1st. The United States agree to purchase of the said company, and the said company agree to sell and deliver to the United States, thirty-four iron cannon, to carry iron ball of thirty-two pounds; and thirty-four like cannon, to carry iron ball of twenty-four pounds; being, together, sixty-eight iron cannon, suitable for fortifications, of the dimensions and descriptions contained in the printed note hereto annexed.

2d. The parties to this agreement respectively contract in like manner for the sale, delivery, receipt of, and payment for, sixty iron cannon, to carry twenty-four pound ball of the like metal, suitable for frigates or ships of war, agreeably to the dimensions and descriptions in the said annexed printed note.

3d. The United States agree to pay to the said John Brown, John Francis, and Rufus Hopkins, Nicholas Power, Obadiah Brown, Brown, Benson, and Ives, and Jabez Bowen, the price of one hundred and six dollars and two-thirds for every ton weight of said cannon, as the same shall weigh when bored, and finished agreeably to contract; and the said John Brown, John Francis, and Rufus Hopkins, Nicholas Power, Obadiah Brown, Brown, Benson, and Ives, and Jabez Bowen, agree to accept and receive that price for the same.

4th. The said cannon are to be delivered to the United States, at a wharf on the bank of some river, creek, or water, in the State of Rhode Island, Connecticut, or Massachusetts, at which a decked vessel of sixty tons burthen can lie.

5th. The cannon are to be cast solidly, with a spruce head of metal, of at least five hundred weight, and to be bored out with machinery. An allowance of the extra expense of such boring out, over and above that which would arise from casting with a cavity nearly of the size of the intended caliber, shall be made by the United States, if on a consideration of the said expenses, and all advantages and disadvantages attending the operation, it shall appear that any thing ought to be paid on that score to the contractors by the United States. It is further agreed that if, on experiment, it shall be found impracticable to make the cannon upon the plan of casting them solidly, they shall then be cast in the usual manner, but with a spruce head as before specified.

6th. Two-third parts of the said one hundred and twenty-eight pieces of cannon are to be delivered on or before the first day of January next, 1795, and the remaining one-third part are to be delivered on or before the first day of May next, 1795.

7th. Drawings, plans, or profiles, are to be furnished by the Secretary of War.

A payment in advance, of five thousand four hundred dollars, is to be made to the said John Brown, John Francis, Rufus Hopkins, Nicholas Power, Obadiah Brown, Brown, Benson, & Ives, and Jabez Bowen, and they are to be entitled to such proportion of advance, throughout the term of the contract, satisfactory security being given therefor, other than their own obligations.

Payments are to be made, from time to time, as deliveries of the cannon shall be effected.

For the due and faithful performance of this contract, the said John Brown, John Francis, and Rufus Hopkins, Nicholas Power, Obadiah Brown, Brown, Benson, & Ives, and Jabez Bowen, hereby bind themselves and the Furnace Hope Company, their, and each of their heirs, executors, and administrators, in the penalty of seven thousand dollars.

In witness of the premises, the Commissioner of the Revenue hath hereunto put his signature, and the said John Brown, John Francis, and Rufus Hopkins, Nicholas Power, Obadiah Brown, Brown, Benson, & Ives, and Jabez Bowen, for themselves, and in behalf of the aforesaid Furnace Hope Company, have hereunto set their hands and seals, the day and year first before mentioned.

ADDITIONAL.

The cannon to be proved at the expense of the United States, and by a person to be appointed by the Secretary of War.

Signed, sealed, and delivered, in the presence of us,
 PETER FOOTMAN,
 JOHN MEASE,
 JOHN S. DEXTER,
 NATHANIEL CUSHING.

For Brown
 and Francis.

TENCH COXE, *Commissioner of the Revenue.*
 JOHN FRANCIS,
 RUFUS HOPKINS,
 OBADIAH BROWN,
 BROWN, BENSON, & IVES,
 JABEZ BOWEN,
 NICHOLAS POWER.

Prior to the completion of the foregoing contract, to which this paper is annexed, it is agreed, on the part of the United States, that one-fourth of the whole amount of the cannon shall be paid on the demand of Brown and Francis on closing the contract; that another fourth part shall be paid when one-third of the cannon shall be completed; that another fourth shall be paid when two-thirds of the cannon shall be finished; and that the remainder of the money shall be paid when the whole of the cannon shall be finished.

TENCH COXE, *Commissioner of the Revenue.*

Witness, EZ. FORMAN.

Z.

WAR OFFICE, *September 13th, 1796.*

SIR:

There will be wanted for the frigate, destined for the Mediterranean, twenty-four nine pounders, and twelve six pounders; and for the three frigates, now under construction, forty twelve pounders; it is requested, therefore, that a contract may be entered into for the delivery of this number of cannon, on or before the first of April ensuing.

To obviate as much as possible dispute with the person who may engage to furnish them, it may be proper that the contract should comprise the following conditions:

1. That the guns be cast in the solid, and bored.
2. That the twenty-four nine pounders, and twelve six pounders, conform exactly in weight, bore, caliber, and length, to British ship guns of the same dimensions now in use.
3. That the forty twelve pounders be formed agreeably to the dimensions laid down in the annexed draught.
4. That the guns, after having been bored, and before undergoing any proof, shall be examined by one or two persons, to be appointed by the President of the United States, in the presence of such other persons as shall be named by the owner of the works. That this examination shall commence by a verification of the diameters of the different parts, and ascertainment whether there are more internal and external cavities or defects than are specified in the annexed table, exhibiting the defects which are to be tolerated.

That in all cases where the bore or caliber is found to be less than the diameter prescribed, and the defects not greater than those tolerated, the cannon shall be returned to the boring machine to be enlarged before being proved; and in all cases where the defects are greater than those tolerated, the examination shall cease, and the cannon be rejected.

5. That the instruments commonly employed to ascertain dimensions and discover cavities or holes, in the external and internal parts of guns, shall be used on such occasions.

6. That the touch hole must end in the cannon, at the middle of the rounding of the angle at the bottom of the bore. That should any holes be found in the touch hole, deeper than the twentieth of an inch, the cannon cannot be admitted to proof till the same shall have been filled up with beaten iron.

7. That the trunnions must be perpendicular to the vertical plane, which is supposed to pass through the touch hole, and to cut the bore into two equal parts. That the upper part of the trunnion shall be level with the centre of the caliber, or bore, and that the usual relative weight be preserved between the breech and chase.

That the proof by powder shall be as follows: viz. Each cannon shall be proved by two successive discharges. The weight of the powder, for the first discharge, shall be equal to two-thirds of the weight of the ball; and for the second equal to half the weight of the ball. The cartridge shall be well rammed down, with a wad over it; two balls shall be placed over that, with a wad of hay between them, and a wad over, which shall be well rammed down, the

balls to be measured, so as to allow a sufficient windage, and approved of by the officers who shall make the experiment, and the owner of the works, or any person whom he may appoint for that purpose.

9. That, to ascertain the strength of the trunnions the cannon must be placed on two pieces of wood, having indentions large enough to receive two-thirds of the trunnions, and with the hinder part at a sufficient distance from where the trunnions lodge so that the breech may be inclined in any direction, but never so as to rest on the ground. The proof by powder must be made on these pieces of wood.

10. That the cannon which shall have stood the proof by powder shall be raised from off the temporary carriage and placed upon a supporter, so that they may be filled with water. That should the water, on being compressed, filter through any part of the cannon, it cannot be received, though it has stood proof.

11. That the cannon which shall have stood the aforesaid examination and proofs shall be subject, nevertheless, to be re-examined; and should new holes be detected, or the ones tolerated found to have been enlarged by the firing, all such cannon must undergo a second proof, but of one discharge only; when, if the holes exhibit no further enlargement, they shall be admitted, and receipted for, after being weighed.

12. That the weight of each cannon received shall be marked on the left trunnion.

As cannon which have not undergone the above examination and proofs cannot be used by the United States without putting the success of those military undertakings in which they may be engaged, at risk, and as the principles and regulations here laid down, have been the result of much experience, and long adopted for the verification of cannon, by the principal nations in Europe, they may be considered as guides that ought not to be departed from. It is requested, therefore, that the contract shall be so formed as to ensure a strict and punctual compliance with each and all of the above-mentioned conditions.

JAMES M'HENRY.

P. S. The draught for the twelve pounders, which is in hand, will be furnished in a few days.

Defects to be tolerated in Cannon, for the use of the Marine of the United States.

JAMES M'HENRY.

SECRETARY OF THE TREASURY.

Articles of agreement made on the twenty-fifth day of October, one thousand seven hundred and ninety-six, between Oliver Wolcott, junior, Secretary of the Treasury of the United States of America, for and on behalf of the said States, of the one part; and Samuel Hughes, of Harford county, in the State of Maryland, on behalf of the Cecil Company, he being fully authorized to do so, of the other part.

This indenture witnesseth, That the said Oliver Wolcott, junior, for and on behalf of the United States of America, and the said Samuel Hughes, for and on behalf of the said Cecil Company, and by virtue of the powers to him granted, have mutually covenanted and agreed, and by these presents do mutually covenant and agree, as follows:

First. That the said Samuel Hughes, on behalf of the Cecil Company, shall, on or before the first day of May, now next ensuing, deliver, for the use of the United States, to such person as may be designated by the Secretary of War, twenty-four iron cannon, to carry iron ball of nine pounds weight; twelve iron cannon, to carry ball of like metal, of six pounds weight; and forty iron cannon, to carry ball of like metal, of twelve pounds weight.

Secondly. That the said cannon shall be cast in the solid, and bored.

Thirdly. That the twenty-four nine pounders and twelve six pounders shall conform exactly, in weight, bore, caliber, and length, to British ship guns of the same description now in use.

Fourthly. That the forty twelve pounders, shall be formed agreeably to the dimensions laid down in the draught furnished by the Secretary of War.

Fifthly. That the said cannon, after having been bored, and before undergoing any proof, shall be examined by one or two persons, to be appointed by the President of the United States, in the presence of such other person as may be named by the said Samuel Hughes, on behalf of the Cecil Company; which examination shall commence by a verification of the diameter of the different parts, location of the trunnions, and ascertainment whether there are more internal and external cavities or defects than are specified in the table annexed to this instrument, exhibiting the defects which are to be tolerated; and in all cases, where the bore or caliber is found to be less than the diameter prescribed, the cannon shall be returned to the boring machine, to be enlarged before being proved; and in all cases where the defects are greater than those tolerated in the said table, or trunnions misplaced, the examination shall cease, and the cannon be rejected.

Sixthly. That the instruments commonly employed to ascertain dimensions and discover cavities or holes in the external and internal parts of guns, shall be used on such occasions.

Seventhly. That the touch hole shall end in the cannon at the middle of the rounding of the angle at the bottom of the bore; and if any holes shall be found in the touch hole deeper than the twentieth part of an inch, the cannon are not to be admitted to proof until the same shall have been filled up with beaten iron.

Eighthly. That the trunnions shall be perpendicular to the vertical plane, which is supposed to pass through the touch hole, and to cut the bore into two equal parts. The upper part of the trunnions shall be level with the centre of the caliber or bore; and the usual relative weight shall be preserved between the breech and chase.

Ninthly. That the proof by powder shall be as follows, viz. Each cannon shall be proved by two successive discharges: The weight of the powder for the first discharge shall be equal to two-thirds of the weight of the ball; and for the second, equal to half the weight of the ball. The cartridge to be well rammed down, with a wad over

it. Two balls to be placed over the cartridge, with a wad between them and a wad above; which also shall be well rammed down. The balls to be measured so as to allow a sufficient windage, and approved of by the officers who shall make the experiments, and the said Samuel Hughes, on behalf of the Cecil Company, or any person he may appoint for that purpose.

Tenthly. That, to ascertain the strength of the trunnions, the cannon shall be placed on two pieces of wood, having indentions large enough to receive two-thirds of the trunnions, and with the hinder part at a sufficient distance from where the trunnions lodge, so that the breech of the cannon may be inclined in any direction; but never so as to rest on the ground. The proof, by powder, to be made on the said pieces of wood.

Eleventhly. That the cannon, which shall have stood the proof by powder, shall be raised from off the temporary carriage and placed upon a supporter, and filled with water; and, should the water, on being compressed, filter through any part of the cannon, the same shall not be received by the United States, although they have stood proof by powder.

Twelfthly. That the cannon which shall have stood the aforesaid examination and proofs shall be subject, nevertheless, to be re-examined; and, if new holes are detected, or the ones tolerated found to have been enlarged by the firing, all such cannon shall undergo a second proof, but of one discharge only, with two-thirds powder and two balls, as before specified; when, if the holes exhibit no further enlargement, the said cannon shall be admitted and received for, after being weighed.

Thirteenthly. That the weight of each cannon received shall be marked on the left trunnion.

Fourteenthly. That the said cannon, after being approved and receipted for, shall be delivered by the said Samuel Hughes, at his own proper cost and expense, at a wharf on the bank of some river, creek, or water of the Chesapeake, where a decked vessel of sixty tons burthen can load and unload.

Fifteenthly. That the United States shall be at the expense of proving the said cannon, and shall, when required, send a person to prove such of them as are ready, provided the number is not less than twelve; but the first proof may be made on any lesser number.

Sixteenthly. That, when one half of the number of the said cannon are finished and receipted for, payment shall be made therefor, at the price hereafter mentioned, including, however, in the said payment, any advances which may have been made to the said Samuel Hughes, on account of this contract.

Seventeenthly. That the said Oliver Wolcott, Jr. shall pay, or cause to be paid, to the said Samuel Hughes, on behalf of the Cecil Company, the price of one hundred and thirty-three dollars and one-fourth of a dollar, for every ton weight which the said cannon shall weigh, after being proved and receipted for.

In witness thereof, the said Secretary of the Treasury, on behalf of the United States, hath hereunto subscribed his hand, and affixed the seal of the Treasury; and the said Samuel Hughes, on behalf of the Cecil Company, hath hereunto set his hand and seal, the day and year above written.

[L. S. T. U. S.]

Ab.

NAVY YARD, BOSTON, *September 24, 1797.*

STR:

Having before stated to you my intention of launching the frigate *Constitution* on the 20th instant, the necessary preparations were made to that end; and, at the time appointed, all the blocks and shores were removed, with full expectation of her moving gently into the water.

She, however, did not start until screws and other machinery had been applied; and then she moved only about twenty-seven feet. Concluding that some hidden cause had impeded her progress, and the tide ebbing fast, I decided it to be most prudent to block and shore her up, and examine carefully into the cause of her stopping. I found that the part of the ways which had not before received any of the weight, had settled about half an inch, which, added to some other cause, of no great importance in itself, had occasioned the obstruction.

The next day, after due preparation, the ship was raised two inches, in fifty minutes, by means of wedges; her bilgeways were then taken out, and the apparent defects removed. All things being in order, a second attempt was made on the 22d instant; and, upon the removal of her supports, she moved freely for about thirty-one feet, and then stopped. On this unexpected event, as she was somewhat advanced on the new wharf, which was built for her to pass over only, and not to rest upon, I judged it advisable to suspend any further operations, although it might have been possible, with the machinery previously prepared, to have pressed her into the water; but if she had been constrained twenty or thirty feet further, and then have stopped, her situation would have been critical, on a foundation by no means solid; accordingly, she was perfectly secured in her new situation.

On examining the ways erected on the new wharf, I find they have both settled abaft about one and five-eighths of an inch; which circumstance, as it could not have been foreseen, the descent of the ways was not calculated to overcome, and which solely occasioned her to stop.

I had formed the inclined plane upon the smallest angle that I conceived would convey the ship into the water, in order that she might make her plunge with the least violence, and thereby prevent any strain or injury; I must now give the ways more descent, which will remedy the defect occasioned by the settling of the new wharf; and I am fully confident that the next trial, at the high tides in October, will be attended with success: in the mean time, I shall proceed in completing the ship on the stocks.

Your favor of the 10th came to hand on the 17th instant.

I am, very respectfully, your humble servant,

GEORGE CLAGHORNE.

Hon. JAMES M'HENRY, *Secretary of War.*

5th CONGRESS.]

No. 13.

[2d SESSION.]

MARINE CORPS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MAY 22, 1798.

Mr. SEWALL, from the committee on that part of the speech of the President of the United States which regards the protection of commerce, and the defence of the country, reported:

That, in their opinion, important advantages would be obtained, by an arrangement in one corps, of the marines who are, or shall be, engaged in the service of the United States, and by annexing them to the existing military establishment; particularly, as it would afford the means of order and economy, in which a number of minute detachments are liable to be very deficient; and as thereby the detachments, which will be occasionally on shore, will be kept in proper discipline, and may be rendered useful in the fortifications, or elsewhere, as the public service may require. The committee therefore recommend the following resolution to be adopted:

Resolved, That, in addition to the present military establishment, there shall be raised a battalion, to be called the marine corps, to consist of a major, and suitable commissioned and non-commissioned officers, five hundred privates, and the necessary musicians, including the marines now in service; and the marines which shall be employed in the armed vessels and galleys of the United States shall be detachments from this corps.

5th CONGRESS.]

No. 14.

[3d Session.

NAVAL FORCE AND EXPENDITURES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 26, 1798.

NAVY DEPARTMENT, *December 24, 1798.*

SIR:

In compliance with the order of the House of Representatives, of the 18th instant, I have the honor to submit, in paper A, a view of all the vessels of war employed in, and preparing for, the service of the United States, the names of the commanders, where commanders have been appointed; the places where they were built, or are building; their size, and number of men and guns; and the sum necessary for the annual support of each, as detailed in the estimates, Nos. 1, 2, 3, 4, 5, 6, 7, 8, 9, and 10.

Paper B shows the sums given for some of the vessels; the prices, per ton, at which others have been built, or are building; and what vessels have been built, or are building, under the direction of public agents, without particular contracts.

I have also the honor of submitting estimates, Nos. 11, 12, and 13, of the expense of building and equipping the vessels now building under public authority. The order of the House extends to the expense of equipment of every vessel, as well those in service as those preparing; but, with respect to the former description, the expense having been incurred, the estimate or statement should exhibit the exact cost of the equipment, which cannot at this time be ascertained, the whole accounts of the agents for these vessels not having been received, and some few of those which have been received not being accompanied with the necessary vouchers. Nor, indeed, has the accountant of the navy, who only entered upon the duties of his office in September, and then at Trenton, under disadvantages, had sufficient time to arrange his books and accounts, so as to be able to show, in every instance, to what vessel every expense incurred belongs.

It is hoped and expected that these impediments to a compliance with every part of the order of the House will very shortly be removed.

I have not added estimates of the expense of equipping the vessels building for the public by the citizens. Some of these vessels will probably be entirely equipped by the citizens; others only partially. In the Report of the Secretary of the Treasury, to which I beg leave to refer, an estimate is made of the expense of providing all the vessels now building by the public, and by the citizens for the public, with military stores. In some cases the citizens will furnish the military stores; in others, they will require aid from the public, even to rig the vessels. But, upon an average, it is not expected that the public will contribute more towards these vessels than a sum sufficient to procure the military stores.

I have the honor to be, with great respect, sir, your most obedient servant,

BEN. STODDERT.

The Hon. the *SPEAKER of the House of
Representatives of the United States.*

		Virginia,	-	-	187	14	70	Norfolk,	Francis Bright,	
		Sloop General Greene,	-	-	98	10	34	Philadelphia,	George Price,	The annual expense of each being \$10,413 93
		Schooner Diligence,	-	-	-	-	-	Philadelphia,	John Brown,	
		Scammel,	-	-	-	-	-	Portsmouth, N. H.	John Adams,	
		South Carolina,	-	-	-	-	-	Charleston,	James Payne,	41,653 72

It is presumed that the Naval Establishment will be chargeable with the whole expense of the Marine Corps. But only the pay and rations have been included in the foregoing estimate. On this subject the estimates laid before Congress by the Secretary of the Treasury will fully explain. It may be proper to observe that the tonnage, in some instances, may be incorrect.

[3d Session.]

THE BUILDING OF TWELVE SEVENTY-FOURS, AND ESTIMATES OF EXPENSE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 2, 1799.

NAVY DEPARTMENT, 29th December, 1798.

SIR:

I have given to the inquiries you have done me the honor, as Chairman of a Committee of the House of Representatives, to make of me, all the consideration my desire to comply promptly with the wishes of the committee would permit, and now proceed with great diffidence to submit the result.

The protection of our coast; the security of our extensive country from invasion in some of its weaker parts; the safety of our important commerce; and our future peace, when the maritime nations of Europe war with each other, all seem to demand that our naval force should be augmented; so much augmented, indeed, as to make the most powerful nations desire our friendship—the most unprincipled, respect our neutrality. The peaceful character of America will afford to the world sufficient security, that we shall not be easily provoked to carry the war into the country of an enemy; and it well becomes the wisdom of America to provide a cheap defence to keep it from our own.

Twelve ships of seventy-four guns, as many frigates, and twenty or thirty smaller vessels, would probably be found (our geographical situation and our means of annoying the trade of the maritime Powers considered) a force sufficient to ensure our future peace with the nations of Europe. It would not, perhaps, be hazarding too much to say, that, had we possessed this force a few years ago, we should not have lost, by depredations on our trade, four times the sum necessary to have created and maintained it, during the whole time the war has existed in Europe. If we do not profit by experience, and put ourselves in a situation to resent insult, and punish aggression, nothing is more likely than that, in less than half a dozen years, another occasion may be presented for a repetition of the same mortifying observation. In another and still more interesting view of this subject, mutual safety was a leading motive, and must ever remain a strong cement of our Union. Whether this security can be afforded, unless we are able to command our own coast, and whether the union of all the States can long be preserved without it, are questions which merit the most serious and attentive consideration of American legislators. I forbear to dwell on this fruitful, perhaps delicate topic.

However, to attend more to our pressing concerns, we cannot feel entirely secure that we are not to be exposed to great calamities from the ambition or animosity of France, until a considerable addition be made to our naval force. If twelve ships of seventy-four guns are added to our navy, an invasion of any part of our country would be rendered so difficult, that it would scarcely be attempted: for it is not possible to conceive that France could promise herself any advantage by an invasion of this country, equal to the enormous expense, and still more enormous risk, if we should be so prepared to resist her. She would be obliged to employ more than double the number of ships of equal force, to convoy her armies, provisions, and stores, and to keep the communication open between her armies and her own country. France can calculate, and will calculate the loss and probable gain of her enterprises. When she finds she cannot deceive us; that she cannot arm our citizens to carry on her work of subjugation—Insolent and unfounded expectation!—that we are determined on manly resistance, and that we take vigorous measures to put ourselves in a proper posture of defence; even France, with all her pride, and all her heroism, will consult her interest and avoid war with America; and, like other nations, she will discover, that it will not only be just, but politic, to indulge us in our favorite wish of preserving peace with all the world.

Thus, then, in whatever view the subject is considered, whether our object be to prevent invasion; to protect our commerce; to obtain a speedy and a proper peace; to maintain peace hereafter; or, by affording security to every part of our country, to guard against the long train of ills which must result from disunion; the wisest, cheapest, and most peaceable means of obtaining the end we aim at, will be prompt and vigorous measures for the creation of a navy sufficient for defence but not for conquest.

The United States are doubtless able to bear any expense necessary for their present safety and their future tranquillity. No country increases so fast in population and resources, and no country can incur a debt with such an absolute certainty of discharging it, without laying new burthens on the people. Our revenue, arising from the impost and other sources, must increase in proportion to the increase of population; and as the increase of the latter is certain, no country ever had less to fear from the consequences of incurring any debt, necessary for defence and safety.

On the subject of procuring ships of seventy-four guns, we probably have it in our option to buy them or to build them. The former will be the most expeditious mode of procuring them, but the latter, if the pressure of our affairs will admit, will be the most honorable, and the most advantageous for our country. If we buy them from a foreign nation, it is not to be expected that we shall be able to obtain those of the best quality; and the sum given for them will not be kept at home, and distributed among our own citizens, but will operate against us, like an unfavorable balance of trade. My own idea is, that we certainly ought to build the vessels, in preference to purchasing them; that immediate measures should be taken to secure all the necessary timber; but that the President should be authorized to obtain, as the exigency of our affairs may require, twelve ships of seventy-four guns, by purchase or otherwise. If it should be found necessary to procure them sooner than they can be built, the timber may be preserved by docking, until those purchased decay, or for a century, if it should not be sooner wanted.

The estimates herewith will show the expense of building and equipping twelve ships of seventy-four guns, and six brigs or schooners, to mount not exceeding eighteen guns. The latter would be highly useful in scouring the West Indies, and we have not a sufficient proportion of vessels of this size. Three of the largest of the twenty-four gun ships might be converted into frigates of thirty-two guns. The whole annual expense of maintaining the navy would then be,

The annual expense of the existing navy, is,	-	-	-	-	-	-	-	-	-	\$6,383,540 06
										2,434,261 10
The difference would be the annual expense of the proposed addition,										\$8,949,278 96

In times of peace, a small proportion of this sum would be sufficient to keep the ships in a state of preservation. Every material article for the building and equipment of ships of war, copper excepted, and probably copper also, may be procured, the growth or manufacture of our own country. It is true that we have heretofore used cordage made of hemp of foreign growth, and imported canvass, and these articles constitute, if wear and tear be included, one-third of the expense of building, equipping, and refitting our vessels of war. But manufactories of canvass have been heretofore established in the Eastern States, and, with proper encouragement, may be revived, and made to supply at least the public demand; and it is most certain that any quantity of hemp can be raised on the Ohio and Mississippi, the Susquehanna, the Potomac, James river, and other parts of the United States, if the growers of it are assured of a ready market, and at a price less than that given for imported hemp; though, if the prices of cordage and canvass, the entire growth and manufacture of the country, should be found at first a little dearer than the imported, the good policy of paying the difference to our own citizens, to render ourselves independent of foreign countries, for articles so essential to our defence, cannot for a moment be doubted.

Timber can at present be had in almost every part of the United States, but in the greatest abundance, and of the best quality, on the Chesapeake Bay, and the waters which empty into it, and in the Southern States. The live oak of Georgia is thought to be almost indispensable in the construction of our largest ships, to be used in those parts

most subject to decay, but the white oak of the Chesapeake is not greatly inferior. It is, however, highly desirable to use the live oak of Georgia as long as it can be obtained, more especially in the ships built eastward of the Chesapeake; and, by a proper mixture of this timber with that of the growth of the country, good vessels may be built in every part of our country.

The islands on the coast of Georgia, on which the live oak is found, are supposed to be more healthy than the main land near the coast; they are also thought to be very important for the production of cotton; hence this valuable timber is becoming scarce every where convenient to water transportation. Two methods suggest themselves for obtaining supplies beyond the immediate demand. To buy one or two of the most valuable islands, and cause the timber to be preserved for the future uses of the navy, or to purchase the timber as the islands are cleared by the owners, and have it transported to the places fixed on for building our ships, and docked until it be wanted. With respect to a purchase, the lands are held at prices greatly beyond what was the supposed value of them a few years ago; and it is believed they have become less valuable for public purposes, in consequence of the efforts which have been made, and are daily making, to clear them for cultivation.

On the subject of other kinds of timber, possibly, when it is seen by the citizens, that it is worth preserving, it may be sufficient to trust, in a great degree, to their attention to private interest, for the preservation of a quantity equal to the public demand. It would, however, be but provident to expend one hundred thousand dollars, in a way to secure enough of the white oak and yellow pine, both of which are indispensable in the construction of good vessels, to last the public, in aid of supplies from individuals, for ages; 100,000 dollars could be so laid out, and I believe the expenditure would be judicious.

No extraordinary means are necessary to be used for procuring naval and military stores, except the articles of hemp, canvass, and copper. Cannon can be made in many of the States, equal to any that could be obtained from foreign countries, also muskets and bayonets, pistols, swords, boarding pikes, and indeed every other article necessary for ships of war.

Although copper mines are found in many parts of the country, yet the most certain means of procuring present supplies will be by importation. The enterprising spirit of the merchants has heretofore furnished enough for the public demand, and may be trusted for future supplies, so far as may be necessary for the ships now contemplated to be added to our navy. It is to be presumed that, before more ships are wanted, and possibly before any, that may now be authorized, are in a state to require the copper, means may be devised for obtaining it in the United States.

Docks will be highly necessary in repairing our ships, to avoid the tedious, expensive, and sometimes dangerous operation of heaving down. They can undoubtedly be made in the Eastern States, where the tides rise very considerably; probably in New Hampshire, Massachusetts, or Rhode Island. Whether they can be made with equal advantage, or to answer valuable purposes, to the southward of Rhode Island, or New York, I cannot form any accurate judgment, from any information I possess; though it would unquestionably be a great public advantage to have a dock near the entrance into the Chesapeake Bay, and another still further south, if circumstances will admit. Docks for repairing ships ought to be convenient to the sea, and yet not easily accessible to an enemy. Yards for building the ships, where large quantities of materials would be deposited (the destruction of which would always be an object with an enemy) should be, according to the opinion of Mr. Humphreys, a gentleman of considerable science and experience in naval architecture, "in the vicinity of a commercial city, for the convenience of procuring able workmen; within the reach of good white oak timber; in fresh water, where timber may be deposited without danger from the worm; on a river running east and west, or nearly so, with a high bank, and where the harbor is secure from freshets and stormy weather, out of the reach of an enemy, and near a good stream of water, eighteen or twenty feet higher than the surface of the river, for the convenience of making lock docks, sawing timber, and for many other valuable uses."

Perhaps the most expeditious mode of building ships, immediately wanted, will be to set them up in several different places, and by such means avail ourselves of the resources of different parts of the country. I am by no means certain that this method will not, also, be the most economical, under present circumstances, and with little seasoned timber in the country; and it will certainly distribute more equally, among all the States, the advantages which may arise from supplying the materials and the labor. But, the subject being new, I am not possessed of sufficient information to state, with precision, where these places ought to be. At a future time, when the pressure may be less, and our experience greater, two or three places, uniting the greatest number of advantages, may be fixed on for building all the large ships of the United States.

The mode heretofore pursued for obtaining naval stores, for the ships in public service, has been, to get such supplies, on the spot, as could be procured on moderate terms, by the agent, for building or equipping the ship; sending, from Philadelphia, or elsewhere, such articles only as could not be so supplied. Until it can be ascertained what places should be selected for permanent building yards, no great inconvenience will result from pursuing the mode already adopted, for supplying the naval stores. Deposits of masts, to supply, quickly, vessels which may come in dismasted, will be made at Boston and Norfolk; measures indeed have already been taken for this purpose; and like deposits must be made at New York or Rhode Island; other articles, required by vessels in distress, can generally be had in these places, and in our other commercial cities.

The business of naval armament being new in this country, and complicated, it is impossible, in this early stage, to devise a perfect system on the subject. Every day's experience will add to the stock of knowledge possessed by the country; and, it may be best for the public interest that the Congress; at their present session, should rely a little more on Executive discretion than may hereafter be necessary. At the present session, it may be expedient and sufficient that the President be authorized to procure, by purchase or otherwise, twelve ships of seventy-four guns, and six brigs or schooners, to mount not exceeding eighteen guns; to take measures for procuring, and depositing in docks of fresh water, and in places of safety, such quantity of live oak timber, proper for ships of seventy-four guns, and frigates, not exceeding, in the whole, such parts of the frames of twelve seventy-four gun ships, and as many frigates, as may be deemed essential to be of this species of timber; to cause to be laid out, in securing other kinds of timber, for the future uses of the navy, a sum not exceeding \$100,000: and to cause not exceeding three docks to be erected for the convenience of repairing ships. For so much of these objects as can be accomplished before the next session of Congress, an appropriation of \$1,200,000, with a promise of further appropriations, may be sufficient.

I have suggested no plan for the encouragement of the manufacture of sail cloth. This subject will be better understood in Congress. A certainty of sale, as already observed, will be encouragement enough for the growers of hemp.

I shall take the liberty to lay before you, in a few days, such alterations in the rules for the government of the navy as have been suggested by some of the most experienced captains, with my own observations.

I have the honor to be, with great respect and esteem, sir, your obedient servant,

BENJAMIN STODDERT.

To the Chairman of the Committee

of the House of Representatives on the Naval Establishment.

Amount of cost of building and equipping a seventy-four gun ship, of one thousand six hundred and twenty tons, exclusive of military stores.

Extra annual expense, attending converting three ships of twenty-four guns into thirty-two gun frigates,	34,051 04
Amount of proposed addition,	2,949,278 96
Annual expense of the existing establishment,	2,434,261 10
Total,	\$5,383,540 06

5th CONGRESS.]

No. 16.

[3d SESSION.

REVIEW OF THE NAVY—PROVISION FOR ITS INCREASE, AND FOR DRY DOCKS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 17, 1799.

Mr. JOSIAH PARKER, from the committee to whom was referred so much of the President's speech as relates to the "naval establishment, the augmentation of the navy, and the adoption of systematic measures for procuring timber and other supplies," reported, in part:

That an act passed the first of July, one thousand seven hundred and ninety-seven, authorizing the President of the United States to cause the frigates United States and Constitution, of forty-four guns each, with the Constellation, of thirty-six, to be manned and employed; for the accomplishment of which, the 27th of March following, a law passed, appropriating a sum not exceeding one hundred and fifteen thousand eight hundred and thirty-three dollars, to complete and equip those ships for sea; also two hundred and sixteen thousand six hundred and seventy-nine dollars, for the pay and subsistence of the officers and crews for one year; sixty thousand dollars for wear and tear, and two thousand two hundred dollars to pay salaries of persons having care of the navy yards at Norfolk, New York, and Portsmouth.

On the 27th of April, one thousand seven hundred and ninety-eight, an act passed, entitled "An act to provide an additional armament for the further protection of the trade of the United States, and for other purposes," authorizing the President of the United States to cause to be built, purchased, or hired, a number of vessels, not exceeding twelve, nor carrying more than twenty-two guns each, to be armed, fitted out, and manned, under his direction. To carry this law into effect, the sum of nine hundred and fifty thousand dollars were appropriated.

On the 4th of May, 1798, an act passed, authorizing the President of the United States to cause to be built or purchased, a number of small vessels, to be equipped as galleys or otherwise, to be stationed in such parts of the United States as he may direct. To carry this into effect, eighty thousand dollars were appropriated.

On the 27th of May, "An act more effectually to protect the commerce and coasts of the United States passed, which authorized the President of the United States to instruct and direct the commanders of the armed vessels of the United States to seize, take, and bring into any port of the United States, to be proceeded against according to the laws of nations, any armed vessel of the republic of France, sailing under authority, or pretence of authority, which shall have committed, or which shall be found hovering on the coasts of the United States, for the purpose of committing, depredations on the vessels belonging to the citizens thereof; and also to retake any ship or vessel of any citizen or citizens of the United States which may have been captured by such armed vessel.

On the 22d of June an act passed, entitled "An act to amend the act, entitled 'An act providing a naval armament,' and the act, entitled 'An act to authorize the President of the United States to cause to be purchased or built, a number of small vessels, to be equipped as galleys or otherwise.'" This act authorizes the President to increase the strength of the revenue cutters to seventy marines and seamen, and authorizes the President to employ them, as well as the small vessels to be equipped as galleys or otherwise.

On the 30th of June was passed "An act supplementary to the act, entitled 'An act to provide an additional armament for the further protection of the trade of the United States, and other purposes.'" This act authorizes the President of the United States to accept vessels offered on the credit of the United States, where he may cause evidence of the debt or obligations to be given therefor, limited to twelve vessels, the interest to be paid not to exceed six per cent. This act also stipulates the size of the vessels to be received, as well as the size of those authorized by the act of the 27th of April, viz: six, not exceeding eighteen guns each; twelve, not less than twenty, nor exceeding twenty-four; and six not less than thirty-two guns each. The third section of this act authorizes the President to accept of armed vessels from any State, body politic or corporate, citizen or citizens of the United States.

An act, passed July 16th last, making a further appropriation for the additional naval armament, provides for the building of three ships of not less than thirty-two guns each; and appropriates six hundred thousand dollars for that purpose, and authorizes the President of the United States to employ timber and other materials for ships now on hand, to be used for this purpose, or disposed of in such manner as he may direct.

In conformity to those several acts, the ship Delaware, of twenty guns, sailed on a cruise, and took Le Croyable French privateer, of fourteen guns, and seventy men, within soundings on our coast; which privateer had taken vessels on the coast. A few days after, the ship Ganges sailed on a cruise; this ship mounted twenty-four guns; in June, the Constellation, of thirty-six guns, sailed on a cruise; and in July, the Constitution and United States, of forty-four guns, each; and shortly after, several other vessels of war. For a particular account of the existing force, as well as the additional vessels preparing, the committee exhibit herewith a report of the Secretary of the Navy, of the 26th ultimo. [See No. 14, page 57.]

Your committee beg leave to report further, that, about the time of the sailing of our ships of war, and before the merchant ships were permitted to arm for their defence, our trade was in such jeopardy, at sea and on the coast, from French privateers, that but few vessels escaped them; that ruin stared in the face all concerned in shipping; and that it was difficult to get property insured; that insurance stood at the following rates in Philadelphia, at that time:

To Russia,	out, 22½ per cent.—home, 22½	To Portugal,	out, 15 per cent.—home, 15
Sweden,	20	Morocco,	20
Denmark and Hanse Towns,	17½	Italy,	27½
Holland,	20	China and the East Indies,	20
Great Britain,	17½	West Indies,	17½
Spain,	17½	Africa,	20
France,	17½		

That, at this time, insurance can be had at the following rates, in the same offices:

To Russia,	out, 12½ per cent.—home, 12½	To Portugal,	out, 10 per cent.—home, 10
Sweden,	12½	Morocco,	12½
Denmark and Hanse Towns,	10	Italy,	17½
Holland,	15	China, and the East Indies,	10
Great Britain,	10	West Indies,	12½
Spain,	12½	Africa,	12½
France,	12½		

From hence it will appear, independent of our greater security at home, as well as from insult and robberies abroad, that the saving on our shipping, exports, and imports, for the last year, has been more than could have been expected in so short a period. But, pleasing as this is to the committee, they have good reasons to believe that the saving will be greater, as our naval force increases, believing that insurance will be less than it is now. The committee would exhibit an exact statement of the imports and exports for the last year, if they had it in their power, as well as the quantity of tonnage employed by the United States; but, on account of the dreadful malady that afflicted this city, as well as other important towns of the United States, the returns cannot be obtained; nor can the committee exactly estimate the value of the imports of the last year, as the value is not annexed to several articles which pay a duty—the duty being estimated by the pound on coffee, &c. and on rum, &c. by the gallon; but the imports in the United States, from the 1st of October, 1797, to 30th September, 1798, may be safely estimated at fifty millions of dollars, the committee believe more, as the profits on exports have been considerable, and moneys imported are not entered.

The exports, beginning on the 1st of October, 1796, and ending September 30th, 1797, were as follows:

To Russia,	\$3,450	To Portugal,	\$463,310
Sweden,	898,315	West Indies,	1,508,044
Denmark,	2,533,224	Africa,	230,873
Holland,	8,845,486	Europe, (generally) -	207,077
Great Britain,	8,569,748	Northwest Coast of America,	15,607
Hanse Towns,	9,589,858		
France,	11,664,091		
Spain,	5,596,253		
		Dollars,	51,294,710

In addition to which, the committee are assured that large sums of specie have been exported, particularly to the East and West Indies and China.

The merchant shipping of the United States, built and employed in that period, was as follows:

In foreign commerce,	675,046 tons.
Coasting trade,	200,372
Fisheries,	38,920

besides 3,114 tons of shipping built in foreign countries, and owned in the United States, making the whole a total of 917,452 tons, the value of which may be fairly estimated as follows:

Shipping, owned in the United States, employed in foreign commerce,	678,160 tons, at \$40 per ton,	\$27,126,400
Coasters and fishermen,	239,292, at \$30,	7,178,760
	Total, dollars,	34,305,160

The committee beg leave to state, as their opinion, that the measures taken for the protection of the commerce of the United States, and subsequent thereto, have saved to the United States considerably more than all the expenses incurred by the naval establishment; and, in aid of their opinion, they beg leave to exhibit the following statement:

Exports and imports into the United States, for one year, commencing from the time of the sailing of our vessels of war, and authorizing merchant ships to arm, \$100,000,000 at 7½ per cent. is	\$7,500,000 00	
Value of vessels employed in foreign trade \$27,126,400 at 7½ per cent. is	2,006,730 00	
Coasters and fishermen, \$7,178,760 at one per cent,	71,787 60	
	Total, dollars,	9,578,517 60

which may be reasonably calculated on, as, notwithstanding the rate of insurance has fallen so much, the stock of the insurance company of this city is higher than at any other period, which evidently shows that it may be still lowered; the natural consequence must be, that freight will fall, as well as insurance; foreign productions will share the same fate; whilst the productions of our country and fisheries will raise in the same proportion, as the merchants of this country will be enabled to do more, on a less capital, and with more certainty.

The exact expense that has attended the whole of the naval equipment cannot be ascertained, on account of the late fever, added to the Secretary of the Navy's not having entered on the duties of his office until June last, and the Accountant of the Navy, not before September; but the annual expense attending the present naval establishment, including eight revenue cutters, is estimated at two millions four hundred and thirty-four thousand two hundred and sixty-one dollars and ten cents, as will appear, by the report of the Secretary of the Navy, in this report; and the committee presume that the sums there stated will be fully adequate to answer the purposes for which they are intended; from that sum may be taken the estimate of the annual expense of the Retaliation, galley, taken in the West Indies by two French frigates, twenty-four thousand eight hundred and thirty-seven dollars, and fifty-

five cents, leaving the annual expense of the present armament two millions four hundred and nine thousand four hundred and twenty-three dollars.

Your committee beg leave to report, as their opinion, that, for the safe-keeping and careening the ships of war of the United States, a dock or docks should be established in one or more places in the United States; that it would be advisable to lay in annually a stock of timber for the building and repairing of ships of war, and that a sum of money ought to be appropriated for that purpose; that the President of the United States be authorized to have put on board such of the vessels of war as he may think proper, an additional number of guns, than for which the ship or vessel may be rated, and that an additional sum ought to be appropriated therefor; that the navy of the United States ought to be augmented. They, therefore, submit the following resolutions:

Resolved, That ——— docks be established in the United States, and that a sum, not exceeding ——— dollars, be appropriated therefor.

Resolved, That ——— dollars be appropriated for the annual purchase of timber, to be used or preserved for building ships or vessels of war of the United States.

Resolved, That the navy should be augmented with ——— ships, to carry not less than seventy-four guns, and ——— sloops of war, of not more than eighteen guns, and that a sum not exceeding ——— dollars be appropriated therefor.

Resolved, That the President of the United States be authorized by law to augment the number of guns on board any ship now in service, or building, above the number such ship may be rated, and that ——— dollars be appropriated for that purpose.

Resolved, That the President of the United States should be authorized to take, on the naval establishment, such of the revenue cutters, now in service, as may be, in his opinion, fit for service abroad.

No. 17.

[3d Session.

AUGMENTATION OF THE PAY OF CAPTAINS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, ON THE 12TH DAY OF FEBRUARY, 1799.

NAVY DEPARTMENT, February 9, 1799.

Sir:

The emoluments of Captains in the navy, especially those commanding the large vessels, are not, I believe, equal to the expenses to which they are exposed. It is a custom in the navy for the Captains to entertain, and frequently, their officers; and, when in port, the principal people of the place, the commanders of squadrons, the officers of all the vessels under their command. It is not necessary for me to point out the good effects to be produced by this friendly and frequent intercourse between the commanders and inferior officers, including midshipmen, on the manners and spirit of the navy. If a Captain of a frigate happens to be a man of fortune, he may afford the expense to which his situation subjects him; but, even in this case, it is a hardship that a gentleman should give up more than his time to his country, which, no doubt, is well able to reimburse his actual expenses. A poor man, however great his merit, must, from necessity, seek more profitable employment in private service. Several instances have already occurred in proof of this opinion; and they will become more frequent as the ebullitions of patriotism have time to subside.

The commanders of our frigates have at all times as great a charge upon their hands, and are subjected to as much expense, as Brigadier Generals. When they command squadrons, their situation becomes at least as important as that of Brigadier Generals on separate command. View the great difference in their emoluments. There is really no good reason why there should be this difference, or any difference, to the disadvantage of the naval officers.

The pay of a Brigadier General is one hundred and four dollars per month, and twelve rations per day, and sixteen dollars per month for forage; and when on separate command, the rations are doubled. The pay of a Captain of a frigate is seventy-five dollars per month, and six rations per day.

A Brigadier General will seldom command more than his brigade; and seldom, indeed, more than his brigade, if employed on a separate command. A Captain of a frigate will frequently have the command of a squadron on separate command. Under the present laws, the Captains of all our ships are entitled to the same emoluments, and in all situations.

If the bill passes for six ships of seventy-four, and six of eighteen guns, our navy may be conveniently made to consist of the following description of vessels, and without incurring expense for alterations:

- 6 ships of seventy-four guns,
- 9 large frigates, thirty-six guns and upwards,
- 3 smaller frigates, of thirty-two guns,
- 12 ships, twenty to twenty-eight guns,
- 9 sloops of war, under twenty guns;

besides such of the revenue cutters as may be found proper to be added to the navy; and nine galleys, or vessels, not exceeding ten guns.

I have taken the liberty to enclose the form of a bill,* which, without burthening the public with greater than the present expense, would, I presume, satisfy the officers; those of lower rank, having something to hope, would be content to look to the time of advancement for higher reward; and those of highest rank would be better enabled to meet the expense to which they are exposed.

I have the honor to be, with great respect, sir, your most obedient servant,

BEN. STODDERT.

Col. JOSIAH PARKER, Chairman of the Committee, &c.

No. 19.

[1st SESSION.

ACTION BETWEEN THE CONSTELLATION AND LA VENGEANCE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 21, 1800.

NAVY DEPARTMENT, 20th March, 1800.

In obedience to the order of the House of Representatives of the United States, of the 18th instant, the Secretary of the Navy has the honor to lay before the House a copy of Captain Truxtun's letter of the 3d of February, together with a copy of the extract from his journal, referred to in the said letter, detailing the particulars of the engagement between the Constellation, under his command, and a heavy French ship, mounting, as he supposed, fifty-four guns.

The Secretary has received a number of letters too voluminous to trouble the House with, of dates both prior and subsequent to the action, which leave no doubt on his mind that the French ship, so gallantly defended against the bravery and superior skill of Captain Truxtun, is the same that arrived at Guadaloupe from France, in the month of December last, called La Vengeance, mounting fifty guns or upwards.

In confirmation of this opinion, the Secretary takes the liberty of stating the substance of letters received from Captain Baker, of the Delaware sloop of war, from B. H. Phillips, Esquire, American Consul at Curaçoa, and from D. M. Clarkson, Esquire, Navy Agent at St. Kitts.

Captain Baker, in a letter dated Curaçoa, 8th of February, mentions that a French ship, called *La Vengeance*, of fifty-four guns, had left Guadaloupe on her return to France, about the 1st of February, had a very severe action with the *Constellation* the following night, and arrived at Curaçoa on the 6th, in a most shattered condition; that he understood she had lost one hundred and forty men in the action, and when she escaped from the *Constellation* had eight feet water in her hold.

Mr. Phillips, in a letter dated Curaçoa, 9th of February, to the Secretary of State, announces the arrival there of the French ship *La Vengeance*, of fifty-six guns, bound from Guadaloupe to France, with a valuable cargo, and a large sum of specie, in a very distressed situation, having lost one hundred and sixty men, killed and wounded, and her masts and rigging nearly all shot away, in an engagement of five hours, within pistol shot, with the *Constellation*.

Mr. Clarkson, at St. Kitts, in a letter dated 16th of February, states, "we are certain Captain Truxtun's gallant action was fought with *La Vengeance*, a French man of war of fifty-four guns, and five hundred picked men, from Guadaloupe to France."

As to the conduct of any particular officer, or other persons on board the *Constellation*, the Secretary has no information, except what is to be found in the communications from Captain Truxtun, by which, but still more by the result of this heroic action, it appears that all the officers and men on board the *Constellation* must have nobly performed their duty.

The praise of having pursued, for many hours, a ship known to be of force so greatly superior to his own, to bring her to action, and of conducting that action with so much skill as to compensate for his great inferiority of force, belongs exclusively to their gallant commander.

It cannot be necessary for the Secretary to add to the eulogium bestowed by Captain Truxtun, on the brave young midshipman, James Jarvis, who gloriously preferred certain death to an abandonment of his post.

All which is respectfully submitted.

BENJAMIN STODDERT, *Secretary of the Navy.*

The Hon. the SPEAKER of the House of Representatives of the United States.

Copy of a letter from Captain Thomas Truxtun to the Secretary of the Navy.

UNITED STATES' SHIP CONSTELLATION, AT SEA, February 3d, 1800.

SIR:

I had the honor to address you the day after my arrival at St. Christopher's the 21st ult. as per copy annexed; after which I made every exertion in my power to get the squadron, as well as my own ship, to sea, in the shortest time possible; and gave all the commanders of the different vessels orders to cruise separately, in certain situations, agreeably to the copies enclosed.

On the 30th I left St. Christopher's with the *Constellation*, in an excellent trim for sailing, and stood to windward in order to occupy the station I had allotted for myself, before the road of the enemy at Guadaloupe, where I was informed a very large and heavy frigate, of upwards of fifty guns, was then lying, and early on the next day I fell in with L'Insurgent, Captain Murray, and the prize brig *Conquest*, of Italy, that had been fitted out to cruise with him in those seas. After a short interview with Captain Murray, I requested him to proceed to St. Christopher's without loss of time, and call on our agent there, Mr. Clarkson, for letters that I had lodged for him, which pointed out his further destination. On our parting he immediately made sail to leeward, and I continued plying to windward. At half past seven A. M. of the following day, I discovered a sail to the southeast, to which I gave chase; and, for the further particulars of that chase, and the action after it, I must beg leave to refer you to the extracts of my journal, which is also enclosed, as being the best mode of exhibiting a just, fair, and candid account of all our transactions in the late business, which has ended in the complete dismantlement of the *Constellation*, though, I trust, to the high reputation of the American flag.

I have just fell in with the *Enterprise*, Lieutenant Shaw, returning from Curaçoa, who I send off to you with my despatches, and I shall be obliged by your sending him again to meet me at Port Royal, Jamaica, as early as possible, as I shall be impatient to hear from you, especially as we are now in want of every thing, being a mere wreck.

If I had met Captain Morris, of the *Adams*, I should have taken the command of that ship and kept the station to windward, leaving him in charge of the *Constellation* to be refitted at Jamaica; but I have not been so fortunate.

I have the honor to be, with great respect and esteem, your very obedient humble servant,

THOMAS TRUXTUN.

The Hon. BENJAMIN STODDERT, Esq. *Secretary of the Navy, Philadelphia.*

A circumstantial account of the engagement between the United States Frigate Constellation, of thirty-eight guns, and a French National Frigate, of fifty-four guns, on the 1st of February, 1800; taken from Commodore Truxtun's Journal, viz:

SATURDAY, February 1st, 1800.

At half past seven A. M. the road of Basseterre, Guadaloupe, bearing east, five leagues distance, saw a sail in the southeast standing to the westward, which, from her situation, I at first took for a large ship from Martinico, and hoisted English colors, on giving chase, by way of inducement for her to come down and speak me, which would have saved a long chase to leeward of my intended cruising ground; but finding she did not attempt to alter her course, I examined her more attentively as we approached her, and discovered her to be a heavy French frigate, mounting at least fifty-four guns. I immediately gave orders for the yards to be slung with chains, topsail sheets, &c. stoppered, and the ship cleared, ready for action, and hauled down the English colors. At noon the wind became light, and I observed the chase, that we had before been gaining fast on, held way with us, but I was determined to continue the pursuit, though the running to leeward, I was convinced, would be attended with many serious disadvantages, especially if the object of my wishes was not gratified.

Sunday, February 2. At one o'clock, P. M., the wind being somewhat fresher than the noon preceding, and an appearance of its continuance, our prospect of bringing the enemy to action began to brighten, as I perceived we were coming up with the chase fast, and every inch of canvass being set that could be of service, except the bag reefs, which I kept in the top-sails, in case of the enemy, finding an escape from our thunder impracticable, should haul on a wind, and give us fair battle; but this did not prove to be her commander's intention; I, however, got within hail of him at eight P. M.; hoisted our ensign, and had the candles in the bottle lanterns all lighted, and was in the lee gangway, ready to speak him, and to demand a surrender of his ship to the United States of America, when, at that instant, he commenced a fire from his stern and quarter guns, directed at our rigging and spars. No parley being then necessary, I sent my principal aid-de-camp, Mr. Vandyke, to the different officers commanding divisions on the main battery, to repeat strictly my orders before given, not to throw away a single charge of powder and shot, but to take good aim, and to fire directly into the hull of the enemy, and load principally with two round shot, and, now and then, with a round shot and a stand of grape, &c.; to encourage the men at their quarters, and to cause or suffer no noise or confusion whatever, but to load and fire as fast as possible, when it could be done with certain effect.

These orders being given, in a few moments I gained a position on his weather quarter, that enabled us to return, effectually, his salute, and thus as close, and as sharp an action as ever was fought between two frigates, commenced, and continued until within a few minutes of one, A. M., when the enemy's fire was completely silenced, and he was again sheering off. It was at this moment that I considered him as my prize, and was trimming in the best manner I could, my much shattered sails, when I found the mainmast was totally unsupported with rigging, every shroud being shot away, and some of them, in many places, so as to render stoppers useless, which in fact could not be applied with effect. I then gave orders for all the men to be sent up from the gun deck, to endeavor to secure the mast, in order that we might get alongside of the enemy again as soon as possible; but every effort was in vain, for it went over the side in a few minutes after, and carried with it the topmen, among whom was an amiable young gentleman, who commanded the main top, Mr. James Jarvis, son of James Jarvis, Esq. of New York. This young gentleman, it seems, was apprised of his danger by an old seaman, but he had already so much the principle of an officer engrafted on his mind, not to leave his quarters, that he replied, if the mast went, they must go with it; which was the case, and only one of them was saved. I regret much his loss, as a promising young officer and amiable young man, as well as on account of a long intimacy that has subsisted between his father and myself, but have great satisfaction in finding that I have lost no other, and only two or three were slightly wounded; out of thirty-nine of the crew killed and wounded, fourteen of the former, and twenty-five of the latter. As soon as the mainmast went, every effort was made to clear the wreck from the ship as soon as possible, which was effected in about an hour; and, as her security was then the great object, it being impossible to pursue the enemy, I immediately bore away for Jamaica, for repairs, &c. finding it impracticable to reach a friendly port in any of the islands to windward.

I should be wanting in common justice was I to omit here to journalize the steady attention to order, and the great exertion and bravery shown by all my officers, seamen, and marines, in this action, many of whom I had sufficiently tried before on a similar occasion, (the capture of the *Insurgent*) and all their names are recorded in the muster-roll I sent to the Secretary of the Navy, dated the 19th of December last, signed by myself.

THOMAS TRUXTUN.

6th CONGRESS.]

No. 20.

[2d Session.

NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 2, 1800.

In pursuance of the act, entitled "An act for the better government of the Navy of the United States," the Secretary of the Navy, the Secretary of the Treasury, and the Secretary of War, respectfully report to Congress:

That, on the 30th day of June, 1800, there had been received into the treasury the sum of twenty-three thousand eight hundred and fifty-nine dollars and eighty-eight cents, being the proportion of prize money, so far as the accounts had been rendered, then belonging to the United States; which sum they have caused to be invested in stock of the United States, through the agency of George Simpson, Cashier of the Bank of the United States, (except the sum of thirty-two dollars and seventy-six cents still remaining in his hands) in the following manner:

Statement of the purchases of stock by George Simpson, agent for the commissioners of the fund for Navy pensions and half pay.

Date of purchase.	Of whom purchased.	Where purchased.	Price.	Eight per cents.	Navy stock.	Six per cents reduced.	Specie value.
Nov. 11, 1800.	A. Regnaud,	Philadelphia,	108 $\frac{1}{4}$	3,000	-	-	3,247 50
Do.	do.	do.	108	8,000	-	-	8,640 00
Do.	do.	do.	90	-	8,900	-	8,010 00
Do.	do.	do.	88 $\frac{3}{4}$	-	-	4,227 56	3,751 96
				11,000	8,900	4,227 56	23,649 46
Brokerage,	-	-	$\frac{1}{4}$ per cent.	-	-	-	59 12
Commission,	-	-	$\frac{3}{4}$ per cent.	-	-	-	118 54
Remaining in the hands of George Simpson,	-	-	-	-	-	-	32 76
							\$23,859 88

That, since the 30th June, and prior to the 1st of October, the further sum of six thousand and twenty-four dollars and thirty-two cents has been received at the treasury, and is now to be invested.

That other sums have been received at the treasury since the 1st of October, which will be applied in the same manner as directed by law, as soon as the forms of office will admit.

On behalf of the Board:

BEN. STODDERT.

CITY OF WASHINGTON, November 25, 1800.

6th CONGRESS.]

No. 21.

[2d SESSION.]

NAVAL ESTABLISHMENT, AND ITS EXPENSES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 15, 1801.

NAVY DEPARTMENT, 12th January, 1801.

SIR:

The report of the Secretary of the Treasury, containing a statement of the appropriations necessary for the year 1801, includes the estimates of the expense of maintaining the navy for the same year. It is unnecessary, therefore, for me to repeat them here.

But it will be observed that these estimates were formed on the idea of employing our whole force in cruising, as heretofore, for the protection of our commerce. Should the United States be so fortunate as to terminate, by an honorable treaty, the differences with France, it would be good economy to sell all the public vessels, except the following frigates:

The United States, President, Constitution, Chesapeake, Philadelphia,	The New York, Constellation, Congress, Essex, Boston,	The John Adams, Adams, and General Greene.
---	---	--

The rest were either built of materials which do not promise long duration, or are too small to form a part of the national defence. In future wars, the United States will probably be influenced by the example of all other nations, to suffer the capture of vessels merely commercial from their enemy; and, in this event, the enterprising spirit of our citizens will quickly furnish, for private emolument, nearly all the small vessels necessary to be employed: and will thus add to the national means of annoyance, without adding to the national expense. In this view, it may be sufficient for the United States to attend principally to a provision for ships of the line and frigates.

The expense of maintaining the thirteen frigates herein enumerated, in constant service, and on the present establishment of numbers, pay, and rations, would amount, annually, to the sum of one million two hundred and twenty-five thousand and forty-eight dollars and seventy-three cents, as will be seen in paper No. 1. But, on a peace establishment, the ration, which is too large, ought to be reduced; seamen's wages will undoubtedly fall, on a general peace; and, in such a state of things, it would not be necessary to employ, in each ship, more than two-thirds of the present number of able and ordinary seamen. The paper No. 2 contains an estimate of the annual expense of these ships on a peace establishment, and on the principle of keeping the whole of them in constant service, amounting to seven hundred and twelve thousand seven hundred and twenty-four dollars and thirty-five cents. The paper No. 3 shows the expense of keeping only six of the frigates in constant service; the others remaining in port, but allowing half pay to a sufficient number of commissioned officers and midshipmen for the ships so laid up, amounting to three hundred and eighty-seven thousand two hundred and fifty-seven dollars. In the paper No. 4, there is added to the estimate No. 3 the expense of allowing half pay to all the commissioned officers and midshipmen at present in service, making the whole amount to the annual sum of four hundred and forty-four thousand six hundred and seventy-seven dollars.

The act establishing and organizing the marine corps considers that corps as part of the military establishment, but subject to perform duty on ship-board, as well as in posts and garrisons on the seacoast, and elsewhere on shore. It is questionable, therefore, whether the expense of this corps ought to be provided for in the estimates of the War or the Navy Department. It is, certainly, one of the most useful corps belonging to the United States; and is particularly advantageous in facilitating the means, and lessening the expense, of manning our ships; and affords to every vessel a body of experienced and disciplined men, always prepared for action. The war expense of this corps is two hundred and seventy thousand nine hundred and fifty-seven dollars and ninety-eight cents, per annum; in peace, the expense might be reduced to two hundred and seven thousand three hundred and ten dollars, per estimate No. 5; which, being added to the estimate No. 4, would make the whole amount to six hundred and fifty-one thousand nine hundred and eighty-seven dollars.

The acts of Congress have appropriated one million of dollars towards building six seventy-four gun ships, and for procuring, arming, &c. six sloops of war, leaving about seven hundred thousand dollars to be applied towards the six seventy-four gun ships; also, two hundred thousand dollars for the purchase of growing or other timber, or of timbered lands, for the navy, and for preparing proper places for securing the timber procured; and fifty thousand dollars for the erection of two docks, for repairing the public ships.

Under these acts, contracts have been made for eight frames for seventy-four gun ships; two of them under the appropriation of two hundred thousand dollars, and the execution of them, as far as six frames, will, it is believed, be completed this winter. A considerable part of the other timber, necessary for six ships, has been procured. Ground has been purchased at Portsmouth, New Hampshire, Charlestown, (near Boston) Philadelphia, the city of Washington, and Norfolk; and measures have been taken to procure ground at New York, for capacious building and dock yards; and progress is making in preparing docks for receiving the timber, and wharves for building the ships. Contracts have also been made for cannon, and for the copper bolts and spikes, and for sheathing copper, for the seventy-four gun ships; but it is impossible to say how far those which respect copper will be executed, the works for manufacturing sheathing copper being very expensive, and, it is to be feared, beyond the reach of individual capital and enterprise.

The sums already advanced and expended on these different objects cannot be precisely ascertained; but they are not materially different from the following estimate:

For ground and improvements,	-	-	-	-	-	\$186,800 00
Timber,	-	-	-	-	-	210,070 00
Copper purchased, and advances on contracts for sheathing copper,	-	-	-	-	-	76,913 00
Cannon,	-	-	-	-	-	33,000 00
Purchase of Grover's Island and Black Beard,	-	-	-	-	-	22,516 75
						<u>\$529,299 75</u>

The agents for disbursing this money are also agents for all other purposes of the navy; and it can only be seen what has been expended, under each head of appropriation, on settlement of their accounts. To remit money to them under each head of appropriation, allowing them to expend on that particular object only the sum remitted, would be to create the necessity of keeping, in each agent's hands, four or five times as much public money as necessary; hence, the practice has arisen in the Navy Department of drawing on one appropriation, for all navy purposes, until that appropriation is exhausted; leaving until the settlement of the agent's accounts the charges against each appropriation for which the money has been expended.

The expense of building six seventy-four gun ships, and fitting them for sea, with guns and military stores, and every other article except men and provisions, has heretofore been estimated at two millions four hundred and three thousand eight hundred dollars and ninety-four cents; to complete the wharves and docks, for seasoning timber at the six places, where ground has been purchased, and to erect suitable houses, for the reception of public stores,

will cost, including what has already been expended, six hundred thousand dollars; and to make, at two of these places, proper docks for repairing of ships, may cost one hundred thousand dollars, amounting, in the whole, to	\$3,103,800 00
From which is to be deducted the sums already expended,	529,299 75
Leaving a balance still to be appropriated, of	<u>\$2,574,500 25</u>

If this balance should be divided into four equal parts, and one part should be appropriated in the present, and one in each of the three succeeding years, the money will be furnished as fast as it will be proper to build the ships, to give them every chance of long duration.

The timber alone of a seventy-four gun ship will cost, delivered at the ship yard,

For the frame, consisting of twenty-seven thousand three hundred and eighty-seven cubic feet,	
If of live oak, cut to the moulds,	\$54,774 00
If partly of live oak, or other timber as valuable, and partly of white oak,	41,080 00
If of white oak alone,	\$27,387 00
All the other timber,	40,000 00
	<u>67,387 00</u>

All the timber for a frigate, to mount forty-four guns, has been estimated to cost fifty thousand dollars.

It will be impracticable to get more live oak from Georgia, after the frames already contracted for are completed, except from the islands belonging to the United States, and these are too small to furnish more than a few of the most material pieces for many ships. It will, also, soon be impracticable to obtain, in the United States, any other kind of timber superior to white oak; but there is reason to believe that, when our timber is as well seasoned, our white oak ships will last as long as those of most other countries. The experiment has never yet been fairly made.

When the United States own twelve ships of seventy-four guns, and double the number of strong frigates, and it is known that they possess the means of increasing, with facility, their naval strength, confidence may be indulged that we may then avoid those wars in which we have no interest, and without submitting to be plundered. An annual sum of one hundred and seventeen thousand three hundred and eighty-seven dollars, (over and above the appropriation for the six seventy-four gun ships already authorized) for the purchase of timber, to be laid up in docks for seventy-four gun ships and frigates, and the adoption of efficient arrangements to secure the manufacture of copper, the culture of hemp, and the manufacture of canvass, would, in a few years, raise us to this desirable state of security.

Thus, then, it appears that, for the small sum of six hundred and fifty-one thousand nine hundred and eighty-seven dollars thirty-four cents, the United States may keep in constant service six frigates; seven others in port, but always ready for service; the corps of marines, consisting of more than eleven hundred officers and men, and may remunerate the past, and secure the future, services of a meritorious class of men, who, in general, either sacrificed more profitable and less hazardous private employment, to devote themselves to their country, in a season of peril; or who, being qualified by education for any pursuits, have entered into the navy, as a profession, at that time of life when professions are usually chosen.

All great maritime nations retain in peace the commissioned navy officers necessary to be employed in war, by allowing them a portion of their monthly pay, on the condition of their holding themselves in readiness, at all times, to be called into active service. The same provision is not so generally extended to the midshipmen; but the discrimination is no where just, and, in the United States, in the present instance, it would be extremely impolitic: for the midshipmen are among the most promising young men of our country, possess all the materials to make officers equal to any in the world, and well merit the fostering care of their Government. But it would be injurious to themselves and to their country to pay them for remaining in idleness at home. No midshipman ought to receive half pay, without exhibiting satisfactory proof that at least four months of the year for which he demanded it had been employed by him in acquiring a better knowledge of his profession; if not in foreign service, at least in the merchant ships of his own country.

It also appears that, for the further sum of six hundred and forty-three thousand six hundred and twenty-five dollars and six cents, appropriated for the present, and for each of the three succeeding years, six seventy-four gun ships may be added to the navy; two frames for two other seventy-four gun ships may be placed in dock for seasoning; six capacious building yards, with docks for receiving large quantities of timber, may be prepared; and suitable houses, which are indispensable for the security of the naval stores, may be erected at each of the building yards.

And that, for the further appropriation of one hundred and seventeen thousand three hundred and eighty-seven dollars, for the timber of a seventy-four and a forty-four gun ship, to be repeated annually, until an adequate quantity of timber shall be obtained, the United States may acquire the means of suddenly raising their navy to any size which the exigency of their affairs may demand.

It will require years to cut the timber from the woods and to build a ship of seventy-four guns, and, after she is built, of green timber, she will not last longer than the time consumed in building her. A ship of the same size, besides the immense advantage in point of duration, may be built and sent to sea in less than a year, if all the materials are on the spot. Timber may be preserved for ages in docks, and at little expense; and the knowledge that we possess it in that state will inspire nearly as much respect for our flag, as if the ships were built and on the ocean.

In a pecuniary point of view, there can be no comparison between the expense of creating a sufficient navy, and the loss a commerce, so great as ours, will too certainly sustain for the want of such protection. But the loss of property is but a paltry consideration, compared with all the humiliating and destructive consequences which must flow from that debasement of mind which a system of eternal submission to injury and injustice cannot fail to produce.

Before I conclude, I will take the liberty of observing, that the business of the Navy Department embraces too many objects for the superintendence of one person, however gifted. The public interest, I am very sensible, has already suffered from this cause; and I have no doubt that the establishment of a Board, to consist of three or five experienced navy officers, to superintend, in subordination to the Head of the Department, such parts of the duties as nautical men are best qualified to understand and to direct, would produce a saving to the public far beyond the expense of such an establishment. Their full pay as officers, indeed, and full rations, might be deemed sufficient compensation for such duty, as it would be proper that the members of the Board should retain their rank in the navy.

I have the honor to be, with great respect, sir, your most obedient servant,

BEN. STODDERT.

HARRISON GRAY OTIS, Esq.
Chairman of the Committee of Naval Affairs.

No. 22.

[1st SESSION.

NAVAL EXPENDITURES FOR MATERIALS, NAVY YARDS, AND DOCKS, AND THE PROCEEDS OF THE VESSELS SOLD.

COMMUNICATED TO CONGRESS, DECEMBER 8, 1801,

With message of the President of the United States; of which the following is an extract:

“With respect to the extent to which our naval preparations should be carried, some difference of opinion may be expected to appear; but just attention to the circumstances of every part of the Union will doubtless reconcile all. A small force will probably continue to be wanted, for actual service, in the Mediterranean. Whatever an-

nual sum beyond that you may think proper to appropriate to naval preparations, would, perhaps, be better employed in providing those articles which may be kept without waste or consumption, and be in readiness when any exigence calls them into use. Progress has been made, as will appear by papers now communicated, in providing materials for seventy-four gun ships, as directed by law.

"How far the authority given by the Legislature for procuring and establishing sites for naval purposes, has been perfectly understood and pursued in the execution, admits of some doubt. A statement of the expenses already incurred on that subject shall be laid before you. I have, in certain cases, suspended or slackened these expenditures, that the Legislature might determine whether so many yards are necessary as have been contemplated. The works at this place are among those permitted to go on; and five of the seven frigates directed to be laid up have been brought and laid up here, where, besides the safety of their position, they are under the eye of the Executive administration, as well as of its agents, and where yourselves also will be guided by your own view, in the legislative provisions respecting them, which may, from time to time, be necessary. They are preserved in such condition, as well the vessels as whatever belongs to them, as to be at all times ready for sea at a short warning. Two others are yet to be laid up, so soon as they shall have received the repairs requisite to put them also into sound condition. As a superintending officer will be necessary at each yard, his duties and emoluments, hitherto fixed by the Executive, will be a more proper subject for legislation. A communication will also be made of our progress in the execution of the law respecting the vessels directed to be sold."

Expenditures on account of materials for building six seventy-four gun ships, to the 1st of October, 1801.

TIMBER FOR THE FRAMES.

Advanced and paid on account of live oak:		
For six frames in Georgia,	-	\$112,000
For one frame in South Carolina, of which about two-thirds has been procured,	-	17,000
For one frame, and one-third of a frame, at Washington,	-	15,000
		<u>\$144,000</u>
From which deduct this sum, as there are eight frames procuring, two of which are to be preserved for future use, agreeably to act of 25th February, 1799,	-	26,666
		<u>\$117,334</u>

TIMBER, (exclusively of the frames.)

No. 23.

[1st SESSION.]

NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 4, 1802.

The Secretary of the Navy, the Secretary of the Treasury, and the Secretary of War, Commissioners under the "Act for the better government of the Navy of the United States," respectfully report to Congress—

That, since the 29th of November, 1800, the date of the last report of the Board, the sum of \$54,878 51, accruing to the United States from the sales of prizes, has been applied to the purchase of stocks of the funded debt of the United States, as exemplified in the statements herewith, No. 1, 2, which stocks, together with all those stocks previously purchased, are placed on the books of the treasury, to the credit of the commissioners, as per statement No. 3. These stocks produce an annuity of \$5,688 44. The gross amount of interest and dividends accruing from the time when they were purchased to the end of the present year, is \$5,237 69, as per statement No. 4.

That the pensions of the persons placed on the invalid list of the naval establishment amount to an annual sum of \$1,604 80, and that the aggregate of all those which either have been paid, or are payable, to the end of the year 1801, amounts to the sum of \$1,730 28, as per statement, No. 5, which, deducted from the gross amount of interest and dividends as above, will leave a balance unapplied of \$3,507 41. There are, however, several applicants to be placed on the list, whose cases have not been decided on, and it is presumed that other cases will occur. But, taking into view all circumstances, the Commissioners entertain the opinion that the present stocks of the fund are sufficient to meet all the cases contemplated by the act.

For and in behalf of the Board,

NAVY DEPARTMENT, *31st. December, 1801.*

RT. SMITH.

No. 1.

Statement of Moneys placed in the hands of George Simpson, Agent of the Commissioners of the Fund for Navy Pensions, to be vested in Stocks of the funded debt of the United States.

[1st Session.]

ACTION BETWEEN THE ENTERPRISE AND A TRIPOLITAN CORSAIR.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 19, 1802.

Mr. TALLMADGE, from the committee to whom had been referred resolutions from the Senate, "in respect to Lieutenant Sterret, the officers, and crew, of the United States' schooner Enterprise," made the following report:

That the schooner Enterprise, of fourteen guns, was officered and manned as follows, viz:

Andrew Sterret, Lieutenant, and commanding officer;
David Porter and Richard H. Lee Lawson, Lieutenants in the Navy;
Enoch S. Lane, Lieutenant of Marines; and
Ninety-four men.

That, on the 1st day of August, 1801, the Enterprise fell in with, and captured, a Tripolitan corsair of fourteen guns and eighty men, in which action the barbarian lost twenty men killed and thirty wounded, although not a man was wounded on board the Enterprise; and that the corsair, after being dismantled, was dismissed.

Your committee report, as their opinion, that the House disagree to the resolutions of the Senate, of the 31st of December, 1801, respecting Lieutenant Sterret, and the other officers and men of the schooner Enterprise.

They further report, for the consideration of the House, the following resolutions:

Resolved by the Senate and House of Representatives of the United States in Congress assembled, That they entertain a high sense of the gallant conduct of Lieutenant Sterret, and the other officers, seamen, and marines, on board the schooner Enterprise, in the capture of a Tripolitan corsair of fourteen guns and eighty men.

Resolved, That the President of the United States be requested to present to Lieutenant Sterret, a sword commemorative of the aforesaid heroic action; and that one month's extra pay be allowed to all the other officers, seamen, and marines, who were on board the Enterprise when the aforesaid action took place.

No. 25.

[1st Session.

NAVAL FORCE AND ITS DISPOSITION.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 1, 1802.

NAVY DEPARTMENT, 29th January, 1802.

SIR:

In obedience to the resolution of the House of Representatives of the 28th instant, I herewith transmit to you, to be laid before them, a statement of the vessels now belonging to the Navy of the United States, with their present state of equipment, and the service in which they are respectively employed.

I have the honor to be, with great respect, sir, your most obedient servant,

RT. SMITH.

The Hon. the SPEAKER of the House of Representatives.

Statement of the vessels now belonging to the Navy of the United States, with their present state of equipment, and the service in which they are respectively employed.

Frigates of forty-four guns.—United States, Constitution, President, Chesapeake, Philadelphia.

Frigates of thirty-six guns.—Constellation, Congress, New York.

Frigates of thirty-two guns.—Boston, Essex.

Frigates of thirty-two guns, but smaller than the two preceding vessels.—Adams, John Adams, General Greene.

Schooner Enterprise, of twelve guns—retained as a tender.

The frigates President, Philadelphia, Essex, and Boston, are cruising in the Mediterranean, for the protection of our commerce against the Tripolitan corsairs. Two of these vessels are expected home, in virtue of orders given the 15th of December last. The terms of service for which the crews of these vessels entered, will expire on or about the 1st of June next.

The Chesapeake, the Constellation, and the schooner Enterprise, destined for the Mediterranean, are nearly in a state of complete preparation for sea. Every necessary order for officering, manning, provisioning, and otherwise equipping them, has been given; and it is presumed they will be ready to sail on or before the 20th of the ensuing month.

The Constitution, at Boston, and the Adams, at New York, are undergoing necessary repairs. The repairs of the Constitution will be completed in the course of three months; those of the Adams will be effected in one month.

The frigates United States, Congress, New York, John Adams, and General Greene, are dismantled and laid up in ordinary, in the Eastern Branch. They are officered and manned agreeably to the quota prescribed by the act, entitled "An act providing for a naval peace establishment." These vessels are in such a state that they might all be prepared for service on or before the 1st of March next.

The George Washington sailed from Philadelphia in August last, with tributary stores for Algiers. On her return to the United States, it is intended to sell her.

RT. SMITH, *Secretary of the Navy.*

[1st Session.

SAILING ORDERS GIVEN TO THE COMMANDERS OF THE INSURGENT AND PICKERING.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 4, 1802.

NAVY DEPARTMENT, 3d February, 1802.

SIR:

In obedience to the resolution of the House of Representatives, of the 2d instant, I herewith transmit copies of the sailing orders given to the commanders of the frigate Insurgent and brigantine Pickering.

The frigate Insurgent sailed from Baltimore the 22d July, and from Hampton Roads 8th August, 1800. The Pickering sailed from New Castle 20th August, 1800.

Since the sailing of these vessels, no information whatever has been received respecting them. It is presumed, however, that they were both lost in the equinoctial gale of September, 1800.

I have the honor to be, with great respect, sir, your most obedient servant,

RT. SMITH.

SPEAKER House of Representatives.

NAVY DEPARTMENT, 14th July, 1800.

SIR:

Having already sent you your instructions for the general government of your conduct on a cruise, it only remains for me, at present, to point out the particular objects of the cruise you are about entering upon.

Considerable deprivations have been lately made on our commerce between the West India Islands and our own coasts. The Guadeloupe privateers, eluding the vigilance of our vessels on that station, get between them and the United States, and not only capture the American vessels in the West India trade, but make great havoc among those of more value, employed in the European and East India trade.

You will please then proceed to sea with the Insurgent, without a moment's delay, in search of those privateers. After leaving the capes, you will make an easterly course, keeping rather north of 38° north latitude, until you obtain the longitude 68, and cruise for a few weeks between longitude 68 and 66, and stretch as far south as latitude 31 or 30, after which you will pursue the suggestions of your own judgment and experience, and employ the Insurgent on such cruising ground as you may think will best effect the objects of your cruise: First, to protect, between our own coasts and the West India Islands, our vessels trading to and from the West Indies, Europe, and the East Indies; and secondly, the capture of the enemy's vessels to be found between the cruising grounds of our vessels in the West Indies and our own coast.

In eight weeks from the time of your leaving the Capes, if you meet with no enemy's vessels, you will return to Chesapeake Bay, and anchor off Annapolis, despatching a messenger to me with an account of the occurrences of your cruise, and a return of articles wanted to fit you again for sea; but if you should find that the enemy's vessels continue to molest our trade, within eight or ten degrees of our own coast, you will extend your cruise as long as you can employ the *Insurgent* to advantage, not exceeding four months.

I have the honor to be, sir, your very humble servant,

BENJAMIN STODDERT.

Captain PATRICK FLETCHER, of the *Insurgent*, *Baltimore*.

NAVY DEPARTMENT, 15th August, 1800.

SIR:

Having already furnished you with all the necessary instructions for the government of your conduct on a cruise, it only remains for me now to direct, that, taking under your convoy the provision ship *Florida*, and such merchant vessels as may be ready to sail with you, you proceed to join our squadron on the *Guadaloupe* station, rendezvousing at *St. Kitt's*.

You will see the *Florida* safe to *St. Kitt's*; her cargo is to be delivered to David M. Clarkson, Esq. our agent there, unless you should meet the commanding officer on your passage, by whose orders you will then be governed.

After performing this service, you will cruise in the vicinity of *Guadaloupe*, until you fall in with Captain *Decatur*, or the commanding officer of that station, under whose command you are to act until further orders.

I have the honor to be, sir, your most obedient servant,

BENJAMIN STODDERT.

Lieutenant BENJAMIN HILLAR, of the *Pickering*, *New Castle, Delaware*.

7th CONGRESS.]

No. 27.

[1st SESSION.]

NAVY YARDS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 10, 1802.

Mr. MITCHELL, from the committee to whom was referred that part of the message of the President of the United States which relates to naval preparations and the establishment of sites for naval purposes, reported in part* as follows:

1st. Six navy yards have been purchased, as appears by document No. 1.

2d. Timber for building eight seventy-four gun ships has been purchased by contract, part of which has been, and the whole of which is contracted to be, delivered at the six yards before mentioned, which, together with the expenses for improvements made, will appear by document No. 1.

3d. The committee are of opinion that the timber so deposited, with other materials for building, ought to be secured under suitable sheds, or stores, in such manner as shall best preserve the same, and under care of proper persons to be appointed for that purpose.

4th. Charlestown, in Massachusetts, and Norfolk, in Virginia, from the improvements already made, and from other circumstances, appear the most eligible places for receiving and repairing the ships in actual service; should any additional improvement in those places become necessary for this purpose, they ought to be made.

5th. The ships in ordinary ought, in the opinion of the committee, to remain at Washington.

6th. Two of the ships, viz. the *Adams* and the *General Greene*, not being constructed upon approved models for ships of war, and going out of repair, ought to be sold, under direction of the President of the United States, and the proceeds applied to building or purchasing smaller vessels, (if such should be required by the service) or, if he should think it necessary, in improvements at Charlestown and Norfolk.

7th. The rations of the seamen should be enlarged conformably to the report of the Secretary of the Navy.

8th. The committee further report as their opinion, that the President of the United States should be authorized to employ some suitable person to lay out and direct such works and improvements at Charlestown and Norfolk, and such other places as may be hereafter determined on.

9th. And that, for improving navy yards, docks, and wharves, there be appropriated

\$50,000

And for wear and tear, repairs, and military stores of vessels, &c.

87,666

\$137,666

NAVY DEPARTMENT, January 20, 1802.

SIR:

To enable the committee to form a satisfactory opinion respecting the navy yards, it is proper to present to their view their present situations. For this purpose, I herewith transmit to you a sketch of the first cost of the several navy yards; of the cost of the improvements made in each, and of the quantity and cost of the timber, planks, and military stores, deposited in each. Among other considerations, the committee will thence perceive the expense that would attend the removing the public property, from such yards as might be sold, to those that might be retained.

Since I have been in office, I have anxiously sought for all possible information respecting the navy yards; but no satisfactory opinion has yet been formed, with regard to the yards that ought to be sold. There is reason to believe that the site of the navy yard at Philadelphia ought to be changed. There is an opinion entertained by some, that the site of the yard at Portsmouth is not the best, and doubts have been expressed respecting the proper position of the yard at New York: all information upon these points, that have been obtained by this Department, is herewith communicated to you.

With respect to the contemplated improvements of the navy yards, and the salaries of the superintendents, I have only to remark that, from the reduced scale of the proposed appropriation, the intended improvements must, in a great degree, be suspended, and of course superintendents will not be necessary. There has, hitherto, not been occasion to employ superintendents at any of the navy yards, excepting Captain Nicholson at Charlestown, Massachusetts, and Captain Tingley at the city of Washington, with a salary of one thousand two hundred dollars to each of them. At the latter place it will, hereafter, be necessary to employ some person to have charge of the ships in ordinary, of the navy stores, and of the navy yard; and to be the agent of the Department in various other matters.

There is no occasion to make any additional provision for preserving the military stores now on hand, or for collecting other materials.

If Congress should deem it necessary to sell any of the present navy yards, or to purchase other situations, and a committee should be appointed to prepare a bill for such purpose, I will with pleasure contribute my assistance.

I have the honor to be, with great respect, sir, your most obedient servant,

ROBERT SMITH.

Hon. Mr. MITCHELL.

* See further report, No. 28.

No. 1.

Navy yards, with their improvements, and the value of property deposited therein.

AT PORTSMOUTH, NEW HAMPSHIRE.	
Purchase of ground,	\$5,500
Improvements, to 1st October, 1801,	26,304
	31,804
Live oak timber deposited,	6,747 feet,
Under orders for transportation, being ready, to be there deposited,	8,890
	15,637 at \$2, 31,274
Other timber, say plank, wales, thick stuff, &c. for a seventy-four gun ship,	30,000
Stores of various kinds,	30,000
	\$123,078
It would cost, to remove the timber from Portsmouth to any other building yard, say fifty cents per foot, for the live oak, and for the other timber and stores, not less than \$12,000, say, together,	20,000

AT CHARLESTOWN, MASSACHUSETTS.	
Purchase of ground,	\$40,000
Improvements,	3,643
	43,643
Live oak deposited,	9,480 feet,
Ordered, and ready for transportation,	22,777
	32,257 at \$2, 64,514
Other timber,	30,000
Stores of various kinds, including those at Boston,	110,000
	\$248,157
It would cost, to remove the live oak to any other building yard, at fifty cents per foot, and the other timber and stores,	16,100
	20,000
	36,100

AT NEW YORK.	
Purchase of ground,	\$40,000
Improvements,	1,865
	41,865
Live oak deposited,	13,086 feet,
Ditto, ordered, and ready for transportation,	3,980
	17,066 at \$2, 34,132
Other timber,	30,000
Stores of various kinds,	100,000
	205,997
It would cost, to remove the live oak to any other building place, and the other timber and stores,	8,533
	19,000
	27,533

AT PHILADELPHIA.	
Purchase of ground,	\$37,000
Improvements,	1,636
	38,636
Live oak deposited,	7,096
Ordered, and ready for transportation,	8,854
	15,950 at \$2, 31,700
Other timber,	30,000
Stores of various kinds,	100,000
	200,336
It would cost, to remove the live oak to any other building place, and other timber and stores,	7,985
	19,000
	26,985

AT NORFOLK.	
Purchase of ground,	\$12,000
Improvements,	14,275
	26,275
Live oak deposited,	10,591 feet,
Ordered, and ready for transportation,	5,576
	16,167 at \$2, 32,334
	58,609
Timber, exclusively of live oak,	30,000
Stores of various kinds,	45,000
	133,609
It would cost, to remove the live oak to any other building yard, and the other timber and stores,	8,000
	14,000
	\$22,000

AT WASHINGTON CITY.

Purchase of ground,	\$4,000	
Improvements,	54,683	
		58,683
Timber for ship's frame, not yet deposited, but contracted for, on the Potomac, and may be deposited in the present year,		50,000
Other timber,		30,000
Stores of various kinds, exclusively of those belonging to the frigates laid up in ordinary,		20,000
		<u>158,683</u>
		<u>\$1,069,860</u>

Besides the timber for ship's frame in this place, mentioned above, there is about two-thirds of a frame of live oak in South Carolina, intended for this place, which, when deposited, will, with the other, make two complete frames, one of which is contemplated to be preserved for future use.

There are also two complete frames to be deposited at Boston, say Charlestown, one of which is for future use.

To remove the timber and stores from this to any other building place, other than Norfolk, would probably cost \$30,000.

No. 2.

NAVY DEPARTMENT, February 4, 1802.

Sir:

Congress, by three acts passed the 25th February, 1799, made the following appropriations:

For the building of six 74 gun ships, and for procuring, arming, &c. six sloops of war, \$1,000,000.

For erecting two docks for the convenience of repairing the public ships and vessels, \$50,000.

To be laid out in the purchase of growing or other timber, or of lands on which timber was growing, suitable for the navy, and to cause the proper measures to be taken to have the same preserved for the future uses of the navy, \$200,000.

Letter A shows the principles by which the Secretary of the Navy was governed in purchasing, under the authority of these acts, ground at different places for navy yards.

The Secretary of the Navy, in a letter addressed to the chairman of the Committee on Naval Affairs, dated 12th January, 1801, observes:

"Under these acts, contracts have been made for eight frames for seventy-four gun ships, two of them under the appropriation of \$200,000; the execution of them, as far as six frames, will, it is believed, be completed this winter; a considerable part of the timber necessary for six ships has been procured; ground has been purchased at Portsmouth, N. H. Charlestown, near Boston, Philadelphia, Washington, and Norfolk, and measures have been taken to procure ground at New York, for capacious building and dock yards, and progress is making in preparing docks for receiving the timber."

In his estimates for the year 1801, the Secretary of the Navy estimated "for the expenses attending six seventy-four gun ships, and for completing navy yards, docks, and wharves," the sum of \$500,000; and Congress, by an act of the 3d of March, 1801, appropriated that sum for those objects. Out of this appropriation, there has been expended, from 1st January to 31st December, 1801, inclusive, \$304,605 76; leaving, on the 1st January, 1802, a balance in the treasury, on this appropriation, of \$195,394 24.

The aggregate appropriations for this department for the year 1801, amount to \$3,042,352 95

Deduct amount of warrants drawn on the Treasurer from 1st January to 31st December, 1801, inclusive, 2,071,907 24½

Leaving unexpended, on the 1st January, 1802, \$970,445 70½

I take this occasion to suggest the expediency of selling two of the frigates in service, retained by the "Act providing for a naval peace establishment, and for other purposes." The frigates Adams and General Greene are not constructed upon approved models for ships of war. They would both make excellent merchantmen, and would, no doubt, command a good price; and the proceeds of these sales might be applied to the purchase of smaller vessels, which may be employed to great advantage, if we should be obliged to maintain a naval force in the Mediterranean for any length of time.

If Congress should determine that the Adams and General Greene shall be sold, it would be well to authorize the President to apply the proceeds either to the purchase of smaller vessels, or of cannon and other naval stores, as in the discretion of the Executive may be thought the most advisable.

Before I conclude, I will take the liberty further to suggest, that the navy ration, under the present establishment, has been found inadequate, and has created much murmur and discontent among the seamen; the allowance of meat has been too small, that of vegetables also; by cutting off superfluities, the allowance of these articles may be increased to the proper quantity, and the ration be supplied at the present price. I would recommend the following allowance:

For Sunday—1½ lb. beef, ½ lb. flour, or Indian meal, 14 oz. bread, 1 half pint spirits, and 1 half pint of molasses.

For Monday—1 lb. pork, 14 oz. bread, 1 half pint spirits, and 1 half pint pease.

For Tuesday—1½ lb. beef, 1 lb. potatoes, 14 oz. bread, 2 oz. butter, and 1 half pint spirits.

For Wednesday—1 lb. pork, 14 oz. bread, 2 oz. cheese, 1 half pint spirits, and 1 half pint rice.

For Thursday—1½ lb. beef, 1 lb. potatoes, ½ lb. flour, or Indian meal, 14 oz. bread, 1 half pint spirits.

For Friday—½ lb. flour, or Indian meal, 14 oz. bread, 2 oz. butter, 1 half pint spirits, 1 half pint molasses, and 1 pint of rice.

For Saturday—1 lb. pork, 14 oz. bread, 1 half pint spirits, 1 half pint pease, and 1 half pint vinegar.

I have the honor to be, with great respect, sir, your most obedient servant,

ROBERT SMITH.

SAMUEL L. MITCHELL, Esq. Chairman of the Committee of Naval Affairs.

A.

APRIL 25, 1800.

The Secretary of the Navy has the honor to submit for the consideration of the President the following observations:

No express provision was made by Congress for establishing navy yards for building the first six frigates directed by law. But as vessels so large cannot be built without first erecting wharves, or extending wharves before erected, both these things were done, and in every instance on private property; so that the public have now little or no advantage from the expenditure of sums to a considerable amount. The evil, however, did not stop here. The yards connected with the wharves were, in almost every instance, too confined to admit of the convenience of piling away the timber in a manner to prevent the necessity of frequent removals of one piece to get at another, which happened to be first wanted. The expense of this unnecessary kind of labor, arising solely from the want of sufficient room in the yard, amounted to several thousand dollars in building the frigate United States at Philadel-

phia. At Boston and at Baltimore, there is reason to believe this expense was still more considerable. It would not, perhaps, be hazardous too much to say, that the sums lost in improving private property, and in piling and un-piling timber for the want of yards sufficiently capacious, would have been nearly sufficient to have procured them for the public, and to have erected wharves and other essential improvements.

But when the building of these frigates commenced, it was not foreseen that the United States would so soon want more; nor was the public mind prepared to consider the establishment of a navy as necessary to the honor and safety of the country.

All the timber, except the frames for the six seventy-four gun ships authorized to be built, has been ordered, to be deposited at Portsmouth, in New Hampshire, Boston, New York, Philadelphia, Norfolk, and the city of Washington; and the greater part, if not the whole, has been already collected at these different places. Contracts have long been made, and are in part executed, for the frames for these ships, of the live oak of Georgia and South Carolina, and measures are in operation to transport, as soon as may be, these frames to the different building places. At Norfolk, the yard where the frigate was built, belonging to the State of Virginia, has been lately ceded to the United States, on condition of being paid the value of the ground, which, it is presumed, will not exceed two thousand dollars, and this will include the wharf heretofore built by the United States. At the city of Washington a sufficient quantity of ground is selected for a navy yard, belonging to the public. At Philadelphia; the old and very inconvenient confined yard, heretofore used, must be again rented; considerable additions be made to the wharf at the public expense, and the unnecessary loss of constant removal of timber be again sustained, or ground sufficient for a proper navy yard must be purchased, at an expense equal perhaps to thirty thousand dollars. At New York there have been two wharves built by the public, for the frigate *President*. The first wharf was discovered to be placed where there was not sufficient water to launch the ship. It is not yet ascertained for what sum a quantity of ground adequate to the purpose can be obtained at a place, said to be extremely proper, near New York, for a building yard; but it is believed the price will not exceed a few thousand dollars. At Boston, the old yard, besides being private property, and too confined to contain the timber for a seventy-four gun ship, is so much surrounded by wooden houses as to be thought too dangerous a situation for building a valuable ship, especially a ship that might remain long on the stocks. At this place, or rather at Charlestown, there is a very proper situation for a building yard; but the ground necessary for the purpose cannot be obtained for less than eighteen or twenty thousand dollars. At Portsmouth, the yard of Mr. Langdon, hired for the frigate, might be used for the seventy-four gun ship. But an island at this place, quite convenient for all the purposes of a large establishment, can be procured for six thousand dollars.

In this view of the subject, and believing that it is the truest economy to provide at once permanent yards, which shall be the public property, and which will always be worth to the public the money expended thereon, instead of pursuing the system at first adopted, which, with the experience before us, can only be justified on the ground that the ships, now ordered, are the last to be built by the United States, the Secretary of the Navy has had but little difficulty in making up his opinion that the proper course to be pursued is, to make the building yards at Norfolk, Washington, New York, and Portsmouth, public property, and to commence them on a scale as if they were meant to be permanent. And also, the building yards at Philadelphia and at Boston, notwithstanding the high prices which must be given for the ground.

Mr. Humphreys, whose report accompanies this, was sent to the eastward to view the situations about Boston and Portsmouth, proper for building yards. He can no where find, within a convenient distance of Boston, a situation so eligible in all respects as that of Charlestown.

Mr. Humphreys was also instructed to examine the different ports and harbors eastward of New York, with a view to the selection of the situation for one of the docks for repairing of ships, directed by act of Congress. His report on that subject corresponds with the opinion the Secretary of the Navy has long entertained, from the best lights in his power, that Newport, Rhode Island, affords advantages which give it a superiority over other places. It is of easy access, and can be gained under circumstances which would render it almost impossible for a ship in a crippled state to reach any other port to the eastward of Chesapeake bay. It has a capacious and safe harbor in all kinds of weather; and is the very point of which a maritime enemy would endeavor to get possession, for the purpose of annoying on our own coast, our own trade, and of cutting off one half the maritime strength of our country from the other half.

The objection to this place is the expense of fortifying it. In a war with England, or in a war with France, if France had only the United States to contend with, either nation would take possession of Rhode Island and make it a second Gibraltar. Indeed, it would be much more injurious to the interests of the United States, in the hands of either nation, than Gibraltar is to Spain. Half a dozen hostile ships would do more mischief to our commerce from Rhode Island, from the celerity with which they could move in and out of port, than double the number from Boston, or most other ports. It is a national object to keep possession of Rhode Island, too important to be neglected, let the expense of fortification be what it would.

Boston, from the natural strength of its situation, the great number of ship carpenters in its vicinity, and of its seamen, must always remain a building place and place of rendezvous for our navy, of the first importance. At Boston, too, the tides rise so high as to lessen greatly the expense of emptying a dock; but the danger of the coast eastward of Cape Cod, and the difficulty of access to Boston, seem to forbid a reliance on that place as the principal rendezvous of our navy in a war on our coasts, and as an asylum for ships damaged in action, and seeking a port for repairs.

New London has many advantages for a dock. At this place the machine for pumping the dock might be worked by water, instead of using for that purpose a steam engine of more expense. It is capable of being fortified at an expense considerably less than Rhode Island, but it is not so easy of access as Rhode Island. Indeed, a ship cannot enter into the harbor with a northwest wind, nor is the harbor very capacious. But a judicious enemy, able to make an establishment on our eastern coast, would not hesitate a moment between New London and Rhode Island; nor, indeed, between Rhode Island and any other place, on account of the great facility with which they might carry on their operations from Rhode Island.

There are several fine harbors east of Boston: Portsmouth, Portland, and Wiscasset, will all become important in a naval view as the country advances in population; but it is conceived that it is yet too early to put them in competition with Boston, Rhode Island, or New London. They are indeed all subject to one of the disadvantages which is made an objection to Boston, and in a greater degree—the fogs, which so frequently prevail, continue so long on all the eastern coast from Cape Cod, particularly in the spring season.

Together with the report of Mr. Humphreys, the Secretary of the Navy has the honor to lay before the President, sundry plans and observations relative to the harbors of New London, Newport, Providence, Boston, Charlestown, Portsmouth, Portland, and Wiscasset; all of which is respectfully submitted.

No. 3.

NEW YORK, 13th May, 1801.

SIR:

I had the honor of writing you yesterday, to which beg your reference. The hasty result of my observations respecting the site purchased for a navy yard are as follows: The situation, combined, has undoubtedly advantages for the purpose intended; one disadvantage most striking to me, is, the exposure to an enemy landing in the rear, the danger of which is not so great on reflection, and more in sound than reality; however, where Government contemplate a large naval establishment, it may be prudent to put this risk as much out of sight as possible, especially as other situations may be found, in my opinion preferable, and unattended with the above hazard. Messrs. Watsons have been guilty of one great oversight in the purchase, (Government having at that period in view extensive appropriations to the object as a navy yard) in not embracing a larger front on the water, by which error

they put Government in the power of Mr. Jackson, by allowing him to retain the ground that commands the entrance to the deep water into that side of the bay, on which the improvements would be made, and might render the yard for launching a large ship in a great measure useless, by docking out and contracting the aperture thereto, and force Government to his own terms. This appears a serious objection to large improvements, unless the impediment is removed, by another purchase from Mr. Jackson of about four acres of ground, embracing the water front; then the situation would be complete, saving the possible exposure above mentioned. The purchase is made and paid for, and cannot be got rid of without a great loss, say at least \$10,000; the object now is, I presume, to render the same serviceable; this may be done at a small expense, by preparing the ground for the building a 74 gun ship, which will cost about \$1,500, and making the mill pond a deposite for all the navy timber, which will suffer extremely by lying this summer exposed to the heat and weather: the sooner you determine on the latter point the better, as the contract made by Messrs. Watsons to T. Childs for the lease of the mill, requires ninety days' notice to get possession; a copy of the lease was sent to Mr. Stoddert, and to which I refer you, and is of a piece with the whole transaction. The deeds I have sent to the district attorney, Edward Livingston, Esq. to report on the title, which will, in course, be sent to you. The brig Richmond sold for \$6,250, and, in my opinion, more than she was worth, with her inventory. The ship, as delivered to me, does no credit to the captain or any officer that was on board; in discharging the ballast, 40 lbs. powder, some lead, &c. has been found secreted; her sails, and, in short, every thing relating to her, show a great want of common attention. Had she been in the situation that I should suppose a vessel belonging to Government ought to have been, some thousand dollars would have been added to her sale.

I have the honor to be,
Sir, your most obedient humble servant,

DANIEL LUDLOW, *Navy Agent.*

Extract of a letter from Daniel Ludlow, Esq. to the Secretary of the Navy, dated New York, 29th Sept. 1801.

Enclosed you will find the plan of the stores you directed to be built. I contemplate laying the foundation early this fall, and the first tier of beams, and providing all the materials to commence in the spring; should you wish any alteration in the plan, please to inform me in due season. The timber I am moving over to Long Island, and arranging the ground for the keel of the 74 gun ship. I have contracted for a dock 130 feet in length and 30 in breadth, and to be 10 feet above low water mark, completely built, and all materials found, for \$46 95 per foot, in length, the water being 18 feet deep at low water mark; the expense will be rather heavy. Government will, however, find a great convenience when the same is complete.

Extract of a letter from Daniel Ludlow, Esq. to the Secretary of the Navy, dated New York, 3d December, 1801.

I left with General Smith an accurate plan of the navy grounds on Long Island, with the general improvements contemplated, and progressing rapidly from the favorable weather, together with my observations and opinion; all which I presume he has imparted to you for your approbation, which I shall be happy to receive.

I have to acknowledge the receipt of your favors of the 9th and 20th ultimo. The information you will have received from General Smith, will, I trust, convince you that the spot chosen for a navy yard is, in every respect, an eligible one, saving the possibility of an attack in time of war; the hazard of that is too small to take into view: for, if an enemy can land and march seven to ten miles uninterrupted, and destroy works within half a mile of this city, what can they not accomplish? I trust General Smith must be of my opinion that the danger is too remote to contemplate or retard the necessary operations commenced, and considerably advanced. I shall, however, do no more this season than to secure against the winter what has been begun, and wait your further instructions for the spring operations.

Extract of a letter from the Navy Department to Daniel Ludlow, Esq. dated 29th April, 1801.

Some short time hence I shall write you more fully respecting the navy yard; in the mean time you will give such directions respecting the keel and the timber, &c. as you may think best for the general good: it being much more in your power to judge what ought to be done than I can at this distance. I wish every further expense relating to the yard to be delayed, but I entreat your opinion relative to the spot purchased, the probable expense of preparing it for the building of the seventy-four gun ship, and whether, from its situation, it will not be very much exposed to a sudden stroke of an enemy, with little risk to those who might attack.

Extract—dated 11th June, 1801.

Perhaps you had better delay for a few days the removing the timber. When Mr. Langdon arrives, it may be thought proper to sell the present navy yard. I wish you would see him as he comes through New York, and induce him to visit that purchased, and Kipp's Bay, that he may the better be able to form his judgment on that subject.

Extract—dated 17th June, 1801.

Your proposal respecting preparing the ground on Long Island for the reception of the keel for the seventy-four gun ship is approved.

Extract—dated 2d September, 1801.

It is not intended to proceed with the building of the seventy-four gun ships, until we are prepared at all points to progress with advantage. The ground on Long Island must certainly be made use of for the ship to be built at New York, and the sooner the public are relieved from the expense of renting ground where the keel now lies, the better. Be pleased, therefore, to have the place on Long Island prepared and the keel removed to it without delay. Let the dock also be prepared, and the residue of the timber be placed in it. With respect to the lease of the mill, as you are on the spot, you can the best judge whether the permitting it to continue leased will materially interfere with your arrangements and impede your operations: and if it should, you will at once take the regular steps to gain possession of it.

I cannot authorize the purchase of the additional quantity of ground, without an act of Congress.

Extract—Secretary of the Navy to Daniel Ludlow, Esq. dated 28th October, 1801.

If you have not laid the foundation of the store house, you will be pleased to postpone doing it till the spring, as it will not be possible to complete it this winter; and I am not decided in my opinion with respect to the most suitable spot. The members of Congress from your State may, possibly, give the preference to a different place from that at present contemplated, and I do not wish the subject entangled in any unnecessary difficulties.

Description of Kipp's Bay, on the East River.

The rock best calculated for launching large ships from, has alongside four fathoms water; at forty feet distance it increases to four and a half fathoms; at sixty feet, to five and a half fathoms; ninety feet, seven and a half fathoms; from one hundred to five hundred feet it preserves a depth of ten fathoms. The place has a sufficient distance to launch a ship of any size, allowing the greatest descent supposed safe in launching.

The grounds about this place have every advantage required for a dock yard; it is plentifully supplied with fresh and salt water for seasoning timber; a level for rope walks and other necessary buildings; the situation esteemed healthy, the anchorage safe, and the bay secure from the ice in the winter; the shore is deep enough, in its natural state, to launch a ship from, without the enormous expense of docking out (as in other places is necessary) to reach a sufficient depth of water.

RICHARD V. MORRIS.

No. 4.

Report of Joshua Humphreys on the subject of Docks.

In obedience to your order of the 29th of January, I have visited and examined the several ports of New London, Newport, Providence, Boston, Charlestown, Portsmouth, Portland, and Wiscasset, on which I beg leave to submit the following report, viz:

REMARKS AT NEW LONDON.

ADVANTAGES.

- 1st. A sufficient depth of water in the channel.
- 2nd. A good situation on Winthrop's Point for a dry dock, with a sufficient quantity of ground.
- 3d. A good stream of water for the use of dock, for pumping, sawing, &c.
- 4th. A good cove for docking timber.
- 5th. Still water in the harbor.
- 6th. Good anchorage.
- 7th. Plenty of good stone for the dock.
- 8th. The small comparative expense in fortifying.
- 9th. The advantage of being quick at and from sea.

The most suitable place for a dock is at the northeast side of it; it should be in a range with a large stone in the edge of the bank, and in a southeast direction from the said stone; this stone lays about two hundred feet above the east end of the rope walk.

DISADVANTAGES.

1st. The harbor, below Winthrop's Point, is not sufficiently large for such a navy as the United States must have; and, above this point, the river is frequently full of ice, the breaking up of which makes it dangerous to vessels which lie in it.

2nd. The impossibility of entering this port with a northwest wind; which is the most prevailing wind in the winter season.

3d. Vessels in this port are subject to be injured by ice, in hard winters, if they lay in the channel. To deepen the bar sufficient to receive vessels inside the rock, to keep them clear of ice, would cost a considerable sum, and be an annual expense to keep it sufficiently deep.

4th. The harbor is very open and exposed, all below Winthrop's Point.

5th. An enemy, with the wind at east or west, has a leading wind up to Winthrop's Point and down; which is a great advantage, in the attack by water, of any place.

6th. The rise of the tide being only three feet.

7th. The commanding heights to the westward of Fort Trumbull.

8th. The probability of worms.

REMARKS AT NEWPORT.

ADVANTAGES.

1st. Accessible at all times, especially when the wind is at northwest; which is the prevailing wind in the winter season.

2nd. A good channel, depth of water, still tide, and a capacious harbor, well land-locked, sufficient for the largest navy in the world, a good anchorage above the Dumpling Rocks; which is the proper place for ships to lie in; in fact, it is the best harbor, for our navy, I have seen.

3d. Goat Island, a suitable place for docks, and belonging to the United States, well secured from storms by its situation; and the most suitable place for a dock, is the west side of the wharf.

4th. Plenty of good materials for the docks.

5th. A good dock for docking of timber.

6th. Great advantage of being quick at, or from, sea; which may be in three hours.

7th. The number of vessels belonging to, and bound east and west of, this port, frequently make it, and wait for a wind to waft them to their respective ports: this was the case while I was at this port, and is the most decided proof in favor of it.

It appears, from the best information I could obtain, that the east end of Long Island is a desirable part of the continent to make, in coming on this coast, and is the land most generally made, and that it is an object that commands the attention of all seamen returning to any port east of the Delaware. From the land so made, a northwest wind is a fair wind into this port; but unfair for any other, neither can they make any.

DISADVANTAGES.

1st. The great expense to fortify this place; which may be estimated at more than one million of dollars.

2nd. The small rise of tide.

3d. The probability of worms.

4th. The difficulty of anchoring, below the Dumpling Rocks, the water being deep, and the bottom rocky.

REMARKS AT PAWTUXET.

ADVANTAGES.

1st. Gaspe or Namquid Point, which is the place pointed out for a dock, being above Connanicut Point, is well secured from an enemy, from its natural situation.

2nd. It can be well fortified, and at a small expense.

3d. Plenty of good materials for building of docks.

4th. Good depth of water, and anchorage, good harbor, and well land-locked.

5th. Good place for docking timber.

6th. Pawtuxet river may be brought to a dock established at this place.

7th. The reasonable terms on which the ground may be had.

DISADVANTAGES.

- 1st. Namquid or Gaspé Point extends at least 1,600 feet from the bank, which will cost a considerable sum to wharf and fill it.
 - 2nd. This place, from its great distance from the main, is much exposed to the cold northerly wind, which cannot be well avoided, and will often prevent the workmen from working, let the urgency of the business be ever so great.
 - 3d. This place is subject to worms.
 - 4th. And to the ice.
- The harbor above Conannicut Point is not sufficiently large to contain a large fleet of men of war.

REMARKS AT BOSTON AND CHARLESTOWN.

ADVANTAGES.

- 1st. The outer harbor of President and Nantasket roads is large, and considered as a safe harbor for large fleets from the weather, when they are safe in, and anchored.
- 2nd. Quick at sea, from this place.
- 3d. The inner harbor is very safe from the winds, freshets, and an enemy, and can be securely fortified at an easy expense.
- 4th. Boston and Charlestown, both being situated on necks of land, can be securely fortified, and without very great expense.
- 5th. The number of tradesmen, within its vicinity, that may be commanded, at all times, in fitting and building ships of war.
- 6th. The number of seamen that resort to the port of Boston, which will always forward an expeditious equipment.
- 7th. The rise of tide, as it respects dry docks, which may be stated at eleven feet.
- 8th. The great number of militia, that may be collected at a short notice, in case of an invasion; more than at any other place.

DISADVANTAGES.

- 1st. The great fog that this coast is frequently subject to.
 - 2d. The great number of shoals that are in and off the great Bay, and the number of currents, which no experience can guard against.
 - 3d. The difficulty of entering the harbor with the wind at Northwest, which is ahead.
 - 4th. The Easterly winds, though fair for running in, are mostly attended with thick hazy weather, and the navigation of the Bay being difficult, vessels are frequently compelled to stand out to sea.
- Mr. M'Lellan, an old experienced commander on the coast, and a respectable citizen of Portland, states that at, and all to the eastward of, Cape Cod, the coast is subject to great fogs, which sometimes continue for fifteen days; it is also stated in a chart of George's Bank, by Paul Pinkham, that it is the most dangerous coast within the limits of the United States, and which he fears has been fatal to many.
- 5th. That a French seventy-four gun ship was absolutely lost in going out of the harbor, during the Revolutionary war, and a British seventy-four gun ship at Cape Cod.
 - 6th. The harbor opposite the town of Boston is not sufficiently large to contain a large fleet, the channel being very narrow, so much so, that there was but just room for the Constitution to swing clear of the ground at low water, in consequence of which Captain Nicholson thought it most prudent to drop the ship down to President road, (which is just below the castle) to take in his stores.
 - 7th. The anchorage is bad, from the bottom being very hard above Castle Island, so much so, that Captain Nicholson also states he was drove up and down the harbor by the ice, with two anchors ahead, which would not hold; this happened some time since, though I suppose the ice cannot be so troublesome since the bridges are built.
 - 8th. It is notorious that many vessels put into the Vineyard, and Newport, and there wait a wind for Boston, which passage is considered as very dangerous. The difficulty of entering Nantasket roads will be increased in crippled ships.
 - 9th. It is stated that more vessels are lost in and near Boston Bay, than all the other parts of the coast of the United States.
 - 10th. The fall of tide, as it respects shoals, in the port or bay, as vessels may be affected by getting aground on hard bottom.
 - 11th. To establish a navy yard at Boston, the expense would be at least forty-eight thousand dollars for the ground, and the place too much confined, and be very liable to be affected by fire; not only that, but you must lay your vessel in a northerly direction, subject to the cold northerly winds.
 - 12th. Noddle's Island presents a Westerly and Northwesterly exposure, which is a very cold one, and the ground uneven. The most suitable piece of ground on this island, for a dock or navy yard, is said by the tenant to contain about seventy-seven acres, upland and marsh; the owner demands twenty-five thousand dollars for it.
 - 13th. At Charlestown and Noddle's Island there are long flats.
 - 14th. Charlestown is the most suitable spot in the port of Boston for a building yard, and ought to be purchased, for that purpose, at the following prices, if the lots cannot be purchased at a lower rate:

	J. Harris's ground contains	7 acres, for	-	-	-	-	-	\$12,000
Low ground.	{	Stern's ground contains	3 acres, for	-	-	-	-	500
		Breed's ground contains	2 acres, for	-	-	-	-	250
		Do. do.	9 acres, for	-	-	-	-	3,600
		21 acres,	-	-	-	-	\$16,350	
	Additional, as described below,	2 acres,	-	-	-	-	3,000	
								<u>\$19,350</u>

It would be desirable to have about two acres more, in order to have more room contiguous to where the ship ought to be built.

This piece of ground is between Doctor Putnam's house and the road, which road should be vacated, and run on the new line contemplated, and is marked with a dotted line on the plan, and will join J. Harris's ground aforementioned, which, in proportion to the other ground, I have supposed may cost about three thousand dollars, and have added to the foregoing amount of cost of ground.

REMARKS AT PORTSMOUTH.

ADVANTAGES.

- 1st. This harbor can be fortified at a small expense.
- 2d. Quick at, and from, sea, being but a short distance.
- 3d. Furnell's Island, belonging to Mr. Dennet, supposed to contain forty-five acres, (price six thousand dollars) is the best and most suitable place for a dock or building yard, of any other in Portsmouth harbor, and, although

this island is further from Portsmouth than Langdon's Island, yet it is equally near to Kittery's, where all the carpenters reside.

The most suitable spot on this island for a dock is in a cove in the west part of the island; and for a building yard, nearly south of the east end of Dennet's house. Neither the dock nor slip will require above two hundred feet from the shore, to a sufficient depth of water, and both may have a south direction, which is a very desirable one.

4th. There is on this island a sufficient quantity of stone for any building that may be thought necessary to be erected for the use of the navy yard, and also a suitable place for docking of timber.

5th. The place pointed out on Dennet's Island, for a dock or yard, is much more sheltered from the cold north, and northwest wind, than that on the island of John Langdon, Esq. and is much cheaper.

DISADVANTAGES.

- | | |
|---|----------------------------------|
| 1st. The want of a capacious harbor. | 2d. The rapidity of the current. |
| 3d. This coast subject to fogs. | 4th. Hard stony bottom. |
| 5th. Very dangerous for vessels to pass the Narrows, except at slack water. | |

The island belonging to the Hon. John Langdon contains, by information, about eighteen or twenty acres, for which he demands the sum of twenty-five thousand dollars. Although this island has many advantages, and several wooden buildings, &c. I am decidedly of opinion Dennet's Island is far preferable for a building yard, especially taking into consideration the difference of price. And as Mr. Langdon has not a wish to sell, (except to accommodate the public) on that account alone it ought to be relinquished, when others can be had.

REMARKS AT PORTLAND.

ADVANTAGES.

- 1st. This port is within five miles of the light-house, which facilitates the entry into, or leaving it.
- 2d. Sufficient depth of water up to the town.
- 3d. Safe place for a dock, free from all winds.
- 4th. A south front; good water at a short distance from the bank, which is very high; great quantity of filling may be had from the bank; in short, a dock can be made on reasonable terms. The spot would be a desirable one, if the navigation of the river and basin were equally as good.
- The proper place to erect a dock would be the west side of it, about one hundred yards east of a stump on the shore, and about the same distance from a spring of water, and about one quarter of a mile east of Vaughan's bridge.
- 5th. Good place for docking of timber.
- 6th. Portland can be well defended by land, having a small neck of land to pass to the town.

DISADVANTAGES.

- 1st. The harbor is not sufficiently large.
- 2d. Large flats on each side of the river.
- 3d. Narrow channel, from the first bend up to the place suitable for a dock yard.
- 4th. Subject to ice.
- 5th. High and uneven ground at the most suitable spot for a dock.
- 6th. Difficulty in fortifying the river and basin where the ships must lay.
- 7th. Its great distance from the centre of the Union.
- 8th. The coast subject to fogs.
- 9th. Price of the land, which is rated at four hundred dollars per acre.

REMARKS AT WISCASSET.

ADVANTAGES.

- 1st. Sheepscot river is deep, bold, and safe, from Cross river to the town of Wiscasset, having from six to twenty fathoms water; no shoals in that distance that vessels of any size can ground on.
- 2d. The harbor inside the river is from five to nine fathoms, where large vessels may lay safe from storms, worms, or an enemy.
- 3d. This port embraces a good harbor, free from storms, where a large fleet may ride in safety; in Task's Cove fifty sail of the line may lay within one hundred and fifty feet of the shore, in six fathoms water, without being affected by any current whatever. This river can, with a very small sum, (compared with other places) be safely fortified, possessing very commanding ground and situations for that purpose, and not more than from one-half to three-fourths of a mile wide.
- 4th. Birch Point, belonging to the Hon. Silas Lee, contains about fifty acres of land, with a fine cove on each side for docking timber; the one on the southwest side is now made up for a mill-dam, to turn a saw and grist mill, which are erected thereon. This point of land is almost closed in by the two coves, which nearly meet on the west part, and make the passage very narrow, which is a very great convenience.
- The bank is about twelve feet above the tide; the land is not very uneven, several docks may be built on Mr. Lee's ground, on the aforementioned point; sufficient depth of water at a convenient distance.
- 5th. Sufficiency of good stone for docks.

DISADVANTAGES.

- 1st. The fogs, that are frequent on this coast.
- 2d. The great distance from the centre of the Union.
- 3d. The difficulty of procuring artificers, seamen, &c.
- 4th. The price demanded by Mr. Lee for his land and mills, being twelve thousand dollars.

Having compared and considered the advantages and disadvantages of situation, with capacity of harbor, depth of water, rise of tide, expense in building docks, prices of land, facility of navigation, and capability of defence, previously stated at each port, I am decidedly of opinion that Newport, Rhode Island, is by far the most suitable port for the establishment of dry docks, and great naval port for our navy, for the ease and safety of entry at all seasons of the year. Its eligibility, in preference to any other Eastern port, is universally acknowledged. The principal and only objection is the great expense of fortification, which may amount to more than a million of dollars.

Boston harbor has been preferred by some, but experience has shown that, during the late Revolutionary war, a French and an English seventy-four gun ship were both lost in Boston Bay, which are evident marks of its dangerous coasts and harbors. Neither money nor art can ever alter the winds, dispel the fogs, and remove the currents or shoals which are attached to Nantasket road and coast. The amount of loss on those two ships, would, I suppose, pay from one-half to two-thirds of the cost of fortifying Newport. Upon comparative accidents which have happened, and the causes still existing, it is fair to calculate upon what may take place in future. I am justified in this conclusion by the mode pursued by the underwriters, who calculate their premiums by the experience they have gained from what has passed; from which it is prudent and justifiable to calculate a continual loss, equal to the cases stated, and in an increased proportion, as our navy becomes more numerous.

How different is Boston port, compared with that of Rhode Island, where you have no reason to calculate a single loss in a century?

During the late war, the enemy, by taking possession of Rhode Island, cut off the communication in part between the Eastern and Middle States. To guard against this in future, it may be doubted whether the navy and dock yards will call for any more important additional expense for fortification, than for general defence, as there is no situation within the United States more convenient to favor the depredations of an enemy than Rhode Island, nor from which our trade would be more liable to destruction from the excursions of their cruisers.

The united interests of the States render this one of the most important ports for the attention of Government. I cannot close this report without stating the propriety of fortifying the most suitable places for the protection of Gardiner's Bay, to prevent an enemy from taking possession of it.

I am, with the greatest respect,

JOSHUA HUMPHREYS.

The Honorable BENJAMIN STODDERT, *Secretary of the Navy.*

No. 5.

Remarks of Joshua Humphreys, relative to the Ports and Harbors to the Eastward.

REMARKS AT NEW LONDON.

Winthrop's Point embraces a very suitable place for docking of timber; the ground at this place is not very even; the course of the river is about northeast. Here is also a stream of water that may be brought to the dock, if it should be established at this place, with a head of fifteen or twenty feet. The owner of the mill on this stream has just embarked for Europe.

This spot contains about fifty acres at this place; three or four lots, which are held by different persons, must be purchased, to make the yard complete.

Soundings at the above point; bank twenty feet from high water.

At 1st distance,	20 feet further,	1 foot gravel.		
2d do.	13½ do.	2 do. do.		
3d do.	do. do.	3 do. do.

24th do.	do. do.	15 do. do.	5 feet do.	
25th do.	do. do.	16 do. do.	do. do.	

At three hundred and twenty-four feet from high water mark, and three hundred and forty-four feet from the bottom of the bank, is sixteen feet deep, and five feet more of mud, taken at about one fourth ebb.

Bank at this place twenty feet high above high water. The last distance took us out in a south halfeast direction of the point; the last distance is about fifty or sixty feet further south of the point than from the shore. If the distance could be taken more at right angles with the shore, the depth would have been much more.

If the dock should be fixed here, the east side of it should be in a range with a large stone in the edge of the bank and in a southeast direction from it; the stone is about two hundred feet above the east end of the rope walk.

Cumstock Point.—The land at this place is very high and uneven towards the river, but a little further back it is level and even. The creek that empties into the basin or cove, about this point, is very suitable for docking timber. This creek will give about twenty feet head of water, which may be made use of for freeing a dock of its water, or any other purposes, if it should be established at this place. It will be necessary to purchase more ground at this place than will be absolutely wanted, in order to embrace the use of the creek, and for cutting a ditch to convey the water to the dock.

Any quantity of dirt, to fill the wharf, may be had at this place, and at Winthrop's Point.

The quantity of land contemplated will be about ninety acres. If a dock should be erected at this place, the east side should be about forty-five feet east of the east end of a wooden house on the point, and to be nearly southeast in direction.

The foot of the bank is a little above common high water.

Twenty-seven feet from high water mark, is the edge of the water at about half tide.

At one hundred and sixty-eight feet from the edge of the water, at the last distance and about seventy-two feet south of the point, is fourteen feet, and at least five feet more mud; and ninety feet further out, twenty-four feet water, soft mud.

Good stone may be had in great plenty, close at the water's edge, about one and a half miles above Winthrop's Point, and about two and a half miles below Cumstock's. Beef, pork, cheese, and all kinds of fish, cheap, and in great plenty.

The tide at this place rises from three to three and a half feet; I think it will not exceed three feet generally. The entrance into, and out of, this harbor, is so easy, that no regular bred pilots are necessary, nor any employed; the captains take their vessels in and out themselves, except they are very large. On the river Thames, they build from six hundred to a thousand tons of shipping annually.

At this place there are not many tradesmen; only one blockmaker.

Carpenter's wages about one and a half dollars per day.

Boarding, for laboring men, two dollars per week.

Beef, ten dollars per barrel, and pork.

The river Thames is sufficiently deep, for any ship, up to Winthrop's Point, but from this point to the channel, is crooked and narrow.

This river is generally frozen, in hard winters, above Winthrop's Point; in such weather, it will be dangerous for ships to ride in that place, and, more especially, in freshes at the breaking up of the ice. In this river, a ship would ride without winding, the tide of flood hardly to be felt. Below Winthrop's Point a number of ships may lie in safety, if they are hove on the mud between the rock below Winthrop's Point and the town of New London.

Between the rocks and the town there are but fifteen feet water at high water, at common tide. The mud is soft, and a pole may be run down five or six feet without any difficulty.

The course of the river, from its entrance to Winthrop's Point, is near north. The wind at west or east is a free wind, by two points, up or down. The present forts could not prevent a ship of the line from running above Winthrop's Point, without the reach of Fort Griswold, where it may be in her power to destroy the town, or a dock yard established at Winthrop's Point.

The wind at northwest, which is the prevailing wind during our winter, will prevent almost any ship from entering the harbor; they must bear away for Newport, Rhode Island. This is a fact: for while I remained at Rhode Island, five sail of vessels, bound to New London and Connecticut river, were obliged to put in there, where they must and did remain until the wind changed to at least north, which was four or five days before they could proceed to their own ports: this is a very serious objection to the port of New London. An army landing to the westward of the river Thames, and getting possession of a height which commands Fort Trumbull, would soon drive them out of it. There is also a height to the north of Fort Griswold, that commands it. The channel of the river Thames lies all on the east side of the river for above a mile above Winthrop's Point; the harbor is not sufficiently large for such a fleet as the United States will possess. Ships lain up in that harbor may be affected and much injured by the ice, although it is not common.

They say that the worm is not very destructive in this port.

By throwing a pier in said channel, a little below the forts, and fortifying it; to throw up a battery under Fort Trumbull, and to erect another low battery on the other shore, both as near the water as convenient, and completing the other two forts, they would, when full manned, afford a complete protection against any attack by water.

Batteries should be erected on Gardiner's Island, in order to prevent an enemy from harboring in that place.

REMARKS AT NEWPORT, RHODE ISLAND.

In a direct line from Bannister's wharf, at Fort Adams, the greatest depth of water between the said wharf and Goat Island, in the aforesaid direction, was seventeen feet at high water; about twelve inches more of soft mud.

In a southeast direction from a work shop on the south side of Fort Wolcott, the greatest depth at high water is twenty feet, and about twelve inches more of soft mud: channel very narrow at that depth, and lays very near the island.

In a north-northeast direction from Lime Rock, twenty feet water greatest depth, hard bottom.

In a direction from Lime Rock to the barracks at Fort Adams, which may be about a west-northwest course, the greatest depth is twenty-nine and a half feet at high water, hard bottom.

From abreast of a wharf at Fort Adams, in the channel, is twenty-nine and a half feet water, from which depth it increases to seven fathoms in a northwest course. It was said, to have continued sounding in the same course, the depth would have increased considerably, which I believe.

A northeast course from Fort Adams, and about four hundred yards distance, there are seven fathoms water. About half a mile southwest of Fort Wolcott, eight and a half fathoms water.

Rose Island, which is to be fortified, lays northwest of Fort Wolcott, distance about one mile.

In a direction from the south point of Rose Island to the north battery, (which stands a little north of the town of Newport) and nearly of an east direction, there are twenty-six feet of water, at high water, between the bar that runs from the north side of Goat Island and North Battery, channel nearest the North Battery side.

In a direction from a long wharf, which is at the north end of the town, to Fort Wolcott wharf, twenty feet, about one foot mud. From the fast land on the island, to the outer part of the thoroughfare of the wharf, it is about one hundred feet, and from that to the end of the wharf it is about forty-eight feet more.

Distance and depth of water, taken at high water, at the south side of the wharf built on Goat Island, at Fort Wolcott; first distance was taken from the outer part of the thoroughfare of the wharf.

1st	distance,	20 feet from thoroughfare,	6 feet water.		
2d	do.	20 feet further,	8 $\frac{1}{2}$ feet water.		
3d	do.	20 do.	13 $\frac{1}{2}$ do.		
4th	do.	20 do.	16 $\frac{1}{2}$ do.	and two feet mud.	
5th	do.	20 do.	19 $\frac{1}{2}$ do.	do.	do.

11th	do.	20 do.	24 $\frac{1}{2}$ do.	do.	do.
12th	do.	20 do.	25 $\frac{1}{2}$ do.	and one foot mud, and then hard bottom.	
13th	do.	20 do.	25 $\frac{1}{2}$ do.	do.	do.
14th	do.	20 do.	25 $\frac{1}{2}$ do.	do.	do.

The rise and fall of the tide at Newport, 17th of February, 1800, was three and a half feet; it may be as much as four feet in common; I do not believe it is more. The inhabitants state it is at five and six feet.

If Forts Adams and Wolcott, a fort at the place called North Battery, which is a little north of the town, were completely fortified and finished, a good fort built on Rose Island, which is purchased by Government for that purpose, one erected on the south end of the Hospital or Coaster's Harbor Island; a pier sunk between Goat and Rose Island, and another between Rose and Coaster's Island, and batteries erected on them, and made bomb proof, I think would make the harbor very secure, especially if there was another battery erected on an eminence on Conanicut Island, about west or southwest of Fort Adams. The north end of Conanicut, and south of Prudence, should be fortified, to prevent an enemy from coming around Conanicut. Troops may land on the east side of Rhode Island, but there is commanding ground between which they must land and the town.

There is only one place for docking of timber, which is in the northwest part of the town, which, I suppose, may contain three, or four, or five acres. This place is banked in all round, and, I am told, is supplied by fresh streams of water, as well as from the sound; I am also informed the worm does not eat in this place; on this subject I have my doubts.

Plenty of stone may be had, except the steps, which I think may be difficult to procure at this place.

Mr. Channing states there will be no difficulty in procuring the place for docking timber at a reasonable price, as it belongs to the town.

REMARKS AT PROVIDENCE, RHODE ISLAND.

Distance and depth of water from a stake at the east end of Namquid, or Gaspé point, taken in a course south about eight degrees east. Depth of water at stake nine feet.

1st	distance from the stake,	16 feet,	9 $\frac{1}{2}$ feet hard bottom.
2d	"	"	17 " 9 $\frac{1}{2}$ " "
3d	"	"	17 " 9 $\frac{1}{2}$ " "
4th	"	"	17 " 12 " "
5th	"	"	17 " 17 " "
6th	"	"	17 " 22 " "
7th	"	"	17 " 25 " "
8th	"	"	17 " and three feet mud.
9th	"	"	17 " " "

The above distance and depth taken when the tide had risen one foot.

Rise of tide this 20th day of February, 1800, by actual measurement, four feet. The inhabitants say it generally rises five feet.

Distance and depth of water taken from the same stake; the first sounding was at this place, but in a contrary direction, north, eight degrees west.

1st distance,	16 feet out,	13 feet, and 2 feet mud.
2d "	17 "	16 feet hard bottom, sand or clay.
3d "	17 "	16 "
4th "	17 "	14 one foot mud.
5th "	17 "	14 "
6th "	17 "	16 feet and hard bottom, sand or clay.
7th "	17 "	17 one foot clay.
8th "	17 "	16 one foot, hard clay.
9th "	17 "	16 "
10th "	17 "	17 one foot, then hard.
11th "	17 "	17 "
12th "	17 "	16 " "

Distance and depth of water from the same stake, taken in an east direction from the end of the point.

30 feet from the stake,	17 feet water; supposed distance.
70 "	24 "

Distance and depth of water, taken in a south, twenty-five degrees east direction, from a stake in the point about four hundred and fifty feet nearer the west side of the river, and in about a west-southwest course from the stake on the point.

1st distance,	51 feet out,	2 feet hard sand.
2d "	17 "	2 "
3d "	17 "	2 "
4th "	17 "	2½ "
5th "	17 "	3 "
6th "	17 "	3 "
7th "	17 "	3 "

In about a south, direction, and the supposed distance of three hundred yards from the stake, which stands in the east end of the point, and from which the other distances are taken, there is twenty-four feet water, when the tide had raised about eighteen inches.

From a rail, which lies a little above high water, to the stake at nine feet water, at low water, which is in the east end of the point, and the same the first distances are taken from, it is nine hundred and fifty feet, and from that rise to the bank, it is seven hundred and fifty feet.

One thousand six hundred and sixty feet from the nearest part of the bank to the stake in the east end of the point.

The water, all above this point, is very shoal for a very considerable distance, and not more than twelve feet for near two hundred feet from the shore. The shore below the point is not quite as shoal, but here the flats run off five or six hundred yards.

There is a cove between Mr. Brown's land and that of Mr. Rhoads, which will serve for docking of timber. It is supplied with fresh water streams sufficient to prevent worms from eating. The mouth of this cove is contracted to about one hundred and fifty feet.

There is also another cove, larger than the first, and to the south of it, which is supplied with fresh water.

The Pawtuxet may be turned into either of those coves, with the expense of, I suppose, three thousand dollars, and for the use of discharge of the dock.

There is a large pond, which, I am informed, never loses its water; they suppose it would supply a continued stream. This pond, I suppose, may contain about ten acres.

From the bank to the stake, in the point in which the distance was taken, is about east-northeast.

Nuhet Point and Connaicut Point bear from each other about southwest and northeast, distance one hundred and eighty rods from a stake in nine feet water in Connaicut Point.

There is a middle ground between the two points, with about three fathoms at low water, and a good channel on both sides.

To secure this place, a pier should be sunk on this middle, and fortified, as well as a good fort on each point.

Opposite Sassafas Point, from five to seven fathoms close into the western shore.

Field's Point, six fathoms about one hundred yards from the western shore; a little below, seven fathoms; and further down in the cove, very shoal; channel very crooked.

In a range from Pawtuxet, to a wharf on the eastern shore, nineteen feet at low water; this is a little above Sabin's Point; channel about mid-way. At Reunstick's, a little below Connaicut, twenty-two and an half feet, for many soundings deepened into five fathoms at low water. Five fathoms for many soundings from the south end of the Island of Prudence to the north end of the Connaicut.

At this place there is a great plenty of stone, which may be obtained at a very low rate.

A yard established at Gaspe, or Namquid Point, will be much exposed in the winter season; I am of opinion it would be difficult to get ships up to that place in a hard winter.

If the dock should be placed in a south direction, there might be some difficulty in securing the side next the channel. And, if it should be put out with the direction of the point, the sun would seldom shine on the north side.

There is a bank on the north side of Pawtuxet river, at India Point, the most suitable situation I have seen, but there cannot be carried sufficient water.

There appears a sufficiency of water up to Gaspe Point, and ships may be easily taken up there. This port may be got into with almost any wind, and is an excellent harbor. The ground from the light house, on the east side of the Connaicut, to Fort Adams, is very rocky, and bad anchorage.

Twentieth day of February, 1800, rise and fall of the tide was exactly four feet. The inhabitants say it averages five feet; this I doubt.

Hand-sawed white oak plank, thirty-one dollars sixty-seven cents per thousand, reduced measure.

REMARKS AT PROVIDENCE AND RHODE ISLAND.

East-northeast course across Warren river, at the mouth, three fathoms at high water, little before Rumstock's Rock. The course up the channel of the river, from the mouth to the town, is north-northeast. Northwest from Providence, deepest water, eight fathoms about mid-way; and three-fourths over, three and a half fathoms. North and by west, from the northwest point of Patience, about one-fourth the distance across from the point, eight fathoms. West-southwest from the south end of Patience, four and a half fathoms. About one-third way across, and half way over, a quarter less than three fathoms; on this course, a little further over, five fathoms. West by south-half-south from the middle of Patience, two-thirds over, three fathoms; at one-third, seven fathoms. South of Warwick neck, at about two hundred feet from the shore, sixteen and a half feet; at one-third, ebb; sticky

bottom; but, just at the point, a fine level bank about ten or twelve feet above high water; the water deepening very fast a little further out. North and by west from Providence Point, two fathoms for about one-fourth of the way over to the other shore; half-way, seven fathoms; and two-thirds over, a quarter less three; at almost low water from that over to Rocky Point, three fathoms. In a course east and by north from Rocky Point, three fathoms for about one-third of the way over, at low water, in the above course. From Providence Point, three fathoms and three and a half fathoms; between that and the depth before, sticky bottom. Northeast by north from Providence Point, three and a half fathoms. East half-north from Popposquash, four and a half fathoms; at low water, four fathoms next back to northwest. In a northeast course from Popposquash, and in a south direction from Point Pleasant, four fathoms; in the same course, eastward from Popposquash, five and a quarter fathoms, and two fathoms about the middle, which continues a considerable distance; thence, continued about three quarters of the way over, three and a half fathoms, sticky bottom. In a northwest course, about two hundred yards from the western shore, three and three quarters, and four and a half fathoms in the above course. In a line between a wharf in Bristol, and a wharf at Popposquash, three fathoms deepest water, and is in a nearly east and west direction, and is a little below the church; the channel is nearly west.

