I have the honor to enclose the letter of the consul, informing me of the conclusion of this affair. During the progress of our negotiations with the States of Barbary, now brought to a conclusion, there has appeared a disposition, on the part of each of them, to grant as far as we were disposed to demand. Any attempt to conciliate them, except through the influence of their fears, I should expect to be vain. It is only by the display of naval power that their depredations can be restrained. I trust that the successful result of our small expedition, so honorable to our country, will induce other nations to follow the example; in which case, the Barbary States will be compelled to abandon their piratical system. I shall now proceed with the squadron to Carthage, at which place I hope to find the relief squadron from America.

I have the honor to be, with great respect, sir, your most obedient servant,

STEPHEN DECATUR.

HON. BENJAMIN W. CROWNINSHIELD, *Secretary of the Navy.*

No. 1.

U. S. CONSULATE AT TRIPOLI, IN BARBARY, August 6, 1815.

SIR:

I have the pleasure of now laying before you all the documents relative to the unlawfully seizing, in the port of Tripoli, and under the guns of the forts, two American prizes, captured by the Abellino, and taken out by the English brig Paulina. I have fully addressed the United States' Government on this affair, and hope you have come fully prepared to demand and obtain ample satisfaction.

It is a case attended with such a flagrant violation of the United States' treaty with this regency, and our neutral rights, that it calls for the most prompt and energetic conduct on the part of the United States, which will not only convince this Power, but all others, that our rights and privileges cannot be invaded with impunity. If, however, the Bashaw, contrary to my opinion, should refuse us that satisfaction we are justly entitled to, it is my determination to leave the regency by this occasion.

I shall have the pleasure of seeing you, and will detail more fully the events as they have taken place. In the interim,

I have the honor to be, &c.

RICHARD B. JONES.

Commodore STEPHEN DECATUR,

On board the United States' frigate Guerriere, off Tripoli.

No. 2.

U. S. SHIP GUERRIERE, OFF TRIPOLI, August 6, 1815.

SIR:

I have been officially informed that the Bashaw of Tripoli has permitted a British sloop of war, pending hostilities between that nation and the United States, to take from out of his harbor, and from under the guns of his castle, two American prizes, and refused protection to an American cruiser lying within his waters, in direct violation of the treaty which existed between our two nations. As soon as I had settled with Algiers for her aggressions, and with Tunis for a similar outrage to the one now complained of, I hastened to this place with a part of the squadron under my command.

With ample power to take satisfaction for the violation of our treaty above stated, I only follow the invariable rule of my Government, in first making a demand of justice. I have, therefore, to inform your excellency that I require that immediate restitution be made of the value of the vessels taken from the harbor of Tripoli as before stated, and also compensation for the loss occasioned by the detention of the American cruiser, in violation of the treaty. Your excellency will perceive the necessity of making known to me the determination of His Excellency the Bashaw, in relation to the above demands, with the least possible delay.

I have the honor to be, with great consideration, your excellency's most obedient servant,

STEPHEN DECATUR.

His Excellency the PRIME MINISTER of His Excellency the Bashaw of Tripoli.

SIR:

TRIPOLI, August 9, 1815.

Permit me to congratulate you on the honorable adjustment of all differences which have existed between the United States and this regency. This arrangement may not only be considered as just and honorable for the United States, but also as highly advantageous to the interest of our citizens. I have no doubt this lesson will long serve to keep in the remembrance of the Bashaw the power, justice, and humanity of the United States. To your dignified, firm, and manly conduct throughout this affair, the United States are indebted for the standing we now have; and as the representative of our country here, permit me to offer the sincere homages of respect, esteem, and regard, with which I have the honor to be, &c.

RICHARD B. JONES.

Commodore STEPHEN DECATUR,

Commander-in-chief of the American squadron, off Tripoli.

UNITED STATES' SHIP GUERRIERE, NAPLES, September 8, 1815.

SIR:

I have the honor to inform your excellency that in my late negotiation with the Bashaw of Tripoli, I demanded and obtained the release of eight Neapolitan captives, subjects of His Majesty the King of the Two Sicilies. These I have landed at Messina. It affords me great pleasure to have had it in my power, by this small service, to evince to His Majesty the grateful sense entertained by my Government of the aid formerly rendered to us by His Majesty during our war with Tripoli.

With great respect and consideration, I have the honor to be, &c.

STEPHEN DECATUR.

His Excellency the MARQUIS CIRCELLO, *Secretary of State.*

NAPLES, September 12, 1815.

SIR:

Having laid before the King my master the papers which you have directed me, dated the eighth instant, in which you were pleased to acquaint me that, in your last negotiation with the Bey of Tripoli, you had freed from the slavery of that regency eight subjects of His Majesty, whom you had also set on shore at Messina. His Majesty has ordered me to acknowledge this peculiar favor, as the act of your generosity, which you have been pleased to call a return for the trifling assistance which the squadron of your nation formerly received from his Royal Government during the war with Tripoli.

In doing myself the pleasure of manifesting this sentiment of my King, and of assuring you, in his name, that the brave American nation will always find in His Majesty's ports the best reception, I beg you will receive the assurance of my most distinguished consideration.

MARQUIS CIRCELLO,

*Secretary of State, &c. Minister of Foreign Affairs.*COM. DECATUR, *Commander of the squadron of the United States of America.*

14th CONGRESS.]

No. 136.

[1st SESSION.]

ESTIMATES FOR BUILDING AND EQUIPPING, AND THE EXPENSE OF KEEPING IN SERVICE FOR ONE YEAR, A SEVENTY-FOUR, A FORTY-FOUR, AND A SLOOP OF WAR.

COMMUNICATED TO THE SENATE, JANUARY 15 AND 29, 1816.

NAVY DEPARTMENT, January 13, 1816.

SIR:

In compliance with the request of the honorable Committee of the Senate upon Naval Affairs, communicated by your letter of the 8th instant, I have the honor to enclose to you, herewith, the several estimates, in detail, marked A, B, and C:

By these estimates, it appears that the cost of building a seventy-four gun ship would be	-	-	\$217,412
Equipping a seventy-four gun ship would be	-	-	167,450
Building and equipping a seventy-four,	-	-	<u>\$384,862</u>
That the cost of building a forty-four would be	-	-	\$153,475
Equipping a forty-four would be	-	-	114,925
Building and equipping a forty-four,	-	-	<u>\$268,400</u>
That the cost of building a sloop of war would be	-	-	\$46,293
Equipping a sloop of war would be	-	-	35,930
Building and equipping a sloop of war,	-	-	<u>\$82,223</u>

It hence results that the expense which would be incurred in building and equipping one seventy-four, two forty-fours, and two sloops of war, would be as follows:

A seventy-four gun ship,	-	-	\$384,862
A forty-four costs \$268,400, therefore, two forty-fours would cost	-	-	536,800
A sloop of war costs \$82,223, therefore, two would cost	-	-	164,446

Total cost of building and equipping one seventy-four, two forty-fours, and two sloops of war, would be \$1,086,108

In these estimates I have been aided by the practical knowledge and experience of the Commissioners of the Navy Board, who availed themselves of the calculations of scientific ship-builders, and the information derived from recent investigations and inquiries of the market price of the materials, and various articles of equipment.

The estimates are as correct as the fluctuating prices of labor and materials will admit, and sufficiently so to found the data upon for the amount of the contemplated annual increase of the navy; but, so far as the calculations are conjectural, it is presumed that they may exceed the actual expenditure from five to ten per cent.

All which is respectfully submitted,

B. W. CROWNINSHIELD.

HON. CHARLES TAIT, *Chairman Naval Committee of the Senate.*

A.

Estimate of the expense of building and equipping a seventy-four gun ship.

22,000 feet of live oak, - - - at \$1 60,	\$35,200	6,000 thirty-two pound shot, - - -	\$9,600
120,000 feet of white oak and yellow pine, 30,	36,000	1,500 thirty-two pound grape, - - -	3,500
24,000 lbs. of copper bolts, - - - 40,	9,600	300 barrels powder, at 45 cents, - - -	13,500
30,560 lbs. of sheathing copper and nails, 45,	13,752	4,000 cylinders, at 50 cents, - - -	2,000
106 tons, 213,000 lbs. of iron, - - - 6,	12,780	200 muskets at \$15, - - -	3,000
13,500 lbs. of lead, - - - 10,	1,350	200 battle-axes, at \$1 50, - - -	300
Labor of carpenters, and mast making, - - -	85,000	200 pikes, at \$1 50, - - -	300
Labor of joiners, including stuff, - - -	8,000	200 pairs of pistols, at \$10, - - -	2,000
Blacksmith's work, - - -	12,780	200 sabres, at \$3, - - -	600
Plumber's bill, - - -	1,350	Colors and signals, - - -	1,200
Turner's bill, - - -	900	Anchors, - - -	4,800
Carver's bill, - - -	700	200 tons kentledge, at \$40, - - -	8,000
Hull and spars complete, - - -	<u>\$217,412</u>	Camboose, - - -	1,800
Blockmaker's bill, including gun carriages and every thing furnished by him, - - -	\$8,500	Rigger's bill, forty men, at \$15 per month for four months, - - -	2,400
Sailmaker's bill, two suits, - - -	28,300	Charts, compasses, books, mathematical instruments, &c. - - -	1,000
Ropemaker's bill, 120 tons, at 13 cents per lb. - - -	31,200	Contingencies, - - -	5,000
Tanner's bill, - - -	750	Equipment, - - -	167,450
Painter's bill, - - -	2,500	Hull and spars complete, - - -	<u>217,412</u>
Cooper's bill, - - -	5,500	Building and equipment, - - -	<u>\$384,862</u>
Boat-builder's bill, - - -	1,700		
Ordnance, 64 thirty-two pounders, and 22 thirty-two pound carronades, - - -	30,000		

B.

Estimate of the expense of building and equipping a forty-four gun frigate of the first class.

14,400 feet of live oak, - - - at \$1 50,	\$21,000	Ordnance, 32 twenty-four pounders, and 20 forty-two pound carronades, - - -	\$16,500
85,000 feet white oak and yellow pine, - - - 30,	25,500	3,000 round shot, - - -	3,600
20,000 lbs. copper bolts, - - - 40,	8,000	1,000 grape, - - -	2,500
27,500 lbs. copper sheathing and nails, - - - 45,	12,375	190 barrels of powder, at 45 cents, - - -	8,550
75 tons, 150,000 lbs. of iron, - - - 6,	9,000	2,000 cylinders, - - - 50 cents, - - -	1,000
11,500 lbs. of lead, - - - 10,	1,150	150 muskets, - - - \$15 00 - - -	2,250
Labor of carpenters and mastmakers, - - -	60,000	150 battle-axes, - - - 1 50 - - -	225

Tanner's bill, - - -	250 00	Hull and spars, - - -	\$46,293 00
Painter's bill, - - -	600 00	Equipment, - - -	35,930 00
Cooper's bill, - - -	1,150 00	Building and equipment, - - -	<u>\$82,223 00</u>
Boat builder's bill, - - -	700 00		
Ordnance, 20 thirty-two pound carronades, and two long twelve pounders, - - -	4,800 00		

COMMUNICATED TO THE SENATE, JANUARY 29, 1816.

NAVY DEPARTMENT, *January 27, 1816.*

SIR:

In compliance with the request of the Committee of the Senate on Naval Affairs, communicated by your letter of the 23d, I have the honor to transmit to you for their information, the papers herewith marked A, B, C; which contain the estimates of expense necessary to keep in service, for one year, a seventy-four, a forty-four, and a twenty-two gun ship respectively; each having a full complement of men and officers, and provisions for twelve months.

I have the honor to be your most obedient servant,

B. W. CROWNINSHIELD.

HON. CHARLES TAIT, *Chairman of the Naval Committee of the Senate.*

A.

Estimate of the annual expense of a seventy-four gun ship. January, 1816.

	PAY AND SUBSISTENCE.		Amount of pay.
	Pay per month.	Rations estimated with pay.	
1 Captain,	\$100	7	1,200 00
6 Lieutenants,	40	12	2,880 00
1 Surgeon,	50	1	600 00
1 Chaplain,	40	1	480 00
1 Purser,	40	1	480 00
3 Surgeon's mates,	30	3	1,080 00

No. 137.

[1st SESSION.]

CAPTORS OF THE BRITISH SHIP OF WAR LEVANT REWARDED AFTER THE RE-CAPTURE OF THE SAID VESSEL.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 5, 1816.

Mr. PLEASANTS made the following report:

The Committee on Naval Affairs, to whom was referred the petition of Captain Charles Stewart, late commander of the frigate Constitution, praying to be paid the value of the Levant, a British ship of war captured by the Constitution in her late cruise, and taken by force out of the harbor of Port Praya, a neutral port, by a squadron of British ships, have had the said petition under consideration, and make the following report: The petitioner states that, on the 20th of February 1815, with the frigate Constitution under his command, whilst cruising in the neighborhood of the island of Madeira, he fell in with two British ships of war, the Cyane mounting thirty-four guns, and the Levant mounting twenty-one; that the Constitution brought the two ships to action, and captured both after a conflict of forty minutes; that having taken possession of her prizes the Constitution proceeded on her cruise, and on the 10th of March anchored with her prizes in Port Praya in St. Jago, one of the Cape de Verd islands belonging to Portugal; that, on the next day, March the 11th, whilst lying in the said port, they discovered a squadron of ships, which ultimately proved to be British, consisting of three sail, two of sixty-eight and one of fifty guns, commanded by Sir George Collier; that the Constitution with her prizes immediately got under way, and with much difficulty escaped the enemy, who had approached very near, under cover of a thick fog, before they were discovered; that the Constitution and Cyane got off without being brought to action by so superior a force, and the Levant, which had moved in a direction to divide the attention of the enemy, being pursued, was enabled to get back into Port Praya, and anchored close under the batteries, thinking the enemy would respect the neutrality of the port; that in that situation she was attacked and taken possession of by the enemy, without any attempt on the part of the Portuguese to prevent the outrage.

The petitioner asks of Congress to pay to the officers and crew of the Constitution the value of the Levant, she having been captured by them on the high seas, and forcibly taken from a neutral port by the enemy.

The committee are of opinion that the petitioners have not a right to demand of the United States the value of the said prize. Though the Government have a right to demand of the Portuguese Government compensation for the outrage committed in one of their ports, and if compensation is made, the amount ought to be paid to the captors, yet in the many and great losses sustained by our citizens during the late war in Europe by the violation of their neutral rights, it has not been the practice of the Government to make compensation for such losses. Were it to be done in this case, the captors would be placed in a more eligible situation than if the outrage had not been committed; in that case they would have had to encounter the ordinary dangers of the sea in bringing their prize into port; and also the hazard of recapture by the enemy. But proceeding on the principle acted on by Congress in other cases which occurred during the late war, of making some compensation for the gallantry and good conduct of the officers and men, where they did not succeed in getting their prizes into port, and such gallantry and good conduct having been signally displayed in this action, the proper tribunals having determined that the force of the enemy was superior, the committee taking the case of the Frolic captured by the Wasp, and recaptured by the enemy, as a proper criterion, the force of the Levant being about equal to that of the Frolic, and the compensation made being twenty-five thousand dollars, recommend the passage of an act authorizing the payment of that sum to the officers and crew of the Constitution, to be deducted from the value of the Levant, provided the Government succeed in obtaining such value from the Portuguese Government. For this purpose they herewith report a bill.

*To the honorable the Senate and House of Representatives of the United States of America, in Congress assembled.
The petition of the subscriber respectfully sheweth:*

PHILADELPHIA, December 22, 1815.

That, on the 20th day of February, 1815, the United States frigate Constitution, then under his command, did, in pursuance of the orders of the late honorable Secretary of the Navy, William Jones, overtake on the high seas, about sixty leagues from the island of Madeira, His Britannic Majesty's ships of War the Cyane of thirty-four guns, commanded by Captain Gordon Falcon, and the Levant of twenty-one guns, commanded by Captain the honorable George Douglas, both post captains in the navy of Great Britain, and did there bring to action, engage with, and capture the said two ships of war, the Cyane and Levant, after a sharp conflict of forty minutes; and that your petitioner did take possession of the two prizes aforesaid, and proceed in the frigate Constitution with them to the island of St. Jago, one of the Cape de Verd, in the possession of the troops and subjects of the Prince Regent of Portugal, with whom we were at peace, and from whom there had issued a declaration of neutrality when the war between the United States and Great Britain was made known to him; that your petitioner, having come to anchor with the Constitution, and the above named prizes, in the aforesaid island of St. Jago, on the 10th day of March, 1815, discovered, on the following day, while preparations were making by your petitioner to divest himself of his prisoners, by sending them on parole to Barbadoes agreeable to his instructions,) off the port, a squadron of three ships of war, belonging to the King of Great Britain, commanded by his officers generally, and under the command of the honorable Sir George Collier particularly, consisting of the Leander of sixty-eight guns, Newcastle of sixty-eight guns, and Acasta of fifty guns; that the said squadron by means of, and covered by, a thick fog, approached the ship Constitution and her two prizes within three miles before they were discovered, which near approach left no time for your petitioner to hesitate or deliberate on the situation of your good ship the Constitution and her two prizes, but obliged him, for the security of that valuable vessel entrusted to his care, to get under weigh and rescue her from the probable grasp of the enemy, which your petitioner did, taking with him the two prize ships

aforesaid, that they might be used according to circumstances, and for the purpose of saving the Constitution: all of which was done according to the best skill and judgment of your petitioner; and your precious ship the Constitution returned in safety to the port of Boston.

And your petitioner humbly begs leave to state, to your honorable body, that while they were in the act of getting under weigh in the harbor of Port Praya, the flag of the Prince Regent of Portugal was hoisted on two several forts, and a fire opened from their batteries upon the Constitution and her two prizes; several shot from them passing both over and striking near the bends of the Constitution; that after your petitioner had derived all the advantages he could from his prizes aforesaid, the Levant returned into the harbor of Port Praya, and came to anchor close to the batteries thereof, where she was soon after attacked by the aforesaid squadron, under the command of the aforesaid Sir George Collier, and forcibly taken possession of by them and carried from out of the harbor of Port Praya aforesaid, without the troops, garrison, or subjects of the Prince Regent of Portugal making any resistance or hindrance whatever, as they were in duty bound to do within the harbors and neutral waters of the Prince Regent of Portugal.

Your petitioner, therefore, for and in behalf of himself, the gallant officers, and crew of the frigate Constitution under his command, and in consideration of their being so unlawfully and unjustly robbed and deprived of the usual advantages that would accrue to them, for their gallantry in engaging and subduing the aforesaid two ships of war belonging to the King of Great Britain, humbly begs your honorable body will take this their case into consideration; and that you will be pleased to grant to them the value of the said ship Levant, of which they have been deprived as above stated; and your petitioner will ever pray, &c. &c.

CHARLES STEWART,

Late commander of the United States frigate Constitution.

NAVY DEPARTMENT, *January 5, 1816.*

SIR:

In compliance with the instructions of the honorable Committee upon Naval Affairs, communicated by your letter of the 29th ultimo, I have the honor to enclose to you papers No. 1 to 6; which contain all the information in the possession of this Department relative to the capture of the British vessels of war Cyane and Levant, by the United States' frigate Constitution, under the command of Captain Charles Stewart, of the United States' Navy.

I have the honor to be, very respectfully, your obedient servant,

B. W. CROWNINSHIELD.

HON. JAMES PLEASANTS, JUN.

Chairman of the Committee on Naval Affairs, House of Representatives.

No. 1.

U. S. FRIGATE CONSTITUTION, *May, 1815.*

SIR:

On the 20th of February last, the island of Madeira bearing about west-southwest, distant sixty leagues, we fell in with His Britannic Majesty's two ships of war the Cyane and the Levant, and brought them to action about 6 o'clock in the evening; both of which, after a spirited engagement of forty minutes, surrendered to the ship under my command.

Considering the advantages derived by the enemy, from a divided and more active force, as also their superiority in the weight, and number of their guns, I deem the speedy and decisive result of this action the strongest assurance which can be given to Government that all under my command did their duty, and gallantly supported the reputation of American seamen.

Enclosed you will receive the minutes of the action, and a list of the killed and wounded on board this ship; also, enclosed, you will receive, for your information, a statement of the actual force of the enemy, and the number of killed and wounded on board their ships as near as could be ascertained.

I have the honor to be, &c.

CHAS. STEWART.

HON. B. W. CROWNINSHIELD, *Secretary of the Navy.*

No. 2.

Minutes of the chase of the U. S. frigate Constitution, by an English squadron of three ships, from out the harbor of Port Praya, island of St. Jago.

Commences with fresh breezes and foggy weather; at five minutes past 12, discovered a large ship through the fog, standing in for Port Praya; at eight minutes past 12, discovered two other large ships astern of her, also standing in for the port. From their general appearance, supposed them to be one of the enemy's squadrons, and from the little respect hitherto paid by them to neutral waters, I deemed it most prudent to put to sea. The signal was made to the Cyane and Levant to get under weigh; at twelve after meridian, with our topsail set, we cut our cable and got under weigh, (when the Portuguese opened a fire on us from several of their batteries on shore); the prize ships following our motions, and stood out of the harbor of Port Praya close under East point, passing the enemy's squadron about gunshot to windward of them. Crossed our top-gallant yards and set foresail, mainsail, spanker, flying jib, and top-gallant sails. The enemy seeing us under weigh, tacked ship, and made all sail in chase of us. As far as we could judge of their rates from the thickness of the weather, supposed them two ships of the line, and one frigate. At half past meridian, cut away the boats towing astern, first cutter and gig; at 1 P. M. found our sailing about equal with the ship on our quarter, but the frigate luffing, gaining our wake, and rather dropping astern of us; finding the Cyane dropping astern and to leeward, and the frigate gaining on her fast, I found it impossible to save her if she continued on the same course, without having the Constitution brought to action by their whole force; I made the signal at ten minutes past 1 P. M. to her to tack ship, which was complied with. This manœuvre, I conceived, would detach one of the enemy's ships in pursuit of her, while, at the same time, from her position, she would be enabled to reach the anchorage at Port Praya before the detached ships could come up with her; but, if they did not tack after her, it would afford her an opportunity to double their rear, and make her escape before the wind. They all continued in full chase of the Levant and this ship; the ship on our lee quarter firing by divisions broadsides; her shot falling short of us. At 3 P. M. by our having dropped the Levant considerably, her situation became (from the position of the enemy's frigate) similar to the Cyane, it became necessary to separate also from the Levant, or risk this ship being brought to action to cover her. I made the signal at five minutes past 3 for her to tack, which was complied with; at twelve minutes past 3, the whole of the enemy's squadron tacked in pursuit of the Levant, and gave up the pursuit of this ship. This sacrifice of the Levant became necessary for the preservation of the Constitution. Sailing-master Hixon, midshipman Varnum, one boatswain's mate, and twelve men, were absent on duty in the fifth cutter, to bring the cartel brig under our stern.

No. 3.

Minutes of the action between the United States frigate Constitution and His Majesty's ships Cyane and Levant, on the 20th February, 1815.

Commences with light breezes from the eastward and cloudy weather; at 1, discovered a sail two points on the larboard bow; hauled up and made sail in chase; at quarter past 1, made the sail to be a ship; at three-quarters

past 1, discovered another sail ahead; made them out at 2 P. M. to be both ships, standing close-hauled with their starboard tacks on board. At 4 P. M. the weathermost ship made signals, and bore up for her consort, then about ten miles to leeward; we bore up after her, and set lower topmast, topgallant, and royal studding sails in chase; at half past 4, carried away our main royal mast; took in the sails and got another prepared. At 5 P. M. commenced firing on the chase, from our two larboard bow guns; our shot falling short, ceased firing; at half past 5, finding it impossible to prevent their junction, cleared ship for action, then about four miles from the two ships; at forty minutes after 5, they passed within hail of each other and hauled by the wind on the starboard tack, hauled up their courses, and prepared to receive us; at forty-five minutes past 5, they made all sail close hauled by the wind, in hopes of getting to windward of us; at fifty-five minutes past 5, finding themselves disappointed in their object, and we were closing with them fast, they shortened sail, and formed on a line of wind about half a cable's length from each other. At 6 P. M., having them under command of our battery, hoisted our colors, which was answered by both ships hoisting English ensigns. At five minutes past 6, ranged up on the starboard side of the sternmost ship about three hundred yards distant, and commenced the action by broadsides, both ships returning our fire with great spirit for about fifteen minutes; then the fire of the enemy beginning to slacken, and the great column of smoke collected under our lee induced us to cease our fire to ascertain their positions and conditions; and in about three minutes, the smoke clearing away, we found ourselves abreast of the headmost ship, the sternmost ship luffing up for our larboard quarter; we poured a broadside into the headmost ship, and then braced aback our main and mizzen topsails, and backed astern under cover of the smoke, abreast the sternmost ship; when the action was continued with spirit and considerable effect until thirty-five minutes past 6, when the enemy's fire again slackened, and we discovered the headmost bearing up; filled our topsails, shot ahead, and gave her two stern rakes; we then discovered the sternmost ship wearing also, wore ship immediately after her, and gave her a stern rake, she luffing too on our starboard bows, and giving us her larboard broadside; we ranged up on her larboard quarter within hail, and was about to give her our starboard broadside, when she struck her colors, fired a lee gun, and yielded. At fifty minutes past 6, took possession of His Majesty's ship *Cyane*, Captain Gordon Falcon, mounting thirty-four guns. At 8 P. M. filled away after her consort, which was still in sight to leeward; at half past 8, found her standing towards us, with her starboard tacks close hauled, with topgallant sails set, and colors flying; at fifty minutes past 8, ranged close along to windward of her, on opposite tacks, and exchanged broadsides, wore immediately under her stern and raked her with a broadside, she then crowded all sail, and endeavored to escape by running; hauled on board our tacks, set spanker and flying jib in chase; at half past 9, commenced firing on her from our starboard bow chaser, gave her several shot, which cut her spars and rigging considerably; at 10 P. M. finding they could not escape, fired a gun, struck her colors, and yielded. We immediately took possession of His Majesty's ship *Levant* Hon. Captain George Douglas, mounting twenty-one guns. At 1 A. M. the damages of our rigging was repaired, sails shifted, and the ship in fighting condition.

No. 4.

GENERAL ORDERS.

UNITED STATES FRIGATE CONSTITUTION, *February 23, 1815.*

Captain Stewart takes the first opportunity of returning his thanks to the officers, seamen, ordinary seamen, and marines of this ship, for their gallantry, order, and discipline, displayed by all under his command on the night of the 20th instant, while engaged with His Majesty's late ships *Cyane* and *Levant*, and congratulates them on the glorious result of their exertions; a result which could not have been produced against so superior a force, commanded by distinguished officers, without the energy and order so conspicuously exhibited by all on that occasion. We were not only outnumbered in guns and weight of metal by the enemy, but had also to contend with a more active class of vessels, and a divided force, which gave to them every advantage. Be assured that the laurels you have acquired for yourselves will never fade, and that the share of glory you have given to your country will be hailed by your fellow citizens with the greatest satisfaction, and posterity, in beholding the trophies gained by your gallant predecessors in victory, shall view with grateful sensations the two which you have added to their number.

You will accept his thanks for the promptness with which you repaired the damages and secured the three ships, and he assures you that it will not be least among your merits, when it is known, that in one hour after a contest so severe, your own ship was ready to fight another action, and your prizes enabled to make sail.

The excellent example hitherto shown by our naval victors in their respect towards the persons and property of a subdued enemy, he trusts, will not be deviated from by any under his command; surely, there can be none among you who can be desirous of tarnishing so much of your well earned glory, as to hesitate between the choice of being scornfully pointed at as a plunderer, or to perceive the finger of satisfaction selecting you as a hero. If, therefore, any of you have unwarily possessed yourselves improperly of either public or private property, he commands you to give it immediately to the commanding officer. You surely cannot wish to bring disgrace on your commander or your officers, whom you have so gallantly supported.

It is much to be regretted, that on occasions like the present, the commander is not permitted to see with his own eyes the distinguished merits of each officer, that he might thank them individually for their exertions, but as all must have done their duty well to produce such decisive effect, he begs they will receive his thanks collectively. He tenders to the officers commanding the gun-deck, fore-castle, and quarter-deck divisions, his thanks for the steady and incessant fire kept up by their batteries, the vivacity of which nothing could surpass. To Captain Henderson and Lieutenant Freeman, commanding the marines, he owes his grateful thanks for the lively and well directed fire kept up by the detachment under their command. He thanks Mr. Hixon, and the officers stationed on the fore-castle and tops, for their steady attention to orders, and the promptness with which they replaced every thing important that was shot away. To Mr. Pottinger and the officers superintending the magazines and passages, he gives his thanks for the facility with which every essential was furnished the batteries from their departments. To Doctor Kearney, and his assistants in the cockpit, he feels great obligations for their humanity and skill in relieving and assisting the wounded. Captain Stewart begs Lieutenant Ballard to accept his thanks for the prompt assistance he gave him in all the operations and manœuvres of the ship, for the alacrity with which every order was attended to, and the promptness with which they were executed, and he assures him that the gallantry and good conduct displayed by him on that occasion will make a lasting impression on his gratitude. To Mr. Humphreys, commanding the flag-guard, and the officers attached to him as aids, he gives his thanks, and assures them that he is highly satisfied with their gallantry and support.

No. 5.

U. S. FRIGATE CONSTITUTION, OFF NEW YORK, *May 18, 1815.*

SIR:

Agreeably to an act of Congress, I have the pleasure to transmit to you the flags of His Britannic Majesty's late ships *Cyane* and *Levant*, by Captain Henderson, commanding the detachment of marines on board the *Constitution*, whom I beg leave to recommend to your notice.

Captain Henderson is also the bearer of one of the *Constitution's* muskets, which I request your permission to deposit in the Navy Department, as an evidence of the veracity of the late enemy.

I am, very respectfully, &c.

CHARLES STEWART.

Hon. B. W. CROWNINSHIELD, *Secretary of the Navy, Washington.*

No. 6.

BALTIMORE, May 2, 1815.

SIR:

I have the honor to make known to you my arrival at this place with a part of the officers and crew of the United States' frigate Constitution, captured in a prize, the Levant, in the harbor of Port Praya, in the island of St. Jago, by a squadron of His Britannic Majesty's ships, consisting of the Leander, Sir George Collier, the Newcastle, Lord George Stewart, and the Acasta, Captain Kerr. For the particulars of my recapture, I beg leave to refer you to the enclosed extract from the log-book of the Levant.

Having caused the destruction of my own papers, as well as those of the officers with me, I can only say to you, relative to the Constitution, that, after leaving the port of Boston, she severally cruised off the islands of Bermuda and Madeira, in the Bay of Biscay, and for some time in sight of the Rock of Lisbon, without having met with but two of the enemy's vessels, one of which was destroyed, the other ordered in; and that, on the evening of the 20th of February, the island of Madeira bearing west-southwest distant seventy leagues, fell in with, engaged, and, after a close action of forty minutes, captured His Britannic Majesty's ships Cyane, Captain Gordon Falcon, and Levant, Hon. Captain Douglas. It would, sir, be deemed presumption in me to attempt to give you particular details respecting the nature of this action; I shall, therefore, only remark, generally, that every officer, seaman, and marine on board did their duty. I cannot, however, deny myself the pleasure that this opportunity affords me of noticing the brilliant management of Captain Charles Stewart, through whose unerring judgment every attempt of an ingenious enemy to gain a raking position was frustrated.

I have the honor to be, &c.

HENRY E. BALLARD.

The Cyane mounted on her main deck twenty-two 32lb. carronades; on her upper deck ten 18lb. carronades, two long 9's, and one 12lb. carronade, on a travelling carriage, with a complement of 175 men.

The Levant mounted eighteen 32lb. carronades, two long 9's, and one 12lb. carronade, with 138 men on board. The Constitution had four killed and nine wounded; the Cyane, seven killed and seventeen wounded; the Levant, nine killed and seventeen wounded.

Hon. B. W. CROWNSHIELD, *Secretary of the Navy.*

14th CONGRESS.]

No. 138.

[1st Session.]

INDEMNITY TO AN OFFICER FOR RESPONSIBILITY INCURRED IN THE DISCHARGE OF HIS DUTY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 7, 1816.

Mr. BASSETT, from the committee to whom was referred the letter or memorial of Commodore John Rodgers, of the navy of the United States, reported:

That, in October last, a decree was rendered by the District Court of the Massachusetts district, against Commodore Rodgers, for forty-three thousand two hundred and fifty dollars. The decree expressly charges Commodore Rodgers, as commander of the squadron only, exempting him from any personal agency in the transaction on which the decree was rendered. From this decree an appeal was entered to the Circuit Court, the judge of which, not having time to examine the merits, on account of his preparation to attend the Supreme Court at Washington, confirmed the decree *pro forma*.

To this view, drawn only from the proceedings of the court, your committee will add a more detailed one from other evidence. The frigates President and Congress sailed from Boston on a cruise about October, 1812. In the course of that cruise, Commodore Rodgers having captured the British packet Swallow, and being engaged in removing the specie from on board her to the President, Captain Smith of the Congress did, without order or signal from Commodore Rodgers, give chase to a vessel which he did not come up with in less than three-quarters of an hour, and was — leagues distant from, and out of sight of, the President at the time of boarding the said vessel, which proved to be the Eleanor of Baltimore, owned by John Donnell. The two frigates, thus parted by the chase, did not unite till the next morning, eight o'clock. The facts of the boarding, as appears from the deposition of Lieutenant J. J. Nicholson, are, that he was ordered by Captain Smith to board the Eleanor, and send her captain and mate on board the Congress, with her ship's papers, which he accordingly did. It appears, that, after boarding the Eleanor, Lieutenant Nicholson being asked by a boy on board what vessel he belonged to, told him it was the British frigate Shannon; but it does not appear that the statement so made was by the order of Captain Smith, nor does it appear that any colors were flying from the Congress, and, if they were, it was not known to Lieutenant Nicholson. It seems to have been the impression of Lieutenant Nicholson that the insubordination of the crew was owing to the suspicion that they were captured by the Shannon. This impression may have been, and probably was, incorrect, as on the next morning the crew beat their captain (Graham) severely, and three of them were, at the request of Captain Graham of the Eleanor, put on board the President.

The decree and the deposition concur in ascribing the loss of the vessel to the insubordination on board, which the decree supposes to have been occasioned by the deception of the boarding officer. The judge deduces from this fact a general liability for the consequences it is considered to have produced; which liability he fixes upon Commodore Rodgers, on the ground that, though not personally acting in the transaction, he was responsible as commanding officer of the squadron. It is not within the legislative sphere to decide on judicial questions. This case is prepared for a decision of the Supreme Court: there let it be decided. It is of importance to remark, that the commodore, by this decree *pro forma*, is required to give security in the penalty of forty-five thousand dollars; a sum serious to be involved in, however strongly urged thereto by friendship, or the stronger impression that the Supreme Court will reverse the decree. In looking to precedents, your committee find them numerous; the Government having never failed to indemnify the officer who has suffered in the faithful discharge of his duty. Though the cases are many, none have been as strong as this, where the officer is made responsible by the force of his appointment solely, without personal agency or privity in the transaction. The cases of interference have, in the general, been after judgment; but in the case of Lieutenant Malay the defence was assumed by the Government. It would be certainly consonant with reason to say, that the propriety of indemnity being agreed, the period when must be unimportant, or dependent upon the particular circumstances of each case. The peculiar features of this case requiring present interference are, the heavy security required operating oppressively on Commodore Rodgers before decision, and the possibility of an affirmance of the judgment, for want of security, to the injury of the Government.

Your committee, seeing that Commodore Rodgers is charged in this case, whether rightfully or wrongfully, as the officer of the Government only, acting avowedly within the limits of his duty, (if, indeed, he could be said to be acting at all in this transaction,) and satisfied of the justice and strict propriety of indemnifying an officer so acting, recommend the following resolution:

Resolved, by the Senate and House of Representatives of the United States of America in Congress assembled, That Commodore Rodgers be required to prosecute the appeal taken from a decree of the Circuit Court for the Massachusetts district to the Supreme Court of the United States, in which John Donnell of Baltimore was libellant, and said Rodgers was respondent, for the sum of forty-three thousand two hundred and fifty dollars, with costs; and if the same be confirmed, that then the Secretary of the Treasury be required to cause the same to be liquidated and paid; and that ——— dollars be appropriated for the same out of any money not otherwise appropriated.

Resolved, further, That the Attorney General be required, on the part of the United States, to assist the counsel of Commodore Rodgers in prosecuting said appeal.

WASHINGTON, February 1, 1816.

SIR:

In the month of October, 1812, Captain John Smith, commanding the United States' frigate the Congress, while on a cruise, fell in with the schooner Eleanor, owned by Mr. John Donnell of Baltimore, spoke her, and sent an officer on board for the purpose of examining her papers. Some time after this the Eleanor was lost; and the owner, alleging that her loss arose from her having been "forcibly taken and detained by the frigates President and Congress," instituted a suit against Captain Smith, and myself, as commanding the frigate President, for the value of the vessel and cargo. While the suit was pending, Captain Smith died; and at a special District Court for the Massachusetts district, held in October, 1815, it was decreed that the libellant recover against me the value of said schooner and cargo, being forty-three thousand two hundred and fifty dollars, with costs. From this decree an appeal was made to the next Circuit Court, and there, in consequence of some papers not having been received in time to admit of the case being fully examined by the presiding judge before his necessary departure for Washington, and as it was understood by the court and counsel on both sides, at the opening of the arguments, that a decree of some sort should be delivered before the close of the term, it was deemed necessary by the judge to enter an affirmance of the former decree, which now subjects me to the extreme inconvenience of filing a bond with sureties to respond the final judgment and costs in this case, and to enter the appeal in six days.

I am prepared, sir, to show that I had no agency whatever in the detention of the schooner Eleanor, more than if I had been with the President in the British channel, and Captain Smith had fallen in with her on our own coast; that I never gave to Captain Smith any order, either written, verbal, or by signal, directly or indirectly, with respect to the schooner Eleanor, prior to his falling in with her, or any order that could have had any effect whatever on his conduct towards that vessel; that, at the time he fell in with her, the President was not in sight, neither did I know any thing of the transaction until a considerable time after it took place; that I never gave any order whatever of any kind at any time, or took any measure, in relation to the Eleanor, that was not most obviously calculated to afford her succor and relief.

A transcript of the decree, delivered in the District Court in October, 1815, is herewith transmitted. The judge, (Davis,) it may be seen, expresses the opinion that Captain Smith would be liable to respond in damages if he were living; but "Commodore Rodgers, though not personally acting in this transaction, must, I think, as commander of the squadron, be responsible."

I hope, sir, that this case will be considered as not undeserving of the interposition of the National Legislature. I respectfully request, through you, that Congress will be pleased to afford such relief as in their wisdom and justice may appear due.

I have the honor to be, with great respect, sir, your most obedient servant,

JOHN RODGERS.

The Hon. the SPEAKER of the House of Representatives.

MASSACHUSETTS DISTRICT, ss.

John Donnell, by James Perkins, his agent,
vs.
John Rodgers and John Smith.

} Special District Court, October, 1815.

The object of this libel and complaint is to recover of the respondents the value of the schooner Eleanor and cargo, the property of said Donnell, alleged to have been lost at sea in the month of October, A. D. 1812, in consequence of being forcibly taken and detained by the frigates President and Congress, and from improper and unjustifiable proceedings on that occasion, on the part of the captors, the said John Rodgers, commanding the ship President, and said John Smith, the ship Congress, sailing in squadron, under the command of said Rodgers.

Having fully considered the evidence offered in this case, it appears to me to be proved that the schooner Eleanor and cargo were lost in consequence of the master being deprived of the command of the vessel, and from the insubordination of the crew during his absence, and the absence of the master on board the frigate Congress. This temper of the crew appears to have been induced altogether by the indiscreet and unnecessary imposition which was practised on the part of the captors, by which a conviction was produced that the frigates were British; a persuasion which the subsequent explanations could not remove. Such deception is, indeed, admissible in war, in relation to the enemy, but the belligerent adopts it at his peril; and if an innocent party is injured by the indulgence of such a practice, there should be adequate redress. Nothing culpable or exceptionable appears in the character or conduct of this vessel. The right of search is indisputable; but, in this instance, it appears to me to have been exercised in an improper manner, and in such a manner as to make those who were instrumental in the transaction liable for the consequences connected with it. Captain Smith, commander of the frigate Congress, (the ship by which the Eleanor was examined,) has died since this suit has been pending. The reputation and character of that gentleman must assure us that no intentional wrong could have been inflicted by him on his fellow-citizens while in the execution of his official duties. But I am compelled to say that the course of proceedings relative to the examination and detention of the Eleanor were such as to render him liable to respond in damages if he were living. Commodore Rodgers, though not personally acting in this transaction, must, I think, as commander of the squadron, be responsible; and I shall decree, accordingly, that the libellant recover against him the value of said schooner and cargo, being forty-three thousand two hundred and fifty dollars, according to the affidavit in the case. If the vessel and cargo should be considered as too highly estimated, I should ascertain the true value more correctly by commissioners to be appointed by the court. There is not time for this course of proceeding previous to the next Circuit Court, at which it is understood that it is desirable the cause should be entered for as early a decision as may be practicable. I shall, therefore, render judgment for the abovementioned sum, with costs.

JOHN DAVIS, District Judge.

A true copy: attest,

JOHN W. DAVIS, Clerk.

MASSACHUSETTS DISTRICT, ss.

John Donnell, by James Perkins, his agent,
vs.

} Special District Court, October, 1815.

The object of this libel and complaint is to recover of the respondents the value of the schooner Eleanor and cargo, the property of said Donnell, alleged to have been lost at sea in the month of October, A. Having fully considered the evidence offered in this case it appears to me to be proved, that the schooner Eleanor and cargo were lost in consequence of the master being deprived of the command of the vessel, and from the insubordination of the crew, during his absence and the absence of the mate, on board the frigate Congress. This temper of the crew appears to have been induced altogether by the indiscreet and unnecessary imposition which was practised on the part of the captors, by which a conviction was produced that the frigates were British; a persuasion which the subsequent explanations could not remove. Such deception is indeed admissible in war, in relation to the enemy, but the belligerent adopts it at his peril, and if an innocent party is injured by the indulgence of such a practice there should be adequate redress. Nothing culpable or exceptionable appears in the character or conduct of this vessel. The right of search is indisputable; but, in this instance, it appears to me to have been exercised in an improper manner, and in such a manner as to make those who were instrumental in the transaction liable for the consequences connected with it. Captain Smith, commander of the frigate Congress, the ship by which the Eleanor was examined, has died since this suit has been pending. The reputation and character of that gentleman must assure us that no intentional wrong could have been inflicted by him on his fellow-citizens while in the execution of his official duties. But I am compelled to say that the course of proceedings relative to the examination and detention of the Eleanor were such as to render him liable to respond in damages, if he were living. Commodore Rodgers, though not personally acting in this transaction, must, I think, as commander of the squadron, be responsible. And I shall decree, accordingly, that the libellant recover against him the value of said schooner and cargo, being forty-three thousand two hundred and fifty dollars, according to the affidavit in the case. I shall therefore render judgment for the abovementioned sum with costs.

JNO. DAVIS, *Dis. Judge.*

A true copy: attest,

JOHN W. DAVIS, *Clerk.*

UNITED STATES OF AMERICA, MASSACHUSETTS DISTRICT, *ss.*

District Court of the United States for said district, sitting in Admiralty at Boston, in the district aforesaid, on the first day of February, 1813.

John Donnell, by his agent, James Perkins, comp't. }

vs.
John Rodgers and John Smith. }

The answer of John Rodgers, commander of the United States' frigate, the President, to the libel and complaint aforesaid.

The respondent now, and at all times hereafter, saving and reserving to himself all and all manner of benefit and advantage of exception that may be had to the many errors, uncertainties, and manifest insufficiencies in the complainant's said libel or complaint contained, for answer thereto, or unto so much thereof, as this respondent is advised is material for him to make answer unto, protesting that the said schooner, called the Eleanor, or the goods, wares, and merchandise on board thereof, never were seized and detained by the said respondent; the said respondent does answer and say, that, during the existence of war between the United States of America and the united kingdom of Great Britain and Ireland, and their dependencies, to wit: on or about the 16th day of October, 1812, last, the said John Rodgers, being commander of the said United States' frigate the President, and the said John Smith, commander of the said United States' frigate the Congress, he, the said John Rodgers, being then and there the commanding officer of a fleet, or squadron, consisting of the ships aforesaid; and as such it being the duty of the said respondent, in and with this ship, and the ships of his squadron, to cruise for, and to seize and bring into port for adjudication, the ships and vessels, and property of every description he, or they, might meet with belonging to the said united kingdom of Great Britain and Ireland, or the subjects thereof: and for this purpose, to search and examine all vessels whatsoever which he or they might fall in with on the high seas according to the law of nations, and the rights of belligerent Powers; he did, in and with the respective ships of his squadron, namely, Congress and President, in about the longitude of 53° 19' west, and the latitude 37° 32' north, on the high seas, fall in with the aforesaid schooner or vessel called the Eleanor: That the said John Rodgers, of the aforesaid frigate President, being at the time engaged in taking possession of a vessel called the Swallow, came up with the said schooner, and brought her to; did, as I was afterwards informed, despatch one Joseph J. Nicholson, an officer, and several men, from on board the said frigate, with instructions to go on board the said schooner, and to request the commander thereof to repair, with the said vessel's papers, on board the said frigate, for the purpose of submitting the same to the inspection and examination of him, the said Smith; and, in the mean time, the said Nicholson, who was despatched as aforesaid from the said frigate, should remain on board the said schooner, and conduct her in such manner, during the examination and inspection of the papers as aforesaid, as that she should remain subject to the control and the signals of the said frigate; that, in pursuance of the said instructions, as the said respondent is informed and verily believes, the said Nicholson with the men who were despatched with the men as aforesaid, did proceed on board the said schooner while she was on her larboard tack; that on entering on board he found the crew thereof in great confusion; the vessel being then under a double reefed mainsail, jib, foretop sail sheeted home and clewed on the cap, the rest of the sails and rigging in a confused and disordered situation; that the said Nicholson immediately requested the master of the said vessel to repair on board the said frigate with one of his mates and with their papers, which request was complied with without hesitance: that he, the said Nicholson, thereupon, wore the said vessel on the starboard tack, in order to come up with the Congress, and to maintain a convenient position near to her; that he soon after discovered the Congress to wear, and thereupon wore the schooner also, in order to keep on the same tack with the frigate; that, about an hour afterwards, and whilst the said schooner was in this situation, the said Nicholson perceiving a squall approaching, and that the sails of the said vessel were in an improper and dangerous condition, ordered the crew to assist in taking in sail, and to prepare the vessel against the impending danger; which order, every individual of the said vessel's crew, except the mate, did refuse to obey, and most of them abandoned their stations, and went below.

In this situation, and being altogether unable, without the assistance of the crew, to manage and conduct the said vessel, she was overtaken by the squall, and both her masts carried overboard, and she reduced to a wreck. And the said respondent doth say, from the information received from Captain Smith, that the master of the said schooner and her papers were detained on board the said frigate Congress for the space of one or two hours only, and for no longer time than was indispensably requisite for such an inspection and examination, as he was authorized to make, in order to ascertain the character of said vessel, and whether she were or were not subject to capture, and to be sent into port for adjudication according to the laws of war; and that, after he was made acquainted with the disaster before recited, he did render to the officers and crew of the said schooner all such assistance as was deemed necessary for their safety and convenience, and for the preservation of the said vessel and cargo; and that, immediately after the papers of said vessel had been examined as aforesaid, which was effected as speedily as the nature of the case would admit, the same were restored to her commander, and he permitted to take possession of, and proceed with his said vessel and the cargo on board, in such manner as he might deem proper, and for this purpose every possible facility and assistance were tendered to him. And the said respondent doth furthermore say, that he is credibly informed, and doth verily believe, that, very soon after the said Nicholson, from the Congress frigate, had entered on board the said schooner, he did truly represent, to the officers and crew thereof, the national character of the two ships of war, by which he had been detained as aforesaid, as also the true cause of such detention. In all which matters and things the said respondent says that he did proceed and do as he lawfully might. And he does

utterly deny that the said schooner and her cargo, or any part thereof, were or was, by the misconduct, "negligence, or want of care of the officers of the said frigates, or any of them, wrecked, lost, or destroyed," as the said complainants in their libel or complaint have alleged.

And for cause why the said respondent does not proceed in this honorable court, to the legal adjudication of the said schooner Eleanor, her tackle, apparel, and furniture, and the goods, wares, and merchandise, which were laden therein, whether good and lawful prize or not, and why restitution, in value of the same, should not be decreed to the said complainants, in manner as propounded in the said libel or complaint, he, the said respondent, does allege that he is not now in possession of the said schooner, or her aforesaid cargo, or any part thereof; nor ever was in possession of, or had the custody of the same, except in the manner, and under the circumstances herein stated and set forth; but that the same were given up to the master thereof as before alleged. And all this the said respondent is ready to verify. Whereupon, he humbly prays to be dismissed from the said libel and complaint, with the said costs and expenses by him most wrongfully sustained in that behalf.

JOHN RODGERS.

Sworn to, in court, this 1st day of February, 1813.

WM. S. SHAW, Clerk.

I, Joseph James Nicholson, of Baltimore, in the State of Maryland, of lawful age to give testimony, do testify and say, that, in the month of October, in the year of our Lord 1812, the United States' frigate Congress, to which I then and ever since have belonged, in the capacity of second lieutenant, under the command of John Smith, Esq., and the frigate President, commanded by John Rodgers, Esq., who was commodore of the squadron, consisting of those two frigates, sailed from the port of Boston on a cruise; that, on the 16th of said month, between the hours of eleven and twelve o'clock, A. M., while the Congress was lying to, on the larboard tack, I discovered to the windward a sail standing to the eastward and before the wind, and immediately thereupon the Congress made sail in chase after her, she being about one mile and a half distant; after chasing her about three quarters of an hour, during which time the Congress fired two fore-castle guns, we came up to her; being directed by Captain Smith to board the chase and send her master and one of his mates, with her papers, on board our frigate, and to follow the frigate, I went in our boat and boarded her on her starboard side, my boat's crew consisting of a midshipman and four men. On getting on board, I met a boy who lighted me up her side, and whom I afterwards heard called by the name of "Norris;" and I inquired for the master; he immediately appeared; and, pursuant to my instructions, I required him to go on board the Congress, with one of his mates, and his ship's papers. Said master, whose name I understood to be John Graham, accordingly went in the frigate's boat, taking with him his mate and papers, to the Congress, and I remained on board the chase, which I then found to be the schooner Eleanor, of Baltimore. Shortly after I had boarded, but whether before or after her master had left her, I cannot recollect, I was repeatedly asked, by the boy before mentioned, what ship it was that I came from; and I replied, she was His Majesty's ship Shannon; and, directly afterwards, going aft, I met the supercargo, and recognised him for an old acquaintance, whom I had often seen in Baltimore. At first he did not know me, but after some conversation, the particulars of which I do not now recollect, and being told my name, he recollecting me. I then told him the name of our frigates, that we were Americans, what port we were from, and of the prizes we had taken. I wore ship twice, one or two of his men assisting me to shift the main boom and the jib sheet; afterwards, finding the crew would not obey my orders, I requested the supercargo to inform them who and what I was. Observing the Congress to leave us, owing, as I then supposed, to the bad steerage of the schooner, she carrying a strong weather helm, I went forward, and seeing the men there hauling down the jib, I asked them the reason of their so doing, and their reply was, that the jib-sheet had become unhooked, or had parted. My impression then was that they intended to do all they could to thwart and oppose me. When I went on board the schooner, I found her under a double reefed mainsail, the peak not entirely up, and a jib, the foretopsail sheeted home, clewed on the cap, the square sail and rigging foul, and flying about in every direction. On going aft, subsequent to remarking the situation of the jib, I found the main boom playing about, and in a dangerous state, owing to its not being confined to the crotch rope, and I ordered it to be secured, but could get no assistance, except from the man at the-helm. About a quarter past two o'clock, A. M. it was squally, and I ordered hands to be placed by the throat and peak haulyards, intending, if the squall should prove heavy, to take in the mainsail, but I could not cause my orders to be obeyed. Immediately after I had given these orders, the mainmast went, falling directly fore and aft; and shortly afterwards, before I could get forward, the foremast went by the board, in a quarterly direction. The cause of the falling of the mainmast, as I then supposed, was the schooner's having too much aftersail, which brought her head to wind and reel, and the main boom having considerable play, which strained the mainmast. After she was dismantled, the crew were alarmed, and became disposed to assist me. I then ordered the pump to be sounded; and it was reported to me there was no water in the well. I then ordered a light to be put on the stump of the foremast and the mainmast, to be secured in board, and caused a number of guns to be fired off. At half past three o'clock, A. M. or thereabouts, we came within hail of the Congress, and informed Captain Smith of our situation, and he sent a boat, with the master of the schooner, on board her. I offered to take the supercargo before mentioned on board the frigate with me, and to give him a berth in my state-room, and we went together in said boat to the Congress.

J. J. NICHOLSON.

Question, by William Prescott, Esq. Did you chase the schooner under British colors?

Answer. As my station was forward, I was not in the way of knowing what orders were given, and therefore cannot tell; but I know not of any colors being hoisted.

Question by the same. How near was the frigate Congress to the schooner when the before mentioned guns were fired, and were they loaded with balls?

Answer. I cannot tell the distance, as I was attending to my duty on the fore-castle; and the guns not being fired from my division, I know not whether they were loaded; but my supposition is, they were loaded with ball, that being the practice of all national vessels in time of war.

Question by the same. Was the supercargo present when you represented to the boy that the frigate was His Majesty's ship Shannon?

Answer. He might have been present, and I believe he was some of the time.

Question. When you first disclosed to the supercargo that you were an officer from an American frigate, did you request him not to communicate it to the crew?

Answer. I did.

Question. Was the refusal of the crew to obey your orders owing to their belief that you were from an English frigate?

Answer. I think it was; they persisted to consider me a British officer, notwithstanding all my endeavors to convince them to the contrary, from the time when I observed the Congress was leaving us.

Question. Did the mate obey your orders?

Answer. He did.

Question. At what distance was the frigate from the schooner when her masts were carried away?

Answer. I cannot tell; but I then saw the lights of the frigate appear and disappear at times.

Question. Was the schooner, by your taking command of her, carried out of the course of her voyage to Bordeaux?

Answer. She must have been, but I cannot say how many points. I did all I could to follow the Congress in every direction she took, pursuant to the order of Captain Smith; and I think if the crew had obeyed my orders, the masts would not have been carried away.

J. J. NICHOLSON.

UNITED STATES' FRIGATE PRESIDENT, BOSTON, *October 7, 1812.*

SIR:

In the event of parting company, the following you are to consider as the limits of your cruise: To steer in a direction for the Azores; and, reaching the longitude of thirty-four or thirty-five degrees west, to shape a course for the Cape de Verd Islands; off which, say from twenty-five to fifty leagues to the westward, after cruising one week, should you not fall in with me, to steer for the island of St. Paul, (latitude — degrees, fifty-five minutes north, and longitude twenty-nine degrees west,) and not finding me then, after cruising ten days, to steer westward to the longitude thirty-four, whence, after cruising five days, you are to proceed to the United States; passing to windward of Barbadoes, off which, should your water and provisions not be too far expended, you may cruise such length of time as you may deem advisable.

It is impossible to foresee the events which may arise to make it necessary for you to deviate from these instructions; much must necessarily be left to your own judgment. And although the object of your cruise is to capture and destroy the enemy's ships, and by the exercise of every means in your power to harass and perplex his East India and Brazil commerce, you are, nevertheless, not to expose the health of your crew, or hazard the safety of your ship to effect this, without having sufficient reason to believe that in doing so the object to be obtained is decidedly of primary importance to the risk attending its accomplishment. I have mentioned the number of days you are to cruise at each of the places assigned you as the most advisable cruising grounds; you are at liberty, nevertheless, to cruise as many days, more or less, at either, as your supply of water and provisions may on calculation sanction.

St. Paul's, you will recollect, is a point which all the enemy's homeward bound East India, as well as a large portion both of his outward and homeward bound Brazil commerce passes.

New York, New London, or Newport, are the most advisable ports for you to return to; but, should you have reason to believe that these are invested, you are at liberty to make any other in the United States, giving me, as also the Navy Department, on your return, an account of your cruise.

I have the honor to be, &c. &c.

JOHN RODGERS.

Captain JOHN SMITH, *Commanding United States' frigate Congress.*

I, John Rodgers, now resident in the city of Washington, in the District of Columbia, do testify and declare, that, soon after the commencement of a certain process in the admiralty, which is now pending in the Circuit Court of the United States for the first circuit, wherein John Donnell, of the city of Baltimore, is complainant against John Smith, Esquire, late deceased, and myself, on account of the alleged illegal seizure and detention, on the high seas, by the said Smith, as commander of the United States' frigate Congress, and myself as commander of the late United States' frigate President, of a certain schooner called the Eleanor; that is to say, in the winter of eighteen hundred and thirteen, being with the said Smith in Boston, we respectively engaged George Blake, Esquire, the attorney of the United States for Massachusetts district, as our proctor and counsel to manage in our behalf the defence in that suit. That in pursuance of the said Blake's request, and in order to enable him to frame a proper answer to the complaint, I caused Lieutenant Nicholson, whom I understood to have been the officer from the said frigate Congress, who boarded the said schooner Eleanor, and who was actually on board said vessel when the disaster complained of occurred, to prepare and hand to the said Blake a brief statement of the facts and circumstances attending the seizure and detention of that vessel. Such a statement, I understood, was made by said Nicholson to said Blake; and, being shortly afterwards informed by said Blake that an answer to the complaint of said Donnell had been prepared, I called, with Captain Smith, upon the said Blake, on or about the 1st of February, of the said year 1813, for the purpose of examining and making oath to the said answer. I well remember that the District Court of the United States, in which our counsel, Mr. Blake, appeared to be much occupied, was then in session, and that we met him for the purpose of making the proper attestation to the said answer in that court. The paper containing the said answer was there handed to Captain Smith and myself by said Blake; and, as it appeared, on a hasty and cursory examination, to contain a correct statement of the principal and most prominent circumstances attending the seizure of the said schooner Eleanor, it was thereupon immediately, and without a critical and minute consideration of the particular phraseology of the instrument, subscribed and attested to by the said Smith and myself. I furthermore testify and declare, that, in all the conferences which I ever had with my counsel, Mr. Blake, relative to the subject in question, I uniformly stated to him my intention of assuming, as a principal ground of my defence against the claim of Mr. Donnell, that whatever injury he might have sustained on account of the capture and detention of the said schooner Eleanor, was altogether the effect of a course of procedure which had been pursued by Captain Smith, without any particular order, privity, or agency, on my part; and that, however Captain Smith might be considered responsible for the consequences of the disaster alluded to, I ought to be regarded, as in reality I was, a perfect stranger to, and in no degree instrumental in, producing the same.

I furthermore declare, that, at the time of subscribing and making oath to the answer as aforesaid, it did not occur to me that it contained any statement or expression which could, in legal construction, warrant the conclusion that I intended to unite with the said Smith in a joint defence against the said suit, or to hold myself, as his commodore, in any degree responsible for his particular acts in regard to the seizure and detention of the said schooner Eleanor; and if the said answer, in the form in which it now appears in the case, does admit of such construction, it has been owing altogether to the misapprehension of my counsel, Mr. Blake, in framing the said answer contrary to my intentions, and not in conformity with the true state of my case. I furthermore testify and declare, that, at the time of the seizure and detention of the said schooner Eleanor, by the frigate Congress, and also at the time when the disaster alluded to is stated to have occurred on board the schooner, my own ship, the President, was not in sight. And in regard to the boarding the said schooner by the Congress, no instruction or command whatsoever was given by me, directly or indirectly, to Captain Smith, or to any of his officers or crew, nor had I then, or at any time subsequently, any connexion or concern with the said transaction; except that after the frigate Congress came up with the President, and I was informed of the misfortune which had happened to the schooner, I provided for the accommodation of the officers and crew of that vessel, another vessel called the Swallow, with which they returned to the United States.

BOSTON, *January 26, 1806.*

DEAR SIR:

I regret being under the necessity to state to you, that, owing to the circumstance of my not having received, until very near the close of the late session of our Circuit Court, your last affidavit in the case of Donnell, we are deprived of the benefit of Judge Story's opinion on the merits, in the present stage of the cause. It seems he had considered it unadvisable even to look into the papers until every portion of the evidence on both sides should have been introduced; and having, therefore, delayed the investigation until the reception of the abovementioned affidavit, which left him only a day or two preceding his departure for Washington, it became impossible for him, as he assures me, in the midst of the necessary preparation for his journey, to pay the least attention to this subject, much less to attempt an adjudication of the cause, with that deliberation which its importance certainly demands. Under such circumstances, and especially it having been understood by the court and the counsel on both sides, at the opening of the argument, that a decree of some sort should be delivered before the close of the term, it was deemed necessary by the judge, according to the uniform practice of the subordinate courts in such cases, to enter an "affirmance" of the former decree, "*pro forma*, and without prejudice to either party," with a view to take the cause, for a final argument and determination, to the Supreme Court.

This course of procedure can, as you will at once perceive, be attended with no other injury or inconvenience to you than as it may have been deemed desirable to have obtained, *in this early stage* of the cause, the deliberate opinion of Judge Story, which, I am extremely confident, would have been favorable to you; with this other consideration, moreover, that, being appellant, you are, of course, under the necessity of paying, in the first instance, for the transcript of a voluminous record, and also of filing a bond with sureties to respond the final judgment and costs. In every other point of view, as the case, whatever might have been the decision in the Circuit Court, would most certainly have had a final hearing and determination at the Supreme Court, the circumstances before stated are altogether unimportant. By way of facility, with regard to giving the bond, an agreement of counsel has been entered of record, that it shall be delivered to Judge Story, at Washington, on or before the 20th of February, and its sufficiency is also to be left to his judgment.

Accompanying this, I take the liberty to hand you a form for such a bond as will be proper on the occasion; and, so soon as the clerk, who is now employed in making it out, shall have completed his transcript of the record and proceedings, it shall be forwarded to you without the least delay. In the meantime, permit me to advise you to request your counsel at Washington (Mr. Pinkney, undoubtedly) to cause the appeal and appearance to be immediately entered. Should it be the desire of your counsel, preparatory to the final hearing, to be made acquainted with the points and the authorities in their support which were relied upon in your defence at the Circuit Court, I presume Mr. Dexter, who will be attending the Supreme Court, will be able to communicate the requisite information. I will, myself, moreover, in the course of a few days, send you my own list of authorities.

Have the goodness to favor me with a line by the returning mail, if possible, that I may be assured this shall have reached you.

In extreme haste, I am, dear sir, with the greatest esteem and respect, your friend and most obedient servant,
GEO. BLAKE.

P. S. The sum to be paid to the clerk for cost of the transcript will probably be fifty or sixty dollars.

Honorable JOHN RODGERS.

Boston, December 13, 1815.

DEAR SIR:

I had the pleasure to receive by the mail of this morning your letter of 8th instant. The affidavit and "extracts" which it contained will undoubtedly be sufficient, with the aid of my own affidavit, to ensure success to my motion for leave to withdraw the answer which was first given by you, in the case of Donnell, jointly with Captain Smith, and to enable you to file a separate and distinct answer. It seems, however, that you have inadvertently omitted to notice that part of my last letter on this subject, wherein you were requested to prepare and forward to me such an answer. I beg leave, therefore, to suggest the necessity of your doing this, with as little delay as possible. The court, which is now under a temporary adjournment, will be convened again, probably for the last time during the present term, on the 24th of this month, at which time the judges will, I presume, expect to receive your final reply to the libel and complaint in question. I pray you, therefore, to send it to me, if practicable, by the returning mail. In framing this answer, it will be necessary for you barely to transcribe the former answer of yourself and Captain Smith, of which a copy was transmitted with my last letter, omitting only such expressions as may seem to have indicated an acquiescence on your part, to unite with him in a joint defence; and superadding also that part of the statement contained in your present affidavit, which goes to show the distance of the President frigate, from the Congress at the time when the disaster complained of occurred. It would be advisable, moreover, to state, in your answer, the nature of your cruising orders to Captain Smith, with reference to your journal, &c. &c.; and to negative most expressly the having given any order by "word," "writing," or "signal," with regard to the pursuit and detention of this particular vessel the *Eleanor*. In all other respects, the answer now to be filed ought to conform to the former one, inasmuch as we shall not be allowed to exhibit a statement substantially at variance with that already presented, nor, indeed, to do more than merely to explain what might have seemed ambiguous in our former answer, or to subjoin a statement of such other facts and circumstances, essential to the points in issue, as may seem to have been heretofore inadvertently omitted. The cause having already undergone a very full argument on all the points, I indulge in the hope that I may have the pleasure of announcing to you a favorable decision very soon after I shall have received your answer as above proposed.

In much haste, I am, dear sir, with the greatest respect and esteem, your most obedient servant,

GEO. BLAKE.

P. S. I forgot in my last to state that the libel of Captain Ham et al. against yourself and Captain Smith, which was long depending in our District Court, was a short time since abandoned.

JOHN RODGERS, Esq.

Boston, October 20, 1815.

MY DEAR SIR:

I have to perform the unpleasant task of making known to you the sad result which has attended the first hearing of the libel which has so long been pending against yourself and our deceased friend Captain Smith, in favor of John Donnell, as owner of the schooner *Eleanor* and cargo. This cause, which had been lingering along from term to term in our District Court, was necessarily, a few weeks since, brought to trial; and after a very full argument, in the course of which, as I flatter myself, nothing was omitted which could have been urged in your defence, a decree was passed against you for the supposed value of the vessel and cargo. From this decree an appeal in your behalf was interposed as a matter of course, and the cause is now open for a re-hearing in the Circuit Court, whose session commenced here a day or two since. What may be the result of a second and more thorough investigation of the case it is impossible to predict. I cannot, however, but entertain very strong hopes, (although it must be confessed that the evidence brought into the cause by the libellant wears, at present, a pretty formidable aspect,) that the liberal and enlightened judge of the Circuit Court, who has been somewhat remarkable for his pre-disposition in favor of *belligerent rights*, will take a very different view of the principles urged in your defence, from that by which the judge of the court below seems to have been governed in making his decision. I pray you, at any rate, my dear sir, to be assured that no effort on my part shall be wanting to obtain a more favorable decision in the second trial. Permit me, however, to observe that, as this cause is now beginning to assume a pretty serious and imposing aspect, I am extremely unwilling to endure the responsibility of continuing to act as counsel in the defence singly and alone, especially as two gentlemen, each of whom being at least of equal professional standing with myself, are associated against me on the other side; I must beg, therefore, you would have the goodness, with as little delay as possible, to authorize me to take to my aid some professional gentleman of distinction, (say Dexter or Otis,) whose co-operation with me in your defence would, I am persuaded, be not less advantageous to you, (or rather to the Government, by whom you will undoubtedly, in any event, be ultimately indemnified,) than it would be grateful and acceptable to myself. It is proper for me furthermore to suggest, that, in case the decree of the district judge should be affirmed on the appeal, which I cannot believe to be a very probable result, the cause cannot be transferred for a final decision in the Supreme Court of the United States until a bond, with sufficient sureties, not for costs merely, but for the entire amount of the damages which may be awarded, shall have been filed in our Circuit Court, with condition to abide and perform the final judgment. I deemed it prudent to give you this latter intimation thus seasonably, inasmuch as in a case of such magnitude, one, moreover, in which the United States will undoubtedly consider themselves responsible ultimately, the final determination ought to be, and unquestionably will be, in the highest court of the nation.

That you may be acquainted, in some measure, with the grounds upon which the district judge has seen fit to pronounce against you, I take the liberty to hand you the enclosed copy of his decree. Should you deem it to be useful to know more of the present posture of the case, and to become acquainted with the nature and bearing of

the evidence on either side, I will, with much pleasure, transmit to you a transcript of the entire record, or such parts thereof as you may be inclined to inspect. In a word, I will immediately comply with any directions which you may think proper to give me in relation to this subject. Lest you should suppose me to have been remiss in having omitted to communicate to you the foregoing circumstances instantly, and without the least delay, I beg leave to observe, that on the day succeeding my argument in your case at the District Court, I left town with my family on a journey to the country, from whence I returned not until yesterday, and that the decision of the judge was pronounced during my absence.

I have only time to subjoin a request that you would be pleased to offer my most cordial salutations, as well as those of Mrs. B., to Mrs. Rodgers, and family, who will very long be holden in most affectionate remembrance by numerous friends in this quarter; and accept for yourself assurances of the unremitted esteem and respect with which

JOHN RODGERS, Esq.

I am, dear sir, your friend and obedient servant,

GEO. BLAKE.

(Private.)

BOSTON, November 20, 1815.

DEAR SIR:

On receiving your letter of 25th October, I called immediately on Mr. Dexter, and, according to your suggestion, engaged him as associate counsel with me in your controversy with Donnell.

The cause has since been very fully, and, in reference to one of your advocates I may add, very ably argued, in the Circuit Court. A decision will not be pronounced until about the middle of December, to which time the court will speedily be adjourned. In the mean time, with reference to one of the strongest grounds assumed in your defence at the trial, to wit, that the distance of your own ship, the President, from the Congress, and the Eleanor, when the latter vessel was brought to and boarded by Captain Smith, must have precluded the possibility of your having given any particular orders, or having had any immediate concern, or agency, in that transaction, it was deemed advisable by your counsel, at the hearing, to propose such an amendment and modification of the present state of the pleadings as should leave you to stand on ground rather more distinct and independent of Captain Smith than you are supposed to do according to the answer in its present form. With this view, and especially as the court, towards the close of the hearing, intimated a doubt, whether, by uniting with Captain Smith in the *answer* and *justification*, you had not, upon strict legal principles, presumptively admitted that he acted, in making the seizure, under your authority and command, a motion was submitted for leave to sever the answer, and to file a separate answer, which should clearly disconnect you from him. Upon this motion, the court assented to the modification proposed, provided it should be shown satisfactorily, by your affidavit and my own, that the joint answer, in its present shape, had been put in merely through the misconception of your counsel as to what might be the legal effect of such a joinder in pleading. The doubt thus intimated by the court did not, I confess, at the trial, nor does it now, on further reflection, strike me with much force, inasmuch as the answer in its present form, though joint, exhibits such a presentment of facts as clearly shows that the seizure was effected by the Congress alone, and altogether independently of the President, and without the possibility of having received any previous special orders from that ship relative to the transaction. Still, however, for the sake of greater safety, in a case of so considerable magnitude, and on a point of so much importance, (*e majori cautela*, as we say in law latin,) it is undoubtedly advisable to put in a separate answer. In order to enable you to frame such a one, which, with regard to the principal facts stated, must correspond with your former answer, I take the liberty to forward herewith a copy of the latter, together with a loose draught of an affidavit in such form as will, I presume, be found to accord substantially with your own recollection of the facts and circumstances therein referred to. Should this, however, not be the case, you will be pleased to make such additions and qualifications as shall render your statement more conformable with the facts in the case.

It is particularly desirable that your affidavit should describe, with some degree of precision, the relative position of the President with regard to the Congress and Eleanor, at the time the latter was boarded, as also where the disaster took place; and that the nature of the cruising orders given by yourself to Captain Smith should be distinctly stated, so as to show very clearly that you had no privity or connexion with the individual transaction alluded to. With regard to this latter object, it would be well also to obtain, if possible, some other evidence besides that resulting from your own declaration: such, for example, as the affidavit of some officer belonging to the President, who may have been acquainted with the orders which were given by you from time to time to Captain Smith. With a view to assist your recollection of the circumstances attending the transaction, I forward you likewise a copy of the very full deposition of Lieutenant Nicholson, which was used at the trial, and constituted in fact the principal part of your evidence in the case.

As it is not quite certain that the court may not resume its sittings at an earlier period than the middle of December, may I be permitted to request that you would furnish me with the proposed answer and affidavit, duly executed, with as little delay as the nature of your other numerous avocations will admit. I have only to add, that both the instruments above mentioned ought regularly to be executed, and sworn to before some judge of a court of the United States.

With the most cordial esteem and respect, I am, dear sir, your most obedient,

GEORGE BLAKE.

JOHN RODGERS, Esq.

P. S. Although no very strong intimation of an opinion proceeded from the judge in the course of the trial, I was nevertheless happy to perceive, that the obvious inclination of his mind, throughout the trial, was in favor of our defence. I am at any rate very sanguine in the belief, and such I find to be the decided impression of my colleague, Mr. Dexter, that the decision of the Circuit Court, as well as the final determination in the Supreme Court, should the cause go there, cannot but be favorable, on any of the grounds which we have assumed.

As before, yours,

G. B.

WASHINGTON, October 25, 1815.

DEAR SIR:

I have received your letter of the 20th instant, with the enclosed copy of the decree of Judge Davis, in favor of the owner of the schooner Eleanor, of Baltimore. Had it appeared in evidence that the Eleanor's loss had been occasioned by any orders given by me to the captain of the Congress; I should suppose the judge had some reason for such a decision; but as this is not the case, I am at a loss even to conjecture on what ground his decree has been founded, as I cannot believe that the mere circumstance of my being Captain Smith's senior officer could justify such a decision; otherwise, I should be left to conclude, that, in this instance, law and justice were directly at variance.

It would appear by the decree, that the strongest argument used in favor of the plaintiff was, that the Eleanor's loss was occasioned by the boarding officers representing the President and Congress to be British frigates. Now, if the boarding officer did make this representation, it neither did, nor could have caused the crew to mutiny, unless they were all mad: for you must understand, that Lieutenant Nicholson, the boarding officer, was, immediately on going on board, recognised by the supercargo of the Eleanor as his schoolmate. Of course, if the crew remained longer in ignorance of the character of the ships, it was the fault of the supercargo, and he ought to be accountable for any evil consequences which might have resulted afterwards.

I notice what you say respecting the employment of additional counsel, and would advise your uniting the services of Mr. Dexter: for, although I do not believe that Judge Story will see the affair in the same light that Judge

Davis did, or that any other abilities than your own would be requisite, still it would not be advisable to omit any thing which might tend to a fuller elucidation of the case; and more particularly, as in the event of my being cast, the United States will be bound, in justice, not only to pay the costs of the suit, but to indemnify me to the fullest extent. Should you have occasion for Lieutenant Nicholson, the officer that boarded the Eleanor, a summons will find him at Philadelphia, as he is attached to the navy yard at that place.

With great regard and esteem, believe me, dear sir, your obedient servant,

JOHN RODGERS.

GEORGE BLAKE, Esq. *District Attorney, Boston.*

BOSTON, December 29, 1815.

DEAR SIR:

I have the pleasure to acknowledge the receipt of your letter of — instant, enclosing your answer, according to the late arrangement, to the libel of J. Donnell. On the receipt of these papers, I was really in hopes I should not again have had occasion to address you on this subject, until the cause should have had its final decision in this district. It seems, however, that further disclosures are required, and that a final decree will be delayed until these shall have been produced. I received last evening from one of the counsel of Donnell the enclosed billet, requiring peremptorily the production of a transcript of your sailing orders to Captain Smith, at the commencement of the cruise in question. It is obvious they can have no essential bearing on the points in issue: still, it is necessary they should be produced; and I will thank you therefore to forward the documents to me authenticated in like manner with those heretofore transmitted, with as little delay as possible.

In extreme haste, I am, dear sir, very truly, your friend and obedient,

G. BLAKE.

JOHN RODGERS, Esq.

DECEMBER 26, 1815.

SIR:

You are hereby notified to produce the sailing orders, and all other orders given by Commodore Rodgers to Captain Smith on the cruise, during which the Eleanor, belonging to John Donnell, Esq. of Baltimore, was captured by the President and Congress frigates, under the command of Commodore Rodgers, and afterwards lost.

Yours, respectfully,

SAMUEL HUBBARD.

GEORGE BLAKE, Esq.

WASHINGTON, February 6, 1816.

SIR:

At the time the accident happened to the schooner Eleanor, of which her detention by the frigate the Congress is alleged to have been the cause, the frigate the President was not in sight; neither was the Congress or the Eleanor to be seen from the President until seven hours after the accident occurred. Captain Smith having left the Eleanor, made sail to the eastward, (where I was engaged in disposing of the cargo and crew of the British packet, the Swallow, which I had captured the preceding evening) for the purpose of communicating to me the disaster that had happened to her.

With respect to the Eleanor, Captain Smith had no orders from me, either written, verbal, or by signal; and, to show more distinctly that I had no agency in the transaction which, it is alleged, occasioned the loss of the Eleanor, it is only necessary to observe that I did not know what the Eleanor was, or whether the Congress had boarded her, until eight o'clock in the morning, although she had left me at eleven o'clock the preceding night in chase of her.

I have the honor to be, with great respect, sir, your obedient servant,

JOHN RODGERS.

HON. BURWELL BASSETT, *Chairman of a Committee of Congress.*

SIR:

WASHINGTON, February 6, 1816.

It has been alleged that the crew of the Eleanor mutinied, owing to their believing the President and Congress to be British frigates. This was not the case. The crew was disaffected before the Eleanor fell in with the Congress, as was fully evinced by their behavior while the Eleanor was under the examination of the Congress. They then beat violently, and abused the master of the Eleanor, who, previous to leaving me, expressed his apprehensions of their proceeding to the last degree of violence, unless I would take from him Peter Michael, Joseph Pierson, and James Murray, who, he alleged, were the ringleaders in the mutiny. He declared to me that he preferred abandoning his vessel to remaining on board with them; and I did, in consequence, receive them on board the President.

I have the honor to be, with great respect, sir, your obedient servant,

JOHN RODGERS.

HON. BURWELL BASSETT, *Chairman of a Committee of Congress.*

14th CONGRESS.]

No. 139.

[1st Session.]

PRIZE MONEY ALLOWED WHEN THE PRIZE PROPERTY IS RESTORED.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 15, 1816.

TREASURY DEPARTMENT, February 15, 1816.

SIR:

In the communications which have been made to Congress, relative to the operations of the American squadron in the Mediterranean, it appears that the property captured as prize from the Dey and regency of Algiers was restored on the conclusion of the peace with that Power. The restoration of the prize property being effected for the purposes of the Government, an equivalent became due to the captors; which has been fixed by their agent, and the Secretary of the Navy, at the sum of one hundred thousand dollars.

By the desire, therefore, of the Secretary of the Navy, and with the approbation of the President, I have the honor to submit to the Committee of Ways and Means a request that an item for appropriating one hundred thousand dollars may be included in the general appropriation bill, now preparing, to satisfy the claim of the captors.

I have the honor to be, very respectfully, sir, your most obedient servant,

A. J. DALLAS.

The Hon. WM. LOWNDES, *Chairman of the Committee of Ways and Means.*

NAVY DEPARTMENT, *March 1, 1816.*

SIR:

I have the honor to enclose to you the copy of a communication from Littleton W. Tazewell, Esq. agent for the officers and men of the United States squadron upon the late service in the Mediterranean, in which are comprised the reasons for admitting the claims of the captors to be equivalent to the one-half of the value of property captured, and which is submitted for your information upon the subject.

I have the honor, &c.

B. W. CROWNINSHIELD.

Hon. A. J. DALLAS, *Secretary of the Treasury.*GEORGETOWN, *February 1, 1816.*

SIR:

As the agent of the officers and crews of the several ships and vessels of the United States, composing the first Mediterranean squadron, lately under the command of Commodore Decatur, it becomes my duty to ask of the Government, for and in behalf of my constituents, a fair and just equivalent for the interest of the captors in the Algerine property, captured by that squadron during the late war with the Dey and regency of Algiers, and afterwards restored to that Power by the officers of the United States, upon the conclusion of peace between the two nations. In making this application, I do not consider that I solicit of the Government any favor or benevolence, but the performance of a mere act of justice, required by existing laws, and in exact conformity with its already settled practice in previous similar cases. Hence, sir, I address myself rather to the President, through you, than to Congress. For if I am informed correctly of the arrangement of the different departments of our Government, it belongs to the Legislature to prescribe the rule, but to the Executive only to apply and carry the rule so prescribed into effect; and should any funds be required for the attainment of this object, although Congress alone can furnish them, yet the application for such funds is to be made to that body, not by the individual for whose payment they are designed, but by that department of the Executive charged with the duty of satisfying the public engagements. If, therefore, the President shall be satisfied that the claim which I prefer is of the character I have stated, it is not for me to address myself to any other branch of the Government in relation thereto.

In order to establish the proposition, that this claim must be regarded as one founded upon existing laws, I have only to refer you to the 5th section of the act of Congress, passed on the 23d of April, 1800, entitled "an act for the better government of the navy of the United States." Within the *spirit* of the provisions of this statute none, I believe, will doubt that the claim I exhibit is embraced; and but little question, I think, can exist, that the very letter of the law also very strongly protects it. But if doubts arise upon this latter subject, they will readily be removed by reflecting that it is only the act of the Government itself which has prevented from being done that which the literal terms of this statute may seem to require; and surely it ought not to be said, that the Government have a right to require evidence which the Government itself has rendered it impossible to obtain, and this to establish a fact admitted by the Government to be true.

The settled practice of the Government also, in previous similar cases, abundantly proves, that its own interpretation of this statute is such as I have contended for. The case of the ships of the Emperor of Morocco, captured by Captains Rodgers and Bainbridge in 1803, and restored to that monarch by the captors, before any judicial adjudication of the question of prize was, or could have been had, is one which, in its principles, it would be difficult, I think, to distinguish from that which I present. But in that case, the captors were compensated by the Government for their interests in the vessels captured, and the Executive made application to the Legislature, to enable the satisfaction of this legal demand. The act of Congress upon this subject you will find in the seventh volume of the laws of the United States, page 85.

As to the amount of the claim which I prefer, as soon as its principles are admitted, I will proceed to adjust it with you in any mode you choose to point out. At present, I will only remark, that I feel no disposition to ask of the Government more than I believe they ought to allow; and as from every information I have been enabled to obtain, the property captured was worth at least two hundred thousand dollars, I shall be disposed to rate it at that sum; if, upon inquiry, you also shall be satisfied that this estimate is not too high, and as I admit that the capturing squadron was of superior force, my constituents will, of course, be entitled to only one moiety of this sum. If, therefore, the President shall be satisfied that the claim which I prefer is correct in its principles, and after making every necessary inquiry you shall be convinced that the extent of that claim is not extravagantly estimated by me at one hundred thousand dollars, I will consent to this sum being taken as its amount, without resorting to any other mode of adjustment; should you differ with me, however, upon this question of "quantum," I will, with pleasure, accede to any other mode of settling it which you shall suggest.

I have the honor to be, very respectfully, sir, your most obedient servant,

LITTLETON W. TAZEWELL.

To the Honorable the SECRETARY OF THE NAVY.

14th CONGRESS.]

No. 140.

[1st SESSION.

VALUATION OF SHIPS CAPTURED AND TAKEN INTO THE NAVAL SERVICE OF THE UNITED STATES DURING THE WAR WITH GREAT BRITAIN.

COMMUNICATED TO THE SENATE, FEBRUARY 26, 1816.

NAVY DEPARTMENT, *February 26, 1816.*

SIR:

In obedience to a resolution of the honorable Senate of the United States of the 8th instant, I have the honor to transmit, herewith, the papers A, B, C, D, E, F, which contain all the information that the records and files of this Department afford upon the several subjects of inquiry.

A (No. 1 to 32,) contains copies of correspondence, and other papers, relative to the negotiation for the purchase of the captured ship *Cyane*.

B (Nos. 1 and 2,) contains all the direct information relative to the ship *Alert*; by which it appears that ship was purchased at the marshal's sales at a very low price.

C. Copy of a decree of the United States' District Court of New York, adjudging the ship *Macedonian* to the captors, at the valuation of two hundred thousand dollars.

D, (Nos. 1 and 2,) relative to the purchase of the sloop of war *Epervier*.

E. Extract of a letter from the Secretary of the Navy to Captain David Porter, confirming the valuation and purchase of the ship *Essex Junior*.

F. Statement showing the actual force, when captured, of the different prizes made by the United States' ships of war, during the late contest with Great Britain, and taken into the service of the United States.

All which is respectfully submitted.

B. W. CROWNINSHIELD.

The PRESIDENT OF THE SENATE.

A.

No. 1.

PRIZE SHIP CYANE, NEW YORK, April 21.

Sir:

I have the honor to enclose you the dimensions of the prize ship Cyane, together with the different articles that are now on board of her.

On account of my not at present being permitted by the marshal to land any thing, an exact inventory cannot be taken of the shot, powder, water and spirit casks, ballast, &c.; but, as soon as they are permitted to be landed, a correct account of them shall be taken, and immediately transmitted to the Department.

Very respectfully, I have the honor to be, your obedient servant,

B. V. HOFFMAN.

The Hon. B. W. CROWNSHIELD, *Secretary of the Navy, Washington City.*

Dimensions of the Masts, Spars, Yards, and Booms, of the Prize Ship Cyane, with her length, breadth, and depth.

	Feet.	Inches.	Diameter in inches.
Length of spar deck, - - - - -	124	9	
Length of gun deck, - - - - -	123	3

An inventory of the stores, ammunition, guns, &c. on board the Prize Ship Cyane, April 20, 1815.

IN THE GUNNER'S DEPARTMENT.

22 thirty-two pound carronades on the gun deck,	44 powder horns,
6 eighteen pound carronades on the quarter deck,	6 drum's heads,
2 twelve pound carronades in the gangway,	100 wads for thirty-two pounders,
2 eighteen pound carronades, and	35 breechings for thirty-two pound carronades,
2 nine pound long guns, on the fore-castle, with the whole of their armament complete,	17 damaged lanterns,
28 muskets,	8 glass signal lanterns,
20 bayonets,	31 primed matches,
30 battle axes,	12 match staves,
40 boarding pikes,	1 bundle match stuff,
70 cutlasses,	34 boxes thirty-two pound grape shot,
100 scabbards,	8 sponges and rammers for eighteen pound carronades,
18 cartridge boxes,	A quantity of spare rigging and junk for use of gunner,
38 rammers, sponges, ladles, and worms on gun deck,	18 quires of cartridge paper,
10 rammers, sponges, and ladles, on the quarter deck,	1 coil of gun tackle falls—2½ inches,
13 sponges, gunner's department,	1 cask whitening,
52 cartridge and tube boxes,	46 blue lights and rockets,
57 scabbards for swords,	4 quires cartridge paper,
54 sheaths for swords,	100 priming wires,
33 scabbards, with straps, for bayonets,	11 formers for thirty-two, eighteen, long nine, and twelve pounders,
8 sheaths for swords, with belts,	300 musket flints,
40 sword belts for cutlasses,	A large quantity of powder in the magazine.

A great number of round, which, being stowed in different parts of the ship, their number cannot be ascertained, including canister and grape.

Account of Sails on board ship Cyane.

3 main-courses,
3 fore-courses,
2 main-topsails,
3 fore-topsails,
3 mizzen-topsails,
2 main-topgallant sails,
2 fore-topgallant sails,
1 mizzen-topgallant sail,
3 mizzen-topsails,
3 fore-royals,
2 main-royals,
1 mizzen-royal,

1 mizzen-course,
2 flying jibs,
3 standing jibs,
1 spritsail and spritsail topsail,
15 staysails of different kinds,
2 complete sets of boat sails,
1 awning for the quarter deck,
1 main skysail,
4 lower studding sails,
4 topmast studding sails,
4 topgallant studding sails,
2 spankers.

Inventory of articles in the Carpenter's department.

1 jar of paint oil, about fifteen gallons,
1 small tub of yellow paint, forty pounds weight,
1 ditto lead color, paint forty-two pounds weight,
1 half keg red paint, and half keg black paint,
1 chest of tools of sundry articles,
1 dozen paint brushes,
1 dozen augers, 1½ dozen chisels, 3 saws, 4 axes,
4 adzes, 1 cross cut, and 1 whip saw,
1 dozen of calking, and horsing irons,
7 pair of hooks and braces for boats' rudders,

1 dozen hooks for shot racks,
1 dozen large ring bolts,
2 kegs black varnish, ½ ditto pitch,
9 boxes containing nails, spikes, and other things belonging to the carpenter's department, besides a great many other things impossible to enumerate.
1 anvil, 1 camboose complete, a forge with
1 pair of bellows, 1 cabin store,
2 large launches.

Inventory of articles in the Boatswain's department.

1 coil of white rope, thirty fathoms, (supposed at)
3 coils of five inch rope,
4 coils of remnants—size unknown,
1 coil of seven inch—contents not known,
A machine for twisting rope,
2 copper boilers,
2 waste hammock cloths.
3 dozen hooks and thimbles,
1 dozen scrapers,
3 half hour glasses, 2 hour ditto, 2 four hour ditto,
48 signal flags of different kinds,

4 hand leads, nine pound weight,
4 deep-sea leads, twenty-nine pound weight,
4 dozen blocks, of different kinds,
3 American ensigns,
2 English ensigns, 4 pennants,
3 anchors, from twenty-nine to thirty-two cwt.
2 stream anchors, from six to nine cwt.
5 cables, (size)
5 hawsers, (size)
1 engine, 1 travelling tiller.

An inventory of Purser's stores.

1 box shoes—one hundred pairs,
1 box of candles—one hundred pounds,
3 barrels of beef,
3 barrels of pork,
3 barrels of cocoa,
8 barrels of peas,
2 barrels of beans,
2 barrels of sugar,
2 barrels of flour,
1 tierce of oatmeal,
2 casks of wine,
1 cask of vinegar,
1 cask of lime juice,

3 puncheons of rum, 1 L. H.
4 hogsheads of rum,
1 barrel of lamp oil,
7 empty spirit casks,
1 set of purser's weights and scales,
1 pair of steelyards,
1 set of cooper's tools,
A bread room nearly full of bread,
5 oil canisters,
4 bins partly filled with small stores,
A locker and chest, containing sundry articles for the use of the doctor's department.

No. 2.

Mr. McCauley to the Secretary of the Navy.

SIR:

NEW YORK, April 14, 1815.

I have the honor to acquaint you that the officers and crew of the frigate Constitution have appointed me their prize agent, and, on their behalf, permit me to offer you (for the United States) the interest they have in the prize ship of war Cyane, now in this harbor, at a fair valuation, by three officers of the navy. I am induced thus early to apply to you, under an impression that the present large assemblage of our navy officers in New York would afford you an opportunity of making such a selection as would be desirable to you, and could not fail of being satisfactory to me.

I have the honor to be, &c.

JOHN McCAULEY,
*Agent for the captors.*The Hon. B. W. CROWNINSHIELD, *Secretary of the U. S. Navy.*

No. 3.

Mr. McCauley to the Secretary of the Navy.

SIR:

NEW YORK, May 24, 1815.

I have the honor herewith to enclose you a copy of the proceedings of the District Court of New York in the case of the ship Cyane. The commanding officer informs me that he has some time since furnished you with an inventory of condition and dimensions. I have the honor to be, &c.

JOHN McCAULEY, *Agent.*The Hon. B. W. CROWNINSHIELD, *Secretary of the U. S. Navy.*

No. 4.

Decree of Condemnation.

At a special District Court of the United States of America, held for the southern district of New York, at the city of New York, on Tuesday, the 9th day of May, 1815: Present, the Hon. William P. Van Ness, Esq. Judge of the district.

The United States of America, and the officers and crew of the U. S. frigate Constitution, }
vs. } *In Admiralty.*
The ship Cyane, her armament, tackle, apparel, furniture, and stores.