Fox Hill, which is on the west side of Conanicut, was formerly fortified, and should now be fortified. The Bonnet, which is opposite the Narraganset shore, should also be fortified. The Bonnet is a little below the place called South Ferry. At both places it is high ground; and little more than a mile past east side of Dutch Island, there is a good harbor, and you can carry five fathoms all around it; this depth is about two hundred feet from the shore, sticky bottom. Very good harbor between the island and Conanicut. From the south point of this island to Fox Point is about a mile, and rather under that distance at the upper end; the length of this island may be one mile. In a westerly course across the river from Dutch Island to the western shore, five fathoms, nearly half way across from the island, then into ten fathoms, and three quarters over, seven fathoms, gradually decreasing to five fathoms at about one hundred yards from the Narraganset shore, at Cakquetay river, which washes the east side of Mount Hope.

Depth of water at the narrows, at Mason's Neck, nineteen feet. The two points are about two hundred feet apart. Above those points there is a most beautiful cove, to form dry docks for small vessels, well calculated both as to land, and water, and situation. A little below the narrows, you can carry twenty-five feet water out to sea. The channel lies nearest Mount Hope. Near Mount Hope it is said there is good marble. From the south end of Prudence, to the north end of Conanicut, said to be three miles distance, and five fathom channel, shoalest place.

North end of Rose Island, Gull Rocks, and southwest end of Coaster's Harbor Island, which are nearly in a line, should all be fortified. Whale Rock bears west and by south from the light house on Beaver Tail, Conanicut Island.

East Ferry Cove, five fathoms, at about three hundred feet from the shore on the north side of the cove; and in a south direction. Sixteen fathoms between Benton's Point and the Dumping Rocks. Goat Island is supposed half a mile long, and about three hundred feet wide.

The depth of water, noted on the plan, was taken at the lowest spring tide at Gaspe Point. King Philip's Chair of State is cut out of a rock under Mount Hope. At the foot is a fine large spring of water.

REMARKS AT BOSTON AND CHARLESTOWN.

In a southwest direction from Doctor Putnam's, at about five hundred feet off, twenty-one feet. The deepest water in that course, six and a quarter fathoms, across the river, at high water.

In an east course from Leech's wharf to Noddle's Island, the deepest water is five and a half fathoms, on the Boston side of the middle ground. The other side of the middle ground, called the Muscle Shoal, four and a half fathoms; and two hundred feet from the island, fourteen feet water; all those soundings hard bottom. A place may be made for docking of timber, between Noddle's Island, Camp Hill, and Wood Island. In a south-southwest direction from Noddle's Island, at a wharf where is a sluice, on the south side of the island, it is about one hundred yards to low water mark, or twelve feet water at high water. About two hundred yards from the island, in the same course, three and a quarter fathoms at high water. In a direction from Noddle's Island to the ship yard at Charlestown Point, from five to seven fathoms water, this direction crosses the middle ground, called the Muscle Shoal; all hard bottom, and taken at high water.

There is a long flat that makes out from Charlestown Point in a south-southeast direction, which turns out, about one-quarter of the way to Noddle's Island, and terminates in a point; it is also in a ——— direction of Doctor Putnam's house.

Good solid rising ground in front of Mr. Putnam's house; but to the northeast of this ground is very low and marshy, and is against the long flats stated above. This low soft ground is about west of the flats, and passes to Mystic river, where there are also long flats.

The deepest water from Charlestown Point, to the north part of Noddle's Island, is thirty-seven feet at high water.

On the north side of Mystic river, against Mr. Williams's house, which is a little above the north side of Noddle's Island, there are long flats running out.

Distance and depth of water, taken at high water, from the west side of the ship building by Mr. Barker, nearly in a south-southeast direction.

698 0 feet from high water mark out there are thirty-nine feet water at high water. At this distance it is hard clay bottom.

Wages at Boston this winter was a dollar and a half per day, in summer it will be one dollar and three quarters, or rather less. White oak plank will cost forty-four dollars per thousand, reduced to inch measure, and so in proportion for four and a half inch planks, which will be one hundred and ninety-eight dollars per thousand for that thickness. The plank for that price is to be square edged, and of best quality. Boston is subject to fogs in the spring of the year. Northwest wind is a foul one. This harbor requires a good pilot; they never leave the port without one.

Twenty-fourth February, moon two days old, tide fell twelve feet—new moon.

Distance and depth of water, taken in a north-northeast direction from the end of the launching ways at Mr. Hart's wharf.

	<i>Feet. in.</i>	<i>Feet. in.</i>

252 feet outside of the wharf are fifteen feet water.

The prize ship to the Boston frigate put into Newport, because they were afraid to make into Boston Bay; she arrived on the 14th February, and did not get into Boston until the 26th.

Plenty of stone may be had at this place. The remaining water may be pumped out by the tide. Boston depends on their neighbors for carpenters.

There is a long flat lying opposite Russell's or Foster's wharf, which is very near bare at every low tide.

Captain Nicholson informs me there was but just room for the frigate Constitution to swing at low water, when she lay opposite the town; she was obliged to fall down to King or President's road, which is just below the castle, to take in her stores, &c. This appears to be a good road for vessels to lay in as an outer harbor, but is below a very principal fortification. This place can contain a very large fleet. The bottom of the river, opposite the town, is very hard, too much so to be good anchor ground. Captain Nicholson was drove up and down by the ice with two anchors ahead.

Nantasket road, which is below King or President road, will contain a very large fleet, where they may lie in safety, as I am informed.

Fort Independence, on Castle Island, will have a good chance of raking a ship either in coming up or going down; when abreast of the fort she must be very much in the power of the fort, as she must pass within point blank shot, and as she passes further on she can be raked. By the time or before she is abreast of this fort, she will be within the reach of a fort which must be erected on Governor's or Block Island, that lies about three quarters of a mile from Castle Island, and a little above it. To pass a fort on that island a ship may be completely raked above and below it, and very much within its reach when abreast, which is within point blank shot.

This island is about one hundred feet above the tide, and nearly fifty feet above Castle Island, of course will command it; if for no other reason, it ought to be fortified, to prevent an enemy from taking possession of it. The main ship channel lies between the two islands. Castle Island should be well fortified on the side next Dorchester neck, because flat vessels, at high water, may lie on the inside, and enfilade the fort with impunity. At high water on these flats there are from sixteen to eighteen feet water.

Dorchester Point is about three quarters of a mile from Castle Island, the hills on the neck are much higher, of course should be fortified, more especially as it has, in some degree, the command of the harbor, and to prevent an enemy from taking possession of it.

The fort on Castle Island is, in my opinion, constructed on too large a scale, and the cannon much too far apart.

On this Island (as well as every other where it could be done) there should be a fixed water battery, as low down as possible; one of this kind will be more certain destruction to an enemy at a greater distance, while the upper battery will prevent a ship from hauling close to it, and driving the men out of it.

It would be well to supply every fortification, where there are wooden buildings, with a fire engine and buckets.

Charlestown and Boston are both very secure from the attacks of an enemy by land, as an enemy would have to pass a very narrow neck of land to obtain possession of either place. Boston Bay is liable to fogs in the spring of the year, which makes it dangerous to enter that port.

On a chart of George's Bank, by Paul Pinkham, he states it to be "the most dangerous coast within the limits of the United States, and which, he fears, has been fatal to the lives of many."

It is stated, by Mr. McClellan of Portland, that all the coast, at and east of Cape Cod, is subject to great fogs, which many times continue for fifteen days. Mr. McClellan is a person of great respectability in Portland, and commander of a ship for many years from the Eastern States.

Long Island should be fortified on the east end, which may be considered the key of the harbor; this head of the Island is supposed to be 100 feet above the tide, and is the highest land on the Island. Deer Island lays about north from Long Island, distance about three quarters of a mile. The channel is about midway between them. Long Island, properly fortified, I am informed, will effectually secure King's road, and the town of Boston.

Nantasket road lies below this Island, and is the only safe place for ships of war to lay-in, in the winter season, when the weather is severe, because they will be much affected by the ice. This is verified by Captain Nicholson.

Distance of the flats, from the end of the wharf, on Noddle's Island to low water mark, is from eight to nine hundred feet. The wharf is extended from the shore about ninety-five feet. The course of the Island, next the town, is N. W. and S. E.

The east boundary line, which may be supposed to contain sufficient ground on Noddle's Island, is in a line from a tree on Snake Island to Doctor Putnam's house in Charlestown. This line is supposed to take in about thirty-five acres of marsh, and forty-two of upland; the upland is divided as it were into two Islands. Camp Hill, supposed to contain thirty acres, and the other which is the N. W. end contains about twelve acres; at this end is the deepest water and the boldest shore.

REMARKS AT PORTSMOUTH, NEW HAMPSHIRE.

Distance and depth of water taken in a south direction, 28th February, 1800, at high water (but which was a low tide) a little below the N. W. corner of William Dannel's Island. At this place there is a deep cove; it is about three hundred feet between the points that project out, and form the cove; this Island is said to contain forty-seven acres of land from high water.

At	1st distance, from inside of cove at high water,	18 feet out,	Ft. In.	
	2d do. do. do.	18 do.	6	hard bottom.

	11th do. do. do.	18	22 6	do.
	12th distance out from high water mark	18	25	gravel.
	13th do. further out do.	18	27	hard rock.
				no bottom at 35 feet.

248 feet; there are more than thirty-five feet water at high water, at which time the above soundings were taken.

Great quantity of stone is in this island, I think sufficient to erect all the buildings that would be wanting for the use of a ship yard, and I believe enough to build a dock, except the steps, which, I am told, can be had dressed at half a dollar per cubic foot at this place.

Sevey's Island, which is called Jenkin's or Trefrethren's Island in the draught, is fortified on its height, that is, rough works thrown up last war; this island should be fortified at Henderson's Point also. The island opposite Sevey's is called Pierce's Island, and is only about one quarter of a mile distant. Works have been thrown up on this island. These islands, well fortified, will effectually protect the harbor. Between those two islands, there is an amazing rapid current, and which is the only ship channel. The fort on Pierce's Island is called Fort Sullivan. The principal part of the workmen reside on the opposite shore from the town, and are as handy to work on Dannel's Island as at Langdon's, or in the town of Portsmouth. This island has several places that will do for docking timber.

I cannot consider the harbor of Portsmouth, above the two islands mentioned before, sufficient for a large fleet, and the harbor below the island, as aforementioned, and fortified, cannot be a secure one. Ships passing in rapid currents are always in danger unless they have plenty of room, which they have not in this port. From all the information I can obtain, this place is never troubled with ice; that vessels may pass up and down at any time in the winter season. This port, they say, is subject to fogs in the months of August and September. See Mr. McClellan's information on the subject, under the Boston head.

An anchor of, I suppose, about thirty-three hundred weight, belonging to the Crescent frigate, lay on Langdon's Island. I believe there are one or two of forty-five hundred weight, in the care of Mr. Sheaf, bought for the Congress frigate. There is also a quantity of kentledge lying at New London, belonging to the United States.

Distance and depth of water at Langdon's Island, taken in a south direction, over a ledge of rocks, taken at about two hundred feet east of his wharf.

198 feet, 26 feet at low water.

Peck has about six acres, for which Colonel Thompson says he asks six thousand dollars. Mr. Peck could not make up his mind about the price. There is a good cove a little above his place, and adjoining it. A large creek runs up on the North side of this place.

A few ships may lay in Kittery's sound; it lays about North of the light house, distant about three quarters of a mile. Here is good ground for anchorage in four fathoms water, and about five hundred yards from the shore.

Each side of the river Piscataqua is bound by rocks from the mouth above Peck's ground, and so are all the islands; many sunken rocks in the bed of the river. There are eight fathoms water at low water in a line from the light

house to the rocks on the other shore, hard bottom all across. The light house is about two miles and a half below the town, and two miles further down you are out to sea clear of land and rocks. The vessels always pass the narrows at slack tide, owing to the great rapidity of the current at other times.

The fort at the light house is very badly planned; an enemy may get under the walls of it, and lay there, and not a single piece of cannon can be brought to bear on them; they can wait their own time to scale the walls, and may easily effect it. The magazine has a considerable quantity of water in it, the drain that was intended to carry it off, perhaps two feet above the bottom of the magazine.

The fort is nearly square, and in very bad order, not a single piece of cannon can be mounted without considerable repair. There is a height Southwest of the fort, which should be fortified, as it perfectly commands it; it is about five hundred yards from the fort.

Fort Sullivan, on Sevey's island, is a very commanding fort; it is near seventy feet above low water, a ship must pass close under this fort.

Fort Sullivan, on Pierce's island, is from thirty to forty feet above low water. These two islands properly fortified, and a boom across from one to the other, will perfectly secure the port.

N. B. From the lower end of Shiply's island you may see through between Dennet's and Sevey's islands.

The rise and fall of the tide 2d March, was 5 feet 6 inches.

Do. do. 3d do. 6 do. 6 do.
Do. do. 20th do. 8 do.

From the best information I can obtain it generally rises eight feet. I am sure it cannot be calculated more. Buildings on Langdon's island belonging to the United States:

One wooden, one story stone, forty-one feet by sixteen feet.

One small shed of rough boards.

One addition made to one of Langdon's stores for the accommodation of the workmen to live in.

It would not be safe for vessels of a large size to pass out very little above Peck's place on account of a large sunken rock which lays near the middle of the river, although there is sufficient water for any ship up to the bridge, which is about eight miles above the town.

REMARKS AT PORTLAND, MAINE.

AT FORE RIVER.

Soundings off from Union wharf at one quarter across, fourteen feet, at one-third over from the town, twenty-seven feet; half way, thirty-four feet in channel, all soft bottom, shoal water and long flats on both sides; one of the wharves is run out one thousand three hundred feet from the shore.

Abreast of Robinson's wharf thirty-six feet in the channel, the channel is one-third of the width from the wharves, thirty-one feet water a little above Clark's Point, narrow channel, twenty-four feet a little above last soundings across the river, next crossing twenty-one feet, next crossing in about west-northwest course to the chimney of Mr. Vaughan's burnt house twenty-four feet; all the foregoing soundings were soft bottom.

Barbary creek is a good place for docking timber, and is opposite to the place pointed out as suitable for a dock, and where the soundings were taken. It is free from all storms, as well as the river at that place. The soundings were taken at about one quarter of a mile below Vaughan's bridge. The bank at this place is supposed to be seventy feet high near its edge, and continues to rise still higher in a north course. The course of the river at this place is nearly east and west, and will give a complete direction for a dock. Between the place of soundings and Clark's Point the deepest water in the shoalest place is twenty-four feet, high water.

The light house is four miles below the town; and the capes four miles further. The narrowest part of Portland sound between the highest house and the town is about one mile wide; in this channel there is sufficient depth of water up to the town for any ships, and a good channel. Hussey's sound sufficiently deep for any ships, and Luckless sound is supposed to be good for any ship. Broad sound, sufficient water for any ship, but difficult passage. Whitehead sound, supposed good water, but narrow channel; all those channels lead up to Portland. The tide runs about two knots. House island may be fortified, and may annoy an enemy in passing up the sound; this place should be fortified on the top of the hill as well as a low situation. From this island to Spring Point is the narrowest passage from the light house to town; Spring Point would assist a fort on House island, but there are a number of commanding eminences, one after another, in a westerly direction, that will command down to the point where a fortification should be erected.

This harbor is often obstructed by the ice; many times in winter persons pass over on the ice, and sometimes on horseback.

Distance and depth of water taken at high water, in a South direction from a place called Mart Beach, about one hundred yards East of a stump on the shore, and about the same distance from a spring of water.

At 1st distance out from low water mark	18 feet	out 15 feet	and 1 foot more mud.

27th do. do.	18 do.	24 do.	do. do.

Tide at Portland, 6th of March, seven feet rise and fall. This morning, 7th March, Fore river was frozen over from the most westernmost wharf up the river. Vessels could sail from the wharf all this day and last night, one

lay in the stream and not affected by the ice. A water battery should be erected on Mountjoy Point, under the guns of the present fort. An east or west wind is a leading wind into the port, or out of it; if at east it will be fair to pass the town, but right ahead on the return, until you open the sound, when it becomes a leading wind out; the west wind has the same advantage in passing up and down the sound, and the reverse in passing the town. In passing up to the town a ship must pass Mountjoy Point within half a mile.

A battery may be raised on a reef of rocks, which runs from Spring Point, and would have more effect upon any ship attempting this port, than at any other place. This fort could only be maintained, while we could command the ground to the southwest of it. This ground has commanding heights for at least one mile, or a mile and a half, in the southwest direction.

Any quantity of stone may be had at this port and hewn for steps, at fifty cents per cubic foot. Portland appears to me to be one of the most thriving ports on the continent; it is said, sixty sail of square rigged vessels belong to it.

The cost of vessels built at this port, when complete for sea, is about forty dollars per ton, Congress measure. Carpenter's wages about one dollar and thirty-three cents per day. Sometimes they are obliged to give that sum and find them, which I believe would be always the case if much work was to be done at Portland, because the workmen are detached, and generally employed in other places. Boarding and lodging is three dollars per week, the same as at Philadelphia. In and about this port, they generally build with black and grey oak, both for plank and timber. No good white oak to be had, under a considerable distance. At this place considerable quantities of fine pitch pine plank may be had, of sixty feet in length, down to forty feet. Price of black oak plank from twenty to thirty-two feet in length, is sixteen dollars per thousand, reduced to inch measure.

There is a fine large cove at the back of the town. Fogs begin and continue from April to August and September.

March 8th. This day six hundred sled loads of boards, scantling, plank, masts, spars, wood, hay, and marketing, came into Portland. This is the time of the year when the greatest quantity of produce is brought to market.

The town of Portland can be very easily fortified, there being but a small neck of land, say about one-eighth of a mile, to unite the two rivers. A sufficient and fine height to protect the town, and within point blank shot of where the passage for the water may be cut, or to prevent any enemy from passing the present neck.

REMARKS AT WISCASSET, MAINE.

March 10th.—This day the tide fell from high to low water, eleven feet; to-morrow full moon.

The situation proposed for a dock yard at this place belongs to Mr. Lee; it contains from forty to fifty acres; it has a high bank, from ten to fifteen feet above high water; it is surrounded by large coves on each side, that on the south side is dammed out, and a large grist mill with two pair of stones, and a saw mill, which I suppose may work half time.

This mill, I think Mr. Wood informed me, cost four thousand dollars; either of the coves will contain an immense quantity of timber. The ground is tolerably even. The coves run so near each other, as to leave but a narrow pass to and from the spot.

Distance and depth of water, taken at high water, at a small pine tree, which grows on a rock about one hundred yards below — point, in a south-southeast direction from the said pine tree.

At 1st distance,	30 feet out,	3 feet 9 inches,	hard bottom.

9th do.	17 do. do. do.	31 do.	do. do.
10th do.	17 do. do. do.	34 do.	do. do.
	17 do. do. do.	36 do.	do. do.

183 feet out in a S. E. direction, 36 feet water. A little further out, it appeared by the lead soft bottom.

The upper end of Jeremy Squaw's Island, which is called Docken Point, is but about half a mile from Folly Point, and about the same distance from Edgecomb. Those three places, well fortified, would prevent any ship from passing into what I call the inner harbor and against the town.

Between the forementioned places, there is a very rapid tide, it is called the Narrows, which I think runs from four to six knots, and makes two very short turns in the channel. Between the Narrows and the town is a very fine harbor, that will contain one hundred sail of the line, and very still water, there being very little current either ebb

or flood; in this basin there are from five to twelve fathoms water at high water, except a small ledge of rocks, which lies in the opening of the channel into the basin or harbor, and a soft middle ground which lies opposite the town; ships may ride in perfect safety; the harbor is so landlocked, that a stranger cannot from the town form any idea of the outlet or course of the river. I am informed the worm does not eat the timber in this port, nor are they ever troubled with ice. This port lies about twenty miles up the Sheepscut river from its mouth. There is a communication between this river into Kennebeck river; in this passage the tides of the two rivers meet, and are called Hell Gate; this place is considered dangerous to pass except at the change of the tides.

There appears to be plenty of good stone for docks along the banks of the river.

In a course from General Wood's wharf to the Narrows, there are fourteen feet water at low tide on a middle ground of soft mud; between this middle ground and the General's wharf, forty-nine feet; and between the middle ground and Folly Point, thirty-six feet six inches; there is the same depth of water continued to within about two hundred feet of the point. The width of the river at this place is about one mile.

Trask's cove is a fine cove for ships to lie in; there are seven fathoms within one hundred and fifty feet of the shore. This cove seems to form the head of the river in coming up; at this place it makes a short turn to the N. W. into the harbor before the town; in this turn is what they call the Narrows, which is supposed to be half a mile wide. A fort erected on Decker's Point, one on Folly's Point, and one on the shore eastward of Decker's Point, will effectually protect Trask's cove, and prevent any ships from entering the inner harbor.

The course of the river is generally N. and by E. and S. and by W. and about half a mile wide from Fowle's Point up to Decker's Point. Harrington's cove, which is about two miles below the Narrows, is convenient for ships to ride in, being from five to eleven fathoms at high water.

The shore is generally very bold on the west side of the river; the distance from the shore is about the depth out to seven fathoms. Vessels may pass this shore in some places where their yards will touch the rocks and trees; in one place there are eight fathoms water in not more than twenty feet from the shore.

At a place called Dogget's castle, there is a parcel of rocks, which are nearly perpendicular from forty to fifty feet, and the top of those a little further back must be upwards of one hundred feet, above high water; there are ten fathoms within fifty feet of the rocks. A ship of the line may lie along side of those rocks, and moor as if along side of a pier.

Rum cove, which is about a mile below Harrington's cove, has from four to eight fathoms at high water. Parson's and Jewitt's coves, which are in sight of the sea, and about fifteen miles above Seguin light house, are both good harbors.

Cross River mouth is just at Parson's cove, on the east side of the river; in this river I am informed you may carry up five fathoms water at low water for near three miles, where vessels may ride in perfect safety, if they conceive the before mentioned coves are not sufficient.

From Fowle's Point to Cross Point, about three-quarters of a mile. Forts erected on these points, which are rather distant from each other, yet they can rake a ship for a considerable distance, and they must come right on. If Cross Point should be thought sufficiently close, there is another site for a fortification a little further up; in fact, this place can be as easily and as cheaply fortified as any other port in the United States N. E. of New York. There is hardly a part of this narrow river but what can be effectually fortified.

A S. S. W. course will take you out to sea without any alteration from the bend of the narrows.

Ships laid up in Trask's eddy, or cove, may moor in seven fathoms water, at high water, within one hundred and fifty feet from the shore, and fasten to the trees.

The neck purchased by Mr. Lee, proposed for a dock yard, for one thousand dollars, and Mr. Wood supposed the mill and dam cost four thousand dollars.

Hand-sawed plank, at Wiscasset, of yellow bark oak, which is considered by the people of this place inferior to white oak, and at the same time state it to last from ten to fifteen years.

Vessels built at this place cost about forty dollars per ton, complete for sea; they are composed of yellow bark, oak, birch, maple, beech, &c.

Carpenter's wages at one dollar thirty-three cents per day; sometimes merchants are obliged to give that price and find them; board is three dollars per week.

Directions for sailing from Cape Cod and Cape Ann into Boston Bay.

Cape Cod to Boston light house, W. N. W. from Race Point; into Cape Cod Harbor, S. by E. two and a half miles to Wood End; thence, S. E. by S. two and a half miles; thence, N. by E. one-half E. one-quarter of a mile; thence, N. W. one mile, to anchorage in the harbor.

From Race Point to Plymouth light house, W. S. W. one-half W. between five and six leagues; thence, W. S. W. about two and a half miles up to Saguis.

From the Gurnet, to clear Cohasset rocks, N. by W. about six and a half leagues. Soundings off Brant rock, five fathoms; abreast of North River, nine fathoms; abreast of Scituate Point, six fathoms; abreast of Glade's, thirteen fathoms; abreast of Cohasset rocks, nine to ten fathoms.

From Cohasset rocks to Boston light house, N. W. till you come up with the Hardens, about five miles; thence, W. S. W. about two and a half miles to said light house.

From Boston light house into Nantasket road, W. by S. till you come up with the S. point of George's Island, two and a half miles; thence, W. N. W. about one-quarter of a mile; thence, N. W. one eighth of a mile, which will be a good roadstead.

To the Westward of George's Island.

From Boston light house, to go in by the spit of sand through the Narrows: first, W. Southerly, until you get up with the beacon, which is on the western end of the spit of sand; then, N. W. by W. till you get up with Gallop's Island point; thence, N. W. half W. till you get abreast of Nix's Mate; thence, W. till you get up with the northern part of Spectacle Island; thence, N. W. by W. till you get up with the castle; thence, N. W. by N. till you get up with the western part of Governor's Island; thence, N. W. by W. till you get within about a mile of Boston; thence, N. W. which brings you to anchorage off the town.

Courses and distances from Cape Ann Harbor to Half-way Rock, and to Boston Light House, and from Half-way Rock to Marblehead Rock, and from Marblehead Rock to Boston Light House.

From Easton Point, off Cape Ann harbor, to clear Half-way Rock, S. W. by S. two leagues; thence, S. S. W, half W. eleven miles, to Boston light house, clear of the Brewster.

From Half-way Rock to Marblehead Rock, N. W. by W. four miles.

From Marblehead Entering Rock, to clear the Graves and outer Brewster, S. by W. ten miles; thence, W. by S. two miles, to abreast of Boston light house.

7th CONGRESS.]

No. 28.

[1st SESSION.

NAVY YARDS AND DOCKS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 27, 1802.

Mr. MITCHELL made the following report:

Further report of the committee to whom was referred so much of the President's message of December the 8th, as relates to naval sites and naval preparations.

An act was passed on the twenty-fifth of February, one thousand seven hundred and ninety-nine, authorizing the expenditure of fifty thousand dollars, by the President, for the construction of *two* docks for the convenience of repairing the public ships and vessels. This law does not appear to have been executed, and the money appropriated to the purpose returned to the general fund.

The committee find that *five* sites for docks and navy yards had been purchased prior to the twelfth day of January, one thousand eight hundred and one, as appears by the report of Benjamin Stoddert, the then Secretary of the Navy, of that date, made to a committee of Congress, to wit: at Portsmouth, Charlestown, (Mass.) Philadelphia, Washington, and Norfolk; and that measures had been taken to procure ground at New York for a *sixth* site of a capacious building and dock yard. This purchase, your committee find, was completed some time prior to the third day of March, one thousand eight hundred and one.

The committee also find, that the purchases of these *six* sites, with the expenditures thereon, had cost, prior to the third day of March, one thousand eight hundred and one, the following sums, that is to say:

Purchase of ground at Portsmouth,	-	-	-	\$5,500
The like at Charlestown,	-	-	-	40,000
The like at New York,	-	-	-	40,000
The like at Philadelphia,	-	-	-	37,000
The like at Norfolk,	-	-	-	12,000
The like at Washington,	-	-	-	4,000
				<u>\$138,500</u>

Whereby the sum of one hundred and thirty-eight thousand and five hundred dollars had been laid out in these purchases, during the latter part of the term of four years preceding the fourth of March, one thousand eight hundred and one.

On the said grounds, the committee find that money had been expended for buildings and improvements of different kinds, before the fourth day of March, one thousand eight hundred and one, to the following amount:

At the City of Washington,	-	-	-	\$42,023 91
At Portsmouth,	-	-	-	14,507 01
At Norfolk,	-	-	-	4,000 00
				<u>\$60,530 92</u>

Making an expenditure of the gross sum of sixty thousand five hundred and thirty dollars and ninety-two cents.

The committee has examined, with great care, and cannot find any law authorizing the purchase of any sites for navy yards or buildings; nor any law appropriating money either for their purchase or improvement, prior to the third of March, one thousand eight hundred and one. On that day, it appears by the act making appropriations for the navy of the United States, for the year one thousand eight hundred and one, that, for the *expenses at tending six seventy-four gun ships*, and for *completing navy yards, docks, and wharves*, the sum of five hundred thousand dollars was appropriated.

Out of this fund, it appears that the Navy Department has commenced improvements in some of the navy yards, and continued them in others.

Upon the whole, the committee find that, prior to the fourth of March, one thousand eight hundred and one, the sum of one hundred and ninety-nine thousand and thirty dollars and ninety-two cents have been expended in purchasing navy yards and making improvements upon them, without any law authorizing the purchase, or any appropriation of money, either for purchase or improvements.

2d SESSION.

NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 20, 1802.

NAVY DEPARTMENT, December 17, 1802.

The Secretary of the Navy, the Secretary of the Treasury, and the Secretary of War, Commissioners under the "Act for the better government of the Navy of the United States," respectfully report to Congress:

That, since the 31st of December, 1801, the date of their last report, there has accrued, and will accrue to the end of the present year, for interest and reimbursement of the principal of the debt of the United States, belonging to the fund for satisfying navy pensions, the sum of five thousand eight hundred and eighty dollars twenty cents, which, added to the sum of three thousand five hundred and seven dollars forty-one cents, being the balance unapplied at the end of last year, forms an aggregate of nine thousand three hundred and eighty-seven dollars sixty-one cents, as exemplified in the annexed statement, marked A. That the pensions of the persons on the invalid list of the naval establishment; which have been paid, or are in a course of payment, for the same period, amount to the sum of three thousand two hundred dollars and thirty-seven cents, as appears by statement B; which, being deducted from the amount of interest and reimbursement, as above stated, leaves a balance unapplied of six thousand one hundred and eighty-seven dollars twenty-four cents.

That there has been received from the treasury, of moneys arising from the sales of prizes, including one thousand nine hundred and twenty-three dollars forty-five cents, previously on hand, the sum of forty-two thousand five hundred and sixty-two dollars eighty-nine cents, for the investment of which in stock of the funded debt of the United States, or in bank stock, measures have been taken; and it is intended to invest, in like manner, the unap-

plied balance of interest and reimbursement, with the reservation of a small sum in the treasury, to meet eventual demands of applicants for pensions.

For, and in behalf of the Board,

ROBERT SMITH.

To the SPEAKER of the House of Representatives.

A.

Abstract of Interest, and the reimbursement of the Principal of the debt of the United States, belonging to the fund for the payment of Navy Pensions, for the year ending 31st December, 1802.

[2d SESSION.]

DRY DOCKS.

COMMUNICATED TO CONGRESS, DECEMBER 28, 1802.

Gentlemen of the Senate and of the House of Representatives:

In my message of the 15th instant, I mentioned that plans and estimates of a dry dock, for the preservation of our ships of war, prepared by a person of skill and experience, should be laid before you without delay: these are now transmitted; the report and estimates by duplicates, but the plans being single only. I must request an inter-communication of them between the Houses, and their return when they shall no longer be wanting for their consideration.

TH: JEFFERSON.

DECEMBER 27, 1802.

NAVY DEPARTMENT, 8th December, 1802.

SIR:

I have the honor to enclose two copies of a report made to me by B. H. Latrobe, Esq. on the subject of a dry dock at this place, of a size sufficient to contain twelve frigates of forty-four guns, in which report he mentions the site that would, in his opinion, be the best; the works necessary to be erected, accompanied by drawings, the means of supplying the dock with water, and the probable period it would take to complete the works, to which he has subjoined the necessary estimates, exhibiting the probable cost.

I also enclose two copies of a report made to me by Captain Tingey, in pursuance of instructions to examine the streams of water in the neighborhood.

I have the honor to be, with the greatest respect and esteem, sir, your most obedient servant,

RT. SMITH.

The PRESIDENT United States.

WASHINGTON, December 4, 1802.

SIR:

In conformity to your instructions, I repaired to the city of Washington, and have, since my arrival, devoted my best attention to the several objects committed by you to my consideration; I now beg leave to submit to you the result.

I. Site of a Dry Dock or Naval Arsenal.

The principle of a dry dock or naval arsenal, in which twelve frigates of forty-four guns could be laid up, had been already so far matured by the President of the United States, before my arrival, that I have only to lay before you a description of the situation in which it can most advantageously be erected, and designs and estimates of the works which are necessary to carry it into effect.

The harbor of the Eastern Branch of the Potomac has, in almost every part, a bottom of mud, into which the wharves which have been erected sink to a great depth, and which affords, in very few places, a prospect of a good building foundation at a moderate depth and expense. But at the end of the street marked 9 east of the capitol, which bounds the navy yard to the east, a spot of hard gravel runs out near to the channel, which promises to furnish a solid foundation for the erection of the first lock necessary to raise the ships into the dock; another circumstance points out this spot as advantageous: a valley runs up in the direction of the street, the greatest part of the distance to which the works must be extended. This will save more than half of the digging which would otherwise be necessary. To render the situation as advantageous as possible, it will be requisite that the streets should be vacated so far as the square in which the Virginia and Georgia avenues intersect each other, and to purchase the squares east of the street No. 9 as far as No. 10. But should any objection occur to the vacating of the streets to such an extent, or to the terms on which the lots could be purchased, the plan herewith submitted may be executed at nearly the same estimated expense by vacating the streets only to the extent of the navy yard, according to its present limits, and by placing the arsenal at right angles with the locks, extending the same from east to west. A circle is marked on the plan, representing a turning dock, which would also be useful as a repairing and graving dock for three frigates, if necessary to execute the same. Its expense is included in the estimate herewith submitted. Should this mode of executing the plan be adopted it will render the purchase of only one hundred feet by two hundred and fifty feet necessary, to the eastward of the street No. 9, at the distance of about four hundred feet from the present shore. As, however, this plan has many disadvantages, it will be to be considered in how far the present purchase of the eastern squares could be effected by the sum which the erection of the turning dock will require; for if the arsenal be in a line with the locks, the erection of the turning dock may be well postponed until the extension of the arsenal or the construction of repairing or graving docks be found necessary. And should great part of the navy yard be occupied by the arsenal, the space which ought to be open for the erection of store houses, will not only be much curtailed but their situation deteriorated. If the eastern squares be obtained, a range of store houses, east of the locks, will not only enclose and protect the works, but be in the most advantageous situation for the delivery of the stores to the ships as they arrive from the arsenal at the pier heads. For the perfect comprehension of the situation, I beg to refer to the maps of the city.

II. Works necessary to be erected.

The first works to be erected are two locks, of twelve feet lift each. The lowest of these locks being sunk twenty-three feet below high water, receives the ship from the channel of the harbor. The lower gates being shut, the lock is filled by water from the upper lock, until it rises to the height of twelve feet above high water, at which level the vessel will find twenty-three feet of water in the upper lock, into which she then enters. The water in the upper lock being then raised twelve feet higher, the vessels will be admitted to the dry dock or arsenal into twenty-three feet of water: her keel being then (if she draw twenty-three feet) one foot above high water mark. Whenever the number of vessels intended to be docked, or laid up, have been raised into the dry dock by this process (which is more fully explained by the model which I shall in a few days submit to you) all the water is permitted to discharge itself into the harbor, and the vessels being properly shored, as the water leaves them, settle upon the blocks which are prepared upon the slips marked in the drawing No. 2, fig. 1. It is very evident, to use the words of the President's letter to me, "that a vessel thus secured from the weather from above, and placed with her keel one foot above high water mark, may be perfectly drained, and rendered as safe against decay as the internal timbers of a house." In order to get rid of the foul air which is the most rapid cause of rot, and also perfectly to drain the vessels, it may be necessary, on laying them up, to take off one strike on each side, on each floor below the gun deck, from stem to stern. In this dock a vessel may be built or repaired at leisure; a single vessel may be docked for repair between the dry dock and the locks; without filling the dry dock.

The naval arsenal, as appears by the drawing hereto annexed, is to be so constructed as to admit the free passage of the air from every quarter. It was essential that it should be permanent in its mode of construction, and secure from fire. The walls are therefore of solid masonry. For so extensive a span without a pillar, no better roof could be adopted than that recommended by the President, and of which he has furnished me with the model, namely, that of the Halle au blé or corn market, at Paris, an incombustible roof; that, covered with painted or varnished sheet iron, is certainly the cheapest, and I think the best. The drawings and estimates are therefore calculated for such a building and roof. As to the ornamental parts of the design they are not included in the estimate, nor are they within the compass of the arts in America at present.

III. The means of supplying the dock with water.

In the letter of the President to me, two modes of supplying the dock with water were submitted to examination. 1st. From the Potomac canal. 2d. From the Tiber.

1st. There cannot be one moment's hesitation as to the abstract merits of each of these methods of supply. The Potomac canal may be brought by continuation from the locks at the Little Falls through Georgetown, to Rock creek, and through the city to the navy yard. This canal would not only fill all the works in twelve hours, but convey to the navy yard all the timber, stores, and provisions, which the whole range of the upper navigation of the Potomac could supply, comprehending not only a great part of Virginia and Maryland, but also a very considerable portion of the most fertile western counties of Pennsylvania. To this part of the subject I have paid particular attention, and have fully digested a plan which appears to me the best, and, perhaps, under all the circumstances of the property, and the levels of the ground in the city, the only feasible means of accomplishing such a navigation. Being, however, instructed by the President, to separate the consideration of this project from my present report, on account of its large expense, I will only mention here, that the plan of a company, either by way of extension of the old Potomac canal company, or of a new company for this separate object, has been suggested, which, if formed, under the sanction of the Legislature, would give to the nation all its advantages both as to the docks and the supply of stores, on no worse terms than those on which private citizens would obtain its commercial facilities.

2d. *The Tiber.* Captain Tingey and Mr. King, by your orders, have measured and levelled the ground between the hill on the Tiber which belonged to the late Mr. Nodley Young, and also between the spring known by the name of Stoddert's spring and the navy yard. I have proceeded in my calculations of the expense of bringing the water of the Tiber to the navy yard, upon their survey. The correctness and fidelity of Mr. King, as a surveyor, are well known, and may always be depended upon. I have also carefully gone over the ground with a view to its quality, and to the best line of conducting the water. Nothing can be more easily effected than the canals, the whole of the ground being remarkably easy to be dug. At the navy yard, however, no more than a head of twenty-four feet above high water is wanted, while the head of water of Young's mill is forty-six feet seven inches, and the

level of Stoddert's spring is thirty-two feet three inches above high water. This difference of elevation, while it offers the advantage of large reservoirs to contain a sufficient quantity of water to fill the docks rapidly, renders it necessary to construct works of some expense to hold up and discharge the water in such a manner that it shall not destroy the banks of the canal by its rapidity, and fill the docks with the earth and sand brought down by the stream. For this reason, a dam, wear, and sluice, at Young's mill, must be built. The sluice to discharge the water from the reservoir in order to cleanse it, the wear to prevent injury to the works in time of heavy rains, and the dam to hold up a considerable body of water at all times. The works at Young's mill must be so constructed as to lower the water at once to the level of Stoddert's spring, by means of a sluice, which shall be capable of being so regulated as to keep a constant slow stream in the canal to prevent stagnation, or to discharge into it the whole of the water necessary to keep the canal full, when the sluice which fills the dock shall be drawn. The reservoir on the Piney branch must be nearly on a level with Stoddert's spring, below which, on the most convenient place, another weir and sluice must be erected to lower the water to the canal which supplies the dock. The last sluice must be at the dock itself, where no wear is required, as it will be constantly under inspection. The whole quantity of water required to fill the works at the dock, is three millions five hundred and fifteen thousand two hundred cubic feet. If the quantity of water yielded by the Tiber and Stoddert's spring, at the time of Captain Tingey's survey, (see his report) were not made to accumulate in reservoirs, it would require a month (twenty-nine days) to fill the dock and locks, allowing nothing for evaporation and soakage: for the joint streams yield only one hundred and twenty-five thousand and eighty-eight cubic feet in twenty-four hours. But, by collecting the water at Young's mill, and in the reservoir on the Piney Branch of Tiber, and by making the canal of large dimensions as proposed, namely, sixteen feet on the surface, six at the bottom, and three feet deep, the works may be completely filled in three days.

The expense of these works is annexed in estimate No. 2.

IV. *The time of completing the works.*

Should the works be undertaken immediately, while the very numerous skilful and experienced workmen, who have been collected and in part educated in the execution of large and difficult works at the Pennsylvania bank, and the works for supplying the city of Philadelphia with water, are within reach; I have not the smallest doubt that the assistance of those collected in the city of Washington, and in a tolerably favorable season, a frigate may ascend the locks and be placed above high water mark before the end of the year 1803, and that the naval arsenal may be completed before the end of the year 1804. The supply by means of the Tiber may probably be effected in the year 1803; but if not, the locks only may be filled in December, 1803, by means of the pumps employed in their erection, in three days. The Potomac canal could not be completed before the end of the year 1805, but would, by that time, with tolerable seasons, discharge itself into the dock.

I need not mention to you, sir, that the operations of the ensuing year depend in a great measure upon very active preparations before the first of March; by that time, every good workman has usually planned and engaged in the employment of the season.

In respect to the estimates, I must beg leave to remark, that, as to the rate of charge for materials and workmanship, they are founded upon the experience of expense in works in Philadelphia, the nature of which is similar, and as far as they are designated and described in the drawings, I trust that no material difference will arise. There are, however, two points of expense upon which I must make an observation. The first is, the price to be paid for land, on which it is impossible to be at present informed, and in which it is easy to commit a mistake; the other is the uncertainty of the foundations below the bed of the harbor, for though there is no indication of a failure of solid foundation at the place at which the lower lock chamber is proposed to be founded, yet, as the rest of the bed of the river is muddy, it is possible that mud may be found below the gravel, in which case, piling to the extent of perhaps ten thousand dollars may be necessary.

With these observations, I submit to you the result of my attention to your instructions, and hold myself in readiness to offer such additional information and explanations as you may please to command.

I am, with true respect, your faithful humble servant,

B. H. LATROBE.

To ROBERT SMITH, Esq. *Secretary of the Navy.*

ESTIMATE OF THE LOCKS.

20,160 yards earth to be removed to make the flanks of the coffer dam, digging and carting,	at 30 cts.	\$6,048 00
Coffer dam, framed, piled, and puddled, if rated agreeably to the actual cost of a similar dam, erected at Philadelphia, which measures two hundred and ninety-two thousand eight hundred cubic feet, and cost in labor, machinery, and all materials, thirty thousand dollars nearly, it would stand in ten cents per foot.		
54,000 feet cube of dam,	at 10 cts	5,400 00
Digging below high water mark.		
29,756 yards lower lock pit,	at 25 cts.	7,439 00
14,878 yards upper lock pit,	at 25 do.	3,719 50
14,875 yards above high water,	at 15 do.	2,231 70
This will account for all the digging of the lock and turning dock: for the amount accounted to the flank dams will come out of these places.		

WALLING.

384 perches in wings,	at \$3 00	1,152 00
4,992 perches in piers and round the gate recesses,	at 4 00	19,968 00
Faced with Aquia stone above high water; and the whole bedded and jointed in faves.		
2,932 perches lock chamber, in common stone,	at 3 50	10,262 00
1,579 perches above, in ashler,	at 5 00	7,895 00
2,240 perches gate and sluice walls to upper locks,	at 4 00	8,960 00
1,579 perches lock chamber, below high water,	at 3 50	5,226 00
2,932 perches lock above, in ashler,	at 5 00	14,660 00
2,956 perches in the turning dock,	at 5 00	14,780 00
4,836 perches gates to the dry docks and arsenal,	at 5 00	24,180 00
1,896 perches paving in lock chambers and gates,	at 3 00	5,688 00
2,660 feet cube, at twenty-five cents, labor and workmanship in each of six pair of gates,	\$665	
2,000 pounds iron work,	at 20 400	
		1065 6,390 00

12 sluices,	at 150 00	1,800 00
Pumping, being the expense incurred in a similar work in Philadelphia,		3,000 00
Scaffolding and utensils,		10,000 00
		\$152,699 00

To this sum must be added ten per cent for incidental expenses of direction, superintendence, office expenses, and other small charges, impossible to be foreseen or enumerated,

		15,269 00
Total,		<u>\$167,968 00</u>

NAVAL ARSENAL.

13,703 perches in the dock,	-	-	-	at \$3 50	-	\$47,960
21,210 perches above,	-	-	-	5 00	-	106,050
8 capitals,	-	-	-	200 00	-	1,600
There is nothing about the building but plain masonry, faced with Aquia stone, excepting only the cornices of the piers and the capitals of the columns; five dollars per perch is a good allowance for the whole of the work, including arches, the small quantity of moulded work which is in the piers, and for the stairs, which have been measured as solid.						
1,374 squares of compound ribs, labor, nails, and all materials, including sheeting,	-	-	-	at \$10 00	-	13,740
1,374 squares of sheet iron roof, laid down and painted,	-	-	-	20 00	-	27,480
Scaffolding and utensils, beyond what has served for the locks, say	-	-	-	-	-	5,000
Add ten per cent. for incidental charges, as before;	-	-	-	-	-	20,183
Total,					-	\$222,013

B. HENRY LATROBE, *Engineer.*

WASHINGTON, December 4, 1802.

Estimate of the expense of supplying the Canal by means of the Tiber and Stoddert's spring.

Yards.	Perches.	Items.	Dollars.
	720	Masonry, sluices, and wears, at Young's mill,	at \$5 00 - 3,600
	360	At the second reservoir on Piney Branch,	5 00 - 1,800
7,200	-	Dam at Young's mill,	25 - 1,800
9,680	-	Canal,	15 - 1,452
17,500	-	Dam at Piney Branch, second reservoir,	20 - 3,500

NAVY YARD, WASHINGTON, October 22, 1802.

SIR:

Conformably to your letter of instructions of the 13th July past, I proceeded, without delay, to examine the streams of water, &c. mentioned therein. On this business I availed myself of the assistance of Mr. Nicholas King, a judicious and accurate surveyor, and have now the honor to communicate the result.

The first spring to which you refer, by the name of Young's, is known generally and more particularly as Mr. Stoddert's. This spring rises at thirty-two feet three inches above the level of high water mark (spring tides) in the Anacostia or Eastern Branch. The quantity of water discharged from it is thirteen hundred and twenty-four cubic feet, or forty-nine cubic yards and one foot, in an hour. To convey this water to the navy yard, a channel or race must necessarily be cut in the face of the hill or bank which margins the Eastern Branch, and of necessity so nearly level as only to allow a current sufficient to overcome slight obstructions, and prevent the water from stagnating. The length of this race, from the head of the spring to the navy yard, would be about three miles and one-eighth: for, in ascertaining the levels, we measured a line exceeding two miles and one-quarter, to which, in our judgment, one-third should be added for passing the heads of certain valleys or ravines which occurred in its course. This race would course generally along the side of gravelly banks or hills, and some part of the water will consequently be lost by absorption; yet, as there are two or three lesser springs in this distance, the waters of which may with ease be brought into the race, it is presumed that the full quantity which runs from the head spring will be delivered at the navy yard.

To ascertain the fall and quantity of water discharged by Tiber creek, we levelled along its meanders to the mill belonging to the estate of the late Notley Young, Esq. and found the water in the race below the wheel twenty-nine feet five and three-tenth inches above the high water in the Tiber and Potomac. The wheel being overshot, the water in the race above it is forty-six feet seven and three-tenth inches above the high water mark aforesaid. The quantity of water which passes down the Tiber at this mill (though it was a dry season) we found equal to one hundred and forty-four and forty-four hundredth cubic yards in an hour. To bring the water of the Tiber from this mill to the navy yard, in an open channel, two courses may be pursued. One by tracing the level line, or nearly so, until it passes the upper end of the Piney Branch of the Tiber, then continuing across the low and nearly level ground to Stoddert's spring; there falling into, and blending with the water of the first mentioned race to the navy yard. In this case, the distance to cut would be from the mill to the spring, one mile and six eighths; thence to the navy yard, three miles and one-eighth, as aforesaid. The other course would be the same until it crossed round the head of Piney Branch; then continuing the level, westward, along the face of the hill, and coming round by the capitol to the navy yard, a distance of four miles and a half.

When the water is sufficiently high to admit the boats to navigate between the Great and Little Falls of the Potomac, to the locks of the latter, it is then thirty-one feet and four and two-tenth inches above the high water in the river.

The distance between the canal, at the Little Falls, and the navy yard, as the race would be obliged to course, would be eight miles, making use of aqueducts to convey the water over the stream at Mr. Foxall's furnace, over Rock creek, and over the Tiber, near the capitol; namely, two miles and seven eighths from the locks to Rock creek bridge, and thence, five miles and one eighth through the city to the navy yard.

The season, as is before intimated, was, at the time this survey was taken, extremely dry, and the quantity of water in the Little Falls canal consequently small; not so high by two feet as when the boats pass along it. Thus, allowing for dry seasons, the height of this canal above high water may not be reckoned more than twenty-nine feet, for the purposes contemplated by this survey.

In the event of using the waters of the Tiber and Stoddert's spring, it would be eligible for the purpose of speedily filling the dry docks, to have a large reservoir, of capacity sufficient to contain two fold, or upwards, of the cubic contents of the docks, for which it would, probably, be necessary to purchase the mill (late Notley Young's) and some convenient ground adjacent. On inquiry relative to this subject, I understand that, for the purchase of the mill, and six acres of ground adjoining, the sum of about four thousand dollars will be expected.

I have not yet learned from Mr. Carroll the price he means to affix on the ground on the Eastern Branch, most convenient for cutting the docks. But I feel firmly persuaded that, in case of a very extravagant value being laid thereon, it would be full as eligible (if not more so) to make use of a part of the navy yard, to the westward of the warehouses, which, being already public property, and of capacity sufficient for the purposes contemplated, will preclude the necessity of stopping any other of the streets of the city, which, in the event of making use of Mr. Carroll's ground, must inevitably take place, and which circumstance might furnish specious pretexis to disaffected persons to oppose the whole.

I forbear making any calculation on the probable expense of digging and completing the canals for the conveyance of the waters to the navy yard, as you are in possession of superior data, for the purpose, than any I am capacitated to give.

I have the honor to be, with much respect, sir, your obedient servant,

HON. ROBERT SMITH.

THOMAS TINGEY.

Extract of a letter from B. Henry Latrobe to the President, dated

PHILADELPHIA, December 15th, 1802.

"SIR:

Captain Dale, of the United States' navy, called upon me this morning, and, in conversation upon the naval arsenal, or dry docks proposed by you to be erected at the Federal City, which he most warmly approved, he informed me that the Swedish Government had lately conceived the idea of adopting the same means of preserving their navy in times of peace. The Swedish Admiral Soderstrom described to him the situation of the dock, which was then in the progress of construction. It was intended to contain eight ships of seventy-four guns, and another was projected to contain twelve, in all making provision for twenty ships of the line. The situation was remarkably favorable. Deep water, close to a perpendicular rock, which can be easily wrought, gives the opportunity of excavating the dock; the rock forms the wall, and the roof is laid over at such a height that the ships go in with their lower masts standing. Captain Dale did not exactly know how the ships were worked into the dock, but from his description of the situation, I presume they are tide docks. Admiral Soderstrom said, that the vessels were to be washed with fresh water, perfectly drained, and opened to a circulation of air, and that he had no doubt of their remaining in perfect repair in the dock for a century, and gave many reasons for his opinion, which were convincing."

[2d SESSION.

PRESERVATION OF TIMBER.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 7, 1803.

NAVY DEPARTMENT, January 6, 1803.

SIR:

In obedience to the resolution of the honorable the House of Representatives, of the third instant, calling for information as to the situation of the timber deposited in the navy yards of the United States, for the purpose of building ships of war, and whether, in order to preserve the same, it should not be covered with sheds,

The following report is respectfully submitted:

Under the impression that adequate means ought to be provided for the effectual preservation of the timber of the United States, deposited, and to be deposited, in the navy yards, amounting, in value, to the sum of \$580,000, I sent to the several navy agents a circular letter, bearing date February 22, 1802, which, among other subjects, contained the following instruction:

"It is presumed that all the public property committed to your care, but more especially the timber, will be kept in a state of due preservation. This is an article of such immense consequence, and may suffer so much for want of care, that no pains or expense ought to be spared to season and preserve it in the most effectual manner. You will please to state the situation of all the timber in your custody."

After I had received, in answer to this letter, the reports of the navy agents, stating the situation of the timber in their respective navy yards, and after the passing of the act of Congress, entitled "An act making an appropriation for the support of the navy of the United States, for the year one thousand eight hundred and two," the following circular letter, dated the 20th of May, 1802, was sent to the navy agents at Portsmouth, Boston, New York, Philadelphia, and Norfolk.

"Such of the timber as is not entirely covered with water, must be immediately put under a shed; and, if necessary, a shed may be built for that purpose.

"We cannot allow you for the erection of a shed, should it be necessary to erect one, a sum exceeding two thousand dollars. The shed, however, should be so constructed that it may be enlarged at pleasure.

"You may draw on me for this sum, for this object; but our appropriations will not admit of a cent beyond it."

And in reply to these letters, the following reports have been received, viz:

PORTSMOUTH, October 14, 1802.

"The shed is finished; it is a very good one, and as cheap as I could possibly procure it done. The plank, the wall pieces, and other thick stuff, are all completely housed, and it will be unnecessary to build any more sheds, unless all the timber in the docks was put into sheds, the cost of which would be very considerable."

BOSTON, June 22, 1802.

"I beg leave to observe that all the live oak timber, which has been delivered into the navy yard, here, (excepting three loads received this month) has been covered from the sun and weather under a building and shed erected for the purpose. No part of it has, at any time, been docked, or touched with sea water. Another shed is now preparing to cover the freights lately received, and the remaining quantity to be delivered here. The timber and thick stuff exposed to the sun and weather, in the basin, at low water, is oak and pine."

NEW YORK, 1st of June—29th July, 1802.

"The necessary directions for securing the timber, (agreeably to your letter of the 20th of May) I have given to the carpenter of the yard, and every expedition is making to its completion. Two vessels, with timber, have arrived from Georgia, for the seventy-four gun ships; all which, together with what was on hand, is perfectly secured from any injury, being well docked."

PHILADELPHIA, June 22, 1802.

"The shed would cost \$2,800, and the expense of hauling, exclusive of laborers, \$160 to \$200, exceeding the appropriation at least \$1,100. I, therefore, with the best advice I could obtain, determined on levelling the timber, in its present situation, and getting it into the water, as far as possible, with safety, and then covering the whole with boards, to be secured to the timber, and in addition, to be kept down with some old iron ballast. Two respectable ship-wrights, Messrs. Bowers and Hutton, are of opinion that it will not only be as well, but better preserved than by shedding. The expense will not exceed \$200. For the preservation of the white oak, (gun-carriage stuff) yellow-heart pine boards, and cedar, I have taken a shed in the yard. For the live oak expected, I shall erect a shed."

NORFOLK, 27th of May, and 8th of June, 1802.

"We have no timber in the yard entirely covered with water. The greater part of that which lately lay in the dock has been drawn out, and we are now busily employed in removing the remainder.

"After making every possible arrangement at the navy yard, for the preservation of the public property, it is now my intention to visit my family in Jefferson county. At present it may perhaps be only necessary to say that things are in such a train as to admit of my absence for a time, it is thought, without the smallest inconvenience or detriment to the public service."

The timber at the navy yard at Washington is principally docked, and, for the present, it is thought, is in a state of security and preservation.

From the arrangements that have thus been made, my opinion of the necessity of sheds, for the preservation of the timber of the United States, is apparent, and this opinion is confirmed by universal experience. Among practical men, there exists a difference of opinion as to the time when sheds ought to be used. Some are of opinion that the timber ought to remain immersed in water, for a certain period of time, before it be put under sheds. Others think that it ought not to be previously deposited in water, but that it should, in the first instance, be placed under cover. All, however, agree that, without sheds or roofs, timber cannot be completely seasoned and preserved.

I have the honor to be, with great respect, sir, your most obedient servant.

R. T. SMITH.

The Honorable the SPEAKER of the House of Representatives of the United States.

7th CONGRESS.]

No. 32.

[2d SESSION.

DRY DOCK AT WASHINGTON.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 10, 1803.

Mr. MITCHILL, from the committee to whom was referred so much of the President's message as relates to our navy yards and the building of docks, reported two resolutions, providing for the safe keeping of timber, frigates, and other public property:

1st. *Resolved*, That, for securing from waste and loss the timber and other public property in the different navy yards, and towards improving the same for the greater despatch of business, the Secretary of the Navy, under the direction of the President of the United States, shall cause the requisite buildings and sheds to be erected, and other needful repairs and improvements to be made; and that, for accomplishing the same, ——— dollars are hereby appropriated, to be paid out of any moneys in the treasury, not otherwise appropriated.

2d. *Resolved*, That for preventing rottenness and decay in the ships of the navy, the President of the United States be, and hereby is, authorized to cause a dry dock, with convenient canals, locks, machinery, and water courses, to be constructed, at or near the public navy yard in the city of Washington; which dock shall be capable of containing twelve frigates, or ships of war, and of preserving them dry, and safely sheltered from sunshine and rain; and that, for carrying the same into effect, ——— dollars be, and the same hereby are, appropriated, to be paid out of any moneys in the treasury, not otherwise appropriated.

7th CONGRESS.]

No. 33.

[2d SESSION.

DRY DOCKS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 28, 1863.

Mr. MITCHILL, from the committee appointed to inquire into the usefulness and propriety of constructing a dock or docks at either of the public navy yards, or elsewhere within the United States, for the building and repair of ships of war, reported:

That an act was passed in February, 1799, authorizing the establishment of two docks for the convenience of repairing the public ships and vessels, in suitable places, under the direction of the President of the United States, and that fifty thousand dollars were then appropriated towards effecting this object. It appears that this sum was never expended for the intended purpose, and consequently reverted to the treasury, in the manner provided by law for unexpended appropriations, after two years. The committee therefore recommend, that, to carry into effect the aforesaid act, according to its original provisions, the sum therein specified should be again appropriated, and for that purpose recommend the adoption of a resolve, in the following words, to wit:

Resolved, That, for carrying into effect the act, entitled "An act authorizing the establishment of docks," the sum of fifty thousand dollars be appropriated as an equivalent, for the appropriation therein made, but which since reverted to the treasury unexpended.

7th CONGRESS.]

No. 34.

[2d SESSION.

LIEUTENANT COLONEL OF MARINES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 14, 1863.

NAVY DEPARTMENT, 14th February, 1863.

SIR:

Your letter of the 7th instant, requesting a detail of the duties performed by the Lieutenant Colonel Commandant of the marine corps, was this day handed to me. I have, therefore, in reply, to inform you that he has to give orders for recruiting men, and, when recruited, they are supplied with clothing and provisions, under orders issued by him. He has to order detachments to and from different places, agreeably to the necessities of the service; to keep up guards on board the ships in ordinary, and at the navy yards; to superintend the discipline of the men on shore, and to see that all the arms are kept in a state of preservation; he has to correspond with the Navy Department and with the marine officers and others at the different posts; he has a paymaster under him, who keeps the accounts of the corps; but all moneys for the use of the corps are advanced upon the commandant's requisitions, and all payments pass through him and on his responsibility; and all accounts of expenditures on account of the corps are settled with him. From this detail the committee will be able to judge what rank the commanding officer of the marine corps ought to bear; and from the enclosed statement, showing the present distribution of the officers and privates, they can determine upon the expediency or in expediency of reducing the marine corps.

I have the honor to be,
Sir, your obedient servant,

RT. SMITH.

Jos. H. NICHOLSON, Esq.

Statement of the distribution and employment of the officers and privates of the marine corps.

OFFICERS.

In service in the Mediterranean,	-	-	-	-	-	-	-	-	9
Wanted for the two relieving frigates and four small vessels,	-	-	-	-	-	-	-	-	7
for the proposed guards at the six navy yards,	-	-	-	-	-	-	-	-	6
to have charge of the marines at the barracks, and those in the ships in ordinary, one of whom to act also as adjutant, one as quartermaster, and the other as paymaster,	-	-	-	-	-	-	-	-	3
									<u>25</u>

There are at present belonging to the marine corps twenty-five commissioned officers only, exclusively of the lieutenant colonel commandant.

NON-COMMISSIONED OFFICERS AND PRIVATES.

In service in the Mediterranean,	-	-	-	-	-	-	-	-	216
In ships in ordinary,	-	-	-	-	-	-	-	-	80
Guard at the barracks,	-	-	-	-	-	-	-	-	24
For the proposed guards at the six navy yards, each guard to consist of twenty-four,	-	-	-	-	-	-	-	-	144
Will be wanted for the next relieving squadron, viz:									
For two frigates,	-	80							160
Four small vessels twenty each, 80									
									<u>624</u>

There are, at present, belonging to the marine corps, four hundred and fifty-three non-commissioned officers and privates, from which it appears that there is, at present, a deficiency of - 171

But if the Chesapeake, the Constellation, and the Adams, should return before the relieving squadron be sent out, the non-commissioned officers and privates of those ships, amounting to - 125

Would reduce the deficiency to - 46

RT. SMITH.

[1st Session.]

MARINE CORPS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 2, 1803.

SIR:

NOVEMBER 2, 1803.

The committee appointed "to inquire whether any, and, if any, what, alterations are necessary in the several acts relative to the establishment of a marine corps, and in 'An act fixing the rank and pay of the commanding officer of the corps of marines,'" have instructed me to request information of you on the following points:

What is the whole number of marines, and marine officers, contemplated by the establishment?

Is the establishment complete, and, if not, what is the deficiency?

What number of marines and officers are at present in service in the Mediterranean?

What is the number on shore?

How many marine stations are there, and how many officers and marines are there at each station?

How many officers are there, and how many of each grade?

How many vessels are there in actual service? what is the force of each, and how many marines and officers has each vessel on board?

What is the annual amount of pay and emoluments of the commanding officer of the corps?

I am, sir, with much respect, your fellow-citizen,

MICHAEL LEIB.

ROBERT SMITH, Esq. *Secretary of the Navy.*NAVY DEPARTMENT, *November 4, 1803.*

SIR:

The following statement exhibits answers to the queries which you have proposed, in your letter of the second instant, in relation to the marine corps. The answers are arranged in the order in which the queries have been proposed.

	Lieut. Col. Command'g	Captains.	First Lieutenants.	Second Lieutenants.	Sergents.	Corporals.	Music.	Privates.
The acts of Congress of July, 1798, March, 1799, and April, 1800, which constituted the marine corps, authorized	1	4	18	18	8	48	48	50
The corps is not complete; there is a deficiency of	-	1	3	14	8	12	15	14
We have now in service, in the Mediterranean,	-	1	5	4	-	17	16	15
But the frigates New York, Adams, and John Adams, whose return is shortly expected, will bring	-	-	2	3	-	6	5	6
Of which it is intended to discharge,	-	-	-	-	-	4	5	5
There will then be in service, in the Mediterranean,	-	1	3	1	-	11	11	9
And we shall then have on shore, and in the vessels in ordinary,	1	2	12	3	-	21	17	22
There are on shore seven marine stations, viz: barracks, navy yards at Washington, Norfolk, Philadelphia, New York, Boston, and Portsmouth.	-	-	-	-	-	-	-	-
We have at barracks, at present, including staff, music, armorers, artificers, servants, sick, &c.	1	1	6	-	13	11	15	112
But, on the arrival of the New York, Adams, and John Adams, we shall have	1	1	8	3	15	11	16	146
Of which guards will be supplied for eleven ships in ordinary, (each ship having, agreeably to the law of 3d March, 1801, one sergeant, or corporal, and eight marines) and of which guards for the barracks, and for the navy yard at Washington, will also be supplied.	-	-	-	-	2	2	2	15
We have at the navy yard at Norfolk,	-	-	1	-	2	2	2	15
at Philadelphia,	-	1	1	-	2	2	2	15
at New York— <i>none.</i>	-	-	-	-	-	-	-	-
at Boston,	-	-	1	-	2	2	2	15
at Portsmouth— <i>none.</i>	-	-	-	-	-	-	-	-
There are belonging to the corps—officers,	1	3	15	4	-	-	-	-

We have in actual service—

The Constitution, of forty-four guns; the Philadelphia, of forty; the New York, of thirty-six guns.

The Adams, and John Adams, of thirty-two guns, each.

The Syren and Argus, of sixteen guns, each.

The Enterprise, Vixen, and Nautilus, of twelve guns, each.

But, as before observed, the frigates New York, Adams, and John Adams, are expected home shortly.

	Captain.	First Lieutenants.	Second Lieutenants.	Sergents.	Corporals.	Music.	Privates.
There will then remain in service in the Mediterranean,	-	-	-	-	-	-	-
The frigate Constitution, having on board,	1	-	1	2	2	2	40
Philadelphia, having on board,	-	1	-	2	2	2	35
Syren, having on board,	-	1	-	2	2	2	21
Argus, having on board,	-	1	-	2	2	2	27
Enterprise, having on board,	-	-	-	1	1	-	9
Vixen, having on board,	-	-	-	1	2	1	11
Nautilus, having on board,	-	-	-	1	2	-	13
In service in the Mediterranean, as before stated,	1	3	1	11	11	9	156

The annual amount of the pay and emoluments of the commanding officer of the marine corps is one thousand seven hundred and twenty-two dollars ninety cents.

I have the honor to be, respectfully, sir, your most obedient servant,

RT. SMITH.

MICHAEL LEIB, Esq. *Chairman of a Committee of Congress.*

NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 28, 1803.

NAVY DEPARTMENT, 26th December, 1803.

The Commissioners of the Navy Pension Fund, in obedience to the "Act for the better government of the Navy of the United States," respectfully report to Congress the following statements in relation to the fund:

Paper A, exhibiting a statement of stock on the books of the treasury, to the credit of the commissioners, with the interest and reimbursement accruing for the year 1803.

Paper B, list of navy pensioners, with their pensions, respectively.

Paper C, account of the commissioners with T. T. Tucker, Esquire, Treasurer of the United States, acting as treasurer of the fund.

Paper D, abstract of warrants drawn by the Commissioners of the Navy Pension Fund on the Treasurer of the United States, acting as treasurer of the fund, for the payment of navy pensions during the year 1803.

Paper E, purchases of stock (being the amount of stock added to the fund since the last report of the commissioners) by Thomas M'Euen & Co. per order of George Harrison, Esquire, Philadelphia; and the account of the commissioners with George Harrison, Esquire, for the purchase of stock on account of navy pensioners.

For and in behalf of the commissioners:

ROBERT SMITH.

A.

Statement of Stock on the books of the Treasury to the credit of the Secretary of the Navy, the Secretary of the Treasury, and the Secretary of War; for the time being, Commissioners of the Navy Pension Fund, with the interest and reimbursement accruing for the year 1803.

NAVY DEPARTMENT, ACCOUNTANT'S OFFICE, December 13, 1803.

THOMAS TURNER, *Accountant.*

9th CONGRESS.]

No. 37.

[1st SESSION.

CAPTORS OF THE MOORISH VESSELS MESHOU DA AND MURBOKA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 10, 1804.

SIR:

27th December, 1803.

The Committee of Ways and Means have instructed me to request that you will cause to be laid before them such information, in the possession of the Department of the Navy, as may enable them to carry the enclosed resolution into effect.*

I beg you to accept the assurance of my high respect.

JOHN RANDOLPH, Jr.

ROBERT SMITH, Esq. *Secretary of the Navy.*

NAVY DEPARTMENT, January 4th, 1804.

SIR:

In answer to your letter of the 27th ult. enclosing a resolution of the House of Representatives of the 22d ult., on the subject of the armed vessels belonging to the Emperor of Morocco, captured by our cruisers and surrendered to that Power, I have the honor to inform you that the Meshouda was captured by the United States' frigate John Adams, commanded by Captain John Rodgers, and that the Murboka was captured by the United States' frigate Philadelphia, commanded by Captain William Bainbridge; and that the Meshouda and the Murboka were both surrendered to the Emperor of Morocco by the captors.

The accompanying papers, No. 18 and 19, will explain to you the circumstances under which the surrender was made. Papers No. 1 and 2 exhibit the respective valuations of the vessels so captured and surrendered.

I have the honor to be, with high respect,
sir, your most obedient servant,

HON. JOHN RANDOLPH, Jr.
Chairman of the Committee of Ways and Means.

ROBERT SMITH.

UNITED STATES' FRIGATE NEW YORK,
Tangier Bay, October 14th, 1803.

SIR:

Agreeably to your request that we would examine the Moorish ship Murboka, now in this bay, prize to the United States' frigate Philadelphia, and state to you what we consider the real value as she now lays, we have the honor to inform you that we have examined said ship, and consider that her hull, masts, spars, sails, rigging, cables; anchors, cannon, military stores, and other articles belonging to her, are worth ten thousand dollars.

We have the honor to be, &c.

JOHN RODGERS,
TOBIAS LEAR,
ISAAC CHAUNCEY.

COM. PREBLE.

*Resolved, That provision ought to be made, by law, to indemnify the captors of such armed vessels, belonging to the Emperor of Morocco, as have been captured and surrendered to the said Power, for the prize money to which they are entitled, and that a bill be brought in for that purpose by the Committee of Ways and Means.

Estimate of the value of the ship Meshouda, prize to the United States' frigate John Adams.

The ship with her boats, masts, spars, cables and anchors, sails and rigging, water casks, colors, compasses, and other ship chandlery,	\$6,500
Twenty pieces of cannon, with carriages, tackles, breechings, worms, ladles, rammers and sponges, &c. &c. complete,	5,000
Muskets, cutlasses, pistols, and boarding pikes,	1,136
Thirty barrels of powder, and all the shot on board, agreeably to inventory,	1,000
Merchandise on board, estimated at <i>prime cost</i> , to be delivered up with the ship,	3,553
	<u>\$17,189</u>

GIBRALTAR BAY, *October 17, 1803.*

SIR:

Agreeable to your request of this date, to us directed, we have taken a survey of the ship Meshouda, for the purpose of estimating her value; and it is our unanimous opinion that the ship, together with her guns, and stores of every description, and merchandise on board, as per inventory presented to us by you, would be worth in the United States seventeen thousand one hundred and eighty-nine dollars, agreeably to the foregoing statement.

EDWARD PREBLE,
H. G. CAMPBELL,
ISAAC CHAUNCEY.

To Com. JOHN RODGERS,
U. S. frigate New York.

UNITED STATES' FRIGATE CONSTITUTION,
Tangier Bay, October 5, 1803.

SIR:

I have the honor to inform you that I arrived here this day, and as the Nautilus was in sight to the westward, I made her signal to join me, considering it of importance to display as respectable a force to his Imperial Majesty's view as possible. Several letters passed between Mr. Simpson and myself. Among my despatches you will find arranged all my correspondence since I have been on this station.

October 6th. Mr. Simpson paid us a visit on board the ship; informed me that the Emperor was momentarily expected.

The New York and John Adams joined company. Our ships are constantly kept clear for action, and men sleep at quarters.

I sent a boat on shore with a letter to the Consul. The letter was delivered, and the boat returned without molestation. At 2 P. M. the Emperor arrived, and in consequence of his declaration that he was pacifically inclined, I ordered the ship dressed, and a salute of twenty-one guns, as a compliment to his majesty. The morning following he received a salute from the other ships. All our salutes were returned.

October 7th. The Emperor sent a present of ten bullocks, twenty sheep, and four dozen of fowls, for the squadron, as a token of his friendship.

October 8th. The Emperor appeared on the beach with his court and army, for the purpose of viewing the squadron. I saluted him from the ship, and was complimented with a return.

October 9th. The Emperor gave an order, under his seal, for the release of the brig Hannah, her cargo and crew, detained at Mogadore, and appointed Monday next to grant Mr. Simpson and myself an audience. The proofs which the Emperor has given of his pacific disposition, since his arrival, inclines me to believe that our differences will soon be adjusted, and peace fully restored. The weather has constantly been very stormy for several days past.

October 10th. The prize ship Murboka arrived here from Gibraltar by my orders. I gave those orders to enable me to restore her to the Emperor as soon after the adjustment of our differences as possible, to get clear of the trouble and expense of the crew.

The Syren passed to the westward with a convoy of seven sail of American vessels. I landed at Tangier about 11 o'clock in the forenoon, accompanied by Colonel Lear, Mr. Morris, as Secretary, and two midshipmen. At one P. M. with the addition of Mr. Simpson to our company, we were all conducted to the castle, and were soon ushered through a double file of guards, and conducted into the presence of the Emperor. Mr. Simpson and myself were desired to advance close to his majesty; the other gentlemen were kept back. We conversed with him by the means of an interpreter. He expressed much regret that any differences had arisen between the two nations; disavowed having given any hostile orders, and declared he would punish those of his Governors who had. He said he was at present at peace with the United States, and wished to continue so. He promised to restore all American property, and release all our citizens that have been or may be detained in consequence of orders from any of his Governors. We assured him, on our part, that it was the wish of the President of the United States to be on terms of peace and friendship with his majesty; and I promised to deliver up to him the Murboka, and all other vessels of his nation that may have been detained by any of the vessels of my squadron, and to recall the orders I had given to capture Moorish vessels; and observed to him that I was authorized by Commodore Rodgers to say he would restore the Meshouda, but that we expected his majesty to ratify the treaty made by his father in 1786; this he promised most sacredly to do, and said his friendship for the Americans should last forever, and increase in strength in consequence of our disposition to oblige him. At two o'clock, Colonel Lear and the other gentlemen, not admitted to the audience, returned to town. Mr. Simpson and myself finished with the Emperor, after his having assured us that whatever his prime minister should do with us, should be sanctioned by him, and receive his seal; and that he would authorize him to do whatever we pleased to ask of him, as a proof of his declarations. We were then conducted to a building in the castle, where we had a long conversation with the minister. I endeavored to impress on his mind the advantages of a free commercial intercourse which they might have with all nations; and that the revenues of the Emperor arising from that source, would be much greater than any thing they could expect if at war with us; as I should immediately blockade all his ports, and not suffer a vessel of any nation to enter or pass out; this appeared to have its full weight. He assured us every thing should be settled perfectly to our satisfaction. I ordered his majesty's colors to be hoisted on board the Murboka to gratify him.

October 12th. I received the orders of the Emperor, addressed to all his Governors and officers, for the release of the Hannah, at Mogadore, and all other vessels, &c. detained; his declaration, or proclamation of peace, and his ratification of the treaty, all with the imperial seal. I this day delivered up the Murboka to the Moors, agreeable to my promise, and Mr. Simpson and myself had an audience with the prime minister, who delivered me a letter from his Imperial Majesty to the President of the United States, expressive of his friendship for our nation, and his ratification of the treaty. The original Arabic and translation of the letter, and translations of all the other papers relative to the treaty, I shall forward to the Secretary of State, under cover to you, and shall send you copies of the whole, at the same time, in my despatches.

October 13. Peace having been re-established, I despatched the Nautilus to Mogadore, to carry the news, and the order for the release of the brig Hannah and crew, and to recall the Enterprise, cruising off that port, and sent orders countermarching those for capturing Moors. The passage to Mogadore is fourteen days by land, and not more than forty-eight hours by water, with an easterly wind, which is now blowing a fresh gale. The Syren entered the bay; I immediately despatched her for Gibraltar, and sent letters to you and to our Consuls at different ports in Europe, with the news of peace, and ordered the Syren to prepare for convoying a number of merchant vessels from

Gibraltar to Leghorn, which have been waiting several days for the settlement of our affairs with Morocco. The John Adams left the bay for Gibraltar.

October 14th. Commodore Rodgers, for the first time, landed with me, and, on our return, Colonel Lear accompanied us on board the Murboka, to estimate her value, and I hope the United States will make some allowance to the ship that captured her, as an encouragement to the officers and men. In the evening the New York left the bay for Gibraltar.

October 15th. Having settled every thing here, at six in the evening weighed and sailed for Gibraltar, saluted the garrison, and had an equal return. In the whole of this business, I have advised with Colonel Lear, Mr. Simpson, and Commodore Rodgers. I am confident we have all been actuated by the same motives—the good of our country; and I hope the President will approve our conduct.

I lost one of my heavy anchors, and a part of a bower cable, in the bay, and, as the buoy rope parted, I could not recover it, although several trials were made; I also lost half my stream cable; both were cut by the rocks.

October 16th. Arrived at Gibraltar, and anchored. The Syren getting ready for Leghorn; and the New York and John Adams for America. I shall wait here a few days for the Enterprise, Nautilus, and Argus; and proceed to Algiers. The Nautilus will go with me; the Enterprise will follow, as soon as she is new rigged, and has a convoy to take up; the Argus, Lieutenant Hull, I shall leave on this station this winter, and until she can be relieved by some vessel from the United States; as it is absolutely necessary that one vessel, at least, should always rendezvous at Gibraltar, and show herself in Tangier Bay, and along the Morocco coast, occasionally. If this is done, we shall always be good friends with the Emperor. Mr. Simpson can give notice of any unfriendly appearance. I beg leave to recommend, in the strongest terms, the necessity of sending out, in addition to the present squadron, one of the small frigates and a brig or schooner, to remain on this station. I could call the frigate to my aid, if Tunis should threaten, and the schooner or brig would always be ready to come with despatches, while the frigate could remain here, if Morocco should again break with us. However, I do not believe they will; but it is best to look out for them.

While I was absent from this bay, four men, belonging to the Philadelphia, and two to this ship, deserted from on board the prize ship in this bay; three of them got on board the British frigate Medusa, Captain Gore, and were refused to the officer of the prize, who went and demanded them. The Medusa is now at sea, but expected in a few days. I have a letter prepared for the captain, which, I think, will bring the men back. I shall write you more of this business when it is concluded. Mr. Cathcart is here, and will proceed to Leghorn, in the Syren, to deliver the public property to Captain Stewart, to be transported to Algiers for Colonel Lear. I shall, agreeably to Colonel Lear's request, give Captain Stewart orders for that purpose. I expect to be able to leave this bay in eight days, for Algiers, and from thence off Tripoli. I do not expect to do much this winter, but, when the spring opens, I hope to convince the Bashaw of Tripoli that it will be for his interest to have peace with us on our own terms. I am confident that more active exertions have never been made by the same number of ships and vessels, of any nation, than have been made by the ships and vessels of the United States on this station, within these four weeks past. I have much pride and pleasure in making the assertion, as it adds reputation to our navy in the opinion of other nations. The ships sail this evening for the United States. My time is very much engaged in the various duties that call for my attention, and I hope you will excuse any want of information which I may have neglected to give you.

October 17th. The ships not being ready to sail, I kept my letter open, and have the pleasure to acquaint you that the ship Betsey Walker, which loaded at Norfolk, for Algiers, has delivered her cargo there, and arrived here this day. Every thing stands fair and friendly at that regency, but I much fear some accident has happened to the other ship loaded at Norfolk, as I have not heard any thing of her.

I have sent home, by the New York and John Adams, eight invalids, belonging to the Philadelphia, and eight belonging to this ship; also, the acting boatswain and gunner which I brought out, neither of which being competent to their duty; and have taken the boatswain of the New York, and the gunner of the John Adams, to fill their stations.

It is absolutely necessary that every article of the provision, &c. composing our rations, should be sent from the United States, as well as wood and coal, as they cannot be procured in this country, in consequence of the war between France and England. I would inform you that Mr. Gavino has but a small quantity of provision on hand.

It is probable that we shall fix on Malta for our deposit of provisions; it is, however, impossible to determine on this till I go there myself; it would, therefore, be advisable to charter the provision ships to go to Gibraltar, stipulating that they should proceed to Malta, if required.

I have the honor to be, with the highest respect, sir, your most obedient servant,

EDWARD PREBLE.

UNITED STATES' FRIGATE CONSTITUTION, TANGIER BAY, *October 8th, 1803.*

SIR:

I am honored with your favor of this date, and have duly considered its contents, and think your arguments so far conclusive, that I shall not hesitate in giving up the Murboka, and am authorized by Commodore Rodgers to assure you that he will do the same by the Meshouda, on the emperor's renewal and acknowledgment of the treaty of peace and friendship, entered into between the Emperor, Sidi Mahomet, his father, and the United States, in the year 1786, and the fulfilment of his promise to release all American property and citizens he may have in his possession.

I am fully aware of the happy combination of circumstances which has facilitated that so much desired object of our Government, without the agency of money, or even the promise of any future tribute or present, either of which must have degraded us in the eyes of these barbarians, and would only have been a prelude to greater insolence and demands.

If the arguments adduced in favor of the restoration of the Murboka and Meshouda should appear rather specious to the Secretary of State, I feel confident they will give place to the importance of the object accomplished thereby. Indeed, your extract from his instructions assures to us his approbation of the measures we have taken for the security of our large and increasing commerce to this part of the world, by the establishment of an honorable and permanent peace.

I have the honor to be, with respect, sir, your obedient servant,

JAMES SIMPSON, Esquire.

EDWARD PREBLE.

8th CONGRESS.]

No. 38.

[1st SESSION.

ADDITIONAL NAVAL FORCE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 11, 1804.

Mr. SAMUEL L. MITCHILL made the following report:

Report of the Committee of Commerce and Manufactures, on the bill from the Senate, entitled "An act to authorize the sale of the ship General Greene, and a further addition to the naval armament of the United States, and on the resolve of the House, passed the 4th instant, directing an inquiry to be made whether any, and what, further addition be necessary to the naval establishment of the United States.

It does not appear, from any document accompanying the papers referred to, or in the possession of the committee, that the commercial prosperity, or external relations of the nation, require the addition of any more ships to our naval establishment, at this juncture. The peace lately concluded with Morocco, and the prospect of the termination of the war with Tripoli, would appear to render more vessels unnecessary at present. Did the public defence and general welfare seem to demand the building or purchasing the two vessels contemplated in the bill, the committee would have no hesitation to recommend not only that number, but a further and sufficient armament.

The ship General Greene, as is alleged, is so far decayed as to be likely to sell but for a very moderate price. Even the debates in Congress are believed to have countenanced the belief that she would bring but a small sum into the treasury, if disposed of either at private sale or at auction. At the same time, it occurs to the committee that she might probably be turned into a sheer hulk or store ship, and thus be very serviceable in the neighborhood of a navy yard, by aiding in taking out and putting in masts, in heaving ships down, and in other operations incidental to the construction and repairing of vessels.

It is therefore submitted, as the opinion of the committee,

That no legislative provision is necessary, at present, to authorize the buying, selling, or building of vessels.

That the ship General Greene be kept for public use, and converted into a *sheer hulk* or store ship, if, upon a survey made, she shall be found fit for either of those purposes.

And that the first, second, and third sections, be stricken out of the bill.

8th CONGRESS.]

No. 39.

[1st SESSION.

NAVY YARD AT WASHINGTON.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 17, 1804.

NAVY DEPARTMENT, February 7, 1804.

SIR:

I have received your letter of the 4th instant. The arrangements contemplated at the navy yard at this place are—

1st. To discontinue the services of certain officers and men who have been found to be superfluous.

2d. Instead of entering a certain portion of men for each ship, and as the peace establishment law directs, attaching them permanently to such ship, to enter the men for the general service of the yard, and to assign to them one ship, as a place of eating, sleeping, &c.

The officers proposed to be discontinued may retire on half pay, like other officers of the navy not in actual service.

The accompanying copy of a letter from Captain Cassin to me, exhibits a detailed view of the grounds upon which the proposed arrangements are founded.

Statement B exhibits a view of the officers and men at present employed at the yard and on board of the ships in ordinary; also a view of the officers and men proposed to be discontinued, and of those proposed to be retained.

Statement C is an estimate of the saving which the adoption of the contemplated arrangements would produce.

I have the honor to be, sir, respectfully, your most obedient servant,

ROBERT SMITH.

Honorable JOSEPH NICHOLSON.

A.

JANUARY 23, 1804.

SIR:

Since I have had the honor of being entrusted with the charge of the ships in ordinary, many objections to the system prescribed by the act of Congress, providing for a naval peace establishment, in relation to the officering and manning the vessels in ordinary, have occurred to me. To provide a remedy, and suggest it for your consideration, I have reflected much on the subject, and have advised with gentlemen of the first practical information. The result I now beg leave, respectfully, to submit:

By the act of March 3, 1801, it is provided that there shall be permanently attached to each frigate laid up in ordinary, one sailingmaster, one boatswain, one gunner, one carpenter, one cook, one sergeant, or corporal of marines, and eight marines; and to the large frigates, twelve, and to the small frigates, ten seamen. The sailingmaster of each ship to have the general care and superintendence of the ship, and generally to execute such duties of a purser as may be necessary.

Agreeably to the provisions of this law, and the instructions which you have, from time to time, honored me with, the ships placed under my care have heretofore been officered and manned. My objections to the present system, are, 1st. The officers and men being dispersed in small squadrons on board of a number of ships, cannot be collected with that facility or despatch which is desirable.

2d. There being a squadron of men on board of each ship, there must necessarily be a fire kept on board each ship to cook at, and in proportion to the number of fires is our danger of suffering from them.

3d. The officers cannot be sufficiently employed, and our experience has demonstrated that even good officers will degenerate if not actively employed. It will be perceived, in the sequel, that there are other objections to the

present system. They are, however, subordinate to the three principal objections above recited, and proceed from them.

With respect to the first objection, it is obviously desirable that our force should be concentrated as much as possible. If all were drawn from one point, it could be applied at a moment's warning. For many days together the services of the men are required for one common object; every day, therefore, when their services are so required, we unavoidably lose time in collecting them.

2dly. It is manifestly true that, under the present system, we are exposed to great and constant danger from fire, and a considerable proportion of the time of the men is unavoidably employed in cleaning up dirt made by themselves on board of their respective vessels, and dirt is a powerful auxiliary in rotting a ship.

3dly. As our officers are not sufficiently employed, they will not avoid setting an evil example of idleness and inactivity. While at sea, sailingmasters, boatswains, gunners, and carpenters, have all important duties to discharge, and they would have important duties in a vessel in ordinary, if all the rigging, sails, cables, guns, spars, &c. were kept on board.

But, under the present system, every article belonging to these departments is taken from on board the vessels, and deposited on shore, and neither of these officers have a single article under their charge, excepting the master, who, under my superintending control, has the general charge of the ship; our experience having evinced the inefficiency of requiring masters to perform the duties of pursers, the provision which has been substituted will, I have no doubt, be found a very salutary one.

Having suggested these defects in the present system, it becomes me also to suggest a remedy, which I do, with great deference, by proposing—

1st. That the establishment of officers and men at the navy yard shall consist of only the following:

1 Master of the yard,	2 Gunners, one sail-maker,
1 Head carpenter and constructor, with his crew,	1 Ship-keeper to each ship, and
1 Purser,	100 Seamen, and three guards of marines,
1 Clerk, to keep the account of the stores,	Plumber, blacksmith, and crew,
1 Clerk of the yard,	Block-maker and crew,
2 Boatswains,	Cooper and crew.

We have at present,

10 Sailingmasters,	1 Clerk of the yard,
1 Carpenter, head and crew,	Plumber, blacksmith, and crew,
11 Boatswains,	Block-maker and crew,
11 Gunners,	Cooper and crew,
11 Carpenters, one sail-maker,	130 Seamen,
1 Clerk, to keep the account of the stores,	11 Guards of marines.
1 Purser,	

2d. That all the men have their cooking done, diet and sleep, on board of one ship, or in a house to be built for the purpose. This arrangement would not only diminish the expense, as appears by paper A, and increase the security of the public property, but would enable me to discharge the duties assigned to me with increased facility and despatch.

Under the proposed arrangement, it would be the duty of the master of the yard to attend to laying down the buoys, marking out the channel, to be in readiness with the proper pilots to go on board of ships of the United States, at the mouth of the branch, and to bring them up to their moorings, and take them from thence to sea; to be vigilant in despatching boats necessarily provided for the relief of such vessels coming into port, and for the discharge of stores, &c. having them carefully conveyed to the warehouses appropriated to the same. To visit the ships in ordinary at least once a day, in order that they should be kept clean and sweet, and properly ventilated to prevent decay, and in case of delinquency to report thereof. When any ship or ships should be ordered for sea, to attend particularly to the distribution of officers and men, as may be found necessary to facilitate the execution of such order. To state from under his hand a proportion of rigging, ground tackle, and stores, for the boatswains, that the superintendent may warrant the store-keeper in the issue thereof. He is to specify the size, length, and quantity, of each required, in order to frame indentures for the boatswains of each ship to sign previous to leaving port. When it becomes necessary for the crews in ordinary to perform duty in the yard, to regulate the distribution of officers and men for the better performance thereof; to attend to the moorings of the ships in proper season; to see the cables well secured from ice or other injury; their boats carefully collected and placed under cover, when no longer necessary to be exposed to the weather; to attend in person on board of ships removing from their moorings to dock, &c. It is also necessary that he should pay great care and attention to the ships' spars received at the navy yard, and suggest such measures as will prevent their decay. It is further necessary that he should visit the warehouses frequently, and examine the stores of each ship, placing them in a state of forwardness, as far as the state of ordinary will admit.

The boatswains and gunners would be placed under the immediate eye of the master of the yard, and should have the particular charge and direction of crews employed in their respective departments.

The three guards of marines would be placed, one on board the headmost and one on board the sternmost ships, to prevent boats coming inside of the moorings at night, &c. and one guard in the yard to prevent desertion and to guard the public property there.

The duties of the other officers have already been prescribed to them by you, and are well known to themselves.

Thus, sir, I have taken the liberty of suggesting to you the aforementioned arrangement, which, in my opinion, would effectually remove all the obstacles at present opposed to the security of the public property committed to my care, and to the due and prompt execution of any orders with which you may honor me, as superintendent of the yard.

All which is most respectfully submitted.

I have the honor to be, sir, your obedient humble servant,

JOHN CASSIN, *Superintendent Navy Yard.*

HONORABLE ROBERT SMITH, *Secretary of the Navy.*

At present we consume annually about one hundred and thirty cords of wood, and one thousand bushels of coal. Under the proposed arrangement forty cords of wood and two hundred and fifty bushels of coal would be sufficient, and the proposed arrangement contemplates our dispensing with the service of

9 Sailing masters,
9 Boatswains,
9 Gunners,
11 Carpenters,
30 Seamen,
8 Guards of marines;

All of which, it will be found, diminish the expenses of the yard from twenty to thirty thousand dollars per annum. If the sailing masters, boatswains, gunners, and carpenters, proposed to be dispensed with, were furloughed and put on half pay, in that case the saving to the public would be upwards of twenty thousand dollars a year.

B.

View of the officers and men at present employed at the navy yard, and on board the ships in ordinary, at Washington; also, a view of the officers and men proposed to be discontinued, and of those proposed to be retained.

Officers and men at present employed.	Officers and men proposed to be discontinued.	Officers and men proposed to be retained.
1 Navy agent, 1 Superintendent, 1 Surgeon, 1 Surgeon's mate, 10 Sailing masters, 1 Head carpenter, 1 Purser, 1 Clerk to keep the accounts of stores, 1 Clerk of the yard, 11 Boatswains, 11 Gunners, 11 Carpenters, 1 Sailmaker and crew, 1 Plumber and crew, 1 Blockmaker and crew, 1 Cooper and crew, 130 Seamen, 11 Guards of marines.	9 Sailing masters, 9 Boatswains, 9 Gunners, 11 Carpenters, 30 Seamen, 8 Guards of marines.	1 Captain of the navy,* 1 Superintendent, 1 Surgeon, 1 Surgeon's mate, 1 Sailing master, 1 Head carpenter, 1 Purser, 1 Clerk to keep the accounts of stores, 1 Clerk of the yard, 2 Boatswains, 2 Gunners, 1 Sailmaker and crew, 1 Plumber and crew, 1 Blockmaker and crew, 1 Cooper and crew, 100 Seamen,† 3 Guards of marines.

* 1 Captain of the navy, proposed to be attached to the establishment, would have the general superintendence of the navy yard, and perform the duties of navy agent.

† In no state of things shall we require more than one hundred seamen at the yard.

C.

Estimate of the annual expense of keeping in actual service the officers and men proposed in statement B to be discontinued, which exhibits the annual saving that would be produced by adopting the arrangements contemplated.

PAY.			
9 Sailing masters,	- - - - -	at \$40 per month,	\$4,320 00
9 Boatswains,	- - - - -	at 20 do.	2,160 00

In the articles of wood, coal, candles, &c. we should save about	- - - - -		1,000 00
Total amount of saving which would be produced, by adopting the contemplated arrangements,			\$31,403 28

8th CONGRESS.]

No. 40.

[1st Session.]

MARINE CORPS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 29, 1804.

Mr. EPPES, from the committee appointed under a resolution of the 18th of February, to inquire whether the moneys drawn from the Treasury of the United States on account of the marine corps, from the year 1798, to the end of the year 1803, have been faithfully applied to the public service, in conformity to the existing laws, reported:

That, in the prosecution of the object of their inquiry they applied to the Secretary of the Navy for copies of such papers and documents as they thought necessary for a fair investigation of the accounts; that, on a suggestion from the Secretary of the Navy, that copies of the documents applied for would require much time and labor, and that the originals might be examined at his office, where every aid in his power would be afforded, the committee attended at the office, and although aided in their examination by the Accountant of the Navy Department, who manifested every disposition to furnish them with the necessary information, they found the papers and documents too volumi-

nous for a thorough examination at this late period of the session of Congress, and that a general view of the accounts was the only one which could by them be exhibited.

They find that the advances on account of the marine corps, commenced in the year 1798; from that period to the end of the year 1803, it appears that the sum of three hundred and fifty-three thousand five hundred and seventy-three dollars and fifty-three cents have been advanced on account of this corps; that it appears that this sum of three hundred and fifty-three thousand five hundred and seventy-three dollars and fifty-three cents, the sum of two hundred and fifty-two thousand eight hundred and thirty-four dollars were advanced to the colonel commandant of the marine corps, before he had adjusted or settled any account at the Navy Department, except for the sum of nine hundred and fifteen dollars and fifty-five and one-sixth cents, of which sum five hundred and eighty-three dollars and fifty-five and one-sixth cents were for services performed by him as paymaster to the corps during the years 1798 and 1799. It appears that, from the adjustment of this account, the last item of which is on the 31st day of December, 1803, no subsequent account had been filed or adjusted at the office of the Accountant of the Navy Department to the end of the year 1803. And that, on the 31st day of December, 1803, there appeared on the books of the Accountant an unsettled and unadjusted balance against William W. Burrows, of seventy-four thousand four hundred and sixty-eight dollars and fifty-five cents. On the 8th day of January, 1804, Colonel William W. Burrows filed, at the office of the Accountant of the Navy Department, accounts amounting to sixty-one thousand five hundred and forty-three dollars and ninety-two cents, which are not yet adjusted or examined; and on the 13th of February he filed other accounts, not yet examined, amounting to three thousand four hundred and ninety-seven dollars. No subsequent account has been filed at the office of the Accountant of the Navy Department. Supposing these accounts to be correct, Colonel William W. Burrows is indebted to the United States, for moneys advanced and not accounted for, in the sum of nine thousand four hundred and twenty-eight dollars and fifty-five cents, as will appear by a general statement from the Accountant of the Navy Department, marked No. 1, which accompanies this report. It appears further that, from the establishment of the corps to the end of the year 1803, William W. Burrows has received for his own personal emolument, under the heads of pay, subsistence, forage, quarters, and wood, the sum of eleven thousand six hundred and twenty-two dollars. That he was entitled to receive, during this period, as appears by the annexed statement from the Navy Department, marked No. 2, for his pay, subsistence, and forage, the sum of eight thousand, five hundred and twenty-five dollars and thirty cents, leaving a balance of three thousand and ninety-seven dollars, of which sum two thousand five hundred and fourteen dollars, allowed for quarters, as appears by document No. 3, annexed; and the sum of five hundred and eighty-three dollars and fifty-five cents for services as paymaster, appear not to have been authorized by any existing law. The committee, however, consider it due to the Navy Department to state, that the allowance for quarters did not commence with the present Secretary of the Navy, but has only been continued by him as established by his predecessors. They believe that provision by law for a monthly or quarterly adjustment of the accounts of the marine corps would promote economy, and guard the public against the danger which always attends advances of money on individual responsibility. They, therefore, submit the following resolution:

Resolved, That provision ought to be made by law for a monthly or quarterly adjustment of the accounts of the marine corps.

No. 1.

Amount of advances to William W. Burrows, to the 31st December, 1803,	- - -	\$353,573 53
Amount of expenditures admitted,	- - -	279,104 98
Balance remaining on the books of the office, 31st December, 1803,	- - -	74,468 55
Amount of accounts exhibited and filed on the 8th January, 1804, including an account for expenditures by Captain Wharton,	- - -	61,543 92½
Amount of accounts exhibited and filed on the 13th February, 1804,	- - -	3,490 70
		<u>65,034 62½</u>
Which would leave to be accounted for,	- - -	<u>\$9,433 92½</u>

THO. TURNER, *Accountant.*NAVY DEPARTMENT, ACCOUNTANT'S OFFICE, *February 28, 1804.*

No. 2.

Statement of the pay, subsistence, and forage, received by William W. Burrows, as Commandant of the Marine Corps.

AS MAJOR.

Pay from 16th July, 1798, to 30th April, 1800, inclusive,	- - -	\$1,076 67
Subsistence,	- - -	853 20
Forage,	- - -	215 33
		<u>2,145 20</u>

AS LIEUTENANT COLONEL.

Pay from 1st May, 1800, to 31st December, 1803, inclusive,	- - -	3,300 00
Subsistence,	- - -	2,552 10
Forage,	- - -	528 00
		<u>6,380 10</u>
		<u>\$8,525 30</u>

THO. TURNER, *Accountant.*NAVY DEPARTMENT, ACCOUNTANT'S OFFICE, *February 28, 1803.*

No. 3.

Statement of the sums paid for quarters for the Commandant of the Marine Corps.

At Philadelphia, from the 16th July, 1798, to 30th June, 1800,	- - -	960 53
At Washington, from 5th August, 1800, to 6th November, 1802,	- - -	1,204 17
		<u>\$2,164 70</u>

No account has been exhibited for the rent of the commandant's quarters since November, 1802. The last rent paid was at three hundred and fifty dollars per annum; and as the Colonel has ever since occupied the same house, it may be presumed to be at the same rent.

THO. TURNER, *Accountant.*NAVY DEPARTMENT, ACCOUNTANT'S OFFICE, *February 28, 1804.*

[Explanatory letter, subsequently communicated to the House of Representatives.]

NAVY DEPARTMENT, ACCOUNTANT'S OFFICE, *March 3d, 1804.*

SIR:

In pursuance of your request of this morning, I have examined the report of the committee relative to the application of moneys drawn from the treasury, on account of the marine corps, and it seems to me that the report carries on the face of it evidence of its being incorrect. It also appears susceptible of a construction, calculated to make an impression that would be unjust as well as unfounded.

The committee state, "that they find that the advances on account of the marine corps commenced in the year 1798; from that period to the end of the year 1803, it appears that the sum of three hundred and fifty-three thousand five hundred and seventy-three dollars and fifty-three cents has been advanced on account of this corps; that it appears that of this sum of three hundred and fifty-three thousand five hundred and seventy-three dollars and fifty-three cents, the sum of two hundred and fifty-two thousand eight hundred and thirty-four dollars was advanced to the Colonel Commandant of the marine corps, before he had adjusted or settled any account at the Navy Department, except the sum of nine hundred and fifteen dollars and fifty-five and one-sixth cents, of which sum five hundred and eighty-three dollars and fifty-five and one-sixth cents were for services performed by him as paymaster to the corps, during the years 1798 and 1799. It appears from the adjustment of this account, the last item of which is on the 31st December, 1802, no subsequent accounts had been filed or adjusted at the office of the Accountant of the Navy Department, to the end of the year 1803; and on the 31st of December, 1803, there appeared on the books of the Accountant, an unsettled and unadjusted balance of seventy-four thousand four hundred and sixty-eight dollars and fifty-five cents."

If they were correct in this statement, how could they manage to reduce three hundred and fifty-three thousand five hundred and seventy-three dollars and fifty-three cents, the amount of advances, to seventy-four thousand four hundred and sixty-eight dollars and fifty-five cents, the balance stated by them? Not by deducting nine hundred and fifteen dollars and fifty-five and one-sixth cents, the only amount of accounts settled mentioned by them. They are, however, correct, both in the amount advanced, and in the balance remaining to the debit of Colonel Burrows, on the 31st of December, 1803. It is, therefore, evident that they have omitted to insert the accounts settled and admitted, subsequent to the credits stated by them, and antecedent to the end of the year 1803, which accounts and amount of credits are stated in the report to Congress, on the 11th of January.

The nine hundred and fifteen dollars and fifty-five and one-sixth cents mentioned by the committee, were admitted in accounts settled previous to the 23d March, 1801; the five hundred and eighty-three dollars and fifty-five and one-sixth cents allowed to the commandant, for services as paymaster, in the years 1798 and 1799, was by direction of Mr. Stoddert, the then Secretary of the Navy.

On the 27th of October, 1801, I wrote a letter to Colonel Burrows, a copy of which you have enclosed; and on the 20th of November following, Colonel Burrows filed accounts and vouchers, amounting to two hundred and four thousand five hundred and eighty-one dollars and fifteen cents, at which time there was to his debit only two hundred and eight thousand two hundred and eleven dollars and nineteen and five-sixth cents.

Those accounts, shortly after they were exhibited, were put into the hands of an examining clerk, but, from their magnitude and intricacy of calculation and investigation, were not finally adjusted until the 30th June, 1802, at which time a settlement was made, including these accounts, as well as others, exhibited by Colonel Burrows, to the 3d day of May, 1802, and the sum of two hundred and eighteen thousand five hundred and ninety-nine dollars and ninety-five cents passed to his credit, and on the 8th of February, 1803; a further sum was passed to his credit by Charles Wadsworth, Purser, of forty-five dollars.

Colonel Burrows also exhibited accounts to the close of the year 1802, which were adjusted, and the sum of fifty-eight thousand six hundred dollars and forty-seven and five-sixth cents passed to his credit on the 18th July, 1803; and on the 17th of November following he obtained a further credit for expenditures by Lieutenant Caldwell, amounting to nine hundred and forty-four dollars; subsequent to which no accounts were filed by Colonel Burrows, until after the expiration of the year 1803, as stated by the committee.

The allowance for quarters for the commandant having been admitted by authority from the Secretary of the Navy, it is not necessary, in my justification, that I should remark on the construction of the committee, "that it appears not to have been authorized by any existing law." It will, however, no doubt, readily occur to you, that the sum, supposed to be necessary for this object, has been uniformly inserted in the estimates and appropriated by law.

With very great respect, I have the honor to be, sir, your most obedient servant,

THO. TURNER.

The SECRETARY of the Navy.

NAVY DEPARTMENT, ACCOUNTANT'S OFFICE, *October 27th, 1801.*

SIR:

Under the general instructions I have received from the Secretary of the Navy, to call on *all persons* who have had the expenditure of money on account of the Department, to settle their accounts, I must request that you will, with as little delay as possible, exhibit all your accounts, accompanied by the necessary vouchers, to the 1st of the present month, and, at the same time, inform you that it is now laid down as a rule not to be dispensed with, that all accounts for expenditures must be exhibited monthly, to the close of each month.

It may be of importance, and I am extremely anxious that all your accounts to the present time should be exhibited, examined, and adjusted, previous to the meeting of Congress.

With great respect, I have the honor to be, sir, your obedient servant,

THO. TURNER.

Lieutenant Colonel BURROWS.

8th CONGRESS.]

No. 41.

[1st SESSION.

LOSS OF THE FRIGATE PHILADELPHIA.

COMMUNICATED TO CONGRESS, MARCH 20, 1804.

To the Senate and House of Representatives of the United States:

I communicate to Congress a letter received from Captain Bainbridge, commander of the Philadelphia frigate, informing us of the wreck of that vessel on the coast of Tripoli, and that himself, his officers, and men, had fallen into the hands of the Tripolitans. This accident renders it expedient to increase our force, and enlarge our expenses in the Mediterranean, beyond what the last appropriation for the naval service contemplated. I recommend, therefore, to the consideration of Congress, such an addition to that appropriation, as they may think the exigency requires.

TH. JEFFERSON.

MARCH 20, 1804.

TRIPOLI, November 1, 1803.

SIR:

Misfortune necessitates me to make a communication the most distressing of my life, and it is with the deepest regret that I inform you of the loss of the United States' frigate Philadelphia, under my command, by being wrecked on rocks between four and five miles to the eastward of the town of Tripoli. The circumstances relating to this unfortunate event are: At 9 A. M. being about five leagues to the eastward of Tripoli, saw a ship, in shore of us, standing before the wind to the westward; we immediately gave chase; she hoisted Tripolitan colors, and continued her course very near the shore; about eleven o'clock had approached the shore to seven fathoms water; commenced firing at her, which we continued, by running before the wind, until half past 11; being then in seven fathoms water, and finding our fire ineffectual to prevent her getting into Tripoli, gave up the pursuit, and was bearing off the land, when we ran on the rocks in 12 feet water forward, and 17 feet abaft; immediately lowered down a boat from the stern, sounded, and found the greatest depth of water astern; laid all sails aback; loosed top-gallant sails, and set a heavy press of canvass on the ship, blowing fresh, to back her off; cast three anchors away from the bows, started the water in the hold, hove overboard the guns, except some abaft, to defend the ship against the gunboats which were then firing on us; found all this ineffectual; then made the last resort, of lightening her forward, by cutting away the foremast, which carried the main top-gallant mast with it: but labor and enterprise were in vain: for our fate was direfully fixed. I am fully sensible of the loss that has occurred to our country, and the difficulty which it may further involve her in with this regency; and feel, beyond description, for the brave unfortunate officers and men under my command, who have done every thing in their power, worthy of the character and stations they filled; and I trust, on investigation of my own conduct, that it will appear to my Government and country consistent to the station in which I had the honor of being placed.

Striking on the rocks was an accident not possible for me to guard against by any intimation of charts, as no such shoals were laid down in any on board, and every careful precaution (by three leads kept heaving) was made use of in approaching the shore, to effect the capture of a Tripolitan cruiser; and, after the ship struck the rocks, all possible measures were taken to get her off, and the firm determination made, not to give her up as long as a possible hope remained, although annoyed by gunboats, which took their position in such a manner that we could not bring our guns to bear on them, not even after cutting away part of the stern to effect it.

When my officers and self had not a hope left of its being possible to get her off the rocks, and, having withstood the fire of the gunboats for four hours, and a reinforcement coming out from Tripoli, without the smallest chance of injuring them in resistance, to save the lives of brave men, left no alternative but the distressing one of hauling our colors down, and submitting to the enemy whom chance had befriended. In such a dilemma, the flag of the United States was struck; however painful it will be to our fellow-citizens to hear the news, they may be assured that we feel in a national loss equally with them. Zeal of serving our country, in doing our duty, has placed us in that situation which can be better conceived than described, and from which we rely on our country's extricating us.

The gunboats, in attacking, fired principally at our masts; had they directed their shot at the hull, no doubt but they would have killed many.

The ship was taken possession of a little after sunset; and, in the course of the evening, myself, and all officers, with part of the crew, were brought on shore, carried before the Bashaw, who asked several questions. From his palace, the officers were conducted to the house which Mr. Cathcart lived in, where we lodged last night, and this day the *minister* has become the guarantee to the Bashaw for us officers, and we have given him our parole of honor.

Enclosed you will receive a list of the officers, and a few of the people to attend them, who are quartered in the American consular house, and are to be provided for by such ways and means as I can best adopt, which will be on as economical a plan as possible: the remainder of the crew will be supported by this regency.

We have all lost every thing but what was on our backs, and even part of that was taken off; the loss of the officers is considerable, as they were well provided in every necessary for a long station.

Mr. Nissan, the Danish consul, has been extremely attentive, and kindly offers every service of assistance.

I trust, sir, you will readily conceive the anxiety of mind I must suffer. After the perusal of the enclosed certificate from the officers, on my conduct, should you be pleased to express the opinion of Government, you will much oblige me.

I have the honor to be, sir, with the greatest respect, your most obedient servant,

WILLIAM BAINBRIDGE.

Honorable ROBERT SMITH, *Secretary of the Navy, Washington.*

P. S. Notwithstanding our parole, we are not permitted to leave the house, or to go on the top of it, and they have closed our view of the sea.

SIR:

We, late officers of the United States frigate Philadelphia, under your command, wishing to express our full approbation of your conduct concerning the unfortunate event of yesterday, do conceive that the charts and soundings justified as near an approach to the shore as we made; and that, after the ship struck, every exertion was made, and every expedient tried, to get her off, and to defend her, which either courage or abilities could have dictated. We wish to add, that, in this instance, as well as every other since we have had the honor of being under your command, the officer and seaman have distinguished you. Believe us, sir, that our misfortunes and sorrows are entirely absorbed in our sympathy for you.

We are, sir, with sentiments of the highest and most sincere respect, your friends and fellow sufferers,

DAVID PORTER, *Lieutenant.*

[2d SESSION.]

NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, NOVEMBER 14, 1804.

The Commissioners of the Navy Pension Fund, in obedience to the "Act for the better government of the Navy of the United States," respectfully report to Congress the following statements in relation to the fund.

Paper A. Exhibiting a statement of stock on the books of the Treasury, to the credit of the commissioners, with the interest and reimbursement for the year 1804.

Paper B. List of navy pensioners, with the amount of pension allowed to each.

Paper C. Account of the commissioners with Thomas T. Tucker, Esq. treasurer of the fund.

Paper D. Abstract of warrants drawn by the Secretary of the Navy on the treasurer of the fund, from the 13th of December, 1803, to the present day.

Paper E. Account of the commissioners with George Harrison, Esq. for the purchase of stock in the month of October last, which exhibits the amount of stock added to the fund since the last report of the commissioners.

All which statements are respectfully submitted.

For the commissioners:

R. SMITH, *Secretary of the Navy.*

NAVY DEPARTMENT, November 10, 1804.

A.

Statement of the Stock on the books of the Treasury to the credit of the Secretary of the Navy, the Secretary of the Treasury, and the Secretary of War; for the time being Commissioners of the Navy Pension Fund, with the interest and reimbursement accruing for the year 1804.

Denomination of Stocks.	Commencement of Interest.	Nominal am't of Stock.	Interest and reimbursement for the year 1804.	Reimbursement on 6 per cent. and deferred first of January, 1805.	Irredeemed amount of Stock 31, 1804.

[2d SESSION.

DESTRUCTION OF THE FRIGATE PHILADELPHIA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, NOV. 15, 1804.

To the House of Representatives of the United States:

Agreeably to your resolution of the 9th instant, I now lay before you a statement of the circumstances attending the destruction of the frigate Philadelphia, with the names of the officers and the number of men employed on the occasion: to which I have to add that Lieutenant Decatur was thereupon advanced to be a captain in the navy of the United States.

NOVEMBER 15, 1804.

TH: JEFFERSON.

NAVY DEPARTMENT, November 13, 1804.

SIR:

Agreeably to your letter of the 10th instant, and the resolution of the House of Representatives of the 9th instant, therewith sent to me, I have the honor to enclose a statement of the circumstances attending the destruction of the frigate Philadelphia, with the names of the officers and the number of men employed on the occasion.

I have the honor to be, with great respect, sir, your most obedient servant,

ROBERT SMITH.

PRESIDENT of United States.

Statement of the circumstances attending the destruction of the frigate Philadelphia, with the names of the officers, and the number of men employed on the occasion, as laid before the President by the Secretary of the Navy, November 13, 1804.

On the 31st January, 1804, Commodore Preble, lying with his squadron in the harbor of Syracuse, gave orders to Lieutenant Charles Stewart, commanding the brig Syren, of sixteen guns, and to Lieutenant Stephen Decatur, junr. commanding the ketch Intrepid, of four guns and seventy-five men, to proceed to Tripoli, and to destroy the frigate Philadelphia, of forty-four guns, then lying in the harbor of Tripoli. Lieutenant Decatur had orders to enter the harbor in the night, board and set fire to the Philadelphia, and Lieutenant Stewart was ordered to take the best possible position, without the harbor, to cover the retreat.

Under these orders they proceeded immediately to the coast of Tripoli, but, owing to very heavy gales of wind, that usually prevail there in the winter season, the enterprise could not be undertaken until the 16th February, when Lieutenant Stewart having taken the best possible position to effect the object of his instructions, Lieutenant Decatur, at 7 o'clock in the night, entered the harbor of Tripoli, boarded, and took possession of the Philadelphia.

This frigate, at the time she was boarded, had all her guns mounted and charged, and was lying within half gun shot of the Bashaw's castle and of his principal battery. Two Tripolitan cruisers were lying within two cables length on the starboard quarter, and several gun boats within half gun shot on the starboard bow; and all the batteries on shore were opened upon the assailants; about twenty men of the Philadelphia were killed, a large boat full got off, and one man was made prisoner.

After having gained possession of the frigate, Lieutenant Decatur set fire to her store room, gun room, cockpit and birth-deck, and with a firmness highly honorable to him, his officers and men, they remained on board until the flames had issued from the ports of the gun deck and the hatchways of the spar deck, and they continued in the ketch along side the frigate until the fire had communicated to her rigging and tops.

Lieutenant Decatur did not lose a man, and had but one slightly wounded.

The following is a list of the officers, and the number of men, employed in the destruction of the Philadelphia.

Lieutenant Stephen Decatur, junr.
James Lawrence, *Lieutenant.*
Joseph Baimbridge, *do.*
Jonathan Thorn, *do.*
Lewis Herman, *Surgeon.*
Ralph Izard, *Midshipman.*
John Rowe, *do.*

Charles Morris, *Midshipman.*
Alexander Laws, *do.*
John Davis, *do.*
Thos. Mc'Donough, *do.*
Thos. Oakley Anderson, *do.*
Mr. ——— Salvader, *pilot.*
Sixty-two men.

Lieutenant Decatur has stated that all his officers and men behaved with the greatest coolness and intrepidity, and Commodore Preble has informed me that Lieutenant Stewart's conduct was judicious and meritorious.

Respectfully submitted.

R. SMITH.

8th. CONGRESS.]

No. 44.

[2d SESSION.]

INDEMNITY MADE TO AN OFFICER FOR RESPONSIBILITY INCURRED IN THE EXECUTION OF MILITARY ORDERS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, ON THE 8TH DAY OF JANUARY, 1805.

Mr. DANA, from the Committee of Claims, to whom was referred the memorial of Alexander Murray, a Captain in the navy of the United States, made the following report:

Captain Murray commanded the frigate Constellation, in the service of the United States, and was cruising near Guadaloupe, about the first of July, 1800, when two vessels were discovered standing in for the port of Basse-terre. The vessels were a French privateer and her prize. Under cover of the night, the privateer escaped; but the prize was recaptured by Captain Murray, and carried to Martinique. This vessel was an American-built schooner, with a tier of ports, and had on board a French prize-master, and seven or eight hands, with a process verbal, representing her as an American vessel, which the captors had determined to take to Guadaloupe. The persons before on board (except the master, an old man, and two boys) had been taken off by the privateer. The schooner was furnished with Danish papers; named the Charming Betsey; and bound to the island of Guadaloupe, from St. Thomas.

In the month of April, 1800, the same vessel, under the name of the Jane, being owned by citizens of the United States, and registered accordingly, sailed from Baltimore, with a cargo chiefly of flour, for the West Indies, and was furnished with ammunition, cannon, and arms. At the time of the recapture, she had been chiefly dismantled of these articles; a small part of the ammunition and arms excepted. The cargo on board, at this time, consisted of American produce; a considerable portion of which was found, at Martinique, to be in a damaged condition; and the whole was therefore sold at auction, by the navy agent of the United States at that Island, in pursuance of Capt. Murray's direction. A proposal was there made, by Captain Murray, to deliver up the property, on condition of having security for the value, in case of condemnation. The security not being given, he ordered the vessel to be taken to the United States, and the nett proceeds of the cargo to be remitted to the United States' Bank, to await the result of a trial.

A libel for condemnation was afterwards exhibited, in the District Court of the United States, for the district of Pennsylvania, in the name of Capt. Murray, as well for the United States, as for himself, the officers, and men, belonging to the frigate Constellation. The property was claimed as belonging to Jared Shattuck, a resident merchant in the Danish Island of St. Thomas, who was born within the limits of the United States; but had become a Danish burgher about the year 1796; and damages were also claimed for him on account of seizure and detention. The District Court ordered that the vessel should be restored, and that the proceeds of the cargo should be paid to the claimant, or his agent, with costs, and such damages as should be assessed by the clerk of the court, and two merchants of the district. The damages, after deducting the moneys arising from the sales of the cargo, were assessed at \$14,930 30. And a decree was pronounced accordingly, for the recovery of the damages, with costs.

On the libellant's appeal to the Circuit Court of the United States, the decree of the District Court was affirmed, so far as it ordered the restitution of the vessel, and payment of the nett proceeds of the cargo, and was reversed for the residue; each party to pay his own costs, and one moiety of the bills for the custody and wharfage of the vessel, until restitution.

From this decision both parties appealed to the Supreme Court of the United States. This court affirmed the decree of the Circuit Court, so far as it affirmed the decree of the District, which ordered the restitution of the vessel, and the payment of the nett proceeds of the cargo, and so far as it directed the parties to bear their own

costs; but reversed so much thereof as rejected the claim for damages. This court further decreed, that so much of the decree of the District Court as adjudged the libellant to pay the costs and damages, be affirmed; but that the estimate of damages, before mentioned, be annulled; and that the cause be remanded to the Circuit Court, with directions for referring it to commissioners, to ascertain the damages according to a specified standard; each party to pay his own costs, in the two upper courts.

In pursuance of this determination, a special mandate was sent to the Circuit Court. Whereupon commissioners were appointed, who assessed the damages, including expenses, according to the standard specified by the Supreme Court. For the damages so assessed, judgment was ultimately rendered by the Circuit Court; and Captain Murray is now liable to process of execution thereon.

The object of the present application is, that he may be relieved, by the Government of the United States, from the damages and expenses to which he has thus been subjected, in consequence of acting, as he believed to be his duty, under the public instructions which he had received.

A communication from the Secretary of the Navy, in relation to this subject, is herewith presented, and prayed to be received as part of the present report. The observations of the Secretary explain the responsibility of the Government in so clear a manner, that the committee deem it unnecessary for them to attempt a further elucidation of the principle.

On a view of the circumstances of this case, the committee consider it as but an act of justice to state explicitly their opinion, that, in the re-capture of the *Charming Betsey*, and the subsequent proceedings respecting the property, Captain Murray conducted as became an officer of the navy, attentive to his orders, and solicitous to perform his duty with fidelity.

The following resolution is therefore recommended to the House:

Resolved, That the prayer of the memorial of Alexander Murray is reasonable, and ought to be granted.

Opinion of the Supreme Court of the United States in the case of Alexander Murray, and others, vs. the schooner Charming Betsey.

The *Charming Betsey* was an American built vessel, belonging to citizens of the United States, and sailed from Baltimore under the name of the *Jane*, on the 10th of April 1800, with a cargo of flour, for St. Bartholomew's; she was sent out for the purpose of being sold. The cargo was disposed of at St. Bartholomew's, but finding it impossible to sell the vessel at that place, the captain proceeded with her to the island of St. Thomas, where she was disposed of to Jared Shattuck, who changed her name to that of the *Charming Betsey*, and having put on board her a cargo consisting of American produce, cleared her out as a Danish vessel, for the island of Guadaloupe.

On her voyage she was captured by a French privateer, and eight hands were put on board her for the purpose of taking her into Guadaloupe as a prize: She was afterwards re-captured by Captain Murray, commander of the *Constellation* frigate, and carried into Martinique. It appears that the Captain of the *Charming Betsey* was not willing to be taken into that island; but when there, he claimed to have his vessel and cargo restored, as being the property of Jared Shattuck, a Danish burgher.

Jared Shattuck was born in the United States, but had removed to the island of St. Thomas while an infant, and was proved to have resided there ever since the year 1789, or 1790. He had been accustomed to carry on trade as a Danish subject, had married a wife and acquired real property in the island, and also taken the oath of allegiance to the crown of Denmark, in 1797.

Considering him as an American citizen who was violating the law prohibiting all intercourse between the United States and France or its dependencies, or the sale of the vessel as a mere cover to evade that law, Captain Murray sold the cargo of the *Charming Betsey*, which consisted of American produce, in Martinique, and brought the vessel into the port of Philadelphia, where she was libelled under what is termed the non-intercourse law. The vessel and cargo were claimed by the Consul of Denmark, as being the bona fide property of a Danish subject.

This cause came on to be heard before the judge for the district of Pennsylvania, who declared the seizure to be illegal, and that the vessel ought to be restored, and the proceeds of the cargo paid to the claimant or his lawful agent, together with costs, and such damages as should be assessed by the clerk of the court, who was directed to inquire into and report the amount thereof; for which purpose he was also directed to associate with himself two intelligent merchants of the district, and duly inquire what damage Jared Shattuck had sustained by reason of the premises. If they should be of opinion that the officers of the *Constellation* had conferred any benefit on the owner of the *Charming Betsey*, by rescuing her out of the hands of the French captors, they were, in the adjustment, to allow reasonable compensation for the service.

In pursuance of this order the clerk associated with himself two merchants, and reported that, having examined the proofs and vouchers exhibited in the cause, they were of opinion that the owner of the vessel and cargo had sustained damage to the amount of twenty thousand five hundred and ninety-four dollars and sixteen cents, from which is to be deducted the sum of four thousand three hundred and sixty-three dollars and eighty-six cents, the amount of moneys paid into court arising from the sales of the cargo, and the further sum of one thousand three hundred dollars, being the residue of the proceeds of the said sales remaining to be brought into court, five thousand six hundred sixty-three dollars and eighty-six cents. This estimate is exclusive of the value of the vessel, which was fixed at three thousand dollars.

To this report an account is annexed, in which the damages, without particularizing the items on which the estimate was formed, were stated at fourteen thousand nine hundred and thirty dollars and thirty cents.

No exceptions having been taken to this report, it was confirmed; and, by the final sentence of the court, Captain Murray was ordered to pay the amount thereof.

From this decree an appeal was prayed to the circuit court, where the decree was affirmed, so far as it directed restitution of the vessel and payment to the claimant of the nett proceeds of the sale of the cargo in Martinique, and reversed for the residue.

From this decree each party has appealed to this court.

It is contended on the part of the captors, in substance:

- 1st. That the vessel *Charming Betsey* and cargo, are confiscable under the laws of the United States. If not so,
- 2d. That the captors are entitled to salvage. If this is against them,
- 3dly. That they ought to be excused from damages, because there was probable cause for seizing the vessel and bringing her into port.

1st. Is the *Charming Betsey* subject to seizure and condemnation for having violated a law of the United States?

The libel claims this forfeiture under the act passed in February, 1800, further to suspend the commercial intercourse between the United States and France and the dependencies thereof.

That act declares "that all commercial intercourse," &c. It has been very properly observed, in argument, that the building of vessels in the United States for sale to neutrals, in the islands, is, during war, a profitable business, which Congress cannot have intended to prohibit, unless that intent be manifested by express words or a very plain and necessary implication.

It has also been observed that an act of Congress ought never to be construed to violate the law of nations, if any other possible construction remains, and, consequently, can never be construed to violate neutral rights, or to affect neutral commerce, further than is warranted by the law of nations as understood in this country.

These principles are believed to be correct, and they ought to be kept in view in construing the act now under consideration.

The first sentence of the act, which describes the persons whose commercial intercourse with France or her dependencies is to be prohibited, names any person or persons, resident within the United States or under their protection. Commerce carried on by persons within this description is declared to be illicit.

From persons the act proceeds to things, and declares explicitly the cases in which the vessels employed in this illicit commerce shall be forfeited. Any vessel owned, hired, or employed, wholly or in part, by any person residing within the United States, or by any citizen thereof, residing elsewhere, which shall perform certain acts recited in the law, becomes liable to forfeiture. It seems to the court to be a correct construction of these words to say, that the vessel must be of this description, not at the time of the passage of the law, but at the time when the act of forfeiture shall be committed. The cases of forfeiture are, 1st. A vessel of the description mentioned which shall be voluntarily carried, or shall be destined or permitted to proceed to any port within the French republic. She must, when carried, or destined, or permitted to proceed to such port, be a vessel within the description of the act.

The second class of cases are those where vessels shall be sold, bartered, entrusted, or transferred, for the purpose that they may proceed to such port or place. This part of the section makes the crime of the sale dependent on the purpose for which it was made. If it was intended that any American vessel sold to a neutral should, in the possession of that neutral, be liable to the commercial disabilities imposed on her while she belonged to citizens of the United States, such extraordinary intent ought to have been plainly expressed; and if it was designed to prohibit the sale of American vessels to neutrals, the words placing the forfeiture on the intent with which the sale was made ought not to have been inserted.

The third class of cases are those vessels which shall be employed in any traffic by or for any person resident within the territories of the French republic, or any of its dependencies.

In these cases, too, the vessels must be within the description of the act at the time the fact, producing the forfeiture, was committed.

The Jane having been completely transferred, in the island of St. Thomas, by a bona fide sale to Jared Shattuck, and the forfeiture alleged to have accrued on a fact subsequent to that transfer, the liability of the vessel to forfeiture must depend on the inquiry whether the purchase was within the description of the act.

Jared Shattuck having been born within the United States, and not being proved to have expatriated himself according to any form prescribed by law, is said to remain a citizen, entitled to the benefit and subject to the disabilities imposed upon American citizens; and, therefore, to come expressly within the description of the act which comprehends American citizens residing elsewhere.

Whether a person born within the United States, or becoming a citizen, according to the established laws of the country, can divest himself absolutely of that character, otherwise than in such manner as may be prescribed by law, is a question which it is not necessary at present to decide. The cases cited at bar, and the arguments drawn from the general conduct of the United States on this interesting subject seem completely to establish the principle that an American citizen may acquire, in a foreign country, the commercial privileges attached to his domicile, and be exempted from the operation of an act expressed in such general terms as that now under consideration. Indeed, the very expressions of the act would seem to exclude a person under the circumstances of Jared Shattuck. He is not a person under the protection of the United States. The American citizen who goes into a foreign country, although he owes local and temporary allegiance to that country, is yet, if he performs no other act changing his condition, entitled to the protection of our Government; and if, without the violation of any municipal law, he should be oppressed unjustly, he would have a right to claim that protection, and the interposition of the American Government in his favor would be considered a justifiable interposition. But his situation is completely changed, where, by his own act, he has made himself the subject of a foreign Power. Although this act may not be sufficient to rescue him from punishment for any crime committed against the United States, a point not intended to be decided, yet it certainly places him out of the protection of the United States, while within the territory of the sovereign to whom he has sworn allegiance, and consequently takes him out of the description of the act.

It is, therefore, the opinion of the court, that the *Charming Betsey*, with her cargo, being, at the time of her recapture the bona fide property of a Danish burgher, is not forfeitable, in consequence of her being employed in carrying on trade and commerce with a French island.

The vessel not being liable to confiscation, the court is brought to the second question, which is:

2d. Are the re-captors entitled to salvage?

In the case of the *Amelia* it was decided, on mature consideration, that a neutral armed vessel in possession of the French might, in the then existing state of hostilities between the two nations, be lawfully captured; and if there were well founded reasons for the opinion, that she was in imminent hazard of being condemned as a prize, the re-captors would be entitled to salvage. The court is well satisfied with the decision given in that case, and considers it as a precedent not to be departed from in other cases, attended with circumstances substantially similar to those of the *Amelia*. One of these circumstances is, that the vessel should be in a condition to annoy American commerce.

The degree of arming which should bring a vessel within this description has not been ascertained, and perhaps it would be difficult precisely to mark the limits, the passing of which would bring a captured vessel within the description of the acts of Congress on this subject. But although there may be difficulty in some cases, there appears to be none in this. According to the testimony of the case, there was on board but one musket, a few ounces of powder, and a few balls. The testimony respecting the cutlasses is not considered as showing that they were in the vessel at the time of her recapture. The capacity of this vessel for offence, appears not sufficient to warrant the capture of her as an armed vessel. Neither is it proved, to the satisfaction of the court, that the *Charming Betsey* was in such imminent hazard of being condemned as to entitle the re-captors to salvage.

It remains to inquire whether there was, in this case, such probable cause for sending in the *Charming Betsey* for adjudication, as will justify Captain Murray for having broken up her voyage, and excuse him from the damages sustained thereby.

To effect this, there must have been substantial reason for believing her to have been, at the time, wholly, or in part, an American vessel, within the description of the act, or hired, or employed by Americans, or sold, bartered, or trusted for the purpose of carrying on trade to some port or place belonging to the French republic.

The circumstances relied upon are principally—

1st. The proces verbal of the French captors.

2d. That she was an American built vessel.

3d. That the sale was recent.

4th. That the captain was a Scotchman; and the muster roll showed the crew were not Danes.

5th. The general practice in the Danish islands of covering neutral property.

1st. The proces verbal contains an assertion that the mate declared that he was an American, and that their flag had been American, and had been changed during the cruise to Danish, which declaration was confirmed by several of the crew.

If the mate had really been an American, the vessel would not, on that account, have been liable to forfeiture, nor should that fact have furnished any conclusive testimony of the character of the vessel. The proces verbal, however, ought, for several reasons, to have been suspected. The general conduct of the French West India cruisers, and the very circumstances of declaring that the Danish colors were made during the chase, were sufficient to destroy the credibility of the proces verbal. Captain Murray ought not to have believed that an American vessel, trading to a French port in the assumed character of a Danish bottom would have been without Danish colors.

That she was an American vessel, and that the sale was recent, cannot be admitted to furnish just cause of suspicion, unless the sale of American built vessels had been an illegal or an unusual act.

That the captain was a Scotchman, and that the names of the crew were not generally Danish, are circumstances of small import, when it is recollected that a very great proportion of the inhabitants of St. Thomas are British and Americans.

The practice of covering American property in the islands might, and would, justify Captain Murray in giving to other causes of suspicion more weight than they would otherwise be entitled to, but cannot be, itself, a motive for seizure. If it was, no neutral vessel could escape, for this ground of suspicion will be applicable to them all.

These causes of suspicion, taken together, ought not to have been deemed sufficient to counterbalance the evidence of fairness with which they were opposed. The ship's papers appear to have been perfectly correct, and the

information of the captain, uncontradicted by those belonging to the vessel who were taken with him, corroborated their verity. No circumstance existed which ought to have discredited them. That a certified copy of Shattuck's oath, as a Danish subject, was not on board, is immaterial, because, being apparently on all the papers a burgher, and it being unknown that he was born in the United States, the question, whether he had ceased to be a citizen of the United States, could not present itself.

Nor was it material that the power given by the owners of the vessel to their captain, to sell her in the West Indies, was not exhibited. It certainly was not necessary to exhibit the instructions under which the vessel was acquired, when the fact of acquisition was fully proved by the documents on board, and by other testimony.

Although there does not appear to have been such cause to suspect the Charming Betsey and her cargo to have been American, as would justify Captain Murray in bringing her in for adjudication, yet many other circumstances combine, with the fairness of his character, to produce a conviction that he acted upon correct motives, from a sense of duty: for which reason this hard case ought not to be rendered still more so, by a decision in any respect oppressive.

His orders were such as might well have induced him to consider this as an armed vessel within the law, sailing under authority from the French republic; and such, too, as might well have induced him to trust to very light suspicions respecting the real character of a vessel appearing to belong to one of the neutral islands. A public officer, entrusted on the high seas to perform a duty deemed necessary by his country, and executing, according to the best of his judgment, the orders he has received, if he is the victim of any mistake he commits, ought certainly never to be assessed with vindictive or speculative damages. It is not only the duty of the court to relieve him from such when they plainly appear to have been imposed on him, but no sentence against him ought to be affirmed, where, from the nature of the proceedings, the whole case appears upon the record, unless those proceedings are such as to show on what the decree has been founded, and to support that decree.

In the case at bar, damages are assessed as they would be by the verdict of a jury, without any specifications of items which can show how the account was made up, or on what principles the sum given as damages was assessed. This mode of proceeding would not be approved of if it was even probable, from the testimony contained in the record, that the sum reported by the commissioners of the district court was really the sum due. The district court ought not to have been satisfied with a report giving a gross sum in damages, unaccompanied by any explanation of the principles on which that sum was given. It is true Captain Murray ought to have excepted to this report. His not having done so, however, does not cure an error apparent upon it, and the omission to show how the damages which were given had accrued, so as to enable the judge to decide on the propriety of the assessment of his commissioners, is such an error.

Although the court would, in any case, disapprove of this mode of proceeding, yet, in order to save the parties the costs of further prosecuting this business in the circuit court, the error which has been stated might have been passed over, had it not have appeared probable that the sum for which the decree of the district was rendered, is really greater than it ought to have been, according to the principles by which the claim should be adjusted.

This court is not, therefore, satisfied with either the decree of the district or circuit court, and has directed me to report the following decree:

Decree of the Court.

This cause came on to be heard on the transcript of the record of the circuit court, and was argued by counsel; on consideration whereof, it is adjudged, ordered, and decreed, as follows, viz.: That the decree of the circuit court, so far as it affirms the decree of the district court, which directed restitution of the vessel, and payment to the claimant of the nett proceeds of the sale of the cargo in Martinique, deducting the costs and charges there, according to amount exhibited by Captain Murray's agent, being one of the exhibits in the cause, and so far as it directs the parties to bear their own costs, be affirmed; and that the residue of the said decree, whereby the claim of the owner to damages for the seizure and detention of his vessel was rejected, be reversed.

And the court, proceeding to give such further decree as the circuit court ought to have given, doth further adjudge, order, and decree, that so much of the decree of the district court as adjudges the libellant to pay costs and damages, be affirmed; but that the residue thereof, by which the said damages are estimated at twenty thousand five hundred and ninety-four dollars and sixteen cents, and by which the libellant was directed to pay that sum, be reversed and annulled. And this court does further order and decree, that the cause be remanded to the circuit court, with directions to refer it to commissioners, to ascertain the damages sustained by the claimants, in consequence of the refusal of the libellant to restore the vessel and cargo at Martinique, and in consequence of his sending her into a port of the United States for adjudication; and that the said commissioners be instructed to take the actual prime cost of the cargo and vessel, with interest thereon, including the insurance actually paid, and such expenses as were necessarily sustained in consequence of bringing the vessel into the United States, as the standard by which the damages ought to be measured. Each party to pay his own costs in this court and the circuit court. All which is ordered and decreed accordingly.

A true copy.

E. B. CALDWELL,
Clerk Supreme Court U. S.

NAVY DEPARTMENT, December 26, 1804.

SIR:

I have had the honor of receiving your favor, in which you have been pleased to request me to communicate to you such observations as I may think proper to make in relation to the admissibility of the claim of Captain Murray, or to the necessity of the legislative interposition which he has solicited.

In this case, two questions present themselves for consideration—

1st. Was the recapture of the Charming Betsey warranted by any *statute* of Congress?

2d. Was it warranted by the *instructions* which Captain Murray had received from the Executive?

The first was a question between Captain Murray and the *owner* of the vessel and cargo. The second is a question between Captain Murray and the *Government*.

Upon the first question, the courts of the United States having decided that the recapture was not authorized by any *statute* of Congress, Captain Murray has been adjudged to pay to the owner the damages sustained by him in consequence of such recapture.

Upon the second question, the ultimate responsibility of Government essentially depends: for, if the recapture was not authorized by the *instructions* from the Executive, Captain Murray has no claim upon the Government for indemnity. But if it was so authorized, then he is to be considered merely as an agent of the Government, and in such case, the Government is, I trust, to be considered responsible for an act thus done by him in obedience to their orders.

The instructions given to Captain Murray were *military orders*; and, founded or not founded in law, he was at his peril bound to obey them. They gave to him a great latitude of discretion. They authorized him to capture, not only upon positive proof, but upon presumptive evidence, grounded on mere circumstances of suspicion.

The judges of the Supreme Court have stated that "many circumstances combine with the fairness of the character of Captain Murray to produce a conviction, that he acted upon correct motives, from a sense of duty, and that his orders were such as might well have induced him to consider this vessel as an armed vessel within the law, sailing under authority from the French republic, and such, too, as might well have induced him to trust to very light suspicions respecting the real character of a vessel appearing to belong to one of the neutral islands."

Such has been the construction of the judges of the Supreme Court upon the orders which Captain Murray had received from the Executive. And in addition thereto, I am warranted in stating that my predecessor in office, who had prepared and issued those instructions, and who necessarily must have well known their true intent and meaning, as well as the real circumstances of the case, has been invariably of the opinion, that Captain Murray was bound by his orders to recapture as he did the Charming Betsey.

From the view I have taken of his instructions and of the circumstances of this case, it has appeared to me also, that he was warranted, by the tenor of his orders, in the recapturing of this vessel. Under this impression, I have considered that, agreeably to the principles of political justice, recognized as well by the practice of the United States, as by the theory of the ablest jurists, Government is answerable for the damages that have been decreed against Captain Murray. Whatever doubts might have existed respecting the responsibility of Government in such cases, the question has appeared to me to have been settled in this country, by the judicial decision in the case of the Niger, which was afterwards deliberately sanctioned by the act of Congress passed March 2d, 1799.

Considering Captain Murray a military officer, who had in this case acted under and in pursuance of the orders of the Executive, and believing as I did, that Government would ultimately have to pay whatever damages might be decreed against him, I, by letter dated 23d September, 1801, authorized and directed the navy agent at Philadelphia to give the requisite security upon the appeal that had been prayed by Captain Murray, and to request the District Attorney to attend to the prosecution of the appeal.

With respect to your inquiry in relation to the necessity of the Legislative interposition which Captain Murray has solicited, it is, I presume, sufficient for me to state, that there is not at this time any money in the treasury, subject to the control of this Department, that could be applied by me to this case.

I have the honor to be, respectfully, sir, your most obedient servant,

R. SMITH.

The Honorable SAMUEL W. DANA,
Chairman of the Committee of Claims.

Instructions to the commanders of armed vessels belonging to the United States, given at Philadelphia, the tenth day of July, in the year of our Lord one thousand seven hundred and ninety-eight, and in the twenty-third year of our independence.

In pursuance of the acts of Congress, passed the twenty-eighth day of June, and the ninth day of July, You are hereby authorized, instructed, and directed, to subdue, seize, and take, any armed French vessel or vessels, sailing under authority, or pretence of authority, from the French republic; which shall be found within the jurisdictional limits of the United States, or elsewhere, on the high seas, and such captured vessel, with her apparel, guns, and appurtenances, and the goods and effects which shall be found on board the same, together with all French persons and others, who shall be found acting on board the same, to bring within some port of the United States; and also to retake any vessels, goods, and effects, of the citizens of the United States, or persons resident therein, which may have been captured by any French vessel. In order that proceedings may be had concerning such capture or recapture, in due form of law, and as to right shall appertain.

By command of the President of the United States of America:

BEN. STODDERT, Secretary of the Navy.

CIRCULAR.

NAVY DEPARTMENT, 29th December, 1798.

SIR:

It is the positive command of the President, that, on no pretence whatever, you permit the public vessels of war under your command to be detained or searched, nor any of the men to be taken from her by the ships or vessels of any foreign nation, so long as you are in a capacity to repel such outrage on the honor of the American flag. If force should be exerted to compel your submission, you are to resist that force to the utmost of your power; and whenever overpowered by superior force, you are to strike your flag, and then yield your vessel, as well as your men; but never your men without your vessel.

You will remember, however, and it is strictly enjoined by the President, that your demeanor be respectful and friendly to the vessels and people of all nations in amity with the United States, and that you avoid as carefully the commission of, as the submission to, insults or injuries.

I have the honor to be, &c.

BEN. STODDERT.

CIRCULAR.

NAVY DEPARTMENT, 12th March, 1799.

SIR:

Herewith you will receive an act of Congress "further to suspend the commercial intercourse between the United States and France, and the dependencies thereof," the whole of which requires your attention. But it is the command of the President, that you consider particularly the fifth section as part of your instructions, and govern yourself accordingly.

A proper discharge of the important duties enjoined on you, arising out of this act, will require the exercise of a sound and impartial judgment. You are not only to do all that in you lies, to prevent all intercourse, whether direct or circuitous, between the ports of the United States and those of France and her dependencies, in cases where the vessels or cargoes are apparently as well as really American, and protected by American papers, only, but you are to be vigilant that vessels or cargoes really American, but covered by Danish or other foreign papers, and bound to or from French ports, do not escape you.

Whenever, on just suspicion, you send a vessel into port, to be dealt with according to the aforementioned law, besides sending with her all her papers, send all the evidence you can obtain to support your suspicions, and effect her condemnation. At the same time that you are thus attentive to fulfil the objects of the law, you are to be extremely careful not to harass or injure the trade of foreign nations with whom we are at peace, nor the fair trade of our own citizens.

A misconstruction of his authority by Captain Nicholson, in relation to vessels of friendly nations, captured by the French, renders it necessary that I should make some explanatory observations on that subject. Our laws direct the capture of all armed vessels sailing under the authority, or pretence of authority, from the French republic. A vessel captured by the cruisers of France must be considered as sailing under the authority of France, and it is scarcely to be supposed that, in times like the present, when few vessels sail without arms, a captured vessel in possession of the captors will be so circumstanced as not to come under the description of an armed vessel, under the meaning of our laws.

To justify a recapture nothing is necessary but that the vessel be provided with such means of annoyance as will render her dangerous to an unarmed American vessel, in pursuit of lawful commerce. If, however, the vessel cannot be considered an armed vessel within the meaning of our laws, you are not to recapture her, unless you should have probable cause to suspect that the citizens of the United States, or persons resident therein, have some interest in the vessel or cargo. It is always your duty to recapture American property, and property of persons resident within the United States, whenever found in possession of the French, on the high seas.

I have the honor to be, &c.

BEN. STODDERT.

NAVY DEPARTMENT, 27th July, 1799.

SIR:

Prior to your sailing you will please to cause every officer on board the Insurgent, having charge of public stores of any kind, to make returns of the quantity on board; which returns, with your signature, you will please to transmit to this office. It will be well for you to keep copies of such returns, in a book kept for that purpose,

which will enable you to check extravagant demands from the different officers, on the return of the ship into port. The vigilant attention of the Commander in regard to stores, is the only circumstance which can prevent great waste and great fraud on board of our public ships. When you are on return to the United States, each officer should prepare his account of the expenditure of stores during the voyage; should show in the returns the quantity on hand, and what will be wanted for another cruise of six months. These returns, also with your signature, should be forwarded to this office, on the very day of your arrival in port; and duplicates should be given to the navy agent of the port, in order that the articles be prepared without the least delay. I must beg your particular attention to this letter, which you will consider as containing orders always to be adhered to.

BEN. STODDERT.

ALEXANDER MURRAY, Esq. Norfolk.

NOTE.—See the case of Captain Little, No. 46.

8th CONGRESS.]

No. 45.

[2d SESSION.]

NAVAL OPERATIONS AGAINST TRIPOLI.

COMMUNICATED TO CONGRESS, FEBRUARY 20, 1805.

To the Senate and House of Representatives of the United States:

I communicate, for the information of Congress, a letter of September 18, from Commodore Preble, giving a detailed account of the transactions of the vessels under his command, from July the 9th, to the 10th of September, last past.

The energy and judgment displayed by this excellent officer, through the whole course of the service lately confided to him, and the zeal and bravery of his officers and men in the several enterprises executed by them, cannot fail to give high satisfaction to Congress and their country, of whom they have deserved well.

TH: JEFFERSON.

February 20, 1805.

Copy of a letter from Commodore Edward Preble to the Secretary of the Navy.

Sir:

I had the honor to write you from Messina, under date of the 5th of July; I then expected to have sailed the day following, but was detained, by bad weather, until the 9th, when I left it, with two small bomb vessels under convoy, and arrived at Syracuse, where we were necessarily detained four days. On the 14th I sailed, the schooners Nautilus and Enterprise in company, with six gun boats and two bomb vessels, generously loaned us by his Sicilian Majesty. The bomb vessels are about thirty tons, carry a thirteen inch brass sea-mortar, and forty men. Gunboats, twenty-five tons, carry a long iron twenty-four pounder in the bow, with a complement of thirty-five men. They are officered and manned from the squadron, excepting twelve Neapolitan bombardiers, gunners, and sailors, attached to each boat, who were shipped by permission of their Government. This step I found necessary, as every vessel in the squadron was considerably short of complement. The gunboats are constructed for the defence of harbors; they are flat bottomed and heavy, and do not sail or row even tolerably well. They were never intended to go to sea, and, I find, cannot be navigated with safety, unless assisted by tow ropes from larger and better sailing vessels, nor even then, in very bad weather; however, as they were the best I could obtain, I have thought it for the good of our service to employ them, particularly as the weather in July and August is generally pleasant, and, without them, my force too small to make any impression on Tripoli. On the 16th of July we arrived at Malta, where we were detained, by contrary gales, until the 21st, when we left it, and arrived in sight of Tripoli the 25th, and were joined by the Syren, Argus, Vixen, and Scourge. Our squadron now consisted of the Constitution, three brigs, three schooners, two bombs, and six gunboats, our whole number of men one thousand and sixty. I proceeded to make the necessary arrangements for an attack on Tripoli, a city well walled, protected by batteries judiciously constructed, mounting one hundred and fifteen pieces of heavy cannon, and defended by twenty-five thousand Arabs and Turks; the harbor protected by nineteen gunboats, two galleys, two schooners of eight guns each, and a brig mounting ten guns, ranged in order of battle, forming a strong line of defence, at secure moorings, inside a long range of rocks and shoals, extending more than two miles to the eastward of the town, which form the harbor, protects them from the northern gales, and renders it impossible for a vessel of the Constitution's draught of water to approach near enough to destroy them, as they are sheltered by the rocks, and can retire under that shelter to the shore, unless they choose to expose themselves in the different channels and openings of the reefs, for the purpose of annoying their enemies. Each of their gunboats mounts a heavy eighteen or twenty-six pounder in the bow, and two brass howitzers on their quarters, and carry from thirty-six to fifty men. The galleys have each one hundred men, schooners and brigs about the same number. The weather was not favorable for anchoring until the 28th, when, with the wind E. S. E. the squadron stood in for the coast, and, at 3 P. M. anchored, per signal, Tripoli bearing S. two and a half miles distant. At this moment the wind shifted suddenly from E. S. E. to N. N. W. and from thence to N. N. E. At 5 o'clock it blew strong, with a heavy sea, setting directly on shore. I made the signal to prepare to weigh. At 6, the wind and sea having considerably increased, the signal was made for the squadron to weigh and gain an offing: the wind continued veering to the eastward, which favored our gaining searoom, without being obliged to carry so great a press of sail as to lose any of our gunboats, although they were in great danger. The gale continued varying from N. E. to E. S. E. without increasing much, until the 31st, when it blew away our reefed foresail, and close reefed maintopsail; fortunately the sea did not rise in proportion to the strength of the gale, or we must have lost all our boats. August 1st, the gale subsided, and we stood towards the coast: every preparation was made for an attack on the town and harbor. August 3d, pleasant weather, wind East; stood in with the squadron towards Tripoli. At noon we were between two and three miles from the batteries, which were all manned, and observing several of their gunboats and galleys had advanced, in two divisions, without the rocks, I determined to take advantage of their temerity. At half past 12, I wore off shore, and made the signal to come within hail, when I communicated to each of the commanders my intention of attacking the enemy's shipping and batteries. The gun and mortar boats were immediately manned, and prepared to cast off, the gunboats in two divisions of three each; the first division commanded by Captain Somers, in No. 1, Lieutenant Decatur in No. 2, and Lieutenant Blake, in No. 3: the second division commanded by Captain Decatur, in No. 4, Lieutenant Bainbridge, in No. 5, and Lieutenant Trippe, in No. 6. The two bombards were commanded by Lieutenant Commandant Dent, and Mr. Robinson, First Lieutenant of this ship. At half past 1 o'clock, having made the necessary arrangements for the attack, wore ship and stood towards the batteries. At 2, signal made to cast off the boats; at a quarter past 2, signal for bombs and gunboats to advance and attack the enemy. At half past 2, general signal for battle. At three-quarters past 2, the bombs commenced the action, by throwing shells into the town. In

an instant the enemy's shipping and batteries opened a tremendous fire, which was promptly returned by the whole squadron within grape-shot distance; at the same time the second division, of three gunboats, led by the gallant Captain Decatur, was advancing, with sails and oars, to board the eastern division of the enemy, consisting of nine boats. Our boats gave the enemy showers of grape and musket balls as they advanced; they, however, soon closed, when the pistol, sabre, pike, and tomahawk, were made good use of by our brave tars. Captain Somers being in a dull sailer, made the best use of his sweeps, but was not able to fetch far enough to windward to engage the same division of the enemy's boats which Captain Decatur fell in with; he, however, gallantly bore down with his single boat on five of the enemy's western division, and engaged within pistol shot, defeated, and drove them within the rocks, in a shattered condition, and with the loss of a great number of men. Lieutenant Decatur, in No. 2, was closely engaged with one of the enemy's largest boats of the eastern division, which struck to him, after having lost a large proportion of men, and, at the instant that brave officer was boarding her to take possession, he was treacherously shot through the head by the captain of the boat that had surrendered, which base conduct enabled the poltroon (with the assistance he received from other boats) to escape. The third boat of Captain Somers' division, kept to windward, firing at the boats and shipping in the harbor, had she gone down to his assistance, it is probable several of the enemy's boats would have been captured in that quarter. Captain Decatur, in No. 4, after having, with distinguished bravery, boarded and carried one of the enemy of superior force, took his prize in tow, and gallantly bore down to engage a second, which, after a severe and bloody conflict, he also took possession of. These two prizes had thirty-three officers and men killed, and twenty-seven made prisoners, nineteen of which were badly wounded. Lieutenant Trippe, of the Vixen, in No. 6, ran along side of one of the enemy's large boats, which he boarded with only Midshipman John Henley and nine men, his boat falling off before any more could get on board; thus was he left, compelled to conquer or perish, with the odds of *thirty-six to eleven*. The Turks could not withstand the ardor of this brave officer and his assistants; in a few minutes the decks were cleared, and her colors hauled down. On board of this boat fourteen of the enemy were killed, and twenty-two made prisoners, seven of which were badly wounded. The rest of their boats retreated within the rocks. Lieutenant Trippe received eleven sabre wounds, some of which are very severe: he speaks in the highest terms of Mr. Henley, and those who followed him. Lieutenant Bainbridge, in No. 5, had his latteen yard shot away early in the action, which prevented his getting alongside the enemy's boats, but he galled them by a steady and well directed fire, within musket shot; indeed he pursued the enemy until his boat grounded under the batteries: she was, fortunately, soon got off. The bomb vessels kept their stations, although covered with the spray of the sea occasioned by the enemy's shot. They were well conducted by Lieutenants Dent and Robinson, who kept up a constant fire from the mortars, and threw a great number of shells into the town. Five of the enemy's gunboats, and two galleys, composing the centre division, and stationed within the rocks, as a reserve, joined by the boats that had been driven in, and supplied by fresh men from the shore to replace those they had lost, twice attempted to row out, to endeavor to surround our gunboats and their prizes: I as often made the signal to cover them, which was promptly attended to by the brigs and schooners, all of which were gallantly conducted, and annoyed the enemy exceedingly, but the fire from this ship kept their flotilla completely in check. Our grape shot made great havoc among their men, not only on board their shipping, but on shore. We were several times within two cables length of the rocks, and within three of their batteries, every one of which, in succession, were silenced, so long as we could bring our broadside to bear upon them; but the moment we passed a battery, it was re-animated, and a constant, heavy fire kept up from all that we could not point our guns at. We suffered most when wearing or tacking; it was then I most sensibly felt the want of another frigate. At half past 4, the wind inclining to the northward, I made the signal for the bombs and gunboats to retire from action, and, immediately after, the signal to tow off the gunboats and prizes, which was handsomely executed by the brigs, schooners, and boats of the squadron, covered by a heavy fire from the Constitution. At three-quarters past 4, P. M. the light vessels, gunboats, and prizes, being out of reach of the enemy's shot, I hauled off to take the bomb vessels in tow. We were two hours under the fire of the enemy's batteries, and the only damage received in the ship is, a twenty-four pound shot nearly through the centre of the mainmast, thirty feet from the deck; main royal yard and sail shot away; one of our quarter-deck guns damaged by a thirty-two pound shot, which, at the same time, shattered a marine's arm; two lower shrouds and two backstays were shot away, and our sails and running rigging considerably cut. We must impute our getting off thus well to our keeping so near that they overshot us, and to the annoyance our grape shot gave them: they are, however, but wretched gunners. Gunboat No. 5 had her main yard shot away, and the rigging and sails of the brigs and schooners were considerably cut. Lieutenant Decatur was the only officer killed, but in him the service has lost a valuable officer. He was a young man who gave strong promise of being an ornament to his profession. His conduct in the action was highly honorable, and he *died nobly*. The enemy must have suffered very much in killed and wounded, both among their shipping and on shore. Three of their gunboats were sunk in the harbor, several of them had their decks nearly cleared of men by our shot, and a number of shells burst in the town and batteries, which must have done great execution. The officers, seamen, and marines, of the squadron behaved in the most gallant manner. The Neapolitans, in emulating the ardor of our seamen, answered my highest expectations.

I cannot but notice the active exertions and officer-like conduct of Lieutenant Gordon, and the other Lieutenants of the Constitution. Mr. Harriden, the master, gave me full satisfaction, as did all the officers and ship's company. I was much gratified with the conduct of Captain Hall and Lieutenant Greenleaf, and the marines belonging to his company, in the management of six long twenty-six pounders, on the spar deck, which I placed under his direction. Captain Decatur speaks in the highest terms of the conduct of Lieutenant Thorn, and Midshipman McDonough, of No. 4, as does Captain Somers of Midshipmen Ridgely and Miller, attached to No. 1.

Annexed is a list of killed and wounded; and, enclosed, a copy of my general orders on this occasion.

Killed. Gun-boat No. 2—Lieutenant James Decatur.

Wounded. Constitution—One marine.

Do. Gun-boat No. 4—Captain Decatur, (slight) one sergeant of marines, and two seamen.

Do. Gun-boat No. 6—Lieutenant Trippe, severely, one boatswain's mate, and two marines.

Do. Gun-boat No. 1—Two seamen.

Do. Gun-boat No. 2—Two seamen. Total—one killed, thirteen wounded.

August 5th. We were at anchor with the squadron about two leagues north from the city of Tripoli; the Argus in chase of a small vessel to the westward, which she soon came up with, and brought within hail; she proved to be a French privateer, of four guns, which put into Tripoli a few days since, for water, and left it this morning. I prevailed on the Captain, for a consideration, to return to Tripoli, for the purpose of landing fourteen very badly wounded Tripolitans, which I put on board his vessel, with a letter to the prime minister, leaving it at the option of the Bashaw to reciprocate this generous mode of conducting the war. The sending these unfortunate men on shore, to be taken care of by their friends, was an act of humanity, on our part, which I hope will make a proper impression on the minds of the Barbarians, but I doubt it. All hands were busily employed in altering the rig of the three prizes, from latteen vessels to sloops, and preparing for a second attack. Observed one of the enemy's schooners and the brig, (two corsairs in the harbor) to be dismasted. Was informed by the French captain, that the damage these vessels received in the action of the third had occasioned their masts being taken out.

August 7th. The French privateer came out, and brought me a letter from the French Consul, in which he observes, that our attack of the third instant has disposed the Bashaw to accept of reasonable terms, and invited me to send a boat to the rocks with a flag of truce, which was declined, as the white flag was not hoisted at the Bashaw's castle. At nine A. M. with a very light breeze from the eastward, and a strong current which obliged the Constitution to remain at anchor, I made the signal for the light vessels to weigh, and the gun and bomb boats to cast off, and stand in shore towards the western batteries; the prize boats having been completely fitted for service, and the command of them given to Lieutenants Crane, of the Vixen, Thorn, of the Enterprise, and Caldwell, of the Syren, the whole advanced with sails and oars. The orders were for the bombs to take a position in a small bay to the westward of the city, where but few of the enemy's guns could be brought to bear on them, but from whence they

could annoy the town with shells; the gun-boats to silence a battery of seven heavy guns which guarded the approach to that position, and the brigs and schooners to support them, in case the enemy's flotilla should venture out. At half past one P. M. a breeze from N. N. E. I weighed with the Constitution and stood in for the town, but the wind being on shore, made it imprudent to engage the batteries with the ship, as, in case of a mast being shot away, the loss of the vessel would probably ensue, unless a change of wind should favor our getting off. At half past two P. M. the bomb and gunboats having gained their station, the signal was made for them to attack the town and batteries. Our bombs immediately commenced throwing shells, and the gunboats opened a sharp and well directed fire on the town and batteries, within point blank shot, which was warmly returned by the enemy. The seven gun battery, in less than two hours, was silenced, except one gun; I presume the others were dismounted by our shot, as the walls were almost totally destroyed. At a quarter past three P. M. a ship hove in sight to the northward, standing for the town; made the Argus signal to chase. At half past three one of our prize gunboats was blown up by a hot shot from the enemy, which passed through her magazine: she had on board twenty-eight officers, seamen, and marines, ten of whom were killed, and six wounded; among the killed were James R. Caldwell, First Lieutenant of the Syren, and Midshipman John S. Dorsey, both excellent officers; Midshipman Spence, and eleven men, were taken up unhurt. Captain Decatur, whose division this boat belonged to, and who was near her at the time she blew up, reports to me, that Mr. Spence was superintending the loading of the gun at that moment, and, notwithstanding the boat was sinking, he, and the brave fellows surviving, finished charging, gave three cheers as the boat went from under them, and swam to the nearest boats, where they assisted during the remainder of the action. The enemy's gun-boats and galleys (fifteen in number) were all in motion close under the batteries, and appeared to meditate an attack on our boats; the Constitution, Nautilus, and Enterprise, were to windward, ready, at every hazard, to cut them off from the harbor, if they should venture down; while the Syren and Vixen were near our boats, to support and cover any of them that might be disabled. The enemy thought it most prudent, however, to retire to their snug retreat behind the rocks, after firing a few shot. Our boats, in two divisions, under Captains Somers and Decatur, were well conducted, as were our bomb vessels, by Lieutenants Dent and Robinson. The town must have suffered much from this attack, and their batteries, particularly the seven gun battery, must have lost many men. At half past five P. M. the wind began to freshen from the N. N. E.; I made the signal for the gun and bomb boats to retire from action, and for the vessels to which they were attached to take them in tow. The Argus made signal that the strange sail was a friend.

In this day's action No. 4 had a twenty-four pound shot through her hull; No. 6, her latteen yard shot away; No. 8, a twenty-four pound shot through her hull, which killed two men; some of the other boats had their rigging and sails considerably cut. We threw forty-eight shells, and about five hundred twenty-four pound shot into the town and batteries. All the officers and men engaged in the action behaved with the utmost intrepidity. At half past six all the boats were in tow, and the squadron standing to the northwest. At eight the John Adams, Captain Chauncey, from the United States, joined company. At nine the squadron anchored, Tripoli bearing southeast, five miles distant. Gunboat No. 3 was this day commanded by Mr. Brooks, master of the Argus, and No. 6 by Lieutenant Wadsworth, of the Constitution.

Annexed is a return of our loss in this attack.

Killed. Gunboat No. 9—One Lieutenant, one midshipman, one boatswain's mate, one quarter gunner, one sergeant of marines, and five seamen.

Do. Gunboat No. 8—Two seamen.

Wounded. Gunboat No. 9—Six seamen, two of whom mortally. Total—twelve killed, six wounded.

Captain Chauncey brought me the first positive information that any reinforcement was to be expected. By him I was honored with your letters of the 7th, 22d, and 31st of May, informing me that four frigates were coming out, under Commodore Barron, who is to supersede me in the command of our naval forces in these seas, at the same time approbating my conduct, and conveying to me the thanks of the President for my services. I beg you, sir, to accept my warmest thanks for the very obliging language in which you have made these communications, and to assure the President that to merit the applause of my country is my only aim, and, to receive it, the highest gratification it can bestow.

Captain Chauncey informed me that the frigates might be expected every moment, as they were to sail from Hampton Roads four days after him. In consequence of this information, (and as I could not bring the John Adams into action, she having left all her gun carriages for her gun deck, except eight, on board the Congress and Constellation, a day or two previous to her sailing) I determined to wait a few days for the arrival of Commodore Barron, before another attack, when, if he should arrive, the fate of Tripoli must be decided in a few hours, and the Bashaw completely humbled. Had the John Adams brought out her gun carriages, I should not have waited a moment, and can have no doubt but the next attack would make the arrival of more ships unnecessary for the termination of the Tripoline war. I gave Captain Chauncey orders to remain on the station, that we might be benefited by the assistance of his boats and men, as nearly half the crews of the Constitution, brigs, and schooners, were taken out to man the bombs, gun and ship's boats, when prepared for an attack.

August 9th. We were engaged supplying the bombs and gun-boats with ammunition and stores, and getting every thing in readiness for an attack, the moment Commodore Barron should arrive and make the signal. I cannot but regret that our naval establishment is so limited as to deprive me of the means and glory of completely subduing the haughty tyrant of Tripoli, while in the chief command; it will, however, afford me satisfaction to give my successor all the assistance in my power. At three P. M. I went on board the Argus, for the purpose of reconnoitering the harbor of Tripoli; we stood in towards the town, and were near being sunk by the enemy's fire; one of their heaviest shot, which struck about three feet short of the water line, raked the copper off her bottom under water, and cut the plank half through. In the evening the wind blew strong from the N. N. E.; the squadron weighed, and kept under sail all night. The day following we anchored, Tripoli bearing S. S. W. six miles distant. At ten A. M. the French consul hoisted a white flag at his flag staff, under the national colors, which was a signal that the Bashaw was ready to treat. I sent a boat into the harbor, and took this opportunity to forward Captain Bainbridge, and his officers, letters from their friends. The boat was not allowed to land, but returned in the afternoon and brought me a letter, advising that the Bashaw was ready to receive five hundred dollars for the ransom of each of the prisoners, and terminate the war, without any consideration for peace or tribute. This is three hundred and fifty thousand dollars less than was demanded previous to the action of the third instant. These terms I did not hesitate to reject, as I was informed by Captain Chauncey that it was the expectation of our Government, on the arrival of four frigates, to obtain the release of the officers and crew of the Philadelphia without ransom, and dictate the terms of peace. I enclose you copies of our correspondence, which will convince you that our attacks have not been made without effect.

August 16th. No news of the frigates, and but short allowance of water in the squadron. I sent the Enterprise to Malta, with orders to the agent there to hire transports, and send off immediately a supply of fresh water, provision, and other stores which have become necessary, as some of the squadron have now been upwards of five months in sight of this dismal coast, without once visiting a friendly port. Those vessels, as well as the gun-boats, received their supply of water and provisions from the Constitution.

August 18th. As the season is fast approaching when we may expect bad weather, and no news of the frigates, I have determined to make an attack as soon as the wind proves favorable. At eight P. M. I sent Captains Decatur and Chauncey, in two small boats, to reconnoitre the harbor, and observe the disposition of the enemy's flotilla at night. They returned at midnight, and reported that they were anchored in a line abreast, from the mole to the Bashaw's castle, with their heads to the eastward, for the defence of the inner harbor. At daylight the wind shifted suddenly from northeast to north northwest, and brought a heavy sea on shore, which obliged us, for greater safety, to weigh, and stand to sea.

20th. We had gained an offing of nine or ten leagues; still blowing hard. We met with the ketch Intrepid, from Syracuse, with a cargo of fresh water, stock, and vegetables, for the squadron.

22d. Fell in with a ship from Malta, with water and live stock for the squadron. These cargoes arrived very opportunely, as we have for some time past been on short allowance of water. The wind having moderated, we stood in and anchored with the squadron, six miles northeast by north from Tripoli. All the boats were engaged in discharging the transports. The *Enterprise* arrived from Malta, but brought no intelligence of the long expected frigates. 24th. With a light breeze from the northeast, we stood in with the squadron, prepared for action, intending to attack the town and shipping in the night. At eight in the evening, anchored about two and a half miles from the batteries. At midnight it fell calm; I sent the bomb vessels, under the protection of the gunboats, to bombard the town; the boats of the squadron were employed in towing them in. At two, A. M., the bombardment commenced, and continued until day-light, but with what effect is uncertain. At six, all the boats joined us, and were taken in tow by the squadron, which was under weigh and standing off. At seven, anchored four miles north of the town. The weather, for several days, proved unfavorable for approaching the shore. 28th, we were favored with a pleasant breeze from the eastward; at three, P. M., we weighed, and stood in for Tripoli; at five, anchored the *Constitution*, two miles north by east from Fort English, and two miles and a half from the Bashaw's castle; the light vessels ordered to keep under way; we were employed until eight, P. M., in making arrangements for attacking the town; a number of the officers, and many of the seamen, of the *Constitution* being attached to the bomb, gun, and ship's boats; Captain Chauncey, with several of his officers, and about seventy seamen and marines, volunteered their services on board the *Constitution*. All the boats in the squadron were officered and manned, and attached to the several gunboats. The two bomb vessels could not be brought into action, as one was leaky, and the mortar-bed of the other had given way. The *John Adams*, *Scourge*, transports, and bombs, were anchored seven miles to the northward of the town. Lieutenant Commandant Dent, of the *Scourge*, came on board the *Constitution*; and took charge on the gun-deck. Lieutenant Izard, of the *Scourge*, also joined me. Lieutenant Gordon commands gunboat No. 2, and Lieutenant Lawrence, of the *Enterprise*, No. 5; these are the only changes. At half past one, A. M., the gunboats, in two divisions, led by Captains Decatur and Somers, were ordered to advance and take their stations close to the rocks at the entrance of the harbor, within grape-shot distance of the Bashaw's castle. The *Syren*, *Argus*, *Vixen*, *Nautilus*, *Enterprise*, and boats of the squadron, accompanied them. At three, A. M., the boats anchored with springs on, within pistol shot of the rocks, and commenced a brisk firing on the shipping, town, batteries, and Bashaw's castle, which was warmly returned, but not as well directed. The ship's boats remained with the gunboats, to assist in boarding the enemy's flotilla, if it should venture out, while the brigs and schooners kept under weigh, ready for the same service, or for annoying the enemy as occasion might present. At day-light, presuming that the gunboats had nearly expended their ammunition, we weighed with the *Constitution*, and stood in for the harbor. Fort English, the Bashaw's castle, crown and mole batteries, kept up a heavy fire upon us as we advanced. At half past five, I made the signal for the gunboats to retire from action, and for the brigs and schooners to take them in tow. We were then within two cables' length of the rocks, and commenced a heavy fire of round and grape on thirteen of the enemy's gunboats and galleys, which were in pretty close action with our boats. We sunk one of the enemy's boats; at the same time two more, disabled, ran on shore to avoid sinking; the remainder immediately retreated. We continued running in until we were within musket shot of the crown and mole batteries, when we brought to and fired upwards of three hundred round shot, beside grape and canister, into the town, Bashaw's castle, and batteries. We silenced the castle and two of the batteries for some time. At a quarter past six, the gunboats being all out of shot and in tow, I hauled off, after having been three-quarters of an hour in close action. The gunboats fired upwards of four hundred round shot, besides grape and canister, with good effect. A large Tunisian galliot was sunk in the mole. A Spanish ship, which had entered with an ambassador from the Grand Seigneur, received considerable damage. The Tripoline galleys and gunboats lost many men, and were much cut. The Bashaw's castle and town have suffered very much; as have their crown and mole batteries.

Captains Decatur and Somers conducted their divisions of gunboats with their usual firmness and address, and were well supported by the officers and men attached to them. The brigs and schooners were also well conducted during the action, and fired a number of shot at the enemy, but their guns are too light to do much execution. They suffered considerably in their sails and rigging. The officers and crew of the *Constitution* behaved well. I cannot, in justice to Captain Chauncey, omit noticing the very able assistance I received from him on the quarter-deck of the *Constitution* during the whole of the action. The damage which we have received is principally above the hull. Three lower shrouds, two spring stays, two top-mast backs stays, trusses, chains, and lifts of the main yard, shot away. Our sails had several cannon shot through them, and were beside considerably cut by grape; much of our running rigging cut to pieces. One of our anchor stocks, and our larboard cable, shot away, and a number of grape shot were sticking in different parts of the hull, but not a man hurt! A boat belonging to the *John Adams*, with a master's mate, (Mr. Creighton) and eight men, was sunk by a double headed shot from the batteries, while in tow of the *Nautilus*, which killed three men, and badly wounded one, who, with Mr. Creighton and the other four, were picked up by one of our boats. The only damage our gunboats sustained was in their rigging and sails, which were considerably cut by the enemy's round and grape shot. At eleven, A. M., we anchored with the squadron, five miles northeast by north from Tripoli, and repaired the damage received in the action.

29th and 30th, preparing the bomb vessels for service; supplying the gunboats with ammunition, &c. 31st, a vessel arrived from Malta with provisions and stores; brought no news of Commodore Barron or the frigates. We discharged this vessel's cargo and ordered her to return.

September 2. The bomb vessels having been repaired and ready for service, Lieutenants Dent and Robinson resumed the command of them. Lieutenant Morris, of the *Argus*, took command of No. 3, and Lieutenant Trippe, having nearly recovered from his wounds, resumed the command of No. 6, which he so gallantly conducted the third ultimo: Captain Chauncey, with several young gentlemen, and sixty men, from the *John Adams*, volunteered on board the *Constitution*. At four, P. M., made the signal to weigh; kept under sail all night. At eleven, P. M., a general signal to prepare for battle. A Spanish polacre in ballast came out of Tripoli, with an ambassador of the Grand Seigneur on board, who had been sent from Constantinople to Tripoli to confirm the Bashaw in his title; this ceremony takes place in all the Barbary regencies every five years. The captain of this vessel informed us that our shot and shells had made great havoc and destruction in the city, and among the shipping, and that a vast number of people have been killed: also informs us that three of the boats which were sunk by our shot in the actions of the third and twenty-eighth ultimo, had been got up, repaired, and fitted for service.

3d. At 2, P. M. Tripoli bore south southwest, two miles and a half distant; wind east by north. At half past two, the signals were made for the gunboats to cast off, advance, and attack the enemy's galleys and gunboats, which were all under weigh in the eastern part of the harbor, whither they had for some time been working up against the wind. This was certainly a judicious movement of theirs, as it precluded the possibility of our boats going down to attack the town, without leaving the enemy's flotilla in their rear, and directly to windward. I accordingly ordered the bomb vessels to run down within proper distance of the town and bombard it, while our gunboats were to engage the enemy's galleys and boats to windward. At half three, P. M., our bombs having gained the station to which they were directed, anchored, and commenced throwing shells into the city; at the same time, our gunboats opened a brisk fire on the galleys, &c. within point blank shot, which was warmly returned by them and Fort English, and by a new battery a little to the westward; but, as soon as our boats arrived within good musket shot of their galleys and boats, they gave way, and retreated to the shore within the rocks, and under cover of musketry from Fort English. They were followed by our boats, and by the *Syren*, *Argus*, *Vixen*, *Nautilus*, and *Enterprise*, as far as the reefs would permit them to go with prudence. The action was then divided. One division of our boats, with the brigs and schooners, attacked Fort English, whilst the other was engaged with the enemy's galleys and boats. The Bashaw's castle, the mole, crown, and several other batteries, kept up a constant fire on our bomb vessels, which were well conducted; and threw shells briskly into the town; but, from their situation, they were very much exposed, and in great danger of being sunk; I accordingly ran within them with the *Constitution*, to draw off the enemy's attention, and amuse them whilst the bombardment was kept up. We brought to within reach of grape, and fired eleven broadsides into the Bashaw's castle, town, and batteries, in a situation where more

than seventy guns could bear upon us. One of their batteries was silenced. The town, castle, and other batteries, considerably damaged. By this time, it was half past four o'clock; the wind was increasing, and inclining rapidly to the northward. I made the signal for the boats to retire from action, and for the brigs and schooners to take them in tow, and soon after hauled off with the Constitution to repair damages. Our main-top-sail was totally disabled by a shell from the batteries, which cut away the leech rope, and several cloths of the sail; another shell went through the fore-top-sail, and one through the jib; all our sails considerably cut; two top-mast backstays shot away; main sheets, fore tacks, lifts, braces, bowlines, and the running rigging, generally, very much cut, but no shot in our hull, excepting a few grape. Our gunboats were an hour and fifteen minutes in action. They disabled several of the enemy's galleys and boats, and considerably damaged Fort English. Most of our boats received damage in their rigging and sails. The bomb vessel No. 1, commanded by Lieutenant Robinson, was disabled, every shroud being shot away; the bed of the mortar rendered useless, and the vessel near sinking; she was, however, towed off. About fifty shells were thrown into the town, and our boats fired four hundred round shot, besides grape and canister. They were led into action by Captains Decatur and Somers, with their usual gallantry. The brigs and schooners were handsomely conducted, and fired many shot with effect at Fort English, which they were near enough to reach with their carronades; they suffered considerably in their rigging, and the Argus received a thirty-two pound shot in the hull forward, which cut off a bower cable as it entered. We kept under weigh until eleven, P. M., when we anchored, Tripoli bearing south southwest three leagues. I again, with pleasure, acknowledge the services of an able and active officer in Captain Chauncey, serving on the quarter-deck of the Constitution. At sun-rise, I made the signal for the squadron to prepare for action. The carpenters were sent on board the bombs to repair damages, and our boats employed in supplying the bombs and gunboats with ammunition, and to replace the expenditures.

Desirous of annoying the enemy by all the means in my power, I directed to be put into execution a long contemplated plan of sending a fire ship, or *infernal*, into the harbor of Tripoli, in the night, for the purpose of endeavoring to destroy the enemy's shipping, and shatter the Bashaw's castle and town. Captain Somers, of the Nautilus, having volunteered his services, had, for several days before this period, been directing the preparation of the ketch Intrepid, assisted by Lieutenants Wadsworth and Israel. About one hundred barrels of powder, and one hundred and fifty fixed shells, were apparently judiciously disposed of on board her. The fuses leading to the magazine, where all the powder was deposited, were calculated to burn for a quarter of an hour. September 4th. The Intrepid being prepared for the intended service, Captain Somers and Lieutenant Wadsworth made choice of two of the fastest rowing boats in the squadron, for bringing them out, after reaching their destination, and firing the combustible materials which were to communicate with the fuses. Captain Somers' boat was manned with four seamen from the Nautilus, and Lieutenant Wadsworth's with six from the Constitution; Lieutenant Israel accompanied them. At eight in the evening, the Intrepid was under sail, and standing for the port, with a leading breeze from the eastward. The Argus, Vixen, and Nautilus, convoyed her as far as the rocks. On entering the harbor, several shot were fired at her from the batteries. In a few minutes after, when she had apparently nearly gained the intended place of destination, she suddenly exploded, without their having previously fired a room filled with splinters and other combustibles, which were intended to create a blaze, in order to deter the enemy from boarding while the fire was communicating to the fuses which led to the magazine. The effect of the explosion awed their batteries into profound silence with astonishment; not a gun was afterwards fired for the night. The shrieks of the inhabitants informed us that the town was thrown into the greatest terror and consternation by the explosion of the magazine, and the bursting and falling of shells in all directions. The whole squadron waited, with the utmost anxiety, to learn the fate of the adventurers, from a signal previously agreed on, in case of success; but waited in vain. No signs of their safety were to be observed. The Argus, Vixen, and Nautilus, hovered round the entrance of the port until sunrise, when they had a fair view of the whole harbor. Not a vestige of the ketch or her boats was to be seen. One of the enemy's largest gunboats was missing, and three others were seen very much shattered and damaged, which the enemy were hauling on shore. From these circumstances, I am led to believe that these boats were detached from the enemy's flotilla to intercept the ketch, and, without suspecting her to be a fire ship, the missing boat had suddenly boarded her, when the gallant Somers and heroes of his party, observing the other three boats surrounding them, and no prospect of escape, determined, at once, to prefer *death* and the *destruction of the enemy to captivity and torturing slavery*, put a match to the train leading directly to the magazine, which at once blew the whole into the air, and terminated their existence. My conjectures respecting this affair are founded on a resolution which Captain Somers, Lieutenants Wadsworth and Israel had formed—neither to be taken by the enemy; nor suffer him to get possession of the powder on board the Intrepid. They expected to enter the harbor without discovery, but had declared that, should they be disappointed, and the enemy should board them, before they reached their point of destination, in such force as to leave them no hopes of a safe retreat, that they would put a match to the magazine, and blow themselves and their enemies up together; determined, as there was no exchange of prisoners, that their country should never pay ransom for them, nor the enemy receive a supply of powder through their means. The disappearance of one of the enemy's boats, and the shattered condition of three others, confirm me in my opinion that they were an advanced guard, detached from the main body of the flotilla on discovering the approach of the Intrepid, and that they attempted to board her before she had reached her point of destination; otherwise, the whole of their shipping must have suffered, and perhaps would have been totally destroyed. That she was blown up before she had gained her station is certain, by which the service has lost three very gallant officers. Captain Somers and Lieutenants Wadsworth and Israel were officers of conspicuous bravery, talents, and merit. They had uniformly distinguished themselves in the several actions; were beloved and lamented by the whole squadron.

September 5th. We were employed in supplying the gunboats with ammunition, &c. and repairing the bomb vessels for another attack, but, the wind shifting to the N. N. E. a heavy swell setting on shore, and other indications of bad weather, determined me, for greater safety, to take the guns, mortars, shot, and shells, out of the boats, into the Constitution and John Adams, which was accordingly done. The weather continuing to wear a threatening aspect until the 7th, and our ammunition being reduced to a quantity not more than sufficient for three vessels to keep up the blockade, no intelligence of the expected reinforcement, and the season so far advanced as to render it imprudent to hazard the gunboats any longer on the station, I gave orders for the John Adams, Syren, Nautilus, Enterprise, and Scourge, to take the bombs and gunboats in tow, and proceed to Syracuse with them. The Argus and Vixen to remain with the Constitution, to keep up the blockade.

September 10th. The United States' ship President, Commodore Barron, and Constellation, Captain Campbell, hove in sight, and soon joined company, when the command of the squadron was surrendered to Commodore Barron, with the usual ceremony. I continued in company with the squadron until the 12th, when three strange ships came in sight, standing direct for Tripoli. Chase was given, and two of them boarded and taken possession of by the Constitution, the President in company, about four leagues from Tripoli, but not more than five miles from the land, while the Constellation and Argus were in chase of the third. The two boarded by the Constitution were loaded with about sixteen thousand bushels of wheat. Tripoli is in a state of starvation, and there can be no doubt but these cargoes were meant as a supply and relief to our enemies.

Considering the season too far advanced, and weather too uncertain, to hazard any further operations against Tripoli, at present, Commodore Barron determined that the prizes should be sent to Malta, under convoy of the Constitution, it being necessary she should go into port to be re-caulked and refitted. I notified Commodore Barron that it was my wish to return to the United States, in the frigate John Adams, Captain Chauncey; this, readily, and in the handsomest manner, met his acquiescence. I shall accordingly return in that ship.

The service in this quarter cannot suffer from this arrangement, as Captain Decatur is at present without a ship, and my return will place him immediately in the exercise of the duties attached to that commission which he has so gallantly earned, and his country generously bestowed. I shall feel a pleasure in leaving the Constitution under the command of that officer, whose enterprising and manly conduct I have often witnessed, and whose merits eminently entitle him to so handsome a command.

The other commanders merit the highest commendations for their prompt obedience to orders, on all occasions, and for the zeal, spirit, and judgment, which they displayed in the several attacks on the enemy's shipping and batteries, as well as for the general good order and discipline at all times observed on board their respective vessels. The officers of the squadron have conducted themselves in the most gallant and handsome manner; and the conduct of the different ships' companies has merited my warmest approbation since I have had the honor to command them.

It affords me much satisfaction to observe that we have neither had a duel nor a court martial in the squadron since we left the United States.

I most sincerely regret the loss of our gallant countrymen, who have sacrificed their lives to the honor of the service, and that it has not been in my power, consistent with the interest and expectation of our country, to liberate Captain Bainbridge and the unfortunate officers and crew of the Philadelphia. Be assured, sir, I have incessantly endeavored to effect this desirable object. I have no doubt but my successor will be able to effect their release, and establish peace, on such terms as will reflect the highest honor on himself and his country.

September 17th. Arrived at Malta, with the two detained Greek vessels. We experienced very bad weather, but had the satisfaction to learn that the bombs and gunboats had arrived safe at Syracuse the 15th instant, without accident. Each of the Tripoline gunboats which we have captured has two brass howitzers abaft, and a handsome copper gun in the bow, which carries a twenty-nine pound shot, is eleven and a half feet long, and weighs six thousand six hundred pounds.

I send you a plan of the town and harbor of Tripoli, with the disposition of our squadron and the enemy's flotilla, at the time of the several attacks, with sundry other papers.

I have the honor to be, with the highest respect, sir, your most obedient servant,

EDWARD PREBLE,

U. S. ship Constitution, Malta harbor, 18th September, 1804.

HONORABLE SECRETARY OF THE U. S. NAVY, *Washington.*

8th CONGRESS.]

No. 46.

[2d SESSION.

INDEMNITY MADE TO AN OFFICER FOR RESPONSIBILITY INCURRED
IN THE EXECUTION OF HIS INSTRUCTIONS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, ON THE 20TH OF FEBRUARY, 1805.

Mr. DANA, from the Committee of Claims, to whom was referred the memorial of George Little, made the following report:

The memorialist, being a captain in the navy, commanded the frigate Boston, in the service of the United States, and was cruising near the Island of Hispaniola, in company with the frigate General Greene, commanded by Captain Christopher Raymond Perry, in the month of December, in the year 1799, when they captured a brig called the Flying Fish, laden with coffee, and bound from Jeremie, a French port in Hispaniola, to the Danish Island of St. Thomas.

The vessel was sent to the United States for trial, and was afterwards libelled before the district court in Massachusetts, as well for the United States as for the officers and men belonging to the capturing frigates.

The vessel and cargo were claimed by the supercargo, Francis Bareme, in behalf of Samuel Goodman, a Prussian by birth, and residing in St. Thomas, except a quantity of coffee in sacks, claimed on the part of the master.

The district judge ordered the restoration of the property; but refused to award either damages or costs against the libellants, because, in his opinion, there was probable cause for the capture.

The master of the brig was born in St. Thomas, but for several years had been employed in vessels of the citizens of the United States, and sailed from the ports of the United States. He spoke the language perfectly in the accent of an American, and had the appearance of being such. The mate was born and always continued a citizen of the United States. The seamen were of different nations, British, Portuguese, Danish, or American, besides negroes. The supercargo was a Frenchman. The vessel had carried a cargo of provisions and dry goods from St. Thomas to Jeremie, and was returning with a cargo of coffee at the time of the capture. During the chase by the two frigates, the master threw overboard the log book and certain other papers. The vessel had no register. There was on board a protest signed by the master, supercargo, and several seamen, declaring that the vessel had been bound from St. Thomas's to Port-au-Prince, and compelled by the brigands to go into Jeremie; which was false and totally unfounded. After the capture the master inquired of the seamen, whether they would stand by him respecting this pretence. The law of the United States prohibiting intercourse with France and its dependencies had been long before known at St. Thomas's; and it had been since a common practice there to cover American property for the purpose of eluding the law.

Port-au-Prince is known to have been one of the ports in Hispaniola, with which a commercial intercourse was allowed under the proclamation of June, 1799, issued by the President of the United States in pursuance of the authority vested in him by the act of Congress, of the 9th of February, 1799, entitled "An act further to suspend the commercial intercourse between the United States and France, and the dependencies thereof." Jeremie was a port with which no commercial intercourse was allowed under that act.

On appeal to the circuit court, holden in and for the district of Massachusetts, the sentence of the district court was reversed, as to the refusal of damages and costs, because the Flying Fish, at the time of the capture, was on a voyage from and not to a French port; and damages were accordingly awarded, with costs, against the libellants. From this decision an appeal was taken to the Supreme Court of the United States, who affirmed the decree of the circuit court, with costs and damages, including interest. In pursuance of this determination of the Supreme Court, judgment was rendered by the circuit court, holden at Boston, in the month of October, 1804, against Captain Little, of Massachusetts, and Captain Perry, of the district of Rhode Island, for ten thousand two hundred and forty-five dollars and ninety-six cents, on account of damages and costs with interest. In this case, Captain Little being immediately liable to the process of execution, has made application to the Government, that he may be relieved from damages and charges.

The public instructions to the commanders of the armed vessels of the United States extended to the seizure of vessels bound to or from French ports. But the Supreme Court did not consider these instructions as legally excusing the captors from the claim for damages and costs.

The opinion of the Supreme Court, and the instructions herewith presented,* will enable the House to estimate the justice of the present application. The committee deem it unnecessary for them at this time to enter into an examination of the principle on which the relief is requested. It has already been clearly recognized.

The following resolution is accordingly submitted to the House.

Resolved, That the prayer of the memorial of George Little is reasonable, and ought to be granted.

*For these instructions see No. 44.

Opinion of the Supreme Court of the United States, in the case of Little and others vs. Bareme and others.

The Flying Fish, a Danish vessel having on board Danish or neutral property, was captured on the 2d of December, 1799, on a voyage from Jeremie to St. Thomas's, by the United States' frigate Boston, commanded by Captain Little, and brought into the port of Boston, where she was libelled as an American vessel that had violated the non-intercourse law. The judge before whom the cause was tried, directed a restoration of the vessel and cargo, as neutral property, but refused to award damages for the capture and detention, because, in his opinion, there was probable cause to suspect the vessel to be American. On an appeal to the circuit court, this sentence was reversed, because the Flying Fish was on a voyage *from*, not to a French port, and was, therefore, had she even been an American vessel, not liable to capture on the high seas.

During the hostilities between the United States and France, an act for the suspension of all intercourse between the two nations was annually passed. That under which the Flying Fish was condemned, declared "every vessel owned, hired, or employed, wholly or in part by an American, which should be employed in any traffic or commerce with or for any person resident within the jurisdiction, or under the authority of the French republic, to be forfeited, together with her cargo; the one half to accrue to the United States, and the other to any person or persons, citizens of the United States, who will inform and prosecute for the same."

The 5th section of this act authorizes the President of the United States to instruct the commanders of armed vessels "to stop and examine any ship or vessel of the United States on the high seas, which there may be reason to suspect to be engaged in any traffic or commerce contrary to the true tenor of the act, and if, upon examination, it should appear that such ship or vessel is bound or sailing to any place or port within the territory of the French republic or her dependencies, it is rendered lawful to seize such vessel, and send her into the United States for adjudication."

It is by no means clear, that the President of the United States, whose high duty it is to "take care that the laws be faithfully executed," and who is commander in chief of the armies and navy of the United States, might not, without any special authority for that purpose, in the then existing state of things, have empowered the officers commanding the armed vessels of the United States, to seize and send into port for adjudication, American vessels which were forfeited by being engaged in this illicit commerce. But when it is observed that the general clause of the first section of the act which declares that such vessel may be seized, and may be prosecuted in any district or circuit court which shall be holden within or for the district where the seizure shall be made, "obviously contemplates a seizure within the United States," and that the fifth section gives a special authority to seize on the high seas, and limits that authority to the seizure of vessels bound or sailing to a French port, the Legislature seemed to have prescribed the manner in which this law shall be carried into execution, was to exclude a seizure of any vessel not bound to a French port. Of consequence, however strong the circumstances might be which induced Captain Little to suspect the Flying Fish to be an American vessel, they could not excuse the detention of her, since he would not have been authorized to detain her had she been really American. It was so obvious, that, if only vessels sailing to a French port could be seized on the high seas, that the law would be very often evaded, that this act of Congress appears to have received a different construction from the Executive of the United States—a construction much better calculated to give it effect.

A copy of this act was transmitted by the Secretary of the Navy to the captains of the armed vessels, who were ordered to consider the 5th section as a part of their instructions. The same letter contained the following clause: "A proper discharge of the important duties enjoined on you, arising out of this act, will require the exercise of a sound and impartial judgment. You are not only to do all that in you lies to prevent all intercourse, whether direct or circuitous, between the ports of the United States, and those of France and her dependencies, where the vessels are *apparently, as well as really American*, and protected by American papers only, but you are to be vigilant that vessels or cargoes, really American, but covered by Danish or other foreign papers, and bound to or from French ports, do not escape you."

These orders, given by the Executive, under the construction of the act of Congress, made by the Department to which its execution was assigned, enjoin the seizure of American vessels sailing *from* a French port. Is the officer who obeys them liable for damages sustained by this misconstruction of the act, or will his orders excuse him? If his instructions afford him no protection, then the law must take its course, and he must pay such damages as are legally awarded against him. If they excuse an act not otherwise excusable, it would then be necessary to inquire whether this is a case in which the probable cause which existed to induce a suspicion that the vessel was American, would excuse the captor from damages, when the vessel appeared in fact to be neutral.

I confess the first bias of my mind was very strong in favor of the opinion that, though the instructions of the Executive could not give a right, they might yet excuse from damages. I was much inclined to think that a distinction ought to be taken between acts of civil and those of military officers, and between proceedings within the body of the country and those on the high seas. That implicit obedience which military men usually pay to the orders of their superiors, which indeed is indispensably necessary to every military system, appeared to me strongly to imply the principle, that those orders, if not to perform a prohibited act, ought to justify the person whose general duty it is to obey them, and who is placed by the laws of his country in a situation which in general requires that he should obey them. I was strongly inclined to think that where, in consequence of orders from the legitimate authority, a vessel is seized with pure intention, the claim of the injured party for damages would be against that government from which the orders proceeded, and would be a proper subject for negotiation. But I have been convinced that I was mistaken, and I have receded from this first opinion. I acquiesce in that of my brethren, which is, that the instructions cannot change the nature of the transaction, or legalize an act, which, without those instructions, would have been a plain trespass.

It becomes, therefore, unnecessary to inquire whether the probable cause afforded by the conduct of the Flying Fish, to suspect her of being an American, would excuse Captain Little from damages for having seized and sent her into port, since, had she actually been an American, the seizure would have been unlawful.

Captain Little, then, must be answerable in damages to the owner of this neutral vessel, and as the account taken by order of the circuit court is not objectionable on its face, and has not been excepted to by counsel before the proper tribunal, this court can receive no objection to it.

There appears then to be no error in the judgment of the circuit court, and it must be affirmed, with costs.

Decree of the Court.

The court having heard the arguments of counsel in this case, and maturely considered the same, doth adjudge, order, and decree, that the judgment and decree of the circuit court of the United States, in and for the district of Massachusetts, in this case be, and the same is hereby, affirmed, with costs and damages, at the rate of six per centum, per annum, including interest.

E. B. CALDWELL, Clerk.

9th CONGRESS.]

No. 47.

[1st Session.]

ADDITIONAL APPROPRIATIONS FOR THE NAVY FOR THE YEAR 1805.

COMMUNICATED TO THE SENATE, DECEMBER 6, 1805.

NAVY DEPARTMENT, 5th December, 1805.

Sir:

In obedience to the resolution of the Senate of this day, requiring the Secretary of the Navy "to lay before the Senate the reasons why an additional appropriation is required for the naval service for the current year," I have the honor to state,

That, out of the sum appropriated for the support of the navy, for the year 1805, the sum of \$312,370 has been paid for *extra* expenses, not contemplated in my estimate for that year. Statement A gives a view of these expenses.

The sum of \$287,630 has, moreover, been paid out of the money appropriated for the support of the navy for the year 1805, for expenses incurred during the year 1804, by the squadron fitted out under the act, entitled "An act further to protect the commerce and seamen of the United States against the Barbary Powers," and by Commodore Preble, in his preparatory arrangements for attacking Tripoli. With respect to these last mentioned expenses, it may be proper to observe, that there existed, at the time they were incurred, an adequate appropriation, made by the act under which they were authorized, to pay them, if payment had been necessary, during the year 1804; but it was not necessary to pay them until the year 1805; and as the appropriation made by the act above-referred to was not, agreeably to the treasury construction, subject to my order at the time that payment of these expenses was required, they were paid out of the money appropriated for the support of the navy for the year 1805.

From the preceding statements it appears that the following sums have been paid out of the money appropriated for the support of the navy for the year 1805; for expenses not contemplated in my estimate for that year, viz:

For extra expenses incurred during the year 1805, as per statement A,	\$312,370
For expenses incurred during the year 1804, explained above,	287,630

Constituting a total of	\$600,000
-------------------------	-----------

Which is the existing deficiency.

Respectfully submitted,

ROBERT SMITH.

The Honorable the PRESIDENT of the Senate.

A.

Estimate of the extra expenses of the Navy Department incurred during the year 1805.

For vessels and gunboats captured and put into commission in the Mediterranean, by the commanding officer,	\$32,000
For building the two vessels of war authorized by the act, entitled "An act further to protect the commerce and seamen of the United States against the Barbary Powers," by which act an adequate appropriation was made, but which appropriation was not subject to my order after the close of the year 1804,	63,120
For expenditures under the resolution of Congress of the 27th November, 1804, voting a sword to Captain Decatur, and two months' extra pay to each of the officers of the ketch Intrepid, for which no appropriation was made,	2,000
For expenditures under the resolution of Congress of the 3d March, 1805, voting a medal to Commodore Preble, a sword to each of the commissioned officers and midshipmen who distinguished themselves in the attacks against Tripoli, and one month's extra pay to each of the petty officers, seamen, and marines, of Commodore Preble's squadron, for which no appropriation was made,	20,000
For six months' service of the frigate the Adams, \$23,000, and four months' service of the brigantine Hornet, \$16,500, which vessels were put into commission for the protection of our commerce on the coast,	39,500
For nine months' service of eight gunboats, having only men enough to navigate them across the Atlantic,	35,000
For two bombards, purchased and fitted out by Commodore Preble, and seven months' service,	47,000
For nine months' service of 400 extra men, sent out in the John Adams to the Mediterranean,	63,750
For bounty to seamen, which we were obliged to give, to induce them to enter the service, the pay in the merchant service being extravagantly high,	10,000
	<u>\$312,370</u>

9th CONGRESS.]

No. 48.

[1st Session.]

INCREASE OF THE NAVY, AND STATEMENT OF MATERIALS ON HAND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 23, 1805.

Mr. Dawson made the following report:

The committee to whom was referred "so much of the message of the President of the United States as relates to aggressions committed on our coasts by foreign armed vessels; to the defence of our ports and harbors; to the building of seventy-four gun ships; and to the preventing the exportation of arms and ammunition,"* have, according to order, had the same under consideration, and beg leave to offer sundry resolutions, as a report, in part:

1st. Resolved, That a sum of money, not exceeding one hundred and fifty thousand dollars, be appropriated to enable the President of the United States to cause our ports and harbors to be better fortified and protected against any insult or injury.

* See Foreign Relations No. 24, page 66.

2d. *Resolved*, That a further sum of money, not exceeding two hundred and fifty thousand dollars, be appropriated to enable the President of the United States to cause to be built a number of gunboats, not exceeding fifty, for the better protection to the harbors, coasts, and commerce, of the United States.

3d. *Resolved*, That a further sum of money, not exceeding six hundred and sixty thousand dollars, be appropriated, to enable the President of the United States to cause to be built six line of battle ships, to be added to the naval establishment of the United States.

SIR:

NAVY DEPARTMENT, December 16, 1805.

I had the honor of receiving your letter of the 8th instant.

Paper A exhibits a view of all the timber, plank, thick-stuff, &c. belonging to the Navy Department, and deposited at Norfolk, Virginia, at Philadelphia, at New York, at Charlestown, Mass., and at Portsmouth, N. H. Besides the timber, &c. mentioned in paper A, we have a very considerable quantity at the City of Washington, which cannot, however, be precisely ascertained at this particular time, as we have lately been receiving, and are continuing to receive, supplies at that place of deposit.

Of the timber at the above mentioned places, there is live oak timber for the frames of seventy-fours, as follows, viz:

At Norfolk,	-	-	-	-	19,343 cubic feet.
At Washington,	-	-	-	-	4,885
At Philadelphia,	-	-	-	-	21,032
At New York,	-	-	-	-	17,653
At Charlestown,	-	-	-	-	37,914
At Portsmouth; N. H.	-	-	-	-	17,687

There is also at the City of Washington 26,378 cubic feet of walnut and other timber, procured for the frame of seventy-four gun ships.

All the cannon necessary for six seventy-four gun ships are provided and paid for.

A contract has been made for all the necessary copper sheathing, bolts, nails, and spikes, and all other articles of copper required for six seventy-four gun ships; upon which an advance of \$30,000 has been made. And independently of this contract, we have on hand, manufactured, for seventy-four gun ships,

44,900 cwt. of sheet copper,
8,777 do. bolts,
13,165 do. spikes.

I am, very respectfully,

Sir, your most obedient servant,

ROBERT SMITH.

J. DAWSON, Esq. *Chairman of a Committee of Congress.*

858 feet 8 inch,
1,390 do. 8½ do.

1,108 feet 2½ to 6 inches refuse white oak plank,
146 cubic feet refuse live oak timber,
102 do. do. knees,
204 planed carlings,
244 pieces live oak timber for carlings, stan-
chions, &c.
3,607 cubic feet pine timber,
5 pieces for bowsprits, &c.
4 do. yards, &c.
2 bilge ways, 126 feet each,
32,563 locust treenails,
13 pieces refuse launching ways,
50 spruce spars,
9 spruce poles.

NAVY DEPARTMENT, December 21, 1805.

SIR:

In answer to your letter of the 19th instant, I have the honor to state to you—

That a seventy-four gun ship will cost	\$328,888 89
That, of the materials for seventy-fours, in point of cost, we have on hand	520,000 00
That we have in service ten gunboats.	
That we have building ten gunboats.	
That we have in service two bombs.	
That we have building two bombs.	
That the average cost of building gunboats, will be, each,	4,625 00
That the annual expense of a seventy-four gun ship in service, will be	192,500 00
That the annual average expense of gun boats in service, will be	7,000 00

It may be proper here to subjoin, that, from the time Congress shall authorize the building of seventy-four gun ships, it will require three years to prepare one for launching; but we could, in the same period of time, build six.

I have the honor to be, respectfully,
sir, your most obedient servant.

ROBERT SMITH.

J. Dawson, Esq.

NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 31, 1805.

NAVY DEPARTMENT, December 30, 1805.

The Commissioners of the Navy Pension Fund, in obedience to the "Act for the better government of the navy of the United States," respectfully report to Congress the following statements in relation to the fund:

Paper A exhibits the amount of stock on the books of the treasury, to the credit of the commissioners, with the interest and reimbursement accruing to the 31st December, 1805, inclusive.

Paper B, list of navy pensioners, with the amount of pension allowed to each.

Paper C, account of the commissioners with Thomas T. Tucker, Esq. treasurer of the fund.

Paper D, abstract of warrants drawn by the Secretary of the Navy on the treasurer of the fund, from the 10th day of November, 1804, (the date of the last report) to the 2d instant.

Paper E, two accounts of stock purchased by George Harrison, Esq. of Thomas Newman, which exhibit the amount of stock added to the navy pension fund, since the date of the last report of the commissioners.

Paper F, account of George Harrison, Esq. with the Board.

Respectfully submitted: for the commissioners,

R. SMITH, *Secretary of the Navy.*

A.

Statement of the Stocks on the books of the Treasury to the credit of the Secretary of the Navy, Secretary of the Treasury, and Secretary of War, for the time being Commissioners of the Navy Pension Fund, with the interest and reimbursement accruing to 31st December, 1805, inclusive.

ESTIMATE OF THE ANNUAL EXPENSE OF SUPPORTING, IN ACTUAL SERVICE, THE WHOLE NAVAL FORCE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 28, 1806.

NAVY DEPARTMENT, January 27, 1806.

SIR: In obedience to the resolution of the House of Representatives, of the 24th instant,* I have the honor to enclose, for their information, paper A, which is an estimate of the annual expense of supporting in actual service the whole of the frigates and smaller vessels, now belonging to the navy of the United States.

I have the honor to be, respectfully, sir, your most obedient servant,

R. SMITH.

N. MAÇON, Esq. *Speaker of the House of Representatives.*

* Resolved, That the Secretary of the Navy be directed to lay before this House estimates of the expense of repairing, and of the annual expense of manning and supporting, in actual service, the whole of the frigates and smaller vessels of war belonging to the United States.

A.

Estimate of the annual expense of supporting in actual service the whole of the frigates and smaller vessels now belonging to the Navy of the United States.

Names of Vessels.	For pay and subsistence of the officers and pay of the seamen.	For Provisions.	For medicine, hospital stores, &c.	Repairs and contingent expenses.	Total amount.

No. 51.

[1st SESSION.]

CONDITION OF THE NAVY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 30, 1806.

NAVY DEPARTMENT, January 28, 1806,

SIR:

In obedience to the resolution of the House of Representatives of the 27th instant, directing the Secretary of the Navy "to lay before the House a report on the condition of the frigates, and other public armed vessels belonging to the United States; distinguishing the frigates fit for actual service, distinguishing such as require repair, and the sum necessary for repairing each, and distinguishing also such as it may be the interest of the United States to dispose of rather than repair." I have the honor to state:

That the frigate Constitution is now in a state of thorough repair, and in all respects prepared for service;

That the frigate Chesapeake has lately been repaired, and is fit for service;

That the frigates Adams, Essex, and John Adams, are also fit for service;

That the brigs Syren, Hornet, Argus, and Vixen, the schooners Nautilus and Enterprise, the bombs Spitfire and Vengeance, and all the gunboats, are now in and fit for service;

That the frigates President, United States, Congress, Constellation, New York, and Boston, require to be repaired, but it is utterly impossible to form an accurate estimate of the "sum necessary for repairing each."

I know of no vessel belonging to the navy which I consider it would be "the interest of the United States to dispose of rather than repair."

All which is respectfully submitted.

ROBERT SMITH.

NATHANIEL MACON, Esq. *Speaker of the House of Representatives.*

No. 53.

[1st SESSION.]

MEDITERRANEAN FUND APPLIED TO THE BUILDING OF SHIPS OF THE LINE.

COMMUNICATED TO THE SENATE, FEBRUARY 26, 1806.

Mr. MITCHELL, from the committee appointed on the subject, submitted to the consideration of the Senate a report on those parts of the memorials from the merchants of New York, and the Chamber of Commerce in New Haven, which relate to providing a further naval armament for the public defence.

In addition to the strong reasons urged in those two memorials, the committee refer to the President's message, of the third day of December last,* informing Congress that considerable provision had been made, under former authorities, of materials for constructing ships of war; that these were on hand, and subject to the will of the Legislature; and two communications, from the Secretary of the Navy, dated December 16th and 21st, 1805,† giving information that large supplies of timber, cannon, copper, and other valuable materials, for that object, had been already bought and paid for.

Calculating the moderate appropriation which will be required to augment, to a very respectable degree, the naval force of the nation; contemplating the insults and depredations, committed by foreigners, near our coasts, and at the very mouths of our most frequented harbors; and estimating the protection and security to the territory of the nation, and to the persons and property of its citizens, by an enlargement of the means of maritime defence, the committee recommend an adoption of the following resolution, to wit:

That it is expedient to make provision, by law, for the appropriation of any balance which may remain unexpended of the Mediterranean fund, to the purpose of building ships of the line, under the direction of the President of the United States, agreeably to the provisions of the act of February 25th, 1799.

No. 54.

[1st SESSION.]

SERVICES OF THE DANISH CONSUL AT TRIPOLI TO THE CAPTIVE CREW OF THE FRIGATE PHILADELPHIA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 5TH AND 20TH, 1806.

NAVY DEPARTMENT, *March 4, 1806.*

SIR:

In obedience to the resolution of the House of Representatives of the 5th ult. requiring the Secretary of the Navy to inform the House of the nature and extent of the services rendered to the captive crew of the frigate Philadelphia, by the Danish consul at Tripoli, I herewith enclose a copy of a letter from Captain Bainbridge to me, which affords all the information in my possession upon the subject.

Respectfully submitted.

R. SMITH.

The Honorable the SPEAKER
of the House of Representatives of the United States.

NEW YORK, *February 12, 1806.*

SIR:

In compliance with your letter of the 6th instant, which this day came to hand, I hasten to detail the services rendered to the crew of the United States late frigate Philadelphia, while in captivity at Tripoli, by Nicholas C. Nissen, Esq. his Danish Majesty's consul-residing there.

In consequence of the mode of imprisonment it was impossible for the officers to procure the necessary articles of subsistence; they were, therefore, necessitated to receive their daily provision, &c. through another channel. Mr. Nissen generously offered his services to obtain our necessary supplies, which he did in the most faithful manner for nineteen months and three days, the period of our captivity; and at times, when the funds placed at my command in Tripoli, were expended, he continued our daily supply, by his own means, until ours were renewed by the Commodore of the Mediterranean squadron, or George Davis, Esq. chargé of affairs at Tunis, to whom we are gratefully indebted.

Had it not been for the friendly aid of Consul Nissen we should not have received our subsistence in so regular a manner as we did, and should have been exposed, at a great expense, to the impositions of the lowest class of our enemy. His attentions were not confined solely to the officers, but were equally extended to the seamen and soldiers.

* See Foreign Relations, No. 24, page 66.

† See No. 48 of this series.

Consul Nissen was the first Christian we saw after landing on the shore of Africa, and he met us the very evening of our misfortune, with the philanthropy of a man of feeling, and immediately administered to our wants by sending provision and bedding from his house, and ameliorated, as much as possible, our truly unpleasant situation.

I cannot, in justice to his attention, omit mentioning a circumstance which shows the lively interest he took in our situation, and the hazard he ran to serve us. When Commodore Preble attacked Tripoli, Mr. Nissen's house was as much exposed as any in the town, and himself in danger from the bombardment. I solicited him frequently to leave his dangerous situation, and retire to the gardens where the consuls were: he requested me not to importune him more to leave the town, for he preferred running the risk of the shot and shells from our squadron, and attending to our wants and subsistence, to resorting to the gardens. In thus pursuing the dictates of a feeling mind he was very near losing his life by a shot from the *Constitution*. Had he not acted in this friendly manner towards us it is very probable we should have been several days without provision, as the enemy were occupied and exasperated.

I have, sir, detailed to you generally the services rendered to the officers and crew of the *Philadelphia*, at Tripoli, by Nicholas C. Nissen, Esq.; but it is impossible for me to convey a just sense of them. Nothing but a perfect acquaintance with our situation, and the aid we received, can truly estimate the services rendered.

I have the honor to be, sir, with the greatest respect, your most obedient servant,

WM. BAINBRIDGE.

Honorable ROBERT SMITH, *Secretary Navy*.

Mr. CLARK, from the committee to whom was referred a letter from the Secretary of the Navy, communicating the nature and extent of the services rendered to the captive crew of the late frigate *Philadelphia*, by his Danish Majesty's consul at Tripoli, submitted the following report:

That, at the time of the unfortunate loss of the late frigate *Philadelphia*, off Tripoli, commanded by Captain William Bainbridge, Nicholas C. Nissen, Esq. was his Danish Majesty's consul residing at that place. As soon as this disastrous event was known to him, he generously offered his services to obtain the necessary supplies for Captain Bainbridge, his officers, and crew, which he most faithfully continued to do for nineteen months and three days, the period of their captivity. This interposition was not only humane, but greatly beneficial to the captives, in supplying them with the necessaries and comforts of life, which, in some instances, were beyond their limited resources, except through this friendly agency. Consul Nissen took a prompt and feeling interest in the welfare of the American captives, and administered to their wants, by sending to them provisions and bedding from his own house, and ameliorating, as much as possible, their truly unpleasant situation; and his benevolence never suffered the least abatement during their continuance at Tripoli.

One trait in the conduct of this worthy gentleman, is too remarkable to be passed over without notice: his house was much exposed in the attack Commodore Preble made on the town of Tripoli; but such was his zeal for the accommodation of the American prisoners, and his anxiety to be near them, that he refused to seek a place of security, although urged so to do; and by remaining at home, greatly endangered his life. From the most correct information of Consul Nissen's disinterested conduct, the committee are of opinion that he deserves well of the American Government, and, therefore, recommend the following resolution:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States be requested to cause to be made known to Nicholas C. Nissen, Esq. his Danish Majesty's consul residing at Tripoli, the high sense entertained by Congress of his disinterested and benevolent attentions manifested to Captain Bainbridge, his officers, and crew, during the time of their captivity in Tripoli.

9th CONGRESS.]

No. 55.

[1st SESSION.

ESTIMATE FOR REPAIRS OF VESSELS, STORE RENT, PAY OF ARMORERS, FREIGHT, AND CONTINGENT EXPENSES, FOR 1806.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 11, 1806.

NAVY DEPARTMENT, 11th April, 1806.

SIR:

In compliance with the resolution of the House of Representatives, I herewith transmit to you, to be laid before them, paper A, which specifies the several sums of money, respectively, wanted for repairs of vessels, for store rent, for pay of armorers, for freight, and for contingent expenses of the navy, for the year 1806.

The estimate for repairs, as well as for the other items, in this statement, is obviously altogether conjectural. Universal experience has ascertained that practical men, however conversant in naval architecture, can form no precise opinion, from any previous survey of a ship requiring repair of consequence, as to the extent and cost of such repair. The sum stated as necessary may not, and I hope will not, be wanted. In such case, it, of course, will not be expended. But I have deemed it expedient to estimate for the largest sum that I have reason to apprehend in any state of things may be required. This I have done as a measure of precaution, and under an impression that, at all times, and especially at a crisis like the present, all the frigates and other vessels of the navy ought to be completely prepared for service at any moment Government may have occasion for them.

I am, respectfully, sir, your obedient servant,

ROBERT SMITH.

HON. NATHANIEL MACON, *Speaker of the House of Representatives*.

A.

Estimate of the sums necessary to be appropriated for repairs of vessels, store rent, pay of armorers, freight, and contingent expenses, of the navy, for the year 1806, prepared in obedience to the resolution of the House of Representatives of the 10th April, 1806.

For repairs of vessels. This item comprises the expense of procuring the necessary timber, masts, yards, copper, iron, anchors, cables, standing and running rigging, canvass, &c. the making and repairing the necessary boats of a ship, water casks, &c. and all the professional and manual labor required for the purpose of repairing, and keeping in repair, all the vessels, of whatever description, belonging to the navy of the United States,

\$303,300

For store rent, in the Mediterranean, the United States, and elsewhere,	\$3,500
For pay of armorers,	650
For freight. This item comprises the expense of transporting, in the United States, and from the United States to the Mediterranean, timber, masts, yards, plank, cordage, canvass, powder, ball, beef, pork, flour, bread, spirit, molasses, peas, suet, butter, and every other description of articles required either for the repairs of vessels, or the maintenance of the crews of vessels,	60,000
For contingent expenses. This item comprises commissions to agents in foreign countries, and in the United States, officers' travelling expenses, the expense of nautical instruments, chests, books, models, drawings, signals, lanterns, lamps, oil, fuel, candles, hammocks, trumpets, glass, cisterns, cans, mess kids, buckets, axes, gridirons, tea Kettles, shovels, tongs, charcoal, sulphur, saltpetre, fire engines, bread bags, and an infinite variety of other such articles,	45,000
	<u>\$411,950</u>

9th CONGRESS.]

No. 56.

[1st SESSION.]

NAVAL PEACE ESTABLISHMENT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 19 AND 21, 1806.

(EX-OFFICIAL.)

NAVY DEPARTMENT, December 16, 1805.

SIR:

The enclosed paper, marked A, exhibits a view of the captains, masters-commandant, lieutenants, and midshipmen, at present belonging to the navy of the United States.

Paper B explains my ideas as to a Naval Peace Establishment.

Paper C exhibits the proportion of able seamen, ordinary seamen, and boys, required for a frigate of forty-four guns, a frigate of thirty-six guns, a frigate of thirty-two guns, a brig of sixteen guns, and a schooner of fourteen guns.

It is desirable that the President should be authorized to appoint five captains, in addition to the number now in the navy. The five senior masters-commandant, who would, if authority existed, be promoted to the stations of captains in the navy, are gentlemen distinguished for their services, who have by courtesy been called captains, and who are, in every respect, entitled to promotion; the greater part of whom I fear we shall lose, if they are not promoted. For similar reasons it is desirable that the President should be authorized to appoint nine masters-commandant, and one hundred lieutenants.

With respect to lieutenants, we have unavoidably been obliged to appoint midshipmen to the station of lieutenants, who were junior to others of equal merit not appointed. It is, therefore, obviously desirable that authority should be given to the President to appoint as many lieutenants as will include all the meritorious midshipmen, senior to the junior midshipmen now appointed or acting as a lieutenant, and thus give them that rank to which they are entitled, by their merit and their services.

I am, respectfully, sir, your most obedient servant,

R. SMITH.

ANDREW GREGG, Esq.

Chairman of the Committee on the Naval Peace Establishment.

A.

List of Captains, Masters-Commandant, Lieutenants, Acting Lieutenants, and Midshipmen, in the Navy of the United States.

B.

AN ACT supplementary to the act, entitled "An act in addition to the act, entitled 'An act providing for a Naval Peace Establishment, and for other purposes.'"

Be it enacted, &c. That, from and after the passage of this act, the act, entitled "An act providing for a Naval Peace Establishment, and for other purposes," be, and the same is hereby, repealed, excepting and reserving the third section thereof, which regulates the ration of the navy of the United States.

Sec. 2. *And be it further enacted,* That there shall be retained in the naval service in times of peace, and that the Naval Peace Establishment shall consist of the following officers, that is to say, fifteen Captains, nine Masters Commandant, one hundred Lieutenants, one hundred and fifty Midshipmen, and as many Surgeons, Sailingmasters, Surgeons' Mates, Chaplains, Pursers, Boatswains, Gunners, and Carpenters, as may, in the discretion of the President of the United States, be deemed expedient and necessary.

SEC. 3. *And be it further enacted*, That the President of the United States be, and he is hereby, authorized, in his discretion, to keep in actual service in the navy, in time of peace, not exceeding—

Able seamen,	-	-	-	-	-	-	400
Ordinary seamen, &c.	-	-	-	-	-	-	400
Boys,	-	-	-	-	-	-	114

C.

Exhibit of the proportion of Able Seamen, Ordinary Seamen, and Boys, required for vessels of the description mentioned underneath.

	Able Seamen.	Ordinary Seamen.	Boys.
For a frigate of forty-four guns,	120	142	30
For a frigate of thirty-six guns,	100	107	30
For a frigate of thirty-two guns,	75	65	25
For a vessel of sixteen guns,*	45	30	10
For a schooner of fourteen guns,	30	15	8
	370	359	103
	359		
	103		
	832		

*For such a vessel as the brig *Hornet*, which rates sixteen guns, we should require sixty able seamen, forty ordinary seamen, and twenty boys.

D.

List of the Navy of the United States, showing the number of guns and station.

	Guns each.	Where employed.

No. 6, Ditto,	No. 12, Newburyport; ready for launching.

Eight in the Western country, building, two of which are probably launched by this time; the others nearly ready for launching.

NAVY DEPARTMENT, December 5, 1805.

[Communicated to the Senate, April 21, 1806.]

NAVY DEPARTMENT, *April 21, 1806.*

SIR:

I have this moment received your letter of this morning, requesting my sentiments of the navy peace establishment bill, now before the Senate, and proposing to me these questions, viz: "Is it correct? Are any alterations or amendments requisite? And, if so, what?"

Without presuming to judge of the correctness of a bill sanctioned by the House of Representatives, I would only take the liberty of sending to you, herewith, a copy of a note this day transmitted by me to the President.

I have the honor to be, respectfully, sir, your obedient servant,

R. SMITH.

Hon. J. TURNER, *Chairman of a Committee of the Senate.*

NAVY DEPARTMENT, *21st April, 1806.*

SIR:

Having obtained a sight of the bill now before the Senate, entitled "An act in addition to an act, entitled 'An act supplementary to the act providing for a naval peace establishment, and for other purposes,'" I lose no time in informing you that, under the restrictions of such an act of Congress, the Chesapeake, as contemplated by you, cannot be sent to the Mediterranean. The proposed act, among other regulations, contains this proviso, viz: "That the whole number of able seamen, ordinary seamen, and boys, shall not exceed nine hundred and twenty-five." As we have at this time, in actual service, twelve hundred and ninety-nine able seamen, ordinary seamen, and boys, if this bill should be passed into a law, we cannot, consistently with its restrictions, put in commission another frigate. Instead of increasing the number of men in service, we shall be under the necessity of reducing the number to nine hundred and twenty-five.

If Congress will, agreeably to the recommendation contained in your message of the 14th April, 1806, revive the Mediterranean fund, and appropriate a part thereof to the purposes of the navy, and will, moreover, augment the number of seamen that may be employed to fifteen hundred and ninety-one, then the frigate, the Chesapeake, may be put in commission, and sent to the Mediterranean, under the authority of law. We, otherwise, shall not be able to send out this frigate until the return of the vessels ordered home by my letter of the 12th October, 1805.

I have the honor to be, with great respect, your most obedient servant,

R. SMITH.

THOS. JEFFERSON, Esq. *President of the United States.*

9th CONGRESS.]

No. 57.

[2d SESSION.]

NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 12, 1807.

NAVY DEPARTMENT, *January 9, 1807.*

SIR:

I have the honor, herewith, to transmit to you a report on the subject of the "Navy Pension Fund," which I pray you to lay before Congress.

This report has been unusually delayed, under the expectation that it would, by this time, have been practicable to include in it an account of the investment of thirty-three thousand dollars, part of thirty-five thousand four hundred dollars received from the treasury in November last, for the navy six per cent. stock belonging to the fund; but this expectation has not been entirely fulfilled. It has been found extremely difficult of late to invest money in the public stocks to advantage.

I have the honor to be, respectfully, sir, your most obedient servant,

R. SMITH.

Hon. NATHANIEL MACON,
Speaker of the House of Representatives.

NAVY DEPARTMENT, *January 9, 1807.*

The Commissioners of the Navy Pension Fund, in obedience to the "Act for the better government of the navy of the United States," respectfully report to Congress the following statements in relation to the fund:

Paper A, which shows the amount of stock on the books of the treasury to the credit of the commissioners.

Paper B, list of navy pensioners, with the amount of pension allowed to each.

Paper C, account of the commissioners with Thomas T. Tucker, Esq. treasurer of the fund.

Paper D, abstract of warrants drawn by the Secretary of the Navy on the treasurer of the fund, from the 2d October, 1805, to the 1st January, 1807.

Paper E, accounts of Mr. Samuel Hambleton for the purchase of stock, which exhibits a view of all the stock purchased since last report.

Respectfully submitted: for the commissioners,

R. SMITH, *Secretary of the Navy.*

A.

A Statement of the stock on the books of the Treasury, to the credit of the Secretary of the Navy, the Secretary of the Treasury, and the Secretary of War, for the time being Commissioners of the Navy Pension Fund, with the interest and reimbursement accruing for the year 1806.

DENOMINATION OF STOCK.	Commencement of Interest.	Nominal am't of stock.	Interest and reimbursement for the year 1806.	Reimbursement of six per cent. and deferred stocks, to Dec. 31, 1806, and payment of navy six per cent. 1st October.	Irredeemed am't of stock on the 1st Jan. 1807.
Six per cent. stock,	January 1, 1806,	\$25,362 65	\$2,029 01	\$13,119 92	\$25,459 12
Ditto,	April 1, "	3,456 17	224 65

[2d SESSION.]

GUNBOATS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 12, 1807.

Mr. ROGER NELSON, from the committee to whom was referred, on the 3d ultimo, so much of the message of the President of the United States as relates to the repairs of fortifications, and to the further protection of our ports, towns, and rivers, reported that they had taken the same into consideration, and beg leave to recommend the following resolutions:

Resolved, That a sum of money, not exceeding — dollars, be appropriated, to enable the President of the United States to cause our fortifications to be improved and repaired.*

Resolved, That a further sum of money, not exceeding — dollars, be appropriated, to enable the President of the United States to cause to be built a number of gunboats, not exceeding —, for the better protection of our ports, towns, and rivers.

NAVY DEPARTMENT, December 10, 1806.

SIR:

In answer to your letter of the 6th instant, I have the honor to state, that we have, at this time, fit for service, four bomb vessels and thirteen gunboats. That we have, on the stocks, and lately launched, fifty-six gunboats, all of which will be fit for service early in the ensuing year.

That, of the appropriation, viz: two hundred and fifty thousand dollars, made by law of last session, we have expended the sum of one hundred and ninety-one thousand one hundred and eighteen dollars and ninety-two cents, leaving unexpended, of that appropriation, the sum of fifty-eight thousand eight hundred and eighty-one dollars and eight cents, which will, however, be wanted to complete the gunboats contracted for under that law.

In answer to your inquiry with respect to the additional gunboats wanted, the President has instructed me to communicate to you his opinion, that it would be expedient to authorize, by law, the building of sixty additional gunboats, for which it would be necessary that the sum of three hundred thousand dollars be appropriated.

I have the honor to be, very respectfully, sir, your obedient servant,

R. T. SMITH.

ROGER NELSON, Esq.

No. 59.

[2d SESSION.]

PROTECTION OF NEW ORLEANS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 15, 1867.

COMMITTEE ROOM, *December 31, 1866.*

GENTLEMEN:

The committee to whom has been referred the enclosed resolution of the House of Representatives, have instructed me to request that you will furnish them with information on the following points, and with such other remarks as you may deem material:

1. The protection which now is, or can be, afforded to the city of New Orleans, by the existing military and naval establishments?
2. The mode in which that city may be most effectually defended?
3. The probable expense of such a system of defence?

I am, with high respect, gentlemen, your obedient servant,

JOHN RANDOLPH.

The SECRETARY OF WAR, *and the* SECRETARY OF THE NAVY.

Resolved, That provision ought to be made, by law, to fortify and defend such position on the Mississippi, below the city of New Orleans, as the President of the United States shall designate, for the protection of that city; and that further provision ought to be made, by law, for guarding the approaches to the same from the east.

NAVY DEPARTMENT, *January 3, 1867.*

SIR:

In answer to your letter of the 31st ultimo, addressed jointly to the Secretary of War and the Secretary of the Navy, I have the honor, on the part of the Navy Department, to submit to you, for the information of the committee, the following statement and remarks:

1st. The protection which is, by the Navy Department, at this time, afforded to the city of New Orleans, consists of

One hundred and twenty-six marines;

Ketch *Etna*, armed with one thirteen inch mortar, two eight inch howitzers, and eight long nine pounders;

*Ketch *Vesuvius*, armed in the same manner, excepting two twenty-four pound carronades, in lieu of the eight inch howitzers.

Gunboats No. 11 and 12, armed each with two long twenty-four pounders, and two five and a half inch howitzers;

Gunboats No. 13 and 14, armed each with two twenty-four pounders.

In addition to this force, there can be afforded, towards the protection of the city of New Orleans, by the Navy Department, under the existing establishment,

Two ketches, armed, each, with one thirteen inch mortar, two long nine pounders, and four twenty-four pound carronades;

Nine gunboats, armed, each, with two thirty-two pounders.

Which two ketches and nine gunboats are now ready for service.

And there are, besides, thirty-five gunboats, armed in the same manner, which could be ready for service as soon as their officers and men could join them.

2d. As to the defence of the city of New Orleans, I would remark, that, against approaches from the *sea*, gunboats, in co-operation with fixed batteries, judiciously sited, would afford it an effectual protection. The requisite number must necessarily depend upon the nature and extent of the invading naval force.

An enemy, having the command of the Gulf of Mexico, may approach New Orleans by various inlets. The access by Lake Pontchartrain is the most easy to such an enemy, and the most dangerous to the United States. They, with a fair wind, may reach this lake in twenty hours from Mobile, and in twenty-five hours from Pensacola; and a landing of troops may be effected on its beach within five miles of the city. The inlets of the Mississippi are numerous. The bars, however, at the mouths of Lake Pontchartrain and of the Mississippi, will not allow the entrance of ships of the line or of frigates; and sloops of war, and cutters, when opposed by gunboats, will not appear in those waters.

If, in time of war, there should be stationed in the river Mississippi and Lake Pontchartrain, forty gunboats, or even a less number, it is highly probable that no nation would think of attacking, by water, the city of New Orleans. And if, at this time, there were nine gunboats, in addition to those now on that station, we would have nothing to apprehend from any enemy whatever.

To rely, however, altogether on the protection that might be afforded by gunboats, would, in my apprehension, be hazardous too much, as the enemy, being masters of the sea, might equip and send against us a superior force of small craft, and might prevent any reinforcement on our part.

3d. The probable expense, in time of peace, of any number of gunboats that might be deemed necessary on the New Orleans station, would be, annually, each boat, three hundred dollars; and, in time of war, the annual expense would be, each boat, eleven thousand and thirty-nine dollars and forty-six cents.

Agreeably to an intimation in your letter, I deem it material to remark to you, that additional gunboats cannot, at this time, be sent for the protection of the city of New Orleans, unless an adequate extra appropriation be therefor made, and unless the restriction of the act of Congress of the last session, as to the number of men to be employed by the Navy Department, be repealed or enlarged.

I have the honor to be, respectfully, sir, your most obedient servant,

R. SMITH.

Honorable JOHN RANDOLPH,
Chairman of a Committee of Congress.

* The ketch *Vesuvius*, on her passage to New Orleans, got on shore in a severe gale of wind, near the island of Abaco, and her commander was reduced to the necessity of throwing her guns overboard. Other guns have, however, been sent to New Orleans, to replace those that were lost.

NOTE.—For letter of Secretary of War, see *Military Affairs*, No. 67.

9th CONGRESS.]

No. 60.

[2d SESSION.]

EFFICIENCY OF GUNBOATS IN PROTECTING PORTS AND HARBORS.

COMMUNICATED TO CONGRESS, FEBRUARY 10, 1807.

To the Senate and House of Representatives of the United States:

In compliance with the request of the House of Representatives, expressed in their resolution of the 5th instant, I proceed to give such information, as is possessed of the effect of gunboats in the protection and defence of harbors, of the numbers thought necessary, and of the proposed distribution of them among the ports and harbors of the United States.

Under present circumstances, and governed by the intentions of the Legislature, as manifested by their annual appropriations of money for the purposes of defence, it has been concluded to combine: 1. Land batteries, furnished with heavy cannon and mortars, and established on all the points around the place favorable for preventing vessels from lying before it. 2. Moveable artillery, which may be carried, as occasion may require, to points unprovided with fixed batteries. 3. Floating batteries; and, 4, gunboats, which may oppose an enemy at his entrance, and co-operate with the batteries for his expulsion.

On this subject, professional men were consulted, as far as we had opportunity. General Wilkinson and the late General Gates gave their opinions, in writing, in favor of the system, as will be seen by their letters now communicated. The higher officers of the navy gave the same opinions, in separate conferences, as their presence at the Seat of Government offered occasions of consulting them; and no difference of judgment appeared on the subject. Those of Commodore Barron and Captain Tingey, now here, are recently furnished in writing, and transmitted herewith to the Legislature.

The efficacy of gunboats for the defence of harbors, and of other smooth and enclosed waters, may be estimated, in part, from that of galleys, formerly much used, but less powerful, more costly in their construction and maintenance, and requiring more men. But the gunboat itself is believed to be in use with every modern maritime nation, for the purposes of defence. In the Mediterranean, on which are several small Powers, whose system, like ours, is peace and defence, few harbors are without this article of protection. Our own experience there of the effect of gunboats, for harbor service, is recent. Algiers is particularly known to have owed to a great provision of these vessels the safety of its city, since the epoch of their construction. Before that, it had been repeatedly insulted and injured. The effect of gunboats at present in the neighborhood of Gibraltar is well known; and how much they were used, both in the attack and defence of that place, during a former war. The extensive resort to them by the two greatest naval Powers in the world, on an enterprise of invasion, not long since in prospect, shows their confidence in their efficacy for the purposes for which they are suited. By the Northern Powers of Europe, whose seas are particularly adapted to them, they are still more used. The remarkable action between the Russian flotilla of gunboats and galleys, and a Turkish fleet of ships of the line and frigates, in the Siman sea, in 1788, will be readily recollected. The latter, commanded by their most celebrated admiral, were completely defeated, and several of their ships of the line destroyed.

From the opinions given as to the number of gunboats necessary for some of the principal sea ports, and from a view of all the towns and sea ports from Orleans to Maine, inclusive, entitled to protection in proportion to their situation and circumstances, it is concluded that, to give them a due measure of protection, in times of war, about two hundred gunboats will be requisite. According to first ideas, the following would be their general distribution, liable to be varied, on more mature examination, and as circumstances shall vary—that is to say:

To the Mississippi, and its neighboring waters,	40 gunboats,
To Savannah and Charleston, and the harbors on each side, from St. Mary's to Currituck,	25 do.
To the Chesapeake, and its waters,	20 do.
To Delaware bay and river,	15 do.
To New York, the Sound, and waters, as far as Cape Cod,	50 do.
To Boston, and the harbors north of Cape Cod,	50 do.

The flotillas assigned to these several stations might each be under the care of a particular commandant, and the vessels composing them would, in ordinary, be distributed among the harbors within the station, in proportion to their importance.

Of these boats, a proper proportion would be of the larger size, such as those heretofore built, capable of navigating any seas, and of reinforcing occasionally the strength of even the most distant ports, when menaced with danger. The residue would be confined to their own, or the neighboring harbors; would be smaller, less furnished for accommodation, and, consequently, less costly. Of the number supposed necessary, seventy-three are built or building, and the one hundred and twenty-seven still to be provided would cost from five to six hundred thousand dollars. Having regard to the convenience of the treasury, as well as to the resources for building, it has been thought that one half of these might be built in the present year, and the other half the next. With the Legislature, however, it will rest to stop where we are, or at any further point, when they shall be of opinion that the number provided shall be sufficient for the object.

At times, when Europe, as well as the United States, shall be at peace, it would not be proposed that more than six or eight of these vessels should be kept afloat. When Europe is in war, treble that number might be necessary, to be distributed among those particular harbors which foreign vessels of war are in the habit of frequenting, for the purpose of preserving order therein. But they would be manned, in ordinary, with only their complement for navigation, relying on the seamen and militia of the port, if called into action on any sudden emergency. It would be only when the United States should themselves be at war, that the whole number would be brought into active service, and would be ready, in the first moments of the war, to co-operate with other means, for covering, at once, the line of our sea ports. At all times, those unemployed would be withdrawn into places not exposed to sudden enterprise, hauled up under sheds, covered from the sun and weather, and kept in preservation, with little expense for repairs or maintenance.

It must be superfluous to observe that this species of naval armament is proposed merely for defensive operation; that it can have but little effect towards protecting our commerce in the open seas, even on our own coast; and still less can it become an excitement to engage in offensive maritime war, towards which it would furnish no means.

TH: JEFFERSON.

February 10, 1807.

Extract of a letter from General Horatio Gates to Thomas Jefferson, Esq. dated

OCTOBER 19, 1804.

"DEAR SIR:

"I am charmed with your instituting gunboats, for I believe them to be the most proper defence for large harbors that has hitherto been imagined. These, co-operating with small batteries of heavy guns, upon the projecting heights, near the water, are much better, and infinitely less expensive, than fixed and large fortifications. The French, who are the best judges of artillery and engineering of any nation in Europe, adopt this plan of defending their harbors; the effects of it are too well known in England. I know not if you have seen a publication which

appeared in Paris, in May, 1802, entitled "Lettres d'un Observateur sur la Marine." It is well worth your perusal; much useful information may be derived from it for the defence of our harbors, and our astonishingly increasing commerce. A paltry frigate dare not then insult us, as has been, and now is, done in the harbor of New York."

A letter from General James Wilkinson to Thomas Jefferson, President of the United States, dated

WASHINGTON, November 10, 1804.

SIR:

I regret that a variety of interruptions and engagements should have so long prevented my attention to the subject you did me the honor to mention to me.

On turning it in my mind, the idea occurred to me that your proposition could not be better ascertained than by an examination of the system of defence heretofore adopted for our towns and harbors, and a comparative view of its merits with those of the plan which you recommend. I have yielded to this suggestion, and shall be happy if the manner and matter of the enclosed reflections should meet your approbation, as they are for you, and at your disposal only.

You will also find under cover an extract from the reflections of the Marquis of Santa Cruz, an author of great respectability, who wrote early in the last century, from which you will perceive galleys, in other words gunboats, have been long held in high estimation.

I have only to add, sir, that these observations were committed to paper on the day of their date, and that I have not been able to have them copied sooner, so inadequate are my means to my duties.

With great consideration and respect, I have the honor to be, &c.

NOTE: This letter was only the cover of General Wilkinson's opinion, and, therefore, shows only, in general terms, what that was. The opinion itself was, on a former occasion, communicated to a committee of the House of Representatives, and was read to the House for its information. This paper cannot now be found, which is the more regretted as it went much at large into the reasoning on the subject.

Copy of a letter from Commodore Samuel Barron to Thomas Jefferson, President of the United States, dated

SIR:

WASHINGTON, February 8, 1807.

In consequence of a conversation which I had the honor to hold with you yesterday, on the subject of gunboats, I venture to state my reasons for supposing them the proper kind of vessels to afford the most effectual means of defence and annoyance within the bays and rivers of the United States.

The small draught of water enables them to take such positions as to attack, in a measure, with impunity, vessels of any size, and are enabled to approach or retire as may best suit, to discomfit their enemy and protect themselves.

My residence having been always near the Chesapeake, enables me to remark more particularly on the effect of gunboats opposed to ships within the Capes of Virginia.

The Middle Ground, the Horse Shoe, and Willoughby's Point, are proper positions for gun boats to take to repel attempts to enter the bay and James' River. York Spit affords the same advantage in preventing an entry into that river, and near each river is a flat which affords a safe position to annoy, without fearing the near approach of large ships. Ten or twelve of these boats would probably be sufficient to compel to remove from her position a frigate, and so on, in proportion to the size and number of the enemy's ships. To do more than annoy would be difficult. With those vessels a great number and a long time would be necessary to capture a ship of war, but few commanders would feel secure while open to the attack of an enemy which, however inferior, he could not destroy. An attempt to board might be better opposed by small arms, cutlasses, &c. and in case of the necessity of retreat, the small rivers adjacent, &c. would be found of easy access to the boats, and inaccessible to the enemy. I do suppose that twenty gunboats, stationed in Hampton Roads and its vicinity, would be sufficient to repel any predatory attack in that quarter, and be very formidable to a larger force. It is impossible for me to enlarge on this subject, being incapable of estimating the force which might be brought in opposition to this mode of defence. I can recollect perfectly the manner and by what means two small boats, belonging to the State of Virginia, during the Revolutionary war, often intercepted, almost under the guns of large ships, the supplies which were frequently attempted to be afforded them; this was done by means of a light draught of water and good sailing. They were, however, deficient of heavy cannon. The gunboats, building under my direction, are so constructed as to sail fast, and to mount one heavy cannon, and can, if necessary, mount some smaller guns in the waist, so that they can be used in attack on privateers, or ships of war, and are competent to any employment, during summer, on the sea-coast, where the inlets will generally admit them in case of tempestuous weather, or the necessity of retreat from a superior force.

I have the honor to be, with great respect, &c.

SAM'L BARRON.

The efficacy of gunboats in the defence of coasts, ports, and harbors, must be obvious to every person capable of reflection, when it is considered with what celerity they can generally change their position and mode of attack, extending it widely to as many different directions as their number consists of, or concentrating nearly to one line of direction. It hardly need be observed that the very small object which a gunboat presents to the attacking enemy, causes it always problematical whether it may be hit by the most expert and experienced marksmen, while, on the other hand, the enemy attacking is generally with large ships, mostly of the line of battle, and which, from their magnitude, may be struck by almost every shot. The advantages of gunboats, for the defence contemplated, are numerous. They cannot easily be surrounded, be the force of the enemy what it may; consequently, very few, if any, are likely to fall into the enemy's hands. Their capability of retiring into shoal water, thereby keeping the adversary at long gun-shot distance, where naught but a charge of single round shot will reach, in which they will almost always have the advantage, or taking their station behind shoals, where they cannot be pursued by the smallest class of frigates, or even of sloops of war; and in many cases they may have opportunity of annoying an enemy when sheltered themselves by low points of land, where nothing but their masts can be seen, of course in a situation comparatively safe when that of the enemy is considered.

Such, indeed, is believed to be the great utility of gunboats for defence, that, notwithstanding the gigantic power of the British navy, in its present state, a judicious writer, in the British Naval Chronicle, after advising a plan for raising a fleet of one hundred and fifty or two hundred gunboats, to assist in repelling the threatened invasion of that country, says: "A gunboat has this advantage over a battery on shore, that it can be removed at pleasure, from place to place, as occasion may require; and a few such vessels, carrying heavy guns, would make prodigious havoc among the enemy's flat bottomed boats crowded with soldiers."

Respecting those particular "ports and harbors in the United States, which may be defended or essentially assisted in being defended by gunboats," it is believed they would essentially assist in the defence of all the principal ports in our country: for the only place where gunboats could be of no avail must be such a one where the enemy, under sail, could advance, uninterrupted by shoals, rocks, or narrow channels, to the immediate point of attack, within pistol shot of the shore.

The above cursory observations are respectfully submitted.

NAVY YARD, Washington, February 9th, 1807.

THOMAS TINGEY.

9th CONGRESS.]

No. 61.

[2d SESSION.

SEAMEN AND BOYS IN THE NAVAL SERVICE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, ON THE 20TH OF FEBRUARY, 1807.

HOUSE OF REPRESENTATIVES, February 17, 1807.

SIR:

The enclosed resolution passed yesterday.* It is designed to ascertain if the number of seamen allowed by law for the public service make the complement necessary for, and commensurate with, that object. The committee desire the fullest information on this point. As their organ, I invite your attention to this subject, and request, in their behalf, all the information that can exhibit it in the proper point of view. A distinct statement on each of the following heads is likewise requested, viz:

- 1st. The number of seamen allowed by law for the public service;
- 2d. The number in actual service;
- 3d. The number requisite for a gunboat, and the number of gunboats in service;
- 4th. The number necessary for the relief squadron destined for the Mediterranean.

Receive the assurances of my respect.

ROBERT SMITH, Esq. *Secretary of the Navy.*

THOMAS NEWTON, JUN. *Chairman of the Select Committee.*

SIR:

NAVY DEPARTMENT, February 18, 1807.

I this morning received your letter of yesterday's date.

By the act, entitled "An act in addition to an act, entitled 'An act supplementary to the act providing for a naval peace establishment, and for other purposes,'" passed April 21, 1806, it is declared "that the whole number of able seamen, ordinary seamen, and boys, shall not exceed nine hundred and twenty-five,"

We have now in actual service, about	925	
The whole number requisite for one gunboat, is,	700	
The number of gun-boats in service is four, and there are also two bomb ketches.	24	
The number of able seamen, ordinary, and boys, requisite for such a bomb ketch as the Etna or Vesuvius, (the two now in service) is,	60	

The number of men necessary for the relief squadron destined for the Mediterranean, is, including ordinary seamen and boys, 412, that is to say:

For the frigate Chesapeake,	292	
For the sloop of war Wasp,	120	
	412	

From the preceding statement it appears that the number of able seamen, ordinary seamen, and boys, is restricted to

And that the number now in actual service is,	700	
And that the relief squadron will require,	412	
	1,112	

Exceeding the limited number,		187
		1,112

Besides the seven hundred men stated to be now in actual service, we may, from a letter received from Captain Shaw, dated at New Orleans, November 29, 1806, presume that he has entered four hundred additional seamen, in order that he might be the better enabled to aid in defending the city of New Orleans against an apprehended attack.

I am, very respectfully, sir, your most obedient servant,

Hon. Mr. NEWTON, *Chairman of a Select Committee of Congress.*

ROBERT SMITH.

10th CONGRESS.]

[1st SESSION.

ADDITIONAL APPROPRIATIONS FOR THE NAVAL SERVICE FOR THE YEAR 1807.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, NOVEMBER 5, 1807.

COMMITTEE ROOM, November 2d, 1807.

SIR:

The Committee of Ways and Means, to whom was referred "an estimate of extraordinary expenses incurred by the Navy Department, since the twenty-second day of June last, for the service of the year one thousand eight hundred and seven," have instructed me to request that you will furnish them with such information relative to this subject, as may be in possession of the Navy Department, and which you may deem material.

I have the honor to be, with high respect, your most obedient,

Hon. ROBERT SMITH, *Secretary of the Navy.*

G. W. CAMPBELL.

*Resolved, That a committee be appointed to inquire whether any, and, if any, what, addition ought to be made to the existing Navy Peace Establishment.

Estimate of extraordinary expenses incurred by the Navy Department, since the 22d of June, 1807, for the service of the year 1807.

NAVY DEPARTMENT, *November 3d, 1807.*

SIR:

In answer to your letter of the 2d instant, in which you ask for such information as may be in possession of the Navy Department, and which may be deemed material by me, "relatively to the estimate of the expenses incurred by the Navy Department, since the 22d June, 1807," I have the honor to state, that, under existing circumstances, it was deemed sound policy and good economy to procure in season a supply of those articles which, in the event of war, could not be procured without difficulty, and then at very advanced prices. Of the article saltpetre, it was early determined to lay in a large supply, as we had none on hand, and but a scanty supply of powder. We have consequently purchased all that has been offered for sale at a reasonable price. For that stated in the estimate we have given different prices, the lowest of which has been sixteen, the highest eighteen cents per pound. For powder, cannon, cannon ball, copper, canvass and cordage, we have contracted at the ordinary market prices.

The President further determined to prepare all our gunboats for actual service, and to increase the marine corps from five hundred non-commissioned officers, musicians and privates, (the number estimated for for the service of the year 1807) to one thousand and forty-four, the number authorized by law. Hence the expenses incurred, as stated in the estimate for arming, manning, and provisioning our vessels, and for clothing and pay, &c. of the marine corps.

On reviewing the estimate, which from necessity was hastily prepared, I discover one item which should not have been included. I mean sixty-four thousand pounds of sheet iron, stated under the head of repairs of vessels, amounting to nine thousand and twelve dollars and twelve cents. This item having been returned in the general statements of contracts and purchases, made by the navy agents since the 22d June last, in pursuance of a circular letter addressed to them, was taken from those general statements and introduced into the estimate, without the object for which it was intended having been adverted to. Upon examination I find that it was purchased under the appropriation law of the 7th January, 1807, and is intended to be used, not in repairing of vessels, but in roofing buildings at the navy yard. This item having been thus already provided for by law, need not be included in the appropriation now to be made. Deducted from the estimate for repairs of vessels, it reduces that item from one hundred and fifty-one thousand eight hundred and ninety-six dollars and seventy-three cents, to one hundred and forty-two thousand eight hundred and eighty-four dollars and sixty-one cents, and consequently the whole amount of the estimate will be six hundred and seventy-seven thousand and sixty-four dollars and forty-seven cents, instead of six hundred and eighty-six thousand seventy-six dollars and fifty-nine cents, as first stated.

I have the honor to be, respectfully, sir, your most obedient,

R. SMITH.

HON. G. W. CAMPBELL, *Chairman Committee Ways and Means.*

10th CONGRESS.]

No. 63.

[1st Session.

ADDITIONAL APPROPRIATIONS FOR THE NAVAL SERVICE FOR THE YEAR 1807.

COMMUNICATED TO THE SENATE, NOVEMBER 16, 1807.

Mr. ANDERSON, from the committee on the bill making further appropriations for the support of the navy of the United States, during the year 1807, reported sundry documents, and the bill without amendment.

COMMITTEE ROOM, November 13th, 1807.

SIR:

A bill making further appropriations for the support of the navy of the United States, during the year one thousand eight hundred and seven, hath passed the House of Representatives, and has been referred to a committee of the Senate, who have directed me to request information of you upon the following points:

Whether any part of the expenses for which this appropriation is made has been paid; and, if so, from what fund? If not, whether the terms upon which the articles were contracted for were not more expensive than they would have been for immediate payment?

What are the specific items, which are already authorized by law, and what those now to be authorized?

With sentiments of high respect,

JOS. ANDERSON, *Chairman of the Committee.*

Hon. ROBERT SMITH, *Secretary of the Navy.*

NAVY DEPARTMENT, November 13th, 1807.

SIR:

In answer to your letter of this day's date, I have the honor to state:

1st. That it is impossible, at this time, to state precisely, what proportion of the extraordinary expenses incurred by the Navy Department, since the 22d day of June last, has been paid for, as all the accounts of the navy agents have not been received; but from a view of such accounts as have been rendered and received, and of the remittances made to the agents, the proportion of the extraordinary expenses actually paid for is estimated at about one hundred and sixty thousand dollars, which sum has been paid out of the appropriations made for the support of the navy for the year 1807, by act of Congress, passed 7th January, 1807.

2d. That, by the returns made, it does not appear that the Navy Department has in any instance paid more, or agreed to pay more, than the cash price for any one of the articles constituting those extraordinary expenses; but, to enable the committee to form for themselves a satisfactory opinion upon this point, I take the liberty of submitting to their consideration the accompanying paper, marked A, which is an exhibit of the prices given at different periods, for cannon, saltpetre, powder, shot, copper, &c. which are the principal articles of the extraordinary expenses.

3d. That none of the articles purchased and stated in the estimate as constituting the extraordinary expenses of the Navy Department, since the 22d day of June last, were authorized by any previous appropriation law. They were all procured without "awaiting a previous and special sanction by law," as has been communicated by the President to Congress, in his message at the opening of the present session.* They are such articles as the crisis called for, and such as Congress has annually authorized and provided for.

I have the honor to be, respectfully, sir, your most obedient servant,

Hon. Jos. ANDERSON, *Chairman of the Committee of the Senate, &c.*

RT. SMITH.

A.

Exhibit of the prices given at different periods for cannon, cannon ball, powder, copper, &c.

		Price given since the 22d June, 1807.
For cannon, the general contract price since the year 1798, has been	\$133½ per ton.	\$133½ per ton.
Cannon ball, twenty-four and thirty-two pound, and for powder and copper, various prices have been given, that is to say:		
For cannon ball, twenty-four and thirty-two pound,	60 to 74 per ton.	69½ per ton.
Copper,	45 to 55 cents per lb.	43, 44, 45, 47 and 50 cents per lb.
For powder, per quarter cask,	8 to 10.	\$8½ per qr. cask.
Pork, the contract price in the years 1806, and 1807, was,	20 per barrel,	20 per barrel.
Saltpetre, in the years 1799, and 1800, the Department gave twenty-five and thirty cents per pound, but we have seldom purchased saltpetre; the practice has generally been to purchase powder.		16, 17, and it is believed for a part 18 cts.

NAVY DEPARTMENT, 13th November, 1807.

No. 64.

[1st SESSION.]

ADDITIONAL GUNBOATS FOR PROTECTION OF PORTS AND HARBORS.

COMMUNICATED TO THE SENATE, NOVEMBER 20, 1807.

Mr. MITCHELL, from the committee on that part of the message of the President of the United States, which relates to the defence of our seaport towns and harbors,* reported, in part, the following letter from the Secretary of the Navy; also a bill to appropriate money for the construction of an additional number of gunboats:

NAVY DEPARTMENT, November 18th, 1807.

SIR:

In answer to your letter of the 16th instant, in which you ask for such information in relation "to the defence of our seaport towns and harbors, and the further provision to be made for their security," as the Navy Department may possess, I have the honor to state that, in aid of the fixed fortifications, which will be submitted by the Secretary of War, it is presumed that there will be required, at the ports and harbors mentioned below, the number of gunboats annexed to them respectively, viz:

At New Orleans, - - - - -	16	At Newport, R. I. - - - - -	12
At Savannah, - - - - -	8	At Tiverton, - - - - -	1
At St. Mary's, - - - - -	4	At Boston, - - - - -	12
At Charleston, S. C. - - - - -	10	At Salem and Newburyport, - - - - -	6
At Georgetown, do. - - - - -	1	At Portland, - - - - -	6
At Wilmington, N. C. - - - - -	3	At New Bedford, - - - - -	4
At Ocracock, - - - - -	4	At Marblehead and Cape Ann, - - - - -	2
At Albemarle Sound, - - - - -	1	At York, Kennebunk, and Saco, - - - - -	2
At Norfolk, - - - - -	60	At Kennebeck, Sheepscook, Damariscotta, Broad Bay, St. George's, - - - - -	5
At Alexandria, - - - - -	2	At Penobscot, - - - - -	3
At Baltimore, - - - - -	3	At Frenchman's Bay, - - - - -	2
At Philadelphia, - - - - -	4	At Passamaquoddy Bay, - - - - -	3
At Delaware bay and river, - - - - -	10	At Portsmouth, N. H. - - - - -	4
At Egg Harbor, N. J. - - - - -	1		
At Amboy, - - - - -	2		
At New York, - - - - -	50		
At Long Island, - - - - -	4		
At New London, - - - - -	6		
At Connecticut shore, - - - - -	6		
		Making in all,	257
		Of which we have at this time provided,	69
		Would leave to be provided,	188

The building of these gunboats is estimated on an average at \$5,000 each.

188 gunboats, at \$5,000, make \$940,000

Deduct the amount of timber contracted for, as stated in the exhibit of extraordinary expenses incurred by the Navy Department, since the 22d June last, 87,500

Would leave to be appropriated for the building of 188 gunboats, \$852,500

Respectfully submitted.

RT. SMITH.

HON. SAMUEL L. MITCHELL, *Chairman of a Committee of the Senate.*

10th CONGRESS.]

No. 65.

[1st SESSION.]

CONDITION OF THE NAVAL FORCE, AND AN INCREASE OF GUNBOATS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, NOVEMBER 30, 1807.

NAVY DEPARTMENT, 16th November, 1807.

SIR:

In answer to your letter, requesting full "information concerning the strength and present state of our naval force, particularly specifying the number and condition of our frigates and other armed vessels, including gunboats, with my opinion as to the sum necessary to make all needful repairs to such of them as are not now fit for immediate service," I have the honor to enclose paper A, which is an exhibit of the number and condition, &c. of the frigates and other vessels of war, and gunboats, of the United States.

By this paper it will appear that all the frigates and other vessels of war, belonging to the United States, excepting the frigates President, Congress, and New York, are either in actual service, ready for service, or can soon be prepared for service; and with respect to the frigates President, Congress, and New York, it is presumed that they could, if required, be repaired in the course of three months of good weather.

With respect "to the sum necessary to make all needful repairs," I take the liberty of remarking, that it is impossible to ascertain, before such repairs are made, what they will cost. The estimate for repairs must ever be altogether conjectural. A ship may have, and often has, defects in her timbers, which cannot be discovered without opening her. The most skilful builders often find themselves greatly deceived in their estimates of the expense of repairing vessels; and the best informed architects admit that it is impossible to form any precise opinion, from any previous survey of a ship requiring repairs of consequence, as to the extent and cost of such repairs. But by referring to the estimate for the service of the navy for the year 1808, you will find that I have estimated the sum of \$195,000 for these objects.

I have the honor to be, respectfully, sir, your most obedient servant,

ROBERT SMITH.

Honorable THOMAS BLOUNT,
Chairman of a Committee of Congress, &c.

*See Foreign Relations, No. 26, pages 70, 71.

NAVY DEPARTMENT, 30th November, 1807.

SIR:

In answer to your letter this moment received, I have to state to you that it is believed that, "for the protection of our ports and harbors," there ought to be built one hundred and eighty-eight additional gunboats. The accompanying sketch, marked A, will give you a view of the ports and harbors at which it is thought that gunboats ought to be stationed, and the number of gunboats for each.

It is presumed that the whole of these additional gunboats could be built, or otherwise provided, in the course of three, or, at the utmost, four months from the time that Congress may authorize them; and it is believed that they could, within the same period, be completely prepared for actual service.

The cost of each gunboat, not armed, is estimated at - - - - - \$5,000 00
The armament (exclusive of cannon, which Congress have this session provided for) is estimated at 1,200 00

Making the cost of each gunboat, exclusive of cannon; - - - - - \$6,200 00

Upon this estimate, valuing each gunboat at \$5,000, (exclusive of cannon and military stores)
One hundred and eighty-eight gunboats would cost - - - - - \$940,000 00

From this sum, however, there is to be deducted for timber, already provided or contracted for, and comprehended in the estimate of extra expenses incurred by the Navy Department, since the 22d June last, and which expenses have been this session provided for by Congress, the sum of - - - - - 87,500 00

Leaving to be appropriated for the building of one hundred and eighty-eight gunboats, (exclusive of cannon and military stores) the sum of - - - - - \$852,500 00

And estimating the military stores for each gunboat (exclusive of cannon, which is already provided or contracted for) at one thousand two hundred dollars for each boat.

The military stores for one hundred and eighty-eight gunboats would cost, at one thousand two hundred dollars, each, - - - - - \$225,600 00

We have estimated the annual cost of each gunboat in actual service at eleven thousand thirty-nine dollars and forty-six cents. If Congress should authorize the building or otherwise providing of one hundred and eighty-eight additional gunboats, the whole gunboat establishment would, when such additional gunboats should be completed, consist of two hundred and fifty-seven gunboats, which, at eleven thousand thirty-nine dollars forty-six cents, each, would make the annual cost of the whole - - - - - \$2,837,141 22

For six months they would, of course, cost - - - - - \$1,418,570 61

And they would cost for one month - - - - - \$236,428 43

If Congress should determine to provide one hundred and eighty-eight additional gunboats, it might not be good policy to confine the Executive to procuring them by building them. It is impossible to say whether there is a sufficient quantity of seasoned timber now in the country. It would be injudicious to build them of other than seasoned timber; and no doubt many might, if necessary, be procured by purchase. I, therefore, recommend, if they should be authorized, that the Executive be left at liberty to procure them by building or otherwise.

I have the honor to be, with great respect, sir, your most obedient servant,

ROBERT SMITH.

Honorable THOMAS BLOUNT, Chairman, &c.

10th CONGRESS.]

No. 66.

[1st SESSION.]

GENERAL VIEW OF THE NAVY AND MARINE CORPS, WITH ESTIMATES OF THE EXPENSES FOR MAINTAINING THE WHOLE IN SERVICE FOR ONE YEAR.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 11, 1807.

NAVY DEPARTMENT, *December 10, 1807.*

Sir:

In obedience to the resolution of the House of Representatives of the 30th of November, 1807, I transmit to you, herewith, to be laid before the House—

Paper A, which exhibits “the number of officers and men, respectively, belonging to the navy of the United States, and the corps of marines, and estimates of the number of officers and men which would be necessary to complete the manning the whole and entire navy of the United States, including the gunboats, with an estimate of the expenditures respectively necessary for maintaining them in actual service during one year.”

Paper B, which is an exhibit “of the timber and other materials belonging to the United States, now on hand, suitable for building ships of war.”

With respect to the state of this timber and other materials.—From the last reports made to me, it appears that those at Portsmouth, Philadelphia, and Boston, are in a good state of preservation; at Norfolk some injury has been sustained by the keel and keelson pieces and some of the white oak thick stuff having been too long exposed to the influence of the weather before they were placed under suitable protection; such, however, as have sustained injury can be speedily replaced. At Washington, the timber is all under cover; the keel, keelsons, white oak, thick stuff, and plank, are laid in the dock to water-season them. From New York, no report has been recently received as to the state and condition of the timber; there is, however, good reason to believe that it is in a good state of preservation.

It may not be improper in me here to state that, in addition to the timber and other materials now on hand, suitable for building ships of war, considerable quantities have been provided, and are now on hand, for the purpose of repairing vessels; and that, for the equipment of the six seventy-four gun ships, the cannon have been provided; and that there are also on hand considerable quantities of copper and canvass suitable for seventy-four gun ships.

Respectfully submitted.

R. SMITH.

To the Hon. the SPEAKER of the House of Representatives.

A.

Statement of the number of officers and men, respectively, belonging to the Navy of the United States, that is, of those who are at this time employed in the Navy of the United States; prepared in obedience to the resolution of the House of Representatives of the 30th of November, 1807.

13 Captains,
 9 Masters Commandants,
 72 Lieutenants,
 17 Surgeons,
 15 Surgeons' Mates,
 3 Chaplains,
 22 Sailingmasters,
 150 Midshipmen,

19 Pursers,
 13 Boatswains,
 6 Gunners,
 6 Carpenters,
 5 Sail-makers,
 *188 Petty officers of various descriptions,
 *1,766 Able seamen, ordinary seamen, and boys.

NOTE.—Existing laws authorize—

13 Captains,
 9 Masters Commandant,
 72 Lieutenants,

150 Midshipmen,
 1,425 Able seamen, ordinary seamen, and boys,

And such number of all other commissioned, warrant, and petty officers, as may, in the opinion of the President of the United States, be necessary and proper for the vessels in actual service.

Return of the officers, non-commissioned officers, music, rank and file, belonging to the United States' corps of Marines.

[10th CONGRESS.]

No. 67.

[1st SESSION]

NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 12, 1808.

NAVY DEPARTMENT, *January 9, 1808.*

The Commissioners of the Navy Pension Fund, in obedience to the "Act for the better government of the navy of the United States," respectfully report to Congress the following statements in relation to the fund:

Paper A, which shows the amount of stock on the books of the treasury to the credit of the commissioners.

Paper B, list of navy pensioners, with the amount of pension allowed to each.

Paper C, account of the commissioners with Thomas T. Tucker, Esq. treasurer of the fund.

Paper D, abstract of warrants drawn by the Secretary of the Navy on the treasurer of the fund, from the 1st of January, 1807, to the 1st of January, 1808.

Paper E, accounts of Mr. George Macdaniel for the purchase of stock, which exhibit a view of the purchases of stock made since last report.

Respectfully submitted: for the Commissioners,

R. SMITH, *Secretary of the Navy.*

A.

Statement of the stock on the books of the Treasury, to the credit of the Secretary of the Navy, the Secretary of the Treasury, and the Secretary of War, for the time being, Commissioners of the Navy Pension Fund, with the interest and reimbursement accruing for the year 1807.

Denomination of Stock.	Commencement of Interest.	Nominal amount of stock.	Interest and reimbursement for the year 1807.	Reimbursement of 6 per cent. and deferred stocks to 31st Dec'r, 1807.	Irredeemed amount of stock, first of January, 1808.

D. SHELDON, Jr.

10th CONGRESS.]

No. 68.

[1st SESSION.

PAY AND RATIONS OF THE SEVERAL OFFICERS OF THE NAVY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 21, 1808.

NAVY DEPARTMENT, April 5, 1808.

SIR:

I have received your letter of the 29th ultimo, and, in answer, have the honor to state: 1st. That, prior to the passage of the act, entitled "An act providing for a naval peace establishment, and for other purposes," the navy ration was valued at twenty-eight cents; that, after the passage of that act, which reduced the constituent parts of the ration, the ration was valued at twenty cents. The enclosed paper, marked A, exhibits the component parts of a ration, as established by the act, entitled "An act providing a naval armament," passed July 1, 1797, when the ration was valued at twenty-eight cents; and the component parts of a ration, as established by the act providing a naval peace establishment, when the ration was valued at twenty cents. From this paper, and from a reference to the prices of the constituent parts of the ration, at the periods referred to, and at the present period, the committee will be able to form a satisfactory opinion as to the propriety of the petition of the officers of the navy, so far as it relates to an increase of the price of the ration.

The second object of the petition is, that officers, when unemployed, may be permitted to receive their rations, in addition to the half pay which they now receive. The enclosed paper, marked B, exhibits the monthly half pay at present received by each grade of officer in the navy, and the amount which they would receive, if to their half pay were added their rations, valued in one column at twenty cents, in another at twenty-eight cents. This paper,

it is presumed, will be sufficient to enable the committee to satisfy themselves as to this part of the petition. It is proper for me here to remark, that officers unemployed, and not furloughed for any definite period of time, are at all times subject to the orders of the Government; and they, from necessity, are compelled to hold themselves in readiness to obey such orders at a moment's warning. Their situation is materially different from that of officers who have furloughs for definite periods, with permission to leave the country.

The 3d object of the petition is, that the widows and orphans of the officers of the navy may have a provision made for them, similar to that made for the widows and orphans of the officers of the army. At present there exists no provision whatever for the widows and orphans of navy officers who may be killed in action. The enclosed paper, marked C, states the provision made for the widows and orphans of the officers of the army in such cases.

The 4th object of the petition is, to procure an increase of the number of rations allowed to masters commandant in the navy, but no definite number has been prayed for. The enclosed paper, marked D, states the annual amount of the pay of a master commandant in the navy, as established by law. Masters commandant in the navy have command of vessels of a rate inferior to that which the law declares shall be commanded by captains in the navy, but superior to that commanded by lieutenants commanding. They are compelled to keep a separate table, essential to the preservation of the discipline of a man of war, and are, of course, exposed to extraordinary expenses, from which officers who live together in mess are exempt.

The 5th object is to procure an increase of the pay of midshipmen. Upon this point it may not be necessary for Congress to act. By the act, entitled "An act providing a naval armament," the power of fixing the pay of midshipmen was vested in the President of the United States. I here take the liberty of suggesting, that, as the President is at present vested with the power of regulating the pay of seamen, it would be advisable that the pay of boatswains, gunners, carpenters, and sailmakers, in the navy, should be regulated in like manner by the President. The pay of this class of officers could then be regulated by the pay given in the merchant service, and many inconveniences, at present experienced, would be avoided.

With respect to the memorial of the surgeons in the navy, the enclosed paper, marked E, exhibits the annual amount of their pay, and also of the pay of surgeons' mates, as prescribed by law. It will thence be perceived that surgeons and surgeons' mates in the navy receive less for their services than the usual profits of the private practice of physicians on shore.

I am, very respectfully, sir, your most obedient,

ROBERT SMITH.

HON. JOHN MONTGOMERY, *Chairman of a Committee, &c.*

A.

C.

Provision made by law for the widows or children of commissioned officers of the Army dying by reason of wounds received in actual service.

Section 15, of the act, entitled "An act fixing the military peace establishment of the United States," passed 16th July, 1802—see 5th vol. Laws U. S. page 25.

"And be it enacted, That if any commissioned officer, in the military peace establishment of the United States, shall, while in the service of the United States, die, by reason of any wound received in actual service of the United States, and leave a widow, or, if no widow, a child or children under sixteen years of age, such widow, or, if no widow, such child or children shall be entitled to, and receive, half the monthly pay to which the deceased was entitled at the time of his death, for and during the term of five years. But, in case of the death or intermarriage of such widow, before the expiration of the said term of five years, the half pay, for the remainder of the time, shall go to the child or children of such deceased officer: *Provided always*, That such half pay shall cease on the decease of such child or children."

D.

Statement of the annual pay of a Master Commandant of the Navy of the United States.

Pay \$60 per month, and five rations per day,	\$1,085 00
---	------------

See act, entitled "An act fixing the pay of the captains and commanders of ships and vessels of war of the United States," passed February 25, 1799, Laws U. S. vol. 5, page 257.

If masters commandant were allowed as many rations as are allowed to captains commanding a twenty gun ship, it would add to their present allowance one ration per day.

No. 69.

[2d SESSION.]

INCREASE OF THE OFFICERS, SEAMEN, AND MARINES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 10, 1808.

Resolved, That the committee appointed on so much of the message of the President of the United States as relates to the military and naval establishments, be instructed to inquire into the expediency of authorizing the President of the United States to employ such an additional number of seamen, not exceeding ———, as in his opinion the public service may require; and that the committee have leave to report by bill or otherwise.

COMMITTEE ROOM, December 3, 1808.

SIR:

I am instructed by the committee on the above subject to request of you to inform us of the number of seamen, in addition to those already in service, necessary to be employed by the Government; and that you will give us such further information on the subject as your Department is in possession of.

Very respectfully, your obedient servant,

R. NELSON, *Chairman of the Committee.*

The Hon. ROBERT SMITH, *Secretary of the Navy.*

NAVY DEPARTMENT, December 7, 1808.

SIR:

I have received your letter of the 3d instant; and, in answer, have the honor to state that the accompanying paper, marked A, exhibits the additional number of officers and seamen required for the public service, none of which could be employed without the authority of a special act of Congress. The same paper also exhibits the number of marines required in addition to the present establishment; for the employment of which provision by law will be necessary.

Paper B exhibits a view of the annual expense of maintaining in service the number of officers, petty officers, seamen, and marines, required, in the opinion of the President, in addition to the number already estimated for in the annual estimate presented to the House, through the Secretary of the Treasury.

This additional estimate, added to the estimate presented through the Treasury Department, will make the different items of the necessary appropriations as stated below, viz:

For pay and subsistence of the officers, and pay of the seamen,	\$1,077,834 00
For provisions,	490,354 31
For hospital account,	30,000 00
For repairs of vessels,	445,000 00
For contingent account, comprising freight, store rent, commissions to agents, travelling expenses, &c.	150,000 00
For pay and subsistence of the marine corps,	186,320 70
For clothing,	44,699 50
For military stores,	6,706 00
For hospital account,	3,000 00
For contingent account,	19,035 00
For navy yards,	60,000 00
For ordnance,	150,000 00
	\$2,662,949 51

I have the honor to be, respectfully, sir, your most obedient servant,

ROBERT SMITH.

Hon. R. NELSON, *Chairman of the Committee on Military and Naval Establishments.*

A.

Statement of the additional number of officers, seamen, and marines, required for the public service, which cannot be employed without the authority of a special act of Congress.

	Midshipmen.	Seamen.	Corporals.	Private Marines.
The public service requires,	384	3,425	192	1,052
The existing laws authorize,	150	1,425	48	890
	234	2,000	144	162

Thus, the public service requires—234 midshipmen,
2,000 seamen,
144 corporals marines,
162 privates do.

in addition to the number now authorized by law; none of which can be employed without the authority of an act of Congress.

B.

Estimate of the pay and subsistence of the officers, and of the pay of seamen stated below.

	Pay per Month.	Amount of Pay.	Rations per Day.	Number of Rations.	Price of Rations.	Amount of Rations.	Am't of Pay and Rations.
128 masters,	\$ 40	\$61,440	2	93,440			
10 pursers,	40	4,800	2	7,300			
30 surgeons' mates,	30	10,800	2	21,900			
171 boatswains,	20	41,040	2	124,830			
171 gunners,	20	41,040	2	124,830			
234 midshipmen,	19	53,352					
11 captains' clerks,	25	3,300					
171 masters' mates,	20	41,040					
171 quarter gunners,	18	36,936					
171 quartermasters,	18	36,936					
171 stewards,	18	36,936					
171 cooks,	18	36,936					
2,500 seamen,	12	360,000					
<u>4,110</u>				372,300	20 cts.	74,460	
Deduct one ration per day for each of the officers drawing more than one ration, as one ration for each is estimated in the article provisions,				186,150		37,230	
		764,556		186,150		37,230	781,786

PROVISIONS.

One ration each for 4,416 officers and men and marines.

4,018 barrels of beef, at \$15 00		\$60,285 00
3,445 barrels of pork, 20 00		68,900 00
1,171 barrels of flour, 8 00		9,368 00
1,410,360 pounds bread, 4½		63,466 20

[2d SESSION.]

INCREASE OF THE OFFICERS, SEAMEN, AND MARINES.

COMMUNICATED TO THE SENATE, JANUARY 3, 1809.