The marshal having returned upon the motion which issued to him in this cause, that, in obedience to the said precept, he had attached the said ship Cyane, her armament, tackle, apparel, furniture, and stores, therein men-

tioned; on motion of the district attorney, on behalf of the United States and the captors aforesaid, the first, second, and third proclamations were made for any person to appear that could show any cause why the said ship *Cyane*, her armament, &c. should not be condemned as good and lawful prize to the use of the United States and the said captors, and they should be heard; and no person appearing to claim or defend the same, on the like motion, it is ordered by the court that the first, second, and third defaults be entered. Whereupon the said attorney prayed sentence of condemnation against the said ship *Cyane*, her armament, tackle, apparel, furniture, and stores; and thereupon it is ordered, sentenced, and decreed by the court, that the said ship *Cyane*, her armament, tackle, apparel and furniture, and stores, be, and the same are hereby, condemned as good and lawful prize to the United States and the captors aforesaid; and it is further ordered that the said ship *Cyane*, her armament, tackle, apparel and furniture, and stores, be sold by the marshal, according to law.

The same *vs.* the same.

On motion of the attorney of the United States, it is ordered by the court, that the execution issued to the marshal in this cause be stayed until the tenth day of June next.

Extract from the minutes of the court:

ROBERT FINN, *Deputy Register.*

No. 5.

The Secretary of the Navy to Captain Evans.

SIR:

NAVY DEPARTMENT, *June 7, 1815.*

You will not deliver the ship *Cyane* into the hands of the marshal, but keep possession of her for the United States until further orders from this Department.

I am, respectfully, &c.

B. W. CROWNINSHIELD.

Captain SAMUEL EVANS, *Commanding Naval Officer, New York.*

No. 6.

The Secretary of the Navy to Mr. McCauley.

SIR:

NAVY DEPARTMENT, *June 8, 1815.*

Your letter of the 24th ultimo, covering the copy of the decree of the District Court of New York, in the case of the prize ship *Cyane*, has been received.

I have this day written to the navy agent to make an offer for the ship, in behalf of this Department, which, if not acceded to on the part of the captors, the ship will be sold at public auction, after giving due notice of the time and place of sale.

I am, respectfully, your obedient servant,

B. W. CROWNINSHIELD.

JOHN McCAULEY, Esq.

Agent for the captors of the ship Cyane, New York.

No. 7.

The Secretary of the Navy to John Bullus, Esq.

SIR:

NAVY DEPARTMENT, *June 8, 1815.*

The late British ship of war the *Cyane* having been condemned in the District Court of Admiralty for the district of New York, to the captors and the United States, (the *Cyane* having been a public ship belonging to the navy of Great Britain,) it is desirable to retain her in the navy of the United States, although such a ship is not actually wanted for the service.

You will, therefore, offer the agent of the captors, say forty thousand dollars for the ship, with armament and stores complete as she came from sea; that is, reserving the moiety thereof to the United States' Pension Fund.

If this offer is not accepted, you will immediately write to the Department, that orders may be given for the sale at public auction, after due notice shall be published in the public papers.

I am, respectfully, &c.

B. W. CROWNINSHIELD.

JOHN BULLUS, Esq., *Navy Agent, New York.*

No. 8.

The Secretary of the Navy to Captain Samuel Evans.

SIR:

NAVY DEPARTMENT, *June 9, 1815.*

You will be pleased to transmit immediately to this Department an inventory of the prize ship *Cyane*, including a description of her model and qualities, dimensions, condition of hull and spars, armament, sails, and materials, and quantity of stores, provisions, &c. on board, which may be included in an inventory for the sale of the ship. This statement is wanted immediately, to enable the Department to decide upon the value of the ship, and purchase for the public service.

I am, respectfully, &c.

B. W. CROWNINSHIELD.

Captain SAMUEL EVANS, *Commandant U. S. Navy Yard, New York.*

No. 9. (1.)

Captain Samuel Evans to the Secretary of the Navy.

U. S. NAVY YARD, NEW YORK, *June 12, 1815.*

SIR:

I have had the honor to receive your letter of the 7th instant, relative to the ship *Cyane*, and it is, in consequence, proper that I should state to you what I have learned respecting her.

It appears that, agreeable to your instructions to Lieutenant Hoffman, the prize master, the ship was reported to the district attorney, and libelled. This proceeding, I suppose, placed her in the possession of the District Court; and the marshal, as the executive officer of that court, demanded and received from Lieutenant Hoffman the keys of the ship, which he still retains in his possession, having secured the hatches, and placed a deputy on board, to see there was no embezzlement.

In the early part of last month, the ship was condemned as forfeited to the United States and the captors, and an execution issued from the court to the marshal, directing the sale of her; and she was advertised for sale accord-

ingly. The agent of the captors, however, moved the court to stay the execution, with a view to produce proof of the inferiority of the capturing ship, and make an arrangement with the Government respecting the purchase of her; which was granted until the 10th of this month. The court, however, has not yet met; but, immediately they do, it is supposed they will direct the marshal to proceed in conformity to their former decree, or deliver the ship to the captors.

Thus, sir, this ship is situated; and, on the assumption that it is not your intention that I should, in a military point of view, enter into collision with the civil authority, I have done no more than direct the navy officer on board not to suffer her, or any thing in her, to be removed without my knowledge; and, as she is at the yard, I shall keep her here until I can hear from you on the subject. Even this measure, however, may produce opposition and difficulty, and I request your early sanction or disapproval of it, with such other orders on the subject as you may judge necessary from the above exposition.

I have the honor to be, very respectfully, sir, your obedient servant,

SAMUEL EVANS.

Hon. B. W. CROWNINSHIELD, *Secretary of the Navy.*

No. 9. (2.)

Mr. John Bullus to the Secretary of the Navy.

NEW YORK, June 12, 1815.

SIR:

I have had the honor to receive your letter of the 8th instant. Agreeably to your directions, I have made the offer you directed to the agent of the captors of the late British ship the Cyane, of forty thousand dollars for the ship, with her armament and stores complete as she came from sea, reserving the moiety thereof to the United States' Pension Fund.

The agent states that he is not prepared to give an answer to this offer previous to consulting with the captors, for which purpose he will this day proceed to Boston; and in a short time I expect to receive his answer.

I have the honor to be, &c.

JOHN BULLUS.

The Honorable B. W. CROWNINSHIELD, *Secretary of the Navy Department.*

No. 10.

The Secretary of the Navy to Captain Samuel Evans.

NAVY DEPARTMENT, June 16, 1815.

SIR:

I have received your letter of the 12th instant. The power of the United States' court does not extend to any control over the property after legal condemnation. The owners of the ship will take possession, and direct her to be sold when they think proper. The marshal and the court can always depend upon the Government for their fees and charges. So long as the United States are a party, that ship must not be sold without the authority of the Navy Department, and you are directed to forbid such sale, or to deliver the ship up; and the marshal will certainly not sell under such circumstances.

It is not to be expected that any officer of the United States will disobey a direct injunction of the Executive, expressed through either of the Departments; and all ideas of force must consequently be out of the question.

I am, respectfully, &c.

B. W. CROWNINSHIELD.

Captain SAMUEL EVANS, *Commanding Naval Officer, New York.*

No. 11.

John McCauley, Esq. to the Secretary of the Navy.

NEW YORK, June 19, 1815.

SIR:

I received from Mr. Bullus, Navy Agent at New York, the proposals he was directed by the Navy Department to make for the prize ship Cyane, viz. the Government will take the Cyane, at forty thousand dollars, on condition that the captors agree to relinquish for the Navy Pension Fund one moiety thereof, which would leave to the captors, after deducting the court charges, agent's commission, port expenses, &c. about eighteen thousand dollars as a reward for their gallantry in subduing two ships of war of the enemy, superior in force to their own ship, in a time and style unparalleled, I believe, in naval history. I must confess, sir, that an offer so far short of my expectations, and below the value of a ship of the Cyane's description, (which is, in fact, a vessel superior in force, capacity, and many qualities, to some of the United States frigates, as first built—say the Boston, the Adams, the John Adams, and the General Green,) that I feel myself much at a loss on the occasion, and a difficulty in making known to the officers, seamen, and marines concerned, the manner and extent of your disposition to reward their merit. I therefore determined only to communicate your proposals in a private letter to Captain Stewart, for his information, believing that you have not given the subject such consideration as it merits on the part of Government, both as respects its fairness between them and the captors, and the policy of Government in rewarding those who have so largely contributed to the honor of our flag, to the character of our marine, and perished, or bled, in the cause of their country. Sir, it has time immemorial been the established practice of naval powers to encourage their marine, by rewarding their gallantry in every possible way, that they may be excited to great and glorious acts of heroism, satisfied that the high national character the country acquires by their brilliant achievements more than compensates the nation for any of those pecuniary, or other rewards, they bestow on their gallant citizens, or subjects in arms, while at the same time they hold the power of punishing with death or disgrace those who are guilty of acts of folly or indiscretion, and who thereby hazard the public character and public property. As this has been the usage and practice of all nations hitherto, (not excepting our own,) so it has been also their policy and pride to bring into their service all the national ships of war, which the skill and courage of their marine have subdued and conducted into port, by a fair valuation of the vessel, her armament, stores, &c. made by persons competent to judge and decide on the same, as a vessel of war for public service, and not in the manner of a merchant, who is bargaining for a vessel for mercantile purposes, and for which he cannot, at all times, afford to give the full value, but wishes to get a bargain, as cheap as he can, let who will suffer. It may be said, sir, that the Government is under no obligation to purchase the prize ships of war, unless it suits their convenience to bid them in for public service, as competitors with individuals under the hammer of an auctioneer. And as no individual would be desirous to have ships built for war to prosecute mercantile operations with, the Government agents could procure them at their own price, and at one fourth their value: but, sir, would this mode of proceeding comport with the true policy of Government, and the dignity of a liberal and enlightened nation? Would it carry with it that generous reward due to their heroic citizens? And would it not be injudicious, by opening to the enemy, or those who may become our enemy, a market whereat to recover at a cheap rate their lost ships of war, or afford to the latter, at the expense of your gallant citizens, the cheap means of annoyance to yourselves? It is, therefore, upon this principle, as well as to reward the victorious, that the common practice and usage of nations has been to purchase all the captured ships of war; and if the officers, seamen, and marines, are bound in their duty to the Government by the custom and practice of the sea service, does

not the universal practice of public service in honor bind the Government to their officers, seamen, and marines? By the instructions generally given to the commanders of our ships of war in the late contest with Great Britain, I have understood, that they have been ordered to destroy the merchant vessels, and their cargoes, with certain exceptions, lest they put to hazard the ship under their command: this being admitted, that opening has, by the order of their own Government, been closed to their receiving any advantage in that way, and the very small portion which falls to their share, of what they may get in, under those exceptions, leaves (after the heavy duties, charges, and Navy Pension Fund &c., are satisfied) but little encouragement to the service, unless the Government act with liberality towards them, in the purchase of the ships of war sent in. By the act of Congress for the distribution of prizes, the law declares that all prizes of equal or superior force to the vessel making the capture shall belong to, and be wholly distributed among, the captors. This principle has hitherto been practised on, and the courts, or those to whom it belonged to decide the question, have in several instances decided with that liberality towards the captors, which has always distinguished the intent and meaning of the honorable Congress of the United States, the rate of the United States ship making the capture as established by the act of Congress, and the actual force of the vessel captured, has been taken as the standard of their respective forces; or how could the Insurgent be declared of equal force to the Constellation, under Commodore Truxton, that ship mounting as many guns as the Insurgent, and they twice the weight of caliber—the Insurgent French twelves on her gun deck, and the Constellation English twenty-fours. This was also the case when the Macedonian was declared to be of equal force to the frigate United States, although not equal in any one respect otherwise—the Macedonian mounted forty-nine guns, the calibers of eighteens, twelves, and thirty-twos, the United States fifty-six guns, twenty-fours and forty-twos: so also was the Brig Boxer given up to the captors on the same principle (when actually inferior in number and weight) to the Enterprise.

In the case under consideration the attacking force or combined force of the two ships Cyane and Levant were actually superior in the number of their guns, and weight of caliber, not only to the rate of the Constitution as established by act of Congress, but superior in those points to her whole force. Much might be said in elucidation of this subject, but I deem it improper to intrude further on your valuable time, but, as, agent for the captors, I have considered it as proper to submit the foregoing considerations to you, and I trust that the officers, seamen, and marines of the precious ship Constitution will not be doomed by their Government to receive a compensation for the Cyane (actually a frigate, and, as I understand, sound and put in complete repair prior to her leaving England last fall, when she was newly coppered, well fitted, and found in abundance of stores of all kinds for six months, at the time of her capture) less than was paid by Government to the captors of the Epervier.

You will oblige me, sir, by as early a decision in this case as your more important official duties will permit.
In the mean time, I remain, with respect, your obedient servant,

JOHN McCAULEY.

Honorable W. CROWNINSHIELD, *Secretary of the Navy.*

No. 12.

The Secretary of the Navy to John McCauley, Esq.

NAVY DEPARTMENT, June 23, 1815.

SIR:

In reply to your letter of the 19th June, current, I have to observe that the offer made by this Department, for the prize ship Cyane, is, in my opinion, fully equal to the value of that ship. If the captors should think themselves entitled to extra compensation for their bravery and good conduct, in capturing the Cyane and Levant, that will be a subject for the consideration of Congress, and which this Department cannot decide.

It appears that the ship is very much cut up in the hull, spars, and rigging, and will require large and expensive repairs; at the same time that the Government cannot apply, at this period, a larger sum out of any existing appropriations; and, should this offer not be accepted, I request your determination, in order that instructions may be given for the disposal of the ship at public sale.

I am, respectfully, your obedient servant;

B. W. CROWNINSHIELD.

JOHN McCAULEY, Esq. *New York.*

No. 13.

The Secretary of the Navy to John McCauley, Esq.

NAVY DEPARTMENT, October 27, 1815.

SIR:

The offer that was made for the prize ship Cyane was what I was authorized to do by the President of the United States.

As Congress will meet soon, would it not be better to come before them for remuneration? Nothing would give me more pleasure than to be legally authorized to be just, and even generous, to the captors, who so bravely maintained the honor of their country, but I do not see that I am.

Very respectfully, yours, &c.

B. W. CROWNINSHIELD.

JOHN McCAULEY, Esq. *Prize Agent for Ship Constitution.*

No. 14.

John McCauley, Esq. to the Secretary of the Navy.

PHILADELPHIA, November 28, 1815.

SIR:

Before I left New York I informed the captors that I had accepted your offer of forty thousand dollars for the prize ship Cyane, and did flatter myself that I should, before this, have received the money. I shall feel myself very much indebted to you to say when I shall be paid, or, if any difficulty has arisen, be so good as to state it to me, that I may make it known to the concerned.

I have the honor to be, &c.

JOHN McCAULEY.

The Hon. B. W. CROWNINSHIELD, *Secretary of the Navy.*

P. S. The court charges, amounting to thirteen hundred dollars and ninety cents, have been paid in New York by my order, as follows, viz:

Marshal's fees,	-	-	-	-	-	-	-	\$650	90
District Attorney's fees,	-	-	-	-	-	-	-	500	00
Clerk's fees,	-	-	-	-	-	-	-	150	00

\$1,300 90

And the ship ready for delivery to the United States.

No. 15.

The Secretary of the Navy to John McCauley, Esq.

NAVY DEPARTMENT, December 1, 1815.

SIR:

I have received your letter of the 28th ultimo. The amount of the purchase of the ship *Cyane*, \$40,000, is remitted to the Navy Agent at New York, with instructions to have the bill of sale executed in your presence by the marshal, and all the materials, with the ship, delivered over to the commandant of the navy yard, previous to the payment of the money, in order to avoid, as much as possible, any difficulty that might arise out of the transaction.

I am, very respectfully, your obedient servant,

B. W. CROWNINSHIELD.

JOHN McCAULEY, Esq. *Prize Agent for the Cyane, Philadelphia.*

No. 16.

The Secretary of the Navy to John Bullus, Esq.

NAVY DEPARTMENT, December 1, 1815.

SIR:

Having purchased the prize ship *Cyane* for the sum of forty thousand dollars, a warrant for which is enclosed in favor of John McCauley, Esq. agent for the captors. Before the payment of the amount of this warrant to Mr. McCauley you will have a bill of sale duly executed by the Marshal of the United States for the District of New York, and see the ship delivered over by him to Captain Samuel Evans, commandant of the navy yard, including all her armament, ammunition, provisions, stores of all kinds, in every department, iron and other ballast, equipments, and appurtenances of every description, which belonged to the said ship at the time of her arrival at the port of New York, and free from all charges, costs of condemnation, and fees of court, or of the marshal; and recite all the foregoing conditions and articles in the bill of sale from the marshal. It is distinctly to be understood that the ship is to be delivered to the officer appointed by this Department complete in all these particulars, and free from all charges of every kind whatever.

You will then, upon the execution of said bill of sale, which Mr. McCauley will sign as a witness, pay over to him the amount.

I am, very respectfully, &c.

B. W. CROWNINSHIELD.

JOHN BULLUS, Esq. *Navy Agent, New York.*

No. 17.

The Secretary of the Navy to Captain Samuel Evans.

NAVY DEPARTMENT, December 1, 1815.

SIR:

The prize ship *Cyane* having been purchased by this Department for the United States' service, you will have an exact inventory taken of her armament, ammunition, provisions, sails, equipments, and appurtenances of every description, and have the same compared with the originals at the time of the ship's arrival at the port of New York.

The ship will be secured at the navy yard, ready for such repairs or service as may be ordered.

I am, very respectfully, &c.

B. W. CROWNINSHIELD.

CAPTAIN SAMUEL EVANS, *Commandant U. S. Navy Yard, New York.*

No. 18.

John McCauley, Esq. to the Secretary of the Navy.

NEW YORK, December 7, 1815.

SIR:

Yours of the 1st came duly to hand, and I repaired to this place to fulfil your request. I have waited on the marshal, who declares that he has nothing to do with the ship, having delivered her up to me, and therefore will not be a party in executing a bill of sale. The examination of her armament, stores, &c. are progressing, and I hope will be complete in a few days. If any deficiency should be found, I trust the captors will not be required to make them good, as the ship has been entirely out of their control.

I have the honor to be, &c.

JOHN McCAULEY.

THE HON. B. W. CROWNINSHIELD, *Secretary of the Navy.*

No. 19.

The Secretary of the Navy to Jonathan Fisk, Esq. United States District Attorney, New York.

NAVY DEPARTMENT, December 11, 1815.

SIR:

I submit the enclosed question to your consideration, whether the bill of sale, executed by John McCauley, Esquire, prize agent for the captors, will be valid; or whether, as in the case of the *Macedonian*, the marshal ought not to make the bill of sale to the United States? Your opinion will oblige me.

I am, very respectfully, your obedient servant,

B. W. CROWNINSHIELD.

JONATHAN FISK, Esq. *U. S. District Attorney, New York.*

No. 20.

Jonathan Fisk, Esq. to the Secretary of the Navy.

NEW YORK, December 16, 1815.

SIR:

I have the honor to state, in answer to yours of the 11th instant, that the District Court having decreed a delivery of the sloop of war *Cyane* to the captors or their agent, instead of ordering a sale, it will be competent for Mr. McCauley, the authorized agent of the captors, to execute the bill of sale. The decree of the court will be inserted in, and constitute a part of the bill of sale. This will, in my opinion, be a valid transfer of the vessel.

I have the honor to be, &c.

JONA. FISK.

THE HON. B. W. CROWNINSHIELD, *Secretary of the Navy.*

No. 21.

The Secretary of the Navy to John Bullus, Esq. Navy Agent, New York.

NAVY DEPARTMENT, December 19, 1815.

SIR:

You will require of Mr. McCauley a bill of sale of the ship Cyane, in which will be inserted the decree of the court, and all the other items as noted in my letter to you of the 1st December instant; upon the execution of which, you will pay over the amount of purchase money to Mr. McCauley.

I am, very respectfully, &c.

B. W. CROWNINSHIELD.

JOHN BULLUS, Esq. *Navy Agent, New York.*

No. 22.

The Secretary of the Navy to John McCauley, Esq. Philadelphia.

NAVY DEPARTMENT, December 20, 1815.

SIR:

The navy agent at New York was yesterday instructed to receive from you a bill of sale of the ship Cyane, and to pay you the amount of prize money.

I am, very respectfully, your obedient servant,

B. W. CROWNINSHIELD.

JOHN McCAULEY, Esq. *Philadelphia.*

No. 23.

The Secretary of the Navy to John McCauley, Esq.

NAVY DEPARTMENT, December 30, 1815.

SIR:

In reply to your letter of the 27th current, I inform you, that the amount of the purchase of the ship Cyane was drawn for, by warrant upon the Treasurer, on the 30th November, ultimo.

The navy agent has been advised accordingly, and is, no doubt, prepared to pay over the amount to you, upon executing the bill of sale.

I am, very respectfully, your obedient servant,

B. W. CROWNINSHIELD.

JOHN McCAULEY, Esq. *Philadelphia.*

No. 23.

The Secretary of the Navy to Captain Samuel Evans.

NAVY DEPARTMENT, January 1, 1816.

SIR:

I have received your letter of the 27th ultimo, with the inventory of stores delivered into the navy store at New York.

In your letter, stating the deficiency of articles to a large amount, you do not say how those stores have been disposed of it is to be presumed that they have all been delivered upon regular requisitions for the United States service, and that the storekeeper can thus account for them; if not, you will be pleased to state whether they have been improperly disposed of, and are not accounted for in the storekeeper's accounts.

I am respectfully, &c.

B. W. CROWNINSHIELD.

Captain SAMUEL EVANS, *Commandant of the United States Navy Yard, New York.*

No. 25.

Captain Samuel Evans to the Secretary of the Navy.

UNITED STATES NAVY YARD, NEW YORK, January 1, 1816.

SIR:

I have had the honor to receive your letter of the 1st instant.

The first inventory of the Cyane was taken by Mr. Abbott, prize-master's mate, who was in charge of her during a temporary absence of Lieutenant Hoffman, assisted by the master carpenter and boatswain of the yard.

The second which I transmitted you was taken under the superintendence of the storekeeper of the yard, and sailing-master Loomis, the latter of whom, at the request of the agent of the captors, I authorized to receive the keys of the ship from the marshal, when, by the decree of the court, he delivered her up to them. I had no reason to believe but both inventories were taken essentially correct; the first one, it is true, leaves room to doubt whether some articles, particularly in the gunner's department, are not considered twice, and the officers of the yard, who were at the taking of that inventory, state that a liquor was estimated without measuring it. The deficiency of provisions may, perhaps, in some measure be accounted for in victualling the prize crew, who were not discharged from her until the middle of September, as I find there was nothing but bread and spirits drawn from the yard for that purpose. The other articles have no doubt been pillaged some time between the date of the two inventories. The marshal held charge of her, and every article of any value was under locks and keys, which he or his deputy had in possession; but since I wrote you on the subject, Mr. Berry, the boatswain of the yard, has stated to me that Robert Atkins, a seaman, and one of the prize crew, informed him that Mr. Abbott, the prize-master's mate, had false keys, to correspond with those in the possession of the marshal, and there is some reason to believe that he has been knowing or accessory to the pillage.

Mr. Abbott, while I was absent on duty to the eastward, was discharged with the prize crew of the Cyane, their terms of service having expired. At the request of Lieutenant Hoffman, he was re-entered to assist him in the care of that vessel, and at Lieutenant Hoffman's further earnest request, I permitted him to be transferred to the Tom Boline, after that officer's appointment to her. Atkins was also discharged at the same time. I have had Mr. Berry in quest of him, since he informed me what is stated: he has not yet found him, but when he does, I shall inform you more fully on that subject.

I have the honor to be, &c.

SAMUEL EVANS.

Honorable B. W. CROWNINSHIELD, *Secretary of the Navy.*

No. 26.

Captain Samuel Evans to the Secretary of the Navy.

U. S. NAVY YARD, NEW YORK, January 13, 1816.

SIR:

Since I had the honor to address you on the subject of the Cyane, I have not been enabled to gain much information respecting the plunder committed on board that vessel. Atkins, who informed Mr. Berry that Mr. Abbott had false keys, has kept himself out of the way, and it is said that he has gone to Charleston, South Carolina; another person, that Mr. Berry found in seeking Atkins, by the name of Grant, has declared that he has known Mr. Abbott open the spirit room when the marshal was absent, and had the keys with him, and take rum from it, but knows of nothing else; and I have myself seen a man belonging to her by the name of Twine, who says that he cut up the main deck awning to make boat sails.

The marshal's deputy, who had charge of the keys, and slept on board, states that he never left them with Mr. Abbott when he was absent, except at the time they were taking the first inventory.

I have the honor to be, &c.

SAMUEL EVANS.

The Honorable B. W. CROWNINSHIELD, *Secretary of the Navy.*

No. 27.

John Bullus, Esq. to the Secretary of the Navy.

NEW YORK, January 20, 1816.

SIR:

I have the honor to enclose you a bill of sale of the prize ship Cyane, unexecuted. Mr. McCauley came here again for the purpose of closing the business and receiving payment, but returned to Philadelphia yesterday. He states that it will be impossible for him to make a bill of sale conforming in all respects to your letters of the 1st and 19th December, owing to a deficiency in her stores. But he is willing to submit the bill of sale to the examination of the Department, and will agree to any modification you may be pleased to direct.

I have the honor to be, &c.

JOHN BULLUS.

The Honorable B. W. CROWNINSHIELD, *Secretary of the Navy.*

No. 28.

The Secretary of the Navy to John Bullus, Esq.

NAVY DEPARTMENT, January 27, 1816.

SIR:

I return to you herewith the bill of sale for the ship Cyane; it will be but just that an allowance should be made for the deficiency in the stores, if it can be done without too great expense and trouble; the amount is considerable, and you may have the point determined by any two intelligent and impartial men, and return the bill of sale, when duly executed, to this Department. Pressure of business has prevented an earlier answer to your letter of the 20th current.

I am respectfully, &c.

B. W. CROWNINSHIELD.

JOHN BULLUS, Esq. *Navy Agent, New York.*

No. 29.

John McCauley, Esq. to the Secretary of the Navy.

PHILADELPHIA, February 1, 1816.

SIR:

I wrote to you from New York on the 19th ult. which place I left under assurances from Mr. Bullus he would write to me on his receiving further instructions from you. I shall be extremely obliged to you to inform me if those instructions are gone on, and the nature of them so far as it affects what is expected of me, before I receive the purchase money.

I have the honor to be, &c.

JOHN McCAULEY.

The Hon. B. W. CROWNINSHIELD, *Secretary of the U. S. Navy.*

No. 30.

John McCauley, Esq. to the Secretary of the Navy.

PHILADELPHIA, February 2, 1816.

SIR:

I wrote to you on the 1st instant, and this day I received a letter from the navy agent at New York stating he was ready to arrange the business respecting the Cyane, provided I was willing to submit to a reference the costs of deficiencies in inventory. For my part I was privy to no inventory, but that taken in January last; and if any other was taken, let those who took it be accountable for the deficiencies that may appear. Should you insist on the captors making good those deficiencies, I must confess (though I must submit) that I conceive it to be neither "just nor generous."

I have the honor to be, &c.

JOHN McCAULEY.

The Hon. B. W. CROWNINSHIELD, *Secretary of the U. S. Navy.*

No. 31.

The Secretary of the Navy to John McCauley, Esq. Navy Agent, Philadelphia.

NAVY DEPARTMENT, February 6, 1816.

SIR:

I have received your letter of the 2d instant, and regret the delay occasioned by the Treasury arrangements, in making the payment for the ship Cyane.

As respects the deficiency in the inventory, the amount is too considerable to be passed over without investigation; but I have no disposition to make the captors account for the deficiency. I suggested to the navy agent the propriety of adjusting the business by a compromise; I now authorize him to take the ship with the present inventory, and to pay over the amount. In this, I wish to demonstrate my sincere desire to render justice to the captors, and to convince you, that my proposition arose solely from a sense of public duty; while I admit that the custody of the ship, between three parties, has been neglected to the prejudice of the United States; and the responsibility appears to be lost in the useless division of authority over the property.

I am, very respectfully, your obedient servant,

JOHN McCauley, Esq. *Philadelphia.*

B. W. CROWNINSHIELD.

No. 32.

The Secretary of the Navy to John Bullus, Esq.

NAVY DEPARTMENT, *February 7, 1816.*

SIR:

On the 27th ultimo you were authorized to have the allowance to be made for the deficiency in the stores of the Cyane determined by a reference to two intelligent and impartial men; but as the Department feels no disposition to require the captors to account for that deficiency, you will please to have the bill of sale duly executed and transmitted to this Department, paying to the agent of the captors the amount of purchase money.

I am, respectfully, &c.

B. W. CROWNINSHIELD.

JOHN BULLUS, Esq. *Navy Agent, New York.*

B. No. 1.

John Bullus, Esq. to the Secretary of the Navy.

NEW YORK, *February 19, 1816.*

SIR:

I have the honor to acknowledge the receipt of your letter of the 16th instant.

The prize ship Alert was purchased by me at marshal's sale, on the 26th October, 1812, agreeably to instructions received by Captain Hull from the Department, who then commanded on this station,) for the sum of eleven thousand two hundred dollars.

On the 27th of October, I made a requisition for the amount, which was received by me on the 6th November following, in draught No. 1576 from the Treasurer, agreeably to warrant No. 2967, in which was included also ten thousand dollars for "contingent." The amount was paid to Peter Curtanius, marshal, on the 16th November, and the receipt and bill of sale forwarded to the Accountant of the Navy, in my accounts for November 1812, per abstract P. voucher No. 1. I have the honor to be, very respectfully, your obedient servant,

JOHN BULLUS.

The Honorable BENJAMIN W. CROWNINSHIELD, *Secretary of the Navy.*

B. No. 2.

Captain D. Porter to the Secretary of the Navy.

WASHINGTON, *February 17, 1816.*

SIR:

In answer to your letter of yesterday, I have to state, that the Atlantic was valued at Valparaiso by Mr. Poinsett, the Consul General for Chili, and two American merchants there, at twenty-five thousand dollars; taking into the estimate her services for a year in the employ of the United States, together with her stores, ammunition, and armament complete.

This valuation I did not consider one-third the actual value of the ship, but as her services were wanting and the risk of recapture being great, I (acting between the United States and the officers and crew) felt satisfied if a compensation could be secured to the latter, in the event of her capture, equivalent to the chance of getting her to America. My capture occasioned the loss of the certificate of valuation, but having preserved a copy of it I forwarded one to the Department of New York, attested by Mr. Bostwick, the clerk who copied it. This, it appears, has been mislaid. My books are not here, and I have not at this moment the means of furnishing another. I shall write to Mr. Poinsett on the subject, however, and furnish you with satisfactory testimony on that head as soon as possible.

In regard to the sloop of war Alert, I am unable to state what the United States purchased her for. I have understood, however, that the agent of the captors has only received between three and four thousand dollars for their proportion of the ship; and that the United States are yet indebted to them for a quantity of stores taken out of her for the service of the fleets on the lakes, and for the vessels on the New York station.

The amount of the stores claimed by the captors will, probably, amount to the price of the ship: making the whole amount of the captors' proportion of the prize about twelve thousand or twelve thousand five hundred dollars. I am not enabled to inform you with greater precision, not having had a settlement with the agent, Major Hall of the marines; and I am sorry that his absence to the Mediterranean should prevent my consulting him. Many of the officers and men are dissatisfied with the valuation of the Alert, believing that she was of equal value to any other sloop of war since captured. I have the honor to be, &c.

D. PORTER.

Honorable B. W. CROWNINSHIELD, *Secretary of the Navy.*

C.

The President of the United States of America, to all to whom these presents shall come, greeting:

Know ye, that we, having inspected the records of the District Court of the United States for the district of New York, do find a certain entry or writing there remaining of record, in the words and figures following, to wit:

At a special District Court of the United States of America, held for the district of New York, at the city of New York, on Monday, the 1st day of March, 1813, at 11 o'clock, A. M. Present, the Honorable William P. Van Ness, Esq., one of the judges of the district of New York.

The United States of America, and the officers and crew of the U. S. frigate United States, }
vs. } Decree.

The frigate Macedonian, her tackle, apparel, and furniture, arms, stores, and ammunition. }

The marshal having returned upon the motion which issued in this cause, that, in obedience to the said precept, he attached the frigate or ship Macedonian therein mentioned, her tackle, apparel and furniture, arms, stores, and ammunition, and had given due notice to all persons claiming, that this court would, on this day, proceed to the trial and condemnation thereof, unless a claim should be interposed for the same; and on the motion of the attorney of the United States of America prosecuting in this district, the proctor for the libellants, the first, second, and third proclamations were each three times made for any person or persons to appear that can show any cause why the said

frigate or ship Macedonian, her tackle, apparel and furniture, arms, stores, and ammunition, should not be condemned as forfeited, pursuant to the prayer of the libel, and they should be heard; and no person appearing to claim or defend the same, it is ordered by the court that the first, second, and third defaults be entered. Whereupon, the said proctor for the libellants prayed sentence of condemnation against the said frigate or ship Macedonian, her tackle, apparel and furniture, arms, stores, and ammunition; the court, by this definitive sentence or final decree, doth pronounce, decree, and declare as follows, to wit:

That the said frigate or ship Macedonian, whereof a certain I. S. Carden was commander, her tackle, apparel and furniture, and the arms, stores, and ammunition taken therein and therewith, were rightly and duly taken and seized by the United States' ship of war United States, whereof Stephen Decatur, Esquire, is commander; and that the said frigate or ship Macedonian, her tackle, apparel and furniture, and the arms, stores, and ammunition taken therein and therewith, did, at the time of the capture and seizure thereof, (as far as appears to this court,) belong to Great Britain, or to some person or persons being subjects of Great Britain, or inhabiting within the territories of Great Britain, and, as such, ought to be accounted and reputed liable and subject to confiscation, and to be adjudged and condemned as and for good and lawful prize.

That the said frigate or ship Macedonian was a ship of war belonging to Great Britain, or persons being subjects of Great Britain, of equal force to the said ship of war the United States, by which the said frigate or ship Macedonian was captured; and, therefore, the court doth pronounce, decree, and declare, that the said frigate or ship Macedonian, her tackle, apparel and furniture, and the arms, stores, and ammunition taken on board the same, be adjudged and condemned as good and lawful prize to the commander, officers, and crew of the said United States' ship of war United States, the captors thereof.

And all the libellants in this cause consenting to dispense with a sale of the said frigate or ship Macedonian, her tackle, apparel and furniture, and the arms, stores, and ammunition taken on board the same, and agreeing that the said frigate or ship Macedonian, together with the tackle, apparel and furniture, and the arms, stores, and ammunition taken on board of the same, are of the value of two hundred thousand dollars, and that the same shall be taken and received by the United States of America, upon the payment of that price, the court doth further pronounce, decree, and declare, that, upon the payment of the aforesaid sum of two hundred thousand dollars by the said United States of America to the said commander, officers, and crew of the said ship of war United States, or to their agent or agents, to be by them divided and distributed according to law, the marshal of this court do deliver the said frigate or ship Macedonian, her tackle, apparel and furniture, arms, stores, and ammunition, unto the said United States of America, or unto any person or persons by them duly authorized to receive the same.

And the court doth lastly pronounce, decree, and declare, that the libellants, the commander, officers, and crew of the United States' ship of war United States, out of the money to be by them received, as aforesaid, do pay and satisfy the costs of this suit.

W. P. VAN NESS.

All which is promulged by this definitive sentence or final decree, read, signed, and promulged by the Honorable William P. Van Ness, Esq. one of the judges of the District Court of the United States for the district of New York, upon this first day of April, in the year of our Lord one thousand eight hundred and thirteen.

In testimony whereof, I have caused the seal of the said District Court to be hereunto affixed.

THERON RUDD,
Clerk of the district of New York.

D. No. 1.

The Secretary of the Navy to A. S. Bulloch, Esq.

Sir:

NAVY DEPARTMENT, July 24, 1814.

I have this moment received a letter from C. Harris, Esq., attorney for the district of Georgia, saying, "I proceeded immediately to libel the Epervier, and shall obtain a final condemnation in the beginning of August; and an early sale will take place, unless you wish it or order it postponed. I suppose you will order her to be purchased, as she cannot bring any thing like her value."

I regret that no agent for the captors has yet appeared to negotiate with this Department for the sale of the Epervier at an equitable and liberal price, which I am disposed to give, and which, by agreement of the parties, the court would have sanctioned. There appears, however, no alternative but a public sale, at which there will be no real bidder but the public at any thing like her value; and justice to the captors forbids that she should be sacrificed. I have, therefore, determined upon the highest price which I feel myself authorized to go in the purchase of the Epervier, for the service of the navy of the United States. You are, therefore, hereby authorized to purchase the Epervier, at public sale, at a sum not exceeding fifty-five thousand dollars, including in the purchase all her armament, ammunition, provisions, stores of all kinds in every department, iron, and other ballast, equipments, and appurtenances of every description which belonged or was attached to the said vessel at the time of her capture, and free from all charges against said vessel to the day of the sale, and also of the costs of condemnation and court charges. On this subject you will have a clear understanding with the district attorney and the marshal, and recite the foregoing conditions in the bill of sale from the marshal.

I am, respectfully, &c.

W. JONES.

A. S. BULLOCH, Esq. Navy Agent, Savannah.

*Extract of a letter from the Secretary of the Navy to Captain David Porter, dated*NAVY DEPARTMENT, *July 13, 1814.*

I confirm the purchase of the Essex Junior, for account of the United States, at the sum of twenty-five thousand dollars. You will please to transmit to this Department the valuation made by the persons appointed by you for that purpose.

F.

Statement showing the actual force, when captured, of the different prizes made by the United States' ships of war during the late contest with Great Britain, and taken into the service of the United States.

Ship Alert, 20 guns; viz. eighteen 32lb. carronades, and two long 12 pounders.
Ship Macedonian, 49 guns; viz. twenty-eight long 18's, two long 12's, and two long 9 pounders; and sixteen 32lb. and one 18lb. carronades.

Ship Atlantic, afterwards the Essex Junior, 8 guns; the caliber not designated.

Brig Epervier, 18 guns; viz. sixteen 32lb. and two 18lb. carronades.

Ship Cyane, 34 guns; viz. twenty-two 32lb., nine 18lb., and one 12lb. carronades, and two long 9 pounders.

[The prizes captured on the lakes, and taken into the service of the United States, are omitted in this statement, from an impression that they were not embraced by the resolution of the Senate.]

14th CONGRESS.]

No. 141.

[1st Session.]

MARINE CORPS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 22, 1816.

NAVY DEPARTMENT, *April 11, 1816.*

SIR:

In compliance with the request of the committee of the House upon Naval Affairs, communicated by your letter of the 4th instant, enclosing a resolution of the House of Representatives, I have the honor to state, for the information of the committee, that the number of officers, non-commissioned officers, musicians, and privates, proper to be retained in the marine corps upon a peace establishment, ought not, under existing circumstances, to be less than one thousand men, exclusive of commissioned officers, the number to which the corps was reduced in January last, in pursuance of the order of this Department; copy of which, marked A, is enclosed.

It will be perceived, by an inspection of the representations recently made by Lieutenant Colonel Franklin Wharton, the commandant of the corps, of which copies are herewith transmitted, marked B, that to supply the wants of the service, and give effectual protection to the public property at the various depots, it would be impolitic, at the present time, to recommend a further diminution; and, as the number of commissioned officers is not disproportioned to the strength of the corps, and as resignations frequently occur, it is not considered necessary to suggest any reduction in the number of the officers.

I have the honor to be, with the highest respect, sir, your most obedient servant,

B. W. CROWNINSHIELD.

Hon. JAMES PLEASANTS, JUN., *Chairman of the Naval Committee
of the House of Representatives.*

A.

NAVY DEPARTMENT, *January 24, 1816.*

SIR:

You are hereby authorized and directed to reduce the United States' marine corps, under your command, to the number of one thousand men, including the non-commissioned officers, musicians, and privates; and retaining the commissioned officers and staff upon the present establishment.

I am, very respectfully, &c.

B. W. CROWNINSHIELD.

Col. FRANKLIN WHARTON, *Commandant U. S. Marine Corps, Head Quarters.*

NAVY DEPARTMENT, *April 18, 1816.*

SIR:

In compliance with the request of the Naval Committee of the House of Representatives, communicated by your letter of the 16th instant, I have the honor to state, in reply to the first inquiry of the committee, that the present number of officers, staff, non-commissioned officers, musicians, and privates of the marine corps, authorized by the several acts of Congress, passed July 11th, 1798, March 22d, 1799, April 22d, 1800, March 3d, 1809, and April 16th, 1814, is as follows, viz: 1 lieutenant colonel, 2 majors, 20 captains, 32 first lieutenants, 38 second lieutenants, 117 sergeants, 233 corporals, 92 musicians, and 2,180 privates.

As it respects the second inquiry of the committee, I have to observe, that the marine corps has never been organized into regiments or companies; the guards requisite for the protection of the public property on shore, or the performance of duty on board the vessels of war, are considered as detachments, and vary in the number of

officers and men, according to the nature of the service on which they are employed. The law passed on the 3d of March, 1815, fixing the peace establishment of the army, directs a company to consist of one captain, one first lieutenant, one second lieutenant, four sergeants, four corporals, two musicians, and sixty-eight privates. This organization might be applicable to the marine corps while employed on shore; but the same number of privates of which a company in the army consists would form three detachments, each sufficient for a sloop of war, and would, consequently, require three lieutenants, and a proportional number of sergeants, corporals, and musicians.

The answer to the third inquiry of the committee may readily be deduced from the proportion of officers deemed necessary for the proper organization of the corps, conformably to the principles stated in the preceding article. The present officers of the marine corps, are one lieutenant colonel commandant, two majors, two captains, (majors by brevet,) twelve captains, exclusive of the three who form the staff, twenty first lieutenants, and eighteen second lieutenants, making the entire number of commissioned officers amount to fifty-eight.

The staff consists of an adjutant, paymaster, and quartermaster, selected from the captains. The duties of these officers are arduous, and considered, by the Department, to be of primary importance, and indispensable to the preservation of the corps. The non-commissioned staff consists of a sergeant major, quartermaster sergeant, drum and fife majors, with one sergeant or two corporals for the superintendence of the armory.

The staff being taken from the strength of the corps, leaves, of course, that number of effective officers and non-commissioned officers deficient for actual service; and the whole number now in commission cannot be reduced without inconvenience to the organization, taking into view the probable resignations which may occur in the course of the year.

Enclosed is a copy of an estimate relative to the expense of the marine corps during the year 1816.

All which is respectfully submitted.

B. W. CROWNINSHIELD.

HON. JAMES PLEASANTS, JUN.

Chairman of the Naval Committee of the House of Representatives.

230 on board frigates and sloops of war.

Total, 350

B.

NAVY YARD, GOSPORT, VIRGINIA, *March 31, 1816.*

SIR:

My guard remains much as when I last wrote you, with the exception of one man dead, (Graham,) who I regret much in consequence of his worth. The guard have very arduous duty to perform. I have lately had to triple my sentries round the yard, in consequence of an attempt being made to fire it, but was fortunately discovered by sergeant Dentzell, my orderly. I am in hopes you will be enabled to send me some more men shortly; they are much wanted here. I should be much pleased if a wall could be put up round the yard; it would prevent many desertions, and all attempts of incendiaries. May I hope to hear from you shortly, relative to the prisoners I mentioned in my last?

With respect, &c.

THO. R. SWIFT, *Captain M. C.*

Lieut. Col. FRANKLIN WHARTON,
Commandant Marine Corps, Washington.

HEAD QUARTERS OF MARINES, WASHINGTON, *April 8, 1816.*

SIR:

The subjoined copy of an inquiry made of the officers of the corps in command of guards stationed at the navy yards at the time of discharging such men as came within your instructions on that subject, I beg leave to submit, and have now, in obedience to your orders lately received, made extracts from their reports in relation to it, which I presume will be satisfactory in showing what duty has been, and now is, required, from the detachments so stationed.

(Extract No. 1.)

The order for discharges will be immediately attended to. After filling up the guard of the Independence and Washington, I shall not, in my opinion, have any thing like a sufficient number for this command. I have averaged ten sentinels; three reliefs will be thirty men; thirty, as a relief guard, will be sixty; taking into consideration sick, waiters, fatigue, cooks, deaths, and desertions, fifty more will be necessary; making the strength one hundred and ten privates. I shall not have forty.

ROBERT D. WAINWRIGHT, *Captain commanding,*
Stationed at the navy yard, Charlestown, Massachusetts.

[For the months of January and February, Captain Wainwright reports sixteen deserters, three of whom only have been regained.]

(Extract No. 2.)

In reply to your letter of the 24th instant, as respects the strength of the guard necessary for the protection of the public property in the navy yard at New York, I will state, that at no time since my command at that post could the public property be sufficiently protected without from eight to ten sentinels a day; and I should be unwilling to hold myself responsible for the property of the United States unless I could have a guard of sufficient strength to protect it, and which, in my opinion, cannot, or ought not, to be a less number than two musicians, four sergeants, four corporals, and sixty-five privates, with their commissioned officers.

RICHARD SMITH, *Major commanding,*
Stationed at the navy yard, New York.

[Major Smith here makes no allowance for sick, prisoners, deaths, desertions, or discharges.]

(Extract No. 3.)

The number of sentinels posted daily is five: one at the barrack's gate, one at the hospital, one at the water gate, and two on the line of the rope walk, to prevent plundering in that quarter, which had commenced; the two last were particularly demanded by the commanding officer of the yard; the sentinel at the gates, and at the hospital, are essentially necessary. It is my opinion that the following number of officers, non-commissioned officers, musicians, and privates, will be required at this station for the security of the public property, viz: three officers, five sergeants, four corporals, four musicians, and fifty-five privates.

ANTHONY GALE, *Major of Marines,*
Stationed at the navy yard, Philadelphia.

[Major Gale deducts from this number fourteen privates, say waiters, those on the sick list, cooks, &c. but makes no allowance for prisoners, deaths, and desertions, or discharges.]

(Extract No. 4.)

Captain Cassin has stated to me, should the guards be competent, he would require five sentinels for the protection of the public property in the yard; these are independent of the one which is requisite in front of the barracks, and one at the marine battery; I should, therefore, say six at the smallest calculation; that, from eighty to ninety effective men would not be beyond the number to be stationed in this yard, taking into consideration deaths, sickness, and desertions.

THOMAS R. SWIFT, *Captain commanding,*
Stationed at the navy yard, Gosport, Virginia.

[Captain Smith here makes no allowance for prisoners and discharges.]

Extract of a letter from Major Daniel Carmick, stationed at New Orleans.

The draught you have made on me for men has reduced my number, so much as that to enable me to comply with the commodore's requisition, which has lately been increased on account of an attempt being made to burn the large ship at the navy yard, Tchefonctas, I must, therefore, request you to authorize my recruiting a sufficient number for that purpose.

[This draught was made before the return of the squadron from the Mediterranean, but was then revoked.]

Extract of another letter from the above-mentioned officer, since received.

I was pleased when I learned that your order for a detail from my command was revoked, as I have now barely sufficient to comply with the requisition of the commodore of this station. The Saranac brig came on this station without marines, which, of course, took a sergeant, a corporal, and twelve privates; which, with the other vessels on the station, leaves not more than sufficient for the guards on shore. Submitting the foregoing for your consideration, I now beg leave to state, sir, that I have at head quarters scarcely a sufficient number for the guard there, at the navy yard, and magazine; and that the mechanics in the armory have been frequently required for duty on account of the number on the sick report and prisoners. In addition to the guards above stated, permit me to observe, that, at Baltimore a small guard has been stationed, and is now continued; that at Portsmouth, New Hampshire, I have been for several years required to keep one; and that at Sacket's harbor and Erie, guards have been and still are stationed for the protection of the property; and that I believe, from the information received, one is essentially necessary on lake Champlain; but the reduced state of the corps, and having received no orders to that effect, I have never formed one for that station. Since the report of Captain Swift, at Gosport, Virginia, I have received the accompanying letter.

[In the order for reducing the corps, Major Carmick was directed to discharge from seventy to eighty men, to be taken from those whose terms of service were expiring.]

The corps reduced, it will be proper, in the disposition of our men, that I should be informed on certain points relative to guards. Report to me, therefore, the following: what number of sentinels on the average have you been required to post under requisition of the commanding naval officer of the yard, for the security of the public property, &c. and on that number deemed in future to be necessary; what, in your opinion, ought the number of privates to be on the station, to allow the performance of such guard duty as is usual at forts and fortifications, as to the relief of guards, calculating on deaths, desertions, &c. &c.

I have the honor to be, &c.

FRANKLIN WHARTON, *Lt. Col. Com. of Marines.*

The Hon. B. W. CROWNINSHIELD, *Secretary of the Navy.*

[To Captain Robert Wainwright and others, officers stationed at navy yards.]

No. 142.

[2d SESSION.]

CLAIM FOR PRIZE MONEY ON VESSELS CAPTURED BY THE ARGUS AND DESTROYED AT SEA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 30, 1816.

Mr. PLEASANTS made the following report:

The Committee on Naval Affairs, to which was referred the petition of Thomas J. Allen, administrator of William H. Allen, late commander of the United States' brig *Argus*, and the surviving officers and crew of that vessel, and the heirs and representatives of the officers and crew deceased, have had the said petition under consideration, and have agreed upon the following report and resolution thereupon:

The petitioners state, that, in the summer of 1813, during the late war with Great Britain, William H. Allen, commander of the United States' brig *Argus*, was ordered by the Navy Department to receive on board, and convey to France, our late minister to that country, and afterwards to cruise on the coast of England and Ireland, for the purpose of intercepting and destroying the commerce of the enemy in that quarter; that after executing the former part of the order, the *Argus* proceeded on her cruise, and in the course of three weeks, on a service of the greatest difficulty and danger, captured nineteen British vessels in the Irish channel, amounting in value, with their cargoes, to about two and a half millions of dollars; that his orders from the Navy Department forbade the commander to send any of his prizes into port, "unless their value and qualities should render it morally certain that they might reach a safe and not distant port." All those prizes, except two, were accordingly destroyed at sea, with their cargoes, and the only two which, under his orders, he deemed himself at liberty to attempt to save, were re-captured by the enemy; that after seriously injuring the commerce of the enemy in those seas, the *Argus* was captured by a superior force on the 14th of August, 1813; her commander, with other officers, and many of her crew, mortally wounded, and the survivors remained a long time in captivity; the petitioners ask some remuneration for their services and losses in the destruction of their prizes: the amount they leave to the judgment of Congress.

The committee have bestowed an attentive consideration on this case, and with every disposition to appreciate the merits of the officers and crew of the brig *Argus*, are of opinion that the prayer of the petition ought not to be granted. It is well recollected what a number of circumstances concurred to produce that impulse of feeling, which conferred upon the officers and crew of the frigate *Constitution* the reward which they received for the capture of the *Guerriere*. The then recent disasters of our land forces; the brilliant contrast on the ocean; the success of a part of our infant navy in its first contest with that of Great Britain; the apprehensions entertained of the result of such a contest, all conspired to produce a burst of applause from one end of our country to the other. This feeling extended to the National Legislature, and along with resolutions expressive of their high sense of the merits of the officers and men, was coupled an act bestowing a pecuniary reward, in consideration of the necessity they were under of destroying their prize, to prevent her falling into the hands of the enemy, then in force in the immediate neighborhood. The cases of compensation, to be found in the acts of Congress, were generally bottomed upon this precedent. The committee doubt the propriety of extending the principle. It is unquestionably true, that sailors and soldiers in the public service of a Government, are bound to obey its orders. Soldiers have to execute the most difficult orders whenever the necessity occurs, without the hope of prize money or emolument in any shape. Sailors, when war exists with a commercial nation, have this prospect, being entitled to a proportion of what they capture if their prizes get safe into port; and this prospect no doubt has some influence in inducing them to engage in the public service. But should the policy of the Government point out the necessity or propriety of carrying on a destructive warfare against the commerce of an enemy, it has undoubtedly the complete and unqualified right to order its public ships on such a service. It will be remembered, that such was the opinion of Government of our capacity to injure our enemy essentially in this way, that at the time the news of peace arrived, a law had passed, and preparations were making under it, to fit out a squadron of small ships for this express purpose. No one imagined, it is believed, that the Government was to pay or make compensation in any way to the officers and crews of the vessels engaged in this service, for what they might destroy of the enemy's commerce. Should the United States be unfortunately engaged in another war with the same Power, (an event at least possible,) the same mode of warfare might, and probably would be resorted to, particularly during the comparatively weak state of our navy. Should the prayer of this petition be granted, no one acquainted with the force of precedents can doubt that it would be resorted to; and the extent of the expense to be incurred by the Government in such a case, cannot be foreseen or calculated. But were it the opinion of the committee that some compensation ought to be made in this case, they should find great difficulty in fixing a standard by which it should be regulated; any rule to which they could resort must be entirely capricious, and could not, they believe, be bottomed on principle. All the circumstances connected with the petition being duly considered, the committee recommend to the House the adoption of the following resolution:

Resolved, That the prayer of the petition ought not be granted.

[2d SESSION.]

CONTRACTS FOR THE YEAR 1816.

COMMUNICATED TO THE SENATE, ON THE 14TH OF JANUARY, 1817.

NAVY DEPARTMENT, *January 13, 1817.*

SIR:

I have the honor of transmitting, herewith, a statement of the contracts made by the Navy Department during the year 1816, prepared in obedience to the act of the 3d of March, 1809, entitled "An act further to amend the several acts for the establishment and regulation of the Treasury, War, and Navy Departments."

I have the honor to be, with great respect, sir, your obedient servant,

B. W. CROWNINSHIELD.

The Hon. the PRESIDENT of the Senate of the United States.

Statement of the Contracts made by the United States' Navy Department in 1816.

Date of contracts.	Names of contractors.	Articles contracted for.	Price of articles.	When to be delivered.	Where to be delivered.	
1816.						
January 15	Nathan Starr, -	1,000 ship cutlasses,	\$3 each,	Within one year,	Middletown, Connecticut.	
February 12	Lemuel Pope, Jr. -	Freight of two vessel loads of live oak timber, from Sapelo island, Georgia.	\$15 per ton,			Navy Yard, Washington.
May 1	John T. Boyd, -	100 tons of saltpetre,	24 cents per pound,	50 tons in 12 months, 50 tons in 15 months.	New York.	
May 9	John Pigeon, -	For raising and landing, on the navy yard wharf at Washington, certain guns, kentledge, shot, and bolts, sunk in the late sloop of war Argus.	\$15 per ton for guns and kentledge, \$20 per ton for shot and bolts.			Navy Yard, Washington.
June 1	John Watkins,	5,000 trenails, 24 inches in length,	\$19 per thousand,	}	Do. do.	
		16,000 do. 30 do.	\$25 do.			
		5,000 do. 36 do.	\$31 do.			
		2,000 do. 40 do.	\$35 do.			
June 1	John Mason,	32 forty-two pound cannon, 36 thirty-two do. 24 thirty-two pound carronades,	\$125 per ton, \$135 each,	}	Georgetown, D. C.	
		130 tons round shot,	5 cents per pound,			
		60 tons of grape shot and stools,	8 cents per pound for grape shot, 5½ cents do. for stools.			
June 14	Edward Livingston,	53,333 cubic feet of live oak ship timber cut to moulds for ships of 74 guns.	\$1 25 per cubic foot,	Within one year,	Washington, Philadelphia, or Boston.	
August 7	Elijah and Thos. Swift,	29,630 do. for frigates of 44 guns, 1 full and complete frame of live oak timber for a 74 gun ship.	\$1 12½ per cubic foot, 30 cents per foot for freight, \$1 55 per cubic foot,			On or before 18th July, 1818.
August 13	John Snow,	Do. for a ship of the line, 2 do. for frigates,	\$1 15 do.	Within 6 months,	Do. do.	
		All the ranging timber of live oak and heart of yellow pine which may be required for one ship of the line and two frigates.				\$1 per foot for oak ranging timber, 42 cents do. for pine ranging timber.
		All the mast pieces of heart yellow pine that may be required for a ship of the line and two frigates.				45 cents per foot,
August 22	E. J. Dupont de Nemours & Co.	Remanufacturing damaged powder,	\$13 per hundred. The Navy Department to furnish all the saltpetre that may be required for the remanufacturing of the said powder, and allow a reasonable price for the barrels in which the powder shall be put up.	}	Boston, New York, Philadelphia, or Washington.	
September 4	Decatur and Atterbury,	2,300 bolts of canvass—				
		600 bolts No. 1,	\$22 50 per bolt,	Within 12 months,	New York.	
		500 do. 2,	\$22 25 do.			
		300 do. 3,	\$22 do.			
		300 do. 4,	\$21 75 do.			
		250 do. 5,	\$21 do.			
		150 do. 6,	\$20 do.			
		100 do. 7,	\$19 do.			
		100 do. 8,	\$18 do.			

STATEMENT—Continued.

Date of contracts.	Names of contractors.	Articles contracted for.	Price of articles.	When to be delivered.	Where to be delivered.
1816. Septem. 16	Levi Hollingsworth,	All the sheathing, copper, copper bolt rods, copper rods for spikes, and copper sheathing nails, required for two ships of the line and one frigate of the first class.	33 cents per pound for the bolt rods, rods for spikes, and sheathing copper, and 44 cents per pound for the sheathing nails,	Within 12 months,	Baltimore.
October 2	Benj. and John Hersey,	680 oak knees,	50 cents per inch sided,	1st June, 1817,	Navy Yard, Washington.
October 2	George Long,	Freight of the ship George Long, from Alexandria, D. C. to the Mediterranean.	\$1 per barrel, if discharged at Gibraltar, or \$1 12½ per barrel, if discharged at any other port in the Mediterranean.		Mediterranean.
October 3	William Yeaton,	500 barrels of pork,	\$18 50 per barrel,	The ensuing winter and spring.	Navy Yard, Washington.
October 9	Edward Stone,	1,000 do. do.	\$18 50 do.	Do. do.	Do. do.
October 24	E. and A. Winchester,	3,500 do. beef,	\$12 do.	Do. do.	Boston.
		1,000 do. pork,	\$20 do.		
November 5	David Wilson,	180 pieces of live oak timber,	\$1 20 per cubic foot,	November, 1816,	Navy Yard, Washington.

[2d SESSION.

NAVY PENSION FUND.

COMMUNICATED TO THE SENATE, JANUARY 17, 1817.

NAVY DEPARTMENT, *January 15, 1817.*

SIR:

The commissioners of the Navy Pension Fund, in obedience to the "Act for the better government of the Navy of the United States," respectfully report to Congress the following statements in relation to that fund.

Viz: Paper A, contains a statement of the amount of the United States' stock belonging to the Navy Pension Fund.

Paper B.—Statement of Bank stock belonging to the Navy Pension Fund.

Paper C.—Account of the treasurer, Thomas Tudor Tucker, Esq. with the commissioners of the Navy Pension Fund. [Balance against him \$12,324 60.]

Paper D.—Abstract of warrants drawn by the Secretary of the Navy on the Treasurer of the Pension Fund, from the 1st of January, 1816, to the 31st December, inclusive. [Amount, \$36,144 65.]

Paper E.—Statement of moneys not included in the treasurer's account, nor invested in stocks on the 31st December, 1816.

Paper F.—List of Navy pensioners, with the pension allowed to each. [Number, including widows and orphans, 327, and amount paid, \$27,627 20.]

All which is respectfully submitted.

B. W. CROWNINSHIELD.

To the Hon. the PRESIDENT of the Senate.

A.

Statement of the stocks on the books of the Treasury, to the credit of the Secretary of the Navy, the Secretary of the Treasury, and of the Secretary of War, for the time being Commissioners of the Navy Pension Fund, with the interest and reimbursement which accrued for the year 1816.

Stocks.	Nominal amount of stock.	Commencement of interest.	Interest and reimbursement for 1816.	Reimbursement of 6 per cent. and deferred stocks, to 31st Dec. 1816.	Irredeemed amount on 1st January, 1817.
Old six per cent.,	39,579 04	1st Jan. 1816.	3,166 31	34,911 10	4,667 94
Deferred,	56,532 23	Do.	4,522 56	28,351 53	28,180 70
Three per cent.	30,895 93	Do.	926 88		30,895 93
Louisiana,	38,000 00	Do.	2,280 00		38,000 00
Six per cent. loan of \$7,500,000,	112,314 44	Do.	6,798 84		112,314 44
Do. do. 10,000,000,	193,489 35	Do.	11,609 36		193,489 35
Do. do. 6,000,000,	50,000 00	Do.	3,000 00		50,000 00
Six per cent of 1815,	36,789 44	Do.	2,207 36		36,789 44
	\$558,600 43		\$34,511 31	\$63,262 63	\$495,337 80

TREASURY DEPARTMENT, REGISTER'S OFFICE, *January 14, 1817.*

JOSEPH NOURSE, *Register.*

B.

Statement of Bank stock belonging to the Navy Pension Fund.

	Nominal amount.	Amount of cost.
626 complete shares Columbia Bank stock,	62,600 00	69,102 60
700 do. Washington do.	14,000 00	14,260 00
600 do. Union do.	15,000 00	15,340 50
	\$91,600 00	\$98,703 10

In addition to the stock reported by the Register of the Treasury, the sum of, \$37,800 United States' stock of 1814, still remains on the books of the Commissioner of Loans at Philadelphia.

NAVY DEPARTMENT, ACCOUNTANT'S OFFICE, *December 31, 1816.*

CONST. FREEMAN; *Accountant.*

E.

Prize Moneys.

Deposited to the credit of the Treasurer of the United States, not included in his account as Treasurer of the Navy Pension Fund,	\$50,039 72
This sum, amount of dividends on bank stock, for the last twelve months, not deposited to the credit of the Treasurer of the Navy Pension Fund,	7,768 00
This sum, amount of interest on \$37,800 United States' stock, on the books of the Commissioner of Loans at Philadelphia, not deposited to the credit of the Treasurer of Navy Pension Fund,	2,835 00
This sum, the balance per treasurer's account herewith,	12,324 60
	<u>\$72,967 32</u>

There are considerable sums, in the District Courts of Massachusetts and New York, unaccounted for.

NAVY DEPARTMENT, ACCOUNTANT'S OFFICE, *December 31, 1816.*

[2d SESSION.]

SURVEYS OF THE WATERS OF THE CHESAPEAKE BAY, WITH A VIEW TO THEIR DEFENCE, AND THE ESTABLISHMENT OF DOCKS AND DEPOTS.

COMMUNICATED TO THE SENATE, JANUARY 20, 1817.

NAVY DEPARTMENT, January 18, 1817.

SIR:

In obedience to the resolutions of the honorable Senate of the United States of the 21st of December, 1815, and the 8th of January, instant, I have the honor to lay before the Senate all the information in the possession of this Department, respecting surveys of the waters of the Chesapeake, the Middle Ground, and the several sites proper for the establishment of docks and a naval depot, with a roll of the several surveys made by order of this Department, in conjunction with officers of the corps of engineers, under orders from the War Department. Schedule of which, and other accompanying documents, is herewith enclosed.

In relation to the site for docks and naval depot within the Chesapeake, I respectfully refer to the separate opinions of the Commissioners of the Navy Board, and the officers who made the surveys; and whose opinions being at variance, in respect to the local advantages of the places designated, I have deemed it most proper to leave the decision to the honorable Senate, without expressing any preference arising from my own view of the subject; as a spirit of candid investigation appears to have marked their deliberate consideration of the comparative advantages, with a single regard to the public good.

I have the honor to be, with the highest respect, sir, your most obedient servant,

B. W. CROWNINSHIELD.

The Hon. the PRESIDENT of the Senate.

Schedule of documents having relation to the defence of the Chesapeake Bay, and the selection of a site for a naval depot, (not specified in the annexed schedule of charts,) submitted by the Secretary of the Navy to the honorable President of the Senate, January 18, 1817, viz:

AA. Copy of a communication from Commodore John Rodgers, President of the Naval Board, stating his opinion relative to the selection of a site for a naval depot, and the means proper to be adopted for the defence of the Chesapeake bay.

BB. Copy of a communication from Commodore Stephen Decatur, Commissioner of the Navy, upon the same subject.

CC. Copy of a communication from Commodore David Porter, Commissioner of the Navy, upon the same subject.

B. and C, No. 1 and 2. Copies of communications from Captain Arthur Sinclair, of the United States' Navy, explanatory of charts B and C.

D and E. Communication from Captain Robert T. Spence, of the United States' Navy, explanatory of charts D and E.

Schedule of Charts.

Chart A. Exhibiting observations and measurements made, in relation to the defence of Chesapeake bay, during the summer of 1816.

Accompanying chart A are three papers, marked A No. 1, A No. 2, and A No. 3. A, No. 1, shows the number of batteries believed requisite to defend the entrance of the Chesapeake bay. A, No. 2, shows the profile of the bottom between Old Point Comfort and Willoughby's Shoal, with an outline of a regular work on Old Point Comfort, and a castle, mounting one hundred and twenty pieces of cannon, and eight mortars on Willoughby's Shoal. A, No. 3, is copy of a letter from Colonel Bomford, of the corps of engineers, to the Secretary of War, dated the 21st of November, 1816.

Chart B is a survey of York river, in Virginia.

Chart C. Site for a naval depot in York river.

Chart D. Upper and Lower Tangier Islands.

Chart E. Lower Tangier Islands.

N. B. As there are no duplicates of the preceding enumerated charts, the Secretary of the Navy respectfully requests that the honorable President of the Senate, after having used the same, may cause them to be returned to the Navy Department.

AA.

Copy of Commodore John Rodgers's letter to the Secretary of the Navy, relative to a naval site and rendezvous on the waters of Chesapeake bay.

NAVY COMMISSIONERS' OFFICE, December 23, 1816.

SIR:

Having, in company with the other Commissioners of the Navy Board, examined those places designated in your letter of the 7th May last, for the purpose of reporting, through you, for the consideration of the President of the United States, the opinion of the Navy Commissioners, as to the means most proper to be adopted for the defence of the Chesapeake bay in time of war, it is a source of unpleasant reflection, not only to myself, but I am confident equally so to the other commissioners, to find, on comparing our opinions, that we do not entirely agree as to the mode by which this truly important object might, most probably, be accomplished. I regret this the more from the persuasion, that it would have been more agreeable to you, and more satisfactory to the President, had we found all the data upon which we might have formed a correct estimate of such positive character as to admit of no diversity of opinion. As, however, different opinions are entertained by the members of the Board, we have judged it best that each member should make a separate report, trusting that from these conflicting opinions, and the facts and arguments adduced in support of each, the best means of obtaining the highly important object in view may be elicited.

I proceed, with respectful deference for the opinions of my brother commissioners, to submit those views of this important question, which the most attentive consideration and anxious investigation of facts have produced in my mind.

From the distance between the nearest points of the Middle Ground and Horse Shoe, the great depth of water between those places, and their exposed situation to the mountainous waves, rolling in from the Atlantic ocean, unobstructed, during the prevalence of southeasterly gales, I incline to the opinion that it would be extremely difficult, if not impracticable, to erect batteries, at any cost, however great, that would resist the tumult of the whole Atlantic ocean, drawn, as it were, to a focus, by the peculiar formation of the coast at that point.

In another view such an attempt might be hazardous; for it may be seriously questioned, whether the erection of batteries in that part of the channel of Chesapeake bay which is the most confined, would not produce a new channel through that immense bank of sand, the Middle Ground, thereby changing the course of its waters, rendering the batteries wholly useless, and subjecting the navigation of the bay to destruction at its very confluence with the Atlantic ocean? A new channel, thus formed, would necessarily displace immense deposits of sand from the Middle Ground, and thereby, most probably, to the destruction of the navigation, complete the bar that nature has already more than two-thirds finished across the entrance of the bay.

For these reasons the erection of batteries between the Horse Shoe and Middle Ground appears to me, if not impracticable, at least unadvisable.

I will now examine the navigation from Cape Henry to Hampton Roads, and thence to Norfolk, for the purpose of demonstrating, by unquestionable facts, how far Norfolk unites the advantages essential to the purposes of a great naval rendezvous and depot of maritime stores.

As an outer harbor, Hampton Roads is easy of ingress and egress to ships of every class. At its entrance from the bay, by erecting a formidable battery at Old Point Comfort, and another at the distance of one mile on the shoal of Willoughby's Point, it might be so far defended as to prevent a hostile fleet, however formidable, from attempting to enter it without having in view the accomplishment of some great object. On ordinary occasions the risk which an enemy would then incur, from an attempt to enter Hampton Roads, would no doubt be sufficient to deter him; but an object, worthy of the risk, might present itself; and, in such case, an enemy, availing himself of the most favorable wind and tide, might attempt it, and would probably succeed. Passing these batteries, as he might do under such circumstances, with a velocity equal to fourteen miles an hour, the effect of the batteries would be rendered very uncertain, and he would be in their reach only eight minutes, seventeen seconds! Should he succeed in entering the road, he might anchor in various situations, from four to four and a half miles in every direction from the shore. My own personal observation enables me to add, that during the prevalence of northeasterly gales, particularly in the winter season, Hampton Roads is subject to a very heavy sea, which may be ascribed to its great width at its entrance, and its exposure to the northeast.

As an inner harbor, Norfolk may be easily defended both by land and by sea; and there is in its vicinity an abundance of good timber. These are great advantages; but, from the difficulty of getting in or out of Elizabeth river, arising from the narrowness of the channel in many places, and the various courses necessary to be steered, (from west-northwest to east-northeast, points directly opposite,) before you reach Cape Henry, added to a shoal at its confluence with the waters of Hampton Roads, on which there are only twenty feet eight inches at low water, and not more than twenty-four feet two inches at high water, during the prevalence of neap-tides, and at no time, excepting the spring-tides, more than twenty-two feet at low; and twenty-five feet at high water, present to my mind insuperable objections to Norfolk as a navy yard, particularly when it is recollected how imperfect and insecure Hampton Roads would be as an outer harbor.

I will now proceed to state the advantages and disadvantages peculiar to York river, considered as a place for a naval rendezvous and depot of naval stores—below Yorktown as an outer, and above it as an inner harbor.

The lower part of York river being, at its mouth, only one mile wide and three-quarters in breadth, from shore to shore, and the channel only about fifteen hundred yards from flat to flat, and affording, as it does, a safe navigation at all times and in all seasons for ships of the greatest draught of water, is, in my opinion, suitable for an outer harbor. With the aid of land batteries an inferior may be defended against a superior force of ships. Like Hampton Roads, however, it is subject to a rough sea during the prevalence of easterly gales; but, in this river, that disadvantage is greatly diminished by the fact, that with any wind that would make this anchorage objectionable, or that would enable an enemy of superior force to approach you, (supposing this place not to be fortified,) you can, with perfect security and ease, get under weigh and run into the inner harbor, above the batteries at Yorktown and Gloucester.

As an inner harbor and naval depot, York river, above Yorktown, does not combine every advantage desirable, not having any basin or deep bay in which ships could be sheltered from the draught of the river, and there not being an abundant supply of timber immediately in its vicinity.* It has, however, every other essential requisite; being completely susceptible of defence against a land or naval force, and affording at all times, and in all tides, an easy and safe navigation to ships of the greatest draught of water; there being for at least ten miles above Yorktown, where the river is actually only nine hundred yards wide from shore to shore, nowhere less than six fathoms of water.

Another very prominent fact, in relation to the outer harbor of York, more than counterbalances the objections stated. From that harbor ships passing up and down the Chesapeake bay are exposed to full view; indeed the moment a ship enters the bay you can discover her. You would there have the advantage of watching the movements of an enemy, from a safe harbor. If he comes with a force too formidable for you to resist him in that position, you can retire; the same wind that enables him to approach you, would enable you to retire to a place of safety. If circumstances would justify your attacking him, you might do so, with the advantage of having the earliest intelligence of his approach.

Hence, although York river does not possess every advantage that could be desired, as respects either its inner or outer harbor, it does, in my opinion, unite more of the essential requisites than nature has bestowed on almost any other place. From its peculiar position, (which the chart will show,) when aided by a naval force, it is the only point deserving the name of the key to the Chesapeake bay.

I proceed now to examine St. Mary's river.

This river is situated on the north side of the Potomac, about seven miles above Point Look Out, the next above Smith's Point, with which it forms the entrance into the Potomac. By some it is urged that this place, as respects salubrity of climate, is preferable to either Norfolk or York. As a safe and commodious harbor it is, perhaps, not excelled by any in the United States. At its entrance it is about three miles wide, and the water is thirty-two to thirty-three feet deep; for three and a half to four miles up, its width gradually decreases, until you pass two projecting points at opposite sides, within which the depth at low water is about twenty-four feet; and the river from point to point about half a mile wide: from this to a place about two miles further up, the river is, by two other projecting points, diminished to about five hundred yards in width, presenting above those points a beautiful basin, in which there is, near the entrance inside, twenty or twenty-one feet at low water.

This river above, where it is perfectly susceptible of defence against a naval force, presents, in several respects, the most seducing reasons for its selection as a naval depot and rendezvous. But situated as it is, in a narrow peninsula, having the Patuxent on the one side, and the Potomac on the other, the protection of such an establishment would be attended with great expense. To protect it against a land force, it would be necessary to erect strong batteries, and the annual expense of maintaining an efficient garrison in them would be very great.

Such an establishment should not only be able to protect itself, but it should afford the means of protecting our own commerce in every part of the bay. This latter advantage, I am inclined to think, is not possessed in a superior degree by St. Mary's, owing to its great distance from the sea (ninety-five to one hundred miles): neither do I think that in the present infant state of our country, it could effectually protect itself against a land force, since even above the line of defence, where the batteries would necessarily be situated, the peninsula is so narrow, that a superior land force might so occupy it as to cut off all communication in the rear, thereby endangering the safety of the adjacent country, while at the same time a superior naval force, from the safe anchorage afforded, might not only cut off all communication in front, by his large vessels, but his smaller vessels might destroy every merchant vessel of ours attempting to pass up to Washington or to Baltimore.

The facts stated being all that occur to me as essential in deciding the question of locating a naval depot and rendezvous, I now proceed respectfully to submit my views as to the best means of defending the Chesapeake bay generally. I assume the preliminary position, which I presume will be readily accorded to me, that in the present infant state of our country, our preparations to meet a war should be conducted with a view to measures of defence as well as offence.

* Although it would be an advantage if York river had a basin, or deep bay, to shelter ships from the draught of the river, yet its not having that advantage is not to be considered as constituting any serious objection to the river.

Two small but strong martello towers, between the eastern extreme of Lynnhaven bay and the mouth of Lynnhaven creek, would prevent an enemy from anchoring between those two points; and his exclusion thence would, as you will perceive by the chart, deprive him of any other safe anchorage nearer the mouth of the bay than New Point Comfort.

A strong battery on Old Point Comfort would keep him out of Hampton Road; and two martello towers at the mouth of York river, would prevent his anchorage in that situation, while, at the same time, they would serve to protect it, as an outer harbor and general rendezvous for our marine force assembled in the Chesapeake bay, in time of war.

York river, fortified at Yorktown, would afford security to that important tract of country through which it passes, and secure a naval depot higher up the river. The place where I consider it advisable to locate such an establishment is called the Clay Banks, and is about ten miles higher up than Yorktown.

While a battery at Old Point Comfort, and two martello towers at the mouth of York river would keep an enemy from Hampton and York, they would, with the aid of a suitable naval force, prevent his attempting to take shelter in a situation so near as New Point Comfort. Hence, being shut out of Lynnhaven bay by the two towers proposed in that quarter, he would be deprived of all safe anchorage near the entrance of the bay.

The importance of depriving an enemy of anchorage in Lynnhaven bay is fully established by the fact, that it is a position more dangerous to our commerce than any that could be occupied by any enemy within the Chesapeake bay; and if the importance of depriving him of all safe anchorage near the entrance of the bay be, as it appears to me, too obvious to admit of a doubt, then the propriety of erecting towers and batteries at the other places suggested must necessarily be conceded.

It will, I presume, be readily admitted, in devising the most efficient means for the protection of the Chesapeake bay, that the mouth of the bay should claim the first attention, since if you can succeed in protecting that point effectually, you afford protection to all points above it. The measures which I have had the honor of suggesting have had this great object in view.

Allow me, sir, to request your attentive examination of the chart submitted. A reference to that part of it which embraces York Spit, and what is termed the head of the Middle Ground, will, I think, satisfy you of the great advantage which a respectable naval force, stationed at the mouth of York river, would possess; and that such a force, co-operating with the towers near Lynnhaven bay, the battery on Old Point Comfort, and the towers of York river, proposed, would, in all probability, protect the whole commerce of the Chesapeake bay.

With respect to the Tangier Islands, I have considered it unnecessary to say any thing; particularly as the report and chart made by Captain Spence afford more information than any personal observation of my own would enable me to communicate.

I have the honor to be, with great respect, sir, your most obedient servant,

JOHN RODGERS.

HON. BENJAMIN W. CROWNINSHIELD, *Secretary of the Navy.*

N. B. Some difference of opinion probably exists, as to the practicability of defending, against a land force, a navyyard situated on the Clay Banks. I cannot, however, persuade myself to entertain any doubt on the subject, since the land is there as high, if not higher than any other within reach of cannon shot. There are, moreover, two large creeks, Aberdeen and Jones's, that discharge their waters into York river, on each side of the proposed site, about one mile distant from its centre, by which, without any extraordinary labor or expense, the whole establishment might be insulated; and the measure by which this desirable protective effect would be produced, would furnish an ample supply of water for all the purposes of labor-saving machinery.

For further particulars relative to the advantages of this place, permit me to refer you to the following extracts of Captain Sinclair's report:

The mouths of these two creeks are two miles apart, but before they flow half a mile there are two branches approaching each other, within a quarter of a mile, where, after the creeks are dammed below, a canal might be cut which would insulate the place, and add greatly to its security in the rear. Indeed, it appears to be very capable of being defended by a moderately small force. The channel does not exceed a quarter of a mile in width, and is overlooked by an eminence of thirty feet for a mile or two below. The country is said to be healthy; indeed, judging from its inhabitants, I should pronounce it so. The land is generally fine, and well timbered with white oak, yellow and pitch pine, and some cedar, though not in abundance.

JOHN RODGERS.

Copy of the communication made by Commodore Stephen Decatur, dated January 2d, 1817, in relation to the defence of the Chesapeake Bay, and the selection of a site suitable for a naval depot.

NAVY COMMISSIONERS' OFFICE, January 2, 1817.

SIR:

In obedience to your call of the 16th ultimo, on the Navy Commissioners, requiring a report of the late examination and surveys made under their direction, in pursuance of your instructions of the 7th May, I enclose you a statement of such facts as I have been enabled to collect upon this important subject. From the diversity of opinion which we found to exist between us, upon this important subject, we have deemed it most satisfactory to give in separate reports. This diversity was, perhaps, to have been expected, in a case presenting so wide a range for observation; and I trust we shall not be considered as too tenacious of our individual opinions, when it is recollected that this question involves the safety of the navy, and the protection of the extensive shores of the Chesapeake.

The first examination required by your order of the 7th, is to ascertain the most proper mode of defending the Chesapeake in time of war.

In giving my opinion upon this head, I beg leave to be understood as disclaiming all knowledge of the expense of constructing fortifications, for particular estimates of which I beg leave to refer you to Lieutenant Colonel Bomford of the engineers, who accompanied us on this survey. The Chesapeake bay can be defended from a superior hostile fleet only by fortifications sunk at some point in the channel, and the point nearest the ocean susceptible of defence is obviously the most proper. The channel of the bay at the capes, navigable by ships of a large class, is four and three quarter miles wide, depth of water generally from ten to fifteen fathoms. The sea at this point, being uninterrupted by shoals in its roll from the Atlantic, would, in my opinion, render fortifications utterly impracticable. Ascending the bay from the capes, the channel branches at the Horse Shoe, one branch passing into Hampton Roads, the other leading up the bay itself. That branch of the channel which leads up to Hampton Roads, passes between two shoals; that on the south side called Willoughby's, and distant from Old Point Comfort about two and a quarter miles, has eight feet water on it; the one on the north side is called the Thimbles, and is distant from Old Point about three miles, and has nine feet water on it; they are about a geographical mile distant from each other. The other branch of the channel (that which passes up the bay) has a width between the Horse Shoe and the Middle Ground of four miles, and the depth of water for three-fourths of this distance does not exceed four fathoms and a half, being nowhere more than eight fathoms.

The bottom, from a number of experiments, appears to be a solid and closely compacted sand, protected from the heavy sea of the Atlantic, by the shoal of the Middle Ground, which stretches many miles to sea, and on which its violence is expended before it reaches this channel. If the Chesapeake be susceptible of defence at all, it is my opinion this is the only point at which it can be defended, the channel at every other place, above or below, being much wider, and of much greater depth; and that works, judiciously constructed, between the tail of the Horse

Shoe and the Middle Ground, would be permanent, strong evidence is furnished by those extensive works which form the harbor of Cherbourg—works constructed on a sand, unprotected by shoals without, where the sea is as violent, the tide infinitely stronger, and its perpendicular rise upwards of forty feet.

You will perceive, sir, that, in considering the subject of defending the Chesapeake, generally, I have included the defence of Hampton Roads; not *only* as an arm of the bay, nor on account of the objects of spoil to which the banks of its rivers invite an enemy, but with reference to the other inquiry of a naval depot, to which I shall presently call your attention.

In relation to the defence of Hampton Roads, particularly. If the defence of this place were the exclusive object, there is another position for the purpose, which would probably be preferable, which is Old Point Comfort, and the opposite shoal, called the Rip Raps, which are less than one mile distant. I beg leave to refer you to a report made upon the subject by Colonel Bomford, merely noticing that I understand it was made out before it was discovered that the water on Willoughby shoals and the Thimbles was so shallow, or that those shoals approached so near together as they do. I will now further add the authority of General Bernard's opinion, that any distance, not exceeding one mile, may be so fortified as to be rendered impassable.

If, in addition to powerful works placed at the entrance into Hampton Roads, we add that part of the naval force already contemplated, which will probably be stationed within the roads, (the only inducement a hostile fleet could have to attempt passing heavy batteries,) so moored as to aid in obstructing the enemy's passage, and sufficiently near to be sustained by the forts, in the event of their passing, I do not believe it will ever be attempted. Let us suppose Hampton Roads thus fortified, and our naval depot, as well as our fleet, drawn within those defences; what inducement would remain to an enemy to attempt a passage up the bay? The destruction of our fleet and our depot would be their first object; their second would be to prevent our fleet from getting to sea. Either of those objects would keep them necessarily in the vicinity of the roads. The pillage of the shores of the Chesapeake and its waters would be the only remaining inducement for a cruise up the bay; an inducement too trifling to permit the belief that they would abandon for it the important objects that they would leave in the neighborhood of Hampton Roads; and more particularly when their passage up the bay is opposed by batteries stretched across the channel at the Horse Shoe and the Middle Ground, and with a fleet, too, in their rear, ready to act, in the event of their receiving such injury, as is more than probable, they would receive, in passing such works. The non-existence of any object of sufficient importance to invite an enemy up the bay, under the arrangements already stated, would render it unnecessary to have the works between the Horse Shoe and the Middle Ground as numerous or as strong, by one-half, as would be otherwise requisite. And it is my opinion that the bay and Hampton Roads are susceptible of permanent and complete defence, by works erected at the points proposed, and the same works be made to serve for the defence of both; whereby the whole expense of fortifying the naval depot would be saved, as well as the expense of keeping up garrisons. What the expense of such works would be, I am incapable of saying; but I am satisfied that the cost to the nation of defending the shores of the Chesapeake, for one single war, would greatly surpass what would be requisite to erect a permanent defence of the bay; and, when we connect this with the debasement of permitting the enemy to make a home of our waters, the consideration of any warrantable expenditure can scarcely be thought to oppose an obstacle to the establishment of any works which may be determined to be practicable.

I come now to the location of a naval depot; and on this point there are a few simple principles which seem decisive of the inquiry. A naval depot should possess a sufficiency of water; it should be contiguous to the ocean; otherwise, the navy could not render that prompt protection to the coast which comprises the greater part of its utility. It should, also, be connected with the means of supplies of timber and naval stores, which no posture of a war could cut off or interrupt. These are qualities of the first necessity.

There are other advantages, not, indeed, so indispensable, but still of a very high character, and which it would be extremely fortunate to find with the qualities of primary importance already mentioned; such, for example, as a populous neighborhood, from which supplies of labor and provisions might be commodiously drawn, and which would be at hand to give support to the depot, in the event of a sudden attack. Another of these incidental advantages is, a large, safe, and well defended outer harbor, into which the ships, when built, could be drawn and manoeuvred, without the hazard of exposure to a superior enemy.

Hampton Roads, which I consider the outer harbor of Norfolk, is eighteen miles from Cape Henry. Ships can enter or proceed to sea from it, with the wind from any quarter. It furnishes excellent anchorage, and has sufficient room for a fleet to manoeuvre in under sail; an advantage which no other harbor, that I know of, possesses. The distance from Hampton Roads to the navy yard at Gosport is twelve miles; and the shoalest water found in the river, at ordinary high tides, is twenty-five feet. This depth is more than sufficient for the seventy-fours we now have. You will find on the file in your office that the pilotage paid for the Independence seventy-four, when she sailed for the Mediterranean, was twenty-four feet. The ships now building, though of greater capacity, will not draw so much by six inches. The present defences of Norfolk are, in my opinion, sufficient to protect it from any naval force that can be brought against it.

It will be recollected that, during the late war, the enemy considered it absolutely necessary to get possession of Craney Island, before they could pass up to Norfolk with their shipping; in consequence of which, a combined attack by their boats, and a considerable land force, was made on Craney Island. The attack was repelled by a few pieces of cannon placed upon the sand; since which time, it has been regularly fortified. All the approaches to Norfolk and the navy yard by land are interrupted by water courses, and lead through swamps; both places, with the exception of about two hundred yards, are insulated by creeks, unfordable by reason of the deep mud. Those creeks can, and, I believe, have been, connected by military works; nor is there any higher ground than that on which they stand within cannon range of either place.

It is the opinion of military men who have commanded there, that they are particularly well situated for defence against an attack by land.

From Craney Island up to the navy yard, which I consider the inner harbor, is six miles; in which space, thirty sail of the line may lay with perfect convenience; and it is at all times so smooth as not to interrupt the ordinary work or repairs that may be required. From Norfolk to Hampton Roads, large ships cannot sail when the wind is ahead, in consequence of the narrowness of the channel. But, if warping-anchors, with buoys, be laid down in the channel, (as is the case in all men of war harbors that are close,) ships can, with any wind, be warped into the roads.

The harbors of Malta and Port Mahon, which are considered two of the best harbors in Europe, can only be left or entered, when the wind is adverse, by warping. The navy yard at Norfolk comprises within its walls a square of about twenty acres, one side of which lays upon the channel of the river, at which sixteen sail of the line can be laid up in ordinary, if they are brought to the pier, end on, as is practised at the naval arsenal at Antwerp.

The navy yard, in its present state, furnishes as many conveniences for building or fitting out as any yard in the United States; two hundred thousand dollars, at least, having been already expended by the public in valuable improvements. The neighborhood furnishes abundance of oak and pine timber suitable for naval purposes, and also naval stores, a supply of which cannot be cut off by a blockading enemy. The advantage it possesses in consequence of its vicinity to a commercial city, would be considerable, both as it regards the numerous mechanics and seamen that are to be obtained there, and the protection a large population would afford, in the event of a sudden attack. The climate of Norfolk is, I presume, similar to that of the shores of the Chesapeake, generally, on tide water.

I will now proceed to the examination of York river. From Cape Henry light-house to Gloucester town, which is the first point on York river that could be rendered sufficiently strong to prevent the passage of a hostile fleet, is thirty-two miles. Ships can enter or proceed to sea from it, with all winds. The distance from Gloucester to the Clay Banks, the place contemplated for the navy yard, is seven miles, and the depth of water is sufficient for any ship, at all times of tide. It can unquestionably be defended against any attack by water. It is, at present, entirely unprotected by any fortifications. From the best information I have been enabled to collect, I am induced to believe that there are several rivers putting in from the bay navigable for light craft and boats, and approaching within eight or nine miles of the Clay Banks, where a debarkation of troops might be effected; of the nature of the intervening grounds I am unacquainted. The site selected as the best in this river for a naval depot forms, at present,

part of the bed of the river; and no vessel drawing ten feet water can approach the bank nearer than a quarter of a mile. As the bottom is mud, it is probable that it would be found necessary to drive piles for the foundation of the navy yard; and the whole yard must, of course, be composed of artificial or made ground. There is a creek on each side of its heading, about half a mile in the rear, where they approach within about four hundred yards; at this point it is proposed placing the defences against a land attack. About eight hundred or a thousand yards to the right of this position and the contemplated depot, there is an extensive range of heights that overlook and command them.

In consequence of which, I am of opinion that this position cannot be defended from a land attack with a less force than would be competent to meet the assailants in the field. It is believed that a supply of oak timber may be obtained from the shores of York river; but pine, fit for naval purposes, and naval stores, must be drawn from a distance. A blockading force, in time of war, might prevent the transportation of them by water, the only means by which they could be obtained in any quantity. From the unusual straightness of York river, the mouth of which lies open to the bay, it is much more rough with particular winds, than rivers of its width generally are.

With the wind blowing fresh up or down the river, I should apprehend that any repairs that would require working near the water would be interrupted. The inner harbor of this river, like that of Norfolk, cannot be left or entered when the wind is ahead, except by warping.

The next point embraced by your instructions is Tangier Islands, lying about one hundred miles up the Chesapeake. From the survey and report of Captain Spence, the commissioners were of opinion that that place was totally unfit for a naval depot, and, therefore, did not proceed to examine it. For particular information respecting this place, I beg leave to refer you to Captain Spence's survey and report.

As your instructions did not particularise St. Mary's, and not being apprised that my colleagues intended to examine that place, I was not present when they did so. It lies on the upper side of the Potomac river, near its mouth, and about a hundred and twenty miles up the Chesapeake bay. I am unacquainted with the depth of water, the extent of the harbor, its susceptibility of defence against an attack by water, or the supply of naval stores and building materials in its vicinity.

From my want of local knowledge of this place, I can say nothing as to its particular advantages, and can only point out some prominent objections which present themselves. Its distance from the ocean I consider an insuperable objection to it as a naval depot and rendezvous, in consequence of the difficulty and detention our ships might meet with in going out or returning from sea. Another objection is, that the population for a considerable distance is so thin that it cannot afford sufficient succor in case of a sudden attack.

The river Patuxent lies a few miles higher up the bay than the Potomac, and approaches where it is navigable for vessels of the largest class, within five miles of the rear of the harbor of St. Mary's. The harbor is every where surrounded on the land side by commanding heights, which are too numerous to be occupied and sustained except by a large army; and therefore it would be necessary that a considerable land force should be kept there at all times to ensure its safety. Another very important objection is, that, if the neighborhood does not afford sufficient supplies of timber, which I believe is the case, they might be cut off in time of war by a blockading force. This place, as well as the harbors of Norfolk and York, from the narrowness of its channel, can only be left or entered, when the wind is adverse, by warping. Its climate is very similar to the climate of those places. There is an objection common to both York and St. Mary's as the places of naval deposite, which has not yet been mentioned, and that is, that they both lie within the defences proposed to be raised from the Horse Shoe to the Middle Ground. If you present to an enemy the combined attractions of your depot and your fleet, those works for the defence of the bay must be more numerous and strong, and, consequently, much more expensive; and it is for this, among other reasons, that I think it so much more preferable to place both these objects behind the defences proposed to be established at the mouth of Hampton Roads.