SIR:

NAVY DEPARTMENT, *December 16th, 1808.*

I have received your letter of the 13th instant.

To enable the Executive to carry into effect the provisions of the bill, entitled "A bill to authorize and require the President of the United States to arm, man, and fit out, for immediate service, all the public ships of war, vessels, and gunboats of the United States," there would be required, in addition to the officers, seamen, and marines, at present authorized by law,

350	Midshipmen,	
4,447	Able seamen, ordinary seamen, and boys,	
2	Captains, Marines,	
9	1st Lieutenants, Marines,	
2	2d Lieutenants, do.	
4	Sergeants, do.	
191	Corporals, do.	
659	Privates, do.	

As will more particularly appear by the accompanying paper, marked A.* Papers B, C, D, and E, exhibit the appropriation required to satisfy the necessary expenditures, contemplated by the bill.

I have been charged by the President to enclose to you, herewith, a copy of a communication, made to the chairman of a committee of the House of Representatives, upon the military and naval establishments.

It is accordingly herewith sent, and marked F.

I have the honor to be, with great respect, sir, your obedient servant,

R. T. SMITH.

HON. WILLIAM B. GILES, *Senate.*

* This and the subsequent papers referred to were communicated with the letter. For F, see No. 69.

10th CONGRESS.]

No. 71.

[2d SESSION.]

DISAGREEMENT OF THE SENATE AND HOUSE OF REPRESENTATIVES ON THE BILL PROVIDING FOR AN INCREASE OF THE OFFICERS, SEAMEN, AND MARINES.

COMMUNICATED TO THE SENATE, JANUARY 23, 1809.

Mr. BRADLEY, of the conferrées from the Senate, on the disagreement between the two Houses, in relation to the bill, entitled "An act authorizing the appointment and employment of an additional number of navy officers, seamen, and marines," made the following report:

That they have met the conferees on the part of the House of Representatives, and have had a free conference on the subject of the disagreement between the two Houses, and regret that it has not been in their power to compromise the disagreement. They submit to the Senate certain propositions made by them to the conferees from the other House as evidence of their earnest desire to have accommodated all differences, and a justification of their conduct to the nation; they subjoin the letter from the superintendent of the navy yard, in the absence of the Secretary of the Navy, that the state of the frigates might be fully known. They are compelled to say, they found no disposition on the part of the other conferees to depart in the least respect from the bill as passed by the House of Representatives, or in any manner to wish any accommodation, short of the Senate receding, in every instance, from their amendments. They therefore unanimously recommend to the Senate to ADHERE TO THEIR AMENDMENTS.

Propositions, with the subjoined letter, communicated to the conferees on the part of the House of Representatives.

"The conferees from the Senate, on the disagreement between the two Houses, in relation to the amendments made by the Senate to the bill, entitled "*An act authorizing the appointment and employment of an additional number of navy officers, seamen, and marines,*" being sincerely desirous to accommodate all differences between the two Houses, do propose to the conferees from the House of Representatives, a middle course, which will impose little if any additional burthens on the nation; the four frigates being at present in a state of repair, as they are informed, can very soon be equipped for actual service; they presume, from the known liberality and spirit of accommodation, which has so uniformly marked the proceedings of both Houses of Congress, that they will readily concur therein, to wit:

"To amend the first amendment made by the Senate, to read as follows:

"That, in addition to the frigates now employed in actual service, there be fitted out, officered, and manned, as soon as may be, the four following frigates, to wit: the United States, Essex, John Adams, and President; and moreover the President of the United States is hereby authorized and empowered to equip, man, and employ, in actual service, so many of the other public armed vessels, now laid up in ordinary, and gunboats, as in his judgment the public service may require; and to cause the frigates and other armed vessels, when prepared for actual service, respectively, to be stationed at such ports and places on the sea coast as he may deem most expedient, or to cruise on any part of the coast of the United States or territories thereof, and."

And so modify the second amendment of the Senate, that, in lieu of the words "*three hundred and fifty,*" insert only "*three hundred.*"

And so modify the third amendment of the Senate, that in lieu of "*four thousand four hundred and forty-seven,*" insert the words, "*three thousand six hundred.*"

And to recommend to the Senate to recede from their two last amendments made to the second section of the bill.

And to amend the title to read—

"An act authorizing the employment of an additional naval force."

Subjoined is a letter from Captain Tingey, superintendent of the navy yard, showing the state of the frigates.

NAVY YARD, WASHINGTON, *January 20th, 1809.*

SIR:

I have the honor to state, in reply to your note of this morning, that the frigates United States, Essex, and John Adams, are now in as good order in their hulls as on the day they were launched, and can be rigged in a few weeks, if so ordered, and suitable appropriations made.

The frigates "Congress and Adams" might also proceed to a station in the mouths of any of our bays or harbors, but I do not consider their hulls in a situation fit to bear the sea in heavy weather.

The frigates Constitution and New York I consider as unfit to proceed from this yard until they shall have had a thorough repair, and the remaining frigate, the President, is now progressing under a thorough repair, and may, I presume, be ready for sea in May next, with the number of carpenters now employed here.

I have the honor to be, very respectfully, sir, your obedient servant,

THO. TINGEY.

HON. STEPHEN R. BRADLEY.

[2d SESSION.]

NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 24, 1809.

NAVY DEPARTMENT, *January 23, 1809.*

SIR:

I have the honor herewith to transmit to you, to be laid before Congress, a report on the subject of the navy pension fund.

I have the honor to be, respectfully, sir, your most obedient servant,

R. SMITH.

The Honorable the SPEAKER of the House of Representatives.

NAVY DEPARTMENT, *January 23, 1809.*

The Commissioners of the Navy Pension Fund, in obedience to the "Act for the better government of the navy of the United States, respectfully report to Congress the following statements in relation to the funds:

Paper A, which shows the amount of stock on the books of the treasury, to the credit of the commissioners.

Paper B, list of navy pensioners, with the pension allowed to each.

Paper C, account of the commissioners with Thomas T. Tucker, Esq. Treasurer of the fund.

Paper D, abstract of warrants drawn by the Secretary of the Navy, on the Treasurer of the fund, from the 1st January, 1808, to the 1st January, 1809.

Paper E, accounts of Mr. George Macdaniel, for the purchase of stock, which exhibit a view of the purchases of stock made since the last report.

Respectfully submitted: For the commissioners,

R. SMITH, *Secretary of the Navy.*

A.

Statement of the Stock on the books of the Treasury, to the credit of the Secretary of the Navy, the Secretary of the Treasury, and the Secretary of War, for the time being Commissioners of the Navy Pension Fund, with the interest and reimbursement accruing for the year 1808.

STOCKS.	Commencement of interest.	Nominal amount of stock.	Interest and reimbursement for the year 1808.	Reimbursement of six per cent. and deferred stocks to Dec. 31, 1808.	Irredeemed amount on the 1st January, 1809.
Six per cent., - - - -	1st January, 1808,	\$39,579 04	\$3,166 31	\$16,795 14	\$22,783 90
Deferred, - - - -	Ditto,	56,532 23	4,522 57	11,301 96	45,230 27
Three per cent. - - - -	Ditto,	29,291 03	878 72	-	30,895 93
Ditto, - - - -	1st October, 1807,	1,604 90	60 18	-	-
Eight per cent., - - - -	1st January, 1808,	59,300 00	4,744 00	-	59,300 00
Louisiana six per cent., - - - -	Ditto,	14,000 00	840 00	-	14,000 00
Converted six per cent., - - - -	Ditto,	3,250 00	195 00	-	3,250 00
		\$203,557 20	\$14,406 78	\$28,097 10	\$175,460 10

I certify that the sum of fourteen thousand four hundred and six dollars and seventy-eight cents was the amount of interest, and reimbursement of stock, which accrued during the year 1808, to the credit of the navy pension fund; and that the capital stock to their credit, on the books of the treasury, amounts to two hundred and three thousand five hundred and fifty-seven dollars and twenty cents, according to the following

SCHEDULE.

	Six per cent.	Three per cent.	Deferred.	Eight per cent.	Louisiana six per cent.	Converted six per cent.	Total.
Nominal amount per Register's certificate Jan. 2, 1808,	\$39,579 04	\$29,291 03	\$56,532 23	\$59,300	\$14,000	\$3,250	\$201,952 30
Transferred Feb. 22, 1808,	-	1,604 90	-	-	-	-	1,604 90
	\$39,579 04	\$30,895 93	\$56,532 23	\$59,300	\$14,000	\$3,250	\$203,557 20

[2d SESSION.

INCREASE OF THE MARINE CORPS.

COMMUNICATED TO THE SENATE, FEB. 14, 1809.

NAVY DEPARTMENT, February 9, 1809.

SIR:

I have received your letter of the 4th instant.

The accompanying paper, marked A, exhibits in detail the augmentation to the marine corps necessary to enable the Executive to carry into effect the provisions of the act entitled "An act authorizing the employment of an additional naval force."

The President has determined to station at New Orleans three hundred marines. This will obviously be a command too extensive for any officer sustaining only the commission of a captain. I am decidedly of opinion that the New Orleans station requires one major and two captains; and as four captains were considered necessary prior to the acquisition of New Orleans, the two required for that station ought to be in addition to the four at present authorized by law.

I have the honor to be, very respectfully, sir, your most obedient servant,

ROBERT SMITH.

HON. A. GREGG, of the Senate.

A.

Statement of Marine Officers and privates required to enable the Executive to carry into effect the provisions of the act, entitled "An act authorizing the employment of an additional naval force;" passed 31st January, 1809.

[1st SESSION.

CONDITION AND DISPOSITION OF THE NAVAL FORCE.

COMMUNICATED TO THE SENATE, MAY 25, 1809.

NAVY DEPARTMENT, 24th May, 1809.

SIR:

I have the honor of transmitting to you, herewith, to be laid before the Senate, the enclosed paper, marked A, which will afford a general view of the state and disposition, at this time, of the vessels belonging to the Navy of the United States, and of the gunboats.

It appears proper here to observe, for the information of the Senate, that the frigates Constitution and Chesapeake, the ship Wasp, the brigs Hornet and Argus, and the schooners Revenge and Enterprise, were in commission prior to the passage of the act, entitled "An act authorising the employment of an additional naval force," passed 31st January, 1809; and that the frigates President, United States, and Essex, the corvette John Adams, the brigs Syren, Vixen, and Nautilus, and the cutter Ferret, have been put in commission, since the passing of that law, agreeably to its provisions; that the frigates United States and Essex, and the corvette John Adams, have had such thorough repair and improvement that practical gentlemen pronounce them to be, at this time, better and more efficient vessels than they were when originally launched; and that the frigate President is now undergoing a thorough repair, which is nearly completed, and being repaired, under the advantages afforded by extensive experience, she will be, in all respects, greatly superior to what she was when first launched.

Respectfully submitted.

PAUL HAMILTON.

The Hon. GEORGE CLINTON, *Vice President*
of the United States, and President of the Senate.

A.

Exhibit showing the state and disposition at this time of the Vessels belonging to the Navy of the United States, and of the Gunboats.

[1st Session.]

GUNBOATS, PAY OF OFFICERS, AND COMMISSIONS TO NAVY AGENTS.

COMMUNICATED TO THE SENATE, JUNE 8, 1809.

COMMITTEE ROOM, *May 29, 1809.*

SIR:

The committee to whom has been referred a resolution of the Senate, authorizing the committee to inquire whether it be expedient, at this time, to make any modifications of the laws relating to the army and navy of the United States, have directed me to ask information of you upon the following points:

How many gunboats have been built, under the existing laws?

What has been the average or aggregate cost of building them?

In what situation are they now placed, or contemplated to be placed?

How many of them are laid up, and how many in actual service, and where stationed?

What will be the annual expense of taking care of those laid up?

What the annual expense of those to be continued in actual service?

What will be the probable state of those gunboats, at the end of one year, which may be laid up or unemployed?

What will be the probable state of those, at the end of one year, which may be kept in service, on the coasts, or in the harbors?

Which would best promote the true interest of the nation, and of the navy department—to continue the system of gunboats hitherto adopted, and dispose of them in the manner now authorized by law, or to authorize the President to cause them to be sold, except so many as he may think expedient to be retained in service?

What would be the difference in the expense of keeping one or more frigates on our own coasts, or sending them to the Mediterranean?

Should it be considered expedient to keep any armed vessels in the Mediterranean seas?

Upon the foregoing points, the committee wish you to give as full a view as you can, from such data as you now possess.

Is it, at this time, expedient to make any modification of the laws of the United States, in relation to the navy department? If so, what are the modifications you deem expedient, so far as you have had time and opportunity to examine them?

Accept assurance of my high consideration.

JOS. ANDERSON, *Chairman of the Committee.*

NAVY DEPARTMENT, *June 6, 1809.*

SIR:

I have received your letter of the 29th ultimo, requesting information, which I have now the honor to give, upon the points therein stated.

There have been built, under the existing laws, one hundred and seventy-six gunboats and bombs; and the average cost of building them may be calculated at nine thousand dollars.

The paper A, herewith sent, affords the requisite information as to the situation in which these boats are now placed, the number laid up, the number in actual service, and where stationed.

Paper B is an exhibit of "the annual expense of taking care of those laid up."

Paper C is an exhibit of the annual expense of maintaining one gunboat, and twenty-four of them, on one station—for instance, New Orleans—in actual service.

As to the "probable state of those boats at the end of one year, which may be laid up, or unemployed," I will observe that, with all the care that can be taken of them, they will unavoidably decay in a greater or less degree. Those built of green, will, of course, decay much sooner than those built of seasoned timber. To keep a gunboat in a state of preparation for service, we shall very frequently be subjected to the expense of repairing her; an expense to an amount which cannot be foreseen. The sails, and standing and running rigging, at present belonging to those laid up will, probably, at the end of one year, be so much injured as to be unfit for use. Their small boats and water casks, unless well protected from the rain and sun, will sustain considerable injury, in the course of the same time; and they cannot be so protected without expense. If a gunboat is suffered to lie in port for one year, without giving her any kind of repair, she will probably be found, at the expiration of that year, wholly unworthy of being repaired.

With respect to those kept in service, they also will decay, if not occasionally repaired; though it is observed by professional men that vessels in service, especially in salt water, are less subject to decay than they are lying in port, and universal experience does, I believe, sanction this idea.

In reply to your query respecting the gunboat system, as relating to the "interest of the nation, and of the Navy Department," and as to the propriety of continuing that system, or the abandoning of it, by a sale of the boats, I am to observe that much must depend on the species of policy which, in the event of a war, may be adopted. If that event should shortly occur, and it is determined that a plan of operations merely defensive shall be pursued, there can be no doubt that gunboats will aid materially, if properly stationed; but, if, on the contrary, our marine should be directed against a foreign trade, and to the conveying and protection of our own, a system of well armed, fast sailing, frigates, and smaller cruisers, would, on every principle, be preferable, in point of effect, and, comparatively rated per gun and number of men to be employed, would be much less costly. It must also be observed that it is only on board of vessels suited for sea service that good seamen are to be formed, and that those calculated merely for ports afford no opportunity for improvement in naval science. As to the expediency of selling or retaining the gunboats, reference to the preceding exhibits afford some information; but I beg leave to remark that nothing short of a knowledge of the policy which events may induce could enable me to give a decided opinion on this point.

The difference of the expense of keeping one or more frigates on our own coast, and sending them to the Mediterranean," would, in my opinion, be inconsiderable. On our own coast, they will, especially in the winter and spring months, be subject to numerous accidents, from causes universally known, and not existing, it is believed, in an equal degree, in any other part of the world; such as frequent and sudden heavy squalls of wind, numerous shoals, thick fogs, and the irregularity of the motion of the Gulf Stream, which, in misty weather, renders the approach to our coast peculiarly hazardous. For our vessels stationed in the Mediterranean, we should be subjected to the expense of transporting certain articles of provisions and naval stores, not to be obtained in that sea; but this is, I believe, the only additional expense to which they would be subjected, and this expense may be more than counterbalanced by the accidents to which our vessels would be subject on our own coast, and the comparative cheapness of certain supplies which can be obtained in the Mediterranean ports; and I am persuaded that, if Congress would authorize the building of a suitable vessel for the transportation of provisions from this country to the Mediterranean, for the use of any of our vessels that might be stationed in that sea, the expense of maintaining them there would be less than the expense of maintaining them on our own coast.

As you have not required my opinion on the expediency of sending some of our frigates to the Mediterranean, I will only venture to suggest, for consideration, that we have in that sea a valuable trade at stake, subject to the depredations of a lawless people, whose dispositions might be effectually restrained by the presence of a few vessels of respectable force; and that I consider professional knowledge, on the part of our officers, (which can best be acquired abroad) as of high national importance.

With respect to the expediency of modifying the laws in relation to the Navy Department, it appears to me that some alterations are necessary.

By the act authorizing the employment of an additional naval force, passed at the last session of Congress, it appears that the Executive is restricted from sending our vessels equipped under that act beyond our coast. If it shall now be deemed expedient to send any of them to the Mediterranean, or any other foreign station, this restriction ought to be removed, or so modified as to give to the Executive, power adequate to the purpose.

I avail myself of this occasion respectfully to submit to consideration the memorial of the officers of the navy, some time since presented to Congress, a copy of which, with copies of a letter from my predecessor to Mr. Montgomery, chairman of a committee of the House of Representatives, dated 5th of April, 1808, and of a letter from Captain Bainbridge to me, upon the same subject, are herewith transmitted, and marked D*. Having attentively perused this memorial, I cannot withhold the expression of my opinion that the prayer thereof is perfectly reasonable. National considerations ought surely to induce us to foster that just and honorable pride, that truly patriotic ambition, to which our navy officers, and especially those well skilled in seamanship, obviously sacrifice their pecuniary interests.

To another and not an uninteresting subject, embraced by the queries which you have propounded to me, I will also invite your serious attention. By the act further to amend the several acts for the establishment and regulation of the Treasury, War, and Navy Departments, it is provided that the commissions to navy agents shall not exceed one per centum, nor, in any instance, the compensation allowed by law to the purveyor of public supplies. The treasury construction of this statute will appear by the papers E and F, herewith sent. That construction prohibits any allowance under any circumstances, for either clerk hire, porters, office rent, fuel, or stationary. The whole receipts of the agents are confined to one per centum; and the product of that per centage is limited to two thousand dollars per annum.

In our large sea port towns, and especially in Norfolk, Baltimore, Philadelphia, and New York, our purchases will necessarily be extensive; often so much so, as to occupy exclusively the time of the agent. In these places, clerks must be indispensable, and porters highly useful; and wherever we have an agent, it appears to me proper that the public should allow whatever the agent may reasonably pay for office rent, fuel, and stationary. It is not probable that the commissions to the agents will in any other places than those mentioned, viz: Norfolk, Baltimore, Philadelphia, and New York, amount to two thousand dollars, and in neither of these places will the clear receipts of either of the agents amount to more than five hundred and fifty dollars per annum, as will more particularly appear by the accompanying exhibit, marked G. In other places the commissions will not amount to as much as is now given to the most common clerk in a merchant's counting house.

To make the commissions amount to two thousand dollars, it would require that two hundred thousand dollars should be disbursed; and if an agent should disburse one million of dollars, or any sum exceeding that, the gross amount of his pay for such disbursements is limited to two thousand dollars; the nett amount of which cannot reasonably be calculated at more than five hundred and fifty dollars.

With this view of this subject, I cannot rely upon the present agents continuing to hold their appointments, or upon other fit persons accepting such appointments, without the law in question being so modified as to make them a reasonable allowance for their services, and the expenses inseparably connected with the discharge of their official duties. In disbursing so large a sum of money as an agent must disburse, to entitle him to the small compensation of five hundred and fifty dollars per annum, he hazards the loss of ten times as much, from irregularity in vouchers, erroneous calculations, misinterpretation of instructions, from not strictly conforming in each and every purchase to the specific restrictions of the existing law, and from various other causes, to which the most correct men are and ever will be liable, in a greater or less degree.

The copy of a letter from General Stricker, navy agent at Baltimore, a gentleman justly of high standing in society, and I am told, as good an agent as could be procured in any country, herewith sent, and marked H, will explain to you his situation under the existing law; and other agents, of equal merit, are similarly situated.

Deeming it my duty, under the latitude you have allowed, to be perfectly explicit and full in my communication to you upon this subject, and being sincerely anxious to manage the business of the Department in such manner as to promote the interests of the nation, I trust I shall not be thought presumptuous when I suggest the indispensable necessity of being aided by able agents.

I flatter myself, sir, with a belief that I have afforded the information required, and I regret that I have not been able to do it at an earlier moment.

I am, with great respect, sir, your obedient servant,

PAUL HAMILTON.

Honorable JOSEPH ANDERSON, *Chairman of a Committee of the Senate.*

Medicine and hospital stores, &c.	-	-	-	-	-	250
						Dollars, - 11,499

Say \$11,500.

As one gunboat will cost \$11,500 per annum, 24 gunboats will cost \$276,000.

Estimate of the annual expense of maintaining in actual service twenty-four Gunboats at New Orleans.

1 captain commanding,	\$100 per month,	16 rations per day,	-	-	-	\$2,368
2 surgeons,	50 "	-	-	-	-	1,200
1 purser,	40 "	-	-	-	-	480
4 surgeons' mates,	30 "	-	-	-	-	1,440
5,110 rations	at 20 cents each,	-	-	-	-	1,022
						6,510
Annual expense of twenty-four gunboats, not including the above essential officers,						276,000
Total annual expense of twenty-four gunboats in actual service at New Orleans,						\$282,510

NOTE.—In the above estimate, full crews are allowed to the gunboats; but orders have been given to reduce the crews of the gunboats at New Orleans to a number merely sufficient for their navigation and safety; the reduction is left to the commanding officer at New Orleans, who, from a full view of all circumstances, can form the most satisfactory judgment upon this point. We have not had time to hear from him what the actual reduction has been, but we may estimate that this reduction, from the time it shall be made, will reduce their annual expense to \$250,000

E.

NAVY DEPARTMENT, March 18, 1809.

SIR:

By the act, entitled "An act further to amend the several acts for the establishment and regulation of the Treasury, War, and Navy Departments," copy of which is enclosed, it is declared that the compensation to either of the navy agents shall not exceed one per centum on the public moneys disbursed by him, nor in any instance the compensation allowed by law to the purveyor of public supplies.

The purveyor's salary is fixed by law at 2,000 dollars per annum, but he is additionally allowed, at the public expense, one or more clerks, a messenger, stationary, store rent, and fuel for his office, and the navy agents have been anxious to know, whether, under the law above referred to, they are entitled to similar allowances. I have, therefore, the honor to request of you, sir, the treasury construction upon the following points:

1st. Are the navy agents entitled, under this law, to any other allowance than that of one per centum on the public moneys disbursed by them?

2d. If the one per centum should yield less than 2,000 dollars per annum, can any allowance for clerk hire, porters, stationary, office rent, and fuel, be made, consistently with the law?

3d. If the one per centum should yield an excess so as to enable an agent to pay for clerk hire, &c. and leave him 2,000 dollars for his own compensation, would such payments be allowed?

4th. If a navy agent is not, by law, entitled to any of these allowances, does the law leave it in the power of the Secretary of the Navy to make them, or any of them?

Under the annual appropriation for the expense of navy yards, comprising docks and other improvements, pay of superintendents, store keepers, clerks, and laborers, the Secretary of the Navy has heretofore allowed, to several of the navy agents, clerks, whose services were paid for out of such appropriation.

I have the honor to be, with great respect, sir, your obedient servant,

C. W. GOLDSBOROUGH, *Acting Secretary of the Navy.*

G. DUVALL, Esq.,
Comptroller of the Treasury.

F.

TREASURY DEPARTMENT, *Comptroller's Office, March 30th, 1809.*

SIR:

I have been prevented by indisposition from paying earlier attention to your letter of 18th instant. I have duly considered the law under which the questions stated by you arise, and am of opinion that it will admit only of one construction. The compensation allowed to the agents of the Navy Department by the act of the 3d March, 1809, cannot exceed one per centum on the public moneys disbursed by them, nor in any instance the compensation allowed by law to the purveyor of public supplies. The salary of the purveyor is two thousand dollars. There is also an allowance for clerk hire, stationary, store rent, &c. for which a separate appropriation is annually made. But this cannot be considered as an additional allowance to the purveyor. It adds nothing to the emoluments of his office. His compensation still remains two thousand dollars, and no more. Compensation means a remuneration or equivalent for personal services rendered in a particular capacity; and to entitle the person acting, to the compensation fixed by law, he must perform the service required, and cannot, at the public expense, employ another to do it for him, nor can the expenses incident to the discharge of the duties of the station be charged to the United States. If such had been the intention of the Legislature, a correspondent appropriation would have been made, as has been done with respect to the purveyor's office. It follows that all the questions stated must be answered in the negative; without doubt Congress will, at the next session, make any auxiliary regulations, on the representation of the Secretary of the Navy, which may be deemed necessary and proper.

I am, sir, respectfully, your obedient servant,

G. DUVALL.

CHARLES W. GOLDSBOROUGH, Esq.

G.

Estimate of the probable clear compensation of a navy agent, under the existing law, supposing that the gross amount of his commissions will be two thousand dollars.

										1,450 00
Clear annual compensation,	-	-	-	-	-	-	-	-	-	\$550 00

H.

BALTIMORE, *May 26, 1809.*

SIR:

I am sorry that my first communication should be on a subject as unpleasant to me (because of a personal nature) as it must be to you, involving, as it does, considerations affecting the Department of the Government over which you preside. I allude to the act passed at the last session, regulating the compensation to be allowed to the navy agents, &c.

Previous to the passage of this law the commissions allowed the navy agents was two per cent. for all sums of money paid and expended in contracts for their account; one per cent. on all sums received for public property sold, and one half per cent. on all sums paid for the purpose of recruiting, paying off a crew, and the like services.

By the existing act one per cent. only is allowed, and it is further provided that this compensation shall in no instance exceed two thousand dollars.

By a reference to the officers of the Department you will be informed, sir, that the business usually transacted in this place for account of the Department is very considerable; that it often is of a nature to require much labor and great attention; that it is often urgent, and consequently not to be delayed; and that to do it with the promptness the public service demands, will necessarily occupy much of the time of the most active persons out of doors, as well as that of a good clerk in doors, to keep and prepare the necessary accounts.

If, then, after this detail of the nature and extent of the duties attached to the navy agency here, it shall appear to you that the compensation at present allowed is too small, I flatter myself you will use your influence to have the commissions augmented to what they formerly were, or, if this cannot be done, obtain some allowance for clerk hire, house rent, fuel, stationary, and a porter, which, under existing circumstances, absorb nearly the whole of the commissions.

I have thought it was due to myself to make you the foregoing communication, which I hope your liberality will pardon,

And that you will believe me to be, with great respect, your obedient servant,

JOHN STRICKER,

The Honorable PAUL HAMILTON.

GUNBOATS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JUNE 8, 1809.

NAVY DEPARTMENT, June 7, 1809.

SIR: In obedience to the resolution of the House of Representatives of the 26th ultimo, I have the honor herewith to transmit to you, to be laid before the House, the accompanying papers, marked A and B, which contain information upon the points embraced by the resolution, as far as it can at this time be given from official documents in the possession of the Navy Department.

To the item of "cost and equipment of the gunboats" an addition to an amount, yet unascertained, must be made. This arises from various supplies, procured and intended at first for the repair of frigates and other vessels, which having been found most of them better adapted to the building and equipment of gunboats, were used for those purposes. The sum thus to be added to the cost and equipment of those boats will be considerable, as timber, canvass, cordage, copper, iron, kentledge, sheathing paper, junk, &c. to a considerable amount, have been thus applied.

The actual expense of the gunboats, while in service, cannot, it will be readily admitted, be ascertained until the accounts shall be exhibited and finally settled; and since the order for dismantling and laying them up, a sufficient time has not elapsed for such accounts to have been transmitted and settled by the accountant of the navy.

A desire to furnish the most extensive information which circumstances would admit, has been the principal cause why I have not done myself the honor of replying, at an earlier moment, to your communication.

Respectfully submitted.

PAUL HAMILTON.

The Honorable JOSEPH B. VARNUM,
Speaker of the House of Representatives.

NAVY DEPARTMENT, Accountant's Office, June 6th, 1809.

SIR: I now hand you enclosed an abstract of the aggregate amount of expenditures on account of gunboats, including the advances which remain unaccounted for on the books of this office, and for which no accounts have been exhibited: a considerable proportion of the advances unaccounted for stands to the debit of the pursers that are and have been stationed at New Orleans, Norfolk, and New York, and it is presumed have been applied principally to the pay of the officers and crews, and will be accounted for as soon as the boats are laid up, and the crews finally paid off and discharged, when pay rolls will, of course, be made up and exhibited.

With the highest respect, I have the honor to be, sir, your most obedient servant,

THOMAS TURNER.

The Honorable PAUL HAMILTON.

A.

Abstract of the aggregate amount of expenditures for, and on account of, Gunboats and Ketches, viz:

FOR GUNBOATS.			
<i>Taken from accounts actually adjusted and settled in this office.</i>

[1st Session.]

REPAIRING FRIGATES; EXPENSES OF KEEPING IN SERVICE EACH CLASS OF VESSELS;
AND A COMPARATIVE STATEMENT OF THE COST OF BUILDING AND MAINTAINING
IN SERVICE A FRIGATE AND GUNBOAT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JUNE 12, 1809.

NAVY DEPARTMENT, 9th June, 1809.

SIR:

I have received your letter of yesterday's date, and, in reply, have the honor to state:

1st. That the cost of repairing each of the frigates now lying at the Navy Yard, Washington, cannot be estimated with any degree of precision, until each frigate shall have been thoroughly examined in her hull, masts, spars, rigging, sails, water casks, &c. and the precise state of each particular ascertained. I some time since directed such examination to be made, and reported to me, but this has as yet been only partially done; and being apprehensive that some days may elapse before I shall have it in my power to afford satisfactory information upon this subject, I have supposed that, in the mean time, it would be agreeable to the committee to receive information upon the other points of your letter, and therefore proceed to state:

2dly. That the difference between keeping each of the public armed vessels in service, for six months, from this time, and laying them up in ordinary immediately, circumstanced as they now are, their crews being generally in debt for advances of money and clothes made to them, and their supplies of provisions, and, in a great measure, all their other supplies being now actually on board, would be from three to four months' pay of their respective crews; that is—

For a 44 gun frigate, about	-	-	-	-	-	-	\$17,000
36 do.	do.	-	-	-	-	-	15,000
32 do.	do.	-	-	-	-	-	12,000
16 gun brig,	-	-	-	-	-	-	7,000
14 gun schooner,	-	-	-	-	-	-	5,000

In replying to your third query, requiring "a comparative statement of the building and the annual expense of maintaining a gun on board a frigate and a gunboat," it is necessary to suppose a particular case. I will take the frigate President, mounting fifty-six guns; forty-two pound carronades, and twenty-four pound long cannon.

This frigate cost two hundred and twenty thousand nine hundred and ten dollars and eight cents, say, two hundred and twenty-one thousand dollars. A gunboat, carrying two guns, will cost 12,000 dollars. A gunboat, carrying one gun, will cost about nine thousand dollars. The frigate will require four hundred and twenty men to man her, and can be maintained, in actual service, at an annual expense less than one hundred and twenty thousand dollars, including the pay of officers and seamen, provisions, repairs, medicine, contingencies, and every other expense of every description. A gunboat, mounting one or two guns, will require forty-five men to man her, and cannot be maintained in actual service, at an annual expense less than eleven thousand seven hundred dollars, including every expense. It hence results that the building of nineteen gunboats, each carrying two guns, and carrying thirty-eight guns in the whole, would cost more than the building of a frigate mounting fifty-six guns; that the building of twenty-five gunboats, each mounting one gun, would cost more than the building of a frigate mounting fifty-six guns; that the number of men, required for a frigate mounting fifty-six guns, would not be sufficient to man ten gunboats carrying, in the one case, twenty guns, in the other case, ten guns; that, to fight fifty-six guns, on board of twenty-eight gunboats, would require twelve hundred and sixty men; and to fight them, dispersed in fifty-six gunboats, would require two thousand five hundred and twenty men; and that two thousand five hundred and twenty men employed on board of frigates, mounting each fifty-six guns, and each requiring four hundred and twenty men, can fight three hundred and thirty-six guns, consisting of forty-two pound carronades, and twenty-four pound long cannon.

With respect to the expense per gun, it appears that fifty-six guns, mounted on board of a frigate, can be maintained at an annual expense less than one hundred and twenty thousand dollars; that the annual expense per gun, on board of a gunboat carrying two guns, will be five thousand eight hundred and fifty; and on board of a gunboat carrying one gun, eleven thousand seven hundred per annum; that the difference between the annual expense of fighting fifty-six guns on board of a frigate, and twenty-eight gunboats, carrying fifty-six guns, is two hundred and seven thousand six hundred dollars; and that the difference in the annual expense of fighting fifty-six guns on board of a frigate, and fifty-six gunboats carrying each one gun, is five hundred and thirty-five thousand two hundred dollars.

The annual expense of keeping the gunboats (other than those now in service, and those yet on the stocks) in ordinary, would be about sixty-four thousand dollars.

As to the saving already made by laying up these boats in ordinary, it is impossible at this time precisely to ascertain it, as the Department is not informed of the day on which each boat was laid up. I can only, at this time, form a conjecture as to the amount, which is supposed to be equal to one month's pay of the crews discharged; that is, about eighteen thousand dollars.

I am, with great respect, sir, your obedient servant,

PAUL HAMILTON.

RICHARD CUTTS, Esq. *Chairman of a
Committee of the House of Representatives.*

11th CONGRESS.]

No. 78.

[2d SESSION.

CONDITION OF THE NAVAL FORCE, AND THE APPLICATION OF APPROPRIATIONS MADE
FOR THE NAVAL SERVICE AND MARINE CORPS..

COMMUNICATED TO CONGRESS, DECEMBER 5, 1809.

To the Senate and House of Representatives of the United States:

I now transmit a report of the Secretary of the Navy, containing statements from that Department, referred to in my message of the 29th ultimo.*

December 4, 1809.

JAMES MADISON.

NAVY DEPARTMENT, December 1, 1809.

SIR:

I have the honor of transmitting to you, herewith, paper A, which is an exhibit of the vessels of war and gun-boats at this time belonging to the Navy of the United States; distinguishing the number in commission prior to the passage of the act, entitled "An act authorizing the employment of an additional naval force," passed January 31, 1809. The number fitted out under that act; the whole number now in commission, and prepared for service, and the number in ordinary, and where.

By this paper it will be seen, that the act of 31st January, 1809, has been fully executed. The number of vessels of war and gun boats, now in commission, and the actual state of those not in commission, will also appear, it is hoped, in a satisfactory form.

Paper No. 1, which is an exhibit of the warrants drawn upon the appropriations made by the act of Congress of 3d March, 1809, for "repairs of vessels;" for contingent expenses; and for clothing of the marine corps, respectively.

Paper No. 2, which is an exhibit of the warrants drawn upon the sum of \$150,000, transferred by your order, agreeably to the act of Congress, entitled "An act further to amend the several acts for the establishment and regulation of the treasury, war, and navy departments," passed, March 3, 1809, from the appropriation made by the appropriation act of 3d March, 1809, for "provisions" to that of "repairs of vessels."

Paper No. 3, which is an exhibit of the warrants drawn upon the sum of \$25,000, transferred by your order, agreeably to the provisions of the act above recited, from the appropriation made by the appropriation act above recited, for "provisions," to that of "contingent expenses."

Paper No. 4, which is an exhibit of the warrants drawn upon the sum of \$2,500, transferred by your order, agreeably to the provisions of the act above recited, from the appropriation made by the act above recited for "quartermasters' and barrack masters' stores for the corps of marines," to that of clothing for that corps.

The sum transferred in aid of the appropriation for "repairs of vessels," may appear large; but pursuing the spirit of the act of 31st January, 1809, it was determined that the repairs made should be thorough and complete. In doing this, the disbursements have certainly been heavy. The price of naval stores, greatly and suddenly enhanced, has greatly contributed to swell them to their present amount. One very consoling circumstance for these heavy disbursements, arises out of the fact, that all the vessels repaired, especially the frigates, have been so much improved in their armament, their other fittings, and their sailing, that the most experienced practical men pronounce them to be, at this time, greatly superior, in all respects, to what they were when first fitted out from the stocks.

The contingent expenses have also been unexpectedly great, arising principally from the very heavy disbursements at New Orleans.

The appropriation for marine clothing was found inadequate to the objects for which it was made, in consequence of the advanced price of cloths and woollens.

I have the honor to be, with great respect, sir, your most obedient,

PAUL HAMILTON.

The PRESIDENT of the United States.

No. 79.

[2d SESSION.

NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 6, 1810.

NAVY DEPARTMENT, January 4, 1810.

The Commissioners of the Navy Pension Fund, in obedience to the "Act for the better government of the navy of the United States," report to Congress the accompanying statements in relation to the fund:

Paper A, which shows the amount of stock on the books of the treasury, to the credit of the commissioners.

Paper B, which shows the number of shares in the Bank of Columbia held in the name of the commissioners, and belonging to the fund.

Paper C, list of navy pensioners, with the pension allowed to each.

Paper D, account of the commissioners with Thomas T. Tucker, Esq. treasurer of the fund.

Paper E, abstract of warrants drawn by the Secretary of the Navy on the treasurer of the fund, from the 1st January, 1809, to the 1st January, 1810.

Paper F, accounts of George Macdaniel, for the purchase of stock.

Respectfully submitted: for the commissioners,

PAUL HAMILTON, *Secretary of the Navy.*

A.

Statement of the Stock on the books of the Treasury to the credit of the Secretary of the Navy, the Secretary of the Treasury, and the Secretary of War; for the time being Commissioners of the Navy Pension Fund, with the interest and reimbursement accruing for the year 1809.

STOCK.	Commencement of interest.	Nominal amount of stock.	Interest and reimbursement for the year 1809.	Reimbursement of 6 per cent. and deferred stock, to 31st December, 1809.	Unredeemed amount, 1st of January, 1810.
Six per cent. stock, - -	January 1, 1809, -	\$39,579 04	\$3,166 31	\$18,617 49	\$20,961 55
Deferred stock, - - -	Do. -	56,532 23	4,522 57	13,065 73	43,466 50
Three per cent. stock, - -	Do. -	30,895 93	926 88	- - -	30,895 93
Louisiana stock, - - -	Do. -	14,000 00	840 00	- - -	14,000 00
Converted stock, - - -	Do. -	3,250 00	195 00	- - -	3,250 00
Total, - - -	- - -	\$144,257 20	\$9,650 76	\$31,683 22	\$112,573 98

I certify that the sum of nine thousand six hundred and fifty dollars and seventy-six cents will be the amount of interest and reimbursement of stock, to the credit of the Commissioners of the Navy Pension Fund, accruing to the 31st December, 1809; and that the capital stock to their credit, on the books of the treasury, amount to one hundred and forty-four thousand two hundred and fifty-seven dollars and twenty cents, according to the following

SCHEDULE.

	Six per cent.	Three per cent.	Deferred.	Eight per cent.	Louisiana six per ct.	Converted six per ct.	Total.
Nominal amount per Register's certificate of 31st Dec. 1808,	\$39,579 04	\$30,895 93	\$56,532 23	\$59,300 00	\$14,000 00	\$3,250 00	203,557 20
Deduct eight per cent. stock paid off 1st January, 1809, -	-	-	-	59,300 00	-	-	59,300 00
	39,579 04	30,895 93	56,532 23	-	14,000 00	3,250 00	144,257 20

TREASURY DEPARTMENT, Register's Office, December 27, 1809.

JOSEPH NOURSE, *Register.*

B.

Statement of Columbia Bank stock belonging to the Navy Pension Fund.

	Nominal Amount.	Amount of Cost.
Two hundred and eighty-three complete shares, - - - -	28,300	31,357 98
Three hundred and forty-three short shares, - - - -	13,720	17,164 62
	\$42,020	\$48,522 60

Certificates of the above shares are in my possession.

CH. W. GOLDSBOROUGH,

Secretary to the Commissioners of the Navy Pension Fund.

GEORGE MACDANIEL.

SEPTEMBER, 1809.

Vouchers referred to in the account of George Macdaniel.

VOUCHER No. 1.

George Macdaniel,

Bought of Dickason and Company,
24,000 Louisiana six per cent. stock, at two per cent. advance, carrying interest from 1st January, 1810, - \$24,480

Received, July 28, 1809, twenty-four thousand four hundred and eighty dollars, in full,

For Thomas Dickason & Co.

JOSEPH NOURSE, *Attorney.*

VOUCHER No. 2.

George Macdaniel,

Bought of Walter S. Chandler,
77 shares of Columbia Bank stock, on each of which forty dollars have been paid, at ten dollars advance, - \$3,850

Received, July 29, 1809, three thousand eight hundred and fifty dollars, in payment of the above,

W. S. CHANDLER.

VOUCHER No. 3.

George Macdaniel, for the Commissioners of the Navy Pension Fund,

Bought of Joseph Nourse,
80 complete shares of Columbia Bank stock, at one hundred and twelve dollars, - \$8,960

Received, August 16, 1809, of George Macdaniel, eight thousand nine hundred and sixty dollars, in payment of the above,

JOSEPH NOURSE.

VOUCHER No. 4.

George Macdaniel, for the Commissioners of the Navy Pension Fund,

Bought of Walter S. Chandler,
22 complete shares of Columbia Bank stock, at one hundred and twelve dollars, - \$2,464

Received, August 16, 1809, of George Macdaniel, two thousand four hundred and sixty-four dollars, in payment of the above,

WALTER S. CHANDLER.

VOUCHER No. 5.

George Macdaniel, for the Commissioners of the Navy Pension Fund,

		To Clement Smith, Dr.	
August, 1809.	To 9 shares Columbia Bank stock complete, at \$110,		\$992 25
	13 short ditto, at \$50,		650 00
	Cash paid for 245 short shares, at \$50,	\$12,250 00	
	79 complete ditto, at \$110,	8,690 00	
		\$20,940 00	
	Per vouchers 1, 2, and 3,		52 35
	Commission, at $\frac{1}{4}$ per cent.		20,992 35
			\$22,634 60

July 27. By cash received, - - - - - 20,000 00

\$2,634 60

August 23d, 1809. Received of George Macdaniel two thousand six hundred and thirty-four dollars, and sixty cents, in payment of the balance of this account,

CLEMENT SMITH.

VOUCHER No. 6.

George Macdaniel, for the Commissioners of the Navy Pension Fund,

Bought of Charles Hill,
93 complete shares of Columbia Bank stock, at \$110, - \$10,230

Received, August 29, 1809, of George Macdaniel, ten thousand two hundred and thirty dollars, in payment of the above,

CHARLES HILL.

VOUCHER No. 7.

George Macdaniel, for the Commissioners of the Navy Pension Fund,

Bought of Stephen Pleasonton,
8 short shares of Columbia Bank stock, at \$48, - \$384

Received, September 1st, 1809, of George Macdaniel, three hundred and eighty-four dollars, in payment of the above,

STEPHEN PLEASONTON.

RECEIPT (a.)

Account of moneys belonging to the Navy Pension Fund, viz:

Half year's dividend, at Bank Columbia, on 283 full shares,	\$1,132 00	
343 short shares,	548 80	
	<hr/>	\$1,680 80
In the hands of George Macdaniel, at the said bank, on account of		
advances to purchase stock,	\$1,112 09	
To pay navy pensioners,	18 48	
	<hr/>	\$1,130 57
		<hr/> <u>\$2,811 37</u>

The Treasurer of the United States will be pleased to receive of George Macdaniel the above two thousand eight hundred and eleven dollars thirty-seven cents, and pass it to the credit of the Navy Pension Fund.

THOMAS TURNER.

NAVY DEPARTMENT, ACCOUNTANT'S OFFICE, *September 23d, 1809.*

Received, September 23d, 1809, of George Macdaniel, two thousand eight hundred and eleven dollars thirty-seven cents, to be passed to the credit of the Navy Pension Fund.

THOMAS T. TUCKER, *Treasurer of U. S.*\$2,811 3711th CONGRESS.]No. 80.[2d SESSION.]

USE OF THE TORPEDO IN THE DEFENCE OF PORTS AND HARBORS.

COMMUNICATED TO THE SENATE, FEBRUARY 26, 1810.

Mr. BRADLEY made the following report:

The committee to whom was referred, by the Senate, a resolution to inquire into the expediency of employing the Torpedo, or submarine explosions, in conjunction with the naval and military operations of the United States, for the better defence of their ports and harbors, have had the same under consideration, and thereupon make the following report:

That a treatise on that subject, lately published by Robert Fulton, the inventor of the Torpedo, and addressed to the President of the United States, and to the members of both Houses of Congress, renders it unnecessary on the part of the committee to lay before the Senate any further description of its machinery, or any calculations to what extent of usefulness and economy it may hereafter be applied, when perfected in sure and practical operations. The author has therein very minutely detailed its principles and powers, and referred to several experiments which have been made to illustrate the same, when in a much less perfect state of improvement, calculated to show its application, not merely to the defence of ports and harbors, but in its effects to supersede, in a great measure, the necessity of a navy to protect commerce on the ocean, and to extricate a suffering world from that system of oppression, now exercised by the great maritime belligerents on the high seas.

If it can be demonstrated by actual experiments, that the theory is susceptible of sure practical operations, it certainly will merit the attention of every Government, who at present does not exercise, or does not hereafter expect to exercise, an undue influence on the seas. The committee deem it premature to offer any opinion upon the expediency of incorporating it into the naval or military preparations, until such actual experiments are made as shall remove all doubts as to the certainty of its operation. At the same time the committee are unanimous in opinion, that a sum ought to be appropriated by Government, and experiments actually made, under the direction of the Secretary of the Navy, to enable him to ascertain with precision, how far it may be expedient hereafter for Congress to employ the Torpedo, or submarine explosions, for the better defence of the ports and harbors of the United States. And in pursuance thereof, submit to the consideration of the Senate the following:

Be it enacted, &c. That a sum not exceeding ——— thousand dollars be, and the same is hereby, appropriated, payable out of any money in the treasury, not otherwise appropriated, to defray the expense which shall be incurred in any actual experiments, when the President of the United States shall deem it expedient to cause such experiments to be made, which shall be made under the immediate direction of the Secretary of the Navy, for the purpose of ascertaining, with precision, how far the Torpedo, or submarine explosions, may be usefully employed as engines of war.

To James Madison, Esq. President of the United States, and to the members of both Houses of Congress:

GENTLEMEN:

In January last, at Kalorama, the residence of my friend Joel Barlow, I had the pleasure of exhibiting to Mr. Jefferson, Mr. Madison, and a party of gentlemen from the Senate and House of Representatives, some experiments and details on Torpedo defence and attack; the favorable impression which the experiments appeared to make on the minds of the gentlemen then present, and my conviction that this invention, improved and practised to the perfection which it is capable of receiving, will be of the first importance to our country, has induced me to present you in the form of a pamphlet a description of my system, with five engravings, and such demonstrations as will give each of you an opportunity to contemplate its efficacy and utility at your leisure; and enable you to form a correct judgment on the propriety of adopting it as a part of our means of national defence. It being my intention to publish hereafter a detailed account of the origin and progress of this invention, and the embarrassments under which I have labored to bring it to its present state of certain utility; I will now state only such experiments and facts as are most important to be known, and which, proving the practicability of destroying ships of war by this means, will lead the mind to all the advantages which we may derive from it. I believe it is generally known that I endeavored for many years to get torpedoes introduced into practice in France, and in England; which, though unsuccessful, gave me the opportunity of making numerous very interesting experiments on a large scale; by which I discovered errors in the combinations of the machinery and method of fixing the torpedoes to a ship; which errors in the machinery have been corrected: and I believe I have found means of attaching the torpedoes to a vessel

which will seldom fail of success. It is the result of my experience which I now submit to your consideration; and hoping that you will feel an interest in the success of my invention, I beg for your deliberate perusal and reflection on the following few pages. Gentlemen who have traced the progress of the useful arts, know the years of toil and experiment and difficulties which frequently pass, before the utility and certain operation of new discoveries have been established; hence it could not be expected, that torpedoes should be rendered useful without encountering many difficulties; and I am aware that, in the course of further essays other difficulties will appear; but from my past experience I feel confident that any obstacle which may arise can be surmounted by attention and perseverance: of this gentlemen will be better able to judge, after examining the following facts and details.

PLATE I

Is a view of the brig Dorothea, as she was blown up on the 15th of October, 1805.

To convince Mr. Pitt and Lord Melville that a vessel could be destroyed by the explosion of a torpedo under her bottom, a strong built Danish brig, the Dorothea, burthen two hundred tons, was anchored in Walmer road, near Deal, and within half a mile of Walmer Castle, the then residence of Mr. Pitt. Two boats, each with eight men, commanded by Lieutenant Robinson, were put under my direction. I prepared two empty torpedoes in such a manner, that each was only from two to three pounds specifically heavier than salt water; and I so suspended them, that they hung fifteen feet under water. They were then tied one to each end of a small rope eighty feet long: thus arranged, and the brig drawing twelve feet of water, the 14th day of October was spent in practice. Each boat having a torpedo in the stern, they started from the shore about a mile above the brig, and rowed down towards her; the uniting line of the torpedoes being stretched to its full extent, the two boats were distant from each other seventy feet; thus they approached in such a manner, that one boat kept the larboard the other the starboard side of the brig in view. So soon as the connecting line of the torpedoes passed the buoy of the brig, they were thrown into the water, and carried on by the tide, until the connecting line touched the brig's cable; the tide then drove them under her bottom. The experiment being repeated several times, taught the men how to act, and proved to my satisfaction that, when properly placed on the tide, the torpedoes would invariably go under the bottom of the vessel. I then filled one of the torpedoes with one hundred and eighty pounds of powder, and set its clockwork to eighteen minutes. Every thing being ready, the experiment was announced for the next day, the 15th, at five o'clock in the afternoon. Urgent business had called Mr. Pitt and Lord Melville to London. Admiral Holloway, Sir Sidney Smith, Captain Owen, Captain Kingston, Colonel Congreve, and the major part of the officers of the fleet under the command of Lord Keith, were present; at forty minutes past four the boats rowed towards the brig, and the torpedoes were thrown into the water; the tide carried them as before described, under the bottom of the brig, where, at the expiration of eighteen minutes, the explosion appeared to raise her bodily about six feet; she separated in the middle, and the two ends went down; in twenty seconds, nothing was to be seen of her except floating fragments; the pumps and foremast were blown out of her; the fore-topsail-yard was thrown up to the cross trees; the fore-chain-plates, with their bolts, were torn from her sides; the mizen-chain-plates and shrouds, being stronger than those of the foremast, or the shock being more forward than aft, the mizenmast was broke off in two places; these discoveries were made by means of the pieces which were found afloat.

The experiment was of the most satisfactory kind, for it proved a fact much debated and denied, that the explosion of a sufficient quantity of powder under the bottom of a vessel would destroy her.* There is now no doubt

*Twenty minutes before the Dorothea was blown up, Captain Kingston asserted that, if a torpedo were placed under his cabin while he was at dinner, he should feel no concern for the consequence. Ocular demonstration is the best proof for all men.

left on any intelligent mind as to this most important of all facts connected with the invention of torpedoes; and the establishment of this fact alone merits the expenditure of millions of dollars and years of experiment, were it yet necessary, to arrive at a system of practice which shall ensure success to attacks, with such formidable engines. For America, I consider it a fortunate circumstance that this experiment was made in England, and witnessed by more than a hundred respectable and brave officers of the royal navy: for, should Congress adopt torpedoes as a part of our means of defence, Lords Melville, Castlereagh, and Mulgrave, have a good knowledge of their combination and effect. Lord Grenville, Earl Grey and St. Vincent,* have on their minds a strong impression of their probable consequences. Sir Home Popham, Sir Sidney Smith, and Colonel Congreve, the latter now celebrated for his ingenious invention of pyrotechnic arrows or rockets, were my friends and companions in the experiments; they are excellent and brave men, and from my knowledge of those noblemen and gentlemen, and their sentiments on this subject, I can predict that they would feel much disposed to respect the rights, nor enter the waters, of a nation who should use such engines with energy and effect.

This fortunate experiment left not the least doubt on my mind that the one which I made in the harbor of New York, in August, 1807, would be equally successful. The brig was anchored, the torpedoes prepared and put into the water in the manner before described; the tide drove them under the brig near her keel, but in consequence of the locks turning downwards, the powder fell out of the pans and they both missed fire. This discovery of an error in the manner of fixing the locks to a torpedo has been corrected. On the second attempt the torpedo missed the brig; the explosion took place about one hundred yards from her, and threw up a column of water ten feet diameter sixty or seventy feet high. On the third attempt she was blown up: the effect and result much the same as that of the Dorothea before described. About two thousand persons were witnesses to this experiment. Thus, in the course of my essays, two brigs, each of two hundred tons, have been blown up. The practicability of destroying vessels by this means has been fully proved. It is also proved that the mechanism will ignite powder at any required depth under water within a given time. It now remains to point out means by which torpedoes may be used to advantage with the least possible risk to the assailants.

PLATE II

Represents the anchored Torpedo, so arranged as to blow up a vessel which should run against it.

B is a copper case, two feet long, twelve inches diameter, capable of containing one hundred pounds of powder. A is a brass box, in which there is a lock similar to a common gun lock, with a barrel two inches long, to contain a musket charge of powder: the box, with the lock cocked and barrel charged, is screwed to the copper case B. H is a lever which has a communication to the lock inside of the box, and in its present state holds the lock cocked and ready to fire. C is a deal box, filled with cork, and tied to the case B. The object of the cork is to render the torpedo about fifteen or twenty pounds specifically lighter than water, and give it a tendency to rise to the surface. It is held down to any given depth under water by a weight of fifty or sixty pounds as at F: there is also a small anchor, G, to prevent a strong tide moving it from its position. With torpedoes prepared, and knowing the depth of water in all our bays

*The morning of my first interview with Earl St. Vincent he was very communicative. I explained to him a torpedo and the Dorothea experiment. He reflected for some time, and then said, Pitt was the greatest fool that ever existed, to encourage a mode of war which they who commanded the seas did not want, and which, if successful, would deprive them of it.

and harbors, it is only necessary to fix the weight F at such a distance from the torpedo as, when thrown into the water, F will hold it ten, twelve, or fifteen feet below the surface at low water; it will then be more or less below the surface at high water, or at different times of the tide; but it should never be so deep as the usual draught of a frigate or ship of the line. When anchored, it will, during the flood tide, stand in its present position; at slack water it will stand perpendicular to the weight F, as at D; during the ebb it will be at E. At ten feet under water the waves, in boisterous weather, would have little or no tendency to disturb the torpedo; for that if the hollow of a wave should sink ten feet below what would be the calm surface, the wave would run twenty feet high, which I believe is never the case in any of our bays or harbors. All the experience which I have on this kind of torpedo is, that, in the month of October, 1805, I had one of them anchored nine feet under water, in the British channel, near Dover; the weather was severe, the waves ran high, it kept its position for twenty-four hours, and, when taken up, the powder was dry and the lock in good order. The torpedo thus anchored, it is obvious that, if a ship in sailing should strike the lever H, the explosion would be instantaneous and she be immediately destroyed; hence, to defend our bays or harbors, let a hundred, or more, if necessary, of these engines, be anchored in the channel, as, for example, the Narrows, to defend New York.

The figure to the right of the plate is an end view of the torpedo H. H shows its lever forked, to give the better chance of being struck.

Having described this instrument in a way which I hope will be understood, I may be permitted to put the following question to my readers, which is, knowing that the explosion of one hundred pounds of powder, or more, if required, under the bottom of a ship of the line, would destroy her, and seeing that, if a ship, in sailing, should strike the lever of an anchored torpedo, she would be blown up, would he have the courage, or, shall I say, temerity, to sail into a channel where one or more hundred of such engines were anchored? I rely on each gentleman's sense of prudence and self-preservation to answer this question to my satisfaction. Should the apprehension of danger become as strong on the minds of those who investigate this subject as it is on mine, we may reasonably conclude that the same regard to self-preservation will make an enemy cautious in approaching waters where such engines are placed: for however brave sailors may be, there is no danger so distressing to the mind of a seaman, or so calculated to destroy his confidence, as that which is invisible and instantaneous destruction.

The consideration which will now present itself is, that the enemy might send out boats to sweep for, and destroy the torpedoes. It is, therefore, proper to examine the nature of such an operation, and its chance of success. Suppose two hundred torpedoes to be placed in three miles of channel, the enemy's boats, in attempting to sweep for them, would be exposed to the fire of our land batteries, or necessitated to fight our boats, for whenever they leave their ships and take to boats, we can be as well armed and active at boat fighting as they; and thus opposed by batteries and boats, they would have three or more square miles of channel to sweep, which, even if successful, would be a work of time, and were they to get up some of the torpedoes, they could not ascertain if all were destroyed, for they could not know whether five or five hundred had been put down; nor could they prevent our boats throwing in additional numbers each day and night. It therefore amounts to an impossibility for an enemy to clear a channel of torpedoes, provided it were reasonably guarded by land batteries and row boats. Added to the opposition which might be made to the enemy, there is a great difficulty in clearing a channel of torpedoes with any kind of sweep or drag, so as to establish full confidence in sailing through it. It is only they who put them down, and know the number, that could tell when all were taken up. To facilitate the taking of them up, I have, since plate II was engraved, thought of a very useful and simple piece of mechanism, which, being screwed to the box C, will hold the torpedo under water, at any given depth, and for any number of days. They may be set to stay under water a day, week, month, or year; and on the day which shall be previously determined, they will rise to the surface; at the same instant each will lock its lever H so that it cannot strike fire, and the torpedo may be handled with perfect safety. Not having time to engrave this improvement, it shall be exhibited to Congress in a working model, by which it will also be better understood.

I will now suppose the enemy to be approaching a port; a signal announces them; our boats run out and throw into the channel two hundred torpedoes, set each to fifteen days. Should the enemy sail among them, the consequence will teach future caution; should they cruise or anchor at a distance, what could they do? They, not knowing the number of torpedoes which were put down, nor the day on which they were to rise to the surface, could not have their boats out exposed to our fire, and waiting from day to day for a time uncertain. Whereas, our officers knowing the number which were put down, and the day they were to rise to the surface, would have their boats ready to take them in, and at the same time replace them with others set for ten, fifteen, twenty, or more days. Viewing this subject in all its bearings, the impression on my mind is, that it would be impossible for an enemy to enter a port where anchored torpedoes were thus used, without their incurring danger of such a kind, that courage could not guard them from its consequences. Prudence and justice would warrant their abandoning such an enterprise; and the probability is, that, knowing us to be thus prepared, they never would attempt it; or should they, and only one vessel were to be destroyed, we might calculate on its good effect to protect us from future hostile enterprises.

PLATE III

Represents a Clockwork Torpedo, as prepared for the attack of a vessel while at anchor or under sail, by harpooning her in the larboard and starboard bow.

B is a copper case, to contain one hundred or more pounds of powder; C, a cork cushion, to give the whole torpedo such a buoyancy that it will be only from two to three pounds heavier than salt water. To ascertain such weight, when it is charged with powder, and the lock screwed on, it is put into a large tub of sea water. C is to have fifteen or twenty inch holes bored in its sides and top, to let the water rush in and the air out, otherwise the air would prevent its immediately sinking. A is a cylindrical brass box, about seven inches diameter and two inches deep, in which there is a gun-lock with a barrel two inches long, to receive a charge of powder and a wad, which charge is fired into the powder of the case B. In the brass box A, there is also a piece of clockwork, moved by a spring, which, being wound up and set, will let the lock strike fire in any number of minutes which may be determined, within one hour. K is a small line fixed to a pin, which pin holds the clockwork inactive; the instant the pin is withdrawn, the clockwork begins to move, and the explosion will take place in one, two, three, or any number of minutes for which it has been set; the whole is so made as to be perfectly tight, and keep out the water, although under a pressure of twenty-five or thirty perpendicular feet. D is a pine box, two feet long, six or eight inches square, filled with cork: it is ten or fifteen pounds lighter than water, and floats on the surface; the line from it to the torpedo is the suspending line, which must be of a length in proportion to the estimated draught of water of the vessel to be attacked; vessels of a certain number of guns usually draw within a few feet of the same draught of water; the suspending line should be from four to eight feet longer than the greatest draught of the vessel, that it may bend round the curve of her side, and lay the torpedo near her keel. From the torpedo and the float D, two lines, each twenty feet long, are united at E; from thence one line goes to the harpoon; the total length of the line, from the torpedo to the harpoon, being about fifty feet, according to the length of the vessel to be attacked, will, when the ship is harpooned in the bow, bring the torpedo under her bottom near midship. See the harpoon. It is a round piece of iron, half an inch diameter, and two feet long, the butt one inch diameter, the exact caliber of the harpoon gun. In the head of the harpoon there is an eye, the point, six inches long, is barbed; the line of the torpedo is spliced into the eye of the harpoon; a small iron or tough copper link runs on the shaft of the harpoon; to the link the torpedo line is also tied, and at such a distance, that when the harpoon is in the gun, it will form a loop as at H; but when fired, the link will slide along to the butt of the harpoon, and, holding the rope and harpoon parallel to each other, the rope will act like a tail or rod to a rocket, and guide it straight: without this precaution, the butt of the harpoon would turn foremost, and make a very uncertain shot. F is the harpoon gun, made strong, and to work on a swivel in a stanchion fixed in the stern-sheets of a boat. My experience with this kind of harpoon and gun is, that I have harpooned a target of six feet square fifteen or twenty times, at the distance of from thirty to fifty feet, never missing, and always driving the barbed point through three inch boards, up to the eye; which practice was so satisfactory, that I did not consider it necessary to repeat it. The object of harpooning a vessel on the larboard and starboard bow is, to fix one end of the torpedo line; then, if the ship be under sail, her action through the water will draw the torpedo under her; if she be at anchor, the tide will drive it under her, where, at the expiration of the time for which the clockwork was set, the explosion will destroy her.

This being the kind of torpedo and clockwork by which the *Dorothea*, in Walmer roads, and the brig in New York harbor were blown up, and the harpoon having succeeded to fix the line to the target, these two experiments shall be combined, and the mode of practice, with the prospect of success and risk to the assailants, examined.

PLATE IV.—Figure 1

Represents the stern of a row boat; a platform, about four feet long, three feet wide, is made on her stern on a level with the gunwale, and projecting over the stern fifteen or eighteen inches, so that the torpedo, in falling into the water, may clear the rudder. On the platform, the torpedo and its suspending line of cork are to be laid, and the harpoon line carefully coiled, as at F, so that when the harpoon is fired, the line may develop with ease: very pliable, well greased, or white line, would be best for this purpose. The harpoon and gun are so well engraved as to require no explanation. B is the copper case, to hold one hundred, or one hundred and fifty pounds of powder. C, the box of cork, to diminish its tendency to sink, and bring it to a specific gravity of only two or three pounds more than sea water. Its suspending box of cork, explained in plate III, is not seen in this figure, lest the drawing should be confused; it can be imagined in its proper place. A is the brass box with the clockwork lock; D, the pin which prevents the clockwork moving; the line from the pin is tied to a bolt, or otherwise fixed to the boat, as at E. Thus fastened, when the torpedo is pulled into the water, the pin D will remain in the boat, and the clockwork will begin to act. The man who shall be stationed at the gun, and who may be called the harpooner, is to steer the boat and fire when sufficiently near. If he fixes his harpoon in the bow of the enemy, it will then only be necessary to row away; the harpoon and line being fixed to the ship, will pull the torpedo out of the boat, and at the same instant set the clockwork in motion. This reduces the attack of each boat to one simple operation, that only of firing with reasonable attention. Should the harpooner miss the ship, he can save his torpedo and return to the attack. While I was with the British blockading fleet off the coast of Boulogne in 1804 and 1805, I acquired some experience on the kind of row-boat best calculated for active movements, and which I now believe well adapted to a harpooning and torpedo attack; hence I propose clinker-built boats, each twenty-seven feet long, six feet extreme breadth of beam, single banked, and six long oars; one blunderbuss, on a swivel, on the larboard, and one on the starboard bow; one ditto on the larboard, and one on the starboard quarter; total, four, for which cartridges should be prepared, each containing twelve half ounce balls. To work the blunderbusses, in case of need, two mariners should be placed in the bow, two in the stern; each of those men to be provided with a horse pistol and cutlass, and each oarsman a cutlass, in case of coming to close quarters with a boat of the enemy.

Total of Boat's Crew,	}	1 harpooner,
		1 bowman.
		4 marines,
		6 oarsmen,
		— Total, 12 men.

Such boats would be active, well armed, and, if good men, may be said to be strong handed, and well prepared to make good a retreat, or act on the defensive, in case of encountering the enemy's boats.

Figure 2.

A is a bird's eye view of a vessel at anchor; B, her cable; E E, two torpedoes; C D, is their coupling line, about one hundred and twenty feet long; it is here represented touching the cable collapsing, and the torpedoes, driving by the tide under the vessel. This is the manner in which the Dorothea, in Walmer roads, and the brig, in New York harbor, were blown up.

PLATE V.—Figure 1.

A shows a torpedo, with the harpoon line fixed to the centre of its end; when the line is thus fixed, the tide cannot drive the torpedo under a vessel: for, the pressure of the current being equal on both sides, it will hang perpendicular to its suspending box of cork C, figure 2, and remain as at B, where, exploding, it would blow the water perpendicular to C, and up the side of the ship; the lateral movement of the water from B to E, would give her a sudden cant to one side, but do her no injury. This has been proved by the following practice.

On the first of October, 1803, Captain Siccombe, in a galley with eight men and his coxswain, placed two torpedoes in the manner described, plate IV, figure 2, between the buoy and cable of a French gun-brig, in Boulogne roads. The tide drove them until they both lay perpendicular to her sides. When the French saw Captain Siccombe advancing without answering the countersign, they exclaimed, that the infernal machines were coming, and fired a volley of musketry at his boat, but without touching a man.* The moment the French fired, fearing the effect of the explosions, they all ran aft, and were in the greatest confusion. The tide drove Captain Siccombe's boat so far down, that he was obliged to cross under the brig's stern, where, seeing her men collected, and expecting another volley, he discharged at them two blunderbusses, each containing fifteen half-ounce balls,† and was rowing away, when both torpedoes exploded, but, to his astonishment, the brig was not destroyed. On the same night, Lieutenant Payne, of Captain Owen's ship *l'Immortalité*, placed two torpedoes across the bow of another French gun brig; he received their fire, had one man wounded, rowed to some distance, and waited till he saw the explosion of the torpedoes, which did not appear to do any injury to the vessel. When Captain Siccombe called on me in the morning, and reported these circumstances, I was much at a loss to account for the brig not being blown up. Defective in the experience which this failure gave me, I had not reflected, that, if the copper case, with the clockwork and powder, weighed specifically fifteen or twenty pounds more than water, it would hang like a heavy pendulum to its suspending cork-box C; and if the coupling line were fixed in the centre of the end, as at A, figure 1, the action of the tide being equal on both its sides, would have no tendency to sheer or drive it from its perpendicular position. After about half an hour's consideration, I was forcibly impressed with this error in arrangement, as the real cause of Captain Siccombe's and Lieutenant Payne's failure.

I immediately had a large tub made, then filling a copper case with powder, I screwed on to it the clockwork lock, and tied to it the pine box C, then suspending the whole torpedo by a line in the tub of sea water, the end of the suspending line was tied to one end of a scale beam. I then filled the pine box C with cork, until the whole volume of the torpedo, and box of cork would, when just covered with water, hold three pounds, in equilibrio, in the scale on the other end of the beam. The torpedo being then three pounds heavier than water, had a sufficient tendency to sink; and being so balanced, would, while under water, be easily moved by a slight pressure to either

* They had got some idea of these machines, from an attempt which had been made with them against the Boulogne flotilla, in October, 1804, called the Catamaran expedition.

† The report on this attack in the French papers, acknowledged that the brig had five men killed and eight wounded. This, from two blunderbusses, shows, that the persons in the vessel attacked have to fear the small arms of the torpedo boats.

[NOTE.—The French papers, giving an account of the attack of Captain Siccombe and Lieutenant Payne, acknowledged that the torpedoes blew up along side of the gun brigs, but gave them only a violent shock and cant to one side; they spoke of the engines as things of little consequence, and not to be feared. It is now, however, evident, that they owed the safety of the two brigs to the trifling circumstance of the torpedoes not being properly balanced in water, and the coupling lines not being tied to a bridle, so as to make the torpedoes sheer under the bottoms of the brigs.]

side; then, instead of tying the coupling line to the end of the torpedo, as at A, I tied it to a bridle, as at B, which, presenting the side on an angle to the tide, the pressure of the current in the direction of the arrow would cause the torpedo to sheer from B to G. This arrangement perfectly succeeded to sheer the torpedo from its perpendicular C, and the side of the vessel to E, near the keel, a position near which it should be to do execution. In this situation, the explosion being under the vessel, would have a great body of water to remove laterally, before it could get out by a line curving round her side. The water, when acted on in so instantaneous a manner as by the explosion of one hundred or one hundred and fifty pounds of powder, does, for the instant, operate like a solid body; hence the explosion raises the vessel up with a great force, acting on a small portion of her bottom, which portion giving way, is the same in effect as though a high sea had lifted her fifteen or twenty feet, and let her down on the point of a rock of three or four feet diameter. This, I believe, accounts for the certain destruction which will follow all explosions that take place near the keel. In all cases, when the explosion is under water, the action will be perpendicular to the surface, as from B to C: for, in the perpendicular, there are less particles to remove, and less resistance than in any diagonal, as, for example, from B to D.

Figure 3

Is a bird's eye view of a ship of the line, either at anchor or under sail, and the torpedo boats rowing on to the attack. I am sensible that there are strong prejudices against the possibility of row boats attacking a ship or ships of the line, with any reasonable hope of success; I will, therefore, commence my reasoning and demonstrations by the following questions. What is the basis of the aggression and injustice of one nation towards another? Is it not a calculation on their power to enforce their will? What is the basis of all courage and obstinate perseverance in battle? Is it not a calculation on some real or presumed advantage? A frigate of 30 guns is not expected to engage a ship of 80 guns, for every rational calculation is against her, and to strike her colors would be no dishonor. If I now prove that all the calculations are in favor of the torpedo boats, it shall hereafter be no dishonor for a ship of the line to strike her colors, and tamely submit to superior science and tactics.

I will run my calculations against a third rate, an 80 gun ship, she being the medium between first rates of 110 guns, and fifth rates of 44 guns. I will suppose her to enter one of our ports or harbors in a hostile manner; her draught of water, when loaded, is twenty-two feet; her full complement of men six hundred. Were we to oppose to the enemy an 80 gun ship, she would cost four hundred thousand dollars; we would also have to give her a full complement of six hundred men. If she engaged the enemy, the chances are equal that she would be beaten; if an obstinate engagement, she might have from one to two hundred men killed and wounded, and be so shattered as to require repairs to the amount of forty or fifty thousand dollars; she might be taken, and lost to the nation, and add to the strength of the enemy. It is now to be seen if six hundred men, and a capital of four hundred thousand dollars, the value of an 80 gun ship, cannot be used to better advantage in a torpedo attack or defence.

600 men, at 12 to a boat, would man 50 boats.	-	-	-	-	-
50 boats, at one hundred dollars each,	-	-	-	-	\$5,000
50 torpedoes, complete, one hundred and fifty dollars, each, powder included,	-	-	-	-	7,500
50 harpoon guns, thirty dollars each,	-	-	-	-	1,500
200 blunderbusses, twenty dollars each,	-	-	-	-	4,000
100 pair of pistols, fifteen dollars a pair,	-	-	-	-	1,500
600 cutlasses, three dollars each,	-	-	-	-	1,800
Contingencies,	-	-	-	-	3,000
				Total,	<u>\$24,300</u>

The pay and provisions for six hundred men, whether in an 80 gun ship, or in torpedo boats, may be estimated, for the present, to amount to the same sum annually.

Here is an establishment of fifty boats, with their torpedoes, and armed complete, for twenty-four thousand three hundred dollars; the economy, three hundred and seventy-five thousand seven hundred dollars.* It is evident the ship could not put out fifty boats to contend with our fifty; she could not, in fact, put out twenty; therefore, as to boat fighting, the enemy could have no chance of success, and would have to depend for protection on her guns and small arms, unless, in a case of great emergency, the attack should be in the night; for if an enemy came into one of our harbors to do execution, the chances would be much against her getting out, and to any great distance, before night. In a night usually dark, row boats, if painted white, and the men dressed in white, cannot be seen at the distance of three hundred yards; and there are nights so dark, that they cannot be seen if close under the bow. I might here draw into my calculations on chances, that an enemy, who understood the tremendous consequences of a successful attack with torpedoes, would not like to run the risk of the night being dark. But in any night, the fifty boats, closing on the vessel in all directions, would spread or divide her fire, and prevent it becoming centered on any one or more boats. Boats which row five miles an hour, and which all good boats can do for a short time, run at the rate of one hundred and forty yards a minute. At the distance of three hundred yards from the ship, they take the risk of cannon shot, which must, from necessity, be random and without aim, on so small a body as a boat, running with a velocity of one hundred and forty yards a minute. At two hundred yards from the ship, the boats must take the chance of random discharges of grape and canister shot; and at one hundred yards from the ship, they must run the risk of random musket; each boat will, therefore, be two minutes within the line of the enemy's fire, before she harpoons, and two minutes after she has harpooned, before she gets out of the line of fire: total, four minutes in danger.† The danger, however, is not of a very serious kind: for, as before observed, no aim can be taken in the night, at such quick moving bodies as row boats; yet some men might be killed, and some boats crippled;‡ in such an event, the great number of boats which we should have in motion, could always help the unfortunate. But what would be the situation of the enemy, who had their six hundred men in one vessel? The torpedo boats closing upon her, twenty-five on the larboard and twenty-five on the starboard bow, some of them would certainly succeed to harpoon her between the stem and main chains, and if so, the explosion of only one torpedo under her would sink her, killing the greatest part of the people who were between decks, and leave those who might escape to the mercy of our boats to save them.

I now beg of my reader to meditate on this kind of attack, and make up his mind on which are in the greatest danger—the six hundred men in the ship, or the six hundred men in the boats? Are not the chances fifty to one against the ship, that she would be blown up before she could kill two hundred men in the boats? Should this appear evident, or be proved by future practice, no commander would be rash enough to expose his ship to such an attack.

To give a fair comparative view of the two modes of fighting, I have, in these calculations, made the number of men on each side equal; by the same rule, if twenty ships of 80 guns were to come into one of our ports, we should

*As each boat, with a torpedo, and armed complete, costs four hundred and eighty-six dollars, this economy would pay for seven hundred and eighty-nine boats; hence, eight hundred and thirty-nine torpedo boats, with torpedoes and arms, could be fitted out for the sum which one 80 gun ship would cost.

†A deduction may be made from this time; after harpooning, if the ship were anchored in a current which ran one mile and a half an hour, that would be two feet three lines a second; hence, if the distance from the harpoon to the torpedo were sixty feet, thirty seconds would be sufficient for the tide to push it under the keel; its clockwork might be set to explode in one minute from the time the torpedo fell out of the boat. If a vessel were under sail, running more than two miles an hour, one minute would be sufficient time for the clockwork to act before explosion. After explosion, there would, of course, be no resistance; and the probability is, that all hands would be too much occupied in attempting to save themselves; to keep them under any discipline. Thus, each torpedo boat would not be more than three minutes within the line of the enemy's fire.

‡It is very easy to make the boats so that they cannot be sunk.

be necessitated to have one thousand boats and twelve thousand men; but such a preparation would not be necessary. It can never be necessary for us to have more boats than are sufficient to meet the boats which the enemy could put out to oppose us; an 80 gun ship, which is to work her guns, cannot be encumbered with many boats. They usually have—

- 1 launch, which is a bad rowing boat;
- 1 long boat, which may row well;
- 1 the captain's barge, a good row boat;
- 1 yawl, or galley, a good row boat.

They may, in some cases, have two more boats, total number six; therefore, twelve boats on our part would be sufficient to attack an 80 gun ship; particularly, as all our boats would be built expressly for running, and our business is to run, to harpoon, and not to fight; for this purpose, our six oarsmen, in each boat, never quit their oars, while our four marines keep up a running fire. The six or eight boats, if the enemy could put out so many, could not prevent our twelve boats closing on the ship. If our boats came into contact with the boats of the enemy, the contest would be reduced to boat fighting; the ship could not use her cannon or small arms, against us, without firing on her own boats. If we succeeded to drive the boats under the guns of the ship, we should follow so close, that her guns and small arms could not be used: for in the night, and amidst a number of boats in confusion, they could not discriminate between friends and enemies. On this theory, if twenty ships of 80 guns, or a force to that amount, were to enter one of our ports, two hundred and forty boats, with two thousand eight hundred and eighty men, would be sufficient, and perhaps more than sufficient, for the attack; and the following view of chances exhibits a strong probability that such a force of torpedo boats and men would destroy the twenty ships of the line within one hour.

Let the attack be in the night. The enemy must be at anchor; twenty vessels could not keep under way in narrow waters which could not be well known to their pilots. If they put out their boats, they could not bring into action more than six good boats from each ship, total, one hundred and twenty boats. Each ship would be a point from which their boats could depart, or to which they could retreat, total, twenty positions; in these twenty positions, twelve thousand men would be exposed to torpedo explosion, which is the same, in effect, as a mine under a fortification. We, with two hundred and forty boats, exposing only two thousand eight hundred and eighty men, would have the whole of our shores to depart from or retreat to. Being the assailants, and having it in our power to approach in every direction, the enemy could not know a feint from a real attack, nor could they tell which ship we would attack first; they, consequently, could not concentrate their boats; each vessel would be necessitated to keep her own boats on the look out, and to aid in protecting her, while we should have the power to divide our force, or concentrate one hundred boats on one vessel, as circumstances might require. Hence, every thing is in favor of the success of the torpedo attack, while the greatest danger is to be apprehended for the ships.

Having given my experience and theory on anchored and harpoon torpedoes—a system which I hope will, by every friend to America and humanity, be considered of some interest to the United States—I am aware of the doubts which may arise as to the success of harpooning, in the minds of men, in general, and particularly of those who have no experience, who are so impressed with the imaginary tremendous fire of an 80 gun ship, or a ship of war, that the question has often been put to me, where will you find men who have courage to approach in boats within twenty feet of an 80 gun ship, to harpoon her? I answer, that the men in the boats, who are not more than three minutes within the line of the enemy's fire, are not so much in danger, nor does it require so much courage as to lie yard-arm and yard-arm, as is usual in naval engagements, and receive broadsides, together with grape shot and volleys of small arms, for forty or sixty minutes. It is not so great a risk, nor does it require so much courage, as to approach a vessel in boats, climb her sides, and take her by boarding; yet this has frequently been done. The risk is not so great, nor does it require so much courage, as to enter a breach, which is defended by interior works and close ranges of cannon, flanked by howitzers, or carronades, loaded with canister or grape shot, and the parapet crowded with infantry; yet such breaches have been forced, and cities taken by assault, with numerous examples of this kind. I hope there can be no doubt of sufficient courage to make a torpedo attack. In the instances of Captain Siccombe and Lieutenant Payne, before mentioned, they considered the risk of so little importance that they went to the attack without any apparent concern; and the sailors, who were offered a few guineas for each gun of a vessel which they should destroy, used all their influence with the officers to be permitted to be of the party. But I will not propose a project so novel, and look to others to execute it. If torpedoes be adopted as a part of our means of defence, with a reasonable number of men organized and practised to the use of them, if it be thought proper to put such men under my command, and an enemy should then enter our ports, I will be responsible to my fellow-citizens for the courage which should secure success. While I propose this, I wish it to be understood that I do not desire any command or public employment. My private pursuits are the guarantee of an independence and freedom of action, which is always grateful to my feelings; they are useful and honorable amusements, and the most rational source of my happiness.

Estimate for an anchored Torpedo.

Thirty-two pounds of copper, at seventy-five cents a pound,	-	-	-	\$24 00
A lock, in a brass box, water tight,	-	-	-	20 00
One hundred pounds of powder, at twenty cents a pound,	-	-	-	20 00
Machinery, to let it rise to the surface in a given time, rope, cork box, anchor, and weights,	-	-	-	20 00
				\$84 00

In a preceding page, I have given an estimate for a clock work and harpooning torpedo.

The torpedo will cost	-	-	-	\$150 00
Each boat, armed complete,	-	-	-	336 00

*While organizing a system of torpedo attack against the Boulogne flotilla, during the administration of Mr. Pitt, it was determined that men should be taken from Lord Keith's blockading fleet to man the boats; but a difficulty occurred how to carry a sufficient number of good active boats. Finding that the ships of war could not take on board more than their usual number, without being encumbered, four ordnance vessels were to be prepared, with large hatchways, to receive a number of boats in the hold, and to carry torpedoes. Lord Melville was impeached, Mr. Pitt died, and my system was opposed by Lords Grenville and Howick, and the new administration. I mention this, my experience, to show that ships of war cannot carry a sufficient number of boats to contend with the boats which we could bring into action; they may, indeed, bring with them ordnance ships to carry boats, but if they unman the ships to man the boats, the ship will be less formidable in her fire; and I believe it is self-evident that they who have to cross three thousand miles of sea, cannot be so well furnished with boats as we who command the land.

Estimate for an establishment in our most important and vulnerable ports.

	Boats.	Anchored torpedoes.	Clockwork torp's.
Boston	150	300	300
New York,	150	300	300
In the Delaware,	50	200	100
Chesapeake,	100	200	200
Charleston,	100	200	200
New Orleans,	100	200	200
Total,	650	1,400	1,300

650 boats, at \$336, each,	\$218,400
1,400 anchoring torpedoes, at \$84, each,	117,600
1,300 clockwork torpedoes, at \$150, each,	195,000
Total,	<u>\$531,000</u>

Having mentioned the ports in which it is most probable the enemy would attempt to make an impression, calculations can be made for a like mode of defending other situations—a *minutiae* which I am not prepared to enter into, nor is it necessary, in the present state of this disquisition. I have shown a strong power, in boats and torpedoes, to defend six of our principal ports. Gentlemen will please to look to the numbers allotted to each port, and reflect whether an enemy would not be inclined to respect a force so active and tremendous in its consequences—a force, which, under cover of the night, could follow them into every position within our waters, and pursue them for some leagues from our shores into the open sea; yet those establishments would not require an expenditure of four hundred thousand dollars: for the cutlasses and fire arms, to arm the boats, and the powder for the torpedoes, are already in our arsenals and magazines. And what is four hundred thousand dollars, in a national point of view? A sum which would little more than build and fit out for sea two ships of thirty guns. After reflecting on these experiments and demonstrations, I hope no one will, for a moment, hesitate in deciding that the two thousand seven hundred torpedoes, and six hundred and fifty boats, before estimated, will be a better protection for six of our sea ports than two ships of thirty or any other number of guns. To man the boats in the different ports nothing more will be necessary than a marine militia; they can be as numerous as any possible necessity could require, and should be exercised to row and use the torpedoes, until the practice became familiar; after which, practice once a month would be sufficient. Corps thus formed would be no expense to the National Government. Torpedoes would require no repairs; and the boats, carefully laid up in houses built for the purpose, would last many years.

To compare torpedoes with the usual marine establishments, and the superior protection which they give, for any specific sum expended, I have stated this prospect of economy; but I do not consider economy, in the commencement of such a system, as an object of primary importance. Let our fellow-citizens be convinced—convince the people of Europe—of the power and simple practice of these engines, and it will open to us a sublime view of immense economy in blood and treasure. As we are not in actual hostility, and have no opportunity to try experiments on an enemy, my opinion is, that we should immediately prepare for such an event; and, to satisfy the public, we should, without loss of time, make the following experiment:

Purchase a strong ship; make six torpedoes; build two good row boats, and prepare them as for action, with twelve men each. Let the ship be anchored, and the men practised in harpooning, throwing the torpedoes, and observing the action of the tide in driving them under her bottom. After practising on her while at anchor, the ship to be got under way in moderate and stiff breezes, and, while under way, the men to row at and harpoon her, letting the torpedoes fall into the water, and observing the action of the current in driving them under her bottom. When the men have been so exercised as to be certain of harpooning the ship, the torpedoes to be charged, a committee appointed, or the whole of Congress, to witness the effect, the ship to be put under way, the helm lashed, her men take to the boat, the torpedo boats advance, harpoon, and blow her up. The success of such an experiment will show the value of the system; to which courage must be added in case of an actual engagement.

Probable expense of such an experiment.

A strong, though old ship,	\$1,000
Six torpedoes, at \$150, each,	900
Two boats, at \$100, each,	200
Two harpoon guns,	60
Total,	<u>\$2,160</u>

Twenty-four men can be chosen from the sailors in Government employ.

THOUGHTS ON THE PROBABLE EFFECT OF THIS INVENTION.

At the time a new discovery is made in physics or mathematical science, the whole of its consequences cannot be foreseen. In the year 1330, Bartholomew Schwartz is said to have invented gunpowder; twenty-five years after, a very imperfect kind of cannon was constructed of welded bars of iron, others of sheet iron, rolled in the form of a cylinder, and hooped with iron rings; in some cases, they were made of leather, strengthened with plates of iron or copper; balls of stone were used; and it was not until the beginning of the fifteenth century, that is, one hundred and seventy years after the invention of powder, that iron balls were introduced into practice. Muskets were not used until the year 1521, or one hundred and ninety-one years after the invention of gunpowder. The Spaniards were the first who armed their foot soldiers in this manner; they had matchlocks; but firelocks, that is locks with flint, were not used until the beginning of the eighteenth century, one hundred and eighty years after the invention of muskets, and three hundred and eighty years after the invention of powder. When firelocks were first invented, Marshal Saxe had so little confidence in a flint that he ordered a match to be added to the lock with a flint, lest the flint should miss fire:* such is the force of habit, and want of faith in new inventions.

Although cannon, fire arms, and the whole detail of ammunition, now appear extremely simple, yet we here see the very slow advances to their present state of perfection, and they are still improving; hence I conclude that it is now impossible to foresee to what degree torpedoes may be improved, and rendered useful. When Schwartz in-

*I have seen one of these firelocks, in the collection of ancient arms, Rue de Bacq, Paris.

vented powder, it may be presumed that his mind did not embrace all its consequences, or perceive that his discovery would supersede the use of catapults, armor, bows and arrows, and totally change the whole art of war. He certainly could have no conception of such a combination of art as we now see in ships of the line; those moveable fortifications, armed with thirty-two pounders, and furnished with wings, to spread oppression over every part of the ocean, and carry destruction to every harbor of the earth. In consequence of the invention of gunpowder, ships of war have been contrived, and increased to their present enormous size and number;* then may not science, in her progress, point out a means by which the application of the violent explosive force of gunpowder shall destroy ships of war, and give to the seas the liberty which shall secure perpetual peace between nations that are separated by the ocean? My conviction is, that the means are here developed, and require only to be organized and practised, to produce that liberty so dear to every rational and reflecting man; and there is a grandeur in persevering to success in so immense an enterprise, so well calculated to excite the most vigorous exertions of the highest order of intellect, that I hope to interest the patriotic feelings of every friend to America, to justice, and to humanity, in so good a cause.

I have shown that a ship of eighty guns, and six hundred men, could have little chance of resisting fifty torpedo boats, of twelve men each, equal six hundred men. If it can be admitted possible that an eighty gun ship will be necessitated to retreat before fifty boats, she must run so far that the boats cannot follow her, that is, more than eight or ten leagues; therefore, boats could follow a ship over the narrow parts of the Baltic or British channel; but I will confine my remarks to the British channel, between Boulogne and Romney, from Calais to Dover, and from Ostend to the mouth of the Thames. If I can show that in those waters the British fleets would be compelled to retreat before torpedo boats, or perish, it follows that they must yield to a like system of attack in every other sea; and the like combination of power which can force them to yield will act on all ships of war to their total annihilation.

Let the coast of Boulogne be the scene for action; suppose the British to have one hundred ships of eighty guns, or a force to that amount, equal eight thousand guns, and sixty thousand men; this is a greater power than ever has been engaged in one action. I have mentioned large ships, because the strength of a fleet depends more on the size of the ships, and weight of metal, than on their number; in such case the line will not be so much extended as if the vessels were smaller and more numerous; the signals can be seen and answered from the extremities of the line with more certainty, and the order of battle can be better kept. The length of a ship, from the point of the bowsprit to the stern, may be estimated at forty fathoms, and the distance between two ships one hundred fathoms, consequently, the one hundred ships would form one line of fourteen thousand fathoms, or twenty-eight thousand yards, equal to near sixteen miles. Such a line could not see and answer signals from the van and rear to the centre. It could, however, be formed into four divisions of twenty-five ships each, and they again could be subdivided; but the tactics which must be adhered to when two fleets of nearly equal force engage, will be of little utility when the attack is made by a sufficient number of torpedo boats.

Estimate of the force to attack so formidable a blockading fleet.

Men, sixty thousand, a number equal to the British; they cannot all be sailors, nor is it necessary they should, but men who, with six weeks exercise, can learn to row well, for to row with tolerable dexterity is all the nautical knowledge required. To divide the sixty thousand men, twelve in a boat, will require five thousand boats, each of which will be so light, that its twelve men can draw it on the beach above high water mark, or on the sands, or plane, in a few minutes, or launch it into the water with equal facility.

Manner of arranging the boats until wanted.

A boat being six feet wide and twenty-seven feet long, if a space of twelve feet wide, and thirty-nine feet long, be allowed for each boat, four hundred and forty of them would range, side by side, in the distance of one mile, then leaving twelve feet from the stems of the first row to the sterns of the second, and a like space between each line, the five thousand boats could be laid up on a beach or plane one mile long, one hundred and fifty yards wide, and give sufficient room for the men to get at the boats without confusion; this plan would not require the expense of forming a basin or harbor. Thus arranged, each boat, with its torpedo, harpoon gun, arms, and oars, in their places, and the twelve men in their stations, six on each side of the boat, the whole could be run into the water and manned in an hour, which facility of embarking is of the first importance for rapid movements, and to take advantage of the weather.†

Estimate for the preparations.

5,000 boats, one hundred dollars each,	-	-	-	\$500,000
5,000 torpedoes, one hundred and fifty dollars each,	-	-	-	750,000
5,000 harpoon guns, thirty dollars each,	-	-	-	150,000
				<u>\$1,400,000</u>

This is equal to three hundred and fifteen thousand pounds sterling, or about the value of three ships of eighty guns; it is equal to seven millions five hundred and sixty thousand livres, a sum of little importance to France, it being not equal to the expenses of her government for one day; the men she has, and three times the number if required; the powder for the torpedoes, and arms for the men, are in her magazines.

Suppose the boats and torpedoes prepared, the harpooners exercised, and the men practised to the oars. The intrepidity of the French, in an assault, has been so often proved, that there can be no question as to their courage to rush on to the attack, in any case where there is a reasonable hope of success. It is obvious, that the British ships could not put out a sufficient number of boats to oppose five thousand torpedo boats; consequently, they have no other means of resistance than to manœuvre, and defend themselves from their ports and decks, in the best manner they can devise.

It is now necessary, in calculating the chances of success, to examine various modes of attack and defence; I therefore beg of the reader never to lose sight of the facility with which the whole of the French boats can be run into the water, manned, and ready for action, or again drawn up on the shore, and with how much ease every advantage may be taken of calms and favorable circumstances; he must also separate from his mind the idea of boats attempting to fight ships; such an attempt would be absurd; it is torpedoes, those instruments of instantaneous destruction, which are to decide the contest. The boats are but the means of harpooning and attaching the torpedoes to the ships; this is the whole object of the attack.

In defence, it is to be considered by what means a ship or ships could prevent the boats approaching so near as to harpoon them in the larboard or starboard bow, and make good their retreat? I will name the calm months of June, July, and August, as most favorable for the enterprise. Let it be recollected that, in all attacks of this kind, the boats row at the rate of five miles an hour, or one hundred and forty-six yards a minute; at the distance of four hundred and thirty-eight yards, or three minutes from the ship, they will risk random round shot;‡ at two hundred and

* Compared with existing military marines, I consider all galleys, and vessels of war, which were in use previous to the invention of powder, as very insignificant. It is probable that four seventy-four gun ships, in open sea, would destroy all that ever existed at any one time.

† When the British fleet is becalmed before Boulogne, the French flotilla is becalmed also, and cannot make any advantageous movements. The calms which lay the British fleet under great disadvantage will give every possible advantage to the torpedo boats, and will be the most favorable time for the attack.

‡ All shot from cannon, carronades, or howitzers, against boats, must be random; a boat is too small, and moves too quick, to admit of taking aim; and, in the night, musket shot will be random also.

nineteen yards, or one and a half minutes from the ship, they risk one discharge of grape; at one hundred yards, or forty seconds from the ship, they risk one volley of small arms, before they harpoon. After harpooning, it is probable the ship's crew would be more occupied about their own safety than in standing deliberately to fire at the boats. And thus, each boat will not be more than four minutes within the line of the ship's random shot: such rapidity and decision in attack gives incalculable advantages to the boats.

First mode of attack.

In a calm and usually dark night, the ships at anchor, either in one line, or parallel lines, or promiscuously. The torpedo boats to be formed into divisions, each division to consist of fifty boats, and to attack one ship. Suppose the ships first attacked to be those nearest the land; in a calm they could not get under way, nor could they change their positions; a ship, by having a spring on her cable, might possibly bring her broadside to bear on the boats, but as the fire of the broadside could do little injury until the boats were within four hundred and thirty-eight yards, or three minutes, of her bow, and, as three minutes, after coming within the line of fire, is to decide the contest, I conceive that her broadside could not protect her; if the boats, at six hundred yards distance, run for her bow, it would be impossible for her to change her position so quick by a spring on her cable, as the boats could change their direction to keep under her bow. If the ships were in one line, and the headmost first attacked, she could receive no assistance from the vessel astern, for she would lie between the stern ship and the boats, and receive the fire which might be directed for them. If the ships lay in several parallel lines, or promiscuously, and the next line were on her larboard, the larboard ship would be distant at least one hundred fathoms, and, while the boats were bearing down, might fire broadsides on them when they were at the distance of two hundred yards; but the moment they closed in with the ship she must cease her fire, otherwise she would do more injury to the ship than to the boats; the larboard ship would, therefore, only have an opportunity to fire two minutes at the boats, in which time she might possibly discharge two broadsides; but as the boats could keep in a line with the bow of the vessel attacked, and there is more danger from the larboard or starboard ship than the one attacked, a better mode would be to attack the headmost ship of each line at the same time; in such case, each ship would be necessitated to reserve her whole fire for her own defence; she could not assist the next ship, and thus each vessel would be as much exposed, and left to her own resources, as though there were not another ship within three leagues of her. The succeeding ships of the line, or lines, could be attacked in like manner: hence, this mode of attacking any number of vessels, with an equal number of divisions or boats, amounts to nothing more than a repetition of an attack with fifty boats on one ship; and it does not appear to me possible that her fire could repel fifty boats, or prevent them from lodging ten, fifteen, or twenty harpoons, if necessary, in her larboard and starboard bow. I leave to nautical men, and experienced commanders, to show to the public how a ship, or ships of war, anchored in a calm, as before stated, could resist such an attack, and their total destruction in a few hours. But commanders, seeing the danger of being becalmed while at anchor, may keep the fleet under way.

Second mode of attack.

In the night, the ships under way, calm, or light breezes of not more than four knots an hour. Ships of the line, that are under way, seldom approach nearer each other than a cable's length; this precaution is to prevent their running foul, and causing confusion; when expecting an enemy of equal force, the custom is to form one line. Admitting that, to oppose the torpedo boats, they preserved this usual order of battle, close hauled, and under easy sail, to let the boats come up; here, as in the case of being at anchor, each ship must apply her whole fire against the division of boats which attack her; she cannot aid the ship next to her. As the boats, advancing under cover of the night, each division will, in three minutes from the time they arrive within danger of cannon shot, be in with the bow of the destined ship, and fire their harpoons into her; therefore, it appears that her chance while under way is very little better than when at anchor. If, as the boats advance, a ship turns her bow to meet them, she facilitates their harpooning her. Will any other order of battle, than one right line, give more security? Would two, three, or four parallel lines, give better protection? In such case the line nearest the boats would be attacked first, and the other lines taken in succession. Were the ships to form a crescent, the headmost vessels would be first attacked; in this form they might surround a number of boats, and get them between two fires; but whatever situation the boats may be in, after they arrive within the range of grape shot, they can, in a few minutes, be under the bow of the ship, where they will be safe from all fire, except small arms; but to arrive under her bows amounts to a moral certainty of effecting her destruction. Therefore, with the immense advantage which torpedoes give to an attack with boats, it is of little consequence whether it be made in the night or day, in a calm, or a breeze of from four to six knots. If the ships engage with the boats, their case will be desperate. In all my reflections on this kind of war, I see no chance for their escape, other than by retreat; and the moment English ships of war retreat before torpedo boats, that moment the power of the British marine is for ever lost, and with it the political influence of the nation.

In this view of chances, I have calculated the number of men in the boats equal to the number in the ships, and estimated five thousand boats to be brought into action; but in all cases when there are sufficient torpedo boats to drive in the boats of the ships, there will be sufficient to attack the fleet; the one hundred ships could not put six hundred good boats in motion, therefore one thousand torpedo boats would suffice for the attack; they could be formed into fifty divisions of twenty boats each; they would have every advantage, in a calm, of directing fifty or one hundred boats against one vessel, while the ships would not have the power to concentrate their fire on the boats; the ships could not be defended unless there were transports or ordnance vessels expressly for carrying good row-boats, the number of which should be sufficient to repel the torpedo boats; but if ships can only be protected by boats, it follows, that they will cease to be of use, and the contest for the command of the channel must be decided by boat fighting. In such case, the nation which could put in action the greatest number of boats, and was least dependent on commerce, would have a decided advantage. England is more dependent on commerce than France, her merchant vessels could be attacked, destroyed, and her trade ruined, yet the commerce of France could not be more, nor so much, injured as it is at present. In such an event England, who has usurped the dominion of the ocean and laid all nations under contribution, would be the most humble supplicant for the liberty of the seas. And then the Emperor of France would have a noble opportunity to display a magnanimity of soul, a goodness of heart, which would add lustre to his great actions, and secure to him the admiration of the civilized world, by granting to so ingenious, industrious, enterprising, and estimable a people, a perfect liberty of commerce.*

I have now run this subject to a conclusion, in which I do not hesitate to say, that two thousand torpedo boats, and twenty-four thousand men, would take the command of the British channel from Boulogne to Romney, from Calais, Gravelines, Dunkirk, and Ostend, to the mouth of the Thames, and that the command of the commerce of those narrow seas would command the British nation; but there the power of torpedo boats must cease; a nation cannot send such boats to sea to depredate on commerce, nor to foreign countries on expeditions of conquest; and therefore the seas must be free.

* A Government, and particularly a monarchy or aristocracy, may be in the habitual practice of vice, while the people are in the habitual practice of virtue. In an aristocracy, where the army, navy, places, and pensions, are in the power of the few, the voice of the people has little or no influence. The genius, industry, and enterprise, of the English, have converted a barren island into the most fruitful and beautiful spot on earth; their improvements in the useful arts have made them the greatest and most useful manufacturing people that ever existed. In proportion as the people, by their industry, increased the riches of the nation, the Government found a facility in raising revenue, and have loaded the virtuous people with taxes to the amount of twenty-five or more millions a year, to pay for ruinous wars, the conquest of America, the establishment of the Bourbons, and the balance of Europe.

ON THE IMAGINARY INHUMANITY OF TORPEDO WAR.

In numerous discussions which I have had on this subject and its consequences, it has been stated that, instead of giving liberty to the seas, its tendency would be to encourage piracy and buccaneering, by enabling a few men in a boat to intimidate and plunder merchant vessels, thereby producing greater evil than existing military marines. This idea is similar to one which might have arisen on the invention of muskets, which, giving to an individual the power of certain death at the distance of fifty or a hundred yards, robbers might infest the highways, and from an ambush shoot the traveller and take his property; yet there is not so much robbery now as before the invention of gun-powder; society is more civilized; is not so much divided into feuds, or clans, to secrete and protect villainy; and all civilized society will, in their own defence, combine against the robber, who has little chance to escape. In like manner, as an individual, instigated by revenge, might with an air gun shoot his neighbour, or by the means of gun-powder blow up his barn or buildings; but society combine against such atrocious acts, and he who would commit them could have little other prospect before him than the gibbet. In the case of pirates or buccaneers, they could not make a torpedo without some intelligent workman, who would be a means of discovery. Were they to take a prize, they must have some port to carry it to, or it could be of no use to them; were they to plunder a ship, they could not carry much in a torpedo boat, and the boat must have a port to go to, where neighbors or spectators, observing her suspicious character, would lead to investigation; added to which, pirates are seldom constant in their attachment to each other, and each would suspect the other turning informer. It would be difficult for a torpedo boat to depart from any port in America, and return without being detected. It is certainly much more easy and secure for an individual to go on the highway and rob, yet how seldom is that done. When nations combine against pirates, there is no reason to fear that individuals can make a bad use of this invention.

But men, without reflecting, or from attachment to established and familiar tyranny, exclaim, that it is barbarous to blow up a ship with all her crew. This I admit, and lament that it should be necessary; but all wars are barbarous, and particularly wars of offence. It is barbarous for a ship of war to fire into a peaceable merchant vessel, kill part of her people, take her and the property, and reduce the proprietor with his family from affluence to penury. It was barbarous to bombard Copenhagen, set fire to the city, and destroy innocent women and children. It would be barbarous for ships of war to enter the harbor of New York, fire on the city, destroy property, and murder many of the peaceable inhabitants; yet we have great reason to expect such a scene of barbarism and distress, unless means are taken to prevent it; therefore, if torpedoes should prevent such acts of violence, the invention must be humane.

When a fortress is besieged, and a mine driven under the citadel, the powder laid, and the train ready to light, it is the custom for the besiegers to send to the commander of the besieged, to inform him of the preparations, and leave it to his judgment to surrender or risk the explosion; if he will not surrender after such warning, and he, with his men, should be blown up, he is to be charged with the inhumanity, and not the besiegers. Should Government adopt torpedoes as a part of our means of defence, the Europeans will be informed of it, after which, should they send hostile ships into our ports among anchored torpedoes or torpedo boats, and such ships should be blown up, the inhumanity must be charged to them, and not to the American Government or to this invention.

Having, in the preceding chapter, given details for a system of French torpedo boats, which could command the narrow parts of the British channel, I may be accused of enmity to England and partiality to France; yet I have neither hatred nor particular attachment to any foreign country. I admire the ingenuity, industry, and good faith of the English people; I respect the arts, sciences, and amiable manners of the people of France. There is much in each of those countries which we may copy to great advantage. But my feelings are wholly attached to my country; and while I labor for her interest in this enterprize, I am happy that the liberty of the seas, which I believe can be effected, will not only benefit America: it will be an immense advantage to England, to France, and to every other nation. Convinced of this, I have viewed military marines as remains of ancient warlike habits, and an existing political disease, for which there has hitherto been no specific remedy. Satisfied in my own mind that the torpedoes now discovered will be an effectual cure for so great an evil; to introduce them into practice, and prove their utility, I am of opinion that blowing up English ships of war, or French, or American, were there no other, and the men on shore, would be humane experiments of the first importance to the United States and to mankind.

A VIEW OF THE POLITICAL ECONOMY OF THIS INVENTION.

At the death of Queen Elizabeth, in 1602, the royal navy consisted of the following vessels:

4 ships of 40 guns,	3 ships of 8 guns,
4 of 32	1 of 6
10 of 30	4 of 4
2 of 20	4 of 2
3 of 16	
2 of 12	Total 42
5 of 10	180 guns, with 3 hoys.

When equipped for sea, it carried 8,376 men.

At the death of King James I. in 1765, the royal navy consisted of sixty-two sail; the money expended per annum was fifty thousand pounds sterling, equal to \$222,222 20.

At the death of King William, in 1701-2, the navy consisted of

Ships of the line, including fourth rates,	123
Frigates,	46
Fire ships,	87
	Total 256

The whole navy mounting about 9,300 guns, and, to completely man the ships, it would take 52,000 men; the sum allowed per annum for the navy, was 1,046,397 pounds sterling, equal to \$4,650,653 30. Thus, in one century, it increased in vessels and men six fold, and in expense twenty fold.

In 1801, the royal navy consisted of

192 ships of the line,	} Principal force for combat, 760.
28 ships of 50 guns,	
227 frigates,	
181 sloops,	
96 gun vessels,	
11 gun barges,	
15 bombs,	
10 fire ships,	
11 store ships,	
8 yachts,	
9 tenders,	
2 advice boats,	
5 armed transports,	
13 Dutch hoys,	
6 river barges,	
1 convalescent ship,	
130 hired ships and cutters.	

Annual expense, 13,654,013 pounds sterling, equal to \$60,684,502 40. At present I have not time to ascertain the exact number of men, which, however, amount to more than one hundred thousand.

From 1701 to 1801, the number of vessels have been increased four fold, and the expense twelve fold; the expense is now two hundred and seventy times greater than at the death of King James I. one hundred and eighty-five years ago.

State of the maritime power of nations about the year 1790. Taken from Arnauld.

Nations.	Ships of the line.		Frigates.		Sloops.	Total vessels.	Total cannon.	Total seamen.
	Ships.	Guns.		Guns.				
Spain, - - -	72 from 112 to 58		41		109	222	10,000	50,000
Portugal, - -	10	80 58	14 from 44 to 30		29	53	1,500	1,000
Naples, - - -	10	74 50	10		12	32	1,000	5,000
Venice, - - -	20	88 16	10		58	88	1,000	14,000
Ottoman Empire, - -	30	74 50	50 from 50 to 10		100 galliots	180	3,000	50,000
Holland, - - -	44	74 56	43	40 24	100	187	2,300	15,000
Denmark, - - -	38	90 50	20	42 20	60 chebecks	118	3,000	12,000

France, - - -	81	118 64	69	40 30	141 various	291	14,000	78,000
England, - - -	195	100 50	210		256	661	12,000	100,000
						2,714	59,800	359,000

Taking the whole of these fleets, and estimating their expense by that of the British marine, it must amount to about twenty-six millions of pounds sterling per annum, equal to \$115,555,555 50. Can we reflect on this table, and not feel, in the most sensible manner, the folly of the eleven European nations, who support such establishments for their mutual oppression? Is there an American who, after viewing these horrid consequences of divided Europe and her barbarous policy, that can, for a moment, harbor a wish that these happy States should be divided, and each petty Government, in proportion to its resources, augment its fleets and armies, either for defence or to gratify a mad ambition, by depreddating on its neighbors? If there be such men, they are in a state of political insanity, and the worst enemies to the American people. The humane and excellent Dean Tucker, in his work on political economy, published during the American Revolution, has observed, "That the wars of Europe, for the last two hundred years, have, by the confession of all parties, really ended in the advantage of none, but to the manifest detriment of all. Suffice it to remark, that, had each of the contending Powers employed their subjects in cultivating and improving such lands as were clear of all disputed titles, instead of aiming at more extended possessions, they had consulted both their own and their people's greatness much more efficaciously than all the victories of a Cæsar or an Alexander." This important truth should be deeply impressed on the mind of every American.

But I will return to the fleets of Europe, and endeavor to point out the principal causes of the great increase of those engines of oppression, and from whence the wealth has arisen to support such expenses. I will also show the increasing resources which will, if science does not check it, enable England, hereafter, to support a marine of fifteen hundred armed ships, with as much ease as she now does seven hundred and sixty.

In 1602, the British nation could not possibly have paid for the expense of such a navy as it possessed in 1701; and in 1701, the resources of the nation were not equal to the expense of the navy of 1801. The reason is, that since 1602, the sciences have developed immense resources. Chemistry and mechanics have multiplied the produce of productive labor, and increased the riches of every nation in Europe; the commerce of China and the East Indies has been opened; Russia and Sweden have become civilized and commercial; South America, the West India Islands, and North America, have, from a few hundred persons, grown to a population of at least twenty-five millions; who have created a vast and productive commerce, of which there was no conception two centuries ago. Agriculture has every where been improved; the earth produces more for a given labor; manufactures are carried on, in various degrees of perfection, in every country and district of country, which, creating surplus wealth to pay for luxuries, returns millions of riches on so enterprising and commercial a people as the English, which, added to their own improvements in mechanism, manufactures, and agriculture, enables the Government, at this day, to expend thirteen millions of pounds sterling, annually, on their marine. Yet the people in general live better, have more enjoyments; and because they have more enjoyments, they are, in reality, not more oppressed than the people of 1625, who paid only fifty thousand pounds to the marine. Such is the natural consequence of a general cultivation of the useful arts; but a just Government and a wise people should take care that the wealth which the useful arts give to them, should not be uselessly expended.

As imports and exports are the consequence of increased population and industry, the following will show how the expenses of the British marine have not only kept pace, but gained on her sources of wealth.

Table of British imports and exports, and expense of the marine, in pounds sterling.

In 1701.—Imports,	- - - - -	£5,869,609
Exports,	- - - - -	7,621,053
Total,	-	£13,490,662

Expense of the Marine.—£1,046,397, or one-thirteenth of the whole imports and exports.

In 1798.—Imports,	- - - - -	£46,963,000
Export of British manufactures,	- - - - -	33,602,000
Export of foreign goods,	- - - - -	14,387,000
Total,	-	£94,952,000

Expense of the Navy.—£13,654,013, or about one-seventh of the total imports and exports.

In 1800, the population of the United States was estimated at five millions two hundred and fourteen thousand eight hundred and one; with this population, we import from England to the amount of seven millions sterling per annum, for which we pay, in direct and circuitous trade, equal seven millions, making our imports from England, and exports to pay for them, fourteen millions, or equal to one-seventh of the imports and exports of England. Therefore, as it is the profits of trade which support the British marine, we pay one-seventh of its whole expense, or about two millions sterling, and, in fact, support one-seventh of seven hundred and sixty armed ships, equal 108. Thus we cherish an evil of which we complain, and, unless we can destroy it, we must continue to nourish it.

In 1700, the population of England and Wales amounted to five millions four hundred and seventy-five thousand five hundred and forty-four; in 1800, to nine millions three hundred and forty-three thousand five hundred and

seventy-eight: it did not double in the last century, notwithstanding the great increase of trade. As her population is now equal to one person for every six acres, there is a powerful check on its increase, and the rational calculation is, that it will not double, or rise to eighteen millions in the next two centuries. But the United States is doubling its population in about twenty-five years, or, for probable correctness, say in thirty years; consequently,

In 1830, we shall have	-	-	-	-	-	10,429,602
1860,	"	"	"	"	"	20,859,204
1890,	"	"	"	"	"	40,718,408
1920,	"	"	"	"	"	81,436,816

Even then the acres of the United States will be more than ten to an individual. As our habits and customs are English, it is a reasonable calculation, that,

In 30 years, we shall take from them to the amount of	-	-	-	-	-	14,000,000
60	"	"	"	"	"	28,000,000
90	"	"	"	"	"	56,000,000

This is more than they now send to all the world, which wealth, resulting from American labor, being turned into England, will increase her resources equal to the maintenance of her present marine: for, as I before stated, if of seven millions which we now import, we furnish funds for the seventh part of her naval expenses, or, say two millions. Seven is into fifty-six, the imports of ninety years hence, eight times; the United States, will, therefore, furnish sixteen millions sterling per annum, to support the British marine, and enable England to double her present naval establishment. Thus we are continually aiding and supporting the only tyranny which can oppress us, or disturb our tranquillity.

I am aware that, opposed to this statement, it will be said that we shall become manufacturers, and hereafter import, in proportion to our population, less from England; but, in a vast country like the United States, where lands are cheap, and men can easily be provided for in agricultural pursuits, it will be difficult for the manufactures to keep pace with the population. We are now much greater manufacturers than we were twenty-five years ago; yet our imports increase; the manufactures of England have augmented ten-fold in the last century. Although her population has not doubled, yet her exports and imports have kept near even pace with each other. The consequence of manufactures is to create abundance, and give the means of purchasing luxuries; therefore, more persons enjoy the luxuries of fine articles. England has her manufactures established, and her people taught; she has the start of all the world, which she will keep for very many years; nor can such superiority be an injury to America, or to France, or any other nation, provided the profits are not expended on a military marine to oppress them.* Then what is to be done to arrest this enormous evil, this organizing system of oppression? One of three things must be done: we must have a marine of a force to be respected, or we must suffer our commerce to be as limited as the British Government may think proper, and be laid under contribution; or, military marines must be destroyed, and liberty given to the seas.

What kind of a marine would obtain for us that consideration and respect which would give to our merchant ships unmolested admittance into the ports of Europe? Fifty ships of eighty guns each, and thirty thousand men, certainly could not guarantee to us such respect. Russia has a greater naval force, and dare not show a ship out of the Baltic. Yet, fifty such ships would cost the United States twenty-five millions of dollars, and seven millions of dollars a year; which, added to repairs, dock yards, arsenals, navy boards, and agents, may be estimated at ten millions a year. But, even could such a marine secure to us a reasonable liberty of commerce, America could not now bear such an expenditure; and where is the additional commerce to pay for ten millions a year, expended to protect it? Should our resources, in twenty years, enable us to support such a marine, I have shown that the British can augment their fleets also, and spare a force to meet us at sea. But were America to try her finances to the utmost, and establish a marine equal to fifty ships of eighty guns, it would be to us the greatest of misfortunes: for so many persons would become interested in obtaining a support from it, that, like England, we should continue adding, until our successors would find it a power superior to their liberty; one which would load them with taxes; press their children into senseless wars, nor leave them permission to complain. Should we ever be necessitated to have a marine of a force to be respected, such are the accumulated evils under which our posterity must suffer. But if science and energy should sweep military marines from the ocean, America will be the garden of the world; an example for Europe to imitate. When we contemplate the immense sums which are expended in European marine establishments, and calculate the infinite good which might have been done with the capital, we have to lament that man, instead of gratifying his ambition in wars and devastation, has not sought a more noble and lasting fame in promoting the arts, the sciences, and civilization.

The annual expense of the navy of Great Britain amounts to upwards of thirteen millions a year; as long as war continues, the expense will not be diminished; but, taking the chance of war and peace for the succeeding twenty-five years, and estimate that the marine will cost ten millions a year, the expenditure in twenty-five years will be two hundred and fifty millions of pounds sterling. If driven to have a marine, such might be the expenditure of our successors; if we can avoid it, the capital might be expended in useful work. I will now give a short sketch of the improvements which might be made in America for such a sum.

First, twelve canals, running from the Eastern and Northern parts of the United States to the South, each fifteen hundred miles long, and fifty miles distant from each other, equal to eighteen thousand miles; thirty canals, running from the seacoast to the interior, each six hundred miles long and fifty miles apart, or eighteen thousand miles; total, thirty-six thousand miles, at three thousand pounds sterling a mile, amounting to one hundred and eight millions. Canals to this extent would intersect a country fifteen hundred miles long, six hundred miles wide, equal to nine hundred thousand square miles, or seven hundred and fifty-six millions of acres, not an acre of which would be more than twenty-five miles from canal carriage; and which acres, allowing six to an individual, which is equal to the density of English population, or say seven, allowing for rivers, roads, and canals, would be ample space in a country which, by its improvements, must be fertile for one hundred and eight millions of inhabitants.

Second: two thousand bridges, at thirty thousand pounds sterling each, equal to	-	-	-	-	-	£60,000,000
Two thousand and fifty public establishments for education, at forty thousand pounds sterling each,	-	-	-	-	-	82,000,000
The canals,	-	-	-	-	-	108,000,000
Total,	-	-	-	-	-	\$250,000,000

The two hundred and fifty millions, raised by loan, and funded at five per cent., would, if expended on a marine, lay a tax on the people of twelve millions five hundred thousand pounds sterling a year, equal to fifty-five millions five hundred and fifty-five thousand five hundred and fifty-five dollars a year, with a horde of excise men and tax gatherers, to torment honest industry. But if expended on canals, the profits of transport would pay the interest, and give inconceivable advantages to the people. Such communications would facilitate every species of industry. Canals bending round the hills would irrigate the grounds beneath, and convert them into luxuriant

* Many appear to be of opinion, that if Bonaparte could get the command of the seas, or had it in his power, he would reduce London to ashes, and destroy the arts and manufactures of England. Carthage is always cited as an example of a conqueror's vengeance. This, however, has never been my opinion, because it is not justified by any act of his life. In all the countries he has conquered, he has ever respected the sciences and useful arts; he has not burned Vienna, Berlin, or Madrid. Had he no other motive, his own fame, in a great measure, depends on the protection which he may give to the sciences. But, independent of this, I believe he well understands the benefit which Europe receives from English arts and industry; and his war is not against them, but against the manner in which their profits are applied; that is, against the marine, and interference of the British Government in all the concerns of the continent.

pasturage. They would bind a hundred millions of people in one inseparable compact—alike in habits, in language, and in interest; one homogeneous brotherhood, the most invulnerable, powerful, and respectable, on earth. Say, legislators, you who direct the destinies of this great nation, shall Americans, like servile creatures of established habits, imitate European vices, or copy them because they are familiar? Shall they nourish a useless marine; lay the basis for its increase, and send it down the current of time to futurity, with all its complicated evils? Shall such a system consume our resources; deprive the earth of improvements; draw into its vortex ambitious men; divert the best talents of our country from useful works, and interest them in its support; creating non-productive laborers, who must be the consumers of the produce of the productive class, and diminish their enjoyments? Or will you search into the most hidden recesses of science, to find a means for preventing such incalculable evils? and direct the genius and resources of our country to useful improvements, to the sciences, the arts, education, the amendment of the public mind and morals. In such pursuits, lie real honor and the nation's glory; such are the labors of enlightened republicans—those who labor for the public good. Every order of things, which has a tendency to remove oppression and meliorate the condition of man, directing his ambition to useful industry, is, in effect, republican. Every system, which nourishes war and its consequent thousands of idlers and oppressors, is aristocratic in its effects, whatever may be its name. These sentiments exhibit my political creed, the object of all my exertions; and these principles, practised by Americans, will create for them a real grandeur of character, which will secure to them the respect and admiration of the civilized world.

No. 81*.

[2d Session.]

NAVY HOSPITALS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 26, 1810.

Mr. BASSETT, from the Committee on the Naval Establishment, made the following report:

That their attention had been called by the Secretary to navy hospitals. To his memoranda, herewith presented, they beg to refer. It remains for your committee to state, their conviction of the propriety of the Secretary's suggestions, and to congratulate the House that the opportunity is offered to ameliorate greatly the situation of a meritorious portion of citizens, without recurring to the public treasury. Of all classes of society, seamen require most the paternal foresight of Government. Habit, which tyrannizes over man in every situation, makes the sailor ever regardless of to-morrow; like the infant, he requires a guardian, or old age brings with it miserable poverty. On this principle, our Government, as well as others, have, from seamen's wages, raised a fund for marine hospitals, with guardian care setting apart a portion of the earnings of health for a support in sickness and decrepitude. The object is to give this principle a more operative direction, and not to deviate from it in the slightest degree. The sailor alone shall be able to exult in the comfortable asylum prepared for his aged and enfeebled brother, whilst the farmer, himself pressed by the hard hand of poverty, may view with complacency the comfort of others, which cost not an additional stroke of his hoe or his axe. The committee recommend the following resolutions:

Resolved, That the twenty cents per month deducted by law, from the pay of the officers and seamen of the navy, together with such sums as may be due or become due to deserters, shall be made a fund for building and supporting navy hospitals, to be expended under the direction of the Secretary of the Navy and others, as commissioners of said fund.

Resolved, That all fines imposed on officers, seamen, and marines, shall accrue in aid of the hospital fund, and that one ration shall be allowed the hospital for every person admitted, to be deducted from their accounts on settlements, and when any one shall be received into the hospital, who shall be entitled to a pension, such pension shall be paid to the hospital during his continuance therein.

Resolved, That the unexpended balance in the hands of the treasurer, of the twenty cents heretofore deducted from the pay of the officers and seamen of the navy, shall accrue to the navy hospital fund.

NAVY DEPARTMENT, February 22, 1810.

SIR:

Availing myself of the latitude allowed me by the honorable committee of which you are the chairman, I submit for consideration the following observations and notes relative to pensions and hospitals:

1st. As it respects the pensions of seamen and marines.

By the eighth section of the act for the better government of the navy, it is provided that the pensions shall in no case exceed one half the monthly pay.

The power of regulating the pay of seamen and marines is vested in the President of the United States; that of seamen has been regulated from time to time according to circumstances, depending principally on the wages given in the merchant service. Hence, in the years 1798, 1799, 1800, and 1801, their pay was \$17 per month. In the years 1802, and 1803, it was \$14; afterwards \$10, and is now \$12 per month. The pay of the marine was early fixed at \$6 per month, and has undergone no change.

Soldiers in the land service may receive a pension of \$5 per month.

Hence, it is obvious that, under present laws, great inequality exists with respect to pensions. The same description of persons may at one time receive \$8 50 per month, at another \$7, at another \$6, at another \$5 per month. The most valuable seaman, however crippled in the public service, could not now receive a pension exceeding \$6 per month; and in the year 1800, or 1801, an inferior seaman, sustaining less disability, might have received \$8 50 per month. Cases of this kind, indeed, are now to be found upon the pension roll. It appears, too, that the pension provided for the marine is two-fifths less than that provided for the soldier in the land service. This distinction between the marine and the soldier is certainly not founded in any principle of justice. Its existence, it is presumed, has escaped the attention of Congress, otherwise it would not have been suffered to remain so long to the prejudice of the marine.

A strong dissuasive to the continuance of this distinction arises out of the fact that the pension of the marine is paid out of a fund which his enterprise contributed to raise, whereas, to pay the pension of the soldier, Congress have to make annual appropriations of money out of the treasury.

To remove the existing pernicious inequality in the pensions of seamen of the same class, and sustaining similar disabilities, and to place the marine on an equality in this respect with the soldier, the eighth section of the act of 23d of April, 1800, ought to be repealed, so far as respects the pensions of seamen and marines, and it ought to be declared by law that the pension of the able seaman should not exceed ——— dollars per month; that of the ordinary seaman, or boy, ——— dollars; and that of a non-commissioned officer, musician, or private, in the marine corps, \$5 per month. Under such a law, the compensation for wounds sustained in the public service might be graduated by the measure of disability incurred; and as the law ought to provide for the highest disability that may be sustained, it is conceived that the blank for able seamen might be filled with \$10, and that for ordinary seamen and boys with \$6, without transcending the bounds of justice, or falling short of the dictates of humanity. Surely \$10 per month would not be an extravagant compensation to a poor crippled sailor, deprived of the use of his limbs in his country's service, and who, when not able to pursue his profession, is emphatically like a fish out of

* See No. 84.

water, and is as utterly incapable of making any kind of provision for his support, as the disabled soldier, who had never seen salt water, would be on board of ship.

2dly. As it respects hospitals for the relief of sick and disabled seamen.

As a fund for the relief of sick and disabled seamen, the Secretary of the Navy is required to deduct from the pay of each officer, seaman, and marine, belonging to the Navy, twenty cents per month, and to pay the same quarter annually into the treasury, to be applied under the direction of the President of the United States. The amount thus deducted and paid into the treasury is \$55,649 29, and there is a considerable sum deducted, but not yet paid into the treasury; and yet no navy officer has, and but very few of the navy-seamen have, received any benefit from it.

By law the like deduction of twenty cents per month is made from the pay of each seaman in the merchant service, and the whole fund thus raised is applicable indiscriminately to the relief of officers, seamen, and marines of the navy, and the seamen of the country generally. The inconveniences and embarrassments which arise from the placing of persons engaged under military law in the public service, in hospitals where no such law exists, have escaped the attention of Congress. In the few cases which have occurred of navy seamen being sent to such hospitals, experience has proved that the commanding officers of the ships from which they were sent, could never get returns made to them, and that, on an average, three out of five have deserted as soon as they got in a convalescent state. Hence the propriety of having *distinct establishments* for the relief of sick officers, seamen, and marines, of the navy. Let the fund drawn from the seamen in the merchant service be appropriated for the relief of seamen in that service; and let the fund deducted from the pay of the officers, &c. of the navy, be appropriated exclusively for them. If such a law existed, and the supplementary provisions hereafter suggested were authorized by law, there might be, in a very short time, six capacious hospitals established, in which all the sick of every description of the navy might be comfortably nursed; all the wives of seamen killed in action might be supported; all the children supported and educated, and young men just entering the service as midshipmen might acquire the invaluable knowledge of the theory of navigation, lunar observations, and naval tactics, without costing the public a single cent. If doubts should be entertained as to the capacity of the means to accomplish these important and highly interesting objects, they may easily be removed by actual demonstration.

In addition to the twenty cents per month, let funds be raised from such of the following sources as may be thought most advisable, or, to complete the goodly work at once, let the whole of them be added to the fund.

1st. Let Congress declare by law, that all the balances due to deserters from the service should be forfeited, and thus applied.

2d. That the balances due to seamen dying in the service, should be invested in funds, and the interest thus applied, until such balances should be called for by either the wives, children, or known legal representatives of the deceased.

3d. Let the disabled person entitled to a pension make his election between going into a hospital for life, or receiving the pension allowed him by law. If he preferred going into a hospital for life, which many would do, then his pension to be applied towards the support of the hospital.

4th. Let the balance at this time, or the unapplied amount of the money raised by deducting twenty cents per month from the pay of the officers, &c. of the navy, be thus applied.

5th. Let Congress add to the twenty cents which, by the act of 2d March, 1799, the Secretary of the Navy is required to deduct from the pay of the officers, seamen, and marines of the navy, instead of twenty cents, fifty might be deducted. This of itself would produce one hundred and fifty per cent. upon the amount now deducted. The officers, seamen, and marines would, it is confidently believed, cheerfully consent to a deduction of one dollar per month from their pay, if they knew that the amount was to be applied exclusively to their benefit.

6th. Let the rations of the seaman or marine, and one of the rations of each officer, while in the hospital, be deducted, and thus applied.*

7th. Let all mulcts of pay by sentence of courts martial, and all stoppages of grog for minor offences, be thus applied.

8th. Let ten or fifteen per cent. on slop clothing furnished the seamen, be thus applied. At this time, the sailor on-board ship is furnished with slop clothing from twenty-five to thirty-three and a third per cent. less than he could get it at out of a slop shop, so that if ten per cent. on the present price were added, the seaman would still get the slop clothing from fifteen to twenty-three and a third per cent. less than he could buy it for out of a slop shop. Hence, he could not reasonably complain at the making of the proposed addition to the price, especially when he would reflect that the amount thus to be produced was intended exclusively for his benefit and that of his brother seamen.

In addition to these provisions, it will be recollected that many of the officers necessary for the hospitals might be selected from among those disabled in the service, who would gladly serve without any addition to their pensions, excepting merely their board, the cost of which, to the establishment, would be very inconsiderable. There are now on the roll of pensioners, one captain of the navy, one lieutenant, one surgeon, one surgeon's mate, and a number of boatswains, gunners, sailmakers, sergeants of marines, cooks, &c.

Further, it is presumed that in or near the navy yards would be the most suitable places for the erection of hospitals. In that case, the commandants of the yards might be governors ex officio of the hospitals, without any additional pay whatever. With them the Secretary of the Navy would hold his correspondence upon all subjects in relation to the hospitals.

The wives of seamen, killed in the service, would make nurses and attendants on the sick; do all the necessary sewing, washing, &c. and their children might, with the pensioners and convalescents, work the gardens.

The persons having the immediate charge of the hospitals ought to be acquainted with navigation, &c. and have the qualifications of teachers; so that the children of seamen, killed in the service, might, when not at work in the gardens, be taught reading, writing, and ciphering; and young men just entering the service as midshipmen, might be sent to the hospitals to be taught navigation, &c.

If deemed expedient, eight or ten dollars per month might be deducted from the pay of midshipmen, while studying navigation in the hospitals, and the amount might be applied towards paying the teacher, or if more than sufficient for that, towards defraying the general expences of the hospitals. This, indeed, would be learning them this valuable knowledge, at less expense than they could possibly acquire it in any other way. To me it appears very clear, that the effects of such institutions, under proper regulations, would be happy indeed. The wretched sailor, covered with wounds received in the service of his country, might be saved the debasing employment of beggary; the woman widowed, the child orphaned, in the gallant achievements of the husband and father, might be rescued from wretchedness, probably disgrace. A body of men devoted from gratitude to the service of their country would here be raised up; the benefits of education would be extended; a competition to be admitted into the public service would be excited; and the brave would be encouraged and stimulated, without costing the public one additional cent.

Respectfully submitted by

PAUL HAMILTON.

Honorable BURWELL BASSETT,
Chairman of the Naval Committee of the House of Representatives.

*The ration would of itself be sufficient to defray the expenses of every description of provisions, wines, liquors, &c. required for the sick in hospitals under proper regulations. The experiment has been fairly tried in a small hospital at New York, under the care of Doctor Samuel R. Marshall, a surgeon in the navy of the United States. The following is the result of that experiment:

For three months, one ration per day for each man sick in the hospital, at twenty cents, amounted to	\$628 20
The expense of every description of provisions, &c. including pot herbs, soap, and candles, was	301 57½

Leaving a balance in favor of hospital, of	\$326 62½

3d SESSION.

NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 14, 1811.

NAVY DEPARTMENT, January 10, 1811.

SIR:

I have the honor herewith to transmit to you, to be laid before Congress, a report on the subject of the Navy Pension Fund.

I am, sir, with great respect, your obedient servant,

PAUL HAMILTON.

Honorable JOSEPH B. VARNUM,
Speaker of the House of Representatives.

NAVY DEPARTMENT, January 10, 1811.

The Commissioners of the Navy Pension Fund, in obedience to the "Act for the better government of the navy of the United States," respectfully report to Congress the following statements, in relation to the funds:

Paper A, statement of stock on the books of the treasury to the credit of the commissioners.

Paper B, statement of stock held by the commissioners in the Bank of Columbia.

Paper C, statement of navy pensioners, with the pension allowed to each.

Paper D, account of the commissioners with Thomas T. Tucker, Esquire, treasurer of the fund.

Paper E, abstract of warrants drawn by the Secretary of the Navy, on the treasurer of the fund, from the 1st of January, 1810, to the 1st of January, 1811.

Paper F, account of George Macdaniel with the commissioners.

All which is respectfully submitted for the Commissioners of the Navy Pension Fund.

PAUL HAMILTON,
Secretary of the Navy.

A.

Statement of the Stock on the books of the Treasury, to the credit of the Secretary of the Navy, the Secretary of the Treasury, and the Secretary of War, for the time being Commissioners of the Navy Pension Fund, with the interest and reimbursement accruing, for the year 1810.

Denomination of Stock.	Commencement of Interest.	Nominal amount of stock.	Interest and reimbursement for the year 1810.	Reimbursement of 6 per cent. and deferred stocks to 31st Dec'r, 1810.	Unredeemed amount of stock, 1st of January, 1811.
Six per cent. stock,	January 1, 1810,	\$39,579 04	\$3,166 31	\$20,553 39	\$19,025 65
Deferred six per cent. stock,	- - -	56,532 23	4,522 57	14,998 00	41,534 23
Three per cent. stock,	- - -	30,895 93	926 88	- -	30,895 93
Louisiana six per cent. stock,	- - -	38,000 00	2,280 00	- -	38,000 00
Converted ditto,	- - -	3,250 00	195 00	- -	3,250 00
Total,	- - -	\$168,257 20	\$11,090 76	\$35,551 39	\$132,705 81

I certify that the sum of eleven thousand and ninety dollars and seventy-six cents was the amount of interest and reimbursement of stock, to the credit of the Commissioners of the Navy Pension Fund, which accrued during the year 1810; and that the capital (nominal) stock to their credit, on the books of the Treasury, amounts to one hundred and sixty-eight thousand two hundred and fifty-seven dollars and twenty cents, according to the following

SCHEDULE.

	Six per cent.	Three per cent.	Deferred.	Louisiana six per cent.	Converted six per cent.	Total dollars.
Nominal amount, per Register's certificate of the 27th of December, 1809,	\$39,579 04	\$30,895 93	\$56,532 23	\$14,000	\$3,250	144,257 20
Add Louisiana six per cent. stock, bearing interest from 1st January, 1810,	-	-	-	24,000	-	24,000 00
Total,	\$39,579 04	\$30,895 93	\$56,532 23	\$38,000	\$3,250	168,257 20

TREASURY DEPARTMENT,

Register's Office, January 3, 1811.

JOSEPH NOURSE, Register.

B.

Statement of Columbia Bank Stock belonging to the Navy Pension Fund.

SHARES.	Nominal am't.	Amount of cost.
476 complete shares,*	\$47,600 00	\$60,102 60
150 short shares,	6,000 00

C.

List of Navy Pensioners, January, 1811.

NAMES.	RANK.	RESIDENCE.	Monthly allowance.	Annual amount.
Robert Forsith,	Marine,	New Hampshire,	\$3 00	\$36 00
Richard Wilson,	Boatswain,	Ditto,	10 00	120 00
John Mushaway,	Ditto,	Ditto,	10 00	120 00
George Arbuckle,	Seaman,	Massachusetts,	3 33 $\frac{1}{3}$	40 00
Gavin Walkinshaw,	Ditto,	Ditto,	8 50	102 00
John Shapeley,	Cook,	Ditto,	9 00	108 00
Uriah Hanscom,	Ordinary seaman,	Ditto,	6 00	72 00
John Davidson,	Lieutenant,	Ditto,	20 00	240 00
Richard W. Cooper,	Seaman,	Ditto,	8 50	102 00
Charles Sandys,	Sailmaker's mate,	Ditto,	8 50	102 00
Silas Taft,	Marine,	Ditto,	3 00	36 00
William Taylor,	Able seaman,	Ditto,	4 00	48 00
Henry Nelson,	Ditto,	Ditto,	6 00	72 00
James Steel,	Ditto,	Ditto,	6 00	72 00
Collins Lincoln,	Marine,	Ditto,	3 00	36 00
Peter M'Mahon	Ordinary seaman,	Ditto,	4 50	54 00
Cotton Brown,	Cook,	Ditto,	9 00	108 00
John Hoxse,	Seaman,	Rhode Island,	8 50	102 00
Isaac Stearns,	Marine,	Ditto,	3 00	36 00
Edward Field,	Surgeon's mate,	Connecticut,	15 00	180 00
Jason Bebee,	Corporal of marines,	Ditto,	4 00	48 00
George Bonner,	Seaman,	New York,	8 50	102 00
William Fitzsimmons,	Ordinary seaman,	Ditto,	7 00	84 00
John Baptiste,	Boy,	Ditto,	3 00	36 00
Enoch Brown,	Midshipman,	Ditto,	9 50	114 00
Jacob Dern,	Seaman,	Ditto,	8 50	102 00
James Currin,	Ordinary seaman,	Ditto,	7 00	84 00
William Cotter,	Cook,	Ditto,	6 00	72 00
John Smith,	Ordinary seaman,	Ditto,	4 00	48 00
John Whipple,	Quartermaster,	Ditto,	9 00	108 00
Seth Harding,	Captain during the Revolution- ary war,	Ditto,	30 00	360 00
James Williams,	Ordinary seaman,	Ditto,	5 00	60 00
Joseph Irvine,	Corporal of marines,	Ditto,	4 00	48 00
Neal Patterson,	Seaman,	Ditto,	6 00	72 00
John Carbery,	Cooper,	Ditto,	4 50	54 00
Peter Lemark,	Private marine,	Ditto,	3 00	36 00
Dominick Burns,	Ditto,	Ditto,	3 00	36 00
Seth Hebbard,	Ditto,	Ditto,	3 00	36 00
William Robinson,	Ditto,	New Jersey,	3 00	36 00
Isaac Andrews,	Ordinary seaman,	Pennsylvania,	5 00	60 00
Patrick Fowler,	Marine,	Ditto,	2 50	30 00
Philip Morrison,	Ditto,	Ditto,	3 00	36 00
Thomas Burns,	Boatswain,	Ditto,	7 60	91 20
Thomas Baker,	Captain,	Ditto,	37 50	450 00
Hamilton Sellers,	Ordinary seaman,	Ditto,	7 00	84 00
Charles Christian,	Seaman,	Ditto,	8 50	102 00
John Casson,	Marine,	Ditto,	3 00	36 00
John Johnson,	Private marine,	Ditto,	3 00	36 00
William Sandwith,	Ditto,	Ditto,	3 00	36 00
Henry Dougan,	Ditto,	Ditto,	3 00	36 00
John Rosier,	Ditto,	Ditto,	3 00	36 00
Jacob Farman,	Able seaman,	Ditto,	5 00	60 00
David Thomas,	Marine,	Ditto,	3 00	36 00
William Barry,	Ordinary seaman,	Ditto,	5 00	60 00
Andrew Hanson,	Seaman,	Ditto,	8 50	102 00
Richard Webb,	Ordinary seaman,	Ditto,	5 00	60 00
Richard Gold,	Able seaman,	Ditto,	6 00	72 00
John Moore,	Ditto,	Ditto,	6 00	72 00
John Pasco,	Ditto,	Ditto,	6 00	72 00
James Perkins,	Ditto,	Ditto,	2 00	24 00
Hugh Kelly,	Marine,	Ditto,	3 00	36 00
Richard Gilbody,	Ordinary seaman,	Delaware,	4 00	48 00
Edward Murray,	Sergeant of marines,	Maryland	4 50	54 00
Daniel Fullen,	Ordinary seaman,	Ditto,	7 00	84 00

NAVY HOSPITALS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 12, 1811.

The bill establishing navy hospitals being under consideration, in Committee of the Whole, Mr. BASSETT laid on the table the following letters:

NAVY DEPARTMENT, December 24, 1810.

SIR:

For the use of the Naval Committee, to whom, I understand, the subject of naval hospitals has been referred by the House of Representatives, I subjoin an extract of a letter from Captain Chauncey, at New York, dated 20th inst.

"I conceive it to be my duty to avail myself of this opportunity to call your attention to the situation of the sick on this station, and the particular hardship upon officers who may contract disease in the execution of their official

duties, to be obliged to take lodgings, at great expense, which frequently subjects them to pecuniary embarrassments, or be placed in common with the sailors and marines in a large room that is neither wind nor water tight. To give you some faint idea of what is called the hospital on this station, imagine to yourself an old mill, situated upon the margin of a mill pond, where every high tide flows, from twelve to fifteen inches, upon the lower floor, and there deposits a quantity of mud and sediment, and which has no other covering to protect the sick from the inclemency of the season, than a common clap-board outside, without any lining or ceiling on the inside. If, sir, you can figure to yourself such a place, you will have some idea of the situation of the sick on this station."

I have the honor to be, with great respect, sir, your most obedient servant,

PAUL HAMILTON.

Honorable BURWELL BASSETT, *Chairman of the Naval Committee of Congress,*

NAVY DEPARTMENT, *January 16, 1811.*

SIR:

The paper A, herewith transmitted, affords a view of the amount paid into the treasury on account of the hospital fund; the amount now standing to the credit of the fund on the books of the accountant of the navy; and the supposed sum due to the fund from the frigates and other vessels, now in commission, and upon accounts not yet settled.

I have the honor to be, respectfully, sir, your servant,

PAUL HAMILTON.

Honorable BURWELL BASSETT, *Chairman of the Naval Committee of Congress.*

A.

Amount paid to the orders of the Treasury Department, on account of the hospital money deducted from the pay of the officers, seamen and marines of the navy	- - - - -	55,649 29
Amount now standing to the credit of the fund on the books of this office,	- - - - -	2,639 09
Amount supposed to have accrued by the deductions from the pay of those in service, and for which the purser's and other accounts have not been adjusted, say,	- - - - -	15,000 00
		<u>17,639 09</u>
Making a total of	- - - - -	<u>\$73,288 38</u>

NAVY DEPARTMENT, *Accountant's Office, January 16th, 1811.*

THOS. TURNER, *Accountant.*

NAVY DEPARTMENT, *January 24, 1811.*

SIR:

The following is an extract of a letter from the Secretary of the Treasury to me, dated 22d inst. upon the subject of the unexpended balance of the hospital fund:

"The payments made on account of the marine hospital fund, whether by the navy or by owners of private vessels, form a joint fund for defraying the expenses on that account. I can only state the probable balance belonging to the fund generally, which remained unexpended on the 31st December, 1810. This I estimate at about seventy-five thousand dollars, twenty thousand of which are pledged to the city of Charleston, whenever called for, to assist in building a marine hospital there."

You will recollect, sir, that the sum paid into the treasury by the Navy Department, is fifty-five thousand six hundred and forty-nine dollars and twenty-nine cents; and when we consider that no navy officer, and but very few of the navy seamen, ever received any benefit from this fund, I think it fair to conclude that, of this sum, fifty-thousand dollars remain unexpended. With respect to the unexpended balance, you will perceive, sir, from the letter of the Secretary of the Treasury, that, in the bill providing for navy hospitals, if it be intended to appropriate that balance towards navy hospitals, instead of using the general terms "unexpended balance," a specific sum must be mentioned; otherwise, as it is not possible to ascertain the unexpended balance, no portion of it could be applied to navy hospitals.

I am, sir, very respectfully, your servant,

PAUL HAMILTON.

Honorable BURWELL BASSETT, *Chairman of the Naval Committee, House of Representatives.*

11th CONGRESS.]

No. 85.

[3d Session.]

EXPERIMENTS ON THE PRACTICAL USE OF THE TORPEDO.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 14, 1811.

NAVY DEPARTMENT, *February 12, 1811.*

SIR:

Under the authority of the act of Congress of the 30th of March, 1810, entitled "An act making appropriation for the purpose of trying the practical use of the torpedo, or sub-marine explosion," certain preliminary experiments have been made in the city and harbor of New York. By letter, copy of which is herewith transmitted, and marked No. 1, Messrs. Wolcott, Colden, Livingston, Lewis, Williams, Garnett, and Kemp, were requested to attend the experiments, and to report their opinions thereon, either jointly or severally. These gentlemen accordingly attended, and their opinions will be found in the papers A, B, C, and D.

- A. Letter and report signed by Messrs. Wolcott, Kemp, Colden, Garnett, and Williams.
- B. Letter from Mr. Colden.
- C. Letter from Mr. Livingston.
- D. Letter from Mr. Lewis.

Commodore Rodgers and Captain Chauncey were also requested to attend the experiments; and to conduct the defence against the torpedo. The Commodore's observations, in which it is believed Captain Chauncey concurs, will be found in paper E, which contains extracts of his journal kept on that occasion.

F is a letter from Mr. Fulton.

These papers contain all the material information, with respect to Mr. Fulton's torpedo system, at this time in the possession of the Navy Department. They shew that Mr. Fulton has not, in the opinion of a majority of the committee, proved that the Government ought to rely upon his system as a means of national defence. Mr. Fulton states, however, that he has made important improvements since the experiments were made; and as he appears very confident of success, it is contemplated to authorize further experiments, in order to ascertain the effect of such improvements.

Of the five thousand dollars voted, about one thousand five hundred dollars have been expended, leaving an unexpended balance at this time of about three thousand five hundred dollars.

All which is respectfully submitted.

PAUL HAMILTON.

The Honorable JOSEPH B. VARNUM, *Speaker of the House of Representatives.*

No. 1.

NAVY DEPARTMENT.

SIR:

Congress having, during their last session, provided for an experiment of Mr. Fulton's torpedo system, it has been proposed by that gentleman that some preliminary experiments be made in the harbor of New York, and that yourself, Mr. Colden, Mr. Chancellor Livingston, Mr. Lewis, Colonel Williams, Mr. Garnett, and Doctor Kemp, should be invited to attend such preliminary experiments, and report your opinions either jointly or severally upon the merits of his system generally, so far as a satisfactory opinion may be formed from an observation of such experiments.

It will not, I hope, sir, be either inconvenient or disagreeable to you to attend Mr. Fulton's experiments, and to report your opinion upon his system; and I shall consider myself obliged by your rendering this service.

Favor me, if you please, by an answer to this letter.

I have the honor to be, with great respect, sir, your obedient servant,

PAUL HAMILTON.

To OLIVER WOLCOTT Esquire

[Same to Cadwallader D. Colden, Esq. Robert R. Livingston, Esq. Morgan Lewis, Esq. Colonel Jonathan Williams, John Garnett, Esq. Doctor John Kemp.]

A.

NEW YORK, *January 22, 1811.*

SIR:

We have now the honor to submit to your consideration, a statement of facts and observations, in relation to certain experiments exhibited by Mr. Fulton, as requested in your letter of May 4th, 1810.

It seems to be generally admitted that a ship may be destroyed by sub-marine explosions; but whether Mr. Fulton's system can be rendered practically useful, must as we conceive depend on future discoveries and improvements. The only opinion which we venture at this time to express, with any degree of confidence, is, that this system is at present too imperfectly demonstrated to justify the Government in relying upon it as a means of public defence. In expressing this opinion, we, however, disclaim the intention of attempting to discourage such investigations and experiments as the wisdom of Government, aided by other lights and information than we have possessed, shall consider fit and useful.

We cannot conclude this report without suggesting a reflection, which has been strongly impressed on our minds during this investigation, and which we hope will not be thought unworthy the attention of Government; namely, the necessity of an institution in the United States to which subjects of this nature might be referred. A legislative body, from the numerous and more important objects which demand its attention, must be incapable of that patient and systematical investigation which is essential in all improvements of science. The many useful and ingenious discoveries made by Americans prove their inventive faculties and powers of combination; but that they may be usefully directed, a national institution appears to be requisite. Such an institution, patronized by Government, would at all times be ready to examine the merit of any plan for improvements in civil or military science, and perhaps its approbation ought to precede the grant of any exclusive privilege.

Almost every State in Europe has such an establishment. In England there is a board of longitude, an institution for the improvement of naval architecture, an observatory, and a board of ordnance, to which a military academy is attached. In France an Academy of Sciences was established before the Revolution, and since that period the National Institute, which includes every department of science. It is not necessary to enumerate other similar institutions in different nations of Europe; and it cannot be doubted that astonishing improvements in every department of art and science have resulted from their labors, and thereby entailed a debt of endless gratitude upon mankind. We, therefore, cannot but express our regret that America alone, while possessed of ample means, should be deprived of the advantage and glory which would result from uniting their efforts to those of other civilized nations. The present we deem an auspicious period for commencing the establishment, which we take the liberty to recommend to your patronage; as, in addition to the resources of talent and learning already possessed, men of profound science in every department might probably be found, who, discontented with political vicissitudes, would be desirous to find a refuge in our country, hitherto happily exempted from the agitations of Europe.

We have the honor to be, with the highest respect, sir, your obedient servants,

OLIVER WOLCOTT,
JOHN KEMP,
CADWALLADER D. COLDEN,
JOHN GARNETT,
JONATHAN WILLIAMS.

The Honorable PAUL HAMILTON, *Secretary of the Navy.*

Statement of facts and observations in relation to experiments exhibited by Mr. Robert Fulton, explanatory of his system of Torpedo war, in and near the city of New York, from September 21st to November 1st, 1810.

On the 21st of September a majority of the persons named in the letter of the Secretary of the Navy, dated May 4, 1810, convened at the City Hotel, where they were attended by Commodore Rodgers and Captain Chauncey, of the navy, and Mr. Robert Fulton. The object of this meeting was to agree on a mode of exhibiting the experiments proposed by Mr. Fulton, explanatory of his system of torpedo war, in such manner as would enable the commissioners to report their opinion of the merits of said system, so far as satisfactory opinions could be formed from observations of said experiments.

At this meeting Mr. Fulton exhibited a torpedo lock, also a model of a torpedo, which he proposed to launch under the bottom of a ship, by means of a spar, projected from the bow of a boat or vessel, for which purpose, he requested that the frigate President might be removed from the North into the East river. To this proposal of Mr. Fulton, Commodore Rodgers replied, that a removal of the frigate President would be attended with inconvenience; but, that the proposed experiments might be made either on the frigate in the North river, or on the brig Argus, then at anchor near the navy yard, in the East river. It was then agreed that the experiments should be made on the

brig *Argus*, with blank torpedoes; and that such defence should be made against them as a vessel of war could exert, without having recourse to her guns, or the employment of active force.

Owing to unfavorable weather and other causes, the commissioners could not convene at the navy yard before the 26th of September; at which time they viewed the brig *Argus*, prepared for defence against the application of torpedoes, in the mode which had been previously suggested by Mr. Fulton. This defence consisted of a net, suspended from the bow of the brig, and reaching to the bottom; also, of spars lashed together and suspended from the bowsprit and yards, in such a manner as would prevent boats from coming into contact with the brig. The studding sail booms were moreover armed with kentledge and heavy shot, and provided with grapnels, for the purpose of sinking or taking possession of any boat or torpedo which might come within reach. It was stated by the officers of the navy, that these means of defence were such as are usually possessed by ships of war, and that, after the preparations were made, all the defences could be disposed in proper order, or replaced in a ship, in the term of fifteen minutes. After hearing the observations of Commodore Rodgers, Captain Chauncey, and Lieutenant Lawrence, commander of the *Argus*, Mr. Fulton candidly admitted that, on the supposition that the net before the brig reached the bottom, he was then unprepared for an attack, by any means which he had at that time provided.

The commissioners viewed at the navy yard specimens of different torpedoes, and in particular *anchor torpedoes*, with the means proposed of securing them under water, in a position capable of annoying ships while passing over them. They also inspected a machine invented for the purpose of cutting the cables of ships while riding at anchor; the effect of which machine will be hereafter described.

At this meeting experiments were made of firing a harpoon, to which a small rope had been attached: the attempts to place the harpoon in a target did not succeed at a greater distance than fifteen feet, and at that distance the harpoon struck firmly, but obliquely.

On the 28th of September the commissioners met at the navy yard; when, to demonstrate the effect which the guns of a ship of war would have upon a boat of the size and description of that which Mr. Fulton had prepared for exhibiting his experiments, Captain Chauncey caused an old boat to be moored at about ninety yards distance, in which three boards were placed upright, representing the size of men. At this object a twenty-four pounder, loaded with canister and grape shot, was discharged; the effect was, that seventy-three shot passed through the boat; eighteen shot penetrated through the first board, nine through the second, and five through the third.

At this meeting an attempt was made to cut a cable under water, which failed; owing, as it is suggested by Mr. Fulton, to the imperfection of the machinery. It was then determined to postpone further experiments till the 29th of October. On the 1st of November the commissioners again convened at the navy yard, when Mr. Fulton succeeded in cutting a fourteen inch cable about six feet under water, without injuring his machinery. The operation was performed from an open boat, which remained about five minutes within pistol shot of the vessel at anchor.

The commissioners examined an *anchor torpedo* in the East river, which had several days remained under water; it was viewed when the ebb tide had just commenced and when the current was feeble: the torpedo at that time appeared to preserve nearly a vertical position, as intended by Mr. Fulton; but no experiment was made of the effect of the machinery upon the bottom of a vessel.

At this and other meetings of the commissioners, various models were exhibited by Mr. Fulton of machines, by means of which it was supposed by him the defensive measures of the officers of the navy might be counteracted and defeated; in opposition to which, they suggested counter projects. The duty of the commissioners being, however, confined to an observation of *experiments*, it is deemed unnecessary to report on this branch of the subject.

OLIVER WOLCOTT,
JOHN KEMP,
CADWALLADER D. COLDEN,
JOHN GARNETT,
JONATHAN WILLIAMS.

NEW YORK, January 22, 1811.

B.

NEW YORK, January 26, 1811.

Sir:

I had the honor to receive a letter from you in May last, desiring my services as one of a committee to attend a course of experiments to be made by Mr. Fulton on his torpedo system, and requesting that I would report to you, either separately or jointly with the other members of the committee, my opinions on the merits of Mr. Fulton's system, so far as satisfactory opinions might be formed from an observation of his experiments.

A variety of circumstances have occurred to prevent the committee from meeting to make a joint report. The gentlemen of the committee who reside in this city have at length, however, agreed upon a statement to be submitted to you; but as this is a mere detail of the experiments which we have witnessed, and as we, who have subscribed that statement, could agree upon nothing further, I think it my duty to offer for your consideration what follows, as the result of my observations on Mr. Fulton's experiments.

That gunpowder can be ignited under water with facility, and the infinite power of its expansibility, when exploded in that situation, seems to have been demonstrated by Mr. Fulton's experiments. The efficacy of his cable cutting machine, which requires but a very small charge, shows at once how easily powder may be fired under water, and that its force is equal to what it would be if exploded in the same machine in the atmosphere.

It seems to be proved that water is as resistible to a sudden impulse as a solid body; if so, a very small quantity of powder, if fired at any depth below the surface, as it cannot move the infinite weight of matter which resists its lateral pressure, must make way for its expansion through the perpendicular column of water with which it may be covered. When we see that the firmest rocks yield to the force of a small quantity of powder, we cannot doubt but that the strength of a vessel's bottom must be as nothing when exposed to the explosion of the charge of a torpedo.

If these may be taken as just principles, then, if means can be found of placing a torpedo under the bottom of a hostile vessel, notwithstanding any act or force she could use, the torpedo system would be complete. When we consider how much experience has been necessary to bring to perfection what are now considered as very simple operations, we should be cautious not to be discouraged by the failure of first essays. The history of powder, from the time of its first discovery till it was applied in the way in which it is now used, affords a striking example of the improvement to be derived from practice and experience. We should have had neither land nor floating batteries, nor armies with fire-locks, if the world had rested satisfied from the early experiments which were made with gunpowder, that there were no better means of applying it than the leather gun and the match, which were used in the infancy of the invention.

The committee saw no attempt on the part of Mr. Fulton to place a torpedo under the bottom of a vessel. He acknowledged that he was not prepared to overcome the means which had been adopted for defending the *Argus* against his floating torpedoes, and it appeared from Mr. Fulton's explanation of the manner of applying these instruments, that the defences of the vessel, independent of any force which might have been used, were insurmountable obstacles to the application to a torpedo in any way which Mr. Fulton had previously suggested. But though the means of defence which were applied to the *Argus* were only such as a vessel of war commonly carries as part of her equipment, and though they could be put in the state in which the committee saw them in a very short time, I cannot but think that, if the dread of torpedoes were to produce no other effect than to induce every hostile vessel of war which enters our ports to protect herself in the way in which the *Argus* was protected, torpedoes will be no inconsiderable auxiliary in the defence of our harbors.

As to the anchored torpedo, no other experiment was attempted than to show that, when in the water, it might be retained in the position necessary for its having the desired effect. The tide, however, being slack, or nearly so, at the time that the anchored torpedo was examined by the committee, its vertical position at that moment did not afford any evidence that it would resist a strong current; on the contrary, there was reason to believe that, in the way in which it was then anchored, it would yield to the pressure of a strong tide, so as to be driven to the bottom, or

to lay nearly horizontally in the water; but it cannot be doubted but that there are means of fixing a torpedo so that it will retain an upright position in the strongest tide.

Mr. Fulton's cable cutter appears to be a very ingenious invention. Its efficacy, when properly applied to the cable of a vessel, has been demonstrated; and it seems that it may be applied, when the persons who are to manage it are at a considerable distance from the object intended to be affected. It was suggested by the officers of the navy, and it cannot be questioned, but there are many means, by chains and otherwise, of guarding a cable against this machine; but an invention which will oblige a hostile vessel, whenever she anchors in one of our ports, to guard her cables by the means above referred to, must be of great importance in a system of defence. A vessel of war, surrounded by large booms and spars, with nets hanging from her bows as deep as the water, with her rigging loaded with weighty pieces of iron, and with grappels and shot suspended from her yards to guard her against torpedoes, and with chains to defend her cables against the cable cutting machine, must be much less wieldy, and of course much less formidable for attack or defence than she would be without such incumbrances.

In all Mr. Fulton's experiments it was obvious that he labored under great disadvantages for want of experience. Several of his experiments failed in the first instance from defects in the machinery, which it was obvious were easily to be remedied. The application of his cable cutting machine required as much nautical skill as is requisite to manage a boat in a strong tide way. For want of this skill, it was obvious that the cable cutting machine was not applied by Mr. Fulton with as much facility as it might have been by an experienced waterman. To make experiments upon this important subject which would be entirely satisfactory would require the co-operation of a number of persons practised in the modes that have been, or which may be, suggested for applying Mr. Fulton's machines; we can as little judge of what may be the efficacy of a torpedo, when we see it in the hands of persons who have no experience with respect to it, as we could of the efficacy of a mortar, were we only to see it managed by men who had no practice in its use. Could Mr. Fulton have the means of making frequent experiments, and of training a number of men to the application of his machines, the Government might be able to form a just estimate of the value of his systems.

The experiments which the committee witnessed were too limited to authorize a confident opinion as to what may be the merits of Mr. Fulton's system. It is impossible to say how far the very ingenious suggestions made by Commodore Rodgers and Captain Chauncey, for guarding a vessel as well against torpedoes as against the cable cutter, would on experiment be found effectual. But I think Mr. Fulton's experiments give us ground to suppose that the knowledge of gunpowder is yet in its infancy, and that in time this new application of its irresistible power, by submarine explosions, may produce greater changes in the world than have been made by it since its introduction into Europe.

I have the honor to be, sir, with very high respect, your most obedient servant,

CADWALLADER D. COLDEN.

The Hon. PAUL HAMILTON.

C.

CLERMONT, December 7, 1810.

SIR:

My distance from New York having prevented my meeting the gentlemen of the committee at the time they made up their report, and being so unfortunate as to differ with them in opinion as to the utility of torpedoes as a mean of defence in addition to those usually employed against a naval armament, I think it my duty, in compliance with your request, to state my opinion, with a more detailed account of the experiment than is detailed in their report.

On the 21st of September the members of the committee met, and chose Mr. Livingston president, and Mr. Garnett secretary of the committee. Not having the minutes of Mr. Garnett, I shall not be able to specify dates so precisely as I might otherwise do.

Commodore Rodgers and Captain Chauncey, and a number of other naval officers, attended.

Mr. Fulton opened the business by explaining the principles of his mode of attack, and exhibited a water proof torpedo lock, and the model of a boat with two moveable projecting spars, at the end of which two torpedoes were to be fixed. It was then agreed that the experiments should be made with blank torpedoes, upon the brig Argus, lying in the East river, and at a convenient distance from the navy yard, and that such defence should be made against them as a vessel of war could exert.

On the 26th of September, the commissioners met at the navy yard, at which time they examined the brig Argus, prepared for defence against an attack by torpedoes.

This defence consisted of a net suspended from the bows of the brig, and reaching, it was said, as low as its bottom; also of spars lashed together and suspended from the bowsprit and yards, with a view to prevent boats from coming into contact with the vessel. The studding-sail yards and booms were armed with kentledge and heavy shot, and provided with grappels for the purpose of sinking or seizing the attacking boat. It was stated by the officers of the navy, that these means of defence were such as ships of war usually possess, and that they could be fixed in thirty minutes, and of this they afterwards exhibited proofs at the request of the committee. Mr. Fulton admitted that he was not then prepared to show how a vessel thus guarded could be attacked, but that he would investigate the subject by the time of our next meeting. At this meeting Mr. Fulton exhibited his harpoon torpedo, and fired it at a target, but without the promised success, the rope at the end of the harpoon changing its direction and preventing the point from reaching the object at a greater distance than fifteen feet; at that distance it stuck firmly into the oak plank, carrying the rope with it. Mr. Fulton also exhibited his cable cutter, which consisted of a small piece of ordnance with a water proof lock, to the end of which a hook for catching the cable was adjusted; from this an iron rod with a broad end, similar to that of a chisel, was fired at a cable placed upon the ground before it, which it cut through.

The committee also examined the anchored torpedoes, which consisted of a piece of timber of about sixteen to eighteen feet long, from the bottom of which the anchor rope was suspended: the torpedo was placed within the hollow of this timber, in such a way as not to be fired by sweeps passing over it, nor easily taken up by them. It was to be maintained in its upright position by means of a bridle and small anchor.

On the 28th of September, the committee again met at the navy yard, when an attempt was made by Mr. Fulton to cut a cable under water. In order to effect this, the cable cutter above described was suspended by a float, but from the inexperience of the boatmen, and their rowing down instead of up the tide, the float got entangled in the anchor rope, and the gun was discharged without cutting the cable. This experiment was, on the 1st of November, repeated; and a fourteen inch cable completely cut in two, many feet under water. I did not see this experiment, but collect it from the report of the committee, and a view of the cable after it was cut. I cannot, therefore, say the time that the boat was within shot, or its distance from the vessel; but presume that the report of the committee is correct on this head. On our meeting, on the 28th of September, Mr. Fulton exhibited the model of a vessel guarded in the manner the brig Argus was, with nets; and also showed the practicability (as he supposed) of passing the torpedo under the net, and making it rise to the bottom of the vessel, after it had passed. This, he alleged, might be effected by annexing a weight to a torpedo, that was specifically lighter than the water, which weight would be cast off at a given time, and the torpedo rise and strike the bottom of the vessel with sufficient force to be discharged. He exhibited the model of the clockwork prepared for this operation, which cast off the weight at the time for which it was set. To guard against this, Commodore Rodgers said that the net might be extended to the bottom of the river; in which case, it was admitted by Mr. Fulton, that the torpedoes could not be placed under the ship, but by passing them through the net. Commodore Rodgers was asked whether it would be possible to sail and manœuvre a vessel in a harbor surrounded with spars and booms, and with nets hanging down to the bottom of the river. He was of opinion that it was; but upon being requested to put the brig Argus in motion, with her nets and spars, which did not extend many feet below the vessel, he declined it until she should come round into the

North river, where she would have more room. On this subject, however, the commodore never had any experimental evidence, the ship never having been manœuvred with these incumbrances. How far Commodore Rodgers' opinion on this head is correct, I pretend not to judge; but this question, so very important in deciding on the means that a ship possesses for defending itself against torpedoes, ought, in my opinion, to be tested by actual experiment; because no naval officer, however experienced, can as yet speak of it except as a theoretical and untried question. I was not with the committee when they examined the anchored torpedo, but I saw it (I believe in company with one member of the committee) at two different times, when it appeared to me to be erect. What the effect of a ship passing over it would have been, whether or not the lock would have given fire, I cannot say from any actual experiment, though I have little doubt, from the construction of it, that it would have done so while the torpedo was vertical, or even if its head was inclined by the tide to a ship coming upon it against the tide; though I doubt whether it would have gone off if the ship sailed with the tide, if the tide should incline the head of the torpedo much in the same direction; but I have no reason to think that it would be so inclined; or if it would, it is obvious that this might be early prevented by the use of two instead of one bridle, and by various other ways. This was the sum of the experiments made by Mr. Fulton. He, however, suggested several ingenious modes by which he conceived the netting might be cut, and the torpedoes passed through them. These were answered by several modes of defence, equally ingenious, proposed by Commodore Rodgers, Captain Chauncey, and the other naval officers present. But as you have it in your power, sir, to command those, and doubtless will do so, by calling upon Mr. Fulton and the gentlemen of the navy, I do not think it necessary to repeat them; but will proceed to state my own opinion, drawn from what I was able to collect from the experiments, after mentioning one other, made by Commodore Rodgers, in order to show the effect of grape and canister shot. An old boat, whose planking was not, I think, one inch thick, was anchored at the distance of sixty or eighty yards from the wharf, with some boards set erect, to represent men. A four and twenty pounder, loaded with grape and canister shot, was levelled by Captain Chauncey, and fired at it. The boat and boards were perforated by a great number of shot. Not having been so exact as to count them, I cannot say the precise number, but certainly enough to have destroyed a boat of that kind, and killed or wounded every man in it. A circumstance struck me in this experiment, from which very important conclusions may be drawn. For the space of near two minutes after the gun was fired, (the day being calm) the boat was invisible to myself, and, I believe, to every person placed within twenty yards of the gun, owing to our being involved in the smoke of the cannon. Another circumstance was, that, though the sides of the boat were old and thin, yet some of the shot did not appear to have passed through more than one side of the boat, most of them being found within it; from whence I infer, that a three-inch oak plank would have resisted those shot, and, of course, that grape or canister could not be of much effect when the men were covered by a deck, or when the sides of the boat were more than three inches thick.

It seems, sir, to have been admitted on all sides, on the faith of the experiments that have been previously made, and of which Mr. Fulton had given an account to the public, that powder placed under a vessel would destroy it; and, indeed, this might have been inferred from the incompressibility of the water, and the resistance it affords to any sudden and violent impulse.

Mr. Fulton has thus presented to us a new application of powder, and it is impossible to say to what important consequences it may ultimately lead as a defence against naval attacks, or in the relative strength of nations. Those consequences are certainly much more obvious than such as were apparent from the early knowledge of gunpowder, and its subsequent application to military purposes.

The first model presented, as I have said, by Mr. Fulton to the committee, was that of a boat with two moveable projecting spars armed with torpedoes. It appears to me, that, if one or more vessels of three or four hundred tons, (a number of which are always in our harbor, and may be fitted for the attack in a few hours) armed in the manner I have mentioned, and ballasted with wood, were to attack a ship of the line, by running upon it with all their sails set, and a favorable tide, that such ship, whatever might be its force, would incur the greater risk. The netting (if it were possible for a hostile ship to cover itself with netting) would be no defence against the impetus of such vessels. Its grape and canister shot could have no effect upon the few men placed on board such ship, and covered by the deck. Its round or chain shot might, by a bare possibility, carry away a torpedo; but when it is reflected that many are levelled against one ship, and that a single one can in a moment effect its destruction, it will, I think, be found extremely difficult to resist their attacks. Fire ships have not yet been rejected as a means of both attack and defence. Torpedo vessels have greatly the advantage over them. First, in being much cheaper—the expense of fire ships preventing the employment of such a number of them as may be necessary, they in no instance, that I have been acquainted with, equaling the number of the fleet with which they are to contend; whereas by a little exertion, and without any very extraordinary expense, forty or fifty torpedo ships may be fitted out in less than a week, in any of our large commercial harbors. Next, in the certainty of the attack: a fire ship frequently fails from the fire not taking. Even after it is grappled to a ship, as the effect of fire is not instantaneous, it may be cut loose and towed off. Again: as a vessel of war, even when inflamed by a fire ship, is not immediately destroyed, the men know that they have time to escape, and are not so alarmed as to prevent their exertion: when attacked by torpedo ships, they know their destruction will be instantaneous; they will lose their presence of mind, and, instead of seeking means of defence, they will look for those of escaping from this untried danger. The fire ship, too, from the hazard to which the crew are exposed from an explosion, will soon be deserted, and often before it arrives near enough to grapple with an enemy. In the torpedo ships the crew incur no danger, even at the instant in which they touch the enemy's ships; because the explosion being directly upwards, can in no other way affect the attacking ship than by the agitation occasioned by the enemy's sinking, and this will not be so rapid as to prevent the few men necessary for navigating such ship from escaping by an aperture left in her stern, as in fire ships, for that purpose.

Though the harpoon did not carry the line so far as was expected, in the experiment that we saw, yet there is no reason to conclude, from its failure, that experience and practice may not improve upon this mode of attack; and the rather, as the cause of the failure was an obvious defect in the arrangement, which it will require but little skill or ingenuity to change for the better. A half inch rope was fixed near the sharp end of the harpoon; it was plain that the resistance of the air would retard the motion of this end carrying the rope, and of course gradually turn the harpoon. Should it be practicable to harpoon a ship at the distance of twenty or thirty yards, (which can hardly be doubted) light boats might, in a dark night, or even by day, when a ship was covered by its own smoke in attacking our batteries, approach with the utmost safety so near as to place the harpoon in her bows. I can hardly suppose, under such circumstances, that a ship would defend itself with netting extending to the bottom of the channel, and thus clog its own movements in a narrow river, with the obvious danger of running on shore. If, however, the enemy's apprehension were so much alive as to compel them to use this precaution, this alone will be an important point gained in the article of defence. It should also be recollected, that vessels thus guarded would afford a sure mark for fire ships, which should form an additional article of defence, because a fire ship running in upon the netting, would be so connected with the ship that it would be extremely difficult to disengage it.

I would here observe, that there is a very obvious difference between a cannon fired from the shore, and coolly pointed by the most skilful artillerist against a fixed object, and cannon fired in the hurry of battle from a ship covered with smoke, against a small boat in rapid motion. Experience convinces us that ships are frequently boarded by boats; and how vast is the difference between boarding a ship and merely approaching within a few yards of it, and firing a gun.

The cable cutter is certainly a very ingenious project. To render it successful, practice and experience are necessary. Two facts are ascertained, to wit: that a cannon may be fired under water with the same effect as in open air; and next, that the thickest cables may be cut by these means. The anchor of a large ship, in a river in which there is considerable current, must necessarily be placed at a considerable distance from the ship, so that not the least danger would be incurred by the boats that should be employed in cutting the cable during a dark night. The position of the ship points out that of the cable, and a little practice would enable the boat to place the hook upon it at a considerable distance from the ship. The effect of depriving a ship of her anchor in a calm, and without an enemy's port, are too obvious to need mentioning.

No defence, that I recollect, was offered by the naval officers against the anchored torpedoes. The only question was, whether they would maintain their vertical position when a strong tide run? As far as we could judge, from what we saw, there is no reason to doubt that they would; but, supposing that they would yield to the tide, they certainly would return to their position when the tide slackened—that is, for near two hours out of six. Are naval armaments so rapid in their movements as to take your forts, batter down your towns, and quit your harbors in less than six hours? Can they go in with the flood, and go out before the ebb commences? If not, anchored torpedoes must, even under the most unfavorable view of the subject, effect their destruction, if distributed in the channels of your harbors with the liberality that the importance of securing them would dictate. Upon the whole, sir, I view this new application of powder as one of the most important military discoveries which some centuries have produced. It appears to me capable of effecting the absolute security of your ports against naval aggressions; provided that, in conjunction with it, the usual means necessary to occupy an enemy's attention are not neglected. I am far from thinking that, if your harbors were without batteries, and the enemy's ships were left at full leisure to arm themselves against torpedoes only, to search for and remove them, (a matter, however, of great difficulty) that it would be safe to trust to them; but, added to the other means of defence which prudence dictates, I think they may be made a most important auxiliary; provided, however, that a corps of men were raised and trained in every part to the use of them; and provided, too, that an ill-timed parsimony should not confine the torpedoes (anchored torpedoes especially) to a number below that which the importance of the subject demands. I would, therefore, earnestly recommend the further prosecution of the experiments already commenced, and upon a larger scale; nor do I think that trifling miscarriages, arising from want of practice and nautical skill, should stifle in its birth a discovery that may lead to consequences, the extent and importance of which it is impossible at this moment to foresee; and I sincerely hope, sir, that they may do honor to your administration, by being brought to perfection under your patronage.

I have honor to be, sir, with great respect, your obedient servant,

ROBERT R. LIVINGSTON.

The Hon. PAUL HAMILTON, *Secretary of the Navy.*

D.

STAATSBURG, *January 22, 1811.*

SIR:

The expectation of a joint report from the gentlemen with whom I was associated on the subject of your letter of the 4th of May last, has hitherto prevented my accepting the alternative you proposed, of addressing you individually. A difference of sentiment having disappointed that expectation, I transmit you a brief statement of the impressions I received from Mr. Fulton's experiments explanatory of his torpedo system.

A particular detail of the experiments, I understand, will be forwarded to you by another hand. It were useless, therefore, to repeat them here. They were much more limited, it is said, than was intended; owing principally to a continuance of unfavorable weather, occasioning an inconvenient delay to those gentlemen who resided at a distance. Restricted as they were, when considered as a first essay in support of an infant science, they certainly equalled, if not surpassed, those of most new inventions, and might challenge a comparison with the progress made in the application of gunpowder to the various species of fire arms. I might add, without extravagance, they warrant an expectation that, aided by Government, (which every practical science promising public utility is entitled to be) and the efforts of genius, the sub-marine use of gunpowder will, at no distant period, be entitled to rank among the best and cheapest defences of ports and harbors.

The facts resulting from the experiments are:

1. That gunpowder is susceptible of ignition and explosion under water.
2. That a sufficient quantity, exploded under the bottom of a vessel lying in that element, will destroy her.
3. That it may be applied, under water, to fire arms, with as much effect, *under some circumstances*, as in the atmosphere.
4. That by such application a vessel may in a few minutes be cast from her moorings.
5. That the necessary defence of a ship against floating torpedoes must greatly encumber her, and proportionably impair her activity.

The supposed difficulty of conveying torpedoes under the bottoms of vessels affords the principal objection to their practical use as engines of war; and the nautical gentlemen who attended the experiments of Mr. Fulton, and who, when free from bias, must be the best judges, were, with one exception, of opinion they could, with the ordinary muniments of a ship, defeat every effort which should be made for that purpose. Specimens of the means to which they would resort were exhibited in the equipment of the *Argus*. Of these the only one which appeared to me of much importance as a defence against an attack with torpedoes, was the sub-tension of the brig's splinter net from the bowsprit yard to a considerable depth below the surface of the water; where, I understood, it was kept to its position by a quantity of kentledge attached to its lower line. This defence I conceive to be useful only where the vessel lies at anchor; though the nautical gentlemen were of a contrary opinion. Whether they are correct or not, can be ascertained he experiment alone. In any situation of the vessel, however, it does not present to my mind an insurmountable obstacle.

The annoyance which the boats employed in the management of the torpedoes would be subjected to from the ship's battery, appeared to many to afford of itself a complete protection. On this subject it is with diffidence I offer an opinion. The little experience I have had has not been calculated to impress my mind with great respect for a battery employed against a small moving object; particularly where the battery itself, after a few discharges, acquires a degree of motion. The uncertainty of round shot, on such occasions, is obvious; and the effect of musket ball discharged from great guns may be easily rendered harmless. It is a fact known to gunners, that you cannot give to a cannon, loaded with leaden ball, her full charge of powder, without risking a fusion of the lead. They are, therefore, on such service, always undercharged, and their force thereby proportionably diminished. The experiment of Captain Chauncey gave conclusive evidence of this fact: for, although the boat fired at was not removed beyond sixty yards from the mouth of the cannon, and her siding of not more than one-half or three-quarter inch stuff, many of the balls which penetrated her were found lying in her bottom. A three inch oak plank would have effectually resisted *them*, and probably grape shot also.

The introduction of torpedoes, as an item in a system of defence, will certainly meet with opposition from adverse interests, deep rooted prejudices, and perhaps foreign attachments. Its advocates will have to encounter the pertness of the wittings of the day. Still I trust it will not be deserted, while even a distant prospect of its becoming permanently useful shall remain.

Accept, sir, an assurance of my sincere respect and esteem.

MORGAN LEWIS.

E.

Extract from Commodore Rodgers' Journal.

SEPTEMBER 21, 1810.

At eleven o'clock in the forenoon, Captain Chauncey, of the navy, and myself, accompanied by Colonel Wharton, according to appointment, met at the City Hotel, Broadway, Mr. Fulton, and a committee appointed by the Honorable Paul Hamilton, Secretary of the Navy, consisting of Chancellor Livingston, Governor Lewis, C. D. Colden, Esq. Mr. Garnett, Doctor Kemp, and Colonel J. Williams, (Mr. Oliver Wolcott, late Secretary of the Treasury, a member, being absent) to investigate and report their opinions of the principles, as well as to demonstrate, by such experiments as Mr. Fulton might advise, the efficacy, of (as engines of national offensive and defensive war) certain sub-

marine projects published by him, under the title of "Torpedo War," which he had proposed to Congress as being well calculated to supersede the necessity of a navy. And to enable the projector to prove, by actual experiment, the efficiency of his scheme, a law was passed in February, 1810, appropriating five thousand dollars to the purpose.

The committee all being present, with the exception of Mr. Wolcott, at noon Mr. Fulton opened the subject by placing a torpedo lock on the table; and after some preliminary observations relative to the progress and improvements in the various arts and sciences, he quoted a few paragraphs from his book, entitled "Torpedo War," to enable him to explain more forcibly the affinity of his preceding remarks to the subject then before the committee. He expressed a desire, that I would have the frigate President transported from the North river (where she was then lying) to the East river, contiguous to the navy yard, for the purpose of making an experiment. I asked Mr. Fulton if the experiments could not as well be made in the North river, and observed that the President was undergoing some repairs in her rigging, preparing to paint, &c.; consequently that she could not conveniently be removed. He observed that he preferred the East river, on account of its contiguity to the navy yard; as, at the yard, he would (previous to the experiments) be afforded the means of making the necessary arrangements with his machinery, as well as with his boats and men, which might be required. The United States' brig Argus was, at this time, lying in the East river, near the navy yard, which enabled me to offer her for his accommodation; which, he having accepted, the committee (with the exception of Mr. Wolcott, an absent member, and with the concurrence of Mr. Fulton) unanimously resolved that the experiments should accordingly be commenced on the 24th instant, with blank torpedoes, on the United States' brig Argus; and that such defence should be made by her as a vessel of war was capable of, without the use of her guns, or any other active force of similar kind.

The time and mode of experimenting being now determined on, Mr. Fulton placed a torpedo on the table, and observed that it was the kind with which he should commence his essays on the Argus, (for a description of which see the cut.) This kind of torpedo, it will be observed, is intended to be applied to a vessel's bottom, from the bowsprit of a torpedo boat, by the aid of a long pole, suspended by an swivel on the end of the bowsprit, so nearly on a balance, that a man in the bow of the boat can elevate or depress the torpedo with his right hand, and at the same time fire it, by pulling a line which he holds in his left.

Mr. Fulton having fully explained the principles of the before described torpedo, the committee adjourned to meet on the 24th instant, for the purpose of commencing the experiments, as had been previously resolved.

SEPTEMBER 22, 1810.

On this day Mr. Fulton (having previously prepared a torpedo boat) had various torpedoes and apparatus transported to the navy yard, for the purpose of essaying with on the Argus, consisting of five different kinds; as also a combination of various different machines, viz: a hook, chisel, and gun, intended for the purpose of cutting off cables under water:

SEPTEMBER 24.

On this day, with the advice of Captain Chauncey, I gave Lieutenant Lawrence (commander of the Argus) directions to prepare his vessel in a manner to prevent the application of torpedoes under her bottom; and which he accordingly did, with nothing more than simply her own spare studding sail booms, nine fire grappels, a few pigs of kentledge, and the President's splinter net, as follows:

REFERENCES.

No. 1. Spritsail yard, from which is suspended a net. No. 2. Studdingsail booms upon the surface of the water. No. 3. Fore yard. No. 4. Main yard. No. 5. Topsail yard across the stern.

The splinter net, having seven pigs of kentledge, of two hundred pounds each, attached, at equal distances, to its lower part, was suspended, by its upper part, from the bow, in a transverse direction, to the keel, by the assistance of a light yard, that was supported by the bob-stays about eighteen inches below the hawseholes, in such manner that the net formed a curtain or barricade in front of the vessel, with the weights attached to the lower part of it barely touching the bottom.

The spare studdingsail booms of the Argus formed a floating chevaux de frize to prevent boats from coming in contact with the vessel's hull (as described in the cut) and were supported in that position with ropes leading to the ends of the lower yards, bowsprit, and a spare topsail yard across the stern, to which the main topsail braces led. These, with the addition of about twenty-five battering rams and grappels, suspended from a small hawser, which was fastened by the bite to the jib boom, the two ends leading aft on each side of the vessel, through blocks on the extreme ends of the fore and main yards, down to the ends of the topsail yard across the stern, and hauled well taught (as described below) were all the obstacles with which Mr. Fulton had to contend, in the application of his torpedoes to the Argus's bottom; but these, however, were found sufficiently conclusive arguments to render all his schemes abortive, as will hereafter be shown by his own confession.

REFERENCES.

No. 1. End of jib boom. No. 2. Spritsail yard. No. 3. Fore yard. No. 4. Main yard. No. 5. Topsail yard across the stern. No. 6. Fire grappels. No. 7. Pigs of kentledge.

After the Argus was thus prepared for the experiments, several thousands of the citizens of New York assembled at Corlear's Hook (opposite the navy yard) for the purpose of witnessing the result of Mr. Fulton's operations on her; but the weather proving somewhat unfavorable, and the committee, in consequence, having sent to notify that they would not attend on this day, a boat was despatched to inform the people collected there that no experiments would be made before the next day.

SEPTEMBER 25.

Boats were again sent to New York for the committee, but in two hours after returned with information from Governor Lewis, that the president of the committee (Chancellor Livingston) being indisposed, and the weather not being favorable, would prevent their attendance on this day. Colonel Williams and Mr. Garnett (two of the committee) came over, however, and in company with Mr. Fulton, Captain Chauncey, and myself, and some gentlemen, went on board of the *Argus*, and examined the preparations made for her defence: this they did though without comment, Mr. Fulton excepted, who acknowledged that the means of defence then exhibited were sufficient to prevent the application of torpedoes to her bottom, unless some mode could be devised to remove the obstacles, which he declared might be done, although he could not then precisely say how, as, from his not being previously aware of the difficulties which he then found he had to encounter, time must be given for reflection and further invention.

In this day's remarks it may be proper to note, that Mr. Fulton made an experiment on the wharf with his machine for cutting off cables under water, (for the form of which see margin) and succeeded; but without proving it would have the same effect under the water, or even if it could, that it was of any use as an instrument of war.

After this experiment, he made several others, by firing harpoons at a target of about five feet square; but did not succeed in attaching the harpoon to the target, in any instance, at a greater distance than fifteen feet.

SEPTEMBER 26.

The committee met at the navy yard, on this day, at half past ten o'clock in the morning, at which time Mr. Fulton made several essays with his harpoon gun, but did not succeed any better than in his preceding experiments. After this, at his request, the committee retired to the house of Captain Chauncey, where models had been prepared by the exhibitor, to explain results which he had not been able to prove by actual experiment; and, after explaining causes and effects, he informed the committee that, since their last meeting, his mind had been, in part, employed in devising means to destroy the security which nets afforded to vessels, in opposition to his torpedoes, in substance as follows: That he had invented a combination of knives, calculated to be fired from a gun, for the purpose of cutting a hole through the net, which being effected, a trough, about half the size of the body of a cart, (containing the torpedoes) was to be introduced into the said hole, and the torpedoes emptied in, and, to use his own words, "in the same manner that potatoes are commonly emptied from the body of a cart."

It now appearing that Mr. Fulton had given up the intention of experimenting on the *Argus*, I mentioned to the committee that she was then under sailing orders, and that, if Mr. Fulton did not intend to make any essays on her, I would order her to prepare for sea, and which I should have done, had he not, at the time, expressed a desire that she might be detained a few days longer, as it was probable, (as he said) that he might, in a very short time, be prepared to make some experiments on her.

The committee now adjourned, to meet on the 28th instant.

NOTE. It will be recollected that Mr. Fulton addressed a letter to the members of Congress, who voted in favor of the torpedo bill, (dated April 15th, 1810) in which he assured them that nets, booms, &c. instead of obstructing, would facilitate his operations.

SEPTEMBER 28.

The committee met according to appointment, and the lighter of the yard was anchored with a piece of an old twenty-two inch cable, for the purpose of affording Mr. Fulton an opportunity of showing more demonstratively, the actual effect of his machine for cutting off cables under water.

REFERENCES.

No. 1. Cable which was intended to have been cut by the cable cutter. No. 2. The buoy of the machinery afloat of the cable. No. 3. Large flat hook which supports a gun. No. 4. Torpedo boat, with her side against the current. No. 5. A rope from the boat, attached to the machinery.

The cable being thus prepared, Mr. Fulton made an attempt to hook, and cut it off, but did not succeed even in hooking the cable, much more in cutting it off, whilst, at the same time, he was obliged to require the assistance of the men on board of the lighter, to which the cable was attached, to extricate the torpedo boat from the awkward position in which the tide had placed her, from the machine being on one side of the cable, and the boat on the other. (See the figure.) The gun was, however, fired under water, but the only visible effect produced was the bursting of the lock.

Mr. Fulton having concluded his experiments for this day, but having, on a former occasion, demed the practicability of a ship using her guns to any important advantage, against torpedo boats, even at the distance of twenty yards, Captain Chauncey, to remove all doubts on this subject, had an old condemned boat (about eighteen feet long) anchored ninety yards from the wharf, with three small pieces of board placed in her, in positions representing three men sitting down. At this distance he discharged a grape and canister from a twenty-four pounder, and of which were actually drove seventy-three shot through the boat, eighteen through the first piece of board representing a man, nine through the second, and five through the third.

Mr. Fulton having now expressed doubts whether the preparations made on the *Argus* could be effected with any reasonable degree of facility, the committee proposed that she should be got under weigh, and that the preparations then made on her should be displaced, which, being done, that she should be brought to an anchor again, and the same preparations replaced, in order to prove the facility with which such an operation could be performed.

This proposal was accordingly assented to; but the rudder of the *Argus* being, at the time, on shore, and under repair, the performance was necessarily postponed, to take place on the 1st of October, in the North river.

OCTOBER 1.

Owing to calm weather during the two preceding days, the *Argus* was not removed into the North river, as had been determined on the 28th ultimo; the committee, however, not thinking it then necessary that she should be removed for the purpose of performing the experiments which, at their last meeting, had been resolved on, agreed that they should be made where she then lay, in the East river, and which was accordingly complied with, when, to the astonishment of those who had entertained any doubts of the facility with which a vessel could be so prepared, after she had been dismantled of such preparations, the same were seen replaced in less than fifteen minutes.

Mr. Fulton having now caudally acknowledged (and that, too, in a manner much to his credit) that his want of nautical information had led him into many errors; at the same time, all parties wishing to see the project fairly and thoroughly tested, the committee adjourned to meet again on the 29th instant, in order that he might be afforded sufficient time to make experiments on the improvements which he had suggested, as being necessary to the perfecting of his torpedoes, and the manner of applying them.

OCTOBER 29.

Owing to the bad weather, the committee was prevented attending to the torpedo experiments, consequently they were not renewed, as had been resolved at the last adjournment, on the 1st of the present month.

OCTOBER 30.

Boats were sent to New York, for the purpose of conveying the gentlemen of the committee to the navy yard, but none of them attended except Colonel Williams and C. D. Colden, Esq. the latter of whom came at a late hour.

No experiments were made on this day, but Mr. Fulton exhibited a miniature model of a vessel of three hundred tons, in the presence of Colonel Williams, Captain Chauncey, and myself; at which exhibition were also present General Morton, Doctor Bullus, and some other gentlemen of similar curiosity; which he called a torpedo block ship, the sides of which were calculated (as he said) to be cannon proof, and the decks proof against musket shot, the former being six feet thick, and the latter six inches.

REFERENCES.

No. 1. Bowsprit. No. 2. Hull of a vessel whose sides are six feet thick, cannon proof, and decks six inches thick, musket proof. No. 3. Four long booms, with a torpedo on each. No. 4. Bumpkins, by which the booms are supported. No. 5. A skull wheel, which is intended to propel this vessel against the tide.

This vessel is intended to be armed with two torpedoes on each side, which are each to be applied by the means of a spar ninety-six feet long, projecting from the vessel's side, supported at the inward end by a double circular swivel, and at the outward end by guys leading from the mast heads. For the particulars of this singular vessel, (which, to my confined imagination, truly deserves the name of a *non descript*) I leave the reader to make his own conclusions from the figure annexed, and by which alone he will be enabled to judge whether such *torpid, unwieldy, six-feet-sided, six-inch decked, fifteen-sixteenth-sunk-water-dungeons*, are calculated to supersede the necessity of a navy, particularly when the men who manage them are (as is intended) confined to the limits of their holds, which will be under water, and in as perfect darkness as if shut up in the black-hole of Calcutta.

OCTOBER 31.

Boats were sent to New York for the committee, but the weather being unfavorable, none of the gentlemen attended.

NOVEMBER 1.

Boats were sent to New York for the committee; but none of the members attended except the Honorable Oliver Wolcott, C. D. Colden, Esq. Colonel Williams, and Mr. Garnett. On this day Mr. Fulton made an essay with his sub-marine gun, and succeeded in cutting off, under water, an old fourteen inch cable, that had been prepared for the purpose; and this, I understand, he did (not being myself present) without any injury to the gun or lock. It is, therefore, proved, that, by such means a cable can be cut off under water; but I, nevertheless, deny that it is possible to use this machine so as to make it of any importance as an engine of war: for the cable cannot be hooked with any probable degree of certainty, without exposing the assailants in such manner, and for such a length of time, to part of the ship's cannon, as well as to her musketry, swivels, blunderbusses, &c. as would ensure them destruction before they could perform the operation, and which was amply verified in the beforementioned experiments, as Mr. Fulton and all the men in the boat with him were exposed for at least fifteen minutes to the fire of the musketry from the vessel on which he made the essay, and, of that time, they were at least five minutes within short pistol shot. At the same time it will be observed, that the vessel was specially prepared for the purpose, and the relative positions of her and the cable, such (according to Mr. Fulton's opinion) as to enable him to perform the operation with the greatest facility. But, even admit that the machine for cutting off the cable could be applied, in defiance of the opposition before stated, the crew of a ship have it in their power to make such a machine (and such as will occur in the mind of every seaman) in twenty minutes, as to prevent, even if no other means were used, the possible application of a cable cutter.

After the beforementioned performance of cutting the cable, the members of the committee, at the request of Mr. Fulton, proceeded to examine a torpedo which had been previously anchored off the navy yard, for the purpose of showing the position which a torpedo of that description would maintain in the tide.

This torpedo was, by the effect of a bridle, anchored in such a manner as to present the surface, by which it was supported, on an inclined plane, to the resistance of the tide; so that the action of the tide served to propel it upwards: and to prevent its being thus propelled beyond a certain distance from the bottom, a weight was attached to its lower extremity, by means of a rope of correspondent length, to the desired distance from the bottom.

The position of this torpedo was shown on the ebb tide, and actually (as I am informed) maintained the position which Mr. Fulton supposed it would. This, however, was done without his proving any thing of its effect as an engine of war, or even that it would maintain a similar position on the flood tide; and which it must be admitted would be very uncertain, owing to the weight attached to the lower end of the torpedo always being liable, on the change of the tide, to become entangled with the moorings of the machine itself.

Therefore, all that has yet been proved relative to this description of torpedoes, I consider in amount as nothing, when compared with the object for which it was constructed; and even if it was capable of being made as perfect as the projector has described, in his book, entitled "Torpedo War," (but which I utterly deny) it can never be of any important consequence; as by the aid of a very simple piece of machinery, in form like the back bone of a fish, (and which would naturally suggest itself as a preventive) its effect may, without the question of a doubt, be rendered harmless.

The committee on this day adjourned, for the purpose of making their report; Mr. Fulton having informed them that he had no further experiments to make: therefore,

Having attended all the experiments, and noted in my preceding remarks every thing of any consequence relative to the same, I have only further to observe, that Mr. Fulton bought a vessel, for the purpose, as he said, of convincing the committee, by ocular demonstration, of the effect of his torpedoes; but which, however, (after being at the trouble of transporting her to the navy yard) he never attempted; owing, as I am induced to believe, to an entire conviction, in his own mind, that such an attempt would only serve to prove more distinctly that the practice of every, or any part of his project would be found not only impossible, but that even its theory would be proved as conclusively absurd. Further, however, I do not, at this moment, feel myself at liberty to animadvert; as Mr. Fulton has pledged himself to Mr. Wolcott, Colonel Williams, Doctor Kemp, and Mr. Garnett, (members of the committee) in presence of Captain Chauncey and myself, to acknowledge in a public manner the incorrectness of all such part of his theory as he should not be able to establish by these experiments; consequently I cannot but conclude that his amor patriæ, as well as a respect for his word, (which he pledged as beforementioned) will induce him to publish to the citizens of the United States, in the same public manner, that what he may have led them to

expect he now finds himself unable to perform, namely, that his torpedoes, so far from being of the importance which he had considered them, were, on a more thorough examination of their principles, assisted by all the practice of which he, himself, had supposed them susceptible, found, to say the least, comparatively of no importance at all; consequently that they ought not to be relied on as a means of national defence.

F.

KALORAMA, DISTRICT OF COLUMBIA, February 1, 1811.

SIR:

I have the honor to return to you the report of the committee on the torpedo experiments, with that of Commodore Rodgers; and the letters of Robert R. Livingston, Morgan Lewis, and Cadwallader D. Colden, on the same subject. The opinions expressed in these papers are, I think, as favorable to this infant art as, under all circumstances, could be expected.

It is proved and admitted—

1st. That the water proof locks will ignite gunpowder under water.

2d. It is proved that seventy pounds of powder, exploded under the bottom of a vessel of two hundred tons, will blow her up; hence it is admitted, by all the above parties, that, if a sufficient quantity of powder (and which I believe need not be more than two hundred pounds) be ignited under the bottom of a first rate man of war, it would instantly destroy her.

3d. It is proved and admitted, by all parties concerned in the experiments, that a gun can be fired under water, and a cable of any size may be cut by that means at any required depth.

With these immensely important principles proved and admitted, the question naturally occurs, whether there be within the genius or inventive faculties of man the means of placing a torpedo under a ship, in defiance of her powers of resistance. He who says there is not, and that, consequently, torpedoes never can be rendered useful, must of course believe that he has penetrated to the limits of man's inventive powers, and that he has contemplated all the combinations and arrangements which present or future ingenuity can devise to place a torpedo under a ship.

There is no man of sound sense, who has the least acquaintance with the difficulties under which all the arts have labored in their infancy, who, on calm reflection, will be so weak or vain as to presume that he possesses a strength of intellect to foresee all that can be done, not only in infant arts, but in arts now familiar and long established.

But as it is impossible now to conceive the various modes which may be invented for placing torpedoes under a ship, and as the success is of incalculable importance to our country, there is every reason to prosecute the experiments with ardor; and we are encouraged to this by a contemplation of the progress of the whole military art, and particularly the attack and defence of fortified places. The celebrated Vauban, after years of experience, aided by a powerful genius, to fortify cities, confessed that it was impossible to make any work so strong by art alone that it could not be taken by the art and exertions of a besieging army, in which the besiegers commence, by parallels and zig zags, to approach the rampart of the besieged, and run their mine or subterranean passage under the works, to blow them up. During the whole time of their approaches, which is frequently for weeks or months, the besiegers are under as heavy a fire from the besieged as has or perhaps can be invented; when the explosion makes a breach in the rampart, it is defended by all the guns, loaded with grape and canister shot, which can be brought to bear upon it: the trench is enfiladed with cannon and small arms. In fact, the whole power of the besieged is directed to defend the breach, perhaps not twenty feet wide; yet, in defiance of so concentrated a fire—a fire infinitely more destructive than any ship could keep up from her bow—there are hundreds of instances of such breaches having been forced, and the works taken. Is it impossible to contemplate the ingenious combinations, the perseverance, the risk, and acts of valor, of a besieging army, and then believe that there are not ways and means, enterprise and courage, when organized and exercised, to mine through water, which is the work of a few minutes, and blow up a ship, when the risk is not one thousandth part so great as that of storming a breach? I think, sir, this comparative view of the danger in storming a breach, and attacking a ship, proves that, added to the three principles before mentioned and admitted, the courage to undertake the attack of a ship with torpedoes must be admitted also.

I will now consider the progress of the experiments at New York, and the prospect of future improvement which they present.

First, as to the harpoon, it is admitted that, at the distance of "fifteen feet, the harpoon stuck firm."* Were it improved, it should not be fired at a greater distance from the ship than thirty or forty feet, because the sudden jerk on the line might break it off at the torpedo: men in a boat, at thirty feet distance from a ship, are in as great danger as when in with her bow and under her guns; thus, as the harpoon can be fixed at fifteen feet, I will not at present insist on a greater distance, though I am certain that practice will enable me to fix the harpoons at the distance of forty or more feet, if required; but I do insist that organized men, who have courage to storm a breach or to attack a vessel by boarding, have courage to approach within fifteen feet of a ship to fire a harpoon, or even, if necessary, to drive a spike into her bow; when the ship discharges her bow guns, her bow must be covered with smoke, after which all shot against the boats will be random, particularly if the attack be made in the night; but, to protect the men, the torpedo boats may be decked with thick oak plank, and rendered proof against canister and musket shot. The risk of the men would then be inconsiderable: for, while a boat was near in with the bow of the ship, her cannon could not be brought to bear so as to fire round shot. It is, therefore, a fair conclusion that, courage added to art, a ship cannot guard herself against a torpedo attack by means of her guns and small arms only. She must, therefore, have nets, booms, grapples, &c. &c.

I will now do justice to the talents of Commodore Rodgers, by stating that the nets, booms, kentledge, and grapples, which he had arranged round the Argus, made, at first sight, a formidable appearance against *one torpedo boat and eight bad oarsmen*. I was taken unawares: I had explained to the officers of the navy my means of attack; they did not inform me of their measures of defence; the nets were put down to the ground, otherwise I should have sent the torpedoes under them. In this situation, the means with which I was provided being imperfect, insignificant, and inadequate to the effect to be produced, I might be compared to what Bartholomew Schwartz, the inventor of gunpowder, would have appeared, had he lived at the time of *Julius Caesar*, and presented himself before the gates of Rome with a four pounder, thereby endeavoring to convince the Roman legions that, by the means of such machines, well organized, he could batter down the walls and take the city: a few catapults, casting arrows and stones upon his men, would have caused them to retreat; a shower of rain might destroy his ill guarded powder, and the Roman centurions, who could not conceive the various modes in which gunpowder has since been used to destroy the then art of war, (as my opponents cannot now see the combinations by which torpedoes may supersede the necessity of ships of war) would very naturally conclude that it was a useless invention; while the manufacturers of catapults, bows, arrows, and shields, would be the most vehement against further experiments.

This, sir, may be conceived a digression; but, being on an interesting subject, I have stated this supposed first experiment with a four pounder as a case in point. Some of the first cannon were made of leather; but, if such cannon failed, does it therefore follow that gunpowder was useless? Or does it follow, because I was not prepared to put torpedoes through a net the first time it was presented to me, that the defect was in the torpedoes? You, sir, will instantly perceive it was not; but arose from the want of time and experience. I had not one man instructed in the use of the machines, nor had I time to reflect on this particular mode of defending a vessel. I have now, however, had time; and I feel confident that I have discovered a means which will render nets to the ground, booms, kentledge, grapples, oars with sword blades through the port holes, and all such kinds of operations, totally useless. It is as follows:

Should an enemy of any force enter one of our ports, and put her nets to the ground, let Government press from the wharves four or more merchantmen, loaded or in ballast, each of them from three to four hundred tons burthen;

*It entered five inches into oak plank.

in the magazine there should be thirty or forty torpedoes, each containing two hundred pounds of powder, and each adjusted to the end of a spar or boom from forty to sixty feet long, tapering from the butt to the point, where the torpedo, of a conic form, and having on each side a long blade or scythe, should be firmly fixed; let the butt end of the spar be tied so as to act like a swivel, under the fore chains, one on the larboard the other on the starboard side, and the other end of the spars, with the torpedo, be hoisted up to the spritsail yard, and held there until near the scene of action. The expense of thus preparing a ship will be eight hundred or one thousand dollars, and each will be as dangerous to an enemy as a fire ship. The expense of a fire ship is from eight to ten thousand dollars, which sum could certainly be expended to greater advantage by arranging torpedo ships, as here proposed, and for the following reasons:

First, eight thousand dollars would pay for arranging eight torpedo ships, which could be done in a few hours; each with two torpedoes projecting from the bow; which eight ships, moving at one time towards the enemy, would divide her fire on eight points, and render it less dangerous to each than in the case of one fire ship, which would draw on her the whole fire of the vessel attacked.

Second, the expense of a fire ship is so great that an attack is seldom made with more than one, which must be grappled with the enemy; then set on fire and abandoned by her men, who must take to their boat, and expose themselves to the boats and guns of the vessel attacked. Should the fire ship be grappled to the enemy, still she may not burn so as to communicate the fire; or, if to the leeward, she may be cut adrift; at all events, if in port, the men could escape to the shore; therefore, their danger not being great, they would work with more confidence and ardor to extinguish the flames and save their ship; yet the danger with which fire ships impress an enemy makes them respect the ports where they are prepared for action.

In the year 1776, Commodore Talbot grappled a fire ship to a British two decker, in the river Hudson: he set his ship on fire, and returned to shore under a heavy discharge of musketry and cannon, without losing a man. He failed to burn the enemy, but he drove the vessel attacked, and one of equal force, from seven miles above New York down to Staten Island. The following note is his account of this enterprise.*

As it does not require so much bravery to make an attack with a torpedo ship as to grapple a fire ship to an enemy, the use of fire ships proves that courage is to be found to attack with those which may be armed with torpedoes.

Suppose, then, two torpedo ships fastened to each other by a chain eighty or one hundred feet long, forming a bridle opposite to the fore chains, in the manner I arrange my floating torpedoes; then to be sailed or floated down on the tide, the torpedoes let down twenty-two feet under water, one ship steered for the larboard and one for the starboard side of the enemy; in this manner, the chain would cross her cable, before which she must either slip or cut cable and run, or the momentum of the torpedo ships would sheer round, stern outwards, and press the torpedoes through the nets under her bottom, where instant explosion would be instant death. Such an operation gives no time for an enemy to deliberate, or exert themselves to push off, or cut torpedo vessels adrift, or to calculate on getting to shore in boats. The tremendous consequence of explosion under a ship deprives common men, such as sailors, of all firmness, and the irresistible danger would also influence the major part of officers; hence this mode of attack is infinitely more to be dreaded than that of fire ships; and, for these reasons, an enemy will not dare to enter our ports to put it to the test. Should any one doubt the practicability of this mode of passing torpedoes through nets and under a vessel, the importance of the object merits the experiment. I therefore conceive it useless, at this time, to say more on the theory. †

Of the *anchored torpedoes*, I have had the pleasure to show you the improvements I have made on these, since the meeting of the committee at New York, to give them stability under water, or to take them up or put them down when necessary. There is a very simple mode to convince any unbeliever of the advantage which this kind of engine will present, and the respect for our harbors, which it will create in the mind of an enemy. Let me put one under water, and they who do not believe in its effect, may put their confidence to the proof by sailing over it.

A compound engine of this kind will cost from eight hundred to a thousand dollars; three hundred and twenty of them could be made for the first cost of one ship of 54 guns; of which three hundred and twenty, say one hundred at New York; one hundred, if required, at Boston; one hundred at Charleston; twenty in the Delaware, to be placed in the waters between the forts or batteries; and thus four ports could be guarded so as to render it impossible for the enemy's ships to enter either of them, unless they had strength first to take possession of the land and forts, and then time to deliberately search for the torpedoes; yet one ship of 54 guns cannot guard one port against one 74 gun ship, although her first cost in anchored torpedoes would guard at least three ports against ten ships of 74 guns. In this estimate, it may be also stated that a 54 gun ship, in commission, costs the nation one hundred thousand dollars a year; this, at five per cent., is interest to raise a loan of two millions to build the forts or batteries in barbette, between which the torpedoes should be placed. While I thus compare the expense of torpedoes with that of a ship of 54 guns, I do not mean to object to such ships to protect our coast; but, when considered for harbor defence, or aiding forts or batteries to defend harbors, the money can be better expended in torpedoes.

In the report of the committee it is also admitted that I cut a fourteen inch cable at the depth of six feet under water, (*it was in fact twelve feet under water.*) In this experiment it is true I was five or six minutes within pistol shot of the vessel—the reason is, it was only the fourth time a cable cutting machine was ever tried; with so little experience, I did not attempt to cut at a greater distance; the object at the time being to prove that a cable could be hooked and cut without injuring the machine. New invented instruments must be unskillfully used for a

* In the year 1776 I was captain in the service of the United States, and, at the same time, attached to General Green's brigade, then stationed on Long Island. At this time, General Washington sent for me, requesting that I would take command of a brig which was prepared as a fire ship or vessel. I consented, and, in the latter part of the year, lying in the river Hudson, nearly opposite the small river which separates the island of New York from the main land, I took advantage of a fair wind, ran down the river to two British ships of war, which lay at anchor about seven miles above New York, and grappled a two decker, and, perhaps strange to say, I lay under her side until I got out of the water, where I was forced by the violence of the fire; after which I took up a brave man by the name of Priestly, who was also forced into the river by the flame; myself and all my men escaped in my boat to the Jersey shore, under a fire from the broadside and musketry of the ship not grappled, without the loss of a life. I was, however, so much burnt that I could not see the light for twenty days. This enterprise took place about 4 o'clock in the morning, and the battle of Harlem, on York Island, commenced at day light; on which occasion, the American arms were probably much aided by the attack with this one fire ship: for I drove every ship of war out of the Hudson river down to the watering place at Staten Island, and cleared the river, for some time, of ships of war, which it was evident were sent up the river to cover the left wing of the British army.

SILAS TALBOT.

OCTOBER 15, 1810.

† Mr. Colden has very properly remarked, "that, if an enemy be driven to the necessity to protect herself with nets from above her water line, to the bottom of the water, in which she may be anchored, and which will sometimes be fifty or more feet deep; if she must place round her booms, spars, kentledge, and grappels, and thus trammel herself so as to be unfit for active service, that alone is a sufficient reason for adopting torpedoes." But, on the plan I now propose, to break through nets with merchant ships armed with torpedoes, I will venture to predict that I will compel the vessel attacked to be so much embarrassed by nets, booms, or spars, to fend off, as to make her totally unfit for action; or I will blow her up; or, should I fail to blow her up, I will prove that I can cut her cables or chains, and set her adrift, with all her encumbrance of nets to the bottom, booms, spars, &c. &c. with which she must either be driven on shore or go to sea.

time, but, with the practice of only one month, and one good boat's crew, I will undertake to cut the cable of a ship at any given depth under water, without approaching nearer to her than eight hundred yards. I will also undertake to place myself at the distance of eight hundred yards from a ship having an unguarded cable, and at that distance I will put an improved cable-cutting machine in the water; I will there abandon it, and it shall go to the cable, cut it off, and set the ship adrift, without any further aid on my part than placing it in the water. Such is the unforeseen and incalculable results of mechanical combinations.* It may be said, if one cable be cut and anchor lost, the enemy could put out a second, third, fourth, or fifth anchor and cable; but as a provident Government would not undertake to defend a port with one cannon, so there should be in the magazine fifteen or twenty machines for cutting cables, and there should be a marine militia practised in the use of them. In such case, an enemy could not afford to exchange an anchor and cable, worth five thousand dollars, against three ounces of gunpowder, and, at the same time, run the risk of being driven on shore in a calm or by a lee tide: hence, in our calculations on harbor defence, this instrument alone will always be an embarrassing consideration for an enemy.

It must be admitted that the whole of the experiments at New York were badly executed, but they could not be otherwise. I had not a man practised, nor am I experienced in the use of my own machines. I consequently was necessitated to explain my theory by such imperfect means as I had in my power; yet, under all these disadvantages, I have, to my satisfaction, gained much useful experience, and evidently convinced some of the committee of the great importance of persevering, and particularly with a view to harbor defence. By the experiments, I have discovered much of the strength and resources of my opponents, and I am satisfied I can defeat every obstruction which has hitherto been presented; this I hope to prove after some practice. But, having witnessed the activity and resources of mind which Commodore Rodgers and Captain Chauncey possess, I look forward to contend with new and difficult combinations which they may produce for defence. In this manner it is probable we shall discover the principal means of defence against torpedoes, and modes of attack with them, until, like the attack and defence of fortified places, the measures to be pursued on each side, in all cases, will become familiar, and a fair calculation may be made on the mode of attacking a ship.

But, sir, to do this, it is indispensable that I should have twenty or thirty men under my command, to be practised to the use of my engines in my own way. Well as gunnery is understood, no one can hope that young recruits should fire a cannon with skill and effect, until they have some months' practice. It is, therefore, demanding of me to perform a miracle, to apply torpedoes to advantage, break through nets, harpoon ships, and cut cables, with an outfit of one thousand dollars, and not one man practised to assist me. Compare my situation with that of my opponents—men of talents and sound nautical knowledge, working on their own element, the commodore commanding more than four hundred men, in a ship of 54 guns, which ship, with all her various apparatus, as fitted for efficient service, is an engine produced by the combined talents of some thousands of ingenious men, who have directed their attention to the improvement of vessels of war since the invention of gun-powder: thus the commodore, added to his own talents, has the advantage of the experience and talents of all nautical men who have lived before him; yet he would not be so imprudent as to face an enemy of equal force, if his men were raw recruits, unpractised to the guns or working of the ship; and it is to familiarize his men to their duty in each department that he is in a state of constant practice. A succession of experiments on his men, which costs the nation one hundred thousand dollars a year, which experiments, when followed from one to ten or twenty years, at the expense of from one hundred thousand to two millions of dollars, is to enable him to do no more than fight one ship of equal force, in which contest the chances would be equal that he would not take or destroy the enemy: with all this expensive experiment for years of peace, to be prepared in case of war, it is not expected that he should contend with a ship of 74 guns. But if experiments, which are inconsiderable in their expense compared to that of a 54 gun ship, should prove that attacks with torpedoes can be rendered practicable and efficient, (*and every reflection teaches me that they can*) it will be immaterial whether the enemy's vessel be a 40 or an 80 gun ship—two hundred pounds of powder exploded under the bottom of *either* will produce certain destruction.

Thus, sir, considering this subject in these various points of view, its infancy, its prospect of success, and, if successful, its immense importance to these States and to mankind, the small establishment, and inconsiderable sum required to practise and prove its utility, compared with the expense of other nautical establishments which promise only common and imperfect results, I conceive it highly merits a patient and candid succession of experiments: for which purpose, I feel the necessity of taking time, that I may have the ensuing summer to practise a few men on nets, and such other obstructions as may be presented; which I hope, sir, will meet with your approbation and that of every friend to science.

I unite with the committee in opinion that Government should not rely on this, or any new invention, for defence, until its utility be fully proved. It never has been my wish that such confidence should be placed in torpedoes, until fair experiment had proved their value beyond a doubt.

I have the honor to be, sir, with great respect, your most obedient,

ROBERT FULTON.

The Honorable PAUL HAMILTON, *Secretary of the Navy.*

* This discovery has been produced by my other experiments.

CULTURE OF HEMP.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 21, 1811.

NAVY DEPARTMENT, *January 21, 1811.*

SIR:

I have had the honor of receiving your letter of the 17th instant. As to the expediency of encouraging the culture of hemp by protecting impost duties, or by prohibiting the importation of that article into the United States and its territories, it is not, I presume, expected of me to make any observations, as these are subjects appertaining peculiarly to the Treasury Department, and no doubt the Secretary of the Treasury can afford all the information necessary to enable you to form a satisfactory opinion upon them.

Without venturing an opinion upon the expediency of either of these provisions, I will submit for your consideration the following observations relatively to the culture and dressing of hemp.

In the essays first made by our countrymen in the culture of hemp, and in dressing it for market, the disadvantages of inexperience were sensibly felt. Many errors, added to the dissuaves of previous habit, discouraged its culture: doubts, too, whether the climate or soil of our country was adapted to the raising of hemp, were entertained. But very few indeed indulged the expectation that we should ever be able to make hemp equal to that of

Russia. Hence, for many years the culture of this important article progressed slowly. Our countrymen, however, stimulated by their characteristic enterprise, and by hopes of ultimate success, persevered in repeated experiments, and have at length acquired that practical information which has corrected many of their first errors, and now enables them to raise hemp in such quantity, and of such quality, as to compensate them amply for their trouble. Still, however, they have not yet acquired that extensive information upon the subject which would assure to them all the advantages arising from the culture of this valuable article.

In preparing the hemp for breaking, the pernicious practice of what is commonly called "dew rotting" still prevails, to a great extent—a practice tedious in its process, partial and unequal in its effects upon the fibre, and destructive of considerable quantities of hemp, by the unavoidable exposure of it to the winds, which blow it about and entangle it. Hemp thus prepared, is in some places strong, in others weak; and has, moreover, a dark color, all which materially affect its value.

In hemp, there is a viscous gummy substance, by which the fibres of the bark are bound together, and to the body of the plant; and all that is necessary to prepare it for breaking, is to dissolve this substance. The experience of other nations has long since decided, that this dissolution can best be effected by immersing or steeping the plant in pure clear running water, which, in a much shorter period of time than any other system heretofore practised, produces this dissolution over all parts of the plant equally, makes it equally strong in all places, renders it more flexible, gives it a lively bright color, and, what is an object of vast importance, especially as respects durability under water, it will receive and retain a greater portion of tar than when prepared by "dew rotting." It may be here further remarked, that the more clear and pure the stream of water the brighter will be the color of the hemp.

"Dew rotting" requires many weeks of constant attention. But practical men affirm, that, in a *pure warm stream* of water, the process of dissolution will frequently be completed in five or six days.

In Russia, three weeks are allowed for steeping where the water is not very cold; but if cold, as in rivers and springs, five, and sometimes six weeks, are found to be necessary. To ascertain whether the hemp be sufficiently steeped, a head is taken out of the pound, dried and beat, and if the husk comes off, the hemp is considered as having been sufficiently steeped. It is then taken out of the pound, and suspended upon sticks placed horizontally, for the purpose of drying; after remaining in the open air in this situation about a fortnight, it is removed and put into a kiln, where it is suffered to remain twenty-four hours. It is then ready for breaking, which operation is performed by means of a hand mill; after this is done, the husk is beaten off by striking the heads obliquely with iron and wooden instruments, of the shape of a large two-edged knife; finally it is drawn through a wooden comb, with one row of wide wooden teeth, for the purpose of unravelling and cleaning it.

As to the climate and soil best adapted to the culture of hemp, it may be observed that it is raised both in the frigid and torrid zones; and that any soil, if not wet, may be made to yield hemp, though the richer the soil the better, and a flat country is, for this purpose, to be preferred. On the waters of the Ohio, Mississippi, Susquehannah, Potomac, James River, and other parts of the United States, there is an abundance of land peculiarly adapted to the culture of hemp.

As to the certainty and profit of a crop of hemp, it is believed that no crop is more certain when sown in ground adapted to it; and to the grower, it yields a profit superior to most articles, and exceeded but by few. An acre of ground well ploughed, harrowed, and manured, will yield one thousand pounds of clean hemp, worth, when properly cured and dressed, from one hundred to one hundred and fifty dollars, sometimes two hundred dollars. The labor and necessary buildings required, in the sowing, preserving, and preparing for market, a crop of hemp, are inconsiderable when compared with some other articles, and especially tobacco, while the profit is greater, and the injury done to the soil much less.

From a disposition to encourage the culture of hemp, cordage made of American hemp has been brought into use in our navy. For standing and running rigging, and, indeed, for most other purposes, excepting cables, it is found to answer very well, even when made of "dew rotted" hemp. Of the "water rotted" hemp, we have not yet been able to procure a sufficient quantity to justify our excluding the use of Russia hemp, especially for cables. American "water rotted" hemp is no doubt equal in all respects to the best Russia hemp: indeed, I rather incline to think it superior. Upon this point, however, the samples herewith sent will enable you to form an opinion.

No. 1 is a sample of American "water rotted" hemp, grown on Blannerhasset's island.

No. 2 is a sample of Russia hemp, delivered to me by a rope maker, as the *best* kind of Russia: in this, however, I incline to think there must be some mistake, though it is certainly good hemp.

No. 3 is a sample of American "dew rotted" hemp, grown in Botetourt county, Virginia.

Upon examining these samples, you will, I believe, find the opinion which I have ventured to express, with respect to the mode of dressing hemp, confirmed in a great measure. The great difference between "water rotted" and "dew rotted" hemp will be obvious to you from such examination.

American "dew rotted" hemp being of a dark color, frequently neither broke nor scutched as it ought to be, and brought to market without being properly enbaled, does not, in such cases, command a good price in our markets. These are the causes, and this the effect. The growers of hemp ought not, however, to be discouraged by this circumstance. They should remember that, in removing the cause, the effect will cease; and they may be assured that, if their hemp is properly prepared, it will always command a price equal to the hemp of Russia, probably superior. For my own part, as Secretary of the Navy, I can only say that, in such case, I should feel it to be my duty to give a decided preference to hemp of our own growth.

The quantity of hemp raised in our country increases every year, and no doubt exists that, in a very short period of time, enough will be raised to supply every public and private demand for all the purposes to which it is applicable.

The great desiderata to be obtained, appear to me to be, to persuade our countrymen to relinquish the prevailing pernicious practice of "dew rotting," and to adopt that practice which the experience of other nations has approved, namely, the steeping in water: this done, they will soon find their advantage in the change; and thus a new and powerful impulse will be given to the culture of this valuable article.

Should you think it expedient to offer any inducements to produce this change in the manner of dressing our hemp, whence would flow such happy effects, permit me to observe, that the only one which at this time occurs to me, as coming within the range of my official duties to execute, would be an annual appropriation by Congress, of a sum of money enabling me to contract for a supply of American hemp and canvass for the use of our navy. Should this plan be approved, the appropriations should be made in time to admit of contracts being formed prior to the commencement of the season for croppings; and the first appropriation should be made distinct from other appropriations, or it might be added to the estimates for the current year in the first instance; this would involve an appropriation in the first year, exceeding the amount required in that year for the expenses of the navy; but it would be a provision for the ensuing year, and the amount might be deducted from the estimates of the ensuing year. The propriety of this provision will readily occur to you, when I state the fact, that it would not be possible at this time to contract for these articles, deliverable in time to be used within the year; they could not be delivered till after the crops of this year shall have been gathered and prepared for market. In the contracts which might thus be made, it would become my duty, in execution of the object of Congress, to stipulate that the hemp should be steeped in water instead of being exposed to dews; and upon good security being given, a portion not exceeding one-fourth or one third of the amount of each contract might be advanced. These contracts being judiciously distributed in different parts of the country, and what would be just, a higher price being given than "dew rotted" hemp would command, it would not be unreasonable to expect that a spirit of emulation, always useful to public improvements, would be excited, and powerfully assist in exploding present errors, and in producing the change in the dressing of hemp; which, in my opinion, would essentially promote individual and national prosperity.

Some few of our countrymen do, at this time, I am told, entertain apprehensions that our markets will be overstocked with American hemp, and that the price will be greatly diminished. This admitted, they have it in their power to prevent the importation of all foreign hemp, by making theirs in all respects equal to foreign hemp. This, indeed, in a national view, would be an important point gained. But when it is considered to what a variety of pur-

poses hemp is applicable; that we are at this time greatly dependent upon foreign countries for hemp, for canvass, and linens of various kinds made of hemp; that there exists a spirit of patriotism and of persevering industry ready to be exerted, when fit opportunities shall present, to shake off this dependence; that, if more hemp should be raised than will be required for cordage, factories of canvass and linens will necessarily be established; such apprehensions lose their force, and yield to reflections and anticipations of the most agreeable nature.

A comprehensive view of this subject leads us to cherish the expectation that the United States will, at no very distant period, become exporters of hemp, as they now are of every other description of naval stores and of cotton; and that the individuals who raise it will, like those who raise other naval stores and cotton, experience all the beneficial effects resulting therefrom.

These observations are submitted to you, sir, with all the diffidence which the novelty of the subject naturally excites, and with the hope that they may be useful in aiding your deliberations upon the highly interesting question now under your consideration.

I have the honor to be, respectfully yours,

PAUL HAMILTON.

HON. THOMAS NEWTON,
Chairman of the Committee of Commerce and Manufactures.

12th CONGRESS.]

No. 87.

[1st Session.]

INCREASE OF THE NAVY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 17, 1811.

Mr. CHEVES, from the committee to whom was referred so much of the President's message of the 5th of November, 1811,* as relates to the naval establishment, reported, in part:

That the subject referred to your committee, in its several relations, presents a question of the highest importance to the interests of the people of this country, inasmuch as it embraces one of the great and leading objects of their government—that which, above all others, laid the foundation of the happy union of these States—your committee need hardly say they mean the protection of maritime commerce—an interest which, though when superficially viewed, seems to affect only the Atlantic portions of the country, yet really extends as far as the utmost limits of its agriculture, and can only be separated from it, in the opinion of your committee, by a total blindness to the just policy of Government. The important engine of national strength and national security which is formed by a naval force, has hitherto, in the opinion of the committee, been treated with a neglect highly impolitic, or supported by a spirit so languid, as, while it has preserved the existence of the establishment, has had the effect of loading it with the imputations of wasteful expense, and comparative inefficiency.

No system has hitherto been adopted, which, though limited by the dispensing security of the times, and the just economy of our republican institutions, was yet calculated to enlarge itself gradually with the progress of the nation's growth in population, in wealth, and in commerce, or expand with an energy proportioned to a crisis of particular danger.

Such a course, impolitic under any circumstances, is the more so when it is demonstrably clear that this nation is inevitably destined to be a naval power, and that the virtue of economy, if no other motive could be found, would recommend a plan by which this force must be gradually increased, the necessary expenses diminished, and durability and permanency given to the strength which they may purchase.

That a naval protection is particularly secured to the interest of commerce, by our great political compact, is proved by that part of the constitution which expressly gave to Congress the power "to provide and maintain a navy," and is confirmed by the history of the times, and the particular circumstances which led to its institution; but it is alike secured by the fundamental nature of all government, which extends to every interest under its authority, a protection (if within the nation's means) which is adequate to its preservation; nor is this protection called for only by the partial interests of a particular description of men, or of a particular tract of country. A navy is as necessary to protect the mouth of the Mississippi, the channel through which the produce of the agriculture of the Western States must pass to become valuable, as the bays of the Chesapeake and Delaware, and more necessary than on the shores of the Eastern or the Southern States.

It has, indeed, been urged, your committee are aware, that a naval establishment is forbidden by the great and burthensome expenditures of public money which, it is said, will be required to support it, and by the inability of the country, by any expenditure, to maintain a navy which can protect its maritime rights against the power of Great Britain. The first objection appears to your committee to be founded on a mistaken assumption of the fact: for, in their opinion, a naval force, within due limits, and under proper regulations, will constitute the cheapest defence of the nation.

The permanent fortifications necessary to the defence of the ports and harbors of the Union will cost, in the opinion of your committee, as much in their erection, and as much annually, if properly provided and garrisoned, as the naval force which, it is confidently believed, on the testimony of persons competent to decide, would be amply sufficient to prevent all attacks from reaching our shores. It will thus furnish the most appropriate, adequate, and cheap protection against a foreign enemy, and will, at the same time, be perfectly innocuous to the public liberty, and the private morals of the country; dispense almost entirely with a standing army, so hostile to the genius of our free constitutions, and remove the standing vices and evils of camps and garrisons from the cities on our sea coast; cherish a noble body of mariners, who, in honorable peace, will spread the sails of a prosperous and vivifying commerce on every sea, and, in necessary war, terribly avenge their country's wrongs.

The other objection your committee suppose to be founded on an imperfect examination of the subject: for those who are best able to form opinions on this matter, from congenial professional pursuits, as well as a particular knowledge of the marine of Great Britain, declare that she cannot, at any time, spare more than a very limited force for the American station; one which can be effectually resisted by an establishment which may be supported by this Government without a direct expense, while, in its effects, it will greatly more than reimburse to the national wealth, the sums which may be drawn from it for this object; protect our harbors from insult, our coasting trade from spoliations, and give us the dominion of a sea on our borders which we ought to call our own, and defend with our cannon.

To detail all the reasons on which this opinion is founded would, perhaps, not be in the power of your committee, who are, in part, governed by the opinions of men of experience and professional skill, (often among the best grounds of human faith, but not always equally communicable.) But the leading facts and principles on which it is founded are too plain and obvious to labor under this difficulty. The history of all times proves the inability of Great Britain, or any other Power, to station a large force in remote seas: for, independent of the necessity that always exists for its presence in more proximate quarters, could the former nation place the whole of her thousand ships on our coast, she would be unable, in a state of hostility with the United States, competently to supply even a considerable

*See Foreign Relations, No. 32, page 79.

squadron of them, for any duration of time, with the least regard to the efficiency of the service, and without a wasteful and ruinous expense. Let those who hold a different opinion declare how, and from whence.

To the defence of your ports and harbors, and the protection of your coasting trade, should be confined, in the opinion of your committee, the present objects and operations of any navy which the United States can, or ought to have. In this view our advantages are great and manifest. Looking along our extended line of coast, from the north-eastern to the southern extreme of our territory, we discover, in quick succession, ports and harbors furnishing in abundance every supply for active and constant service; in which to concentrate, by mutual advice and information, which can be transmitted with greatest certainty and speed, the forces of different stations, to attack the enemy in detail when his vessels may be scattered; and in which our ships may find refuge and security when approached by a force so much superior as to forbid a combat. To enter no further into details, it is obvious that, from these advantages, the power and efficiency of an American navy must be double its nominal proportion to that of an assailing enemy. But your committee beg leave to observe, that it would be unworthy the magnanimity of the nation to look only at one Power, and forget that it stands in the relation of an independent sovereignty to other nations, against whom, unless man change his nature, and cease to be violent and unjust, it may be necessary to array the national force on that element where the injury may be suffered, and where alone it can be avenged or redressed. With this view, your committee have not considered this subject with regard only to the practicable and advisable preparation for the present momentous crisis, which, whatever it may be, must be greatly inadequate, for the reasons already stated: but the object of the committee is to recommend a system which shall look to futurity, and though limited by the present situation and means of the country, have a capacity to be enlarged in proportion to the growing wealth, commerce, and population of the nation. Your committee are, at the same time, not unaware that some of those who are unfriendly to a navy, ground their opposition rather upon its future permanent establishment than on its present expense. But your committee will only observe, that the wisdom of that policy seems to reach as far beyond reasonable practicable views, as it will probably fall short of the attainment of its object. To restrain the great energies of such a number, as this country possesses, of the best seamen the world ever beheld, and such a mass of tonnage as Great Britain herself has not boasted more than twenty years, will as much transcend the feeble efforts of the politician, as it would be beyond his power to create them: they are formed by the high behest of beneficent nature, nurtured by our wise, free, and happy public institutions, and can only perish with the latter.

Your committee, however, admit, that it will neither be politic nor practicable to swell the naval establishment of this country to the size of our desires or of our necessities; but a gradual increase of it is, in their opinion, within the most limited means, and within the obvious policy of the Government; and in attempting this, some present addition will be made (too little—much too little, they lament) to the best strength of the nation, as a measure of preparation for this crisis of danger.

With these observations, and with a full, detailed, and useful report of the Secretary of the Navy, in reply to questions propounded by your committee, they beg leave to recommend that all the vessels of war of the United States, not now in service, which are worthy of repair, be immediately repaired, fitted out, and put into actual service.

That ten additional frigates, averaging 38 guns, be built; that a competent sum of money be appropriated for the purchase of a stock of timber: and that a dock, for repairing the vessels of war of the United States, be established in some central and convenient place.

They also beg leave to report a bill, entitled "A bill concerning the naval establishment."

WASHINGTON, November 19, 1811.

SIR:

I am directed, by the committee to whom was referred so much of the President's message of the 5th instant as relates to the naval force of the United States, to request a reply from you to the several questions which follow; and they have also directed me to ask as early an answer as may be conveniently practicable:

1st. What number of the vessels of war of the United States is now in actual service; and what are their names, rates, and stations?

2d. What number of vessels is laid up in ordinary; what are their names and rates; what will be the expense of repairing and equipping them for actual service; within what time can the same be accomplished; and what will be their aggregate annual expense in service, with that of those now employed?

3d. What will be the expense of building, manning, and completely equipping for actual service, a vessel of each rate of those most useful and most usually employed in modern naval war; and what will be the annual expense of maintaining such vessels, respectively, in actual service?

4th. Will any, and, if any, what, force of vessels, not exceeding the rate of frigates, afford a reasonable protection to the coasting trade and the mouths of the harbors of the United States? If such be deemed incompetent, what other force is deemed requisite?

5th. What materials, for ship building and naval equipment, are deemed imperishable; and to what extent in quantity, and what amount in value, would it be practicable and advisable to provide the same?

6th. What is the number of gunboats belonging to the United States; what is their state of repair; what number is in actual service; and where are they stationed or laid up?

7th. In the event of putting in commission the ships now laid up in ordinary, could the necessary seamen, to man them, be speedily procured, without an increase of pay or bounty?

I am further directed to request, that you will communicate in your reply any other information which, in your opinion, may be important or material on this subject.

I have the honor to be, sir, with great respect, your obedient servant.

LANGDON CHEVES.

Honorable PAUL HAMILTON, *Secretary of the Navy.*

NAVY DEPARTMENT, December 3, 1811.

SIR:

I have had the honor of receiving your letter of the 19th instant. The several questions which you have been pleased to propound to me, involve a scope of information difficult correctly to state, and comprehend points upon which I am compelled to submit conjecture in some instances instead of fact. The subject is, however, so deeply interesting as to have commanded my most deliberate and anxious investigation.

The papers herewith submitted, and marked A, B, and C, will, I hope, afford satisfactory answers to your three first queries.

In reply to the fourth, I have to state, that, as to the force necessary to afford a reasonable protection to the coasting trade, and the mouths of the harbors of the United States, it appears to me impossible to form a satisfactory opinion, unless we knew the extent of the force by which our coasting trade and the mouths of our harbors may be assailed. The naval nations of Europe employ line of battle ships. The heaviest rate of our vessels of war does not exceed a large 44 gun frigate, which is inferior in number of guns, and men, and weight of metal, to a ship of the line. If, then, while we have only frigates, an enemy should send against us ships of the line, the protection which, in such case, we should be able to afford to our coasting trade, would obviously be very imperfect. With a force equal in number and rate to that of an enemy, or to that which an enemy at a distance could send against us, neither our commerce on our coast nor our harbors would have any danger to apprehend: for, considering the numerous dangers of our coast, the heavy gales and fogs to which it is peculiarly subjected, our superior knowledge of the shoals with which it abounds, and the numerous ports to which we have access for victualling, repairing, and equipping ships, so decided would be our advantage, that it is believed an enemy, only our equal in number and rate of vessels, would not, under such circumstances, approach our shores with any intention of remaining for the

purpose of molesting our trade. Such, indeed, are the advantages which we possess, in these particulars, that I incline to the opinion that, with half the number of vessels of the same rate which might be sent against us, a reasonable protection might generally be afforded to our coasting trade. I do not wish to be considered as giving the opinion, that, with such a force, our coasting trade could be effectually protected; that no capture of our merchant vessels would be made under such circumstances; for, even if our force were equal to an enemy, we might expect occasionally to have vessels captured. An enterprising enemy would watch opportunities, and avail himself of them; but, in our operations against the enemy, we should not, it is presumed, be found deficient in enterprise or vigilance, competent to retort his aggressions, and to secure an equivalent for all our losses.

Supposing, then, a continuance of the present state of things in Europe, and that the United States should come into collision with either of the present great belligerent Powers, a naval force of twelve sail of the line, (74's) and twenty well constructed frigates, including those we now have, and rating generally not less than thirty-eight guns, with the addition of our smaller vessels now in service, judiciously directed, it is believed would be ample to the protection of our coasting trade; would be competent to annoy extensively the commerce of an enemy; and, uniting occasionally in operations with the gunboats already built, if equipped and brought into service, and our fortifications, also, afford complete protection to our harbors.

The imperishable materials for ship building and naval equipment, consist of timber, plank, staves, masts and spars, iron, copper in sheets, bolts and nails, anchors, kentledge, canvass, hempen yarns, &c. In timber of every description, required for navy purposes, our country abounds, and it would at this time be practicable to procure any quantity, on terms that are reasonable. It would unquestionably be sound economy to keep always on hand an adequate supply of this all-important article, which ought to be well seasoned before it is used. The deplorable effects of being compelled, as the Navy Department has frequently been, to use green timber in the repair of our ships, our experience too fully demonstrates. This, indeed, is one of the principal reasons of the great expense generally, and very justly, complained of by the guardians of the public purse; happily, however, it is perfectly within the reach of our power to remedy this evil, and I do most earnestly recommend to your serious consideration, the propriety of an extra annual appropriation for three years, for the purpose of enabling the Department to provide an extensive stock of every description of timber required for navy purposes. The other articles of an imperishable nature may be procured as required, or as opportunities offer to obtain them on reasonable terms, out of the general appropriation for repairs made annually, for the support of the navy, to which purposes it will partly be devoted; and to the encouragement of the manufacture of sail cloth, manufactured within ourselves, of hemp of our own growth, by giving it a preference to that made of foreign hemp.

The paper marked D affords an answer to your sixth query, as full as the information in possession of the Department will enable me to give it.

If it should be determined to commission the ships now in ordinary, the necessary seamen to man them can, it is confidently believed, be procured without any increase of pay or of bounty, and in time to man them as they may be prepared for service.

In my answer to your fifth query, I have stated one of the causes of the great expense of the navy, so generally, and it is admitted justly, complained of, and I have suggested a remedy for that particular cause. Other causes of expense exist, which may be obviated; and, under the latitude you have allowed me, I will, at this time, state one which immediately presents itself.

The United States do not own a dock. To repair our vessels we are compelled to heave them down—a process attended with great labor, considerable risk, and loss of time; and upon a ship thus heave down, the carpenters cannot work without much inconvenience. Hence the Department is subjected to much expense, which might be avoided by the construction of one or more suitable docks. Such a provision, even in the present state of our navy, would be valuable for the reasons above stated; but if Congress determine to have built vessels of a rate superior to those we now have, it will certainly be found to be indispensable. The accuracy of this remark will be admitted when we consider the force requisite to heave down a ship of the size of even a frigate, and the straining of her frame when this is done on the principle of the lever.

I have now, sir, according to my best judgment, offered replies to your queries; and, assuring you of my readiness to obey the further commands of the committee,

I have the honor to be, with the greatest respect, yours,

PAUL HAMILTON.

Honorable LANGDON CHEVES, *Chairman of the Naval Committee.*

A.

Exhibit showing the number of vessels of war of the United States now in actual service; their names, rates, and stations, for the winter.

Names of vessels.	Rate.	Station for the Winter.	Remarks.
Frigate President, - - -	44	Newport, Rhode Island,	Under command of Com. Rodgers.
Frigate Essex, - - -	32		
Ship John Adams, - - -	20		
Brig Argus, - - -	16	Hampton Roads,	Under command of Com. Decatur.
Frigate United States,	44		
Frigate Congress, - - -	36		
Ship Wasp, - - -	16	Foreign service.	
Brig Nautilus, - - -	14		
Frigate Constitution,	44		
Ship Hornet, - - -	16	Charleston, South Carolina,	Under command of Capt. Campbell.
Brig Vixen, - - -	14		
Brig Enterprise, - - -	14		
Brig Siren, - - -	16	New Orleans,	Under command of Captain Shaw.
Brig Viper, - - -	10		
Brig Oneida, - - -	16		
		Lake Ontario,	Lieutenant Woolsey.

B.

Exhibit showing the number of vessels laid up in ordinary; their names and rates; the original cost of each, including every expense; the probable expense of repairing and equipping each for actual service; the period it will probably take to repair each; and the annual expense of each in actual service.

Names of vessels.	Rate.	Original cost.	Probable expense of repairing, &c.	Time necessary to repair, &c.	Annual expense.
Chesapeake, -	36	\$220,677 80	\$120,000	Six months, -	\$102,253
Constellation, -	36	314,212 15	120,000	Six months, -	102,253
New York, -	36	159,639 60	120,000	Six months, -	102,253
Adams, -	32	76,622 27	60,000	Six months, -	81,607
Boston, -	32	119,570 04	60,000	Six months, -	81,607
					<u>\$469,973</u>

NOTE.—The sums and periods of time, estimated for repairing and equipping the vessels of war comprehended in the above statement, are in a great degree conjectural; though it is presumed, that the sums stated would be sufficient, and that, in the time stated, the vessels could be repaired.

Until these vessels shall be opened and thoroughly examined, it is obviously impossible to ascertain, with any degree of precision, what would be the expense of repairing them, or what time it would take to repair them: for, until then, their actual state and condition cannot be ascertained. By some it is at this time thought that neither the New York nor the Boston are worthy of being repaired; but I hope that, on opening them, we shall find them otherwise; and, under this impression, I have returned them in this exhibit. Should they be found to be too rotten to repair, I shall consider it as a serious misfortune, for they have been constructed upon the most approved models for vessels of their rates.

In the estimate of the expense of the navy for the year 1812, the employment of all our frigates, excepting those above stated, and of all our other vessels of war, and of sixty-two gunboats, is contemplated: these objects, together with the corps of marines, navy yards, and ordnance, &c. are estimated to cost two millions five hundred and two thousand and three dollars ninety cents, which is the aggregate amount of the estimate for the year 1812. Of this sum—

The expense of the corps of marines is estimated at	-	-	-	-	\$228,905 90
The expense of navy yards, &c.	-	-	-	-	60,000 00
The expense of ordnance, &c.	-	-	-	-	60,000 00
The expense of the vessels of war in commission, and of those and the gunboats in ordinary,	-	-	-	-	1,403,098 00
The expense of the sixty-two gunboats in commission,	-	-	-	-	750,000 00

Whole amount of the navy estimate, year 1812, - - - - - \$2,502,003 90

If, then, the frigates now in ordinary were put in commission, “their aggregate annual expense in service, with that of those now employed,” and including every other object of navy expense, upon the scale contemplated in the estimate for the year 1812, would be the sum stated under the head “annual expense” in this exhibit, viz:

Added to the whole amount of the navy estimate, as stated above,	-	-	-	-	\$469,973 00
					2,502,003 90
Which makes	-	-	-	-	<u>\$2,971,976 90</u>

But, excluding the expense of the corps of marines, navy yards, and ordnance, above stated, the annual expense in service of the frigates now in ordinary, with that of those now employed, and of sixty-two gunboats in commission, and of all the other gunboats in ordinary, would be two millions six hundred and twenty-three thousand and seventy-one dollars.

The aggregate annual expense, if the frigates now in ordinary were put in commission, and added to the expense of the vessels of war now in commission, and of the ordinary, but excluding the expense of the corps of marines, navy yards, ordnance, and of the sixty-two gunboats in commission; that is, the annual expense of all our *vessels of war in service*, and the expense of gunboats in ordinary, would be one million eight hundred and seventy-three thousand and seventy-one dollars.

But, as stated in this paper, it would probably take six months to repair the frigates in ordinary: hence, their expense, if put in commission, would, for the year 1812, not exceed half their annual expense, viz: four hundred and sixty-nine thousand nine hundred and seventy-three dollars; half of which is two hundred and thirty-four thousand nine hundred and eighty-six dollars fifty cents: say two hundred and thirty-five thousand dollars.

If, then, the frigates in ordinary were put in commission, the whole expense of the navy, for the year 1812, including every expense whatsoever, (excepting the sum stated as necessary to put the frigates in ordinary in repair) would be two millions seven hundred and thirty-seven thousand and three dollars and ninety cents.

And, excluding the expense of the marine corps, navy yards, and ordnance, it would be two millions three hundred and eighty-eight thousand and ninety-eight dollars.

And, excluding the expense of the marine corps, navy yards, ordnance, and the sixty-two gunboats in commission, the expense for the year 1812 would be one million six hundred and thirty-eight thousand and ninety-eight dollars.

If, then, we had all our *vessels of war* in commission, their annual expense would be one million eight hundred and seventy-three thousand and seventy-one dollars; but, for the year 1812, as five of them could not be brought into actual service for six months, their expense would be one million six hundred and thirty-eight thousand and ninety-eight dollars.

The estimate for the repair of the frigates in ordinary is a distinct consideration, and is not comprehended in any of the views taken of the subject. That estimate, as will be seen by reference to the table, amounts to four hundred and eighty thousand dollars: If, then, it should be determined to put the frigates now in ordinary in commission, an appropriation of four hundred and eighty thousand dollars for their repairs and equipment, and of two hundred and thirty-five thousand dollars for their support in actual service, during the year 1812, would be necessary. These items, added to the aggregate of the navy estimate for the year 1812, would make the whole expense for that year, three millions two hundred and seventeen thousand and three dollars and ninety cents.

C.

Estimate of the expense of building, and completely equipping for actual service, vessels of war of various rates; and the annual expense of each.

Rate.	Expense of Building.		Annual expense of each.	REMARKS.
	Per Gun.	Dollars.	Dollars.	
74	\$4,500	333,000	211,784	The Frigate President cost, \$220,910 08 Philadelphia, 179,349 00 New York, 159,639 60 Essex, 139,362 50 John Adams, 113,505 72 Maryland, 70,249 83
60	4,500	270,000	140,000	
50	4,500	225,000	115,214	
44	4,500	198,000	110,000	
36	4,500	162,000	102,000	
32	4,000	128,000	82,000	
20	3,500	70,000	50,202	

NOTE.—An estimate of the annual expense of a seventy-four, in detail, is subjoined, for the satisfaction of the committee. The annual expense of all the rates under sixty guns is given from past experience, and in neither case, it is believed, does this statement vary materially from what would be the actual annual expense.

The estimate of the expense of building ships of war of different rates, is believed to be ample. The cases referred to under sixty guns, are considered as appropriate; they show the actual cost of vessels of war some years since, and it has been attempted to fix the expense per gun by this standard of experience. It is stated that a fifty gun ship may be built and equipped for two hundred and twenty-five thousand dollars, because the frigate President cost only two hundred and twenty thousand nine hundred and ten dollars and eight cents; and this is believed to be correct: for the frigate President, although she rates less than a fifty gun ship, yet she is so nearly equal in her hull, armament, sails, rigging, &c. that such a frigate would certainly cost within five thousand dollars as much as a fifty gun ship would cost. To invalidate the effect of this reference in this case, it might be said, that, although the frigate President cost only two hundred and twenty thousand dollars, yet that other frigates, for instance the United States, the Constitution, and the Constellation, the two first equal, the last inferior in rate to her, cost considerably more; the fact indeed is so, for the United States cost two hundred and ninety-nine thousand three hundred and thirty-six dollars and fifty-six cents; the Constitution cost three hundred and two thousand seven hundred and eighteen dollars and eighty-four cents; and the Constellation, of inferior rate to either, cost three hundred and fourteen thousand dollars and upwards. But it must be remembered that these vessels were built at a time when we had but very little experience on the subject of building and equipping vessels of war; and the fact that the frigate Constellation, a thirty-six, did cost nearly one hundred thousand dollars more than the frigate President, a forty-four, is evidence of the disadvantages of inexperience in the one case, and of the advantages of experience in the other—advantages which it is to be hoped would be rather improved, in any future attempts to build and equip vessels of war.

The number of men required for the frigate President, or for either of our largest forty-four's, would be sufficient to man a fifty gun ship; hence the annual expense of a fifty gun ship would be about the same as the annual expense of the President, viz. one hundred and fifteen thousand two hundred and fourteen dollars, and it is so stated accordingly in the appropriate column.

It may not be amiss to state, for the information of the committee, that cannon, and a considerable proportion of the requisite timber for six seventy-four gun ships, are at this time provided, and deposited in the different navy yards.

Estimate of the pay and rations of the officers and crew of a ship of war of seventy-four guns for twelve months—six hundred and fifty men.

OFFICERS.	Pay per month.	Amount of pay per annum.	Rations per day.
1 Commander,	\$100	\$1,200	8

12th CONGRESS.]

No. 88.

[1st Session.]

VESSELS REPAIRED, AND THE EXPENSES INCURRED, FROM 1st JANUARY, 1802, TO 1st OCTOBER, 1811.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 6, 1812.

NAVY DEPARTMENT, January 4, 1812.

SIR:

In obedience to the resolution of the House of Representatives of the 26th ultimo, requiring of the Secretary "to lay before the House a statement of the vessels belonging to the United States, which have been repaired since the year 1801, specifying the time when such repairs were severally made, and the cost," I have the honor of transmitting to you, herewith, the paper A, which affords the best information in possession of the Department upon the subject.

I have the honor to be, with great respect, sir, your most obedient servant,

PAUL HAMILTON.

Honorable HENRY CLAY, Speaker of the House of Representatives.

A.

A Statement exhibiting the amount that is charged on the books of this office to the several vessels of the Navy of the United States, for repairs from the 1st of January, 1802, to the 3d of March, 1809; and the aggregate amount expended in repairs from the 4th of March, 1809, to the 1st of October, 1811.

Names of vessels repaired.	When repaired.	Where repaired.	Cost in dollars.	Total dollars.
Adams, frigate,	1st January to 30th September, 1802,	New York,	48,520 52	55,612 13
Ditto,	1st July, 1804, to 31st August, 1805,	In ordinary,	7,091 61	
Argus, brig,	1804 and 1805,	Mediterranean,	7,377 51	19,385 18
Ditto,	1st March, 1808, to 3d March, 1809,	Norfolk and New York,	12,007 67	
Boston, frigate,	In 1802,	In ordinary,	1,042 44	8,959 22
Ditto,	In 1803,	Ditto,	6,125 57	
Ditto,	In 1804,	Ditto,	1,791 21	
Constitution, frigate,	1st October, 1802, to 31st March, 1803,	Boston,	77,198 19	302,582 21
Ditto,	1st April, 1803, to 31st March, 1804,	Ditto,	40,713 61	
Ditto,	In 1805 and 1806,	Mediterranean,	84,802 65	
Ditto,	1st February, 1808, to 3d March, 1809,	New York,	99,867 76	
Constellation, frigate,	1st January to 31st December, 1802,	Philadelphia,	30,551 76	56,096 06
Ditto,	In 1803,	Mediterranean,	6,954 51	
Ditto,	In 1804,	In ordinary,	8,016 43	
Ditto,	In 1805,	Mediterranean,	9,499 96	
Ditto,	In 1806,	In ordinary,	1,073 40	
Chesapeake, frigate,	23d June, 1804, to 31st October, 1805,	In ordinary,	20,119 68	57,574 16
Ditto,	1st November, 1805, to 31st July, 1806,	Ditto,	11,850 93	
Ditto,	1st March to 1st September, 1807,	Ditto,	5,871 53	
Ditto,	1st May, 1807, to 30th May, 1808,	Norfolk,	19,732 02	
Congress, frigate,	In 1802,	In ordinary,	9,121 50	20,995 54
Ditto,	In 1804,	Ditto,	4,316 05	
Ditto,	In 1805,	Mediterranean,	7,032 55	
Ditto,	In 1807,	In ordinary,	525 44	
Essex, frigate,	1st April to 1st December, 1803,	In ordinary,	8,360 75	36,162 79
Ditto,	1st May, 1807, to 1st November, 1808,	Ditto,	27,802 04	
Enterprise, schooner,	In 1805,	Mediterranean,	33,187 60	33,187 60
Hornet, brig,	1st Septem. 1805, to 31st Dec. 1806,	Charleston & New York,	4,061 37	20,383 51
Ditto,	1st January to 31st December, 1808,	Charleston,	16,322 14	
John Adams, frigate,	1st January to 31st December, 1802,	In ordinary,	10,970 37	50,264 44
Ditto,	1st January to 23d June, 1804,	Ditto,	4,886 91	
Ditto,	1st April to 30th June, 1805,	New York,	24,803 73	
Ditto,	1st August, 1807, to 30th June, 1808,	In ordinary,	9,603 43	
New York, frigate,	1st January to 31st December, 1802,	In ordinary,	5,668 59	10,756 10
Ditto,	In 1803,	Mediterranean,	5,087 51	
Nautilus, schooner,	In 1804 and 1805,	Mediterranean,	11,223 29	11,223 29
President, frigate,	1st July, 1803, to 31st Decem., 1804,	In ordinary,	8,765 09	31,920 02
Ditto,	1st June to 31st December, 1804,	Norfolk,	3,879 95	
Ditto,	In 1805 and 1806,	Mediterranean,	8,836 63	
Ditto,	1st November, 1807, to 31st Oct. 1808,	In ordinary,	3,977 53	
Ditto,	1st Novem. 1808, to 3d March, 1809,	Ditto,	6,460 82	
Syren, brig,	In 1805 and 1806,	Mediterranean,	15,577 72	17,210 83
Ditto,	14th Nov. 1808, to 3d March, 1809,	In ordinary,	1,633 11	
United States, frigate,	1st January to 31st December, 1802,	In ordinary,	2,564 78	46,924 14
Ditto,	1st February to 31st December, 1804,	Ditto,	1,374 22	
Ditto,	1st Feb. 1806, to 31st March, 1807,	Ditto,	27,771 59	
Ditto,	1st April, 1807, to 31st March, 1808,	Ditto,	11,961 03	
Ditto,	1st April, 1808, to 3d March, 1809,	Ditto,	3,252 52	
Vixen, brig,	In 1805 and 1806,	Mediterranean,	11,976 56	14,555 86
Ditto,	15th Nov. 1808, to 3d March, 1809,	In ordinary,	2,579 30	
Vessels in ordinary, names not mentioned,	1st January to 31st December, 1804,	- - - -	9,983 83	66,888 82
	1st January to 30th September, 1805,	- - - -	30,161 08

				2,214,212 89

NOTE TO THE PRECEDING STATEMENT.

Although the above is a correct account of the respective sums charged to the several vessels for the periods stated, it is not to be understood as an accurate statement of the whole amount expended on the several vessels repaired at Washington: for it has been the practice, from time to time, to purchase materials for general repairs, which were charged, previous to the 4th of March, 1809, under the general head of contingencies; and of their application, or of the amount used on the respective vessels, no account was ever rendered to this office, nor is it believed that any correct account has been kept by the officers of the yard.

Since the 4th of March, 1809, in pursuance of instructions from the Comptroller of the Treasury, emanating from the provisions of the act of Congress, entitled "An act further to amend the several acts for the establishment and regulation of the Treasury, War, and Navy Departments," all repairs have been charged under the general head of "repairs of vessels," without any subordinate account or designation as to vessels, and of course it would be impossible to furnish any account from this office that would afford any thing like a correct view of the sums expended in repairs on the respective vessels.

NAVY DEPARTMENT, *Accountant's Office*, January 3, 1812.

NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 10, 1812.

NAVY DEPARTMENT, *January 9, 1812.*

The Commissioners of the Navy Pension Fund, in obedience to the "Act for the better government of the Navy of the United States," respectfully report the following statements in relation to the fund:

Paper A, statement of stock on the books of the treasury, belonging to the fund.

Paper B, statement of stock in the Banks of Columbia, Union Bank, and Washington Bank, belonging to the fund.

Paper C, statement of navy pensioners, with the pension allowed to each, and the annual amount of navy pensions. [\$8,045 20.]

Paper D, account of the commissioners with Thomas T. Tucker, Esq. treasurer of the fund. [Balance in his hands 1st January, 1812, \$4,320 49.]

Paper E, abstract of warrants drawn by the Secretary of the Navy on the treasurer of the fund, from the 1st January, 1811, to 1st January, 1812. [Amount \$21,404 78.]

Paper F, account of George Macdaniel with the commissioners. [Amount of stock purchased by him, including \$94 45 for his commissions, \$19,042 85, and showing a balance in his favor of \$68 19.]

All which is respectfully submitted.

For the Commissioners of the Navy Pension Fund:

PAUL HAMILTON, *Secretary of the Navy.*

A.

Statement of the Stock on the books of the Treasury to the credit of the Secretary of the Navy, the Secretary of the Treasury, and the Secretary of War, for the time being Commissioners of the Navy Pension Fund, with the interest and reimbursement which accrued for the year 1811.

STOCKS.	Commencement of Interest.	Nominal amount of Stock.	Interest and Reimbursement for the year 1811.	Reimbursement of six per cent. and deferred stocks, to 31st Dec. 1811.	Irredeemed amount on the 1st January, 1812.
Six per cent. -	January 1, 1811,	39,579 04	3,166 31	22,603 99	16,975 05
Deferred, -	Do.	56,532 23	4,522 57	17,049 46	39,482 77
Three per cent. -	Do.	30,895 93	926 88	- -	30,895 93
Louisiana six per cent. -	Do.	38,000 00	2,280 00	- -	38,000 00
Converted six per cent. -	Do.	3,250 00	195 00	- -	3,250 00
Total, -	- - -	\$168,257 20	\$11,090 76	\$39,653 45	\$128,603 75

I certify that the sum of eleven thousand and ninety dollars and seventy-six cents is the amount of interest and reimbursement of stock to the credit of the Commissioners of the Navy Pension Fund, which accrued during the year 1811, and that the nominal capital stock to their credit on the books of the treasury amounts to one hundred and sixty-eight thousand two hundred and fifty-seven dollars and twenty cents.

TREASURY DEPARTMENT, *Register's Office*, December 31, 1811.

JOSEPH NOURSE, *Register.*

[1st SESSION.

NAMES, RANK, PAY, AND RATIONS, OF THE OFFICERS OF THE NAVY AND MARINE CORPS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 4, 1812.

NAVY DEPARTMENT, February 3d, 1812.

SIR:

In obedience to the resolution of the House of Representatives of the 23d ultimo, I have the honor of transmitting to you, herewith, to be laid before the House, paper A, which is "a statement of the name, rank, pay, and rations, of each commissioned officer and midshipman belonging to the navy of the United States, respectively."

Presuming that the House wished full information upon the subject, I shall, I hope, be excused for the liberty I have taken in adding a list of the officers of the corps of marines and of the warrant officers of the navy.

I have the honor to be, &c.

PAUL HAMILTON.

The Hon. the SPEAKER of the House of Representatives.

A.

Exhibit showing, at this time, the name, rank, pay, and rations, of each commissioned officer and midshipman belonging to the Navy of the United States, respectively.

12th CONGRESS.]

No. 91.

[1st Session.]

NUMBER OF VESSELS IN SERVICE, AND ESTIMATES OF REPAIRING AND FITTING FOR SERVICE THOSE IN ORDINARY.

COMMUNICATED TO THE SENATE, FEBRUARY 21, 1812.

Mr. GILES, from the committee appointed to consider "the bill concerning the naval establishment," reported amendments to the said bill; together with the following documents explanatory of the same.

COMMITTEE CHAMBER, December 12th, 1811.

SIR:

In obedience to instructions from the committee of the Senate to whom so much of the President's message, as concerns our foreign relations is referred, I do myself the honor to request information from you upon the following points:

- 1st. What is the number of ships of war now in service and the force of them, respectively?
 - 2d. Are any repairs necessary for them at this time, and, if so, what would be the probable expense of such repairs?
 - 3d. Are there any ships of war worthy of repair, not now in service?
 - 4th. If so, what would be the probable expense of such repairs?
 - 5th. Within what time could such repairs probably be completed?
 - 6th. What additional number of men would be required to man such ships when repaired?
 - 7th. What would be the probable expense of the officers and men required for manning such ships for one year?
- And, also, the expenses of the officers and men of the ships, now in service, for the same period?

Be pleased, sir, to accept assurances of my high consideration, &c.

WM. B. GILES, Chairman.

The Honorable PAUL HAMILTON, Secretary of the Navy.

NAVY DEPARTMENT, *December 14th, 1811.*

SIR:

I have had the honor of receiving your letter of the 12th instant. We have now in service the following ships of war, viz:

Frigate President,	rating 44 guns.	Brig Argus,	rating 16 guns
United States,	44	Siren,	16
Constitution,	44	Vixen,	14
Congress,	36	Nautilus,	14
Essex,	32	Oneida,	16
Ship John Adams,	20	Enterprise,	14
Wasp,	18	Viper,	10
Hornet,	18		

None of these vessels, excepting the Enterprise, do at this time require repairs. The Enterprise is repairing at the yard at this place. The expense of her repairs will be very inconsiderable.

The annual expense of keeping these vessels, and the gun boats in commission, in a state of repair, is estimated at \$315,000, and this item is included in the navy estimate submitted for the year 1812.

We have the following ships of war, not now in service, viz: the Chesapeake, the Constellation, the New York, rating thirty-six guns each. The Adams and the Boston, rating thirty-two guns each. Of these, no doubt is entertained of the Chesapeake, the Constellation; and the Adams, being worthy of repair. As to the New York and Boston, some doubts have been expressed; a satisfactory opinion cannot, however, be formed, until they shall be opened and thoroughly examined. They are vessels of approved model, and I rather incline to the opinion, that they might be repaired for a sum considerably less than their original cost. The following table affords, at one view, answers to your third, fourth, and fifth queries; and, for the information of the committee, other information is added, which it is hoped will be acceptable.

NAMES OF VESSELS.	Rate.	Original cost, including every expense.	Probable expense of repairing.	Time it will take to repair them.	No. of petty officers, able seamen, ordinary seamen, & boys, required.	No. of marines required.	Annual expense.
Chesapeake, - -	36	\$220,677 80	\$120,000 00	Six months.	298	51	\$102,253
Constellation, - -	36	314,212 15	120,000 00	Do.	298	51	102,253
New York, - -	36	159,639 60	120,000 00	Do.	298	51	102,253
Adams, - -	32	76,622 27	60,000 00	Do.	257	46	81,607
Boston, - -	32	119,570 04	60,000 00	Do.	257	46	81,607
		\$890,721 86	\$480,000 00		1,408	245	\$469,973

The number of seamen, ordinary seamen, and boys, exclusive of petty officers, required to man the vessels above stated, is 1,220

And we have at this time in service, 4,010

Whole number required for the vessels of war and gunboats now in commission, and for the five vessels above stated, 5,230

The number of seamen authorized by law, is as follows:

See Laws, vol. 8, p. 108, act of 21st April, 1806,	925
Do. do. 112, do. 3d March, 1807,	500
Do. 9, 206, do. 31st January, 1809,	3,600

Whole number authorized by law, 5,025

Hence, if all the vessels of war and gunboats, now in commission, be kept in service, and it should be determined to man the five frigates above stated, there would, in the number authorized by law, be a deficiency of (seamen) 205

Of the seamen, stated as necessary for the vessels of war and gunboats now in commission,
 The vessels of war require 2,346
 The gunboats require 1,488
 Vessels and gunboats in ordinary, 176

Making, as above stated, 4,010

The number of marines authorized by law, exclusive of commission officers, is 1,823

The vessels of war and gunboats, now in commission, require 805
 The different stations on shore require, 473
 The five frigates, if put in commission, would require 245

Making, 1,523

Hence, the number of marines, at this time authorized by law, is more than sufficient to enable the Executive to man the five frigates now in ordinary, and to keep in service all the ships of war and gunboats now in commission. The probable annual expense, in service, of the five ships now in ordinary, would, as before stated, be \$469,973; but, for the year 1812, their expense, in service, would probably not exceed half that sum, because it would take half the year to repair them.

The navy estimate, for the year 1812, amounts to \$2,502,003 90

That is to say:

The expense of the corps of marines,	\$228,905 90
Navy yards, &c.	60,000 00
Ordnance,	60,000 00
Ships of war in commission and in ordinary, and gunboats in ordinary,	1,403,098 00
Gunboats in commission,	750,000 00
	\$2,502,003 90

If it should be determined to put the five frigates, now in ordinary, in actual service, an addition to the number of captains at this time authorized by law (thirteen) will be necessary, as several of those now on the roll are, from age and bodily infirmities, unfit for actual service at sea.

I have the honor to be, with great respect, sir, your most obedient servant,

PAUL HAMILTON.

Honorable WILLIAM B. GILES,
Chairman of the Committee on Foreign Relations, Senate.

COMMITTEE CHAMBER, February 4th, 1812.

SIR:

In obedience to instructions from the committee of the Senate to whom was referred so much of the President's message as concerns the relations between the United States and Great Britain and France, and to whom, also, was referred a bill from the House of Representatives, entitled, "An act concerning the naval establishment," I do myself the honor to request a more detailed estimate of the probable expenses of repairing the frigates of the United States than is contained in your report to the committee of the 14th of December last; and likewise to inform the committee whether, since that time, any further examination has been made into the condition of the New York and Boston frigates, so as to ascertain, with more certainty than could then be done, the propriety of providing for their repairs.

I am further instructed by the committee to ask the favor of your personal attendance in the committee chamber, when reports upon these subjects shall be made, prepared to give such additional information, respecting the several subjects herein mentioned, as may be required by the committee.

Be pleased, sir, to accept assurances of my high consideration, &c.

WM. B. GILES, Chairman.

The Honorable PAUL HAMILTON, Secretary for the Navy Department.

NAVY DEPARTMENT, February 13th, 1812.

SIR:

I have had the honor of receiving your letter of the 14th inst. requiring "a more detailed estimate of the probable expenses of repairing the frigates of the United States than is contained in my report of the 14th December last."

So far as respects the repairs of the hulls of these frigates, it is altogether impracticable to prepare an estimate in detail with any degree of accuracy, until the hulls shall be opened, and every timber and plank minutely inspected. So far, however, as respects their equipment with masts, spars, sails, water casks, boats, blocks, rigging, cables, &c. the probable expense can be satisfactorily ascertained; and I have accordingly had prepared, and now transmit—

Paper A, which is an estimate of the expense of the standing and running rigging required for the frigate Constellation.

Paper B, which is an estimate of the expense of masts, yards, and spars, for the same frigate.

Paper C, which is an estimate of the expense of sails, hammocks, &c. for the same.

Paper D, which is an estimate of the expense of water casks, buckets, kids, cans, &c.

Paper E, which is an estimate of the expense of boats, oars, and boats-hooks.

Paper A A, which is a general estimate of the cost of such articles, including paints, blocks, &c. for the five frigates Constellation, Chesapeake, New York, Boston, and Adams, amounting to the sum of \$263,306 86

In my communication to you of the 14th December, 1811, it was stated that, for repairing the hulls of these frigates, and equipping them for sea, there would be required the sum of \$480,000 00

as stated in the paper AA; the expense of repairing them, exclusive of their hulls, will probably amount to	263,306 86
which leaves for the expense of repairing their hulls, and for small stores, the sum of	216,693 41

Since my communication to you of the 14th December last, I required of the captain commandant of the navy yard at this place to have the frigates New York and Boston re-examined by the carpenters of the yard; and the following is the result of such re-examination, as reported to me by Captain Tingey:

“DECEMBER 31st, 1811.

“The master and the foreman of the ship-carpenters, having been ordered to re-examine the state of the frigates New York and Boston, report as follows:

FRIGATE NEW YORK.

“Her floor timbers and first futtocks are of white oak—twenty-six of the floors, (those in the extremes) and the whole of the first futtocks, must be replaced with new. Her second and third futtocks and top timbers are of live oak, cedar, and locust, and appear tolerably sound, particularly those of live oak. The fore and the after end of the keelson, all the ceiling, decks, beams, knees, wales, upper works, and part of her bottom plank, will require to be new. Probably, however, some of the knees will answer again, or suit for a smaller vessel.”

FRIGATE BOSTON.

“Her frame is of white oak, and a great part of it appears to be rotten. Her floor timbers and first futtocks appear in a better state. The second and third futtocks, top timbers, stern frame, and all forward, together with most of her ceiling, seams, knees, wales, upper works, decks, and part of her bottom plank must be new.”

This examination has, no doubt, been as perfect as it could be made; but until the vessels themselves shall be opened, and every timber and plank minutely inspected, a satisfactory opinion as to their being worthy of repair cannot be formed.

No doubt of the Constellation, Chesapeake, and Adams, being worthy of repair, has ever been entertained by any practical man.

I have the honor to be, with great respect, sir, your most obedient servant,

PAUL HAMILTON.

Hon. WILLIAM B. GILES, Chairman of a Committee, Senate.

A.

Estimate of Cordage, &c. necessary for the equipment and stores of the frigate Constellation, corresponding with the supplies issued to the frigate Congress.

For standing and running rigging, and stores complete, from 2 to 8 inch rope,	65,649 at 18 cents	\$11,816 82
Ratline, assorted,	3,905 ditto	702 90
Spun yarn ditto,	6,718 ditto	1,209 24
Worming and seining line,	726 20 cents	145 20
White lines, marline, and housline,	650 30 cents	195 00
Twine,	50 1 dollar	50 00
White cordage, fine, for wheel ropes,	308 25 cents	77 00
Seven hawsers and tow lines,	9,603 18 cents	1,728 54
Two messengers, fine,	2,612 20 cents	522 40

Deduct the sum above stated, viz: - - - - -	263,306 86

And there will remain for timber, mechanical labor on the hulls of the frigates, and for small stores, 216,693 14
\$480,000 00

COMMITTEE CHAMBER, *February 17, 1812.*

SIR:

Pursuant to instructions from the committee of the Senate to whom so much of the President's message is referred as concerns the relations between the United States and Great Britain and France, &c. I do myself the honor to request the favor of your personal attendance in the committee chamber, to-morrow morning, at half past ten o'clock, for the purpose of giving such information respecting the affairs of your Department as may be required of you by the committee.

Be pleased, sir, to accept assurances of my high consideration, &c.

WM. B. GILES, *Chairman.*The Hon. PAUL HAMILTON, *Secretary for the Navy Department.*

[12th CONGRESS.]

No. 92.

[1st SESSION.]

NAVY HOSPITALS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MAY 26, 1812.

NAVY DEPARTMENT, *25th May, 1812.*

SIR:

In obedience to the provision of the 4th section of the act, entitled "An act establishing navy hospitals," passed 26th February, 1811, I have now the honor of submitting the paper A, containing rules and regulations for the government of the navy hospitals, authorized by that act.

I have the honor to be, with great respect, sir, your obedient servant,

PAUL HAMILTON.

The Honorable the PRESIDENT of the Senate.

A.

REPORT ON NAVAL HOSPITALS.

In order that the business of the hospitals may be conducted on a general plan, and with views adequate to the beneficent design of the Government, it is necessary that systematic rules and regulations be adopted. We, therefore, beg leave to submit the following to the Honorable the Secretary of the Navy of the United States, agreeably to his instructions of the 12th of March, 1812.

On a supposition that each hospital will be calculated for the present to accommodate at least one hundred men, the following officers, nurses, &c. will be necessary:

- 1 Surgeon, who is also to act as a physician,
- 2 Surgeon's mates,
- 1 Steward,
- 1 Matron,
- 1 Ward master,
- 4 permanent nurses; any additional number at the discretion of the surgeon, who will be regulated by the number of patients and the prevailing diseases,
- 1 Cook,
- 2 Washwomen,
- 3 Servants to the hospital,
- 1 Porter. In addition to these, it is supposed that assistants may be obtained from the list of invalids and pensioners; places of trust, however, ought to be permanent or during good behavior.

DUTIES OF THE SURGEON.

1. It shall be the duty of the surgeon to direct the supply of *all articles* that he may think necessary for the hospital.
2. He shall visit the sick in the hospital daily, or oftener, if necessary, to prescribe and attend generally to all cases committed to his care, and direct such *nourishment* and *quantity* as he may think proper for the use of the sick and convalescents.
3. He shall have the supreme direction of every thing which relates to the internal regulation of the hospital, and to the economy of the establishment, and be clothed with power to suspend from duty, or to arrest any person who may be employed therein; also to punish, in such way as shall be hereafter directed, all convalescents, pensioners, &c. who shall wilfully disobey orders, break through any of the established rules of the hospital, which are contained in the code, or which hereafter may be added with the consent of the Secretary of the Navy of the United States.
4. He shall examine and verify the steward's monthly amount of all purchases and expenditures under his orders.
5. He shall keep, or cause to be kept, a book, in which shall be recorded the names of the patients and pensioners admitted into the hospital under his charge, the ship, navy yard, or marine port they came from, their rank, date of admission, disease or disability, discharge or death, and to whom delivered when discharged.
6. He shall report to the Navy Department the number of men and officers, who have been admitted into the hospital, every three months, with the number of days that they have been victualled, specifying the ship, navy yard, or marine port, from whence they came, distinguishing pensioners from others, to enable the accountant of the Navy Department to appropriate the amount of the ration, stopped on board of each ship, at the navy yard or marine port, to the support of the hospital.
7. He shall cause a diary of the medical and surgical practice of the hospital to be kept, and instruct his mates in their duty; likewise such surgeon's mates of the navy as may be ordered to the hospital for instruction.
8. He shall examine annually, in conjunction with the steward, *all the articles* belonging to the establishment, and report all losses that may have taken place, that the amount thereof may be charged to the steward, unless he can show cause for the same.
9. He shall be careful in examining the diseases of all patients sent for admission, and is hereby enjoined not to receive any, excepting under the forms and instructions directed to be observed by the surgeons of the navy.
10. The hospital surgeons shall on no pretence whatever be obliged to act out of the line of their duty hereby prescribed.