Having weighed all the advantages and disadvantages of the several positions, it is my decided opinion, that the present navy yard at Norfolk, independent of the protection it would afford the Chesapeake, is, in all respects, incomparably the best place for a naval depot, if Hampton Roads be properly fortified; and in that case I should consider it the finest harbor I have ever seen. The only objection to it, in its present state, is the mud bar at the mouth of river, over which our largest ships cannot pass at *low water*; which is a sufficient objection in the present unprotected state of Hampton Roads, inasmuch as any of our larger ships, chased into the roads by a superior naval force, at *dead low water*, could not pass the bar at the mouth of the river, and would, of course, be exposed to attack. The expense of the requisite buildings for a naval depot at either of the other places, together with the fortifications necessary for the protection of them by land and by water, would, in my opinion, be much greater than would be necessary to fortify Hampton Roads completely. Should either of the other places be fortified, they would require a much larger force to garrison them, and would render no material aid in the general defence of the Chesapeake. Permit me further to observe, sir, that it is the unanimous opinion of the Board that the waters of the Chesapeake should, at some point or other, be the place of a naval depot and rendezvous. The mildness of the climate enabling the workmen to continue their labor throughout almost the whole of the year, and the geographical situation of the place, seem to me to fit it eminently for this purpose. It is near the centre of our coast, and of our commerce; and that portion of the navy which would be stationed there would possess, thereby, a facility in defending both by the rapid movements it would be enabled to make. And I have no hesitation in expressing the opinion, that by raising the fortifications which I have proposed, and placing the depot near the ocean, the Chesapeake, at present the most vulnerable point of the coast, would become one of the strongest. It would become itself a defence to our seaboard.

The subjoined sketch of the waters in the vicinity of the Chesapeake was furnished me, at a few hours' notice, by Mr. Adams, of the United States' navy, who made the survey of the Chesapeake under the directions of the Board. The well known talents and precision of this gentleman leaves no doubt of the accuracy of his lines of bearing, distance, and soundings. You will perceive, sir, that I have drawn my facts relative to those points from this document.

I have the honor to be, &c.

STEPHEN DECATUR.

Hon. B. W. CROWNSHIELD, *Secretary of the Navy.*

CC.

Copy of the communication made by Captain David Porter, Commissioner of the Navy, in relation to a site for a naval depot, and the best means to be adopted for the defence of the Chesapeake bay.

NAVY COMMISSIONERS' OFFICE, December 27, 1816.

SIR:

In compliance with the call made by you of the 16th ultimo, and for the reasons set forth in the communication made to you by the Board of the 24th instant, I have now the honor to send for your consideration, facts, and my own opinions, in relation to the points to which you have directed the attention of the commissioners of the navy by your communication of the 7th May last.

I have the honor to be, with great respect, your obedient servant,

D. PORTER.

Hampton Roads, it is believed, could be fortified to advantage by means of batteries placed on Old Point Comfort, and on the shoal of Willoughby's Point, in fifteen feet water, and the distance between the batteries, so placed, need not be more than one mile and a quarter. But until a fair experiment has been made as to the expense of erecting them, the effect of the latter, on the shoals and channels, and whether it could resist the violence of the waves to which it would necessarily be exposed, I should not deem it advisable to undertake to defend the Ches-

apeake, by erecting a line of batteries across the mouth of the bay, as, by so doing, the risk would be incurred of expending uselessly many millions of dollars; of choking up the channel on one side, and of changing the navigation to the other; by obstructing the waters, and thereby causing them to ebb and flow in larger quantities and with greater rapidity on the north side of the mouth of the bay, clearing away a passage for the largest ships by the removal of the light and almost floating sand on that side of the Middle Ground, where a safe and convenient channel already exists for vessels drawing sixteen feet water. A failure in the completion, or the ultimate destruction of the blocks or islands which must be sunk in the channel for the purpose of erecting such batteries, would create dangerous shoals;* and if perfect success should be obtained in the erection, it is quite problematical whether they would succeed, at all times, and under all circumstances, in preventing the passage of a hostile fleet, or of securing to themselves the necessary supplies of provisions and water when invaded by a powerful force. Therefore, for an uncertain object, I should consider it unadvisable to risk the destruction or injury of the present channel into the Chesapeake, and the opening of another that would require equal means to defend.

If Hampton Roads can be fortified, the Chesapeake bay, in my opinion, (which I submit with due deference,) could be best protected by a moveable force, that can seek the protection of batteries placed there, and at York river. The chart (not yet completed) of the survey made under the superintendance of the commissioners, and the report of the surveying officer, will place you in possession of the distances, depths of water, and other facts that have produced this opinion, as well as of the information required by the examination of "Hampton Roads up to Norfolk." It therefore only remains for me to give my opinion as to the latter place for a naval depot. A want of sufficient depth of water, at all times, for the easy ingress and egress of the largest ships, I have always considered a strong objection to Norfolk as a great naval depot. The objection does not, however, exist to the extent I supposed. The minute examination which has lately been made, discovers more water over the flats, below Craney Island, than was ever before found, but yet not of sufficient depth to float, at all times, ships of the largest class, with their provisions, water, and guns on board: added to which, the channel is narrow, difficult to be found, and never to be passed by ships of war with a head wind. Under these circumstances, I can see no cause for changing the opinion formerly entertained; and will now add, that if a higher perfection in our naval architecture, or the increased size of our ships should render a greater draught of water necessary, and our ships are not to be put into a state for service until their arrival in Hampton Roads; if they are then to receive their guns, their provisions, and their stores, from the naval depot; if Hampton Roads, instead of affording protection to the whole Chesapeake, is to answer only the purpose of protecting our inoffensive ships, the main object of a naval depot, at the mouth of the Chesapeake, will be defeated, and the objections to Norfolk proportionably increased.

How far the fortifications of Hampton Roads may justify ships dropping down there in a defenceless state, will depend on experiments yet to be made, and on the extent of those experiments. It is now doubted, whether one of our largest ships, under the most favorable circumstances, could steer through the narrow and crooked drain, which forms the channel over the flats, without grounding. The means, however, of determining this point, are fortunately at hand, and it would not be difficult to make the trial. York river opposes no obstacles to the passage of the largest ships as high up as the Clay Banks, which appears to be the most suitable place on that stream for a navy yard. It offers advantages in streams of water for labor-saving purposes, and may be protected from maritime attack by batteries placed at York and Gloucester points, and near the channel on the oyster shoals above, (which are bare at low water,) as well as on the shoalest part of York spit; and the passage of an enemy may be retarded by means of booms, and other obstructions. The climate is said to be subject to the same diseases as those which prevail at Norfolk; and it is said to be liable to attack from Severn river. It has, however, this advantage over Norfolk, (in addition to its depth of water,) that ships can go to sea with most winds with which they leave the place named as most suitable for a naval depot. Captain Sinclair's reports and survey of York river will afford you further information on this subject. The Tangier Islands were surveyed by Captain R. T. Spence: to that survey, and the report which accompanies it, I beg leave to refer you for all the information I possess respecting them.

Commodore Rodgers and myself, on our passage down the Potomac, in conformity with your instructions, touched in at St. Mary's, which is situated near its mouth. In point of healthiness of situation, security from maritime attack, and (I am informed) from ice, excellence of harbor, and the easy ingress and egress to an inner harbor, at all times, to ships drawing not more than twenty-four feet and a half of water, the advantages it offers by means of streams of water for labor-saving purposes, and its convenience to forests of fine timber, St. Mary's is, in my opinion, superior to any other place of which I have a knowledge on the Chesapeake for a naval depot.

How far its distance from the sea, and the necessity for concentrating a land force for its protection from an enemy, (which may attack it from the Patuxent,) may weigh against these advantages, or whether it may be considered a disadvantage to have so concentrated, in a healthy situation, a force which may easily be transported for the protection of other important points; or, in fine, (taking into consideration its central position, and the speed with which vessels may get to sea with a favorable wind, through both channels of the Chesapeake,) whether such objections should be considered disadvantages, I beg leave to submit to the decision of Government: they involve military questions of which I am not a competent judge. I shall merely observe, firstly, that whatever objections may be made to the distance of St. Mary's from the ocean, when we measure the sinuosities of the channel, we shall find the objection nearly as strong to Norfolk; and when we take into estimation the time required to sail this distance, we shall find the comparison much in favor of St. Mary's. And, secondly, that whatever objection may be made to the assemblage of a military force for the protection of St. Mary's, still stronger objections might be made to their assemblage from the distant parts of Virginia, for the defence of Norfolk; and the same remark may apply to York. Norfolk has owed its protection to troops drawn from Richmond, which was thereby left exposed to attack. St. Mary's would be guarded by those from Baltimore and Washington, and placed in the most favorable situation to enable them to aid in their defence, as well as that of Richmond. The establishment of a naval depot at St. Mary's is not incompatible with the plan suggested for protecting the Chesapeake, by means of a moveable force, that shall seek the protection of batteries at Hampton Roads and York river. The protection of St. Mary's would depend greatly on that force; and the destruction of the naval depot, established there, would require a force (in addition to the one left to watch our fleet) proportioned to the protecting force stationed at St. Mary's: for it is not usual or prudent to leave an enemy unguarded in the rear, when he may be in a situation to avail himself of the advantages which a defeat might offer.

A superior enemy's fleet which could (by placing itself between the naval depot and St. Mary's, and our naval rendezvous at Hampton Roads) cut off all communication between them, could, by blockade, render both fleet and depot equally useless, were the latter at Norfolk. The command of our own waters (the object for defending the mouth of the Chesapeake) would secure to us an easy communication between our fleet and depot. And if this superiority is not to be obtained, our naval depot, placed wherever it may be, will not answer the end for which it was intended.

A naval depot at St. Mary's would afford a safe and commodious winter retreat for our fleets, which experience has taught me cannot be found in Hampton Roads, and which I have reason to believe cannot be found in York river. It would, from its central and convenient situation, afford protection and convoy to the commerce of the whole bay, even were its mouth blockaded by an enemy's fleet; an advantage which could not be afforded by York or Norfolk. It would serve as a rendezvous for the light cruisers from Baltimore, where they could easily elude an enemy's blockading fleet by availing themselves of the choice of channels; an advantage which York does not possess in so great a degree, and one of which Norfolk has been found to be entirely destitute. The blockade of the mouth of the Chesapeake would constitute the blockade of Hampton Roads; consequently, the supplies of the naval depot, placed there, would be limited to those received by the canals, and by the waters discharging themselves into Hampton Roads; while the whole resources of the Chesapeake, and its tributary streams, as well as those which may be afforded by the projected canals connecting its waters with the Delaware, will be open to St. Mary's.

* Engineers say it would require nine batteries, mounting from one hundred to one hundred and fifty guns each, to defend the passage between Old Point Comfort and the Middle Ground.

A military force stationed at St. Mary's can aid in the defence of every part of the bay exposed to attack, while such aid has never been found in the force stationed at Norfolk, nor is it believed it would in any stationed at York. And, finally, if the experiment of fortifying Hampton Roads should not succeed, a naval force that can issue from St. Mary's would not be less formidable, nor afford less protection to the Chesapeake, than one stationed there or at York.

In closing these remarks, allow me to observe that I should regret extremely that any difference of opinion existed as to the most suitable point for establishing a naval depot, were I not persuaded that this difference will be the means of placing you in possession of the best information as to the merits and defects of the places under examination. And I am happy to have it in my power to say, that there appears to be but one opinion among the commissioners as to the necessity of such an establishment somewhere on the waters of the Chesapeake. Reasons of a political nature which may weigh for or against the particular spot to be selected for a naval depot, I leave to politicians; unbiassed by local interests or local prejudices, I have given my opinion solely in regard to the utility of such an establishment. I give them with deference; but with a perfect conviction, in my own mind, of the correctness of the position, that the defence of the Chesapeake, and the utility of a naval depot on its waters, will depend more on the conveniences and resources it can furnish, than the position of the depot. A naval depot is the source whence all the members receive their supplies and vigor to defend, not any particular spot or place, but the whole body corporate—not for the advantage of any particular section, but for that of the whole Union.

B. & C. No. 1.

Copy of a letter from Captain A. Sinclair to Commodore John Rodgers, President of the Navy Board, dated

SIR:

YORK RIVER, March 22, 1816.

I sailed and arrived in York river the day my last letter left Norfolk for you, and agreeably to your instructions of the 26th ult. I take the earliest opportunity to inform you of my proceedings here.

I have traced the river up and down several times, and find there is not water enough for ships of the largest class to ascend higher than five or six miles above what is called the Clay Banks, which lay in Gloucester county, and about fifteen miles below West Point. The report of the officers I had sent over to ascertain what distance four fathoms could be carried up, and who reported that they carried that depth all the way to West Point, was extremely erroneous. The confluence of the Portopotank creek with this river has thrown an extensive mud flat entirely across the channel, on which there is not more than twenty feet water; between that and where it commences shoaling again, about four miles below West Point, there is quarter four fathoms, and from thence to West Point, three fathoms is the extent of what can be carried. So that the want of a sufficient depth of water places that highly eligible site, in every other respect, entirely out of the question for a navy yard. Yorktown labors under too many disadvantages to be thought of as a dock-yard. In the first place, its exposed situation on both sides to the attack of an enemy, who may have the ascendancy in our waters. Secondly, its great exposure to easterly gales, and the great difficulty there will be in getting piers to stand, owing to the sandy foundation, strong current, and high sea, which heaves in from the eastward. Thirdly, there is no stream by which labor-saving machines may be worked, or the docking of ships be aided: and lastly, it is one of the poorest countries in the world, in every respect, being totally destitute, of timber, even for fuel, except miserable pine.

I should not have mentioned any spot *as not* being calculated for the above purpose, but for the general opinion, which prevails among the intelligent part of the community in this quarter of the country, that Yorktown is eminently calculated for a naval establishment, and that such an opinion has gained belief abroad.

I have fixed on a site in Gloucester county, just nine and a half miles above Yorktown, which holds out many more advantages than any other on the river; indeed, there is not another above York, that the distance of the channel from the shore does not counterbalance all other advantages they may possess; and this is infinitely further from deep water than it ought to be, the nearest point being four hundred yards. This, however, is the greatest disadvantage attending it. It ebbs dry three-fourths of the distance, leaving a fine, firm foundation, and from two feet water it is very abrupt into four fathoms at low water. There is an abundance of timber at hand for piling, filling in, &c.; and the land, from high water, rises gradually in the distance of one hundred and fifty yards to thirty feet in height, affording as much earth as may be required for filling to the channel.

This site is bordered on the east by Aberdeen creek, and on the west by Jones's creek, either of which affords an abundance of water for all our purposes; but the country generally is so low, that I am fearful the water dare not be raised entirely high enough for docking; what it leaves, though, after taking a ship in, may be easily pumped out by pumps worked by water. There are several good mill streams emptying into those creeks which flow from a source sufficiently high to answer the purpose of docking, if the adjacent land would admit of its being dammed. The mouths of those two creeks are two miles apart, but before they flow half a mile, there are two branches approaching each other within a quarter of a mile, where, after the creeks are dammed below, a canal might be cut which would insulate the place, and add greatly to its security, in the rear; indeed, it appears to be very capable of being defended by a moderately small force. The channel does not exceed a quarter of a mile in width, and is overlooked by an eminence of thirty feet for a mile or two below. The country is said to be healthy; indeed, judging from its inhabitants, I should pronounce it so. The land is generally fine and well timbered with white oak, yellow and pitch pine, and some cedar, though not in abundance. The county of Matthews can supply a number of excellent ship carpenters, who would, no doubt, flock to such an establishment. The wind from north to west-southwest will take a ship to sea; the channel is generally narrow, but very plain, and quite deep-enough for the heaviest ships completely equipped for sea. I have made a very minute survey of all the land lying between those two creeks as far back as where I purposed a canal should be cut for security against an enemy, and shall forward a plat of it, as soon as I can copy it upon a large scale. It can be purchased (that is as much as the Government may require,) for whatever disinterested persons may value it at, which will not exceed from ten to twenty dollars the acre.

With the plat I shall send you a proper description of it, with the advantages, disadvantages, &c. attending it. I have made as much progress as the weather has admitted of, which has been extremely boisterous and inclement. To be as accurate as I could wish to be, I ought to have another vessel, as it is almost impossible to sight an object from a base line on shore, the distance being about three leagues to the end of the Spit. I regret too, that I have not some intelligent young officers, as I could not procure a good draughtsman at Norfolk, and have to perform all that work myself. The aid of officers of some science, whom I could trust to take angles, &c. would relieve me very much.

The soil about the above site is well calculated for making bricks, which may be contracted for, for about five or six dollars the thousand. Shells for lime may be had at from three and a half to four dollars the hundred bushels; wood at three dollars per cord. I shall be more minute in my description of this place, attending to the width of the river, width and depth of the channel, strength of tide, with its perpendicular rise, exposure to ice, winds, enemy, &c. Should you wish any particular information that I may not probably embrace, you will be good enough to let me know, that I may be prepared to answer it.

Very respectfully, sir, I remain your obedient servant.

A. SINCLAIR.

Commodore JOHN RODGERS, *President of the Board of Navy Commissioners, Washington.*

B & C. No. 2.

Copy of a letter from Captain Arthur Sinclair to Commodore John Rodgers, President of the Navy Board, dated

SIR:

YORK RIVER, March 29, 1816.

I wrote you on the 22d inst. informing you of my having fixed on a site for a navy yard, which held out more advantages than any other on this river, and that it was not free from its disadvantages; namely, the channel being

too great a distance from the shore, and the river straight, wide, and bleak; but the channel being very narrow, and the remainder of the river quite shoal for eight or ten miles up and down, there is not much sea made from any wind. It would be exposed to ice if there were any afloat, but there has not been a sufficient quantity known in this river, from which danger might be apprehended, for upwards of thirty years; and should it be deemed prudent to guard against it, it will be seen, from the accompanying plat, which is a rough draught of a *minute and critically correct* survey, that it may be easily effected; the rise and fall of the tide not exceeding three feet on an average, the current is very trifling, seldom exceeding two knots.

This site, as I have before mentioned, is situated in Gloucester county, nine and a half miles above York, which lays six and a half miles from the mouth of the river, making the whole distance from it to Cape Henry about forty miles.

I have brought the survey a little below York, and find five and a half fathoms the least water there is at low tide, between the above site and York; below that, it is well known there is sufficient depth for any ship. The channel continues not more than four or five hundred yards wide, for two and a half miles, when it gradually increases to a half mile in two and half more, running south, thirty degrees east, for that distance. It then makes a small change to south, fifty-five degrees east, and widens to upwards of a mile between that and York, from which, to the mouth of the river, the course is from south seventy degrees east, to east, and the channel increasing to upwards of a mile in width. Agreeably to your letter of instruction, which requires a survey to be made so as to embrace the approach from the sea, and the channels now known to afford navigation for line-of-battle ships, I might stop this survey at York; but believing an accurate chart of this river to the bay channel will be acceptable to the Board of Commissioners, and more particularly so, should they approve of the site I have selected, I shall endeavor to continue to that point, should I find it practicable with the means in my power.

I have found infinite difficulty in making the survey, but more particularly in laying down the channel, having had a great deal of bad weather, frequently driving us eight or ten miles from our work to make a harbor, so that when a good day would offer, we would lose most of it in regaining our station. And not having men enough to man more than one boat, I have found almost insupportable difficulties in taking the soundings and shifting the buoys from station to station, being compelled, for the want of a second vessel, to use four buoys, and to make frequent references to the land for base lines to correct the work. Neat draughting is not to be performed on board such a boat as this; the want of room and stability precludes the possibility of it. I shall, of course, have to copy them when I return to Norfolk. I have not, as yet, been able to find a draughtsman who can draw more neatly than myself; the engineer I have had, and whom I have now discharged, being a man of science without possessing the talent of neat drawing. I shall endeavor to procure one in Norfolk if possible, but in case of my not succeeding, I can only promise you accuracy without much neatness.

I have the honor to remain, with high respect, sir, your obedient servant,

A. SINCLAIR.

Commodore JOHN RODGERS, *President of the Board of Navy Commissioners, Washington.*

D & E.

Letter from Captain Robert T. Spence, in relation to the Tangier Islands, dated

MAY 26, 1816.

SIR:

The islands known by the name of the Tangier Islands, have hitherto been very fallaciously represented; especially during the late war, when, from the circumstance of their having been a rendezvous for British marauders, and a depository for their stolen negroes, it became necessary to throw up temporary buildings for shelter and breastworks to secure them from surprise. These sheds were represented as highly commodious, and their works of defence, consisting of embankments of sand partially sodded to render them less mutable than they otherwise would have been, were magnified, by the exaggerating fancy of the timid, into regular fortifications, mounting heavy cannon, calculated to protect the island, and to give security to the shipping anchored in the sound. It was understood that an abundance of good water was afforded, and their gardens, described to be in a high state of cultivation, were spoken of as furnishing a sufficiency of vegetables for refreshment and for health. All these partial and illusive accounts were believed by many who had not the means of being better informed, and by others who were wholly indifferent to the fact. Having, in compliance with an order from the board of commissioners, explored, and, from accurate surveys, obtained correct charts of the islands, I spared no pains to inform myself on such points as my instructions particularly called my attention to, as

- 1st. The relative situation of these islands to each other, their distance from each other, and from the main.
 - 2d. The length and breadth of each.
 - 3d. The topography of each.
 - 4th. The channel on all sides, and those leading to each island and separating them.
 - 5th. The particular positions occupied by the British during the late war, and the works constructed by them.
 - 6th. How far they are at this time defensible, and what works would render them completely so.
 - 7th. The harbors afforded by these islands.
 - 8th. Whether they afforded good fresh water in abundance.
 - 9th. Whether they afford a good site for a naval establishment and rendezvous in time of war.
 - 10th. The soundings at least three miles on all sides, that it may be seen how near a first rate ship of war can safely approach them at every point, especially at that point which may be judged the best for a naval establishment.
- The charts I have prepared and transmit to the Board, having been executed with attention, are sufficiently minute to furnish full information upon all these particulars. They afford a kind of graphical report, exhibiting at one view the relative position of the islands; their distance from each other; their length and breadth; their topography; the particular positions occupied by the British during the late war, and that of the works constructed by them; the harbors afforded by the islands, as also the soundings on all sides, even beyond the distance prescribed by the commissioners. It therefore only remains for me to offer a brief general account, and a few remarks on such points upon which the charts cannot be alone satisfactory.

The Tangier Islands (if islands they may be called) situated about eight miles from the main, are nothing more than banks of sand, which are here and there interspersed with an upper stratum of soil, owing its original formation to seaweed and other marine productions, deposited by inundations, to which, in strong easterly winds, the islands are wholly subject, save here and there a small spot, elevated for the purpose of cultivation, and occupied by the possessor. That section of the islands on which the British formed their establishments is a level surface of white sand, the margin of which, though not more than three feet in height, is higher than the area it surrounds, in which the British had their hospitals, store-houses, their stolen negroes, grave-yards, and works of defence—of which there is nothing remaining, save memorials of death, and attestations of the deleterious effect of the water. The strength of their defences may readily be conjectured from the materials of which they were composed, and from their forms, which are in some places entire, while the outlines are distinctly visible. They consisted of semi-circular embankments, constructed of stakes driven equidistant into the foundation, interwoven with brush, and filled in with sand; the formation of which gave constant employment to an immense number of negroes they had collected from different parts of the Chesapeake. On these works, a few small guns were mounted, but of what caliber I could not, with any certainty, ascertain. On abandoning the island the whole was conflagrated, and as the brush consumed the sand, returned more or less to its former level. Notwithstanding enough has been explained to establish the futility of attempting an establishment at such a place as the "Tangiers," there still remains other objections more cogent and less remediable. A want of fresh water is here, during the summer months, severely experienced. Wells formed by the insertion of barrels of extra length, (being from the nature of the

ground but few,) afford, at particular periods, a scanty supply, the saline impregnation of which must produce, with those not accustomed from infancy to its use, that destructive disease which daily robbed His Britannic Majesty of nine or ten of his loyal subjects. This mortality, it was said, had determined the commanding admiral to abandon, at the ensuing season, a spot not only subject to dangerous inundations, but to which a want of water, and other causes, had given more the appearance of a hospital than a naval rendezvous.

Waiving, however, these objections, and admit for a moment that it is both defensible and tenable, would the advantages resulting from an establishment thus situated, prove of such magnitude as a transient view of the subject might at first promise? Cut off in time of war from all communication with Government, and from resources essential to its preservation, could it be productive of benefits proportioned to the expenditure attending its creation? As the day is rapidly approaching when the entire defence of the entrance of the Chesapeake will render other places within its bosom more eligible for a naval rendezvous, an establishment of this description on the Tangiers would then, it is probable, be speedily abandoned for sites in every respect better suited, both in time of peace or war, for the equipment of our public vessels, and for other purposes necessarily connected therewith.

While a superior maritime force has uninterrupted access to the Chesapeake, an establishment, either naval or military, at the Tangiers, cut off from assistance and supplies, would be wholly insecure, and exposed to inevitable reduction by an enemy possessing means of attack commensurate with the object to be effected. With this view of the subject I have, perhaps, been too prolix in my comments; if so, I plead the injunction contained in my instructions, "to make such general and particular remarks as might occur;" this, and my desire to be satisfactory, I offer as my apology:

I have the honor to remain, your obedient servant,

ROBERT T. SPENCE.

Commodore JOHN RODGERS,
President of the Board of Navy Commissioners.

Document A. No. 3, accompanying chart A, referred to in the report of the Secretary of the Navy communicating information relative to a site for a naval depot.

WASHINGTON, November 21, 1816.

SIR:

In compliance with your order and instructions, I have the honor to submit the following observations on the defence of Chesapeake bay, together with the enclosed map and sketches; the first being the result of various examinations made by Major Kearney and myself; the latter, some outlines of my views on this subject.

Whatever may be the importance of founding permanent fortifications, to exclude an enemy from the waters of the Chesapeake, it does not appear, from attentive examination, that the entrance or mouth of the bay, (viz. a line from the nearest part of a shoal, called the Middle Ground, to Cape Henry,) affords the most practicable positions, as the violent action of the Atlantic during gales of wind, and the great depth of water, will render any attempt to establish permanent foundations on that line extremely slow in the execution, and (if ever effected) of uncertain durability, independent of an expense which the most sanguine could scarcely deem justifiable.

The next position of importance is Hampton Roads. A regular fortification on Old Point Comfort, and a castle on the nearest part of Willoughby's shoal (called the Rip Rap,) distance eighteen hundred yards, might, with the aid of a well organized flotilla, not only cover James and Elizabeth rivers from the attempts of a superior naval enemy, but the latter would also threaten the rear of any armament that would pass up the bay. This position would also present the most prompt support to our marine, whether in reconnoitring an enemy, (whose movements may be observed from thence to the Atlantic,) while protected by the batteries, or finding that protection on returning to a port scarcely fifteen miles from Cape Henry.

In the event of fortifying the pass between Old Point Comfort and Willoughby's shoal, several positions near the margin of Lynnhaven bay, may be advantageously occupied by small insulated towers of masonry, carrying one twenty-four pounder each, and at such distances from the shore, as will secure them from the effect of grape and case shot; and as this bay would then be the only place near the mouth of the Chesapeake that a superior naval enemy could occupy with effect, the towers previously recommended would not only annoy, but deprive them of the principal advantages which the position would otherwise afford. One or two towers of the same kind would also prove important in the vicinity of Cape Charles.

Having thus stated an opinion that Hampton Roads, from its proximity to the Atlantic, combines many superior advantages, and, if fortified, will constitute an important part of the general defence of the Chesapeake, and singly will serve to check the incursions of an enemy, it will, I presume, be superfluous to particularize the positions which are more remote from the mouth of the Chesapeake that may be occupied for local defence, as almost every site of the description is already fortified where objects of sufficient importance and the existing population warrant their establishment.

As the total exclusion of an enemy from the waters of the Chesapeake is an object of great and increasing importance, and the obstacles having been already noted which will probably prevent the prosecution of such a design in the establishment of permanent and efficient defences at its entrance, in conformity with the spirit of my instructions, I subjoin an opinion on a more practicable position.

By referring to the enclosed map, and sections C, D, E, F, it may be observed that the distance and depth of water, between the extremity of the Horse Shoe and Middle Ground, is less than between the latter and Cape Henry, the bottom being also (at every place of trial) firm and free from quicksand, and as that line is also less exposed to the action of the water in particular winds, there can be but little doubt of its being the only position near the entrance of the Chesapeake that could justify any attempt to establish permanent defences, or that might promise, in conjunction with the works proposed and naval co-operation, to afford general protection and security.

Should this idea be deemed worthy of serious attention, the proposed castle on Willoughby's shoal may be erected in the first instance; and if, upon the test of time and military investigation, it should be found substantial and effective, sound and ample data would be thus afforded for the construction of similar towers (nine in number) on the line previously mentioned, (viz. from the extremity of the Horse Shoe to the Middle Ground) and would not only test the principle, but also the relative expense.

The expense of erecting works of masonry near the entrance of the Chesapeake will be considerably augmented in consequence of the distance from the principal materials, (viz. lime and stones,) the following general estimate, calculated on the prices of the present year, will not, I presume, vary considerably from the truth.

A regular (casemated) pentagon, mounting one hundred and fifty pieces of cannon and mortars, on Old Point Comfort,	\$250,000
A quadrangular castle of masonry, (four tiers of cannon) mounting one hundred and twenty-eight guns, on Willoughby's shoal,	209,000
Five small towers on the margin of Lynnhaven bay, and near Cape Charles,	50,000
	<hr/>
	\$509,000

The two works above mentioned could keep up an effectual cross fire of seventy-five heavy pieces of cannon and mortars, on any vessel attempting the pass, for the space of twenty-five minutes in time, allowing that the vessel should sail at the rate of between eight and nine miles per hour.

As there are various opinions on passing batteries in vessels of war, it may be proper to offer an observation on that subject; and it may be safely inferred, (from the result of many naval conflicts,) that vessels of equal armament may maintain a close action for fifteen minutes or more, without being entirely disabled from making sail, or changing

positions. With this fact, it can scarcely be doubted that vessels of war may often pass batteries without being destroyed or irreparably injured. The risk, however, of such attempts is greatly multiplied when passing under a well directed cross fire of hot shot, carcasses, and shells, and which must be encountered again in the event of an unsuccessful enterprise.

It has also been a received opinion; in reasoning upon the comparative powers of land batteries (in commanding positions) and the batteries of vessels of war, that six twenty-four pounders on the former, when well directed, are superior to the broadside of a forty-four gun frigate, and that double that number of guns of larger caliber are superior to the broadside of a seventy-four gun ship, provided the land batteries are so placed as not to admit the approach of vessels within the effective range of grape and case shot.

The latter observations are presented with due consideration, and may either be confirmed or rejected by an appeal to the distinguished naval gentleman with whom I had the honor to be associated, and from whom Major Kearney and myself received every civility and assistance.

The preceding statement has been condensed from a variety of notes, observations, and calculations, which will also afford (in the event of fortifying any of the positions previously named) a description more in detail, together with appropriate plans for the construction.

Fully sensible of the honor conferred in your order of the 31st of May last, I remain, with the greatest respect, your most obedient and humble servant,

GEO. BOMFORD, *Lieutenant Colonel of Ordnance.*

14th CONGRESS.]

No. 146.

[2d SESSION.

HOSPITAL SURGEONS.

COMMUNICATED TO THE SENATE, JANUARY 27, 1817.

NAVY DEPARTMENT, *January 23, 1817.*

SIR:

In reply to your note in relation to the memorial of Doctors Cutbush and Marshall, in behalf of themselves and the surgeons of the navy who have hitherto performed the duties of hospital surgeons, and praying for additional compensation, with the rank and emoluments equivalent to the army establishment in the United States, I have the honor to transmit to you the answer of the Commissioners of the Navy upon this subject, and the opinions of several commanders in the United States' service, whose experience and standing entitle them to respect and confidence.

The pay and emoluments prayed for appear reasonable and consistent when compared with the military hospital establishment, and a just reward to merit. I would, therefore, respectfully recommend to the honorable committee the establishment of a definite rank to a limited number of the oldest surgeons of the navy, who have devoted the best years of their lives to the service, under all the hardships and privations to which it has subjected them, and whose opportunities of acquiring property for the maintenance of their families have been less than any other description of officers.

I have the honor to be, with the highest respect, sir, your most obedient servant,

B. W. CROWNINSHIELD.

HON. CHARLES TAIT, *Chairman of the Naval Committee of the Senate.*

NAVY COMMISSIONERS' OFFICE, WASHINGTON, *January 22, 1817.*

SIR:

In conformity with a request made in your letter of yesterday, the Commissioners of the Navy present to your consideration their opinions on the petition of the surgeons of the navy, referred to you by the Naval Committee.

It seems to be but just that, inasmuch as the duties and responsibility of navy surgeons call for an equal degree of professional knowledge, as well as of respectability of character, with those of the army, they should be put on the same footing, with respect to rank, pay, and emoluments.

The commissioners are further of opinion, that the navy surgeons, as regards their rank in relation to each other, as well as with the surgeons of the army, ought to take rank according to the date of their commissions.

The commissioners cannot perceive the justice of the complaint of the petitioners, "that, in consequence of their being classed, in the distribution of prize money, with persons with whom they do not and cannot associate, the respect to which the profession is entitled has been considerably diminished in our public service." This classification is merely to specify the sum to which surgeons are entitled in the distribution of prize money, and neither involves any general idea of equality, nor imposes any necessity of associating with inferiors.

With great respect, sir, your obedient servant,

JOHN RODGERS.

HON. B. W. CROWNINSHIELD, *Secretary of the Navy.*

SIR:

NEW YORK, *May —, 1816.*

We have heard with pleasure that it is the intention of the medical officers of the navy to address a respectful memorial to you, requesting that measures might be taken by the Department to obtain for them a definite rank in the service, an increase of pay, and the establishment by law of the rank of hospital surgeon. It has also been suggested to us, that the opinion of the senior officers of the navy, on the justice and expediency of those claims, might not be without benefit. We feel it, therefore, as a duty incumbent on us to state, that we consider the medical department of such great importance to the navy of our country, that no reasonable measures ought to be omitted which could have a tendency to retain in the service the professional ability of those gentlemen, who, by their experience, knowledge, zeal, and humanity, have procured the esteem and confidence of those with whom they have been associated; and we also beg leave to express our belief that no reasonable inducements would be objected to by Congress to procure for those who are engaged in a perilous service, and who are constantly exposed to the diseases of all climates, the best medical aid which the country affords. To effect this, it must be obvious that the rank and pecuniary emolument of medical officers ought to bear some proportion to what gentlemen of professional eminence would be entitled in private life; and we consider that justice requires they should, at all events, receive a compensation and rank equal to what has been enjoyed by the medical officers of the army. On the same principle, we would most earnestly invite your attention to the establishment of the rank of hospital surgeon. To the army, eight

officers of that rank are by law assigned; to the navy, *not one*; and let it be recollected that, whilst the hospitals of the former are supported at the expense of the Government, a fund has been formed *from the pay of the latter* for the support of such institutions as may be found necessary for their comfort and accommodation. On this fact, comment is unnecessary. We leave it respectfully, sir, to you, with entire confidence that you will use all proper means to promote the interest and dignity of that Department over which you have presided with so much honor to yourself, and satisfaction to those who have been subject to your orders. We shall only add our request that you will use this in any manner that may conduce to the interest of the surgeons and mates of the navy; and have the honor to be, with the most profound respect, sir, your obedient servants,

SAMUEL EVANS,
JOSEPH BAINBRIDGE,
S. ANGUS,
JAMES RENSHAW,
GEORGE W. RODGERS,
JAMES T. LEONARD,
EDWARD TRENCHARD,
JAMES JONES,
L. WARRINGTON.

To the Hon. BENJAMIN W. CROWNINSHIELD, *Secretary of the Navy.*

Sir:

Boston, December 13, 1816.

We have heard with pleasure that it is the intention of the medical officers of the navy to address a respectful memorial to you, requesting that measures might be taken by the Department to obtain for them a definite rank in the service, an increase of pay, and the establishment by law of the rank of hospital surgeon. It has also been suggested to us, that the opinion of the senior officers of the navy on the justice and expediency of those claims might not be without benefit. We feel it, therefore, as a duty incumbent on us to state, that we consider the medical department of such great importance to the navy of our country, that no reasonable measures ought to be omitted which could have a tendency to retain in the service the professional ability of those gentlemen, who, by their experience, knowledge, zeal, and humanity, have procured the esteem and confidence of those with whom they have been associated; and we also beg leave to express our belief that no reasonable inducements would be objected to by Congress to procure for those who are engaged in a perilous service, and who are constantly exposed to the diseases of all climates, the best medical aid which the country affords. To effect this, it must be obvious that the rank and pecuniary emolument of medical officers ought to bear some proportion to what gentlemen of professional eminence would be entitled in private life; and we consider that justice requires they should, at all events, receive a compensation and rank equal to what has been enjoyed by medical officers of the army. On the same principle, we would most earnestly invite your attention to the establishment of the rank of hospital surgeon. To the army, *eight* officers of that rank are assigned by law; to the navy, *not one*; and let it be recollected that, whilst the hospitals of the former are supported at the expense of the Government, a fund has been formed *from the pay of the latter* for the support of such institutions as may be found necessary for their comfort and accommodation. And, sir, we beg leave to express our hope that you will be pleased to give your aid in promoting the interest of the surgeons and surgeons' mates in the navy, by endeavoring to obtain for them a more eligible and advantageous situation than the present rules and regulations of the service admit of.

We have the honor to be, with great respect, your obedient and humble servants,

WILLIAM BAINBRIDGE,
ISAAC HULL,
D. DEACON,
ALEX. S. WADSWORTH.

The Hon. SECRETARY OF THE NAVY.

14th CONGRESS.]

No. 147.

[2d SESSION.]

CONDITION OF THE NAVAL ESTABLISHMENT.

COMMUNICATED TO THE SENATE, JANUARY 29, 1817.

COMMITTEE ROOM, December 27, 1816.

Sir:

The time of peace and prosperity is the season proper to build up and mature the institutions of a country. Under the influence of this obvious truth, Congress has, by a wise course of legislation, nearly completed the naval establishment. By the creation of a navy board, which, harmonizing with the head of the Department, and giving to it all the benefits of practical observation and experience, the civil administration of the affairs of the navy has been rendered, perhaps, as complete as the nature of the institution will admit. But, to realize all the advantages confidently anticipated by the friends of the Board, a cordial concert and harmony between it and the head of the Department is indispensable. It cannot but be foreseen that any jealousy, rivalry, or misunderstanding between these important branches of the establishment must greatly tend to paralyze effort, and to render nugatory the best concerted designs.

By the law of the last session, providing for the gradual and permanent increase of the navy, the fate and fortunes of this important branch of the national strength was finally fixed and settled. Congress, by a prudent foresight, has authorized, and furnished the means, of creating, by degrees, a naval force, which, when completed, cannot fail to secure for the nation that safety at home, and that respect from abroad, the foundation for which was so amply laid by the heroic exploits of our infant navy during the late war. There is no doubt that at this moment this arm of our safety and our strength possesses the confidence and the favor of the Government and of the nation. It is of the utmost importance that this confidence and this favor should not only be retained, but, if possible, augmented. This, in the opinion of the committee, can only be done by a prudent, energetic, and, above all, an economical management of the affairs confided to the Department. Profusion, in the expenditure of public money, is a common charge against Government. It is probable the belief of this very profusion in the money concerns of the Department, was the true cause why the navy was kept down so long in public opinion. The committee are of opinion that, situated as this country is, that a navy is not only its most efficient and appropriate, but its cheapest defence. That this conviction should become general, nothing is necessary but to introduce and enforce the most rigid economy in every branch of naval expenditure—an economy recommended by considerations not only of attachment to the naval establishment, and a solicitude for its prosperity and reputation, but of duty to the nation.

An act of the last session has [also secured; by more effectual provisions, the Navy Pension Fund; so that the benevolent and humane intentions of the Legislature will be more amply extended to the disabled officers and seamen of the navy.

By your report to the Senate, of the 4th of December, 1815, [see No. 129] it appears that the dock-yard, contemplated by the act of the 3d of March, 1813, had not then been constructed; nor had the acts respecting naval hospitals been then executed. Perhaps the laws respecting these necessary appendages of the naval establishment are defective. Perhaps the appropriations, heretofore made for their construction, may not be adequate to the purpose. The naval committee of the Senate, animated with the desire to perfect the naval establishment by every means in their power, to amend any defects that may exist in the laws respecting it, and to afford every means to prevent or to suppress abuses, if any should exist, have directed me to communicate with you freely, and to inquire,

1st. Whether any legislative provision is necessary to carry into effect the existing provisions respecting the naval establishment? and,

2d. Whether any further provision, by law, is necessary to render it more perfect?

I have the honor to be, very respectfully, sir, your obedient servant,

C. TAIT, *Chairman.*

The Hon. BENJAMIN W. CROWNINSHIELD, *Secretary of the Navy.*

NAVY DEPARTMENT, *January 8, 1817.*

SIR:

I have the honor to reply to your letter of the 27th ultimo, and most cordially reciprocate your sentiments upon the subject of the naval establishment, and of the relative duties of its several branches.

The system of economy is most essential to its popularity, and a most important duty incumbent upon this Department; so far as abuses have crept in, every effort will be directed to check them in future, and to confirm that confidence of the Legislature which has been so liberally demonstrated in the late acts for a gradual increase of the navy, and for appropriations towards its support.

The act of the last session, for the better security of the Navy Pension Fund, has not been attended to in the States of Massachusetts and New York, where its provisions were more immediately applicable; and large sums, it is presumed, are still due, and remain unaccounted for since the commencement of the late war.

The subject of dock-yards and naval depots has constantly been under consideration, and the final decision, as to the most proper site in the Chesapeake, will lead to the execution of the necessary docks in that and the other naval establishments.

The naval hospitals have been suspended from the insufficiency of the original appropriation of the act of 1811, the amount of fifty thousand dollars, appropriated out of the Marine Hospital Fund, having failed; and the sum deducted from the pay of the officers and seamen has been absorbed in the general expenditures, and its reimbursement must depend upon additional estimates and appropriations for the service. The necessity of the establishment is fully admitted, and the present period appears to be propitious to its completion, which shall receive all the attention from this Department due to its importance.

To the queries propounded by the committee, I have the honor to reply that the existing provisions, respecting the naval establishment, are adequate to the present organization of the Department; such further provisions as the nature of the service may require, and such as may arise out of the gradual increase of the navy, shall be promptly suggested to the consideration of the naval committee of the Senate.

I take the liberty of suggesting a repeal of the law passed April 18, 1814, authorizing the President to make an addition, not exceeding twenty-five per centum, to the pay of the officers, seamen, and marines, as the situation of the naval service does not, at present, require such additional allowance.

I have the honor to be, with the highest respect, sir, your most obedient servant,

B. W. CROWNINSHIELD.

Hon. CHARLES TAIT, *Chairman Naval Committee of the Senate.*

NAVY DEPARTMENT, *January 22, 1817.*

SIR:

The Commissioners of the Navy Pension Fund respectfully submit to the honorable naval committee of the Senate the propriety of extending the provisions of the acts of Congress, in relation to the widows and children of those officers, seamen, and marines, who, in certain cases to be designated by law, may have died, or shall hereafter die in the naval service, in consequence of disease, or injuries received while in the line of their duty.

The existing acts of January 20, 1813, and of March 4, 1814, do not extend the benefit of pensions to all cases deserving the bounty of Government; many cases have occurred which claim some consideration from the long and faithful services of deceased officers and seamen, several of which have been presented to Congress in the form of petition, during the present session, and have taken that course from the inability of the commissioners to admit their claims, under a literal construction of the acts, which limit the pensions to the widows of those only "who die by reason of wounds, &c."

Considering the casualties and extreme hardships to which the naval service exposes those engaged in it, exclusive of those resulting from the acts of the enemy in battle; and, also, that the relief to be afforded will be derived from a fund accruing from the captures made by the officers, seamen, and marines, it is submitted to the naval committee of the Senate to have the naval service placed upon an equal footing with the military establishment, by extending the provisions to the widows and orphans of the naval officers, seamen, and marines.

A further consideration of the existing laws will show that sufficient provision is not made for the widows of surgeons and surgeons' mates, who are, in the performance of their duties, peculiarly exposed to contagious diseases; and, in the event of death ensuing from such causes, as the laws are now construed, the widows and orphans would be deprived of an equitable share of the benefits of the Navy Pension Fund.

I have the honor to be, with very great respect, sir, your most obedient servant,

B. W. CROWNINSHIELD.

Concurred with.

WM. H. CRAWFORD.

Hon. CHARLES TAIT, *Chairman Naval Committee of the Senate.*

14th CONGRESS.]

No. 148.

[2d SESSION.

CLAIM FOR PRIZE MONEY FOR A BRITISH VESSEL DESTROYED ON LAKE SUPERIOR.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 5, 1817.

Mr. PLEASANTS, from the Committee on Naval Affairs, to which was referred the petition of Arthur Sinclair, for himself, his officers, and crew, in a cruise on Lake Superior, during the late war, reported:

The petitioner states that, during the late war, he was ordered on an expedition up Lake Superior, against Michilimaciac. That during the said cruise it was the fortune of the party to destroy in the river Nantawausaga a brig belonging to the enemy loaded with military stores; her burthen was about two hundred tons, and the loss sustained by the enemy in the destruction of said brig and stores was supposed to be not much short of one hundred thousand dollars. This loss was of a character most serious to the enemy, and would have been felt in the most sensible manner, had not the conclusion of peace put an end to the war. The petitioner prays that the munificence of Congress would bestow on those concerned in said expedition such reward as in their judgment they may merit.

The committee have considered the petition with attention, and are of opinion that the prayer of it ought not to be granted. The conduct of Captain Sinclair, his officers and men, was undoubtedly gallant; but the committee are able to see in the transaction nothing but the discharge of a duty, in the way in which duties were generally discharged by the naval officers and men, with bravery and fidelity. Extraordinary rewards should be reserved for extraordinary services, and they have been bestowed by Congress in few or no cases, but where there was equal or superior force. The committee, therefore, recommend to the House the following resolution:

Resolved, That the prayer of the petitioner ought not to be granted.

[1st SESSION.

CONTRACTS FOR THE YEAR 1817.

COMMUNICATED TO THE SENATE, JANUARY 7, 1818.

NAVY DEPARTMENT, *January 6, 1817.*

SIR:

I have the honor of transmitting, herewith, a statement of the contracts made by the Commissioners of the Navy during the year 1817, prepared in obedience to the act of the 3d of March, 1809, entitled "An act further to amend the several acts for the establishment and regulation of the Treasury, War, and Navy Departments."

I have the honor to be, very respectfully, your obedient servant,

B. W. CROWNINSHIELD.

Honorable the PRESIDENT OF THE SENATE.

Statement of the Contracts made by the Commissioners of the Navy in 1817.

Names of the contractors.	Date of contracts.	Articles contracted for.	Price of articles.	When to be delivered.	Where to be delivered.
Joel Bunce,	1817- January 1	All the rations that shall be required for the United States' marines stationed at the United States' navy yard, New York.	20 cents per ration,	As required during 1817,	United States' navy yard, New York.
Edward Stone, Henry Eckford,	" 6 " 10	500 barrels of pork, One complete frame of live oak timber, cut to moulds, for a ship of the line, and one complete frame of live oak timber, cut to moulds, for a frigate, and all the promiscuous live oak timber required for chocks, fillings, and such like purposes, for the said two frames.	\$19 per barrel, \$1 55 per cubic foot for the frame of the ship of the line, and \$1 42½ per cubic foot for the frame of the frigate, and \$1 per cubic foot for the promiscuous timber required for the two frames.	Within 40 days, Within 12 months,	Washington city. United States' navy yard, New York.
William Bowhay,	" 27	The right of making and using a machine invented and patented by him, called Bowhay's dorvelling machine.	\$100.		
Isaac S. Middleton, Thomas Spalding,	March 19 April 2	Building a warehouse and furnishing materials, One complete frame of live oak timber, cut to moulds, for a frigate.	\$3,210, \$1 42½ per cubic foot,	September 1, 1817, Within 12 months,	Washington city. Navy yard, New York.
Robert E. Griffith,	" 5	Copper rods for bolts and spikes, sheathing copper, and copper sheathing nails; 391,233 pounds.	26 cents per pound,	Do. do.	Philadelphia.
William M'Kenney,	" 9	500 barrels of bread, 700 do.	\$6 75 per each 100 pounds, \$7 do.	May 1, 1817, -	Georgetown, D. C.
Thomas Foyles,	" 10	All the rations that may be required of him for the use of the marines of the United States stationed at head quarters in the city of Washington.	20 cents per ration,	As required, from the 10th April, 1817, to 9th April, 1818.	Washington city.
Nathaniel Wattles,	May 4	Freight of naval stores from the navy yard, Washington, to Gibraltar, &c.	\$1 25 per barrel.		
A. Bull, P. Herron, J. Hopkins, W. Truss, T. Hoggard, and C. Grice.	June 7	359,600 feet of oak plank for a seventy-four, - 232,250 feet of yellow pine plank, do. - Also the white oak root knees, yellow pine beams, ledges, and long combings, and the promiscuous yellow pine and white oak for a seventy-four, and the lower masts, topmasts, lower yards, and top sail yards, and the oak plank and thick stuff for tops, caps, trestle trees, &c. required for a line of battle ship.	\$3 per 100 superficial feet, \$3 do. 50 cents per inch sided for the oak root knees; 38 cents per cubic foot for the yellow pine beams, ledges, long combings, and promiscuous yellow pine and white oak; 4½d. Virginia currency, per inch, for the lower masts; 3½d. Virginia currency, per inch, for the topmasts, lower yards, and topsail yards; \$3 per 100 superficial feet for the oak plank and thick stuff required for tops, caps, &c.	Within 12 months,	Navy yard, Gosport, Va.
Elijah Swift,	" 9	One complete frame of live oak timber, cut to moulds, for a ship of the line.	\$1 55 per cubic foot,	Within 24 months,	At such navy yard as the commissioners may direct.
Nathaniel P. Tatem,	" 9	130,250 superficial feet yellow pine plank for a frigate, 233,250 do. white oak plank do. 484 white oak root knees, Yellow pine beams, Lower masts, Topmasts, lower yards, and topsail yards,	\$3 per 100 superficial feet, \$3 do. 45 cents per inch sided, 38 cents per cubic foot, 60 do. 3½d. Virginia currency, per inch,	Within 12 months,	Navy yard, Gosport, Va.

STATEMENT—Continued.

Names of the contractors.	Date of contracts.	Articles contracted for.	Price of articles.	When to be delivered.	Where to be delivered.
Nathaniel P. Tatem,	1817. June 9	Oak plank and thick stuff for tops, caps, and trestle-trees.	\$3 per 100 superficial feet,	Within 12 months,	Navy yard, Gosport, Va.
John F. Tice,	" 10	Keel and keelson pieces, for one line of battle ship, of Jersey white oak.	\$1 per cubic foot,	August-16, 1817,	Navy yard, Brooklyn, New York.
Ebenezer Thompson,	" "	700 white oak knees for a line of battle ship, 484 do. for a frigate.	50 cents per inch sided.

NAVY PENSION FUND.

COMMUNICATED TO THE SENATE, JANUARY 19, 1818.

NAVY DEPARTMENT, January 15, 1818.

To the honorable the President of the Senate:

The commissioners of the Navy Pension Fund, in obedience to the act for the better government of the navy of the United States, respectfully report to Congress the following statements in relation to that fund.

Paper A. which shows the amount of stock on the books of the Treasury to the credit of the commissioners.

Paper B. Statement of bank stock belonging to the fund.

Paper C. Account of the commissioners with Thomas T. Tucker, Esq. treasurer of the fund. [Balance against him \$76,016 47.]

Paper D. Abstract of warrants drawn by the Secretary of the Navy on the treasurer of the fund, from the 1st of January, 1817, to the 31st December, inclusive. [Amount \$196,900.]

Paper E. List of navy pensioners, with the pension allowed to each. [Number, including widows and orphans, three hundred and fifty-eight, and amount paid \$32,036.]

All which is respectfully submitted in behalf of the commissioners.

B. W. CROWNSHIELD.

A.

Statement of the stocks on the books of the Treasury to the credit of the Secretary of the Navy, the Secretary of the Treasury, and the Secretary of War, for the time being Commissioners of the Navy Pension Fund, with interest and reimbursement which accrued in the year 1817.

No. 151.

[1st Session.]

NAVY HOSPITALS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 20, 1818.

NAVY DEPARTMENT, *January 15, 1818.*

In compliance with a resolution of the House of Representatives, passed on the 22d day of December, 1817, I have the honor to submit the following statement in relation to naval hospitals, and to meet the inquiry contemplated in said resolution.

By the act of Congress, passed the 26th February, 1811, the Secretary of the Navy, Treasury, and War, were appointed a board of commissioners of navy hospitals, and the sum of \$50,000 was appropriated "out of the unexpended balance of the Marine Hospital Fund," to be paid to the said commissioners, to constitute a fund for navy hospitals; which sum has not been transferred to the credit of navy hospitals, in consequence of the deficit of receipts in the several succeeding years, to meet the annual expenditure for the support of the marine hospitals, as will appear by the treasury statements herewith; so that the fund for navy hospitals remains still unaided by that amount.

In the year 1809, as will appear by statement marked A, No. 1, the sum of \$38,513 96, was paid by warrant of the Secretary of the Navy into the treasury, in conformity with the act of 2d March, 1799, being the amount collected, "by virtue of said act, from the officers, seamen, and marines of the navy;" and on the 25th February, 1811, at the period of passing the act establishing commissioners of navy hospitals, there remained a balance, due to the Marine Hospital Fund, of \$3,782 86, as per statement, marked A, No. 2; and by the same statement it appears that the fund which has accrued to naval hospitals since the 26th February, 1811, to the 30th November, 1817, the latest settlement of accounts, amounts to \$77,701 45, while the annual expenditure for supporting the temporary establishments of navy hospitals, was \$13,783 98, as per statement A, No. 3, which has been paid out of the appropriations for the navy, and which exceeds, considerably, the amount received on account of the fund for navy hospitals.

By a statement of the Register of the Treasury, marked A, No. 4, it appears that, on the 1st of January, 1811, there remained on hand a balance, on account of the Marine Hospital Fund, of \$112,081 90; and that the expenditures of the years 1811 and 1812 exceeded the actual receipts by the sum of \$17,824 39; in the three subsequent years buildings were required for the further accommodation of the sick at different ports, and specific appropriations were granted by Congress, for that purpose, to the amount of \$60,000. The unexpended balance of \$33,667 41, remaining in the treasury on the 1st of January, 1817, with the estimated amount of receipts for that year, falls short of the expenditures by the sum of \$7,869 54, as appears by statement A, No. 1.

By section third, of the act passed 26th February, 1811, the commissioners were "authorized and required to procure, at a suitable place, or places, proper sites for navy hospitals," &c.; in pursuance of which the commissioners met in the early part of the year 1812, and had surveys made of several sites in Washington city; and an architect was employed to make a draught of a building, &c. but the subsequent events of the war stopped all further proceedings, until after the peace. In 1815 and 1816, the commissioners met, and, upon examining the state of the funds, it was found that there were no moneys at their disposal, and applicable to the object, so that the provisions of the act for establishing navy hospitals have not been carried into effect, for the reasons assigned, while no neglect is justly imputable; for every accommodation, and medical aid, has been afforded to the sick in temporary hospitals, commensurate with the means, and as far as circumstances have permitted.

The resolution of the House of Representatives affords an occasion of presenting, herewith, a joint report of the commissioners of navy hospitals, for the consideration of Congress.

All which is respectfully submitted.

B. W. CROWNINSHIELD.

To the Hon. the SPEAKER of the House of Representatives.

NAVY DEPARTMENT, *January 14, 1818.*

The commissioners of navy hospitals, designated by the act of Congress, passed 26th February, 1811, have taken into consideration the provisions and the objects of the said act, and find, upon examination, that the want of adequate funds has prevented its being carried into effect. The commissioners, therefore, recommend that so much of the law as separates the Navy Hospital Fund from the Marine Hospital Fund, be repealed; and so much of the third section of that law, as requires the establishment of a permanent asylum, &c. unless Congress shall deem it expedient to appropriate, specifically, a sum sufficient for that special object.

The commissioners further recommend, in case of repealing so much of the law, that the joint funds for the support of hospitals be placed under their direction as commissioners of hospitals, generally; and that the present existing marine hospitals, with such as may be erected as naval hospitals, be placed under the same direction, to be governed by such rules and regulations as the commissioners shall adopt; and the surgeons, officers, attendants, &c. to be appointed out of the naval surgeons, and those who fill the same stations in the naval hospital establishments; and that an appropriation be made for building and supporting the same.

WM. H. CRAWFORD,
J. C. CALHOUN,
B. W. CROWNINSHIELD.

The Hon. the SPEAKER of the House of Representatives.

A, No. 1.

Statement of the Marine and Navy Hospital Fund, on the 1st day of January, 1818.

TREASURY DEPARTMENT, REGISTER'S OFFICE, *January 8, 1818.*

The Register begs leave to state to the Secretary of the Treasury that, by a statement rendered to the Treasury Department from this office, under date the 5th January, 1818, there remained unexpended on the 1st January, 1817, of the Marine Hospital Fund, the sum of	33,667 41 .
That, from the best estimate which can be formed, the receipts into the treasury, during the year 1817, will not exceed	40,000 00
Making on 1st January, 1818,	73,667 41
From an examination of the accounts settled at the treasury, in relation to said fund, warrants for payments made in the year 1817 will be issued to the amount of \$81,536 95	81,536 95
And that a deficiency on the 1st January, 1818, is stated at	7,869 54
	\$81,536 95

NOTE. The sum of \$38,513 96 was paid into the treasury in the year 1809,³ by Thomas T. Tucker, for so much received by him from the Navy Department, under the act of 2d March, 1799. This appears to have been the only payment into the treasury by the Navy Department.

JOSEPH NOURSE.

HON. WILLIAM H. CRAWFORD, *Secretary of the Treasury.*

15th CONGRESS.]

No. 152.

[1st SESSION.]

COMPLAINTS OF SUBALTERN OFFICERS OF THE NAVY AND MARINE CORPS.

COMMUNICATED TO THE SENATE, JANUARY 21, 1818:

Mr. TAIT made the following report:

The Committee on Naval Affairs, to whom have been referred the memorial of certain commissioned officers of the navy, under the rank of commanders, and also the memorial of certain officers of the marine corps attached to the Mediterranean squadron, have had the same under consideration, and report:

That your committee, duly impressed with the importance and delicacy of the subjects referred to them, and anxious to pursue that course which will best comport with the good of the public service and the high duties of the Senate, have given the several memorials all the consideration to which they are entitled.

The memorialists of the navy and marine corps pray that the Senate would institute an inquiry into the proceedings of two naval courts martial, had in the Mediterranean, in the early part of the last year. They complain that those proceedings were such as to impair their confidence in the tribunals which have been established by the laws of the country for the protection of the rights of all who are connected with the naval establishment.

The memorialists of the marine corps pray that their rights may be guarded by a special act of the Legislature, "or, that the rules and regulations for the better government of the navy be more strictly carried into execution."

Your committee sincerely regret that any circumstances should have occurred which have caused discontents among any portion of the officers of the United States' navy. They have indulged the hope that the high reputation and renown which had been acquired by the naval establishment of this country in war would be cherished and sedulously guarded, in the season of peace, by every officer of the corps. It is only by a correct deportment, by a rigid discharge of duty, and a strict observance of the laws, that their well earned fame can be preserved. If these observations are correct as it regards the individuals, officers of the navy, they most strongly apply to their tribunals. If naval courts martial, or courts of inquiry, have become so negligent, or so partial and unfaithful in the discharge of their duties, that those who should look to them for protection can no longer confide in them, but must resort, in the language of the memorialists, for safety "to those arms with which their country has entrusted them, or to that strength with which nature has endowed them," then, indeed, there is most serious cause of alarm. But your committee do not believe that this is the condition and character of your naval tribunals. They have heretofore been unimpeached. Under their administration, the American navy has attained a character, both at home and abroad, of which the nation is justly proud. In the instances complained of, there may have been some ground for criticism; the proceedings may have been such as not to give entire satisfaction to all; but your committee are decidedly of the opinion, that, whatever may be the character of the proceedings of the courts martial under consideration, they are beyond the control of the Senate. It has no power that can reach these cases. It has none other than legislative power touching these matters, which, in its nature, cannot be retrospective. The corrective, in such cases, is confided by the institutions of the country to the Chief Magistrate, and to that department of the Government would their complaints, perhaps, have been most properly addressed.

There is another view of the subject, to which the committee have not been inattentive. It has been considered a fit occasion to look into the laws governing the navy, in order to discover whether any defects exist which may require legislative correction. Your committee have done so, and, on examination, are of opinion that no legislative proceedings are necessary at this time. The rules and regulations for the government of the navy now in force are those under which it has grown up and acquired a reputation for discipline and efficiency which your committee believe is not surpassed by any similar establishment. In this state of things, they are of opinion that the causes of complaint, if any, are not in the laws, but in the administration of the laws. As it regards the marines, a description of force most necessary and useful, and which merits the fostering and protecting care of the Government, the committee, on examination, find that they are subject to do duty afloat and on shore, as the Executive, at his discretion, may direct; and that they are "governed by the same rules and articles of war as are prescribed for the mili-

tary establishment, and by the rules for the regulation of the navy heretofore, or which shall be established by law, according to the nature of the service in which they shall be employed." The committee know no footing more proper on which to place the marines than that on which the law has already placed them. Were new rules now to be prescribed for their government and protection, it is believed that none other ought to be prescribed than those which now exist. Your committee, therefore, repeat that, in their opinion, the defect, if any, is not in the law, but in its execution. Viewing, then, the subjects referred to them in all their bearings, feeling the danger of affecting that discipline which is the vital principle of all military establishments, while they would frown with indignation on every act which savored of oppression or of mal-administration, your committee respectfully submit the following resolution:

Resolved, That the Committee on Naval Affairs be discharged from the further consideration of the memorial of the naval officers of the Mediterranean squadron, under the rank of commanders, and of the memorial of the officers of the marine corps, of date the 17th January, 1817.

The memorial of the commissioned officers of the Mediterranean squadron, under the rank of commanders, to the honorable the Senate of the United States, dated

PORT MAHON, January 20, 1817.

The undersigned, officers holding commissions in the navy of the United States, beg leave, most respectfully, to state to the honorable the Senate of the United States, that, having entered the service early in life, from motives of love of their country, respect for its naval character, and a sincere wish to become useful, they would willingly encounter dangers of any kind, or endure any hardships which the good of the service or the preservation of discipline may make necessary; that, together with a willingness to risk their lives and sacrifice their comforts, they have heretofore felt a firm reliance on the protection which the well digested laws of their country were intended, by the framers and enactors of them, to afford to officers of every grade, against the wanton exercise of that power which all military establishments must place in the hands of the superior over the subaltern. Guarding with cautious jealousy their reputation and their rights against all assaults which have not been designated by the law for the guardianship and arbitration of the most respectable of all tribunals, (a court martial,) they have witnessed with the deepest regret the proceedings on a late transaction which has been brought to the decision of a court, composed of the eldest officers of this squadron—of officers who, from their rank in service, we had hoped would prove as jealous guardians of our rights as of their own. We beg leave, respectfully, to state the leading circumstances of this case: Captain John Heath, commanding the detachment of marines on board of the frigate Java, under the command of Oliver H. Perry, Esquire, was so unfortunate as to incur the displeasure of his commander. The merits of the case between these two officers we do not presume to canvass; but we are imperiously called upon to notice the subsequent events: A court martial, convened in the harbor of Mahon, on board the Java, on the 31st of December, 1816, for the trial of Captain Heath, on charges and specifications, of which the following is a copy:

CHARGE 1st. Disrespectful, insolent, and contemptuous conduct to me, his superior officer. *Specification 1st.* That he did, on or about the 22d of July, 1816, on board of the United States' frigate Java, then standing into the bay of Naples, on being asked by me "why a certain marine was suffered to appear on deck in so filthy and dirty a dress?" reply to me in an insolent, disrespectful, and contemptuous manner. *Specification 2d.* That he did, late in the evening of the 18th of September, 1816, on board the United States' frigate Java, then at anchor in the harbor of Messina, cause a letter, written by himself, and couched in language highly improper to be used towards his commanding officer, to be left on my table in the cabin of said ship. *Specification 3d.* That he did, when sent for into the cabin, on being asked "why he took such a time to write me a letter of that kind?" assume a deportment towards me highly provoking and disrespectful: the aforesaid charge and specifications being in violation of a part of the 15th article, and a part of the 13th article, of the rules and regulations for the better government of the navy of the United States.

CHARGE 2d. Neglect of duty and unofficer-like conduct. *Specification 1st.* That on or about the evening of the 16th September, 1816, on board the United States' ship Java, then at anchor in the harbor of Messina, he, the said Captain John Heath did, on two marines jumping overboard to swim from the ship, neglect to come on deck, although called and informed of this circumstance, alleging as a reason therefor, the subterfuge of his being sick. *Specification 2d.* That he did, when ordered by me, at said time and place, to come on deck and muster the marines, execute that duty in a careless and indifferent manner; and when the marines were mustered, did neglect to report to me, until called and directed so to do. *Specification 3d.* That he did neglect, on the desertion of said marines from the ship, to take those immediate steps for their recovery that became him as a commanding officer of the detachment to which they belonged, and were required by the urgency of the case. This charge and specification being in violation of a part of the 20th article, and the 28th article of the rules and regulations for the better government of the navy of the United States.

CHARGE 3d. Disobedience of orders. *Specification.* That he did, at the time and place referred to, in the 3d specification of 1st charge, though repeatedly ordered to be silent, continue to speak, although warned of the consequences, and in the same indecorous and contemptuous manner as is therein alleged, thereby violating a part of the 14th article of the rules and regulations for the better government of the navy of the United States.

O. H. PERRY.

UNITED STATES' SHIP JAVA, *Algiers Bay, October 14, 1816.*

Of these charges and specifications, it will be necessary to observe only, that the offence on which the greatest stress is laid, was committed, as the specification states, on the 22d July, 1816; that Captain Heath was neither arrested, suspended, nor warned that notice would be taken of this offence; that on the 16th September, 1816, Captain Heath is again supposed by Captain Perry, to commit an offence, for which Captain Perry suspends him from the exercise of the duties of his office; that in the interval between the commission of these two offences, a general court martial convenes in the bay of Naples, of which court, Captain Perry is President, and Captain Heath a member; that after Captain Heath had been suspended from duty two days, he addresses a note to Captain Perry, of which the following is a copy:

UNITED STATES' FRIGATE JAVA, MESSINA, *September 18, 1816.*

SIR:

On the evening of the 16th instant, I was ordered below by you, from the quarter deck of this ship, with these words, or to that effect, "I have no further use for your services on board this ship." I have waited until this moment to know why I have been thus treated; and being ignorant of the causes, request my arrest and charges.

Very respectfully, your obedient servant,

JOHN HEATH, *Captain Marines.*

The language of this note Captain Perry considered disrespectful, and summoned Captain Heath into his cabin. Willingly would your memorialists draw a veil over the transaction, which then and there took place; most willingly would they bury in oblivion a transaction so disgraceful to the character of an American officer. But justice to themselves forbids it. It appears by the statement of Captain Heath, and the acknowledgment of Captain Perry, that, after some conversation had passed, Captain Perry, from (as he says,) "a disposition to chastise insolence on the spot," gave to Captain Heath a blow, and after having committed this outrage on his person, with much abusive language, ordered him to be confined to his room, and a sentinel placed over him; a measure which hitherto has been considered justifiable in extreme cases only. A little reflection convinced Captain Perry of the impropriety of his conduct, and alarmed him for its consequences; he accordingly, through the medium of another post captain, and the first

lieutenant of the Java, made an overture to Captain Heath of reconciliation, and through them tendered an apology, but insisted on terms of his own dictating. This, Captain Heath, having a due regard for his own reputation, for the commission which he has the honor to hold, and for the respectability of his brother-officers of the same rank, positively refused to accept, and in his turn preferred charges against Captain Perry. A court martial convened, and as we have been unofficially informed, for the trial of both; but Captain Perry remained in the exercise of the functions of his office, while Captain Heath was in close confinement. Of the proceedings of this court your memorialists know but little; they have ere this, they presume, been laid before the honorable Secretary of the Navy: But they know that Captain Perry has sailed for the United States, in command of the Java, with the sanction of a court martial, and that of the commander-in-chief to support his conduct.

The undersigned have now no guarantee for the safety of their persons, but the use of those arms which the laws of their country have placed in their hands, and that personal strength with which nature has blessed them. To those means they must resort, and on them in future depend, unless the honorable Senate, to whom they look with filial confidence as the guardians of their rights, will, by a timely interference, save them from the disagreeable alternative of relinquishing a profession to which they are enthusiastically attached; or becoming, in every instance, the defenders, not only of their characters, but of their persons. Placed at a distance from their country, and without the immediate influence of its civil laws, your memorialists rely with confidence on the decision of the high tribunal to which they now solemnly appeal. Your memorialists trust it will not engross too much of the valuable time of the Senate, to institute an examination into the proceedings of this court in these two instances. They beg leave also to state, that a case occurred at Naples in August last, between Captain T. O. Creighton and Midshipman Marston, of the Washington, the decision on which they also consider as tending to destroy the conviction which every officer ought to feel, while in the execution of the duties of his office, that the strong arm of the law is extended over him, equally for his protection during good conduct, and for his punishment when he deviates from its rules. If your memorialists have erred in making this appeal, they hope it will be attributed rather to an exuberance than a deficiency of a good feeling; and they trust that they will ever be found ready to obey the call and support the cause of their country in any contest, however unpromising to themselves as individuals.

And your memorialists, as in duty bound, will ever pray.

Thos. Ap. Catesby Jones, lieutenant navy.
W. B. Shubrick, lieutenant navy.
R. T. Auchmuty, lieutenant marine corps.
Christopher Ford, lieutenant marine corps.
George Pearce, lieutenant navy.
Beverly Kennon, lieutenant marines.
Samuel L. Breese, lieutenant navy.
Thomas Nichols, sailingmaster.

J. L. Morris, lieutenant navy.

Memorial of the officers of the United States' Marine Corps.

The officers of the United States' Marine Corps in the Mediterranean present the following memorial to the honorable Senate and House of Representatives of the United States, and pray that their situation on board ship, and the grievances herein complained of, may claim their serious attention.

The want of established rules and regulations for the marine corps, when stationed on board ship, and this difference of discipline in different vessels, have always been productive of serious ills, and have, too frequently, occasioned unavoidable and unhappy disturbances. The undersigned, therefore, do earnestly entreat, that rules and regulations be established by an act of Congress, wherein the duties of marine officers, when afloat, may be clearly and distinctly defined, and rights and privileges protected.

The undersigned regret the necessity under which they conceive themselves bound by their duty to the service and themselves, of entreating the honorable Senate and House of Representatives, as the guardians and protectors of their rights, to examine the decision of a court martial held at Mahon, on Captain Oliver H. Perry, of the navy, under the charges of outraging the rights, feelings, and person of the commanding officer of marines, of the United States' ship Java; and pray that the protection of their rights and persons be guaranteed by some special act of Congress, or that the rules and regulations for the better government of the navy be more strictly carried into execution.

John Hall, C. M. M.
H. B. Breckenridge, captain marines.
Wm. Hall, captain marines.
John L. Kuhn, lieutenant U. S. Marines.
Henry Olcott, first lieutenant marines.

Francis B. White, first lieutenant marines.
John Harris, first lieutenant marines.
R. T. Auchmuty, second lieutenant marines.
Christopher Ford, lieutenant marines.

PORT MAHON, January 17, 1817.

UNITED STATES SHIP WASHINGTON, PORT MAHON, May 4, 1817.

SIR:

I have the honor to transmit herewith an attested copy of a letter written to me by the captains and commanders of the squadron.

I fully concur with those gentlemen in opinion, and shall believe it to be my duty to comply with their request so far as to permit the officers complained of to return to the United States, as soon as it can be done without injury to the public service.

I have the honor to be, very respectfully, sir, your obedient humble servant,

I. CHAUNCEY.

To the Hon. BENJAMIN W. CROWNSHIELD, *Secretary of the Navy, Washington.*

PORT MAHON, *May 4, 1817.*

SIR:

We, the undersigned, captains and commanders, serving in the squadron under your orders, have heard with deep regret that many of the lieutenants, and other commissioned officers belonging to the vessels under our respective commands, have forwarded to the honorable the Senate of the United States, a memorial which in our opinion is calculated to excite disaffection and insubordination in the navy, and bring into contempt a service heretofore distinguished for its reputation, order, and good government.

The undersigned wish to be distinctly understood, that it is not against petitioning the Legislature for a redress of real wrongs, that we now protest, but against the manner, time, and object of the memorialists, which, if truly represented to us, is as follows:—They complain that they have been oppressed, and require that the 30th article of an act for the better government of the navy should be revised and so amended as to designate particularly the punishment of offenders, and, it is believed, that they even go so far as to threaten that should their imaginary grievance not be redressed, they will resort to their arms for protection. It is also understood that the memorialists have presumed to reflect on the members of two courts martial, composed of officers of long standing in the navy; that their meetings have been held with apparent secrecy, and the memorial studiously withheld from their commanders, who would readily sanction any measure having for its object the good of the service. It cannot be denied that it is the bounden duty of officers, more especially when on a foreign station, to cultivate towards each other the most perfect harmony and good will; but it is the opinion of the undersigned, that the conduct of the memorialists is calculated to have a contrary effect. The undersigned are therefore impelled by a sacred duty we owe our country and ourselves, to request that you will be pleased to remove all those officers from under our respective commands, as soon as the public service will admit of the same, as we cannot but consider the signers of the memorial as having forfeited all claims to our confidence, and their example as endangering the vessels entrusted to our charge.

We have the honor to be, very respectfully, sir, your obedient servants,

WM. M. CRANE,
JOHN ORDE CREIGHTON,
GEORGE W. RODGERS,
THOMAS GAMBLE,
J. I. NICHOLSON,
EDMOND P. KENNEDY.

To ISAAC CHAUNCEY, Esq. *Commodore*
and Commander-in-chief of the naval forces of the U. S. in the Mediterranean, &c.

15th CONGRESS.]

No. 153.

No. 154.

[1st Session.]

TRIALS OF CAPTAIN OLIVER H. PERRY, OF THE NAVY, AND CAPTAIN JOHN HEATH,
OF THE MARINE CORPS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 30, 1818.

NAVY DEPARTMENT, January 29, 1818.

Sir:

In obedience to the resolution of the House of Representatives of the 22d instant, I have the honor to transmit, herewith, copies of the proceedings of the court martial, ordered by Commodore Isaac Chauncey, on the Mediterranean station, for the trial of Captain Oliver H. Perry; and also of the proceedings of the court martial, on the same station, ordered by the same officer, for the trial of Captain John Heath, of the marine corps.

I have the honor to be, with the highest respect, sir, your most obedient servant,

B. W. CROWNINSHIELD.

The Hon. the SPEAKER of the House of Representatives.

U. S. SHIP WASHINGTON, PORT MAHON, January 11, 1817.

Charges and Specifications preferred by John Heath, Captain in the Marine Corps of the United States, and commanding a guard on board the United States' frigate Java, against Oliver H. Perry, Esq. Captain in the Navy of the United States, and commanding said ship.

CHARGE 1st. *Ungentlemanly and unofficer-like conduct.*

Specification. In that, on the night of the eighteenth day of September, in the year of our Lord one thousand eight hundred and sixteen, in contempt of, and in direct violation of the laws for the better government of the navy of the United States, Oliver H. Perry, Esq. a captain in the navy of the United States, and in command of the United States' frigate Java, did, in the cabin of said frigate, while lying in the harbor of Messina, then and there, without cause or provocation, make use of most abusive and unwarrantable language to John Heath, a captain in the marine corps of the United States, and commanding a detachment on board the United States' frigate aforesaid, in words to wit; that he, the said John Heath, was a "damned rascal and scoundrel, and had not acted like a gentleman," or words to that effect.

CHARGE 2d. *Oppression and cruelty.*

Specification. In that, on the night of the eighteenth of September, in the year of our Lord one thousand eight hundred and sixteen, Oliver H. Perry, Esq. a captain in the navy of the United States, and in command of the United States' frigate Java, did, in the cabin of said frigate Java, while lying in the harbor of Messina, then and there, without cause or provocation, violently strike John Heath, a captain in the marine corps of the United States, and commanding a detachment on board of the United States' frigate aforesaid, being in contempt of, and in direct violation of the laws of the United States, for the better government of the navy.

JOHN HEATH, *Captain Marines.*

Witnesses.—Lieut. P. G. Howle, Mr. Anderson, Corporal Philpot, John Coleman, Captain John Heath.

Minutes of the proceedings of a court martial, assembled on board the United States' frigate Java, in the harbor of Port Mahon, upon the 10th day of January, 1817, for the trial of Oliver H. Perry, Esq. a captain in the navy of the United States.

Members present: Captain John Shaw, *President*; William M. Crane, John O. Creighton, John Downes, Thomas Gamble, Robert S. Kearney, *Judge Advocate.*

All parties admitted, read the order of Isaac Chauncey, Esq. commodore and commander-in-chief of the naval forces of the United States, in the Mediterranean sea, dated Port Mahon, January 10th, 1817, directed to John Shaw, Esq. a captain in the navy of the United States. Captain Perry appeared in court, and, being asked, made no objections to the members of the court. The members and Judge Advocate being duly sworn, the annexed charges and specifications were read. Captain Perry being desired to plead to the foregoing charges and specifications, pleaded not guilty; whereupon the court proceeded to trial.

The following witnesses were duly sworn on the part of the prosecution, viz: Lieutenant Howle, Lieutenant McCall, and corporal Philpot, all of the Java; all the witnesses were ordered to withdraw, except Lieutenant Howle, who was retained for examination.

Lieutenant HOWLE. I was in the ward room on the evening of the day specified in the charge, and was lying in my cot directly under the cabin. I heard loud talking between some persons in the cabin, and overheard Captain Perry say he wanted me. I hastened out of bed, and as soon as I got my clothes on, went into the cabin; I there discovered Captain Perry and Captain Heath in conversation; they were standing by the after-gun in the forward cabin; as I opened the door, I heard Captain Heath say something about feelings; I believe Captain Perry ordered him to keep silence, but will not be very positive about that; as soon as Captain Perry saw me, he said, sir, I have arrested this man, (alluding to Capt. Heath,) you will take charge of him, and I have a great mind to put him in irons. He has not only dared to write me an insulting letter, but he has insulted me in my cabin: he then addressed himself to Captain Heath, and said, I would serve you right if I did put you in irons; to which Captain Heath replied, "very well, sir;" Captain Perry said, don't repeat those words again, or I will knock you down; Captain Perry repeated these words two or three times, in an attitude with his arm extended, and shaking either his finger or his fist, I do not know which, at Captain Heath. Captain Heath again replied, "very well, sir;" upon which Captain Perry struck him. I then got in between them, and Captain Perry called for his sword, but it was not given to him that I perceived; he then ordered me to take him below, and put him in irons, and place a sentry over him; during the time I was in the cabin, I heard Captain Perry make use of the word puppy to Captain Heath. I took Captain Heath as far as the hatch leading to the ward room; I then returned and asked Captain Perry if I should put him in irons; he told me no, I need not, but to put him in his state room, and place a sentry over him; which order I obeyed. He then sent for me, and observed it was not probable that the business would stop there, and requested me to notice the circumstances on paper as they had occurred, which I did the next morning. On leaving the cabin, I asked what order I should give to the sentry who was placed over Captain Heath; he told me I might remove the sentry, but to confine him to his state room: the next morning Captain Perry told me I might allow him the use of the ward room. Lieutenant Howle ordered to withdraw.

Lieutenant M'CALL's testimony declares none of these circumstances came under my observation. I was in bed at the time.

Witness questioned by the prosecutor.

Question. Did you not hear Captain Perry order me in irons?

Answer. I did not.

Corporal PHILPOT's testimony. I was on guard on the night referred to in the charge. I was sitting outside the cabin door on one of the match tubs; Captain Heath passed and went into the cabin; the door was left on jar; I heard Captain Perry address Captain Heath and say, how dare you have the assurance to write to me? some reply was made by Captain Heath; I overheard the word feelings; Captain Perry said, if you repeat those words again I will knock you down; he then called for the officer of the marines, and before he arrived he called for his sword; when the officer of the marines arrived, Captain Perry ordered him to take Captain Heath and put him in irons; Lieutenant Howle then led Captain Heath out of the cabin, returned and asked Captain Perry if he should put Captain Heath in irons; Captain Perry said no, put him in his state room and place a sentry over him. Lieutenant Howle ordered me to have a sentry in readiness to place over Captain Heath, which I attended to. In about fifteen minutes Lieutenant Howle returned to the ward room, and ordered me to withdraw the sentry, which I did.

The witness ordered to withdraw.

JOHN COLEMAN, duly sworn on the part of the prosecution, states as follows: I was on post at the cabin door, the night referred to. I heard Captain Perry send for Captain Heath; Captain Heath passed me, and went into the cabin; the first thing which I heard, was Captain Perry asking for his sword; he then called for the marine officer, to put some one in double irons. I did not know who was meant at the time, nor until I saw Lieutenant Howle lead Captain Heath out of the cabin. Lieutenant Howle then stepped back and asked Captain Perry if he should put Captain Heath in irons; he said no, put him in his state room, and place a sentry over him.

Question by the court. Did you see the parties referred to?

Answer. No. I did not.

The witness ordered to withdraw.

Captain JOHN HEATH, duly sworn, states as follows: On the evening of the 16th of September, while lying in the harbor of Messina, I was ordered below by Captain Perry, from the quarter deck of this ship, without a knowledge of the cause, with these words, or to this effect, "you may go below, sir, I have no further use for your services on board this ship." I remained below for two days, under feelings the most mortifying. At length, being no longer able to bear the indignity which I conceived attached to the manner of sending me below, I resolved to apply immediately to Captain Perry for arrest and charges, as I felt anxious to know the cause of my suspension from duty. With this view I addressed Captain Perry, as I thought, a respectful letter, on the evening of the 18th September, requesting my arrest and charges, at the same time stating my ignorance of the cause of his treatment of me. Captain Perry received my letter on the same evening, I think about eleven o'clock. After his return on board, he sent for me in the cabin, and on approaching him, I was received in a manner I did not expect—his language was harsh and irritating, giving me an angry look, and, in an angry tone of voice, said, how dare you to write me this insolent letter?

I was much surprised at Captain Perry's manner, as I was unconscious of having offended him; I replied, as nearly as I recollect, that I was sorry he should construe the letter into disrespect or insolence, as none was intended, that it was merely a request for my arrest and charges. Captain Perry then said, "you damned rascal you have insulted me, it was not my intention to have arrested you, but I will now work you for it;" or words to that effect; I immediately replied, Captain Perry, you must recollect I have the feelings of a gentleman, hold a commission as well as yourself, and will have redress for this language. Captain Perry observed, that I had not acted like a gentleman. I replied, "very well, sir." Says he, do you know to whom you are speaking? my reply was, yes, sir, I am speaking to Captain Perry. Captain Perry then continued his abusive language, the precise words I do not recollect, except those of rascal and scoundrel, which were repeated; I replied, "very well, sir," and was preparing to leave the cabin, when he said, stop, sir, you shan't go yet, you have insulted me in my cabin, and I have a great mind to put you in irons. Being unused to such language, and not in a situation to have immediate redress, and finding Captain Perry became more and more irritated, and apprehensive of the consequences, I made another effort to withdraw; he, however, ordered me to remain, and called for Lieutenant Howle, of marines. Captain Perry and myself were at this time in the forward cabin; Lieutenant Howle entered, and Captain Perry turned towards him and said, I have arrested this man, (alluding to me,) you will take charge of him, he has not only dared to write me an insolent letter, but has also insulted me in my cabin, and I have a great mind to put him in irons. I replied "very well, sir." Captain Perry now advanced towards me, and, to the best of my recollection, with his fist clenched, saying, "if you repeat those words again, I will knock you down;" seeing Captain Perry advancing towards me in this manner, I immediately replied, Captain Perry, don't strike me; I think it was nearly at the same instant I received a blow from him; I drew back to defend myself, and Lieutenant Howle rushed in between us. During the time I was in the cabin Captain Perry called for his sword, but I do not recollect exactly at what period. He ordered Lieutenant Howle to take me below and confine me to my state room, and place a sentry over me; the sentry was placed in the ward room, but removed shortly afterwards.

There being no other witnesses to examine in the case, Captain Perry submitted to the consideration of the court, two letters, which are hereunto annexed, and which are copies from originals, together with an address, which is also annexed:

The court was then cleared, and the whole of the evidence read over by the Judge Advocate, and the following sentence pronounced.

SENTENCE.

The court, having maturely weighed and considered the whole matter, are of opinion, that the prisoner is guilty, in part, of the first charge and specification, in that he used improper language. The court also find the prisoner guilty, in part, of the second charge and specification, in that he did strike Captain Heath. The court doth, therefore, from all the circumstances of the case, and in consideration of the honorable overtures made to Captain Heath, for a reconciliation, only adjudge the prisoner to receive a private reprimand from the commander-in-chief, and he is hereby sentenced accordingly. The court adjourned *sine die*.

JOHN SHAW, *President.*

UNITED STATES' SHIP WASHINGTON, PORT MAHON, *January 11, 1817.*

Approved,

I. CHAUNCEY, *Commodore and Commander-in-Chief.*

UNITED STATES' SHIP JAWA, September 19, 1816.

SIR:

In order to prevent all mistakes, we have thought it advisable to repeat to you in writing the prompt and voluntary proposal of Captain Perry, that he regrets he should have been so much excited as to offer you personal violence, and that he will make you an honorable and personal apology, such as will be proper for you to receive, and him to make.

For the above reasons, we request your answer in writing.

Respectfully your obedient servants,

W. M. CRANE.
J. MACPHERSON.

Captain JOHN HEATH, *Marine Corps.*

UNITED STATES' SHIP JAWA, TUNIS BAY, October 8, 1816.

SIR:

I am under the painful necessity of informing you of a circumstance, and of detailing to you the causes which led to an event of a very unpleasant nature.

The apparent violation of the laws of my country, which may be imputed to me in my having offered personal violence to the captain of the marine guard of this ship, I trust will be in a great measure extenuated by the consideration that, although I do not absolutely defend this mode of redress, yet I insist the consequences were produced by a sufficient provocation.

The general deportment of Captain Heath towards me, so contrary to the usual address of my officers, and, moreover, his marked insolence to me in many instances, induced me to believe that his conduct proceeded from a premeditated determination to insult me on every occasion.

His palpable neglect of duty on several important emergencies, together with the usual indolence and inattention to the calls of his office, made it a desirable object with me to solicit his removal the first convenient opportunity, not only to obtain a more active and vigilant officer, but to save him the rigorous severity of a court martial.

I will now, sir, narrate to you, the circumstances which have thus compelled me to address you.

On the evening of the 16th of September last, while this ship lay at anchor in the harbor of Messina, two of her marines deserted by jumping overboard and swimming on shore. Informed of the fact, Captain Heath, as their commanding officer, was immediately sent for and acquainted therewith, but he refused to go on deck, alleging as a reason therefor, the subterfuge of indisposition. I then repeated the order for him to come on deck, and muster the marines. This duty he executed in so careless and indifferent a manner, and at the same time neglecting to report to me until called by me and requested so to do, that (conscious that such an occasion ought to animate the most careless and inattentive officer to decision and promptitude) I was induced, from such a manifest neglect of duty, to say to him, "that he might go below, and should do no more duty on board the Java."

On the evening of the 18th September, he addressed to me a letter, written by himself, which he caused to be laid on the table in the cabin, and which I received at a very late hour. This letter being couched in language which I deemed indecorous and disrespectful, I sent for him and demanded why he thus addressed me, and particularly why he had selected a time so obviously improper. He immediately assumed a manner so highly irritating and contemptuous, that I believed it my duty to arrest him, (after having expressed to him my indignation at such conduct,) and for this purpose sent for the second marine officer, at the same time ordering him to be silent. In utter disregard of this order, though repeatedly warned of the consequences of his disobedience, he persevered in the same irritating tone and manner, until at length, after reiterated attempts to effect his silence, I gave him a blow. Frequent outrage added to frequent insult provoked this disagreeable consequence.

Mortified that I should so far forget myself as to raise my arm against any officer holding a commission in the service of the United States, however improper his conduct might have been, and however just the cause, I immediately, in conformity to this principle, offered to make such an apology as should be proper for both; this proposal was refused, which precluded the necessity of any further overtures. The offer was consonant to the views of some of the most distinguished officers of the squadron, after their being made fully acquainted with every particular.

From my having been educated in the strictest discipline of the navy, in which respect and obedience to a superior was instilled into my mind as a fundamental and leading principle; and from a natural disposition to chastise insolence and impertinence, immediately when offered me, even in private life, must be inferred the burst of indignant feeling which prompted me to inflict personal satisfaction on an officer who thus daringly outraged the vital interests of the service in my own person.

I have thus gone through this unpleasant recital with as much candor and conciseness as possible. I might indeed detail to you other acts of delinquency in this officer, but I will not further weary you with the circumstances of this unfortunate affair, but confine myself to the request that you will be pleased to order a court of inquiry or court martial, as you may see fit, to examine into the causes which led to this seeming infraction of the laws of the navy.

After eighteen years of important and arduous services in the cause of my country, it can hardly be imagined that I have any disposition to infringe that discipline which is the pride and ornament of the navy; and to prevent any intention being falsely ascribed to me, I beg you will give immediate attention to this request, that the navy, as well as my country, shall be satisfied of the integrity of my motives.

I have the honor to be, sir, very respectfully, your obedient servant,

O. H. PERRY.

ISAAC CHAUNCEY, Esq.

Commodore and Commander-in-chief United States Naval Forces, Mediterranean.

Mr. President, and Gentlemen of the Court:

I shall confine myself to a few brief remarks on the subject which has brought me before this honorable court, begging leave to refer them to my letter to the commodore in chief, requesting this court martial for a detail of circumstances, trusting that a character gained in a long and honorable service is safe in the possession of gentlemen of your rank and professional respectability.

I am deprived of a most important witness in my favor by the absence of Mr. Anderson, who was present at the commencement of this affair, (the time the conduct of the prosecutor was most offensive:) it is my good fortune, however, that several of the members of this court have frequently heard him express his opinion of the provoking and insulting conduct of Captain Heath, particularly on his entrance into my cabin; this cannot fail to have its weight on the minds of the court, as from the peculiar situation of a captain (and such was mine) he may be insulted when alone in his cabin, while his prosecutor shall have the advantage of corporals and privates, stationed at his door, to distort and mangle circumstances and language imperfectly seen or heard. Although I had been so highly insulted by Captain Heath, not only on this occasion, but on others, yet as I had raised my hand against him while holding a commission, I immediately, from that consideration, offered him prompt and honorable atonement, as will appear by the paper signed by Captain Crane and Lieutenant Macpherson, which they deemed sufficient, and earnestly recommended to his acceptance; but notwithstanding this officer had before suffered a blow, and for which he was content to receive moderate satisfaction, yet this was too favorable an opportunity to give his commander (who had so frequently overlooked his offences) trouble, to let pass. I must appeal to the knowledge the president and members of this respectable court have of my general character for a refutation of these charges, and I ask if it is possible that I could in mere wantonness commit an act of violence. No, gentlemen, it was the outrageous conduct of this officer that produced the consequences that resulted—I will therefore leave my case in your hands,

with perfect confidence in your justice and liberal construction of the delicate situation in which I am and was then placed, with one more remark, viz: the evident contradiction of the testimony, and a misrepresentation of a part thereof.