HOSPITAL MATES.

They shall be subject solely to the orders of the hospital surgeon in the line of their duty. They shall also be charged with the safe keeping of all surgical instruments, medicines, and books, belonging to the hospital, and on their removal therefrom be held responsible for any loss, unless exonerated by a certificate from the surgeon. They shall have full power, during the absence of the surgeon, to confine nurses, servants, or convalescents, who have been guilty of disorderly riotous behavior, and report the same to him at his next visit: commission and warrant officers are to be reported to the surgeon. They shall not absent themselves from the hospital without obtaining a written permission from the surgeon, unless a furlough be granted by the Secretary of the Navy. Surgeon's mates of the navy ordered to the hospital for instruction, shall be subject to the same rules and regulations as those immediately attached to it, excepting that they shall not be charged with the safe keeping of any of the articles belonging to the establishment, nor be vested with any of the powers hereby granted to the hospital mates.

STEWARD.

1. He shall be a man of strict integrity, sobriety, and ability. He shall take charge of, and be responsible for, all stores and hospital furniture furnished for the establishment and support of the hospital, medicines and other articles in the medical department excepted; it therefore shall be his duty to examine all articles belonging to the respective wards monthly, before the nurses receive their wages, to see that nothing has been purloined by them, as he alone will finally be held responsible for the same.

2. He shall be furnished with the necessary sums, on his requisition, approved by the surgeon, to purchase such articles of diet as the surgeon may require for the use of the sick, and to defray the incidental charges against the institution; no accounts, however, shall be paid by him without being approved by the surgeon.

3. He shall keep a regular account of the number of patients, pensioners, and persons employed in the hospital, who are daily victualled, and the quantity of hospital stores (or extras) issued by order of the surgeon. For this purpose he shall open an account for every article of hospital stores and provisions in his charge, and debit each article with the quantity received. He shall likewise make out a weekly or monthly return of his disbursements and expenditure of stores, designating the regular hospital allowance and the extras, according to the requisitions of the surgeon; which return shall be examined and verified by his signature, before the amount shall be passed to his credit. These returns shall be absolutely necessary for the final acquittal of his accounts at the Navy Department: he shall be allowed ——— per cent. for waste and leakage.

4. He shall, under the direction of the surgeon, superintend generally the concerns of the hospital; he shall report all absentees, at the morning and evening roll call, to the surgeon.

5. He shall superintend the management of the gardens and grass lots belonging to the institution, and keep an account of the proceeds thereof, and do all other matters that the surgeon may conceive economical and beneficial to the institution.

6. The steward shall, before he enters on the duties of his appointment, give bond with two securities for the faithful discharge of his duty.

MATRON.

1. The matron, if practicable, should be the wife of the steward. She shall visit the wards of the hospital frequently, and see that the patients and bedding are kept clean; that the wards be swept and the beds made every day at an appointed hour; that the sick do not suffer for the want of proper attendance from the nurses; and that they be furnished with the nourishment prescribed by the surgeon; that the hospital be washed as often as the surgeon may think necessary; that the table linen, bedding, and hospital clothing, be washed and kept in good order.

2. She shall superintend and direct the servants employed in the hospital, likewise the cooking establishment and dairy, and do all other matters and things as may have a tendency to preserve the public property, and diminish the expenses of the institution. All nurses and servants are hereby enjoined and required to be obedient to her orders in the line of her duty.

WARD MASTER.

1. He shall be authorized to act as master-at-arms, to take charge of the refectory, and to execute the orders of the surgeon, when punishment is to be inflicted by confinement or clog.

2. He shall take charge of the receiving and bathing rooms, and all the apparel necessary for the changing of the sick on their arrival at the hospital, and shall attend to the cleansing of them before they are introduced into their respective wards.

3. He shall take charge of, and be responsible for, all clothing belonging to the sick, which shall not be permitted to be taken into the wards; he shall have them well cleansed and purified, and when dry, deposited in the bags, chests, or knapsacks of the men to whom they respectively belong, and arranged in a room set apart for the purpose, the name of each man being marked on his bag, chest, or knapsack; and when the same is delivered out of his charge, a receipt shall be given.

4. He shall call a roll in the convalescent wards, wards of recovery, and invalid wards, morning and evening, at the opening and closing of the doors of the hospital, and report all absentees to the senior hospital mate.

5. He shall walk through the wards every night, at the hour which may be fixed on by the surgeon, to see that all lights and fires are extinguished, except those which the surgeon may conceive necessary for the use of the sick.

6. On the death of a patient in the wards, he is to take an inventory of the effects of the deceased, and deliver it to the steward, who shall take charge of them. If an officer, the steward shall take an inventory of all his goods and papers, which shall be reserved in a place of safe keeping, for the benefit of those who may legally claim them.

7. He shall be charged with the burying of the dead, and do all other matters, by order of the surgeon, which may not have been detailed in this code.

NURSES.

1. They are hereby strictly enjoined and required to be obedient to the commands that they may from time to time receive from their superiors, and be careful so to conduct themselves that they may not incur the displeasure of the hospital surgeon.

PORTER.

1. The porter shall be a responsible man. He shall take charge of the keys of the gates, and permit no stranger to enter who is intoxicated, or who may have liquors of any description for either the patients, nurses, invalids, or servants employed in the hospital, nor permit any person to pass out, who may be suspected of having any hospital property in possession, without giving the steward immediate information thereof. He is to report the names of those to the hospital surgeon's mates, who have been out on liberty, and returned intoxicated. He is to permit no patient or pensioner to go out, without a pass signed by the surgeon.

All other persons employed in the institution shall be subject to such orders, rules, or regulations, as the surgeon may from time to time think proper to establish.

No person employed in the hospital, in any department, shall, directly or indirectly, have any private interest in the supply of any provisions or other articles which may be supplied for the establishment, or support thereof.

No pensioner or invalid shall be received into the hospital without an order from the Secretary of the Navy.

No person shall be admitted into the hospital without an order signed by the commander of the ship, navy yard, or marine port, to which he belongs, accompanied by a certificate from the surgeon, with a statement of his case, and

the mode of treatment which had been pursued for his recovery.* And when any seaman or marine is discharged from the hospital, the officer into whose care the man is delivered, shall give a receipt for him on the hospital books.

Whenever a seaman, ordinary seaman, boy, or marine, is sent to the hospital from a vessel of war, the purser shall send with him a statement of his accounts, signed by himself and the commanding officer, which account shall be transmitted to the purser of the ship to which said seaman, ordinary seaman, boy, or marine, may be ordered, when discharged from the hospital.

† Foreign sick seamen, belonging to the *national ships* of war, may be admitted into the United States' naval hospitals, provided it can conveniently be done, on application being made to the surgeon by the consul or agent of such foreign Power to which they may respectively belong; the said consul or agent giving a promissory note to pay — per day for each seaman so admitted, and to pay for or furnish such clothing as may be necessary for such man, and, in case of death, to pay the funeral expenses.

All pensioners shall be mustered every morning, by a commissioned or warrant officer, if any of this grade be on the pension list in the hospital; if not, by the highest in rank among the pensioners; to see that every man is clean in his person and clothing; and on Sunday there shall be a general muster and inspection of pensioners and convalescents, at the hour appointed by the surgeon, who shall personally examine every man; and every man who shall fail to appear shaved, and otherwise clean in his person and clothing, shall, for the first offence, have his allowance of beer, wine, or spirit, stopped from one to three days; for the second offence, ten days; and for the third, fifteen days, or more, at the discretion of the surgeon.

Whenever a seaman, ordinary seaman, marine, or boy, who is on the pension list, shall be taken sick, he shall be removed from the pensioners' apartment to the sick ward designated for his reception by the surgeon.

There shall be no assemblage of convalescents, or other persons, in the wards of the hospital, to disturb the sick. Gaming is strictly forbidden.

Any officer or other person who shall disobey any of the established rules of the hospital, or shall refuse to follow the advice of the surgeon, shall, if an officer, be forthwith discharged, on reporting him to the Navy Department; and no allowance shall be made to him for sick quarters or medical aid: but if a seaman or marine, he shall be confined in a solitary room set apart for that purpose.

Any officer, seaman, or marine, who shall strike, or draw, or offer to draw, or raise any weapon, against the surgeon, surgeon's mates, steward, or ward master, while executing the duties of their respective offices, shall, if an officer, be cashiered; and all others confined in a solitary cell for the space of —, and sent aboard the first public ship that shall arrive at the port where such hospital may be, and shall be mulct of their pay for — months, to be appropriated to the support of the hospital.

If any person in the hospital shall waste, embezzle, or fraudulently buy, sell, or receive, any provisions or public stores, every such person shall forfeit all the pay and subsistence then due to him; and if an officer, he shall be cashiered, and the amount deducted from his pay.

Any citizen who shall have received the goods thus purloined, on conviction before any magistrate, shall forfeit and pay double the value of the provisions or public property so bought or received, and be subject to a fine of —.

Any person in the hospital who shall be found guilty of stealing the property of his comrades, shall restore the same, or the amount thereof, and be confined, if his health will permit, in a solitary cell, for the space of —, and wear a clog and chain to his leg, as a mark of disgrace, for the space of —.

Any officer in the hospital who shall be guilty of profane swearing, drunkenness, or other scandalous conduct, tending to the destruction of good morals, shall be cashiered, or suffer such punishment as a court-martial shall adjudge.

Every seaman, ordinary seaman, marine, boy, or petty officer, who shall be guilty of riotous behavior or drunkenness, shall be confined in a solitary cell for the space of —.

Every person who may have left the hospital on permission, and who shall not have returned within twenty-four hours after the expiration of the time specified in his pass, shall be deemed a *deserter*, and, if a seaman or marine, shall be subject to such punishment as the articles of the navy have directed for the crime of desertion; but if a *pensioner*, he shall be marked *run*, on the hospital books, and forfeit his pension.

No person in the hospital shall quarrel with any other person in the hospital, nor use provoking or reproachful words, gestures, or menaces, on pain of solitary confinement for the first offence, and, if incorrigible by this mode of punishment, he shall wear a clog and chain, as a mark of disgrace.

All crimes committed by persons belonging to, or as patients or pensioners in, the hospital, which are not specified in this code, shall be punished according to the rules and regulations of the navy.

All clothing belonging to deceased officers or men, which may not have been claimed within six months after public notice has been given of their decease, shall be sold, and applied to the clothing fund of the hospital.

Each person employed in the hospital, except surgeon and mates, shall be entitled to receive a naval ration, or equivalent in other articles, not exceeding twenty cents per day.

That no person may plead ignorance of the above rules and regulations, they shall be read, at the monthly muster, by the surgeon's mates, and a copy, with such regulations as may hereafter be made, shall be placed in a convenient place, in each ward, that every patient, nurse, and pensioner, may be informed thereof.

E. CUTBUSH,
GEORGE DAVIS,
SAMUEL R. MARSHALL,
THOMAS EWELL.

MONDAY, March 16th, 1812.

GEORGETOWN, March 17th, 1812.

SIR:

The report which we had the honor to transmit to you, under date of the 16th March, was strictly limited to the points contained in your order. There are other subjects of consideration which we beg leave to submit to your discretion. In the report presented, the duty of performing divine service has been omitted, from the desire of limiting, as far as possible, the number of officers, proportioning them according to the quantum of duty to be performed: we are, however, induced to suggest the propriety of attaching a chaplain to the institution, being of high importance, and conducive to good order and the advancement of morality. We presume that this duty would be performed, for the present, (under the invitation of the honorable Secretary of the Navy) with pleasure, by any of the clergy near those places where the hospital may be erected.

No provision, as to pay, &c. of hospital surgeons, is contained in the bill passed at the last session of Congress: in the *army*, an express provision is made for this class of officers. We would submit the propriety of incorporating in the bill, which may contain the rules and regulations of the hospitals, a clause specifying the rank of surgeons to hospitals, and of their mates, as it respects land and sea officers; also to allow the same pay and emoluments as the hospital surgeons in the army of the United States now receive.

Under all European Governments, hospital surgeons and naval surgeons have a definite rank: it serves as a stimulus for men of talents, not only to offer their services, but to continue in service when the situation is made as reputable as that of any other class of officers. Our navy has, hitherto, with a few exceptions, been rather as a medical school for young gentlemen, who enter it for practical knowledge: this is incorrect, as no person should be permitted to take charge of the health and lives of seamen, in whose capacity his fellow-citizens cannot confide; those, therefore, who have not graduated at a respectable college or university, should be obliged to submit to an examination before they are commissioned.

* This regulation may be dispensed with, provided the person be sent to the hospital immediately after an accident by which an injury or wound may have been received.

† Should this regulation be adopted, it will be necessary to provide for an additional number of medical assistants.

We have not noticed the capacity or the sites necessary for the hospitals; we conceive, however, that from eight to ten acres of ground would be necessary for each hospital, and, to the hospital and asylum, *at least* fifteen acres, more if convenient.

Gentlemen intended for the situation of hospital mates should be examined by those who may be appointed hospital surgeons, to ascertain their ability to perform the duties of their station. We beg leave to submit the propriety of making a distinction between the two hospital mates, as, for example, the senior and the junior; the former to be capable of performing the duties of naval surgeon.

We are unacquainted with the extent of your views respecting the hospital establishment; we have, therefore, reported the number of medical officers, &c. for one hundred men; but if for a greater number, it will be necessary to increase the establishment by an addition of medical officers, whose duties must be defined.

We have the honor respectfully to submit the above remarks.

E. CUTBUSH,
GEORGE DAVIS,
SAMUEL R. MARSHALL,
THOMAS EWELL.

[1st SESSION.

FLOATING BATTERY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JUNE 11, 1812.

The Secretary of War and the Secretary of the Navy, to whom was referred the petition of Edward Clark, with the papers accompanying, ask leave to report as follows:

Mr. Clark proposes to construct a floating battery, which is to be rendered buoyant by "empty vessels—punchons for instance, encased within large chests of timber, open at the bottom; to be anchored at any point, and fitted for the reception of any fort; to be constructed of materials cheap, and easily put together."

The principle on which this species of float is founded is a correct principle in natural philosophy. The doctrine of "specific gravities" establishes the feasibility of constructing, on Mr. Clark's plan, a float adequate to supporting a formidable battery. Although this construction is philosophical and ingenious, it appears subject to two objections:

1st. The liability of the buoyant power to destruction by cannon shot. The disability of a single cask of the capacity of one hundred and twenty-five gallons induces a diminution of the buoyant power equivalent to one half ton.

2d. The liability of the casks (in salt water) to injury from worms.

Improvements on the plan might diminish the force of these objections; but it is doubted whether it is susceptible of such improvement as will render it preferable to a float constructed wholly of light wood.

All of which is respectfully submitted by

WILLIAM EUSTIS,
PAUL HAMILTON.

[2d SESSION.

COMPLAINTS OF THE OWNERS OF PRIVATEERS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, NOVEMBER 23, 1812.

To the honorable the Senate and House of Representatives of the United States in Congress assembled, the memorial of the undersigned, of the city of Baltimore, merchants and owners of private armed commissioned vessels of war, respectfully represents:

That your memorialists have, since the declaration of war, at a heavy charge and cost, purchased, equipped, and fitted for offensive operations, numerous strong and well appointed cruisers, which have done the public enemy immense injury, by the capture of many of her merchant vessels laden with valuable cargoes, and the destruction of at least ten thousand tons of her shipping; that the cruisers of your memorialists have captured and made prisoners of war seven hundred of the seamen of the enemy, who have been exchanged for an equal number of American prisoners, who have thus, through the instrumentality and at the charge of your memorialists, been rescued from captivity; that, trusting to what they deemed the fair construction of the 14th section of the act "concerning letters of marque, prizes, and prize goods," and, supposing from the general and comprehensive expressions of the commissions which had been granted to them by the President of the United States, that enemy's property, whether taken bound to the United States or elsewhere, on the high seas, or within our own waters, was lawful prize, your memorialists were greatly induced by this confidence, to make larger and more immediate outfits, calculating upon the known course of trade between this country and Great Britain, in which it has been so usual to cover British interests in American names, and knowing that it would be in their power, when armed with the authority of a national commission, to detect and bring to light the belligerent interest; that, in many instances, your memorialists have succeeded in capturing and bringing in for adjudication property so circumstanced, that they had proceeded against it as prize of war, and a general sentiment appeared to prevail among those experienced in the law that, under the fair construction of the prize act, and according to the manifest intention of the Legislature, the captors having incurred the expense of the outfit, having encountered the peril of capture, and having detected the enemy interest, which must otherwise have remained concealed, were entitled, in law, as well as in point of justice, to the benefit of the capture; that, after proceedings had been instituted at their instance, and at a heavy expense, agains

such property in different districts, your memorialists, who never anticipated any interference on the part of the Government of the United States with their just claims, on the ground of an act of Congress pre-existing the declaration of war, and whose operation they believed to be suspended, as related to prize goods, by the 14th section of the prize act above referred to, now find themselves called upon to defend their rights as well against the pretensions of the Treasury Department as against the shufflings, evasions, and legal subtleties of fictitious claimants, anxious to screen, because having a common interest in the property of the belligerent. Your memorialists are persuaded that it could not have been the intention of the Legislature to appropriate the proceeds of individual enterprise, exertion, and hazard against the enemy to the exclusive advantage of the public treasury; and that, if such can, by any possibility, be the legal exposition of their acts, it must have been a mere legislative omission, of which your memorialists confidently hope the injurious consequences will be prevented by an explanatory law.

Your memorialists would further beg leave to submit to the wisdom of Congress the propriety of diminishing, on behalf of the captors, the very heavy duties imposed upon prize goods. They do not require an indiscriminate abatement of duty upon all prize goods, but they would humbly represent that, on various articles, principally intended for exportation, and not consumed within the country, the impost equals, and, on some, exceeds their value in the market; so that it may happen that the captor, instead of being benefited, may have incurred his risk and expense in some instances, without any profit from, and in others at a positive loss by, his prize. Your memorialists would suggest that it is not in consonance to the just principles of revenue that the Government, under the pretence of duty, should take the whole proceeds of the exertions and hazards of the captor, but that there should, in all cases, be a just proportion between the value of the article captured and the claim of the Government thereon, by way of impost. In such cases, therefore, your memorialists would humbly pray a diminution of duty, or that, with respect to prize goods, a fair ratio be established, by law, between the value in market and the impost on the article.

Your memorialists would respectfully call the attention of the Legislature to the embarrassments, difficulties, and delays which they labor under in the determination of prize causes in the different courts of the United States, under the present very imperfect system, even in cases where the enemy interest is incontestably shown, where no claim is interposed, and where, therefore, the proceedings ought to be conducted with the expedition characteristic of courts of admiralty. In several of such instances a procrastination of many months has taken place, to the extreme injury of the captors, without any reasonable cause of delay, and the hardy seaman who had hazarded his life in the public cause, finds himself at last obliged, by necessity, to sacrifice for a trifle, his share in the just compensation of his perils, to which, as the right is certain, so the remedy ought to be immediate.

While there are numerous acts of Parliament in Great Britain, prescribing to the courts of admiralty the mode of proceeding, and ensuring to captors a safe and speedy ascertainment of their rights, whereby the private armed service is much encouraged, your memorialists, and others in the like circumstances in the United States, are exposed to the inconvenience of this matter being left entirely open to the discretion of the judges, with the exception of a few words in the prize act. In consequence of which omission, every court has, according to the several impressions of its judges, adopted a mode of proceeding peculiar to itself; and while in one district the remedy of the captor is speedy, in others the determination for a considerable time is suspended, to the great vexation and injury of the interested. That courts belonging to the same country, and exercising, in different districts, precisely the same jurisdiction and power, should be bound by some rules common to them all, in matters of prize, and that the rights of the citizen should not be different before tribunals similarly organized, according to the district in which such rights are to be exercised, would appear to be positions too plain for argument; but that, from the want of the necessary provisions, the rights of war speedily administered in one district, should, in another, be subject to the most vexatious delays, appears to be an evil of such magnitude that your memorialists are persuaded that it is only necessary to show its existence to Congress to secure its prompt legislative redress.

Your memorialists would further submit to Congress some considerations which, although of minor importance, in a national point of view, are of serious moment to them, as owners of private armed vessels of war. Great inconveniences are experienced by them in consequence of that provision of the prize act which renders it incumbent on the captors to proceed against the prize in the first district to which such prize may be brought—a provision which appears to your memorialists to operate exclusively to the benefit of the officers of the customs and of the courts, who claim the possession and benefit of prizes taken in port, as their rights—a provision which, in many instances, may expose the prize to re-capture by the enemy, which deprives the privateer owners of all control over that in which they are the most interested, subjects them to the loss of a bad market, and compels them to submit to a distant and expensive agency, and to frequent detriment from carelessness and mismanagement, which would not have been incurred, if the prize could have been lawfully taken from the district where she first casually arrived, to the district in which the captor resides, and to which the capturing vessel belongs. As to any substantial object of justice, they can discover none which is so gratified by the provision in question, as to render a compliance with the interests and wishes of the captor, in this particular, inexpedient; the question in controversy can be as justly decided in one district as another, in which respect no preference can be presumed in law, and none can be justly given; and the inconvenience from the present arrangement is so sensibly felt, that it will frequently happen that prizes will incur the risk of re-capture, from a longer voyage, rather than put into a near American port, at which the rights of the officers of the customs and of the court may compel her to remain, although it may be to the interest of all concerned that she should proceed to another port. Your memorialists therefore pray that captors be permitted, by law, to take their prizes from one port of the United States to another, under such precautions and limitations as to the wisdom of Congress may appear expedient.

Your memorialists would further submit to the consideration of Congress the propriety of a legal provision that the agents of the captors should, in cases where the prize is sold on a credit, be entitled to receive the notes or other securities which have been received upon such sales by the respective marshals of districts, previously securing to the officers their fees and commissions; such a provision, enabling the person specially appointed by the captors to receive the proceeds would put it in his power in most instances to pay off the officers and seamen before the terms of credit expired, and thus prevent the inconvenience and loss arising from the delay. And as the agents of the owners are in general the agents of the officers and crew, there can be no just exception to the law at once entrusting them with the possession of those funds which must finally come into their hands, through the medium of the clerks of the courts. Your memorialists would likewise suggest that the marshal's commission on the sale of prize goods, which is charged upon the gross amount of sales, is peculiarly burthensome to the captor, in all cases where the United States receive the greater part of the proceeds by way of duties, as such commissions come entirely out of the pocket of the captors, and not unfrequently amount to five or six per centum on the sum which they are entitled to receive, after the deduction of duties. Your memorialists conceive that in justice they should only be chargeable with marshal's commission on the sum by them actually received.

Wherefore your memorialists pray that Congress, taking into consideration the various grievances of which they have herein complained, will pass a law or laws giving them such relief in the premises as to the justice and the fair demands of your memorialists may be due.

No. 95.

[2d SESSION.]

DISTRIBUTION OF PRIZE MONEY TO THE CAPTORS OF THE FRIGATE
GUERRIERE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, NOVEMBER 25, 1812.

NAVY DEPARTMENT, *November 21, 1812.*

SIR:

In order to enable the committee to form a satisfactory opinion as to the compensation to be provided for the officers and crew of the frigate *Constitution*, for the capture and subsequent destruction of the British frigate the *Guerriere*, I have the honor to state to you that the *Constitution* rated 44, and mounted 55 guns; that the *Guerriere* rated 38, and mounted 54 guns. The *Guerriere*, although entirely dismantled, and in other respects much crippled, could have been brought into port, without incurring any other risk than that of recapture; but Captain Hull conceived that, if he had manned the *Guerriere*, for the purpose of sending her into port, he would have so far reduced the crew of the *Constitution* that he might have subjected both vessels to capture. He presumed that, under all circumstances, it would be better for him to destroy the *Guerriere*, and preserve the force of the *Constitution* unimpaired, and his having done so unquestionably proceeded from the most patriotic considerations.

The *Guerriere* was a frigate of the first class in the British navy; and, no doubt, when the engagement between the *Constitution* and her commenced, she was completely fitted in all respects for the most serious service. The cost of such a ship, independently of her stores, could not have been less than two hundred thousand dollars, and her stores were worth, in all probability, fifty thousand dollars at least; besides, she had on board a number of prize goods, the value of which cannot be ascertained; but was probably equal to fifty thousand dollars more. So that the whole value of the *Guerriere*, her stores and prize goods, at the time the action commenced, may fairly be estimated at three hundred thousand dollars.

Had Captain Hull have incurred the risk before mentioned, and succeeded in getting the *Guerriere* into port, the officers and crew of the *Constitution*, considering the *Guerriere* as her equal, would have been entitled to the whole of the *Guerriere*, her stores and prize goods. Sooner, however, than run the risk of losing the *Constitution*, he determined to destroy the whole. The question then arises, what, under these circumstances, ought the officers and crew to be allowed? For my own part, I have no hesitation in giving it as my opinion that the sum of *one hundred thousand dollars* would not be too liberal a provision, or too great an encouragement for the great gallantry, skill, and sacrifice of interest, displayed on this occasion; and I am persuaded that, if such a provision were made, the difficulties of manning our frigates, at present experienced, would vanish.

It may further be remarked, that Captain Hull, while on the cruise on which he captured and destroyed the *Guerriere*, burnt two enemy's vessels, viz. the brig *Lady Warren* and the brig *Adeora*, and obliged the enemy to burn the brig *Dolphin*, with a cargo of hemp and Russia goods, and to abandon an English barque laden with timber: for no part of which have the officers or crew of the *Constitution* received any compensation.

I have the honor to be, with great respect, sir, your obedient servant,

PAUL HAMILTON.

Hon. B. BASSETT.

WASHINGTON, *November 23, 1812.*

SIR:

In compliance with your request I have the honor to state to you that my opinion, as to the value of the *Guerriere*, at the time the action between her and the *Constitution* commenced, is, that, exclusively of her stores and prize goods, she was probably worth two hundred thousand dollars; and my impression is; that her stores and prize goods must have been worth one hundred thousand dollars.

I am informed that, independently of their stores, the frigate *President* cost two hundred and twenty thousand dollars; that the *Chesapeake* cost two hundred and twenty thousand dollars; and that the Congress cost one hundred and ninety-seven thousand dollars. These vessels were certainly built on good terms; and it is from their cost that I form my idea as to the probable value of the *Guerriere*; and my impression as to the value of her stores and prize goods is derived from personal observation and information obtained on the occasion from different persons.

I have the honor to be, very respectfully, sir, your obedient servant,

ISAAC HULL.

Hon. BURWELL BASSETT, *Chairman of the Naval Committee.*

[12th CONGRESS.]

No. 96.

[2d SESSION.]

INCREASE OF THE NAVY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, NOVEMBER 27, 1812.

Mr. BASSETT, from the committee appointed on that part of the President's message which relates to the naval establishment,* reported, in part:

That, in performance of the duty assigned them, the committee could not fail to advert to the report made to the last session of Congress on this subject; having adverted to it, they could not fail, from the justness of its reasoning, to rely on it, and pray that it may be taken as part of their report.† The little experience yet afforded us in naval warfare corroborates the principles there contended for, and in this view they think themselves supported by that passage in the President's message which says, "our trade, with little exception, has safely reached our ports; having been much favored in it by the course pursued by a squadron of our frigates, under the command of Commodore Rodgers." They therefore concurred in the opinion that it is proper to increase the naval establishment. For information as to the mode of increase they applied to the Navy Department, and obtained the documents which they

*See Foreign Relations, No. 33, page 81.

†See No. 87 of this series.

submit to the House. The comparative effect of vessels of different rates must be considered as demonstrated by these documents. Yet were your committee apprised that, in the complicated system of naval warfare, no one principle would be relied on as applicable to all times and all occasions; but that a patient comparison of many principles was necessary to a just conclusion. They were apprised that facility of movement should be combined with efficiency of force; nor were they regardless of the benefit of occasional division. Inasmuch, however, as great gain will sometimes follow from the power to operate on many points at once, yet, at others, it may be all important to give unity to your force. To obtain the things desired, it is essential that your naval establishment comprise ships of different rates. It is evident, too, from the documents, that you economise in men and money by providing some of the larger ships. This conclusion, so well fortified by reason, is found in unison with the practice of all nations who have had the fiscal and other means of providing a navy. Indeed it would seem almost the spontaneous effect of instinct, without the aid of reason to oppose like with like. To yield the advantage of the sabre, the bayonet, or fire arms, to your enemy, would, by all men, be deemed miserable policy. Can reason change with the element? Let us then have for defence seventy-six, thirty-eight, and sixteen gun ships; because we are opposed to an enemy possessing all these means of attack, and because they combine all advantages in naval warfare. It is not the intention of your committee to put aside the gunboats, but they believe that, considering the opportunity afforded them for action, an ample portion of that species of force has been provided. Your committee cannot conclude their report without bringing to the view of the House the fact, that the naval superiority of Great Britain, which secures her integrity and supports her dignity, is maintained at a cost much below the military establishments of the continent. And it is with something like exultation, as republicans, that they present a species of national force that, whilst it will best subserve the national defence, can operate least on the national liberty. It is a bright attribute in the history of the tar, that he has never destroyed the rights of the nation. In its defence only is he to be found. Thus aided by economy, and fortified by republican principle, your committee think they ought strongly to recommend that the fostering care of the nation be extended to the naval establishment. It is far, very far, from your committee to extend their views of a navy to the mad and wicked prospect of foreign conquest, or a silly contest to be mistress of the ocean. Their view is limited to their own defence and to enforce respect to their just rights. To the objection that it is the nature of man to run into extremes, they answer that it is the end, not the beginning, we should guard against. It is surely yielding much of the argument to surrender all of the subject that is good, and require submission to evil, that good may come thereof. Rather separate the wheat from the chaff; show the good and the bad. Let it be impressed on every citizen that, to use force to protect and maintain the rights and liberties of his country, is his first duty, whilst it is the greatest of crimes to attack with force the rights of others. It can require no subtlety to enforce the distinction between defence and offence; neither can it require argument to prove that the first ought not to be abandoned, as being more than life's worth: though the other may be deprecated as the consummation of wickedness. Limited to the view of defence and protection, the committee directed their chairman to ask leave of the House to report a bill to increase the navy of the United States.

NAVY DEPARTMENT, 13th November, 1812.

Sir:

I have the honor of transmitting herewith, for the information of the committee of the House of Representatives of which you are the chairman, certain papers, marked A, B, C, and D.

From the paper A it appears that a 76 gun ship, mounting 88 guns, discharges in one round 3,176 lbs. of cannon ball: that a 44 gun frigate, mounting 54 guns, discharges in one round 1,488 lbs. of cannon ball: that a 76 discharges at one broadside 1,588 lbs., and that a 44 gun frigate discharges at one broadside 744 lbs. of ball. The question then arises, what is the intrinsic relative force of a 76 and a 44?

Suppose two 44 gun frigates should be brought into combat with a 76—one on the larboard, the other on the starboard quarter; each frigate presenting a broadside of 744 lbs. of ball, will have to contend against a battery of 1,588 lbs. As 744 lbs. is to 1,588 lbs. so would be the relative metal of a 76 and two large 44 gun frigates—difference against the frigates 844 lbs. weight of metal. It is obvious, then, that two 44 gun frigates could not contend with a 76, with the least probability of success.

Suppose a third frigate, attacking alternately on the starboard and larboard quarter, should join in the combat. While two of the frigates should be operating on one quarter with a difference in weight of metal against them of 100 lbs. the third frigate would be contending on the other with a difference against her of 844 lbs.

It might be observed, that the frigates would all attack on one quarter, and then with 2,232 lbs. of metal they would have to contend with only 1,588 lbs., having a difference in their favor of 644 lbs. In reply it may be observed, that three frigates could not take such a position, on any one quarter, as would enable them to bring all their broadsides to bear at once upon an object moving through the water with as much celerity as themselves. Moreover, a frigate would always avoid the broadside of a 76, for one well directed broadside from a 76, at close shot, would inevitably blow her out of the water. Witness the Randolph with the Yarmouth. Frigates would attack in various directions; change their positions frequently, and avoid the tremendous battery of a 76 as much as possible.

Besides, a 76 is built of heavier timber, is intrinsically much stronger than a frigate in all her works, and can sustain battering much longer, and with less injury. A shot which would sink a frigate, might be received by a 76 with but little injury—it might pass between wind and water through a frigate, when it would stick in the frame of a 76.

All things considered, it must be admitted that one 76 gun ship, mounting 86, is equal in combat to three frigates mounting 162 guns. Admitting this equality, other questions present themselves for consideration; and

1st. What is the relative expense of building and equipping these vessels?

2d. What is the relative number of their crews?

3d. What is their relative annual expense in actual service?

To ascertain the expense of building and equipping a frigate, we will take the actual cost of one of our largest, viz: the President, which was \$220,910. A frigate would then cost - - - - - \$220,910

The cost of a 76 cannot be so easily ascertained: however, from the papers B and C we may, I think, estimate the expense of building and equipping a 76 at not exceeding - - - - - \$333,000

The construction then of a force in frigates, equal in combat to a 76 gun ship, would cost - - - - - 662,730

Making, in this view, a difference in favor of the 76 of - - - - - 329,730

As then \$333,000 is to \$662,730, so would be the relative expense of building and equipping a 76, and a force in frigates equal to a 76, making a difference in favor of the 76 of - - - - - \$329,730

By the paper A it appears that a 76 requires to man her 650 men, and that a 44 requires 420. To man three 44 gun frigates, or a force in frigates equal to a 76, would then require 1,260 men; and in this respect, we find a difference in favor of the 76 of 610 men. That is, 650 men on board of a 76 can direct as much force as 1,260 can on board of three frigates.

As to the relative expense: we have heretofore estimated the annual cost of a frigate of 44 guns at \$110,000, and from the best information we can obtain upon the subject, the annual expense of a 76 will not exceed - - - - - \$202,110

The annual expense, then, of three frigates, or a force in frigates equal to a 76, would be \$330,000, while a 76 would not cost exceeding \$202,110, making, in this respect, a difference in favor of the 76 of \$127,890, annually.

In examining the relative strength of frigates and ships of war, and of ships of war and gunboats, we shall find similar results in favor of the larger class of vessels.

Hence, if the only object in view was to employ the greatest intrinsic naval force, at the least expense, I should think there would be no difficulty in deciding that we ought to have none but ships of the greatest magnitude. But in providing a naval armament, there are other considerations, of the highest importance. We should inquire, what kind of force will, most probably, be brought against us? With what description of force can we meet the enemy with the greatest probability of success, and afford the most effectual protection to our commerce? And upon these

highly interesting points, I will take the liberty of submitting a very valuable communication, D, received from Charles Stewart, Esquire, a captain in the navy of the United States, an officer of great observation, distinguished talents, and very extensive professional experience, observing that I believe all the most enlightened officers in our service concur in the opinions he has expressed.

I have the honor to be, with great respect, sir, your most obedient servant,

PAUL HAMILTON.

Hon. BURWELL BASSETT,

Chairman of the Naval Committee of the House of Representatives.

A.

Statement showing the number and description of guns mounted on vessels of different classes; the weight of ball in a round of each; the weight of a broadside; the number of men required for each; the annual expense in actual service of each; the annual expense computed by the gun, by each man, and by the weight of metal; and the relative power of each man, in each description of vessels, computed in weight of metal.

Rate of ships.	No. of 68 pound carronades.	No. of 42 pound long cannon on the lower gun deck.	No. of 24 pound long cannon on the upper deck.	No. of 42 pound carronades on the quarter deck.	No. of 32 p'd carronades on the main deck or quarter deck.	No. of 42 pound carronades on the forecastle.	No. of 32 pound carronades on the forecastle.	No. of 9 pound long cannon.	Whole number of carriage guns.	No. of guns in a broadside.	Weight of ball in a round.	Weight of ball in a broadside.	Number of men.	Whole annual expense in actual service.	Annual expense per gun.	Annual expense per man.	Annual expense per each pound of metal.	Power of each man computed in weight of metal.

B.

Estimate of the expense of building and equipping a seventy-four gun ship, of one thousand six hundred and twenty tons, prepared some years since by Joshua Humphreys, Esq. of Philadelphia, a shipwright of great respectability and professional talents.

Live oak timber,	\$40,000
White oak and pine, &c.	30,000
Labor,	85,100
Cables, rigging, &c.	32,400
Smiths' work,	30,400
Anchor, marline,	8,700
Sailmaker's bills, two suits, including canvass,	16,200
Joiner's bill, including stuff,	7,800
Carver's bill,	1,620
Tanner's bill,	700
Rigger's bill,	2,240
Painter's bill,	3,240
Cooper's bill,	4,860
Blockmaker's bill,	3,240
Boatbuilder's bill,	1,620
Plumber's bill,	2,430
Ship chandlery,	9,720
Turner's bill,	1,215
Copper bolts,	10,960
Sheathing copper, nails, &c.	17,440
Woollens for sheathing,	1,215

Contingencies,

\$311,100
31,600
\$342,700

NOTES BY AN EXPERIENCED GENTLEMAN.

"Labor." This item was calculated at a time when ship carpenters' wages were two dollars and fifty cents per day; they can now be obtained at two dollars.

"Cables and rigging." When the above estimate was made the price was sixteen dollars; they can now be obtained at fifteen dollars.

"Carver's bill." Expensive carving on the head and stern is abolished; one thousand dollars may be deducted from this item.

"Rigger's bill." We employ seamen at twelve dollars per month; this item may be considerably reduced.

"Painter's bill." The present practice of painting our ships of war differs so much from that first adopted, both in point of labor and colors, that one-third of this item may be safely deducted.

"Woollen for sheathing." Now exploded; experience having established the fact, that it occasions an absorption and retention of salt water, which corrodes the copper inside, &c. nor could the copper be laid on so smooth as without it.

"Contingencies." At the time the above estimate was made we had no yards; of course wharfage, or rent of yard, was then included; and we do not now, as then, give such quantities of rum to laborers. This item may be reduced one-half.

C.

Estimate of the expense of building and equipping a 76 gun ship, formed from the actual expense of building and equipping the frigate President.

The President, of 1,444 tons, cost \$220,910, say per ton \$153; a 76 would ton 1,620.	
1,620 tons, at \$153, make	\$247,860
Add for additional guns and gun carriages,	18,599
Additional cubic feet of timber in the frame, about 4,000 feet, at \$1 25,	5,000
For additional weight of rigging, anchors, and other materials, add 10 per cent. on the cost of the tonnage. \$247,860, at 10 per cent.	24,786
	<u>\$296,245</u>

Say \$300,000.

D.

U. S. FRIGATE CONSTELLATION, November 12, 1812.

SIR:

I have received your letter of the 11th instant, in which you state "the desire of the Naval Committee to possess the most comprehensive information upon naval subjects, particularly the description of marine force best adapted to our defence, and the relative efficiency of vessels of different rates." In compliance therewith, I have the honor to answer the questions you propound, as follows:

Question 1. What, in your opinion, is the relative efficiency of ships of the line, say seventy-fours, and large frigates?

Answer. The relative efficiency or force of a seventy-four gun ship and large frigates is as one to three.

Comparative Force.

Frigate of 50 guns.		Ship of the line, 74 guns.	
Gun deck,	30 24 pounders.	Lower gun deck,	28 42 pounders.
Quarter deck,	14 32 pound carronades.	Upper ditto,	30 24 ditto.
Forecastle,	6 32 ditto.	Quarter deck,	16 42 pound carronades.
		Forecastle,	8 42 ditto.
Guns	50 1,360 lbs. shot each round.	Ditto,	2 24 pounders.
Men	430	Poop,	4 68 pound carronades.
	480 guns and men.	Guns	88 3,224 lbs. shot each round.
		Men	650
			738 guns and men.

Argument. By the above comparison it appears that a seventy-four gun ship discharges at one round 3,224 lbs. of shot, and a frigate of the first class 1,360 lbs.; it therefore clearly proves the position or relative force in point of metal to be one to three, or thereabouts. When this circumstance is considered jointly with the following, it must appear to others, as it does to me, that, as you increase the class of the ship, you increase the force in the proportion of one to three, and diminish proportionately the expense of building, equipping, and supporting them in commission, which may easily be established by estimates from the Department, and the experience of all other maritime nations.

Ships of the line are much stronger in scantling, thicker in the sides and bottom, less penetrable to the shot, and consequently less liable to be torn, or battered to pieces, or sunk; the additional room being more than in proportion to the additional number of men, leaves greater space for water and provisions, and admits of her wings being kept clear, that shot penetrating below the water, the holes can readily be plugged up from the inside, and her sinking thereby prevented; hence we have seen ships of the line capable of battering one another for several hours, and, if not too much crippled in the spars and rigging, enabled to renew an action on following days. I am aware that some are of opinion that a more divided force is better calculated for action, from the advantageous position that would be given to a part. Suppose three frigates of fifty guns were to undertake to batter a seventy-four gun ship, and that two of them were to occupy the quarter and stern of the seventy-four, (this is placing them in the most favorable position) the other frigate engaged abreast, every thing would then depend on the time the frigate abreast could maintain that position, to enable the other two to act with effect on the stern and quarter. But it must appear evident to all acquainted with the two classes of ships, that the frigate abreast could not withstand the fire of so heavy and compact a battery many minutes, and, in all probability, would be dismantled or sunk the first or second broadside: this would decide the fate of the other two. Much might be said upon the superiority of ships of the line over frigates in the attack of batteries, or their defence; on the security of valuable convoys of merchant ships, or troops sent on an expedition; but their advantages, in these respects, must be apparent to all, however unacquainted with nautical affairs.

Question 2. What, in your opinion, is the relative efficiency or force of large frigates and sloops of war?

Answer. The relative efficiency of large frigates and sloops of war is at least one to two.

Comparative Force.

Sloop of War.		Frigate.	
Gun deck,	16 12 pounders.	Gun deck,	30 24 pounders.
Quarter deck,	8 24 pound carronades.	Quarter deck,	14 32 pound carronades.
Forecastle,	4 24 ditto.	Forecastle,	6 32 ditto.
Guns	28 480 lbs. shot.	Guns	50 1,360 lbs. shot.
Men	180	Men	430
	208 guns and men.		480 guns and men.

Question 3. What description of naval force do you think best adapted to the defence of our coast and commerce?

Answer. Ships of the line are best calculated for the defence of our coast, and for the protection of our inward and outward commerce, when engaged in war with a foreign maritime Power.

Argument. It cannot be supposed that, in a war with a foreign maritime Power, that Power will only send to our coast frigates and smaller cruisers, because we possess no other description of vessels. Their first object will be to restrain, by ships of the line, our frigates and other cruisers from departing and preying upon their commerce; their next object will be to send their smaller cruisers in pursuit of our commerce; and by having their ships of the line parading on our coast, threatening our more exposed seaport towns, and preventing the departure of our small cruisers, they will be capturing what commerce may have escaped theirs, and recapturing what prizes may have fallen into our hands. Thirdly: they can at any time withdraw their ships of the line, should a more important object require it, without hazarding much on their part; and return in sufficient time to shut out our cruisers that may have departed during their absence. Fourthly: they can at all times consult their convenience in point of time

and numbers; and will incur no expense and risk of transports for provisions and water, but can go and procure their supplies at pleasure, and return to their station ere their absence is known to us.

Question 4. What description of force do you think best calculated to prosecute the present war and any future war in which we may be engaged?

Answer. For the prosecution of the present war with the most effect, a mixed naval force, of the following description, is, in my opinion, the best calculated:

Ships of the line to rate, in honor of the year of our independence, seventy-six's, to mount as follows:

28 42 pounders on the lower gun deck,
 30 24 do. on the upper do.
 24 42 pound carronades on quarter deck and fore-castle,
 2 24 pounders on fore-castle,
 4 68 pound carronades on poop.
 —
 88 guns.

Frigates to rate forty guns to mount as follows:

30 24 pounders on gun deck,
 20 32 pound carronades on quarter deck and fore-castle.
 —
 50 guns.

Frigates to rate thirty-two guns to mount as follows:

26 18 pounders on gun deck,
 16 24 pound carronades on quarter deck and fore-castle.
 —
 42 guns.

Corvette ships to rate sixteen guns to mount as follows:

18 32 pound carronades,
 2 12 pounders.
 —
 20 guns.

Argument. By having a proportion of these classes of ships of war, the inner squadron, or *guard de costa*, may be composed of the ships of the line and a few of the thirty-two gun ships, for repeaters and look out ships. Hence it would produce one of two results—either that the enemy would be obliged to abandon our coast or bring on it a much greater force, at least double our number, out of which they will be obliged to keep on our coast a superiority, at all the hazards of the sea, and at great additional expense and risk of transports to provision and water them. But should they, from other circumstances, be unable to keep up this superiority on our coast, the door will be kept open for the ingress and egress of our cruisers and their prizes; while our other classes of ships may be sent in pursuit of their smaller cruisers and commerce. These observations will apply to all future wars in which we may be engaged with the maritime Powers; but, as we might more frequently be engaged with the Barbary Powers, the frigates and sixteen gun ships would be better adapted to that species of warfare. They have no ships of the line. The ships of the line could then be laid up in ordinary, dismantled, and preserved at a small expense.

Question 5. Would not the erection of docks for the repairs of our vessels produce a great saving in expense, labor, and risk; and would not docks greatly expedite the refitting of our ships?

Answer. A dry dock, agreeable to a plan I furnished the Department some time since, to be freed from water by pumps or drains, will be indispensable for the repair of ships of war, and will be the least expensive way of repairing the bottoms of our ships, and will expedite the outfits in point of time one to ten.

Argument. A ship of war wanting repairs done to her bottom, or coppering, must be turned down one side at a time to undergo that repair; therefore, to prepare a ship for that process, requires that all her upper masts should be taken down, and all her guns, stores, water casks, ballast, ammunition, &c. should be taken out; which leads to *great loss, waste, and labor*; and the *time occupied in the process* will be from *two to three weeks*, and as *much more time will be required to re-rig, re-equip, and replace her guns, stores, and other materials.* The preparation to dock a ship of war can be done in twelve hours; all that is necessary to be done is, to take out the guns, and pump the water out of the water casks; and, when *in dock*, the repairs of her bottom can progress *on both sides* at the same time. Should a ship of war require a thorough repair throughout, it can never be effectually done but in a dock; for instance, in repairing ships of war in the water, they are liable to have the fine form of their bottom spoiled, by hogging, spreading, or warping, which will materially affect their *sailing*. Ships wanting thorough repairs require all the plank stripped off *inside and outside*; their *beams, knees, and clamps, taken out*; these articles are all they have to bind their frames together, and thereby preserve their shape; but, when stripped of them to make room for the new, they are *liable to hogg*, from the greater weight and body of timber being in the *fore and after end*, at which places there is no pressure *upwards*, caused by the water, as those ends are sharp. The two extremes of the ship are liable to sink in the water, while the body or middle of the ship rises with the *upward pressure of water*. The next consideration in repairing the bottoms in the water, though not of such vital importance, is not unworthy of serious attention: the bolting in the bottom ought to be driven from the *outside*; but, when repaired afloat, they are under the necessity of driving them from the *inside*; hence the bottom will not be so strong nor so well secured.

The time for answering the several questions propounded to me in your letter of the 11th instant being very short, and a great deal being required by my other avocations, will, I trust, be a sufficient apology for my not going more largely and minutely into the subject, as also for any inaccuracies which I may have committed. I will, therefore, close this communication with an expression of my hopes that, whatever may be proposed by the naval committee to Congress on this subject, they will strongly recommend to their consideration the necessity of having what they propose for the increase of the navy, of the best seasoned materials, which will be by far the cheapest, and be longer in a state for active service. I trust their past experience will prove to their satisfaction this position, that the best materials are always the cheapest, and that a slow increase is better than a hasty and temporary one.

I have the honor to be, very respectfully, sir, your obedient servant,

CHS: STEWART.

Honorable P. HAMILTON.

We agree with Captain Stewart in the foregoing statement, in all its parts.

ISAAC HULL.
 C. MORRIS.

In service in 1798, 20 vessels, } Besides smaller vessels.
 Do. 1799, 33 do. }

Statement showing the proportions of able seamen, ordinary seamen, and boys, required for a ship of the line, say a 76, and a 44 gun frigate.

A 76 requires 280 able seamen, 233 ordinary seamen and boys.
 A 44 do. 140 do. 172 do.

NOTE.—280 able seamen is considered by practical men as too great a proportion for a first rate 76. The whole number of able and ordinary seamen and boys is 513, and practical men say that they may be classed thus: 220 able seamen, 293 ordinary seamen, &c. It is observed by those acquainted with ships of the line, that to manage their sails does not require more able seamen than are required to manage the sails of a large frigate.

A force in frigates equal to a seventy-six would then require 420 able seamen; a 76 would require 220; making a difference in this respect of 200 able seamen in favor of the 76.

In 1798 and 1799 no difficulty was experienced in procuring able seamen. We could frequently in one week man a frigate. One among other considerations which induced able seamen to enter then with so much alacrity, was, because the enemy we were then contending with had not afloat (with very few exceptions) vessels superior in rate to frigates. The enemy we are now fighting have ships of the line; and our sailors know the great difference between that class of vessels and frigates, and cannot but feel a degree of reluctance at entering the service, from the evident disparity. Build ships of the line, and you would man them with more ease than you now can a sloop of war.

In 1798, 1799, and 1800, we had near four thousand able seamen in the navy; a number sufficient to man eighteen ships of the line.

Ordinary seamen can always be procured in abundance.

12th CONGRESS.]

No. 97.

[2d SESSION.

CAPTURE OF THE MACEDONIAN AND FROLIC, AND LOSS OF THE WASP.

COMMUNICATED TO CONGRESS, DECEMBER 11, 1812.

WASHINGTON, December 11, 1812.

To the Senate and House of Representatives of the United States:

I transmit to Congress copies of a letter to the Secretary of the Navy, from Captain Decatur of the frigate "United States," reporting his combat and capture of the British frigate Macedonian. Too much praise cannot be bestowed on that officer and his companions on board, for the consummate skill and conspicuous valor by which this trophy has been added to the naval arms of the United States.

I transmit also a letter from Captain Jones, who commanded the sloop of war Wasp, reporting his capture of the British sloop of war the Frolic, after a close action, in which other brilliant titles will be seen to the public admiration and praise.

A nation feeling what it owes to itself and to its citizens could never abandon to arbitrary violence on the ocean, a class of them which gives such examples of capacity and courage, in defending their rights on that element—examples which ought to impress on the enemy, however brave and powerful, a preference of justice and peace, to hostility against a country whose prosperous career may be accelerated, but cannot be prevented, by the assaults made on it.

JAMES MADISON.

UNITED STATES' SHIP UNITED STATES, AT SEA, October 30, 1812.

SIR:

I have the honor to inform you that, on the 25th instant, being in the latitude 29° N. longitude 29° 30' W. we fell in with, and, after an action of one hour and a half, captured, His Britannic Majesty's ship Macedonian, commanded by Captain John Carden, and mounting forty-nine carriage guns (the odd gun shifting.) [She is a frigate of the largest class, two years old, four months out of dock, and reputed one of the best sailers in the British service. The enemy being to windward, had the advantage of engaging us at his own distance; which was so great that, for the first half hour, we did not use our carronades, and at no moment was he within the complete effect of our musketry or grape: to this circumstance, and a heavy swell which was on at the time, I ascribe the unusual length of the action.

The enthusiasm of every officer, seaman, and marine, on board this ship, on discovering the enemy, their steady conduct in battle, and the precision of their fire, could not be surpassed. Where all have met my fullest expectations it would be unjust in me to discriminate. Permit me, however, to recommend to your particular notice my first lieutenant, William H. Allen; he has served with me upwards of five years, and to his unremitting exertions in disciplining the crew is to be imputed the obvious superiority of our gunnery exhibited in the result of this contest.

Subjoined is a list of the killed and wounded on both sides. Our loss, compared with that of the enemy, will appear small. Amongst our wounded you will observe the name of Lieutenant Funk, who died a few hours after the action: he was an officer of great gallantry and promise, and the service sustained a severe loss in his death.

The Macedonian lost her mizzen mast, fore and main top masts, and main yard, and was much cut up in her hull. The damage sustained by this ship was not such as to render her return into port necessary; and had I not deemed it important that we should see our prize in, should have continued our cruise. With the highest consideration and respect,

I am, sir, your obedient humble servant,

STEPHEN DECATUR.

The Hon. PAUL HAMILTON.

List of killed and wounded on board the United States.

Thomas Brown, New York, seaman; Henry Shepherd, Philadelphia, ditto; William Murray, Boston, boy; Michael O'Donnell, New York, private marine; John Roberts, ditto—*killed*.

*John Mercer Funk, Philadelphia, Lieutenant; John Archibald, New York, carpenter's crew; Christian Clark, ditto, seaman; George Christopher, ditto, ordinary seaman; George Mahar, ditto ditto; William James, ditto ditto; John Laton, ditto, private marine—*wounded*.

On board the Macedonian there were thirty-six killed, and sixty-eight wounded; among the former were the boatswain, one master's mate, and the schoolmaster; and of the latter were the first and third lieutenants, one master's mate, and two midshipmen.

NEW YORK, November 24, 1812.

SIR:

I here avail myself of the first opportunity of informing you of occurrences of our cruise, which terminated in the capture of the *Wasp*, on the 18th October, by the *Poictiers*, of seventy-four guns, while a wreck from damages received in the engagement with the British sloop of war *Frolic*, of twenty-two guns, sixteen of them thirty-two pound carronades, four twelve-pounders on the main deck, and two twelve-pound carronades on the top-gallant fore castle, making her superior in force to us by four twelve pounders. The *Frolic* had struck to us, and was taken possession of two hours before our surrendering to the *Poictiers*.

We had left the Delaware on the 13th; the 16th had a heavy gale, in which we lost our jib-boom and two men; half past eleven on the night of the 17th, in the latitude of 37 degrees North, and longitude 65° West, we saw several sail, two of them appearing very large: we stood for them for some time, then shortened sail, and steered the remainder of the night the course we had perceived them on. At day light on Sunday the 18th we saw them ahead: gave chase, and soon discovered them to be a convoy of six sail, under the protection of a sloop of war, four of them large ships, mounting from sixteen to eighteen guns. At thirty-two minutes past eleven A. M. we engaged the sloop of war, having first received her fire at the distance of fifty or sixty yards, which space we gradually lessened until we laid her on board, after a well supported fire of forty three minutes; and although so near, while loading our last broadside, that our rammers were shoved against the side of the enemy, our men exhibited the same alacrity which they had done during the whole of the action. They immediately surrendered upon our gaining their fore-castle, so that no loss was sustained on their side after boarding.

Our main top mast was shot away between four and five minutes from the commencement of the firing, and falling, together with the main topsail yard, across the larboard fore and fore topsail braces, rendered our head yards unmanageable the remainder of the action. At eight minutes, the gaff and mizzen top-gallant mast came down, and at twenty minutes from the beginning of the action every brace and most of the rigging was shot away. A few minutes after separating from the *Frolic* both her masts fell upon deck; the main mast going close by the deck, and the fore mast going twelve or fifteen feet above it.

The courage and exertions of the officers and crew fully answered my expectations and wishes. Lieutenant Biddle's active conduct contributed much to our success, by the exact attention paid to every department during the engagement, and the animating example he afforded the crew by his intrepidity. Lieutenants Rodgers, Booth, and Mr. Rapp, showed, by incessant fire from their divisions, that they were not to be surpassed in resolution or skill. Mr. Knight and every other officer acted with a courage and promptitude highly honorable, and I trust have given assurance that they may be relied on whenever their services may be required.

I could not ascertain the exact loss of the enemy, as many of the dead lay buried under the masts and spars that had fallen on deck, which two hours' exertion had not sufficiently removed: Mr. Biddle, who had charge of the *Frolic*, states that, from what he saw, and from information from the officers, the number of killed must have been about thirty, and that of the wounded about forty or fifty; of the killed, is her first lieutenant and sailing master; of the wounded, Captain Winyates, and the second lieutenant.

We had five killed and five wounded, as per list: the wounded are recovering. Lieutenant Claxton, who was confined by sickness, left his bed a little previous to the engagement, and though too weak to be at his division, remained on deck, and showed, by his composed manner of noting its incidents, that we had lost by his illness the services of a brave officer.

I am, respectfully, &c.

JACOB JONES.

Hon. PAUL HAMILTON.

* Since dead.

13th CONGRESS.]

No. 98.

[2d SESSION.

GOLD MEDAL PRESENTED TO CAPTAIN PREBLE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 23, 1812.

To the House of Representatives of the United States:

I transmit to the House of Representatives a report of the Secretary of the Navy, complying with their resolution of the 16th instant.

JAMES MADISON.

December 23, 1812.

NAVY DEPARTMENT, *December 21, 1812.*

SIR:

On the subject of the resolution of the honorable the House of Representatives, of the 16th instant, I have the honor to state:

That, in pursuance of the resolution of Congress of the 3d of March, 1805, a gold medal, emblematical of the attacks on the town, batteries, and naval force, of Tripoli, by the squadron under Commodore Preble's command, was presented to Commodore Preble, in the manner stated in the enclosed letter, dated May 17, 1806.

That one month's pay was allowed, "exclusively of the common allowance, to all the petty officers, seamen, and marines, of the squadron, who so gloriously supported the honor of the American flag, under the orders of their gallant commander, in the several attacks."

That no sword has been presented to either of the commission officers, or midshipmen, who distinguished themselves in the several attacks.

And that it is not known to this Department that there ever was made by Congress a specific appropriation of twenty thousand dollars, for the purpose of carrying into effect the resolution referred to.

With respect to that part of the resolution which "requests the President to cause a sword to be presented to each of the commissioned officers and midshipmen who distinguished themselves," it is presumed that the President saw what to his mind appeared difficulties of great delicacy, from the peculiar language of the resolution. By the resolution he was requested to present swords to such only as had distinguished themselves; and all having been represented to him as having acted gloriously, he could not, in justice, draw with precision a line of discrimination. He felt, it is to be presumed, a repugnance to the making of a selection which, by implication, would necessarily have cast an unmerited reproach upon all not therein included. A degradation of that kind might have greatly injured the service, and could not possibly have been grateful to the honorable feelings of the favored officers.*

I have the honor to be, with the greatest respect, sir, your most obedient servant,

PAUL HAMILTON.

The PRESIDENT.

NAVY DEPARTMENT, *May 17, 1806.*

SIR:

In pursuance of the resolution of Congress, of the 3d of March, 1805, requesting the President of the United States to cause a gold medal to be struck, emblematical of the attacks on the town, batteries, and naval force, of Tripoli, by the squadron under your command, and to present it to you in such manner as, in his opinion, would be most honorable to you, the medal which will herewith be delivered to you by Lieutenant Jones has been struck. You will receive it, sir, as a testimony of your country's estimation of the important and honorable services rendered by you; and you will be pleased to accept an assurance of the great pleasure I have in the honor of presenting it to you.

I have the honor to be, with great respect, sir, your most obedient servant,

R. SMITH.

To Commodore EDWARD PREBLE.

From the records of the Navy Department.

PAUL HAMILTON.

No. 99.

[2d SESSION.

CAPTURE OF THE BRITISH BRIGS DETROIT AND CALEDONIA.

COMMUNICATED TO THE SENATE, JANUARY 13, 1813.

To the Senate of the United States:

I transmit to the Senate copies of the correspondence called for by their resolution of the 7th instant.*

JAMES MADISON.

*January 13th, 1813.*BLACK ROCK, *October 9, 1812.*

SIR:

I have the honor to inform you that, on the morning of the 8th instant, two British vessels, which I was informed were His Britannic Majesty's brig Detroit, late the United States' brig Adams, and the brig Hunter, mounting fourteen guns, but which afterwards proved to be the brig Caledonia, both said to be well armed and manned, came down the lake, and anchored under the protection of Fort Erie. Having been on the lines for some time, and in a measure inactively employed, I determined to make an attack, and, if possible, get possession of them; a strong inducement to this attempt arose from a conviction that, with those two vessels, added to those which I have purchased and am fitting out, I should be able to meet the remainder of the British force on the upper lakes, and save an incalculable expense and labor to the Government. On the morning of their arrival, I heard that our seamen were but a short distance from this place, and immediately despatched an express to the officers, directing them to use all possible despatch in getting the men to this place, as I had important service to perform. On their arrival, which was about 12 o'clock, I discovered that they had only about twenty pistols, and neither cutlasses, nor battle axes; but on application to Generals Smyth and Hall, of the regulars and militia, I was supplied with a few arms, and General Smyth was so good, on my request, as immediately to detach fifty men from the regulars, armed with muskets; by four o'clock, in the afternoon, I had my men selected and stationed in two boats which I had previously prepared for the purpose: with those boats, fifty men in each, and under circumstances very disadvantageous, my men having had scarcely time to refresh themselves, after a fatiguing march of five hundred miles, I put off from the mouth of Buffalo creek, at one o'clock the following morning; and at three I was along side the vessels; in about ten minutes I had the prisoners all secured; the topsails sheeted home, and the vessels under way; unfortunately the wind was not sufficiently strong to get me up against a rapid current into the lake, where I understood another armed vessel lay at anchor, and I was obliged to run down the river by the forts, under a heavy fire of round, grape, and canister, from a number of pieces of heavy ordnance, and several pieces of flying artillery; was compelled to anchor at a distance of about four hundred yards from two of their batteries. After the discharge of the first gun, which was from the flying artillery, I hauled to the shore, and observed to the officer that if another gun was fired, I would bring the prisoners on deck, and expose them to the fate we should all share; but, notwithstanding

*Resolved, That the Secretary of the Navy be directed to lay before the Senate any correspondence that may have taken place between him and Captain Chauncey and Lieut. Elliott, relative to the capture and subsequent disposition of the British armed brigs Detroit and Caledonia, on the 8th of October, 1812.

standing they disregarded the caution, continuing a constant and destructive fire, one single moment's reflection determined me not to commit an act that would subject me to the imputation of barbarity. The Caledonia had been beached in as safe a position as the circumstances would admit of, under one of our batteries at Black Rock; I now brought all the guns of the Detroit on one side, next the enemy, stationed the men at them, and directed a fire, which was continued as long as our ammunition lasted, and circumstances permitted. During the contest, I endeavored to get the Detroit on our side, by sending a line (there being no wind) on shore, with all the line I could muster; but the current being so strong, the boat could not reach the shore. I then hauled on shore, and requested that warps should be made fast on the land and sent on board, the attempt to do which again proved useless. As the fire was such as would, in all probability, sink the vessel in a short time, I determined to drop down the river, out of reach of the batteries, and make a stand against the flying artillery. I accordingly cut the cable and made sail, with very light airs, and at that instant discovered that the pilot had abandoned me. I dropped astern, for about ten minutes, when I was brought up on our shore, on Squaw Island; got the boarding boat made, had all the prisoners put in and sent on shore, with directions for the officer to return for me, and what property we could get from the brig; he did not return, owing to the difficulty of the boat's getting on shore. Discovering a skiff under the counter, I sent the four remaining prisoners in the boat, and with my officer, I went on shore to bring the boat off; I asked for protection to the brig of Lieut. Col. Scott, who readily gave it; at this moment I discovered a boat, with about forty soldiers, from the British side, making for the brig; they got on board, but were soon compelled to abandon her, with the loss of nearly all their men. During the whole of this morning both sides of the river kept up alternately a constant fire on the brig, and so much injured her that it was impossible to have floated her: before I left her she had received twelve shot of large size in her bends her sails in ribbons, and her rigging all cut to pieces. To my officers and men, I feel under great obligations; to Captain Towson, and Lieutenant Roach, of the second regiment of artillery; Ensign Prestman, of the infantry; to Cornelius Chapin, Mr. John McComb, Messrs. John Tower, Thomas Davis, Peter Overtacks, James Sloan, resident gentlemen of Buffalo, for their soldier and sailor-like conduct; in a word, every man fought with their hearts animated only by the interest and honor of their country. The prisoners I have turned over to the military. The Detroit mounted six six-pound long guns; a commanding lieutenant, a lieutenant of marines, a boatswain and gunner, and fifty-six men; about thirty American prisoners on board, muskets, pistols, and battle axes; in boarding her, I lost one man, one officer wounded—Mr. John C. Cummings, acting midshipman, a bayonet through the leg; his conduct was correct, and deserves the notice of the Department. The Caledonia mounted two small guns, blunderbusses, pistols, muskets, cutlasses, and boarding pistols; twelve men, including officers; ten prisoners on board; the boat boarding her commanded by Sailing Master George Watts, performed his duty in a masterly style; but one man killed and four wounded badly, I am afraid mortally. I enclose you a list of the officers and men engaged in the enterprise, and also a view of the lake and river in the different situation of attack; in a day or two I shall forward the names of the prisoners. The Caledonia belongs to the Northwest Company, laden with furs, worth, I understand, two hundred thousand dollars.

JESSE D. ELLIOTT.

HONORABLE PAUL HAMILTON, *Secretary of the Navy.**Lieut. Elliott to the Secretary of the Navy.*

BLACK ROCK, October 10th, 1812.

SIR:

In my letter of yesterday's date I stated my intention to enclose to you a list of the officers and men engaged with me in capturing His Britannic Majesty's brig the Detroit and brig Caledonia. The incessant fire of the enemy, and my own constant engagements for the protection of the vessels, compel me to postpone sending that list till another opportunity. Last evening, having observed an intention on the part of the enemy to remove the ordnance and military stores with which the Detroit was charged, I determined at once to set her on fire; thereby to prevent her having the aid of masts and yards in getting her guns into boats, she having five twelve-pound guns in her hold, and six six-pounders upon her deck, that I could prepare them, and, with my sailors, remove the ordnance, during the night, when unobserved by the enemy. These preparations I am now making, and shall, with as much expedition as possible, continue to get the ordnance, and place it in our battery, as we are much in want—not one piece at Black Rock. The Caledonia I have perfectly recovered from the enemy.

I have the honor to be, with great respect, &c.

JESSE D. ELLIOTT.

Lieut. Elliott to Commodore Chauncey, dated

BLACK ROCK, October 10th, 1812.

SIR:

I have the honor to inform you that, on the morning of the 6th instant, two vessels under British colors came down Lake Erie, and anchored under the protection of Fort Erie: that on the same day a detachment of men arrived from New York, accompanied by Sailing Masters Watts and Chisson, with some master's mates and midshipmen: that on the morning following I, with two boats previously prepared for the purpose, boarded and took possession of them, with the loss of two men killed, Samuel Fortune and Daniel Martin, and four wounded; Acting Midshipman John C. Cummings, John Garling, Nathan Armstrong, Jerome Sardie, and John Yosem. As there is not a probability of your receiving this shortly, I have made a communication to the Department upon the subject, a copy of which I enclose for your perusal. I beg you will not have conceived me hasty in making this attack. I acted as if the action came directly from yourself. Let me recommend to your particular attention the officers and men who performed this service: each and all did their duty. The ensign of the Adams I will send you by an early opportunity: it is at your disposal. The particulars, as it regards the vessels, I will forward you in a day or two; at present I am much engaged.

With sentiments, &c.

P. S. I have neglected mentioning to you the names of the vessels captured. One His Britannic Majesty's brig *The Detroit*, formerly the United States' brig Adams; the other a brig belonging to the Northwest Company, loaded with skins, called the Caledonia.

SACKETT'S HARBOR, October 16, 1812.

SIR:

I have great pleasure in informing you that, by a gentleman who arrived here yesterday afternoon, from Buffalo, I learn that Lieutenant Elliott, with about sixty sailors, and a number of volunteer militia, cut out from under the guns of Fort Erie, on the night of the 8th instant, the brig Adams (lately surrendered at Detroit) and the schooner Caledonia, laden with peltry, said to be very valuable: but in running these vessels for Black Rock, they both grounded, in such a situation that the British fort was firing on them when my informant left there on Friday morning last. It was, however, believed, that, if they could not be got off, they could be destroyed. I, however, hope that Lieutenant Elliott will be able to save both vessels: for such an addition to our little force on Lake Erie, at this time, would be invaluable. Lieutenant Elliott deserves much praise for the promptness with which he executed this service; as the sailors had only arrived at Black Rock on the 8th, and he had no particular orders

from me, except to have boats built and prepared for cutting out the British vessels, which I knew rendezvoused near Fort Erie. If Lieutenant Elliott succeed in saving the Adams and Caledonia, I think that we shall obtain the command of Lake Erie before December; but, as to this lake, I hardly know what to say, as there has not a single pound of powder, nor a gun, arrived yet, and I can make no calculation when any will arrive. I feel quite discouraged, and shall be tempted to seek the enemy, with the Oneida alone, if the guns do not arrive soon.

The sailors have all arrived at their places of destination; but the marines have not arrived. I, however, hope to see them to day or to-morrow.

I have the honor to be, very respectfully, your obedient servant,

ISAAC CHAUNCEY.

Honorable PAUL HAMILTON, *Secretary of the Navy.*

SACKETT'S HARBOR, *October 27, 1812.*

SIR:

I have the honor of enclosing you copies of two letters from Lieutenant Elliott, giving an account of his having cut out from under Fort Erie, on Lake Erie, in a most gallant manner, two British brigs, the Detroit (late Adams) and the Caledonia. The Detroit was manned and armed as a man of war; the Caledonia belonged to the Northwest Company, and was loaded with peltry.

Nothing that I can say, more than I have already said in a former communication upon this subject, will add to the credit of Lieutenant Elliott, and the gallant officers and men who accompanied him. The thing speaks for itself, and will, I am sure, be duly appreciated by all who have any idea of the difficulties that he had to encounter, after getting possession of these vessels.

I have the honor to be, respectfully, sir, your most obedient servant,

ISAAC CHAUNCEY.

Honorable PAUL HAMILTON, *Secretary of the Navy.*

WASHINGTON, *January 8, 1813.*

SIR:

In answer to your note, requesting of me "a general description of the armament and stores on board at the time of the capture of the Adams, and the probable number of men," I can state, that I sailed from Malden in the Adams, and arrived at Fort Erie on the morning preceding the night in which you captured that vessel. I left her in the afternoon, and crossed in her boat to Buffalo, with a flag. When I left the Adams, she had on board five guns mounted, (six and four pounders) and six long twelves in her hold. She had also on board a quantity of powder and ball, and a number of boxes of muskets. I am not able to state, of my own knowledge, the number of stand of arms, but I have been informed that nearly all the arms taken at Detroit were on board; if that was the fact, the number must have exceeded two thousand. The number of the crew that I left on board could not vary much from sixty, and the number of American prisoners about thirty, including three officers.

I have the honor to be, respectfully, your obedient servant,

HARRIS H. HICKMAN.

Lieutenant J. D. ELLIOTT, *U. S. N.*

NAVY DEPARTMENT, *October 27, 1812.*

SIR:

I have received, with great satisfaction, your communication of the 9th instant, and have been desired by the President of the United States to return to you, and through you to the officers and men under your command, in the expedition to Fort Erie, which terminated to the glory of the American arms, his particular thanks.

I am, with great respect, sir, your most obedient servant,

PAUL HAMILTON.

P. S. Your having abstained from fulfilling your intimation that you would expose your prisoners to the enemy's fire, is highly approved.

JESSE D. ELLIOTT, *Esq. Lieutenant Commanding, Black Rock.*

12th CONGRESS.]

No. 100.

[2d SESSION.]

NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 2, 1813.

NAVY DEPARTMENT, *January 29, 1813.*

The Commissioners of the Navy Pension Fund, in obedience to the "Act for the better government of the Navy of the United States," respectfully report to Congress the following statements in relation to the fund:

Paper A, which shows the amount of stock on the books of the treasury to the credit of the commissioners.

Paper B, statement of bank stock belonging to the fund.

Paper C, list of navy pensioners, with the pension allowed to each. [Aggregate amount \$9,287 20.]

Paper D, account of the commissioners with Thomas T. Tucker, Esquire, treasurer of the fund. [Balance in his hands 1st January, 1813, \$4,249 24]

Paper E, abstract of warrants drawn by the Secretary of the Navy, on the treasurer of the fund, from the 1st of January, 1812, to the 1st of January, 1813. [Amount of warrants drawn \$11,445.]

Paper F, accounts of Mr. George Macdaniel for the purchase of stock, which exhibit a view of the purchases made since last report. [Balance in his hands 1st January, 1813, \$2,726 25.]

All which is respectfully submitted for the Commissioners.

W. JONES, *Secretary of the Navy.*

A.

Statement of the Stock on the books of the Treasury, to the credit of the Secretary of the Navy, the Secretary of the Treasury, and the Secretary of War, for the time being Commissioners of the Navy Pension Fund, with the interest and reimbursement which accrued for the year 1812.

STOCKS.	Commencement of Interest.	Nominal amount of stock.	Interest and reimbursement for the year 1812.	Reimbursement of 6 per cent. and deferred stocks to 31st Dec'r, 1812.	Irredeemed amount of stock, 1st of January, 1813.
Six per cent. stock,	January 1, 1812,	\$39,579 04	\$3,166 31	\$24,782 66	\$14,796 38
Deferred six per cent. stock,	- - - - -	56,532 23	4,522 57	19,226 45	37,305 78

THOMAS TURNER, Accountant.

RE-ORGANIZATION OF THE NAVY DEPARTMENT, INCREASE OF THE CAPTAINS' AND ADDITIONAL SLOOPS OF WAR.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 6, 1813.

NAVY DEPARTMENT, February 2, 1813.

SIR:

Permit me to revive the suggestions I had the honor to make to you in conversation relative to the better organization of the Navy Department; and though it would be premature in me to offer any general system of improvement, yet, in my view, there are some prominent defects in the establishment, which are susceptible of a simple remedy, similar to that of which necessity urged the adoption in relation to the War Department.

The vital error appears to me to consist in loading the chief of the Department with the cognizance of details, and with the execution of duties which divert his attention from the sound direction of the great and efficient objects of the establishment; or the inevitable alternative is to submit the execution of those duties to subordinate agents, whose responsibility does not afford a sufficient guarantee to the public for the judicious and faithful discharge of the trust. Of this nature is the duty of forming contracts, making purchases, and the effective control and accountability of navy agents, now spread over the interior as well as the Atlantic coast, and which I conceive would employ to great public advantage a distinct department, directed by a responsible and able head. If, in the present state of our navy, this view of the subject is in any degree correct, the increase, as now provided for by law, must render it indispensable.

I would therefore respectfully suggest the idea of a naval purveyor's department, with deputies, as many as may be necessary, to be nominated by the President to the Senate. The purveyor to reside in some of our central seaport towns, where the state of the market, and the information necessary to form contracts to advantage, can be best known, and effected with the best security; the Secretary of the Navy retaining the control and general direction of all important contracts to be formed by the purveyor.

Permit me also to ask of you to consider the propriety of increasing the appropriation for clerks in the Navy Department, so as to admit of the addition of two able clerks to the number now employed. I would also suggest the propriety of providing for the appointment of an additional number of captains, in anticipation of those authorized by the act for building the seventy-fours. There is not now a single vacancy; and unless a captain is taken from one of the navy yards, there is no commander for the Macedonian, although a distinguished master commandant has been designated for that promotion and command; indeed, we have none to provide for casualties, or the fate of battle.

I would also draw your attention to a species of force of vast importance for short coasting convoys, as well as for the annoyance of the enemy. I mean corvettes, such as the Hornet, or rather larger, (such as the enemy employ.) Of this valuable class of vessels we are almost destitute. I think six vessels of this class would be desirable; they can be built by contract on favorable terms, and in service in four months. Orders have been given to construct and equip two corvettes at Erie, and one at Sackett's Harbor, with a view to the complete command of the whole of the lakes. I think, sir, the public could be amply remunerated for the additional six corvettes, by a reduction of the number of gunboats now in service, and of the officers and crews of those that may be retained, in situations admitting of such diminution.

I have the honor to be, very respectfully, sir, your obedient servant,

W. JONES.

HON. BURWELL BASSETT, *Chairman of the Naval Committee, House of Representatives.*

NAVY DEPARTMENT, February 3, 1813.

SIR:

With reference to the note I had the honor to address to you on the — instant, permit me to add that the authority to increase the number of captains is equally applicable to the circumstances of the Adams frigate, intended for Captain Morris, who is not yet appointed, and for whom there is no vacancy.

I also pray your attention to a subject which menaces the service with serious inconvenience. Offences committed on board privateers are to be tried by naval courts martial; two have been called for and ordered since I have been in office. It is at all times inconvenient and expensive to institute these tribunals, and, in many cases, may be impracticable; meanwhile, the accused may be suffering the rigors of an unjust imprisonment, and the frequency of offences or charges may create very serious evils. Indeed, a case has already occurred, in which an individual has suffered several months' close confinement, waiting trial. Cannot some other tribunal be substituted?

I am, sir, your obedient servant,

W. JONES.

NAVY DEPARTMENT, February 4, 1813.

SIR:

Upon more mature reflection and investigation, I am induced to believe that it will for this session be best to postpone the creation of the purveyor's office, lest it should militate with some of the arrangements necessary to be made at an early period; and during the recess, I shall have an opportunity of testing the utility of the plan, as well as of suggesting some improvements of the system. All that will be necessary at present, will be to provide for two additional clerks in this Department, and I believe they are really necessary. I would propose to embrace in the appropriation for building and equipping the sloops of war, the whole number which may be necessary both on the lakes and the sea, by a section authorizing the building — sloops of war, (say ten of the largest class) and a section appropriating, for the building and equipping the said sloops of war, including \$200,000 for expenses incurred in the purchase and building of vessels on the lakes, — dollars.

I am, respectfully, sir, your obedient servant,

W. JONES.

HON. BURWELL BASSETT, *Chairman of the Naval Committee.*

[12th CONGRESS.]

No. 102.

[2d SESSION.]

DEFICIT IN THE NAVAL APPROPRIATIONS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, ON THE 7TH OF FEBRUARY, 1813.

NAVY DEPARTMENT, February 7, 1813.

SIR:

I have the honor of transmitting to you, herewith, papers A, B, and C, which exhibit a view of the navy appropriations on the 27th of January, 1813.

By these papers, it will be seen that the amount overdrawn under the heads of the several appropriations of pay, provisions, medicines, repairs, contingencies, navy yards, and quartermaster's stores, is \$366,166 70

And that there was on that day due for bills and requisitions drawn upon the Department, under these several heads, 206,460 00

That, on that day, there was estimated to be due to the crews of the public ships, and other vessels in commission, the sum of 365,000 00

And that the balance due and becoming due on contracts for ordnance, is estimated at 105,874 75

Making a deficit in the appropriations of \$1,043,501 45

From the paper C you will perceive, sir, that the appropriations to make good these deficiencies should be classed as follows, viz:

For pay and subsistence of the navy,	512,034 06
For provisions,	84,471 00
For medicines and hospital stores,	14,529 99
For repairs,	218,130 83
For contingent account,	77,725 81
For navy yards,	25,905 64
For quartermaster's stores,	4,829 37
For ordnance,	105,874 75
	<hr/>
	\$1,043,501 45

I incline, however, to the opinion that this classification, with respect to the sums stated as required for provisions and for ordnance, would admit of an alteration beneficial to the public service, although the Department is not in possession of that minute information which would enable me to form a conclusive and satisfactory opinion upon the subject. On the one hand it is confidently believed (although we have no actual returns) that, of the supplies of provisions heretofore provided, there is on hand more than can be consumed during the present year, and of course that a considerable quantity might be sold: on the other hand, it is known that our supply of small arms, such as muskets, pistols, cutlasses, boarding pikes, battle axes, &c., also of shot and ball, is very limited. Under these circumstances, I would recommend that the whole amount transferred, during the late recess of Congress, from ordnance, be now appropriated to ordnance, and that the difference between the sum of one hundred and five thousand eight hundred and seventy-four dollars and seventy-five cents, and the one hundred and fifty thousand dollars so transferred, be deducted from the sum of eighty-four thousand four hundred and seventy-one dollars, stated as the deficit under the head of provisions.

Should this idea meet your concurrence, the appropriations should be made thus—

For pay, &c.	\$512,034 06
For provisions,	40,345 75
For medicines, &c.	14,529 99
For repairs,	218,130 83
For contingent account,	77,725 81
For navy yards, &c.	25,905 64
For quartermaster's stores, &c.	4,829 37
For ordnance,	150,000 00
	<u>\$1,043,501 45</u>

I have the honor to be, with great respect, sir, your most obedient servant,

W. JONES.

Honorable LANGDON CHEVES,

Chairman of the Committee of Ways and Means.

A.

Statement of Navy Appropriations, January 27, 1813.

SPECIFIC HEADS OF APPROPRIATION.	Balance in the hands of the Secretary of the Treasury.	Balance in the hands of the Treasurer of the U. States.	Overdrawn.

Amount of requisitions not complied with,	-	-	-	27,000 00
Amount of bills not paid,	-	-	-	6,000 00

Deficit under this head, - - - - \$218,130 83

NOTE.—In aid of the appropriation for repairs there was transferred, during the late recess, from the appropriation for			
"Pay," &c.	-	-	\$200,000 00
"Provisions,"	-	-	100,000 00
"Ordnance,"	-	-	150,000 00
			<u>\$450,000 00</u>
CONTINGENT ACCOUNT.			
Overdrawn under this head, per papers A and B,	-	-	\$73,725 81½
From which deduct the balance yet in the hands of the Secretary of the Treasury,	-	-	25,000 00
			<u>\$48,725 81½</u>
Amount of requisitions not complied with,	-	-	29,000 00
			<u>\$77,725 81½</u>
NOTE.—In aid of the appropriation for contingent expenses there was transferred, during the late recess, from the appropriation for			
"Pay," &c.	-	-	\$70,000 00
"Sulphur," &c.	-	-	25,000 00
			<u>\$95,000 00</u>
NAVY YARDS, &c.			
Overdrawn under this head, per papers A and B,	-	-	\$15,255 64
Amount of requisitions not complied with,	-	-	10,000 00
Amount of bills not paid,	-	-	650 00
			<u>\$25,905 64</u>
QUARTERMASTER'S STORES, &c.			
Overdrawn under this head, per papers A and B,	-	-	\$3,829 37
Amount of requisitions not complied with,	-	-	1,000 00
			<u>\$4,829 37</u>
ORDNANCE.			
Requisitions not complied with,	-	-	\$8,600 00
Deduct the amount stated, per paper A, to be in the hands of the Treasurer,	-	-	2,725 25
			<u>\$5,874 75</u>

NOTE.—Upon the contracts for ordnance there is, at this time, a large amount due to contractors. This amount cannot, however, be ascertained, with any precision, in time to be communicated during the present session of Congress. The sum due, and becoming due, is probably about two-thirds the amount transferred, during the late recess of Congress, from this appropriation to that of "Repairs." The sum so transferred was, as stated under the head of "Repairs," one hundred and fifty thousand dollars; the sum then due, and becoming due, would, in this view, be about one hundred thousand dollars. The best opinion that I can form, under existing circumstances, is, that the deficit of the appropriation for ordnance ought not to be stated at less than one hundred and five thousand eight hundred and seventy-four dollars and seventy-five cents.

DISTRIBUTION OF PRIZE MONEY—BOUNTY TO PRIVATEERS FOR PRISONERS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 12, 1813.

Mr. BASSETT made the following report:

The committee on that part of the President's message relating to the naval establishment, to whom was referred a resolution to inquire into the expediency of distributing a greater portion of the captures, by the public armed vessels, to the officers and crews thereof, and of giving farther encouragement to privateering, have considered the subject, and, by their chairman, report:

That, in relation to the first inquiry, they find that, by the British statutes of the 13th and 27th of George the second, the whole prize of each and every public armed vessel is given to the officers and crews making the capture; and they find this principle published by British proclamation, in relation to the present war with the United States. The laws of the U. S. vol. 3d, page 360, direct that, if a capture be made by an American public armed vessel, of equal or superior force, the capturing vessel shall have the whole; in all other cases of capture, one half is distributed to the officers and crew, and the other half is paid to the commissioners of the navy pension fund, pledged first for the payment of pensions, and the surplus to be disbursed for the comfort and benefit of seamen. This fund for navy pensions amounts to something more than two hundred thousand dollars, yielding an annual interest of fifteen thousand dollars; and the amount of pensions is from seven to eight thousand dollars; leaving a yearly balance of seventeen thousand dollars in favor of the fund, and this without the addition of the prizes made this war, which are known to exceed one hundred thousand dollars, and will probably amount to two hundred thousand dollars, so as to double the fund; while only four persons have been added to the list by the war, to receive twenty-one dollars. From the above it appears that, from the old pension list, the amount of pensions is little more than three per centum on the amount of prizes. Were five per cent. from the future prizes, to be added to this fund, on past experience it would promise an adequate sum for the payment of pensions. Your committee, however, concluded that it would not do to rely conclusively on past experience, and, on the ground of certainty, deemed it best for the fund to remain as

established for another year, when more experience would give more confidence to the decision. As this report is intended to bring the subject under the view of the House, with the hope that it will not be lost sight of at the next session, it will be proper here to add, that, with some of the committee, the idea was entertained that ten per centum should be withheld from distribution, viz: five per cent. for the pension, and five for the navy hospital fund; in which not only the imbecility of decrepitude, but the imbecility of infancy should also find an asylum. On the other branch of the inquiry, your committee give their fullest attestation to the utility and importance of privateers. If, at other times and in other countries, the effect of individual exertion has been distrusted, the unexampled gallantry of our citizens, in that way, since the declaration of war, assures us that, with Americans, even the individual arm can make an efficient impression on the foe. The mode, however, of giving encouragement, they found not free from difficulty. As least liable to objection, they recommend that a bounty be paid for every prisoner brought in; and, that this proposition may be regularly before the House, they report a bill.

12th CONGRESS.]

No. 104.

[2d SESSION.

CAPTURE OF THE JAVA.

COMMUNICATED TO CONGRESS, FEBRUARY 22, 1813.

To the Senate and House of Representatives of the United States:

I lay before Congress a letter, with accompanying documents, from Captain Bainbridge, now commanding the United States' frigate "the Constitution," reporting his capture and destruction of the British frigate "the Java." The circumstances and the issue of this combat afford another example of the professional skill and heroic spirit which prevail in our naval service. The signal display of both by Captain Bainbridge, his officers, and crew, command the highest praise.

This being a second instance in which the condition of the captured ship, by rendering it impossible to get her into port, has barred a contemplated reward of successful valor, I recommend to the consideration of Congress the equity and propriety of a general provision, allowing, in such cases, both past and future, a fair proportion of the value which would accrue to the captors on the safe arrival and sale of the prize.

JAMES MADISON.

FEBRUARY 22d, 1813.

U. S. FRIGATE CONSTITUTION, *St. Salvadore, 3d January, 1813.*

SIR:

I have the honor to inform you that, on the 29th ult. at 2 P. M. in south latitude 13° 6', and west longitude 38°, about ten leagues distant from the coast of Brazil, I fell in with, and captured, His Britannic Majesty's frigate Java, of 49 guns, and upwards of four hundred men, commanded by Captain Lambert, a very distinguished officer. The action lasted one hour and fifty-five minutes, in which time the enemy was completely demasted, not having a spar of any kind standing. The loss on board the Constitution was nine killed and twenty-five wounded, as per enclosed list. The enemy had sixty killed and one hundred and one wounded, certainly; (among the latter, Captain Lambert, mortally) but by the enclosed letter, written on board this ship, by one of the officers of the Java, and accidentally found, it is evident that the enemy's wounded must have been much greater than as above stated, and who must have died of their wounds previously to their being removed. The letter states sixty killed and one hundred and seventy wounded.

For further details of the action, I beg leave to refer you to the enclosed extracts from my journal. The Java had, in addition to her own crew, upwards of one hundred supernumerary officers and seamen, to join the British ships of war in the East Indies; also, Lieutenant General Hislop, appointed to the command of Bombay, Major Walker, and Captain Wood, of his staff, and Captain Marshall, master and commander in the British navy, going to the East Indies to take command of a sloop of war there.

Should I attempt to do justice, by representation, to the brave and good conduct of all my officers and crew, during the action, I should fail in the attempt; therefore, suffice it to say, that the whole of their conduct was such as to merit my highest encomiums. I beg leave to recommend the officers particularly to the notice of Government, and also the unfortunate seamen who were wounded, and the families of those brave men who fell in the action.

The great distance from our own coast, and the perfect wreck we made of the enemy's frigate, forbade every idea of attempting to take her to the United States. I had, therefore, no alternative but burning her, which I did on the 31st ult. after receiving all the prisoners and their baggage, which was very tedious work, only having one boat left out of eight, and not one left on board the Java.

On blowing up the frigate Java, I proceeded to this place, where I have landed all the prisoners, on their parole, to return to England, and there remain until regularly exchanged, and not to serve in their *professional capacities*, in any place, or in any manner whatever, against the United States of America, until said exchange is effected.

I have the honor to be, &c.

WILLIAM BAINBRIDGE.

The Hon. PAUL HAMILTON, *Secretary Navy, City Washington.*

List of the killed and wounded on board the U. S. frigate Constitution, under the command of Commodore William Bainbridge, in an action with His Britannic Majesty's frigate Java, Henry Lambert, Esq. commander, December 29th, 1812.

WM. BAINBRIDGE.

The following is a list of His Britannic Majesty's military and naval officers, &c. paroled at St. Salvadore, (Brazil) by Commodore William Bainbridge, 3d January, 1813.

1 Lieutenant General,	} Military officers.
1 Major,	
1 Captain,	
1 Post Captain,	
1 Master and Commander,	
5 Lieutenants,	} Naval officers.
3 Lieutenants of Marines,	
1 Surgeon,	
2 Assistant Surgeons,	
1 Purser,	
15 Midshipmen,	
1 Gunner,	
1 Boatswain,	
1 Master,	
1 Carpenter,	
2 Captain's Clerks,	
38 Officers.	

Three hundred and twenty-three petty officers, seamen, marines, and boys, exclusive of nine Portuguese seamen liberated and given up to the Governor of St. Salvadore, and three passengers, private characters, whom the commodore did not consider prisoners of war, and permitted them to land, without any restraint.

DISTRIBUTION OF SWORDS TO THE OFFICERS OF THE SQUADRON AT THE ATTACKS ON TRIPOLI.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 26, 1813.

Mr. QUINCY made the following report:

The committee to whom was referred the message of the President of the United States, transmitting a report of the Secretary of the Navy relative to the resolution of Congress of the 3d of March, 1805, and to the proceedings under the same, having caused the letters marked A and C to be addressed to the Secretary of the Navy, received from him the letters marked B and D, with the accompanying documents annexed to that letter and to this report.

From these letters and documents it appears that, in a letter addressed to the chairman of the Committee of Ways and Means, dated the 16th day of December, 1805, and in explanation of "the causes why the expenditures of that branch of the public service had so far exceeded the estimates and appropriations for the same," the then Secretary of the Navy did transmit "an estimate of expenses defrayed" by the Navy Department, containing an item, declared to be "for expenditures under the resolution of Congress of the 3d of March, 1805; for which objects no appropriations have been made; they have, therefore, been defrayed out of the appropriations for the support of the navy for the year 1805, twenty thousand dollars."

Upon this statement an act passed on the 22d January, 1806, making an additional appropriation to supply the deficiencies in the appropriations for the naval service during the year 1805, in which was included the above sum, thus stated to be a deficiency, incurred by an expenditure, which, to that amount, had been defrayed by the Navy Department.

It now appears, by the annexed letter of the Secretary of the Navy, dated the 2d of February, instant, that the item abovementioned, instead of being, as it was stated to be, "for expenditures which had been defrayed" by the Navy Department, was, in fact, merely an item stating "a deficit," which resulted from "an estimate that the objects, contemplated by the resolution, would, if carried into effect, cost the sum of twenty thousand dollars."

From the preceding statement, resulting from the annexed letter and document, it therefore appears to your committee that the sum of twenty thousand dollars had not been "defrayed out of the appropriations for the support of the Navy for the year 1805," as was alleged to have been done in the item annexed to the letter of the Secretary of the Navy, of the 16th December, 1805.

It also, from the same evidence, appears to your committee, that the above sum of twenty thousand dollars has never been expended for objects specified in the item annexed to that letter, and on account of which that sum was included in the appropriation, made by the act of the 22d January, 1806; the sum of six thousand nine hundred and forty-one dollars and thirty-two cents only having been expended for objects specified in that item, there remained an unexpended balance of that item of appropriation of thirteen thousand and fifty-eight dollars and sixty-eight cents.

In relation to this balance it appears, by the annexed letters of the Secretary of the Navy, that it is not known, with certainty, at the Navy Department, whether that balance has been applied to other objects of navy expenditures, any further than from the circumstance that, at that time, the warrants of the Navy Department "upon the treasurer were drawn upon the appropriations indiscriminately;" and the whole amount of the appropriations having been expended," it is presumed, or supposed, "to follow, irresistibly, that this balance was merged in the general navy expenditures."

Inasmuch, therefore, as the amount of this item of appropriation was obtained under the suggestion of an actual and "defrayed" expenditure, when, in fact, it was merely an estimated and undefrayed expense, and inasmuch as it appears that it has been expended for objects to which it was, originally, not destined by law, your committee are of opinion that a further examination is required into the real objects to which this unexpended balance, obtained under that suggestion, has been actually applied.

With respect to that part of the resolution of the 3d of March, 1805, which "requests the President to cause a sword to be presented to each of the commissioned officers and midshipmen who distinguished themselves in the attack on the town, batteries, and naval force of Tripoli," in the execution of which the Secretary of the Navy states that "it is presumed that the President saw, what to his mind appeared difficulties of great delicacy, from the peculiar language of the resolution," your committee cannot but regret that the terms of the resolution should have been such as to prevent the officers and midshipmen of that squadron from receiving the decreed and well deserved marks of their country's gratitude and honor. It is, however, apparent to your committee, that Congress, by passing the resolution of the 3d of March, 1805, did decide that some of the officers and midshipmen, engaged in that service, were entitled to, and should receive, the destined testimony of the nation's sense of their merit. If, as is suggested in the letter of the Secretary of the Navy, the nature of the service and the equality of desert make discrimination difficult, your committee are of opinion that, under such circumstances, it is better, and more worthy of the national character, that all should receive the destined reward, than that it should be withheld from all. The universality of distribution (should, in the opinion of the President, "all have acted gloriously") will be a testimony of general merit, and to each individual an evidence of his having been a partaker of the glory of that service. A total neglect of such distribution, after so distinct and public an acknowledgment of the title of some, is, in the opinion of your committee, doing justice to none. Under these impressions, considering that the conduct of the squadron, under the command of Commodore Preble, in the harbor and before the batteries of Tripoli, constitutes one of the most brilliant portions of our naval history; considering that the resolution passed on the 3d of March, 1805, raised just expectations in the officers and midshipmen, engaged in that service, of receiving some distinct token of their country's favor; considering, also, the great importance, at this crisis of our affairs, of not discouraging the spirit of our naval commanders by withholding rewards to which they have already been declared, by a solemn resolution of Congress, to be entitled; your committee have deemed it their duty to recommend a renewal of the appropriation, to the amount of the unexpended balance above stated, to enable the President of the United States to carry into full effect the resolution of the 3d of March, 1805.

In pursuance of these opinions and reasonings your committee propose, for adoption, the following resolutions:

Resolved, That the sum of thirteen thousand and fifty-eight dollars and sixty-eight cents be appropriated, to enable the President of the United States to cause a sword to be presented to each of the officers and midshipmen who distinguished themselves at the attacks of the town, batteries, and naval force of Tripoli, in conformity with the resolution of Congress of the 3d of March, 1805.

Resolved, That the Secretary of the Navy be directed to lay before this House, at the ensuing session of Congress, a detailed statement of all the objects of expenditure to which the appropriations under the act of the 11th of December, 1805, and under the act of 22d of January, 1806, making additional appropriations for the naval service, were applied.

A.

HOUSE OF REPRESENTATIVES, 27th January, 1813.

SIR:

The committee to whom was referred the message of the President of the United States relative to the presentation of a gold medal to Commodore Preble, and swords to the officers of his squadron, have directed me to state the following facts as existing in the records of the House of Representatives.

It appears by a letter of the Committee of Ways and Means, dated the 12th of December, 1805, and by the documents accompanying that letter, published by order of the House of Representatives, on the 16th January, 1806, that the Secretary of the Treasury had apprised that committee, by letter, of a large deficiency in the appropriations for the naval service, during the then current year (1805); and that, in reply to the said letter of the Committee of Ways and Means, inquiring why the expenditures of that branch of the public service so far exceeded the estimates and appropriations, the Secretary of the Navy did, by his letter dated the 16th of December, 1805, transmit an account of expenses defrayed by the Navy Department out of the appropriations for the year 1805, and which, not having been contemplated in the estimate on which that appropriation was founded, the expenditure had constituted a total deficiency of six hundred thousand dollars.

Among the items thus stated to have been defrayed, was one of twenty thousand dollars for the expenditures under the resolution of Congress of 3d March, 1805.

Upon this statement I am directed to inquire whether that sum had been expended, and whether that deficiency did then exist, as stated in the letter of the Secretary of the Navy? And, if it were expended, to request that an account of the particulars, specifying the dates, amount, and objects of such expenditure of twenty thousand dollars, may be transmitted to the committee, from your Department.

I am, sir, respectfully, your obedient servant,

JOSIAH QUINCY.

HON. WILLIAM JONES, Secretary of the Navy.

B.

NAVY DEPARTMENT, 2d February, 1813.

SIR:

I have had the honor of receiving your letter of the 27th ultimo.

On referring to the communication made by the Secretary of the Navy, on the 16th December, 1805, to the Hon. John Randolph, chairman of the Committee of Ways and Means, I find that there was at that time an estimated deficit in the navy appropriations of six hundred thousand dollars, and various items are therein stated as consti-

tuting this deficit. Among others the sum of twenty thousand dollars is *estimated* "for expenditures under the resolution of Congress of the 3d March, 1805;" that is, it was estimated that the objects contemplated by the resolution would, if carried into effect, cost the sum of twenty thousand dollars. The resolution embraced three distinct objects, namely: a gold medal to Commodore Preble; a sword to each of the commissioned officers and midshipmen who had distinguished themselves in the several attacks against Tripoli; and one month's extra pay to each of the petty officers, seamen, and marines, of the squadron. Of these objects, two only, that is, the medal and the one month's pay, were carried into effect. The cost of these objects appears by the enclosed paper marked (a.) to have been six thousand nine hundred and forty-one dollars and thirty-two cents.

It results from this, that, of the twenty thousand dollars estimated as necessary to carry into effect the objects contemplated by the resolution of 3d March, 1805, there remained unexpended a balance of thirteen thousand and fifty-eight dollars and sixty-eight cents, and that one of the objects of the resolution was never carried into effect. This balance, it is presumed, was merged in the general navy expenditures. For these objects there never was a specific appropriation made; and at that time the warrants of the Secretary of the Navy upon the Treasurer did not, as they have done since the act of 3d March, 1809, "specify the particular appropriation or appropriations to which the same should be charged."

I have the honor to be, respectfully, your obedient servant,

W. JONES.

Hon. JOSIAH QUINCY, of the House of Representatives.

(a.)

There appears to have been paid on account of the medal presented to Commodore Preble, nine hundred and eighty dollars and thirty-two cents.

There being no special or specific appropriation for the payments under the resolution of Congress, of 3d March, 1805, there was no distinct account raised on the books of this office for the payments. They were charged under the general account for "Pay of the Navy;" of course the amount could only be ascertained by examining various accounts with the Department, which has been done, and it is believed with accuracy, and the amount appears to be five thousand nine hundred and sixty-one dollars.

NAVY DEPARTMENT, *Accountant's Office, February 8, 1813.*

THO. TURNER, *Accountant.*

C.

HOUSE OF REPRESENTATIVES, *22d February, 1813.*

SIR:

I am directed by the committee to whom was referred the message of the President of the United States relative to the presentation of a gold medal to Commodore Preble, and swords to the officers of his squadron, to inquire on what grounds the Navy Department "presumes that the balance of thirteen thousand and fifty-eight dollars and sixty-eight cents was merged in the general navy expenditures," as asserted in your letter of the 2d instant.

They also direct me to inquire *what are the dates* of the several actual expenditures of the sums of \$980 32 paid on account of the medal to Commodore Preble; and on account of the other payments a further sum of 5,961 00 stated in the documents annexed to the same letter.

\$6,941 32

An early answer is solicited by the committee.

I am, very respectfully, your obedient servant,

JOSIAH QUINCY.

Hon. WILLIAM JONES, *Secretary of the Navy.*

D.

NAVY DEPARTMENT, *February 25, 1813.*

SIR:

I have had the honor of receiving your letter of the 22d inst. in which you inquire, "on what grounds the Navy Department presumes that the balance of \$13,058 68 was merged in the general navy expenditures," as stated in the letter addressed to you on the 2d inst.

The terms "it is presumed," as used in my letter of the 2d inst. might, with perfect propriety, have been omitted: for, as therein stated, "there never was a specific appropriation made for the objects in question, and, at that time, the warrants of the Secretary of the Navy, upon the treasurer, did not, as they have done since the act of 3d March, 1809, express the particular appropriation or appropriations to which the same should be charged." Of course the warrants of the Secretary of the Navy, upon the treasurer, were drawn upon the appropriations indiscriminately; and the whole amount of the appropriations having been expended, it follows irresistibly that the balance of \$13,058 68 was merged in the general naval expenditures.

If there had been a specific appropriation of \$20,000; and if the warrants of the Secretary of the Navy had have expressed the object for which they were drawn upon the Treasurer, and the power of transferring had not have existed, or, if it existed, had not have been exercised, it would then have been in the power of the Secretary of the Navy to have answered all the queries which you have been pleased to propound to him upon this subject; and under such circumstances, the information to you would probably have been, that the unexpended balance had been carried to the surplus fund.

The papers herewith, numbered 1, 2, afford information as to the "dates of the several actual expenditures of the sum of \$980 32, paid on account of the medal to Commodore Preble, and an account of the other payments of the sum of \$5,961."

I am, very respectfully, sir, your obedient servant,

W. JONES.

Hon. JOSIAH QUINCY, *House of Representatives.*

[13th CONGRESS.]

No. 106.

[2d SESSION.]

CAPTURE OF THE BRITISH FLEET ON LAKE ERIE AND BRIG BOXER.

COMMUNICATED TO THE SENATE, DECEMBER 31, 1813.

NAVY DEPARTMENT, *December 27th, 1813.*

SIR:

Agreeably to your request, I have the honor to transmit copies of the official letter and documents narrating the splendid and decisive victory gained on the 10th of September, on Lake Erie, by the United States' squadron under the command of Captain Oliver Hazard Perry, over a British squadron of superior force, commanded by a distinguished veteran officer.

The effects of this victory are no less important to the national interest and security, than the unrivalled splendor of the achievement and generous sympathy of the victors is honorable to the national character.

While the heroic commander of the American squadron justly merits the highest honors which the expression of the national councils can bestow, the second in command on that eventful day appears to merit particular distinction, for the important and decisive share he had in that glorious event; and it is grateful in the highest degree to reflect that every officer and man, on that trying occasion, discharged his duty to the nation with zeal, fidelity, and honor.

I have the honor also to enclose copies of the official accounts of the action between the United States' brig Enterprise and the British sloop of war Boxer, which terminated in a victory, which, for brilliancy and decision, it is believed, has never been surpassed in single action. The force of the enemy, in this case, was, if not actually superior, at least equal to that of the Enterprise; but the comparative effect of the skill and fire of each proves that, had the enemy been greatly superior in force, the result must have been the same. In this action, the gallant commander of the Enterprise displayed the highest degree of skill and intrepidity, and died in the arms of victory; but being mortally wounded early in the action, was most ably succeeded by Lieutenant McCall, whose conduct on that occasion it is impossible to appreciate too highly.

I have the honor to be, very respectfully, your obedient servant,

W. JONES.

Hon. JOHN GAILLARD, *Chairman of Committee of the Senate on Naval Affairs.*

U. S. BRIG NIAGARA, (*off the Western Sister, head of Lake Erie*) September 10th, 1813, 4 P. M. }

SIR:

It has pleased the Almighty to give to the arms of the United States a signal victory over their enemies on this lake.

The British squadron, consisting of two ships, two brigs, one schooner, and one sloop, have this moment surrendered to the force under my command, after a sharp conflict.

I have the honor to be, sir, very respectfully, your obedient servant,

O. H. PERRY.

The Hon. WILLIAM JONES, *Secretary of the Navy.*

U. S. SCHOONER ARIEL, *Put-in-Bay, September 13th, 1813.*

Sir:

In my last I informed you that we had captured the enemy's fleet on this lake. I have now the honor to give you the most important particulars of the action.

On the morning of the 10th instant, at sunrise, they were discovered from Put-in-Bay, where I lay at anchor with the squadron under my command. We got under way, the wind light at S. W., and stood for them. At ten A. M. the wind hauled to S. E. and brought us to windward; formed the line, and bore up. At fifteen minutes before twelve, the enemy commenced firing; at five minutes before twelve, the action commenced on our part. Finding their fire very destructive, owing to their long guns, and its being mostly directed at the Lawrence, I made sail, and directed the other vessels to follow, for the purpose of closing with the enemy. Every brace and bowline being soon shot away, she became unmanageable, notwithstanding the great exertions of the sailing master. In this situation, she sustained the action upwards of two hours, within canister distance, until every gun was rendered useless, and the greater part of her crew either killed or wounded. Finding she could no longer annoy the enemy, I left her in charge of Lieutenant Yarnall, who, I was convinced, from the bravery already displayed by him, would do what would comport with the honor of the flag. At half past two, the wind springing up, Captain Elliott was enabled to bring his vessel, the Niagara, gallantly into close action. I immediately went on board of her, when he anticipated my wishes, by volunteering to bring the schooners, which had been kept astern by the lightness of the wind, into closer action. It was with unspeakable pain that I saw, soon after I got on board the Niagara, the flag of the Lawrence come down; although I was perfectly sensible that she had been defended to the last, and that, to have continued to make a show of resistance would have been a wanton sacrifice of the remains of her brave crew. But the enemy was not able to take possession of her, and circumstances soon permitted her flag again to be hoisted. At forty-five minutes past two the signal was made for "closer action." The Niagara being very little injured, I determined to pass through the enemy's line; bore up, and passed ahead of their two ships and a brig, giving a raking fire to them, from the starboard guns, and to a large schooner and sloop from the larboard side, at half pistol shot distance. The smaller vessels, at this time, having got within grape and canister distance, under the direction of Captain Elliott, and keeping up a well directed fire, the two ships, a brig, and schooner, surrendered, a schooner and sloop making a vain attempt to escape.

Those officers and men who were immediately under my observation, evinced the greatest gallantry; and I have no doubt that all others conducted themselves as became American officers and seamen.

Lieutenant Yarnall, first of the Lawrence, although several times wounded, refused to quit the deck.

Midshipman Forrest, (doing duty as lieutenant) and Sailing Master Taylor, were of great assistance to me.

I have great pain in stating to you the death of Lieutenant Brooks of the marines, and Midshipman Laub, both of the Lawrence, and Midshipman John Clark, of the Scorpion; they were valuable and promising officers.

Mr. Hambleton, purser, who volunteered his services on deck, was severely wounded, late in the action; Midshipmen Claxton and Swartwout, of the Lawrence, were severely wounded.

On board the Niagara, Lieutenants Smith and Edwards, and Midshipman Webster, (doing duty as sailing master) behaved in a very handsome manner.

Captain Brevoost, of the army, who acted as a volunteer, in the capacity of a marine officer, on board that vessel, is an excellent and brave officer, and with his musketry did great execution.

Lieutenant Turner, commanding the Caledonia, brought that vessel into action in the most able manner, and is an officer that, in all situations, may be relied on.

The Ariel, Lieutenant Packet, and Scorpion, Sailing Master Champlin, were enabled to get early into action, and were of great service.

Captain Elliott speaks in the highest terms of Mr. Magrath, purser, who had been despatched in a boat on service, previous to my getting on board the Niagara; and being a seaman, since the action has rendered essential service in taking charge of one of the prizes.

Of Captain Elliott, already so well known to the Government, it would almost be superfluous to speak. In this action he evinced his characteristic bravery and judgment; and, since the close of the action, has given me the most able and essential assistance.

I have the honor to enclose you a return of the killed and wounded, together with a statement of the relative force of the squadrons. The captain and first lieutenant of the Queen Charlotte, and first lieutenant of the Detroit, were killed; Captain Barclay, senior officer, and the commander of the Lady Prevost, severely wounded. The commanders of the Hunter and Chippeway, slightly wounded.

Their loss in killed and wounded I have not yet been able to ascertain; it must, however, have been very great.

Very respectfully, I have the honor to be, sir, your most obedient servant,

O. H. PERRY.

The Hon. WILLIAM JONES, *Secretary of the Navy.*

List of killed and wounded on board the United States' squadron, under command of O. H. Perry, Esq. in the action of 10th September, 1813; viz.:

On board the Lawrence, killed.

John Brooks, lieutenant marines.
Henry Laub, midshipman.
Christopher Mayhew, quarter master.
James W. Allen, seaman.
Joseph Kennedy, ditto.
John C. Kelly, private in the regiment.
John Smith, seaman.
William Cranston, ordinary seaman.
Andrew Michael, seaman.
John Hoffman, ordinary seaman.
Charles Pohig, seaman.

Nelson Peters, ditto.
James Jones, ditto.
John Rose, ditto.
James Carty, sailmaker's mate.
Thomas Butler, seaman.
Wilson Mays, carpenter's mate.
James Brown, seaman.
Ethelred Sykes, landsman.
Philip Sharbley, corporal of marines.
Jesse Harland, private.
Abner Williams, ditto.

On board the Lawrence, wounded.

John J. Yarnall, 1st lieutenant, slightly.
Dulaney Forrest, 2d ditto, slightly.
William N. Taylor, sailing master, slightly.
Samuel Hambleton, purser, severely.
Thomas Claxton, midshipman, severely.
Augustus Swartwout, midshipman, severely.
Jonas Stone, carpenter, slightly.
William C. Keen, master at arms, slightly.
Francis Mason, quarter master, severely.
John Newen, ditto, severely.
Joseph Lewis, ditto, slightly.
Ezekiel Fowler, ditto, slightly.
John E. Brown, quarter gunner, severely

Henry Schroeder, ordinary seaman, severely.
Benoni Price, seaman, severely.
Thomas Robinson, ditto, severely.
Peter Kinsley, ditto, severely.
Nathan Chapman, ditto, severely.
Thomas Hill, ordinary seaman, severely.
Barney M'Cain, ditto, severely.
William Dawson, seaman, severely.
Westerly Johnson, ordinary seaman, severely.
Samuel Spywood, ditto, severely.
Robert Hill, seaman, slightly.
Francis Cummings, ordinary seaman, severely.
Thomas Reed, ditto, severely.

William Johnson, boatswain's mate, severely.
 James Helan, ditto, slightly.
 George Cornell, carpenter's mate, slightly.
 Thomas Hammond, armorer, slightly.
 William Thompson, seaman, severely.
 George Varnum, ditto, severely.
 James Moses, ditto, severely.
 William Roe, ditto, severely.
 Joseph Denning, ditto, severely.
 William Daring, ditto, severely.
 John Clay, ditto, severely.
 Stephen Fairfield, ditto, severely.
 George Williams, ditto, severely.
 Lannon Huse, ditto, severely.
 James Waddington, ditto, severely.
 John Burnham, ditto, severely.
 John Burdeen, ditto, severely.
 Andrew Mattison, ditto, severely.
 Jeremiah Easterbrook, ordinary seaman, severely.

Charles Vandyke, ordinary seaman, severely.
 William Simpson, ditto, severely.
 Jesse Williams, ditto, slightly.
 James Hadley, ditto, slightly.
 James Bird, marine, severely.
 William Burnett, ditto, severely.
 William Baggs, ditto, severely.
 David Christie, ditto, severely.
 Henry Vanpoole, ditto, severely.
 Thomas Tuff, landsman, severely.
 Elijah Barlin, ditto, severely.
 John Adams, ditto, slightly.
 Charles Harrington, ditto, slightly.
 William B. Perkins, ditto, slightly.
 Nathaniel Wade, boy, severely.
 Newport Hazard, ditto, slightly.

On the morning of the action, the sick list of the *Lawrence* contained thirty-one unfit for duty.

On board the Niagara, killed.

Peter Morell, seaman.

Isaac Hardy, ordinary seaman.

On board the Niagara, wounded.

John J. Edwards, lieutenant.
 John L. Cummings, midshipman.
 Edward Martin, seaman, (since dead.)
 William Davis, ordinary seaman, (since dead.)
 Joshua Trapnel, marine, (since dead.)
 Ronvell Hall, ordinary seaman.
 George Platt, seaman.
 Elias Wiley, ordinary seaman.
 Henry Davidson, seaman.
 John M. Strebeck, ordinary seaman.
 John Freeman, ditto.
 James Sansford, seaman.
 Thomas Wilson, ditto.

Charles Davidson, seaman.
 Daniel Bennet, ditto.
 John Felton, boatswain's mate.
 Sergeant Mason, marine.
 Corporal Scott, ditto.
 Thomas Miller, ditto.
 John Rumas, ditto.
 George McManomy, ditto.
 George Scoffield, ditto.
 Samuel Cochran, ditto.

On the morning of the action, the sick list of the *Niagara* contained twenty-eight unfit for duty.

On board the Caledonia, wounded.

James Artus, slightly.

Isaac Perkins, slightly.

James Philips, slightly.

On board the Somers, wounded.

Charles Ordun.

Godfrey Bowman.

On board the Ariel, killed.

John White, boatswain's mate.

Wounded.

William Sloss, ordinary seaman, slightly. Robert Wilson, seaman, slightly.
 John Lucas, landsman, slightly.

On board the Trippe, wounded.

Isaac Green, soldier, 26th regiment, badly.

John Nailes, soldier, 17th regiment, slightly.

On board the Porcupine.

None killed or wounded.

On board the Scorpion, killed.

John Clark, midshipman.

John Sylhamamer, landsman.

On board the Tigress.

None killed or wounded.

Two days previous to the action, the sick lists of the small vessels contained the names of fifty-seven men unfit for service.

Recapitulation.

	Killed.	Wounded.	Total.
Lawrence,	22	61	83
Niagara,	2	25	27
Caledonia,	0	3	3
Somers,	0	2	2
Ariel,	1	3	4
Trippe,	0	2	2
Porcupine,	0	0	0
Scorpion,	2	0	2
Tigress,	0	0	0
	27	96	123

S. HAMBLETON, *Purser.*

O. H. PERRY, *Captain and Senior Officer.*

Statement of the force of the British squadron.

Detroit, ship,	19 guns, one on pivot, and two howitzers.
Queen Charlotte, ship,	17 do. do.
Lady Prevost, schooner,	13 do. do.
Hunter, brig,	10 do.
Little Belt, sloop,	3 do.
Chippewa, schooner,	1 do. and two swivels.
	—
	63 guns.

Note.—The Detroit is a new ship, very strongly built, and mounts long twenty-fours, eighteens, and twelves.

Statement of the force of the United States' squadron.

Lawrence, brig,	20 guns.
Niagara, brig,	20 do.
Caledonia, brig,	3 do.
Ariel, schooner,	4 do. (one burst early in action.)
Scorpion, schooner,	2 do.
Somers, schooner,	2 do.
Trippe, sloop,	1 do.
Tigress, schooner,	1 do.
Porcupine, schooner,	1 do.
	—
	54 guns.

The exact number of the enemy's force has not been ascertained, but I have good reason to believe that it exceeded ours by nearly one hundred men.

BOSTON, 7th September, 1813.

SIR:

The enclosed letters will give you the information of a brilliant victory gained by the United States' brig Enterprise over His Britannic Majesty's brig Boxer, of considerable superiority of force. Nothing that I can say would add to the lustre of the gallant action, which so decidedly speaks for itself. But I cannot restrain my deep regret for the loss of so valuable an officer as the brave Lieutenant Burrows.

I have the honor to be, with great respect, sir, your obedient servant,

WM. BAINBRIDGE.

Honorable WILLIAM JONES, *Secretary of the Navy, Washington.*

PORTLAND, 7th September, 1813.

SIR:

I had the honor last evening to forward you by express, through the hands of Commodore Bainbridge, a letter received from Samuel Storer, Esq. Navy Agent at this place, detailing an account of the capture of the British brig Boxer by the United States' brig Enterprise.

I now have to inform you that I left Portsmouth this morning, and have this moment arrived here, and as the mail is closing, I have only time to enclose you the report of Lieutenant McCall of the Enterprise, and to assure you that a statement of the two vessels, as to the damage they have received, &c. shall be forwarded as soon as surveys can be made; the Boxer has received much damage in her hull, masts, and sails; indeed it was with difficulty that she could be kept afloat to get her in. The Enterprise is only injured in her masts and sails.

I have the honor to be, with great respect, sir, your obedient servant,

ISAAC HULL.

The Honorable WILLIAM JONES, *Secretary of the Navy.*

UNITED STATES BRIG ENTERPRISE, PORTLAND, 7th September, 1813.

SIR:

In consequence of the unfortunate death of Lieutenant Commandant William Burrows, late commander of this vessel, it devolves on me to acquaint you with the result of our cruise.

After sailing from Portsmouth on the 1st instant, we steered to the eastward, and on the morning of the 3d, off Wood Island, discovered a schooner, which we chased into this harbor, where we anchored.

On the morning of the 4th, weighed anchor, and swept out and continued our course to the eastward. Having received information of several privateers being off Monhegan, we stood for that place; and on the following morning, in the bay near Pemequid Point, discovered a brig getting under way, which appeared to be a vessel of war, and to which we immediately gave chase. She fired several guns and stood for us, having four ensigns hoisted. After reconnoitring and discovering her force, and the nation to which she belonged, we hauled upon a wind to stand out of the bay, and at 3 o'clock shortened sail, tacked, and ran down with an intention to bring her to close action.

At twenty minutes after 3, P. M. when within half pistol shot, the firing commenced from both, and after being warmly kept up, and with some manœuvring, the enemy hailed, and said they had surrendered, about 4 P. M. Their colors being nailed to the masts could not be hauled down. She proved to be His Britannic Majesty's late brig Boxer, of fourteen guns, Samuel Blythe, Esq. commander, who fell in the early part of the engagement, having received a cannon shot through the body. And I am sorry to add that Lieutenant Burrows, who had gallantly led us to action, fell also about the same time, by a musket ball which terminated his existence in eight hours.

The Enterprise suffered much in spars and rigging, and the Boxer, both in spars, rigging, and hull, having many shot between wind and water.

It would be doing injustice to the merit of Mr. Tillinghast, second Lieutenant, were I not to mention the able assistance I received from him during the remainder of the engagement, by his strict attention to his own division and other departments. And the officers and crew, generally, I am happy to add, from their cool and determined conduct, have my warmest approbation and applause.

As no muster roll that can be fully relied on has come into my possession, I cannot exactly state the number killed on board the Boxer; but from information received from the officers of that vessel, it appears there were between twenty and thirty-five killed, and fourteen wounded. Enclosed is a list of the killed and wounded on board the Enterprise.

I have the honor to be, with great respect, sir, your obedient servant,

EDWARD R. McCALL, *Senior Officer.*

ISAAC HULL, Esq. *Commanding Naval Officer on the Eastern station, Portland.*

List of the killed and wounded on board the United States' brig Enterprise, in the engagement with the British brig Boxer, on the 5th September, 1813.

Killed.

Nathaniel Garren, Ordinary seaman.

Wounded.

William Burrows, commander, since dead.
 Kerwin Waters, midshipman, mortally.
 Elisha Blossom, carpenter's mate, since dead.
 David Horton, quartermaster.
 Russell Coates, quartermaster.
 Thomas Orrings, quartermaster.
 Benjamin Gannon, boatswain's mate.

Scuiler Bradley, seaman.
 James Snow, seaman.
 Snow Jones, seaman.
 Peter Barnard, ordinary seaman.
 William Thomas, 2d, seaman.
 John Fitzmen, marine.

13th CONGRESS.]

No. 107.

[2d SESSION.

NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 17, 1814.

NAVY DEPARTMENT, *January 14, 1814.*

The Commissioners of the Navy Pension Fund, in obedience to the "Act for the better government of the navy of the United States," respectfully report to Congress the following statements in relation to that fund:

Paper A, which shows the amount of stock on the books of the treasury to the credit of the commissioners.

Paper B, statement of bank stock belonging to the fund.

Paper C, list of navy pensioners, with the pension allowed to each. [Aggregate amount, \$11,273 20.]

Paper D, account of the commissioners with Thomas T. Tucker, Esq. treasurer of the fund. [Balance in his hands, \$31,972 25.]

Paper E, abstract of warrants drawn by the Secretary of the Navy on the treasurer of the fund, from the 1st January to the 31st December, 1813. [Amount, \$105,840.]

Paper F, account of prize money deposited to the credit of the Treasurer of the United States, not included in his account D, for the year ending 31st December, 1813. [Amount unexpended 1st January, 1814, \$122,600 41.]

The \$100,000 invested in stock per paper E, was subscribed to the seven and a half millions loan, and the balance, per paper F, is intended to be subscribed to the loan of the year 1814, as it is presumed the investment in that loan will be more advantageous to the pension fund, than the purchase of stock at this time.

All which is respectfully submitted. For the commissioners,

W. JONES.

A.

Statement of the stock on the books of the Treasury, to the credit of the Secretary of the Navy, the Secretary of the Treasury, and the Secretary of War, for the time being Commissioners of the Navy Pension Fund, with the interest and reimbursement which accrued for the year 1813.

No. 108.

[2d Session.]

NAVAL TROPHIES ACQUIRED FROM GREAT BRITAIN.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 4, 1814.

COMMITTEE ROOM, December 22d, 1813.

SIR:

The following resolution has been adopted by the House of Representatives of the United States, viz:

“Resolved, That a committee be appointed to inquire into the present condition and distribution of the flags, standards, and colors, which have been taken by the forces of the United States, from their enemies, and whether it would be expedient to make any provision in relation to them; with leave to report by bill or otherwise.”

The committee to whom the above resolution has been referred have instructed me to state, that they contemplate the collection, preservation, and public exhibition, of the subjects therein embraced. On the 23d of June, 1778, Congress “Resolved, That the Board of War be directed to collect the standards and colors taken from the enemy by the army of the United States, since the commencement of the war.” The committee request such general information as the Navy Department can furnish on this subject. It is particularly desired to know, whether any order and practice have been, at any time, adopted, under the resolution of June 23d, 1778. The committee are anxious to ascertain the number of naval flags which remain, of those that were taken during our revolutionary struggles, their present condition, and manner of preservation. Can the names of the captured vessels to which these flags belonged, be ascertained, together with their rates; and the names of the victorious and vanquished commanders? The same information is requested concerning such flags as have been taken by the forces of the United States during their dispute with France, in 1798; concerning those which were gained from Tripoli, and such as have been taken since the commencement of our present war with Great Britain.

With sentiments of respect, I have the honor to be, &c.

ADAM SEYBERT, *Chairman.*

Hon. WM. JONES, *Secretary of the Navy.*

NAVY DEPARTMENT, January 25, 1814.

SIR:

In reply to the inquiries contained in your letter of the 22d ultimo, I have to remark that the resolution of Congress of the 23d of June, 1778, directing the collection of standards and colors taken from the enemy, appearing to relate to those only which were taken by the *army* of the United States, it is not supposed that “any order and practice have been, at any time, adopted,” in pursuance of that resolution, concerning naval trophies of a similar kind. The records and documents of this Department afford no light respecting such flags as are inquired for by the committee, anterior to the declaration of the present war, nor are there any such flags or standards in any depository of the Department, that were taken prior to this time. Those which have been captured from the enemy by the public armed vessels of the United States, and received at this Department since the 18th of June, 1813, have been carefully preserved, and are now suspended in the office of the Secretary of the Navy, subject to such disposition as Congress may provide for their better security and exhibition. The enclosed paper embraces all the particulars in relation to them within the power of the Department to present to the committee.

I have the honor to be, sir, very respectfully, your obedient servant,

W. JONES

The Hon. ADAM SEYBERT, *Chairman of the Committee, &c. &c.*

Statement showing the number of Naval Flags taken from Great Britain, since the commencement of the present war, together with the names of the captured vessels, &c. to which they were attached, their rates, the rates of the capturing vessels, the date of capture, and the names of the vanquished and victorious commanders.

N. B. In addition to the flags which belong to the captured vessels above named, there are, in this Department, a Royal Standard of Great Britain, taken at York, on the 27th of April, 1813, a Royal Mace taken from the Parliament House, at the same time and place, and a Union Jack and flag, taken at Fort George, on the 27th of May, 1813. These were transmitted to the Department by Commodore Chauncey.

It is believed that this statement includes all the flags of the public armed vessels of the enemy that have been taken by the public armed vessels of the United States, since the commencement of the present war, excepting those of five small vessels, captured by Commodore Chauncey, on Lake Ontario, and those of the brigs Detroit and Caledonia, taken by Lieutenant Elliott, on Lake Erie, which have not been received.

13th CONGRESS.]

No. 109.

[2d SESSION.]

FURTHER ENCOURAGEMENT TO PRIVATE ARMED VESSELS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 19, 1814.

To the Honorable the Senate and House of Representatives of the United States in Congress assembled, the memorial of the subscribers, merchants and ship owners, of the city of Baltimore, most respectfully represents:

That, in consequence of the strict blockade of the several great inlets to the several ports and harbors of the United States, the private armed service has been much discouraged of late, from the great difficulty of bringing into port the property of the enemy captured on the high seas. That sea-faring men having, in this state of things, but inconsiderable inducements to enter on board private vessels of war, are daily becoming more unwilling to adventure in said service, as the prospect of any remuneration for their toils and hardships is thus rendered more distant and precarious. That your memorialists are sincerely anxious to carry on the war with unabated vigor, by supporting the private armed service, with considerable means and resources; and if such inducements should be held out by the Government to our seamen as will offer a prospect of probable compensation to them for their exposure, are ready to give the best pledge of their sincerity by largely embarking in enterprises against the trade of the enemy. That it is most obvious that private cruises must prove in the end detrimental to the public interests, while the sole object of those concerned is to send in for adjudication the property which they capture; as the very frequent recapture of prizes must, by degrees, throw a great portion of our best seamen into the hands of the enemy, and thus waste and dissipate the means of active annoyance. That your memorialists are deeply impressed with the belief that the most effectual means of injury to the enemy's trade, which can now be adopted, without impairing our own strength, by the unnecessary exposure of our seamen to capture, would be, by the destruction at sea, of British merchant ships, which at once would deprive them of the benefit they now derive from the superiority in strength and number of their ships of war; and that such a system, if vigorously prosecuted, would soon teach them that even an inferior naval power can inflict the deepest wounds on that part in which they are most sensible. But it can scarcely be expected that private adventurers will sacrifice to such an object all prospects of benefit, derived from capture, and expose themselves to the certain loss of an unprofitable cruise.

They would therefore respectfully submit it to the wisdom of Congress whether a provision, by law, for an adequate compensation to the owners, officers, and crews, of private armed vessels, for every ton of shipping belonging to the enemy which they shall destroy on the high seas, will not have the effect of preventing the evils they apprehend, of encouraging seamen to enter the service, and of more effectually harassing the enemy, than any system of warfare hitherto adopted. If such a provision should be made, your memorialists will be ready to enter largely into the private armed service, and would sanguinely calculate on the increased spirit of our seamen and the enlarged enterprise of our merchants.

GEORGE P. STEVENSON, and others.

BALTIMORE, February 4th, 1814.

13th CONGRESS.]

No. 110.

[2d SESSION.]

LIST OF NAVAL OFFICERS.

COMMUNICATED TO THE SENATE, FEBRUARY 21, 1814.

NAVY DEPARTMENT, February 21, 1814.

SIR:

In obedience to the resolution of the Senate of the 2d August last, I have the honor to transmit a list of all the commissioned officers in the Navy of the United States, showing their respective rank, and dates of the commissions; and also, a list of all the midshipmen, with the dates of their warrants.

I am, respectfully, sir, your obedient servant,

W. JONES.

To the Hon. the PRESIDENT of the Senate.

Exhibit of the commissioned officers, and of the midshipmen of the Navy of the United States, agreeably to the dates of their respective commissions or warrants.

NAVY DEPARTMENT, *February 19, 1814.*

W. JONES.

13th CONGRESS.]

No. 111.

[2d SESSION.

CONDITION OF THE NAVY, AND THE PROGRESS MADE IN PROVIDING MATERIALS AND BUILDING SHIPS.

COMMUNICATED TO THE SENATE, MARCH 18, 1814.

NAVY DEPARTMENT, *February 22, 1814.*

SIR:

I have the honor to submit the following in answer to your letter of the 20th December last.

Three ships, of seventy-four guns each, and of the largest class, are now building, of prime materials, and in the most substantial and durable manner, viz: one at Portsmouth, New Hampshire, one at Charlestown, Massachusetts, and one at Philadelphia. The two former, it is expected, will be launched in the month of July, and the latter in the month of December next.

Three ships, of forty-four guns each, of the largest class, are also building, of durable materials, in the best manner, viz: one at Philadelphia, one at Baltimore, and one at the navy yard in this city. The two former, it is expected, will be launched by the middle of April, and the latter, in all the month of July next.

The six sloops of war, authorized by law, have all been built, in the most substantial manner and of good materials, two of which are ready for sea; three more have nearly completed their crews, and will, probably, be ready for sea in ten or twelve days, and the sixth is now equipping at the navy yard in this city.

Six barges have been purchased at Philadelphia; also, four at Baltimore, and one at Norfolk.

Eight have been built at Baltimore; ten are nearly completed on the Eastern shore of Maryland; four have been built, and one is now building, at the navy yard in this city; five are building at Charleston, South Carolina; six at St. Mary's, Georgia; and preparatory measures are now in operation to increase the force in North Carolina, and at New Orleans, in vessels of this description, as fast as men can be procured to man them.

Previous to the year 1813, it appears that no timber had been procured under the act of March 30th, 1812; but, early in the year 1813, timber to the amount of twenty-three thousand dollars was purchased at Baltimore, under the act of March 30, 1812, "suitable for rebuilding the frigates Philadelphia, General Greene, New York, and Boston;" but, as there is no appropriation or authority to rebuild those frigates, and as the Philadelphia is not in existence, and the General Greene, New York, and Boston, are rotten worthless hulks, that would cost much more, in proportion to their value, to rebuild them, than to build new frigates of a better class, and vastly superior construction, a part of that timber has been applied to the building of the forty-four and the sloops of war at Baltimore, and the seventy-four and forty-four at Philadelphia.

Contracts for, and purchases of timber, to a very considerable amount, have been made for naval purposes during the year 1813; but which have not been charged to the particular appropriation of the 30th of March, 1812, though applied to the same purposes as timber chargeable to that appropriation would have been, viz: in building the three seventy-four's at Portsmouth, Charlestown, and Philadelphia; the forty-four gun ship at the latter place, and the forty-four and sloop of war at the navy yard in this city; also in the repairs of the ships of the navy, and in preparing several sets of spare masts, spars, tops, &c. &c. ready for the ships which may return damaged; and the residue is applicable to similar purposes.

These have been charged, either under the head of repairs, or to the appropriation for building seventy-four's and frigates; which appropriations, it is conceived, are properly chargeable with timber purchased for those purposes. Six cargoes, amounting to twenty-six hundred tons, of Georgia yellow pine timber, which had been cut for the use of the British navy, but entered the Eastern ports of the United States on account of the war, have been purchased on favorable terms; also a prize cargo of Northern timber. These are properly chargeable to the annual appropriation for the purchase of timber. A contract was made, in August last, for the delivery, at Norfolk and this place, of a quantity of yellow pine plank, thick stuff, beams, and mast pieces, sufficient for two ships of seventy-four guns each, and two forty-four gun frigates. The timber, under this contract, is now delivering. Contracts for timber, yet to be delivered, have been made at the Eastern stations, the particulars of which are not yet in the Department. A recent contract has been made at Philadelphia for white oak plank, thick stuff, beams, and knees;

and for yellow pine plank, and beams, sufficient for a seventy-four and a forty-four gun ship; and for fifty sticks of yellow pine, for masts and spars. These are chargeable upon the appropriation of the 30th of March, 1812.

No contracts for live oak timber have yet been made, as the transportation is impracticable under existing circumstances, and if collected in considerable quantities, at landings accessible to vessels fit for transportation, they would be equally so to the enemy, and the timber, when collected, would be liable to destruction. As live oak is exclusively applied to the frame, of timbers which constitute the form and mould of the ship, it is necessary that the timber should be cut and shaped, not only to the particular curve, for which each piece is designed, but to its true oblique dimensions, otherwise great waste in the conversion, and expense in transportation, will ensue; for this purpose it is necessary that draughts, or designs, of the contemplated ships, should be determined, proper moulds made, by which to cut and shape the timber, and mechanics employed to superintend the execution of the contracts. Hence contracts for timber of this description cannot be made and executed with the same facility and certainty as for straight rectangular timber.

It is, therefore, considered that a state of peace will be much more favorable to the collection of a stock of timber of this description than that of war, in which it can neither be transported to the dock yards, nor deposited in safety at the sea-coast landings. Nevertheless, it is contemplated to make the necessary arrangements for such supplies of suitable live oak timber as may be had in places of safety.

On this subject, it is very satisfactory to learn that our resources, in timber of this kind, are greatly extended, in the abundance which may be procured from the shores of the bays and waters, near the mouth of the Mississippi. This species of timber requires very little seasoning; six months docking will render it perfectly fit for use.

No further steps have been taken in relation to the dock yard than general inquiry and proper deliberation, in order to determine upon the best site, in a central situation.

The result has decided in favor of the right bank of the Hudson, above the Highlands. The motives to this decision were, from considering the contemplated dock yard as the nucleus, around which a great naval establishment may be formed, comprising wet and dry docks, forges, foundries, boring, rolling, saw, and block mills, blast and smelting furnaces, an armory, hydraulic engines, rope walks, manufactories of sail duck, and work shops of all kinds, which will require a copious head of water, readily commanded in this vicinity. Here, also, will be the main arsenal, and depot of timber and materials of all kinds, and the principal dock yard for constructing and repairing ships of war. Such an establishment in any of our seaports, accessible to ships of the line, would form so great a temptation to a powerful enemy as to render destruction certain, unless protected by forts and garrisons of the most formidable and expensive nature.

The natural defences at the pass of the Highlands are such as to remove all doubt on this subject, and supersede the necessity of a large protecting force.

The Hudson is a deep, bold, noble stream, of easy and safe navigation. The surrounding country produces abundance of iron, and large quantities of hemp; and the banks of the Hudson furnish a variety of timber fit for naval purposes. The communication with the Northern and Western lakes is more direct and favorable to the distribution of naval and military stores than any other situation that can be selected. The only objection of importance that I have heard suggested is, that the Hudson at this point is closed by the ice a fortnight sooner, and opens a fortnight later, than at New York; but this objection is greatly overbalanced by the extraordinary advantages of the situation.

In order to select the most suitable situation, a careful examination and survey, under the direction of some of our most experienced officers, aided by a skilful engineer, appears to be indispensable—an opportunity for which has been prevented by the active operations of the war, and consequent occupation of the officers best qualified for this service.

The number of seamen, ordinary seamen, and boys, authorized by law, is indefinite, and discretionary with the President, as will appear by the following references:

The act of Congress of the 21st of April, 1806, limits the officers, seamen, ordinary seamen, and boys, to 13 captains, 9 masters commandant, 72 lieutenants, 150 midshipmen, and 925 seamen, ordinary seamen, and boys.

The act of the same date authorizes the President to man and equip the gunboats.

The act of the 3d of March, 1807, authorizes the employment of 500 additional seamen, ordinary seamen, and boys.

The act of the 31st of January, 1809, authorizes the employment of 300 additional midshipmen, and 3,600 additional seamen, ordinary seamen, and boys.

The act of the 30th of March, 1812, authorizes officers and seamen of the navy to be increased so far as may be necessary to officer, man, and equip, the vessels to be put in service.

The act of the 2d of January, 1813, provides for the building, officering, and manning, four 74's and six frigates.

The act of the 3d of March, 1813, authorizes the President to build six sloops of war, and to build or procure such a number of sloops of war, or other armed vessels, on the lakes, as the public service may require, and to appoint such officers, and to employ the number of seamen, as may be necessary for such vessels, as are authorized by law to be put in commission.

The act of the 5th of July, 1813, authorizes the President to cause to be built, equipped, and manned, such number of barges as he may deem necessary.

There is no correct data in the Department by which to ascertain the actual number of seamen, ordinary seamen, and boys, employed at any one period. The longest period of enlistment being for two years, and, in many cases, for the flotilla service, for a shorter period, the number is constantly fluctuating, and, consequently, cannot be correctly ascertained; but it is believed, from a general view of the subject by the accountant and myself, that the number employed during the year 1813 has considerably exceeded the estimate for that year.

There is not, at this time, in the Department, sufficient data upon which to estimate the number of gunboats actually fit for service: some have undergone partial repairs, while others have deteriorated.

The following will show the number on each station, and their presumed condition, viz:

Portsmouth, New Hampshire,	-	-	-	-	-	-	-	-	6 gunboats,
Newburyport,	-	-	-	-	-	-	-	-	2
Boston,	-	-	-	-	-	-	-	-	2
Rhode Island,	-	-	-	-	-	-	-	-	9
New London,	-	-	-	-	-	-	-	-	2
New York,	-	-	-	-	-	-	-	-	31
									7
									38
Delaware Bay,	-	-	-	-	-	-	-	-	7
									12
									19
Baltimore,	-	-	-	-	-	-	-	-	1
Potomac,	-	-	-	-	-	-	-	-	3
Norfolk,	-	-	-	-	-	-	-	-	23
									6
									3
									5
									6

When it is considered that six large sloops of war have been built, equipped, and manned, in our seaports, and three sloops of war and one ship of twenty-six guns on the lakes, within the preceding eight months—that three seventy-four's and three forty-four's will be added this year, but *which are yet to be manned*, and that provision still exists for building one seventy-four and three forty-four's, as soon as suitable materials can be had, it appears to me that any further provision, at present, for the increase of our naval force, would not add to its efficiency, and therefore is not necessary; except such as I have suggested in my letter to the chairman of the Naval Committee of the House of Representatives, a copy of which I have the honor to enclose, and even of that description the number ought to be *very moderate*, when the contemplated increase of our force on the lakes, and the demand for experienced officers and seamen, which the very rapid augmentation of our force has created, are taken into view. The flotilla service, moreover, is still very deficient in men. We may readily and rapidly add any reasonable number of vessels to our force, but their armament, and many important parts of their equipment, of every description, will be to fabricate. The cannon foundries are few in number, and none of any note north of the waters of the Chesapeake. These have been, are now, and will be, fully engaged, during the present year, in fabricating the ordnance required for the force already authorized. The private armed vessels cannot, at this time, procure their armament of a proper kind on any terms.

With the rapid increase of our naval force, the promotion of young officers has been *necessarily very rapid*; and those whose experience and talents have exalted our flag are comparatively few in number. Therefore, however desirable it may be to give the senior lieutenants separate commands, in which they would be useful to their country, and acquire honor to themselves, it will leave our seventy-four's and frigates, and squadrons on the lakes, without officers of sufficient experience. This has been a subject of serious solicitude with some of our commanders; and the tenacious policy of our naval system precludes the admission of talent and experience from any other source than lineal promotion. It is true sailing masters have been promoted to lieutenants, under special circumstances; and I perceive no good reason why this experienced and valuable class of officers should not be as regularly entitled to promotion as midshipmen.

With these views the honorable committee will be enabled to appreciate the arguments which I have deemed it proper to offer for their consideration.

I also beg leave to suggest the propriety of augmenting the marine corps from the present establishment, eighteen hundred and sixty-nine, to two thousand six hundred and fifty-two, and to increase the number of commissioned officers in the same proportion as in the infantry of the army.

It is not necessary to recall the recollection of the honorable committee to the gallant part this distinguished corps has acted in all the noble victories which have been achieved, nor to its character for discipline, valor, and patient endurance of the most severe service on the lakes, in which it has suffered excessively; suffice it to say, that it is not surpassed by any body of men in the service of the United States, though seen only in the back ground of the picture, and without the ordinary inducements to noble actions—a reasonable prospect of promotion, with a sprig of the laurel which it may help to gather. The augmentation which I recommend will be actually necessary for the force now authorized, as will be illustrated by the estimate which accompanies this. This corps is moreover exceedingly useful at our several naval stations, and, from its amphibious character, calculated to render important services in every situation.

We have a right, sir, to anticipate, during the ensuing summer, the most urgent occasion for the vigorous employment of the flotilla for the defence of the waters of the United States; and it has become a very interesting question how that force is to be commanded with the best effect. That service is, at best, unpopular with the regular officers of the navy; and the services of those officers who are qualified for separate command are required to meet the increased demand for the regular naval force, particularly on the lakes, which is very pressing. Those officers who are deficient in experience are justly averse to the flotilla service, because they can acquire but very little useful professional knowledge; and indeed, it is a service in which those who are to form the officers for the ships of war ought not to be engaged.

There are other intrinsic difficulties in this service, which are unknown on board our ships of war. The temptations to insubordination and vice are much greater in this scattered and amphibious kind of force; and the rigors of naval discipline, unless tempered with judgment and great moderation, discourage the recruiting for this service.

Bay and river craftsmen, seamen, ordinary seamen, who have families, riggers, and naval mechanics out of employ, will engage in this service, under a local commander of capacity and influence, when they will not engage for the regular naval service.

As rank, in our naval service, can only be attained by regular gradation, commanders of talents, local knowledge, influence, and distinguished courage, cannot be commissioned for this service under the present regulations. The necessity of the case, from the reasons which I have assigned, has induced the employment of a few acting officers, with command, but without rank, in two of the most important situations, viz: New York harbor and the Chesapeake bay. These appointments appear to have given great confidence in these districts, and the success in recruiting for the service on these stations, considering the unequal competition of the military and private service, has been favorable.

I would, therefore, take the liberty of suggesting the utility of providing by law for the appointment of four captains, with the same relative rank and authority in the flotilla service, and the same pay and emoluments as captains in the navy; and twelve lieutenants, with the same relative rank and authority in the flotilla service, and the same pay and emoluments as lieutenants in the navy, but limited to the temporary employment of the flotilla, without rank in the navy other than in the flotilla in which they may serve, and subject only to the orders of the President of the United States. In all other respects, to be governed by the rules and regulations provided for the government of the navy.

There is an object of great importance to which I could have wished to draw your attention—I mean the reorganization of the Navy Department; for the necessity of which, no one can be more sensible than myself; but, really, my faculties have been so closely engaged with the multifarious objects, and the current and incessant labors of the Department, during a period of the most active and important operations, that I have had no leisure to deliberate upon and digest a system satisfactory to myself, or such as I can present to you at this time. And, as it is better to labor with known evils, than to hazard a premature and inadequate system, I have thought it best to postpone the subject for the present, respectfully submitting, however, to the wisdom of Congress to revive the system, if it shall deem it now necessary.

I have the honor to be, very respectfully, sir, your obedient servant,

W. JONES.

HON. JOHN GAILLARD, *Chairman of the Naval Committee of the Senate.*

NAVY DEPARTMENT, *March 4, 1814.*

SIR:

Agreeably to your intimation, I have the honor to transmit herewith a list of the ships and vessels of the navy of the United States, with the rate, station, and name, of the commander of each.

I am, very respectfully, sir, your obedient servant,

W. JONES.

The Hon. JOHN GAILLARD, *Chairman of the Naval Committee of the Senate.*

13th CONGRESS.]

No. 112.

[3d SESSION.]

CAPTURE OF THE BRITISH FLEET ON LAKE CHAMPLAIN.

COMMUNICATED TO THE SENATE, OCTOBER 6, 1814.

NAVY DEPARTMENT, *October 3, 1814.*

SIR:

In compliance with your request I have now the honor to enclose copies of all the documents received from Captain MacDonough, in relation to the brilliant and extraordinary victory achieved by the United States' squadron under his command, over that of the enemy, in Plattsburg Bay, on Lake Champlain.

This action, like that of its prototype on Lake Erie, cannot be portrayed in language corresponding with the universal and just admiration inspired by the exalted prowess, consummate skill, and cool persevering intrepidity, which will ever distinguish this splendid and memorable event.

This, like those brilliant naval victories which preceded it, has its peculiar features, which mark it with a distinct character: It was fought at anchor. The firm, compact, and well-formed line, the preparations for all the evolutions of which the situation was susceptible, and the adroitness and decisive effect with which they were performed in the heat of battle, mark no less the judgment which planned than the valor and skill displayed in the execution.

All these are heightened by the contemplation of a vigorous and greatly superior force moving down upon this line, in his own time, selecting his position, and choosing his distance, animated by the proximity of a powerful army, in co-operation, and stimulated by the settled confidence of victory.

To view it in the abstract, it is not surpassed by any naval victory on record; to appreciate its results, it is, perhaps, one of the most important events in the history of our country.

That it will be justly estimated, and the victors duly honored by the councils of the nation, the justice and liberality hitherto displayed, on similar occasions, is a sufficient pledge.

I have the honor to be, very respectfully, sir, your obedient servant,

W. JONES.

The Hon. CHARLES TAIT, *Chairman of the Naval Committee of the Senate.*

UNITED STATES' SHIP SARATOGA, OFF PLATTSBURG, *September 11, 1814.*

SIR:

The Almighty has been pleased to grant us a signal victory on Lake Champlain, in the capture of one frigate, one brig, and two sloops of war, of the enemy.

I have the honor to be, very respectfully, sir, your obedient servant,

T. MACDONOUGH, *Commanding.*

Honorable W. JONES, *Secretary of the Navy.*

UNITED STATES' SHIP SARATOGA,
at anchor off Plattsburg, September 13, 1814.

SIR:

By Lieutenant Commandant Cassin I have the honor to convey to you the flags of His Britannic Majesty's late squadron, captured, on the 11th instant, by the United States' squadron under my command. Also, my des-

patches relating to that occurrence, which would have been in your possession at an earlier period but for the difficulty in arranging the different statements.

The squadron under my command now lies at Plattsburg: it will bear a considerable diminution, and leave a force sufficient to repel any attempt of the enemy in this quarter. I shall wait your order what to do with the whole or any part thereof; and, should it be consistent, I beg you will favor me with permission to leave the lake, and place me under the command of Commodore Decatur, at New York. My health, (being some time on the lake) together with the almost certain inactivity of future naval operations here, are among the causes of this request for my removal.

I have the honor to be, sir, with much respect, your most obedient servant,

T. MACDONOUGH.

Honorable W. JONES, *Secretary of the Navy, Washington.*

UNITED STATES' SHIP SARATOGA, *Plattsburg Bay, September 13, 1814.*

SIR:

I have the honor to give you the particulars of the action which took place on the 11th instant on this lake.

For several days the enemy were on their way to Plattsburg by land and water, and it being understood that an attack would be made at the same time by their land and naval forces, I determined to await at anchor the approach of the latter.

At 8 A. M. the lookout boat announced the approach of the enemy. At 9, he anchored in a line ahead, at about three hundred yards distance from my line; his ship opposed to the Saratoga, his brig to the Eagle, Captain Robert Henley, his galleys, thirteen in number, to the schooner, sloop, and a division of our galleys; one of his sloops assisting their ship and brig, the other assisting their galleys; our remaining galleys with the Saratoga and Eagle. In this situation, the whole force, on both sides, became engaged, the Saratoga suffering much from the heavy fire of the Confiance. I could perceive, at the same time, however, that our fire was very destructive to her. The Ticonderoga, Lieutenant Commandant Cassin, gallantly sustained her full share of the action. At half past ten o'clock, the Eagle, not being able to bring her guns to bear, cut her cable, and anchored in a more eligible position, between my ship and the Ticonderoga, where she very much annoyed the enemy, but unfortunately leaving me exposed to a galling fire from the enemy's brig. Our guns on the starboard side being nearly all dismounted or not manageable, a stern anchor was let go, the bower cable cut, and the ship winded, with a fresh broadside on the enemy's ship, which soon after surrendered. Our broadside was then sprung to bear on the brig, which surrendered in about fifteen minutes after.

The sloop that was opposed to the Eagle had struck some time before, and drifted down the line; the sloop which was with their galleys having struck also; three of their galleys are said to be sunk, the others pulled off. Our galleys were about obeying, with alacrity, the signal to follow them, when all the vessels were reported to me to be in a sinking state; it then became necessary to annul the signal to the galleys, and order their men to the pumps.

I could only look at the enemy's galleys going off in a shattered condition, for there was not a mast in either's squadron that could stand to make sail on; the lower rigging, being nearly all shot away, hung down as though it had been just placed over the mast heads.

The Saratoga had fifty-five round shot in her hull; the Confiance one hundred and five. The enemy's shot passed principally just over our heads, as there were not twenty whole hammocks in the nettings at the close of the action, which lasted, without intermission, two hours and twenty minutes.

The absence and sickness of Lieutenant Raymond Perry, left me without the services of that excellent officer. Much ought fairly to be attributed to him for his great care and attention in disciplining the ship's crew, as her first lieutenant. His place was filled by a gallant young officer, Lieutenant Peter Gamble, who, I regret to inform you, was killed early in the action. Acting Lieutenant Vallette worked the first and second divisions of guns, with able effect. Sailing master Brum's attention to the springs, and in the execution of the order to wind the ship, and occasionally at the guns, meets with my entire approbation; also Captain Young's, commanding the acting marines, who took his men to the guns. Mr. Beale, purser, was of great service at the guns, and in carrying my orders throughout the ship, with Midshipman Montgomery. Master's Mate Joshua Justin had command of the third division; his conduct during the action was that of a brave and correct officer. Midshipmen Montearth, Graham, Williamson, Platt, Thving, and acting midshipman Baldwin, all behaved well, and gave evidence of their making valuable officers.

The Saratoga was twice set on fire by hot shot from the enemy's ship.

I close, sir, this communication with feelings of gratitude for the able support I received from every officer and man attached to the squadron which I have the honor to command.

I have the honor to be, with great respect, sir, your most obedient servant,

T. MACDONOUGH.

Honorable WILLIAM JONES, *Secretary of the Navy.*

P. S. Accompanying this is a list of killed and wounded, a list of prisoners, and a precise statement of both forces engaged. Also letters from Captain Henley and Lieutenant Commandant Cassin.

T. M.

UNITED STATES' SHIP SARATOGA, *September 13th, 1814.*

SIR:

I have the honor to enclose you a list of the killed and wounded on board the different vessels of the squadron under your command in the action of the 11th instant.

It is impossible to ascertain correctly the loss of the enemy. From the best information received from the British officers, from my own observations, and from various lists found on board the Confiance, I calculate the number of men on board of that ship, at the commencement of the action, at two hundred and seventy, of whom one hundred and eighty at least were killed and wounded, and on board the other captured vessels at least eighty more, making in the whole, killed and wounded, two hundred and sixty. This is, doubtless, short of the real number, as many were thrown overboard from the Confiance during the engagement.

The muster books must have been thrown overboard, or otherwise disposed of, as they are not to be found.

I am, sir, respectfully, your obedient servant,

GEORGE BEALE, Jr. *Purser.*

THOMAS MACDONOUGH, *Fsq. commanding U. S. squadron on Lake Champlain.*

Return of killed and wounded on board the U. S. squadron on Lake Champlain, in the engagement with the British fleet, on the 11th of September, 1814.

SHIP SARATOGA.

Killed.

Peter Gamble, lieutenant.

T. MACDONOUGH.

UNITED STATES' BRIG EAGLE, *Plattsburgh, September 12, 1814.*

SIR:

I am happy to inform you that all my officers and men acted bravely, and did their duty in the battle of yesterday with the enemy.

I shall have the pleasure of making a more particular representation of the respective merits of my gallant officers to the Honorable the Secretary of the Navy.

I have the honor to be, respectfully, sir, your most obedient servant,

ROBERT HENLEY.

P. S. We had thirty-nine round shot in our hull, (mostly twenty-four pounders) four in our lower masts, and we were well peppered with grape. I enclose my boatswain's report.

U. S. SCHOONER TICONDEROGA, *Plattsburgh Bay, September 12, 1814.*

SIR:

It is with pleasure I state that every officer and man, under my command, did their duty yesterday.

Yours, respectfully,

STEPHEN CASSIN, *Lieutenant Commandant.*

Commodore THOMAS MACDONOUGH.

U. S. SHIP SARATOGA, *off Plattsburgh, September 15, 1814.*

SIR:

As Providence has given into my command the squadron on Lake Champlain, of which you were (after the fall of Captain Downie) the commanding officer, I beg you will, after the able conflict you sustained, and evidence of determined valor you evinced, on board His Britannic Majesty's brig Linnet, until the necessity of her surrender, accept of your enclosed parole, not to serve against the United States, or their dependencies, until regularly exchanged.

I am, &c. &c.

THOMAS MACDONOUGH.

To Captain PRING, *Royal Navy.*

13th CONGRESS.]

No. 113.

[3d Session.]

CAPTURE OF THE EPERVIER.

COMMUNICATED TO THE SENATE, ON THE 10TH OF OCTOBER, 1814.

NAVY DEPARTMENT, *October 3d, 1814.*

SIR:

Agreeably to your request I have the honor to enclose copies of the official account and other papers relating to the capture of the enemy's sloop of war Epervier, on the 29th April last, by the U. S. sloop of war Peacock, commanded by Captain Warrington.

If the relative force, and comparative effect of the fire of the combatants, and the speedy termination of the contest, though protracted by the early loss of the Peacock's fore yard, be taken as the criterion, then does it display a steady valor and superior skill on the part of the commander, officers, and crew, of the Peacock, which may fairly challenge any single action on record.

I have the honor to be, very respectfully, sir, your obedient servant,

W. JONES.

The Hon. CHARLES TAIT, *Chairman of the Naval Committee of the Senate.*

U. S. SLOOP PEACOCK, AT SEA, *Lat. 27° 47', Long. 80° 9', 29th April, 1814.*

SIR:

I have the honor to inform you that we have this morning captured, after an action of forty-two minutes, His Britannic Majesty's brig Epervier, rating and mounting eighteen thirty-two pound carronades, with one hundred and twenty-eight men, of whom eight were killed and fifteen wounded, (according to the best information we could obtain.) Among the latter is her first lieutenant, who has lost an arm and received a severe splinter wound on the ship. Not a man in the Peacock was killed, and only two wounded, neither dangerously so.

The fate of the Epervier would have been determined in much less time but for the circumstance of our fore yard being totally disabled by two round shot, in the starboard quarter, from her first broadside, which entirely deprived us of the use of our fore and fore-topsails, and compelled us to keep the ship large throughout the remainder of the action. This, with a few top-mast and top-gallant back-stays cut away, and a few shot through our sails, is the only injury the Peacock has sustained. Not a round shot touched our hull; our masts and spars are as sound

as ever. When the enemy struck, he had five feet water in his hold, his main-top-mast was over the side, his main boom shot away, his foremast cut nearly in two, and tottering, his fore rigging and stays shot away, his bowsprit badly wounded, and forty-five shot holes in his hull, twenty of which were within a foot of his water line above and below. By great exertions, we got her in sailing order just as dark came on.

In fifteen minutes after the enemy struck, the Peacock was ready for another action, in every respect but her fore yard, which was sent down, fished, and had the fore sail set again in forty-five minutes. Such was the spirit and activity of our gallant crew.

The Epervier had under her convoy an English hermaphrodite brig, a Russian and Spanish brig; which all hauled their wind, and stood to the E. N. E: I had determined upon pursuing the former, but found that it would not answer to leave our prize in her then crippled state, and the more particularly so, as we found she had one hundred and twenty thousand dollars in specie, which we soon transferred to this sloop. Every officer, seaman, and marine, did his duty, which is the highest compliment I can pay them.

I am, respectfully,

L. WARRINGTON.

SAVANNAH, 4th May, 1814.

SIR:

I have great satisfaction in being able to report to you the arrival of the Peacock at this anchorage to-day, and also the arrival of the Epervier, on Monday last.

I have now to detail to you the reason of our separation. We made sail, as mentioned in my last, on the evening of the 29th. The next afternoon we were, at half past five, abreast the centre of Amelia Island, with the vessel in sight over the land, when two large ships, which had been seen some time previous a little to the northward of the island, were clearly ascertained to be frigates and in chase of us. In this situation, at the suggestion of Lieutenant Nicholson, I took out all but himself and sixteen officers and men, and stood to the southward along shore on a wind, leaving him to make the best of his way for St. Mary's, which place I felt confident he would reach, as the weather frigate was in chase of the Peacock, and the other was too far to leeward to fetch him. At nine we lost sight of the chaser, but continued standing all night to the southward, in hopes to get entirely clear of him. At day light we shortened sail and stood to the northward, and again made the frigate ahead, who gave chase a second time, which he continued until two P. M. when, finding he could not come up, he desisted. In the evening we resumed our course, and saw nothing until day-light on Tuesday morning, when a large ship (supposed to be the same) was again seen in chase of us, and was again run out of sight.

This morning, at half past three, we made Tybee light, and at half past eight anchored near the United States' ship Adams. As the enemy is hovering close to St. Mary's, I concluded that he had received information of, and was waiting to intercept us; accordingly we steered for this place, where we received intelligence of the Epervier's arrival, after frightening off a launch which was sent from the enemy's ship to leeward, on Saturday evening, to cut him off from the land.

From the first of April to the 24th, we saw but one neutral and two privateers, both which we chased without overhauling, although we run one amongst the shoals of Cape Canaveral, and followed him into four fathoms water. We have been to the southward as far as the Great Isaacs; and have cruised from thence to Maranilla reef, and along the Florida shore to Cape Canaveral. Not a single running vessel has been through the Gulf in all this time. The fleet sails from Jamaica under the convoy of a seventy-four, two frigates, and two sloops, from the 1st to the 10th May. They are so much afraid of our cruisers that several ships in the Havana, ready for sea, which intended to run it, (as it is called) were forced to wait the arrival of the convoy from Jamaica.

The Epervier and her convoy were the first English vessels we had seen.

We shall proceed in the execution of your further instructions as soon as we can get a fore yard, provisions, and water.

The Epervier is one of their finest brigs, and is well calculated for our service; she sails extremely fast, and will require but little to send her to sea, as her armament and stores are complete. I enclose you a list of the brig's crew, as accurately as we can get it.

I am, respectfully,

L. WARRINGTON.

The Honorable SECRETARY OF THE NAVY, *Washington City.*

UNITED STATES' SHIP PEACOCK, SAVANNAH, 5th May, 1814.

SIR:

As my letter of yesterday was too late for the mail, I address you again, in the performance of a duty which is pleasing and gratifying to me in a great degree, and is but doing justice to the merits of the deserving officers under my command, of whom I have hitherto refrained from speaking, as I considered it most correct to make it the subject of a particular communication.

To the unwearied and indefatigable attention of Lieutenant Nicholson, (first) in organizing and training the crew, the success of this action is, in a great measure, to be attributed. I have confided greatly in him, and have never found my confidence misplaced; for judgment, coolness, and decision, in times of difficulty, few can surpass him. This is the second action in which he has been engaged this war, and in both he has been successful. His greatest pride is to earn a commander's commission, by fighting for instead of heiring it.

From Lieutenant Henley, (second) and Lieutenant Voorhees, (acting third, who has also been twice successfully engaged) I received every assistance that zeal, ardor, and experience, could afford.

The fire from their two divisions was terrible, and directed with the greatest precision and coolness. In Sailing Master Percival, whose great wish and pride, it is to obtain a lieutenant's commission, and whose unremitting and constant attention to duty, added to his professional knowledge, entitles him to it, in my opinion, I found an able as well as willing assistant. He handled the ship as if he had been working her into a roadstead. Mr. David Cole, acting carpenter, I have also found such an able and valuable man in his occupation, that I must request, in the most earnest manner, that he may receive a warrant: for I feel confident that, to his uncommon exertion, we, in a great measure, owe the getting of our prize into port. From 11 A. M. until 6 P. M. he was over her side, stopping shot holes, on a grating; and when the ordinary resources failed of success, his skill soon supplied him with efficient ones. Mr. Philip Myers, master's mate, has also conducted himself in such a manner as to warrant my recommendation of him as a master; he is a seaman, navigator, and officer, his family in New York is respectable, and he would prove an acquisition to the service. My clerk, Mr. J. S. Townsend, is anxious to obtain, through my means, a midshipman's warrant, and has taken pains to qualify himself for it, by volunteering, and constantly performing a midshipman's duty; indeed I have but little use for a clerk, and he is as great a proficient as any of the young midshipmen; the whole of whom behaved in a manner that was pleasing to me, and must be gratifying to you, as it gives an earnest of what they will make in time. Three only have been to sea before, and one only in a man of war, yet were they as much at home, and as much disposed to exert themselves, as any officer of the ship. Lieutenant Nicholson speaks in high terms of the conduct of Messrs Greeves and Rodgers, midshipmen, who were in the prize with him.

I have the honor to be, sir, respectfully, your obedient servant,

L. WARRINGTON.

The Honorable WILLIAM JONES, *Secretary of the Navy.*

[13th CONGRESS.]

No. 114.

[3d SESSION.]

CAPTURE OF THE REINDEER AND OTHER VESSELS, BY THE WASP.

COMMUNICATED TO THE SENATE, OCTOBER 17, 1814.

COMMITTEE ROOM, *October 13th, 1814.*

SIR:

In order that Congress may proceed in the agreeable duty of bestowing suitable honors and rewards on those gallant men whose noble achievements have already so signally distinguished themselves and their country during this war, I am directed by the Committee on Naval Affairs, on the part of the Senate of the United States, to request that you will transmit all the information in possession of the Navy Department, relating to the capture of the British sloop of war *Reindeer*, by the American sloop of war *Wasp*.

I have the honor to be, &c.

C. TAIT, *Chairman.*HON. WM. JONES, *Secretary of the Navy.*NAVY DEPARTMENT, *October 15, 1814.*

SIR:

I have the honor to enclose copies of the documents received at this Department from the commander of the U. S. sloop of war *Wasp*, relative to the capture and destruction of the enemy's sloop of war *Reindeer*, on the 29th of June last, after a brilliant action of nineteen minutes, which was terminated by boarding, in gallant and decisive style, having repulsed the enemy in repeated and vigorous attempts to board the *Wasp*. All that skill and valor could do was done quickly, and less it was certain would not be done.

I am, very respectfully, &c.

W. JONES.

The Hon. CHARLES TAIT,
*Chairman of the Naval Committee of the Senate.*U. S. SHIP *WASP*, *L'ORIENT, July 8th, 1814.*

SIR:

I have the honor to announce to you the arrival of this ship to-day, at this place. By the pilot who carried us out of Portsmouth, N. H. I had the satisfaction to make you acquainted with our having left that place, and again had the pleasure of addressing you by the French national brig *Olive*, and which was the first vessel we had spoken since our departure from the United States. From the time of our sailing I continued to follow the route pointed out in your instructions, until our arrival at this place, during which we have been so fortunate as to make several captures, a list of which will accompany this. These, with their cargoes, were wholly destroyed, with one exception. This was the galliot *Henrietta*, which was permitted to return with the prisoners, thirty-eight in number, after throwing overboard the greater part of her cargo, leaving only a sufficiency to ballast her. When arrived on our cruising ground I found it impossible to maintain any thing like a station, and was led in chase farther up the English channel than was intended. After arriving on soundings, the number of neutrals which are now passing kept us almost constantly in pursuit. It gives me much pleasure to state to you the very healthy condition of the crew of the *Wasp* during the cruise; sometimes without one on the sick list, and at no time any who remained there more than a few days. Great praise is due to Dr. Clark for his skill and attention at all times, but particularly after the action with the *Reindeer*; his unwearied assiduity to the necessities of the wounded was highly conspicuous.

The ship is at present under quarantine, but we expect to be released from it to-morrow, when the wounded will be sent to the hospital, and every exertion made to prepare the *Wasp* for sea.

I have the honor to be, &c.

J. BLAKELEY.

The Hon. WILLIAM JONES.

U. S. SHIP *WASP*, *L'ORIENT, July 8, 1814.*

SIR:

On Tuesday the 28th ult. being then in latitude 48° 36' N. and longitude 11° 15' West, we fell in with, engaged, and, after an action of nineteen minutes, captured, H. B. M. sloop of war the *Reindeer*, William Manners, Esq. commander. Annexed are the minutes of our proceedings on that day, prior to, and during the continuance of, the action.

Where all did their duty, and each appeared anxious to excel, it is very difficult to discriminate. It is, however, only rendering them their merited due when it is declared of Lieutenants Reilly and Barry, first and third of this vessel, and whose names will be found among those of the conquerors of the *Guerriere* and the *Java*, and of Mr. Tillinghast, second lieutenant, who was greatly instrumental in the capture of the *Boxer*, that their conduct and courage, on this occasion, fulfilled the highest expectation, and gratified every wish. Sailing Master Carr is also entitled to great credit for the zeal and ability with which he discharged his various duties.

The cool and patient conduct of every officer and man, while exposed to the fire of the shifting gun of the enemy, and without an opportunity of returning it, could alone be equalled by the animation and ardor exhibited when actually engaged, or by the promptitude and firmness with which every attempt of the enemy to board was met and successfully repelled. Such conduct may be seen, but cannot well be described.

The *Reindeer* mounted sixteen twenty-four pound carronades, two long six or nine pounders, and a shifting twelve pound carronade; with a complement on board of one hundred and eighteen men; her crew were said to be the pride of Plymouth.

Our loss in men has been severe, owing, in part, to the proximity of the two vessels, and the extreme smoothness of the sea, but chiefly in repelling boarders. That of the enemy, however, was infinitely more so, as will be seen by the list of killed and wounded on both sides.

Six round shot struck our hull, and many grape, which did not penetrate far. The foremast received a twenty-four pound shot, which passed through its centre, and our rigging and sails were a good deal injured.

The *Reindeer* was literally cut to pieces, in a line with her ports; her upper works, boats, and spare spars, were one complete wreck. A breeze springing up next afternoon, her foremast went by the board.

Having received all the prisoners on board, which, from the number of the wounded, occupied much time, together with their baggage, the *Reindeer* was, on the evening of the 29th, set on fire, and in a few hours blew up.

I have the honor to be, very respectfully, your most obedient servant,

J. BLAKELEY.

The Hon. WILLIAM JONES, *Secretary of the Navy, Washington City.*

Minutes of the action between the U. S. ship Wasp, and H. B. M. ship Reindeer, on the 28th June, 1814. Latitude 48° 36' N. Longitude 11° 15' West.

Atfour A. M. light breezes and cloudy. At a quarter after four discovered two sail, two points before the lee beam; kept away in chase; shortly after discovered one sail on the weather beam, altered the course, and hauled by the wind, in chase of the sail to windward. At eight, the sail to windward bore E. N. E. wind very light; at ten, the strange sail bearing E. by N. hoisted an English ensign and pennant, and displayed a signal at the main, (blue and yellow diagonally.) Meridian, light airs and cloudy; at a quarter past twelve P. M. the enemy showed a blue and white flag, diagonally, at the fore, and fired a gun; one hour fifteen minutes called all hands to quarters, and prepared for action; one hour twenty-two minutes, believing we could weather the enemy, tacked ship, and stood for him; one hour fifty minutes, the enemy tacked ship and stood from us; one hour fifty-six minutes hoisted our colors, and fired a gun to windward, which was answered by the enemy with another to windward; two hours twenty minutes, the enemy still standing from us, set the royals; two hours twenty-five minutes set the flying jib; two hours twenty-nine minutes, set the upper staysails; two hours thirty-two minutes, the enemy having tacked for us, took in the staysails; two hours forty-seven minutes furled the royals; two hours fifty-one minutes, seeing that the enemy would be able to weather us, tacked ship; three hours three minutes the enemy hoisted his flying jib; brailed up our mizzen; three hours fifteen minutes the enemy on our weather quarter, distant about sixty yards, fired his shifting gun, a twelve pound carronade, at us, loaded with round and grape shot, from his top-gallant forecastle; three hours seventeen minutes fired the same gun a second time; three hours nineteen minutes fired it a third time; three hours twenty-one minutes fired a fourth time; three hours twenty-four minutes a fifth shot, all from the same gun. Finding the enemy did not get sufficiently on the beam to enable us to bring our guns to bear, put the helm a lee, and at twenty-six minutes after three commenced the action with the after carronade, on the starboard side, and fired in succession; three hours thirty-five minutes, hauled up the mainsail; three hours forty minutes, the enemy having his larboard bow in contact with our larboard quarter, endeavored to board us, but was repulsed in every attempt; at three hours forty-four minutes, orders were given to board in turn, which were promptly executed, when all resistance immediately ceased; and, at three hours forty-five minutes, the enemy hauled down his flag.

J. BLAKELEY.

U. S. SHIP WASE, L'ORIENT, July 10th, 1814.

SIR:

After the capture of His Britannic Majesty's sloop of war the Reindeer, it was my wish to have continued the cruise, as directed by you. I was, however, necessitated to relinquish this desire, after a few days, from a consideration for the wounded of our crew, whose wounds had, at this season, become offensive and aggravated, by the number of prisoners on board at the time, being seventy-seven in number. Fearing, from the crowded state of the Wasp, that some valuable lives might be lost, if retained on board, I was compelled, though with reluctance, to make the first neutral port. Those belonging to the Reindeer, who were dangerously wounded, were put on board a Portuguese brig, bound to England, three days after the action, and from the winds which prevailed, arrived, probably, in two or three days after their departure. Their surgeon, the captain's clerk, with the captain's and officers' servants, and the crew of the Orange Boven, were put on board the same vessel, to attend upon them. Since our arrival at this place we have experienced every civility from the public authorities; our quarantine was only for a few hours; and our wounded, fourteen in number, were carried yesterday to the hospital, where they are very comfortably situated. Our foremast, though badly wounded, can be repaired, and will be taken on shore as soon as possible. All the other damages sustained can be repaired by ourselves.

I have the honor to be, very respectfully, your most obedient servant,

J. BLAKELEY.

The Hon. WILLIAM JONES, *Secretary of the Navy, Washington City.*

[3d SESSION.]

ARCHIVES OF THE NAVY DEPARTMENT, AFTER THE INCURSION OF THE ENEMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, OCTOBER 29, 1814.

NAVY DEPARTMENT, *October 27, 1814.*

SIR:

In obedience to the resolution of the honorable House of Representatives, passed on the 24th instant, I have the honor to report:

That the whole of the official books, papers, trophies, and effects, in the office of the Secretary of the Navy, except the furniture of the office, were preserved from loss or injury by the late incursion of the enemy, and are now entire; and that all the official books and papers in the office of the Accountant of the Navy have been preserved, except those official papers relative to accounts settled and transmitted to the Treasury Department, referred to in the letter of which the enclosed is a copy.

I have the honor to be, very respectfully, sir, your obedient servant,

W. JONES.

The Hon. the SPEAKER of the House of Representatives.

NAVY DEPARTMENT, *Accountant's Office, October 26, 1814.*

SIR:

In reply to your letter of this date, relative to the resolution of the House of Representatives, on the subject of the destruction of the official books and papers in the respective Departments, in consequence of the incursion of the enemy in the month of August, 1814, I have the honor to state, that it is believed that all the official books and papers in *this office* were saved. I have no knowledge of the loss of a single book or paper of consequence; but I have understood that many of our official papers relative to accounts settled and transmitted to the Treasury Department were destroyed. What effect the loss may have on future adjustments it is impossible for me to say.

With great respect I have the honor to be, your obedient servant,

THOMAS TURNER.

The Hon. WILLIAM JONES.

[13th CONGRESS.]

No. 116.

3d SESSION.

RE-ORGANIZATION AND EXTENSION OF THE NAVY, THE ESTABLISHMENT OF A BOARD OF INSPECTORS, AND A NAVAL ACADEMY.

COMMUNICATED TO THE SENATE, ON THE 16TH OF NOVEMBER, 1814.

NAVY DEPARTMENT, *November 15, 1814.*

SIR:

In obedience to the resolution of the Senate, passed on the 18th of March last, directing the Secretary of the Navy to devise and digest a system for the better organization of the Department of the Navy of the United States, I have now the honor to report the following system, with such prefatory observations as appear to me pertinent to the occasion.

It has been affirmed, and cannot be denied, that imperfections exist in the civil administration of the naval establishment; hence it has been inferred that a radical change of system can alone remedy the evils.

Legislative wisdom will readily discriminate between the constituent principles upon which the present establishment is predicated, and has thus far prospered, and the defects which result from the absence of an intelligent, practical, auxiliary agency, qualified to digest, arrange, and enforce, a proper system of detailed regulations, calculated to ensure the judicious and faithful application of public moneys, a strict accountability in the expenditure of supplies, and a rigid execution of the duties enjoined on all the officers and agents connected with the establishment.

Profusion, waste, and abuse, are the inherent offspring of all extensive public institutions; and if we occasionally perceive these evils, in some degree, in the naval establishment of the United States, we are not thence to infer their absence from similar establishments, in other countries, where naval science and experience may be presumed to have provided greater safeguards, and more numerous, skilful, and vigilant agencies.

But regulations, however correct and adequate to the end, become nugatory or worse, unless the authority and the means are coextensive, and competent to enforce the execution, or punish the violation thereof. This may account for the non-existence of many wholesome regulations in the civil administration of the navy of the United States, and for the imperfect execution of those which exist. Breaches of the latter too frequently escape with impunity, from the impossibility of the Head of the Department taking cognizance of all the multifarious concerns of the establishment. It is problematical, however, whether the excess may not be more injurious than the deficiency of regulation; in the former case, responsibility may be lost in the maze and mass of detail and multiplied agency, whilst in the latter, general instruction and sound discretion not unfrequently ensure greater success and responsibility.

That the duties enjoined, or which necessarily devolve, upon the Secretary of the Navy, particularly during a period of active and diversified hostility, are beyond the powers of any individual to discharge to the best advantage, cannot be doubted; though, by great labor and assiduity, with adequate professional qualifications, he may possibly execute the general and most essential branches of duty with tolerable success.

In the progress of reform, whilst we pay due respect to that system, the establishment of which has attained the greatest celebrity, more, it is believed, from its magnitude and power, than from the excellence of its civil administration, we ought not to lose sight of its palpable and acknowledged defects, nor of those features in our own system to which, in no trivial degree, the exalted reputation of our infant navy may be attributed.

That our navy is not excelled in any thing which constitutes efficiency, perfect equipment, and general good qualities, it is believed will be admitted. That our seamen are better paid, fed, and accommodated, is no less true. That all the imported, and many of the domestic articles, of equipment and of consumption in the service, are exceedingly enhanced; that the wages of mechanical labor is more than double that which is paid by Great Britain;

that our expenditure is greatly increased by the interruption to navigable transportation, and the great extent of the local service, is equally obvious. Yet, under all these circumstances, it is demonstrable that, upon a comparison of an equal quantity of tonnage and number of guns and men, or in proportion to the number of men alone, our naval expenditure is considerably less than that for the navy of Great Britain; in which "one hundred and forty-five thousand men are employed, at an expense of more than twenty millions of pounds sterling annually."

The local service is, from its scattered, irregular, and irresponsible nature, much more expensive and wasteful than that of the regular navy; the more perfect organization of which, and responsibility of command, ensure a more faithful superintendence and accountability; hence the current expenditure of the service would be an extravagant criterion by which to estimate that of a regular establishment, under a judicious system. The force employed in local service is extended throughout a line of stations from Louisiana to Maine, and from Champlain to Huron: consequently it is so weak as readily to be penetrated, at almost any point on our maritime frontier, by the concentration of a small hostile force; and it is expensive in proportion to its diffusion. Independently of the deleterious nature of this service upon the health and habits of those employed in it, we are, from the present necessity of this system, deprived of the service of a body of officers and seamen, sufficient to man thirteen ships of the line, such as the Independence, Washington, and Franklin, seventy-fours.

When we contemplate the effect which such a force would have, when acting in conjunction upon our own coast and waters, or in squadron pursuing the commercial fleets of the enemy on the ocean, or in the harbors of his colonies, it is impossible to avoid the conclusion that our waters would be freed from invasion; our coast from blockade; his military and naval resources intercepted to such a degree as to paralyze his efforts on this continent; supersede the necessity of a vast military establishment, coextensive with our maritime, Canadian, and Indian frontiers; and our citizens from those harassing, irregular, and inconvenient calls of militia, which the predatory enterprises of the enemy so frequently produce. In short, according to my conceptions, this cheap and efficient national defence should be adopted as soon as circumstances will admit, and cherished by a well digested, energetic, and liberal system, steadily progressing with the population, commerce, and resources, of the nation.

The nature, construction, and equipment, of the ships, which constitute a navy, form the basis of its efficiency, durability, and economy, and the most important branch in the civil administration of its affairs. With a view to the reform and extension of the naval establishment of the United States, these objects ought to command the first place in our attention, combined with such an organization of the civil department as shall promise the best results. The defects, in this part of the British system, have been the theme of criticism and reprehension for many years past. The most minute, laborious, and able investigation has, from time to time, taken place, under the direction and scrutiny of the Parliament, yet nothing approximating to radical amendment has been adopted; and the advocates of reform, either from the subtle ramifications of the evil, or the agency of some sinister influence, appear to despair of success.

According to the most intelligent writers, supported by well established facts, the deterioration of the British navy, owing to the injudicious selection and combination of incongruous materials in the construction, and the abortive method of preserving, is very alarming; and the diversity in the form, dimensions, and proportions, not only of the several rates, but of the numerous distinct classes of the same rate, as well in their hulls as in their masts, sails, and equipments, and in a still greater degree in their qualities for combined action, demonstrates the prevalence of caprice and prejudice, instead of science and system. "When Lord Nelson was off Cadiz, with seventeen or eighteen sail of the line, he had no less than seven different classes of seventy-four gun ships, each requiring different masts, sails, yards, &c.; so that, if one ship was disabled, the others could not supply her with appropriate stores."

The consequences resulting from this defective organization and want of system, are strongly illustrated in the fact, related by a recent professional writer of rank and talents, that, "out of five hundred and thirty-eight ships &c. in the British navy, now at sea, there are only sixty-nine, which are, in reality, superior in the discharge of metal, or force of blows, but inferior in sailing, to some of the American frigates; and that there are but eighteen, which, unless in smooth water, are equal to contend with the United States; leaving four hundred and fifty-one, out of five hundred and thirty-eight, which are admitted to be incompetent to engage single handed with an American frigate."

These facts are encouraging, and serve to show that, although the numerical force of the enemy in ships and men appears to be overwhelming, yet, if the aggregate number of officers, seamen, and marines, which the United States may, even now, engage for the public service, was concentrated in eighteen or twenty ships of the line, such as have been recently built, it would place all the ships, alluded to in the quotation just recited, except the eighteen, hors du combat; nor could our enemy protect his commerce and colonies, and combine such a force as would counteract the power and offensive enterprise of an American squadron so truly formidable. With such a force, it will be perceived that his host of frigates and smaller vessels would be struck out of the account, or added to the list of our navy, if they came in contact. These views, it is true, are prospective; but, with a stable, judicious, and liberal system, the result would be realized at no remote period.

Having noticed these exceptions to the civil administration of the British navy, it is but just to observe that the organization of the military part of their system is much more perfect.

The regulations and instructions for the service at sea, adopted by order in council, and published in one quarto volume, in 1808, are those which now prevail. They are excellent, and afford much matter worthy of incorporation into our system, with such modification as the peculiar circumstances of the service may require.

Of the French naval system, the department of construction is universally admitted to be the most perfect in existence, and is well worthy of imitation. The military part of the system, however, is less perfect in practice, and not so well adapted to the habits and usages of American seamen as that of the British.

The character of the navy of any nation will be determined by its commercial and navigating enterprise. That of America had surpassed every other, until the unexampled prosperity and rapid extension of its commerce excited the envy, jealousy, and hostility, of those who could not meet it in fair, equal, and friendly competition. The same energy, skill, vigilance, and intrepidity, which distinguished the commercial navigators of the United States, characterize the officers and seamen of the navy. The same superiority of construction which gave to its commercial marine the celerity and security for which it is distinguished, may be seen in the American navy, which is truly indigenous and distinct from every other. The independent character of the nation is manifestly visible in the genius of its navy. The classes of our ships, their form, construction, armament, and equipment, have been tested by experience, and found to have been happily adapted to our circumstances, compelling the enemy either to employ ships of the line against frigates, or to construct a new class of ships. Their efficiency and perfection have extorted the praise of the enemy. The author, before quoted, says "the carronades I saw on board the United States' brig Argus were better mounted, and the vessel more complete, than those in the British navy; and she was uncommonly well manoeuvred."

Our ships are excellent, and all in good condition. The classes are few, and so uniform that, without inconvenience, the masts, spars, and equipments, of any one of a class, will serve indifferently for any other of the same class. All the new ships, of each rate, are of the same class; and are absolutely similar in all their equipments, and in the dimensions and proportions of their hulls, masts, spars, &c. This strict similarity should be carefully preserved, upon every principle of convenience, economy, and efficiency.

Timber, which forms an object of much solicitude in Great Britain, deserves the particular attention of the Department, the reorganization of which will doubtless be made to combine the necessary talents and means to provide for every branch of the service, by a seasonable, diligent, and judicious collection, in secure and convenient depots, of all the materials which enter into the construction and equipment of ships of war.

When it is considered that one seventy-four gun ship requires two thousand large oak trees, equal to the estimated produce of fifty-seven acres, the importance of securing for public use all that valuable species of oak, which is found only on the Southern seaboard, is sufficiently obvious.

Dock yards, foundries, smitheries, and armories, in safe and eligible situations, are indispensable appendages of so important and growing an establishment. These always collect the best workmen; and as private interest cannot

interfere with the execution, the materials and workmanship are better, and the work is performed with more certainty and regularity, than by contract with private individuals; whose works, in some cases, may be so remote from the seat of demand, that the transportation may cost more than the articles.

There is another branch of the service which appears to me to merit the serious deliberation of the Legislature, with regard to the establishment of some regular system, by which the voluntary enlistments for the navy may derive occasional reinforcement from the services of those seamen, who, pursuing their own private occupations, are exempt, by their itinerant habits, from public service of any kind. In my view there would be nothing incompatible with the free spirit of our institutions, or with the rights of individuals, if registers, with a particular descriptive record, were kept in the several districts, of all the seamen belonging to the United States, and provision made by law for classing and calling into the public service, in succession, for reasonable stated periods, such portions or classes as the public service might require; and if any individual so called, should be absent at the time, the next in succession should perform the tour of duty of the absentee, who should on his return be liable to serve his original tour, and his substitute be exempt from his succeeding regular tour of duty.

In the military service, should the ranks not be filled by recruits, the deficiency of regular force may be made up by draughts of militia, to assemble at a given time and place; not so in the naval service; it depends exclusively upon voluntary enlistments, upon which there is no reliance for any given object at any time or place. Hence, the most important expeditions may utterly fail, though every possible exertion shall have been made to carry them into effect.

If we examine, with due attention, the nature, extent, and importance, of the objects involved in the administration of naval affairs, and contemplate, in the history of ages past, the unsuccessful, though indefatigable labors of legislation, science, and genius, to perfect the system, we may learn to appreciate with more accuracy, and cherish with liberality, the life of study, observation, and experience, required to arrive even at moderate attainments in a science which, though familiar in the estimation of all, is the most complicated, critical, and interesting, that has ever engaged the attention or influenced the destinies of nations. My sole object is to invite the attention and liberality of the national councils to the requisite talents and qualifications for cherishing and rearing to maturity the vigorous plant, around which are entwined the affections and confidence of the country.

All these objects appear to me to be intimately connected with the revision of the civil administration of our naval affairs; the executive branch of which should be conducted by persons of enlarged views, collectively combining all the practical knowledge, and professional intelligence, which these important, diversified, and comprehensive subjects, obviously require.

We have a good foundation upon which to raise a durable superstructure; and concluding that that system cannot be radically wrong which has produced such favorable results, I should be unwilling to hazard, by an entire innovation, the benefits we have derived, and may still derive, by retaining the present organization of the Navy Department, and providing, by law, for an intelligent, practical, and efficient, auxiliary agency, such as experience has suggested.

With this view I have the honor to submit, with great deference, the following system for the organization of the Department of the Navy of the United States: distinguishing, for the sake of perspicuity, in the form of a bill, those objects which appear to require legislative provision, from those for which Executive regulation may prescribe with more convenience and advantage; the outline of which only is given, as the ground work may be filled up to greater benefit when the collected experience and talents which it contemplates shall have deliberated upon the subject.

An act for the better organization of the Navy Department.

Be it enacted, &c. That the office, duties, and powers, of the Secretary of the Navy, and of the Accountant, agents, and other officers, of the Department of the Navy, be and remain as now, by law, established, except as herein after modified, altered, or transferred, to any other office or offices, created by this act.

SECTION 2. That the President of the United States be, and he is hereby, authorized to designate three officers of the navy, and, with the advice and consent of the Senate, to appoint two other judicious persons, skilled in naval affairs, to be inspectors of the navy, who together shall constitute a board of inspectors of the navy, three members whereof shall be necessary to form a quorum; and the business of the said board shall be transacted in such central and convenient place, for the superintendence of the affairs of the navy, as the President of the United States shall direct; who shall also have power to designate the presiding member, and to appoint the secretary of the said board, whose duty it shall be to keep regular and correct records of all the transactions of the board, and to transmit attested copies of all such proceedings to the Secretary of the Navy, for the inspection and revision of the President of the United States, as soon as may be after the adjournment of the meeting at which any such proceedings shall have taken place; and the said board shall have power to establish such rules and regulations, for its own proceedings, and to employ such number of clerks and assistants, as well for the transacting of the business of the board, as for that of the several inspectors, and to procure such books, maps, charts, plans, drawings, models, and stationary, as the public interests may require, and the President of the United States approve.

SEC. 3. That it shall be the duty of the Secretary of the Navy to arrange and class, under distinct and appropriate heads, as equally as may be, all such duties and details as may be found impracticable for the officers of the Department of the Navy, as now organized, to execute with advantage to the public; and, with the approbation of the President of the United States, to assign to each inspector of the navy the special charge and execution of one of the classes so arranged; for the faithful performance of which trust, the said inspectors shall, severally, be held responsible, under the instruction, and subject to the revision, of the board of inspectors, to which a statement of all the transactions of each inspector shall be submitted, for revision, at each stated meeting, and an abstract thereof transmitted, monthly, to the Secretary of the Navy, with such remarks thereon as the nature of the case may require; and it shall also be the duty of the Secretary of the Navy to prepare a system of general regulations, defining and prescribing the respective powers and duties of the board of inspectors of the navy, and of the several inspectors, which rules, when approved by the President of the United States, shall be respected and obeyed, until altered, or revoked, by the same authority; and the said general regulations, thus prepared and approved, shall be laid before Congress at their next session.

SEC. 4. That the President of the United States be, and he is hereby, authorized alone to appoint a person, skilled in the science and practice of naval architecture, to the office of naval constructor; and also to appoint two assistant naval constructors; and it shall be the duty of the Secretary of the Navy to prepare such rules and regulations for conducting the business of the constructor's department, as shall appear necessary and proper, which, when approved by the President of the United States, shall be respected and obeyed until revoked by the same authority; and the naval constructor shall be allowed one clerk, to assist in transacting the business of his department.

SEC. 5. That the President of the United States be, and he is hereby, authorized, with the consent and advice of the Senate, to appoint a paymaster of the navy, who shall perform the duties of his office, agreeably to the directions of the President of the United States for the time being; and, before he enters upon the duties of the same, shall give bonds, with good and sufficient sureties, in such sums as the President of the United States shall direct, for the faithful discharge of his said office, and shall take an oath to execute the duties thereof with fidelity.

SEC. 6. That all letters and packets to and from the inspectors and pay master of the navy, which relate to their official duties, shall be free from postage.

SEC. 7. That each inspector of the navy shall be entitled to the pay and rations of a captain commanding a squadron on separate service, and also to the sum of twelve hundred dollars per annum, in lieu of house rent, fuel, forage, &c.; and the salary of the naval constructor shall be three thousand dollars per annum; each of the assistant constructors fifteen hundred dollars per annum; the paymaster of the navy, two thousand dollars per annum; the secretary of the board of inspectors, two thousand dollars per annum; and the clerks and assistants, authorized by this act, shall receive such reasonable compensation for their services as the President of the United States shall direct.

I would also respectfully suggest the expediency of providing, by law, for the establishment of a naval academy, with suitable professors, for the instruction of the officers of the navy in those branches of the mathematics and experimental philosophy, and in the science and practice of gunnery, theory of naval architecture, and art of mechanical drawing, which are necessary to the accomplishment of the naval officer.

In order to illustrate the principles and operation of the proposed organization of the Navy Department, the following outline of the powers and duties, which it is contemplated to assign to the board of inspectors, and to the several inspectors, is respectfully suggested.

POWERS AND DUTIES OF THE BOARD.

The Board should have the general superintendence and direction of the affairs of the navy, under the instructions from, and powers delegated by, the President of the United States, and authority over all the officers, agents, and persons, employed under the Navy Department; report to the Secretary of the Navy, from time to time, all such matters and things as may, in the opinion of the Board, tend to promote the efficiency and economy of the establishment; and, upon the requisition of the Secretary of the Navy, furnish all the estimates of expenditure which the several branches of the service may require, and such other information and statements as he may deem necessary.

The Board should have the power of making contracts and purchases, either directly or through the navy agent, whose power, in this respect, should be limited to small sums, and to objects, the procuring of which may not admit of delay; in all other cases, the previous sanction, either of the Secretary of the Navy, or of the board of inspectors, or of some officer authorized by the Board, should be indispensable.

The naval stations within the United States should be designated by convenient boundaries; and an officer of rank, trust, and confidence, should reside in each, who should, under the instructions of the Board, superintend and control the affairs of the navy within his district, and report to the Board from time to time. All requisitions of commanding officers, pursers, and other persons, upon the agents, should be checked, and receive the sanction of the Board, or of the resident officer authorized by the Board, before they are complied with.

Payments and advances should be made, as heretofore, through the navy agents, (except those for the pay of the Navy) and the sanction of the Secretary of the Navy, of the Board, or of the officer authorized by the Board, should precede all payments and advances, except for limited and urgent demand.

The Board should establish general regulations for the conduct of its members, in the discharge of the special and important trusts severally assigned to them by the Secretary of the Navy; and should digest and report to the Department distinct regulations for the following objects:

1st. Uniform regulations, establishing the several classes of ships and vessels in the navy of the United States; with tables of the dimensions, proportions, number, quantity, quality, nature, and description, of masts, spars, rigging, anchors, cables, armament, and equipments, of all kinds; and of the quantity, quality, and description, of provisions and stores, of every species, for a given period, for each class.

2d. Regulations for receiving, preserving, issuing, and strictly accounting for the expenditure of, materials and stores, of all kinds, and in every department of the service, within the United States.

3d. Regulations for surveying and authenticating the actual state and condition of all the ships and vessels of the navy, and of all materials and stores, of every species, reported to be decayed, damaged, or defective; and for directing the repair, conversion, sale, or other disposition of the same, as the nature of the case may require.

4th. A more perfect system of general regulations, for the naval service, at sea, and on the lakes.

5th. General regulations for the flotilla, or force employed in harbor defence, adapted to the peculiar nature of that service.

6th. Uniform regulations for the navy yards, arsenals, and depots of stores and materials.

7th. Regulations for the cruising ships and vessels of the navy, while in port; for the recruiting service; and for the officers of the navy, while on shore, on duty, or on furlough; in order to ascertain the actual state and local situation of all the officers.

8th. A system of detailed regulations for the naval hospitals, and medical department of the navy, within the United States.

9th. An entire and new system of regulations for the conduct of pursers in the navy, accurately defining their duties, securing a more strict accountability, limiting their emoluments by a fixed and reasonable standard, and protecting the seamen of the navy from the undue advantages which may be practised, with impunity, under the present system.

10th. Regulations for ascertaining, by examination, the moral character and professional qualifications of all the officers of the navy, below the grade of a master commandant, classing them in the scale of their several merits; and of the pretensions of those who may be selected for promotion, as well as of the candidates for warrant appointments in the navy.

All which regulations, when approved by the President of the United States, should be established and obeyed, until revoked by the same authority.

The duties and details of the service proposed to be assigned to the several inspectors of the navy may be classed as follows:

1st. class. Comprehending the general correspondence of the Board, and preparation of all the reports, estimates, and statements, required by the Department; and the communication of such propositions and information, to the Secretary of the Navy, as the Board may deem interesting; and also the general charge and direction of the flotilla service on the New Orleans station.

2d. class. Comprehending the general military correspondence with all the officers of the navy; the roll of the officers of the navy, and record of their services, merits, and qualifications, to be kept on the files of the Board; orders for courts of inquiry and courts martial, and the preparation of all the documents and statements connected with these objects; also, the general charge and direction of the flotilla service on the Southern station, viz: Georgia, South Carolina, North Carolina, and Norfolk.

3d. class. Comprehending the direction of ordnance and transportation; the general superintendence of the foundries, laboratories, armories, and other works, connected with the naval ordnance department, and the inspection and proof of arms, ammunition, &c. The direction of the transportation of all persons, stores, and provisions, of the navy, by land and water; and the general charge and direction of the flotilla service in the Patapsco and Delaware, and at New York.

4th class. Comprehending the victualling and sustenance, including purser's, medical, and hospital stores; also the general charge and direction of the flotilla service on all the naval stations from New York eastward, and on Lake Champlain.

5th class. Comprehending the supply of hemp, yarns, cordage, sail duck, iron, and other metals, anchors, and all other equipments and materials required for the service, except those which are included in the foregoing classes, and in the constructor's department; and also the general charge and direction of the service on Lake Ontario and the upper lakes.

The superintendence and direction of these five classes of objects would be distributed among the five inspectors.

The department of construction, under the direction of the Secretary of the Navy, and of the board of inspectors, would prepare all the draughts, plans, and instructions, for the building of all the vessels of the navy; construct the models, and, when approved, direct and superintend, under the control of the board of inspectors, the building and repairing of the ships, vessels, boats, the formation of masts, spars, &c. and the contracting for, and procuring, all the materials of wood, and of copper, in pigs, bolts, and sheets, necessary for the supply of the navy; construct from the lines, in the mould loft, all the moulds requisite for moulding and bevelling the timber in the forest, under the direction of skilful persons, to be employed by the constructor, for that purpose; and

superintend the construction of the wharves, ships, workshops, and engines, required in building and repairing ships of war.

It is a copious subject, in which it is difficult to combine brevity with perspicuity.

My aim has been to provide a practical, efficient, and economical system, with as much individual and collective responsibility as may be attainable; and I feel a persuasion that the result would not greatly disappoint the estimates I have formed. The wisdom of the Senate will better appreciate its merits.

I have the honor to be, with the highest respect, sir, your obedient servant,

W. JONES.

The Honorable the *PRESIDENT of the Senate.*

13th CONGRESS.]

No. 117.

[3d SESSION.]

REAR ADMIRALS AND BREVET RANK.

COMMUNICATED TO THE SENATE, NOVEMBER 28, 1814.

Mr. TAIT, from the Committee of the Senate on Naval Affairs, to whom were referred two resolutions of the 7th instant, instructing them "to inquire what provision should be made for the appointment of officers above the grade of captain, in the navy of the United States;" and also "to inquire what provision should be made for conferring naval rank by brevet, in consideration of meritorious service," have had the same under consideration, and report:

That your committee assume it as a policy now settled, that the United States are to have a permanent naval establishment, which is to be gradually increased according to circumstances, and as the ability of the Government may permit. Your committee deem it unnecessary to go into a course of reasoning to support the soundness of this policy, and to establish (what is now generally conceded) that a navy is the most appropriate, the most efficient, and the least expensive defence of this country.

The commercial and maritime habits of a large portion of the people of the United States press them to the ocean; hence have arisen competition and rivalry with other nations, pursuing the same course of industry. The history of all nations teaches us that the persons and the property of our citizens on the high seas, unprotected, must be (as indeed they have been) the subjects of frequent violence and injustice. The true remedy against these maritime wrongs is maritime force. A navy, growing up with the growth of the nation, cannot fail, before the lapse of many years, to procure respect from abroad, and safety at home.

Congress, apparently influenced by these considerations, at an early period after the establishment of the General Government, created a naval department, and have authorized, from time to time, the building of ships of war, until the navy has become respectable both from the number and rates of its vessels, and still more so from the gallantry and splendor of its achievements. By the laws now in force, the navy will consist of four seventy-fours, nine forty-fours, three thirty-sixes, eight sloops of war, besides a great number of brigs and schooners, carrying, in the whole, not less than thirteen hundred guns; of these there remain to be put on the stocks, one of the seventy-fours and four of the forty-fours. This force is exclusive of the gunboats, the flotillas, and lake squadrons; the latter of which consist of between thirty and forty ships, some of which are large. The national vessels on the lakes do not carry less than five hundred guns. Your committee are not aware, nor do they believe, that any nation possessing a naval force, such as the above, is without a grade of officers above that of captain. The nation with whom the United States are now at war is said to have about a thousand public ships; to command which she has not less than two hundred admirals, of ten different grades, ascending from rear admiral of the blue to the admiral of the fleet. At present the navy of the United States is commanded by commissioned officers of three grades only: lieutenants, master commandants, and post captains.

The committee would feel that they had not done justice to the subject committed to them, if they failed to contrast the situation of the army with that of the navy, as it respects the scope of promotion in each. The army presents, for the encouragement of an honorable ambition, the high station of major general, through ten different grades. It has also advantages in the variety of its corps unknown to the navy. The youth of our country, ambitious of military fame, may, according to their taste, enter the army as officers of cavalry, of artillery, of infantry, or of the rifle corps. Not so with the naval officer. All that he can expect is to be transferred from a smaller to a larger vessel—from a subordinate station to the command of a ship of war. The rapid promotions, of late, in the army, cannot but strongly impress the naval officer with a deep sense of his own confined situation, and of the cheerless prospect before him. Does not justice then dictate that the range for promotion should be enlarged in our naval establishment?

Your committee are of opinion that a discreet policy and a prudent foresight, not less than a just regard to the strong claims of the navy, call for an enlargement of the sphere of promotion. It cannot be long before the navy will be called on to sail in squadron. The highest attainments in naval tactics should be encouraged. If you expect men to labor for the highest qualifications in their professions, it is necessary to open to them the way to the stations requiring them. The surest mean by which you will probably induce the officers to qualify themselves for an admiral's command, is to create that grade in the navy: thereby requiring in the same act great professional attainments, and offering a reward for them.

Your committee are therefore of opinion that, whether they view this subject in reference to the practice of older and more experienced nations, or in regard to the just claims and the long and meritorious services of the naval officers, or with a view to a just, prudent, and liberal policy, on the part of the Government, a grade or grades superior to that of captain should now be created in the naval establishment.

As to the second resolution, relative to conferring naval rank by brevet, it does not occur to your committee as necessary; it having been the practice of the Government to confer actual rank without regard to seniority; in reward of brilliant achievements, or meritorious service.

The committee respectfully submit the following resolutions:

Resolved, That it is expedient to authorize by law the appointment of officers above the grade of captain in the navy of the United States.

Resolved, That it is inexpedient, at this time, to make any provision for conferring naval rank by brevet.

NAVY DEPARTMENT, November 15, 1814.

SIR:

In answer to the inquiry contained in your letter of the 8th instant, founded upon two resolutions of the Senate, passed on the 7th instant, instructing the Committee on Naval Affairs to inquire "what provision should be made for the appointment of officers above the grade of captain in the navy of the United States," and "what provision should be made for conferring naval rank, by brevet, in consideration of meritorious service," I have the honor to represent,

that the high character which the American navy has justly acquired; the general sentiment which indicates its rapid increase and permanency; and the long, faithful, and honorable services which its senior officers have rendered their country; appear to me to justify and call for the appointment of officers of a higher grade than that of captain.

Love of country, and the laudable desire of honorable fame, are strong excitements to noble actions; but the prospect of progressive promotion to the highest distinction to which talents, zeal, and valor, may justly aspire, is not perhaps less active and stimulating.

Captains of long and honorable standing in the navy cannot but contrast the cheerless prospect of promotion in the naval service with the rapid and high distinction to which their military brethren, with equal but not higher pretensions, have attained.

The naval force, in officers, seamen, and marines, is probably two-fifth parts of the whole military force of the United States actually employed, in which there are, I think, eight major generals and sixteen brigadiers, exclusive of those of the staff, who enjoy the rank, pay, and emoluments, of brigadiers.

The effect of a limited grade, without hope of promotion, is to contract the range of study and professional attainment within the sphere of the command thus limited. Hold out but the prospect of elevated rank and command, and every officer of talents and worth will aspire to the highest qualifications.

Foreign example is to be received with caution, yet the practice of nations, of great maritime experience, may throw some light upon the subject. A comparison of the force of the British navy, with the number of admirals in that service, will exhibit the following result, viz: Of ships of seventy-four guns and upwards, there are

Building, about	-	-	-	-	-	-	-	24
In ordinary, about	-	-	-	-	-	-	-	54
Guards, hospital, prison, store ships, &c	-	-	-	-	-	-	-	33
In commission, about	-	-	-	-	-	-	-	99
Ships of seventy-four guns and upwards,								<u>210</u>

The list of admirals contains two hundred and nine, exclusive of twenty-seven superannuated rear admirals upon half pay: thus exhibiting more than two admirals for every ship of seventy-four guns and upwards, in commission.

We daily see, on our own coast, admirals with commands inferior to those which the American navy may even now afford.

The new grade to be established, and number of promotions, should be consistent with the scale and character of the naval establishment, which may not for some years require the distinction of flags, as in the British navy, viz: red, white, and blue, at the main, fore, or mizzen of each, making nine grades of admirals, rising in the order of the flags, from blue to red.

I am, therefore, of opinion, that it is now expedient to establish the grade of rear admiral, without any distinction of flags, leaving the promotions to vice admiral and admiral for future services, and an enlarged establishment.

I am also of opinion that the same principle which induced the establishment of brevet rank in the army, for gallant actions, meritorious conduct, or long service, is equally applicable to the navy, and cannot fail to excite to those actions which it is intended to reward; but no officer, so brevetted, should be entitled to any additional pay or emoluments, except when commanding on separate service.

I have the honor to be, very respectfully, sir, your obedient servant,

W. JONES.

The Hon. CHARLES TAIT, *Chairman of the Naval Committee of the Senate.*

13th CONGRESS.]

No. 118.

[3d SESSION.]

CONDITION OF THE SEVERAL NAVY YARDS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, ON THE 1ST OF DECEMBER, 1814.

NAVY DEPARTMENT, *November 30, 1814.*

SIR:

I have the honor to transmit herewith sundry documents, marked A, B, C, in compliance with a resolution of the House of Representatives of the United States, passed on the 3d of March, 1813.

I have the honor to be, very respectfully, sir, your obedient servant,

W. JONES.

The Honorable the SPEAKER of the House of Representatives of the United States.

[*Resolved*, That the Secretary of the Navy be, and he is hereby, directed to report to this House, at the next session of Congress, a statement of the number of navy yards belonging to, and occupied for the use of, the United States; the accommodation provided in each, with the number of officers and men attached to each, with their rank and pay; also, the quantity and species of timber provided in each. Also, a statement of the expenditures made in each yard during the year 1811 and 1812; the number of vessels repaired during that time, with the species, quantity, and cost of repairs on each vessel, and the manner in which such repairs have been made, whether by contract or otherwise, and the terms. Also, the amount of timber provided under the law making an annual appropriation of two hundred thousand dollars, with a statement of the contracts made under said act, and the terms thereof: also, the number of officers in the naval service of the United States, their rank, pay, and employ.]

A.

Statement of the number of navy yards belonging to, and occupied for the use of, the United States; the accommodations provided in each; the number of officers and men attached to each, with their rank and pay; the quantity and species of timber provided in each; the expenditures made in each yard during the years 1811 and 1812; and the number of vessels repaired during that time, with the species, quantity, and cost of repairs, on each vessel, and the manner in which such repairs have been made.

There are six navy yards belonging to, and occupied for the use of, the United States, viz:

1. At Portsmouth, New Hampshire.
2. At Charlestown, Massachusetts.
3. At New York.
4. At Philadelphia.
5. At Washington, District of Columbia.
6. At Gosport, Virginia.

No. 1.

The navy yard at Portsmouth, New Hampshire, is situated on an island on the east side of the river Piscataqua, within the jurisdiction of the State of Massachusetts; contains fifty-eight acres, and cost \$5,500.

Improvements in the United States' Navy Yard at Portsmouth, New Hampshire.

Description.	Length.	Breadth.	Height to roof.	Remarks.
Dwelling house, -	66	28	17	Originally built, and only fit for a master carpenter; wants painting and some small repairs.
Barracks, -	70	30	18	Wants painting and some small repairs.
Small house, -	-	-	-	In bad repair; now occupied as an office; ought to be removed.
Store, -	23	22	9	In bad repair; must be removed, being in the way of working at the ship.
Work shop, -	34	22	9	Now filled with carlines; is in bad repair; ought to be removed.
One timber shed, -	130	30	8	In bad repair; only fit for a work shop in bad weather.
Timber shed, -	100	30	10	Good roof and frame; underpinned with stone.
Boat house, -	44	17	9	In tolerable repair.
Two saw pits, -	-	-	-	Covered with sheds.
One saw pit, -	-	-	-	Wanting a shed.
Large timber dock, -	870	-	-	The piers in good repair. The railing, caps, plank, &c. want repairing.
Small dock, -	-	-	-	400 feet to a small island, which is connected to the main island by a bridge 160 feet long. On the small island a blacksmith shop is now erecting, 60 by 25 feet.
Bell house. Flag house and staff. Ways for a 74 gun ship, All the buildings are of wood.	-	-	-	In complete order, having been repaired since my arrival.

ISAAC HULL.

List of Officers, Petty Officers, and Seamen, attached to the United States' Navy Yard at Portsmouth, New Hampshire.

Names.	Rank.	Remarks.
Isaac Hull, - - - -	Captain Commandant, - -	\$100 per month.
Tunis Craven, - - - -	Storekeeper, - - - -	\$83½ do.
Joseph Watson, - - - -	Captain's Clerk, - - - -	\$25 do.
Adam Hill, - - - -	Cockswain, - - - -	\$19 do.
John Chandler, - - - -	Seaman, - - - -	\$12 do.
Wm. Black, - - - -	Do. - - - -	\$12 do.
James Kenney, - - - -	Do. - - - -	\$12 do.
Ephraim Triphern, - - - -	Ordinary seaman, - - - -	\$10 do.
Ephraim Amazeen, - - - -	Do. - - - -	\$10 do.
William Pettigrew, - - - -	Do. - - - -	\$10 do.

The above men are occupied in going in boats to bring such stores from town as are, from time to time, wanting, and in doing duty as laborers when not wanting for other purposes.

Respectfully, &c.

ISAAC HULL.

List of Officers, Petty Officers, and Seamen, attached to the United States' Gun Boats, in ordinary at the Navy Yard Portsmouth, New Hampshire.

Names.	Rank.	Remarks.
Nath. Stoady, - - - -	Sailing-master, - - - -	\$40 per month.
Benj. Davis, - - - -	Seaman, - - - -	\$12 do.
John Webster, - - - -	Do. - - - -	\$12 do.
Charles S. Clinton, - - - -	Do. - - - -	\$12 do.
Job Woodson, - - - -	Do. - - - -	\$12 do.
Andrew Newman, - - - -	Ordinary seaman, - - - -	\$10 do.
Wm. Porter, - - - -	Do. Do. - - - -	\$10 do.
Jarvis Garritt, - - - -	Seaman and cook, - - - -	\$12 do.

A man rated as quarter gunner, to act as gunner of the yard, is much wanting to take care of the arms, and to keep things in order about the boats, &c. &c.

Respectfully, &c.

ISAAC HULL.

The above is a true copy of an account rendered by Mr. Langdon, but not signed by him.

No. 2.

The navy yard at Charlestown, Massachusetts, is situate on the north side of Charles river, on the easterly point of Charlestown, in front of Boston harbor, contains thirty-four acres, exclusive of extensive flats, and cost thirty-nine thousand two hundred and fourteen dollars, including commissions and charges.

REPORT ON THE NAVY YARD, CHARLESTOWN.

In pursuance of an order from the honorable Secretary of the Navy, in conformity with a resolve of the honorable House of Representatives of the United States.

The accommodations of the navy yard are as follows: viz.

A dam, of fourteen feet wide, and three hundred feet in length, extending across a basin in the yard, is the only wharf in the yard, and which cannot be approached, even with boats, until about half flood; at high water there is about six feet water, at which time a vessel not drawing more than that draught of water can come alongside of it, to receive or deliver any articles. It is built of timber, in the slight cobb wharf manner; the principal use (and intention, I presume) is to form the dam to the basin, for the purpose of docking timber.

A stone slip, or landing place, about twelve feet wide, and elevated about three feet above the natural surface of the beach, extending from the high to the low water mark: the only purpose it answers is for the landing of boats.

One store, a wooden building, three stories high, measures sixty feet by forty, with a dry cellar, capable of storing twelve hundred barrels. The other apartments are only sufficient to contain the sails and warrant officers' stores, (the rigging excepted) for one frigate. It is at present the receptacle of the copper and most valuable articles in charge of the navy store keeper, but, in my opinion, it is an improper dépôt for them, being built of wood. It could be usefully appropriated for a rigging and sail loft, which are much wanted in this yard.

Two wooden sheds, one story high, under which the live oak timber for the seventy-four is deposited.

A blacksmith's shop, an old wooden building, large enough for three forges.

An old wooden building, one story high, that is appropriated for the commandant and purser's offices, slop room, steward's room, issuing room, and medicines; but is entirely unfit for those accommodations.

A small wooden building, one story high, occupied by the boatswain of the yard.

The commandant's house, and marine barracks, with a brick powder magazine, are all the accommodations within this yard. For the want of a proper wharf and the necessary store houses and buildings, which could be erected at a moderate sum at the present favorable moment for contracting for the same, I think I may correctly state that the expenditure of public money for the repairs and accommodations of our public vessels at this place is increased 25 per cent. at least; and certainly a greater proportion in time would be saved in giving repairs to the vessels of our navy, provided this establishment had the necessary wharf and buildings.

In answer to the second inquiry embraced in the resolve, I have to reply that they are as follows: viz.

No.	Rank.	Monthly Pay.
1	Captain commandant,	100 Dollars.
1	Lieutenant,	40
1	Surgeon,	50
1	Purser,	40
1	Master,	40
1	Navy storekeeper,	100
1	Acting boatswain,	20
1	Acting gunner,	20
1	Quartermaster,	18
1	Steward,	18
1	Clerk,	50
5	Seamen,	12
2	Ordinary seamen,	10
2	Boys,	8

The quantity and species of timber provided in this yard are as follows, viz.

- 11 keel and kelson pieces, sufficient for one 74 gun ship.
- 1940 pieces of live oak, (a frame for the 74) as per report of my predecessor, Captain Hull. The number of pieces of each respective part of the frame I cannot ascertain here, without incurring considerable expense in removing it; but which the Navy Department can furnish, if necessary, from documents in the Navy Office.
- 289½ tons of white oak, lately contracted for, and brought into this yard, intended for plank, &c. for the 74 contemplated to be built here.
- 1098 feet of knees of white oak, not seasoned.
- 75 pieces of white oak timber in the dock, contents not known.
- 25 tons of Canada oak.
- 450 pieces of oak plank, from 3 to 5 inches thick.
- 120 tons of Eastern hard pine timber.
- 200 pieces of plank, Southern pine, from 3 to 3½ inches thick.
- 7136 feet of short pieces of Eastern hard pine plank, 2½ inches thick.
- 260 feet of spruce oar rafters.
- 30 tons of spruce ranging timber, calculated for the wharf.

A considerable quantity of pine timber, lying in the dock, unfit for any purpose except for a wharf.

The expenditures for the years 1811 and 1812 in this navy yard, for accommodations and repairs of the same, amounted to, as per abstract marked A, \$5,752 43.

The frigates John Adams, Chesapeake, Constitution, President, United States, Congress, sloop Hornet, brigs Nautilus and Argus, and four gunboats, were repaired in 1812. There were no repairs given to our vessels here in 1811, except commencing the repair of the John Adams.

Cost of repairs, exclusive of articles delivered from the Navy Yard, as per abstract, No. 1.

ABSTRACT, No. 1.

Abstract of timber received from the Navy Yard at Charlestown, by the following ships:

JOHN ADAMS.

From 10th May to 29th June, 1812.

- 10 feet square timber of live oak.
- 13 " of scantling.
- 17 " of 4½ inch,
- 164 " of 4 " } oak plank.
- 11 " of 3½ " }
- 23 " of 3 " }
- 23 " of 1½ " }
- 76 " of 3½ " } pine plank.
- 66 " of 3 " }
- 25 " of 2½ " }
- 230 " of 2 inch refuse do.
- 120 " of 1 inch carlines.

Copper and copper bolts for the same.

- 17½ pounds copper bolts of 1½ inch.
- 165 " sheet copper.

CHESAPEAKE.

From May 19th to December 7th, 1812.

- 97 tons thirty-eight feet of oak timber.
- 613½ feet of oak knees.
- 186 " of scantling.
- 205 " of 1 inch carlines.
- 15 " of ½ inch,
- 107 " of 2½ " }
- 249 " of 3 " }
- 830 " of 3½ " }
- 2,175 " of 4 " } oak plank.
- 2,344 " of 4½ " }
- 1,220 " of 5 " }
- 122 " of 5½ " }
- 172 " of 6 " }
- 128 " of 7 " }
- 163 tons nine feet of pine timber.
- 310 feet of 2½ inch,
- 1,250 " of 3 " }
- 2,629 " of 3½ " } pine plank.
- 3,538 " of 4 " }
- 105 " of ½ " boards.

48 feet inch boards.

- 33 pounds copper ruffs.
- 528 " bolts of 1½ inch.
- 3 casks sheathing nails.
- 1,218 pounds copper bolts of 1½ inch.
- 284 " spikes of 9 "
- 808 " " of 10 "
- 22,127 " sheet copper.

CONSTITUTION.

- 3 tons thirteen feet live oak timber.
- 60½ feet of " knees.
- 7½ " of scantling.
- 40 " of elm plank.
- 18 " of 6 inch,
- 8 " of 5 " } oak plank.
- 279 " of 4½ " }
- 334 " of 3 " }
- 63 " of 4 " elm plank.
- 40 " of 4 " pine plank.
- 21 " of 3 " "
- 26 " of 2 " "

333 pounds copper bolts of 1½ inch.

PRESIDENT.

From September 7 to 15, 1812.

- 68 feet of 4 inch oak plank.
- 53 " of 4½ " "
- 36 " of 4 " pine plank.
- 954 pounds copper bolts of 1½ inch.
- 138 " spikes of 10 inches.
- 1,743 " sheet copper.

UNITED STATES.

From the 7th to the 15th September, 1812.

- 16 feet of 6 inch oak plank.
- 8 " of 5 " "
- 38 " of 3 " "

196 feet of pine timber,
83 " of 4 inch pine plank.
116 " of 3½ " "
439 " of 3 " "

CONGRESS.

September 14, 1812.

60 feet of 6 inch oak plank.
86 " of 4½ " "
46 " of pine timber.

GUNBOAT No. 81.

From May 25 to September 2, 1812.

155 feet of pine boards.

The foregoing repairs were done at daily wages; no instance of contract existed except for the price of the daily wages, which was at the following rates:

Master carpenter, from three and a half to four dollars per day.
Good ship carpenters, at one dollar and fifty cents per day.
Sawyers, at one dollar and fifty cents per day.
Joiners, at one dollar and twenty-five cents per day.
Laborers at one dollar per day.

There has not been any timber purchased or delivered at the navy yard here, under the act of Congress appropriating two hundred thousand dollars per year for that purpose.

NAVY YARD, Charlestown, Massachusetts, 14th April, 1813.

ABSTRACT A.

For the improvement of the Navy Yard.

From November, 1811, to December, 1812.

No. 3.

The navy yard at New York is situate on Long Island, opposite to the city of New York, on the Wallabout Bay, contains forty acres, including the mill pond; cost \$40,000.

Statement of the accommodations provided in the United States' Navy Yard, New York.

House for the commandant.

One brick store house, 130 feet by 40.

One brick building containing offices for the commandant, store keeper, clerk, and purser.

Marine barracks for eighty men, with quarters for officers; brick.

An old frame building, small, occupied by boatswain.

One do do occupied as a blacksmith's shop.

One do do occupied as a cooper's shop.

One timber shed.

One small mast shed.

An old barn, occupied as work-shop by joiners.

An old mill, upper part occupied by the armorer's crew, lower part used occasionally in storing provisions.

Statement of the number of officers attached to the United States' Navy Yard, New York, with their rank and pay.

1 commandant,	\$100 per month,		and 16 rations per day.
1 storekeeper,	1,500 per annum,	\$200 house rent.	
1 purser,	40 per month,	300 do.	and 2 do.
1 sailingmaster,	40 do.		and 2 do.
1 clerk to commandant,	625 per annum,		
1 carpenter,	600 do.		
1 boatswain,	20 per month,		and 2 do.
1 gunner,	20 do.		and 2 do.
1 turner,	20 do.		and 2 do.
1 blacksmith,	2 per day, while at work.		
7 do.	average 1 37 do.		
1 armorer,	1 75 do.	do.	
1 cooper,	18 per month,		and 1 do.
1 porter,	288 per annum.		
1 mechanic,	24 per month.		
2 do.	18 do.		and 1 do.
25 laborers and mechanics,	12 do.		and 1 do.
7 do.	10 do.		and 1 do.
3 do.	6 do.		and 1 do.
14 petty officers,	18 do.		and 1 do.
30 seamen,	12 do.		and 1 do.

Statement showing the number of Vessels repaired at the United States' Navy Yard, New York, during the years 1811 and 1812, with the species and quantity of repairs on each.

		1811.
Thirty-one gunboats,	-	Bottoms sheathed; calked all over; supplied with spars; joiners' work done.
Frigate President,	-	Foremast and mainmast fished; small jobs incident thereto.
Sloop Hornet,	-	Joiners' work in her cabin altered.
Brig Argus,	-	New berth deck, calked; bottom hove out, calked, and coppered, with jobs incident thereto.
		1812.
Seventeen gunboats,	-	Bottoms sheathed and repaired; calked all over; supplied with new masts, booms, bowsprits, with gun carriages and sweep circles, new decks, and plank sheers.
Frigate President,	-	Supplied with new foremast and mainmast, new tops, and caps; calking done.
Brig Nautilus,	-	Channels repaired and calking done.
Ship Alert,	-	Gun deck doubled; fourteen port holes cut out; deck calked all over; supplied with twenty-four new gun carriages.
John Adams,	-	Supplied with thirty-four new gun carriages.
Ketch Vesuvius,	-	Four strakes shifted; deck calked.
Ten Fire Ships,	-	Fitted for service, with trunks and leaders; calked, &c.
Frigate Essex,	-	Hove out, false keel put on, copper repaired; calked all over; new mainmast made; a number of spars made; removed old mainmast for a foremast; with many incidental jobs.

No. 4.

The navy yard at Philadelphia, situate on the west side of the river Delaware, within the district of Southwark, adjoining the city of Philadelphia, in the State of Pennsylvania, contains eleven acres to low water mark, and cost \$37,000.

A description of the Navy Yard at Philadelphia in the year 1813, with the appropriate buildings.

A commodious two story brick and frame building, occupied by the marine officers.

Marine barracks, built of brick, two stories high, one hundred and fifteen feet long, twenty-two feet wide.

An old shed room, formerly made use of as a hospital, now occupied as a tool house.

An old building, now occupied as a joiner's shop.

An old building used as an office. *Pulled down.*

Two large shed buildings which enclosed the timber for the seventy-four gun ship. *Pulled down.*

N. B. Most of the materials of the old frame buildings have been used in the erection of the new buildings, a description of which the resolution of Congress does not embrace.

WILLIAM READ,
For GEORGE HARRISON, *Navy Agent.*

List of officers and men attached to the United States' Navy Yard, Philadelphia.

Names.	Rank.	Pay per month.	Remarks.
Alexander Murray,	Commodore.		
Samuel P. Todd,	Purser.		
Simon Kingston,	Sailing Master.		
Samuel D. Heap,	Surgeon.

PHILADELPHIA, May, 1813.

GEO. HARRISON, Navy Agent.

No. 5.

The navy yard at Washington, District of Columbia, situate on the Eastern Branch of the river Potomac, contains thirty-seven acres, and cost \$4,000.

NAVY YARD, WASHINGTON, 10th October, 1814.

SIR:

In compliance with your "circular" instructions of the 30th March, 1813, accompanied by a "copy of a resolution of the honorable House of Representatives," of the 3d of said month, calling for sundry statements, &c. &c. as were in said resolution particularly expressed, a statement of every article contemplated therein was immediately commenced on here, with a minute detail of all the particulars attendant thereon. Much time was expended, and every possible pains taken to render the whole perspicuous on the first view. Those documents were voluminous, and, it is believed, were as complete in detail, and correct in arrangement, as it was possible to effect. Copies of the whole were complete and collated, and a general *account current* was forming, to show the debits and credits due from and to this establishment, which wanted only a short additional time to close and transmit to you, when the whole, with every document appertaining thereto, and all the data from whence they were derived (then in my possession) were consumed with the general conflagration of the yard, on the night of the 24th August last.*

It was expected, and with *much confidence believed*, that those documents would have exhibited and established a credit to the operations of this yard, which, for want of a general knowledge of those facts, has heretofore, perhaps, circuitously been disbelieved.

I can now have the honor *only* to transmit a statement of what remains in the present situation of the yard, so far as appears to be embraced in the intention of the resolution of Congress aforementioned.

The "accommodations" now in a state of usefulness in the yard are, the guard house at the gate, occupied by the marine sentinels, stationed to protect the property in the yard, now otherwise unguarded.

The house erected near the gate, for the residence of the commandant of the yard, occupied according to the original intention.

The house blended with the east wall of the yard, comprising the residence of the second officer, and the pay office of the purser and paymaster.

We have also an (*internally*) unfinished building, intended for accommodations for the officers of the public vessels, while equipping for sea, or repairing at this wharf, comprising, also, lodging and mess rooms for the crew of the navy in ordinary, and occasionally, for small detachments of men, belonging to the service, while passing to or from one distant station to another. In this building, the sailing master attached to the yard, and the people in the ordinary, are now lodged; and it also affords an office and store for the navy store keeper.

The "timber" remaining on hand, since the conflagration of the yard, is not inconsiderable; it consists principally of pine, oak, poplar, and ash logs, but as it lays in an intermixed state, in the dock applied to the purpose of keeping timber for water-seasoning, and for safety, it will require some time to ascertain the quantity, and particularize the different qualities thereof. The value of the whole may probably amount to twenty or twenty-five thousand dollars; say from twenty to twenty-five thousand dollars.

We have received no timber here, "provided under the law making an annual appropriation of two hundred thousand dollars." The contracts and agreements made by me under that law were transmitted to the Department: the copies being consumed with my other papers, I am enabled only to refer to memory for the *names* of those with whom such agreements and contracts were made. The principal ones, I believe, were formed with John Cornwall and others; with Holt, Wilson, and others; and with Henry M. Armistead, all of Norfolk, in Virginia, or its vicinity. The contract with the latter was principally for staves, which I believe he has had the sanction of

*It may not be improper to observe that the *receipts* and *expenditures* of this yard, for the year 1811, were made out and laid before Congress in 1812, and were printed for the use of the House.

the Department to deliver at Norfolk yard, and in like manner, part of the timber, &c. of the others, on a proper deduction being made for the difference of freight—the enemy's force in the Chesapeake having rendered it impossible to deliver those materials at this station.

The vessels which may be considered as now attached to this station are, the schooner *Lynx*, now gone as a flag of truce to the British admiral, in the Chesapeake; the gunboats No. 70, and No. 71, sometime past built at this wharf, each equipped for mounting one long 18 pounder cannon, and two 24 pounder carronades, both (in their hulls and armament) fit for service; and, the old gunboat, No. 140, incapable of bearing any armament, and used only for transporting materials to and from the yard.

Enclosed, herewith is a statement of the officers, &c. now attached to this establishment, and to the navy in ordinary. In addition to which, we have, at present, only a few mechanics, employed, for a short time, to complete the travelling gun carriages and apparatus which were lately ordered, and are far advanced toward a finish. Also a number of laborers, who are employed, together with the ordinary men, in recovering and collecting the valuable incombustible materials, out of the ruins of the store houses, and raising the guns and iron from the bottom of the late sloop of war *Argus*, and otherwise scattered about on the bottom of the Eastern Branch, adjacent to the yard, &c.

For a statement of all the officers of the mechanical branches of the yard, together with the number of persons employed in each branch, and their pay, respectively, prior to the 24th of August, I am now necessitated to refer to the "pay rolls," transmitted to the Department.

I have the honor to be, &c.

THOMAS TINGEY.

Honorable WILLIAM JONES.

Statement of the officers, &c. attached to the Navy Yard at the city of Washington, viz:

Thomas Tingey, commandant, general superintendent and navy agent, rank of a captain in the navy on separate service, with the pay and subsistence established thereto, per annum,	\$2,657 60
Nathaniel Haraden, second officer, superintendent in detail, of all the various works of the yard, rank, a lieutenant in the navy, with the pay and subsistence of a captain commanding a 20 gun ship,	1,445 10
Lewis Deblois, purser to the navy in ordinary, and paymaster to the yard, a purser in the navy with the rank and pay, &c. thereto established,	660 10
Edward Barry, master of the yard, a sailing master in the navy, with rank, pay, &c.	660 10
Salvadore Catalano, master gunner, a sailing master in the navy, rank, pay, &c.	660 10
George Hodge, boatswain of the yard, a boatswain in the navy, rank, pay, &c.	420 10
Buller Cocke, navy store-keeper, having the charge and responsibility of all receipts and expenditures of the public stores, salary, &c.	1,700 00
Benjamin More, clerk of the yard, musters the men, keeping and rendering the rolls of time of service of mechanics, laborers, &c. &c.	920 00
Mordecai Booth, clerk to the commandant, executing all the official duties thereto appertaining,	800 00
John Walker, purser's steward, at \$18 per month,	218 00

In ordinary.

1 seaman, at \$12 per month,	144 00
17 ordinary do. each \$10 per month,	2,040 00
1 do. 9 do.	108 00
3 boys, 8 do.	288 00
4 do. 6 do.	288 00
	\$13,009 10

THOMAS TINGEY.

NAVY YARD, WASHINGTON, 10th October, 1814.

NAVY YARD, WASHINGTON, October 15, 1814.

SIR:

I have the honor to transmit, herewith, a general statement of the repairs of the public ships at this yard in the years 1811 and 1812, in which time also much internal improvement in the yard was made, in the steam engine, saw mill, &c. and in additional stores to two of the warehouses. It is recollected, also, that several new sails were made here, and sent to the frigate *Essex*, at Norfolk, as also, new cables and other cordage; provision and stores to the frigate *Constitution* at Annapolis, previous to her sailing for France in 1811.

I have the honor to be, very respectfully, your obedient servant,

THOMAS TINGEY.

Honorable WM. JONES.

Summary of the Repairs, &c. of the Navy, at the Navy Yard, at Washington, in the years 1811 and 1812, viz:

The brig *Vixen*, having been hauled up on the wharf, in the fall of the preceding year, on the 4th January, 1811, her bottom was completely coppered from the keel up, and on the 5th was launched; after which, several new knees were fitted to her gun deck beams; had entire new upperworks, gun deck, orlop deck, and all the interior store rooms, cabin, ward room, &c. in the joiner's department, complete. The whole of her rigging refitted and replaced with new, as necessary; some new spars, her sails all repaired, and some new ones supplied, together with new cables, &c. painted throughout, and furnished with nearly her whole equipment of ammunition and stores, new, being in every respect completely fitted for sea; and, on the 30th May, sailed from the yard in excellent order.

The brig *Hornet*, on the 10th January, 1811, was hauled up on the wharf, her upper works, second and third futtocks, beams, breast hooks, and main transom, being all entirely rotten, as were also the major part of her first futtocks, many of her floor timbers, and all her plank, excepting only five or six strakes near the keel. She was, therefore, completely rebuilt, with new interior compartments, and joiner's work throughout; new coppered and relaunched on the 11th May. Rigged a ship, with an entire new set of masts, spars, rigging, and cables; her sails altered and repaired as far as practicable, with many new supplies therein; painted throughout, supplied with new cabin furniture, and nearly her whole equipment of ammunition, stores, &c. &c. and on the 20th September was ready for sea; virtually a complete new ship.

The schooner *Enterprise* arrived at the yard on the 24th February, 1811, was entirely unrigged, all her stores and armament landed, her rigging and sails refitted, or replaced with new, wherever necessary. Her masts taken out, and interior alterations made, so as to shift them farther aft; her bends and upper works repaired and calked; careened keel out on both sides; her copper cleaned, and repaired as necessary; new painted throughout, received new armament and ammunition, with a general supply of provisions, stores, &c. &c. and sailed from the yard in good order on the 25th April.

The ship *Wasp* arrived at the yard May 21, 1811, had all her rigging, sails, water casks, guns, ballast, and stores of every kind landed, her decks and upper works calked, receiving some slight repairs therein; was careened

keel out on both sides, her bottom cleaned and the copper repaired, where necessary, her rigging refitted, and sails mended, with such new supplies in every branch as were found requisite; painted throughout, stores of all kinds replenished, equipped complete, and ready for sea again in the last week of July next following.

NOTE. It may not be improper here to observe, that the *Wasp* was built at this yard, by the workmen on daily pay, at the very same time that the *Hornet* was built, by contract, at Baltimore, and by the same draught. It has been stated that the *Hornet* was so extremely rotten as to necessitate complete rebuilding, while, on a thorough examination of the *Wasp*, previous to careening, only one unsound timber was found in her.

In August, 1811, the *Adams* was fitted for a receiving ship, her decks all calked, and quarter deck sheathed, in order to make dry and comfortable lodgings for the officers and men.

Repaired also the masting sheers, and raised them again, and fitted a large scow, for an anchor boat, to aid in transporting the shipping, weighing anchors, &c.

The schooner *Enterprise*, in October, 1811, arrived again at this yard; was hauled up on the wharf, cut down, and stripped to her floor timbers; entirely rebuilt, coppered, launched, and rigged a brig. Having had her hull much improved in rebuilding, was furnished with a new set of masts, spars, sails, rigging, and stores. Her armament all changed from long light guns to carronades, and two heavy chase guns, with entire new gun and carronade carriages, and all the apparatus thereto appertaining. Equipped for sea, and sailed from the yard a complete staunch vessel, in every respect as good as new.

The frigate *Congress*, having had, in the preceding year, a thorough repair in the carpenter's work of her hull, nearly equal to rebuilding, had, during the year 1811, all the interior arrangements in joiner's work entirely refitted new. In October and November, the carpenters made some alteration on her decks, &c. and she was completely new masted and sparred, with new sails, rigging, cables, boats, water casks, gun carriages, and apparatus, stored and fitted for sea; leaving the yard a better ship than when first launched.

The frigate *Constellation*, in February, 1812, was brought to the wharf, stripped down to the lower futtocks, many of which, and some of her floor timbers, replaced with new, from thence rebuilt up entirely new; being much improved by an extension of fourteen inches more beam at the main breadth. Her hull being finished, she was masted and careened keel out on both sides; the new copper bolts which had been driven through her bottom all ring riveted; three new metal rudder braces fixed to her stern post, and a new rudder made; new coppered, with the exception of a few strakes near the keel; her interior joiner's work all new fitted complete; had entire new water casks, gun and carronade carriages and apparatus, together with new masts, spars, rigging, and cables, sails, boats, and all her stores. Was completely rigged, fitted for sea, and, in the fall of the year, left the yard a better ship in every respect than when first from the stocks, and still continues so to be.

Cutter Scorpion. In March, 1812, the old gunboat No. 59, was hauled up on the wharf, cut down to her floor timbers, and thence rebuilt with much improvement; coppered, launched, and rigged completely new, with sails, boats, water casks, and all her armament and stores; fitted out, and named *Scorpion*.

The frigate *Constitution* arrived at the yard in April, 1812. All her armament, stores, sails, rigging, water casks, and ballast landed; was careened keel out on both sides, and nearly new coppered; received a new foremast and bowsprit; many of her spars altered; rigging refitted, and sails repaired, having new supplies in each, wherever necessary; equipped for sea, and sailed again in fine order.

The frigate *Adams*, in June, 1812, was hauled up on the wharf, stripped down to the lower futtocks, was cut asunder at dead flat, and lengthened fifteen feet, thence was entirely rebuilt new, coppered, and launched; having complete new masts, spars, sails, rigging, cables, &c. and boats, water casks, gun carriages, and all particulars thereto appertaining, all ready to go on board, and was fast progressing towards a finish at the close of the year.

Nine gun boats, which had been some time on the stocks in this yard, and in part built, were, in the summer of 1812, finished and launched; equipped with new masts, rigging, sails, anchors, and cables; and armed each with one eighteen pounder long gun, mounted on pivot carriages, and also each two thirty-two pounder carronades, with bed and slide carriages, and all the necessary apparatus. Joiner's work all completed, and stored for service.

In this year, also, the brig *Nautilus* came to the yard, received some small supplies, stores, &c. &c. and sailed again.

In the years 1811 and 1812 several small hired vessels were loaded here, for New Orleans and other southern stations, with provisions, rigging, cables, ammunition, and various stores which cannot now be particularized, from the loss of our documents by the late fire.

By the loss of those documents, much of the foregoing statements are derived from memory. It is not, therefore, improbable that some inaccuracies may have crept in, and there is also no doubt of many omissions, and of no small amount.

All which is respectfully submitted.

THOS. TINGEY.

NAVY YARD, WASHINGTON, *October 15, 1814.*

No. 6.

The navy yard at Gosport, situate on the south branch of Elizabeth river, adjoining the town of Portsmouth, in the state of Virginia, contains sixteen acres, and cost twelve thousand dollars.

NAVY YARD, GOSPORT, *May 25th, 1813.*

SIR:

I have the honor to enclose you a statement of the accommodations provided in this yard, with the number of officers and men attached, with their rank and pay; also the quantity and species of timber provided, including the expenditures made since I have had the honor of this command. Not being made acquainted with the contracts entered into, I have to refer you to the navy agent for information; and my predecessor not leaving any books or data for my government, I fear that my report will be but a lame one.

The commander's dwelling, of brick, two stories high, made comfortable quarters; marine barracks miserable huts of wood, wanting much repair; the officers' quarters a low two story frame building, the whole one hundred and fifty feet from the west wall, which is only five and a half feet high; the northwest is bounded by warehouses and timber sheds, having to extend a fence at the east end to low water mark.

The marine hospital stands in the centre of the yard, two stories high; was formerly occupied as a boatswain and gunner's store rooms; built of wood; the centre of which is occupied as the hospital; the garret as a rigging loft; and lower part gunner's store, store keeper's office, purser's issuing room and office.

The blacksmith's shop, begun of brick, one hundred and sixty-five feet by fifty, including anchor and plumber's shops, not completed; the old shop being dangerous to heat a large fire.

One large timber shed, three hundred feet long, with brick pillars, and forty feet wide.

A small shed for the armorer and plumber; two sheds appropriated, one for the joiners, the other for mast makers.

I have the honor to be, &c.

JOHN CASSIN.

The Hon. WILLIAM JONES.

A statement of public moneys on account of the Navy Department, for the repairs and outfits of the gunboats, with the expenses of the Navy Yard, Gosport, in the months of August, September, October, November, and December, 1812, also, a list of the officers and men attached to the Navy Yard in the year 1812, and the quality and species of timber now in the Navy Yard, May 25th, 1813.

Cash paid joiners, carpenters, armorers, plumbers, and laborers, per pay rolls, at fitting joiner's work for blacksmiths, plumbers, and anchormen's shop, stocking, repairing and cleaning the arms, casting hawse and scupper leads, musket and pistol balls, &c. receiving and delivering stores, driving piles, stowing away plank, &c. in the months of August, September, October, November, and December, 1812,		\$4,842 18 $\frac{3}{4}$
Materials used from the navy store, for the use of the navy yard at Gosport, viz.		
Nails, 373 lbs. at 12 $\frac{1}{2}$ c. \$46 62 $\frac{1}{2}$; paint oil, 34 gals. at \$1 50, \$51,	\$97 62 $\frac{1}{2}$

B.

Statement of all the contracts and purchases made by the U. S. Navy Department, under the act of Congress passed on the 30th of March, 1812, making an annual appropriation, for three years, of \$200,000, for the purchase of timber:

Date.	Names of Contractors.	Quantity and price.	Dolls. Cts.	Where to be delivered.
1812.				
April 12,	Benjamin J. Neale,	3,700 feet of white oak timber for trestle trees and cross trees, at 33 $\frac{1}{2}$ cents per cubic foot,	1,233 33 $\frac{1}{2}$	Navy Yard Washing'n City.
		20 anchor stocks, at \$12 each,	240 00	
		20 do. do. at \$9 60 each,	192 00	
July 11,	Richard Love and Henry Forrest,	white oak root knees, at 50 cents per inch, amounting to	1,799 66 $\frac{1}{2}$	Ditto.
		12,000 locust treenails, at \$23 per thousand,	276 00	
		400 cubic feet of black walnut, at 40 cents per foot,	160 00	
		400 do. white oak, at 30 cents per foot,	120 00	
		400 do. elm, at 25 cents per foot,	100 00	
Sept. 11,	P. Magruder and Wm. Lindsay,	30,000 do. white oak timber, assorted, at 30 cents per foot,	9,000 00	Ditto.
		8,000 do. yellow poplar, at 25 cents per foot,	2,000 00	
		6,000 do. white ash, at 30 cents per foot,	1,800 00	
		2,000 do. keels, kelsons, and deadwood, at 35 cents per foot,	700 00	
Nov. 21,	Thomas Lindsay,	300 white oak root knees, at 50 cents per inch,	1,200 00	Ditto.
		3,000 cubic feet of white oak timber, at 30 cents per foot,	900 00	
		3,000 do. crooked white oak, at 30 cents per foot,	900 00	
Dec. 23,	Henry M. Armistead,	2,000 do. poplar, at 25 cents per foot,	500 00	Ditto.
		white oak root knees, at 45 cents per inch,		
		20,000 cubic feet of square pine timber, part thereof in beams, at 36 cents per foot, the remainder in square sticks, at 37 $\frac{1}{2}$ cents per foot. Paid on this contract,	1,000 00	
	<i>Of whom purchased.</i>	<i>Purchases.</i>		
1813.				
Feb. 24,	M. F. Maher, Jos. Dorsey, and L. Taylor,	565 logs of mahogany, amounting to		Baltimore.
July 12,	A. Brown,	533 $\frac{3}{4}$ tons of pitch pine timber, at \$11 50 per ton,	\$6,138 12	
		2 $\frac{1}{4}$ do. do. do. at 5 75 per ton,	11 92	
			6,150 04	Bath, Me.
" 23,	Jacob Barker,	840 $\frac{5}{8}$ do. do. do. amounting to	8,822 40	New York.
" 5,	A. Brown,	442 do. do. do. at \$11 50 per ton,	5,083 00	New Bedford.
1814.				
May 26,	A. Brown,	397 $\frac{6}{10}$ do. do. do. at 11 50 per ton,	\$4,567 22	Wiscasset.
		5 $\frac{3}{4}$ do. do. do. at 5 75 per ton,	31 33	
		Timber of various kinds furnished and delivered at the navy yard at Washington, from the 22d of May, 1812, to the 3d of March, 1813, both inclusive, amounting to	4,598 55	
			2,846 44	
			72,302 28

[3d Session.

PRIZE MONEY AND THE NAVY PENSION FUND.

COMMUNICATED TO THE SENATE, DECEMBER 8, 1814.

Mr. Tarr made the following report:

The Committee on Naval Affairs, to whom was referred a resolution of the Senate of the 2d instant, instructing them to inquire into the expediency of making provision by law that the officers and crews of the vessels authorized to be built or purchased, by an act, passed the fifteenth day of November, one thousand eight hundred and fourteen, may be entitled "to receive the whole of the prize money which may arise from the sale of such vessel or vessels and their cargoes, as they may capture," &c. have had the same under consideration, and report:

That, by the laws now in force, all the money which accrues to the United States from the sale of prizes constitutes a fund for the payment of pensions in certain cases. That the laws creating the navy pension fund have been in operation for many years, and, so far as the committee are informed, have given general satisfaction; they appear to be founded on the principles of liberal policy and humanity; and should not be repealed or relaxed, but for reasons strong and conclusive. But your committee are decidedly of opinion that, if the navy pension fund is to be interfered with—the laws creating and regulating it are to be repealed, suspended, or relaxed, that the regulation should be a general one. The committee can see nothing in the naval force authorized by the act passed the fifteenth of November of the present year, which should induce a departure from an established and beneficial system. The vessels authorized by that act, when acquired, will form a part of the navy of the United States, and to discriminate in their favor to the exclusion of other national vessels would seem to be both impolitic and unjust.

The committee respectfully submit the following resolution:

Resolved, That it is inexpedient, at this time, to alter the laws respecting the navy pension fund.

[3d Session.

SYSTEM OF DEFENCE, BY LAND OR WATER, BY THE USE OF INFLAMMABLE FLUID.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 2, 1815.

NAVY DEPARTMENT, December 23d, 1814.

SIR:

In obedience to an order of the honorable the House of Representatives, of the 6th instant, referring the memorial of Uriah Brown, "and such parts thereof as relates to operations on the water," to the Secretary of the Navy, I have the honor to report:

That (the system of annoyance presented by Uriah Brown appears to combine principles of science distinct in their nature, and which may be classed under the following heads:

1st. The construction, capacity, and stability of the vessel, for the purposes proposed.

2d. The power of the machinery for propelling, and the security of the enginery for ejecting the inflammable fluid successfully to its object.

3d. The efficacy of the whole system, and its probable effects on the enemy's vessels in our waters.

First. The construction of the vessel of a sufficient thickness to render it impervious to the shot of an enemy, of capacity to contain the whole machinery, with men, fuel, &c. and covered with sheet iron to prevent combustion, appears well calculated, upon the principle of an inclined plane, to reflect shot at any possible angle at which they can be fired from a ship to be assailed; and upon the well known principle of *ricochet* firing, if a ball be fired, and impinge a plane of oak timber, at an angle of about forty-five degrees, it will be reflected at nearly the same angle as the angle of incidence, and will continue to rebound until its force is overcome by its gravity and the resistance of the atmosphere. The guns of a ship of war cannot be depressed more than ten, or, at most, twelve degrees, which angle meeting the approaching vessels, at any point, cannot penetrate the mass of wood and iron, so as to endanger her safety, or impede her progress, and the means of defence are ample to defeat an attempt at boarding with armed boats, and to destroy those who may be in them.

Second. The power of the machinery for propelling, and the security of the engine works within the vessel for ejecting the inflammable fluid. The propelling power by steam is practically known; the security from injury by the shot of an enemy's ship, is clearly demonstrated in the plan and drawing, while the rapidity of approach by steam, at the rate of five miles an hour, and the low surface presented to the enemy's fire, lessen the chances of any one shot taking effect injuriously, while this vessel, pursuing her course in the night, or approaching an enemy in a calm, and choosing the point of attack, combines more advantages than any other plan, in proportion to the expense, that has been offered to the Navy Department.

Third. The efficacy of the whole system, and probability of success in operating against the enemy's vessels. As respects the security of the machinery, in connexion with the power necessary to effectual operation, the care of the artist, the solidity of the workmanship, and thorough knowledge of its principles, are all so essential, that the operator must combine the talents and mechanical knowledge to direct and decide these important points for self preservation.

The experiment having been recently made, in the presence of thousands, of the irresistible power of Mr. Brown's liquid fire to envelop in flames any combustible object at which it is directed, appears to have produced conviction of its efficacy.

I humbly conceive that it may be successfully applied to drive the enemy from our bays and harbors; and, more particularly on the lakes, it may be the means of obtaining our absolute ascendancy.

Should Congress in their wisdom patronise the attempt, the result would, probably, justify the means and the expense.

All which is respectfully submitted.

I have the honor to be, very respectfully, sir, your obedient servant,

BENJAMIN HOMANS.

The Honorable the SPEAKER of the House of Representatives.

13th CONGRESS.]

No. 121.

[3d SESSION.]

REORGANIZATION OF THE NAVY DEPARTMENT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 9, 1815.

Mr. WILLIAM REED, from the committee to whom was referred the resolution, adopted by the House on the 18th of March last, directing the inquiry whether any, and, if any, what means of retrenchment and economy, and of reform in the general management, and of extension and efficiency in the naval establishment, may be practicable and expedient, reported:

That, having considered the several important subjects referred to them, they do not deem it useful to exhibit to the House a detail of the various abuses which have prevailed in the naval establishment. Such a detail, though it might lead to the detection of individual delinquents, would not afford redress for former abuses or prevent their repetition: for it was obvious to your committee that these abuses were either sanctioned by the forms of law, or, for the want of adequate provisions and penalties in the law, must remain unpunished. After having examined and availed themselves of the labors of their predecessors in their investigations, made under the direction of this House, and referred to this committee, they have concluded that it is unnecessary and unprofitable further to extend that investigation, and that it would be more satisfactory to the House, and more promotive of the object of their appointment, to limit their efforts to "a reform in the general management of this establishment." Under a full conviction that the experience of this war has already satisfied the most scrupulous of the ability of this country to create and equip a naval force, competent not only to the defence of our extensive maritime frontier, but also for the great annoyance of a foreign enemy; and that such a force is now equally demanded by every section of our country, as indispensable for its security; the committee have likewise deemed it unnecessary to go into an argument to show the propriety of bestowing upon this branch of our national force, that measure of increase and support which its brilliant exploits on the ocean and on the lakes, and its efficiency in annoying the trade of the enemy, during this war, under all the abuses to which it has been exposed, have shown, should only be limited by our means.

The opinion that has existed from the first establishment of this Department, and been declared successively by almost every Secretary, that the duties incumbent on them were greater and more diversified than the most capable and laborious could discharge, with honor to himself and justice to the nation, led the committee to an examination of the system as now established, and the abuses that resulted from it. In prosecution of this examination, especially on that part which applies to the detail of service, they have principally relied on the information derived from the intelligent and experienced officers of the navy, whom they have always found ready and desirous of giving all the information in their power. By the information obtained from this and other sources, the committee are convinced that most, if not all, the abuses complained of are attributable to three distinct causes:

First. The excessive and laborious duties of the Secretary.

Second. The want of sufficient checks upon, and the consequent irresponsibility of, subordinate agents.

Third. The great latitude allowed commanders in altering, repairing, and furnishing their ships.

It is presumed to be unnecessary to offer to the House any further evidence of this statement than is contained in the following extract from the report of the late Secretary of the Navy, made to the Senate of the United States on the 15th November last:*

"But regulations, however correct and adequate to the end, become nugatory or worse, unless the authority and the means are co-extensive and competent to enforce the execution or punish the violation thereof. This may account for the non-existence of many wholesome regulations in the civil administration of the navy of the United States, and for the imperfect execution of those which exist. Breaches of the latter too frequently escape with impunity, from the impossibility of the Head of the Department taking cognizance of all the multifarious concerns of the establishment."

Great and obvious as the defects in this establishment are by all confessed to be, the committee have felt no little anxiety as to the best mode of correcting them. Desirous equally of avoiding the opposite errors, of rashly changing from one system to another without an attempt to correct known abuses, or loading it with formal but inefficient appendages, which more frequently encumber than relieve, or give energy to its operations: and, concurring in the opinion expressed by the late Secretary, in the report before referred to, that a board, composed of intelligent and experienced officers, in aid of the executive of this Department, would most effectually accomplish this object, and, if properly organized, avoid the dangers from too great innovation on one hand, and inefficiency on the other, they directed a copy of his report to be forwarded to every captain in the navy of the United States, with the annexed circular, marked A. From the answers thereto, which invariably approve the general design, it was thought unnecessary to publish more than those which contained particular observations upon the plan submitted. These are annexed, numbered 1 to 8.

From these materials, collected from intelligent and practical sources, the committee have endeavored to digest a plan which, they unanimously believe, if adopted, will immediately correct many of the abuses complained of, and lay the foundation of an improved system for the management of this Department. They, therefore, beg leave to recommend the adoption of the two bills accompanying this report.

A.

CIRCULAR.

WASHINGTON, November 17, 1814.

SIR:

I am directed, by the committee appointed under a resolution of the House of Representatives, adopted on the 15th of March last, "authorizing and directing an inquiry into the expediency and practicability of reform in the Naval Department of the United States," to forward for your examination a letter from the Secretary of the Navy to the Senate of the United States, of the 18th, communicating his views and plans for effecting this object; and to request you to favor the committee with your opinion of the plan proposed by the Secretary, and to suggest such additions and alterations as shall appear to you necessary for attaining this desirable object.

With respect I am, sir, your very obedient servant.

No. 1.

Observations, submitted to the Naval Committee, on the report of the Secretary of the Navy to the Senate of the United States, dated the 15th November, 1814, relative to the better organization of the Navy of the United States.

I should, for the reasons which follow, recommend three instead of five navy inspectors: that they be taken from the captains in the navy; and that the officer of the oldest date of commission should preside. 1st. I believe that three inspectors are adequate to the performance of the duties contemplated, and this number will be sufficient to form a quorum. If it should be said, that, by confining the board to the number of three, it might be rendered incompetent by the death or disability of a member, it may be replied, that, while the President has the power of supplying the deficiency from the captains in the navy, this objection can have no force. 2d. I recommend the ap-

* See No. 116.

pointment of navy officers in preference to gentlemen out of the navy, who may be skilled in naval affairs, because, in a science in which, of all others, experience has set theory at defiance, practical men only should be allowed to act; and I firmly believe the officers of the navy, after many years of experience in the naval service, and of constant reflection on the subject, are better qualified to execute the duties required, than any other characters. 3d. The officer whose commission is of the oldest date should preside, because, by such an arrangement, no offence could be given to individual feeling, and that union and harmony would be preserved which are so necessary to ensure a co-operation of mind and action.

2d. I should recommend the following alteration in the fourth section: Instead of the Secretary of the Navy preparing the rules and regulations for conducting the business of the naval constructor's department, that that duty be assigned to the board of inspectors, who would always be professional men, and thereby judges of the matter. And it might happen that the Secretary of the Navy would not be a nautical character.

3d. The respective duties, designated in five classes, it appears to me would be much better conducted under the general direction of the board than could be done under the separate direction of the respective members; inasmuch as the greater part of the duties detailed therein are specified in the general duties of the board, and the whole are placed under its control; and more especially as a considerable part would require, for the public interest, the united talents of the board. And should it be found, from experience, which is the only test, that a select distribution of duties ought to be made among the members of the board, with due deference I suggest that the board would be enabled, from actual experiment, to recommend the best classification of duties for such inspector. A system so complicated and extensive as a perfect organization of the civil department of the navy cannot be expected, even under the direction of the best talents, to be the work of a day. But the want of some uniform system in the Naval Department of our country has evidently manifested itself; and the adoption of the general principles for such a system, as recommended by the honorable Secretary of the Navy, I doubt not would be attended with the most favorable result.

WM. BAINBRIDGE.

No. 2.

UNITED STATES' FRIGATE CONSTITUTION, BOSTON HARBOR, *November 26, 1814.*

SIR:

I received the honor of your circular letter of the 17th instant, enclosing a report of the Honorable Secretary of the Navy to the Honorable Senate of the United States, relating to the organization of the Navy Department. You express a desire that the committee may be possessed of my opinion of the plan proposed, and that I should suggest such additions and alterations as may appear to me necessary for attaining so desirable an object.

It appears to me, sir, and is my opinion, that the plan proposed by the report will contribute towards the desired end, but I do not think it calculated to obtain the whole object proposed by Congress. Viewing it as an auxiliary to the Navy Department, it will unquestionably facilitate the operations and relieve the officers of that Department from much of the detail duties, which all must be aware are too extensive and diversified for any one person to discharge with necessary and due attention. We must also be aware how difficult it is to change a system once begun, and whose basis is not established on the best foundation, though it should afterwards be found inadequate to the object.

If we compare this new and young nation, rising in the Western hemisphere, and progressing towards a zenith of greatness which may cast a shade over some of the oldest and most enlightened nations of the Eastern, to a young man commencing life, with the experience of his predecessors, whereby to regulate his conduct and economy, would not his error strike us forcibly, on observing him erecting temporary structure after structure, instead of raising on solid foundation the groundwork of his future comfort and prosperity, which would bid defiance to time, and could only be shaken by the general wreck of things? Presuming the Legislature wish to establish the marine of this country on the best possible foundation, and calculated to be conducted with the greatest economy in all its various branches, I do apprehend the plan submitted will not be found to effect that object, and will fall far short of the end contemplated.

Of the first section, it will only be necessary to remark, that it would be injudicious to destroy the Department, but highly essential to reorganize it.

The second section provides five inspectors of the navy, to form a sort of navy board, which will contribute no further than to relieve the Department from some of the detail service, and sharing with it certain portions of the responsibility. The principal objection to a board of inspectors constituted as I apprehend, arises from its not combining the variety and necessary practical knowledge and information among its members requisite on many important subjects that will come before them.

The assigning to individuals of the board of inspectors (as contemplated by the third section) distinct control over, and responsibility for, specific portions of the service, can and will answer no purpose whatever.

The provisions of the fourth section will be highly essential at all events.

Section the fifth may or may not be requisite; in the latter case the office could at any time be created.

Sections six and seven will only be requisite if the plan is adopted.

As the principal features in the plan of the bill proposed are contained in the section providing the board of inspectors, it will only be necessary to remark, in support of my objection above, that the duties contemplated to be assigned to this board would require, at least, one member in it conversant with each of the important branches of the establishment. The drawing up all the rules and regulations for each branch of the service; the examination of all the officers below the rank of masters commandant for appointments or promotion; the adopting models, for vessels of war to be created from; the planning and arranging their internal apartments; the external equipment and armament; the arranging the proper stores for a given time for each department; the regulating dock yards, navy yards, foundries &c. &c. demand the combined talents and professional experience of men conversant with the different professions. By referring to my letter of the 20th January, 1813, to the Honorable Langdon Cheves, you will observe by the plan of a board there proposed that I had those objects in view, and therefore constituted it of such characters and professions as are essential to give every subject submitted to them a fair and professional examination. The above duties comprise almost the whole economy of the establishment, and form a subject of the first importance to the nation.

With respect to the flotilla, it ought either to form a part of the navy, and be subject to its rules, regulations, and economy, and be under the superintendence and control generally of the Navy Department and navy board, or else be entirely separated therefrom.

One great source of expenditure and inconvenience to the navy service arises from the short enlistment of our seamen, ordinary seamen, and boys, and the principal cause which would defeat any particular object or expedition of our marine, more so than any *imagined* deficiency of seamen. During part of our war with Tripoli, the crews were enlisted only for one year; the consequence was, that a ship could scarcely arrive at her station, and have time to organise her crew, before she was obliged to return and discharge them. The term of enlistment now is two years; but such is the difficulty of getting men, for the small pay and bounty allowed, compared with what they can get in other service, and the ship is so long delayed in procuring her complement, that the times of one half expire before the crew is completed. The inducements given to fill the ranks of the army being much greater than that of the navy, many seamen have joined it; some, from necessity, have gone into foreign service, and are even navigating the commerce of the enemy; many are in the private armed ships and privateers, owing to the exclusive advantages given them over the navy. By this means the glory and maritime reputation of the nation is made to yield to the inglorious warfare of plunder, which deeply affects some individuals of the enemy, but makes only a small impression on the nation at large; some are locked up in the prisons of our foe, who is aware of the short period of their enlistment, and is wary enough to detain them from exchange until their term of service expires, when our Government can no longer command their services. The frequency of changing men from the ship they select to cruise in, to another, or into different service, such as the lakes and flotilla, contributes much to impede the recruiting service. When the above causes are considered, it is only wonderful that any men can be procured for

our ships of war. The registering and classing of the seamen of the United States would produce much good, but the compulsory command of their services would produce much evil, and should only be resorted to in the most extreme necessity. None will serve so well as those who serve voluntarily. To this account may be placed much of our superiority over the British, which has hitherto baffled all their boasted advantages of *experience, skill, and long practice.*

With respect to a naval academy, the best school for the instruction of youth in the profession is the deck of a ship, presuming that none would be offered or received into the service as midshipmen whose education had not been such as to fit them for officers, and calculated for gentlemen. To derive advantage from expenditure, and induce that corps of officers to pursue their profession, in time of peace, through private service, I would allow no half pay to midshipmen, except for such term as they can produce a journal of their voyages, and certificates of the master or owner of the vessel, countersigned by the collector of the port. By this means, many will be induced to pursue that calling to acquire the essential knowledge of seamanship, the properties of different species of vessels, an acquaintance and familiarity with coasts, countries, and nations; a knowledge of their marine, commerce, and fortresses; the genius of the people, and their language; which would be essential to them as officers, and important to the nation. It would enable them to form a true estimate of the requisite force for the attack of any point, place, or object, and the seasons best calculated for expeditions and enterprises, with the least hazard to themselves, when they should be called to execute the object, or plant the standard of our Union over the humbled foe.

The love of country and patriotism of the seamen of the United States stand unrivalled, or only equalled by their intrepidity and perseverance in commercial pursuits, and their valor in naval combat. We see them encountering all the horrors of the enemy's prisons, the privation of liberty and comfortable support, in preference to bearing arms against their country: impressed (during a state of peace with us) on board the British ships of war, and, by oppression, compelled to serve them against other enemies, they submitted with patience to their misfortune; but, when they heard of the war with their own country, no inducement or force could prevail on them to take arms against her. Sir, the navy looks up to the Government, with confidence, for its fostering care, and the nation trusts that they will place this important and essential national force on a systematic and solid foundation, that it may progress to maturity by gradual and regular augmentation. Although it may present to the enemies of our country a front too formidable for them to penetrate, it never can be rendered a machine to menace the constitution or liberties of our country; it will at all times strengthen the arm of Government, bind the Union together, protect our coast and harbors from blockade, menace, or insult, our commerce from plunder, and our citizens from the slavery and dungeons of Barbary. I have the honor to be, very respectfully, sir, your obedient humble servant,

CHARLES STEWART.

No. 3.

NAVY YARD, PORTSMOUTH, *November 30, 1814.*

SIR:

I have had the honor to receive your letter of the 17th instant, covering a letter from the Honorable the Secretary of the Navy to the Senate of the United States, dated the 15th instant, communicating his views and plan of effecting a reform in the management of the naval department, and requesting my opinion thereon.

I now beg leave to inform you that I have examined the letter, and am of opinion that the plans, *generally*, proposed by the honorable Secretary, are such as would, if carried into effect, go far towards effecting the object so much wished for, particularly as it respects the establishment of a navy board. It would be presumption in me to propose additions or alterations of a plan proposed by the Honorable the Secretary of the Navy, with the knowledge he has of naval affairs, and the means he possesses of getting at the transactions of every branch of the establishment; I can, therefore, only say, in general terms, that I think the changes in the naval establishment, proposed by him, are such as will remedy many of the evils that now exist. If, however, it is not thought absolutely necessary to make the proposed changes immediately, (and it would not be thought presumption in me) I beg leave to suggest the idea of appointing, *this session*, the gentlemen that are to compose the navy board, and let them enter immediately on the duties of that office. They, together with the Honorable the Secretary of the Navy, would, before the next meeting of Congress, be able to lay before the Senate a complete system for the reform of the establishment, founded on observation and facts taken from these gentlemen collectively, that may not be known or inquired into as individuals. If I dare give an opinion, these would be my sentiments. The board would have time to examine particularly into the establishment as it now is. They would be able, some of them, to visit the different naval establishments, and inform themselves of what improvements are necessary, and how far it will be expedient to occupy all the navy yards we now have, or, rather, whether it will not be advisable to fix on some two or three establishments, as being important ones, and only improve the others for temporary purposes, such as repairing ships, or giving them an outfit when they fall in, and cannot, without risk, get to the larger establishment. In short, a board appointed immediately, and commencing on the duty of the office, would, in my opinion, as I have before stated, lay before the Government a system, with such rules and regulations for the better government of our naval establishment as cannot fail to meet their approbation, and, I am sure, such as will save millions to the nation, if we are to have a navy of any magnitude. I have the honor to be, most respectfully, sir, your obedient servant,

ISAAC HULL.

HON. WILLIAM REED, *Chairman of the Naval Committee.*

No. 4.

NEW YORK, *1st December, 1814.*

SIR:

Circumstances have prevented me from replying, until now, to your letter accompanying the report of the Secretary of the Navy, on the subject of a new organization of that Department. The objects of reform contemplated in that report being those on which I had heretofore communicated my ideas, I shall merely remark, in compliance with your request, upon the only subject which remains, namely, the organization of one board of inspectors, as recommended by the Secretary.

It appears to be the intention of that officer, that the board is to be so constituted as simply to exercise such powers as may be delegated to them by the Secretary of the Navy, and approved by the President of the United States, and that it is not to be located at the seat of Government.

After having maturely considered the subject in every point of view that presented itself to my mind, it appears to me that the object contemplated would be attained much more effectually, by so constituting this board, that the Secretary of the Navy should be its presiding officer, and the members his counsellors, with whom he might and would be expected to consult, in all those affairs which they would be supposed, from their professional experience, to be better acquainted with than himself: I say better acquainted, because it is presumed that the Secretary will not, generally, be a person thoroughly versed in the details of the service. The members of the board thus constituted, might, in addition to the duties of counsellors, exercise the respective powers contemplated in the report, and as effectually execute the duties of inspectors and comptrollers of abuses as if they formed a separate and distinct establishment, placed in a central part of the United States, and having their separate districts particularly defined.

By this arrangement, the Secretary of the Navy might, at all times, and at the instant, have the advice of one or more competent officers, responsible for their counsel and conduct, and with whom he could at all times consult, without incurring the delay which would result from placing the board at a distance from its head. There is always an advantage in hearing and comparing the different opinions of experienced men on every subject. Letters must, of necessity, be less particular and explanatory than verbal communications, and it is much more easy to come at the whole truth by the latter medium.

In short, sir, I can conceive no advantages that can result from placing this board in a central situation, that will counterbalance the probable disadvantages of the arrangement contemplated in the report of the Secretary. One principal object of this arrangement appears to me, ought to be to bring into the department the experience and activity of a number of professional men, who should be at all times ready on the spot, to furnish either Congress or the Secretary with such information as either might call for, and which their professional experience enable them to communicate.

The board, with the exception of the Secretary of the Navy, should consist of naval officers exclusively, of a grade not inferior to post captains, and composed of not more than three in number, as that would, I think, be fully competent to the discharge of all the duties required. A greater number might tend rather to embarrass and retard, and would take from the navy officers that, on some occasions, could not be spared from the service. These officers to be selected by the President of the United States, and changed as he should find it expedient. The accountant and clerks of the Navy Department to remain, as heretofore, under the Secretary of the Navy, who should be the only disbursing officer of the board; the great duty of this board to consist in forming, arranging, and bringing into operation, a system of order and economy for the navy, which would remedy the defects and abuses now existing in that department. A board thus constituted would, I feel satisfied, reduce the expenses of the establishment at least one-fourth. I am, with much respect, sir, your obedient servant.

STEPHEN DECATUR.

O. H. PERRY.
D. PORTER.
L. WARRINGTON.

The above accords entirely with our opinion.

No. 5.

NAVY YARD, BROOKLYN, December 6, 1814.

Sir:

In compliance with the request of the committee appointed by the House of Representatives to inquire "into the expediency and practicability of reform in the management of the Navy Department of the United States," I have examined attentively the letter from the Secretary of the Navy, which you did me the honor to transmit me; and my sentiments on the subjects it embraces, with such remarks as appear to me of weight, and applicable to those subjects, are respectfully submitted.

In examining the plan proposed by the Secretary, I am at a loss to discover clearly his views of the duties and powers that are to remain with the Secretary of the Navy, after the board he has recommended is in full operation. I assume it as admitted, that the duties and powers of that office are loosely defined now, and I consider it very important, if the office is continued with a board, that the extent of its operations should be clearly marked; if this is done, I believe the officer holding must possess but a small share of power and his duties be very limited, or he must combine in himself the authority to direct and control the board in all cases.

It will be considered scarcely worth while, I presume to retain it, for unimportant purposes; but if it be clothed with the extensive powers alluded to, it appears to me, that ill consequences may easily arise from it, because the judgment of an individual, who it does not appear must necessarily be conversant with naval affairs, may, and might, frequently, be placed in competition with that of a board of five, who are selected expressly for their knowledge in those matters, and with power to reject, modify, or render useless, their most important decisions. This power, I am persuaded, should be held by the President of the United States alone.

It is true, I believe, that, with special and limited authority, vested by an act of Congress, which would clearly define the powers and duties of the office, some benefit might be derived from it. I am decidedly of opinion that the navy should be represented in the cabinet, if I may use the expression, and the office would most probably be of advantage for that purpose; but then, if there is a board created as recommended, it appears to me that the Secretary of the Navy should be more the advocate of that board than the controller of it; he might also be serviceable as the organ of communication between the President of the United States and the board, and between the latter and Congress; but there I think his labors should cease.

He should have no absolute control over either the civil or military department of the establishment. In the light, therefore, which I view the subject, it is manifest to me that the benefits to be derived from the office, limited as above stated, would be of little importance, and could all be executed with equal advantage, if it had no existence; but if it is to exist with all the qualities of a directing and controlling power, I am of opinion that the service would be much benefited by the alteration of the second section proposed, so as to constitute a board of three, to be selected from the captains of the navy, and located at the seat of government. These would, most probably, be competent to the discharge of all the duties that would devolve on a board of this nature, under any circumstances that could arise, until our navy is considerably increased, when, it is to be presumed, the number of members could be increased from the same materials.

I am averse to the introduction of gentlemen into a board of this description, that have lived principally in the merchants' service, who, however well they might be skilled in the duties devolving on mariners in general, cannot, I conceive without distending the imagination, be supposed to be acquainted with the ramifications of a naval service, and who would, most probably, from these circumstances, rather retard and embarrass than be of advantage to it. If it is considered necessary to introduce other than naval officers in this board, I would greatly prefer their being selected from other classes of citizens, possessing sound judgment and extensive information, without regard to maritime qualifications. There are duties, perhaps, that would be allotted to a board of this nature, which gentlemen possessing those qualities could execute with advantage.

On the proposition to authorize the President to appoint a naval constructor, with assistants. I will only trouble the committee by observing, that an able naval architect could, I believe, be employed to advantage in the department; but I am of opinion that more importance is proposed to be given to the office than is necessary or advisable, and that this officer should be under the direction of the board.

The appointment of a paymaster, as proposed, would not, as far as I am enabled to judge, be attended with advantage to the service. It appears to me that a well regulated system to govern the pursers, which it should be the duties of the board to prescribe, and the accountant's office, as it now exists, is all that is necessary on this subject.

The establishment of a naval academy, as recommended, would unquestionably be productive of great advantage to the service. A well regulated establishment of this nature I consider to be much wanted.