Minutes of the proceedings of a general court martial assembled and held on board the United States' frigate Java in the harbor of Port Mahon, upon the 31st day of December, 1816, and held every day afterwards (Sundays excepted) until the 9th day of January, 1817, inclusive.

Present, Captains John Shaw, *President*, William M. Crane, John O. Creighton, John Downes, Major John Hall, (marine corps,) Captain George W. Rodgers, Thomas Gamble, H. B. Breckenridge, (M. C.) William Hall, (M. C.) Doctor R. S. Kearney, *Judge Advocate*.

All persons admitted, read the order of Isaac Chauncey, Esq. commodore and commander-in-chief of the naval forces of the United States in the Mediterranean Sea, dated the 30th day of December, 1816, directed to Captain John Shaw at Port Mahon, for the trial of such prisoners as shall be brought before them.

Captain JOHN HEATH, of the marine corps, appeared in court, and being asked, declared he had no objection to the members of the court. The members of the court and the Judge Advocate were then duly sworn. The following charges and specifications were then read:

Charges and specifications of charges exhibited by Oliver H. Perry, Esq. captain in the navy of the United States, and commander of the United States' frigate Java, against Captain John Heath, commanding the guard of marines attached to said ship.

CHARGE 1st. *Disrespectful, insolent, and contemptuous conduct to me, his superior officer.*

Specification 1st. That he did, on or about the 22d of July, 1816, on board the United States' [frigate] Java, then standing into the bay of Naples, on being asked by me, "why a certain marine was suffered to appear on deck in so filthy and dirty a dress?" reply to me in an insolent, disrespectful, and contemptuous manner.

Specification 2d. That he did, late in the evening of the 18th of September, 1816, on board the United States ship Java, then at anchor in the harbor of Messina, cause a letter written by himself, and couched in language highly improper to be used towards his commanding officer, to be left on my table in the cabin of said ship.

Specification 3d. That he did, when sent for into the said cabin, on being asked why he took such a time to write me a letter of that kind, assume a deportment towards me highly provoking and disrespectful: the aforesaid charge and specifications being in violation of a part of the 15th article, and a part of the 13th article, of rules and regulations for the better government of the navy of the United States.

CHARGE 2d. *Neglect of duty and unofficerlike conduct.*

Specification 1st. That, on or about the evening of the 16th of September, 1816, on board of the United States' ship Java, then at anchor in the harbor of Messina, he, the said Captain John Heath, did, on two marines jumping overboard to swim from the ship, neglect to come on deck, although called and informed of this circumstance, alleging as a reason therefor the subterfuge of his being sick.

Specification 2d. That he did, when ordered by me, at said time and place, to come on deck and muster the marines, execute that duty in a careless and indifferent manner; and, when the marines were mustered, did neglect to report to me until called and directed so to do.

Specification 3d. That he did neglect, on the desertion of said marines from the ship, to take those immediate steps for their recovery that became him as commanding officer of the detachment to which they belonged, and were required by the urgency of the case: this charge and specification being in violation of a part of the 20th article and the 29th article of rules and regulations for the better government of the navy of the United States.

CHARGE 3d. *Disobedience of orders.*

Specification. That he did, at the time and place referred to in the third specification of the first charge, though repeatedly ordered to be silent, continue to speak, although warned of the consequences, and in the same indecorous and contemptuous manner as therein alleged; thereby violating a part of the 14th article of rules and regulations for the better government of the navy of the United States.

O. H. PERRY.

UNITED STATES' SHIP JAVA, ALGIERS BAY, October 14, 1816.

Captain Heath, being desired to plead to the foregoing charges, pleaded "not guilty;" whereupon the court proceeded to trial.

The following witnesses were duly sworn on the part of the prosecution, to wit: Lieutenant Joseph Macpherson, Lieutenant Edward R. M'Call, and Lieutenant Park G. Howle; all of the frigate Java. The two latter witnesses were directed to withdraw, and the court proceeded to the examination of Lieutenant Macpherson, who states as follows:

I recollect, on standing into the bay of Naples, Captain Perry sent or called to Captain Heath, and spoke about a marine who was on deck very dirty. Captain Heath replied, the marines were in want of clothing, or they had no clothes.

Witness questioned by the court.

Question. Was Captain Heath's reply to Captain Perry, when he asked why the marine was suffered to come on deck dirty, disrespectful and insolent, or otherwise unbecoming?

Answer. His manner of reply to Captain Perry was, I thought, very disrespectful.

Question. What did Captain Heath say? Will you describe his manner?

Answer. When he came up to Captain Perry, he had his hands in his pockets and his hat a little on one side of his head, with a swagger. It was this circumstance which attracted my notice. I heard him make some remark about the marine clothing, but do not distinctly recollect what it was.

Question. What notice did Captain Perry take of Captain Heath's conduct at the time? and did he appear to feel it as an indignity?

Answer. Captain Perry told Captain Heath, if he did not take better care of the marines, he should get somebody that would. Captain Perry then leaned over the hammock cloths, evidently to restrain the feelings excited by Captain Heath's manner.

Question. Is not Captain Heath in the habit of wearing his hat on one side, and his hands in his pockets?

Answer. I should say that he was in the habit of wearing his hat a little on one side, as well as my recollection serves me. I cannot say that I have observed that he has the habit of carrying his hands in his pockets.

Question. Is it usual for Captain Heath, when addressing Captain Perry on duty, to keep his hands in his pockets?

Answer. No, I never saw it.

The witness states, in relation to the second specification of the first charge, that he knows nothing in relation thereto; his information being altogether hearsay. His knowledge of the third specification is also derived entirely from hearsay. This witness knows nothing in relation to the second and third charges and specifications.

Witness questioned by the prosecutor.

Question. Lieutenant Macpherson has stated that I told Captain Heath that, if he did not pay more attention to the marines, I would get somebody else that would. Had not Captain Heath previously said to me, that, if the marines were dirty, he could not help it?

Answer. I recollect that Captain Heath used that reply to Captain Perry.

Question. Was the marine, although in worn out clothes, clean in compliance with the orders that had been issued?

Answer. No.

Witness questioned by the prisoner.

Question. Have you not frequently told me that you did not believe I intended any disrespect to Captain Perry that day?

Answer. I recollect, on going into the ward room, to have made some remark which led to the subject. You protested solemnly that it was not your intention to offer any disrespect to Captain Perry; I then said, that I believed you did not; and added, that I thought you showed too much dignity on the occasion. I have had frequent conversations with Captain Heath, and he has always made the same protestations, which I was bound to believe.

Question. Did you never tell me that you thought at times there was something unpleasant in my manners? And have I not as often repeated, that, if so, I was unconscious of it, and regretted it extremely?

Answer. Yes, I have made that observation to Captain Heath; and he has often remarked that he regretted that his manner at times was unpleasant.

Question. Have I not frequently expressed to you that nothing was further from my intention than treating Captain Perry with disrespect?

Answer. I have heard Captain Heath say so.

Question. Have you not frequently heard me say that I used every exertion to please Captain Perry in the discharge of my duty?

Answer. I have heard Captain Heath say that there was no man in the navy he would sooner please than Captain Perry; that he regretted exceedingly what had happened. I heard him say so since his arrest. Captain Heath has always spoken in favor of Captain Perry, as have all the officers of the ship.

The witness withdrew.

Lieutenant M'CALL, of the Java, states as follows: He knows nothing in relation to the first charge; states, in relation to the second, it was reported to me that two marines had jumped overboard. I sent down to Captain Heath to come on deck; he sent me word he was unwell, and requested me to call on Lieutenant Howle. I heard Lieutenant Howle engaged in turning out the marines to muster them. After relieving Lieutenant Turner, who went in a boat in pursuit of the deserters, I sent down to inform Captain Perry of the circumstance. When he came on deck, he asked for the commanding marine officer. I then sent down for Captain Heath, in Captain Perry's name. Captain Heath then came on deck. I heard him hurrying the sergeant, who might have been rather slow in executing his duty. Captain Perry then called Captain Heath to him. Their conversation was so low that I overheard nothing.

Witness questioned by the court.

Question. Did Captain Heath neglect his duty? and was his conduct unofficer-like?

Answer. I cannot say with certainty whether he did or did not.

Question. At what time in the evening did this occurrence take place?

Answer. About eight, or half-past eight.

Question. Did Captain Heath do his utmost to recover the men, or make any exertions to effect it?

Answer. I believe he made none.

Question. Do you know whether Captain Heath was on the sick list at the time the men deserted?

Answer. I do not know: He came from shore, said he was unwell, and turned in.

Question. Had Captain Heath been absent from the ship that day? and did you know of his being indisposed?

Answer. He had been absent from the ship. I did not know that he was unwell until he mentioned it.

Question. How often had Captain Heath been called, and how long was it before he appeared on deck?

Answer. Only twice to my knowledge: I suppose it was from ten to fifteen minutes before he appeared on deck.

Question. Do you know the nature of his indisposition?

Answer. No.

Question. Did it appear to you that Captain Heath, from indisposition, was unable to attend to his duty earlier?

Answer. I think he might have got up sooner.

Question. Has Captain Heath generally paid proper attention to the marines under his command?

Answer. I believe he has.

Question. Did Captain Heath receive an order to pursue the men? and was there a boat at his disposal for the purpose?

Answer. There were boats for the purpose; but I do not know that Captain Heath received such an order.

The prosecutor declined asking the witness any question.

Witness questioned by the prisoner.

Question. You have stated to the court that you believe I made no exertions to recover the marines who had jumped overboard. After I had ascertained who were absent, what exertions do you suppose could have been made on my part to recover them without orders from my commanding officer?

Answer. I presume you could have made none without orders from Captain Perry.

Question by the court. Was Captain Heath active or dilatory in mustering the marines?

Answer. I heard Captain Heath hurrying the sergeant. I heard him three or four times tell him to bear a hand.

Question. Was Captain Heath prompt and active on the occasion?

Answer. Not very.

Question by the prosecutor. Did Captain Heath attend to the marines until directed so to do by me?

Answer. I believe not. The witness knows nothing in relation to the third charge and specification.

The witness withdrew.

Lieutenant HOWLE of marines, examined. Knows nothing in relation to the first specification of the first charge. States in relation to the second specification, that when he was called into the cabin, he was shown by Captain Perry the letter referred to; that he is not competent to decide on its merits; presumes it will be laid before the court, who will be better able to judge. The witness was not present at the time referred to in the third specification of the first charge.

Question by the court. Do you know whether the conduct of Captain Heath was highly disrespectful and provoking towards Captain Perry?

Answer. I do not.

The witness states, in relation to the second charge, as follows:

On the 16th of September, Captain Heath went on shore and returned on board in the evening; he complained of being unwell, and after some short time retired to his state room. Lieutenant Forrest, who was on deck, sent below to inform me, that two marines had jumped overboard from the ship. I hastened on deck, and meeting one

of the marines, I sent him below to the sergeant to hurry the marines on deck for a muster. Captain Perry appeared on deck, and inquired where Captain Heath was. I told him he was below and unwell. He inquired what the matter was. I replied, I could not inform him. I went on the birth deck, and with the assistance of the sergeant, got all the marines on deck. When I returned this time, I found Captain Heath was on deck in conversation with Captain Perry. All I heard Captain Perry say was, "go, sir, and muster the men, and report to me who are absent." While Captain Heath was mustering the men, Captain Perry asked him, "if he meant to be all night about it." As soon as Captain Heath found out who the absent men were, he reported them. After Captain Heath had reported to Captain Perry, he looked at him for some time, and said, "go below, sir, I have no further use for your services."

Question by the court. Do you know that Captain Heath was indisposed?

Answer. I only know it from his coming on board earlier than usual, and his saying so.

Question. How long was it after you told Captain Perry that Captain Heath complained of being unwell before he appeared on deck?

Answer. In a few minutes; in a very short time, for a man who was in bed and had to dress himself.

Question. Was the conduct of Captain Heath prompt and active on this occasion, or otherwise?

Answer. He turned out, I suppose, as soon as he could, and he hurried the sergeants in their duty.

Question. Did Captain Heath make any efforts to muster the marines and ascertain who was absent before Captain Perry directed him to do so?

Answer. The marines got on deck nearly as soon as Captain Heath got there. He was in conversation with Captain Perry when I came up.

Question. Did Captain Heath make those exertions that the occasion called for?

Answer. As far as was in his power, I suppose, he did. There was no delay in getting the marines on deck. I had them on deck as soon as Captain Heath got there.

Question. Was Captain Heath so much indisposed, as, in your opinion, to be incapable of attending to his duty?

Answer. It might have been an inconvenience to him to attend to duty, notwithstanding he did so.

Question. You have stated, that Captain Heath ate supper after he came on board, did he eat heartily?

Answer. I did not observe what he ate.

Question. Did Captain Heath report his case to the surgeon?

Answer. I do not know. I do not know whether he was on board.

The witness states, in relation to the third charge, that when he entered the cabin Captain Perry said to him, "sir, I have arrested this man; he has not only dared to write me an insulting letter, but he has insulted me in my cabin." The only words I heard from Captain Heath were about feelings. Captain Perry ordered him to keep silence or he would put him in irons. Captain Heath said very well. Captain Perry then told him if he repeated those words again he would knock him down. Captain Heath again replied, very well; upon which Captain Perry struck him. He then ordered me to take him out and put him in irons. I conducted Captain Heath out of the cabin, returned and asked Captain Perry if I should put him in irons. He told me to confine him to his room and put a sentry over him.

Witness questioned by the court.

Question. Were Captain Heath's language and manners respectful or disrespectful to Captain Perry at the time specified?

Answer. I did not conceive them disrespectful. The only words I heard him say were, "very well." His gestures I did not observe.

Question. Were those words uttered in a contemptuous manner?

Answer. I did not conceive that they were.

The court adjourned to meet on Wednesday morning, 10 o'clock.

WEDNESDAY MORNING, January 1, 1817.

The court met pursuant to adjournment. Present, the president, members, and judge advocate. Lieutenant HOWLE'S examination continued. The prosecutor declined questioning the witness.

Witness questioned by the prisoner.

Question. When you were first apprized of the two marines having deserted from the ship on the evening of the 16th September, did you not know that I had retired to bed, and believed me to have been unwell?

Answer. I believed you to be unwell from your retiring, and from your saying so.

Question. Did you receive any orders or instructions from me to muster the marines to discover who were missing, and to take proper steps to recover them.

Answer. I received orders from Captain Heath through a midshipman to muster the marines and ascertain who were missing, and to attend to the duty, that he himself was unwell. I received no orders which related to the recovery of the men.

Question. After I came on deck, and had the marines mustered and reported to Captain Perry, do you believe that I had it in my power to have made any further exertions for their recovery?

Answer. No, I do not think you had.

Question. Was I careless and indifferent in mustering the marines after I came on deck on the evening of the 16th of September?

Answer. I did not perceive that you were careless about it. After you were done with Captain Perry you spoke to and hurried the sergeant.

Question. Have you any reason to believe, from my general character and conduct on board this vessel, that I would descend to a falsehood or subterfuge in order to evade my duty?

Answer. Not the least.

Question. From the observations which you made in the cabin on the evening of the 18th of September, when I was in conversation with Captain Perry, do you not think that my language and deportment towards him were extremely forbearing and mild?

Answer. I should suppose it was mild.

The witness withdrawn.

Doctor PARSONS, surgeon of the Java, duly sworn.

Question. Was Captain Heath on the sick list on the evening of the 16th of September, or did he report himself to you at that time?

Answer. He was not on the sick list on that evening. He complained to me on the following morning of a slight indisposition. He did not report himself to me on the evening of the 16th of September.

Witness questioned by the prisoner.

Question. Were you on board this ship early on the evening of the 16th September?

Answer. I do not recollect being out of the ship on that evening.

Question. Have I ever endeavored to evade my duty by feigning indisposition, or alleging as an excuse, the subterfuge of being sick?

Answer. I do not recollect that Captain Heath ever feigned indisposition. He was always actually indisposed when he applied for my assistance.

Question. Do not causes of indisposition often occur which disqualify a man for the exercise of duty, when there is no symptom apparent to a person unacquainted with medicine?

Answer. Such cases do occur.

Question. Could he then form an opinion of the existence of such indisposition?

Answer. He could not.

The witness withdrawn.

Lieutenant M^CPERSON examined by the prisoner.

Question. You are the executive officer of this ship, did you convey to me the order which you received from Captain Perry when going into Naples on the 22d July, for the ship's crew to be cleaned?

Answer. The order was promulgated throughout the ship in the usual manner. I cannot recollect whether or not Captain Heath was specially notified of it.

Question. You say that my manner of replying to Captain Perry relative to the dirty appearance of the marine was disrespectful; was it also contemptuous or insulting?

Answer. Yes.

Question. Did Captain Perry, after this occurrence on the quarter deck, ever speak to you of the disrespectful, contemptuous, and insulting reply he had received from me, and if so, how long after?

Answer. Three or four days afterwards, Captain Perry mentioned to me that his feelings had been very much excited at the manner in which Captain Heath replied to him on the occasion referred to.

Question. Did Captain Perry notice my reply to him at the time in any manner, either by arrest, suspension from duty, reprimand, or otherwise?

Answer. He did not arrest or suspend Captain Heath, but told him if he did not pay more attention to the marines, he would get somebody that would.

Question. How long have you been under the command of Captain Perry?

Answer. I served under Captain Perry in 1808, at New York, and also on lake Ontario, and have been his first lieutenant for the last fourteen or fifteen months.

Question. From the knowledge you have of Captain Perry's character, and his rules and system of discipline, do you think he would suffer any officer under his command to treat him in a disrespectful, insolent, and contemptuous manner, without an immediate arrest or suspension from duty, or otherwise notice it?

Answer. I have never known an instance but the present.

Question. Have you any reason to believe from my general character and conduct on board this ship, that I would descend to a falsehood or subterfuge, in order to evade my duty?

Answer. I have no reason to believe you would.

The witness withdrawn.

Lieutenant M^CCALL re-examined by the prisoner.

Question. Were you on the quarter deck of this ship on the 22d July, when I replied to Captain Perry relative to a certain marine who was dirty in his appearance?

Answer. I might have been, but I do not recollect the circumstance.

Question. Do you believe that my complaint of indisposition on the evening of the 16th September, when sent for in consequence of the desertion of the two marines, was a subterfuge, or an excuse to evade my duty?

Answer. No.

Question. When I came on deck I hurried the sergeants in mustering the marines; did you at the time think I performed that duty in a careless, indifferent manner?

Answer. He hurried the sergeant very often, he appeared very anxious to get through, in order to make his report.

Question. After I had mustered the marines, and reported them to Captain Perry, did you hear Captain Perry say to me that he had no further use for my services on board this ship, and order me below?

Answer. Captain Heath was called by Captain Perry. Some conversation took place between them which I did not hear. Captain Heath then went below, and I concluded he was suspended.

The witness withdrawn.

Midshipman BUCHANAN, of the Java, duly sworn on the part of the prisoner: states, he was on deck the night the two marines jumped overboard. He was sent below to inform Captain Heath of it. Captain Heath observed to him that he was unwell, and to give his compliments to Lieutenant ———, and request him to let Lieutenant Howle know the circumstance.

Question. From my manner of speaking to you did you not think me indisposed?

Answer. I only thought so from your telling me so. You spoke in a low tone of voice.

The witness withdrawn.

Midshipman OVERTON, of the Java, duly sworn.

Questioned by the prisoner.

Question. When you came to my state room on the evening of the 16th of September, to inform me that Capt. Perry wished to see me on deck, was I not making every exertion to obey the summons?

Answer. Yes.

The witness withdrawn.

Corporal PHILPOT and JOHN COLEMAN, belonging to the Java, duly sworn on the part of the prisoner.

Corporal Philpot questioned by the prisoner.

Question. Do you know of any thing that took place in the cabin of the frigate Java, between Captain Perry and myself, on the evening of the 18th September last.

Answer. I was corporal of the guard on the evening referred to. I was sitting outside of the cabin door, on a match tub. Captain Heath passed me and went into the cabin. I heard Captain Perry say to Captain Heath, how dare you, sir, have the assurance to write me such a letter? Captain Heath replied to him, and I heard him use the word feelings. Captain Perry said, if you repeat that again, I will knock you down. He called for his sword, and for the officer of marines, to take Captain Heath and put him in irons. Lieutenant Howle appeared, and led Captain Heath by the arm out of the cabin, and took him to his state room. Lieutenant Howle returned, and inquired of Captain Perry if he should put Captain Heath in irons; he told no, but to put him in his state room, under charge of a sentry. I had a sentry in waiting, and when Lieutenant Howle returned, I was ordered by him to withdraw him, which order I obeyed.

Question. Did you see any thing disrespectful, insolent, or contemptuous in my conduct towards Captain Perry, that evening?

Answer. I was not present during their conversation, and Captain Heath spoke so low, that I could not understand what he said.

Witness questioned by the court.

Question. Where did this conversation take place; in the forward or after cabin?

Answer. In the forward cabin.

Question. How long was Captain Heath in the cabin?

Answer. About ten or fifteen minutes.

Question. Was the door open or shut?

Answer. The door was on a jar, it wanted two or three inches of being shut.

Question. Did Captain Perry call for his sword before Mr. Howle came in, or was it after?

Answer. Before Mr. Howle came in.

The witness was ordered to withdraw.

JOHN COLEMAN examined as follows, by the prisoner:

Question. Do you know any thing that took place in the cabin of the frigate Java between Captain Perry and myself, on the evening of the 18th of September last?

Answer. I remember Captain Perry sending for Captain Heath. After Captain Heath came into the cabin, I heard Captain Perry call for his sword. I did not know what it was for at that time. Then he called for the marine officer, as far as I could understand, to put Captain Heath in double irons. Then Lieutenant Howell (Howle) led Captain Heath out of the cabin door. Lieutenant Howell stepped back, and asked Captain Perry if he should put Captain Heath in irons. Captain Perry said no: put him in his room, and place a sentry over him.

Question. Did you see any thing disrespectful, insolent, or contemptuous in my conduct towards Captain Perry that evening?

Answer. No; I did not.

Witness questioned by the court.

Question. Was the cabin door open or shut?

Answer. The cabin door was nearly shut.

Question. Are you sure it was double irons?

Answer. Yes.

Question. Did you distinctly hear Captain Perry order Captain Heath in irons?

Answer. I heard Captain Perry order some person put in irons. I did not know who it was at that time.

Question. Did you hear what Captain Heath said to Captain Perry, to cause his being ordered in irons?

Answer. No; I did not.

Question. In what part of the ship were you when this took place?

Answer. I was on post, at the cabin door.

Question. Was there any other person in the cabin besides Captain Perry and Captain Heath, at the time you heard somebody ordered to be put in irons?

Answer. There was another person besides: he came on board with the captain, that night.

The witness withdrew.

Evidence on the part of the prisoner closed.

The court adjourned, to meet on Thursday morning, 10 o'clock.

THURSDAY MORNING, January 2, 1817.

The court met pursuant to adjournment. Present, the president, members, and judge advocate.

Captain PERRY being called upon to give his evidence in the case, addressed the court to the following purport:

Permit me, gentlemen of the court, before I commence my testimony, to observe, that I have been upwards of eighteen years in the service, and this is the first time I have ever stood before a court martial as a prosecutor, and Captain Heath is the first marine officer with whom I ever had any difficulty. Amongst that class of officers there are many, who, from a long acquaintance, I entertain a sincere respect for, and it is with extreme regret that I have been compelled to bring charges against one of the corps. How much I have looked over in the conduct of Captain Heath, he well knows. Whenever he has acted improperly, he has only received friendly admonition, and until the evening of the 18th of September, respectful and kind treatment.

Captain PERRY was then duly sworn, and stated as follows: on standing into the bay of Naples, at the time referred to in the charge, I observed a marine come on the quarter-deck in a very dirty condition, although an order had been issued before, that every person should be particularly clean in their dress. I sent for Captain Heath, or called to him, I do not recollect which, and pointed to the marine; Captain Heath approached me in a manner which I thought indecorous, and unbecoming. I told him, that a man in the dress and condition of the marine was a disgrace to the ship, and I believe I said to the corps. He replied, he had reported a want of clothing, and if the marines were not clean, he could not help it. I then told him if he could not, I would find some one that would. I leaned over the hammock cloths, to suppress the feelings occasioned by the conduct of Captain Heath. On Captain Heath sending me the letter which is now before the court, and of which I complain, I sent for him to come into the after cabin; I merely asked him the occasion of his sending me such a letter. He assumed at once a manner which was irritating, in the highest degree, both in person and in looks, shaking his head at me; this had the effect which might have been expected, and I expressed my indignation in warm terms. After some further conversation, I ordered him to be silent, and sent for the second marine officer. Captain Heath paid no attention to my orders. Previous to this I asked him if he was aware to whom he was speaking, and where he was. He replied in an insulting tone, and throwing himself back, with a contemptuous smile, said he presumed he was speaking to Captain Perry, and was in the Java's cabin, or words to that effect. I arrested, and repeatedly ordered him to be silent. He continued to reply until he was taken out of the cabin, and all my efforts to make him keep silence were ineffectual.

When the marines jumped overboard, and after I had got on deck, I asked for Captain Heath; to my surprise he was not on deck. I was told he was sick; it was the first time I had heard of his being so. I inquired repeatedly the nature of his indisposition. No one could tell. I then ordered him on deck. When he made his appearance there, he said nothing about his indisposition; nor did I find his name on the sick report of the surgeon the next day; neither have I heard since that he really was indisposed. I directed him to muster the marines. After a lapse of some time, being extremely anxious to know the number of men who had deserted, I sent for him, and demanded why he was so dilatory; he replied, the marines were mustered; I asked why he had not reported; he said he did not yet know how many were gone. After some further delay, I at length obtained a report; not, however, in the short time stated by Lieutenant Howle. It was from fifteen to twenty minutes, at least, after I got on deck, and after I had given the order to muster the marines, that I obtained the report; a length of time which I deemed altogether unnecessary.

The following is a copy of the letter referred to in the foregoing testimony:

U. S. FRIGATE JAVA, MESSINA, September 18, 1816.

Sir:

On the evening of the 16th instant, I was ordered below by you, from the quarter-deck of this ship, with these words, or to this effect: "I have no further use for your services on board this ship."

I have waited until this moment to know, why I have been thus treated, and being ignorant of the cause, request my arrest and charges.

Very respectfully, your obedient servant,

J. HEATH, Captain Marines.

Captain O. H. PERRY, commanding U. S. frigate Java.

Captain Perry questioned by the court.

Question. Was it in the forward or after cabin that this conversation with Captain Heath took place?

Answer. A part in the forward and a part in the after cabin.

Question. When Captain Heath replied that he was speaking to Captain Perry, &c. did he smile?

Answer. Yes; he had a sardonic grin on his face and a contemptuous look.

Question. Was any other person in the cabin at the time?

Answer. Mr. Anderson, the consul at Tunis, was present. He is a very material witness in the case, and I regret very much that I cannot have the benefit of his testimony.

Witness questioned by the prisoner.

Question. What were the precise words which I used in reply to you relative to the dirty appearance of the marine alluded to, in the first specification of the first charge, and which you say was insolent, disrespectful, and contemptuous?

Answer. I do not recollect the precise words.

Question. Why did you not arrest or suspend me at the time, conceiving, as you did, that my conduct merited it? Captain Perry objected answering this question, and submitted it to the court. The court was then cleared, and it was decided that the question was an improper one, and the witness not bound to answer it. The parties were then admitted, and the determination of the court made known. Captain Perry explained that he only objected to the question from a sense of its inutility in the case. He would now, however, give a voluntary answer to the question, in order to remove any impressions, if such there were, that he was influenced by any other motive than that which he had already stated. He gave the following answer: "that it was from a reluctance to suspend or arrest any officer when there was a possibility to avoid it." The prisoner prayed the court to record the proceedings in this case, which the court hereby grant.

Question. Did you not, on the quarter-deck of this ship, on the evening of the 16th September, when I came to you by your orders, tell me I had been sent for several times, and that I had sent you word I was sick, and did I not, on that occasion, reply to you that I was unwell, and had been so all day.

Answer. I have no recollection of your telling me you were sick.

Question. Did not Lieutenant Howle inform you before I came on deck, that I was unwell?

Answer. He did so.

Question. Was not Lieutenant Howle attending to sending up from below and mustering the marines, when you sent for me on the evening of the 16th of September?

Answer. I believe he was; I directed him so to do.

Question. What reason have you to suppose that my complaint of indisposition, on being sent for from deck, was a subterfuge or an excuse to evade my duty?

Answer. I supposed that an active officer, on such an occasion, even if he was a little indisposed, ought to have come on deck.

Question. Have you any reason to question my veracity?

Answer. I must have had some reason, from the circumstance of your not appearing on the sick list. This is the universal custom of the service and of this ship, and I am entitled to the services of all my men and officers who are not so reported.

Question. Would it have been proper for me to have ordered a boat and sent officers and men in pursuit of the deserters without your orders?

Answer. Certainly not; you must first obtain permission from myself or from the executive officer.

Question. Did you not prevent my taking any further steps than I did, to secure the deserters, by telling me you had no further use for my services on board, and ordering me below?

Answer. Certainly; you were suspended and sent below, and could not, of course, take any further steps.

Question. What do you mean to be understood by the words in the third specification of the first charge, "why he, (Captain Heath,) took such a time to write me a letter of that kind?"

Answer. What I meant by that was, your sending me the letter at night; I think it was about 11 o'clock. This I consider a very improper time to be addressed on business of that kind.

Question. Do you know at what time I sent you this letter?

Answer. I found the letter in my cabin, on the table, when I returned on board. I had left the ship about an hour before.

Question. What do you perceive, in the letter I addressed to you, requesting an investigation of my conduct, to be either improper or reprehensible?

Answer. I have already expressed my entire disapprobation of the letter. It is before the court, and for them to judge of.

Question. Do you not think that every officer, when laboring under a suspension of duty, and conscious himself that he is injured, has a right to request an investigation of his conduct?

Answer. At a suitable time.

Question. What was the language you addressed to me on approaching you in your cabin, on the night of the 18th of September?

Answer. I addressed myself to you with some degree of warmth, but respectfully. I inquired why you chose such a time to write me a letter of that description.

[Captain Perry not being bound to answer the foregoing question, the reply which he has given to it is a voluntary one, and the court direct that it shall be so noted.]

Question. After you spoke to me, concerning the letter I wrote you on the evening of the 18th of September, did I not reply to you in this manner, or to this effect: that I was very sorry you had construed the letter into insolence, as it was very far from my intention to insult you, my object being to obtain arrest and charges?

Answer. At some period of the conversation you assured me it was not your intention to insult me; but your conduct was so much at variance with your assurances, that I paid no attention to them.

Question. On finding you so much irritated in your cabin, on the evening referred to, did I not attempt to leave the cabin, when you ordered me to remain?

Answer. Yes, he did so; but I told him to remain, that I was not yet done with him. I then sent for the second marine officer, and arrested Captain Heath.

Question. Did I not report to you on the evening of the 16th of September the marines who were absent, and was not my report made in a very respectful and explicit manner?

Answer. Yes.

The evidence for and against the prosecution being here closed, Captain Heath moved the court to allow him until Saturday morning, 11 o'clock, to prepare his defence, which was granted accordingly.

The court adjourned, to meet on Friday morning, 11 o'clock.

FRIDAY MORNING, January 3, 1817.

The court met and adjourned, to meet on Saturday morning, 11 o'clock.

SATURDAY MORNING, January 4, 1817.

The court met pursuant to adjournment. Present: the president, members, and judge advocate.

Captain Heath appeared in court, and being called upon, addressed the court, a copy of which address is herewith annexed.

The court was then ordered to be cleared, and the whole of the evidence read over by the Judge Advocate, and the following sentence pronounced:

SENTENCE.

The court, after mature deliberation on the testimony adduced, and having weighed and considered the whole matter, together with what the prisoner had to offer in his defence, agree that the charges are in part proven. The court doth, in conformity thereto, find the prisoner guilty of the first charge, and guilty of the first and third specifications of said charge. The court, also, find the prisoner guilty of the second specification of the first charge, so far as it accuses the prisoner with writing and sending the letter, but acquit him of using language therein highly improper to be used to his commanding officer.

The court acquit the prisoner of the second charge, and of all the specifications annexed thereto; and find him guilty of the third charge, and the specification to said charge. The court doth, therefore, from the circumstances of the case, adjudge the prisoner to receive a private reprimand from the president of the court, and he is hereby sentenced accordingly.

I. CHAUNCEY,
Commodore and commander-in-chief.

U. S. SHIP WASHINGTON, PORT MAHON, January 10, 1817.

Mr. President, and Members of this Honorable Court:

I little expected, on leaving my native country, that I should be arraigned before a public tribunal. But it appears it has fallen to my lot to be thus conspicuous. I will not waste the time of this court, in needless declamation, or unnecessary digressions; but shall aim at the vindication of my character and conduct, to rescue which from the imputation of a charge, I submit to your consideration a few remarks.

I shall proceed to notice the first specification to the first charge, of disrespectful, insolent, and contemptuous conduct. It appears, from the evidence which the witness has stated in this case to the court, that he thought my conduct disrespectful to Captain Perry; yet it also appears that when questioned by me, that he does not believe I intended any disrespect to Captain Perry. My manner of disrespect is also described by having my hat on one side of my head and my hands in my pockets. It really did not occur to me before, that being in this particular situation (as described by the witness) was intended to convey disrespect, or considered as a mark of insolence or contempt; if so, I have been frequently guilty of the same thing. I have frequently, Mr. President, been in such a situation, and without a knowledge of it at the time: yet the witness does not inform this court, that as soon as I was called by Captain Perry, that I placed my hat and my hands in the situation he described; my manner of approaching Captain Perry too is not unnoticed: it is represented as being in a kind of swagger. I confess, Mr. President, I have not the advantage of some men as regards the attitude of walking. It may be also true, that I am not remarkable for walking in a handsome manner; I have probably not paid that attention to this particular as others have. Every circumstance which the witness has stated may have occurred, and yet by no means intended as disrespect, insolence, or contempt to Captain Perry. As I have before observed, the witness has stated to the court that when questioned by me as to the circumstance, he did not believe I intended any disrespect to Captain Perry, yet he observes, he was bound to believe me, from my solemnly asserting that I did not. I do not recollect ever pledging my honor, or solemnly averring on the occasion, as I deemed my word sufficient. The evidence of the witness is, however, before this honorable court, and they will judge how far it will affect me.

I have a faint recollection of the circumstances, as the first specification states to have occurred on the 22d July. I remember, however, Captain Perry's calling or sending for me on the quarter-deck, and pointing out to me a marine who was badly attired. I confess I was much mortified to see the situation of the marine, particularly as I had always endeavored to make the detachment appear as respectable as possible. I mentioned to Captain Perry the situation of the guard as respected clothing, that I had addressed him before on the same subject, and could not help it, or words to that effect. I observed this, I thought, to Captain Perry in my usual manner when I addressed him, which I have ever deemed respectful and polite.

Captain Perry, from his manner, was evidently much incensed, but I presumed it was more at the appearance of the marine than at any thing else; for I can assure this honorable court that so far from intending to treat Captain Perry with disrespect on the occasion, I was astonished to find it a charge against me.

Captain Perry has been pleased to state in this court, in answer to my question, "why he did not arrest or suspend me at the time?" that it was from an indisposition to arrest or suspend any officer where there was a probability to avoid it. Does it not appear, then, that Captain Perry overlooked my conduct on that day? It was passed over. I was punished, inasmuch as I received a reprimand. Why, then, let me ask this honorable court, is this circumstance produced against me as a charge, under the arrest of the 18th September? I beg that the court will take this under their serious consideration.

With regard to the second specification of the first charge, I have to observe, that the letter, as therein expressed to be written, has been produced to this court, and will be left to its wise determination to judge how far it may be deemed insolent and disrespectful. But I hope this court will take into consideration the circumstances under which it was written. I was ordered below on the 16th September, without knowing the cause. I remained below for two days, under feelings the most mortifying—I felt no longer able to bear the indignity which I conceived in the manner attached in sending me below. The wise and salutary laws of our country provide for the punishment of offenders in any situation, and also afford redress to the injured. Had I neglected my duty, or acted in any manner unbecoming the officer and gentleman, I will ask this honorable court if the proper mode of proceeding was not by a court martial.

Under those feelings of mortification, which I have already observed to the court, I wrote the letter which is stated in the second specification of the first charge.

The third specification I shall duly notice. We come now to the charge of neglect of duty, and its several specifications. I am charged, in the first instance, with having screened myself from duty on the night of the 16th September, under the subterfuge of being sick. As this charge, it appears, has attracted no little attention of the court, it may not be amiss to dwell a little on it—I am accused of resorting to the subterfuge of sickness, in order to evade the exercise of my duty. In the first place, I shall observe that, in the numerous catalogue of diseases by which we are occasionally afflicted, many often occur where it is entirely impossible for the most sagacious physician to detect the nature and extent by any external signs. They may elude the most subtle tact of medical art. For the truth of this fact, I appeal to the testimony of all medical men. These cases of indisposition, too, may be so sudden and severe, as to disqualify us immediately for the exercise of duty. But it is asserted that the commanding officer is not bound to believe any man unfit for duty, until he is reported so by the surgeon. But is the surgeon bound to report every case of sickness immediately on his knowledge of it, without an order to this effect from the captain? This

will not be found to be the case in any of the existing customs or regulations of the navy. The surgeon is ordered to make his report of sick at certain specified times, and never recurs to his commanding officer to inform him of every individual case, immediately as it may happen to be presented to him. It follows, then, from the above facts, that in the case of sickness, the testimony of the sick man must ultimately be admitted as complete and sufficient evidence for its existence, that the report of such indisposition is always regulated by order of the captain himself. If, then, the circumstance of sickness be received as a satisfactory plea for incapacity of duty, the charge here exhibited in this specification, even if examined by the most rigid mode of reasoning, in such cases, is entirely invalidated. But I trust I am not here reduced to the necessity of appealing before this court to the rigid decrees of law, even supposing that they did not, in this instance, operate in my favor. No, I feel conscious of bearing such a reputation among my fellow men, as to defy the malicious attacks of any one. I trust it will appear to this honorable court, that the evidence is perfectly satisfactory in my behalf.

As to the second and third specifications, under the charge of neglect of duty and unofficerlike conduct, I shall pass them unnoticed. The evidence relative to those specifications is before this court, which will judge how far my conduct is reprehensible.

The last charge of disobedience of orders, and the third specification of the first charge, present themselves to view.

My prosecutor has stated to this honorable court, that, when I approached him in his cabin on the evening of the 16th September, I assumed at once a manner which was irritating in the highest degree. He does not inform this court the language I received on approaching him in his cabin. Suppose we admit for a moment, that I did assume such a manner, (but which I do not admit,) is there a being in existence, possessing nice and honorable feelings, could tamely submit to be abused with impunity? On approaching Captain Perry, I received harsh and improper language. I felt conscious that I did not deserve such treatment; I was thunderstruck for a moment; I was at a loss to know whether the scene before me was real or imaginary. I found Captain Perry much irritated; I used gentle language to appease him; I found my efforts ineffectual; I informed Captain Perry that I possessed the feelings of a gentleman, held a commission as well as himself, and should have redress for such language. I attempted to leave the cabin, but was ordered to remain. Figure to yourselves, Mr. President, and members of this court, my peculiar situation on that evening. I was arraigned before my commanding officer in his cabin; I received harsh and irritative language; I was ordered to be silent, and not to leave the cabin. Is it possible that my feelings could have been restrained on the occasion? My indignation was, no doubt, expressed in my countenance. I might have assumed a deportment observed to this honorable court, by my prosecutor; but was it without cause? Show me the being in existence, who regards his honor and reputation, who would have acted with less appearance of resentment. A wanton and outrageous attack is made on me, and I am debarred, by the exertion of an arbitrary power, the privilege of self-defence, which is guaranteed to us all by the laws of God. My character, which is dearer to me than life, assaulted, and every weapon of defence interdicted. Can this be suffered? Nature herself revolts at it; she will not endure that all the finest and noblest feelings, the sublimest portion of her ethereal spirit be thus rudely violated. The ground of honor is consecrated; it is impaled by barriers which the hand of tyranny must not invade.

Mr. President, I am about to submit my cause to this honorable court. A few words and I have done. My replication to the charges and specifications in question has been drawn up in a hurry. I have not replied to them as I could wish, but my sentiments are conveyed. It is sufficient. From the evidence which has been adduced before this court, I trust it will appear that I am not guilty of any one charge or specification alleged against me. If my manner has been construed into contempt, and my words misrepresented, I regret it, because such was not intended; and it has already been stated to this court that it is believed I never intended any disrespect to Captain Perry.

Whatever, then, may be the determination of this court, from the proud consciousness of my innocence I shall derive consolation.

JOHN HEATH, *Captain Marines.*

15th CONGRESS.]

No. 155.

[1st Session.]

INCREASE OF THE NAVY.

COMMUNICATED TO THE SENATE, FEBRUARY 2, 1818.

To the Senate of the United States:

In compliance with a resolution of the Senate of the 8th of last month, requesting me to cause to be laid before it the proceedings which may have been had under an "act entitled an Act for the gradual increase of the navy of the United States," specifying the number of ships put on the stocks, and of what class; the quantity of materials procured for ship building; and also the sums of money which may have been paid out of the fund, created by said act, and for what objects; and likewise, the contracts, which may have been entered into, in execution of the act aforesaid, on which moneys may not yet have been advanced, I now transmit a report of the Secretary of the Navy, accompanied by a report from the Board of Commissioners of the Navy, with documents which contain the information desired.

JAMES MONROE.

NAVY DEPARTMENT, *January 29, 1818.*

SIR:

In pursuance of the resolution of the Senate of the 8th instant, I have the honor to transmit, herewith, papers marked, A. Nos. 1. and 2., and B. Nos. 1. and 2; which will, it is believed, meet the various objects of inquiry embraced in the said resolution.

With the highest respect, I have the honor to be, sir, your most obedient servant,

B. W. CROWNINSHIELD.

The PRESIDENT OF THE UNITED STATES.

NAVY COMMISSIONERS' OFFICE, *January 20, 1818.*

SIR:

The Board of Navy Commissioners have been honored with your communication of the 9th instant, enclosing a copy of a resolution of the honorable the Senate, and requiring of them all the information within their knowledge, in relation to the objects of that resolution.

In obedience to this call, they make the following report, and accompany it with a detailed statement, marked A, which they trust will be found to meet fully your views of the information required.

Of the proceedings which have been had under the act for the gradual increase of the navy, the exhibit will show—

That contracts have been entered into, for the live oak frames, cut to moulds, of eight line-of-battle ships, and eight frigates. That the frame of one line-of-battle ship and one frigate is now cutting from Blackbeard island,

under the direction of the Board, from timber belonging to the United States. That one line-of-battle ship is now building from promiscuous timber collected at this navy yard, and that there is also promiscuous live oak for framing a frigate, collected and collecting at this yard; which make the frames of ten line-of-battle ships and ten frigates.

Of the contracts, however, it has been ascertained, that one which embraced the quantity of live oak required for the frames of one line-of-battle ship and two frigates, will not be executed; and doubts are entertained whether another of the contracts, which is for the frames of two ships of the line and two frigates, will be executed. Hence the commissioners can only state, with any degree of certainty, that provision has been made for the frames of seven ships of the line and six frigates.

Of the copper and lead required in the construction of the ships authorized, when the quantity contracted for shall be delivered, (and nearly all has been delivered,) we shall have a sufficiency for all the ships of the line authorized, and for ten frigates.

Of white oak and pine, it will be perceived, that we have contracted for, and otherwise provided, as follows:

A sufficient quantity of oak plank for seven ships of the line and four frigates; and nearly all the pine plank required for seven ships of the line and four frigates.

Beams for five ships of the line and four frigates.

Ledges, long combings, and ranging timber, for seven ships of the line and five frigates.

Knees for six ships of the line and three frigates.

Mast stuff for three ships of the line and two frigates; and we have also engaged, and have now delivering, the keels and keelson pieces for five ships of the line and one frigate.

Of cannon, carronades, round and grape shot, we have contracted for the quantity required for two ships of the line.

Of iron, we have engaged, and have now on hand, nearly all that is required for four ships of the line and one frigate.

Upon the subject of the steam batteries, authorized by the law for the gradual increase of the navy, the commissioners have engaged one steam engine of one hundred horse power.

The commissioners have also established an anchor shop at this navy yard, where all the anchors required will be made. They are also making at this yard iron cables.

One ship of the line is ordered to be laid down at each of the following navy yards, viz: Portsmouth, Boston, New York, Philadelphia, Washington, Norfolk.

Preparations are also making in each of these yards, and materials to a considerable extent have been collected.

Of the ships ordered to be laid down those at New York, Norfolk, and Washington, have been put on the stocks, and are progressing; those at the other points named will be laid down as soon as circumstances will admit.

The ships now building, under the act for "the gradual increase of the navy," are regular two deck ships; and unless guns be mounted on their gangway, which is not usual, they will mount the same number of guns with our present seventy-fours. Hitherto, no ship, having but two decks, has rated higher than an eighty; and we beg leave to observe that the ships now building are of inferior capacity to some ships of other nations having but two decks.

The payment of moneys not coming within the province of the Board they can offer no definite information upon that subject. Upon this branch of the inquiry they can only afford information as to the probable amount of the contracts made by them. As to the payments made upon these contracts, and upon the purchases of the respective navy agents, as also the payments to the superintendents of timber moulding, the carpenters and laborers employed in procuring timber, in the construction of the ships, and in the preparatory arrangements in the different navy yards, and for the transportation of timber, it is presumed that the auditor of navy accounts can afford precise information.

On the subject of advances upon contracts, the Board beg leave to observe that in two instances only, namely, those for cannon, carronades and shot, have they stipulated to make advances. In these cases they agreed to depart from their general rule upon the subject with a view to the improvement of the ordnance of the navy, which, having been found extremely defective, rendered it necessary to make a series of experiments, which subjected the contractors to considerable expense.

The navy commissioners would here respectfully observe, that their attention has been engaged, since the act of 29th April, 1816, in procuring, within the shortest period possible, the live oak timber necessary in the construction of the ships authorized by that act. They found, in the outset, much difficulty in forming contracts for this article; the live oak growing only in places remote from our navy yards, and where it can be got out only in certain months in the year, interposed insurmountable difficulties to its being immediately procured; no contractor would engage to deliver the frame even of a frigate in less than two seasons. One cutting season only having elapsed since the passage of the act of 29th April, 1816, will show why a greater quantity of this timber has not at this time been delivered. The commissioners now entertain no doubt of being able to procure all the live oak required for the ships authorized, as well as every other material necessary in their construction; and if it should be the wish of the Executive to launch them within the period contemplated by the law, and for the sum appropriated.

I have the honor to be, with great respect, sir, your most obedient servant,

JOHN RODGERS, *President of the Navy Board.*

The Hon. BENJ. W. CROWNSHIELD, *Secretary of the Navy.*

IN SENATE OF THE UNITED STATES, January 8, 1818.

Resolved, That the President of the United States be requested to cause to be laid before the Senate the proceedings which may have been had under the act entitled "An act for the gradual increase of the navy of the United States;" specifying the number of ships put on the stocks, and of what class; and the quantity and kind of materials procured for ship building; and, also, the sums of money which may have been paid out of the fund created by said act, and for what objects; and, likewise, the contracts which may have been entered into, in execution of the act aforesaid, on which moneys may not yet have been advanced.

Attest: CHARLES CUTTS, *Secretary.*

Statement of the proceedings of the Board of Navy Commissioners, under the act of Congress entitled "An act for the gradual increase of the navy of the United States," passed 29th April, 1816.

Under this act the navy commissioners have, at various periods, made the following contracts, viz:

For live oak timber, cut to moulds, they have contracted for one hundred and eighty-seven thousand one hundred and eighty-four cubic feet, for line of battle ships; and one hundred and twenty-two thousand one hundred and sixty-eight cubic feet, for frigates, with the following persons:

	Seventy-fours.	Forty-fours.
E. Livingston, - - - - -	46,796	- 30,542
J. Snow, - - - - -	23,398	- 30,542
E. and T. Swift, - - - - -	23,398	- -
J. Spalding, - - - - -	-	- 15,271
H. Eckford, - - - - -	23,398	- 15,271
E. Swift, - - - - -	23,398	- -
H. Lindsay, - - - - -	23,398	- 15,271
A. Bixby & Co. - - - - -	23,398	- 15,271
Contracted for, - - - - -	187,184	- 122,168
Add the timber now cutting on Blackbeard Island, - - - - -	23,398	- 15,271
And the timber collected, and collecting at the navy yard at Washington, - - - - -	23,398	- 15,271
Whole quantity contracted for, and otherwise provided and providing, - - - - -	233,980	- 152,710

Which would be a sufficient quantity for ten ships of the line and ten frigates of the largest class. But it has been ascertained that one of the contracts, namely, that with Mr. Snow, will not be fulfilled. This reduces the quantity to nine ships of the line, and eight frigates. And, as Mr. Livingston has not yet delivered any timber under his contract, doubts are entertained whether he will execute it. Should these doubts be confirmed, the quantity of live oak timber engaged, and otherwise provided by the navy commissioners, will only be sufficient for seven ships of the line and six frigates.

An essential consideration in making the contract with Mr. Livingston, being to secure to the Government the payment of a large sum of money for which that gentleman stands indebted, the navy commissioners feel it to be a duty on their part to urge a compliance with the contract by all the means in their power, and not to abandon it while the least prospect of its being fulfilled shall exist. Under other circumstances the commissioners would, some time since, have abandoned the contract with Mr. Livingston, and engaged the timber of some other person.

Should Mr. Livingston comply with his contract, the live oak timber engaged may be estimated to cost \$462,463 43; but should he fail to execute his contract the estimate will necessarily be reduced to \$346,407 28.

Of these contracts for live oak timber, those with E. & T. Swift, H. Eckford, and J. Spalding, are nearly completed; and no doubt exists that they, as well as the contracts with E. Swift, H. Lindsay, and A. Bixby & Co. will be fully complied with within the periods respectively stipulated by them.

Copper.—Of this article the commissioners have engaged one million six hundred and eight thousand eight hundred and thirty-five pounds—a quantity sufficient for nine ships of the line, and ten frigates of the first class; nearly all of this copper has been delivered. The contracts have been made with the following persons:

L. Hollingsworth, for - - - - -	264,781 pounds.
S. J. Isaac's and Soho copper company, - - - - -	264,781
P. Revere and Sons, - - - - -	227,237
D. A. Smith, - - - - -	391,233
A. Gracie and Sons, - - - - -	69,570
R. E. Griffith, - - - - -	391,233
	1,608,835

Which is estimated to cost, - - - - - \$491,932 60.

Cannon, carronades and shot.—The commissioners have made two contracts for cannon, carronades and shot, each embracing the quantity required for one ship of the line. These contracts have been made with J. Mason and John Swartwout and others. The amount of the two contracts is estimated at one hundred and thirteen thousand four hundred and ninety-six dollars: of these contracts considerable progress has been made by Mr. Mason in executing his; and Messrs. Swartwout and others will, without doubt, complete theirs within the period stipulated.

For special considerations set forth in these two contracts, the navy commissioners agreed to make, upon the most ample security, an advance of fifteen thousand dollars to each contractor.

Oak and pine plank, beams, knees, long combings, ranging timber, mast stuff, &c.—Of these articles the navy commissioners have contracted for two millions one hundred and fifty-four thousand four hundred and sixty-eight feet of oak plank; nine hundred and fifty-seven thousand two hundred and fifty feet of yellow pine plank; forty-six thousand eight hundred and sixty-six cubic feet of yellow pine beams; one hundred and thirteen thousand seven hundred and fifty-six cubic feet of yellow pine and oak, for ledges, long combings, and ranging timber; forty-seven thousand seven hundred and sixteen sided inches of knees; two hundred and seventy-one thousand and ninety-two inches of yellow pine, for masts, yards, &c.; and two thousand one hundred cubic feet of oak, for keel and keelson pieces; and for this latter purpose, they have procured, through the navy agents, about eight thousand cubic feet of white oak.

These contracts have been made with the following persons:

	Oak Plank.	Pine Plank.
N. P. Tatem, for - - - - -	235,775	130,250
A. Butt and others, - - - - -	363,356	232,250
W. Cammack, - - - - -	363,356	232,250
S. Whitehead, - - - - -	599,131	362,500
James Murphy - - - - -	592,850	-
	2,154,468	957,250

	Beams.	Ledges, &c.
N. P. Tatem, for	6,567	19,840
A. Butt and others,	11,244	24,692
W. Cammack,	11,244	24,692
S. Whitehead,	17,811	44,532
	<u>46,866</u>	<u>113,756</u>
	Knees.	Mast-stuff, &c.
J. J. B. Hersey,	10,374	
N. P. Tatem,	4,154	41,343
A. Butt and others,	6,220	62,802
W. Cammack,	6,220	62,802
S. Whitehead,	10,374	104,145
E. Thompson,	10,374	
	<u>47,716</u>	<u>271,092</u>

John F. Tice, two thousand one hundred cubic feet of oak for keel and keelson pieces. These contracts will probably amount to two hundred and one thousand eight hundred and seventy-eight dollars nineteen cents.

The contractors are now engaged in the execution of these contracts; and it is highly probable that the whole, excepting, possibly, that with Mr. Hersey, will be completed in the course of the ensuing nine months.

Canvass.—The commissioners contracted for two thousand three hundred bolts of American made canvass; the probable amount of which is forty-nine thousand seven hundred and eighty dollars. Of this canvass a considerable quantity has been delivered; it was originally intended as a contract under the act for “the gradual increase of the navy;” but being a perishable article, it has since been turned over to repairs.

Lead.—The commissioners have procured at New York about eighty tons of lead, which cost ten thousand, three hundred and ninety-eight dollars sixty-six cents.

Iron.—Of this article, the commissioners have procured about five hundred tons, assorted of all the various sizes and kinds, required in the construction of ships of war; probable cost fifty-two thousand five hundred and fifty-eight dollars eighty-nine cents.

Independently of the articles above enumerated, there has been collected at Boston all the oak required for a line of battle ship and a frigate; and sixteen thousand six hundred and two feet of yellow pine. At New York, twenty-eight thousand four hundred and ninety cubic feet of yellow pine timber; and nine thousand five hundred and thirty-five feet of white pine plank. At Philadelphia, the greater part of the oak and pine plank, beams, knees, &c. for a ship of the line and frigate.

At Washington nearly all the oak and pine required for one line-of-battle ship, and all the pine for a frigate.

At Portsmouth, there are twenty thousand three hundred and sixty-four feet of oak plank; forty-one thousand eight hundred and sixty-eight feet of yellow pine plank; ten thousand three hundred and eighty-three cubic feet of pine timber; thirteen thousand three hundred and fifty-one cubic feet of white oak timber; and twenty-nine pieces of timber suitable for ledges, &c.

The navy commissioners have also engaged of Robert McQueen & Co. a steam engine, with all its machinery complete, twenty-four inch cylinder in the clear, with all the parts proportioned thereto, with a five feet stroke, and equal to a hundred horse power, for thirty thousand dollars. Also, copper boilers warranted of the best workmanship, exclusive of materials, at ten cents per pound.

And they have established at this navy yard an anchor shop, where all the anchors required for the navy will be made; and they are at the same place now making iron cables.

Abstract of warrants drawn by the Secretary of the Navy, from the 29th of April, 1816, to 31st of December, 1817, inclusive, out of the appropriation for the gradual increase of the navy of the United States.

TREASURY DEPARTMENT, FOURTH AUDITOR'S OFFICE, July 24, 1818.

CONST. FREEMAN, Auditor.

15th CONGRESS.]

No. 156.

[1st SESSION.]

DEFENCE OF THE MARITIME FRONTIER AND ESTABLISHMENT OF NAVAL DEPOTS AND DOCKYARDS.

COMMUNICATED TO THE SENATE, FEBRUARY 11, 1818.

WASHINGTON, February 6, 1818.

To the Senate of the United States:

In compliance with a resolution of the Senate of the 13th of February, 1817, I now transmit copies of the reports, in relation to the surveys, and examinations made by naval officers in co-operation with officers of the corps of engineers.

JAMES MONROE.

NAVY DEPARTMENT, February 4, 1818.

SIR:

I have the honor to transmit to you, herewith, copies of the reports, in relation to the surveys and examinations which have been made by naval officers in co-operation with officers of the corps of engineers, in pursuance of the resolution of the Senate of the United States, passed on the 13th day of February, 1817.

Enclosed is a list of the charts, &c. which accompany this communication.

I have the honor to be, with the highest respect, your most obedient servant,

B. W. CROWNINSHIELD.

The PRESIDENT OF THE UNITED STATES.

List of charts.

Rhode Island and Narraganset bay.
Newport and Gardner's bay.
Boston harbor.
Eastern entrance to Long Island sound.
General map from Haerlem to Sandy Hook, exhibiting the line of defence.

Falmouth harbor.
Portsmouth (New Hampshire) harbor.
Sandy Hook.
Penobscot river and bay.
Boston harbor, including Salem and Marblehead.

BOSTON, October 18, 1817.

SIR:

In pursuance of your orders of the 23d of May, and the detailed instructions from the Commissioners of the Navy Board, dated the 29th May, addressed to myself, Captains Evans and Perry, who were appointed commissioners by the President of the United States, to carry into effect the resolution of the Senate for the purpose of ascertaining the practicability of defending the eastern entrance of Long Island sound, and also of examining the coasts and waters north of the Delaware, with a view to the selection of a proper site for a naval depot, rendezvous, and dock-yard, the commissioners, accompanied by General Swift, and Colonel McRee of the corps of engineers, appointed to co-operate with them, did proceed to examine accordingly. On the subject of the points of defence, there has been an unanimous opinion, and a report will be made thereon to the Navy and War Departments, to which I beg leave to refer you. It would have been gratifying to me, as I doubt not it would be to the other members of the commission, if an unanimous opinion had also been formed in selecting the proper site for a naval depot; but as there has been a difference of sentiment, it becomes my duty as a member of that commission to state my opinion on the subject, founded on observations and examinations made by the commissioners, and which will appear in detail. In doing so, I shall mention the different harbors included in the instructions of the Navy Board in the order of arrangement followed in the examination.

I beg leave, however, before entering into an examination of the subject, to state the requisites which, in my opinion, are necessary for the establishment of a naval depot, rendezvous, and dock-yard.

1. A sufficient depth of water for ingress and egress at all times of tide, and accessibility in all seasons of the year for ships of the largest class.

2. A safe and secure harbor from wind, tide, and ice.

3. Means of protection by a numerous and dense population; susceptibility of defence by its natural situation, and without extensive fortifications.

4. A situation free or difficult of blockade.

5. A population to furnish the requisite number of mechanics at the lowest price and to the best advantage; where few or many may at all times be commanded without paying an *indirect tax* to induce them to locate themselves at or near an establishment for a special purpose and for a limited time.

6. The vicinity of a large and commercial town where skilful artisans are established to furnish the various parts of the mechanism of a ship; the greater proportion of which can generally be obtained on better terms for the public interest at private manufactories than can be supplied within a naval establishment.

7. A favorable situation for obtaining in peace or war, a supply of ship timber, and timber suitable for masts and spars.

8. The advantageous situation of the place selected for the construction of dry docks.

9. And generally a location most favorable for obtaining, all supplies connected with a navy or naval establishment, particularly provisions and seamen.

In the execution of the duties prescribed to the commissioners, the place which first received examination was Portland in the district of Maine.

Portland has a good harbor, and is easy of access. A good site might be found for a dock-yard, and a sufficient depth of water at all times of tide; but it would require the erection of very considerable fortifications for its protection. In the event of a war, I should recommend a small naval depot or deposite of naval stores for the accommodation of such vessels of our navy as might find it convenient to stop here; but I should not think it advisable to make an extensive establishment.

Portsmouth, situated on Piscataway river, has an outer harbor easy of access at all seasons of the year, with a sufficient depth of water at all times of tide. This outer harbor is above the fortifications and consequently protected by them, but owing to a very rapid tide in the Narrows above the outer harbor, a large vessel cannot get to the navy yard or inner harbor except with a fair wind, and, for the same reason, but few vessels can be safely moored there. The island on which the navy yard is located is commodious for building ships, has bold water, good timber docks for docking timber, and excellent building ways for a ship of the line. Dry docks might also easily be constructed. The island is exposed to a commanding height on Seaver's island, where the remains of an old fort are yet seen; the possession of this height is, in my opinion, important to the safety of the navy yard and harbor. I should recommend this navy yard in its present situation as a good building yard, but on account of the rapidity of the tide I am decidedly of opinion that it is an unfavorable situation for the establishment of a general rendezvous.

Salem.—This has a harbor accessible to ships of war into safe anchorage, as the frigate *Constitution* found in the late war, when pursued by a superior force, and merits the attention of Government to some additional works of defence.

Boston.—This port possesses, in an eminent degree, all the great advantages necessary for a naval establishment.

It has a sufficient depth of water at all times of tide, and is accessible at all seasons of the year.

It has a safe, commodious, and secure harbor from wind, tide, and ice; and its accessibility is proven by the records of the custom house, a copy of which marked, A, is hereto annexed, showing the numerous arrivals and departures in every winter month in the year.

It has great means of protection in the numerous and dense population in its immediate vicinity; the strength of its natural situation, and by its fortifications. The requisite measures for the defence of the town of Boston will always give protection to a naval establishment situated within its waters; and, from its naturally strong situation, it may be made defensible against a naval force with small expense. There cannot probably be brought to the defence of any place in the United States, within the same time, so numerous and well organized militia as can be brought to the defence of Boston: for accurate information on this point I refer to the report of the adjutant general of the State of Massachusetts, a copy of which is annexed, marked B.

It is a situation difficult of blockade. This fact is shown by the events of the late war, during which the frigates of our navy entered and departed from this port twice as often as from all the other harbors of the United States together. The list herewith accompanying, marked C, shows the number of times our ships of war entered and departed from the port of Boston during the late war.

It has a numerous body of mechanics, and the price of labor is low. Its advantages on this point can be proven by the records of the Navy Department, particularly the low price of mechanical labor.

It is a large and commercial town, abounding in artisans well skilled in all the variety of arts necessary for the building and equipping of large ships.

It is favorably situated for obtaining timber for ship building, and for masts and spars. The country near Boston has the best of white oak timber, which is brought in large quantities, and the Middlesex canal communicating with the Merrimack river, and through that river to the State of New Hampshire, opens an ample source for the supply of timber for years to come; continuations of this canal, connecting it with other water carriage, are in contemplation, which promise to supply all the timber that may be required, and of an excellent quality. The advantageous situation of Boston for the supply of timber to build, repair, and mast and spar ships of every size was fully demonstrated, during the late war, in the building of a seventy-four and a twenty-four gun ship; in repairing several frigates and several sloops of war, the materials of which were all drawn from Boston and its vicinity, and

through the Middlesex canal, and which it would have been very difficult, if not impracticable, to have procured by the way of the ocean, in consequence of the superior marine force of the enemy on the coast.

It is favorably situated for the construction of dry docks, though it may be conceded that they can be built at Portsmouth or Fall river for a less sum than at Boston. As the difference, however, in this expenditure is merely the difference in the first cost of the docks, it cannot be brought in comparison with the saving which, from the possession of other and superior advantages, would be realised in a few years in the daily and continued expenditures which attend such establishments. And as docks can be as well constructed at Boston as at either of the other places, the difference of the expense in the construction ought not, in my opinion, to be entitled to any importance in the selection of a place suitable for a dock-yard, depot, and rendezvous. If it were, however, a circumstance deserving consideration, when put in opposition to other advantages already mentioned, it must lose its weight when compared with the situation of Fall river, or any other place requiring extensive fortifications, and the support of large military establishments for the sole purpose of protecting a naval depot, as also the necessity of paying the mechanics who may be employed higher wages to induce them to locate at a new establishment, out of the vicinity of a populous town, and where also there is a deficiency of timber and other materials for ship building, and of provisions and all kinds of stores.

The facility of obtaining provisions and seamen. In these advantages Boston, in my opinion, stands unrivalled. The provisions put up at this place are of the very first quality, and seamen can generally be obtained more readily than at most other ports. All those articles, also, which are generally required for ships of war, and naval purposes, can be procured here in as sufficient quantity, and on as good terms, as at any other place; the advantages it possesses on this head, it is believed, will be fully corroborated by the numerous contracts which have been made at this place by the Navy Department for the supply of the navy.

Providence river has barely a sufficient depth of water for large ships, and the channel below Gasby point, which is the best situation on the river for a naval depot, is too narrow for a ship to turn to windward; consequently long delays might arise in getting to sea from the establishment, which, if located at this place, would require extensive fortifications for its protection, in addition to those which would be necessary for the defence of Newport harbor.

Fall river is favorably situated for the construction of dry docks, and this, in my opinion, is the only advantage it possesses for a naval depot. There is in its vicinity some timber for ship building, but not in large quantities, and, from the best information I could procure, would soon be exhausted. In approaching it in ships there is a shoal of three quarters of a mile in extent which must be passed, and which has only seventeen feet at low water; the tide rising here only five feet does not produce a sufficient depth, even at high water, for ships of the line to pass when prepared for sea. A naval establishment at this place would require, for its special protection, extensive fortifications, and a large military garrison; and to enable ships to get to sea the channels, on the east and west side of Canonicut island, must, in a state of war, be at all times commanded.

To protect the outlet to the ocean from Fall river, which is the harbor of Newport, it is the opinion of the commissioners, and the officers of the corps of engineers co-operating with them, that, in addition to those already erected, the following mentioned fortifications, together with the filling up of the western channel of Canonicut, would be required, that is to say:

- A fort on Dutch island.
- A fort on Canonicut island.
- A fort and entrenchments extending from Beaver-tail cove to the Dumplings.
- To occupy the Dumplings.
- Fortifications on Brenton's point and Telegraph hills.
- Fortifications on Tammany hill, and on Hunneman's, overlooking Eaton's beach.
- A fort on Coaster's Harbor Island, and a strong fortification on Rose Island.
- A fort on Balt's hill, and
- Tiverton heights to be occupied.

For a more minute detail of the requisite fortifications, a reference is made to the report of the commissioners appointed to examine the practicability of defending Newport harbor. From this statement it is obvious that fortifications of such extent would require a very large military force to defend them; and which, in a state of war, must be constantly kept up, as it would be impracticable to man, on an emergency, such extensive works from the surrounding population.

The vicinity of Fall river to the waters of Seaconnet passage, and of Buzzard's, render it accessible to an enemy who may approach by water within seven to ten miles, and who could march through the country, of not a very dense population, to Fall river. It may, therefore, be asserted that it will not only be necessary to completely defend the island of Rhode Island, but also to erect fortifications, and maintain a force at Fall river sufficient to defend it against any attack that might be made by land. The magnitude of the fortifications, and military force necessary for this purpose, is, in itself, an objection sufficient, in my opinion, to render the location of a naval depot at this place highly inexpedient.

Newport has already been mentioned in relation to the fortifications necessary to protect it. It has a good harbor, is accessible at all times of tide, and in all seasons of the year. It is worthy the attention of Government as a port favorable for the ships of our navy occasionally to enter. From my examination of the waters of Rhode Island I am decidedly of opinion that the most favorable situation for a naval depot, *within those waters*, is between Bristol ferry and Mount Hope bay, marked M on the chart, made from Captain Evans's survey in 1815. But I do not think that situation equal to several others in the United States.

New London.—This has an excellent harbor, accessible at all seasons of the year, at all times of tide, and unobstructed by ice. It is, in many respects, well calculated for a naval depot, having a very good situation at Comstock point, on the river Thames. But the ease with which it may be blockaded, as was proven in the late war, should be an insuperable objection to its being selected for such an establishment as is contemplated by the resolution of the Senate of the United States.

New York.—This port, possessing many of the great advantages necessary for a large naval establishment, has a bar at the southern entrance of its harbor, on which there is but twenty-two feet six inches at low water, which will not admit ships of war of the large class to pass at that time of tide. In winter the harbor is obstructed by drifting ice. It possesses the advantages of great population and excellent artisans, which gives security in a state of war, and great facility at all times in building and equipping a navy. It has two outlets to the ocean; consequently would require a double blockading force to keep vessels within its port. Frog's point, fourteen miles above the city, is an excellent harbor, but requires fortifications. This point, and the opposite point on Long Island, are most favorably situated for the defence of the outer harbor to the port of New York through the sound. It is the key of the sound, and, in my opinion, ought to be immediately fortified. New York is so important a place for a naval establishment that, although I do not consider it has all the advantages Boston possesses, particularly as it is not accessible at all times of tide, and as vessels lying in the harbor, in winter, are exposed to danger from the floating ice, I am firmly of opinion, under every view of the subject, that, next to Boston, it is the most suitable place for such an establishment, and one worthy the attention of Government as a naval depot.

Having thus detailed the advantages of the several places had under examination by the commissioners appointed for that purpose, and considering that a place suitable for the location of an establishment, such as is contemplated by the resolution of the Senate, should possess, if possible, the advantages recited in this report, I feel bound to express my perfect conviction that Boston is the most eligible situation, in every respect, for the establishment of a naval depot, rendezvous, and dock-yard. I will add one other consideration which, though it may not appear to some as important, is, in my opinion, deserving of attention. The establishment is of a nature that should be permanent, and looking forward to the time when the navy of this country may be expected not only to prevent a blockade of our coast, but even to extend its operations on the coast of America to the northeast of the United States, the situation of Boston as a naval rendezvous, in such an event, would have a most important advantage over Fall river in its accessibility by avoiding the shoal of Nantucket, the most dangerous shoal on our coast.

Although, sir, it may appear irrelevant in this report to offer a further opinion, I will, nevertheless, venture to give it, trusting in the purity of my motives for so doing, and in the liberality of the Government to receive opinions when respectfully submitted.

So extensive a coast as that of the United States requires at least three considerable naval arsenals. Geographical situation appears to me to mark decidedly Boston, New York, and Norfolk, as the proper sites. Boston for the eastern section of the country, New York for the middle, and Norfolk for the southern. All these three possess the great advantages of a numerous population for the security of the establishments, susceptibility of defence, and the sufficient and cheap supply of materials and mechanics for the building, repairing and equipping of ships,

I have the honor to be, sir, with very great respect, your most obedient servant,

WM. BAINBRIDGE.

Hon. B. W. CROWNINSHIELD, *Secretary of the Navy, Washington.*

COMMONWEALTH OF MASSACHUSETTS:

B.

DEAR SIR:

ADJUTANT GENERAL'S OFFICE, BOSTON, *November 1, 1817.*

In answer to your letter of the 22d ultimo, I would hereby certify that thirteen thousand one hundred and eighty-two militia are enrolled in the infantry, seven hundred and sixty-four artillery, and six hundred and sixty-five cavalry, within twenty miles of Boston, amounting to fourteen thousand six hundred and eleven men, and may be assembled in this place, in time of alarm, within twenty-four hours. To this number may be added the exempt and others, who might be brought into service on a special occasion, three thousand five hundred more; making an effective force of eighteen thousand one hundred and eleven men.

Six thousand may be assembled in ten hours in Boston. Within thirty miles, a force of the same description, of twenty-four thousand five hundred, in forty-eight hours; within forty miles, in ninety-six hours, thirty thousand. In the late war, some companies arrived in Boston in five days from ninety-five miles distance.

I am, very respectfully, sir, your obedient servant,

E. MATTOON, *Adjutant General.*

Commodore BAINBRIDGE.

BOSTON, *September 13, 1817.*

The undersigned, appointed by the President of the United States, in conjunction with General Swift, of the corps of engineers, to examine Castine, in the Penobscot bay, and the waters adjoining, with a view to ascertain its importance as a military position, and the practicability of fortifying it, having attended that duty, has the honor to submit the following observations and reflections:

The Penobscot is a spacious bay, containing many excellent harbors, the borders of which, and the islands within it, are in a state of improved cultivation, and possess considerable population. Castine is situated on a promontory, nearly at the head of the eastern side of the bay. It has an excellent harbor for any number of ships of the largest size, has bold water, and is accessible at all seasons of the year. The promontory is connected with the main by a narrow isthmus.

Proceeding up the river from Castine to Buckstown, the river is divided by Orphan island, the western channel of which is alone used for the passage of large vessels. This part of the river, nearly opposite Buckstown, is what is termed the Narrows, and has been thought by some as a suitable place for extensive fortifications.

Castine has great strength from its natural situation, and, if proper batteries were erected, might almost bid defiance to an attack. From the narrowness of the isthmus which connects it with the main, it could be insulated without much labor or expense; and this mode of defence, in addition to strong batteries, would, if in the possession of an enemy who had the superiority at sea, render it impregnable. In its present situation it might easily be taken, and, when taken, could be held with a comparatively small force. From an attentive examination of the bay and river Penobscot as high up as Buckstown, it is believed that an enemy cannot possess himself of any position along the waters of the Penobscot, (Castine and the islands within the bay excepted,) without leaving in his rear places advantageous either for driving him from the points he might possess, or for cutting off his retreat; the surface of the country along the river presenting innumerable military positions. The importance, therefore, of fortifications at the Narrows, near Buckstown, is of minor consequence when compared with the defence and possession of Castine, since an enemy would hardly dare to proceed up the river until he secured the command at the entrance.

The very great importance which has been attached by the British to the possession of this place has been proved by the events of the late and of the revolutionary war; and the consequences which would evidently result to this portion of the country from an early and continued occupation of Castine by an enemy are so obvious, as to supersede the necessity of dilating upon the subject.

Its bold water and excellent harbor, affording shelter for the largest fleets; its accessibility at all seasons of the year, its favorable situation for the entry of prizes, and, above all, its geographical situation, communicating in a few days' sail with Halifax, and, by a short route up the Penobscot, with Quebec, giving a command of all the intermediate country from the Penobscot to the St. Croix, make its possession an object of the highest consequence, in the event of another war with Great Britain.

The undersigned is fully of opinion that Castine may be fortified, without great expense, so as to resist any force which would probably be brought against it; and that its importance is great, and such as to merit the high consideration of the Government.

WILLIAM BAINBRIDGE, *U. S. Navy.*UNITED STATES' NAVY YARD, NEW YORK, *October 30, 1817.*

SIR:

In obedience to the orders received from the Navy and War Departments, the undersigned, commissioners, officers of the United States navy and corps of engineers, have examined the ports and harbors east of the Delaware bay as far as Portland. From Portland to Penobscot bay, was examined only by two of them.

The undersigned respectfully submit to the Departments of Navy and War, their opinions of the several harbors and ports which they have examined, in relation to their importance as rendezvous for ships of war, and for depots; and also of their susceptibility for defence.

In examining the chart of the American coast, we find various positions that might be very advantageously occupied for naval purposes in time of war. There are a number of harbors which afford convenient rendezvous for ships of war; and which contain sites for depots and for national defence. They also combine facilities for the organization of naval expeditions. Some of these harbors should be occupied by the United States; not only for the purposes desired, but also to prevent any enemy of great naval power from taking possession of them for similar purposes in time of war. Possessed of these positions, such an enemy would be enabled, by their advantages, to increase the evils of blockade, and perhaps to prolong the contest. The positions presenting the most importance in respect of good harbors, depots, and defensible sites, are to be found in the waters of the Chesapeake and Narraganset bays.

Of the harbors which the commissioners have examined they have the honor to state as follows:

Penobscot bay in the district of Maine.—This bay is one of the most spacious in the United States. It is of easy access and contains two positions which can be perfectly fortified, to wit: Castine and Fort Point. These positions afford in their immediate vicinity good anchorage. The advantages which this bay possesses in the general view above mentioned, are much enhanced by its situation, in relation to Canada and Nova Scotia. The route into the

former country is direct upon the waters which disembogue at this bay, and which approach the Chaudier emptying into the St. Lawrence. Although the United States possess harbors nearer to Nova Scotia than Penobscot bay, yet from a combination of advantages, it commands a preference, because it seems better to unite, in one position, the convenience of a good harbor, the benefits of a naval depot, and the superiority of ground for fortification, than to possess them separately. It must be acknowledged that while an enemy possess the command on the ocean, Penobscot bay could be blockaded, which, in time of war, would reduce the United States to the necessity of transporting by land munitions, &c. not in depot at Castine or Fort Point. The sketch of the bay will present to view the points mentioned. These observations on Penobscot bay are made from the examination of it by Commodore Bainbridge and General Swift.

Portland, District of Maine.—At this place all the commissioners met and proceeded to examine it with the views submitted in their instructions. Relative to a navy yard or depot, the harbor offers one position at Portland-head near the Sack Cove, sufficiently capacious for such a naval establishment, as will be seen by consulting the sketch of the harbor. This harbor and site for a depot, can be defended by strengthening the present works, by constructing enclosed works in the rear of forts Scammel and Preble, by occupying Rannie's island with an enclosed work, and the height in Yarmouth also, as indicated upon the sketch. The harbor of Portland is not large, though in every other particular it is a good one, easily entered, and is a convenient harbor for a squadron to "make" occasionally.

Portsmouth Harbor.—This harbor is of easy access, and has an abundance of water, though from its confined and deep channel the tide runs with too great a velocity to allow a fleet to manœuvre or to anchor in it with safety. It has already a building establishment, and, in the opinion of the commissioners, it would be advisable to retain this yard on account of the excellent ship timber to be found in its vicinity. The defence of this harbor is not difficult; the strengthening of the present works, (see the sketch,) and an enclosed work on Sullivan's or Trefethern's island, would secure the harbor from any naval inroad.

Salem, Cape Ann, and Marblehead harbors—are neither of them sufficiently capacious, or otherwise well situated for any other naval purposes than occasional harbors.

Boston.—This harbor is well known to be amongst the most important, in a commercial point of view, in the United States. It is capacious, and can be entered by any vessel of war. Reports have been in circulation that a bar exists at the mouth of this harbor. The commissioners have so far ascertained that this report is unfounded as that there are on this bar four and one quarter fathoms of water at low tide; as is exhibited upon the accompanying chart. The commissioners having examined this important point, with a view of determining its comparative value, are of opinion that Boston harbor possesses many advantages resulting from its natural means of defence, and its ample space for anchorage in the lower harbor and Nantasket roads. Other advantages are to be found in the proximity of the present establishment to materials for naval construction, in the dense population of the town and its vicinity. But from the uncertainty of entrance into this harbor, and that a fair wind is requisite to enter President Roads from those of Nantasket; and that the harbor is occasionally obstructed by ice; from the difficulty of getting to sea in easterly weather; from its susceptibility of blockade, situate as it is, at the bottom of a bay, and from the dangerous navigation of Boston bay in the winter season, the commissioners are of opinion (with one exception) that it is advisable to retain the present establishment, connecting with it a dry dock, for occasional building and repair, but that it is not advisable to establish a great national depot and rendezvous at this place. The harbor can be secured from maritime attack by occupying George's and Long Island, and by strengthening the defences of the works on Castle, Governor's, and Noddle's Island, (see the map.)

Rhode Island Harbor and Narraganset bay, Watch Hill, Fisher's Island Sound and New London Harbor.—The examination of these waters has convinced the commissioners that they are of great national value, not only in a naval point of view, but also in that of defence. The connexion of them which is here made is intended to exhibit the opinion of the commissioners that in naval as well as in commercial operations the power of maintaining this connexion should be preserved as far as may be practicable, and, indeed, extended, were it within reasonable means, by the line across the sound from the western extreme of Fisher's Island by the race and gulls to Gardner's bay. But the distance exhibited on the map from Fisher's Island to the gull, the rapidity of the tides, and great depth of water, the distance from the gull to Gardner's bay, and the distance of good anchorage in Gardner's bay from that island, are such as to preclude, in the unanimous opinion of the commissioners, the hope of extending a line of defence by permanent fortifications from Fisher's Island to the bay just mentioned. The use of steam batteries in these waters would, in the opinion of the commissioners, aided by a supporting fortification on Gardner's Island, form an important and imposing obstacle to the occupancy of these waters by an enemy who may possess a greater naval force than the United States. For all the objects of naval rendezvous and national defence, the commissioners agree unanimously in the opinion herein expressed, in relation to the waters of Narraganset bay, the sound, and New York. The commissioners (except one) are of opinion that Narraganset bay presents the best site for a naval depot in the Union, north of Chesapeake bay, for the following reasons: The population within two days' march of this bay is equal if not superior to any section of the Union of equal area; consequently, the means of defence which a dense population affords is to be found in the vicinity of it in an equal degree with any other point on the coast. Because, in a geographical view, this bay and that of the Chesapeake, form the two great points on the sea-coast conveniently situated as to distance from the Atlantic extremes of the Union, affording mutual advantage to effect a concentration of any naval force, and the line of their communication would afford to such a force the means of protecting important intermediate positions, to wit: the Delaware, New York, and Long Island sound, because, particularly, as it relates to Rhode Island harbor, it is very accessible from sea at all seasons of the year; it affords capacious harbors, can be entered from the ocean, and the ocean can be reached from it in a few hours' sail; because it can be entered when the wind is northwest, and because it is not susceptible of a continued blockade; nor is it obstructed by ice. An examination of this bay has satisfied the commissioners (with one exception) that the best site for a great naval depot east of the Chesapeake bay, is to be found in this bay, and the various positions upon the waters of it. The sites are Gaspé Point, Mount Hope bay, near Bristol, the Basin, and Fall river. The Basin at the northern extremity of Rhode Island, formed by the north part of the eastern passage, and the stone bridge at Howland's Ferry, and Fall river, at the margin of Taunton river, present the best sites. Both have great advantages; the first from its accessibility, and from the circumstance that the defence of Rhode Island will include that of this position. The latter named place has natural means for forming dry docks, and to propel machinery by its falls. Inasmuch as the water of Watupor South Pond, can be conveyed by conduits to the Basin, and as the site at Fall river would involve an extensive line of defence, the commissioners prefer the Basin. The commissioners have received information that an abundance of oak timber, iron ore, and of workmen, can be procured within a range of thirty miles from this Basin. The line of defence for Rhode Island harbor, including that of the depot, is indicated upon the map commencing at Dutch island in the western passage between Canonicut island and the main land, and extending by the Dumplings, Brenton's Point, Tammany Hill, Butt's Hill, to Tiverton Heights.

In relation to the connexion before mentioned of the harbor of Rhode Island and those near Watch Hill, Fisher's Island, sound, and New London, the line of defence upon these positions is indicated on the map. Ships of war and merchantmen in coming from sea, could, in a northeast wind, make the harbor by Watch Hill and Fisher's Island, or could reach New London harbor, without being cut off by an enemy occupying Gardner's bay. From these positions a westerly or southerly wind would enable fleets to run through Fisher's Island sound by Watch Hill to Rhode Island harbor, without incurring the danger of being intercepted by any vessels lying in Gardner's bay. The harbor of New London is of very easy access and is capacious and safe; and in relation to the line through Fisher's Island sound, is deemed a very valuable harbor. An abundant depth of water extends from New London to Comstock Point. This point has many advantages for a naval depot; the commissioners, however, with the exception before mentioned, prefer Narraganset bay, for reasons which have been assigned.

New York Harbor.—This harbor presents itself in a twofold view, inasmuch as it has a double communication with the ocean, and is connected with Canada by means of the Hudson and Lake Champlain. These views deservedly attach a great importance to New York harbor for naval and military purposes. Any ship of war can enter this harbor from the ocean, by Sandy Hook, or through the sound, and, although the commissioners do not deem it advisable to establish a large naval depot and rendezvous at this place, yet they advise the occupancy of the present yard for occasional depot, building, and repairs, and for a dry dock. This depot should be established to ensure naval supplies, and to aid such military operations as a state of war may render necessary. This harbor may, from the sound side, be considered as, in some degree, connected with New London, and more particularly so, as Frog's Point, at the entrance of the sound, offers a site for a fortification, which would amply secure an outer harbor to that of New York. There are an abundance of water and good anchorage near this point. New York harbor is occasionally obstructed with ice. The commissioners were, from unavoidable circumstances, prevented meeting and commencing their examinations until the 21st of July. The time in which it was necessary to make up their report has not been sufficient to enable them to enter into details of survey, or of calculation as to the expenses of constructing forts at different places. These calculations require much time, as they refer to the fortification of as many sites as shall be selected for defence between Penobscot Bay and New York. It may with propriety be said, that the expenses of constructing fortifications cannot be estimated from the data furnished by the costs of the works that have been heretofore erected. These works have been, in almost every instance, constructed upon the scale of redoubts, and not upon that deserving the name of fortifications.

The commissioners have, in their survey and examination, only determined where it would be best to locate a great naval depot, and where sites for defence should be selected. They are convinced of the impracticability of defending the entrance into Long Island sound from the western point of Fisher's Island to the Gulls and Gardner's bay. They are convinced that the entrance through Fisher's Island sound may be defended. They have indicated the positions which should be occupied for defence on the map. They have decided that Frog's Point can be so secured as to form a good outer harbor to New York, and an inner harbor from the side of the sound.

If the positions recommended should be deemed of sufficient importance to be occupied, engineers should be sent to make the most minute surveys, so as to determine the position and form of the works, which, when constructed, are to last many years, and which in their construction must involve a great expenditure. As to the expense of constructing docks, &c., the remark in relation to details of fortifications will equally apply to these constructions. The enclosed memorandum, relative to timber, workmen, and iron ore, is furnished for reference. Commodore Bainbridge will communicate his own opinion upon the subject of a great depot, as he does not agree with the other commissioners in recommending the location of such a depot in Narraganset bay.

We have the honor to be, with great respect, sir, your most obedient servants,

J. G. SWIFT, B. G.
SAMUEL EVANS,
O. H. PERRY.

The Hon. B. W. CROWNINSHIELD, *Secretary of the Navy.*

OLD POINT COMFORT, HAMPTON ROADS, *January 24, 1818.*

The undersigned, commissioners appointed to examine the lower part of Chesapeake bay, Hampton Roads, and York river, for the purpose of determining whether the entrance into the former could be prevented by fortifications extending from the Horse Shoe to the Middle Ground, whether the latter could be so fortified as to prevent the entrance of a hostile force, have the honor to state, that, from various causes, they were not enabled to assemble until the latter part of the month of December, 1817; that they commenced to discharge the duty assigned them on the 1st of January, 1818, at Old Point Comfort. From the advanced stage of the season, and the consequent uncertainty of having such weather as would enable the commissioners to effect a thorough examination of the waters of Chesapeake bay, and the entrance of York river, they recommend that the execution of their duty in relation to those places may be postponed until the 1st of May next.

To the date of this report from the 1st of January, the commissioners have been employed in surveying and examining Old Point Comfort, the Rip Rap shoals, and the entrance into Hampton Roads. The result of this examination is a conviction, on the part of the commissioners, that the passage into those roads can be so fortified as to prevent the entrance of any hostile fleet. The extent and efficiency of such fortifications will depend upon the decision of the Government as to the length of time which the works should be enabled to withstand the attack of a combined naval and land force, of a given magnitude.

If the amount of resistance to be made at this pass be merely an obstruction of the entrance into Hampton Roads, without any reference to a land attack, the commissioners believe that competent water defences may be constructed to such an effect. As, however, the object of forcing an entrance into Hampton Roads might be deemed by an enemy worth the expense of a regular siege, the commissioners deem it their duty to recommend a system of defence equal to such an exigency. Such a system should embrace the occupation of the Rip Rap shoal with a castellated fort; the channel between that shoal and Old Point Comfort with a boom raft; and Old Point itself with an enclosed work: the whole to be so located as to afford a mutual protection, and to embrace, in the total, the power to resist any force which may be brought against the pass into Hampton Roads. The commissioners have not, as yet, been able to collect sufficient data to authorize them to offer you a complete plan. The magnitude of the work may affect the prices of materials and workmanship; and, as the nature of the substratum at the sites has not yet been sufficiently ascertained, no determinate amount of expense can be estimated upon which the commissioners can with safety rely.

For a general view of the subject, the commissioners present the enclosed charts, which will exhibit the positions that should be occupied, and may enable you to form some opinion of the approximate expense which the adoption of the system would involve; in aid of which, they also enclose an estimate for a work on the Rip Rap shoal, which is predicated on the supposition that the substratum of that site is solid, and upon the usual prices of materials and workmanship in this section of the Union.

It is the wish of the commissioners to lay before you their reasons in detail upon the proposed system; to which effect, the commissioners can with usefulness employ their time till May next, in acquiring further information, and in digesting as perfect a plan as the nature of the case will admit. The commissioners deem it their duty to state to you that Majors Roberdeau and Kearney, and Lieutenant Blaney, have attended the commissioners, and have, by their assiduous attention, been materially beneficial in surveying and drawing.

Respectfully submitted.

J. G. SWIFT, B. G.
L. WARRINGTON,
W. K. ARMISTEAD,
W. McREE,
J. D. ELLIOTT,

To the Hon. B. W. CROWNINSHIELD, *Secretary of the Navy.*

REWARD TO THE OFFICERS AND CREW OF A PRIVATEER FOR EXTRAORDINARY SERVICES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 4, 1818.

Mr. PLEASANTS, from the Committee on Naval Affairs, to whom was referred the petition of Samuel C. Reid, captain of the late private armed brig the General Armstrong, on behalf of himself, the officers, and crew of the said brig, reported:

It appears from the petition, and other documents, that the circumstances which gave rise to the application, were in substance the following:—Captain Reid, in the private armed brig the General Armstrong, of seven guns and ninety men, left the port of New York on a cruise, early in September, 1814; on the 26th of the same month they came to anchor in the port of Fayal, one of the Azores or Western Islands, belonging to the crown of Portugal; in the evening of the same day, a British squadron, consisting of the Plantagenet of seventy-four, the Rota of forty-four, and the Carnation of eighteen guns, under the command of Captain Lloyd, anchored in the same port. During the night, which was entirely clear, the moon near or at the full, and shining brightly, which enabled the Americans to examine accurately, and observe distinctly the movements of the enemy, four boats full of armed men were observed to be approaching the Armstrong, from the smallest of their vessels which lay near; Captain Reid hailed them repeatedly to know what were their views; no answer being returned, and the boats continuing to approach, orders were given to fire upon them, which were instantly obeyed with destructive effect, and after a short contest the boats retreated to their ships. It was soon discovered that the enemy were making preparations to renew the attack, which was commenced about midnight, with twelve or fourteen boats, containing, as was supposed, about four hundred men completely armed and prepared. After a most obstinate, and, on the part of the enemy bloody contest, which lasted about forty minutes, they were entirely frustrated in their attempts to carry the brig, and again retreated to their ships. In this second contest several of the enemy's boats were destroyed, and two of them taken possession of by the crew of the Armstrong, literally filled with dead. After the second retreat of the enemy, the greatest exertions were used by the Americans to prepare their vessel for action in case of another attack. About this time, Captain Reid received a note from Mr. Dabney, the American consul, requesting to see him on shore; when he repaired thither, the consul informed him that the Portuguese Governor had addressed a note to the commander of the British squadron, protesting against his violating the neutrality of the port, and requiring him to cease from further outrage on those whom it was his duty to protect. To this note Captain Lloyd returned a menacing reply; that he would take the Armstrong at every hazard, and if she was injured by her crew, he would consider the place as an enemy's port, and treat it accordingly. During the last action with the boats, the Armstrong lay within pistol-shot of the castle. Captain Reid then returned on board his vessel, and about day-break a cannonade was commenced from one of the enemy's vessels on the Armstrong. Thus situated, finding the enemy determined to persevere in their outrage, and from the immense superiority of their force, knowing it would be impossible to save his vessel, Captain Reid, having due regard for the safety of his comrades who had so nobly supported him, determined to scuttle her and leave her; this he did, when she was immediately set on fire by the enemy and destroyed. In these several contests, from good information, there is reason to believe the loss of the enemy, at a moderate calculation, amounted at least to two hundred and fifty men in killed and wounded; that of the Americans was two killed and seven wounded. The petition further states, that this British squadron was on its way to the West Indies to join the force destined to make an attack on New Orleans; that in consequence of the injury which they sustained, their junction was so much retarded, and the expedition so much delayed, that the Americans had time to prepare for the defence of that place, which, but for this circumstance, could probably not have been effected. The petition concludes with a prayer that Congress would bestow something on those who so gallantly defended the American flag, under circumstances so hopeless; and who in the contest lost nearly the whole of their little all.

This case has engaged much of the attention of the committee. They do not believe that the annals of our Government furnish a precedent of rewards bestowed on men situated as were the crew of the Armstrong, not in the public service. They are fully aware also of the weight attached, and justly attached, to precedents which have been settled on due consideration; it would, therefore, be with much reluctance, they would consent to establish one, to which an appeal might be made in future cases, somewhat analogous in principle. But on mature reflection, apprehensions from the precedent which may be established by this case are much diminished. It will not be going too far, in the opinion of the committee, to say, that among all the achievements which embellish the annals of the late war, there was not one which surpassed that now under consideration. A few brave men in the middle of the Atlantic ocean, who had no personal interest in the preservation of the vessel they defended, and the mere preservation of which, without a miracle, must have been impracticable, could have been actuated by nothing short of the noblest motives which impel men to the achievement of valiant deeds; those motives could have been only their honor and the glory of the flag under which they fought. They knew well the high value which was placed by their country on the rising reputation of their infant navy; they knew it was all-important that that reputation should be sustained by Americans in whatever situation they might be placed; and impelled by these generous motives, and these alone, they hazarded every thing to accomplish their object. They succeeded; and though, after two complete victories, the second gained under circumstances of the greatest inequality, they were ultimately obliged to yield to a superior force, yet the honor of the flag was supported, and the American character raised to an elevation calculated to produce the most beneficial effects. Should this Congress bestow on these gallant men some mark of their bounty, the committee think it would be well bestowed; and should it have the effect of producing similar exertions in future wars, and this precedent be pleaded in support of similar applications, they do not believe the country will have cause to regret the application of a small sum to a purpose so beneficial. From all the circumstances of the case, the committee recommend to the House, the passage of a bill herewith reported, to divide among the officers and crew of the Armstrong the sum of ten thousand dollars.

To the honorable the Congress of the United States, in Senate and House of Representatives convened: The memorial of Samuel C. Reid, late commander of the private armed brig General Armstrong, on behalf of the officers and crew of the said vessel, respectfully sheweth:

That on the 26th September, 1814, the said vessel being at anchor in the port of Fayal, and having on board a crew of ninety men, and seven guns, was attacked by a superior force under the command of Commodore Lloyd, and that the said vessel was finally burnt and destroyed.

For the details of that action, your memorialist refers to the letter of John B. Dabney, Esq. then consul for the United States at Fayal to the Secretary of State, dated 5th October, 1814.

It would not become your memorialist to speak of the merit (if any there was) of the officers and crew of the Armstrong in that action. He may, nevertheless, be allowed to state as a fact, that the squadron with which they engaged was a part of that armament which was destined to make the descent upon New Orleans, and that the injury sustained by this squadron in the action above mentioned, delayed for a time its junction with the fleet then in the West Indies, and thus retarded the progress of the expedition, which gave time for the brave Jackson to collect and arrange his forces.

The officers and crew of the Armstrong do not arrogate to themselves any personal merit, by reason of events and consequences which they could not have foreseen. Yet if, by the faithful discharge of their duty as citizens, they have, under Providence, been the instruments in effecting a great public good, they may hope thence to derive a fairer claim to the notice of their Government.

Your memorialist, on behalf of the said officers and crew, begs leave further to observe, that when they were attacked by a force so vastly superior, and when there was no longer a hope of successful resistance, or of the preservation of the vessel, they would have been justified to the owners, and would perhaps have escaped the reproaches of their fellow citizens, if they had abandoned their vessel, and sought only their personal safety. But they owed a duty to their country, and it was this impulse alone that could induce them to make such a resistance at the expense of their lives and property, no other object being in view; and they do hope, therefore, that their case may not be confounded with that of those who may have fought bravely from the mere prospect of gain.

The officers and crew of the Armstrong had not the advantages of being in the immediate employ, not of enjoying the pay and emoluments of Government; yet they have been led to presume that a service rendered to their country is not the less meritorious for having been performed without the obligation of contract, or previous stipulation for reward.

It may be true that valiant deeds are not to be rewarded with money, yet the practice of our own Government, and that of every civilized nation in the old world, testifies their opinion, that sound policy requires, that the citizens or subjects who perform such deeds as attract the notice of Government, should not want the means of decent support; and Congress have deigned to bestow, and our naval heroes have not disdained to receive, pecuniary reward for services they may have rendered their country in the destruction of men and ships of the enemy.

It is with great reluctance and hesitation that your memorialist, the said Samuel C. Reid, claims the attention of Congress for himself; he should have been forever silent, but he can no longer resist the importunities of those who were his associates in that action, nor be longer a passive witness to their poverty and distress, some of which feel the smart of their wounds to this day.

The said officers and crew having lost most of their baggage and other necessaries, and having also suffered great privations and distress, arrived in the United States about the close of the war, and owing to the embarrassments of commerce and navigation, have been unable, by any exertions, to procure for themselves and families a bare subsistence; whence far the greater part of them and their families, are now actually suffering from want.

Your memorialist hath been led to believe, that these facts are unknown to Congress, and that it would not be deemed honorable to the nation or its Government, that those whom the journals of Congress have thought proper to eulogize, should exist but in misery and distress in the bosom of their own country.

SAMUEL C. REID.

Copy of a letter from the American Consul at Fayal to the Secretary of State.

FAYAL, October 5, 1814.

SIR:

I have the honor to state to you that a most outrageous violation of the neutrality of this port, in utter contempt of the laws of civilized nations, has recently been committed here, by the commanders of His Britannic Majesty's ships Plantagenet, Rota, and Carnation, against the American private armed brig General Armstrong, Samuel C. Reid, commander, but I have great satisfaction in being able to add, that this occurrence terminated in one of the most brilliant actions on the part of Captain Reid, his brave officers and crew, that can be found on naval record.

The American brig came to anchor in this port in the afternoon of the 26th of September, and at sunset of the same day the above named ships suddenly appeared in these roads; it being nearly calm in the port, was rather doubtful if the privateer could escape if she got under way, and relying on the justice and good faith of the British captains, it was deemed most prudent to remain at anchor. A little after dusk Captain Reid, seeing some suspicious movements on the part of the British, began to warp his vessel close under the guns of the castle, and while doing so, he was at about eight o'clock P. M. approached by four boats from the ships filled with armed men. After hailing them repeatedly, and warning them to keep off, he ordered his men to fire on them, and killed and wounded several men. The boats returned the fire and killed one man and wounded the first lieutenant of the privateer, and returned to their ships; and, as it was now light moonlight, it was plainly perceived from the brig as well as from the shore, that a formidable attack was premeditating. Soon after midnight, twelve or more large boats, crowded with men from the ships, and armed with carronades, swivels, and blunderbusses, small arms, &c. attacked the brig; a severe contest ensued which lasted about forty minutes, and ended in the total defeat and partial destruction of the boats, with a most unparalleled carnage on the part of the British. It is estimated by good judges that near four hundred men were in the boats when the attack commenced, and no doubt exists in the mind of the numerous spectators of the scene that more than half of them were killed or wounded; several boats were destroyed; two of them remained alongside of the brig literally loaded with their own dead. From these two boats only seventeen reached the shore alive; most of them were severely wounded. The whole of the following day the British were occupied in burying their dead; among them were two lieutenants and one midshipman of the Rota: the first lieutenant of the Plantagenet, it is said, cannot survive his wounds, and many of the seamen who reached their ships were mortally wounded, and have been dying daily. The British, mortified at this signal and unexpected defeat, endeavor to conceal the extent of the loss; they admit, however, that they lost in killed, and who have died since the engagement, upwards of one hundred and twenty of the flower of their officers and men. The captain of the Rota told me he lost seventy men from his ship. Two days after this affair took place the British sloops of war Thais and Calypso came into port, when Captain Lloyd immediately took them into requisition to carry home the wounded officers and seamen; they have sailed for England, one on the 2d, and the other on the 4th instant, each carrying twenty-five badly wounded. Those who were slightly wounded, to the number, as I am informed, of about thirty, remained on board their respective ships, and sailed last evening for Jamaica. Strict orders were given that the sloops of war should take no letters whatever to England, and those orders were rigidly adhered to.

In face of the testimony of all Fayal, and a number of respectable strangers who happened to be in this place at the moment, the British commander endeavors to throw the odium of this transaction on the American captain, Reid, alleging that he sent boats merely to reconnoitre the brig, and without any hostile intention. The pilot of the port did inform them of the privateer the moment they entered the port. To reconnoitre an enemy's vessel in a friendly port, at night, with four boats, carrying, by the best accounts, one hundred and twenty men, is certainly a strange proceeding! The fact is, they expected, as the brig was warping in, that the Americans would not be prepared to receive them, and they had hopes of carrying her by a *coup de main*. If any thing could add to the baseness of this transaction on the part of the British commander, it is want of candor openly and boldly to avow the facts. In vain can he expect, by such subterfuge, to shield himself from the indignation of the world, and the merited resentment of his own Government and nation, for thus trampling on the sovereignty of their most ancient and faithful ally, and for the wanton sacrifice of British lives.

On the part of the Americans the loss was comparatively nothing—two killed, and seven slightly wounded: of the slain, we have to lament the loss of the second lieutenant, Mr. Alexander O. Williams, of New York, a brave and meritorious officer.

Among the wounded are Messrs. Worth and Johnson, first and third lieutenants. Captain Reid was thus deprived, early in the action, of the services of all his lieutenants; but his cool and intrepid conduct secured him the victory.

On the morning of the 27th ultimo, one of the British ships placed herself near the shore, and commenced a heavy cannonade on the privateer. Finding further resistance unavailing, Captain Reid ordered her to be abandoned

after being partially destroyed, to prevent her falling into the hands of the enemy, who soon after sent their boats and set her on fire.

At nine o'clock in the evening, (soon after the first attack,) I applied to the Governor, requesting his excellency to protect the privateer, either by force, or by such remonstrance to the commander of the squadron as would cause him to desist from any further attempt. The Governor, indignant at what had passed, but feeling himself totally unable, with the slender means he possessed, to resist such a force, took the part of remonstrating, which he did in forcible but respectful terms. His letter to Captain Lloyd had no other effect than to produce a menacing reply, insulting in the highest degree. Nothing can exceed the indignation of the public authorities, as well as all ranks and description of persons here, at this unprovoked enormity. Such was the rage of the British to destroy this vessel, that no regard was paid to the safety of the town: some of the inhabitants were wounded, and a number of the houses were much damaged. The strongest representations of this subject are prepared by the Governor for his court.

Since this affair, the commander, Lloyd, threatened to send on shore an armed force and arrest the privateer's crew, saying there were many Englishmen among them; and our poor fellows, afraid of his vengeance, have fled to the mountains several times, and have been harassed extremely. At length Captain Lloyd, fearful of losing more men if he put his threats in execution, adopted this stratagem: he addressed an official letter to the Governor, stating that in the American crew were two men who deserted from his squadron in America, and as they were guilty of high treason, he required them to be found and given up. Accordingly, a force was sent into the country, and the American seamen were arrested and brought to town, and as they could not designate the said pretended deserters, all the seamen here passed an examination of the British officers, but no such persons were to be found among them. I was requested by the Governor and British consul to attend this humiliating examination, as was also Captain Reid, but we declined to sanction by our presence any such proceedings.

Captain Reid has protested against the British commanders of the squadron for the unwarrantable destruction of his vessel in a neutral and friendly port, as also against the Government of Portugal for their inability to protect him.

No doubt this Government will feel themselves bound to make ample indemnification to the owners, officers, and crew, of this vessel, for the great loss they have severally sustained.

I shall as early as possible transmit a statement of this transaction to our minister at Rio Janeiro for his government.

I have the honor to be, with great respect, sir, your most obedient servant,

JOHN B. DABNEY.

To the SECRETARY OF STATE of the United States.

FAYAL, October 4, 1814.

With infinite regret I am constrained to say, it has eventually fallen to my lot to state to you the loss and total destruction of the private armed brig, General Armstrong, late under my command.

We sailed from Sandy Hook on the evening of the 9th ultimo, and about midnight fell in close aboard of a razeed and ship of the line. They pursued till next noon, when they thought proper to give over chase. On the 11th, after a nine hours' chase, boarded the private armed schooner Perry, John Colman, six days from Philadelphia; had thrown over all his guns. On the following day, fell in with an enemy's gun brig; exchanged a few shots with him and left him. On the 24th boarded a Spanish brig and schooner, and a Portuguese ship, all from the Havanna. On the 26th following, came to, in Fayal Roads, for the purpose of filling water; called on the American consul, who very politely ordered our water immediately sent off, it being our intention to proceed to sea early the next day. At five P. M. I went on board, the consul and some other gentlemen in company. I asked some questions concerning enemy's cruisers, and was told there had been none at these islands for several weeks; when about dusk, while we were conversing, the British brig *Carnation* suddenly hove in sight, close under the northeast head of the harbor, within gun-shot when first discovered.

The idea of getting under way was instantly suggested; but finding the enemy's brig had the advantage of a breeze, and but little wind with us, it was thought doubtful if we should be able to get to sea without hazarding an action. I questioned the consul to know, if, in his opinion, the enemy would regard the neutrality of the port? He gave me to understand, I might make myself perfectly easy, assuring me, at the same time, they would never molest us while at anchor. But no sooner did the enemy's brig understand from the pilot boat who we were, when she immediately hauled close in and let go her anchor within pistol-shot of us. At the same moment, the *Plantagenet* and frigate *Rota* hove in sight, to whom the *Carnation* instantly made signals, and a constant interchange took place for some time. The result was, the *Carnation* proceeded to throw out all her boats; despatched one on board the *Commodore*, and appeared otherwise to be making unusual exertions; from these circumstances I began to suspect their real intentions. The moon was near its full, which enabled us to observe them very minutely; and I now determined to haul in nearer the shore; accordingly, after clearing for action, we got under way, and began to sweep in. The moment this was observed by the enemy's brig, she instantly cut her cable, made sail, and despatched four boats in pursuit of us. Being now about 8 P. M., as soon as we saw the boats approaching, we let go our anchor, got springs on our cable, and prepared to receive them. I hailed them repeatedly as they drew near, but they felt no inclination to reply. Sure of their game they only pulled up with greater speed. I observed the boats were well manned, and apparently as well armed; and as soon as they cleverly got alongside, we opened our fire, which was as soon returned; but, meeting with rather a warmer reception than they had probably been aware of, they very soon cried for quarters and hauled off; in this skirmish I had one man killed, and my first lieutenant wounded. The enemy's loss must have been upwards of twenty killed and wounded.

They had now repaired to their ships to prepare for a more formidable attack. We, in the interim, having taken the hint, prepared to haul close in to the beach, where we moored head and stern within half pistol-shot of the castle. This done, we again prepared, in the best possible manner, for their second reception. About 9 P. M. we observed the enemy's brig towing in a large fleet of boats. They soon after left the brig and took their station in three divisions, under cover of a small reef of rocks, within about musket shot of us. Here they continued manoeuvring for some time, the brig still keeping under way to act with the boats, should we at any time attempt our escape.

The shores were lined with the inhabitants, waiting the expected attack; and from the brightness of the moon they had a most favorable view of the scene. The Governor, with most of the first people of the place, stood by and saw the whole affair.

At length, about midnight, we observed the boats in motion, (our crew having laid at their quarters during the whole of this interval;) they came on in one direct line, keeping in close order; and we plainly counted twelve boats. As soon as they came within proper distance we opened our fire, which was warmly returned from the enemy's caronades and small arms. The discharge from our long Tom rather staggered them; but soon reconnoitering, they gave three cheers, and came on most spiritedly; in a moment, they succeeded in gaining our bow and starboard quarter, and the word was *board*. Our great guns now becoming useless, we attacked them sword in hand, together with our pikes, pistols, and musketry, from which our lads poured on them a most destructive fire. The enemy made frequent and repeated attempts to gain our decks, but were repulsed at all times, and at all points, with the greatest slaughter. About the middle of the action I received intelligence of the death of my second lieutenant; and, soon after, of the third lieutenant being badly wounded. From this and other causes, I found our fire had much slackened on the forecastle; and, fearful of the event, I instantly rallied the whole of our after division, who had been bravely defending, and now had succeeded in beating the boats off the quarters. They gave a shout, rushed forward, opened a fresh fire, and soon after decided the conflict, which terminated in the total defeat of the enemy, and the loss of many of their boats; two of which, belonging to the *Rota*, we took possession of, literally loaded with their

own dead; seventeen only escaped from them both, who had swum to the shore. In another boat under our quarter, commanded by one of the lieutenants of the Plantagenet, all were killed saving four. This I have from the lieutenant himself, who further told me, that he jumped overboard to save his own life.

The duration of this action was about forty minutes; our decks were now found in much confusion, our long Tom dismantled, and several of our carriages broken; many of our crew having left the vessel, and others disabled. Under these circumstances, however, we succeeded in getting long Tom in his birth, and the decks cleared in some sort for a fresh action, should the enemy attack us again before daylight. About 3 A. M. I received a message from the American consul, requesting to see me on shore, when he informed me the Governor had sent a note to Captain Lloyd, begging him to desist from further hostilities. To which Captain Lloyd sent for answer, that he was now determined to have the privateer at the risk of knocking down the whole town; and that, if the Governor suffered the Americans to injure the privateer in any manner, he should consider the place an enemy's port, and treat it accordingly. Finding this to be the case, I considered all hopes of saving our vessel to be at an end. I therefore went on board, and ordered all our wounded and dead to be taken on shore, and the crew to save their effects as fast as possible. Soon after this it became daylight, when the enemy's brig stood close in, and commenced a heavy fire on us with all her force; after several broadsides she hauled off, having received a shot in her hull, her rigging much cut, and her foretopmast wounded, (of this I was informed by the British consul.) She soon after came in again, and anchored close to the privateer. I then ordered the Armstrong to be scuttled, to prevent the enemy from getting her off; she was soon after boarded by the enemy's boats, and set on fire, which soon completed her destruction.

They have destroyed a number of houses in the town, and wounded some of the inhabitants.

By what I have been able to learn from the British consul and officers of the fleet, it appears there were about four hundred officers and men in the last attack by the boats, of whom one hundred and twenty were killed, and one hundred and thirty wounded. Captain Lloyd, I am told by the British consul, is badly wounded in the leg; a jury of surgeons had been held, who gave as their opinion that amputation would be necessary to ensure his life. It is said, however, that the wound was occasioned by an *ox treading on him*. The fleet has remained here about a week, during which they have been principally employed in burying their dead, and taking care of their wounded.

Three days after the action, they were joined by the ship *Thais* and brig *Calypso*, (two sloops of war,) who were immediately taken into requisition by Captain Lloyd, to take home the wounded men. The *Calypso* sailed for England, with part of the wounded, on the 2d inst., among whom was the first lieutenant of the *Plantagenet*. The *Thais* sails this evening with the remainder. Captain Lloyd's fleet sailed to-day; supposed for the West Indies.

The loss on our part, I am happy to say, is comparatively trifling: two killed and seven wounded. With regard to my officers, in general, I feel the greatest satisfaction in saying they one and all fought with the most determined bravery, and to whom I feel highly indebted for their officer-like conduct during the short period we were together; their exertions and bravery deserved a better fate.

I here insert for your inspection a list of the killed and wounded.

Killed. Mr. Alexander O. Williams, second lieutenant, by a musket ball in the forehead, died instantly; Burton Lloyd a seaman, do. through the heart, do.

Wounded. Frederick A. Worth, first lieutenant, in the right side; Robert Johnson, third do. left knee; Basilla Hammond, quartermaster, left arm; John Piner, seaman, knee; William Castle, do. arm; Nicholas Scalsan, do. arm and leg; John Harrison, do. hands and face, by the explosion of a gun.

It gives me much pleasure to announce to you that our wounded are all in a fair way of recovery, through the unremitted care and attention of our worthy surgeon.

Mr. Dabney, our consul, is a gentleman possessing every feeling of humanity, and to whom the utmost gratitude is due from us for his great care of the sick and wounded, and his polite attention to my officers and myself.

Mr. Williams was a most deserving and promising officer. His country in him has lost one of its brightest ornaments, and his death must be sadly lamented by all who knew his worth.

Accompanied with this you will find a copy of my protest, together with copies of letters, written by Mr. Dabney to the Governor of Fayal, our minister at Rio Janeiro, and our Secretary of State. These letters will develop more fully the circumstances of this unfortunate affair.

We expect to sail to-morrow in a Portuguese brig for Amelia Island, who takes the whole of our crew; till when, I remain, gentlemen, your obedient humble servant,

SAMUEL C. REID.

[15th CONGRESS.]

No. 158.

[1st SESSION.]

TRIAL OF CAPTAIN JOHN ORDE CREIGHTON.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 4, 1818.

NAVY DEPARTMENT, *February 28, 1818.*

SIR:

I have the honor to transmit, herewith, in compliance with a resolution of the House of Representatives, of the 26th instant, a copy of the proceedings of the court martial ordered by Commodore Isaac Chauncey, at the instance of Midshipman Marston, for the trial of Captain John Orde Creighton; and also of the memorials of the midshipmen and other officers in the Mediterranean squadron, emanating from the proceedings of the said court martial.

I have the honor to be, with the highest respect, sir, your most obedient servant,

B. W. CROWNINSHIELD.

The Hon. the SPEAKER of the House of Representatives.

Minutes of the proceedings of a court martial assembled on board the frigate Constellation, in the bay of Naples, upon the 26th of August, 1816, and held every day afterwards till ———.

Present: Captain John Shaw, *President*; Captains Charles Gordon, O. H. Perry, W. M. Crane, John Downes, *Members*; Doctor Robert S. Kearney, *Judge Advocate*.

Captain Creighton appeared in court, and all persons admitted. The order of Isaac Chauncey, Esquire, commodore and commander-in-chief of the United States' naval forces in the Mediterranean sea, dated the 26th day of August, 1816, directed to Captain John Shaw, for the trial of Captain John Orde Creighton, of the United States' ship *Washington*, was read. The several members of the court were duly sworn, and the judge advocate also sworn. Captain Creighton, being asked, declared he had no objections to the members of the court.

The court adjourned till to-morrow at ten o'clock.

TUESDAY MORNING, *August 27, 1816.*

The court met, pursuant to adjournment. Present: the president, members, and judge advocate.

The following charges and specifications addressed to the president, were publicly read in court, and in the presence of Captain Creighton:

CHARGE 1st.—Oppression.

Specification.—In that on the 8th day of July, in the year of our Lord one thousand eight hundred and sixteen, in contempt and in direct violation of the laws for the better government of the navy of the United States, John Orde Creighton, a captain in the navy of the United States, and in command of the United States' ship *Washington*, did, on the quarter-deck of the said United States' ship *Washington*, while under way in the harbor of Gibraltar, then and there, without cause or provocation, violently strike me, John Marston, Junior, while in the execution of my duty, being a midshipman on board the United States' ship aforesaid, much to my discomfiture and disgrace.

CHARGE 2d.—Ungentlemanly and unofficerlike conduct.

Specification.—In that on the 9th day of July, in the year of our Lord one thousand eight hundred and sixteen, John Orde Creighton, a captain in the navy of the United States, and in command of the United States' ship *Washington*, did provokingly and falsely accuse me, John Marston, Junior, being a midshipman on board the United States' ship aforesaid, of telling a mischievous falsehood; and in that the above mentioned John Orde Creighton did, then and there, on my denying the truth of the accusation, most vehemently threaten to heave me overboard, assuming thereby an authority not guaranteed by the laws of the United States, nor by the sacred principles of justice.

JOHN MARSTON, JUN.

Captain Creighton being desired to plead to the foregoing charges, pleaded "not guilty;" whereupon the court proceeded to trial, as follows:

JOSEPH ODION, seaman, belonging to the United States' ship *Washington*, duly sworn on the part of the prosecution, says: I saw Captain Creighton strike Mr. Marston, who was standing by the capstan, while the ship was working out of the bay of Gibraltar:

Question by the court. What did Captain Creighton strike Mr. Marston with?

Answer. His hand—with his fist.

Question. Did it appear to you that Captain Creighton struck Mr. Marston by accident or design?

Answer. Design.

Question. What time of day was it?

Answer. Dusk.

Question. What part of his body did he strike?

Answer. The back.

Question. Where was Mr. Marston standing?

Answer. By the capstan, on the quarter deck.

Question. When Captain Creighton struck him, where were you standing?

Answer. At the breast-backstay-falls; I was stationed there.

Question. Did Captain Creighton appear to know who Mr. Marston was?

Answer. I cannot say.

Question. How was Mr. Marston standing when Captain Creighton struck him?

Answer. I do not know how he was standing.

Question. Was there much noise at the time, in consequence of working ship?

Answer. There was some noise in consequence of working ship.

Question. Did Captain Creighton speak to Mr. Marston before or after striking him?

Answer. I cannot say. I did not hear him.

Question. Was Mr. Marston standing alone, or in a crowd?

Answer. I do not recollect.

Question. What effect had the blow upon Mr. Marston?

Answer. I did not notice the effect.

Question. Did Mr. Marston speak to Captain Creighton after receiving the blow?

Answer. No. I did not hear him.

Question. What induced you to believe that Captain Creighton struck Mr. Marston intentionally?

Answer. He appeared to be very angry; that induced me.

Question. Did he appear to be very angry with Mr. Marston only?

Answer. He was very angry with the men working ship.

Question. Was Mr. Marston in uniform, or easily distinguished in his dress from the men?

Answer. In his uniform, and easily distinguished from the men.

Question. Was it dark, or broad daylight?

Answer. It was dark; it was dusk.

Question. Was you so situated that you *only* could see Captain Creighton strike Mr. Marston?

Answer. There were others there who might have seen it.

Question. Which side of the capstan did this occur?

Answer. The starboard side.

Question. Were not the men working ship, and at their stations?

Answer. Yes.

Witness questioned by Captain Creighton.

Question. Did you not say I had a trumpet in the hand I struck Mr. Marston with?

Answer. You had a trumpet in your hand, but not in the one you struck him with.

Question. Was not Mr. Marston standing with his back to me?

Answer. I cannot say how Mr. Marston was standing.

Question. Did you not suppose it was to call his attention, and not meant as a blow?

Answer. It was intended as a blow.

Witness questioned by the court.

Question. Was Mr. Marston standing, leaning, or walking the deck?

Answer. I do not know.

The witness declares he knows nothing in relation to the second charge. Directed to withdraw.

The prosecutor being asked, declined questioning the witness, and being also asked if he had any other witnesses to produce, named a Mr. Middleton, and, on inquiry being made for him, it appears he is not in reach of the court. Mr. Marston then stated that the beforementioned Mr. Middleton was a material witness to make good his charges against Captain Creighton.

All parties were ordered to withdraw, and the court took the above statement into consideration. They observe thereon, that as it has been ascertained that Mr. Middleton is not within reach of the court, and also that, as he is not amenable to any process issuing from this court, and as there is no reasonable expectation that his attendance can be procured hereafter, they cannot put off the trial to a more distant day; it also appearing that Mr. Middleton is a witness both for and against the prosecution.

Midshipman TALMADGE and Midshipman DERYB duly sworn on the part of the prosecution.

Midshipman TALMADGE examined, states as follows:

I heard Captain Creighton make use of this expression to Midshipman Marston, that he was guilty of a malicious falsehood, but have since been induced to believe that he said a mischievous one.

Question by the court. Did you hear Captain Creighton tell Midshipman Marston he would throw him overboard?

Answer. I did not.

Question. Where was Captain Creighton and Midshipman Marston standing at the time Captain Creighton said he told a mischievous falsehood?

Answer. On the gun-deck, on the larboard side.

Question. What part of the ship were you in when you observed the parties?

Answer. I was passing the hatch on the quarter-deck, and stopped there. I could not see all their bodies, I only saw the lower part of them.

Question. How did you know that Captain Creighton was speaking to Mr. Marston?

Answer. I heard their voices; and have no doubt on the subject.

The prosecutor being asked, declined putting any questions to the witness.

Witness was then questioned by Captain Creighton.

Question. Are you positive it was on the gun-deck this expression was used?

Answer. Yes.

Question. On what part of the gun-deck?

Answer. Just forward of the cabin bulk-head, near the ladder.

The witness was directed to withdraw.

Midshipman DERBY examined, states, that he knows nothing in relation to the second charge and specification.

Witness questioned by prosecutor.

Question. Did not Mr. Tallmudge call on you to witness certain expressions of Captain Creighton?

Answer. He did call on me, but I heard nothing.

Witness questioned by Captain Creighton.

Question. When Mr. Tallmudge called you, did you see me, and what part of the ship was I in?

Answer. When Mr. Tallmudge called me you was under the half deck; I was on the spar-deck at the after hatch.

The witness was directed to withdraw.

Midshipman MARSTON desired that his testimony might be heard by the court; he was sworn accordingly, and stated as follows: On the 8th of July, when we were standing out of Gibraltar bay, I was attending as usual on the quarter-deck to the commodore. I received a blow on the back. I turned round. Captain Creighton said damn my blood, why don't you attend to have the fore brace hauled in. I saw the order executed. The next day I wrote a letter to the commodore, stating that Captain Creighton had struck me. Captain Creighton called me on the main deck, and said, my report to the commodore was a mischievous falsehood. A short time afterwards he called me to the starboard gangway, and made use of the same expression. On denying his assertion, he told me he would throw me overboard. He then said, go and tell the commodore that he told me to be out of his sight; which order I obeyed.

Witness questioned by the court.

Question. What did he strike you with?

Answer. With his fist as far as I could judge; he might have had the trumpet clenched in his hand.

Question. Was the blow severe or slight?

Answer. Pretty severe.

Question. Where was the commodore, and how near standing to you?

Answer. A little forward of me.

Question. Did you inquire the reason of the blow at the moment it was given you: and did you say any thing to Captain Creighton on the subject?

Answer. I did not.

Question. Were there any persons near you at the time, either officers or men?

Answer. There were a great many men. I did not observe any officers; there was considerable bustle.

Question. Was the blow given to call your attention to the duty going on, or was it from any other motive?

Answer. From the severity of the blow, I must think it was given maliciously.

Question. Was your manner and language perfectly respectful to Captain Creighton, when he charged you with having asserted a mischievous falsehood?

Answer. It was not.

Question. Did Captain Creighton by his manner show any disposition to repeat the blow after you turned towards him?

Answer. I did not observe that he manifested a disposition to repeat the blow; I hurried off to execute the order.

Question. Did Captain Creighton speak to you in a loud tone of voice when he said damn my blood? &c.

Answer. Not very; he spoke in his common tone.

Question. Was the trumpet in the hand he struck you with?

Answer. From the feeling of the blow, I think it was with the plain fist.

Question. Did you make any complaint or remonstrance to Captain Creighton, he being your captain, previous to your report to the commodore?

Answer. I did not.

Question. Were you alone or in a crowd?

Answer. There were scattering men around me; they were going on with their duty: there was no great crowd.

Question. Was the ship in a situation to excite much anxiety in Captain Creighton, he being the captain of the ship?

Answer. At the time referred to, the ship was not in such a situation as to cause anxiety.

Question. Did Captain Creighton strike many of the men on this occasion?

Answer. He broke one, or, I believe, two trumpets over the men's heads.

Question. Were not the officers generally at their stations on the deck?

Answer. I saw no officer on the deck at the time I went to execute the order.

Question. How did Captain Creighton compel you to retreat after you turned towards him?

Answer. He did not compel me, but from the manner in which he spoke and looked, it was my wish to be away from him as quick as possible.

Question. Have you ever had any conversations or private interviews with the seaman, (your witness,) on the subject of his evidence, and how did you know that he noticed the blow you complain of?

Answer. I have had no private interview with the sailor. I first heard from an officer that the sailor had observed the blow which I received from Captain Creighton. I afterwards took an opportunity of speaking to the sailor in the gangway on the subject; the opportunity was a mere chance; he was going on with duty with some other men. I asked him if he could swear in court to this assertion; he said he could. I added, that I presumed a court martial would sit in a few days, and I should call upon him.

Question. Did any other conversation take place between him and you on this subject?

Answer. No.

Question. Do you know that the first witness has ever been punished by Captain Creighton?

Answer. He was formerly captain of the main-top, but broke. I do not know that he was flogged.

Question. What officer told you that this seaman noticed the occurrence; and how long after?

Answer. I understood from several officers that Midshipman Crowninshield had said this man saw the blow given.

Question. Did Captain Creighton say that your report was a malicious or a mischievous falsehood?

Answer. A mischievous.

Question. Which side of the capstan were you when you received the blow?

Answer. The starboard side.

The witness questioned by Captain Creighton.

Question. Which hand had I the trumpet in?

Answer. I do not recollect

Question. How far from the capstan was you standing?

Answer. About two feet.

The evidence on the part of the prosecution here closed.

Commodore ISAAC CHAUNCEY, Lieutenant SHUBRICK, and Lieutenant DUDLEY, were duly sworn on the part of Captain Creighton.

Commodore Chauncey examined as follows:

Question by the court. Did you see Captain Creighton strike Mr. Marston?

Answer. No.

Question. Do you know any thing in relation to the second charge?

Answer. Nothing. The commodore proceeded to state, that he remembers the ship was working out of Gibraltar bay, on the evening of the 8th July. He heard Captain Creighton speak to a person who stood near him, and judged that he spoke to Mr. Marston, as he heard Mr. Marston reply, "he was attending on the commodore." The next day he received a letter from Mr. Marston, stating that Captain Creighton had struck him. This letter I handed to Captain Creighton. The following day I received another letter from Mr. Marston, containing the charges and specifications. I had a conversation with Mr. Marston, and made some overtures to him by way of reconciling the subject of his complaint, stating to him my belief that Captain Creighton was incapable of offering such violence to an officer, and that I doubted not but Captain Creighton would readily satisfy him on this subject; these he declined, and stated his reasons for doing so. I repeated these overtures to Mr. Marston some days after, and they were still rejected. I then acquainted him that as the frigate United States had now arrived, and as soon as she should be released from quarantine, I should order a court martial for the trial of Captain Creighton.

Question by Captain Creighton. Did I not tell you when you showed me both of Midshipman Marston's letters that I was entirely ignorant of the circumstances he complained of, and have I not repeatedly told you so since?

Answer. When I showed Captain Creighton the first letter, he denied having any knowledge of the circumstance. Captain Creighton has denied ever having any intention to strike Mr. Marston.

Question. Did not Mr. Marston say to you that he was urged by some officer to write you again on the subject?

Answer. Yes.

Question. Have you ever known me to show a disposition to tyrannise or oppress the officers of the Washington?

Answer. No. I should conceive it my duty to check it, if I made such discovery.

Question. Do you not think that I wished to call Mr. Marston's attention, and not to strike him?

Answer. I never believed for a moment that you struck Mr. Marston maliciously. When I received Mr. Marston's first letter, I supposed that you probably had pushed him with your trumpet to call his attention; it was quite dark at the time.

Question. Do you not think the officers of the Washington have every kindness and indulgence shown them that the service will admit of?

Answer. I know nothing to the contrary.

Question. If it had been a severe blow, are you not of opinion, standing where you did, that you should have heard something of it?

Answer. I think I should.

The commodore further states to the court that the ship, at the time she was working out of the bay of Gibraltar, was in such a situation as to excite very great anxiety both in himself and Captain Creighton, and required the exertions of all the officers and crew.

The witness withdrew.

The court adjourned till to-morrow, ten o'clock.

WEDNESDAY MORNING, August 28, 1816.

The court met pursuant to adjournment. Present: the members and judge advocaté.

Lieutenant SHUBRICK examined as follows:

Question by Captain Creighton. Did I not request of you to see Mr. Marston, and assure him that I disavowed having given him, intentionally, any thing like a blow, and that, if he chose to withdraw the charges, I would satisfy him fully on what he complained of?

Answer. I told Mr. Marston that Captain Creighton disavowed any knowledge of having struck him, and that if he would withdraw the charges, he would satisfy him fully as to the language he complained of.

Question. Did he not at first show an indication to accept the proposal?

Answer. I had two conversations with Mr. Marston—one in the morning, the other in the afternoon. In the morning I thought he manifested some disposition to withdraw them; in the evening he did not.

Question. Did he not say that Commodore Rodgers was broke for striking a midshipman, and that it was only necessary to swear to the fact to have me punished in the same way?

Answer. He observed to me that one of the first officers in the service was broke on a similar charge, and he supposed it only necessary to swear to the fact. I told him I thought differently. I presumed a court would inquire particularly into the intention of the person charged with the offence.

The prosecutor declined putting any questions to the witness.

Lieutenant Shubrick withdrew.

Captain Creighton declined troubling the court with the examination of Lieutenant Dudley. The prosecutor claimed the privilege of questioning Lieutenant Dudley, and the court took the same under consideration.

All parties withdrew.

The court came to the resolution to address the-prosecutor as follows:

SIR: You having been highly favored in consequence of your youth, being allowed to appear as an evidence yourself, and to produce to the court two additional witnesses in support of your charges, the court decide that they will not receive the testimony of Lieutenant Dudley, believing that it cannot possibly be of any importance towards the support of your charges. The court have noticed in you a want of due respect to them, which their forbearance alone has heretofore prevented from noticing. The court warn you in future to bear in mind that similar conduct will call from them a more strong expression of their disapprobation.

There being no other witnesses to examine for or against the prosecution, Captain Creighton presented to the court the annexed defence which was read by the judge advocaté.

The court was then cleared, and the minutes read over by the judge advocaté, and the following sentence pronounced.

SENTENCE.

The court having maturely and deliberately weighed and considered the whole matter, agree that the charges and specifications are not proved, and do therefore adjudge Captain Creighton to be acquitted; and he is hereby most fully and honorably acquitted accordingly.

The court further agree in opinion that the overture made by Captain Creighton to Midshipman Marston, through Commodore Chauncey, even if the charges could have been proven, ought to have been amply sufficient to an officer of Mr. Marston's grade, more especially when coming through the commander-in-chief, the public guardian of all our rights, who advised it. It has appeared, moreover, that a similar overture was made through the first lieutenant

of the Washington, and rejected; the court do believe therefrom that the prosecution was persisted in from malignant motives, and they feel it a duty they owe the service to express their decided disapprobation of such malicious, frivolous, and vexatious accusations.

The court adjourned *sine die*.

JOHN SHAW, *President*.
CHARLES GORDON,
O. H. PERRY,
WM. W. CRANE,
JOHN DOWNES,
R. S. KEARNEY, *J. A.*

Approved: I. CHAUNCEY, *Commander*.

Mr. President, and gentlemen of the Court:

I will trespass as little on your patience as possible, and only make such observations on the subject before you as appear necessary, in justice to my own character and reputation.

I had hoped that it would not be found necessary to trouble you at all with this affair; but, finding all my exertions to satisfy the young gentleman were ineffectual, I was at last driven to the necessity of asking the decision of a court martial—the only way I saw left me of checking exaggerated reports, and of removing unjust imputations against myself; and it is with the greatest cheerfulness that I place my honor in the hands of such characters as form this court. They can only judge what is right; and although they will tenaciously guard a young officer from oppression and wrong, yet I feel fully sensible that they will never encourage him in presuming beyond his age and station.

I am charged with having struck a midshipman upon the quarter-deck, and of having violated the fifteenth article of the "rules and regulations for the better government of the navy." I will state to the court how these charges originated; and I trust I have already proved to its satisfaction that it is not the high sense of honor, nor the fine feelings, nor yet the high sense of injury, that has induced this young man thus obstinately to reject every proper and honorable proposal to satisfy his feelings, but that he has been worked upon, and his mind poisoned, by some unworthy member of our corps, who, unable to make himself conspicuous as an officer or a seaman, takes delight in sowing the seeds of discontent; and, instead of doing his utmost to convince young officers that it is impossible for their commanders to harbor a hostile feeling towards them, he appears to exercise the feeble talent he possesses towards disorganizing the ship and creating insubordination. For himself, it is well he keeps concealed; but for the service it is truly unfortunate.

On the 7th day of July last, while at anchor in the bay of Gibraltar, I received an order to get the ship under way, which I attempted, and hove up the anchor. Finding I had not wind enough to take me clear of the vessels in the harbor, and that the current had set in towards the rock, I was under the necessity of anchoring again, until the boats of the squadron could come to our assistance; they having assembled round the ship, she was again got under way. It was then about sunset; and, in consequence of the light and baffling state of the wind, we were compelled to pass through our own and the Dutch squadron, and it required the greatest attention to the Washington to prevent her from falling on board one or more ships then at anchor. This made me extremely anxious, first, that no accident might happen; secondly, that the ship should be so managed as to sustain the character the navy had already acquired; and thirdly, I was anxious for my own reputation as an officer and a seaman. The situation of the ship, therefore, kept me constantly in motion, sometimes in one gangway, then in the other; sometimes on one side of the quarter-deck, then on the other; and it is not unlikely, in passing thus quickly about the deck, that if a midshipman, or any other person, stood in my way, I might have shoved him out of it, or pushed him, to call his attention. Beyond this, I declare, in the presence of my God, was never my meaning or intention, (admitting the fact;) and when such trifles are magnified, and made the basis of a serious charge, it can only be considered frivolous and vexatious conduct. If he received any thing like a blow, I solemnly aver it to be an accident; it never was intentional; for it would be as impossible for me to raise my hand in anger to an inferior officer, as it would be to move Mount Vesuvius. But, gentlemen, I am as ignorant of the whole of this transaction as you are, who did not see it; nor did I hear of it until the next day at noon. After reflecting upon the matter frequently, I have some slight recollection of speaking sharply to a midshipman then standing idle on the quarter-deck, and of his replying that he was attending on the commodore; but at what time it happened, or on what part of the deck, I have racked my brain to think, and am yet in perfect darkness respecting it. I am particularly anxious to remove the impression this charge would convey; and I trust, after the solemn asseveration I have made, that no member of this court, or any other person present, can believe me to have been capable of such an outrage. Gentlemen, I am anxious to remove it on another ground. Can it be supposed for a moment that I would strike a midshipman by the side of the commander-in-chief, and one, too, that I had particularly ordered to attend him? Could I be so disrespectful? It is impossible; and I trust you are all convinced it is so. Had this officer turned to me at the time, and said, "Sir, you have struck me," I should immediately have made him ample apology on the spot for the accident, (for it could only be accidental, if it occurred at all,) and the matter there would have rested; but, on the contrary, he suffers the affair to slumber until noon the next day, and then addresses a letter to the commodore, through whom I received my information. Offended at the indignity shown me, I sent for the midshipman in the starboard gangway, and inquired respecting the subject of his letter; and, believing myself as innocent as the child unborn, I did say it was a "mischievous falsehood." This I did religiously believe, and therefore pronounced it so. But, admitting that I did utter some hasty expressions, they were forced from me in consequence of the very provoking manner that he contradicted me, which the very law that he complains I violated forbids *him* to do; and is there nothing to set off against a little warmth of temper? Does the midshipman receive nothing from his captain? To whom does he look for comforts, for privileges, and indulgences, nay, for protection? Mr. President and gentlemen of the court, I conceive this rod was never intended to be held over the head of a captain; for if he is to be tried for every imaginary wrong that an officer may think proper to set forth, there is at once an end to all authority and subordination.

I beg you, gentlemen, to bear in mind that it must have been dusk when the alleged offence was committed, and that the complainant had his back to me; and that I have made every effort to soothe his feelings, and remove any impression that I meant to do him an injury; and I do assure the court that I have taken more pains, and gone further to effect this, than I should have done to an equal or superior. The court, I am sure, will also recollect that the principal evidence they have, as to the blow, is the prosecutor himself; and I rest satisfied that they will consider well what he has said before they suffer his testimony to make an impression. As to the *respectable* witness he brought in support of the charge, I have no hesitation in saying, as *my* opinion, that he neither saw nor knew any thing of the matter at the time; and I think I have proved by Lieutenant Shubrick that the complainant thought it only necessary to come before this court, and make oath to the fact, to deprive me of my sword. But whether he will succeed or not rests with this honorable body. Therefore, gentlemen, if it has been proved to the court that what is complained of was accidental and unintentional, (admitting that it took place,) and that it was zeal for the service and anxiety for the ship that made me notice him at all, why then I trust your acquittal will be full and honorable; and if, on the other hand, you are satisfied that I struck him designedly, and in contempt of the law, let your punishment be as exemplary.

JOHN ORDE CREIGHTON.

To His Excellency JAMES MONROE, Esq. President of the United States of America.

This memorial respectfully sheweth:

Whereas we, as officers of that Government whose scheme of national welfare and virtuous policy has no equal in the history of the world, conceive it our high privilege and duty, both to ourselves and country, when any

grievance of a serious and general, as well as individual nature, prevails, to appeal in a respectful manner to that authority which officially created us, praying suitable redress for the same. In the present view of things, the power of granting this the President and Congress alone possess.

It is not intended or desired that denunciation, or any thing of an inflammatory or indecorous nature, shall take any part or have any place in this measure; nor is there any individual person upon whom we wish to vent a spleenetic spirit; nor yet, as we conceive, does the moving cause alone concern any individual of us; but that all, particularly junior officers in the service, are equally interested, though probably some on home stations may not as yet be equally aware of the same.

However painful to your memorialists, they are compelled to declare that the laws of our service do not, in effect, secure us against personal injury from (we would fain hope, and do believe) the few commanders, and other officers, who may be disposed to infringe upon our feelings, or do violence to our persons, by striking with the fist, sword, or any other weapon.

We are free to assert, as the facts have been unequivocally substantiated, indeed acknowledged, that upon this station American officers have not only been cursed, abused, insulted, and spurned, but traduced, and actually struck, by certain commanders, and for which no adequate penalty, redress, or correction has been adjudged by Commodore Chauncey, nor by legally organized courts martial. Measures of this kind may be productive of a menial and servile fear, such as characterize the oppressed and degraded mariners of fallen monarchies, but can never inspire or ensure that spontaneous and dignified respect with which officers should deport themselves towards each other and their superiors. Your memorialists beg leave to draw your special attention, besides other instances, to the causes which have led to, and the subsequent proceedings and issue of, certain recent courts martial upon this remote and important station, the documents of which, we presume, have been forwarded to, and received at, the proper department. They deem it unnecessary at this time to cite specifically and in detail the numerous cases in view, as it would swell this instrument to an improper length; but when an investigation of the most important of them shall have been instituted by the President, or any other competent authority, it has only to signify or require it, when we stand prepared to substantiate facts and circumstances which no American can acquiesce in, and which, we trust, that authority to which we appeal will not suffer to pass by with impunity.

Should it be found necessary, as your memorialists apprehend will be the case, they hope that your wisdom may suitably suggest and urge to Congress the propriety of enacting a law, holding sacred our feelings from abuse, and persons from injury, until duly convicted of offences, for which suitable punishment shall have been awarded by a competent tribunal. That authority which officially created us, we are confident, will not subject us to injury and injustice.

On a home station your memorialists would not be under the painful necessity of presenting this address to your notice, believing, as they most firmly do, that it would not have for its foundation similar causes with those which have originated in extraordinary and unwarrantable practices here. In regard to their superior officers, they feel assured that the Government will not decide in favor of a presumptuous declaration made by an officer of elevated rank, that "the laws were not created to be held as a rod of chastisement over the heads of post captains." Can any American commander, we would ask, be allowed to utter such a monarchical and tyrannical sentiment, particularly in the presence of so many young officers, who should ever look up to that grade of officers for examples of virtue, patriotism, and principles of correct discipline? If we are a free people, as is represented by the laws of our country, we pray that they may not be more rigidly enforced on inferiors than those set over them, where violations and crimes are the same; though laws, we are truly aware, extend to all alike, and an abuse of them cannot be imputed to their defect, but abused authority.

Your memorialists are not sensible of any article of the rules and regulations for the better government of the navy of the United States that is in anywise too rigid, as it is certain that a system of strict discipline is the basis and soul of every well regulated and efficient military establishment.

Your memorialists forbear to enlarge further upon this subject, upon the numerous and baneful consequences which are certain to arise from a state of things where all discipline is disregarded. They are too obvious to require elucidation. With alacrity and a laudable zeal do we endeavor to execute, with promptitude, the orders of our superior officers; but if, unfortunately, we casually err, as is often innocently the case, we desire to be corrected, as the Government has ever contemplated, by the salutary mode prescribed by itself.

With every confidence in the justice of the Chief Executive of our beloved country, we beg leave to subscribe ourselves, with the most unfeigned respect, sir, your obedient humble servants,

No. 159.

[1st SESSION.]

APPLICATION FOR PRIZE MONEY ON THE DESTRUCTION OF A FORT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 24, 1818.

Mr. PLEASANTS, from the Committee on Naval Affairs, to whom was referred the memorial of Jairus Loomis, sailing-master, commanding the United States' gun vessel No. 149, and James Bassett, sailingmaster, commanding gun vessel No. 154, on behalf of themselves and their respective crews, reported:

Your memorialists state that, in the month of June, 1816, they received orders from Commodore Patterson, commanding on the New Orleans' station, requiring them to convey certain transports laden with ordnance, provisions, &c. up the river Appalachicola and Chatahoochee to a post established by Lieutenant Colonel Clinch, of the United States army; that these orders were founded on a letter of request from Major General Gaines, to Commodore Patterson, stating the difficulty of supplying the military post on the Appalachicola by land, and his determination to do it by water with the assistance of the commodore. In the letter of General Gaines, among the dangers to be apprehended in ascending the river, a negro fort is mentioned and described, situated on the left bank of the river, and the general expresses his determination to destroy it, in case it should attempt any opposition to his purpose; and that the memorialists were ordered to co-operate with the land forces. In pursuance of their orders aforesaid, the memorialists received in charge two vessels laden with provisions and stores, took them under convoy; and arrived off the river Appalachicola on the 10th of July, 1816, where they received despatches from Colonel Clinch, stating his intention to send a party of men to assist in conveying the transports up the river. On the 15th of said month, whilst the memorialists were waiting the arrival of said men, they discovered a boat pulling out of the river, and despatched one of their boats to her, to ascertain the probability of being able to pass the negro fort, in the vicinity; on approaching the boat aforesaid, a volley of musketry was discharged, and she immediately pulled for the shore. On the 17th of said month, the memorialists despatched a boat properly armed up the river to look for fresh water, under charge of a midshipman and four men; the boat reached the shore near the mouth of the river, was fired on and captured by a party of negroes and Indians in ambuscade, the midshipman and two men killed, one taken prisoner and the fourth escaped; the prisoner was afterwards burnt by the Indians. On the 25th of said month, in consequence of information from Colonel Clinch, that he was approaching, and near the negro fort, the memorialists began to ascend the river, and arrived with their convoy at a point about four miles below the negro fort, where they ascertained that Colonel Clinch had attempted to pass the fort, and had been fired on whenever he came within reach of their guns. It was, however, determined to attempt to force a passage, and after waiting an ineffectual endeavor to erect a battery on shore to annoy the fort, the memorialists, on the 27th of the month, began to warp their vessels up the river. On reaching a station within a mile and a half of the fort, the negroes commenced a fire on the gun vessels, which was instantly returned, and a heavy cannonade took place on both sides for fifteen minutes, when a hot shot from one of the gun vessels struck the magazine belonging to the fort, and blew it up. The fort was fought under the English union jack and bloody flag. By the explosion, the fort was destroyed, and near two hundred and seventy negroes and Indians killed, the whole amounting to about three hundred. A number of articles, consisting chiefly of military stores, fell into the hands of the captors, part of which was taken possession of by Colonel Clinch for the use of the troops, part given to the friendly Indians, and the remainder were delivered by the memorialists to the United States' officers at New Orleans, which having been appraised by persons appointed for that purpose, were estimated at a sum between ten and twelve thousand dollars. The memorialists pray that Congress would bestow on them such part of the estimated value of said articles as they shall think their conduct merited.

The committee having considered the foregoing statement, which, from the documents obtained from the Navy Department, appears to be substantially correct, think as this property was acquired by the valor and hazards of the memorialists, (and no person appearing to claim it,) it would be proper to bestow a part of the value on them. They recommend that the Secretary of the Navy be authorized to distribute among the officers and crews of the gun vessels, one half the estimated value of the articles delivered at New Orleans, for which purpose they report a bill.

15th CONGRESS.]

No. 160.

[1st SESSION.]

REVIEW OF THE LAWS FOR THE GOVERNMENT OF THE NAVY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 1, 1818.

Mr. PLEASANTS, from the Committee on Naval Affairs, to whom were referred a resolution instructing them to inquire whether any, and, if any, what, alterations are necessary and proper to be made in the several laws relating to the government of the navy; also the proceedings of certain courts martial lately held in the Mediterranean for the trials of Captain Oliver H. Perry, Captain John Heath, and Captain John O. Creighton; also the memorial of certain midshipmen, belonging to the Mediterranean squadron, addressed to the President of the United States, reported:

The committee have examined the several subjects referred to them, and are of opinion that the general regulations for the government of the navy do not require to be changed. With a view of ascertaining whether the circumstances which lately transpired in the Mediterranean have grown out of a defect in the law, or the administration of the law, the committee, after an attentive consideration of the law, and of the several cases determined under it, think the defect is not in the law. Their attention has been particularly drawn to the third, fourteenth, and thirtieth sections of the act "for the better government of the navy of the United States." The third section of said act is in the following words: "Any officer, or other person in the navy, who shall be guilty of oppression, cruelty, &c. shall, if an officer, be cashiered, or suffer such other punishment as a court martial shall adjudge," &c. The fourteenth section of said act is in the following words: "No officer or private in the navy shall disobey the lawful orders of his superior officer, or strike him, or draw, or offer to draw or raise, any weapon against him, while in the execution of the duties of his office, on pain of death, or such other punishment as a court martial shall inflict." The 30th section of said act is in the following words: "No commanding officer shall, of his own authority, discharge a commission or warrant officer, nor strike, nor punish him, otherwise than by suspension or confinement, &c.; any commanding officer offending herein, shall be punished at the discretion of a court martial." It will be observed, that the punishment denounced against an inferior officer for striking, &c. his superior, may be death, or such other punishment as a court martial may adjudge; whilst for a similar offence committed by a superior officer

against an inferior, the punishment is such as the discretion of a court martial may award. In these two articles, such an inequality of punishment is supposed by many to exist as to call for a change of the law. This impression did not escape the attention of the committee; but, on mature reflection, they were led to doubt the propriety of the opinion. Striking, drawing weapons, &c. on the part of inferiors against superiors, in military bodies, carries along with it the idea of insubordination and mutiny. Under such circumstances no military body can exist; or, if it exist at all, it must be to purposes worse than useless. It is believed that at all times, and in all nations who have had correct ideas of military discipline, the power to punish mutiny with death has been vested in their military tribunals; nor do they think it could be dispensed with in this Government; for they believe the principle to be correct, that in free Governments the rigor of military discipline is as necessary, perhaps more so, as under Governments of a different character: and it is a circumstance well understood, that persons going into military service part, for the time, with a portion of their civil rights. The committee are of opinion that it would be inexpedient to change this part of the naval regulations.

Their attention was next drawn to the opposite view of the question. Oppression, and striking inferiors by superiors, are punishable, the first by cashiering, or such other punishment as a court martial shall adjudge; the second, at the discretion of a court martial. This part of the subject having given rise to the late occurrences among the officers in the Mediterranean, claimed and received the undivided attention of the committee. They examined the propriety of fixing some definite punishment in these cases; such as suspension for a certain length of time, below which no court martial should be at liberty to go, in adjudging the penalty to be awarded for a commission of the offence. But, on mature consideration, difficulties, which the committee considered as great, if not insuperable, were believed to attend such a provision. Let us suppose that such is the law: when the case comes to be examined, it is found that a number of circumstances exist which reduce the offence to almost nothing; or, on the other hand, circumstances are discovered of a character so aggravated as to give it a very different complexion. Let us take, by way of illustration, the two cases of Captain Perry and Captain Creighton, both now under the consideration of the committee. In the former, the committee see circumstances of a character which, in their opinion, would have justified a much more rigorous sentence of the court martial towards that officer, as high and deserved a favorite of his country as he was; and it is with no small regret that the committee feel it their duty to express the opinion. On the other hand, for a charge, in part, of a similar character, the charge of striking Midshipman Marston by Captain Creighton, they see nothing of sufficient importance to have attracted attention. Thus situated, numberless shades of difference attending almost every case which can be supposed to occur, the committee believe that fixing by law a minimum punishment, if it were of sufficient magnitude to have any effect, would be improper. The committee think a reference to our civil trials will illustrate this part of the subject. Thus, in the trial by jury, that body exercise an entire discretion in all actions of assault and battery, &c. and graduate the penalty to the offence, according to the circumstances of each case. It is also in accordance with the mild character of the criminal codes of most of the States composing this Union, in which a scale of punishments is graduated according to the degree of the offence. The committee know that where the law can be defined with propriety, the discretion of no tribunal whatever ought to be as much relied on as proper legal definitions. They have stated the difficulties which presented themselves, and which they find of such a character as to induce them to consider a change unadvisable. The committee also state, that it would be with much reluctance they would relinquish their confidence in courts martial, composed of those officers whose conduct has so justly merited the confidence of their country.

The committee are aware, that, in examining the conduct of the courts martial referred to them, the path of their duty led over delicate ground. They know that no law which they could recommend would operate otherwise than prospectively; and, also, that they have no power to reverse or unsettle the decisions; but these proceedings having been referred to them, as connected with the subject of the inquiry, that inquiry having in fact grown out of them, they have thought it right to express the opinion they have done. Indeed, the body to which the committee belongs, and who have charged them with the inquiry, constitute the grand inquest of the nation, whose duty it is, on proper occasions, to inquire into the conduct of the highest officers in the Government.

The committee, then, taking into consideration all the circumstances of the cases referred to them, trusting that the officers of the navy, to whom are confided the important duties entrusted to courts martial, with a due regard to the laws of their country, ever to be held sacred by those entrusted with their execution, and constituting the only criterion between free and despotic Governments, will exert themselves to heal the wounds with which the discipline of the navy has been at least threatened—a discipline so admirable in itself, and which was not known to exist till its effects were witnessed by the world, and which once lost, the navy itself would be a useless burden on the community; the committee trusting that these highly important considerations will have their due and proper weight, conclude by recommending to the House the adoption of the following resolution:

Resolved, That the committee be discharged from further consideration of the several subjects referred to them.

After the foregoing report was read, Mr. JOHNSON, of Virginia, moved to recommit it to the Committee on Naval Affairs, with instructions "so to amend the act, entitled 'An act for the better government of the navy of the United States,' (approved April 23, 1800,) as to subject the superior officer who shall strike, or draw, or offer to draw or raise, any weapon against his inferior officer, to a forfeiture of his commission, and dismissal from the service."

The said report and amendment were then ordered to lie on the table.

TRIAL OF FRANKLIN WHARTON, LIEUTENANT COLONEL OF MARINES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 6, 1818.

NAVY DEPARTMENT, April 4, 1818.

SIR:

In obedience to a resolution of the House of Representatives, passed on the 26th day of March, 1818, I have the honor to transmit to you, herewith, a copy of the proceedings of the court martial held for the trial of Franklin Wharton, Lieutenant Colonel of marines.

I have the honor to be, with the highest respect, sir, your most obedient servant;

B. W. CROWNINSHIELD.

The Hon. the SPEAKER of the House of Representatives.

Proceedings of a general court martial held at the City of Washington by virtue of the following order.

ADJUTANT AND INSPECTOR GENERAL'S OFFICE, *August 27, 1817.*

GENERAL ORDER.

A general court martial will assemble at Davis's Hotel in the city of Washington, on Wednesday the 10th September next, for the trial of such prisoners as may be brought before it.

The court will be composed as follows:

Members.

Col. WILLIAM KING, 4th infantry, *President.*

Col. GEORGE E. MITCHELL, Corps of artillery.

Lt. Col. W. K. ARMISTEAD, Engineer.

Lt. Col. J. V. BALL, 1st infantry.

Lt. Col. G. ARMISTEAD, Corps of artillery.

Lt. Col. WM. LAWRENCE, 8th infantry.

Lt. Col. R. JONES, Corps of artillery.

Supernumeraries.

Major JOHN M. DAVIS, staff,

Major WM. McDONALD, staff.

A Judge Advocate will be appointed, and further instructions will be given through the President of the court in after orders.

By order,

D. PARKER, *Adjutant and Inspector General.*

ADJUTANT AND INSPECTOR GENERAL'S OFFICE, *September 3, 1817.*

GENERAL ORDERS.

Samuel Wilcox, Esq. is appointed Special Judge Advocate of the general court martial of which Colonel William King is President, ordered to convene in this city on the 10th instant.

The Judge Advocate will arraign the prisoner for trial, will furnish charges and evidence in support of the same, and be accountable to the court for all the proper detail. Should a prosecutor and counsel appear, their wishes will be submitted to the court through the Judge Advocate; when the court has finished its proceedings, the record will be delivered to the Judge Advocate, and the President will report to this office for orders.

By order,

D. PARKER, *Adjutant and Inspector General.*

SEPTEMBER 10, 1817.

The court met pursuant to the above order. Present: Col. Wm. King, 4th infantry, *President.*

Members. Col. George E. Mitchell, corps of artillery, Lt. Col. J. V. Ball, 1st infantry, Lt. Col. Wm. Lawrence, 8th infantry, Lt. Col. W. K. Armistead, engineer, Lt. Col. G. Armistead, corps artillery, Lt. Col. R. Jones, corps of artillery.

Supernumeraries. Major Wm. McDonald, staff, Major Davis, absent.

Samuel Wilcocks, *Special Judge Advocate.*

The Judge Advocate read the orders, and called over the names of the members of the court, when the court adjourned to meet the next day at ten o'clock, the Judge Advocate stating that he was not ready to proceed.

SEPTEMBER 11, 1817.

The court met pursuant to adjournment. Present: Col. W. King, 4th infantry, *President.*

Members. Col. G. E. Mitchell, corps artillery, Lt. Col. J. V. Ball, 1st infantry, Lt. Col. W. Lawrence, 8th infantry, Lt. Col. W. K. Armistead, engineer, Lt. Col. G. Armistead, corps artillery, Lt. Col. R. Jones, corps artillery.

Supernumeraries. Major John M. Davis, staff, Major Wm. McDonald, staff.

Samuel Wilcocks, *Special Judge Advocate.*

The Judge Advocate stated to the court that he was prepared to take up the case of Lieutenant Colonel Franklin Wharton of the marine corps.

A doubt being suggested whether a court composed exclusively of army officers was competent to the trial of a member of the marine corps, the court was cleared for deliberation. The Judge Advocate gave it as his opinion that the court had competent jurisdiction in the case, but the question being considered of importance, and the members not being satisfied, it was finally determined that the Judge Advocate should, through the War Department, solicit the opinion of the Attorney General on the points at issue. And the court adjourned to meet the next day at ten o'clock.

SEPTEMBER 12, 1817.

The court met pursuant to adjournment. Present: Col. Wm. King, 4th infantry, *President.*

Members. Col. George Mitchell, corps of artillery, Lt. Col. J. V. Ball, 1st infantry, Lt. Col. W. Lawrence, 8th infantry, Lt. Col. W. K. Armistead, engineer, Lt. Col. G. Armistead, artillery, Lt. Col. R. Jones, artillery.

Supernumeraries. Major John M. Davis, staff, Major McDonald, staff.

Samuel Wilcocks, *Special Judge Advocate.*

WASHINGTON, *September 12, 1817.*

The Judge Advocate laid before the court the following correspondence with the War Department, hereunto annexed.

The court being cleared, after due deliberation determined that they had no jurisdiction of the case. The Judge Advocate stating that he had no further business for the court the court adjourned *sine die.*

WM. KING, *Col. 4th infantry, President.*

SAMUEL WILCOCKS, *Special Judge Advocate.*

WASHINGTON, *September 11, 1817.*

SIR:

A doubt has arisen with the general court martial of which Col. William King is President, whether that court is competent to try Lieutenant Colonel Wharton of the marine corps, inasmuch as the court martial is not a mixed court, composed of army officers, associated with officers of the marine corps, as appears to them necessary by the sixty-eighth article of war. The court is desirous to have the opinion of the Attorney General on this point.

I am, with respect, your obedient servant,

SAMUEL WILCOCKS, *Special Judge Advocate.*

GEORGE GRAHAM, Esq. *Acting Secretary of War.*

DEPARTMENT OF WAR, September 11, 1817.

SIR:

On the receipt of your letter of this date, I immediately submitted the question therein stated to the Attorney General, and have now the honor to enclose you his opinion.

With great respect, your obedient servant,

GEO. GRAHAM, *Secretary of War.*SAMUEL WILCOCKS, Esq. *Special Judge Advocate.*

SEPTEMBER 11, 1817.

I am of opinion that, under the sixty-eighth article of war, it rests with the sound discretion of the proper department of the Government, whether to summon officers of the marines in the constitution of a court martial for the trial of the lieutenant colonel of the marine corps, or wholly to pass them by; nor do I know of any act of Congress, or other law, authorizing a different construction of it.

RICHARD RUSH, *Attorney General.*

SEPTEMBER 19, 1817.

The proceedings of the court martial lately ordered for the trial of Lieutenant Colonel Wharton, having been submitted to the President, he is of opinion that, by the organization of the corps of marines, any officer of that corps may be tried by officers belonging to the military establishment of the United States, and therefore disapproves the decision of the court; nevertheless, inasmuch as officers of that corps may, by law, be members of the court, and it is presumed that some may be found to whom no insurmountable objection is applicable, and as he is willing not to press a question on the existing court against the opinion it has given, especially as it may be avoided without the establishment of a precedent in favor of such opinion, he directs that some officers of the marine corps, as well as others of the army, be added to the court for the trial of the said officer.

JAMES MONROE.

Further proceedings of the general court martial of which Colonel W. King is President.

GENERAL ORDER.

ADJUTANT AND INSPECTOR GENERAL'S OFFICE, September 19, 1817.

Colonel T. J. Jessup, of the 3d infantry, Major Richard Smith of the marine corps, Major J. M. Davis, of the general staff, and Captain Robert Wainwright, of the marine corps, are detailed as members of the general court martial of which Colonel King is President, directed to convene in this city by general order of the 21st August last. Major W. McDonald is relieved as a supernumerary of the court, and will report at this office.

The court will convene, organize, and proceed to business accordingly, at Davis's Hotel to-morrow morning at 10 o'clock.

By order,

D. PARKER, *Adjutant and Inspector General.*

SEPTEMBER 20, 1817.

The court met pursuant to the above order. Present: Col. Wm. King, 4th infantry, *President.*

Members. Col. G. E. Mitchell, corps of artillery, Lt. Col. W. K. Armistead, engineer, Lt. Col. G. Armistead, corps of artillery, Lt. Col. R. Jones, corps of artillery, Major J. M. Davis, staff, Col. T. J. Jessup, 3d infantry, Lt. Col. J. V. Ball, 1st infantry, Lt. Col. W. Lawrence, 8th infantry, Major R. Smith, marines, Captain R. Wainwright, marines.

Samuel Wilcocks, *Special Judge Advocate.*

The Judge Advocate read the order of the 19th instant, and the remarks of the Executive on the former proceedings of the court.

Lt. Col. F. Wharton of the marine corps being in court and called to the bar by the Judge Advocate, tendered his sword to the President of the court, which, by the direction of the court, was received by the Judge Advocate.

The prisoner was then asked by the Judge Advocate whether he had any objection or challenge to make to any of the members of the court, to which he replied in the negative.

Captain Wainwright requested to withdraw from the court, as he was a witness on the part of the prosecution, and felt a delicacy in sitting.

The court being cleared for deliberation, determined that he should not be permitted to withdraw.

The Judge Advocate then administered the oath to the court, and was afterwards himself qualified by the President.

The prisoner being asked whether he was ready for his trial, replied that he was, and asked the court to grant him the aid of counsel to assist him in his defence; to which the court assented.

The prisoner was then arraigned by the Judge Advocate, on the following charges:

Charges and specifications of charges preferred against Lieutenant Colonel Franklin Wharton, commandant of the marine corps, by Brevet Major Archibald Henderson, of the same corps.

CHARGE 1st. *Neglect of duty.*

Specification 1st. In that he never has, within the last two years, or at any former period, taken command of any parade of the marine corps:

Specification 2d. In that he never has, within the last two years, or at any former period, taken command in the field of any part of the marine corps.

Specification 3d. In that he never has, within the last two years, or at any former period, in the uniform of the corps, reviewed or inspected any part of the marine corps, either at the head quarters of the corps, or at any of the navy yards where guards of the marine corps were stationed.

Specification 4th. In that he has neglected, notwithstanding repeated applications from Captain Robert D. Wainwright, to give such an order as would justify that officer in carrying into execution the sentences of a court martial, convened (by order of Lieutenant Colonel Wharton, of the date of the 26th of October, 1816,) at the marine barracks, Charlestown, Massachusetts, on the 11th November, 1816, whereby two private soldiers, Peter Hull and John Cordwell, have been unjustly and oppressively kept in confinement beyond the period of their sentences by the court martial, and whereby those sentences remained unexecuted on the 8th June, 1817.

Specification 5th. In that Peter Moore, a private soldier in the marine corps, has been unnecessarily and oppressively kept in confinement at the marine barracks, Charlestown, Massachusetts, in consequence of no notice having been taken by Lieutenant Colonel Wharton of a report made by Captain Wainwright, on the 18th March, 1817, of the voluntary surrender of the said Peter Moore, on the third of that month, as a deserter; and, in consequence of which, the said Peter Moore still remained in confinement on the 8th June, 1817.

CHARGE 2d, *Conduct unbecoming an officer and a gentleman.*

Specification 1st. In that, notwithstanding it was communicated to him that his military character had been assailed in its tenderest point, in consequence of the course he pursued at the time of the capture of the city of Washington by the enemy, he did decline, and has ever since declined, (the communications have been made to him to the same effect, of late date,) to take any effectual measures to put a stop to reports so highly injurious to his own character, and of such great disadvantage to the corps under his command.

Specification 2d. In that, on or about the 14th of April last, he did use harsh and ungentlemanlike language towards John Hall, Esquire, at that time a major in the marine corps, in these words: that he was a liar.

Specification 3d. In that he did, subsequently, refuse to make satisfactory reparation to the said John Hall, Esq., for having used towards him such harsh and ungentlemanlike language.

ARCH. HENDERSON, *Brevet Major Marines.*

WASHINGTON, August 27, 1817.

The prisoner was then asked by the Judge Advocate whether he was guilty of the matter of accusation; to which he replied, that he was not guilty. The prisoner objected to the first and third specifications of the second charge, as being too loose and general, but did not object to any amendment being made, in this stage of the business, by the Judge Advocate or the prosecutor; who declined making any amendment.

The court, on deliberation, determined that no evidence should be given under the first and third specifications of the second charge, because they were too general. A motion was made by the court to exclude all the evidence under the second specification of the second charge, which was overruled; but they determined to receive no evidence of any occurrence that did not take place within two years before the order for convening this court. The prisoner regretted the decision of the court on this point, as he did not object to any evidence as to occurrences that took place beyond two years from the date of the order for convening this court.

Major SAMUEL MILLER, of the marine corps, a witness for the prosecutor, being sworn, says, to my knowledge, Colonel Wharton has never taken command of any parade of the marine corps within two years. To the second specification of the first charge, he says that Colonel Wharton never has taken command in the field of any part of the marine corps.

To the third specification, I can only answer as to head quarters; and, to my knowledge, he never has.

Question by the prosecutor. Are you not in the staff of the corps? and have you not, therefore, had an opportunity of judging correctly and distinctly on the point.

Answer. I am in the staff of the corps, and have been for eight years.

Question by the prisoner. What has been generally the average number of men for parade at head quarters, including the guards of the navy yard and magazine, after leaving at each of those places sentinels sufficient to protect the public property.

Answer. Since the period of the 15th May, 1809, there has never been more than one hundred men efficiently for duty, unless in particular instances, when a small number may have arrived at head quarters, which were immediately detached again; the average may possibly have been from seventy-five to eighty men.

Question by the prisoner. When the guards, in cases of emergency, were withdrawn, were not the men on post frequently four hours, and sometimes six?

Answer. From two to six.

Question by the prisoner. Have you not seen me frequently present at parades, reviews, and inspections, at head quarters and elsewhere?

Answer. The colonel has often been on the parade ground not in full uniform, and has frequently commented on the errors, and applauded the good conduct of the troops. He has generally been on the parade ground when the troops were exercised.

Question by the prisoner. Have the marines stationed at head quarters been ordered out to perform any field duty since the year 1814?

Answer. As it respects the exercise of the battalion, very frequently; as it respects detached duty, never.

Question by the prisoner. Have there not always been captains stationed at head quarters to take command of the troops? and has there ever been a battalion of marines at head quarters while you have been in the staff?

Answer. Since 1809, the rank of the immediate commanding officer in garrison has been that of first lieutenant, captain, and brevet major, and the last four years, generally the rank of captain.

Question by the court. Is there any regulation or order in existence requiring the commanding officer of the marine corps to attend parades, to command the corps in the field, or to inspect or review it?

Answer. As it applies to the lieutenant colonel commandant, none.

Major R. SMITH, of the marine corps, being sworn, says, as to head quarters, I was not stationed there. Colonel Wharton has visited my station at New York twice; when there, he inquired into the discipline of the corps generally, and gave his instructions accordingly. In consequence of my not having a sufficient number of men, there was no review or inspection. I had not sufficient men to turn out a guard to receive Colonel Wharton.

Question by the prisoner. Was I, to your knowledge, ever at New York without visiting your quarters, while you were stationed there, and did I not sometimes stay with you a day or two?

Answer. Whenever Colonel Wharton was at New York, he visited me, and, when he visited me, he used to give me instructions, and remained with me sometimes a day or two.

Captain R. WAINWRIGHT, of the marine corps, a witness for the prosecution, being sworn, says, as to the fourth specification of the first charge, after the adjournment of the court of which Major Henderson was president, I received at the marine depot, Charlestown, Massachusetts, from Major Henderson, at Portsmouth, an order from the commandant of the corps (Colonel Wharton) to carry the sentences of the court into effect, but did not receive the sentences. I applied to the Judge Advocate; he could give me no official documents, as they had been sent to head quarters. I then wrote to Colonel Wharton, on the 18th December, 1816, stating my inability to carry the sentences into effect, and my application to the Judge Advocate for the sentences, and his reply. On the 29th of December, I received from the adjutant's office the sentences, with the original orders hereunto annexed, (A.) which order directs the sentences to be carried into effect on the 10th of December. Not deeming myself authorized to act on that order, as the time had passed, I communicated that to the colonel on the 30th December, 1816, and sent a duplicate on the 20th of January, 1817, and, under cover of January 29th, I received from Colonel Wharton an exact copy of the sentences I had received before. (A.) On the 8th February, I stated to him that the same difficulty existed that there was on the 24th December, 1816, and requested a specific order. On the 13th of March, I forwarded a duplicate of the letter written on the 8th February; and, on the 18th March, I mentioned to Colonel Wharton that the time of Peter Hull's service had expired. On the 4th of April, I again communicated that they were still in confinement, and expressed fears to Colonel Wharton that my letters had not reached him. On the 15th June, 1817, I stated to Colonel Wharton that the term of service of Hull had expired, and that Hull and Cordwell remained in confinement without having their sentences carried into effect.

Under date of the 4th December, 1816, I received from the adjutant and inspector's office, with a letter (B.) dated June 20, 1817, an order, (C.) dated December 4, 1816, hereunto annexed.

Question by prosecutor. Has it not been the practice in our corps that sentences of the courts martial should accompany the order for their execution?

Answer. It has.

Question by the prisoner. Did you or did you not receive a letter from Brevet Major Miller, dated 4th December, 1816?

Answer. As far as I recollect, I did not; but I am satisfied no communication relating to the subject before the court.

Question by the prisoner. What was the date of the first letter ordering you to carry the sentences of Cordwell and Hull into effect?

Answer. December 24, 1816, was the first letter I received with the sentences and order.

Question by the prisoner. Do you not know the proceedings, with an order for their execution, were transmitted to Major Henderson, as president of the court?

Answer. I received the original order from Major Henderson, but with no sentences or proceedings annexed. I know not what Major Henderson received.

Question by the prisoner. What was the date of the order, and when did you receive it?

Answer. The date of the order was December 4; received between the 12th and 18th.

Question by the prisoner. Who took the packages from the post office in Boston containing the orders for executing the sentences, and how were they disposed of?

Answer. There were several letters and packages sent to Major Henderson, at Portsmouth, by me, at Boston. I do not know the contents.

Question by the prisoner. How long did the packages remain in your hands, or at the post office, before you transmitted them to Major Henderson at Portsmouth?

Answer. There was no delay in returning them to the office with the proper change in the direction.

Question by the prisoner. Did you ever hear Major Henderson assign any reason for leaving Boston before the dissolution of the court martial, other than his own will?

Answer. I do not recollect any reason having been assigned.

Question by the prisoner. Did you ever receive the letter alluded to in Major Henderson's communication to you of the 12th December, 1816, which he presumed gave directions about the prisoners under sentence?

Answer. Yes, it was an order for military mourning for Major Carmack of the marines.

Question by the prisoner. Not having received the letters relating to the prisoners did you write to Major Henderson thereupon to inquire of him what was the sentence of the court martial?

Answer. I did under date of December 18th, 1816, and received no reply.

Question by the prosecutor. Was not Portsmouth my station at the time, and how far was it from Boston?

Answer. It was; the distance I do not exactly recollect.

As to the fifth specification of the first charge, Peter Moore was reported to Colonel Wharton, on the 18th March, as having surrendered himself as a deserter on the 3d of March; no order was received from Colonel Wharton, and he was released, by order of the President of the United States, between the 4th and 12th July, 1817.

Question by the prosecutor. Has any part of the letter, in which you made your report of the 18th, been noticed by Colonel Wharton?

Answer. In part, but not relating to Peter Moore.

Question by the prisoner. Did you ever communicate the fact of Peter Moore's confinement to me subsequent to March 18th, 1817?

Answer. Yes, on the 15th June, 1817, he was again reported.

On reconsidering the motion in relation to the second specification of the second charge, it was determined that inasmuch as the specification contained no military offence, the court would receive no evidence in support of it. The court adjourned to meet the next day, at nine o'clock, A. M.

SEPTEMBER 21, 1817.

The court met pursuant to adjournment. Present: Col. W. King, 4th infantry, *President*.

Members.—Colonel Mitchell, artillery, Lt. Col. Armistead, engineer, Lt. Col. Armistead, artillery, Lt. Col. Jones, artillery, Major J. M. Davis, staff, Colonel Jessup, 3d infantry, Lt. Col. Ball, 1st infantry, Lt. Col. Lawrence, 8th infantry, Major R. Smith, marines, Captain Wainwright, marines.
Samuel Wilcocks, *Special Judge Advocate*.

The evidence on the part of the prosecution being closed, Brevet Major Miller, who had been previously sworn, was called on the part of the prisoner.

Question by the prisoner. What has been my practice in acting upon the proceedings of courts martial in ordering the execution of sentences, or directing the release of persons belonging to the corps who may have been tried and acquitted. Have I generally done it promptly, and without delay?

Answer. Always promptly when the nature of the service gave you authority to do so.

Question by the prisoner. Have you ever known any one to have been treated with cruelty or oppression through my neglect, or to have suffered unjustly when it was in my power to redress their grievances?

Answer. Never; on the contrary your character as commandant of the corps has been marked for promptness and humanity.

Question by the prisoner. Am I attentive or neglectful, as far as you are enabled to judge, of the general duties of my command?

Answer. Yes; you are attentive in every instance that has come within my knowledge.

Question by the court. Whence does Lieutenant Colonel Wharton derive authority to order general courts martial, and to decide on their sentences?

Answer. By a rule and article of war, as construed and issued in public orders by the honorable the Secretary of the Navy, Robert Smith.

Question by the court. Has the public service sustained injury from the failure of Colonel Wharton to command parades in person, and to review and inspect the troops?

Answer. In no instance.

The evidence on the part of the prisoner being closed, the prisoner requested the indulgence of the court until the next day, at one o'clock, to prepare his defence.

The court intimating that it would be more convenient to them if the prisoner could be prepared with his defence by twelve o'clock, the prisoner stated that he would endeavor to be ready by that hour, when the court adjourned to meet the next day at twelve o'clock.

SEPTEMBER 22, 1817.

The court met pursuant to adjournment. Present: Colonel W. King, 4th infantry, *President*.

Members.—Colonel Mitchell, artillery, Lt. Col. Armistead, engineer, Lt. Col. Armistead, artillery, Lt. Col. Jones, artillery, Major J. M. Davis, staff, Colonel Jessup, 3d infantry, Lt. Col. Ball, 1st infantry, Lt. Col. Lawrence, 8th infantry, Major Smith, marines, Captain Wainwright, marines.
Samuel Wilcocks, *Special Judge Advocate*.

The prisoner being asked if he was ready to proceed, made the defence hereunto annexed.

The court being cleared, after mature deliberation, find the prisoner not guilty of the first charge and the five specifications under that charge. The court therefore honorably acquit the prisoner, Lieutenant Colonel Wharton.

WILL. KING, Col. 4th infantry, *President*.
SAMUEL WILCOCKS, *Special Judge Advocate*.

The court adjourned *sine die*.

SAMUEL WILCOCKS, *Special Judge Advocate*.

WASHINGTON, September 22, 1817.

Approved:

JAMES MONROE.

Extracts from the proceedings of a General Court Martial, held at the marine barracks, navy yard, Charlestown, Massachusetts; of which Major Archibald Henderson was President, and William C. Alwyn, Esq. Judge Advocate.

A.

The prisoner was ordered to be withdrawn, and the court having fully considered the evidence adduced, did adjudge him, the said John Cordwell, the prisoner, guilty of the charge exhibited against him; and, thereupon, sentence him to suffer twenty days solitary confinement on bread and water, and to be afterwards employed at hard labor, with a ball and chain, for the term of six months; and that he undergo such monthly stoppage of his pay as shall reimburse the United States for the expenses of his apprehension. But, in consideration of the short time that the prisoner had been in the corps, when he deserted, the court do recommend him to the mercy of the commandant of the corps, for a mitigation of that part of the aforesaid sentence which relates to the employment of the prisoner at hard labor.

WM. C. ALWYN, *Judge Advocate.*

ARCH. HENDERSON, *Major and President.*

All the evidence being thus closed, the prisoner was directed to proceed on his defence; but, having nothing to offer, the court was cleared; and after deliberation upon the evidence adduced, did adjudge the said Peter Hull, the prisoner, guilty of the charge exhibited against him; and did, thereupon, sentence him to be confined in the cells for the space of ten days on bread and water, and be thereafter employed during the term of four months at hard labor with a ball and chain. But, in consequence of the severity of duty at this station, and the time of the commission of the offence, the court do recommend the prisoner to the clemency of the commandant of the corps for a remission of the latter part of said sentence.

WM. C. ALWYN, *Judge Advocate.*

ARCH. HENDERSON, *Major and President.*
SAMUEL E. WATSON, *Lieutenant and member.*
THOS. W. LEGG, *Ditto.*
JOHN S. PAGE, *Ditto.*
HENRY E. DIX, *Ditto.*

The court was then cleared, and after considering the evidence, the court did find the said Andrew Smith, the prisoner, guilty of the first charge exhibited against him; and being convicted, on his own confession, of the second charge, they did, therefore, sentence him to be employed at hard labor with a chain and ball, for the term of four months.

WM. C. ALWYN, *Judge Advocate.*

ARCH. HENDERSON, *Major and President.*
SAMUEL E. WATSON, *Lieutenant and member.*
THOS. W. LEGG, *Ditto.*
HENRY E. DIX, *Ditto.*

The prisoner was then withdrawn, and the court did, thereupon, sentence the said Michael Hall, the prisoner, to be employed at hard labor with chain and ball, for the term of four months. But, in consequence of the circumstances urged by the prisoner, in mitigation of his offence, they do recommend him to the mercy of the commandant of the corps.

WM. C. ALWYN, *Judge Advocate.*

ARCH. HENDERSON, *Major and President.*
SAMUEL E. WATSON, *Lieutenant and member.*
THOS. W. LEGG, *Ditto.*
HENRY E. DIX, *Ditto.*

ORDERS.

Proceedings of the general court martial, assembled at Charlestown, Massachusetts, on the 11th ultimo, and by adjournment continued to the 26th of the same, approved; and it is directed, that the several sentences on privates Cordwell, Hull, Smith, and Hall, be carried into execution at the marine barracks, at the place aforesaid, on the 10th instant; excepting hard labor in the case of Hull, Hall, and Cordwell, which is hereby remitted through the recommendation of the court; Hall will, consequently, be ordered to duty.

The court of which Major Archibald Henderson is president, is now dissolved.

FRANKLIN WHARTON, *Lt. Col. Com. of Marines.*

HEAD QUARTERS OF MARINES, WASHINGTON, December 4, 1816.

I certify the foregoing to be a correct copy from the original.

By order of commandant:

LIEUT. R. M. DESHA,
Acting Adjutant of Marines.

HEAD QUARTERS OF MARINES, WASHINGTON, December 24, 1816.

B.

ADJUTANT AND INSPECTOR GENERAL'S OFFICE, WASHINGTON, June 20, 1817.

SIR:

Enclosed are discharges for privates Samuel Gibson, John T. Kipp, Thomas Warnock, Richard Vanican, and Peter Hull.

I again enclose the discharges for sergeants William Bishop and John Leslie.

The order for the approval and the execution of the several sentences of those prisoners tried in November, 1816, was regularly transmitted from this Department.

I again enclose the order of the commandant in the case of John Cordwell.

Very respectfully, your obedient,

SAMUEL MILLER, *Adjutant and Inspector.*

Captain R. D. WAINWRIGHT, *commanding Marines, Boston.*

C.

ADJUTANT AND INSPECTOR GENERAL'S OFFICE, WASHINGTON, December 4, 1816.

SIR:

At a general court martial, of which Major Henderson was president, which sat at the navy yard near Boston, under date of the 15th November, 1816, John Cordwell, a private marine, was tried for desertion, found guilty, and sentenced by the court to solitary confinement and hard labor, and to pay all expenses; but the court, in consideration of the short period he was in service, recommended the remission of his sentence to hard labor. The sentence is approved; and that part of the sentence recommended by the court is remitted.

By order of lieutenant colonel commandant:

SAMUEL MILLER, *Adjutant and Inspector.*Captain WAINWRIGHT, *of Marines, Boston.**Mr. President and gentlemen of the Court:*

In the course of the investigation which has been made of the charges preferred against me, so few have been the points presented for your consideration, and so clear and explicit the testimony that has been adduced, that I am under the necessity of offering you an apology for trespassing on your time, with a few observations in my defence. An intelligent and impartial tribunal is the best counsel of the accused; but some indulgence will, I hope, be extended to the expression of those feelings which will arise in the breast of every officer standing in my situation.

When I was informed by the Navy Department of my arrest, it afforded me some consolation to find, that, in the discharge of the duties of my station, a station of considerable responsibility, I was not charged with any breach of trust, with the crime of converting my office to the pursuit of private emolument, or of acting unjustly or partially towards the officers under my command; on these points, my character is well known to be unimpeachable. But, after the many honorable testimonials of fidelity and good conduct, which I have invariably received from the Navy Department, while I have served in this corps, I must confess I was not a little surprised at being arrested on a charge of neglect of duty, when it could not be inferred from the three first specifications, that the service had suffered from the imputed neglect; and when it could not be presumed that, in the instances recited in the two last specifications, I was actuated by any intentional negligence, or positive malice towards these deserters. Nor did I expect that I should ever have been arrested for conduct unbecoming an officer and gentleman, when the first specification, informal as it is, related to transactions that occurred under the immediate eye of the Department, and to a course of conduct that was never deemed worthy of notice; when, also, the second and third specifications of the same charge, as exhibited to the Navy Department in the first edition of these charges, were not only illegal, but evidently manufactured by my accuser for the purposes of accusation.

Frivolous, however, as these charges were, I met them without reluctance or complaint. It would be a sufficient answer to them to lay before you the letters of my accuser, dated on the 27th September, 13th and 30th December, 1816; and in now presenting them to your consideration, I will leave it to you to decide what credit is due to an accusation made by an individual who, at those periods, did not hesitate to tender me assurances of his respect and esteem, and who, as late as February last, was a willing guest at my table. We must search, therefore, for the motive of these charges, to something beyond a sense of justice or a zeal for the service.

But these charges are as unsupported by evidence as they are destitute of the merit of unexceptionable origin. With respect to the three first specifications of the first charge, it is remarkable, that at this late period I should be accused of not appearing in uniform on parades, reviews, and inspections. Was there any reason of policy or practice why I should, on such occasions, take the command? Did the service suffer by the course I pursued? Did any military regulation or usage require a lieutenant colonel to appear in uniform at the head of a captain's command? The answer given by the witnesses to these questions is in the negative; and, it has also been proved that I generally attended parades, reviews, and inspections, gave all necessary instructions, and saw that the duty was properly performed.

As to the fourth specification it is evident from the written, as well as verbal testimony, that the delay in the execution of the sentences of the court martial on Cordwell and Hull assembled at Boston arose from misunderstanding or mistake, and that no blame is justly chargeable to me on that account. It will be remembered, that these sentences were signed on the 26th November, 1816, and transmitted about that period to this place. On the 4th December, my orders directed these sentences to be executed on the 10th of the same month, allowing five days for the passage of my letter. The letter of the adjutant of the corps bears the same date; a letter which does not appear to have reached Captain Wainwright. If, therefore, Brevet Major Henderson had remained at Boston, where his duty required him to continue until the court was dissolved, no difficulty could have arisen in this case; he might have informed Captain Wainwright of the sentences, and delivered my orders on the 9th of December. The original cause, therefore, of this imputed oppression is attributable to himself, and let me ask why did he permit the request of Captain Wainwright for information as to the sentences to pass without a reply? My duty simply confined me to act at an early period on the sentences, to dissolve the court when their proceedings were approved of, and to direct the sentences to be carried into execution. This duty was strictly performed; and the omission to transmit a copy of the sentences with the order of the 4th December, was certainly not my fault.

But why did not the Judge Advocate at Boston furnish Captain Wainwright with a copy of the sentences? It was his duty to have kept minutes of all the proceedings; and a certified statement of the sentences from him would have been ample justification to Captain Wainwright to have carried them into execution, in pursuance of my orders. It is not easy to account for Mr. Aylwin's answer to Captain Wainwright's application, that he would send him the sentences, though he could not vouch for their correctness.