These comprise all the objects that the Secretary deems it necessary for the Legislature to provide. I am of opinion, however, that there would be advantages obtained by extending the law, so as to define, as clearly as possible, the duties and powers of the board, and to designate the boundaries of the naval districts.

All the regulations recommended I believe to be necessary, and much wanted, but I am of opinion that the appointments of pursers had better be limited by law, and the distribution of the duties of the board would, most probably, be made with more advantage by the members of it.

Upon the whole, it is my opinion that the duties and powers of the Secretary of the Navy, as they now exist, and all the duties and powers that it is necessary should be invested in a Navy Department, would be most advantageously settled in a board, to consist of five members and a secretary; one to be selected by the President, for his abilities as a statesman, who should preside at the board, and the remaining four to be selected by the same authority, from the officers of the Navy. This plan would, I believe, combine all the qualities that are wanting to compose a Navy Department fundamentally efficient for the administration of a permanent and extensive naval establishment.

I have the honor to be, with great respect, sir your obedient servant,

SAMUEL EVANS.

Honorable WILLIAM REED, *Chairman of the Naval Committee.*

No. 6.

SIR:

PORTSMOUTH, NEW HAMPSHIRE, *December 9, 1814.*

Your circular of November 17th, covering a letter from the Secretary of the Navy to the Senate of the United States, I had the honor to receive a few days since.

The appointment of a board for the assistance of the Secretary of the Navy has long been advocated by the different commanders in service, upon the presumption that, with their advice and assistance, the naval force might be rendered much more efficient, without an increased expense to the country. I should, however, suppose three persons sufficient; at this time, for the performance of all the duties of such a board. I cannot but think that part of the plan authorizing the President to appoint the presiding officer, as unnecessary, or improper, since no other rule of precedence can be established among officers than that of rank. I should also presume, that the naval officers possess that information on general naval subjects, and the particular details of service, which render them more peculiarly qualified for the duties of this board, than persons whose attention has been generally devoted to other subjects.

The different duties assigned to the particular members of the board, as classed by the Secretary, I should presume might be more advantageously distributed by the advice of the board itself, after its organization. The appointment of a naval constructor would be attended with many advantages. That of a paymaster, I should think unnecessary at present.

Anxious for the establishment of a board, composed of men whose vigilance and professional talents would enable them to discover and correct abuses; to furnish all the information which might be required upon naval affairs; and to superintend the general police and all those details of service which have hitherto necessarily interfered with the more important duties of the Secretary, I am particularly gratified that it has been officially recommended at a time when the Legislature are endeavoring to discover and reform the existing abuses of the naval establishment. The advantages which will naturally result from it appear too obvious to require enumeration; but not the least important would be the information they could soon furnish the honorable committee of naval reform upon the different subjects of their present inquiries.

With sincere respect I have the honor to be, your obedient servant,

C. MORRIS

HON. WILLIAM REED, *Chairman of the Committee of Naval Reform, Washington.*

No. 7.

FRIGATE UNITED STATES, *December 9, 1814.*

SIR:

A few days since I had the honor to receive your circular of the 17th ultimo, enclosing a letter from the Secretary of the Navy, transmitting a report relative to the better organization of the Department of the Navy of the United States.

From long experience, and so far as my knowledge extends of naval transactions, and to naval regulations, it has been but too obvious that many imperfections have existed in the civil administration of our establishment, and that the only and best method that can be devised to remove the evil, will be to elect, by law, a naval board, to consist of three post captains, (or of a higher grade if there should be such) and that the Secretary of the Navy, where it may be deemed necessary, in joint council to be the presiding officer. This board of inspection, if well selected, I am perfectly satisfied will be enabled to give to our establishment a tone satisfactory in effect, and salutary in its operation. It will be to our navy its sheet anchor; all points of duty will be equally made explicit by its salutary and well defined regulations, and all untoward and unnecessary expenses, which have but too long continued to exist in our establishment, will in a great measure be brought to a final termination. When that object be obtained, the navy cannot do otherwise than progress, under the fostering care which, it is hoped, the Executive of the country will feel disposed to appreciate agreeably to its consequences.

Sir, I have the honor to be, with high respect and consideration, your obedient servant,

JOHN SHAW.

HONORABLE WILLIAM REED.

No. 8.

NAVY YARD, WASHINGTON, *December 10th, 1814.*

SIR:

I have been honored with your letter of the 26th ultimo, as chairman of a committee of the House of Representatives for "inquiring into the expediency and practicability of a reform in the naval department of the United States," transmitting therewith, a letter from the late "Secretary of the Navy, of 15th November, to the Senate, communicating his views and plans for effecting this object," and requesting my opinion, &c. of the plan proposed.

I have perused with attention the said "report" to the Senate, and now proceed to give you my opinion on the several parts thereof, as the nature of the subject appears to me to require.

It has been long evident to every experienced officer in our navy, and experience has made it known to the community at large, that *no one man* (whatever his intellectual powers and endowments may be) is fully competent to execute the multiplicity of complex duties which have been incumbent on the head of the Navy Department.

Thus, then, another branch of power in that department appears to have become indispensably necessary, and none so appropriate, in my opinion, as a Board of three or more experienced, practical, professional men.

Whether the appellation given to the Board, in the report of Mr. Jones, is the most appropriate, it is considered unnecessary herein to discuss; but it is incontrovertibly demonstrable, that such a Board, with proper powers, under an act of the Legislature, will effect a saving of many thousand dollars annually, in the expenses of our naval establishment.

The Secretary having presented his report in the form of "a bill," it may, I conceive, be found convenient to the committee, as well as to myself, to follow its sections in their regular course, with such a fair and candid opinion thereon, as their propositions appear more or less forcible and conclusive on my mind.

The first section, being totally indefinite and prospective, appears to be susceptible of no comment.

In the adoption of the second section, for the organization of the Board, I conceive particular care should be taken to avoid any probable cause for disunion in its members. I would, therefore, respectfully advise that the presiding member be designated by law, and not embarrass the President of the United States with the selection, which, from resignation, death, or other casualty, may very frequently occur; it appears to me more eligible, therefore, that the law should enact that the senior navy officer of the Board should be the presiding member; and being once so established, should continue so to act, as long as he remains a member thereof; notwithstanding any changes that might thereafter take place, by the supply of vacancies.

The Board conjointly should have the power to nominate one or more persons, qualified for the duties of the Secretary thereof, and submit such nominations to the President of the United States for his selection and approval.

A quorum of the Board, or, at least, the presiding member and its Secretary, should reside at the seat of government of the United States, for the great convenience of frequent communications and conferences with the Secretary of the Navy, or with the President of the United States, in cases of particular importance. The Board should hold its regular stated meetings in its office at the seat of government, unless, on emergency, or some important occasion, the Secretary of the Navy may deem it more eligible to be held elsewhere.

The duties of the Secretary of the Board are clearly and amply defined in the "report," as well as is also, the powers of the Board for the establishment of its rules, and the regulations of its proceedings, &c.

The third section appears to require some elucidation respecting the contemplated time or times for holding "each stated meeting" of the Board; as this section states that an abstract of the transactions of each such meeting shall be "transmitted *monthly* to the Secretary of the Navy," &c. Now the transmission of such "abstracts"

monthly, would necessitate an almost perpetual session of the Board, and perhaps such continual sitting of a quorum thereof, might be found imperative, especially in time of war; but otherwise, it is respectfully conceived that, after the first *complete* organization of the Board; once in two or three months will be sufficient for general stated meetings, and transmission of the transactions thereof to the Secretary of the Navy, thus affording time for a part of the members to visit personally the several naval stations, which I conceive to be one of the most essential points of their duty. And if, as heretofore suggested, a quorum of the Board, or at least the presiding member, and the Secretary thereof, reside at and hold their office at the seat of government, the other members will be better enabled to inspect the proceedings at the different naval stations, or the equipment of any squadron or single ship, (if deemed necessary) and report daily, or otherwise, as may appear requisite, by correspondence, to the President of the Board; or those executing the duties of the Board at the seat of government, who can immediately confer thereon with the Secretary of the Navy, or the President of the United States, if deemed essential, and thus a judgment may be formed whether or not it may be expedient for the presiding member to convene the Board earlier than the next approaching general stated meeting, or at any other port or place than their permanent office. Thus, also, by this constant correspondence, the President of the Board, with the aid of the Secretary, will always have the business necessary for the consideration of the Board methodically arranged, and ready to lay before them immediately on their meeting.

On the fourth section I would only observe that, in my opinion, it would be more eligible that the *Board*, contemplated in the "report," should "prepare such rules and regulations, for conducting the business of the constructor's department, as shall appear proper and necessary," and submit them for the approval of the President of the United States, through the Secretary of the Navy.

The fifth section, appointing a "paymaster" of the navy, it is believed, will be productive of great saving in the appropriation to which that office applies, and lessen in a great degree the risk of misapplication or long retention of the moneys appertaining thereto.

The sixth section is believed to be very just and proper.

The seventh section is respectfully submitted to the wisdom and judgment of the committee. Its provisions are, however, considered as adequate and equitable, but it is nevertheless conceived that the travelling expenses of the members, while on duty, should be provided for.

It is firmly believed that a naval academy will have an amply beneficial effect on the naval establishment, and tend to preclude the probability of public ships and vessels falling under the management of incompetent uninformed men.

"The powers and duties of the Board" are, I conceive, amply illustrated and defined in the "report," except that, *immediately following* the first general regulation, it might be proper and highly useful to add, that no officer, whatever his grade may be, shall in anywise alter the internal or external equipments, or arrangements, of the ship or vessel under his command, or to which he may be in any manner attached, under pain of —; but, on perceiving that any eligible improvement may be made in any particular whatever, he shall, as speedily as practicable, submit his ideas of such improvement to the Board, with his reasons therefor, for their decision.

The latitude that has been practised in this respect has cost the naval establishment many thousands of dollars.

In addition to the form of the bill, I would respectfully suggest the following:

And be it further enacted, &c. That, from and after the passing of this act, no person shall be commissioned as a lieutenant in the navy of the United States, until he shall have attained the full age of — years, shall have been full five years in sea *service*, two of which at least he shall have *served* in the capacity of midshipman, master's mate, or sailing master, in the navy of the United States; and shall have and produce a certificate of his abilities (after a full examination before a court of competent officers*) to manage and conduct the duties of a ship of war, in ballasting and stowing the hold, masting, rigging, docking, careening, arming and exercising the great guns and small arms; shall be capable of working a ship at sea, under all the forms and variety of sailing; making and taking in sail, anchoring, and getting under way; mooring and unmooring, and laying at single anchor in a tides-way, and in still water; shall be competently skilled in mathematical navigation, to conduct a ship *to pilot water*, on any known coast, island, bay, river or harbor, in this world. All which is respectfully submitted.

I have the honor to be, very respectfully, sir, your obedient servant,

THOMAS TINGEY.

HONORABLE WILLIAM REED,
Chairman of the Committee, &c.

* Not below the rank of post captains.

[13th CONGRESS.]

No. 122.

[3d SESSION.]

PROVISIONS OF THE PRIZE ACTS EXTENDED TO THE CAPTORS OF THE BRITISH PRIVATEER RETALIATION.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 13, 1815.

Mr. PLEASANTS, from the Committee on Naval Affairs, to whom was referred the petition of Weston Jenkins, in behalf of himself and thirty-two others, inhabitants of Falmouth, Barnstable county, Massachusetts, reported:

That, in the month of October last, a British private armed schooner, called the *Retaliation*, of seventy tons burthen, belonging to Liverpool, in Nova Scotia, whereof William J. Potter was master and commander, carrying five guns, and having a commission to cruise against the United States, came into Tarpaulin Cove, near the town of Falmouth, and there committed many depredations by fitting out armed boats and capturing the coasting vessels and small craft of the neighborhood; that, after some days, the said Weston Jenkins, as captain, with a lieutenant and thirty-one others, formed a resolution to endeavor to take the said privateer, or drive her off the coast: for which purpose they fitted out a small sloop, called the *Two Friends*, with one brass piece of cannon and some small arms, and, thus equipped, went in search of the privateer, which, after having found, they succeeded in capturing after a short skirmish. That the prisoners have all been delivered to the proper officer of the United States, and the papers of said privateer to the clerk of the district court; where the said vessel, her apparel, tackle, and furniture, have been condemned to the United States as droits of admiralty, in consequence of the said Weston Jenkins not having had a commission to cruise against the enemy. This circumstance was produced by the haste with which it was necessary to fit up the sloop, and the distance of the officers of the United States from whom the proper authority could have been obtained. All the foregoing facts are certified by the attorney, the collector, and the judge, of the district. The petitioners pray that distribution of the captured property may be made among them, upon the principles of distribution recognised by the acts of Congress authorizing the private ships of the United States to capture vessels of the enemy: the committee think the prayer reasonable, and that it ought to be granted, for which purpose they ask leave to report a bill.

13th CONGRESS.]

No. 123.

[3d SESSION.]

MIDSHIPMEN AND SAILING MASTERS.

COMMUNICATED TO THE SENATE, JANUARY 16, 1815.

To the Honorable the Senate of the United States, the memorial of the subscribers, Midshipmen in the Navy of the United States, respectfully sheweth:

That your memorialists conceive themselves aggrieved, and their prospects of future promotion and advancement in their profession materially injured, by the practice which has of late obtained, of promoting and commissioning sailing masters to the rank of lieutenants in the navy.

Your memorialists beg leave, most respectfully, to represent, that it is a practice which they believe is not allowed in the naval service of any other country, and that it is not likely to be attended with any beneficial results. Sailing-masters are taken from the merchant service, with qualifications no doubt perfectly sufficient for that most essential office; but they are in no respect accustomed to the peculiar and necessary regulations of vessels of war; and they are generally of an age when it is extremely difficult to lay aside old, and become familiar with new habits: while, on the contrary, midshipmen are trained and educated, from very early years, in the practice of subordination and command, and in all the duties and discipline which may, at future periods, be required from them, as military men. And they are, moreover, instructed theoretically and practically in the sciences connected with that element on which they are to act. Sailing masters enter on their employment, (if it be their intention to hold it permanently) knowing that it is one to which promotion is not properly attached. But, in truth, they more frequently accept of it as an occasional resource and livelihood when thrown out of their ordinary pursuits by the casualties of war, and with the resolution of abandoning it, and returning to their original occupation on the first favorable opportunity: midshipmen, on the other hand, commence by devoting themselves exclusively to the public service of their country; they embrace that service as a permanent profession, always ready to die in it; but hoping, if it should be their good fortune to live in it, that they may be permitted to earn, by their exertions and dangers, at least rank and honor.

Your memorialists beg they may not be understood as objecting to those promotions which may be the reward of gallant and conspicuous merit. Even although these be irregular, and interfere with their own prospects, yet they too much admire and value the cause of such occasional departures from established rules, not to yield to them with the utmost cheerfulness, and applaud the gratitude by which they may be dictated. Nor should they ever have objected, if such sailing masters only were commissioned to be lieutenants, as had served in the public navy the same number of years that is required of themselves: but they regret to state that no such limits have restrained the discretionary exercise of conferring that promotion. It has been given, as they understand and believe, to sailing masters who were not more than nine months in the service of the United States, and had never been able to signalize that short time by any illustrious act, while there were, and still are, many midshipmen who have served for five years, and were fit for promotion, but could not, and cannot even now, obtain it, because the vacancies have been already filled up by such irregular preferences. Your memorialists hope that no justification of what they complain against can be derived from their conduct or incompetency. The history of the American navy affords no room for that suspicion; and they trust that the examples of those whom they look up to and obey, have inspired them with such a sense of their duty and honor, that the lustre of their profession will not be tarnished in their hands. But they beg leave further to observe, that their extent of information and acquirements depends only in a slight degree upon themselves. They have been separated, at very early ages, from their families and friends, and made, as it were, the wards and children of the public. The education they may have received depended not on their parents, guardians, or private preceptors, but on the constituted authorities of the country, and on the teachers of their choice. Your memorialists, without presuming to praise themselves, hope they will be found to have availed themselves of every opportunity given to them for acquiring knowledge. But if there could be any doubt (which they trust there cannot be) that a midshipman, regularly serving his time in the navy of the United States, is fit for promotion, they, with the utmost deference, submit, whether that great evil would not be better remedied by devising some more effectual plan for their instruction, than by promoting over their heads strangers entering from the merchant service.

Your memorialists are aware that an application of this kind, from persons so young as they are, to your august assembly, is singular, and perhaps presumptuous; for this intrusion their situation and their inexperience might well be offered as their apology. But they think they have also peculiar claims to the attention they solicit, as they have already said they are the wards and children of the public, and they address themselves to the representatives of that public, who are constitutionally vested with the power of acting towards them as fathers and guardians. They complain not merely of what may effect them with present inconvenience, but of what must interfere with prospects and interests in the more advanced periods of their lives, when it will be too late to retrace their steps, and seek for honorable independence in any other profession.

Your memorialists, therefore, respectfully and confidently submit the protection of their interests, and, as they believe, of the naval service, to your honorable body.

EDWARD F. HOWELL, *and others.*

[3d SESSION.]

BURNING OF THE NAVY YARD AT WASHINGTON.

COMMUNICATED TO THE SENATE, JANUARY 18, 1815.

COMMITTEE ROOM, 9th November, 1814.

Sir:

A petition has been presented to the Senate by Edward Barry, Sailingmaster, and George Hodge, Boatswain, in the navy of the United States, praying compensation for certain private property destroyed by the burning of the navy yard.

The committee, to whom the petition has been referred, has directed me to inquire of you by whose orders, or under what authority, the navy yard was set on fire.

With great respect,

JOSEPH ANDERSON, *Chairman of the Committee.*Honorable WILLIAM JONES, *Secretary of the Navy.*

NAVY DEPARTMENT, *November 11th*, 1814.

SIR:

In answer to your letter of yesterday, founded on the petition of Edward Barry, Sailingmaster, and George Hodge, Boatswain, praying compensation for certain private property destroyed by the burning of the navy yard, and requesting to be informed by whose orders, and under what authority, the navy yard was set on fire, I have the honor to state that the eventual order, for the burning of the public shipping and stores, was given by the Secretary of the Navy, with the approbation of the President of the United States, and in conformity with the opinions of the Secretary of War and Navy, and assent of the other Heads of Departments, upon a consultation on that subject, in front of General Winder's quarters, on the morning of the 24th of August last, and in order to prevent the said shipping and stores from falling into the hands of the enemy.

The manner in which the fire was communicated to the buildings, which contained the furniture of Sailingmaster Barry, and Boatswain Hodge, will appear by the following extract of a report from the commandant of the yard, made on the 18th ultimo.

"The buildings destroyed by the fire from the frigate, &c. were the mast shed and timber shed, the joiners' and boat builders' shops, and mould loft; all the offices; the medical store; the plumbers' and smiths' shops, and blockmakers' shop; the saw mill and block mill, with their whole apparatus, tools, and machinery; the building for the steam engine, and all the combustible parts of its machinery and materials; the rigging loft; the apartments for the master and boatswain of the yard, with all their furniture; the gun carriage makers' and painters' shops, with all the materials and tools therein at the time.

"Also the hulls of the old frigates Boston, New York, and General Greepe."

I have the honor to be, &c.

W. JONES.

Honorable JOSEPH ANDERSON, *Senator of the United States.*

NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 24, 1815.

NAVY DEPARTMENT, *January 23*, 1815.

The Commissioners of the Navy Pension Fund, in obedience to the "Act for the better government of the navy of the United States" respectfully report to Congress the following statements in relation to that fund:

Paper A, which shows the amount of stock on the books of the treasury to the credit of the commissioners.

Paper B, statement of bank stock belonging to the fund, and abstracts of warrants drawn by the Secretary of the Navy on the treasurer of the fund, from the 1st of January, to the 31st of December, 1814.

Paper C, list of navy pensioners with the pension allowed to each. [Aggregate amount of which is \$13,667 20.]

Paper D, account of the commissioners with Thomas T. Tucker, Esq. treasurer of the fund. [Balance in his hands, \$47,852 60.]

Paper E, account of prize money deposited to the credit of the Treasurer of the United States, not included in his account D, for the year ending the 31st of December, 1814. [Amounting to, \$88, 265 43.]

All which is respectfully submitted. For the commissioners,

B. W. CROWNINSHIELD.

A.

Statement of the Stock on the Treasury books to the credit of the Secretary of the Navy, the Secretary of the Treasury, and the Secretary of War, for the time being Commissioners of the Navy Pension Fund, with interest and reimbursements which accrued for the year 1814.

No. 126.

[3d SESSION.]

DISTRIBUTION OF PRIZE MONEY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 30, 1815.

Mr. PLEASANTS made the following report:

The Committee on Naval Affairs, to whom was referred the petition of Joseph G. Roberts, have, according to order, had the said petition under consideration, and thereupon present the following report:

The petitioner states that he is a surgeon in the navy of the United States, and as such was attached to the squadron on Lake Erie, commanded by Commodore Perry; that whilst the squadron lay in port, the men becoming sickly, a hospital was established on shore, and the petitioner placed over it as surgeon; that whilst discharging his duty on shore, the action on the lake took place, on the 10th of September, 1813, in which the whole of the enemy's squadron was captured; that some of the wounded seamen were sent to the hospital after the action; that, in dividing the prize money, such a construction has been given to the law as to exclude the petitioner from any part thereof, under which construction the whole of the said prize money has been distributed among the officers and crew; the petitioner prays that Congress would grant him such a sum as will be equal to what his proportion of the said prize money would have been, had it been determined that he was entitled to a proportion thereof.

The committee are of opinion that the construction given to the law in the case stated is a correct one, and conformable to naval usage in similar cases. Prize money is allowed as a stimulus to courage and exertion *in action*, and a reward for valor, danger, and victory. They therefore recommend to the House the following resolution:

Resolved, That the prayer of the petitioner ought not to be granted.

No. 127.

[3d SESSION.]

PENSION FOR THE GREATEST DISABILITY LIMITED TO HALF PAY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 30, 1815.

NAVY DEPARTMENT, *January 28, 1815.*

SIR:

In reply to an order of the honorable the House of Representatives, of the 3d instant, referring the petition of Thomas Riddels, of Philadelphia, to the commissioners of the navy pension fund, I have the honor to report, that Thomas Riddels was regularly shipped in the United States' service, at six dollars per month wages, and was stationed on board gunboat, No. 121, commanded by sailing master William Sheed; that, on the 29th day of July, 1813, in an action with the enemy, which took place near the entrance of the Delaware Bay, the said Thomas Riddels lost his leg. After recovering from amputation, he was employed at the navy yard, Philadelphia, and on the 30th May, 1814, a pension was granted to him of three dollars per month, being the highest rate authorized by law.

There are many cases of peculiar hardship similar to this, particularly in the corps of marines, in which a man, for the greatest degree of disability, can receive no more than half his monthly pay, which heretofore has been only six dollars.

As the pension granted to this boy, Thomas Riddels, is for life, he might be bound apprentice to some profitable *sedentary* trade, and the accumulation of his pension, under guardianship, and proper management, may enable him to be usefully employed both for himself and the country.

All which is respectfully submitted.

B. W. CROWNINSHIELD.

The Hon. the SPEAKER of the House of Representatives.

13th CONGRESS.]

No. 128.

[3d Session.

EXPLANATIONS OF THE ESTIMATES FOR THE SUPPORT OF THE NAVY AND MARINE CORPS, FOR THE YEAR 1815.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 10, 1815.

WASHINGTON, February 6, 1815.

Sir:

On an examination of the estimates for the Navy Department, for the year 1815, there appears to be an increase of expenditure proposed of \$1,951,908 50, under the following heads, viz:

	Increase.
Pay and subsistence of the navy,	\$680,283 50
Ordnance,	400,000 00
Navy yards,	60,000 00
Contingent account,	600,000 00
Marine corps, pay, and subsistence,	206,625 00
Clothing, per ditto,	5,000 00
	<u>\$1,951,908 50</u>

I am instructed by the Committee of Ways and Means to apply to you for such information as may enable them to decide on the propriety of authorizing the proposed increase of expenditure.

I have the honor to be, your most obedient,

JOHN W. EPPES.

Hon. B. W. CROWNINSHIELD, *Secretary of the Navy.*

NAVY DEPARTMENT, February 8, 1815.

Sir:

I have had the honor to receive your letter of the 6th instant, requiring information respecting a proposed increase of expenditure, under the following heads of appropriation, viz:

Pay and subsistence of the navy,
Ordnance,
Navy yards,
Contingent account,
Pay of the marine corps, and
Clothing for ditto.

In reply to which, I beg leave respectfully to state that the estimates for the navy, for the year 1815, were predicated upon the actual number of officers, petty officers, seamen, ordinary seamen, and boys, required for the service, forming an aggregate of fifteen thousand two hundred, agreeably to the accompanying exhibit, marked A, showing the various grades, the number of each, and the amount of pay and extra rations. The distribution of this force will probably be in the manner following:

In sea service,	4,000 00
On Lake Ontario,	4,300 00
On Lake Champlain,	1,100 00
On Lake Erie,	600 00
Florella service,	5,200 00
	<u>15,200 00</u>

It being found impracticable to procure boatswains, gunners, carpenters, sailmakers, and master's mates, possessing the requisite qualifications, particularly for the service on the ocean and the lakes, for the compensation of twenty dollars per month, heretofore allowed, it has been deemed expedient to provide for the augmentation of the pay of this valuable class of officers twenty-five per centum, making the monthly pay of each, hereafter, twenty-five dollars.

A similar augmentation of pay for seamen, ordinary seamen, and boys, has become of vital importance, as, without such a provision, it would be excessively difficult, if not impossible, to recruit a force adequate to the public exigence. The powerful inducement of a large bounty offered in the army; the encouragement and high wages given by private armed vessels; the enhanced price of clothing, which, in the naval service, is charged to the seamen; and the hopeless prospect of prize money, owing to the general destruction of captured property, combine to produce a state of things extremely inauspicious to the recruiting service.

These observations are intended to explain the proposed increase, so far as it relates to the pay and subsistence of the navy.

With respect to the other items, embraced by your inquiry, ordnance, navy yards, and contingent account, the sum introduced for these objects into the estimates for the present year, is, notwithstanding the apparent increase, the same, very nearly, as the actual expenditure under those respective heads during the year 1814; and it is believed that an appropriation, for these purposes, of less amount, would be injurious to the public interest, as the Department, deprived of a sufficiency of means, would be liable to have its best directed efforts rendered abortive, from its incapacity to impart efficacy to the naval operations. To avoid the exposure to the enemy, which a discussion might develop, of the extent of the preparations contemplated on the lakes, the sum of one million of dollars, necessary for that purpose, was blended under the following heads of appropriation, and in these proportions, viz:

Under ordnance,	\$300,000 00
Under contingent account,	400,000 00
Under repairs of vessels,	300,000 00
	<u>\$1,000,000 00</u>

This course was deemed preferable to a specific appropriation for building vessels on the lakes, and the views of the Department, on this subject, were intended to have been disclosed to the honorable Committee of Ways and Means. The heads of appropriation, which would appear to have been increased, will, after the sum merged in each shall have been withdrawn, show the amount estimated for the service of the current year to be as follows:

Pay and subsistence of the navy, as per annexed exhibit, A,	\$3,259,624 50
Ordnance,	400,000 00
Navy yards,	160,000 00
Contingent account,	700,000 00

Although the estimates for the three last mentioned items were, for the year 1814, for considerably less sums, yet it became indispensable to have recourse to the President of the United States, as the operations of the year progressed, to direct the increase of these heads of expenditure to the extent required for the present year, by transferring to them moneys appropriated for other branches of the service.

Relative to the proposed increase on account of the pay and clothing of the marine corps, it may be proper to observe that the sum estimated for the pay and clothing of that force, for the year 1814, was two hundred and twenty-eight thousand two hundred and thirty-two dollars and ten cents; and that proposed, for the same objects, during the current year, is three hundred and sixteen thousand ninety-one dollars and fifty cents, making a difference of eighty-seven thousand eight hundred and fifty-nine dollars and forty cents, which, it is presumed, will be considered a moderate increase, when viewed in connexion with the act of Congress, passed on the 16th day of April, 1814, authorizing the augmentation of the corps of marines, by the appointment and enlistment of eight hundred and forty-six officers and men.

I have the honor to be, very respectfully, sir, your obedient servant,

B. W. CROWNINSHIELD.

Honorable JOHN W. EPPES,

Chairman of the Committee of Ways and Means.

[1st Session.

DISBURSEMENTS AT NAVY YARDS; PURCHASE OF TIMBER; INCREASE OF THE NAVY; NAVY HOSPITALS; DOCK-YARDS; REGISTER OF THE NAVY AND MARINE CORPS.

COMMUNICATED TO THE SENATE, DECEMBER 11, 1815.

NAVY DEPARTMENT, *December 7, 1815.*

SIR:

In obedience to the resolutions of the Honorable Senate of the United States, of the 28th of January, and the 28th of February last, I have the honor to report upon the several subjects as per papers enclosed, numbered one to six inclusively.

I am, very respectfully, sir, your most obedient servant,

B. W. CROWNINSHIELD.

HON. JOHN GAILLARD, *President of the Senate.*

No. 1.

NAVY DEPARTMENT, ACCOUNTANT'S OFFICE, *December 4, 1815.*

SIR:

I now hand you a statement of the amount expended under the third section of the act of Congress of the 30th March, 1812, prepared in pursuance of the resolution of the Senate of the 28th of February, 1815.

The account required by the resolution of the Senate of the 28th of January, 1815, cannot be furnished from this office. The aggregate amount expended by the several Navy Agents in each year could be furnished, but there is no distinct account rendered by them for the disbursements at the navy yards; if reference could be had to the agents' accounts, with considerable labor, perhaps a dissection might be made, and the expenditures at the navy yards selected so as to render a tolerably correct account; but it is understood that all the accounts settled at this office, prior to the year 1812, were destroyed by the burning of the Treasury Office by the enemy in August, 1814.

With great respect, I have the honor to be, sir, your most obedient servant,

THOMAS TURNER.

The Hon. B. W. CROWNINSHIELD.

No. 2.

A statement of the amount expended under the third section of the act of Congress of the 30th March, 1812.

Viz: Purchase of timber, - - - - - \$128,774 15

THOMAS TURNER, *Accountant.*

NAVY DEPARTMENT, ACCOUNTANT'S OFFICE, *December 4, 1815.*

No. 3.

Report relative to the gradual and permanent increase of the navy.

The importance of a permanent naval establishment appears to be sanctioned by the voice of the nation, and I have a satisfaction in stating that the means of its gradual increase are completely within the reach of our national resources, independently of any foreign country. The materials for building and equipping ships of war are all at command. Steps have been taken to ascertain the best growth and quantities of timber for naval construction, preparatory to contracts and purchases. The want of a mould loft for the naval constructor to lay out the moulds, by which the timber is to be cut and shaped previously to transportation, has delayed the completion of arrangements for an adequate supply. A building has been erected at the navy yard in this city for that purpose, and will soon be finished, when the business will progress.

Cannon foundries, manufactories of sheet copper, cordage, canvass, and all the mechanical branches, are in a state to furnish the several supplies which may be required.

The commerce of the United States, increasing with the resources and population of the country, will require a commensurate protection, which a navy alone can afford; and the experience derived from the active and vigorous employment of a limited navy, during the period of the late war, has demonstrated its efficient utility.

I do, therefore, with confidence, recommend an annual increase of our navy of one ship, of the rate of 74 guns; two frigates of the first class, rated at 44 guns; and two sloops of war, which can be built with the surplusage of smaller timber, and with a great saving in that material.

The act to increase the navy, passed January 2d, 1813, authorized the building of "four ships, to rate not less than 74 guns, and six frigates, to rate 44 guns each." This act has been partly carried into effect, by building three ships of the rate of 74 guns, and three frigates of 44 guns, in the Atlantic ports; the residue of the appropriation under that act was applied to the building of large ships and frigates upon Lake Ontario.

The concentration of our navy in one or two of the principal ports of the United States, where the depth of water is sufficient for the convenient ingress and egress of the larger vessels, will necessarily lead to the enlargement of the navy yards at such places, with docks for repairs, and the collection of all important materials for the armament and equipment of the different classes of vessels, in order to bring them into active service upon any emergency, with the advantage of combined force.

A general system for the gradual and permanent increase of the navy, combining all the various objects connected with an enlarged naval establishment, such as building docks, and extending the accommodations of navy yards and arsenals of general deposite, will form the subject of a more extensive report, to be laid before Congress during the present session.

No. 4.

Report relative to the measures taken respecting navy hospitals.

The subject of navy hospitals was necessarily suspended during the late war, in consequence of the more imperative duties of the commissioners appointed under the act of Congress of February 26, 1811.

The commissioners met in the early part of the year 1812, and surveyed the several sites in this city most eligible for the erection of an hospital, and directed an able architect to prepare a plan of the building and estimate of the cost. The eldest and most skilful surgeons of the navy have reported upon the general system, organization, and economy of an hospital; all which are now under consideration, and the commissioners are preparing a report upon the subject.

The appropriation of fifty thousand dollars, by the abovementioned act, "out of the unexpended balance of the marine hospital fund," has not been drawn out of the treasury; and it is considered that this sum, in addition to the contributions by the officers and men of the navy of twenty cents per month, will be inadequate to carry the intention of Congress into full execution, without further provision.

The subject merits the attention of Congress, and will receive all the consideration of the commissioners, to complete such an establishment as may meet the public expectations, and furnish relief to those brave officers and men, whose faithful services and wounds entitle them to all the benefits, accommodation, and comfortable maintenance which such an asylum can afford.

No. 5.

Report relative to the establishment of a dock-yard.

The act of March 3, 1813, appropriating "one hundred thousand dollars for the purpose of establishing a dock-yard, for repairing vessels of war," &c. could not be carried into effect during the late war, from the multiplicity of imperious duties which devolved upon the Secretary of the Navy in the active operations of the general service. The subject, however, received all the attention which the Secretary could bestow upon it; surveys of particular sites, and the opinions of experienced and scientific men, were collected, preparatory to a decision, which was suspended by the events of the year 1814; and no further measures were taken until after the peace. During the summer past inquiries and surveys have been made, the result of which will be laid early before Congress. The importance of this appendage to the naval establishment, the necessary arrangements connected with it, and the amount requisite to carry the system into complete effect, require a more detailed statement and estimate than can be embraced in the present report, without anticipating the result of a survey in the southern section of the United States, which is not yet completed.

I cannot omit this occasion of repeating the opinion of the absolute necessity and urgency of having docks constructed as soon as possible, for the repairs of our vessels of war.

14th CONGRESS.]

No. 130.

[1st Session.]

CLAIM FOR PRIZE MONEY FOR VESSELS CAPTURED AND DESTROYED BY THE ARGUS,
AND THE NUMBER CAPTURED AND DESTROYED BY THE VESSELS OF THE NAVY
DURING THE LATE WAR.

COMMUNICATED TO THE SENATE, DECEMBER 18, 1815.

SIR:

WASHINGTON, December 20, 1815.

In support of the petition presented to the honorable the Senate of the United States, and referred to their honorable naval committee, praying remuneration to those interested, for the captures made by the late United States brig Argus, under the command of my late brother William H. Allen, I have the honor to present, herewith, a letter from Benjamin Homans, Esq. of the Navy Department, to me, with a chart of the track of the Argus, and a list of the vessels she captured, their tonnage, &c. &c. and the documents that were found on board those vessels.

The chart shows the course of the Argus from L'Orient, up the western coast of Ireland, into the river Shannon, and thence, round into St. George's channel where she was captured. The red letters on the list of vessels indicate the time and place of their capture on the chart.

It appears, upon examination, that no invoices were found on board the captured vessels; those appertaining to the vessels bound coastwise were probably sent over land by mail; but I am unable to account for the absence of the others; the bills of lading that were signed were probably likewise sent by mail; and the bills of lading and custom house documents herewith, are the only or chief means by which an estimate of the value of the cargoes can be formed. Lieutenant Watson, of the Argus, on his return from England to this country, delivered at the Navy Department a report respecting the value, &c. of these vessels and their cargoes, which he estimated at about three millions of dollars, as will be seen by referring to the letter from Mr. Homans. I cannot find this report, and Lieutenant Watson is absent from this country. His means of ascertaining their value from the officers of the captured vessels, and while in England, were much greater than the papers presented herewith alone afford; but unwilling to overrate the amount, and in order to make adequate allowance for such an error, should there be any in his report, I have thought best to state the sum in the petition at five hundred thousand dollars less than is expressed in his report.

I made application at the Navy Department for the log book of the Argus, which, perhaps, contains some information of importance on the subject, but it has not yet been found; as soon as it is discovered, I shall beg leave to add the evidence it may afford to that presented now.

Some of the vessels taken were very valuable, and among them were those from the West Indies. The cargo of the Bedford alone (with Irish linen, &c. from Dublin for London,) would have brought in this country nearly one million of dollars.

I have not been able to ascertain of what kind or quality were the goods chiefly composing the cargo of the brigantine Ann; but they were most probably linen manufactures, and, if fine, were very valuable. I have written to ascertain their character from Dennison, the purser of the Argus, who is at Baltimore. The schooner Matilda and ship Betsey were the vessels re-captured by the enemy.

The schooner Salamanca, captured on the passage from this country to France, was an armed Government vessel, as her papers show; and the principle upon which awards have already been made for the destruction of the national vessels of the enemy, applies fully to her. And what prevents the application of the same principle where the commerce of the enemy has been destroyed? As having reduced the actual power of the enemy, the capture of a few of their national vessels cannot be considered of much importance, their whole number being so great, and the means of replacing those that were lost so extensive, it can only be justly prized as having lessened the naval reputation of the enemy while it increased our own, and raised the glory of the nation. Aside from this last consideration, the demolition of the enemy's instruments of annoyance gives claim to no greater reward than the destruction of the means by which those instruments are obtained. A nation cannot long support a war, from which the means are taken that enabled her to operate against an enemy: but leave her the means, and she will always be armed, being at all times able to replace her losses. To attack the commerce of the enemy was, therefore, the best mode of wounding her, and upon that conviction were the orders to my late brother predicated; in which the honorable Secretary of the Navy observes, "in no way can the enemy be made to feel our hostility so effectually, as by annoying and destroying his commerce, fisheries, and coasting trade: this would carry the war home to their direct feelings, and interests, and would produce an astonishing sensation." And the sequel demonstrated that hostility in that form was far more dreadful and destructive to her interests than any other which it could assume.

In another view, the claim of the subject to consideration is at least as strong. A law of the United States gives to captors the moiety of their captures; and I believe the position is correct, that the property in them vests the moment they are captured. But the power to convert such property before condemnation is not possessed either by the United States or the captors; and the United States have no greater authority to dispose of it, either before or after condemnation, than is enjoyed by the captors. My late brother was, therefore, compelled by his orders to destroy what actually belonged in part to himself and his crew; and the Executive authority having exercised the power of directing the disposal of those captures in a way that deprived the captors of their property in them, they have, it is humbly conceived, a just claim upon the United States for indemnity.

There is something accruing, under existing laws, for the guns and men captured, but the amount is very small.

The continued loss of sleep, together with the excessive fatigue consequent upon such a rapid succession of captures, and the extreme watchfulness necessary in so exposed a situation, disabled the Argus from making so great a resistance to her more powerful enemy as she might otherwise have done. And although victory hung no laurels over the tombs of those who fell, nor on the brows of the survivors, their misfortune has not sullied the fame of our arms, nor diminished their title to the remembrance of their country.

With the strongest conviction of the justice and liberal sentiments of the honorable gentlemen of the Senate to whose consideration this subject has been referred, I shall look with confident hope to a favorable result.

I have the honor to be, with great respect, sir, your obedient humble servant,

THOMAS J. ALLEN, *Attorney and agent.*

The Hon. CHARLES TAIT, *Chairman of the Senatorial Committee on Naval Affairs.*

SIR:

NAVY DEPARTMENT, January 13, 1816.

I have the honor to transmit to the naval committee of the Senate, in compliance with your request of the 8th instant, the several papers herewith marked A and B. The papers marked A contain a list of all the merchant vessels captured by the public armed ships of the United States during the late war, and subsequently destroyed at sea in obedience to the orders of this Department to that effect.

The papers marked B contain the orders, and extracts from such parts of orders, to the commanders of the ships and vessels of war under which the vessels captured were destroyed at sea.

Those captured vessels which were sent to the United States, and arrived safely, are not included, nor those which were manned for the United States, or friendly ports in Europe, and afterwards recaptured, with a number of others which were liberated as captives; the list being exclusively confined to the captured vessels destroyed, as far as the journals and reports have been made to this Department by the several commanding officers.

I have the honor to be, very respectfully, sir, your obedient servant,

B. W. CROWNINSHIELD.

The Hon. CHARLES TAIT, *Chairman of the Naval Committee of the Senate.*

A.

Statement of all the vessels, other than vessels of war, which were taken and destroyed by the Navy of the United States, during the late war with Great Britain.

Names of vessels captured.	Date of capture.	Vessels by which captured.

NAVY DEPARTMENT, June 5, 1813.

SIR:

When the honorable Mr. Crawford, minister plenipotentiary from the United States to France, is ready for departure, you will receive him and his suite on board, and proceed, with the first favorable opportunity, to sea, directing your course, without deviating for any other object, to the first port in France. In all probability you will find Brest or L'Orient the easiest of access; but should you have an opportunity of landing the minister, on any part of the coast of France, you may thereby avoid much risk in attempting to enter a port before which you may find a hostile squadron. But, in whatever way you may effect the first object of your destination, you will then proceed upon a cruise against the commerce and light cruisers of the enemy, which you will capture and destroy in all cases; unless their value and qualities shall render it morally certain that they may reach a safe and not distant port. Indeed, in the present state of the enemy's force, there are very few cases that would justify the manning of a prize; because, the chances of reaching a safe port are infinitely against the attempt, and the weakening the crew of the *Argus* might expose you to an unequal contest with the enemy.

It is exceedingly desirable that the enemy should be made to feel the effects of our hostility, and of his barbarous system of warfare; and in no way can we so effectually accomplish that object, as by annoying and destroying his commerce, fisheries, and coasting trade. The latter is of the utmost importance, and is much more exposed to the attack of such a vessel as the *Argus*, than is generally understood. This would carry the war home directly to their feelings and interests, and produce an astonishing sensation.

For this purpose, the cruising ground from the entrance of the British channel to Cape Clear, down the coast of Ireland, across to, and along the northwest coast of England, would employ a month or six weeks to great advantage. The coasting fleets on this track are immensely valuable; and you would also be in the way of their West India homeward fleet, and of those to and from Spain, Portugal, and the Mediterranean. When you are prepared to leave this ground, you may pass round the northwest of Ireland, towards Fair island passage, in the track of the Archangel fleets, returning home in August and September.

When it shall be absolutely necessary to return home, you will pursue such route as may best promote the objects of your cruise, and endeavor to make some eastern port; perhaps Portsmouth may be as easy of access, and as convenient, in other respects, as any other.

On your arrival in France you will, with the aid of Mr. Crawford, be better able to form an opinion of the expediency of attempting to send prizes into France, or of touching there to replenish your stores in order to protract your cruise.

Your own disposition, and the amiable character of the minister, insure to him the kindest attention on your part; and I am persuaded that you will derive the most ample gratification from such an intercourse. Your talents and honorable services are deeply impressed upon this Department, and will not cease to excite its attention.

Wishing you a prosperous and honorable cruise, I am, very respectfully, your obedient servant,

WM. JONES.

Lieutenant WM. H. ALLEN,
Commanding U. S. brig *Argus*, New York.

Extract of a letter from the Secretary of the Navy to Captain Charles Stewart, commanding the United States' frigate Constitution, dated September 19, 1813.

The commerce of the enemy is the most vulnerable point we can attack, and its destruction the main object; and to this end all your efforts should be directed. Therefore, unless your prizes shall be very valuable, and near a friendly port, it will be imprudent, and worse than useless, to attempt to send them in; the chances of recapture are excessively great, the crew, and the safety of the ship under your command, would be diminished and endangered, as well as your own fame, and the national honor, by hazarding a battle after the reduction of your officers and crew by manning prizes. In every point of view, then, it will be proper to destroy what you capture; except valuable and compact articles, that may be transhipped.

This system gives to one ship the force of many; and, by granting to prisoners a cartel, as sufficient numbers accumulate, our account on that head will be increased to our credit, and not only facilitate the exchange, but insure better treatment to our unfortunate countrymen who are, or may be, captured by the enemy.

Extract of a letter from the Secretary of the Navy to Master Commandant George Parker, commanding the United States' brig Siren, dated December 8, 1813.

Your own observation must have proved to you how precarious and uncertain is the prospect of getting prizes into a friendly port; and that the manning of a few prizes will soon terminate your cruise, and diminish your force so as to jeopardise the safety of the *Siren*, and your own reputation, by a chance conflict with an enemy, nominally your equal, but fully manned. With every patriotic officer private motives will yield to considerations of public good; and as the great object and end of our public force is to harass and distress the enemy, and as the most effectual annoyance is the destruction of his trade and commerce, it ought to be the ruling principle of action with every commander.

A single cruiser, if ever so successful, can man but a few prizes, and every prize is a serious diminution of her force; but a single cruiser, destroying every captured vessel, has the capacity of continuing, in full vigor, her destructive power so long as her provisions and stores can be replenished, either from friendly ports, or from the vessels captured.

Thus has a single cruiser, upon the destructive plan, the power, perhaps, of twenty, acting upon pecuniary views alone; and thus may the employment of our small force, in some degree, compensate for the great inequality compared with that of the enemy. Considered even in a pecuniary point of view, the chances of the safe arrival of the prize are so few, and of recapture by the enemy, so many, that motives of interest alone are sufficient; but when we consider that it is, in all probability, consigning the prize crew to a loathsome prison, in the hands of a perfidious and cruel enemy, every just motive will combine to urge the destruction, rather than the manning, of every prize.

The American people and Government have given abundant proof that they are deficient neither in gratitude nor generosity. I, therefore, strenuously urge and order the destruction of every captured vessel and cargo, unless so near to a friendly port, as to leave little doubt of safe arrival, or that the merchandise shall be so valuable and compact as to admit of transhipment, without injury to the vessel under your command, or to the public service.

Extract of a letter from the Secretary of the Navy to Master Commandant John Orde Creighton, having under his command the United States' brigs Rattlesnake and Enterprise, Lieutenant Commandant James Renshaw, dated December 22, 1813.

The great object, however, is the destruction of the commerce of the enemy, and bringing into port the prisoners, in order to exchange against our unfortunate countrymen who may fall into his hands. You will, therefore, man no prize, unless the value, place of capture, and other favorable circumstances, shall render her safe arrival

morally certain. As the ransoming of British vessels is prohibited by a statute, and the ransom bonds declared void, you will not agree to the ransoming of any prize. The enemy has also, in violation of his own agreement, and of good faith, refused to recognise cartels granted at sea; you will, therefore, grant no cartel, nor liberate any prisoners, unless under circumstances of extreme and unavoidable necessity.

Be assured, sir, that the confidence of our country cannot be enhanced by any new achievements of our gallant navy; it is now entire, and the services of an officer will now be estimated by the extent of the injury he may inflict upon the vital interest of the enemy in the destruction of his commerce.

[Instructions, the same as the preceding to Captain Creighton, were given, January 6, 1814, to Master Commandant Joseph Bainbridge, commanding the United States' sloop of war Frolic.]

Extract of a letter from the Secretary of the Navy to Master Commandant Lewis Warrington, commanding the United States' sloop of war Peacock, dated

FEBRUARY 26, 1814.

You will therefore, sir, unless in some extraordinary cases that shall clearly warrant an exception, destroy all you capture; and by thus retaining your crew, and continuing your cruise, your services may be enhanced tenfold. The service you may render your country will be estimated by the extent of the injury you may inflict upon its implacable enemy; and this will be best accomplished in the annoyance and destruction of its commerce, from which no other object should be suffered to divert your attention for a moment. With this view, as well as from the rational and obvious policy opposed to this practice, I have it in command from the President, strictly to prohibit the giving or accepting, directly or indirectly, a challenge to combat ship to ship.

Extract of a letter from the Secretary of the Navy, to Master Commandant Johnston Blakely, commanding the United States' sloop of war Wasp, dated

MARCH 3, 1814.

If the qualities of the Wasp are such as I feel confident they will prove to be, you cannot fail to make a brilliant and productive cruise. Your own sound judgment and observation will sufficiently demonstrate to you, how extremely precarious and injurious is the attempt to send in a prize, unless taken very near a friendly port, and under the most favorable circumstances. A failure of success places our unfortunate seamen in the hands of the enemy, diminishes your means of achieving honor to yourself and glory to your country, curtails your cruise, and subjects you to the unequal attack of a foe, nominally your equal, but fully manned. Hence, it is evident, that policy, interest, and duty, combines to dictate the destruction of all captures, with the above exceptions. It is a great object with the enemy to capture and detain in prison, our seamen; and this can only be counteracted by capturing and bringing into port an equal number; this is an object of great national importance; the releasing at sea on parole, though practised by all civilized nations, is utterly disregarded by our enemy.

[Instructions relative to the disposition of captures, the same as the preceding, were given, March 16, 1814, to Master Commandant Charles D. Ridgely, commanding the United States' sloop of war Erie.]

Extract of a letter from the Secretary of the Navy to Captain Charles Stewart, commanding the United States' frigate Constitution, dated

NOVEMBER 29, 1814.

Having, on former occasions, urged the superior policy and advantage of destroying the captures you may make, in preference to the hazardous attempt to send them in, unless in the vicinity of a friendly port, and only in the case of very valuable and fleet sailing prizes, I need not now dwell upon that subject.

Daily experience, and the grievous complaints of the merchants of Great Britain, sufficiently attest the efficacy of the system. Should you touch at any friendly port for succors, you will observe the strictest economy, and put to sea again with the least possible delay. The general instructions you have from time to time, received from this Department, and your own experience, will supersede the necessity of further details, and, in the event of any casualty, or occurrence, which, in your judgment, may render a deviation from these instructions indispensable to the public interest, you will act accordingly, still adhering, as near as may be, to their general spirit and intention.

[Instructions, similar to the preceding, were given, 30th November, 1814, to Captain Charles Morris, commanding the United States' frigate Congress.]

Extract of a letter from the Secretary of the Navy to Captain David Porter, commanding a squadron of small vessels at New York, dated

NOVEMBER 30, 1814.

Having already given to you the necessary instructions for procuring, arming, equipping, and manning, the five vessels destined for your command, you will, as soon as the squadron shall be ready for sea, proceed upon a cruise in the West Indies, where you will employ your force, either collectively or separately, in annoying and destroying the commerce of the enemy, which the nature of your force, seconded by your judgment and enterprise, will, I trust, enable you to execute, as well in his harbors as at sea; and upon a scale so extensive as to make him participate deeply in the evils which he has inflicted upon our prosperity.

[Instructions similar to the preceding to Captain Porter, were given the same day, November 30, 1814, to Captain Oliver H. Perry, commanding another squadron of small vessels.]

CAPTURE OF THE PENGUIN.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 21, 1815.

SIR:

NAVY DEPARTMENT, December 21, 1815.

In compliance with your request, in behalf of the honorable Committee upon Naval Affairs, I have the honor to transmit to you, herewith, copies of letters from Captain James Biddle, of the United States' ship Hornet, dated

March 25th, and April 8th, 1815, addressed to Commódore Stephen Decatur, as commander of the squadron destined to cruise in the Indian seas; which contain all the information in the possession of this Department relative to the capture of the British sloop of war Penguin.

I have the honor to be, with the highest respect, sir, your most obedient servant,

B. W. CROWNINSHIELD.

Hon. JAMES PLEASANTS, JUN.,

Chairman Naval Committee of the House of Representatives.

UNITED STATES' SLOOP HORNET, OFF TRISTAN D'ACUNHA, *March 25, 1815.*

SIR:

I have the honor to inform you that, on the morning of the 23d instant, at half past ten, when about to anchor off the north end of the island of Tristan d'Acunha, a sail was seen to the southward and eastward, steering to the westward, the wind fresh from S. S. W. In a few minutes, she had passed on to the westward, so that we could not see her for the land. I immediately made sail to the eastward, and shortly after, getting sight again, perceived her to be up before the wind; I hove to for her to come down to us. When she had approached near, I filled the main top-sail, and continued to yaw the ship, while she continued to come down, veering, occasionally, to prevent her passing under our stern. At forty minutes past one, P. M., being nearly within musket shot distance, she hauled her wind on the starboard tack, hoisted English colors, and fired a gun. We immediately luffed to, hoisted our ensign, and gave the enemy a broadside. The action being thus commenced, a quick and well directed fire was kept up from this ship, the enemy gradually drifting nearer to us, when, at fifty nine-minutes past one, he bore up, apparently to run us on board. As soon as I perceived he would certainly fall on board, I called the boarders, so as to be ready to repel any attempt to board us. At the instant, every officer and man repaired to the quarter deck, where the two vessels were coming in contact, and eagerly pressed me to permit them to board the enemy; but this I would not permit, as it was evident, from the commencement of the action, that our fire was greatly superior both in quickness and in effect. The enemy's bowsprit came in between our main and mizzen rigging, on our starboard side, affording him an opportunity to board us, if such was his design; but no attempt was made. There was a considerable swell on, and as the sea lifted us ahead, the enemy's bowsprit carried away our mizzen shrouds, stern davits, and spanker boom, and he hung upon our larboard quarter. At this moment, an officer, who was afterwards recognized to be Mr. M'Donald, the first lieutenant, and the then commanding officer, called out that they had surrendered. I directed the marines and musketry men to cease firing, and, while on the taffrail, asking if they had surrendered, I received a wound in the neck. The enemy just then got clear of us, and his foremast and bowsprit being both gone, and perceiving us veering to give him a fresh broadside, he again called out that he had surrendered. It was with difficulty I could restrain my crew from firing into him again, as he had certainly fired into us after he had surrendered. From the firing of the first gun to the last time the enemy cried out he had surrendered, was exactly twenty-two minutes by the watch. She proved to be His Britannic Majesty's brig Penguin, mounting sixteen thirty-two pound carronades, two long twelves, a twelve pound carronade on the top-gallant forecastle, with swivels on the capstern, and in the tops. She had a spare port forward, so as to fight both her long guns of a side. She sailed from England in September last. She was shorter upon deck than this ship by two feet, but she had a greater length of keel, greater breadth of beam, thicker sides, and higher bulwarks, than this ship, and was, in all respects, a remarkably fine vessel of her class. The enemy acknowledge a complement of one hundred and thirty-two, twelve of them supernumerary marines from the Medway seventy-four, received on board in consequence of their being ordered to cruise for the American privateer Young Wasp. They acknowledge, also, a loss of fourteen killed, and twenty-eight wounded; but Mr. Mayo, who was in charge of the prize, assures me that the number of killed was certainly greater. Among the killed are Captain Dickinson, who fell at the close of the action, and the boatswain; among the wounded are the second lieutenant, purser, and two midshipmen. Each of the midshipmen lost a leg. We received on board, in all, one hundred and eighteen prisoners, four of whom have since died of their wounds. Having removed the prisoners, and taken on board such provisions and stores as would be useful to us, I scuttled the Penguin this morning before daylight, and she went down. As she was completely riddled by our shot, her foremast and bowsprit both gone, and her mainmast so crippled as to be incapable of being secured, it seemed unadvisable, at this distance from home, to attempt sending her to the United States.

This ship did not receive a single round shot in her hull, nor any material wound in her spars; the rigging and sails were very much cut; but, having bent a new suit of sails, and knotted and secured our rigging, we are now completely ready, in all respects, for any service. We were eight men short of complement, and had nine upon the sick list the morning of the action.

Enclosed is a list of killed and wounded. I lament to state that Lieutenant Conner is wounded dangerously; I feel great solicitude on his account, as he is an officer of much promise, and his loss would be a serious loss to the service.

It is a most pleasing part of my duty to acquaint you that the conduct of Lieutenants Conner and Newton, Mr. Mayo, acting lieutenant, Lieutenant Brownlow, of the marines, Sailing-master Romney, and the other officers, seamen, and marines, I have the honor to command, was, in the highest degree, creditable to them, and calls for my warmest recommendation. I cannot, indeed, do justice to their merits. The satisfaction which was diffused throughout the ship, when it was ascertained that the stranger was an enemy's sloop of war, and the alacrity with which every one repaired to quarters, fully assured me that their conduct in action would be marked with coolness and intrepidity.

I have the honor to be your obedient servant,

J. BIDDLE.

Commodore DECATUR.

[1st SESSION.

CONTRACTS FOR THE YEAR 1815.

COMMUNICATED TO THE SENATE, JANUARY 3, 1816.

NAVY DEPARTMENT, *January 1, 1816.*

SIR:

I have the honor of transmitting herewith a statement of the contracts made by the Navy Department during the year 1815, prepared in obedience to the act of the 3d March, 1809, entitled, "An act further to amend the several acts for the establishment and regulation of the Treasury, War, and Navy Departments."

I have the honor to be, with great respect, sir, your obedient servant,

B. W. CROWNINSHIELD.

The Hon. the PRESIDENT of the Senate.

Statement of the contracts made by the United States' Navy Department in 1815.

Date of contract.	Names of the contractors.	Articles contracted for.	Price of articles.	When to be delivered.	Where to be delivered.
January 11, 1815,	Joshua Forman,	2,025 32lb. round shot, 2,306 24lb. do. } 1,600 42lb. do. }	\$145 00 per ton.	One-half to be delivered by April 1, 1815, and the remainder by the 1st of January following.	Sackett's Harbor.
January 14, "	Peter Townsend,	4,050 stand of 32lb. grape shot, 60 tons of iron ballast, 500 tons of cannon, or cannon and carronades, with beds for the carronades, complete,	\$175 00 do. \$125 00 do. \$133 33 per ton for cannon, 42lb. carronades, \$200 00 each, 32lb. do. 154 50 " 24lb. do. 117 00 " 18lb. do. 84 50 " 12lb. do. 58 75 " Beds for the carronades, \$6 00 per cwt. \$18 per barrel, \$28 do.		
January 16, "	Joshua Forman,	750 barrels of beef, 750 barrels of pork,	\$18 per barrel, \$28 do.	By April 1, 1815,	Sackett's Harbor.
March 15, "	John Clarke and Wm. Wirt,	175 tons of cannon and carronades,	Cannon, \$133 33 per ton, 12lb. carronades, \$58 75 each. 18lb. do. 84 50 " 24lb. do. 117 00 " 32lb. do. 154 50 " 42lb. do. 200 00 " Beds for carronades, \$6 per cwt. \$105 per ton,	The delivery to commence in the beginning of March, 1816, and quarterly after that time; the whole to be completed on or before the 10th day of March, 1817.	At a navigable landing on James river.
March 20, "	John E. Dorsey,	175 tons of shot, $\frac{1}{3}$ round, $\frac{1}{3}$ grape, with stands, $\frac{1}{3}$ canister,	\$145 do.		
March 20, "	John E. Dorsey,	300 tons of cannon,	\$133 33 per ton,	By 31st of August, 1815,	Philadelphia, New York, and Boston.
April 14, "	Patience Minchin,	2,000 pairs of men's shoes,	\$1 37 $\frac{1}{2}$ per pair,	In ————	Washington.
June 29, "	James Friend and Co.	80,000 lbs. of navy bread,	\$5 25 per 100 lbs.	In July;	Baltimore.
July 22, "	James Friend and Co.	50,000 lbs. of navy bread,	\$5 25 per 100 lbs.	In August,	Do.
July 26, "	Robinson and Attwood,	For building a timber shed and mould loft,	\$9,250,	In December,	Navy yard, Washington.
August 26, "	William Vaughan,	For building a house over the two ships on the stocks at Sackett's Harbor and at Store's Harbor,	\$17,000,	In December,	Sackett's Harbor & Store's Harbor.
November 1, "	James Foyles,	1,200 barrels of beef, 800 barrels of pork,	\$17 50 per barrel, \$21 50 do.	In March, 1816, Do.	Navy yard, Washington. Do. do.
December 15, 1814,	Henry Eckford, and Adam and Noah Brown,	Two ships of the line and one frigate,	\$80 00 per ton,	By the 15th of May, 1815, if possible.	Sackett's Harbor.

[1st SESSION.]

NAVAL FORCE ON THE FIRST OF JANUARY, 1816.

COMMUNICATED TO THE SENATE, JANUARY 5, 1816.

NAVY DEPARTMENT, *January 2, 1816.*

SIR:

In compliance with your request of the 28th ultimo, in behalf of the honorable committee of the Senate upon Naval Affairs, I have the honor to transmit to you, herewith, a list of all the ships and vessels of the navy of the United States; among which are included those at Sackett's Harbor, not completed.

Fifteen barges remain at Sackett's Harbor, six galleys at White Hall, Lake Champlain, and fourteen barges at Baltimore, which could not be sold, conformably to the act of Congress passed on the 27th day of February last, unless at a price far beneath their value.

There are also a few gunboats, retained for occasional service upon the several Atlantic stations, not included in the list.

I am, very respectfully, sir, your most obedient servant,

B. W. CROWNINSHIELD.

Hon. CHARLES TAIT, *Chairman Naval Committee of the Senate.*

Exhibit of the Naval Force of the United States, on the 1st day of January, 1816, showing the names, rates, and stations of the respective vessels.

Names.	Rates.	Stations.	Remarks.
Ship Independence, - - -	74	At Boston,	Ready for service.
" Washington, - - -	74	At do.	Preparing for a cruise in the Mediterranean.
" Franklin, - - -	74	At Philadelphia,	May be ready for service next spring.
" Guerriere, - - -	44	At New York,	Ready for service.
" Java, - - -	44	At do.	Under orders for the Mediterranean.
" United States, - - -	44	Mediterranean.	
" Constitution, - - -	44	At Boston.	
" Constellation, - - -	36	Mediterranean.	
" Congress, - - -	36	At Boston,	Recently returned from the Mediterranean.
" Macedonian, - - -	36	At do.	Ditto.
" John Adams, - - -	24	Mediterranean,	Store ship sailed from Norfolk August 18, 1815.
" Cyane, - - -	24	At New York,	Captured by the frigate Constitution, Feb. 20, 1815.
" Block Ship, - - -	-	At Tchifuncta, La.	Suspended on the stocks since 1814.
" Alert, - - -	20	Mediterranean,	Store ship.
" Louisiana, - - -	20	At New Orleans,	Directed to be sold; considered unfit for naval purposes.
" Hornet, - - -	18	At New York.	
" Wasp, - - -	18	- - -	Sailed from United States May 1, 1814; not heard from since October, 1814.
" Peacock, - - -	18	At New York.	
" Ontario, - - -	18	Mediterranean.	
" Erie, - - -	18	Do.	
Brig Epervier, - - -	18	- - -	Passed out of the straits of Gibraltar July 14, 1815; since which she has not been heard from.
" Enterprise, - - -	14	At New York,	Recently returned from the Mediterranean.
" Etna, - - -	-	At New Orleans,	Bomb vessel.
" Flambeau, - - -	14	At New York,	Recently returned from the Mediterranean.
" Spark, - - -	14	At do.	Ditto.
" Fire Fly, - - -	14	At do.	Ditto.
" Chippewa, - - -	14	At do.	Ditto.
" Saranac, - - -	14	At Sea,	Sailed Dec. 23, 1815, from New York for Mobile;
" Boxer, - - -	14	At New York.	thence to cruise off the mouth of the Mississippi.
" Prometheus, - - -	-	At Sea,	Cruising between Portsmouth, N. H. and river St.
Ketch Spitfire, - - -	-	At Norfolk.	Croix, in aid of the revenue laws.
" Vesuvius, - - -	-	At New York,	Receiving vessel.
" Vengeance, - - -	-	At do.	A sheer hull.
Schooner Nonsuch, - - -	14	At Norfolk.	
" Spitfire, - - -	12	At New York,	Recently returned from the Mediterranean.
" Torch, - - -	12	At do.	Do.
" Tom Bowline, - - -	12	- - -	Sailed from N. York for N. Orleans Nov. 15, 1815.
" Firebrand, - - -	12	At New Orleans,	Employed in the protection of the commerce.
" Surprise, - - -	12	At do.	Ditto.
" Roanoke, - - -	-	At Wilmington, N.C.	
" Hornet, - - -	-	Mediterranean.	
" Lynx, - - -	-	At Boston,	Recently returned from the Mediterranean.
" Despatch, - - -	-	At Portsmouth, N.H.	Employed in transportation.
" Asp, - - -	-	At Baltimore,	Receiving vessel for recruits.
" Corporation, - - -	-	At Philadelphia,	Ditto.
" Ranger, - - -	-	At Baltimore.	
Sloop Buffalo, - - -	-	At Philadelphia,	Retained for transportation.
" Camel, - - -	-	At do.	Ditto.
" Tickler, - - -	-	New Orleans,	Employed in conveying despatches, &c.

EXHIBIT—Continued.

NAVAL FORCE ON LAKE ONTARIO.

Names.	Rates.	Stations.	Remarks.
Ship New Orleans, - -	74	At Sackett's Harbor.	Under cover on the stocks; nearly completed.
“ Chippewa, - -	74	At do. -	Ditto.
“ Plattsburg, - -	44	- - -	Frame and other timbers completely prepared.
“ Superior, - -	44	At do. -	Laid up for preservation.
“ Mohawk, - -	32	At do. -	Ditto.
“ General Pike, - -	24	At do. -	Ditto.
“ Madison, - -	20	At do. -	Ditto.
Brig Jefferson, - -	18	At do. -	Ditto.
“ Jones, - -	18	At do. -	Retained; completely equipped for service.
“ Sylph, - -	16	At do. -	Laid up for preservation.
“ Oneida, - -	14	At do. -	Ditto.
Schooner Lady of the Lake, - -	-	At do. -	Retained for occasional service.

NAVAL FORCE ON LAKE ERIE.

Brig Niagara, - -	18	At Erie, Penn. -	Completely equipped for service.
“ Lawrence, - -	18	At do. -	Laid up for preservation.
“ Detroit, - -	18	At do. -	Ditto.
“ Queen Charlotte, - -	18	At do. -	Ditto.
Schooner Porcupine, - -	-	At do. -	Completely equipped for service.
“ Ghent, - -	-	At do. -	Ditto.

NAVAL FORCE ON LAKE CHAMPLAIN.

Ship Confiance, - -	36	At White Hall, N. Y.	Laid up for preservation.
“ Saratoga, - -	24	At do. -	Ditto.
Brig Eagle, - -	18	At do. -	Ditto.
“ Linnet, - -	14	At do. -	Ditto.
Schooner Ticonderoga, - -	-	At do. -	Ditto.
Steam Frigate Fulton 1st, - -	-	At New York, -	Could be prepared for service in a few days.
Steam Frigate, - -	-	At Baltimore, -	Considerable progress was made on this vessel previously to the restoration of peace; at that time all further operations were suspended.

RECAPITULATION.

29 Ships,
20 Brigs,
3 Ketches,
17 Schooners,
3 Sloops,
2 Steam frigates.

74 Aggregate.

[1st Session.]

NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 9, 1816.

NAVY DEPARTMENT; January 5, 1816.

SIR:

The commissioners of the Navy Pension Fund have the honor to lay before Congress the annual statements respecting the operation of their trust, showing the existing amount of the fund, and the number of pensioners, and the amount of the disbursements.

In performing this duty, the commissioners find it necessary to claim the further aid of the Legislature, not only to enable them to collect the arrearages of the prize money, which belongs to the fund, but to secure, in future, a punctual and faithful accountability on the part of those officers who are charged with the prosecution and sale of prizes, and the collection and distribution of the proceeds of the sales. The imperfections of the existing laws are great, and have given rise to many abuses. Without entering into a minute detail of either the imperfections or abuses, the commissioners respectfully suggest the following provisions as meriting the sanction of Congress.

1st. That it be made the duty of the marshal to pay the proceeds of the sales of prize into court, as soon as conveniently may be, after the sales are closed.

2d. That it be made the duty of the clerk of the court, under the order of the court, forthwith to deposite the share of prizes belonging to the United States, in a bank designated by the court, to the credit of the Treasurer of

the United States, on account of the Navy Pension Fund; and that copies of the certificates of the deposits be transmitted to the Treasurer, and to the Secretary of the Navy. The share belonging to the captors to be deposited in like manner, and to be paid over to their authorized agent, upon the order of the court.

3d. That it be made the duty of the marshals and clerks to state and settle their respective accounts, specifying therein all costs and charges taxed and paid; to submit the same to the court for examination and allowance; to file one copy of the accounts in court, and to transmit another copy, with the allowance of the court, to the Secretary of the Navy, within a limited time.

4th. That it be made the duty of the district attorneys to transmit to the Secretary of the Navy a statement of all prizes libelled and condemned, or restored, at each session of the court; and to accompany the same with a schedule of the cargoes.

5th. That a reasonable compensation be allowed to the accountant of the Navy Department, for his extra services in collecting, stating, and settling the accounts of prize money belonging to the Navy Pension Fund.

6th. That the general provisions before specified be enforced by adequate penalties.

The commissioners further submit to the consideration of Congress, the documents, herewith marked A, B, C, D, E, which exhibit a partial view of the transactions during the late war, and the neglects arising from a defect in the act passed March 26th, 1804, which does not point out the duty of either of the officers of the United States' district courts, in conformity with the three first sections of said act; and in consequence of which, a large amount of interest upon the sums paid into court has been lost, and considerable sums remain still unaccounted for.

In addition to the preceding amendments, it is respectfully suggested, that provision be made by law for the accountability of prize agents for the public armed ships, in whose hands large balances frequently remain unclaimed. And, for the greater security of the officers and seamen of the United States' ships and vessels of war, that the navy agents at the several ports in the United States where prizes are sold, be constituted prize agents for the distribution of all prize moneys accruing to the captors, for which they shall receive a commission of — per centum; and at the expiration of two years from the date of payment, by order of court, they shall transmit to the Navy Department, a complete roll of all the officers, seamen, and marines, to whom they have paid over prize money, distinctly stating each prize case, with the accounts and vouchers; and that they pay over to the Treasurer of the United States, all moneys and balances remaining in their hands, to be appropriated to the Navy Pension Fund, except such part as may be reclaimed by persons who were absent by capture, or other causes, whose claims shall be paid out of said balances.

The act passed April 23d, 1800, section 8th, limits the pensions to be granted to officers, seamen, and marines, disabled in service, to a sum "not exceeding one-half the monthly pay." This provision has, in some cases, proved inadequate to the maintenance of disabled seamen and marines, particularly the latter, which cannot exceed three dollars per month. The extension of the law, so as to vest in the commissioners a discretionary power to allow, in extreme cases, to the full amount of monthly pay, or otherwise to provide for the necessary subsistence of those who are totally unable to take care of themselves, would, it is believed, obviate causes of complaint, and reflect honor upon the liberality and justice of the National Legislature.

All which is respectfully submitted.

For the commissioners,

B. W. CROWNINSHIELD.

The Honorable the SPEAKER of the House of Representatives.

NAVY DEPARTMENT, January 5, 1816.

The commissioners of the Navy Pension Fund, in obedience to the "act for the better government of the navy of the United States," respectfully report to Congress the following statements in relation to that fund:

Paper A, which shows the amount of stock on the books of the treasury to the credit of the commissioners.

Paper B.—Statement of Bank stock belonging to the fund.

Paper C.—Account of the commissioners with Thomas T. Tucker, Esq. treasurer of the fund. [Balance against him, \$13,957 94]

Paper D.—Abstract of warrants drawn by the Secretary of the Navy on the treasurer of the fund, from the first of January, 1815, to the 31st December, inclusive. [Amount, \$168,510.]

Paper E. List of navy pensioners, with the pension allowed to each. [Number, including widows and orphans, 252, and amount paid \$20,547 20.]

All which is respectfully submitted in behalf of the commissioners.

B. W. CROWNINSHIELD.

The Honorable the SPEAKER of the House of Representatives.

A.

Statement of the stocks on the books of the Treasury, to the credit of the Secretary of the Navy, the Secretary of the Treasury, and of the Secretary of War, for the time being Commissioners of the Navy Pension Fund, with the interest and reimbursement which accrued for the year 1815.

No. 1:

NAVY DEPARTMENT, *September 27, 1813.*

SIR:

I addressed to you a letter on the 16th instant, and duplicate of the same to the United States' district attorney of Massachusetts, on the subject of the Navy Pension Fund.

I have received, by this day's mail, your letter of the 21st, which is, in no respect, a reply to the subject of my letter of the 16th; and you do not even notice the circular of 30th March last, which was written by order of the Board of Commissioners of the *Navy Pension Fund*. The prizes of the United States' frigates the President, Congress, Essex, Chesapeake, and others, sent into the ports of your district, have been considerable in amount,

and no account thereof has been rendered to the commissioners of the Navy Pension Fund, or paid over to the credit of the Treasurer of the United States.

Having appropriated a part of these funds to the new loan, it is indispensably necessary to pay the same into the treasury, on or before the 15th of next month. I therefore refer you to the act of Congress in relation to the Navy Pension Fund, passed 26th March, 1804, and a resolution of the Board of Commissioners, transmitted by the above-mentioned circular of 30th March last.

The two per cent. fund, to which you allude, is totally distinct from and has no relation to the Navy Pension Fund.

It is conceived to be the duty of the marshal, or other officers of the United States' courts, to transmit accounts of the condemnation and sale of prizes of the United States' vessels of war, to the accountant of the Navy Department; and to pay over the amount, by depositing it in a bank to the credit of the Treasurer of the United States, which duty has not been complied with.

I am respectfully, &c.

W. JONES.

JAMES PRINCE, Esq. *United States' Marshal, District of Massachusetts, Boston.*

NAVY DEPARTMENT, *September 28, 1813.*

SIR:

I have received your letter of the 22d, in reply to mine on the subject of prize money accruing to the United States' Navy Pension Fund.

The amount of sales of prizes to the United States' frigates the President, Congress, Essex, Chesapeake, and other vessels of war, must have been considerable within the Massachusetts district; and, as yet, no returns thereof have been received at this Department, nor has any deposit been made to the credit of the Treasurer of the United States, as directed by the act of March 26, 1804.

Presuming that you, or the marshal of the district, still retain the amount of said proceeds, and it being absolutely necessary to meet the subscription to the new loan for the benefit of that fund, I was induced to write for information on the subject. If the moneys have been paid into the court, the clerk ought to have complied with the law. At present, the Pension Fund has been credited for no part thereof.

I must request you will be pleased to forward a transcript; from the clerk of the United States' district court of Massachusetts, of all the condemnations of prizes of war, in which the United States have been interested, since the declaration of war against Great Britain.

The importance of the Navy Pension Fund to provide for the support of our brave officers and seamen, who become disabled in the service of their country, ought to induce a strict adherence to the law for its preservation and extension, so as to meet the increasing demands that are made upon it.

I am respectfully, &c.

W. JONES.

GEORGE BLAKE, Esq. *United States' Attorney, District of Massachusetts, Boston.*

No. 2.

NAVY DEPARTMENT, *October 21, 1813.*

SIR:

I have this day received from George Blake, Esq. district attorney for the district of Massachusetts, a transcript of the nett moiety of prizes to the United States' vessels of war, condemned and sold since the declaration of war with Great Britain, as stated by the clerk of the district court.

This moiety by law reverts to the United States' Navy Pension Fund, and the Board of Commissioners, appointed under the law establishing that fund, will require a statement of all the charges, fees, costs of court, and expenses attendant on the condemnation and sale thereof; which I request you will be pleased to furnish as soon as possible, that the regular entries may be made accordingly.

I am respectfully, &c.

W. JONES.

JAMES PRINCE, Esq. *Marshal District Massachusetts, Boston.*

No. 3.

Statement of moneys paid over by Wm. S. Shaw, Clerk of the District Court of Massachusetts, with notes of accountant of the Navy.

DECEMBER 31, 1815.

DR.

Wm. S. Shaw to the United States of America.

To a moiety of the nett proceeds of the brig Hazard, captured by the ship Wasp,	1,658 25
To a moiety of the nett proceeds of the brig King George and cargo, captured by the frigate Essex,	6,627 30
To a moiety of the nett proceeds of the brig Recovery and cargo, captured by the brig Argus,	1,977 70
To a moiety of the nett proceeds of the cargo of the schooner Ellen, (already condemned,) captured by the ship Hornet,	19,769 08
To a nett moiety of specie, captured by Commodore Rodgers, from brig Swallow,	70,291 55
To a moiety of the nett proceeds of the bullion, taken from brig Swallow,	12,344 37
	<u>\$112,668 25</u>

STATE BANK, BOSTON, *October 13, 1813.*

Received of Wm. S. Shaw, Esq. clerk of the district court for the Massachusetts district, the above sum of one hundred and twelve thousand six hundred and sixty-eight dollars and twenty-five cents, on account of the treasury of the United States, for which I have given duplicate receipts.

JOHN B. CLARK, *Cashier.*

In the abstract of sales by the marshal at Boston, is entered—

Schooner Ellen,* prize to frigate Chesapeake,	\$17,559 88
Schooner Hero, do.	10,170 37
Schooner Ellen,* prize to frigate Constitution,	32,676 25
Two prizes to gunboats, No. 54 and 81,	213 84

It does not appear that any account has been rendered of the above to this office, or that the moneys have been paid over to the Treasurer of the United States.

NAVY DEPARTMENT, *December, 1815.*

* The Ellen, prize to the ship Hornet, (in the preceding list,) could not have been meant for the above. By a letter of Commodore Bainbridge, shown to me by Mr. Homans, it appears the Ellen alluded to is the Hornet's prize; yet, irreconcilable in amount.

Copy of account rendered by William S. Shaw, Clerk of District Court of Massachusetts; (the only account ever transmitted to the Navy Department.)

DR.

WILLIAM S. SHAW IN ACCOUNT WITH THE UNITED STATES OF AMERICA.

CR.

To gross amount of sales of the brigantine Atlantic and cargo, captured by the frigate Congress, and condemned in the district court for Massachusetts district,	41,989 08	By amount of costs, &c. against brigantine Atlantic and cargo,	13,850 82	41,989 08
	<u>\$41,989 08</u>	By a moiety of the nett proceeds of said vessel and cargo, paid to the captors,	14,069 13	
		By ditto paid to the United States,	14,069 13	<u>\$41,989 08</u>

STATE BANK, BOSTON, March 17, 1814:
Received of William S. Shaw, Esq. clerk of the district court for the Massachusetts district, the sum of fourteen thousand and sixty-nine dollars and thirteen cents, on account of the Treasurer of the United States, for which I have given duplicate receipts.
THOMAS HARRIS, Cashier State Bank.

N. B. A vessel, called the Julia, was also libelled for trading with the enemy, but delivered up on bond, by order of the court.

DECEMBER 11, 1815.

UNITED STATES OF AMERICA, District of Massachusetts,

Stated by

J. PRINCE, Marshal.

No. 5.

OFFICE OF THE DISTRICT MARSHAL OF MASSACHUSETTS,

BOSTON, *December 11, 1815.*

SIR:

I am honored by your letter of the 29th ultimo, and I transmit you, from the records of my office, a list of sales made by me of property received from the public ships during the war, which I have endeavored to place in that form which I hope may meet the views of the honorable Board of Commissioners. All the moneys have been paid over to the clerk, as the law directs. In some instances the property was sold prior to condemnation, under interlocutory decrees.

I take leave, respectfully, to inform the Board of Commissioners, through you, that in all cases where sales have been made of prizes taken by private armed vessels of war, I have compelled the owners to produce to me certificates from the collector in whose collection district the property has been entered, that bonds have been given for the Invalid Fund, and when they failed thus to do, I have uniformly deducted the amount and transmitted a certificate of the amount of sales to the collector, and taken his receipt for the amount. A diversity of opinion has existed as to the real amount on which the two per cent. should be paid. I have insisted that the nett sales were to be considered from my sales, whereas the owners of private armed vessels have insisted that their commissions, &c. were afterwards to be deducted. I have never assented to this when settlements have been deducted by me.

If I may be so unfortunate as not to have met the design of the Board, I will thank you to point out the mode they may wish, and I will conform thereto, or afford to them all the information in my power.

Permit me to avail of this official opportunity to assure you of the respect and friendship of yours, &c.

J. PRINCE, *Marshal.*BENJAMIN HOMANS, Esq. *Secretary Navy Pension Fund, Washington.*

Abstract of prize property libelled for the account of the public ships of war of the United States, during the late war, in the district of Massachusetts, as prize of war, and sold by the marshal of said district.

Date of libel or sale.	Quality and names of vessels and commanders.			Quality and names of prizes, and where sold.			Quality of the cargo of the prize.	Date settled with the district clerk.	Amount paid over to the clerk.
	Quality.	Name.	Names of commanders.	Quality.	Name.	Where sold.			
November 18, 1812,	Sloop of war,	Wasp,	Jacob Jones, Esq.	Brig,	Hazard,	Boston,	Vessel and appurts.	Nov. 19, 1812,	\$3,420 60
September 17, "	Frigate,	Essex,	David Porter, Esq.	Do.	King George,	Do.	Coals and salt,	Dec. 4, "	13,474 03

No. 1.

NAVY DEPARTMENT, October 27, 1813.

SIR:

The Secretary of the Treasury having exhibited to the commissioners of the Navy Pension Fund the papers received under cover of your letter of the 12th current, viz. an abstract statement from the records of the district court of the State of New York relative to the condemnation of certain prizes and prize goods, with a receipt of the cashier of the Manhattan Bank for nine thousand two hundred ninety-six dollars and six cents, to the credit of the Treasurer of the United States, I have, in behalf of said commissioners, to request copies of the sales of the prizes and goods mentioned therein.

I am respectfully, &c,

W. JONES.

PHILIP SPENCER, JUN. Esq. Clerk of the District Court, New York.

No. 2.

NAVY DEPARTMENT, June 6, 1815.

SIR:

Your letter of the 25th May has been received with the accounts of sales of the cargo of the ship Hazard, brig Orion, and privateer Fortune of War, captured by the gunboats under the command of Commodore Campbell.

The charge of commissions on sales of the ship Hazard's cargo is totally inadmissible. The Government of the United States has appointed its agents by law, and defines their duties; the agents of captors have nothing to do with the property until the moiety is ordered by the court to be paid over to them; the captors may pay as many agents as they please, but the court is bound to see that the clerk pays over the moiety to the United States Pension Fund, into "a bank where public moneys are deposited, to the credit of the Treasurer of the United States."

Your commission, by law of 18th April, 1814, is one half per cent. and *no more*. The commissions charged and deducted for John Carnochan and N. W. Rothwell, are not allowed, and the half must be refunded to the United States, and you will stand charged with two thousand and seventy-five dollars and five cents, from which deduct your commission of one half per cent., three hundred and nineteen dollars and twenty-four cents, leaves a balance of one thousand seven hundred fifty-five dollars eighty-one cents, for which you are held accountable; and I request your immediate attention to this subject.

In the above-named account of sales you have deducted half the duties upon the cargo of the prize brig Aurora, and schooner Isabel. The amount is probably correct, although not accompanied with the collector's certificate and statement. These two last cases naturally led to an examination of the accounts of sales formerly transmitted, and in which there appears to be a charge by Mr. Rothwell, which is also inadmissible, viz. two hundred and fifty dollars costs, said to be *advanced and consented* to by the district attorney. This same charge was submitted by Mr. Rothwell to the Accountant of the Navy, and it was refused. The district attorney, whose duty it was to attend to this and all other causes in behalf of the United States, had no authority to make such an allowance.

The commissioners of the Navy Pension Fund are now about taking up the whole transactions of the war relative to prizes, and it is desirable to have this matter settled without a reference to the Treasury Department; it being the duty of the Comptroller to put all claims in suit which shall be unsettled at a certain period.

I am respectfully, &c.

B. W. CROWNINSHIELD.

JOHN FEPINGER, Esq. Marshal District of Georgia, Savannah.

NAVY DEPARTMENT, November 25, 1815.

SIR:

The following sums, arising from sales of prizes taken by the United States ships of war, and applicable, by acts of Congress, to the United States Navy Pension Fund, appear to have been received by the marshal of the district of New York, and paid into court, on or before the dates herein mentioned, viz:

	\$22,783 74	in June, 1814,	proceeds of sales of prizes.
	1,764 74	in Nov. 1814,	do
About	30,000 00	in May, 1815,	do

\$54,548 48, which amount has been in the hands of the clerk of the court, from the periods stated, to the present time, and unaccounted for. The marshals ought to render accounts of sales, and transmit to this Department receipts for the deposit of the proceeds into court, or into the bank "where public moneys are deposited, to the credit of the Treasurer of the United States," as treasurer of the Navy Pension Fund; and this has been done by all the marshals during the late war, who have duly attended to their duty: as it is obvious that without such notice the commissioners of the Pension Fund cannot ascertain or apply the moneys so accruing. The fund would also have been benefited by the interest arising out of the investment in public stocks, and which has been lost to this important fund by some one's neglect.

The commissioners having no knowledge of the transactions of the district courts, and no information of the condemnation and sale of prizes, cannot claim the proceeds, and it is unjust to detain the amount so long, contrary to the spirit and intent of the act of Congress in relation to the Navy Pension Fund, passed March 26th, 1804. If that act is not sufficiently explicit and obligatory to point out this duty to the officers of the district courts, there is a *duty implied*, to pay over the proceeds and to render accounts; otherwise the clauses are nugatory, which require the Treasurer to "receive all the money so accruing," and the accountant to "receive and settle all accounts."

I have to request your attention to this subject as early as convenient, to enable the commissioners of the Navy Pension Fund to report to Congress the annual statement of that fund, in the first week of the next session.

I am, very respectfully, &c.

B. W. CROWNINSHIELD.

JONATHAN FISK, Esq. District Attorney U. S. New York.

No. 3.

NEW YORK, December 1, 1815.

SIR:

I am this day honored with yours of the 25th ult. respecting the proceeds of prizes in this district, captured by vessels of the United States. I have waited upon the marshal and requested him to furnish me with a statement: but as he has paid into court the proceeds of sales, from which is deducted, in court, the costs and charges, his statement would not give the accurate amount due the Navy Pension Fund.

The clerk of the court is at present out of town, but expected to return in a few days; on his arrival, I will have a statement prepared and transmitted. The amount, I understand, is much more than that quoted in your letter.

I have the honor to be, very respectfully, your most obedient servant,

JONA. FISK.

The Hon. B. W. CROWNINSHIELD, Secretary of the Navy.

No. 4.

MARSHAL'S OFFICE, NEW YORK, *December 21, 1815.*

SIR:

I have the honor of enclosing, for your information, a statement of causes of all prizes captured by public armed vessels of the United States since the declaration of the late war.

By the secretary of the Navy Pension Fund, the marshal is referred to a circular letter, &c. dated 30th March, 1813. The marshal never received a circular letter of that date, or statements of libels, &c. would have been furnished.

The execution and amount of sales in each cause have long since been returned, and filed in the district court, and the gross proceeds paid into court.

I am, respectfully, yours, &c.

JAMES DILL, *for the Marshal.*The Hon. B. W. CROWNINSHIELD, *Secretary of the Navy.*

No. 5.

A list of prize causes of captured property by the navy of the United States, in which sales were made by Peter Curtenius, late marshal, and John Smith, present marshal, and the gross proceeds paid into the district court by the said marshals; and the sums by them paid since the commencement of the late war.

DISTRICT COURT, NEW YORK.

	Gross proceeds.
The United States' squadron, Lake Ontario, &c. vs. schooner Lord Nelson,	\$2,999 25
The same, vs. five boxes of glass ware,	1,972 10
The same, vs. brig Caledonia,	3,700 00
The same, vs. four long twelve pounders,	1,000 00
The same, vs. cargo brig Caledonia,	8,843 11
The frigate Essex, vs. sloop of war Alert,	13,415 66
The sloop of war Hornet, vs. certain trunks of merchandise,	15,586 89
The squadron on Lake Ontario, vs. two kegs of carbine cartridges, &c.	3,344 92
The same, vs. three bales of coating, &c.	1,228 95
The same, vs. sixteen cannon, of different calibers,	28,804 53
The same, vs. brig Duke Gloucester,	2,500 00
The same, vs. schooner Lady Murray,	1,500 00
The same, vs. sloop Elizabeth,	3,525 00
The same, vs. schooner Mary,	2,512 00
The same, vs. schooner Lady Gore,	2,500 00
The same, vs. schooner Confidence,	4,825 84
The same, vs. sloop Mary Ann,	1,600 00
The same, vs. one hundred and twenty barrels of flour,	1,709 37
The same, vs. sloop Drummond,	600 00
The same, vs. schooner Hamilton,	4,925 84
Sloop of war Hornet, vs. ship William,	6,200 00
The same, vs. twenty-four bags containing gold and silver coin,	19,430 24
The frigate President, vs. twenty-two puncheons of rum,	9,490 07
The same, vs. fourteen puncheons of merchandise,	8,773 17
The gunboats, vs. schooner Fame and cargo,	7,569 62
The Essex, &c. vs. ship Atlantic, alias Essex Junior,	8,100 00
The frigate Constitution, vs. ship Susanna and cargo,	73,192 21
The same, vs. eight casks of glass ware, &c.	1,995 68

The above is a statement of the gross proceeds paid into court. The costs in each cause, after being taxed, have been paid by the clerk out of the gross proceeds in court.

No. 6.

NEW YORK, *October 12, 1813.*

Received of Philip Spencer, Jr., clerk of the District Court of New York, nine thousand two hundred and ninety-six dollars and six cents; which sum is placed to the credit of the Treasurer of the United States, for which I have signed quadruplicate receipts.

P. FLEWWELLING, *Cashier.*

The above receipt contains all the moneys paid by the district clerk of New York, on account of prizes, since the commencement of the late war. This being the only document, it is impossible to say what prize or goods produced the above sum.

C.

No. 1.

NEW YORK, *July 9, 1814.*

Finding a consort absolutely necessary, I had the Essex Junior (formerly Atlantic) valued by disinterested persons, and purchased her for the United States at twenty-five thousand dollars.

The services of this vessel, for the last year, have been very important. She has been supplied entirely from my other prizes. She is a fine ship, and I refer you to Captain Downes for information as to her present state. I hope, sir, you will approve of my conduct in making this purchase.

I have the honor to be your obedient servant,

D. PORTER.

Hon. WILLIAM JONES, *Secretary of the Navy.*

No. 2.

Extract of a letter from the Secretary of the Navy to Captain David Porter, dated

NAVY DEPARTMENT, July 13, 1814.

I have before me your letter of the 9th, which has been exhibited to the President, and received his attention. I confirm the purchase of the Essex Junior, for account of the United States, at the sum of twenty-five thousand dollars.

You will please to transmit to this Department the valuation made by the persons appointed by you for that purpose.

No. 3.

NAVY DEPARTMENT, April 15, 1815.

SIR:

At the time of the arrival of the ship Essex Junior, you had the command of the station at New York, and that ship was delivered over to you. As this Department has never been advised of the disposition made of the Essex Junior, I have to request of you to furnish a detailed statement thereof, and of all the circumstances connected therewith, which ought to have been transmitted long since.

I am, respectfully, your obedient servant,

B. W. CROWNINSHIELD.

Captain SAMUEL EVANS, *Commandant U. S. Navy Yard, New York.*

No. 4.

NAVY DEPARTMENT, April 28, 1815.

SIR:

I have received your letter of the 24th instant, explaining some of the transactions relative to the United States' ship Essex Junior.

This business has been conducted with unparalleled neglect of duty, assumption of power, and unauthorized interference with the immediate prerogatives of this Department.

The ship, from the time of her arrival in the United States, has never been properly reported or delivered over to this Department. The marshal of the district of New York has, without the sanction, authority, or advice of this Department, taken possession of and sold this ship, which had been previously paid for by the Government, and the amount distributed to the captors, the officers and crew of the late United States' frigate Essex.

As commanding officer, you had charge of the ship, and the marshal had no authority over you to compel the delivery to him. He had a right to have the ship libelled in the court, and condemned, but he had no control over that ship to sell her for the purpose of paying his own fees, and he must be held accountable for his conduct in this transaction.

You will please to transmit to this Department all the written orders and vouchers in your possession relative to this ship, in order to a further investigation.

I am respectfully, your obedient servant,

B. W. CROWNINSHIELD.

Captain SAMUEL EVANS, *Commandant U. S. Navy Yard, New York.*

No. 5.

UNITED STATES' NAVY YARD, NEW YORK, April 24, 1815.

SIR:

Agreeably to your order of the 15th instant, I have the honor to state, that, on the 9th July last, the ship Essex Junior, prize to the frigate Essex, arrived at the yard, and was, by the direction of her commanding officer, immediately hauled to the wharf and made fast, her sails unbent, her topgallant yards and masts sent down, and permission given to most, or all, of her crew to go to New York, Lieutenant Haddaway being left on board in charge of her. There was no charge given, neither was any officer of the yard consulted respecting these proceedings, further than to request that she might be permitted to haul in, which was, of course, not refused.

A day or two after this, Captain Downes, her commander, informed me that there were some unexpended stores and provisions on board, which had been purchased for the crew of the Essex, and some canvass and twine that had been taken from that ship, which he wished landed and stored; but, as he had not men on board to do it without aid from the yard, he requested I would furnish men for the purpose. I accordingly directed the master of the yard to assist at discharging and storing whatever of public stores and provisions there was on board; and he, as he reported to me, proceeded to do so, until he was informed by Lieutenant Haddaway, the commanding officer, that all was landed, except a sufficiency of provisions for himself and those he had with him.

About this time, as I learn, Captain Downes reported her to the district attorney. He was examined by the commissioners, and the ship was libelled, and virtually taken charge of by the marshal, although Lieutenant Haddaway, and some others belonging to her, still remained by her.

About the latter end of August, or early in September, I understood that she had been, or shortly would be, sold by the marshal, and, as I supposed, by direction of the Government, through Commodore Decatur, who had for some time been appointed to the command of all afloat, or through the navy agent.

On or about the same day, the commodore gave directions that the water casks and stores remaining on board should be landed; but, before all was on shore, he directed that what was taken out should be placed in the ship again, which was done. This was in consequence, I believe, of a communication from the marshal, who remonstrated, and stated, as I understood, that the purchasers would throw the ship on his hands, if the articles taken over were not returned on board; and on the 6th September, Lieutenant Haddaway received Commodore Decatur's order to deliver the ship to the marshal, which was done, and he left her.

I have the honor to be, very respectfully, sir, your obedient servant,

SAMUEL EVANS.

HON. BENJ. W. CROWNINSHIELD, *Secretary of the Navy.*

UNITED STATES' NAVY YARD, NEW YORK, May 3, 1815.

SIR:

Agreeably to your instructions of the 28th ultimo, I have the honor to transmit you, herewith, Commodore Decatur's order for the delivery of the Essex Junior, with her water casks; &c. in her, to the order of the marshal of this district, with other papers in relation to that ship, which will, I trust, convince you that I was not at any period charged with her by the captors; and that under any circumstances, (but particularly limited as I was by your predecessor to the command of the navy yard alone, with a superior officer in port in command,) it would have been an assumption of power which, when called upon, I could not have been enabled to justify, had I in any degree interfered, or taken possession, or received this ship as public property, unless I had been directed to do so by the Department, or other official authority superior to me. The prize ship Cyane is now at the navy yard here,

under circumstances similar to the Essex Junior, and your orders to Lieutenant Hoffman respecting that ship fortifies me in this opinion.

The papers alluded to and transmitted are, first, Captain Downes's affidavit delivering the ship into the hands of the civil authority; second, the statement of Major Hall, prize agent for the Essex at this port, by which it appears that he had charge of her in that character, in conjunction with the marshal, for a considerable time after her arrival, and that he furnished the marshal with her inventory; and, third, the statement of the master of the yard, of what came within his knowledge.

By the records of the district court, it appears that she was libelled by the district attorney in behalf of the United States and the captors, on the 20th of July. On the 13th of August (as appears by the papers of the day) she was advertised to be sold on the 26th of the same month, by the marshal. Whether she was sold on that day or not, I am unable at this moment to say, but on the 3d of September, Commodore Decatur directed, verbally, all her water casks and provisions to be taken from her, and deposited in the public store; and on the 5th, as you will observe by his order, he, in consequence of representations from the marshal, directed the articles should be replaced, and the ship be delivered, with them on board, to the marshal's order, which was done by Lieutenant Haddaway.

I have the honor to be, very respectfully, sir, your obedient servant,

SAMUEL EVANS.

Hon. BENJ. W. CROWNSHIELD, *Secretary of the Navy, Washington.*

District Court of the United States of America for the Southern District of New York, in the case of the ship now called the Essex Junior, late the Atlantic.

DISTRICT OF NEW YORK, ss.

John Downes, being duly sworn, doth depose and say, that the above named ship arrived in the district of New York on the 7th day of July, 1814; that the bulk of the cargo of the said ship was broken after the capture thereof, and the cargo thereof, consisting of 200 barrels of oil, were taken out by order of Captain David Porter, the commander of the frigate Essex, by which she was taken, and was put on board the ship Policy, and ordered to the United States; that none of the cargo of the said prize ship was secreted or taken away, excepting as aforesaid, to the knowledge of this deponent; that the papers now delivered by this deponent to the commissioners of this court were received by him from said Porter, and are now delivered as aforesaid, as this deponent received them, without any fraud, subtraction, or embezzlement; that if, at any time before the final condemnation or acquittal of the said ship Essex Junior, any further or other papers relative to the same shall come to the knowledge or possession of this deponent, that he will either deliver them to the said court, or to their commissioners, or will otherwise give them information of the same.

JOHN DOWNES.

Sworn this 16th July, 1814, before me,

OGDEN EDWARDS, *Commissioner.*

ROBERT FINN, *Deputy Clerk.*

MARINE GARRISON, BROOKLYN, May 2, 1815.

SIR:

From your verbal request of this morning, respecting the Essex Junior, I beg leave to state, that, on her arrival here, I called on Captain Downes, (considering myself the agent for the Essex,) and stated to him the necessity of having her libelled, which was done. Some few days after, the marshal called on me, and required an inventory. I complied with his request, and gave him, from the officer who had charge of the ship, one, consisting, as near as I can recollect, of the hull, spars, yards, standing and running rigging, anchors, cables, boats, and three suits of sails.

I also beg leave to state, that, immediately after this, I had some conversation with Captain Porter, who informed me he was the prize agent for that vessel, she having been sold in Valparaiso, and he appointed agent, which of course took from me all further charge.

I have the honor to be, respectfully, your obedient servant,

JOHN HALL.

Captain SAMUEL EVANS.

Extract from the Navy Yard Log Book.

9th July, 1814, arrived at the yard ship Essex Junior, prize to the United States' frigate Essex. The officer commanding hauled immediately alongside the wharf, and made her fast, unbent the sails, sent down her topgallant yards and mast, and permission given for all hands to go to New York; during which time there was no application made to me whatever. Lieutenant Haddaway was left in charge of the ship. July 15th, instant, by Captain Samuel Evans's order, landed from the abovementioned ship forty-nine bolts of canvass and four bolts of duck, and nine sacks of flour; Lieutenant Haddaway, the commanding officer, observing there is nothing more of consequence on board but what would be necessary for the consumption of himself and men left to take care of the ship. 3d September, 1814, received Commodore Decatur's order to take her water casks out, and whatever other articles of provisions there were remaining on board, and have them deposited in the public store. While performing this duty, Commodore Decatur personally countermanded his first order, and directed every article returned on board again; which were immediately complied with, excepting the canvass and duck. September 6, instant, Lieutenant Haddaway received Commodore Decatur's order to deliver the ship up to the marshal.

FRANCIS H. ELLISON.

NEW YORK, September 5, 1814.

SIR:

Having been informed by the marshal that the sale of the Essex Junior was complete, including the articles she had on board at the time, I have to request that she be delivered to the order of the marshal in her then state.

Very respectfully, your obedient servant,

STEPHEN DECATUR.

Captain SAMUEL EVANS, *United States' Navy Yard, New York.*

No. 6.

NAVY DEPARTMENT, April 28, 1815.

SIR:

The public service requiring a store ship for the Mediterranean, the United States' ship Essex Junior was supposed to be a suitable vessel for that purpose. Upon the information received from Captain Evans, the commandant of the navy yard, it appears that the ship Essex Junior was taken out of his hands. The United States' Navy Department had appraised that ship at twenty-five thousand dollars, and Captain Porter, the captor, was paid at that rate for the ship, and the amount was distributed among the officers and crew of the late United States' frigate

Essex. The ship being the property of the United States, you could have had nothing to do with her, except for the fees of court.

You will be pleased to render an account thereof, and deliver the ship to Captain Evans, at the navy yard, Brooklyn.

I am, very respectfully, your obedient servant,

B. W. CROWNINSHIELD.

JOHN SMITH, Esq. *Marshal District of New York, New York.*

No. 7.

MARSHAL'S OFFICE, NEW YORK, *May 1, 1815.*

SIR:

I have your letter of the 28th April last, and have the honor to inform you that the ship Essex Junior was, in obedience to the order of the district court of this district, sold on the 26th day of August last, and the money arising from the sale has been paid into court. I therefore cannot deliver the said ship to Captain Evans, at the navy yard.

I am, respectfully, yours, &c.

JOHN SMITH, *Marshal.*

The Hon. B. W. CROWNINSHIELD, *Secretary of the Navy.*

No. 8.

NAVY DEPARTMENT, *May 4, 1815.*

SIR:

I have received your letter of the 1st instant. The circumstances attending the derangement of public business at Washington last August and September, prevented the Secretary of the Navy from paying attention to the transaction relative to the United States' ship Essex Junior; and when it is expected to find that ship in possession of the Navy Department, after being paid for, it appears she has been sold by an order of court, and no account yet exhibited to Government of the proceedings.

It certainly is a very unprecedented step to dispose of property without the knowledge or consent of its owners, even in common business; how much more so with public property must be a subject of investigation. In the case of private captures, you consult, in some measure, with the owners, and as much respect at least is due to the Government. The ship Essex Junior was purchased by this Department of the captors, and paid for; the mere libelling and condemnation of court were matter of form. The case is precisely similar to the capture of the fleets on lakes Erie and Champlain, and yet the marshals have never undertaken to sell those vessels out of the Government's hands, after they were condemned in court.

The subject will be submitted to the Attorney General, and the commanding naval officer at New York will be instructed not to give you possession of the prize ship Cyane for the same purpose; otherwise the affairs of the navy may be deranged by your official interference.

I am, respectfully, your obedient servant,

B. W. CROWNINSHIELD.

CASE OF THE SHIP ESSEX JUNIOR.

NAVY DEPARTMENT, *June 8, 1815.*

SIR:

This ship was captured in the Pacific ocean by Captain David Porter, in the United States frigate Essex, and being a fine ship for public service, Captain Porter armed and manned her as a cruising ship; and, on the 8th July, 1814, the ship Essex Junior arrived at the port of New York, under the command of John Downes, a master commandant in the United States navy.

On the 9th of July, Captain Porter wrote to the Secretary of the Navy that he had found it necessary to arm the Essex Junior, and put her into the United States' service; that he previously had the ship valued by disinterested persons, and had purchased her for the sum of twenty-five thousand dollars, which he hoped would be approved; in consequence of which, Mr. Jones, then Secretary, wrote, on the 13th July, approving the purchase, and, on the 6th August following, a warrant was issued for the payment to Captain Porter, as the agent for the captors.

The subsequent events at the seat of Government engrossed the Secretary of the Navy so entirely that no orders ever issued respecting the Essex Junior, until common report said the ship had been sold by the marshal of

the district of New York. The other half of the proceeds of the Essex Junior, say twelve thousand five hundred dollars, is, by law, applied to the Navy Pension Fund; and this state of the business appears from the records of the Navy Department, and of the commissioners of the Navy Pension Fund.

It remains to be observed, that no officer of the district court of New York, or of the United States, has ever rendered any accounts of proceedings, libel, condemnation, or sale of said ship; and the papers herewith submitted will explain the present state of the transaction.

It is therefore a question, How far the marshal of the district of New York is accountable to the United States for the amount of actual cost and purchase of this ship, which has been sold out of the hands of Government without any authority or official notice, except the decision of the court of admiralty, condemning the prize, is to be considered as such; and if this ship has been improperly disposed of, and in a manner sacrificed to speculation, what recourse is to be had in the premises?

All which is respectfully submitted by, sir, your obedient servant,

B. W. CROWNINSHIELD.

The ATTORNEY GENERAL.

No. 11.

The Attorney General has the honor to transmit to the Secretary of the Navy the within opinion, in answer to his communication of the 8th of this month, and to return the papers which accompanied it.

R. R.

June 20, 1815.

OPINION IN THE CASE OF THE SHIP ESSEX JUNIOR.

The proceedings in the district court of New York, in the case of the ship Essex Junior, captured by the frigate Essex, appear to have been such as are usually had in prize cases. It was proper that she should have been libelled and condemned on her arrival at New York. The marshal, in selling, acted ministerially as the officer of the court. I see nothing in the case, as disclosed by the papers submitted to me, which can make him responsible to the United States.

If the captors duly made known to the court, in proper time, the interest which the United States had acquired in this vessel, the order for a general sale, without any reference to such interest, would seem to have been imprudent. If the court had no such knowledge, its proceedings and decrees would naturally take the channel common to all other cases of prize.

How far the peculiar interruption of the public business at Washington, in August last, (the condemnation and sale of the Essex Junior taking place coterminously with such interruption,) may have rendered impracticable such information, or measures of precaution, from the Navy Department, as, under other circumstances, might probably have been issued, preventing thereby the existing embarrassments in relation to the claim which the United States makes to the vessel, is not for me to determine.

As to the sum paid by the purchaser on the sale under the decree of the court, this the United States are entitled to, without dispute, I presume, having already settled with the officers and crew of the frigate Essex for their proportion of the prize money.

I see nothing which can be likely to disturb Mr. Harbeck in the security of his purchase, unless full personal knowledge, duly communicated, of the previous inchoate right of the United States can be traced to him before he made the purchase. If this can be done, a door might still be open towards asserting their title to the vessel in question.

RICHARD RUSH, *Attorney General.*

WASHINGTON, June 20, 1815.

No. 12.

NAVY DEPARTMENT, December 1, 1815.

SIR:

The clerk of the district court of the State of New York having never paid over the amount deposited by you, for the sale of the prize ship Essex Junior, conformably to the first section of the law passed March 26, 1804, you will be pleased to inform him that it must be done immediately, and duplicate receipts taken of the cashier, one to be forwarded to this Department, and the other to the Treasurer of the United States, as treasurer of the Navy Pension Fund.

Your account of charges will be a subject of future settlement. The custody has always been considered sufficient in the hands of the United States' naval officers interested in the preservation of the property, and has not been charged in other cases during the late war. The commission is limited by law to half of one per cent. These several charges will remain for adjustment.

I am, very respectfully, your obedient servant,

B. W. CROWNINSHIELD.

JOHN SMITH, Esq. *Marshal District of New York.*

*Circular addressed to Marshals and District Attorneys.*NAVY DEPARTMENT, *March 30, 1813.*

SIR:

As secretary to the honorable Board of Commissioners of the Navy Pension Fund, I have the honor to transmit to you a copy of a resolution passed by that Board on the 24th current, and to request your compliance therewith.

I am very respectfully, &c.

BENJAMIN HOMANS.

At a meeting of the honorable commissioners of the Navy Pension Fund, on the 24th day of March, 1813, it was resolved, that the Secretary of the Board be directed to write a circular letter to the district attorneys and marshals, requesting them to transmit to the Secretary of the Navy statements of the condemnations of all yessels, money, and merchandise, which have been, or may be, captured by public vessels of the United States, and of the amount payable to the commissioners of the Navy Pension Fund; and that they pay the proceeds into a bank in which public moneys are deposited, to the credit of the Treasurer of the United States, in conformity with the first section of the act in relation to the Navy Pension Fund, passed March 26, 1804.

Attest,

BENJAMIN HOMANS, *Secretary, &c.**Circular.*NAVY DEPARTMENT, *September 16, 1813.*

SIR:

On the 30th March last, the Secretary of the Board of Commissioners of the Navy Pension Fund, by order, addressed to you a circular letter, with a copy of a resolution of the said Board, to which no reply has been received; and as large sums are still unaccounted for by the marshals and officers of the courts of the United States, it is extremely desirable to draw into the treasury the moneys arising from this source, in order that the same may be immediately invested in the new loan, which will close on the 25th instant.

You are therefore earnestly solicited to comply with the requisition of the said resolution of the Board of Commissioners. I am respectfully, &c.

WILLIAM JONES.

To THOMAS G. THORNTON, *Maine.*JAMES PRINCE, } *Boston.*

GEORGE BLAKE, }

NATHANIEL SANFORD, *New York.*ROBERT H. JONES, *North Carolina.*JOHN R. GRAYES, *New Orleans.**Circular to District Attorneys and Marshals.*NAVY DEPARTMENT, *November 29, 1815.*

SIR:

Referring you to a circular written to the district attorneys and marshals of the United States, on the 30th March, 1813, I have the honor to transmit to you a copy of a resolution of the Board of Commissioners of the Navy Pension Fund, passed the 28th instant.

At a meeting of the Board of Commissioners of the Navy Pension Fund, on the 28th November, 1815; present, the honorable B. W. Crowninshield, Alexander J. Dallas, William H. Crawford.

Resolved, That the Secretary of this Board be instructed to address a circular letter to the district attorneys and marshals of the United States, and to request them to forward to the Secretary of the Navy a statement of all the libels and condemnations, in the district courts of the United States, of vessels, money, and merchandise, captured or seized by public vessels of the United States, since the declaration of the late war, in June, 1812, in order that the commissioners may know how far the proceeds thereof have been duly accounted for and paid over to the Treasurer of the United States, conformably to law.

I am, very respectfully, &c.

BENJAMIN HOMANS,

Secretary to the Commissioners Navy Pension Fund.

No. 3.

NAVY DEPARTMENT, *November 4, 1814.*

SIR:

Your letter of 21st October, with copy of account current, and letter of Mr. John A. Morton, of Bordeaux, are received; and the whole transaction of the disposition and transmission of the amount of sales of the prize brig Maria and cargo require investigation.

In the first place, Commodore Rodgers could only constitute an agent for the moiety of the prize, the other moiety of which belonged to the United States Navy Pension Fund, and the agent into whose hands the money was first paid is accountable to the commissioners of the Navy Pension Fund for the nett sum, deducting his lawful commission.

The commissions, therefore, charged by D. B. Warden, Morton and Russell, and yourself, must be refunded on the one half amount. William Lee, as consul of the United States, was the immediate agent of the Government, and was responsible only to the Government for the half proceeds of the prize. If he paid the money over without the proper authority or order of the commissioners, he did it in his own wrong, and the commissions accruing thereon must be refunded and accounted for to the commissioners of the Navy Pension Fund. This includes the two and a half per cent. charged by you on the remittance of that half.

I am respectfully, &c.

WILLIAM JONES.

JOHN BULLUS, Esquire, *Navy Agent, New York.*

NAVY DEPARTMENT, *August 9, 1814.*

SIR:

I have the honor to enclose to you a copy of a letter received from Commodore Rodgers, in reply to one written to him by direction of the honorable Secretary of the Navy, relative to the proceeds of the prize brig Maria.

The commissioners of the Navy Pension Fund deem it but reasonable that they should have been advised by you of this deposite in your hands, in order that the amount might have been applied to advantage.

You will please to place it in one of the banks in New York, to the credit of the Treasurer of the United States, on account of the Navy Pension Fund, and forward a duplicate receipt to this Department.

I am respectfully, &c.

W. JONES.

JOHN BULLUS, Esquire, *Navy Agent, New York.*NAVY DEPARTMENT, *March 9, 1815.*

SIR:

In the transmission of accounts, &c., relative to the sale of the prize brig Maria and cargo, captured by the frigate President, under the command of Commodore Rodgers, you have referred to document No. 1, as copy of a letter from the honorable W. H. Crawford, American ambassador at Paris, directing you to pay over the amount of proceeds to David B. Warden at Paris, which document was not among the papers received from you. I request you to forward this paper without delay, as it is important to a settlement of that business.

I am respectfully, &c.

B. W. CROWNINSHIELD.

WILLIAM LEE, Esquire, *Consul for the United States, Bordeaux.*

No. 4.

BORDEAUX, *September 7, 1815.*

SIR:

In conformity with your request, contained in the letter you did me the honor to write me, of the 9th of March, I enclose a copy of Mr. Crawford's decision, in the case of the brig Maria, captured and sent into this port by the President, Commodore Rodgers. I am much mortified that this document was omitted by my clerks in the packet sent to you. I have marked that part of the minister's decision which obliged me to place the nett proceeds of the sale of that prize in the hands of Mr. Warden.

I have been confined to my bed for three months, or I should have replied sooner to your letter.

I have the honor to be, your very humble servant,

WM. LEE.

TO THE SECRETARY OF THE NAVY.

Copy of opinion of Hon. W. H. Crawford, relative to paying over the proceeds of sale of prize brig Maria and cargo; which goes to show the necessity of making legislative provision for similar cases.

AMERICAN LEGATION, PARIS, *August 20, 1813.*

The contest which has arisen between David Bailie Warden and William Lee, Esqs. touching the interference of the latter with the prizes sent into the ports of France, by Commodore Rodgers, has been presented by the parties to the consideration of the undersigned, minister of the United States. From the correspondence between these gentlemen on that subject, it appears that Commodore Rodgers captured the English brig the Maria, directed her to enter some port in France, and consigned her to David B. Warden, Esq. as Consul General at Paris. The Maria entered the port of Bordeaux, within the consulate of William Lee, Esq. The Government of France had previously determined that the cognizance of such cases should belong to the American consuls. Mr. Lee took possession of the Maria, and, in legal form, adjudged vessel and cargo to be lawful prize; and directed her to be sold by the chancellor of the consulate. This order has been since carried into execution. As soon as Mr. Warden was informed of the consignment, he forbade Mr. Lee to meddle with the prize, and appointed Messrs. Russell and Morton his agents, with directions to take and sell the vessel and cargo. This prohibition appears to be founded, first, on the consignment of Commodore Rodgers, which, as he contends, gives him, in the first place, power to take and sell the prize, and in the second place, that the consignment renders him responsible to the consigner for the value of the prize. Second, That, as agent for prize causes, he has a right to control this case, as it is a prize cause.

If the Maria had entered an American port, consigned to an agent of the captor, she would have been placed in the custody of the marshal, until she had been declared lawful prize by the district court, after which she would have been sold by him. The consignee, in that case, could have exercised no control over the case until after the sale. Can the captor acquire any additional power over a prize, by selecting the port to which she is sent? By sending a prize into a country in amity with the United States, whose courts exercise jurisdiction over the case, the laws of such friendly power will govern, except in the distribution of the prize money. But if the courts of such friendly power refer the decision of the case to the officers and the laws of the United States, the power of the captor must depend upon those laws. The application of the law to the case, by a court of the United States, or by a consul of the United States in France, cannot vary the authority of the captor over the prize.

In the present case, no doubt is entertained of the authority of the consul to exercise the power of a district court of the United States. If the jurisdiction of the case belongs to him, that jurisdiction gives him authority to perform every act necessary to carry the law into complete execution. The consignment could no more authorize the consignee in France to take possession of, and sell, the vessel and cargo, than in the United States. If this conclusion is sound, the claim of Mr. Warden to interfere, on the ground that the consignment renders him liable to the captor for the value of the prize, is also decided. If the consignment does not authorize the occupancy and sale of the prize, the omission to perform those acts can incur no responsibility. But, admitting that the consignment did confer this power, still it may be doubted whether the omission to act under the consignment would incur any responsibility. A consignment to an individual does not impose the necessity of acting as consignee. But this consignment was made to Mr. Warden, as Consul General at Paris. The office of Consul General is unknown to the laws and practice of the United States. Mr. Warden is consul at Paris. The consignment of a vessel to him not within his consulate, can impose no other or greater obligations upon him than upon any other individual. It is a personal, and not an official confidence, and may be declined or accepted at pleasure. But the right to interfere and control the case is contended for, because Mr. Warden is agent for prize causes in France. Prize causes intended to be confided to the agent, and for which he receives a salary from the public, are those in which the owners have no agent authorized or capable of pursuing proper measures for the protection of the property. When the owners or agents are present, he ought to give them advice and assistance, when it is required. In the case of the Maria, the captors being Americans, are not defending against confiscation and condemnation of their property, but are prosecuting enemies' property to condemnation, for their use. The case being in the hands of an American consul, disposed by sentiment and duty to further the interests of the captors, as far as justice requires, the interference of the agent for prize causes was unnecessary. But if this agency embraces the letter and spirit of the case, it gives no right to interfere further than to procure the condemnation of the prize. It cannot give authority to take and sell it. It is objected that Mr. Lee acts as judge, as marshal, and as agent, in this case. It is admitted that he substantially acts as judge, and as marshal, but that arises from the want of legal provisions precisely to fit the case. Mr. Lee is the officer of the United States who, according to the usage of nations and this Government, might be called upon to administer the laws in a foreign country. That state of things now exists. The interests

of the United States in this case is equal to that of the captors. It is, therefore, as proper for Consul Lee to sell the prize, as for the agents of the consignee to sell it. The Government does not permit privateers to sell their prizes, although interest is entire and absolute. The privateers petitioned Congress, during the last annual session, to change this provision. They were heard by counsel, and their petition was rejected. This recent expression of the public will, when the question was brought distinctly under the consideration of the National Legislature, ought to have some weight in the adjustment of this controversy. According to this view of the subject, the undersigned is constrained to decide that the conduct of Mr. Lee has been legal and correct.

There remains one question yet to be considered. To whom are the proceeds of the sale to be paid? The undersigned is not informed of the practice of the court of the United States in cases of this nature. Does the court pay to the captors their moiety of the prize money? or is the whole paid to the United States, who pay the captors? The question is not very important. In this case the consignee of the captors being a responsible officer of the United States, the payment of the nett proceeds of the prize to him, will combine, to a certain extent, both principles. The whole will then be in the hands of an officer responsible alike to the captors and to the Government. Let the nett proceeds of the vessel and cargo be paid over to Mr. Warden. But the Minister of Commerce has interposed his authority, and the proceeds of the sale are retained by him, until it is ascertained who ought to receive the money. To whom is this question referred by the Minister of Commerce? The undersigned, although invited by the Duke of Bassano to communicate with him as minister plenipotentiary of the United States, has not been recognized by the Emperor and King, and is unknown to every other Department of the Government. The undersigned laments that the interference of the French Government has been invoked in this case. The American functionaries in foreign countries ought to look to their own Government for the adjustment of every contest among themselves, especially those arising from their official transactions. The consequences of frequent appeals to the municipal authorities of the country are as palpable as they are objectionable. It is the duty of the party who procured this interference to remove the difficulty which it has produced. The undersigned has given the subject a more extended consideration than the decision of the points in controversy required, under the expectation that this general view of the question may not only prevent the recurrence of such contests, but of all contests anywise analogous to the present.

WILLIAM H. CRAWFORD.

Memorandum by the Secretary of the Commissioners of the Navy Pension Fund.

William Lee, United States Consul at Bordeaux, sold the prize brig Maria and cargo, for 54,285,051 francs, equal at par to	-	-	-	-	-	\$53,447 16
Charges amount to	-	-	-	-	francs, 65,163 47	
Mr. Lee's commission, five per cent.	-	-	-	-	14,252 57	
					79,416 04	=\$14,890 50
				Proceeds,	-	\$33,557 66
The half of which belongs to the United States Navy Pension Fund, say	-	-	-	-	-	\$19,278 33
Of which sum there has been received only	-	-	-	-	-	17,550 00
				Deficient,	-	\$1,728 33

Mr. Lee being constituted the agent of the United States, was the immediate representative of the Government, and guardian of the moiety accruing to the United States for the Navy Pension Fund, and ought to have retained it in his hands, subject only to the order of the commissioners of that fund.

Having paid it over without authority, the accumulation of commissions to Morton and Russell, D. B. Warden, John Bullus, and any other intermediate agents, has reduced the sum as above, for which Mr. Lee is chargeable.

The account of exchange and remittance, &c. has not been received.

According to accounts rendered, the half amount of proceeds, &c. stands thus:

Half proceeds,	-	-	-	-	francs, 102,817 75	
At five francs per dollar,	-	-	-	-	-	\$20,563 55
Amount received,	-	-	-	-	\$17,550 00	
And half of \$981 33	-	-	-	-	490 66	
					18,040 66	—18,040 66
					20,563 55	
					\$2,522 89	
				Deficit,	-	\$2,522 89

Handed to Secretary, October 22, 1814.

E.

WASHINGTON, December 26, 1815.

GENTLEMEN:

Permit me to observe to you, that the duties of the office of Accountant of the Navy are arduous, responsible, and highly important to the public interest; that the salary is less than the salaries received by several of the principal clerks in the different Departments, and, under the existing circumstances, for several years back wholly inadequate to the decent support and education of a young family. By the act of Congress, entitled "An act in relation to the Navy Pension Fund," it was made the duty of the Accountant of the Navy to receive and settle all accounts whatever, in relation to the fund; which duties have ever since been performed (and which have added considerably to my personal labors) without compensation; it not having previously been the particular duty of any officer to attend to the settlement of the accounts, I found them much deranged; and it required considerable labor to arrange and adjust them, and sums were found to be due and were collected, that had been in the hands of individuals for years unattended to. And as it seems to be but justice that the Accountant of the Navy should receive a reasonable compensation for his services out of the fund, which is now rich, yielding an income greatly beyond the demands upon it, I beg leave most respectfully to suggest to you the propriety of recommending to Congress the expediency of authorizing the commissioners of the Navy Pension Fund to allow to the Accountant of the Navy out of the fund a reasonable compensation for his services from the time the law made it his duty to receive and settle the accounts.

With great respect, I have the honor to be, gentlemen, your most obedient servant,

THO. TURNER.

The Honorable Commissioners of the Navy Pension Fund.

[14th CONGRESS.]

No. 135.

[1st SESSION.]

NAVAL OPERATIONS AGAINST THE BARBARY POWERS IN 1815.

COMMUNICATED TO THE SENATE, JANUARY 11, 1816.

Mr. TAIT, from the Committee on Naval Affairs, communicated the following documents, relative to the operation of the squadron under the command of Commodore Decatur against the Barbary Powers:

U. S. SHIP GUERRIERE, OFF CARTHAGENA, *June 19, 1815.*

SIR:

I have the honor to inform you that on the 17th instant, off Cape de Gat, the squadron fell in with and captured an Algerine frigate of forty-six guns, and between four and five hundred men, commanded by Rais Hammida, who bore the title of Admiral. She struck her flag after a running fight of twenty-five minutes. The admiral was killed at the commencement of the action. After the Guerriere (who from her favorable position was enabled to bring the enemy to close action) had fired two broadsides, they, with the exception of a few musketeers, ran below. The Guerriere had four men wounded by musket shot, which is the only injury done by the enemy in this affair. It is with pain I have to communicate to you that one of our main deck guns burst in the first discharge, by which accident five men were killed and thirty badly wounded and burnt. This gun was only doubly shotted; and permit me to state, that, unless some more effectual mode is adopted in proving our guns, I fear the frequency of such accidents will be injurious to the service, beyond the loss of men occasioned thereby. The steadiness of our men adjoining the bursting gun was worthy admiration. Although many of them were much burnt and wounded, it did not occasion a pause in their fire. We have four hundred and six prisoners, including the wounded. The prisoners state about thirty were killed and thrown overboard.

Their squadron is said to be cruising in our vicinity; five days ago they were off this place. Unless I obtain some further intelligence of them by to-morrow, I shall proceed to the port of Algiers in the hope of intercepting their return. For the present I have determined to send the prize into Carthagen.

The enclosed is a return of the wounded by the enemy, as also those who were killed and wounded by the bursting of the gun.

I have the honor to be, very respectfully, sir, your obedient servant,

STEPHEN DECATUR.

Hon. B. W. CROWNINSHIELD, *Secretary of the Navy.*U. S. SHIP GUERRIERE, OFF CAPE PALOS, *June 20, 1815.*

SIR:

I have the honor to inform you that, on the 19th instant, off Cape Palos, the squadron under my command captured an Algerine brig of twenty-two guns and one hundred and eighty men. After a chase of three hours, she run into shoal water, where I did not think it advisable to follow with our large ships, but despatched the Epervier, Spark, Torch, and Spitfire, to whom she surrendered after a short resistance. Twenty-three men were found dead on board. We received from her eighty prisoners, the residue of her crew having left her in boats; many of them must have been killed by the fire of our vessels, and one of the boats was sunk. None of our vessels sustained any damage, nor was there a man killed or wounded. This brig is larger than the Epervier, was built in Algiers five years ago by a Spanish constructor, the same who built the frigate captured on the 17th instant, and is perfectly sound.

I have the honor to be, very respectfully, sir, your obedient servant,

STEPHEN DECATUR.

Hon. B. W. CROWNINSHIELD, *Secretary of the Navy.*U. S. SHIP GUERRIERE, BAY OF ALGIERS, *July 5, 1815.*

SIR:

I have the honor to inform you of the proceedings of this squadron subsequent to the date of my letter of the 20th ultimo. Having put the greater part of our prisoners on board the captured brig, I sent her into Carthagen, and made sail for Algiers, where we arrived on the 28th. Finding the Algerine squadron to be still out, and knowing that they had been at sea a longer period than usual, and that a despatch boat had been sent to Algiers to inform them of our arrival in the Mediterranean, I thought it probable that they would seek shelter in some neutral port. It seemed, therefore, a favorable moment to deliver a letter from the President to the Dey, pursuant to instructions from the Department of State, which would afford them an opportunity to open a negotiation, if they thought fit. A negotiation was accordingly opened, and a treaty of peace was dictated by us, and finally concluded in twenty-four hours, in the manner related in the despatch of Mr. Shaler and myself to the Secretary of State.

This treaty, possessing all the favorable features of those which have been concluded with the most favored nations, and other advantages conceded to us only, I flatter myself will be considered honorable to the United States, particularly when we compare the small force employed on this occasion with the formidable expeditions which have often, and without success, been sent against Algiers. It has been dictated at the mouth of the cannon, has been conceded to the losses which Algiers has sustained, and to the dread of still greater evils apprehended; and I beg leave to express to you my opinion, that the presence of a respectable naval force in this sea will be the only certain guarantee for its observance.

Having concluded the treaty, I have, in conformity with your instructions to dispose of such vessels we might capture as would be unsafe to send home in such manner as would seem to me most expedient, restored them, in their present state, to the Dey of Algiers. This was earnestly requested by the Dey, as it would satisfy his people with the conditions of the peace; and it was determined by Mr. Shaler and myself, that, considering the state of those vessels, the great expense which would be incurred by fitting them for a voyage to the United States, and the little probability of selling them in that part of the world, it would be expedient to grant the request.

I have appointed Captain Downes, of the Epervier, to the Guerriere, and Lieutenant Shubrick, first of the Guerriere, to the Epervier, which brig I have determined to send home with the despatches. These arrangements, I trust, will meet the approbation of the Government. The ten American prisoners who were confined in Algiers have been delivered up, and I have given them a passage in the despatch vessel.

I shall now proceed with the squadron to Tunis, and from thence to Tripoli. At the latter place, I understand, there exists some difficulty between our consul and the regency; of what nature I am not particularly informed.

I have charged Captain Lewis with the delivery of the despatches to the Government, and the flags taken from the Algerine admiral and brig. He is an officer of great merit, and whom I beg leave strongly to recommend to the notice of Government.

I have the honor to be, very respectfully, your most obedient servant,

STEPHEN DECATUR.

Hon. BENJAMIN W. CROWNINSHIELD, *Secretary of the Navy.*

UNITED STATES' SHIP GUERRIERE, BAY OF TUNIS, July 31, 1815.

SIR:

I have the honor to inform you that, upon my arrival at this anchorage, I was made acquainted with the following transactions, which had taken place here during our late war with Great Britain: Two prizes, which had been taken by the Abellino privateer, and sent into this port, were taken possession of by a British vessel of war, while lying within the protection of the Bey of Tunis.

The consul having communicated to me information of this violation of our treaty with Tunis, I demanded satisfaction from the Bey. After some hesitation, and proposing a delay of payment for one year, my demand was acceded to, and the money, amounting to forty-six thousand dollars, was paid into the hands of the consul, Mr. Noah, agent for the privateer.

Of the papers I have the honor to transmit herewith, No. 1 is a copy of the consul's letter to me, No. 2 is a copy of my letter to the prime minister of the Bey, and No. 3 is a copy of the consul's acknowledgment of the receipt of the money.

I shall proceed immediately for Tripoli, and will give you early information of the further proceedings of this squadron. The Bey of Tunis has now lying in this harbor, nearly ready for sea, three frigates and several smaller vessels of war.

I have the honor to be, with great respect, sir, your obedient servant,

STEPHEN DECATUR.

Hon. B. W. CROWNSHIELD, *Secretary of the Navy.*

No. 1.

U. S. CONSULATE, TUNIS, July 25, 1815.

SIR:

On or about the 21st of February, two American prizes, while at anchor and within the immediate protection of His Excellency the Bey of Tunis, were forcibly seized and taken possession of by the boats of His Britannic Majesty's brig Lyra, Dowell O'Reily, Esquire, commander, and sent to Malta. In order to afford the just and necessary protection to American property, to cause our rights and the existing treaty to be respected, I have deemed it my duty to claim of the Bey of Tunis the value of said prizes.

His excellency, though sensible of the violation of the neutrality of his port, and of the loss sustained in the illegal capture of American property when within his waters, still waves the settlement of this claim, and is desirous to procrastinate the arrangement to a length of time which will deprive the owners of the benefit of their labor and danger. Under these circumstances, I do myself the honor to solicit from you such co-operation, in enforcing the respect due to our rights and treaties, as you may deem proper to afford.

With great respect, &c.

M. M. NOAH.

Com. S. DECATUR, *Commanding the American squadron in the bay of Tunis.*

P. S. In the disposal of the cargo of one of the English prizes, an intrigue was set on foot and prosecuted by a company of merchants under the sanction and protection of the Prince Sidi Mustapha, by which the owners have been defrauded of a considerable sum of money. For the satisfactory adjustment of this claim, some interference appears equally necessary.

M. M. NOAH.

No. 2.

U. S. SHIP GUERRIERE, BAY OF TUNIS, July 26, 1815.

SIR:

I have the honor to enclose to your excellency a despatch from the Department of State of the United States, by which you will perceive the friendly disposition of my Government towards the Bey and regency of Tunis. When that despatch was written, it was believed that an equally friendly disposition existed on the part of Tunis. With surprise I understood, on my arrival in the Mediterranean, that the treaty existing between the two countries had been violated on the part of Tunis: first, by permitting two vessels, which had been captured by an American vessel, to be taken out of the port of Tunis by a British cruiser; and secondly, by sanctioning a company of Jew merchants, subjects of Tunis, in taking the property of an American citizen at their own price, and much below its real value.

In consequence of this information, as soon as we had obtained justice from Algiers for their aggressions, I hastened to this port, with the power and disposition to exact from this regency an observance of our treaty. I now require immediate restitution of the property or of its value. Your excellency will perceive the necessity of the earliest attention to this communication, and of making known to me the decision of His Excellency the Bey with the least possible delay.

I have the honor to be, with great consideration, your excellency's most obedient servant,

STEPHEN DECATUR,

Commander-in-chief of the U. S. naval forces in the Mediterranean.

To His Excellency the PRIME MINISTER
of His Excellency the Bey of Tunis.

No. 3.

CONSULATE OF THE UNITED STATES OF AMERICA, AT TUNIS.

To all whom it may concern:

Whereas, on the 17th and 21st days of February, 1815, the English schooner Dunster Castle, and the English brig Charlotte, the former laden with oil and fish, the latter with currants and fustic, were sent into the harbor of Tunis, having been captured by the American private armed brig Abellino, William F. Wyer, commander; the said prizes, when within the waters and under the immediate protection of His Excellency the Bey of Tunis, were taken possession of and sent to Malta, by His Britannic Majesty's brig Lyra, Dowell O'Reily, Esq. commander, then at anchor in the said harbor of Tunis. That application was made to His Excellency the Bey of Tunis for payment for said vessels, amounting to forty-six thousand Spanish dollars, according to their just and regular valuation. His Excellency the Bey of Tunis having ascertained fully and satisfactorily, that the before-mentioned vessels being American property, were within his waters illegally and forcibly carried away, and being sensible of the necessity of causing his rights to be respected, did order that payment should be made for said vessels according to their valuation.

Now, therefore, I, the undersigned, consul of the United States of America for the city and kingdom of Tunis, and agent for the concerned, do hereby make known and certify, that the payment for said vessels according to their valuation, say forty-six thousand Spanish dollars, has been received from His Excellency the Bey of Tunis; who, by these presents, is acquitted from all claim against him on account of said prizes.

[L. s.] Given under my hand and seal of office, at Tunis, this 30th day of July, 1815, and in the fortieth year of the American independence.

M. M. NOAH.

I do hereby certify, that the sum of forty-six thousand Spanish dollars has been paid for the two prizes as above stated, to the American consul; and that the United States has no further claim on His Excellency the Bey of Tunis for these vessels.

STEPHEN DECATUR, *Commander, &c.*

U. S. SHIP GUERRIERE, MESSINA, August 31, 1815.

SIR:

I have the honor to inform you that, immediately after the date of my last communication, I proceeded to Tripoli. Upon my arrival off that place, I received from our consul a letter, a copy of which (No. 1) is herewith transmitted. In consequence of the information contained in this letter, I deemed it necessary to demand justice from the Bashaw. The enclosure (No. 2) is a copy of my note to the Prime Minister of Tripoli. On the next day the Governor of the city of Tripoli came on board the Guerriere to treat in behalf of the Bashaw. He objected to the amount claimed by us, but finally agreed to our demands. The money, amounting to the sum of twenty-five thousand dollars, has been paid into the hands of the consul, who is agent for the privateer. The Bashaw also delivered up to me ten captives, two of them Danes, and the others Neapolitans.