On the 18th December, Captain Wainwright, by his letter of that date, informed me that he could not procure a copy of these sentences, but he was then furnished by Major Henderson with my orders of the 4th December, and by reference to his letter of the 18th, it will be found that he was not aware that any difficulty could arise (when a copy of the sentences should be furnished) in the execution of the order of the 4th December, in consequence of the time therein mentioned for their execution having elapsed. How then could I be aware that such a difficulty might arise? I therefore complied with his request by sending him a copy of the sentences on the 24th December, and again repeated my orders to have them carried into execution. It was not until I received Captain Wainwright's letter of the 30th December, that I was apprised of his hesitation to execute the sentences, in consequence of the 10th December having elapsed. The question, therefore, for your consideration, gentlemen, reduces itself to this point: whether, on hearing this objection, I was bound to revoke my former order by sending a second order, or whether Captain Wainwright might not justifiably have proceeded to execute the sentences on receiving my letter of the 24th December. It is evident from the sentences, that it was perfectly immaterial when the period of the prisoners' solitary confinement commenced; and I presume that it is strictly military that an order shall, as far as possible, be complied with, when received, although, from accidental causes, the lapse of time, or some unforeseen circumstance, it cannot, in every point, be strictly executed. When an officer is directed to march forward against the enemy, it is certainly no reason why the order should be neglected because a forest or a ravine obstructs the march of the troops in a mathematical straight line.

As to the last specification, which relates to the case of Peter Moore, it will be remembered that he surrendered himself as an acknowledged deserter. For not having called a court martial immediately upon him for the purpose of pronouncing a sentence, I shall only allege, in my justification, that the convenience of the service would not have permitted it. There were not officers enough under my command in the vicinity of Boston to compose a court martial, and great expense would have been incurred by detaching officers from a distance for that purpose. If a court martial was assembled on the first report of the commission of every offence, the time of the officers that would be employed, the expense that would be incurred, and the neglect of duty at the several posts that would

attend it, would render such a procedure extremely detrimental to the public service. But there is a general answer to this as well as the former specification, that the prisoners were unknown to me; that I could have no improper motive for the delay of the trial, or the continuance of the confinement, and that mere *nonfeasance* cannot constitute a crime, unless it is grossly culpable, and without excuse.

On the last charge, of conduct unbecoming an officer and a gentleman, it has become unnecessary for me to make any observation. I appeal to those who know me, and who have investigated my military conduct, whether I have ever shrunk from inquiry; whether I have ever been guilty of a mean or dishonorable act; whether the feelings of the officers who have served with me in the marine corps have ever been wounded by my example.

Gentlemen, I shall trouble you no longer. To the judgment of a court so honorable as the present, I readily commit my character and conduct.

FRANKLIN WHARTON,
Lieutenant Colonel Commandant of Marines.

15th CONGRESS.]

No. 162.

[1st SESSION.]

RULES, REGULATIONS, AND INSTRUCTIONS, FOR THE NAVAL SERVICE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 20, 1818.

WASHINGTON, April 20, 1818.

To the Senate of the United States:

I transmit to the Senate a copy of the rules, regulations, and instructions, for the naval service of the United States, prepared by the Board of Navy Commissioners, in obedience to an "act of Congress, passed February 7, 1815, entitled an act to alter and amend the several acts for establishing a Navy Department, by adding thereto a board of commissioners."

JAMES MONROE.

CONTENTS.

Regulations for the government of the navy yards,	Cabinet furniture of the master,
The master of the yard,	Regulations relative to naval surgeons,
The master shipwright,	Surgeon's mates,
The navy storekeeper,	Pursers,
The purser of the yard,	Full and half pay; and rations,

Stores and provisions,	Sailmaker,
Fitting and refitting a ship,	Carpenter,
Regulations for the promotion of discipline, &c.	Surgeon of the fleet, or hospital surgeon,
Cabin furniture,	Hospital ship.
Cabin furniture of the lieutenant,	

REGULATIONS FOR THE GOVERNMENT OF THE UNITED STATES NAVY YARDS.

1. To every navy yard there shall belong a receiving ship, to accommodate the officers and crews of vessels wanting repairs, where they shall be removed when necessary, after the ships, intended for repair, have been hauled into the dock or wharf, and their provisions, stores, ballast, and water casks, removed.
2. When the crew of a ship shall be removed, the ship is to be delivered over to the commandant of the yard, who will commence her repairs, as reported necessary by officers appointed for that purpose, or as instructed by the Board of Navy Commissioners.
3. If, in the course of her repairs, it should be necessary to call for the aid of her officers and crew, the commandant of the yard will signify the same to the commanding officer of the ship, who will, on his requisition, from time to time, furnish the necessary number of officers and men for the service required, who are to be victualled from the stores of the ship, and are to be returned on board the receiving ship after working-hours.
4. The commandant of the yard will, in all cases, act in strict conformity to the instructions of the Board of Navy Commissioners, or to the report of officers of survey; and no additional repairs, or alterations of any moment, are to be made, without instructions from the Navy Department to that effect.
5. When a ship shall be delivered to the commandant of a yard for repairs, and her crew removed, she will be under the sole direction of the commandant, who will report to the Board of Commissioners the time he received her, and will be held accountable for any unnecessary delay in her equipment; he will also report the time he delivered her to her commander.
6. While a ship is undergoing repairs, and under the control of the commandant of the yard, the authority of the captain over her shall cease; yet it will be his duty to point out to the commandant of the yard defects which may have escaped his notice.
7. While the crew remains on board the receiving ship, they shall be under the charge and command of the officers of the ship to which they belong; but, when detailed for duty, on requisition, either in the yard or on the ship repairing, they shall be under the sole direction of the commandant, and subject to the regulations of the yard.

8. Should the commanding officer of the ship have duties to perform, which are not embraced in the report of the officers who surveyed the ship before going into dock, he will make a requisition on the commandant of the yard for a suitable place to execute them in; and, if the duties of the yard will admit of his so doing, he will allot a convenient place, where the commander of the ship may, with his own crew, and in his own manner, perform the service required; provided he does not interfere with the regulations of the yard.

9. If sales, rigging, boats, or other matters, required alteration or repairs, not included in the report of survey, the commandant of the yard may permit such alterations or repairs to be made in the yard by the crew of the ship to which they belong, under the direction and superintendence of the commanding officer of the ship; but he shall not be bound to cause such repairs or alterations to be done, unless particularly instructed to that effect by the Board of Navy Commissioners, or by the commanding officer of the station, he being a senior officer; and, in the latter case, a survey must be immediately held, and the report forwarded to the Board of Commissioners, that their sanction may be obtained.

10. The commandant of the yard, although bound to obey the written orders of the senior officer of the station, as regards certain duties in the yard, is accountable only to the Navy Department, with which he will keep up a constant correspondence. He will cause to be reported *weekly* the duties performed and performing in the yard; *monthly*, a return of expenditures; and *quarterly*, a general return of receipts and expenditures, and stores remaining on hand, designating those fit for service, and those unfit, or requiring a survey; all of which reports are to be conformable to the forms A, B, C.

11. The commandant of the yard will inspect all returns made to the Navy Commissioners, by surveying officers belonging to the yard, all of which he will sign, and will be held accountable for all mistakes.

12. The commandant of the yard will attend all weekly musters, and be particularly careful that none but able bodied and effective men are employed. He will use every exertion to obtain them on the most reasonable terms, and will see that not more men are employed than shall be necessary for the performance of the work on hand.

13. The commandant of the yard will draw up such rules and regulations as may be calculated to secure discipline, and forward the public interest; and shall transmit a copy of such rules and regulations to the Board of Navy Commissioners for their approbation.

14. The guard of marines detached for the protection of the yard shall, while doing duty in the yard, be subject to the orders of the commandant, and receive from him their instructions as to the duties they are to perform therein; and all persons enlisted into the service of the United States, and doing duty under the orders of the commandant of the yard, shall, for every offence, be subject to the act for the better government of the navy of the United States, and punished in the same manner as if the offence had been committed at sea.

15. The commandant of a yard is to be as independent in his yard as a captain on board his ship; nothing is to be done therein without his knowledge and approbation, except by virtue of the written order or orders of a superior officer, having command of the station to which the yard belongs.

16. The commandant of a yard will, on the requisition of commanders of ships, approved by the senior officer afloat, furnish from the public stores all supplies, comporting with the established rules of the service; and no orders are to be given to an agent for the purchase of articles required for particular ships, unless such orders are accompanied by a certificate from the commandant of the yard, setting forth that they cannot be supplied from the public stores.

17. All requisitions for supplies for ships must be made on the commandant of the yard, who, if necessary, shall make a requisition on the agent; but, in all cases, these requisitions must bear the signatures of the senior officer afloat.

18. Commandants of yards will always keep on hand a number of muster papers, pay papers, and other established forms, together with the several rules and regulations for the different branches of the service; and, on the requisitions of commanders of ships, properly countersigned, will furnish them with the necessary number of each.

19. Commandants of yards will monthly transmit to the Board of Navy Commissioners a complete muster-roll containing the names of all persons employed in the yards, respectively, with their circumstances, &c. agreeably to forms D and E.

20. On receiving a ship at the yard for repairs, the commandant will open an account against said ship, charging her for the work done and supplies furnished according to the then existing rates and current prices; as to which he will make inquiries of the agent; and, on stating the account of the ship, he will forward a copy of it to the Board of Navy Commissioners, signed by himself and the principal officers of the yard, and countersigned by the commander of the ship for which the work was done and supplies furnished.

21. Men in ordinary shall be victualled from the yard to which they belong; and if, from any unavoidable circumstance, they should be victualled on board any United States ship of war, where duty may have made their presence necessary, the commandant shall direct the purser of the yard to pay, in kind, to the purser of the ship the quantity of provisions issued from the said ship to the men of the yard; and the same rule must be observed in regard to men belonging to ships victualled in the yard.

22. On the delivery of the sheer hulk, or receiving ship, to a commander of a ship at the yard, for the accommodation of his officers and crew, the commandant will take especial care that she is clean and in good order, and will require the commander of the ship to give particular directions that no damage be done to such sheer hulk or receiving ship, nor to any of the store-rooms or cabins; and it shall be the duty of the commander of such ship to see that the said receiving ship be kept as clean as circumstances will admit, and pumped out when necessary during the continuance of his crew on board of her; and, on quitting her, that she be delivered up clean, and, as far as may depend on him, in good order, to the proper officer of the yard, or the commander of such ship as may be directed subsequently to take possession of her.

23. When a ship is to be laid up in ordinary, the commandant of the yard will take a particular account of the articles delivered into store, and, having first been properly tallied, he will deposit them where they will be secure from the weather. They must be tallied and landed under charge of the officers of the ship, the officers of the yard not being accountable for them until delivered at the store; sails and rigging, when wet, shall not be received; nor shall powder be received any where but at the magazine.

The commandant will endeavor to keep the stores of the different ships separate and ready for delivery; and upon receipt of them, he will give to each of the officers of the different departments receipts specifying the different articles received, duplicates of which must be sent to the Board of Navy Commissioners, before they can be paid off.

24. When a ship intended for ordinary is cleared of her provisions, stores, sails, and rigging, and the yards and spars are properly disposed of, (all of which must be done by her officers and crew,) the commandant of the yard shall, when the crew are removed or paid off, take charge of, and secure her at proper moorings, placing on board the necessary number of men to attend to her preservation; and, if particularly instructed to that effect by the Board of Navy Commissioners, and not otherwise, he will cause awnings to be spread, or sheds to be erected, over her. He will see that all ships in ordinary are wet at proper times, and pumped out as often as occasion may require.

25. When a ship intended for repairing shall haul into the yard, the commandant shall point out the place she is to occupy, and he shall direct the master of the yard to attend to the placing of her anchors where he may think proper. On her removal from the yard, he shall in like manner direct the master of the yard to lift them, calling on the ship's commanding officers for such assistance as may be necessary. He will have hoys, lighters, boats, and purchases for these purposes, in sufficient number and of a proper kind to answer the exigencies of the service, as also water tanks, and other conveniences, when necessary to water them; all of which he is particularly enjoined to keep in good order.

26. The head of one department shall have no control over the other departments in the yard. Each is accountable to the commandant of the yard for the duties performed within his department.

27. No slaves or negroes are to be employed in the navy yards of the United States, without the express orders of the Secretary of the Navy or of the Board of Navy Commissioners.

THE MASTER OF THE YARD.

1. The master of the yard shall have charge of the sheer-hulk vessels and boats belonging to the yards, and see that they are always in a condition for immediate service. He shall inspect all stores received for the use of his department, and report for survey all such as may appear unserviceable. He shall keep daily records of all labor done, and materials used in his department, specifying for what vessel, or service, he received his stores from the storekeepers, and account for them in the manner hereafter specified.

2. He shall attend the mooring and unmooring of all vessels, see that the tackle and purchases of the yard are kept in good order, discharge and store all articles received by the storekeeper for the use of the yard, storing all timber and spars agreeably to the wishes of the master shipwrights.

THE MASTER SHIPWRIGHT.

1. The master shipwrights shall attend to the selection and conversion of all timber, inspect the stores received into the yard for the use of his department, and report for survey such as may be unfit for service. He shall keep daily records of the labor performed, and of the materials used under his directions, on the vessels in the yard, and examine and certify as to the fitness of candidates for work, before they are employed in his department.

2. He shall be present at all surveys and conversions of stores belonging to this department. He will be held responsible for the preservation and storage of all masts, spars, timber, &c. and he shall have the immediate control of all the artificers of his department.

THE NAVY STOREKEEPER.

1. Shall take charge of all stores, provisions, and munitions of war, delivered at the yard for service, and all store-houses and timber sheds shall be under his charge.

2. Articles of stores used in the yard shall be delivered by him to the heads of the different departments, on requisition approved by the commandant of the yard, for which he shall take their receipts, and hold them accountable. He shall give them credit for all surplus stores they may have required for a particular service and returned.

3. He shall deliver stores to vessels conformably to the rules of the service, on requisitions countersigned as before directed, and approved by the commandant of the yard, and the commander of the vessel for which the stores are required shall be bound to exhibit his account of stores on hand, whenever doubts arise whether the quantity demanded does not exceed the quantum allowed to vessels of her rate.

4. He shall notify the commandant of the yard whenever there may be a deficiency of stores on hand.

5. He shall have the immediate control over the watchmen and laborers employed in his department.

6. He shall not receive into store, unless by written order from the Secretary of the Navy, or the Board of Navy Commissioners, or the commandant of the yard, articles purchased for the service, until he, the master, and the master of the department to which the stores belong, shall have examined them, and certified that they were furnished agreeably to contract, and on that certificate, which he shall preserve, the order to receive them shall be given by the commandant. When stores are rejected for want of such certificate, he shall immediately inform the commandant thereof; and if it be necessary to receive them, he and the other examining officers shall fix their value.

7. His requisitions for stores shall be made on the agent, approved by the commandant of the yard.

8. All issues of stores, provisions, or munitions, shall be approved by the commandant of the yard, before the delivery of the articles.

9. It shall be his duty to examine and receipt all accounts rendered for purchases, on being satisfied of their accuracy, which receipt, written on the account, with the commandant's approval, shall be the agent's authority for paying it.

10. He shall issue all stores, conformably to the rules and regulations of the service, and have the charge of their transportation from one district yard or dock to another.

11. All articles whatsoever, whether for building or repairs, are to be regularly entered by the storekeepers on their receipt into the yard, keeping those for gradual increase of the navy, or building, as distinct as possible from those for repairs, after which they are not to be applied to any other use than that for which they were intended or procured, except under circumstances of the most urgent necessity; and even then, they are not to be so applied without the sanction of the Secretary of the Navy, or that of the Board of Navy Commissioners.

12. Every storekeeper shall transmit to the Board of Navy Commissioners quarterly, to wit: on the 1st day of January, 1st day of April, 1st day of July, and 1st day of October, of each and every year, a return of all the stores received and issued agreeably to such forms, and under such regulations, as shall be prescribed for that purpose.

13. There shall be once every year, to wit: on the 1st day of December, in each and every year, a general survey, by officers to be appointed for that purpose by the Board of Navy Commissioners, of all stores in the possession or charge of navy storekeepers; and such surveys shall show the precise quantity of each and every article on hand, and its state and condition. The officers charged with such surveys are to transmit them, signed, to the Navy Commissioners.

THE PURSER OF THE YARD.

1. Shall have charge of the victualling and paying of the officers and men belonging to the yard, and of the paying of all mechanics and laborers employed in the yard and on board of vessels in repair; and shall make to the office of the Fourth Auditor a monthly return of moneys expended.

2. He shall have the charge of issuing provisions and slops, agreeably to the established rules of the service.

The superintendent of the rope-walk, the master of ordnance or gunner, the boatswain, carpenter, cooper, blacksmith, boatbuilder, blockmaker, mastmaker, painter, and plumber, and all others not named or embraced in the foregoing rules and regulations, shall be governed by the general rules and regulations for navy yards, and instructions for the service, and by the particular instructions, orders, and regulations, which may be issued and established by the commandant of the yard.

Regulations and Instructions relative to the United States' Naval Service.

OFFICERS IN GENERAL.

1. Every officer is to repair to the fleet, squadron, ship or station, to which he shall be appointed, without delay, after receiving orders.

2. Every officer, from the time of his joining the squadron, ship, or station to which he shall be appointed, to the time of his removal, is to be constant in his attention to his duty, never absenting himself, except on public service, without the consent of his commander; nor shall he remain out of the ship during the night, nor after the setting of the watch, without having obtained express permission to that effect; neither shall he absent himself from the ship for more than twenty-four hours at a time, without permission of the senior officer present.

3. Every officer is directed to wear his uniform at all times while on public service; and it will be the duty of commanders and others to prevent any changes whatever from being made in that which now is, or hereafter may be, established for the navy.

4. Every officer is to conduct himself with perfect respect to his superiors, and to show every respect and attention to those under his orders, having a due regard to their situation, and invariably to demean himself in every situation, so as to be an example of morality, regularity, and good order, to all persons attached to the naval service. He will observe attentively the conduct of all under his command, encouraging and commending the meritorious, and censuring, punishing, or reporting to his superiors, the misconduct of those who may deserve it.

5. If any inferior shall be oppressed by his superior, or observe any misconduct in him, he is not to fail in his respect towards him; but he is to represent such oppression or misconduct to the captain of the ship, or to the commander of the fleet or squadron in which he serves, or to the Secretary of the Navy, in writing.

6. Every officer is strictly enjoined to avoid all unnecessary expenditure of money or stores belonging to the public, and, as far as may depend on him, to prevent the same in others.

7. Every officer is strictly enjoined to report to his commander, or to the Secretary of the Navy, as circumstances may require, any neglect, collusion, or fraud, discovered by him in contractors, agents, or other persons employed in the supplying of ships with provisions or stores, or in executing any work in the naval department, either on ship board or on shore, whether or not such provisions or stores are under his own charge, or such work under his own inspection or that of any other officer. But in making such representations, he will be held accountable for all vexatious and groundless charges exhibited by him in manner aforesaid.

8. Every officer is strictly forbidden to have any concern or interest in the purchasing of, or contracting for, supplies of provisions or stores of any kind for the navy, or in any works for or appertaining to it; neither shall he receive any emolument or gratuity of any kind, either directly or indirectly, on account of such purchases, contracts, or works, from any person or persons whatever.

9. Every commander of a fleet, squadron, or single ship, before he leave his command, is to sign all books, accounts, and certificates, which may be necessary to enable officers to pass their respective accounts, or to receive their pay; provided he be satisfied that such books, accounts, and certificates are correct, as he will be held accountable to the Secretary of the Navy for all errors and improprieties appearing in papers bearing his signature.

10. If any officer shall receive an order from his superior, contrary to the general instructions of the Secretary of the Navy, or to any particular order he may have received from the said Secretary of the Navy, or any other superior, he shall represent, in writing, such contrariety to the superior from whom he shall have received said order; and if, after such representation, the superior shall still insist upon the execution of his order, the officer is to obey him, and to report the circumstances to the commander of the ship, to the commander of the fleet or squadron, or to the Secretary of the Navy, as may be proper.

11. The pay of every officer shall be held answerable for any loss, embezzlement, or damage, occurring through neglect of the public stores, and for all unnecessary expense.

COMMANDERS OF FLEETS OR SQUADRONS.

1. Every officer appointed to the command of a fleet or squadron shall obtain, as soon as possible, the most correct information of the state, quantity, and number of the ships and crews under his command, the order and discipline observed in them, the quantity and quality of provisions and stores on hand, and their fitness for the service intended. He shall acquaint himself, also, with the skill, capacity, and information, of the commanders and other officers, that he may be enabled to select for particular services those best qualified by their peculiar abilities and sound knowledge to perform them. He shall use every exertion to equip expeditiously the fleet or squadron, and report to the Board of Navy Commissioners any defects he may discover in the ships or their supplies, which may unfit them for the service intended.

2. He shall not exercise any authority in a dock or navy yard, nor order any supplies of stores beyond the established quantity, nor any repairs to be undertaken in any ship; but he shall represent whatever he may think necessary to the commandant of the dock or yard, or, should the case require it, to the Secretary of the Navy or the Navy Commissioners.

3. He shall keep the fleet or squadron in the most perfect condition for service that circumstances will admit of, and make their repairs, as far as may be in his power, by the artificers and others belonging to the ships under his command.

4. He shall take every favorable opportunity to exercise the ships under his command in performing all such evolutions as may be necessary in the presence of an enemy; and on all occasions he is to be careful that a proper example of alertness and attention is shown to the fleet or squadron by the ship which carries his flag.

5. He shall be attentive in battle to the conduct of every ship or officer under his command, in order that he may be enabled to correct their errors, and prevent any bad effects from misconduct, and to make a true statement to the end that they may be rewarded or punished as their conduct may really deserve.

6. He shall direct the crews of the respective ships under his command to be frequently mustered, and cause inquiries to be made into the qualities of the men and their fitness for the stations in which they may be rated.

7. He shall inspect into the state of every ship under his command, and the order, discipline, and attention to cleanliness, and the modes adopted for the preservation of health, and the degree of attention paid to the regulations and instructions of the navy.

8. He shall not order any commander to take on board passengers, or to have supernumeraries, unless there should be strong reasons for so doing; and, in such case, he shall state his reasons in his order for that purpose.

9. He shall inform the Secretary of the Navy of all his proceedings relative to the service upon which he may be employed.

10. He shall correspond regularly with the Secretary of the Navy, as well as with the Board of Navy Commissioners, informing them of all orders given by him relating to the duties respectively connected with his command; and it shall be his duty to point out such naval improvements as his observations may enable him to suggest, and such defects and neglects as may come under his notice.

11. When it shall become absolutely necessary to suspend from employment an officer having charge of stores, he may appoint another to act in his stead, until the pleasure of the Secretary of the Navy be known. He shall report, by the first opportunity, an account of the circumstances which may have caused the suspension, and order a survey to be held, and an inventory of the stores to be taken; one copy of which he shall forward to the Navy Department, and another he shall deliver to the officer taking charge of the stores, who will open accounts of the receipts, returns, conversions, and issues, from the period of closing the survey.

12. He may, in like manner, and for good reasons, suspend from their stations the captains or other officers under his command, and on a foreign station appoint others to act in their places, until the pleasure of the Secretary of the Navy shall be known; but in these cases he shall immediately transmit an account thereof to the Secretary of the Navy, specifying his reasons for so doing, and furnish the captain or other officer with a duplicate of the same.

13. He shall not, without good and sufficient reasons, to be immediately communicated to the Secretary of the Navy, alter the appointments assigned to officers at the period of fitting out.

14. He shall preserve the instructions and orders received by him, and all other papers and correspondence relating to the service upon which he may be ordered, in the most intelligible form; and, at the end of every cruise, he shall send to the Secretary of the Navy a narrative of his proceedings, accompanied by a fair copy of such official correspondence as may have any connexion with the facts therein stated.

15. He shall conform to the standing rules of the navy, in such directions as he shall give to established agents, and incur no expense that the public service does not render absolutely necessary.

16. He shall have no private interest in the procurement of stores or provisions for the public service, nor in any way interfere with the purchase of them, where there are proper officers for that purpose, except when an absolute necessity arises for making use of his credit or authority to obtain them.

17. He shall not make any alterations in the arrangements or emoluments of established agents; nor alter the pay or allowance of artificers or others employed in any department, nor order any additional number to be employed, except when the urgency of some particular service shall require it; nor direct any additional works or repairs, alterations, or improvements, to be undertaken in the docks, hospitals, or other places on shore. But he may suggest to the Secretary of the Navy, or to the Board of Navy Commissioners, the necessity for such works, repairs, &c. or direct the proper officer to make the requisite report and estimate of expense; and, in such case, he shall certify as to the correctness of said estimate and report.

18. He shall obey all orders received from the Secretary of the Navy, and the Board of Commissioners of the Navy, and exact a strict attention to them from all persons under his command.

19. In the purchase of provisions or stores at places where no regular agent is established, he may appoint one for the purpose of obtaining the necessary supply; and he may himself contract for the whole quantity required, or direct each captain to purchase what the ship under his command may require: but, in either case, the amount of the bills drawn will be charged to his account, until satisfactory vouchers are received to show that the articles were of a suitable quality, and purchased at the lowest rates.

20. He shall, as far as may be practicable, wherever no regular agent shall be established, have the public works which it may be necessary to have done on contract, executed at the lowest rates, and on the most reasonable terms; giving public notice, that tenders may be received from those disposed to contract; copies of which contracts shall be sent by him to the Secretary of the Navy and the Board of Navy Commissioners.

21. Should the duties of the dock or yard require more men than those usually employed in them, the commander of the fleet or squadron shall, on the requisition of the commandant of the yard, whenever the duties of the fleet or squadron shall admit of it, order as many officers and men as may be required from the ships for that service; but he will take especial care that no more are sent than may be absolutely necessary and useful.

22. Each of the petty officers thus sent from the ships shall receive eighteen cents, and the men twelve cents per diem, in addition to their pay and rations.

23. No boats or vessels shall be hired for the use of the fleet or squadron without the consent of the commander, and he will be careful that such consent is not given except when the service required cannot be performed by the boats of the ship under his command.

24. Foreign agents are to be paid by bills drawn on the Secretary of the Navy, at the regular rate of exchange, unless otherwise instructed by the Secretary of the Navy; or bills may be disposed of, and the proceeds applied towards reimbursing them: but, in either case, the certificates of three respectable merchants, and the approval of the commander of the fleet or squadron, must be forwarded with the letter of advice. These bills shall in all cases be drawn by the pursers of the respective ships for the amount of the provisions or stores received, and approved by the commander of the fleet or squadron, or by the captain of the ship when acting separately.

25. The commander of a fleet or squadron shall direct frequent examinations to be made into the hospital establishments and sick quarters under his command, and cause every attention to be paid to the comfort of the sick. He shall cause the examining officers to make to him a written report of their state and condition.

26. Should the commander of a fleet or squadron be killed or disabled in battle, his flag shall continue flying while the enemy remain in sight; and the officer next in command shall be informed thereof, and take command of the fleet.

27. On the death of the commander of the fleet or squadron, the officer who succeeds him shall enjoy all the pay and emoluments of commander; in the same manner as his predecessor, until the pleasure of the Secretary of the Navy be known; but he is not to assume any badge of distinction, or hoist any flag, which his rank does not entitle him to.

28. The commander of a fleet or squadron shall not resign his command, or quit his station, unless the bad state of his health shall render a change of climate or situation absolutely necessary; and, in such case, he shall not weaken the fleet or squadron by taking from it a ship or vessel, the service of which may be necessary.

29. When the commander of a fleet or squadron shall resign his command, he shall deliver to his successor the originals of all secret instructions, orders, and signals, and authenticated copies of all other unexecuted instructions and orders, together with such information as may be in his possession relative to the service to be performed.

30. In the absence of a commander of a fleet or squadron, the senior officer shall be governed by the aforesaid instructions, and shall superintend the various duties to be performed; for the due execution of which he will be held responsible.

RANK AND COMMAND.

1. The commission officers of the navy of the United States are divided into the following ranks and denominations:

Commodores, commanding squadrons;
Captains, commanding frigates and vessels of twenty guns;
Masters commandant, commanding sloops;
Lieutenants.

2. Commodores are to wear their broad pendants at all times on board the ship they command.

3. Captains, masters commandant, and lieutenants shall take precedence and command in their respective ranks agreeably to the dates of their commissions, or, if their commissions are of the same date, according to their number. No captain or commander shall assume the broad pendant of a commodore, except under the circumstances specified in the twenty-sixth article of the regulations relative to commanders of fleets or squadrons.

4. The order in which officers shall take precedence and command in the ship to which they belong is as follows:

Captain, or commander;
Lieutenants, agreeably to date or number of their commissions;
Master;
Master's mate;
Boatswain;
Gunner;
Carpenter;
Midshipmen.

5. If an officer in command of a fleet, squadron, or single ship, shall meet with a superior officer, he shall wait on him, and show him his instructions, except such as he shall have been ordered to keep secret, and report to him the condition of his fleet or ship, and, if the public service shall require, such senior officer may take him, his fleet, squadron, or ship under his command; but a senior meeting a junior officer shall not, except under the most absolute necessity, require him to show any secret orders, nor divert him from the execution of the orders he may have received, nor take him under his command. But if, in consequence of the public service requiring it, he should find it necessary to do so, he shall resign the command to him again, and allow him to execute the service on which he was employed, as soon as the necessity for keeping him under his orders shall cease; and he shall, as early as possible, explain to the Secretary of the Navy, and to the officer from whom the junior received his orders, the cause of his so diverting or detaining him under his command.

6. In ports where the regulations admit of guns being fired, the commander of a fleet or squadron will, after beating the tattoo, and setting the watch at night, fire one gun, and the sentinels of the other ships shall fire their muskets. At the relieving of the watch in the morning he will do the same, and the sentinels of the other ships will in like manner fire their muskets; after which, the reveille will be beaten in every ship.

7. Single ships, commanded by captains or commanders, are, at the setting and relieving of the watch, to fire muskets only.

8. From the 25th of March to the 21st of September the watch shall be set at nine o'clock, and from the 21st of September to the 25th of March at eight o'clock in the evening; and it shall always be relieved at four o'clock in summer, and at five o'clock in winter, in the morning.

SALUTES.

1. Commodores, when acting on separate service, by order of the Secretary of the Navy, and not otherwise, shall receive the salute of thirteen guns.

2. The salute of a commodore, when not on separate service by order of the Secretary of the Navy, shall be nine guns.

3. Officers of the same rank are to return the salutes of each other with the same number of guns.
4. The salute of a captain is to be returned with seven guns. The salute of officers of superior rank to that of captain is to be returned with the number of guns to which their rank entitles them.
5. When more than one ship salutes the commander of a fleet or squadron, he will not return it until all the ships shall have ceased firing, and he will then fire the salute of an officer of his rank.
6. The commander only of a fleet or squadron is to be saluted.
7. When two squadrons meet, the officers only who command them are to salute.
8. An officer appointed to command in chief shall be saluted, on hoisting his flag, by all the ships under his command, unless an officer senior to him be present; in which case, they are to salute him as soon as he shall be separated from such senior officer.
9. Commanders are not to be saluted by such officers as have not been separated from them six calendar months.
10. When the President shall visit a ship of the United States' navy, he is to be saluted with twenty-one guns. The Vice President shall be saluted with nineteen guns.
11. The Secretary of the Navy, and the other heads of Departments, Governors of States or Territories, and foreign ministers, are to be saluted with seventeen guns.
12. Major generals are to be saluted with fifteen guns; brigadier generals with thirteen guns.
13. When a public character, high in rank, shall embark on board of any of the United States' ships of war, he may be saluted with thirteen guns.
14. When a commanding officer anchors in any foreign port, he is to inform himself what salutes have been usually given or received by officers of his rank of other nations, and he is to insist on receiving the same mark of respect. Captains may salute foreign ports with such a number of guns as may have been customary, on receiving an assurance that an equal number shall be returned; but, without such assurance, they are never to salute.
15. Foreigners of distinction, on visiting the United States' ships of war, are to be saluted with such a number of guns as may suit their rank and quality.
16. The anniversaries of the independence of the United States, and of the birth of General George Washington, are to be celebrated by salutes of seventeen guns from every vessel in port of the rate of a sloop of war, and upwards.
17. Forts or castles in the United States are not to be saluted by the United States' ships of war.
18. United States' ships of war are not to strike their topsails, nor take in their flags, in any part of the world, to any foreign ship or ships, unless such foreign ship or ships shall have first struck, or shall at the same time strike their flags and topsails to ships of the United States; nor are they, within the limits and jurisdiction of the United States, to salute any foreign ships whatever.
19. Captains are not to salute; they are, however, to return the salutes of foreign ships with an equal number of guns.
20. If a commander of a squadron shall die when on actual service, his colors shall be lowered half-mast, and continue so until he is buried; minute guns, to the number his rank entitles him to, shall be fired from each of the ships present, beginning at the putting of the corpse into the sea, or when it is put off from the ship for the shore.
21. If a captain shall die, the ship he commanded shall wear her colors half-mast, and a salute of nine minute guns shall be fired from the ship, commencing as in the preceding article.
22. If a lieutenant shall die, three volleys of musketry shall be fired at his funeral.

MILITARY HONORS AND CEREMONIES.

1. A commodore shall be received by a lieutenant's guard, the salute of officers, and two ruffles.
2. A captain shall be received by a sergeant's guard, without the salute of officers or beat of drum.
3. The Secretaries of the War and of the Navy Departments having, with the approbation of the President of the United States, established the relative rank between officers of the army and navy, the Navy Commissioners have taken their regulations on the subject as a guide, which are as follow:
Commodores shall rank with brigadier generals.
Captains in the navy shall rank with colonels.
Masters commandant shall rank with majors.
Lieutenants in the navy shall rank with captains in the army.
4. The rank and precedence of sea and land-officers, as above stated, will take place according to the seniority of their respective commissions.
5. This arrangement shall not give any pretence to land officers to command any part of the naval force of the United States; nor shall it give to sea officers any right to command any part of the army of the United States; nor shall either have a right to demand the compliments due to their respective ranks unless on actual service.

Regulations and instructions for commanders of squadrons, or division of ships, of the United States navy.

1. Officers, having command of squadrons of the fleet, will superintend with great attention their respective squadrons, will see that the crews are properly disciplined, that all orders and regulations are strictly attended to and obeyed, and the crews exercised; that the provisions, stores, and water are kept complete, and in good order; that the ships and crews are kept in every respect fit for service, and that every precaution is taken for the preservation of health on board.
2. They will be held responsible to the commanding officer, to whom they will make reports of the state and condition of their squadrons, and all applications for supplies and repairs, as well as of all other matters relating to them.
3. When squadrons shall be divided, the commander of a division shall be equally accountable to the commander of a squadron.
4. The commander of one squadron or division may correct by signal, or otherwise, the mistake or negligence of a ship in another squadron or division, whenever it is probable that, from their relative situations, that ship cannot be seen distinctly by the flag officer commanding the squadron or division to which it belongs; or whenever, being in the presence of an enemy, the officer commanding that squadron or division, whatever may be his situation, does not himself immediately correct such negligence or mistake.
5. Commanders of squadrons or divisions will, after battle, call on their captains for reports, and will afterwards report to their commander the conduct of those under their command, and if, during battle, they should perceive any ship, of any squadron or division, evidently avoiding battle, or not doing her duty, they are to send an officer to suspend the captain of that ship, and to take command of her. If the ship does not belong to the division of the commander who makes these observations, he is to give the earliest information to the commander of the squadron or division, to which such ship may belong.
6. A commander of a squadron having under his command six ships of a rate not below that of a frigate, and acting under separate orders from the Secretary of the Navy, shall be entitled to an officer of the rank of captain to assist him in regulating the details of his squadron.
7. A commodore, or commander of a division, having under his command four ships, of a rate not below that of a frigate, shall be entitled to an officer of the rank of master commandant, who shall, while performing this service, receive the pay and emoluments of a captain of a frigate of the second class.
8. All orders and instructions issued by the captains or masters commandant, aforesaid, shall be given as orders of the commander of the fleet, squadron, or division, and shall be obeyed by those to whom they are addressed, in like manner as those issued by the commander himself in his own name. But they shall never issue an order, or make any change or arrangement whatever, without directions from the commander, unless some very urgent necessity shall require it.

9. Returns, applications, and reports, relating to the ships of the fleet, squadron, or division, are to be delivered to each of the captains, or masters commandant, aforesaid, to be by him laid before the commander.

10. All orders and instructions relative to the duties of the commander of the fleet, squadron, or division, will equally apply to the aforesaid captain, or master commandant, whose duty it shall be to attend to and enforce in the fleet, squadron, or division, to which he may be attached, every rule and regulation of the navy of the United States.

OF APPOINTMENTS.

1. No commander of a fleet, squadron, division, or single ship, while in the United States, shall order any commission or warrant officer to any ship under his command without being authorized by the Secretary of the Navy; nor shall he give acting appointments, or make any changes whatever in the arrangement and distribution of the officers of the navy, without the approbation of the Secretary of the Navy.

2. On foreign stations a commander may, when absolutely necessary, give acting appointments to fill the vacancies which may be occasioned by death or other circumstances; but, in such cases, he shall take the earliest opportunity to make the circumstances known to the Secretary of the Navy, and state his reasons for making such acting appointments.

3. A master commandant must serve in active employ as such one year before he can be promoted to a captain.

4. A lieutenant must serve in active employ, as such, two years and six months, before he can be promoted to a master commandant.

5. A midshipman, before being promoted to the rank of a lieutenant, must be eighteen years of age; have served at sea two years; be acquainted with the manner of rigging and stowing a ship; the management of artillery at sea; arithmetic, geometry, trigonometry, and navigation. He must also know how to make astronomical calculations for nautical purposes, and pass an examination on all those points before a Board of navy officers, to be appointed by the Secretary of the Navy for that purpose, by whom the morals and general character of candidates will be inquired into.

6. Candidates for examination and promotion are to send in their applications to the Secretary of the Navy, on the first day of October, and on the first day of March, every year; and they will be informed of the place or places where examinations are to be held, either by letter, or through the medium of the public prints.

7. If any person shall produce false certificates of age, term of service, or character, such person shall, whenever it may be discovered, and whatever may be his rank, be dismissed from the navy of the United States, and be ever after rendered incapable of obtaining an appointment in it.

8. No person shall be appointed master until he shall have passed an examination on all points of seamanship, and nautical astronomy, and rendered to the examiners the most satisfactory proofs of his morality, and of his capacity to perform the duties which may devolve upon him.

9. Masters of extraordinary merit, and for extraordinary services, may be promoted to lieutenants.

10. No warrant as boatswain, or gunner of a ship of the United States' navy, shall be given to any person who shall not have acted one year in such capacity, and produced satisfactory certificates of his good conduct and qualifications.

11. On foreign stations an officer, commanding a fleet, or squadron, may give orders for the examination of candidates for promotion, where they may appear entitled to it by their abilities and services; and, in these cases, he shall employ three captains on this service, whose certificates shall, without delay, be transmitted to the Secretary of the Navy, after the candidates, who have passed an examination, have been furnished with duplicates thereof.

12. When acting appointments become necessary they shall be conferred upon those who have passed their examination, if any such there be.

13. If an inferior officer, whatever may be his rank, succeeds to the command of a ship, in consequence of the death or captivity of the captain and others, he may make temporary appointments to supply the places vacant; and until he can bring the ship into port, or deliver her up to a senior officer of the navy of the United States, or receive the instructions of the Secretary of the Navy, he shall receive the pay of captain, and those acting under his appointments shall receive the pay of the officers, whose ranks they have respectively filled.

14. No captain, whose date of commission is less than three years standing, except under extraordinary circumstances, or cases of necessity, shall command a frigate of the first class.

15. No captain, whatever may be the date of his commission, shall command a frigate, unless he shall have previously commanded a sloop of war, in active service, for six months.

16. Slaves are not to be borne on the books of the vessels of the United States; nor shall any person compose part of the crew of any vessel of the United States, who has not voluntarily entered the service.

OF STORES AND PROVISIONS.

1. The signature of the captain shall be affixed to all papers having a reference to the expenses of the ship.

2. On taking command, he shall demand of his predecessor, or the navy storekeeper, an inventory of all the articles furnished to the different departments of the ship from the navy stores, and if he command the ship until she is paid off, he shall send such inventory with his accounts to the Treasury Department.

3. He shall cause a careful examination to be made of all articles received on board for the use of the ship, and if he fail to do so, will be alone accountable for any evils resulting from defects or deficiencies in them: provided such defects or deficiencies were passed over at the receipt of the articles, from want of a due examination thereof.

4. He shall not, any time, stop any vessel, lighter, or boat, going with provisions, water, or stores to another ship, nor take such provisions, water, or stores, for the ship under his command, except there be a most urgent and absolute necessity for so doing; and of this he shall, without delay, inform the commanding officer present, and the captain of the ship to which such provisions, stores, or water, were going.

5. When the duties of the ship will admit of it, he shall permit the purser to use the boats for the purpose of conveying on board provisions, stores, and other necessaries for the use of the ship.

6. A captain when serving abroad and not under a superior officer, will transmit to the Board of Navy Commissioners timely notice of such stores and provisions as the ship which he commands may require, accompanied by a survey of those on hand; and he is not to purchase any except under absolute necessity.

7. He shall not permit his stores to be applied to private uses, wasted, or, without absolute necessity, converted to other purposes than those for which they were intended; and whenever he shall think it necessary to order any extraordinary expenditure or conversion of stores or provisions, his order for that purpose shall be given in writing, stating the reason or reasons for such extraordinary expenditure or conversion, which order shall be preserved and produced by the officer having charge of the stores so expended or converted, at the settlement of his accounts.

8. If any stores or provisions shall be lost, destroyed, or embezzled, the circumstances shall be noted in the log book of the ship; and if, through neglect or design, they should be totally lost, they shall be charged to the offender, and he be brought to punishment.

9. He is to use the utmost economy in every thing, which relates to the expenses of his ship, and the public service confided to him; using every article for the purpose for which it was originally intended, and making his supplies and means last as long as possible. He is not to use sails for covering boats, nor for awnings, nor to convert canvass into sails not allowed for the service, nor to any other purpose than that for which they were supplied, unless they shall have first been surveyed, and reported unfit for their proper use; nor shall he make any alterations in the ship under his command without the permission of the Board of Navy Commissioners.

10. He will examine the weekly returns of expenditures, and, with the master, sign those made monthly, which, when so signed, are to be delivered to the officers having charge of stores, to be presented by them at the settlement of their accounts.

11. He may grant to private ships of the United States, and to foreign ships, when absolutely necessary, such supplies of provisions and stores as they stand in need of, giving the officer having charge of them written orders to that effect, and taking from the master or commander of the vessel so supplied, three receipts and three bills of exchange drawn in favor of the Secretary of the Navy on his owner, or those concerned in the ship, for the real amount of the articles furnished; which bills, and two of the receipts, shall be transmitted to the Secretary of the Navy, and the circumstances noted on the accounts and log-book of the ship.

12. When it becomes necessary to purchase stores, they shall be delivered to the proper officers of the ship, who shall sign receipts for them, and they are to be charged at their cost, by the purser of the ship against such officers in their accounts, and such charge or charges shall be transmitted to the Fourth Auditor of the Treasury, to stand against their pay until accounted for.

13. Stores received from navy yards or other establishments, having navy storekeepers or other proper officers to attend to the issuing and valuation of them, are in like manner to be charged at their real value, to the respective accounts of the officers having charge of them, and these charges, as in the preceding article, are to be transmitted to the Fourth Auditor of the Treasury, to stand against their pay, until such stores shall be satisfactorily accounted for.

14. On the death of an officer having charge of stores, his public papers shall be separated from those of a private nature, the former to be forwarded, by a safe conveyance, to the Fourth Auditor of the Treasury, and the latter, together with his private effects, to be put in charge of such officer as the captain of the ship may appoint for that purpose, to be preserved for the benefit of the legal representative of the deceased: unless, from some particular circumstances, the captain should deem it advisable to dispose of them at public sale, in which case, a duplicate of the inventory, with an account of the disposal or sale, shall be transmitted to the Fourth Auditor of the Treasury.

15. If an officer, having charge of stores, should, from any accidental circumstance, be separated from his ship, the captain shall proceed to survey and ascertain the state of the stores, as though such officer were actually dead or discharged, and he shall, as in a like case, appoint another officer to act in his place, giving the earliest intelligence of his proceedings to the Fourth Auditor of the Treasury.

16. He shall carry to sea with him the established number of boats and stores, and not depart from this rule without the consent of the Secretary of the Navy, or of the Board of the Navy Commissioners.

17. When a ship cuts, slips, or parts her cable, the captain shall, as soon as circumstances will admit, endeavor to recover the anchor or cable lost; and, should it appear that no exertion for that purpose was made by him, the value of the articles will be charged against his pay. If the ship puts to sea without recovering them, the senior officer present shall endeavor to recover them; but no vessels are to be hired for the purpose if the boats and crews of the squadron are able to effect it. If neither of them, however, have an opportunity of recovering them, the captain of the ship whose cable was thus cut, slipped, or parted, shall, without delay, give an account to the Board of Navy Commissioners, to the commander-in-chief, or to the commandant of the nearest yard, taking care to state particularly the bearings and distances of the most suitable places to mark the spot where the anchor lies, to the end that means may be immediately adopted for recovering it.

18. While in port it shall be his duty to prevent embezzlement of stores from the ship under his command, from ships in ordinary, and from the dock and navy yards, as well as all other practices of a fraudulent nature, tending to affect the interests of the United States.

19. He shall attend with all the officers of his ship, when the crew is paid off, and examine carefully to discover if any articles are concealed with a view to embezzlement, and report to the Secretary of the Navy and the Board of Navy Commissioners the character of each officer serving under him, particularly as to his sobriety, diligence, activity, and abilities, leaving a copy of that part of his report relating to the conduct of such of the officers as are to remain with the ship in the hands of the commandant of the yard.

OF FITTING AND RE-FITTING A SHIP.

The Captain.

1. When a captain is appointed to a ship in dock or ordinary, he shall visit her throughout, in company with the officers of the yard, ascertaining her qualities, trim, and condition, and shall receive from the commandant of the yard communications as to the orders he may have received from the Board of Navy Commissioners relative to the repairs, or alterations necessary to be made.

2. He will give every aid in forwarding the work of the ship, informing the Board of Navy Commissioners of any neglects he may observe, and make to them a weekly report of the progress of the equipment.

3. A captain, when not under the immediate command of a superior, shall be held responsible for all accidents, arising from negligence during his absence from the ship he commands, when his presence might have prevented such accidents, unless he be absent on public duty, or by permission of the Secretary of the Navy. He shall also be held responsible for all accidents arising from the absence of the officers and crew of the ship he commands, unless they be absent on public duty, or by permission of the Secretary of the Navy.

4. When the ship goes into port to refit, he is to order a minute and careful survey of all stores, &c. and call upon the warrant officers to prepare lists of all such as are damaged, or require to be replaced. He is to inform himself of the regulations of the dock-yard, and conform thereto: he will give to the officers of the yard previous notice of his intention to receive or return stores; and when the orders he is under require the attendance of the storekeeper and clerks, out of their usual working-hours, he will give them due notice of the same.

REGULATIONS FOR THE PROMOTION OF DISCIPLINE, CLEANLINESS, &c.

1. The captain is to allow every officer to possess the cabin allotted to him by the Board of Navy Commissioners, and not to order more cabins to be made, nor to alter those already put up, without their consent, or the consent of his commanding officer.

2. He is to order sentinels to be posted at the entrance into the magazine and store-rooms, and at such other places as may be necessary. That no lights be taken below where danger may be apprehended, unless in good lanterns; and he is to be careful in the adoption of every precaution to guard against fire.

3. He is not to suffer any, except the most careful of the officers and men, to have berths, or to sleep in the orlop, or cable tiers, in which lights are never to be used without his express permission, and then in good lanterns; nor is he to allow any person to smoke tobacco in any part of the ship, except the galley. He is strictly to forbid the sticking of candles against the beams, the sides, or any other part of the ship; to enjoin it upon the officers never to read in bed, by the light either of lamps or candles; not to have any lights in their cabins without some person to attend them; to cause the funnel hole to be well secured by lead or otherwise, and the funnels to be cleaned every morning before the fires are lighted; to cause all fires to be extinguished, and lights to be put out, at the setting of the watch by the master-at-arms and ship's corporal, except such as he shall permit to be kept burning, and to give the most positive orders, and most rigidly to enforce them, that no lighted candle be carried into the spirit room on any pretext whatever while drawing or pumping of spirituous liquors, which duty shall be performed only by day, except on great emergencies occurring in the night.

4. He is not to suffer any person whatever to settle on board, nor to sell any kind of beer, wines, or spirituous liquors on board to the ship's company; he is not to allow the men to sell, exchange, or in any manner dispose of the slop clothes, or bedding with which they are supplied; and, as far as possible, to prevent any traffic among them that would induce them to draw from the purser tobacco, sugar, tea, slop clothes, or any other articles in larger quantities than are usually supplied.

5. He is to be particularly attentive to the comfort and cleanliness of the men; directing them to wash themselves frequently, and to change their linen at least twice every week; he is never to suffer them to sleep in wet clothes, or

wet beds, if it can possibly be avoided; and to cause them frequently, particularly after bad weather, to shake their clothes and bedding in the air, and to expose them to the sun and wind.

6. As cleanliness, dryness, and pure air, essentially conduce to health, he is to exert his utmost endeavors to ensure these to the ship's company in the most extensive degree; he is to cause the upper decks to be washed every morning, and the lower decks as often as may be necessary, when the weather will admit of their being properly aired and dried; to be swept every meal, and the dirt to be thrown overboard; he is to cause the hammocks to be carried on deck, and the ports to be opened as often as the weather will permit, and no more chests or bags to be kept on the lower gun-deck than may be necessary for the comfort of the men: so that as few interruptions as possible may be opposed to a free circulation of air; he is to cause the wind sails and ventilations to be kept in continual operation; the ship to be pumped out daily; and, when necessary, fires to be kindled in stoves for the purpose of removing the dampness of the lower guns.

7. When a ship is first put in commission, and before the crew, provisions, and stores, are received on board of her, she is to be perfectly cleansed, and fires to be kindled for several successive days in the hold and on the berth deck, for the purpose of dissipating moisture. The beams, sides, and carlings of the berth-deck and the hold are then to be whitewashed, and well dried before use; and this practice of whitewashing is to be continued afterwards as often as may be necessary and proper.

8. The lower decks of a ship are always to be dry rubbed with sand in preference to washing, and scrapers are never to be used when the use of them can be avoided; but, should the occasional use of water become necessary, the decks are, after washing, to be well swabbed, and dried with stoves, before the men are permitted to go below.

9. In summer, or in tropical climates, bathing should be encouraged three times every week, and with this view bathing tubs should be placed on the fore-castle, or in the chains.

10. The clothing issued to the men is to be suitable to the seasons; but the wearing of flannel shirts is to be encouraged and permitted at all seasons and in all climates.

11. When men are employed in washing the decks they are to be barefooted, and their trowsers rolled up.

12. In rivers the men are not to be permitted to drink the water along side the ship, but casks are to be filled with the water if fresh, and the mud and other impurities allowed to settle before it is used.

13. Before casks are filled with water for sea service, they are to be properly soaked and cleansed, and the water with which they are filled must be of the best quality that can be procured, and free from all impurities.

14. When a ship anchors in the vicinity of marshes, in a hot climate, the men should never be turned to duty before the rising, and never continued thereat after the setting of the sun, if it can possibly be avoided without any serious injury to the service. In such situations, and on wooding and watering parties, they should never be allowed to leave the ship when there is a probability of their being on shore all day, without taking with them their rations of food and liquor; and, as soon as they return on board, they are to be compelled to put on dry clothes.

15. The practice of detaining boats on shore for officers, after night has set in, is strictly prohibited.

16. On cruises of unusual duration, and particularly in hot climates, ships are to be supplied with lemon acid, which is to be administered twice a week to the crew, in such quantities as the surgeon may deem proper.

17. On receiving newly recruited men, the captain will cause an examination into the state of their persons and clothing, and use every measure to guard against the introduction of filth and contagion on board the ship.

18. As soon as possible after the ship's company is received on board, he will, with the assistance of the senior lieutenant, master, and boatswain, (and of the gunner and carpenter for their crews,) proceed to examine and rate them according to their abilities, which he is to do without partiality or favor; he is to rate as petty officers those only who shall be found qualified for such stations, and to take special care that every person in the ship, without exception, does actually perform the duties of the station in which he is rated; he shall rate none as ordinary seamen who have not been previously at sea twelve months, and are able to go aloft and perform some of the duties of seamen; nor shall he rate any as able seamen who have not been previously at sea three years, and are capable of performing most of the duties of a seaman.

19. He is, without loss of time, to make arrangements for quartering the officers and men, distributing them to the guns, musketry, rigging, &c.; to divide them into watches; make out his quarter, station, and watch bills, with bills of the names of men stationed at every gun; to muster and exercise them frequently at the great guns, small arms, bending and unbending, loosing, reefing, and furling sails; sending up and down topgallant masts and yards; rowing in boats, and every other duty which it may be necessary for seamen to perform, both at sea and in port.

20. As occasions may frequently occur on which it may be necessary, and of great importance, that seamen should be skillful in the use of muskets, the captain is to order a number of sailors to be exercised and trained up to the use of small arms. The following shows the number to be thus trained on board of the respective rates of vessels:

A seventy-four gun ship,	-	-	-	-	-	200	sailors.
A forty-four gun ship,	-	-	-	-	-	120	
A thirty-six gun ship,	-	-	-	-	-	100	
A thirty-two gun ship,	-	-	-	-	-	90	
Sloops,	-	-	-	-	-	65	
Brigs,	-	-	-	-	-	35	
Schooners and cutters, each	-	-	-	-	-	30	

The junior lieutenant, aided by the master-at-arms and ship's corporal, is to have the charge of this duty, and they are to be particularly instructed to teach them only the most simple motions of loading, firing, and forming lines, endeavoring, at the same time, as much as possible, to render the exercise pleasing to the men, and to do away that prejudice which sailors always feel against the discharge of any portion of what they conceive to be the duty of a soldier. They are also to be taught the use of the cutlass and spike, and to be exercised in the various modes of boarding a ship.

21. To make men perfect in the use of the great guns and small arms, an expense of powder and ball is indispensably necessary: and therefore there will be allowed for exercise every month for six months, after receiving the crew and guns on board, as many round shot, and as many cartridges, for the great guns, as will amount to a full broadside; and as many ball cartridges for the muskets as will furnish each man training with twelve, and as many blank cartridges as will furnish them with twenty-four; but after the first six months only half the quantity is to be furnished.

22. The words of command for the exercise of the great guns shall be as follows:

Silence.	Fire.
Cast loose your guns.	Stop your vents.
Level your guns.	Sponge your guns.
Middle your breechings.	Return sponge.
Take out your tompons.	Load with cartridge.
Take off your apron.	Wad to cartridge and ram home.
Prick and prime.	Shot your guns.
Lay on your aprons.	Wad to shot and ram home.
Handle crows and handspikes.	Return rammer.
Point your guns at the object.	Put on your aprons.
Level your guns at the object.	Man your side tackles.
Blow your match.	Run out your guns.

It is to be observed that when training tackles are used instead of crows and handspikes, the words are to suit the case; the same will apply when locks are used instead of matches.

23. The ship's company is to be divided (exclusive of marines) into as many divisions [as there are lieutenants and masters allowed to the ship, and the divisions are to be as nearly equal in number as circumstances will admit.

A lieutenant or master is to command each division, and to have under his orders as many masters, mates, and midshipmen, as the number on board, when quartered, will admit. He is again to subdivide his division into as many subdivisions as there are mates and midshipmen fit to command them under his orders, and to give to each of them the command of a subdivision; but he is to attend to and be responsible for every thing relating to the conduct of the men who constitute the division under his command; to be present at all their exercises; to examine into the state of their clothes and bedding; to see that they keep themselves as neat and clean as the duty of the ship will admit; to prevent swearing, drunkenness and every other immoral practice; to use every exertion to procure for them such comforts as the nature of the service, and the duty they are employed in, will admit; to see that the masters, mates, and midshipmen give every aid in the performance of their duties, and to report to the captain such of the men as they may find ignorant, idle, dirty, and profligate; to the end that they may be instructed, exercised, or punished, as circumstances may require. The marines are also to be divided into equal divisions, and each division is to be commanded by a subaltern, under the direction of the captain of marines, if there be one on board, which subaltern is to attend to and be responsible for the conduct of the division under his command, and for the good condition of their arms, which he is very frequently to inspect.

24. No captain shall carry any woman to sea without an order from the Secretary of the Navy, or from the commander of the fleet or squadron to which he belongs.

25. Every captain is required to make himself acquainted with every coast and harbor he may visit, and, if practicable, to make charts and drawings of them, provided it can be done without giving offence; all of which he is to forward to the Board of Navy Commissioners, accompanied with a journal containing such remarks, descriptions and information as he may think necessary to give. He is to endeavor to ascertain correctly the latitude and longitude of places little known, the prevalent winds and currents, the soundings, &c., as well as every other information that may be of importance to those who visit the place after him. He will also encourage, and offer every facility to such of his officers as are desirous of entering into similar occupations and pursuits, and if any such journals or charts contain observations or remarks which may contribute to the improvement of geography, by ascertaining the latitude and longitude, fixing or rectifying the position of places, the heights and views of land, charts, plans, or descriptions of any port, anchorage, ground, coasts, islands, or danger little known, remarks relative to the direction and effects of currents, tides, or winds, the officers, or persons appointed to examine them, will make extracts of whatever may appear to merit preservation; and after these extracts have been communicated to the officer or author of the journal from which they have been taken, and that he has certified in writing to the fidelity of his journal, as well as of the charts, plans, and views which he has joined to it, the same shall be signed by the officers and examiners, and transmitted with their opinion thereon, to be preserved in the depot of charts, journals, and plans.

26. Whenever he is to sail from port to port in time of war, or appearance thereof, he is to give notice to merchant vessels bound his way, and take them under his care, if they are ready; but not to make unnecessary stay, or deviate from his orders on that account.

27. He is, by all opportunities, to send an account of his proceedings to the Secretary of the Navy, and he is to keep up a punctual correspondence with all public officers in whatsoever concerns them.

28. He is not to go into any port, but such as are directed by his orders, unless by absolute necessity, and then not to make any unnecessary stay. If employed in cruising, he is to keep the sea the time required by his orders, or give reasons for acting to the contrary to the Secretary of the Navy.

29. Upon all occasions of anchoring, he is to take great care in the choice of a good birth, and to examine the quality of the ground for anchoring where he is a stranger, sounding at least three cables length around the ship.

30. Upon his own removal into another ship he is to show the originals of all such orders as have been sent to him, and remain unexecuted to his successor, and leave with him attested copies of the same.

31. He is to leave with his successor a complete muster book, and send all other books and accounts to the officers to whom they respectively relate.

32. In case of shipwreck, or other disaster, whereby the ship may perish, the officers and men are to stay with the wreck as long as possible, and save all they can.

33. When any men borne for wages are discharged from one ship to another, the captain of the ship, from which they be so discharged, is immediately to send pay lists of such men to the Fourth Auditor of the Treasury; and the purser of the ship, from which they are so discharged, is also to supply the purser of the ship to which they are transferred a pay list, stating the balances respectively due them.

34. He is responsible for the whole conduct and good government of the ship, and for the due execution of all regulations which concern the several duties of the officers and company of the ship, who are to obey him in all things which he shall direct for the service of the United States.

35. He is answerable for the faults of his clerk, nor can he receive his wages without the proper certificates, and must make good all damages sustained by his neglect or irregularity.

36. The quarter-deck must never be left without one commission officer at least, and the other necessary officers which the captain may deem proper to attend to the duty of the ship.

37. Commanding officers are to discourage seamen from selling their wages, and not to attest letters of attorney, if the same appear to have been granted in consideration of money given for the purchase thereof.

38. On ships of the United States being visited by custom-house officers, the captain will offer them every facility in the performance of their duties; and if there should be a suspicion of any person having articles on board subject to the payment of duties which such person is desirous of smuggling, he is to give them every possible assistance in discovering such articles, if they are really on board. If he should discover any officer in the act of smuggling, or attempting to smuggle, he is immediately to arrest such officer, and report the matter to the Secretary of the Navy, in order that such directions may be given as conduct so injurious to the public, and so disgraceful to an officer, shall require.

39. He is not, under pretence of lightness, or neatness, or on any other account, to make any alteration in the manner of fitting the standing rigging, on which the safety of the masts so entirely depends; but he is to keep the shrouds and stays as they are fitted in the dock and navy yards; and if he should have occasion to fit others, he is to do it in the same manner, nor is he to suffer any alteration to be made in the established manner of rigging ships, or any experiment to be made, or expedient to be practised, by which the shrouds, stays, or other rigging, may be endangered, or exposed to unnecessary chafing or wearing.

40. He is to favor the masts as much as possible, never hazarding them in carrying too much sail, except in chase, or on other necessary occasions. He is to be attentive in observing that the shrouds and stays are properly set up, especially when new and apt to stretch; but, in doing this, he is to be particularly careful in preventing the masts from being so much stayed, as to risk their being crippled or sprung.

41. He is to direct the carpenter and caulkers to make such repairs in the ship and boats as the stores on board will permit, that, on his arrival in port, as little time and as little assistance from the dock-yard as possible may be required to refit her.

42. While in port or roadstead, he is to follow the motions of the senior officer present, by striking or getting up the yards and topmasts, loosing or furling sails, and doing any other duties contemporaneously with the ship which the senior commands, unless such senior officer shall dispense with his so doing.

43. If a foreign ship shall visit a port of the United States, the senior officer of a United States' vessel of war (there being no flag officer present) is to send a lieutenant to the officer commanding, and to offer him any assistance he may stand in need of; and he, and all other officers of the United States' navy, are to show to the officers of such foreign ship, during their stay in port, such attention and respect as their rank and situation may require, and to afford such assistance to the ship, if wanted, as circumstances will admit, and as a Power in amity with the United States may reasonably expect.

44. He is to pay every attention to the comfort of the sick and wounded, causing a comfortable place to be provided for them in any part of the ship where they will be the least incommoded, and he is to direct to be furnished,

berths, cradles, cots, buckets with covers, and every other convenience they may require; and, on the appearance of any contagious disease, he is to cause the persons infected to be separated from the rest of the ship's company, and consult with the surgeon as to the best means of preventing the spreading of such contagious disease.

45. He is required to keep copies of all official correspondence.

46. He is to see that on all occasions strict justice be done to the officers and men under his command, that they have their proper allowance of provisions, that no improper charges are made against their wages, and that no cruelties or oppressions are practised. He alone is to order punishment to be inflicted, which is never to be done without sufficient cause, nor with greater severity than the offence shall deserve, nor in any case beyond what is authorized by the "Act for the better government of the navy of the United States," passed April 23, 1800. All the officers and ship's company are to be present at the infliction of every punishment, and the captain himself is to attend to see it properly executed. Not more than one dozen lashes shall be given on any account at one punishment, nor shall men be subjected to long confinement, except for trial by court martial, nor be deprived for more than a week at a time of their grog, nor punished by a reduction of their allowance of provisions, nor exposed for punishment to any uncommon hard work or services, to exposures that may endanger their health, or to any kind of torture, for any offence committed. They are, when necessary, to be brought to the gangway, or, if the offence deserves a severer punishment, they are to be tried by court martial.

47. The captain of a ship carrying a broad pennant is, on all occasions of duty, to consult his commander, and a respect due to him requires that he should not inflict any punishment without his knowledge.

48. When the captain is removed from the command of the ship, he is to be governed by the twenty-ninth article of the regulations and instructions for the commanders of fleets and squadrons, and when removed from one ship to another, (if it can be done without any inconvenience to the service,) he will be allowed to take the following number of men, not, however, without express orders to that effect from the Secretary of the Navy; or his commanding officer.

If removed from a	74	may take	50	of whom may be	petty officers	10
Do.	44	do.	40	do.		8
Do.	36	do.	32	do.		6
Do.	sloop	do.	20	do.		4
Do.	brig	do.	15	do.		3
Do.	schooner or cutter	do.	10	do.		2

which men are to be in addition to his clerk, coxswain, steward, servant, or cook, whom he may remove without an order. But the men he may take with him are to be replaced from the ship he shall take command of, with an equal number of the same rate, and of the same quality, as those whom he may take with him.

49. He is to give to his successor a particular account of the qualities of the ship according to the annexed form, together with such further information, on any subject relating to her, as his experience and observation may enable him to give, and as he may deem of service to any captain commanding her. This account is to be signed by himself, the first lieutenant, master, boatswain, and carpenter, and a duplicate thereof is to be sent to the office of the Navy Commissioners. This account must be given in the following form:

Observations on the qualities of the United States' ship the ———

- 1st. Her best trim for sailing.
- 2d. Her draught of water, forward and aft, when victualled for six months, and stored for foreign service.
- 3d. The quantity of iron and shingle ballast on board.
- 4th. How she sails close hauled.
 - in a topgallant gale,
 - in a topsail gale,
 - under reefed topsails,
 - under her courses.
- 5th. How she steers, and how she wears and stays,
 - Under her topgallant sails,
 - topsails,
 - reef topsails,
 - courses.
- 6th. How she lays to in a gale, and under what sail she behaves best.
- 7th. How she sails and steers with the wind abeam,
 - Under her royals,
 - topgallant sails,
 - topsails,
 - courses.
- 8th. How she sails with the wind on the quarter:
 - Under all sail,
 - staysails,
 - royals,
 - topgallant sails,
 - topsails,
 - courses.
- 9th. How she sails and rolls before the wind, and the effect on her masts:
 - Under all sail,
 - royals,
 - topgallant sails,
 - topsails,
 - scudding in a gale.
- 10th. How she rides at anchor in a heavy gale and sea.
- 11th. How she stands under her sails.
- 12th. How she stows her provisions and water, and what quantity of the latter she carries, when victualled for four and six months; and the quantity of ballast that may be dispensed with in the room of six months' provisions.
- 13th. The number of tons of provisions taken on board when stored for the above time.
- 14th. General remarks as to her sailing, under all circumstances, with other ships; showing the proportion she gathers to windward on fore reaches; her proportion of leeway in general, and any other circumstances worthy of note.
50. If a United States' vessel of war should be wrecked, the captain is to use every possible exertion to save the lives of the crew, and to preserve the stores, provisions, and furniture of the ship. He is also to endeavor to save the ship's papers, particularly the muster and slop books; and to take special care to preserve or destroy all signals, secret orders, and instructions, to prevent their falling into improper hands. He is to dispose of the crew in a manner most conducive to their comfort, and the public interest, and to be very particular in keeping up a regular and perfect discipline among them, carefully preventing the commission of any irregularity which may give offence to the inhabitants of the country they are in.
51. He is to lose no time in getting the crew to the United States, to effect which he is authorized to dispose of, on the best terms, the property saved from the wreck, or to draw on the Secretary of the Navy for the necessary moneys.
52. Whenever any commander of a public ship or vessel of the United States shall find himself placed in such circumstances as shall compel him to strike his flag to an enemy, he is to take special care to destroy all his secret

instructions, signal books, and private signals, and, for this purpose, they should be always kept fastened to a weight, so heavy as to sink them, immediately on being thrown overboard; and on inquiring into the loss of the ship, he will produce evidence of his having done so.

53. The ship, and every person on board, being placed under the command of the captain, he will be held responsible for every thing done on board. From him will be expected an example of respect and obedience to his superiors, of unremitting attention to his duty, and a cheerful alertness in the execution of it, in all situations, and under all circumstances. He will be expected to observe himself, and strongly to enforce in others, the most rigid economy in the expenditure of public stores, and to show by every means in his power, a steady determination to serve his country with the utmost zeal and fidelity; and although particular duties are hereafter assigned, and various instructions given to every officer in the navy, yet the captain will be expected to see that all these instructions are obeyed, and all these duties performed by the officers to whom they are respectively assigned.

From him it will be expected, that all those, whether officers or others, shall be corrected, or their conduct properly represented, who are disobedient or disrespectful to their superiors, neglectful of their duty, wasteful of the public stores, or who, by their conduct or conversation, shall endeavor to render any officer or other person dissatisfied with his situation, or with the service on which he is employed.

He is to observe with particular attention the conduct of every officer, and of every other person under his command; that, being acquainted with their respective merits, he may assign them such stations as they may be qualified to fill, and for arduous and dangerous enterprises may select those whose ability and courage may afford the best hopes of success. He is to be extremely attentive to every thing done by his clerk, who, being appointed for the sole purpose of assisting him, will be considered as always acting by his orders. He will, therefore, be held responsible for every thing done by the clerk, and be made accountable for every error he may commit in the discharge of his duty.

CABIN FURNITURE.

1. The commander of a squadron shall be allowed on fitting out, to equip the cabin of a ship of the line in lieu of every expense for moveable furniture, the sum of seven hundred and fifty dollars.
2. There shall be allowed on fitting out, to equip the cabin of a captain, in lieu of every expense for moveable furniture, five hundred dollars.
3. There shall be allowed on fitting out, to equip the cabin of a master and commander, in lieu of every expense for moveable furniture, four hundred dollars.
4. There shall be allowed on fitting out, to equip the cabin of a lieutenant commanding a brig, below the rate of a sloop, in lieu of every expense for moveable furniture, two hundred dollars.
5. There shall be allowed on fitting out, to equip the cabin of an officer commanding a schooner or cutter mounting twelve guns, in lieu of every expense for moveable furniture, one hundred dollars.
6. There shall be allowed on fitting out, to equip the cabin of an officer commanding a vessel mounting less than twelve guns, in lieu of every expense for moveable furniture, fifty dollars.
7. The articles of furniture for cabins shall be purchased by the purser of the ship, agreeably to such instructions as the commander may give him, the amount of which he is to charge to the commander's account.
8. On the removal of the commander to another ship he will deliver over to his successor the articles so charged to him, taking his receipt for the same; this is to be certified by the purser, who will also charge the new commander with the amount of the articles so transferred; and the commander by whom the articles shall be delivered, will transmit to the Fourth Auditor of the Treasury the receipt so taken as aforesaid, together with the purser's certificate; otherwise, the amount of the articles furnished will be charged against his pay on the settlement of his accounts with the Treasury Department.
9. Should the ship be laid up in ordinary, the receipt of the commandant of the yard, and the certificate of the purser will be sufficient vouchers to entitle him to receive his pay.
10. Articles unfit for service must be surveyed by an order from the Navy Commissioners, or, in the event of a ship being on a foreign station, by an order from the commander of the station, on the application of the commander of the ship; and no new articles are to be furnished until the old shall be condemned, which must be certified by the officers holding the survey, and the certificate forwarded to the Navy Commissioners.
11. Articles of cabin furniture broken or lost at sea shall be replaced by the commander of the ship, at his own expense, unless he shall make it appear, by the certificate of two commissioned officers, that such loss or breaking was occasioned by unavoidable casualties, or accidents beyond his control.
12. No articles of silver plate for the use of the cabin are to be furnished at the expense of the United States.

OF THE LIEUTENANT.

1. A lieutenant is to be constantly attentive to his duty, and diligently and punctually to execute all orders for the public service which he may receive from the captain, or any senior officer. When he has the watch, he is to be constantly on deck, until relieved by the officer who is to succeed him. He is to see that the men are alert and attentive to their duty; that every precaution is taken to prevent accidents from squalls, or sudden gusts of wind, and that the ship is as perfectly prepared for battle as circumstances shall admit. He is to be particularly careful that the ship be properly steered, and that a correct account be kept of her way by the log being duly hove, and the leeway for each hour marked on the log board.
2. He is to see that the master's mates and midshipmen of the watch are constantly upon deck, and attentive to their duty; and he is to order the men of the watch to be frequently mustered, and to report to the captain such as he shall find absent from their duty.
3. He is to be extremely attentive to keep the ship in her station, in any squadron he may belong to; and he is to inform the captain whenever he apprehends that he shall not be able to do so.
4. He is to inform the captain of all strange sails that are seen; all signals that are made; all changes of sail made by the commander; all shiftings of the wind; and, in general, of all circumstances which may derange the order in which the fleet is sailing, or prevent the ship from continuing on the course directed to be steered.
5. He is to be very particular in delivering to the lieutenant, who relieves him on the watch, all orders received by him from the captain, or the lieutenant he relieved, remaining unexecuted; and he is to inform him of all signals made by the commander-in-chief, which still remain to be obeyed. He is to point out to him, more especially in the night, the situation of the commander-in-chief, and to inform him what sail his ship was carrying when it could last be ascertained, and whether the ship was coming up with, or dropping astern of him; and he is to give in general whatever other information may be necessary to enable him to keep the ship in her station, if the fleet be formed in order of sailing, or to keep well up with it if it be not so formed.
6. He is to keep men at the mast heads during the day, and in proper stations during the night, to look out. He is frequently to remind them of their duty, if necessary, and to relieve them, more or less frequently, according to the state of the weather, and the degree of their attention.
7. On a strange sail being seen in the night, during war, he is to send a midshipman to inform the captain, and is himself to make arrangements for getting the ship ready for action. He is to keep out of gunshot until every thing is ready; but in doing this, he is to be careful not to remove to such distance as to risk losing sight of her.
8. He is never to carry so much sail as to endanger the springing of any mast or yard, unless some particular service should require it; and when he does so, that all the men in the watch are at their stations, ready to shorten sail the moment any increase of wind, or other circumstances, shall make it necessary.
9. In the night, he is to take care that the master-at-arms and corporals, in their respective watches, are very particular in going the rounds, and that they visit all parts of the ship every half hour, to see that there is no disturbance among the men, and that no candles or lamps are burning, except such as are expressly allowed.

10. He is to direct the carpenter to sound the well himself, or direct one of his mates to do it, twice at least in every watch, and to see that the ports are well barred; and the gunner, or one of his mates, to examine, once at least in each watch, the state of the lashings of the guns, and to report to him when they have done so.

11. In the morning he is to direct the boatswain to examine the state of the rigging, and the carpenter that of the masts and yards. He is to receive their reports; and to inform the captain of every defect they may discover.

12. He is never to change the course of the ship without direction from the captain, unless it be necessary to avoid some danger.

13. If the ship belongs to, or is in company with, any fleet or squadron, he is to direct some careful officer to observe the signals made by the commanding officer, but he is never to answer any signal, whether general, or addressed particularly to the ship to which he belongs, until he is certain that he sees it distinctly, and understands for what purpose it is made; and he is every evening, before dark, to see that lanterns, with candles, and every thing necessary for making signals in the night, are ready, and in good order, and that the number of guns which may be directed, not shot, are ready for being fired, and to be particularly attentive in preventing any other lights being shown in the ship when signal lights are hoisted; and when at sea, that no lights may be seen from the cabins, or any part of the ship.

14. During a fog, he is to be particularly attentive to the guns fired by the commander-in-chief; that by observing any alteration that may take place, either in the direction or strength of the report, he may take such steps as may be deemed necessary to prevent the ship being separated from the fleet. He is to be very careful to order the drum to be beat, and the bell to be sounded, according to the tack the ship may be on, for the information of ships that may be near.

15. He is to see that every occurrence, worthy of notice, during the watch, be properly entered on the log board, and that all signals made in the fleet are correctly minuted, in such a manner as the captain shall direct; and at the end of his watch, he is to sign the log board, and the report of signals, with the initials of his name; and, in like manner, when the occurrences of the day and the report of the signals have been entered in the log-book, he is to sign that with his name at the end of each watch he kept.

16. He is constantly to ascertain the latitude, by observation, at noon, or by double altitudes, as circumstances may require, and to keep an account of the ship's way, specifying the course steered, and the distance run, for each twenty-four hours, with the latitude and longitude she is in, and the bearings and distance of some headland from which she sailed, or towards which she may be going, with other particulars, and in any form that the captain shall direct; which account he is to deliver to the captain every day, as soon after noon as the other duties of the ship will allow.

17. He is not to make any signals by day or night, except such as may be necessary to warn ships of any danger to which they might be exposed, without the directions of the captain.

18. In time of action, he is to see that all the men under his command are at their quarters, and that they do their duty with spirit and alacrity. He is to be particularly attentive to prevent them from loading the guns improperly, from firing them before they are well pointed, and from wetting them after they have been fired; and he is to be very careful to prevent their making an improper accumulation of powder in any part of his quarters.

19. He is to be attentive to the conduct of all the ship's company; to prevent all profane swearing and abusive language; all disturbance, noise, and confusion; to enforce strict obedience to orders, a proper respect to all superiors, and an observance of discipline and good order; and he is to report to the captain all those whose misconduct he shall think deserving of reprehension or punishment.

20. No boat is to be allowed to come alongside, or to go from the ship, without direction from the lieutenant of the watch. When vessels or boats come alongside with provisions, stores, water, &c., he is to see that they are cleared without delay, and that the articles are taken into the ship with the utmost care, to prevent their suffering any damage; and when any provisions, stores, empty casks, &c., are to be sent from the ship, he is to be equally attentive in causing them to be put into the vessels or boats appointed to receive them.

21. When a lieutenant is called by signal on board of a commodore's ship, he is to carry with him an order book, in which he is to enter any orders that may require it, whether given him verbally or in writing.

22. In the absence of the captain, the senior lieutenant on board the ship is to be responsible for every thing done on board. He is to see every part of the duty as punctually performed as if the captain were present. He may put under arrest any officer whose conduct he shall think so reprehensible as to require it, and he may confine such men as he may think deserving of punishment; but neither he, nor any other lieutenant, who may become commanding officer, is to release an officer from his arrest, nor to release or punish any man who has been confined: for this is to be done by the captain only, unless he be absent from the ship, with leave from the Secretary of the Navy, or from his commanding officer, in which case it is to be done only by the senior lieutenant commanding the ship in the captain's absence.

OF THE MASTER.

1. A master, when attached to a ship, is to be constantly attentive to his duty, and diligently and punctually to execute all orders he may receive from the captain, or any of the lieutenants of the ship, for the public service.

2. If the ship be newly commissioned, he is to obtain the most correct information he can of the manner in which her hold was stowed when last in commission, and what were then her qualities, that her stowage may be altered, if there be reason to suppose it may be done with advantage. If the ship shall not have been at sea, the master is to consult the master shipwright on what may be the best manner of stowing her; but if he find the hold already stowed, he is to inform himself how it has been done; and he is attentively to examine her qualities at sea, that he may suggest such alterations in her stowage as he may think likely to improve them.

3. He is to be present himself at the stowing of the hold, to see that the ship has the proper quantity of iron and shingle ballast; and he is to stow her in a manner best qualified to preserve her trim, to make room in the hold to admit of the stowage of the water and provisions, without risk of damage to the casks. He is to stow away as much wood in the hold as possible; and if it should appear to him that the quantity of wood and coals will not be sufficient for the time for which the ship is victualled, he is to report it to the captain.

4. He is to be present when stores or provisions are received on board, to see them carefully and expeditiously hoisted in to prevent their being damaged; and if any of them should appear to him to be in any respect defective, he is to report it to the captain, or the commanding officer on board, that they may be surveyed as soon as the service will admit, and then disposed of in conformity to the report of survey.

5. If any provisions are pointed out to him as being older than the rest, he is to stow them in such a way as to admit of their being first hoisted up; and on receiving any subsequent supplies, he is, whenever circumstances will admit, to put the new provisions under the old, that they may be the last expended.

6. When the stowage of the ship shall be completed, he is to enter into the log-book a particular account of the manner in which it was done, specifying the quantity of iron and shingle ballast in each hold, with a draught of the same, and the manner in which they are arranged, with the size and number of the casks in each tier, and showing the manner in which they are disposed of.

7. He is to be particularly careful in observing that the cables are securely clinched; that they are properly spliced and coiled in the tiers; that the rounding is well put on, and carried far enough to secure the cable from being chafed when across the cut-water.

8. He is to keep the keys of the after-hold and spirit room, which, when wanted, he is to deliver to one of the master's mates only, strictly charging him not to suffer light to be carried into the spirit room; to attend himself, without quitting on any account the spirit room or after-hold, while open; to see it properly secured when the service for which it was opened shall be executed, and to return the keys to him as soon as he has done so.

9. He is to see that the sails are properly fitted with points, robands, earrings, &c., ready for being brought to the yards; and that the boatswain has always a sufficient number of spare points, robands, gaskets, mats, plats, nippers, &c., ready for any purpose for which they may be wanted.

10. He is to be attentive in regarding the quantity of every species of provisions hoisted up from the hold, that if the quantity should appear to be more than is necessary for the ship's company, he may inform the captain. He is to attend also to the quantity of wood and coals hoisted up, that he may prevent any improper expenditure of them.

11. He is to be particularly careful to prevent any waste or improper expense of water, and never to allow of its being started or pumped out in the hold without particular directions from the captain; nor is he to suffer more to be hoisted up in a day than the quantity allowed.

12. He is every day to report to the captain the quantity of water expended during the last twenty-four hours, and the quantity remaining on board.

13. He is, with the first lieutenant, to visit the store-rooms of the warrant officers, to see that they are kept as clean and as well ventilated as circumstances will admit; that no other than the stores of the ship are put into them, and that the stores are arranged with such regularity as to admit of any of them being found when wanted.

14. He is frequently to visit the cable tiers to see that they are kept clean, and that no injury is done to the cables; and he is to direct the master's mate to be very careful to prevent any accumulation of dirt in the hold, and to take every opportunity of collecting and throwing overboard any filth that may be found there.

15. He is frequently to inspect the sail rooms to see that they are dry, and the rooms in good order. He is to give orders for the repairing of sails immediately on discovering that they require it; and if he should find them, or any of the stores, at any time, likely to be damaged by dampness, or by any other cause, he is immediately to represent it to the captain.

16. He is to be extremely attentive in preventing any unnecessary expense of casks, or any damage being done to them by improper violence in stowing them, or getting them into or out of the ship; he is never to allow them to be shaken, without an express order in writing from the captain for that purpose.

17. Whenever it shall be necessary to break up or clear the hold, and to start the water, he is to see that the bungs are carefully taken out of the casks and the water started upon deck from the bung holes, and that the empty casks are carefully lowered into the vessels appointed to receive them, as the expense attending the repairs of, or any considerable damage done to, the casks, by breaking in the heads or staves, or by throwing them over the gun-wales, &c., will be charged against his pay.

18. When there is a probability of the ship's being anchored, he is to see that the anchors and cables are perfectly clear for running, that the stoppers and ring ropes are in good order, and that every thing is ready for bringing her up properly; especially when she is to anchor in high winds and in strong currents.

19. When the ship is at single anchor, he is to keep the anchor clear, and prevent the cables from being chafed, and when she is moored, he is to keep the hawse clear, and should it at any time become foul beyond a cross, he is to represent the same to the captain, or commanding officer, that it may be immediately cleared. He is to see that the rounding is in good order, and that the ship is not girt by being moored too light.

20. He is frequently to examine into the state of the rigging, to see that the standing rigging is always kept well set up, to attend himself when it is set up, to examine frequently the running rigging, and to inform the captain when any part of it appears to be no longer serviceable.

21. At the end of every week, he is to examine the boatswain's and the carpenter's accounts of stores expended, and at the end of every month he is, with the first lieutenant, to sign their expense books, which he is to examine with very great attention before he signs them, to prevent the insertion of expenditures which have not been made, or an improper account of those which have.

22. He is to see that the compasses, the hour and other glasses, are properly taken care of, to try them and compare them with each other frequently, to ascertain and prevent the bad effects of any error which may be in them, to see the log-lines and lead-lines correctly marked, and at hand whenever they may be wanted.

23. The charts, nautical books, and instruments belonging to the ship, are to be delivered to and charged to the account of the master, and on his removal he is to deliver them over to his successor, or the storekeeper of a yard, taking his receipt for the same, which receipt, when approved by the captain, is to relieve him from all further responsibility respecting them.

24. He is, under the command of the captain, to have the charge of navigating the ship. He is to represent to the captain every possible danger in or near the ship's course, and the way to avoid it; and if it be immediate, to the lieutenant of the watch. Whenever the ship shall be approaching the land or any shoals, he is to be upon deck and keep a good look out, always sounding to inform himself of the situation of the ship.

25. He is every day at noon to deliver to the captain an account of the situation of the ship, the latitude and longitude she is in, the variation of the compass, the bearing and distance of the places sailed from, or of that to which the ship is bound, and every other particular which the captain shall direct.

26. He is to see that a sufficient number of master's mates and midshipmen attend every day to observe the meridian altitude of the sun, or to take double altitudes, if the obtaining of a meridian one be doubtful; and he is to direct such as he shall think proper to assist him in making any other observations or calculations which he may think necessary.

27. When the ship shall be in pilot water, although there may be a pilot on board to take charge of her, the master is to be always attentive to the manner in which she is conducted, he is to see the lead carefully hove, &c. if the pilot should not require it, and is to have every thing prepared for anchoring at the shortest notice; and if he perceive the ship standing towards danger, or if he have reason to think the pilot not properly qualified to conduct her, he is immediately to inform the captain.

28. He is to endeavor to ascertain, with every possible degree of accuracy, the latitude and longitude, and the variation of the compass at every place he visits, and of every remarkable headland which he passes.

He is also to ascertain the setting and velocity of the currents, the time of high water, at the full and change of the moon, the direction of the tides, with the extent of their rise and fall. He is to observe, and describe as particularly as he can, the appearances of coasts, pointing out remarkable objects by which one part may be distinguished from another. He is to apply to the captain, whenever he may think the service will admit of it, for boats to survey any coasts or harbors which may be near and he is to enter all the observations he may make, and all the information he may obtain, in a book, according to a prescribed form, the columns of which he is to fill up with all possible correctness. He is frequently to deliver this book to the captain for examination, and at the end of every six calendar months he is to deliver to him a correct copy, containing all the observations made, and information obtained, during the last six months, accompanied by the charts of all surveys taken, and the views which have been drawn of the coasts within that period; which book the captain is to transmit, by the first safe opportunity, to the Secretary of the Navy; and at the end of the voyage, or before he leaves the ship at any time, he is to deliver to the captain, to be by him transmitted to the Navy Commissioners, a copy of such book, containing the observations, &c. and a set of charts containing the surveys, views, &c. during the whole time he may have been master of the ship.

29. He is carefully to examine the charts of every coast, on which the ship may be employed, and at the end of the book of observations, he is to insert a list of the charts by him examined, specifying by whom, and at what time they were published, with such opinions as he may have been enabled to form of their correctness, or inaccuracy, distinctly pointing out every error he may discover, and which was either not known or imperfectly known before, carefully describing its bearings and distances from some remarkable point or points, with its size, the depth of water on it at different times of tide, the soundings near it, and any other circumstances relating to it, which may be worthy of notice; all which he is to insert in the ship's log-books, at the time the discoveries and observations shall be made.

30. He is to have charge of the ship's log-book, which is to be written by the master's mates, under his immediate inspection. He is to compare it every day with the log board, to see that every circumstance which has occurred is properly entered in it, and he is to send it immediately to the lieutenants, that they may sign their names at the end of their respective watches, while that which happened in them is still fresh in their memories. In the-log book he is to enter, with very minute exactness, each of the following circumstances, viz:

1st. The state of the weather, the directions of the wind, the courses steered, and the distances run, with every occurrence relating to the navigating of the ship, the setting and velocity of currents, and the result of all astronomical observations made to ascertain the situation of the ship, the variations of the compass, &c.

2d. The loss of yards, masts, boats, &c. the splitting of sails, the blowing away of flags or colors, and all other accidents, with the quantity of each article lost and saved.

3d. Every circumstance relating to the supply, receipt, loss, survey and returns of slop clothes, provisions, casks and water, specifying from whom they were received, and to whom they were supplied or returned, and by whose order, if any order was given, with the number of casks and packages written in words at length.

4th. An account of the quantity of every species of stores purchased for the ship, or received from, or supplied to any other United States ships, or to merchant ships, or to any foreign ship or arsenal.

5th. Every alteration made in the allowance of provisions, specifying by whose order such allowance was made.

6th. The marks and numbers of every cask of provisions, bale of slops opened for the use of the ship's company, with the quantity it is said to have contained, and the difference, if any.

7th. The time when any hired vessel is employed, and the time she is discharged, the name of the vessel, of the master and of the person from whom she was hired, her burthen in tons, and the number of men employed in her, by whose order, and for what purpose she was hired, and the cause which makes it necessary to hire her, rather than employ the boats of the ship or squadron.

8th. An account of the number of any men employed on board, who are to be paid for the service they perform, whether hired for that service or lent from other ships, mentioning the day on which they began and on which they ceased working, and the number mustered every day. Every entry of the receipt, expenditure, loss, &c. of stores or provisions, is to be carefully examined by the officer who has the charge of them, who is to signify that the account is correct, by signing his name at the bottom of it. After the log book has been signed by the lieutenants, no alteration, however trifling, is to be made in it, without the approbation of the captain, and the perfect recollection of the lieutenant of the watch that such alteration is proper.

31. At the end of every six calendar months, he is to deliver a copy of the log-book for those six months, signed by himself, to the captain, to be transmitted by the first safe opportunity to the Secretary of the Navy; and at the end of every twelve months he is to deliver the original log-book, signed by himself, to the captain, to be kept by him until the ship is paid off, and then to be sent to the Secretary of the Navy. If the master be superseded he is to sign the original log-book, then in his possession, and to deliver it to his successor, who is to give him a receipt for it.

32. Whenever he shall be ordered to survey stores or provisions reported to be decayed or unserviceable, he is to examine the state of each article with the most scrupulous attention, never trusting to any representation or opinion of others, but making his report so conscientiously, that when called upon to confirm it upon oath, which may frequently happen, he may be perfectly ready to do so. He is, as far as his judgment may enable him to determine, to point out the cause to which the defective state of such stores or provisions is to be attributed, particularly mentioning every appearance of neglect or inattention in those who had the charge of them.

If he finds any articles no longer fit for the service for which they were intended, he is to mention in his report any other service for which he may think them fit.

33. Whenever he shall be ordered to survey the stores remaining in a ship, whether they are to remain in the charge of the same officer, or to be transferred to another, he is to examine them with such attention as to be able, when required, to make oath of the truth of his report, as well to their quality as to their quantity, never allowing any article to be inserted in the report without being satisfied that it is on board the ship.

34. He is to examine with particular attention all muster-books, tickets, vouchers for stores, and other papers and accounts before he signs them, as he will be made responsible not only for such as he shall be found to have signed, knowing them to be false, but also for all mistakes in such books, accounts, &c. by which, through his neglect to correct them, the public shall suffer any loss.

35. He is to inform the captain whenever it is probable that rope of any description may be wanted in the ship, and when the boatswain or rope-makers are ordered to make it, he is to attend frequently to see that they are diligent, that the rope is well made, and that there is no waste of yarns; he is to receive from them every day an account of the rope they have made, which is to be entered in the log-book, and he is to see that the boatswain charges himself properly with the whole of the quantity made.

REGULATIONS RELATIVE TO NAVAL SURGEONS AND THEIR ASSISTANTS.

1. Every naval surgeon, on being ordered to a vessel of war in the service of the United States, shall without delay report himself to the commanding officer, and take into his charge all the medicines, instruments, hospital stores, utensils, and all other articles ordered for the use of the sick, agreeably to the estimate F, for which he shall give duplicate receipts to the medical purveyor by whom they were supplied. He shall personally examine the articles before he passes his receipts, as he will be held strictly accountable for the expenditure thereof.

2. He shall keep, or cause to be kept, a regular account of the receipt and expenditure of the said articles of medicine, according to form G, and of the hospital stores as per form H; and, at the expiration of every month, the amount of the respective columns of hospital stores shall be carried to the credit side of a book, as per form I. These books he is carefully to preserve, and at the end of every year to deliver them to the medical purveyor of the depot where he may have arrived.

3. He shall, at the expiration of every cruise, report the quantities of medicine and all other articles received, expended, and remaining on hand, to the medical purveyor of the depot where he may have arrived; which return shall be certified as just and true, and that the articles expended were, to the best of his knowledge and belief, used solely for the sick and invalids on board the ship to which he is attached.—(See form G.) He shall, if the ship is to be laid up, deposit all the articles remaining in his possession with the medical purveyor, and in case there should be no medical purveyor, to the surgeon of the yard or hospital where the ship is laid up, and give a written account of all losses, if returned in bad order, the cause or causes thereof. The purveyor, on receiving the balances of medicines, hospital stores, instruments, and utensils, shall give a receipt for the same, and also a certificate of the condition of the instruments, specifying all losses, or, if returned in bad order, in consequence of neglect; which certificates shall be forwarded to the office of the Fourth Auditor of the Treasury Department, stating the amount of losses and repairs required, that the same may be charged to the naval surgeon. All losses in the surgeon's department, which cannot be reasonably accounted for, shall be deducted from the pay of himself and assistants.

4. When a surgeon is ordered to be transferred, he shall apply to the commanding officer of the ship, and request that two or more surgeons, or other commissioned officers, may be ordered to superintend the survey of all articles in his possession, in the presence of his successor, noting the quantity and quality of each article; which, when signed by the surveying officers, shall be receipted for by the surgeon who succeeds him; a duplicate of which shall be forwarded without delay to the medical purveyor, in order that the complement of all articles may be provided, should the vessel be destined on a long cruise. It is, however, distinctly to be understood, that the first supply shall be considered sufficient for one year, unless there shall have been an unusual prevalence of disease among the crew. This circumstance, moreover, shall be certified, and the certificate forwarded to the medical purveyor, as a voucher for deviating from the established rules of the service.

5. Should a fresh supply of medicines, or other articles in the hospital department, be required on a foreign station, in consequence of any extraordinary number of sick, or by any injury sustained in a gale of wind, or in an action, he shall make out a requisition for such articles as he may think absolutely necessary for the remainder of the cruise, or until he shall arrive in the United States; which requisition, when signed by the commander, shall be forwarded to the navy agent or consul of the port whereat the vessel may be, who will direct the supply thereof. The surgeon shall examine and approve the account of all articles thus supplied, before they are received on board.

6. No condemnation of any articles of medicine or hospital stores shall take place, unless a survey shall have been had on the same, by order of the commander, at the request of the surgeon. A lieutenant, one surgeon, and mate, shall be appointed for this duty; and their certificate shall be necessary to exonerate the naval surgeon from the responsibility which the regulations impose on him.

7. He shall prescribe for *casual cases* on the gun-deck every morning at nine of the clock, due notice having been previously given by his loblolly boy, by the ringing of a bell. He shall visit those who are confined to the sick berth twice a day, or oftener if necessary, and prescribe such medicines and diet as he may think proper. He shall likewise direct the stoppage of the rations of every man on the sick list, and excused from duty, when he shall issue hospital stores in lieu thereof. The amount of the rations stopped shall be accounted for by the purser of the ship at the end of every cruise, and be paid to the naval hospital and asylum fund.

8. He shall cause the patients under his care to be removed to the sick berth whenever he shall judge it expedient. He is to request the commander to order as many men as may be requisite to attend their companions, day and night, as nurses; and, whilst engaged in this duty, they shall be subject to the orders of the surgeon, unless when mustered or called to quarters. Should they neglect to perform the duties required, or not use tenderness and humanity in the performance of them, the surgeon shall make a proper representation thereof to the captain. The sick berth shall be supplied with a sufficient number of buckets with covers for the use of the sick, which shall be emptied frequently and cleansed, and charcoal and water put in them. The berth shall be whitewashed with lime whenever an opportunity offers, and the deck sprinkled with vinegar.

9. He shall be extremely attentive to the personal cleanliness of the patient under his care, and see that the beds and bedding are properly attended to; also, that the sick are supplied with such medicines, drinks, and nourishments, as their situation may require.

10. He shall report *daily*, to the commander, the number, names, quality, and state of the sick under his care, their diseases, and the probable cause of the increase of the sick; also the result of his treatment, agreeably to form K. He shall likewise deposit in the binnacle an alphabetical list of those who are, or ought to be, excused from duty in consequence of wounds, disease, or other injuries.

11. The day previous to the discharge of a man from the sick report, *who had been subsisted by him*, he shall inform the purser, in writing, in order that his steward may include him in his mess in serving out the rations.

12. He shall at all times be prepared with every thing necessary for the relief of wounded men; and, when the ship is cleared for action, he shall repair to the cockpit, with his assistants and attendants, or to such part of the ship as the surgeon, with the consent of the commander, may consider most proper for their reception, the situation having been previously arranged.

13. A variety of cases may occur where, for the preservation of the lives of the sick, as well as for the safety of those who are well, it may be considered necessary to remove part of the sick on the gun-deck. It is, therefore, deemed proper that he should recommend their removal whenever circumstances may make it necessary.

14. Every patient, on being sent to the sick berth, shall, if practicable, be washed with soap and warm water; and, when there is any suspicion of infection, they shall be furnished with a clean shirt and bedding; the blankets and clothes which they had used should be immersed in boiling water in which potash has been dissolved, from whence they are to be taken, washed, and dried, before they are returned to the men's chests or bags. The mattresses should be cleansed, and frequently exposed to the sun and air.

15. He shall keep, or cause to be kept, a journal, according to form L, of the state of the weather, number, names, age, rank, disease, and treatment, when placed on the sick list, discharged therefrom, or death, noting, likewise, the number of days that the patient was victualled from the medical department; also such remarks on the probable origin of the disease prevailing on board, with a topographical account of the vicinity of anchorages, and such other professional observations as may have a tendency to benefit the public service. This journal he shall forward to the Navy Department, inspected by such of the surgeons of the navy as the Secretary of the Navy Department may direct, at the end of every cruise, or whenever he shall be transferred to another vessel.

16. When sick or wounded men shall be sent to any of the naval hospitals of the United States, they shall be accompanied by an officer and an assistant surgeon, to see that they are conveyed with all the care and comfort that circumstances will admit of.

17. Each man sent to the hospital shall be furnished with a sick ticket, agreeably to form M, and also an inventory of his effects, agreeably to form N.

18. Whenever very important or difficult cases occur, he shall, if practicable, consult with the surgeons of the fleet.

19. He shall instruct his assistants, and all others stationed with him, in the use of the tourniquet, and such other persons as the commander may appoint. A number of tourniquets shall be distributed to the different quarters, also two or three to each top, that the wounded men may suffer as little as possible from loss of blood before their removal to the cockpit.

20. He shall occasionally inspect the crew, and take every precaution to prevent the origin or progress of contagion; on the appearance of which he should, without delay, report the case to the commander, in order that a timely separation may be made of the sick from the well, and adopt such measures as may have a tendency to arrest the progress of the disease.

21. He shall frequently inspect the provisions and liquors which may be served out, and report the same to the commander when unsound; he shall, likewise, direct his mates to examine the cook's coppers, to see that he keeps them clean; and likewise report every thing respecting diet, dress, and want of personal cleanliness; in short, every thing which may come within the sphere of his knowledge, tending to promote the comfort and health of the crew.

22. He shall take care that the medicines, and all other articles with which he is supplied, are faithfully administered for the relief of the sick and wounded, and that no part of them be wasted or embezzled, or applied to any other purpose than that for which they were intended.

23. To enable the surgeon and his assistants to take proper care of the articles belonging to the medical department, a store room shall be allotted for their reception, which shall be solely under the charge of the surgeon, or, during his absence, of his first assistant.

24. When a ship comes to anchor at any port, he shall make out a requisition for a supply of fresh provisions and vegetables, fruit, including lemons, limes, or oranges, or such other articles as the place may afford, which he may deem proper for the use of the sick and convalescent; which requisition, being approved by the commander, shall be purchased by the purser, and the amount charged to the medical department.

25. Whenever the surgeon shall consider that a supply of fresh provisions, vegetables, or lemons, is necessary for the crew generally, he is to signify the same to the commanding officer.

26. The surgeon shall be allowed a faithful attendant to issue, under his direction, all supplies of provisions and hospital stores, and to attend to the preparation of the nourishment for the sick.

27. The purser shall, from time to time, supply, on the requisition of the surgeon, approved by the captain or commander, such articles of provisions as he may require for the use of the sick or convalescent; which articles shall be charged to the medical department, or against the rations of the sick which may have been stopped.

28. At the expiration of every cruise, the surgeon shall report to the Secretary of the Navy Department the conduct of his mates, whether they have performed their duties with ability, zeal, and industry. Surgical instruments are to be delivered to the surgeon, and charged to his account; and, on his removal from the ship, he is to take a receipt from his successor, the medical purveyor, or the surgeon of the hospital, when the ship may be laid up; which receipt, when approved by the captain, shall acquit him from further responsibility respecting them.

RELATIVE TO SURGEONS' ASSISTANTS OR MATES.

1. They shall be subject to the orders of the surgeon. They shall weigh or measure every article of medicine and hospital stores issued; they shall keep a journal of the diseases and treatment of all cases, an abstract

of which shall be given to the surgeon, that he may be enabled to report thereupon to the Secretary of the Navy Department at the expiration of every cruise.

2. They shall be careful to see that the medicines prescribed are administered as directed, and that the sick are supplied with proper nourishment. They shall be particularly careful in directing the loblolly boy to keep the cockpit clean, and every article therein belonging to the medical department. They shall, under direction of the surgeon, personally apply dressings to wounds and ulcers, perform the operation of blood-letting, and, in all important cases, they are personally to administer the medicines prescribed, or see them given, and do all other duties pertaining to their profession which the surgeon may direct.

3. They must direct the orderlies to wash all bandages and compresses daily in hot water, with soap or pot ash, and see that they are returned clean and dry to the cockpit.

4. In the absence of the surgeon, the assistant oldest in commission shall act as surgeon. They shall likewise aid in preparing the necessary reports required by the rules and regulations of the navy.

RELATIVE TO PURSERS.

The purser being the officer appointed to receive and distribute the victualling stores and slops of the ship, having entered into bonds to the United States, as prescribed by law, is to abide by the following regulations and instructions, and he is not to expect that any irregularity in, or omission of, any part thereof, or of the forms referred to therein, for keeping his accounts, will pass unnoticed:

1. Every purser attached to a vessel of war shall make to the Secretary of the Navy Department a statement of his accounts every three months, and settle his accounts at the Treasury Department every twelve months; nor shall he permit a greater length of time to elapse without offering his accounts for settlement, if the vessel to which he belongs be in the United States; and, in the event of his failing to do so, his pay and emoluments shall cease from the time of the expiration of the twelve months, commencing at the time of his joining the vessel, or at the date of the last settlement.

2. Every purser of a yard shall settle his accounts at the Treasury Department every twelve months; nor shall he permit a greater length of time to elapse without offering his accounts for settlement; and, in the event of his so doing, his pay and emoluments shall cease from the time of the expiration of the twelve months, commencing at the time of joining the station, or at the date of the last settlement.

3. No purser can be employed, or removed from one ship or station to another, until he shall have settled up his accounts for the ship or station to which he shall have last belonged, unless especially exempted from doing so by the Secretary of the Navy Department.

4. Before a purser can receive orders to join a ship or station, or to be removed from one ship or station to another, he must produce a certificate from the Fourth Auditor of the Treasury, or other satisfactory evidence, that he has settled up his accounts for the last ship or station to which he belonged, and that the balance against him does not exceed one thousand dollars.

5. When a purser joins a ship or station, he shall see that it is provided with the necessary articles belonging to his department, take care that the provisions, victualling stores, and slops, are of a good quality, and demand a survey on those which may appear damaged or otherwise unfit for the service.

6. Tobacco will be purchased by the United States, and delivered and charged to the purser at cost and charges, and he will, on the settlement of his accounts, be allowed fifty per cent. on the amount of all tobacco issued, which per centage is to be added to the cost and charges on the article when issued to the crew.

7. On fitting out, there will be furnished of tobacco a supply equal to the time for which the ship may be victualled; and there will be allowed for each man on board at the rate per annum of twenty-four pounds of tobacco.

8. When tobacco shall be received from the navy stores, and there shall be a difficulty in ascertaining precisely the first cost, and the charges to which it shall have been subjected, it shall be charged to the men at the current retail price per pound, avoirdupois, which is to be certified by the commanding officer present and the agent.

9. Every purser, on closing his accounts, shall take care to have the quantities of tobacco remaining inserted in the surveys, in like manner with the other victualling stores. He is also to prepare and to deliver in to the Fourth Auditor of the Treasury accounts of the issues corresponding with the different victuallings of the ship, accompanied by certificates of the captain of the quantities issued and remaining.

10. The purser is to be charged with the tobacco with which he shall be supplied according to the actual weight at the time he received it; and he will be charged with all deficiencies at the rate at which it may be delivered to the men. If, however, it shall be made appear that, from any extraordinary circumstances, an unavoidable diminution of weight should have been occasioned, a reasonable allowance will be made on the settlement of his accounts.

11. All slop clothing will be charged to the purser at the cost and charges, and he is to be held accountable for the expenditure.

12. In no case will the purser be credited, even for any alleged loss by damage in slops, unless he shows, by regular surveys, signed by three officers, one, at least, of whom to be commissioned, that the loss has been unavoidably sustained by *damage*, and not by any neglect or inattention on his part.

13. And, as a compensation for the risk and responsibility, the purser shall be authorized to dispose of the slops to the crew at a profit of ten per cent.; but he must, at the end of every cruise, render a regular and particular slop account, showing, by appropriate columns, the quantities of each several kinds of articles received or purchased, and the prices and amount, and from whom, when, and where; and he shall show the quantities disposed of, and to whom, and at what prices; so that his slop account may show the articles, prices, and amounts, received and disposed of.

14. In issues of slop clothing, the purser shall in no instance exceed the quantity per man annually, as stated in the following table, unless he shall be particularly instructed to do so by the captain or commander; in which case, he is to obtain his written order, explaining the necessity of departing from this rule:

Table showing the quantity and kind of slops allowed to be issued for the first year per man; for the second year, two-thirds of the amount of the list prescribed for the first year's issue; to be furnished in such articles of slops as the commander may direct. All articles of wearing apparel, or materials of which wearing apparel is made, to be charged as slops; nor shall any deviation from the articles enumerated in the list be issued to the crew, except on extraordinary occasions, and then only by written permission from the Secretary of the Navy Department, or, when serving on a foreign station, by the commander; which document shall be presented before the accounts of the purser shall be passed.

1 Pea jacket, (to serve two years,)	2 Do. trowsers,
2 Blue cloth jackets,	1 Do. banyans,
2 Do. trowsers,	4 Pairs of shoes,
2 White flannel shirts,	1 Mattress,
2 Do. drawers,	2 Blankets,
2 Pair yarn stockings,	1 Hammock,
2 Black handkerchiefs,	1 Red cloth vest,
2 Duck frocks,	2 Hats,

15. When, on foreign stations, there shall be a necessity for purchasing slops, they are to be procured agreeably to the established uniform of the navy, which in winter shall consist of blue jacket and trowsers, and red vest, (the buttons of which shall be yellow,) and black hats. In summer, the dress shall be white duck jackets, trowsers, and vests; and on the home station they will be supplied from the navy stores on requisition, in the same manner as other stores are supplied.

16. The purser will be allowed to sell to the crew, under regulations and restrictions, the articles specified in the subjoined list, to wit:

Soap, tin pots, spoons, bottles of mustard, pepper, knives, combs, brushes, riband, needles, thread.

17. They shall not be allowed to issue more per man annually than the quantities and number specified in the following table, nor shall there be charged on them a profit exceeding twenty-five per cent. on the first cost and charges:

Table specifying the quantity and number of each article allowed to be sold annually to each man:

Twenty-five pounds of soap, three tin pots, three spoons, two bottles of mustard, half a pound of pepper, four knives, four combs, three brushes, three yards of riband, and needles and thread in reasonable quantities.

On the settlement of his accounts at the Treasury Department, he must produce the certificate of the cost and charges of the articles above mentioned, approved by the commander; and unless that document is produced, and the most satisfactory evidence given of the charges against the men for these articles, he is not to receive any per centage on the issues of slops and tobacco; and, in the event of any fraud or imposition being practised against any of the men, it shall be the duty of the commander to bring him to trial for the same, without any avoidable delay.

18. Seamen destitute of necessaries may be supplied with slops by an order from the captain, after the vessel has commenced her voyage.

19. None are to receive a second supply until they have served full two months, and then not exceeding in amount half their pay.

20. Slops are to be issued out publicly, and in the presence of an officer who is to be appointed by the captain to see the articles delivered to the seamen and others, and the receipts given for the same, which he is also to certify. The captain is not to suffer any one to be supplied with slops except when absolutely necessary, and he is to oblige those who are ragged or in want of apparel or bedding to receive such of these articles as they shall be in need of.

21. Whenever it shall be found necessary to lend slop clothes from one United States vessel to another, an order shall previously be obtained from the commanding officer, a duplicate of which, and the receipt of the purser who receives them, stating the quantity and price of every particular kind, must be forwarded to the Board of Navy Commissioners by the first safe opportunity, and the original order preserved by the purser, to be produced at the settlement of his accounts, without which he will not be allowed credit for such loan.

22. When any one dies on board, his clothes and other effects may be sold at auction, and the amount, after being charged to the buyer, shall be carried to the credit of the deceased, for the benefit of his legal representatives.

23. The purser shall be allowed a commission of five per cent., to be deducted from the amount of the sale of such clothes.

24. Seamen are not to be allowed to bid for deceased officer's clothes that are above their wear, nor suffered to bid for any effects beyond their real value, nor to purchase more than the wages due them can answer for.

25. No purser shall pay over any balance of wages to an administrator or executor, without first obtaining an order from the Secretary of the Navy.

26. No purser shall draw moneys at any time or place, without the approval and signature of his commanding officer.

27. At the end of the cruise, and before the payment of the ship, the purser shall return into store such of the slops and bedding as remain unissued, and forthwith render a just account of all slops and bedding that have, from time to time, been committed to his charge. He shall not be allowed credit for slop clothes or bedding returned as unserviceable, unless he produce condemnation of them by survey, together with an affidavit that the whole of the said returns are the same received from the United States' navy stores or ships, or on account of the United States; and that there was no neglect on his part in not having timely issued those which may appear condemned as unserviceable; nor shall he be allowed credit for any unserviceable slops or beds thrown overboard, but he shall cause them to be carefully packed up and preserved, that they may be returned into store; and he is not to receive his wages nor commissions on tobacco, without a certificate from the storekeeper of slops that he has delivered into the slop store the same condemned slops and beds.

28. There shall be allowed every person serving on board the vessels of war of the United States, a daily proportion of provisions, as specified in the following table.

DAYS OF THE WEEK.	LBS.	OZ.	POUNDS OF			OUNCES OF				HALF PINTS OF

\$1 75

29. The purser being held accountable for the expenditure, he shall, as far as may be practicable, examine and inspect all provisions offered to the vessel, and none shall be received that are objected to by him, unless they are examined and approved of by at least two commissioned officers of the vessel.

30. In all cases where it may appear to the purser that provisions are damaged or spoiling, it will be his duty to apply to the commanding officer, who will direct a survey by at least three officers, one of whom to be commission.

31. If, upon a settlement of the purser's provision accounts, there shall appear a loss or deficiency of more than seven and a half per cent. upon the amount of the provisions received, he will be charged with, and held accountable for such loss or deficiency, exceeding the seven and a half per cent., unless he shows, by regular surveys, that the loss has been unavoidably sustained by damage or otherwise.

32. Captains or commanders may shorten the daily allowance of provisions, when necessity shall require it, taking due care that each man has credit for his deficiency, that he may be paid for the same.

33. No officer is to have whole allowance while the ship's company is at short.

34. Beef, for the use of the navy, is to be cut into ten pound pieces, pork into eight pound, and every cask must have the contents thereof marked on the head, and the person's name by whom it was furnished, agreeable to article forty-two.

35. If there be a want of pork, the captain may order beef to be issued in the proportion established.

36. If any provisions slip out of the slings, or are damaged through carelessness, the value of them is to be charged against the wages of the offender.

37. When in port, if it can be done conveniently, at a reasonable rate, the crew shall be supplied two days in each week with fresh meat, one day in lieu of salt beef, and the other in lieu of salt pork, and it is to be observed that one pound and a half fresh meat is considered equal to a pound of salt beef, or three quarters of a pound of salt pork, and the amount of the vegetables, greens, and thickening for the soup is to be equal to the amount of the articles which may, on the day of issue, be stopped in consequence of the serving out of fresh meat.

38. As all are to be equal in point of victualling, no officer, or other person, is, on any account, to select provisions for his own use, either on shore, in store, or on board ship. Nor are they to be paid in kind for any savings of provisions, or to draw more of any one article than is allowed by the established ration. The ship's provisions are calculated and intended for daily subsistence, and must be issued agreeably to this intention.

39. Provisions and stores purchased by agents are to be surveyed when received on board, and if it should appear, by the report of the surveying officers, that they are unfit for the public service, they are to be returned to the agent, and, on settlement, the captain is to refuse to admit them into the agent's account against the ship, and is to transmit to the Board of Navy Commissioners a duplicate of the report of survey, with such remarks as the case may make necessary.

40. Provisions and stores unfit for service are, after survey, if in a port of the United States, to be returned into the navy stores, or to the navy agent, to be disposed of at public sale to the best advantage. If in a foreign port, they are, by order of the commander or captain, to be sold by the purser, or such other person as the commander or captain may appoint. And if at sea, or in a situation where they cannot be otherwise disposed of, they are to be thrown overboard. But, in either case, the purser or officer having charge of the stores is to preserve a copy of the survey, with a certificate of the manner in which the articles were disposed of; or such purser, or other person, will not be allowed credit for the amount thereof.

41. Provisions and stores, especially on foreign voyages, are to be often examined by order of the captain, and every necessary measure adopted for their preservation.

42. Every cask and package of provisions, wet or dry, bread excepted, sent on board the United States' ships of war, is to have the contents thereof, as to quantity and kind, distinctly marked on it, together with a number, and the time when, place where, and by whom purchased or furnished. The casks are to be marked on the head, and the packages on some proper or conspicuous part of them.

43. The casks for spirits are to be stowed in the spirit room; to be surveyed by a sworn gauger; and the quantity they will contain in gallons (wine measure) is to be marked plainly on each near the bung. Casks, in which liquor of any kind is brought on board, are also, in like manner, to be gauged, and the contents marked on them.

44. In all cases when fresh meat is received on board, the commander is to see that it is good and wholesome; that it is fairly and equally distributed among the officers and crew; that no particular pieces are reserved for the officers or others; that a lieutenant, master's mate, or midshipman, attend the distribution in some convenient and public part of the ship, where it shall be pricked for in the customary manner.

FULL AND HALF PAY AND RATIONS.

1. The full pay and full rations of all commissioned and warrant officers, shall commence with the date of their acknowledgment of the receipt of their orders for service, unless there appears to have been unnecessary delay in their executing said orders, in which case the Secretary of the Navy Department will direct their pay to commence at the time of their joining the command ship, or station, to which they have been ordered.

2. The full pay and full rations of all commissioned and warrant officers shall cease, when they shall be notified by the Secretary of the Navy Department that their active services are no longer required.

3. Officers thrown out of active employment, by order of the Secretary of the Navy Department, shall be entitled to only half their pay and half their rations.

4. The resignation of a half-pay officer when called into active service will be considered a disobedience of orders.

5. A lieutenant succeeding to the command of a ship by the death of the captain, and any officer, properly qualified, who shall be appointed on any foreign station by the senior officer present to act in a station vacated by the death of the officer who held it, shall receive the pay allotted to that station until another officer supersedes him.

6. The pay of an officer who quits the ship he belonged to on any foreign station, whatever may be his reasons, shall cease from the time he quits her, unless the Secretary of the Navy Department shall be satisfied that his removal was absolutely necessary for the recovery of his health.

7. The half-pay of officers, who leave the United States on furlough for more than twelve months, shall cease after that period; nor shall they again be entitled to it but by order of the Secretary of the Navy Department; and no officer will, whatever may be his reasons, be considered as belonging to the service, unless he reports himself to the Secretary of the Navy Department once a year, if practicable for him to do so.

MARINES SERVING ON BOARD THE SHIPS OF THE UNITED STATES.

1. The marine detachments appointed to serve on board of the ships of the United States are to be entered upon their books as part of the complement for victuals; and, with regard to provisions and short allowance money, they are to be in all respects upon the same footing with the seamen.

2. When marines are wanted on board any ship or vessel, the commanding sea officer at the port where such ship or vessel shall be is to give as early notice as possible of the number wanted to the commanding marine officer on shore.

3. The commission and non-commission officers are to go on board with the men, and reside there constantly at their duty.

4. All marine officers are to obey the orders of the captain or commanding officer of the ship, and also of the commanding officer of the watch. The marine officers are, upon all occasions, to be treated, as well by the captain of the ship as by all other officers and people belonging to her, with the respect, decency, and regard due to the commissions they bear. They are to possess the cabins or berths erected for them.

5. The marines are to be exercised by the marine officers in the use of their arms as often as possible, that they may become expert in the use thereof; they are to be employed as sentinels, and upon all other duties and service on board the ship which they may be capable of, and therein to be subject to the directions of the officers of the ship; but they are not to be obliged to go aloft, or to be punished for not showing an inclination to do so. And the captain or commanding officer of the ship is strictly charged not to suffer them to be ill-treated, nor a sergeant or corporal to be struck, on any account, by any of the officers, petty officers, or seamen.

6. No marine serving on board of any of the United States' vessels of war is to be discharged as such, and entered as a seaman, without special authority from the Secretary of the Navy.

7. When any marines shall be sent upon duty, either on board of any other ship or on shore, they are not to be discharged from the books of the ships from which they shall be sent, while those ships continue in port, and shall not have their established number completed with other marines.

8. The commanding marine officer is to have in his possession the chests prepared for the arms and the cartridges for the use of the marines. The arms and drums are to be under his charge, and he is to be accountable for any loss or damage that may happen for want of sufficient care in him; but if any such loss or damage happen by the default of any other person, the marine officer is immediately to acquaint the captain of the ship therewith, who is to cause the value thereof to be forthwith noted against the defaulter's name, in order to its being deducted from his pay or wages.

9. The marine arms are to be kept clean and in good condition by the marines themselves, so far as they can do the same; but, if necessary, the marine officer may apply to the captain for the assistance of one or more armorer's mates to repair the arms; and the captain, in such case, will order such assistance to be afforded.

10. When marines are sent on board of any of the United States' ships, in order to serve at sea, the captain of the ship is to cause the purser to supply them, upon their coming on board, with a suit of bedding, if necessary, and from time to time with such further bedding and slop clothes, &c. as the commanding marine officer may represent them to be in want of; for all which the officer charged with paying the marines shall settle with the purser of the ship, charging the amount thereof to the accounts of the marines to whom such bedding and slop clothes, and other slops, may have been so issued.

11. The commanding marine officer on board must examine once a week, at least, into the state of the clothing and slops belonging to each marine, and if he finds any loss or abuse, must inquire how it happened; and he is to inform the captain of the ship of the circumstances, who will apply such corrective as may be necessary to prevent a recurrence of such losses or abuses.

12. When any marine belonging to the ship dies, his clothing and effects (except his uniform marine clothing) are to be sold at the mast, by auction, and the produce charged against the names of the buyers; and the marine officer will, by the first opportunity, transmit to the paymaster of the marine corps an inventory of the effects so sold, and an account of the amount for which they sold, signed by the captain and purser of the ship, in order that such amount may be paid over to the legal representative of the marine so dying.

13. A store room on board of each ship, to be in the possession of the marine officer, is to be appropriated exclusively for the spare clothing, accoutrements, and all other necessaries for the use of the marines.

14. Marines sick or wounded are to be taken the same care of by the surgeon of the ship that the seamen are; and when it shall be necessary to send them out of the ship for cure, they are to be sent on shore to the hospitals, or sick quarters, and are to be in all respects under the same regulations that are established for the seamen. Sick tickets are to be sent with them, similar to those to be sent with the seamen. The captain of the ship and the commanding marine officer on board are to see that their bedding, clothes, and necessaries are sent along with them, the particulars of which are to be noted at the foot of the sick tickets. The commanding marine officer will see that each man's things be securely bound together and labelled. The proper officer at the hospital or sick quarters, and the marine officer attending hospital duty, (where there shall be any,) are to take care that the same be safely deposited and preserved, till the marines are either discharged, run, or die. If discharged, they are to be delivered to their respective owners; and in the cases of desertion and death, they are to be disposed of as provided in the case of dead men's clothes on board of ship.

15. Marines sent sick on shore are to be continued upon the books of the ship from which they shall be sent, unless the proportion of marines allowed the ship be completed during his sickness; and, in the latter case, they are, when recovered, to be turned over to some other ship wanting marines, or to be sent to the nearest marine station. So soon as the number allowed the ship be completed, all marines sent sick on shore are to be discharged from the ship's books, as the ship must never be charged with more than the complement of marines allowed her.

16. When a marine is returned on shipboard from an hospital or sick quarters, the captain of the ship is to take care that there be charged against his name the value of any clothing he may have been supplied with at the hospital, which the hospital surgeon is to set off upon the ticket of discharge from the hospital.

17. The rations issued to the marines must be charged by the purser to the subsistence of the marine corps, in order that the subsistence of the navy may have credit therefor in the settlement of his accounts.

18. Marines are to be paid by the purser of the ship, while they are on board of ship, and charged the same as the ship's crew. Pay rolls, signed by the purser, and countersigned by the marine officer, are to be regularly transmitted to the Fourth Auditor of the Treasury.

GENERAL INSTRUCTIONS FOR WARRANT OFFICERS.

1. The warrant officers of the United States' vessels of war when in ordinary, are to examine frequently the condition of the store rooms appointed to receive their respective stores, are to inform the master shipwright of the yard of any defects in them which may require to be repaired, that they may be fit to receive the stores whenever the ship shall be put in commission; and, when any ship is commissioned, the warrant officers are to use their utmost endeavors to get their stores on board as expeditiously as the other duties, necessary to the equipment of a ship, will permit.

2. When they receive stores on board, whether at the fitting out of the ship, or on any subsequent supply, they are to be very particular in ascertaining that they are of a good quality, and that they receive the full quantity specified in the note or memorandum sent with them; and they are immediately to report to the captain any defect or deficiency which they may discover in them.

3. They are to keep an account, according to the forms delivered to them, of the receipt, expenditure, [expressed in words, and not in figures,] condemnation by survey, or supplying of stores; always specifying the place and the person from whom the stores are received, or the person to whom they are supplied.

4. No waste of stores not perishable will ever be allowed, except from unavoidable accidents, which are to be particularly mentioned in the log-book, wherein the quantity of every article is to be specified. Two of the principal officers present at such accident are to certify that it did happen; and, if the quantity of stores lost be considerable, the quantity remaining is to be ascertained by survey.

5. If stores of any description be lost or damaged through neglect, or by the misconduct of any officer or other person, the officer having the charge of such stores is to report such misconduct or neglect to the captain, that the value of the stores may be charged against the wages of the delinquent.

6. Every officer shall be responsible for the conduct of his yeoman. He is most carefully to avoid the setting down of any stores as expended which have not been used; or the stating them as having been expended for any other purposes than those to which they were actually applied.

7. Every officer shall be responsible for any errors he makes in his accounts; and he shall pay out of his wages the full value of all stores not properly accounted for, or improperly expended; unless he shall produce an order from the captain to expend them in a manner contrary to the regulations contained in these instructions, and the established practice of the service.

8. Officers are not to suffer the yeomen to take stores from the store rooms without their express order. They are frequently to examine the quantity remaining; and if they have doubts of its being as great as it ought to be, they are to apply for a survey thereon.

9. When they are supplied with stores by other officers, whether of the same ship or of any other, they are to charge themselves with such stores, and are to mention their having done so in the receipt they give for them.

10. One officer shall not supply another with stores, nor lend any, without an order in writing from the captain; and when he does supply or lend them, he is to demand a receipt, in which the quantity of every article is to be written in words at length, and in which is to be mentioned by whose order they were supplied; and he is also to give under his hand, to the officer supplied, a voucher of delivery, specifying the stores as particularly as in the receipt.

11. Officers when appropriating rope, canvass, or any other article to use, are to be very attentive to conform to the established length and other dimensions of whatever it may be intended to make.

12. When they convert stores to any other use than that for which they were originally intended, they are to enter them in their accounts, as having been so converted, and are to charge themselves with whatever they convert them into.

13. When masts, sails, colors, or other stores are blown away or lost, they are to be very particular in the quantity they expend in that manner, as they will probably be required to make oath to the truth of that part of their accounts.

14. When stores are damaged or worn out, the officer who has the charge of them is to apply to the captain to have them surveyed; and, after they are surveyed, he is to be careful to apply them to whatever use the surveying officers shall appoint, charging himself with those articles into which he may be directed to convert them.

15. They are to visit their store rooms very frequently, to see that they are kept clean, that they are well aired, and that the stores are so arranged as to admit of their being easily got at when wanted.

16. They are never to carry, nor suffer others to carry lights in their store rooms, except in good lanterns; the doors of which are never to be opened in the store rooms.

17. They are strictly charged not to put into the magazine, the wings, or any of the store rooms, any wine or spirituous liquors; nor to keep any quantity in their cabins, except such as the captain shall expressly permit them to keep there.

18. When the ship is to be dismantled, either for the purpose of being refitted or paid off, they are to be particularly careful in preventing their stores, rigging, &c. from being cut, or in any way damaged; they are to see that all the stores they send from the ship are tallied, and very carefully put into the boats or vessels which are to carry them; and to take every possible precaution to prevent their receiving damage on their way to the store houses.

19. When a warrant officer is about to be removed from a ship, or when he wishes to pass his accounts, which he will be allowed to do at the expiration of every twelve calendar months, he is to apply to the captain for a survey on his stores, who will obtain from his commanding officer an order for that purpose; or if he should have no immediate commanding officer, the captain is himself to order the survey, that the quantity of stores remaining on board may be correctly ascertained.

20. When a warrant officer dies, the captain is immediately to apply to the commanding officer present to order, or if the ship be alone, he is himself to order, a survey on the stores remaining on board; one copy of the report of such survey is to be sealed up with the papers of the deceased officer; and another copy is to be delivered to his successor to be considered as his first charge.

21. As all warrant officers may, at times, be called to survey stores, they are strictly charged to perform that duty with the utmost attention; and to make all their reports with the strictest truth and impartiality, so that, when called on, they may be able, conscientiously, to make oath to the correctness of the report they have made.

22. When ordered to survey stores represented as being unfit for service, they are to examine every part of them very carefully, and if they find them unfit for the service for which they were originally intended, they are to point out, in their report, any other service to which they may be appropriated.

23. When ordered to survey stores for the purpose of ascertaining their quantity, whether to enable the officer in whose charge they are placed to pass his accounts, or to transfer them from one officer to another, they are not to take any account of them from the officer who has charge of them, but, as far as it shall be possible for them to do so, they are, themselves, to ascertain their real quantity.

FOR THE GUNNER.

1. The gunner, having received directions for that purpose from the captain, is to inform the officer having charge of ordnance when the ship will be ready to receive her guns; he is to attend to receive them on board, and to see that every gun is put into its proper carriage, and placed in its proper port; No. 1, being the foremost gun on the larboard side, and No. 2, the foremost gun on the starboard side on each deck.

2. He is, whenever other duties will admit of it, to employ his mates and the men of his crew in fitting the breechings and tackles, that they may be ready for the guns when they are carried on board.

3. He is to examine very carefully into the state of the magazine, that he may be certain of its being properly fitted, and perfectly dry, before the powder is carried on board, but if he should find any appearance of dampness, he is to report it to the captain that it may be properly dried.

4. He is to inform the captain when the powder will be ready to be sent on board, that the fire in the galley may be put out, before the vessel which carries it is suffered to come along side. While the powder is taking into the ship, no candles are to be kept lighted, except those in the light room; nor is any man to be allowed to smoke tobacco. As soon as the whole is stored in the magazine, the gunner is to see the doors, the light room, and the scuttle carefully secured, and is to deliver the keys to the captain, or to such other officer as he shall appoint to take care of them.

5. He is never to go into the magazine without being ordered to go there. He is never to allow the doors of the magazine to be opened by any but himself; he is not to open them until the proper officer is in the light room; and he is to be very careful in observing that the men who go into the magazine have not about them any thing which can strike fire.

6. He is never to keep any quantity of powder in any other part of the ship than the magazine, except that which the captain shall order to be kept in the powder boxes, or powder horns on deck; and when he delivers cartridges from the magazine, he is to be very particular that they are in cases properly shut. And whenever it may be necessary to remove powder from the ship, he is to use the utmost caution that all the passages to the magazine may be wetted, so that accidents may be prevented.

7. He is to turn the barrels of powder once at least in every three months to prevent the separation of the nitre from the other ingredients of the powder; he is also to examine frequently the barrels, and if he finds any of them defective, he is to remove the powder into some of the barrels which have been emptied. He is frequently to examine the cartridges which are filled, that he may remove the powder from any of them which he finds defective.

8. When powder of various qualities shall be sent on board, he is to be very attentive in using them in the order which shall be prescribed.

9. When any extra quantities of stores or ammunition is supplied for foreign service, he is to be careful to use those first which have been the longest time on board, unless he shall receive particular directions to the contrary.

10. He is frequently to examine into the state of the guns, their locks and carriages, that they may be immediately repaired, or exchanged if found defective; and he is frequently to examine the musketry, and all the other small arms, to see that they are kept clean and in every respect fit for service.

11. He is to be attentive in keeping the shot racks full of shot, the powder horns and boxes of priming tubs full, and a sufficient quantity of matches primed and ready for being lighted at the shortest notice.

12. Guns received from the ordnance stores shall be sealed before they are boarded for service, and if it shall be necessary to seal them at any other time, the gunner shall represent it to the captain, who is to give him an order for that purpose, in which the cause of its being done is to be particularly specified.

13. When a ship is preparing for battle, he is to be particularly attentive to see that all the quarters are supplied with every thing necessary for the service of the guns, the boarders, firemen, &c.; he is to see all the screens thoroughly wetted, and hung round the hatchways, and from them to the magazine, before he opens the magazine doors.

14. He is, during an action, to take all opportunities of filling powder, that there may be no cessation of firing for want of ammunition; and he is to be attentive to send out cartridges, with the quantity of powder reduced or increased as the captain shall have directed.

15. After an engagement, he is to apply to the captain for a survey on the powder, shot, and other stores remaining under his charge, that the quantity expended in the engagement may be ascertained.

16. He is to be careful in keeping the boxes of hand grenades and grape shot in dry places, and to expose frequently the grape shot to the sun and wind, to prevent the bags from being mildewed; he is never to start the hand grenades, but is to return those which are not used in the boxes in which he received them.

17. He is never to allow any match to be burnt in the day, nor more than two lengths at the same time in the night, without being ordered to do so by the captain. When a match is burning, it is always to hang over water in tubs, and the gunner's mate of the watch is to attend to it.

18. If a detachment of seamen, or marines, shall, at any time, be sent from the ship, the gunner is to make out an inventory of the arms, ammunition, and stores, which are sent with it, which is to be signed by the officer appointed to command the detachment, and to be witnessed by the captain's clerk, who is to examine the quantity supplied; and, on the return of the detachment, the gunner, in presence of the officer who commanded it, and the captain's clerk, is to examine the arms, &c. which are brought back, and to report the deficiency, if any, in each article, to the captain, who, from the manner in which the officer shall account for such deficiency, will determine whether it be proper to allow the articles to be expended by the gunner in his accounts, or charged against the pay of the officer, or any person under him; by whose carelessness or misconduct the whole, or any part of them, was lost or destroyed.

19. When a salute is to be fired, the gunner is to be very attentive to take such precautions in drawing the guns as may ensure there not being a shot in any of them; and, if vessels of any description be so near as to risk their being damaged by the wads, he is to draw them also; and he is to lay up and point the guns, so as to prevent their doing any mischief, although a wad or shot, notwithstanding the precautions he has taken, may have been left in one of them.

20. He is to take every possible precaution to prevent any ball cartridges being given to the men among the blank cartridges issued to exercise.

21. Whenever he shall be directed to strike any guns into the hold, he is to pay them all over with a thick coat of warm tar and tallow mixed together; and, having washed the bore of the gun with fresh water, and very carefully sponged and dried the inside, he is to put a good full wad, dipped in the same mixture, about a foot within the muzzle, and to see that the tompon is well driven in, and surrounded with putty, and he is to drive a cork tight into the touch-hole, and to secure it there.

22. He is to be extremely attentive in examining all the guns; in seeing them carefully drawn and thoroughly sponged before they are returned into store; he is also to examine very carefully the magazine, to see that no loose powder remains in any part of it after the powder has been returned into store; and is also to be careful that there are not any cartridges left in the cartridge boxes when they are sent on shore.

23. He is to be very attentive to the conduct of the armorer and his mates; to see that they discharge their duty properly; that they keep the muskets, and other small arms, clean and in good order; always repairing them when they are defective, and not suffering them, through neglect, to become too bad to be repaired.

24. If, from any extraordinary circumstances, when a ship is on a foreign station, the small arms should be so damaged that they cannot be cleaned or repaired by the armorer, the gunner is to represent their condition to the captain, who is to direct a lieutenant and the master to survey them; and, if the report shall confirm the representation of the gunner, he is to apply to the commander-in-chief to give orders for their being repaired; but, if the commander-in-chief be not present, the captain is himself to get them repaired by workmen on shore, being very careful not to pay more for their repairs than the established price of the country. The gunner is to attend frequently, and the armorer constantly, to see that the work is properly done.

25. As the brass sheaves and iron pins of blocks for gun-tackles, from being much exposed to salt water, are frequently set fast with rust, he is to be particularly attentive, when this is the case, to cause the iron pins to be knocked out, and to be oiled or greased.

SURVEYS.

1. All applications for surveys shall be made in writing to the captain, by the officer who has charge of the provisions or stores to be surveyed, and shall be transmitted by the captain to the flag officer commanding the division of the fleet or squadron to which he belongs, who is to order the surveys applied for to be taken, except in cases which the commander-in-chief shall reserve for his particular directions; but captains, not serving in a fleet or squadron, or if serving in a fleet or squadron, not being at the time in company with the flag officer commanding the fleet or squadron, or division to which they belong, are to transmit such applications to the senior officer present.

2. The officers employed on surveys are to be, one master, and two officers of the class of him whose stores are to be surveyed; they are all, if possible, to belong to one other ships than that to which the stores to be surveyed belong; but the master of that ship, and the officer who has charge of these stores, are to be present, to give what information may be required, and to prevent partiality or injustice, or to represent it to the captain, if they perceive without being able to prevent it. But if there be a necessity for an immediate survey, when there are not a sufficient number of ships present to furnish, or when the sickness of their officers prevents other ships from furnishing the number of officers required, the master of the ship may be ordered to assist at such survey; but if the ship be alone, such survey is to be taken by one of the lieutenants, the master, and one of the master's mates; but in this case, a survey shall be taken again, if other ships join company before the surveyed stores, &c. have been disposed of.

3. The report made by officers appointed to survey stores, &c. is to specify by whose order it is taken, and for what purpose; what are the articles ordered to be surveyed; the quantity and quality of those articles remaining on board, or the actual state of any which shall be particularly represented as deficient or defective; the number or quantity is always to be written in words at length; and if any stores complained of be found to be no longer fit for their proper use, the report is to specify whether they be fit for any other, and for what, or whether they be no longer fit for any purpose whatever.

4. If any appearance of neglect shall be discovered by the surveying officers, it is to be particularly noticed in their report, whether it be the officer who has charge of the stores, or any other person who may have been guilty of it; but if any appearance of fraud be discovered, the surveying officers are not only to notice it in their report, but they are also to deliver to the captain a separate report, stating their suspicions of such fraud having been committed, and their reasons for suspecting it.

5. There are to be three copies of all reports of stores, provisions, &c., which are surveyed, each signed by all the surveying officers; one of which reports, written on the back of the order for survey, is to be delivered to the officer who has charge of the stores, &c. which are surveyed; one other copy to the captain of the ship to which the stores belong, and the other copy is to be delivered, by the captain, to the officer by whose order the survey was taken. But when the stores, &c. surveyed, are to be transferred to the charge of another officer, a fourth copy, signed in the same manner, is to be delivered to the officer to whose charge the stores, &c. are to be transferred.

6. The surveying officers are not to direct any stores or provisions to be thrown overboard, except such as by their putrid state may be prejudicial to the health of the ship's company. Whatever they find in such state, they are themselves to see thrown into the sea before they leave the ship, and they are to mention their having done so in

their report. All other stores, not convertible to any use, they are to direct the officer, having charge of them, to return into store, whenever the ship shall enter a port where there is a storekeeper, or other officer authorized to receive them.

7. If any officer shall wilfully sign any false report of the quantity or condition of the stores or provisions he is ordered to survey, or shall discover any fraudulent practices in the management of such stores or provisions without making proper mention of them in his report; or if any person shall give any false account of stores or provisions, by which the surveying officers may be deceived, and be led to make out an improper report, he is to be immediately suspended, and his misconduct reported to the commander-in-chief, or to the Secretary of the Navy Department, that he may be tried by a court martial.

8. Surgeon's instruments, medicines, and necessaries for the sick, are to be surveyed by the physician of the fleet or squadron, and two surgeons, or by three surgeons, as the commander-in-chief shall direct, who are to be very particular in specifying the quantity, quality, and condition of each of them. If among the medicines they should find any not fit to be administered, they are to see them thrown overboard. If there shall be a necessity for a survey, when three surgeons cannot be obtained, the commanding officer present may order a surgeon's first assistant to attend as one of the surveying officers.

CONVOYS.

1. The commander of a squadron, or of a single ship, appointed to convoy the trade of the United States, must give the proper and necessary instructions, in writing, from under his own hand, to all the masters of such ships and vessels as he shall be directed to take under his protection.

2. He is to take an exact list, in due form, of all the ships and vessels under his convoy, specifying their respective names, and send a copy thereof to the Secretary of the Navy Department before he sails.

3. He is not, in time of actual war, to chase out of sight of his convoy, but on the contrary to be watchful of and defend it from attack or surprise; and in case any of the ships or vessels should be distressed, he is to afford them all necessary assistance. He is also to extend the same protection to his convoy when the United States are not engaged in war.

4. If the master of a ship shall misbehave, by delaying the convoy, abandoning or disobeying the established instructions, the commander is to report him, with a narrative of the facts, to the Secretary of the Navy Department, by the first opportunity.

5. The commander is to carry a top-light in the night to prevent the separation of the convoy, unless on particular occasions he shall deem it improper.

6. He may order his signals to be repeated by as many ships under his command as he may think fit.

7. When different convoys set sail at the same time, or join at sea, they are to keep together so long as their courses lay the same way; and when this happens, the eldest commander shall command in the first post, the next oldest in the second post, and so on, according to seniority.

8. Commanders of different convoys are to wear the lights of their respective posts, and repeat the signals in order, as is usual in such cases.

MASTER-AT-ARMS AND SHIP'S CORPORAL.

1. They are daily, by turns, as the captain shall direct, to exercise the ship's company.

2. To see that the fire and candles be put out in season, and according to the captain's order.

3. To visit all vessels coming to the ship, and prevent the seamen from leaving the ship without permission.

4. To acquaint the officer of the watch with all irregularities in the ship, as they shall come to his knowledge.

5. The corporal is to act in subordination to the master-at-arms, and to perform the same duty under him which he is to perform himself in cases where a master-at-arms is not allowed.

MIDSHIPMEN.

1. No particular duties can be assigned to this class of officers.

2. They are promptly and faithfully to execute all the orders for the public service which they shall receive from their commanding officers.

3. The commanding officers will consider the midshipmen as a class of officers meriting, in a special degree, their fostering care; they will see, therefore, that the schoolmaster performs his duty towards them, by diligently and faithfully instructing him in those sciences appertaining to their profession, and that he use his utmost care to render them proficient therein.

4. Midshipmen are to keep regular journals, and deliver them to the commanding officer, at the stated periods, in due form.

5. They are to consider it as the duty they owe to their country to employ a due portion of their time in the study of naval tactics, and in acquiring a thorough and extensive knowledge of all the various duties to be performed on board of a ship of war.

COOK.

1. He is to have the charge of the steep tub, and is answerable for the meat put therein.

2. He is to see the meat duly watered, and the provisions carefully and cleanly boiled, and delivered to the men according to the practice of the navy.

3. In stormy weather he is to secure the steep tub, that it may not be washed overboard; but if it should be inevitably lost, the captain must certify as to the loss, and the cook is to make oath as to the number of pieces so lost, that it may be allowed in the purser's account.

CHAPLAIN.

1. He is to read prayers at stated periods; perform all funeral ceremonies over such persons as may die in the service, in the vessel to which he belongs; or, if directed by the commanding officer, over any person that may die in any other public vessel.

2. He shall perform the duty of a schoolmaster, and, to that end, he shall instruct the midshipmen and volunteers in writing, arithmetic, and navigation, and in whatsoever may contribute to render them proficient. He is likewise to teach the other youths of the ship, according to such orders as he shall receive from the captain. He is to be diligent in his office.

3. He shall, when it is required of him, perform the duties of secretary to a commodore.

NAVY AGENTS.

1. The navy agent, being the person appointed to purchase supplies for the service of the navy, pay bills, and sell off surplus or useless stores, is required to observe and abide by the following regulations, stipulations, and instructions, as well as to such instructions of other officers detailed in this volume, as have a bearing upon the duties assigned to his charge; and he is not to expect that any irregularity or omission in the filling up of the several forms referred to herein for the keeping of his accounts will pass unnoticed.

2. All supplies for ships in port, and not under the control of the commandant of the navy yard, are to be furnished by the agent, on the requisition of their captains or commanders, countersigned by the commanding officer afloat, provided such supplies cannot be furnished from the navy stores.

3. All supplies for ships repairing at the navy yard, or in ordinary, are to be furnished by the agent, on the requisition of the commandant of the yard.

4. Stores, provisions, and supplies of every description purchased by an agent for the naval service of the United States are to be obtained at the lowest rates, and of the best quality; and, upon the presentment of his accounts to the Treasury Department, he must produce such account, attested by the signature of the commanding officer of the station, in proof of its accuracy. He must also produce, at the same time, the different requisitions which were made upon him for supplies, signed and countersigned as directed in the second article, in proof of his authority for purchases; and, lastly, he must exhibit the receipts of the respective officers to whom the supplies were delivered. Without each and every of these documents his account shall not be settled, nor shall he receive a credit for any amount not vouched for in the foregoing manner.

5. All articles sent on board ships of the United States by an agent are to be delivered to the commanding officer, or such person as he may authorize to receive them; otherwise their delivery shall be at the risk of the agent.

6. Provisions and stores purchased by an agent are to be surveyed when received on board; and if it appears, by the report of the surveying officers, that they are unfit for the service, they are to be returned to the agent, and, on settlement, the captain is to refuse to admit them in the account against the ship, and to transmit to the Secretary of the Navy Department a duplicate of the report of survey, accompanied by such remarks as the case may make necessary.

7. Every cask and package of provisions or supplies, (bread excepted,) wet or dry, must be numbered, and have the contents thereof distinctly marked on it as to quantity and kind, as well as the time when, place where, and by whom purchased or furnished. The casks are to be marked on the head, and the packages on some proper and conspicuous part of them.

8. Every navy agent must forward his accounts, with the necessary vouchers, for settlement, to the Fourth Auditor, quarterly, to wit, on the 1st day of January, April, July, and October; in which must be distinctly stated the moneys expended and articles furnished for each ship, for the navy or dock-yard, and for other purposes. He will also be required to exhibit an account of the articles purchased and remaining in his possession, of those delivered over for sale, a statement of the sale or sales of old or unserviceable articles, and a particular account of the moneys unexpended and remaining in his hands.

9. No moneys are to be paid over by an agent, nor purchases or sales made, nor any expenses incurred, except with the knowledge and sanction of the commanding officer of the station, or under particular instructions from the Secretary of the Navy Department, or of the Navy Commissioners.

10. Every agent who shall for two successive months neglect to send in his accounts for settlement, as required in Article 8, unless specially exempted by the Secretary of the Navy Department, shall from thenceforth not be allowed any of the emoluments appertaining to the office he holds; and if he neglect for three successive months to send them in, his powers as agent shall totally cease, and his commission be null and void.

11. Agents shall not be concerned, directly or indirectly, in any supplies which it may be their duty to furnish the navy; and if it shall be found that they have participated in the profits of any such supplies, they shall be dismissed from their office, and will be prosecuted to the amount of their bonds.

12. Navy agents shall not advance money to pursers, or other officers of a ship, when destined on service, unless by and with the previous sanction of the Secretary of the Navy, by whom the amount shall be limited.

13. Navy agents shall transmit, quarterly, to the Board of Navy Commissioners, namely, on the 1st of January, 1st of April, 1st of July, and 1st of October of each year, a statement of all purchases turned into store, accompanied by the storekeeper's receipts for the same.

BOATSWAIN.

1. When a ship of the United States is commissioned, the boatswain is to exert himself to get on board all the stores committed to his charge as expeditiously as possible. He is to examine them very carefully, and to inspect very minutely all rigging fitted in the dock-yard, and report to the captain such defects as he may discover in them.

2. When fitting out a ship, and at all other times when it may be necessary to cut out rigging, he is to be extremely careful to cut every rope of the precise length allowed by the establishment, unless some particular circumstance appertaining to the ship shall make it necessary to alter it; in which case, he is to inform the captain, and to receive his orders for such alterations.

3. He is once, at least, every day to examine the state of the rigging, to discover as soon as possible any part which may be chafed or likely to give way, that it may be repaired without loss of time. He is, at all times, to be very careful that the anchors, booms, and boats, be properly secured.

4. He is to be very particular in having ready, at all times, a sufficient number of mats, plats, nippers, points, and gaskets, that no delay may be experienced when they are wanted.

5. He is to be very attentive in observing, while junk is working up, that every part of it is converted to all such purposes as it can possibly be made applicable to.

6. He is to be very frequently upon deck during the day, and at all times, both by day and night, when any duty shall require all hands to be employed. He is, with his mates, to see that the men go quickly upon deck when called, and that, when there, they perform their duty with alacrity, and without noise or confusion.

7. When the ship is preparing for battle, he is to be very particular in seeing that every thing necessary for repairing the rigging is in its proper place, that the men stationed for that service may know where to find immediately whatever may be wanted.

8. When the ship is ordered to be paid off, he is to be very attentive to prevent any of the rigging being damaged or cut, and he is to see every part of it properly tallied and stopped together before he returns it in store.

SAILMAKER.

1. The sailmaker is very carefully to examine the sails when they are received on board, and to inform the boatswain if he discover any defects in them, or any mistake in their number or dimensions. He is also to examine very carefully whether they are perfectly dry when they are put into the sail room, and if any part of them be damp, the first proper opportunity must be taken to dry them.

2. He is to be attentive to see all the sails properly tallied, and so disposed of in the sail rooms as to enable him to find immediately any that may be wanted.

3. He is to inspect frequently the condition of the sails in the sail room, to see that they are not injured by leaks or vermin, and he is to report to the boatswain whenever it shall be necessary to have them taken upon deck to be dried. He is to repair them whenever they require it, and to use his best endeavors to keep them always fit for service.

CARPENTER.

1. When a ship of the United States is ordered to be commissioned, the carpenter is to inspect very minutely into the state of the masts and yards, as well those which may be in store in the dock-yard, as those on board, to insure their being perfectly sound and in good order. He is also to examine every part of the hull, the magazine, store rooms, and cabins; and he is to report to the master shipwright at the port any defect which he may discover in them.

2. He is to make every possible exertion in getting his stores on board, and he is to be very particular in observing that they are all perfectly good, and that he receives his full allowance of every article.

3. When the ship is at sea he is, once at least every day, to examine into the state of the masts and yards, and to report to the officer of the watch when he discovers any of them to be sprung, or to be in any way defective.

4. In ships of two decks he is frequently to examine the lower deck ports, to see that they are properly lined; and when they are barred in, he and his mates are frequently to see that they are all properly secured.

5. He is to be particularly careful in keeping the pumps in good order, always having at hand whatever may be necessary to repair them.

6. He is to keep the boats, ladders, and gratings, in as good condition as possible, always repairing every damage they may sustain, as soon as he discovers it, that, when the ship shall return into port, the workmen of the dock-yard may have only the material defects of the ship to repair.

7. He is to keep always ready for immediate use shot plugs, and every other article necessary for stopping shot holes, and repairing other damages in battle; and, during the action, he is, with the part of his crew appointed to assist him, to be continually going about the wings and passages, and the hold, to discover where shot may have passed through, that he may plug up the holes, and stop the leaks as expeditiously as possible.

8. If he should at any time find stores, or any other articles stowed in the wings or passages, in such a manner as might interfere with his working, if required to cut out shot or to stop leaks during an action, he is to report it to the captain that they may be removed.

9. When the ship is going into port he is to prepare as correct an account as possible of the defects of the hull, masts, and yards, and of the repairs she may stand in need of, of which he is to deliver to the captain two copies; one of which, when signed by the captain, he is to deliver to the master shipwright of the dock-yard. In making this report he is to be very careful not to exaggerate any defect, by which there may appear to be a greater necessity for the ship being repaired than does really exist, nor to conceal any which may really require to be repaired.

10. He is to be particularly attentive in observing the exertions, and examining the works of artificers sent from other ships to assist in repairing the ship he belongs to; and is to report to the captain when he discovers any who, by their want of skill, or want of diligence, shall appear to be undeserving of the additional wages appointed to be paid them.

11. Whenever the ship shall be for any purpose ordered to be heeled, he is to see that all the pumps are in good order, and ready to be worked. He is to station one of his mates to observe, by sounding the well, whether any material increase of water is occasioned; he is to attend to this frequently himself, and to observe, also, whether there be any extraordinary appearance of water in the hold; and in two-decked ships he is to be particularly attentive in seeing that the lower deck ports are well secured.

THE SURGEON OF THE FLEET, OR HOSPITAL SURGEON.

1. The surgeon of the fleet is to be on board the hospital ship, if there be one in the squadron; if there be not, he is to be on board such ship, or at such place on shore, as the commander-in-chief shall direct. He is to visit the patients regularly morning and evening, and oftener, when the nature and urgency of their complaints may render it necessary.

2. All surgeons, surgeons' assistants, and other persons appointed to attend the sick, shall be under the orders of the surgeon of the fleet, and the arrangement of every thing relating to the part of the ship appropriated for the reception of the sick shall be under his direction. He is to propose to the captain every thing which he may think likely to be of service to the sick, to increase their comforts, or to accelerate their cure; and, as far as circumstances may admit, the captain is to comply with his proposals.

3. If any men be sent to the hospital ship with such hurts or diseases as might be cured without danger or inconvenience in the ship they belonged to, he is to refuse to receive them, and to desire the officer who conducts them to take them back to their ship.

4. He is to visit the ships of the squadron frequently, and inquire into the health of the ship's companies, and the treatment of the sick; and, where he finds them sickly, he is to visit them as often as circumstances will admit, to discover, if possible, the cause of their sickness, and to advise such measures as may remove it.

5. He is, whenever he shall see occasion, to inquire into the practice of the surgeon of the ship he visits, and his manner of treating the disease of the men under his care, and to give him such directions as he may deem necessary.

6. He is, whenever he may think it necessary, to examine the instruments, medicines, and necessaries, on board any ship; and, if he finds them bad in quality, or deficient in quantity, he is to report the same to the commander-in-chief, that he may take such measures as circumstances may require.

7. He is, once every week at least, if weather and other circumstances will admit of it, to report to the commander-in-chief the state of the sick in the hospital ship, and, as far as he shall have been able to obtain information, the general state of the sick in the fleet. He is to specify particularly in his reports, those ships which, from the unhealthiness of their crews, appear to be least fit for active service, and most in want of refreshments; and he is to point out whatever he may think necessary for the recovery of the health of the crew of a ship particularly sickly, or for the preservation of the health of the fleet in general. He shall report quarterly to the Navy Department. These reports to conform to form O.

8. He is to consider the second article of the regulations relative to naval surgeons and their assistants, as applicable to him, and is to govern himself accordingly, observing the forms G, H, and I.

9. He shall keep a journal, as per form P; copy of which he shall, once a year, or oftener, if required, transmit to the Secretary of the Navy.

10. On discharging any person from hospital, he shall give a certificate according to form R, upon the back of form Q, stating when he was received, when discharged, the amount received by him during the time he was in hospital, &c.

HOSPITAL SHIP.

1. The captain of an hospital ship is to be particularly attentive to see that the ship is kept perfectly clean, especially that part which is appropriated to the sick. He is to give strict orders that the buckets used by the sick should be frequently emptied and washed, and that the dressings of wounds or sores should be thrown overboard as soon as they are taken off.

2. He is to attend to all requisitions or proposals of the hospital surgeon, and, as far as circumstances may admit, to do whatever he may recommend for the comfort and convenience of the sick. The best provisions on board must always be appropriated to the use of the sick.

3. He is to be careful in preventing wine or spirituous liquors being carried on board without his express permission.

4. He is to keep the station assigned him in the fleet, particularly when he is directed to attend to a ship the crew of which is sickly, and may frequently require the assistance of the hospital surgeon.

5. In addition to the complement of an hospital ship, there shall be borne, as attendants on the sick, on a list of supernumeraries for wages and victuals, a surgeon, two, or, if necessary, three assistant surgeons, six landmen as nurses, a baker, four washermen, a servant to the hospital surgeon, and a servant to the surgeon's assistants.

6. The captain of the hospital ship, or the captain of any other ship in which the hospital surgeon shall be embarked, is to furnish him with a proper boat, whenever he shall think it necessary to visit any ship of the fleet, or to carry his returns to the commander-in-chief.

15th CONGRESS.]

No. 163.

[2d Session.]

NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, NOVEMBER 23, 1818.

NAVY DEPARTMENT, *November 21, 1818.*

SIR:

In obedience to a resolution of the House of Representatives, passed on the 8th of April, 1818, I have the honor to report upon "the state and condition of the Navy Pension Fund, the sources from whence it arises, its amount, the manner in which it is collected, the sums received yearly from each State since the 20th of June, 1812, and copies of the correspondence with this Department in relation thereto."

The documents herewith, marked A, B, C, and D, are respectively submitted with a view to exhibit the most material facts and causes of complaint, and the proceedings thereon had to enforce performance." Papers A, No. 1 to 28, are copies of letters to the district attorneys, marshals, and others, relative to the Navy Pension Fund, from 30th March, 1813, to the 30th April, 1818, inclusively, selected from the records, as most relevant to the objects of inquiry into the resolution.

Papers B, No. 1 to 16, are originals, and copies of letters and statements received from district attorneys, marshals, and others, in reply to the preceding, and explanatory of some of the cases alluded to. It will appear by this correspondence that repeated efforts have been made to bring the officers of the District Courts to account for the proceeds of prize causes, and to procure from them statements of charges, costs, and fees, and accounts of sales with deductions, and amount deposited to credit of the fund.

Papers C, No. 1 to 33, relate to the proceedings of the United States' District Court of New York, and afford a partial view of the difficulties which the commissioners of the Navy Pension Fund have experienced in obtaining legal returns of proceedings, and payment of proceeds into the United States' treasury, for the benefit of the fund; in some instances, the first information received of the condemnation of prizes was through the agent of the captors, to whom the moiety had been paid by order of court.

Papers D, No. 1 to 3, are reports of the Fourth Auditor of the Treasury.

To the several subjects of the resolution, I respectfully state:

1st. That the state and condition of the Navy Pension Fund are exhibited in the Fourth Auditor's reports, marked D, numbered 1, 2, and 3, by which it appears that the total amount at this time of United States' stock, and bank stock, is eight hundred and thirty-nine thousand three hundred and forty-four dollars and sixty cents, bearing an annual interest of fifty-five thousand dollars, which, after paying the annual pensions to the amount of thirty-five thousand dollars, leaves a balance of twenty thousand dollars; in addition to which, there is in the hands of the treasurer, to be invested in stock, the further sum of thirty thousand dollars, part of which is from the late reimbursement of Louisiana stock. The balance, with such sums as are received in the course of the year, have been applied to the purchase of the additional stock, from time to time, for the benefit of the fund, while the pensioners increase in nearly the same ratio as the former pensioners decrease by deaths.

2d. The sources from whence the Navy Pension Fund arises are the moiety of all captures in time of war, when the force was inferior to the capturing ship, according to the act of congress for the better government of the navy, pages 360 and 361, volume 3, new edition of United States' Laws. And by the same act, the management of said fund was placed under the direction of the Secretary of the Navy, Secretary of the Treasury, and Secretary of War, for the time being.

The act of 26th March, 1804, provides further for the disbursement and accountability, and for defining the powers of the commissioners, &c.

3d. The manner in which it has been collected will appear by the documents and correspondence herewith, and those heretofore laid before Congress, which induced the passing of the act of 16th April, 1816.

4th. The specific sums received yearly from each State, from and after the 20th of June, 1812, will appear by the Fourth Auditor's reports, marked D, numbered 2 and 3, which include, also, the particular cases from which they arise. These documents will further exhibit the neglects and defaults in the performance of duties in regard to the said fund; and the correspondence had with the officers of the District Courts explains the proceedings of the commissioners to enforce performance, at different times, so far as the laws authorized them so to do.

The commissioners of the Navy Pension Fund have usually met once in each year since the commencement of the late war, June, 1812. During the war, it was found that the existing laws had not sufficiently provided for the accountability and due returns of prize causes, and payment of proceeds, after decisions had thereon in the United States' District Courts; payments, in many instances, had been delayed, and, when made, were not accompanied with accounts of charges on sales, or of costs and fees taxed. So soon as the return of peace afforded time for consideration upon the subject, the draught of a bill was prepared, "in addition to the act of 26th March, 1804," and transmitted to the chairman of the Naval Committee of the House, by whom it was laid before Congress, and passed into a law on the 16th of April, 1816. Previously to this last mentioned act, the commissioners of the Navy Pension Fund had no authority to demand the payment of the moiety of prizes accruing to the fund, and could not enforce performance, as no penalties were annexed to non-compliance, even with their requests. The subject, generally, has been submitted to Congress in the reports made in the years 1814, '15, '16, and '17, with copies of all the material evidences of neglect, and of correspondence thereon, particularly in the report made 5th January, 1816, to both branches of the Legislature; to which I respectfully refer for corroborative explanations of the present statement. [See No. 134.]

All which is respectfully submitted.

JOHN C. CALHOUN, *Acting Secretary of the Navy.*

To the Honorable the SPEAKER of the House of Representatives.

A. No. 1.

NAVY DEPARTMENT, *March 30, 1813.*

(Circular.)

SIR:

As Secretary to the board of commissioners of the Navy Pension Fund, I have the honor to transmit to you, a copy of a resolution passed by that Board on the 24th current, and to request your compliance therewith.

I am, very respectfully, &c.

BENJAMIN HOMANS.

At a meeting of the honorable commissioners of the Navy Pension Fund, on the 24th day of March, 1813, it was resolved, that the Secretary of the Board be directed to write a circular letter to the district attorneys and marshals, requesting them to transmit to the Secretary of the Navy, statements of the condemnations of all vessels, money, and merchandise, which have been, or may be captured by public vessels of the United States, and of the amount payable to the commissioners of the Navy Pension Fund, and that they pay the proceeds into a bank, in which public moneys are deposited, to the credit of the Treasurer of the United States, in conformity with the first section of the act in relation to the *Navy Pension Fund*, passed March 26, 1804.

Attest:

BENJAMIN HOMANS, *Secretary, &c.*

NATHAN SANFORD, Esq. *District Attorney,*
PETER CURTENIUS, Esq. *Marshal, New York.*

A. No. 2.

(Circular.)

NAVY DEPARTMENT, *September 16, 1813.*

SIR:

On the 30th of March last, the Secretary of the board of commissioners of the Navy Pension Fund, by order, addressed to you a circular letter, with a copy of a resolution of the said Board, to which no reply has been received; and as large sums are still unaccounted for by the marshals and officers of the courts of the United States, it is extremely desirable to draw into the treasury the moneys arising from this source, in order that the same may be immediately invested in a new loan, which will close on the 25th instant. You are, therefore, earnestly solicited to comply with the requisition of the said resolution of the board of commissioners.

I am, respectfully, your obedient servant,

W. JONES.

NATHAN SANFORD, *United States District Attorney, New York.*

A. No. 3. [See No. 134.]

A. No. 4. [See No. 134.]

A. No. 5. [See No. 134.]

A. No. 6. [See No. 134.]

A. No. 7.

NAVY DEPARTMENT, *April 23, 1814.*

SIR:

In pursuance of the notice from the Treasury Department, inviting proposals for the loan of ten millions of dollars in part of the loan authorized by an act of Congress, passed on the 24th of last month, I hereby, in behalf of the commissioners of the Navy Pension Fund, propose to loan the sum of one hundred and fifty thousand dollars on such terms as shall be offered and accepted by the Secretary of the Treasury.

As this sum has been reserved for the purpose, and is of a public nature rather to warrant the subscription to such terms as the Government shall accept of others than an offer of specific conditions, I claim the benefit of subscribing the full sum offered.

I am, very respectfully, sir, your obedient servant,

WM. JONES.

Approved,

JAMES MONROE.

The Hon. SECRETARY OF THE TREASURY.

A. No. 8.

NAVY DEPARTMENT, *August 9, 1814.*

SIR:

I have the honor to enclose to you a copy of a letter received from Commodore Rodgers, in reply to one written to him by direction of the honorable the Secretary of the Navy, relative to the proceeds of the prize brig Maria. The commissioners of the Navy Pension Fund deem it but reasonable that they should have been advised by you of this deposit in your hands, in order that the amount might have been applied to advantage.

You will please to place it in one of the banks in New York, to the credit of the Treasurer of the United States, on account of the Navy Pension Fund, and forward a duplicate receipt to this Department.

I am, sir, respectfully, &c.

BENJAMIN HOMANS, *Secretary Navy Pension Fund.*JOHN BULLUS, Esq. *Navy Agent, New York.*

A. No. 9.

NAVY DEPARTMENT, *November 4, 1814.*

SIR:

Your letter of the 21st October, with copy of account current, and letter of Mr. John A. Morton, of Bordeaux, are received; and the whole transaction of the disposition and transmission of the amount of sales of the prize brig Maria and cargo require investigation.

In the first place Commodore Rodgers could only constitute an agent for the moiety of the prize, the other moiety of which belongs to the United States Pension Fund; and the agent into whose hands the money was first paid, is accountable to the commissioners of the Navy Pension Fund for the nett sum, deducting his lawful commission. The commissions, therefore, charged by D. B. Warden, Morton and Russell, and yourself, must be refunded on the one half amount. William Lee, as consul of the United States, was the immediate agent of the Government, and was responsible only to the Government for the half proceeds of the prize; if he paid the money over without the proper authority or order of the commissioners, he did it in his own wrong, and the commissions accruing therefrom must be refunded, and accounted for to the commissioners of the Navy Pension Fund. This includes the two and a half per cent. charged by you on the remittance of that half.

I am, &c.

WILLIAM JONES.

JOHN BULLUS, Esq. *Navy Agent, New York.*

A. No. 10.

NAVY DEPARTMENT, *January 1, 1815.*

SIR:

I have received your letter of the 25th ult. in which you say the half nett proceeds, in the case of the Atlantic, alias Essex Junior, cannot at present be paid over, as distribution has not yet been made.

I now inform you that the whole amount for which that ship was sold is due to the United States, and you are required to pay the whole sum over to the credit of the Treasurer of the United States, in a bank in which public moneys are deposited. The United States purchased that ship, and the Navy Department paid Captain Porter, in 1814, twelve thousand five hundred dollars, to be distributed among the officers and crew.

You will, therefore, not pay a cent of the proceeds in court to any person but to the Treasurer of the United States.

Very respectfully, &c.

B. W. CROWNINSHIELD.

THERON RUDD, Esq. *New York.*

A. No. 11. [See No. 134.]

A. No. 12.

NAVY DEPARTMENT, *June 20, 1815.*

SIR:

I have received your letter of the 5th instant covering account of sales of brig Oscar, schooner Chatham and cargo, brig Porgey and cargo, and schooner Alliencon and cargo, with receipts from the President of the Planter's Bank for the deposit of several sums.

It is a subject of inquiry, why this money has been suffered to lay twelve months, and no account of sales rendered. The charge in gross, at St. Mary's, will not be admitted in that form: the specific cost and charges may be furnished by the clerk of the court and yourself; and a certificate of the duties paid to the collectors; the accounts will then be passed by the accountant of this Department.

You will be pleased to state the issue of the capture or detention of the ship Emperor and Experiment, and any other captures not yet accounted for; as the whole transactions of captures during the late war are under consideration, and will be examined into, by the commissioners of the Navy Pension Fund.

I am, very respectfully, &c.

B. W. CROWNINSHIELD.

JOHN EPPINGER, Esq. *Marshal Georgia, Savannah.*

A. No. 13.

NAVY DEPARTMENT, *June 24, 1814.*

SIR:

The Treasurer of the United States having been apprised of the deposite to his credit in the Planter's Bank of Savannah, on the 15th instant, of fifty-eight thousand one hundred and sixty-seven dollars and seventy cents, by the marshal of the district of Georgia, the quadruple receipt for which is now in my possession, which sum is on account of the Navy Pension Fund, I now propose to invest the amount in a loan authorized by the act of Congress of the 24th of March, 1814, on the same terms and conditions as the last sum subscribed to the said loan on account of the Navy Pension Fund.

You will therefore please to direct a certificate of six per cent. stock to be issued in the name of the commissioners of the Navy Pension Fund, for the amount to which the above mentioned sum will be entitled, and also to include the commission of one-fourth of one per cent. upon the whole amount, subscribed on behalf of the Navy Pension Fund, as well to the loan of the year 1813 as to that of the present.

I am respectfully, &c.

WILLIAM JONES.

The SECRETARY OF THE TREASURY.

Approved,

JAMES MONROE.

A. No. 14.

NAVY DEPARTMENT, *June 29, 1815.*

SIR:

I received yours of the 14th June current, with a copy of account of sales of the United States' ship Essex Junior. The items charged in the account for marshal's custody, and keeper's fees, cannot be allowed; this is the first instance since the declaration of the late war of a similar charge having been made.

The officers of the United States Navy were sufficient for the safe keeping of the ship, and a joint custody was unnecessary; the commission allowed by law is half per cent. to the marshal. You will, therefore, stand debited for fees ninety-five dollars, and extra commission charged sixty-seven dollars, making altogether one hundred and sixty-two dollars. As to the sale or rather sacrifice of the ship, that subject must be referred to the competent authority.

I have to request that the amount, as it now stands, may be paid into a bank in which public moneys are deposited, to the credit of the Treasurer of the United States.

I am, sir, respectfully, your obedient servant,

B. W. CROWNINSHIELD.

JOHN SMITH, Esq. *Marshal, New York.*

A. No. 15.

NAVY DEPARTMENT, *November 15, 1815.*

SIR:

Having written to Commodore Chauncey for information relative to captures made upon Lake Ontario by the United States' naval force under his command, he informs me that the whole was delivered to the marshal of the district of New York, and supposes that the proceeds still remain in the court.

Presuming that you act as prize agent for Commodore Chauncey, I have to request the favor of you to inform me what amount, if any, has been paid over to you, and when, and by whom; and what is the present state of the proceeds of the prizes, and total amount thereof.

I am, very respectfully, your obedient servant,

B. W. CROWNINSHIELD.

JAMES HEARD, Esq. *New York.*

A. No. 16. [See No. 134.]

A. No. 17.

(Circular.)

NAVY DEPARTMENT, *November 29, 1815.*

SIR:

Referring to a circular written to the district attorneys and marshals of the United States, on the 30th March, 1813, I have the honor to transmit you a copy of resolutions of the honorable board of commissioners of the Navy Pension Fund passed on the 28th instant.

At a meeting of the board of commissioners of the Navy Pension Fund, on the 20th November, 1815, Present, the honorable B. W. Crowninshield, Alexander J. Dallas, Wm. H. Crawford:

Resolved, That the Secretary of this Board be instructed to address a circular letter to the district attorneys and marshals of the United States, and instruct them to forward to the Secretary of the Navy a statement of all the libels and condemnations in the District Courts of the United States, of vessels, money, and merchandise, captured and seized by public vessels of the United States since the declaration of the late war of June, 1812, in order that the commissioners may know how far the proceeds thereof have been duly accounted for, and paid over to the Treasurer of the United States conformably to law.

I am, very respectfully, &c.

BENJAMIN HOMANS, *Sec. N. P. F.*

To the DISTRICT ATTORNEYS of the United States.

A. No. 18.

NAVY DEPARTMENT, *June 14, 1816.*

SIR:

I wish to call your attention to an act of Congress passed the 16th April, 1816, entitled "An act in addition to an act in relation to the Navy Pension Fund," on sections 2, 3, 4, and section 6. All the moneys accruing to the Navy Pension Fund, from the proceeds of prizes captured during the late war, are now wanted to invest in the United States' Bank stock.

I have also to request the favor of you to ascertain what kind of certificate or release the judge will require to be executed by Captain Porter, in behalf of his officers and crew, as their prize agent in the case of the Atlantic,

alias Essex Junior, amount of which was paid to Captain Porter by this Department in August, 1814, say, twelve thousand five hundred dollars, for the half, and the marshal afterwards sold the ship by order of court. You will readily perceive the importance of this subject to the United States' Pension Fund without my urging your attention further.

I am, very respectfully, &c.

BENJAMIN HOMANS.

JONATHAN FISK, Esq. *United States Attorney, District of New York.*

A. No. 19.

NAVY DEPARTMENT, *June 18, 1816.*

SIR:

I wish to call your attention to an act of Congress, passed April 16, 1816, entitled "An act in addition to an act in relation to the Navy Pension Fund," on sections 2, 3, 4, and section 6. All the moneys accruing to the Navy Pension Fund from the proceeds of prizes captured during the late war are now wanted to invest in the United States' bank stock; and it cannot be presumed that a further delay in the payment of the whole sum will be sanctioned by the district judge of Massachusetts. No payments have been made on account of the Navy Pension Fund, since October, 1813. Your schedule and the marshal's, of causes adjudged, exhibits a very considerable amount still unaccounted for, and no cause has ever been assigned for the delay; it is expected, also, that an account of costs and fees taxed will accompany the same.

You will readily perceive the importance of the subject to the United States' Pension Fund, without my further urging your attention to it.

I am, respectfully, &c.

BENJAMIN HOMANS, *Sec. N. P. F.*

GEORGE BLAKE, Esq. *United States' District Attorney, Boston.*

A. No. 20.

NAVY DEPARTMENT, *July 27, 1816.*

SIR:

In compliance with your note of the 24th, I have the honor to enclose to you a form of a bill of sale on requisite claim title to the United States of the prize ship Atlantic, alias Essex Junior, which ship having been sold by order of the judge of the District Court of New York, and proceeds have been detained in said court, and refused to be paid over to the commissioners of the Navy Pension Fund, for the benefit of said fund.

I beg leave to suggest to you the dating of the bill of sale about the time and subsequent to the payment made to you on this account, in the year 1814; of this, however, you will judge, as it is not material, except to show to the court that the money was paid so long since, and that the Pension Fund has lost the benefit of interest upon the reduced amount of proceeds.

Very respectfully,

BENJAMIN HOMANS.

DAVID PORTER, Esq. *Washington.*

A. No. 21.

NAVY DEPARTMENT, *July 29, 1816.*

SIR:

I have the honor to enclose to you a bill of sale, executed by Captain David Porter, for the ship Atlantic, alias Essex Junior, to prove the purchase and payment, by this Department, at the time mentioned.

Will you be pleased to present the same to the court, and ascertain if the amount of proceeds of that ship will be paid over to the Treasurer of the United States, as the law directs.

I have the honor to be, &c.

BENJAMIN HOMANS,
Secretary Navy Pension Fund.

JONATHAN FISK, Esq. *U. S. District Attorney, New York.*

A. No. 22.

NAVY DEPARTMENT, *August 13, 1816.*

SIR:

I have received your letter of the 3d instant, relative to the proceeds of a captured launch, a moiety of which accrues to the Navy Pension Fund.

I have to request the favor of you to transmit the account of sales, with charges and costs of court deducted, and to pay over the amount into a bank in which public moneys are deposited, to the credit of the Treasurer of the United States, agreeably to the act of Congress of March 26, 1804, and the additional act of the 16th April, 1816. The navy agent has nothing to do with the fund, therefore the money must be paid into the bank, and duplicate receipts from the cashier forwarded—one to the Treasurer of the United States, and the other to the Navy Department.

I am, respectfully, &c.

BENJAMIN HOMANS,
Secretary Navy Pension Fund.

THOMAS PARKER, Esq.
U. S. District Attorney, Charleston, S. C.

A. No. 23.

NAVY DEPARTMENT, *August 31, 1816.*

SIR:

I had the honor of receiving your letter of the 12th current, to which imperious business has prevented an earlier reply. The course which has been pursued in relation to the United States' ship Essex Junior is beyond all comment. I now enclose to you a letter from Captain Porter, with all the letters of attorney and authorities to him, from the officers and crew of the late United States' ship Essex; to copy them is out of the question; and there remains but one alternative, if the proceeds should still be withheld, by an appeal to the legislative power of Congress for relief. You will be pleased, sir, to have the papers returned to this Department, for Captain Porter, whether they prove satisfactory or not to the court.

The act of Congress passed April 16, 1816, in relation to the Navy Pension Fund, remains, as yet, uncomplied with by the clerk of the District Court of New York.

No statement of account of proceeds of the prize ship Susannah, captured by the frigate Constitution, Captain C. Stewart, has ever been received, although John McCauley, Esq. prize agent for the captors, received the moiety, \$29,709 12, in May, 1815, and a further sum of \$1,704 48, in June following. This case was not even reported in the schedule of prize causes furnished by the clerk on the 26th December, 1815. The sums belonging to the Navy Pension Fund, deposited in court and unaccounted for, are very considerable: your attention to the subject is earnestly requested.

By order of the commissioners of the Navy Pension Fund.

I am, very respectfully, &c.

BENJAMIN HOMANS,
Secretary Navy Pension Fund.

JONATHAN FISK, Esq.
U. S. District Attorney, New York.

A. No. 24.

NAVY DEPARTMENT, *September 28, 1816.*

SIR:

Your letter of the 13th current, with its enclosures, has been received, and your attention to the subject duly appreciated. The course pursued in the cases referred to has been irregular. The judge should have ordered the distribution to be made to the clerk of the court, and the moiety accruing to the United States' Navy Pension Fund should have been paid over by the clerk into a bank in which public moneys are deposited to the credit of the Treasurer of the United States: this would have saved you the trouble of interposing. The law passed on the 16th April last (to which permit me to refer you,) points out specifically the duties of each officer of the United States District Courts in relation to prize cases. In the present instance Mr. Robertson, the navy agent, must refund the commission charged, to which he is not entitled.

I am, respectfully, &c.

BENJAMIN HOMANS.

THOMAS PARKER, Esq.

U. S. District Attorney, Charleston, S. C.

A. No. 25.

NAVY DEPARTMENT, *December 20, 1816.*

SIR:

I am again compelled to trouble you upon the subject of the United States Navy Pension Fund, in consequence of the receipt of a letter from Mr. Rudd, clerk of the District Court of New York, copy of which is enclosed. Mr. Rudd says: "being the whole amount of prize money belonging to the United States, in cases in which proceedings were ended." This paragraph is to me absolutely obscure.

As respects the prize ship *Susannah* it is still more so. It appears by the declaration of Mr. McCauley that, in consequence of an order of distribution by the court, he received in May and June, 1815, the half amount of proceeds of said ship and cargo; and now Mr. Rudd says, "the case has been staid by order of the court, to abide the decision of some neutral claims." If the decision in this case, and the order of distribution in 1815, were not definitive, why was the money paid to the captors, and now kept back from the Navy Pension Fund? It is almost certain that a reimbursement cannot be expected of the sums distributed; and if a restitution of any part is yet to depend upon an ulterior decree of court, the amount must be an unequal reduction of the moiety accruing to the Navy Pension Fund.

I beg leave further to observe that no accounts have yet been rendered in conformity with the act of Congress, passed April 16, 1816.

I have the honor to be, very respectfully, sir, your obedient servant,

B. W. CROWNINSHIELD.

U. S. District Attorney, New York.

A. No. 26.

NAVY DEPARTMENT, *January 10, 1817.*

SIR:

I am induced to trouble you again upon the subject of the United States Pension Fund.

The act of Congress passed the 16th of April, 1816, has never been complied with by the District Courts of Massachusetts and New York, where it was most immediately applicable, and it is still a cause of regret that those two courts have not directed a distribution of the prize moneys accruing to the United States' Pension Fund, nor transmitted any accounts or statements of the causes decided during the late war, or the disposition of the amount of proceeds.

Will you have the goodness to remind Judge Davis of this, and request him to order the moneys to be paid over into bank, and to forward the amount of fees and charges taxed upon the causes.

With the highest respect, sir, your obedient servant,

B. W. CROWNINSHIELD.

The Hon. JOSEPH STORY,

Judge of the Supreme Court, Salem, Mass.

A. No. 27.

NAVY DEPARTMENT, *March 30, 1818.*

SIR:

The amount of seventy-eight thousand three hundred and seven dollars and forty-seven cents appears to have been duly received into the treasury, for account of the United States' Navy Pension Fund. As it is desirable to invest this amount in stock, that it may draw interest for the benefit of said fund, I have the honor to request that you will direct a warrant to be issued to place the above sum to the credit of the Treasurer of the United States, as treasurer of the United States' Navy Pension Fund.

I have the honor to be, sir, &c.

B. W. CROWNINSHIELD.

Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

A. No. 28.

Extract of a letter from the Secretary of the Navy to the honorable John Davis, Judge of the District Court, Massachusetts.

NAVY DEPARTMENT, *April 30, 1818.*

SIR:

I have the honor to reply to your letter of the 17th instant, relative to the moneys paid over to the credit of the United States Navy Pension Fund by the clerk of the court of the district of Massachusetts.

The act of Congress, passed April, 1816, has not been complied with to the extent contemplated by that act, as accounts of fees and costs taxed, sales and deductions of charges, &c. upon captured property since the declaration of war in June, 1812, have never been received, and the proper entries and settlements cannot be made for want of them: this, however, is applicable to every district court in the United States. That law was specially intended to provide for such accountability, and the subject has been revived during the late session, with reference more particularly to the conduct of the clerk of the court of New York. The following is a statement from the Fourth Auditor's Office, where the accounts are kept, viz: "On the 13th of October, 1813, William S. Shaw, clerk of the District Court of Massachusetts, paid into the State Bank in Boston, to the credit of the Treasurer of the United States, \$112,668 25, said to be the moiety of the nett proceeds of certain prizes, but for which *no account of sales, or of the fees and charges deducted by the officers of court, have been received.*" A letter from the Secretary of the Navy, dated 21st October, 1813, was addressed to James Prince, marshal, requiring "a statement of all the charges, fees, costs of court, &c. attendant on the condemnation and sale of prizes;" but no such account was rendered.

On the 10th of March, 1817, William S. Shaw paid into the bank \$11,878 30, the proceeds of certain prizes, which had remained in his hands, for which he did render account sales, &c.

The further investigation of this subject, at the next session, will probably lead to some crimination; and, so far as relates to the decisions of the court over which you preside, it may be worthy your attention to see how far the non-compliance with the law exists. Every motive of delicacy, as well as personal respect to you, would have been, and has been, cause of avoiding any implied censure upon the transactions under your immediate authority; a complete development of all the transactions of the courts during the late war is become necessary; and, by the late resolution of both Houses of Congress, a detailed statement in every case of prize and judicial proceedings thereon is required of this Department, to be laid before them at the commencement of the next session; and, with this view, I respectfully suggest to you a further inquiry into the statement of the accounts rendered under your decisions, in order to place the subject in the most favorable light, particularly in the case of the brig *Atlantic*, wherein Mr. Shaw has deducted about one-third of the whole proceeds for fees and costs, &c. It has not been deemed proper to correspond directly with the judges of the several courts, but through the attorneys; and, in one instance, a reprimand was received from the judge, through the medium of the clerk, for an "improper interference" with the prerogatives of the court, although the inquiry was made for information wherein a default or neglect was apparent. Under all these circumstances, and the defect in the original act to fix the responsibility somewhere, and to define the duties of the courts, the act of April, 1816, was brought forward, and we now have to report to Congress that the said act has not been fully complied with; and the charges and deductions made in the several prize cases have been one leading cause for the late proceedings in Congress, in the course of which there has appeared a general implication of all concerned.

B. W. CROWNINSHIELD.

Honorable JOHN DAVIS,
Judge of District Court, Mass. Boston.

B. No. 1.

PORTSMOUTH, May 18, 1813.

SIR:

In compliance with a resolution of the honorable commissioners of the Navy Pension Fund of the 24th of March last, I have paid into the New Hampshire Union Bank in Portsmouth, (a bank in which public moneys are deposited,) to the credit of the Treasurer of the United States, the sum of fifty-three thousand seven hundred and forty-four dollars eighty-seven cents, which sum is one half of the nett proceeds that accrued from the sales of the ship *Volunteer* and cargo, captured on the high seas, February, 1813, by the United States' frigate *Chesapeake*, and condemned in the District Court in New Hampshire district, March 16, 1813, for which sum I have taken a receipt from Henry S. Langdon, cashier of said bank, which receipt is herewith transmitted.

I am, sir, very respectfully, your obedient servant,

MICHAEL M'CLARY, *Marshal, N. H. District.*

Honorable WILLIAM JONES, *Secretary of the Navy.*

B. No. 2.

MARSHAL'S OFFICE, VIRGINIA, NORFOLK, July 3, 1813.

SIR:

In answer to your letter addressed to the marshal of this State, relative to the payment of any sums of money arising from prize sales, intended as a fund for the relief of certain persons, &c., I have to state, that the only sum which has ever been paid to the collector, or other person in this State, was a moiety of the proceeds of the sale of the ship *Argo* and cargo, captured by the Congress frigate, amounting to seventeen thousand eight hundred and forty-four dollars, and forty-three cents.

I am very respectfully, &c.

WILLIAM P. FOSTER, *D. Marshal.*

WILLIAM JONES, *Esq. Secretary of the Navy.*

B. No. 3.

MARSHAL'S OFFICE, RICHMOND, July 25, 1813.

SIR:

Enclosed you have the certificate of the deputy collector at Norfolk respecting one moiety of the ship *Argo* and cargo, the other moiety of the proceeds of sales was, pursuant to the decree, paid to L. M. Tazewell, and L. Wheeler, Esqrs. the agents for the captors.

I am, very respectfully, your obedient servant,

For AND. MOORE, M. V. D.

A. LITHGOW, *Agent.*

B. No. 4.

BOSTON, October 13, 1813.

SIR:

I have this morning paid into the State Bank, to the credit of the Treasurer of the United States, the moiety of the nett proceeds of all moneys deposited in court, in consequence of captures made by our public armed vessels, and condemned in this district as good prize, since the declaration of war against Great Britain, amounting to one hundred and twelve thousand six hundred and sixty-eight dollars twenty-five cents; and I have now the honor to enclose to you my account, with a receipt of the cashier of the bank thereon. It is with extreme regret that I add, in consequence of the marshal having supposed your letter of the 30th March last, and some of your subsequent letters, to have referred to the two per cent. duty only, I never knew, until the 12th instant, the pleasure of the Government relative to the application of the proceeds, and the money has remained in the State Bank, in the name of the District Court for the Massachusetts district, ever since the respective condemnations. In future, unless I am otherwise ordered, you may be assured of a most rigid compliance with the instructions communicated to the marshal in the letter of the 30th March last.

Very respectfully, I have the honor to be, &c.

WM. S. SHAW.

Honorable SECRETARY OF THE NAVY.

B. No. 5.

BOSTON, October 14, 1813.

SIR:

On my return from the country a few days since, after an absence of a week or two, I had the honor to receive your letter of 28th September, and in conformity with your instructions, I now forward enclosed an abstract this day delivered to me by the clerk, of the several condemnations which have taken place in the district, of prizes in which the United States have been interested. Until the reception of your letter it was altogether unknown to me that the proceeds of these prizes had remained to this time in the hands of our marshal. He has, I presume, ere this, explained to you the misapprehension to which has been owing the delay attending the proper disposition of this money.

I have the honor to be, sir, very respectfully, your most obedient servant,

GEORGE BLAKE.

Honorable WILLIAM JONES.

Transcript from the clerk's office of the United States' District Court for Massachusetts district of all the condemnations of prizes of war, in which the United States have been interested, since the declaration of war with Great Britain.

A moiety of the nett proceeds of the brig Hazard, captured by the ship Wasp	- - -	1,658 25
A moiety of the nett proceeds of the brig King George, and cargo, captured by the frigate Essex	- - -	6,627 30
A moiety of the nett proceeds of the brig Recovery, and cargo, captured by the brig Argus	- - -	1,977 70
A moiety of the nett proceeds of the cargo of the schooner Ellen, (already condemned) captured by the ship Hornet	- - -	19,769 08
A nett moiety of specie captured by Commodore Rodgers, from the brig Swallow	- - -	70,291 55
A moiety of the nett proceeds of the bullion taken from the brig Swallow	- - -	12,344 37
		\$112,668 25

WILLIAM S. SHAW, *Clerk.*

B. No. 6.

SAVANNAH, June 14, 1814.

SIR:

By order of Judge Stephens, I take the liberty of enclosing to you a copy of the decree of condemnation of the money captured on board the Epervier, by the vessel of war Peacock: this reference arises from the claim of the marshal for commissions on the money arrested on the admiralty proceedings. The marshal states, that his charge of one and one quarter per cent. on money is allowed in every State, and that the amount does not alter the principle; this question ought to be decided by the judge. But he has referred it to you to ascertain your opinion, or perhaps to obtain that of the attorney general. The money was delivered to the marshal, under the warrant of arrest, and is now in his custody, and on his responsibility; the charge arises under the act of 28th February, 1799, for sales of vessels or other property, and for receiving and paying the money for any sum under five hundred dollars, two and one half per cent. for any larger sum, one and one half per cent. upon the excess.

I am, sir, very respectfully, &c.

CHARLES HARRIS, *District Attorney, Georgia.*

WILLIAM JONES, Esq. *Secretary of the Navy.*

IN THE ADMIRALTY:

United States' vessel of war Peacock vs. one hundred and seventeen thousand nine hundred and three dollars, captured in the Epervier. Libel as prize.

JUNE 10, 1814.

The United States' vessel of war Peacock, commanded by Lewis Warrington, Esq. in the late capture of His Britannic Majesty's sloop of war the Epervier, brought into this port, captured also, in dollars, the sum of one hundred and seventeen thousand nine hundred and three dollars, which has been labelled by the district attorney. The usual monition has been published, and proclamation made, and the defaults duly recorded. No claimant appearing, it is ordered, adjudged, and decreed, that the sum of one hundred and seventeen thousand nine hundred and three dollars be considered as prize of war, to the captors, to be distributed as the law directs, on captures made by the public armed vessels of the United States, after payment of costs and charges.

W. STEPHENS, *District Judge, Georgia.*

Ordered, that a certified copy of the above be sent to the Secretary of the Navy, as also a copy of the demand of the marshal for his commissions, and that the same be forwarded by Mr. Attorney for the district.

W. STEPHENS.

GEORGIA DISTRICT, CLERK'S OFFICE:

I certify that the above writing is a true copy of an original decree in the Admiralty Court of said district. In [L. s.] witness whereof I have hereunto set my hand and the seal of said court, this 11th June, 1814.

S. MORDECAI, *Deputy Clerk.*

SIR:

MARSHAL'S OFFICE, MASSACHUSETTS, BOSTON, *October 27, 1813.*

I am honored by your letter of the 21st instant. I have forwarded an attested copy of the same to the district clerk, with a desire the documents may be transmitted to you with the least possible delay. All the accounts which existed in this office are in his possession, and I doubt not an account, certified by the judge for this district, will be sent you directly.

I am, very respectfully, sir, your very obedient servant,

J. PRINCE, *Marshal.*The SECRETARY OF THE NAVY, *Washington.*

B. No. 9.

Enumeration of captures, &c. made by the United States' naval forces on the New Orleans station, during the late war, and libelled in the District Court of the United States for the Louisiana district.

582. John Shaw, commander of the squadron of naval force of the United States on the New Orleans station, *vs.* the ship *Argo* and cargo, captured in the bay of Mobile, and libelled 21st May, 1813, as enemy's property, or as the property of citizens of the United States trading with the enemy. Libel dismissed, and property restored to the claimant, William Thompson, a citizen of the United States.

667. I. D. Ferris, commanding United States' brig *Ætna vs.* the schooner *Dolores* and cargo, seized for violating the embargo law. Information filed 2d April, 1814. Adjudged forfeited to the libellant. Proceeds to be distributed according to law.

734. Daniel T. Patterson and George T. Ross and others *vs.* 1. The schooner *Petit Milan*; 2. The schooner *Dorada*; 3. The schooner *Harlequin*; 4. The schooner *Surprise*; 5. The schooner *Comet*; 6. The schooner *Fly*; 7. The schooner *Wasp*; 8. And a felucca, and certain goods, wares, and merchandise, taken at *Barrataria*, and libelled 17th October, 1814: 1st. As *prize*, being enemy's property, or the property of citizens of the United States trading and corresponding with the enemy. 2d. As *derelict*. 3d. For *salvage*, as the property of some person or persons unknown, rescued out of the hands of pirates. Libel as to the merchandise dismissed, and the information of the United States, under the revenue laws, sustained. The vessels delivered up to the original owners, upon terms of salvage agreed upon between them and the libellants.

The same *vs.* the schooner *General Bolivar*, libelled on the same grounds as in the preceding case. Cause still pending.

Thomas Shield and others *vs.* the cargo of the *Don Hermanos*, captured in the bay of *St. Louis*, and libelled October 25, 1814, as the property of the enemies of the United States, or of citizens of the United States trading with the enemy. That part of the cargo claimed by Basil Green, Thomas Bassett, and Stephen Minor, adjudged forfeited to the libellants as prize; the proceeds to be distributed according to law. An appeal taken to the Supreme Court for the portion claimed by Basil Green.

R. CLAIBORNE, *Clerk.*

B. No. 10.

SIR:

MARSHAL'S OFFICE, GEORGIA, SAVANNAH, *June 5, 1815.*

I forward, herewith, statements of the sale of the cargo of brig *Oscar*, schooner *Carlsham* and cargo, brig *Porgey* and cargo, and schooner *Aliancen* and cargo, captured by the gunboats under the command of Commodore Hugh G. Campbell, and condemned as prize to the captors; also receipts from the President of the Planter's Bank, for the respective moieties to the United States, in these cases entered to the credit of the Treasurer of the United States, agreeably to the act of Congress of March 26, 1804.

I have the honor to be, very respectfully, your most obedient servant,

JNO. EPPINGER, *Marshal.*Hon. B. W. CROWNINSHIELD, *Secretary of the Navy, Washington.*

B. No. 11.

MARSHAL'S OFFICE, GEORGIA, SAVANNAH, *June 20, 1815.*

SIR:

Your letter of the 6th instant has been duly received. I enclose a certified copy of the decree of the district judge of Georgia, allowing a commission of two per centum to the agents of the captors and claimant, and the marshal, respectively, on the amount of sales of the cargo of the *Hazard*. This case, as stated to me by Charles Harris, Esquire, late district attorney, was as follows: "that application was made by the claimants to have agents appointed to assort the cargo, and superintend the sale, so as to enhance the value of the articles, and obtain a full price for the various goods which that cargo contained; the claimants contending that the prize being at *St. Mary's*, a place of small trade, and where there was no capital, that unless the sale was made on a credit, and under the care of persons of experience and integrity, the cargo would lose in the sale at least 25 per cent." After full argument before the judge, in which the district attorney contended against the additional agent, the court decided that the application was correct, that the benefit resulting from the appointment of agents was superior to the expense, and not more than the trouble attendant on the business, and allowed the claimants to name an agent, the captors one; and the court appointed me. The allowance was made by the court, and ordered to be paid. The late district attorney did not, and could not appeal, as the order was an interlocutory one; and, on inquiry of merchants, he was then, and yet is, fully satisfied that the United States received considerable advantage from the sale on credit, and the assortment of the cargo, as made by the commissioners; and he verily believes and knows that affidavits to that effect can be furnished by persons of the first integrity in the country, and that this mode of sale enhanced the value of the cargo from ten to fifteen per cent. He was, therefore, satisfied with the order of court, though he took no part in consenting or agreeing to the arrangement which was forced upon the court, by the claimant, with great zeal and earnestness; and, as to the honor, activity, and disinterestedness of the late district attorney, in his official capacity, and his exertions for the United States in cases of prizes, and all cases of seizure, for a small remuneration, compared to the trouble, responsibility, and sums at stake, he appeals to the judges, the bar, the officers of court, and the public at large.

If, notwithstanding the decree of the district judge, and the above statement of the late district attorney, the Government think proper to disallow the agents their commissions, I have to state that they have informed me that it is their determination not to refund. Should it be intended to institute suits to enforce payment, such suits ought to be brought against the individuals, and not against the marshal, who, as an officer of the court, was bound to pay them. As regards my commission, permit me to observe, that the act of the 18th of April, 1814, has reference only to the commission allowed to the clerks of the United States, and cannot, in my view of the subject, even by the most forced construction, embrace the marshal. Besides, the act was passed more than a month after the sale of the *Hazard's* cargo took place.

I also enclose, herewith, a certified copy of the judge's order, in the case of the schooner *Isabella* and cargo, authorizing the payment of \$250 for costs, which I presume will satisfactorily explain this charge.

I have the honor to be, very respectfully, your obedient servant,

JNO. EPPINGER, *Marshal.*Hon. B. W. CROWNINSHIELD, *Secretary of the Navy, Washington.*

B. No. 12.

BOSTON, June 26, 1816.

Sir:

I have the honor to acknowledge the receipt of your letter of 16th instant, requesting my attention to the subject of the proceeds still remaining in the courts of this district, arising from the sales of property captured by vessels of the United States, and condemned during the late war. Having, heretofore, in pursuance of the former instructions from your Department, repeatedly urged upon the marshal, and especially the district clerk, the necessity of an immediate and final adjustment of accounts in the cases alluded to, I had presumed, until the reception of your present communication, that this had long since been accomplished, and the proper statements and vouchers transmitted to you. In compliance with your request, I have again conferred with the above mentioned officers on the subject, and I trust it will now be attended to immediately. I pray you, at any rate, to be assured, sir, that whatever delay may have attended, or may still attend, the contemplated adjustment, can be attributable, in no degree, to any remissness on my part. The fact is, that, with regard to those cases of prize wherein the United States have been interested, I have considered myself as having officially no other agency than merely to file the libel, and pursue the same to condemnation, leaving the marshal to collect, and the clerk, under the orders of court, to account with your Department for that portion of the proceeds belonging by law to the Navy Pension Fund. Considering the great importance of this valuable institution, I should not have supposed that the proper accounting officers would, on any occasion, have been wanting in a prompt and critical attention to it.

With great respect, I have the honor to be, your obedient servant,

GEO. BLAKE.

Hon. BENJ. W. CROWNSHIELD.

B. No. 13.

Navy Pension Prize Moneys.

It appears that the following sums have been paid into different banks, to the credit of the Treasurer of the United States, viz:

Theron Rudd, clerk District Court New York, paid into the City Bank, New York, December 26, 1815, - - - - -	\$46,613 80
Jno. McCauley paid into the Farmers and Mechanics' Bank, Philadelphia, March 4, 1816, - - - - -	1,704 48
William Davies, United States' district attorney, Georgia, paid Planters' Bank, Savannah, May 22, 1816, - - - - -	1,422 25
Same, June 20, - - - - -	15,062 21
	16,484 46
Theron Rudd, clerk District Court New York, paid City Bank, New York, December 12, 1816, said to be the moiety of the proceeds of the Atlantic, alias Essex Junior, - - - - -	7,482 83
William Davies, district attorney, Georgia, paid Planters' Bank, January 21, 1817, - - - - -	14,000 00
Theron Rudd, clerk District Court New York, paid City Bank, New York, February 6, 1817, said to be proceeds of Susannah and cargo, - - - - -	22,757 46
William Davies, district attorney, Georgia, paid Planters' Bank, Savannah, June 13, 1817, said to be proceeds of Carl Custoff and cargo, - - - - -	3,973 23
Also the following sums immediately paid to the credit of the treasurer of the Navy Pension Fund, not carried into the books of the treasury, viz: 2d May, 1817, by Bank United States, - - - - -	25,003 40
12th May, 1817, by David Caldwell, - - - - -	5,984 90
Ditto. - - - - -	29,799 26
	60,787 56
	<u>\$173,803 82</u>

For the above amount, no accounts have been received at this office, (by which an examination or entry can be made,) in conformity to the second and sixth sections of the act of Congress, passed 16th April, 1816.

FOURTH AUDITOR'S OFFICE, March 30, 1818.

It has been ascertained at the treasury that prize moneys to the amount of seventy-eight thousand three hundred and seven dollars and forty-seven cents has been paid at different banks, to the credit of the Treasurer of the United States, not yet covered by a treasury warrant, or passed to the credit of the Navy Pension Fund. The expediency of vesting the above in stock of the United States is submitted to the honorable Secretary of the Navy.

B. No. 14.

NAVY PENSION.

TREASURY DEPARTMENT, FOURTH AUDITOR'S OFFICE, April 2, 1818.

A list of all the prize causes for which accounts have been received at this office subsequent to the passage of the act of Congress, April, 1816.

An account of the moiety of the proceeds of the schooner Alligator, sloop Catholina, a launch, &c., schooner Nonesuch, condemned by the District Court of South Carolina, and paid over by Thomas Parker, district attorney, amounting to \$1,731 19.

An amount of the moiety of the proceeds of part of the cargo of the brig Liverpool, schooner Favorite and cargo, schooner Nysted and cargo, brig Julia and cargo.

Part of the cargo of the schooner Ellen, being the last part, that had been reserved for further proof, paid over by William S. Shaw, clerk of the District Court Massachusetts, amounting to \$11,878 30.

A receipt for \$1,704 48, paid into the Farmers' and Mechanics' Bank, at Philadelphia, 4th March, 1816, by John McCauley, but no account rendered.

GEO. McDANIEL, Clerk N. P. Accounts.

B. No. 15.

NEW ORLEANS, October 17, 1818.

Sir:

Having judged it necessary to respond, on the 12th instant, to such inquiries only of the resolution of the House of Representatives of the 8th of April, 1818, in relation to the "state and condition of the Navy Pension Fund," as had local information for their object, I now beg leave, in reiterating the same, to advert to the ninth and tenth sections of the thirty-third act of the 23d of April, 1800; the forty-eighth act of the 26th of March, 1804; and the fifty-sixth act of the 16th of April, 1816; in answer to the first parts of the said resolution.

On the succeeding heads, enumerated in the same inquiry, the information that can be furnished from this quarter is negative, as the captures made in the Louisiana district since June, 1812, have not been prizes from

which money accrued to the Navy Pension Fund of the United States, but seizures for a violation of the embargo, revenue, and slave laws, for a breach of the third and fourth sections of the fiftieth act of the 5th of June, 1794, and for illicit commercial intercourse with the enemy, as also recaptures from pirates, redeemed by the rightful owners, on paying salvage to the captors, by ex-judicial and mutual agreement.

I am therefore authorized to say, from the legal sources, that no sums have been forwarded by "the District Court of this State;" that there is no "particular case" to cite, nor any "returns" to refer to; neither is the district attorney aware that there are any "persons in default in the performance of their duty, in regard to the said fund;" and, of consequence, no "proceedings have been had to enforce the performance of such duties."

With a sincere hope that the wishes of the Department may have been complied with,

I have the honor to be, with sentiments of profound respect, sir, your very obedient servant,

LEWIS HEERMAN.

HON. B. W. CROWNINSHIELD, *Secretary of the Navy, Washington.*

B. No. 16.

BOSTON, *March 17, 1814.*

SIR:

I have the honor herewith to transmit my account of the proceeds of the brigantine Atlantic and cargo, captured by the United States' frigate Congress; and am,

With great respect, your very humble servant,

WM. S. SHAW.

HON. SECRETARY OF THE NAVY.

Copy of account rendered by William S. Shaw, clerk of the District Court of Massachusetts, (the only account ever transmitted to the Navy Department.)

DR.

William S. Shaw in account with the United States of America.

CR.

To gross amount of the sales of the brigantine Atlantic and cargo, captured by the frigate Congress, and condemned in the District Court for Massachusetts district,	\$41,989 08	By amount of costs, &c. against brigantine Atlantic and cargo,	\$13,853 82
	\$41,989 08	By a moiety of the nett proceeds of said vessel and cargo, paid to the captors,	14,069 13
		By do. paid to the United States,	14,069 13
			41,989 08
			\$41,989 08

STATE BANK, BOSTON, *March 17, 1814.*

Received of William S. Shaw, Esquire, clerk of the District Court for the Massachusetts district, the sum of fourteen thousand and sixty-nine dollars and thirteen cents, on account of the Treasurer of the United States, for which I have given duplicate receipts.

THOMAS HARRIS, *Cashier State Bank.*

C. No 1.

NEW YORK, *21st September, 1813.*

SIR:

Since my letter of yesterday, I find that the clerk of the District Court is absent from the city, and will not return in two or three weeks. This circumstance will retard the payment of the money in court belonging to the Navy Pension Fund.

I have the honor to be, with great respect, sir, your obedient servant,

NATHAN SANFORD.

HON. WILLIAM JONES, *Secretary of the Navy.*

C. No. 2.

NEW YORK, *September 20, 1813.*

SIR:

I duly received the letter of the Secretary of the commissioners of the Navy Pension Fund, of the 30th of March last, and I immediately had a conference with the late marshal, who was then in office, upon the subject of that letter. He assured me that he would take upon himself the execution of the resolution of the commissioners. Relying upon his assurance, I gave no further attention to the subject.

I have this day had the honor to receive your letter of the 16th instant, and I now learn with surprise that nothing has been done by the marshal.

I will take care that the direction of the commissioners shall be executed without delay, in respect to all moneys now in court, in this district, belonging to the Navy Pension Fund.

With respect, &c.

NATHAN SANFORD.

HON. WILLIAM JONES.

C. No. 3.

NEW YORK, *October 12, 1813.*

SIR:

Pursuant to an order of the District Court of the United States for the district of New York, I have deposited in the Manhattan Bank, in the city of New York, nine thousand two hundred and ninety-six dollars and ninety-six cents, to the credit of the Treasurer of the United States; for which I enclose you the cashier's receipt, together with an abstract from the minutes of court, showing on what account the money had been paid into court.

I am, sir, &c.

PHILIP SPENCER.

HON. WILLIAM JONES.

C. No. 4.

NEW YORK, *November 20, 1815.*

SIR:

On the 16th June, 1814, I received from the clerk of the District Court of the United States, for this district, \$22,783 74, for one half of captures made by the naval force on Lake Ontario; and on the 15th November, 1814, I received \$1,764 74.

The same sums, belonging to the United States, I presume, remain in court, subject to their order.

I have not heard of any other captures on Lake Ontario than those for which I have received the share of the officers and crews.

I am, sir, with respect, &c.

JAMES HEARD.

HON. B. W. CROWNINSHIELD.

C. No. 5.

MARSHAL'S OFFICE, NEW YORK, December 21, 1815.

SIR:

I have the honor of enclosing, for your information, a statement of causes of all prizes captured, by public armed vessels of the United States, since the declaration of the late war.

By the Secretary of the Navy Pension Fund, the marshal is referred to a circular letter, &c. dated 30th March, 1813. The marshal never received a circular letter of that date, or statements of libels, &c. would have been furnished. The executions and amount of sales in each cause have long since been returned and filed in the District Court, and the gross proceeds paid into court.

I am, respectfully, yours, &c.

JAMES DILL, for the Marshal.

Hon. B. W. CROWNINSHIELD, Secretary, &c.

A list of prize causes of captured property by the navy of the United States, in which sales were made by Peter Curtenius, late marshal, and John Smith, present marshal, and the gross proceeds paid into the District Court by the said marshals, and the sums by them paid since the commencement of the late war.

District Court of New York.	Gross proceeds.	Amount paid over as the moiety accruing to the Navy Pension Fund.
The United States' squadron, Lake Ontario, &c. vs. Schooner Lord Nelson,	2,999 25

The same vs. eight casks glassware, &c.	1,995 68	
Total gross amount,	\$241,843 00	

The above is a statement of the gross proceeds paid into court; the costs, in each cause, after being taxed, have been paid by the clerk out of the gross proceeds in court.

C. No. 6.

NEW YORK, December 26, 1815.

SIR:

Enclosed herewith is an order of court directing the payment of the sum of forty-six thousand six hundred and thirteen dollars eighty cents, being the half nett proceeds accruing to the United States, in the fourteen several causes therein enumerated. Also, enclosed, are abstracts in each of the said causes; and a receipt for the said sum of money, signed by the cashier of the City Bank, has been sent to the Treasurer of the United States. The half nett proceeds in the case of the Atlantic, alias Essex Junior, cannot at present be paid over, as distribution has not yet been made.

I am, with great respect, your obedient servant,

THERON RUDD.

To the Hon. B. W. CROWNINSHIELD, Secretary of the Navy.

At a stated District Court of the United States of America, held for the southern district of New York, at the city of New York, on Friday, the 22d day of December, 1815: Present, the Hon. William P. Van Ness, Esq. judge of said court:

Ordered, that in all the following causes, in which money is now in court belonging to the Navy Pension Fund, the clerk shall pay such money into the City Bank, to the credit of the Treasurer of the United States, and shall transmit to the said Treasurer one of the cashier's receipts, with information of the amount upon which the money is paid; and that the clerk shall also transmit to the Secretary of the Navy a statement of the money so paid in every instance.

* In the order of court directing the payment of the moiety, transmitted in the letter of Mr. Rudd, of December 26, 1815, the half proceeds of the three bales of clothing, &c. is stated at \$5,306 04.

† Entire nett proceeds.

	Half nett proceeds accruing to U. S.
The United States of America, &c. <i>vs.</i> divers trunks of merchandise, &c.	- \$5,255 38
The same <i>vs.</i> the brig Duke of Gloucester, &c.	- 1,073 05
The same <i>vs.</i> twenty-four bags of gold and silver coins,	- 8,413 17
The same <i>vs.</i> one hundred and twenty barrels of flour, &c.	- 770 69
The same <i>vs.</i> three bales of clothing, &c.	- 5,306 04
The same <i>vs.</i> two kegs of carbine cartridges, &c.	- 1,567 57
The same <i>vs.</i> the schooner Lady Murray, &c.	- 463 80
The same <i>vs.</i> the schooner Hamilton,	- 2,220 72
The same <i>vs.</i> the schooner Confiance, her tackle, &c.	- 2,172 72
The same <i>vs.</i> sixteen cannons of different caliber, &c.	- 13,979 13
The same <i>vs.</i> fourteen puncheons of merchandise, &c.	- 3,311 64
The same <i>vs.</i> twenty-two puncheons of merchandise,	- 3,447 38
The same <i>vs.</i> the schooner Fame, alias Pomeranea, &c.	- 3,255 10
The same <i>vs.</i> ship William, her tackle, &c.	- 147 41
	<u>\$46,613 80</u>

Extracts from the minutes of the court.

Theron Rudd, *Clerk.*

C. No. 7.

SIR:

NEW YORK, January 20, 1816.

On the receipt of your letter relating to the case of the Essex Junior, I presented the same to the court, and applied for an order to pay over the whole money to the Treasurer of the United States, agreeably to the statement therein contained. The court made the memorandum, a copy of which is herewith enclosed, with instructions to me to transmit the same to the Navy Department.

I am, very respectfully, your obedient servant,

Theron Rudd.

Hon. B. W. Crowninshield, *Secretary of the Navy.*

Memorandum by the court on the letter of the Secretary of the Navy.

"It is extremely irregular and improper for the Secretary of the Navy to issue his orders to the officers of this court. He ought to know that they owe him no obedience; the Government or the Navy Department can only be known or heard here through the proper organ of the Government, the district attorney. The clerk obeys the orders of the court, and none other.

"No money can be paid by the clerk but in pursuance of an order of the court regularly entered for that purpose; such an order can only be obtained on the application of a person properly authorized to make it, and by showing a legal right to the funds required.

"In the present case, the Essex Junior stands condemned to the United States and the captors; the captors, therefore, by the judgment of the court, are entitled to one-half the prize, or the proceeds of the sale. This court knows nothing of private or out-door sales or purchases. If regularly applied for, the one-half of the proceeds will be ordered to be paid to the United States, the other half to the captors. If either party claims to have the whole, a regular and valid title must be shown, derived from the other party, for that portion which was adjudged to him. The letter of the Secretary of the Navy is not evidence in this court of a purchase, and cannot be allowed to divest rights legally acquired.

"The order applied for by the clerk is, of course, refused."

A true copy of the memorandum made by the court on the letter of the Secretary of the Navy:

Theron Rudd,

Clerk of the southern district of New York.

C. No. 8.

A list of prize causes of captured property by the navy of the United States, in which sales were made by Peter Curtinüs, late marshal, and John Smith, present marshal, and the gross proceeds paid into the District Court by the said marshals, and the sums by them paid since the commencement of the late war.

DISTRICT COURT, New York:

	Gross proceeds.
The United States' squadron, Lake Ontario, &c. <i>vs.</i> schooner Lord Nelson,	- \$2,999 25
The same <i>vs.</i> five boxes of glass ware,	- 1,972 10
The same <i>vs.</i> brig Caledonia,	- 3,700 00
The same <i>vs.</i> four long 12 pounders,	- 1,000 00
The same <i>vs.</i> cargo of brig Caledonia,	- 8,843 11
The frigate Essex, &c. &c. <i>vs.</i> sloop of war Alert,	- 13,415 66
The sloop of war Hornet <i>vs.</i> certain trunks of merchandise,	- 15,586 89
The squadron of Lake Ontario <i>vs.</i> two kegs of carbine cartridges, &c.	- 3,344 92
The same <i>vs.</i> three bales of coating, &c.	- 1,228 95
The same <i>vs.</i> sixteen cannons of different calibers, &c.	- 28,804 53
The same <i>vs.</i> brig Duke of Gloucester,	- 2,500 00
The same <i>vs.</i> schooner Lady Murray,	- 1,500 00
The same <i>vs.</i> sloop Elizabeth,	- 3,525 00
The same <i>vs.</i> schooner Mary,	- 2,512 00
The same <i>vs.</i> schooner Lady Gore,	- 2,500 00
The same <i>vs.</i> schooner Confiance,	- 4,825 84
The same <i>vs.</i> sloop Mary Anne,	- 1,600 00
The same <i>vs.</i> one hundred and twenty barrels of flour,	- 1,709 37
The same <i>vs.</i> sloop Drummond,	- 600 00
The same <i>vs.</i> schooner Hamilton,	- 4,925 84
The sloop of war Hornet <i>vs.</i> ship William,	- 6,200 00
The same <i>vs.</i> twenty-four bags, containing gold and silver coin,	- 19,430 24
The frigate President <i>vs.</i> twenty-two puncheons of rum, &c.	- 9,490 07
The same <i>vs.</i> fourteen puncheons of merchandise,	- 8,773 17
The gunboats <i>vs.</i> schooner Fame and cargo,	- 7,569 62
The Essex <i>vs.</i> the ship Atlantic, alias Essex Junior,	- 8,100 00
The frigate Constitution <i>vs.</i> ship Susannah and cargo,	- 73,192 21
The same <i>vs.</i> eight casks of glass ware,	- 1,995 68
Total gross amount,	<u>\$241,843 00</u>

The above is a statement of the gross proceeds paid into court; the costs in each cause, after being taxed, have been paid by the clerk out of the gross proceeds in court.

Half of the within amount is due to the Navy Pension Fund, after deducting costs and charges, and no part of which has been paid to the Treasurer of the United States.

C. No. 12.

NEW YORK, January 24, 1817.

SIR:

Agreeably to your request I have at length obtained, and now enclose to you, the taxed bills of costs of the officers of the court, for the prize proceedings against the squadron captured on Lake Champlain. Upon the amount being paid, the court will not, I presume, deem any further proceedings necessary, in relation to these vessels.

The judge has not yet decided upon the question of admitting a neutral claim to a part of the cargo of the ship Susannah. He informed me that sufficient to meet this claim, if allowed, must be retained for the present in court; and the residue should be paid over by the clerk to the credit of the treasurer. But the judge has returned to his residence in the country, and I have not been able to see the clerk since.

I have the honor to be, &c.

JONA. FISK.

Hon. B. W. CROWNSHIELD, *Secretary of the Navy, Washington.*

					<u>\$200</u>

I certify the costs and charges of the Attorney of the United States in the four causes above, entitled at two hundred dollars.

Dated, January 13, 1817.

N. SANFORD, *Attorney.*

THERON RUDD, *Clerk.*

C. No. 14.

NEW YORK, February 1, 1817.

SIR:

I have the honor to enclose you duplicate of the receipts of the cashier of the City Bank, in the city of New York, for twenty-two thousand seven hundred and fifty-seven dollars fifty-six cents, paid into the said bank by the clerk of the District Court of the United States for the southern district of New York, to the credit of the treasury of the United States. The ship Susannah and cargo, prize to the United States' frigate Constitution, is the source from whence the above arose; an abstract statement of the proceedings of the said court in the cause is also enclosed.

I am directed by the clerk (who is at present indisposed) to inform you, that the two per centum accruing to the sailors' fund on the nett proceeds of prizes to private armed vessels, in all causes determined, where the same was in court, has been paid to the collector of the district of the city of New York.

I have the honor to be, &c.

ROBERT FINN, *Deputy Clerk, Southern Dis. N. Y.*

Hon. BENJ. W. CROWNSHIELD, *Secretary of the Navy, Washington.*

C. No. 23.

At a special District Court of the United States of America, held for the southern district of New York, at the city of New York, on Saturday the 18th of January, 1817.

Present—The honorable William P. Van Ness, Esq. judge of said court.

Three hundred marquetas or cakes of tallow, part of the cargo of the ship *Susannah*, Gardiner Greene Howland, of the city of New York, merchant, on behalf of [Ambrosio de Lezrica, Tomas Antonio de Lezrica, and Andes

Cavaillon, of Buenos Ayres, merchants, claimants, *adsm.* the United States of America, and the officers and crew of the United States' frigate Constitution, Charles Stewart, Esq. commander.

On motion of George Brinckerhoff, Esq. proctor for the above named Ambrosio de Lezrica, Tomas Antonio de Lezrica, and Andres Cavaillon, It is ordered that the clerk examine and report the amount of their claim, and that he retain the same until the further order of this court.

And it is further ordered by the court, that the clerk pay the remainder of the money in court in this cause into the City Bank in the city of New York, to the credit of the Treasurer of the United States.

Theron RUDD, *Clerk.*

The same *adsm.* the same.

NEW YORK, January 18, 1817.

I, Theron Rudd, clerk of the District Court of the United States of America, for the southern district of New York, do hereby certify, that in obedience to the aforesaid rule or order of court, I have examined the claim above mentioned, and that it appears from the papers on file in my office, in the said cause, that the three hundred marquetols of tallow therein mentioned, as far as the same can be ascertained, and which were sold under the direction of the marshal of this district, produced the sum of eight thousand eight hundred and sixty-one dollars and fifty-two cents; that the average of duties, costs, and charges, thereon, amounted to the sum of nineteen hundred and nine dollars and seventy cents; and that the nett proceeds of the same amounted to the sum of six thousand nine hundred and fifty-one dollars and eighty-two cents, all of which is respectfully submitted.

Theron RUDD, *Clerk.*

DISTRICT COURT OF THE UNITED STATES OF AMERICA for the southern district of New York:

The United States' of America, and the officers and crew of the United States' frigate Constitution, *vs.* the ship Susannah and cargo.

[Abstract.]

The ship Susannah and cargo were captured by the United States' frigate Constitution, Charles Stewart, Esq. commander, on the 15th day of February, 1815, in the Atlantic ocean, and were condemned as prize to the United States, and the said officers and crew. The one half nett proceeds of the sales thereof accruing to the United States, after deducting from such half the amount of the aforesaid claim, is twenty-two thousand seven hundred and fifty-seven dollars forty-six cents, paid into the City Bank in the city of New York, to the credit of the Treasurer of the United States, pursuant to the order of the said court, made in this cause, the 18th January, 1817.

Theron RUDD, *Clerk.*

C. No. 32.

NEW YORK DISTRICT COURT:

The United States of America *vs.* the sloop *Fancy* and cargo.

This vessel and cargo were seized by Lieutenant Renshaw, of the United States' navy, for a breach of the embargo law, and were finally condemned by the District Court for the same. The one-half nett proceeds thereof accruing to the United States amounts to eighty-eight dollars and forty-five and a half cents.

\$88 45½

The same *vs.* the sloop *Elizabeth*.

This vessel was captured on Lake Ontario by Captain Chauncey, of the United States' navy, and was condemned by the District Court as forfeited to the use of the United States, and the officers and crews of the vessels under the command of Captain Chauncey. The one-half nett proceeds in this cause accruing to the United States amounts to sixteen hundred and thirty-seven dollars six and a half cents.

\$1,637 06½

The same *vs.* the schooner *Mary*.

This vessel was captured on Lake Ontario by Captain Chauncey, of the United States' navy, and was condemned by the District Court of New York as forfeited to the use of the United States, and the officers and crews under his command. The one-half nett proceeds accruing to the United States amounts to eleven hundred and forty-three dollars twenty-two and a half cents.

\$1,143 22½

The United States of America, and the officers and crew of the United States' frigate Essex, *vs.* the sloop of war Alert.

[Abstract.]

This sloop of war was captured by the United States' frigate Essex, and condemned by the District Court of the New York district, as forfeited to the use of the United States and the officers and crew of the said frigate. The one-half nett proceeds in this cause accruing to the United States amounts to six thousand four hundred and twenty-seven dollars, thirty-one cents.

\$6,427 31

I certify the within to be a true and correct statement, from the records of the court in my office.

PHILIP SPENCER, *Clerk.*

C. No. 33.

PHILADELPHIA, *March 4, 1816.*

SIR:

Your letter of the 29th ultimo was duly received, and in reply beg leave to state, that the money* mentioned in my letter of the 24th ultimo arises from goods taken from on board the British brig Lord Nelson, at sea, and consumed by the officers and crew of the Constitution for public and private use, and paid for accordingly; they, therefore, were not brought before any court for adjudication specifically, but condemnation was made of some articles landed at New York from on board the Constitution, together with a small matter from the Susannah, which were taken from on board said vessel at sea, and sold in New York; the proceeds of which was paid into the court there, and from whom I received one-half for the captors.

Agreeably to your request, I herewith enclose you a duplicate receipt from the Farmers and Mechanics' Bank for \$1,704 48, passed to the credit of the Treasurer of the United States.

I have the honor, &c.

JOHN McCAULEY.

The Hon. B. W. CROWNINSHIELD.

Memoranda.

The frigate Constitution, while under the command of Captain Stewart, has added to the capital of the Navy Fund, as follows, by captures made by said ship, viz:

Say Susannah and cargo, sold at New York, May 20, 1816	-	-	-	-	-	-	\$29,709 12
Goods from Lord Nelson and Susannah, in July	-	-	-	-	-	-	572 86
Do. do. from the agent for captors	-	-	-	-	-	-	*1,704 48
							<u>\$31,986 46</u>

And to the United States nearly eight thousand dollars in duties.

SIR:

Your letter of the 5th instant, together with its enclosures, was duly received; and it is to be regretted, that you have not rendered an account of the sales of the brig Atlantic and cargo; as that is a case, respecting which the Department was particularly desirous of obtaining information, as the costs and charges amounted to nearly one-third of the proceeds.

I am, very respectfully, sir, your obedient servant,

J. C. CALHOUN, *Acting Secretary of the Navy.*JOHN W. DAVIS, *Esq. Clerk of the U. S. District Court, Boston.*DISTRICT CLERK'S OFFICE, BOSTON, *November 27, 1818.*

SIR:

In consequence of the suggestion in your letter of the 17th instant, I have now the honor of enclosing a copy of the sales, and costs, and charges, in the case of the brig Atlantic and cargo. To account for the delay in forwarding these papers, I would state, that the payment in this case was made some time since by my predecessor, Mr. Shaw; and I had reason to presume, that he transmitted the requisite documents at the time when he made that payment.

With the greatest respect, I am, sir, your most obedient servant,

JOHN W. DAVIS.

The Honorable the SECRETARY OF THE NAVY.

A true copy. Attest:

BOSTON, February 9, 1814.

J. PRINCE, *Marshal.*

JNO. W. DAVIS,
Clerk of Massachusetts District Court.

15th CONGRESS.]

No. 164.

[2d SESSION.]

DISTRIBUTION OF PRIZE MONEY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 17, 1818.

NAVY DEPARTMENT, December 16, 1818.

SIR:

In obedience to a resolution of the House of Representatives of the United States, passed on the 4th day of April, 1818, requiring a particular statement of the expenditure of the appropriations made by several acts of Congress, specified in said resolution, I have the honor to report a copy of a statement, received from the Fourth Auditor of the Treasury, accompanied by documents, marked A, B, C, D, and E, which contain all the information in possession of this Department, having relation to the objects of inquiry in said resolution.

All which is respectfully submitted.

J. C. CALHOUN, *Acting Secretary of the Navy.*

The Honorable the SPEAKER *House of Representatives.*

TREASURY DEPARTMENT, FOURTH AUDITOR'S OFFICE, *November 21, 1818.*

SIR:

Your letter of the 14th of the present month, addressed to the Second Comptroller of the Treasury, and a copy of a resolution of the House of Representatives, passed on the 4th of April last, which requires a particular statement of the expenditures of sundry appropriations to reward officers and crews for the capture of vessels from the enemy, during the late war, have been, by the Comptroller, referred to this office.

I have the honor, sir, to report thereon, and to transmit statements showing the expenditures, as far as can be accomplished within the short time assigned to me for this purpose.

1st. The statement, marked A, exhibits the amount of moneys appropriated; the names of the prize agents, to whom the same has been paid; the amount expended, and the balances which remain in the agents' hands, as appears by accounts settled, or on file, in this office.

2d. B. exhibits the amount paid by George S. Wise, Jun. to the officers and crew of the ship *Wasp*; the persons to whom; the period when paid; and the balance due to sundry seamen, unclaimed.

3d. C. exhibits the amount paid by Samuel Hambleton to the officers, seamen, and others, attached to the Lake Erie station; the persons to whom; the periods when paid; and the balances unexpended.

4th. D. shows the amount paid by George Beall, Jun. to the officers, seamen and others, attached to Lake Champlain station; the persons to whom paid; and the balances unexpended.

5th. E. Copy of a statement from Charles Biddle, of the amount paid by him to the officers and crew of the ship *Hornet*; and a copy of his letter to Benjamin Homans, on the subject of his agency. There has not been any list of persons or payments received with this statement.

It has been found impracticable to prepare, in time, correct statements of the expenditures made by Charles W. Goldsborough, Cox, and Montaudevert, and Littleton W. Tazewell; nor can the periods of payment be given, as, in most cases, none have been noted on the rolls. Mr. Tazewell's accounts have been presented at this office, and great progress has been made in their examination; a want of form in some of the vouchers has been the cause why it has not been completed.

The statements, marked B, C, D, and E, were prepared by the agents, in obedience to a previous order from the Secretary of the Navy.

I have the honor to be, with great respect, sir, your most obedient humble servant,

CONSTANT FREEMAN, *Fourth Auditor.*

The Honorable the SECRETARY OF THE NAVY.

A.

Statement, exhibiting the amount of moneys appropriated by Congress, for rewarding the officers and crews of sundry vessels for captures made during the late war; the names of the prize agents to whom the amounts were advanced; the amount expended by them, and the balances remaining in their hands unexpended, as appears by accounts settled, or on file, in this office.

When and for what purposes appropriated.	Amount appropriated.	Amount advanced.	Names of prize agents to whom the amount was advanced.	Amount accounted for, per account settled.	Amount accounted for, per account on file unsettled.	Balance in the hands of the prize agent unclaimed.
For rewarding the officers and crew of the frigate <i>Constitution</i> ; and the officers and crew of the <i>Wasp</i> , 3d March, 1813,	125,000	100,000 00 25,000 00	C. W. Goldsborough, George S. Wise, Jun.	- -	96,452 44 23,107 47	3,547 56 1,892 53
For rewarding the officers and crew of the sloop of war <i>Hornet</i> , and lieutenant Elliot and his officers and companions, 13th July, 1813,	37,000	37,000 00	Cox & Montaudevert,	23,494 22	-	13,505 78
For purchasing the vessels captured on Lake Erie, 18th April, 1814,	255,000	242,250 00 12,750 00	Samuel Hambleton, Isaac Chauncey, paid him for his proportion of prize money,	-	234,020 53	8,229 47
For purchasing the vessels captured on Lake Champlain, 3d March, 1815 ^a	-	290,438 19 13,853 49 5,698 32	George Beall, Jun. White Youngs, Robert Henley, paid him for his proportion of prize money,	- - -	266,711 17 13,612 65	23,727 02 240 84
For rewarding the officers and crew of the sloop of war <i>Hornet</i> , for the capture and destruction of the British sloop of war <i>Penguin</i> , 28th February, 1816,	25,000	25,000 00	Charles Biddle,	-	24,101 07	898 93
For the captors of the Algerine vessels, captured and restored to the Dey of Algiers, 27th April, 1816,	100,000	100,000 00	L. W. Tazewell,	-	75,616 99	24,383 01

TREASURY DEPARTMENT, FOURTH AUDITOR'S OFFICE, *November 21, 1818.*

CONST. FREEMAN, *Fourth Auditor.*

^a This act did not appropriate any specific sum, but authorized the amount of the valuation of such captured vessels, when duly made and returned to the Navy Department, to be distributed as prize money.

B.

Statement of the disbursement of twenty-five thousand dollars appropriated by Congress for the capture of the British sloop of war *Frolic* by the late United States' sloop of war *Wasp*, Jacob Jones, Esq. commander, by George S. Wise, Jun., agent.

GEORGE S. WISE, JUN., *Prize Agent.*

* These sums, amounting to two hundred and sixty-four dollars and seventy-five cents, said to have been paid by Mr. Wise, are advances made to the respective men by Purser Deblois, which the Secretary of the Navy ordered should be deducted from their prize money. Although the men have not been yet in the settlement of Mr. Wise's accounts, he is charged with the said amount, which, consequently, is considered a payment by him.

C.

Samuel Hambleton's account of the distribution of prize money on Lake Erie.

Names.	Rank.	Amount.	When paid.	To whom paid, as per vouchers filed at the office of the Fourth Auditor of the Treasury.

WASHINGTON, October 22, 1818.

GEORGE BEALE, JUN., *Prize Agent.*

E.

PHILADELPHIA, September 2, 1818.

SIR:

I have paid to the officers and crew of the United States' ship Hornet, as prize money,	- - - - -	\$22,763 45
My commissions,	- - - - -	1,250 00
Expenses,	- - - - -	87 62
		<u>\$24,161 07</u>

Your most obedient servant,

CHARLES BIDDLE, JUN.

To the Honorable B. W. CROWNINSHIELD, *Secretary of the Navy.*

PHILADELPHIA, September 2, 1818.

DEAR SIR:

I received, some time since, a letter from the Secretary of the Navy, requesting information relative to the distribution of prize money. Before the money was paid to me, I was required to exhibit at the Department the power of attorney from the officers and crew under which I claimed it, dated 29th November, 1813, a notarial copy of which is deposited in the Navy Office.

Under a general power, I consider my receipt as complete a discharge as the Secretary can wish, and precisely the same as a receipt from each individual composing the crew. I was never regulated by, nor did I ever receive, any instructions or authority from the Department; but claimed the money (as I should have done from an individual) by virtue of the power of attorney, and received it accordingly.

Under these circumstances, I know not the object of the inquiry; but, being unwilling to show a want of respect for the officers of Government, I enclose you a statement, which you can hand over to the Secretary of the Navy, if you think proper.

The cause of any money being unpaid arises, in a great measure, from conflicting powers of attorney, which I presume is no novelty at the Navy Office. The consequence has been *attachments*, which creates a responsibility on my part.

With esteem, I remain your most obedient servant,

CHARLES BIDDLE, JUN.

BENJAMIN HOMANS, Esq., *Washington City.*

15th CONGRESS.]

No. 165.

[2d SESSION.

INCREASE OF THE NAVY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 4, 1819.

DECEMBER 31, 1818.

To the House of Representatives of the United States:

In compliance with a resolution of the House of Representatives, of the 7th instant, requesting me to lay before it "the proceedings which have been had under the act entitled an act for the gradual increase of the navy of the United States; specifying the number of ships which have been put on the stocks, and of what class, and the quantity and kind of materials which have been procured, in compliance with the provisions of said act; and also the sums of money which have been paid out of the fund created by the said act, and for what objects; and likewise the contracts which have been entered into, in execution of said act, on which moneys may not yet have been advanced," I transmit a report from the acting Secretary of the Navy, together with a communication from the Board of Navy Commissioners, which, with the documents accompanying it, comprehends all the information required by the House of Representatives.

JAMES MONROE.

SIR:

NAVY DEPARTMENT, *December 30, 1818.*

In compliance with a resolution of the House of Representatives of the 7th instant, I have the honor to transmit to you, to be laid before the House, statements of the proceedings which have been had under the act entitled an "Act for the gradual increase of the navy of the United States," comprising the papers herewith, marked A, B, C, and D,* together with the copy of a communication from the Commissioners of the Navy.

I have the honor to be, with the highest respect, sir, your most obedient servant,

J. C. CALHOUN,

Acting Secretary of the Navy.

The PRESIDENT OF THE UNITED STATES.

SIR:

NAVY COMMISSIONERS' OFFICE, *December 24, 1818.*

The Board of Navy Commissioners have had the honor of receiving your letter of the 9th instant, enclosing a resolution of the honorable the House of Representatives of the 7th instant, calling for information as to the proceedings which have been had under the act, entitled "An act for the gradual increase of the navy of the United States," specifying the number of ships which have been put on the stocks, and of what class, and the quantity and kind of materials which have been procured in compliance with the provisions of the said act, and also of the sums of money which have been paid out of the fund created by said act, and for what objects; and likewise the contracts which have been entered into in execution of the said act, on which moneys may not yet have been advanced.

Referring to the Fourth Auditor of the Treasury for information as to the sums of money which have been paid out of the fund for the gradual increase of the navy, the Board of Navy Commissioners respectfully submit the enclosed papers, which they hope will afford satisfactory information upon all other points embraced by the resolution. These papers are marked—

A. Which shows the number and class of the ships which have been put on the stocks, and the progress made in building them.

B. Which shows the quantity and kind of materials which have been procured, and are now in deposit, in compliance with the provisions of the act; and

C. Which exhibits a view of the contracts made under the act for the gradual increase of the navy, and designates those on which moneys have not yet been advanced.

The paper C shows that special contracts for the live oak frames of eleven ships of the line and twelve frigates have been made by the Navy Commissioners from time to time. These, with the line-of-battle ship building at this place, and the materials of live oak on hand, and those procuring from Blackbeard's and Grover's islands, which are estimated as equal to the frames of two frigates, exceed the whole number authorized by the act for the gradual increase, three frames for line-of-battle ships, and four frames for frigates. This excess, however, is only nominal, for of the contracts made, two, viz: those with Mr. Livingston and Mr. Snow, which embrace the frames of three line-of-battle ships and four frigates, have, as was expected and intimated in our letter of the 20th January last, been forfeited by the contractors. This failure on the part of the contractors compelled the Navy Commissioners, in the months of June and September last, to enter into contract with Messrs. Swift, Green, and Grice, for the frames of three line-of-battle ships and four frigates, to supply the place of those which Messrs. Livingston and Snow had failed, agreeably to their respective contracts, to deliver. Hence, the contracts now existing, including those which have been completely executed, and the timber procured at Blackbeard's and Grover's islands, embrace the frames of nine line-of-battle ships and ten frigates only, which is the number authorized by the act for the gradual increase of the navy.

Of these frames of live oak thus contracted for, and otherwise provided and providing, three for line-of-battle ships, and two for frigates, have been completed, three more complete frames for line-of-battle ships, and two more for frigates, (a considerable proportion of which has already been delivered,) will, no doubt, be delivered early in the ensuing spring; and the commissioners trust that they will be able to procure from Blackbeard's and Grover's islands, and other sources, all the pieces yet required to complete two more frames for frigates. The residue of the frames authorized by law, viz: three for line-of-battle ships, (part of one which has been procured by the Navy Commissioners at Blackbeard's island,) and four for frigates, are to be delivered during the year 1820; and from the known responsibility of the contractors, the amount of the bonds they have respectively given for the faithful and punctual execution of their respective contracts, and the arrangements which it is known they have made, the Commissioners rely with great confidence upon the faithful execution of their engagements.

Satisfactory progress is making by the contractors for cannon, carronades and shot, and no doubt is entertained of these munitions being in readiness by the time they will be wanted.

All the copper originally contemplated for all the line-of-battle ships and frigates, authorized by law, has been procured. It has, however, since the original estimate upon this subject was made, been judged expedient to use copper bolts in many parts of the ship instead of locust treenails. Copper rods for bolts being offered on good terms, and being essentially better than locust treenails, contracts have accordingly been made for the additional quantity which this decision made necessary. These contracts have been partly executed, and will, no doubt, be completed in due time.

The contractors for oak and pine plank, beams and ledges, long combings, mast pieces, and all the other timber required in the construction of ships, are progressing, and it is expected that the contracts will be executed in due season.

With respect to iron, we have purchased and contracted for nearly all required in the construction of six line of battle ships, and six frigates, and we have purchased nearly all the lead required.

Paper A will show that five ships of the line have been put on the stocks, viz: one at Boston, one at New York one at Philadelphia, one at Washington, and one at Norfolk. Another would have been put on the stocks at Portsmouth, New Hampshire, if it had been possible to procure in that neighborhood suitable pieces for the keel and keelson. The attempt to procure those pieces in that quarter was made, and not abandoned till it was found impracticable to procure them. The Commissioners have found it necessary to send these pieces from the southward. They have accordingly been ordered, and the keel of a line of battle ship will, therefore, be laid at Portsmouth, New Hampshire, early the ensuing spring.

Of the line of battle ships now on the stocks, the one at Washington will be ready to launch the ensuing spring. Those at New York and Norfolk, can, if required, be prepared for launching next fall; and, during the ensuing year, considerable progress will be made in building those at Philadelphia, Boston, and Portsmouth.

All the tarred rope, excepting the standing rigging, required for the line-of-battle ship building at this place has been contracted for.

Canvass being a perishable article, the Commissioners have not deemed it expedient to contract for any for the gradual increase. They have, however, satisfactorily ascertained, that canvass, of a superior quality, of American manufacture, can be procured on moderate terms, and in sufficient quantities.

Owing to the imperfection in the manufacture of heavy anchors, which have hitherto been supplied from private shops, and the high price asked for them, the Navy Commissioners have established at this yard an anchor shop, where all the anchors for the ships authorized by the act for the gradual increase of the navy will be made. They have also attached to the steam engine at this yard the machinery for making blocks, which, while it will enable them to provide all the blocks for the gradual increase at a rate much cheaper than by purchase, will be a means of preserving that uniformity in the construction of blocks which is essential.

The Commissioners have also established at this yard a factory of chain cables, which are more secure, and from their great durability, much less expensive than hempen cables. At this factory, a chain cable for each of the ships authorized by the act for the gradual increase of the navy will be provided.

* The paper D is an abstract of the warrants drawn by the Secretary of the Navy from the 29th April, 1816, to 30th November, 1818, inclusive, out of the appropriation for the gradual increase of the navy, amounting to \$1,367,172 42.

With respect to the steam batteries, the Commissioners have engaged one complete set of engines and boilers for a steam frigate. The engines are to be constructed upon the most approved principles, and to be put effectually and completely in operation.

All which is respectfully submitted.

I have the honor to be, with great respect, sir, your most obedient servant,

JOHN RODGERS, *President of the Navy Board.*

The Honorable J. C. CALHOUN, *Acting Secretary of the Navy.*

A.

Exhibit showing the number and class of the ships which have been put on the stocks under the act for the gradual increase of the navy of the United States, and the progress made in building them.

No.	Class.	Where put on the stocks.	Progress made in building them.
1	Ship of the line, -	Boston, - - -	Keel bolted and laid on the blocks; a large proportion of the live oak frame, nearly all the white oak timber, a considerable quantity of the pine, and nearly all the other materials, which will be required in her construction, are on the spot.
1	Ship of the line, -	New York, - - -	Frame, stern, and bow, are completely raised and regulated, sheer streak on her, lower hold sealed, orlop clamps on, and beams in and kneed, deck partly framed, keelson in and bolted; all the live oak, and nearly all the other materials, are on the spot. If required, this ship can be launched next fall.
1	Ship of the line, -	Philadelphia, - - -	Keel is laid, all the futtocks and floors worked to their proper shape, and well secured from the weather. The frame of live oak will be completely delivered in the spring; a great proportion of the other materials is now on the spot.
1	Ship of the line, -	Washington, - - -	This ship is in such forwardness that she will be ready to launch the ensuing spring.
1	Ship of the line, -	Norfolk, - - -	This ship is timbered, with the exception of half top timbers and stanchions, keelson in and bolted, false keel on and coppered, lower wales on; all the live oak, and nearly all the other materials, now on the spot. If required, this ship can be launched next fall.
1	Ship of the line, -	Portsmouth, N. H. -	A considerable quantity of the live oak, and other materials, are on the spot, as will appear by reference to paper B; and the keel of a ship of the line would have been laid, if every attempt to procure keel and keelson pieces in that quarter had not failed. The Board have at length been compelled to order these pieces from the southward. The keel of a ship of the line will therefore be laid at Portsmouth early the ensuing spring.

B.

Showing the quantity and kind of materials which have been procured in compliance with the provisions of the act for the gradual increase of the navy of the United States.

PROCURED AND NOW DEPOSITED AT NORFOLK.

To be used in the construction of ships of the line.

213,198 feet of pine plank,	29,108 $\frac{1}{2}$ cubic feet of moulded live oak,
258,525 feet of oak plank,	308 live oak knees,
305 pieces of promiscuous timber,	47,400 lbs. of square bar iron,
123 beams,	44,838 lbs. of flat and square iron,
30 ledges,	4,475 sheets of copper sheathing,
425 knees,	37,937 lbs. of copper bolt rods,
15 mast and spar pieces,	19,177 lbs. of copper rods for spikes,
10 pieces of thick stuff for caps, &c.	3,760 lbs. of copper sheathing nails.

To be used in the construction of frigates.

77,876 feet of pine plank,	520 knees,
192,560 feet of oak plank,	24 mast and spar pieces,
214 pieces of promiscuous timber.	21 pieces of thick stuff for caps, &c.
41 beams,	31,853 lbs. of square bar iron,
45 ledges,	9,667 lbs. of flat and square iron,
2 combings,	

AT BALTIMORE.

For two ships of the line and one frigate.

12,210 sheets of sheathing copper,	127,036 lbs. of copper rods and nails.
------------------------------------	--

AT WASHINGTON.

Besides the materials which have been used in the construction of the ship of the line now on the stocks, there is now collected a considerable part of the frames of two frigates, and the residue is providing.

PROCURED AND NOW DEPOSITED AT PHILADELPHIA.

To be used in the construction of a ship of the line and a frigate.

658,198 feet oak plank and thick stuff,	46 pieces of square timber,
400,168 feet of yellow pine plank,	10,663 feet of scantling,
731 round oak logs,	60,000 locust treenails.

For a ship of the line.

1 lower stem piece,	1 complete set of spar deck beams,
2 dead woods,	735 pieces of moulded live oak,
236 knees,	57,161 lbs. of smith's work, such as ring and eye bolts, ring plates, set bolts, wedges, riband nails, rivets, auger shanks, &c. &c.
2 rising timber and breast hooks,	
1 complete set of orlop beams,	

For two ships of the line and four frigates.

22,611 sheets of copper,	1 set of beams complete for a 44.
251,906 lbs. of copper rods and sheathing nails,	

AT NEW YORK.

To be used in the construction of ships of the line.

37,324½ cubic feet of live oak,	186,623 feet Jersey oak plank,
5,982 cubic feet of Jersey w. oak,	173,501 feet southern pine plank,
95 cubic feet of locust,	4,335 cubic feet beams and ledges,
26,439 cubic feet North river pine,	103,768 lbs. of assorted iron,
14,992 cubic feet Georgia pine,	9,153 sheets of sheathing copper,
496 white oak knees,	122,142 lbs. of bolt copper and sheathing nails,
175 pieces spruce spars,	85 tons 13 cwt. lead for ships of the line and frigates.
2,476 in. do. do.	

To be used in the construction of frigates.

35,449 cubic feet of live oak,	2,932 sheets of sheathing copper,
150,000 feet of southern pine plank,	35,642 lbs. of bolt copper and sheathing nails.

AT BOSTON.

7,057 cubic feet, moulded live oak, for a ship of the line,	3,800 cubic feet moulded live oak, for a frigate.
---	---

To be used in the construction of one ship of the line and one frigate.

2,222 cubic feet promiscuous live oak,	149 hacmetac knees,
32,462 do. white oak,	30,476 feet white oak plank,
8,069 do. southern pine,	8,590 feet southern pine plank,
3,123 do. northern pine,	3,359 feet of white pine,
321 do. elm	21,002 locust treenails,
830 do. gun carriage stuff,	381,326 lbs. of assorted round, flat, and square iron.
347 white oak knees,	

Enough for one ship of the line and four frigates.

18,235 sheets of copper sheathing,	221,628 lbs. of copper rods and nails.
------------------------------------	--

AT PORTSMOUTH, N. H.

To be used in the construction of a ship of the line.

372 pieces of moulded live oak,	76,377 lbs. of assorted iron,
17,502 feet of white oak plank,	4,551 sheets of sheathing copper,
159 white oak knees,	42,965 lbs. of copper bolt rods.

To be used in the construction of a frigate.

310 pieces of moulded live oak,	249 knees.
---------------------------------	------------

Promiscuous live oak enough for one ship of the line and one frigate.

C.

Exhibit showing the contracts made by the Board of Navy Commissioners, under the act of Congress, entitled "An act for the gradual increase of the Navy of the United States."

When made.	With whom made.	For what articles made.	Price.	Where to be delivered.	Remarks.
Aug. 7, 1816,	E. & T. Swift, - - -	One complete <i>Live Oak.</i> frame of live oak, for a 74,	155 cents per cubic foot,	Norfolk, - - -	This contract has been completely executed.
Jan. 10, 1817,	Henry Eckford, - - -	Do. for one 74 and one 44,	155 cents for 74, 142½ for 44,	New York, - - -	This contract has been completed.
April 2, " "	Thomas Spalding, - - -	Do. for one 44,	142½ cents,	New York, - - -	This contract has been completed.
June 9, " "	E. Swift, - - -	Do. for one 74,	155 cents,	Philadelphia, - - -	735 pieces delivered, and the residue confidently expected early the ensuing spring.
Aug. 9, " "	Hugh Lindsay, - - -	Do. for one 74 and one 44,	155 cents and 142½ cents,	Boston, - - -	13,079 cubic feet delivered, and the residue expected early the ensuing spring.
Dec. 29, " "	N. Bixby & Co. - - -	Do. for one 74 and one 44,	155 cents and 142½ cents,	Portsmouth, N. H. - - -	682 pieces delivered, and the residue expected early the ensuing spring.
June 8, 1818,	† E Swift, - - -	Do. for one 74 and one 44,	155 cents and 142½ cents,	Boston and Philadelphia,	These contracts are to be completed during the year 1820; the timber is now cutting and no doubt is entertained of the whole being delivered within the time stipulated.
" 24, " "	† P. H. Green, - - -	Do. for one 74 and two 44's,	155 cents and 142½ cents,	Philadelphia, - - -	
Sept. 10, " "	† Samuel Grice, - - -	Do. for one *74 and one 44,	150 cents and 142½ cents,	Norfolk, - - -	
June 14, 1816,	Edward Livingston, - - -	Do. for two 74's and two 44's,	155 cents and 142½ cents,	- - -	The contractors in these instances have failed to comply with their contracts, and their contracts are null and void.
Aug. 13, " "	J. Snow, - - -	Do. for one 74 and two 44's,	115 cents,	- - -	
June 1, 1816,	John Mason, - - -	<i>Cannon, &c.</i> Cannon, carronades, and shot, for a 74,	\$125 per ton for cannon, 5 to 8 cents per pound for shot.	Washington, - - -	Nearly completed.
Dec. 14, " "	Robert Swartwout, and others, - - -	Cannon, &c. and shot, for a 74,	Do. - - -	New York, - - -	Nearly all the shot delivered; the cannon now boring.
Sept. 16, " "	Levi Hollingsworth, - - -	<i>Copper.</i> Copper for two 74's and one 44,	33 cents per pound for all but nails, which are 44 cents.	Baltimore, - - -	Completed.
Dec. 30, " "	Paul Revere & Son, - - -	Copper for one 74 and two 44's,	30 and 32 cents,	Boston, - - -	Completed.
" 17, " "	S. J. Isaacs & Soho Copper Com'y,	Copper for two 74's and one 44,	30 and 32 cents,	New York, - - -	
April 5, 1817,	D. A. Smith, - - -	Copper for two 74's and three 44's,	29 and 32 cents,	Philadelphia & Boston,	
Sept. 1, 1818,	R. E. Griffith, - - -	Copper for two 74's and three 44's,	26 cents, and duty on bolts,	Philadelphia, - - -	
	Joseph W. Revere, - - -	257,750 pounds of copper bolt rods,	36 cents, payable part in old copper, at 32 cents.	Boston, - - -	Part delivered, and the residue will be delivered in the course of the year 1819, and by the time it will be wanted.
	Levi Hollingsworth, - - -	100,531 do. do. do.	33 cents,	Baltimore, - - -	
	S. J. Isaacs & Soho Copper Com'y,	100,631 do. do. do.	33 cents,	New York, - - -	
July 13, " "	† Richard Parrott, - - -	All the tarred rope, except the standing rigging, required for the ship of the line building at this place. [Oak and pine plank, knees, beams, keel & keelson pieces, ledges, long combings, mast stuff, promiscuous timber, &c.]	\$12 25 for 112 pounds,	Washington.	
Oct. 2, 1816,	† B. & J. Hersey, - - -	Knees for a 74,	50 cents per inch, sided,	Washington, - - -	A few only delivered.

* This is for all that part of the frame of a ship of the line which could not be procured by the Navy Commissioners at Blackbeard's and Grover's islands.
NOTE.--This mark † denotes that no moneys have yet been advanced or paid upon the contracts so marked.

EXHIBIT C.—Continued.

When made.	With whom made.	For what articles made.	Price.	Where to be delivered.	Remarks.
June 9, 1817,	N. P. Tatem,	Oak and pine plank, knees, beams, ledges, mast stuff, long combings, &c. for a 44,	\$3 per 100 feet for the plank, 45 cents per inch for knees, 38 cents per foot for beams, &c.	Norfolk,	These contracts have been executed in part, and it is expected that they will all be completed in the course of the ensuing spring.
" 7, "	A Butt, and others,	Same as above, for a 74,	\$3 per 100 feet for plank, &c.		
Sept. 1, "	William Cammack,	Same as above, for a 74,	\$3 &c.		
" 17, "	Swepton Whitehead,	Same as above, for a 74 and 44,	\$3 &c.	New York,	Completed.
June 10, "	John F. Tice,	Keel and keelson pieces for a 74,	\$1 per cubic foot,		
" 16, "	Ebenezer Thompson,	Knees for a 74 and 44,	50 cents per inch sided.	Portsmouth, N. H.	408 delivered; the residue shortly expected.
Sept. 20, "	James Murphy,	592,850 feet Jersey oak, for a 74 and 44,	\$4 per 100 feet for first quality, \$2 66 for second.	New York,	Partly executed.
Feb. 24, 1818,	Amos Upham,	740 white oak knees for a 74,	75 cents per inch,	New York,	Partly executed.
April 28, "	Andrew Leighton,	2,000 hacmetac knees,	\$3 25 to \$4 25 each knee,	Portland,	Partly executed.
May 20, "	James C. Hutchison,	160,146 leger and other staves,	\$14 to 100, per 1,000 of 1,200,	Washington,	Part delivered.
July 17, "	Andrew Leighton,	240 hacmetac knees,	\$660 for the whole,	Portland, Maine,	Executed.
March 28, "	John Snow,	Masts, spars, beams, long combing & ranging yellow pine timber for a 74 and 44,	42 to 45 cents per cubic foot,	Portsmouth, N. H.	Part delivered.
June 24, "	Peter H. Green,	79,000 feet white pine, and 5,000 feet ash,	\$35 per M. superficial feet,	Washington,	Executed.
Nov. 26, 1817,	Charles Ridgely,	110 tons of best American iron,	\$118 to \$124 per ton of 2,240 pounds.	Baltimore,	Executed.
July 23, 1818,	† John D. Sloat,	400 dozen patent augers,	34 cents per one-quarter inch,	Philadelphia, New York, Boston, Washington, and Norfolk.	To be completed by the 23d July, 1819.
Oct. 21, "	John Mason,	All the iron castings required at Washington. [For these articles contracts are not yet signed, although the articles are engaged; the contracts are daily expected, they have been sent to the agents to be signed.]	6 cents per pound,	Washington,	
	† Michael Williamson,	All the American iron for one 74 & one 44,	\$115 to \$140 per ton of 2,240 pounds.	Philadelphia.	
	† J. W. Patterson,	Cask hoop iron for two 74's and two 44's,	\$120 for 50 tons, 130 for residue,	Baltimore.	
	† George French,	Do. for one 74 and one 44,	\$125 per ton of 2,240 pounds,	Washington.	
		Do. for one 74 and one 44,	do. do.	Philadelphia.	
	† P. Israel,	Do. for two 74's and two 44's,	\$130 do. do.	Boston and Portsmouth,	
	† Charles Ridgely,	All the American iron required for two 74's and five 44's.	\$118 to 140 do.	Norfolk, New York, & Washington.	
	† Robert McQueen & Co.	Engines complete, for one steam frigate,	\$43,000.		
		Boilers, public furnishing the copper,	10 cents per pound.		

NOTE.—This mark † denotes that no moneys have yet been advanced or paid upon the contracts so marked.

15th CONGRESS.]

No. 166.

[2d Session.]

NAVY AGENTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 5, 1819.

Mr. PLEASANTS made the following report:

The Committee on Naval Affairs, to whom was referred a resolution, "directing them to inquire into the expediency of increasing the amount of the security to be hereafter required from navy agents; and also requiring security to a greater amount from those now in office," have had the same under consideration, and report:

The committee find, upon examination, that most of the bonds given by navy agents now in office are in the sum of twenty thousand dollars with two sureties; in some few instances the sum is less and the number of sureties smaller, and in one or two cases the number larger. The committee refer to a document annexed to this report, marked A, giving the names of agents now in office, their places of residence, amount of bond and number of sureties. The committee also refer to a document annexed to this report, marked B, giving a list of the names of agents now out of office, against whom balances stand charged in favor of the public, with the amount of those balances, &c. The amount of bonds given, with the number of sureties as heretofore directed by law, has been at the discretion of the President. The committee think that, from the large sums of money continually passing through the hands of those officers, it will be proper to fix by law the minimum amount of the bond, with the number of sureties to be given by each, before entering upon the duties of his office; and that after a stated period those agents, at present in office, shall conform to the same rule by giving new bonds, with the requisite number of sureties; to effect these objects the committee herewith report a bill.

NAVY DEPARTMENT, December 21, 1818.

SIR:

In compliance with the request of the Naval Committee of the House of Representatives, under date of the 9th instant, I have the honor to transmit to you, herewith, a list of the navy agents now in office, marked A, which designates their residence, the amount of bond given by each, and the names of their respective sureties.

Also an abstract statement, marked B, containing the names of former agents, and the amount of balances due by them to the United States, and with which they stand charged on the books of the Fourth Auditor of the Treasury.

The losses will eventually be considerable upon the two last naval agencies at Norfolk; the precise state of the accounts of the late navy agent at New York cannot, at present, be ascertained.

The returns from navy agents are made every three months by a special requisition from this Department, dated 21st November, 1817, addressed to the agents respectively, in the form of a circular.

I have the honor to be, with great respect, sir, your most obedient servant,

JOHN C. CALHOUN, *Acting Secretary Navy.*HON. JAMES PLEASANTS, JUN., *Chairman Naval Committee, House of Representatives.*

A.

Names of the Navy Agents of the United States, where situated, the amount of their bonds, and the number and names of the sureties to each.

Names.	Where situated.	Amount of bonds.	Sureties' Names.
John L. Storer, - Henry S. Langdon, - Amos Binney, -	Portland, Dis. Me. - Portsmouth, N. H. - Boston, Mass. -	\$20,000 20,000 20,000	Seth Storer, Joseph Storer. John Langdon, Jun. Edward Cutts. Jacob Rhoades, Joseph N. Howe, Eben. Larkin, John Binney.
Constant Taber, - Joseph Hull, -	Newport, R. I. - Middletown, Con. -	20,000 10,000	James Fenner. Canfield Gillet, William Thompson, Samuel J. Andrews, James Lewis.
Robert Swartwout, - George Harrison, - James Riddle, - James Beatty, - Joshua Potts, - Arch. S. Bulloch, - Jeremiah Brown, - Miles King, - James Morrison, - John Morgan, - John Robertson, -	New York, N. Y. - Philadelphia, - Newcastle, Del. - Baltimore, Md. - Wilmington, N. C. - Savannah, Geo. - Newbern, N. C. - Norfolk, Va. - Lexington, Ky. - Hartford, Con. - Charleston, S. C. -	10,000 20,000 20,000 20,000 20,000 10,000 20,000 20,000 20,000 20,000 20,000	John Swartwout, William Irving. Charles Francis. George Read. Nathan Levering, George Williams. Hanson Kelly, Aaron Lazarus, Richard Bradley. John H. Morel, Thomas Bourke. William Hollister. Robert C. Jennings, John Hodges. Charles Wilkins, Lewis Sanders. Moses Tryon, Jun. Richard Cunningham, Stephen Shrewsbury, Frederick Kohne.
John Randall, - John K. Smith, -	Annapolis, Md. - New Orleans, -	10,000 20,000	John Muir, John Johnson. William Hawkins, D. A. Smith.

B.

A list of Navy Agents who are now out of service; exhibiting the balances due from each, as appears by the books of this office, and those of the Accountant of the Navy.

Names.	Place of residence.	Balance due the United States.	Remarks.
Daniel Ludlow,	New York, N. Y.	\$1,769 27	Transferred from the Accountant's Office to 1st Comptroller of the Treasury, January 20, 1816.
Daniel Bedinger,	Norfolk, Va.	18 23	Ditto, - - - - - January 20, 1816.
William Smith, Sen.	Charleston, S. C.	1,421 64	Ditto, - - - - - July 28, 1810.
William Smith & Co.	Do.	863 56	Ditto, - - - - - January 20, 1816.
Samuel Brown,	Boston, Mass.	1,527 03	Ditto, - - - - - January 20, 1810.
Archibald Campbell,	Baltimore, Md.	3,030 73	Ditto, - - - - - March 9, 1810.
William Crafts,	Charleston, S. C.	707 64½	Ditto, - - - - - July 28, 1810.
Samuel Storer,	Portland, Me.	271 61	[These balances having been transferred from the book of the Accountant of the Navy to the books of the Register of the Treasury, previous to the establishment of this office, their final result can only be known by a reference to the Register's Office.]
John Beekman,	New York, N. Y.	30	
Theodorick Armistead,	Norfolk, Va.	241,217 86	
John H. Fawn,	Do.	151,483 93	
Nath. Ingraham & Son,	Charleston, S. C.	21,649 95	
John Stricker,	Baltimore,	50	
John Bullers,	New York, N. Y.	560,141 94	

To this balance of	\$560,141 94
Must be added this sum credited by him in his accounts on file in this office, under examination received for the sale of the United States' brig Tom Bowline,	6,388 00
From which amount is to be deducted his expenditures from 1st January to 30th June, 1818, as appears by his accounts on file in this office,	566,529 94 268,458 37
Leaving a balance against him of	\$298,071 57

As no account of his expenditures from 1st July 1818, to the day of his death, (the latter end of September following,) has been received, the actual balance against him cannot be ascertained. His expenditures for that period, judging from those of the two preceding quarters, will probably amount to about \$130,000, to which may be added the last remittance made him of \$40,000, and by him received a few hours previous to his death; no part of which, it is presumed, has been expended. By a regulation of the Treasury Department, adopted the 21st November, 1817, the agents were required to transmit their accounts, for settlement, quarterly. This regulation has been generally complied with by the agents since that period.

CONST. FREEMAN, *Fourth Auditor.*

TREASURY DEPARTMENT, FOURTH AUDITOR'S OFFICE, December 18, 1818.

15th CONGRESS.]

No. 167.

[2d SESSION.]

REGISTER OF THE NAVY FOR THE YEAR 1819.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, BY THE SECRETARY OF THE NAVY, JANUARY 5, 1819.

CAPTAINS.

15th CONGRESS.]

No. 168.

[2d SESSION.

CONTRACTS FOR THE YEAR 1818.

COMMUNICATED TO THE SENATE ON THE 8TH OF JANUARY, 1819.

NAVY DEPARTMENT, January 7, 1819.

SIR:

I have the honor of transmitting herewith a statement of the contracts made by the commissioners of the navy, during the year 1818, prepared in obedience to the act of the 3d March, 1809, entitled "An act further to amend the several acts for the establishment and regulation of the Treasury, War, and Navy Departments."

I have the honor to be, very respectfully, sir, your obedient servant,

SMITH THOMPSON.

The Hon. the PRESIDENT OF THE SENATE.

No. 169.

[2d Session.

NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 12, 1819.

NAVY DEPARTMENT, *January 11, 1819.*

SIR:

On behalf of the commissioners of the Navy Pension Fund, and in obedience to the "Act for the better government of the navy of the United States," I have the honor respectfully to report to Congress the following statements in relation to that fund, viz:

- A. Showing the amount of United States' stock belonging to the Navy Pension Fund.
- B. Showing the bank stock belonging to said fund.
- C. The account of the treasurer, Thomas Tudor Tucker, Esq. with the commissioners of the Navy Pension Fund. [Balance against him, \$1,360 91.]
- D. Abstract of warrants drawn by the Secretary of the Navy, on the treasurer of the fund. [Amount, \$228,235.]
- E. List of navy pensioners, with the pensions allowed to each. [Aggregate amount, \$34,970.]

All which is respectfully submitted.

SMITH THOMPSON.

To the Honorable the SPEAKER of the House of Representatives.

A.

Statement of the Stocks on the Books of the Treasury to the credit of the Secretary of the Navy, the Secretary of the Treasury, and the Secretary of War, for the time being, commissioners of the Navy Pension Fund, with the interest and reimbursement which accrued in the year 1818.

No. 170.

[2d Session.

NAVY AND MARINE HOSPITALS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 14, 1819.

NAVY DEPARTMENT, *January 14, 1819.*

Sir: In obedience to a resolution of the House of Representatives, passed on the 17th day of April, 1818, I have the honor to transmit to you, to be laid before the House, papers marked A, numbered 1 to 8 inclusively, and B, with their several enclosures; which contain statements designating "the different places in the United States in which provision is made for the accommodation of seamen, under the several laws relating to navy and marine hospitals, the number of persons, as nearly as it can be ascertained, annually accommodated at each, and the expense attending the same," and afford all the information upon the subject of said resolution, which could be obtained through the medium of circular letters from this and the Treasury Department, transmitted to the several surgeons and other officers of Government in the United States.

The cost of a "hospital at this place, sufficiently large for the number of persons usually provided for here," would, under existing circumstances, be of very limited extent, compared with other naval establishments at which ships of war are equipped, and to which they return from their cruises. As the average number of seamen or marines accommodated at this place will probably not exceed twenty-five persons at any one time, the establishment being considered only as a building yard, and not, as formerly, a place of rendezvous for the ships in ordinary, or for those requiring repairs, it has not been deemed necessary to furnish an estimate of the costs, which would attend the erection of a hospital for so small a number, presuming that such an estimate would not meet the object of inquiry in the resolution.

I have the honor to be, with the highest respect, sir, your most obedient servant,

SMITH THOMPSON.

The Honorable SPEAKER of the House of Representatives.

A. No. 1.

WASHINGTON, *May 25, 1818.*

Sir: Agreeably to your request of the 6th instant, I have prepared two abstracts: No. 1, of all the expenses of the naval hospital in this city, from June 1st, 1813, to December 31, 1817, except of such repairs as have been made to the fences by the mechanics of the navy yard, by your permission.

No. 2 contains an abstract of the value of hospital stores expended for the same period; admitting that the expense of vegetables before we had a garden, and the expenses of the garden for 1815, 16, 17, attached to the present establishment, be added, it will be found that the aggregate amount of the rations, for the above period, at twenty-five cents each, would leave a very large balance towards the other expenses of the hospital, say one thousand three hundred and thirty-nine dollars ninety-one cents; but as the greater proportion of the patients were marines, whose ration is valued at twenty cents, the balance would not be so great.

No part of the pension of Thomas Harvey has been drawn from the "pension fund," or carried to the credit of the hospital. He has been clothed, pursuant to an order from the Navy Department, dated June 28, 1814. His pension is thirty-six dollars per annum, of course not sufficient for his support alone.

Very respectfully, I have the honor to remain, your servant,

E. CUTBUSH, *Surgeon.*

The Hon. B. W. CROWNINSHIELD, *Secretary of the Navy.*

P. S. Regular returns have been made to the Department of the patients admitted and discharged, also of the hospital stores expended.

No. 1.

Abstract of the expenses of the naval hospital at the city of Washington, from June 1st, 1813, to Dec. 31st, 1817.

Years.	Patients in the hospital.		Wages of nurses and attendants.	Expenses of vegetables and fruit.	Expense of the garden.	For the support of patients, nurses and attendants.	Expense of soap and candles.	Expense of furniture replaced.	Fuel and expenses thereof.	Expenses of medicines, instruments, and dressings.	Incidental expenses.	Repairs at the hospital.	Clothing of an insane pensioner.	Rations of hospital patients and attendants.
	No.	No.

1816,	26	315	186 52	-	26 75	535 58 $\frac{3}{4}$	43 22	25 71	275 37 $\frac{3}{4}$	285 19	19 70	15 43	26 82 $\frac{3}{4}$	2523
1817,	24	231	137 00	-	20 75	448 42 $\frac{3}{4}$	19 74	83 12 $\frac{3}{4}$	157 17 $\frac{3}{4}$	31 53	33 10	-	31 68	2090

REMARKS.

The number of out patients marked thus * is from recollection, the books having been destroyed in the navy yard, 1814.

No steward has been employed in this establishment, and no hospital surgeon, paid as such, as in the army of the United States.

The number of rations stopped will more than cover the expenses for the support of patients and nurses.

E. CUTBUSH, Surgeon.

A. No. 2.

BALTIMORE, August 23, 1818.

SIR:

In obedience to your order of 6th May, I have herewith the honor to transmit the enclosed statement of "the number of sick, who have been annually accommodated in the navy hospital at this place, and of the expenses attending the same." The statement terminates with the 17th March, 1817, when the dismemberment of the navy yard took place.

I have the honor to be, respectfully, sir, your obedient servant,

The Hon. B. W. CROWNSHIELD, Secretary of the Navy.

JAMES PAGE.

A. No. 3.

NEW ORLEANS, August 23, 1818.

SIR: In obedience to your order of the 6th May, to furnish an accurate return of the number of persons annually accommodated at the navy hospital, I have the honor to report, that, from the beginning to the end of the year

1811	were accommodated	284	patients.
1812	ditto	466	ditto.
1813	ditto	348	ditto.
1814	ditto	327	ditto.
1815	ditto	476	ditto.
1816	ditto	244	ditto.
1817	ditto	189	ditto.

In seven years were accommodated 2,334 patients.

At an average per year - 334 patients.

Out patients, or such as receive medical aid, without being actually lodged within the hospital, are not included in the above report.

The greatest number of patients and convalescents maintained at the hospital at the same time, has fluctuated occasionally for several successive months between one hundred and one hundred and fifty; and would determine the estimate of the extent of a building, if such were contemplated to be erected at this place for an hospital.

The total number of days of sojournment at the hospital, of the patients collectively admitted, has been, in the year

1811,	-	-	-	-	5,918	days.
1812,	-	-	-	-	12,503	do.
1813,	-	-	-	-	9,007	do.
1814,	-	-	-	-	8,066	do.
1815,	-	-	-	-	11,024	do.
1816,	-	-	-	-	6,738	do.
1817,	-	-	-	-	6,094	do.

In the space of seven years - 59,350 days.

The average per year of 8,478 days, divided by the average number of annual inmates of the hospital, apportioned to each a stay of twenty-five days and a fraction. But the extremes of each patient remaining at the hospital on being discharged, has actually been, in the year

1811,	longest period	156	days.	Shortest period	1	day.
1812,	ditto	221	days.	ditto	1	day.
1813,	ditto	221	days.	ditto	1	day.
1814,	ditto	290	days.	ditto	2	days.
1815,	ditto	364	days.	ditto	1	day.
1816,	ditto	371	days.	ditto	3	days.
1817,	ditto	269	days.	ditto	2	days.

The subjects of the first column were chronic, or incurable cases; and of forty-two persons coming under the head of the second column, twenty-three either died, or were impostors.

Equally solicitous of laying before the honorable the Secretary of the Navy a precise statement of the expense attendant on the institution, I addressed a letter on the subject to the navy agent; a copy of which is herewith enclosed. But the repeated promises of Mr. Smith to comply with my request not having been as yet fulfilled, I beg leave respectfully to submit, for the information of the Department, that, from an account kept of expenditures of provisions, small stores, and hospital stores, of every kind, the expense for the individual maintenance of a patient in these articles is, in the aggregate, twenty-four cents and a fraction per day. This calculation, than which I cannot at this moment offer any thing more faithfully correct, does not embrace the items of general expense for the hospital; and cannot be considered as conclusive to the inquiry made in the resolution of the House of Representatives of the United States.

I have the honor to be, with sentiments of great respect, sir, your very obedient servant,

LEWIS HEERMAN.

The Hon. BENJAMIN W. CROWNSHIELD, Secretary of the U. S. Navy, Washington.

SIR:

NEW ORLEANS, June 11, 1818.

The honorable the Secretary of the Navy having required of me an estimate of the expenses attendant on the number of patients annually accommodated at the hospital, I am unable of arriving at a just conclusion, unless I can inspect the duplicates of accounts for the hospital, which are deposited in your office.

Will you permit me, therefore, to ask of you the favor to let me examine the accounts which you have paid for the navy hospital, since the 1st of January, 1811, to this date?

I have the honor to be, sir, your very obedient servant,

LEWIS HEERMAN.

JOHN K. SMITH, Esq. *U. S. Navy Agent, Pres't.*

NEW ORLEANS, September 27, 1818.

SIR:

Having done myself the honor, on the 23d ultimo, to forward an accurate return of the number of persons annually accommodated at the navy hospital, I now beg leave to present the same in a tabular form, with an additional column devoted to the manner in which they were discharged from the hospital.

Governed by motives of elucidating the object of the Navy Department, by collateral as well as direct information, I hope to be pardoned for the digression in these reports from the inquiry, under date of the 6th May, before me.

I have the honor to be, with sentiments of profound respect, sir, your very obedient servant,

LEWIS HEERMAN.

THE HON. BENJAMIN W. CROWNSHIELD, *Secretary of the U. S. Navy.*

A septennial return of the United States' naval hospital at New Orleans, Lewis Heerman, surgeon.

In the year	Number of patients admitted.	Number of patients discharged, and how.				Number of days of the stay of patients at the hospital collectively.	Extreme periods of individuals remaining at the hospital.

SUMMARY REMARKS.

Out patients are excluded from this return.

The yearly average of patients accommodated is three hundred and thirty-four.

Of two thousand one hundred and fifty-one patients, recovered, relieved, and incurable, ninety-one deserted.

The proportion of deaths has been rather more than one in thirteen.

Of one hundred and eighty-three deaths, twelve, or one-fifteenth of the whole number, occurred within the first twenty-four hours of the admittance of the patients.

The maximum of patients simultaneously at the hospital has been one hundred and fifty.

The daily expense for maintaining a patient in provisions, small and hospital stores, is, in the aggregate, twenty-four cents and a fraction.

LEWIS HEERMAN, *Surgeon.*

A. No. 4.

HOSPITAL, GOSPORT, VIRGINIA, May 29, 1818.

SIR:

I herewith render you a correct statement of the number of sick admitted into the naval hospital at Gosport, during the years 1816 and 1817, as taken from the hospital books, now in the possession of Dr. Schoolfield, kept by him during that period.

I have the honor to be, very respectfully, sir, your obedient servant,

GEO. T. KENNON, *Hospital Surgeon.*THE HON. BENJAMIN W. CROWNSHIELD, *Secretary of the Navy.*

Number of sick admitted during the year 1816	-	-	-	-	98
Ditto ditto ditto 1817	-	-	-	-	162

NOTE.—Dr. Schoolfield was superseded in May, 1817, by Dr. M. C. Reynolds, who was superseded by myself in August. The returns for the four months May, June, July, and August, are not as correct as I could wish; though I hope they will be sufficiently so to give a tolerable correct idea of the number of sick admitted. The books kept by Dr. M. C. Reynolds, while he acted as surgeon to the hospital, were carried away with his baggage, through mistake, as was reported to me, when he left the station. My returns for the four months specified have been made from the ration book in the possession of the hospital steward.

G. T. K.

A. No. 5.

NEWPORT, R. I. May 17, 1818.

SIR:

In answer to your order of the 6th, I have to state, that, from January 1st, 1815, to January 1st, 1818, two hundred and nineteen petty officers and seamen were received into the hospital in this place, under my charge. Eleven officers during the same time were attended at their lodgings, being two hundred and thirty. Averaging nearly seventy-seven per year, for three years.

I have thus arranged the number, as the greater part of them were received from the squadron under the command of Commodore Bainbridge, and from the frigate Java, on their return from the Mediterranean.

The expenses for the three years were \$5,533 19; averaging \$1,844 19 per year. This expense was greatly increased in consequence of some of their crews being sick of the small pox. It being necessary to conform to the quarantine regulations, and hire the hospital, attendants, &c. in a separate place, directed by the municipal authority; also, to furnish the hospitals with beds, blankets, &c. to furnish the hospital.

Respectfully, your obedient servant,

CHARLES COTTON, *Surgeon U. S. Navy Hospital.*

Hon. BENJAMIN W. CROWNSHIELD, *Secretary of the Navy.*

The hospital in this place is a hired house, capable of receiving from fifty to sixty persons.

NEWPORT, R. I., *May 17, 1818.*

SIR:

By a resolve of the House of Representatives, and by your recent order, there appears to be an inquiry relative to naval hospitals; I therefore beg your permission to suggest those remarks which my long experience on ship-board and in hospitals enables me to make relative to seamen's diseases, and the accommodations requisite for their restoration to health. In so doing, I hope you will not consider me presumptuous, as what I do springs from a motive to be of utility to the service.

Generally speaking, naval hospitals receive those patients whose complaints are considered incurable on board ship, such as labor under some chronic disease, such as have met with some accident, and such as have received a wound. It is, therefore, requisite that they should be accommodated in such a manner as to perfect their cures speedily as possible; or be made comfortable as far as can be while they live. They consequently require suitable apartments, a pure atmosphere, good nourishment, and every attention which can be paid.

In no place has the want of proper accommodations been more severely felt than in this. On the arrival of Commodore Bainbridge's squadron, as large and convenient a house as any that could be procured was rented, but was quite insufficient; and the same circumstances again recurred upon the arrival of the Java, bringing all the sick from the Mediterranean squadron.

From observation, I am enabled to say, that no place in the United States is better calculated than this for a hospital, as respects climate; being milder in the winter than any port to the eastward, and enjoying a more temperate and purer atmosphere than any to the south. The vicinity is also favored with a soil which plentifully produces every article of provision, and at a much cheaper rate than can be procured in any seaport of the United States.

In the vicinity of the town are many excellent sites for the erection of a building, affording ample room, suitable soil, accessible by land and water, and enjoying the convenience of proximity to a thickly inhabited place, yet sufficiently retired. Having been in most of the harbors from Norfolk to Boston, I can say, that in none of them were the seamen on board ship more healthy than in this; nor have I ever known any epidemic to prevail, either among the inhabitants or those temporarily visiting here. The men received into the hospital under my charge have recovered in that speedy manner which convinces me that they must have enjoyed every advantage which can be derived from local situation.

Although I presume that the general hospital, contemplated at Washington, is to receive those patients who, by nature of their diseases, are incurable, yet to mitigate their sufferings fall within the province of medicine and surgery, yet minor hospitals will continue to receive those who require immediate assistance, and whose situation renders their transportation to the general hospital impracticable.

I submit this with due respect, and am your obedient servant,

CHARLES COTTON, M. D. *Surgeon U. S. Navy.*

The Hon. BENJAMIN W. CROWNSHIELD, *Secretary of the Navy.*

A. No. 6.

CHARLESTON, S. C. *June 10, 1818.*

SIR:

I have had the honor of receiving, in due course, your letter of the 6th ultimo, enclosing a copy of a resolution of the House of Representatives, passed on the 17th of April last, relative to naval and marine hospitals, and requiring my attention to the objects embraced in the said resolution, in order that an aggregate statement may be prepared for Congress, at the commencement of the next session.

Pursuant to these instructions, I respectfully submit the following report:

The United States' naval force on this station has always been comparatively small, the number of invalids and hospital subjects, however, we have observed to be generally disproportionate; this was remarkably illustrated during the late war, and will be sufficiently accounted for when it is recollected, that, for local considerations and circumstances, schooners, gunboats, galleys, and barges constituted (with but few exceptions) the description of vessels of war most profitably and usefully employed by our Government on this coast. The seamen are necessarily more exposed to weather at all times, and consequently more predisposed to sickness, than in vessels of a larger class; these causes, operating in a climate insalubrious to strangers, in particular during the autumnal season, may be expected to augment the list of the sick; accession to the number is not unfrequently experienced by the casual arrival of Government vessels with hospital subjects, the proximity of this port to the sea affording easy access. Officers as well as seamen are also occasionally transferred from other stations, St. Mary's, and recently from the squadron off that place, in consequence of the greater comfort afforded during the greater part of the year at Charleston.

These circumstances are stated at some length, inasmuch as they are presumed to be explanatory of the present, and may be expected to influence future arrangements.

The number of sick seamen provided for during the years 1814 and '15, exceed, annually, sixty-two. A subsequent reduction of the naval force has diminished our invalids to seventeen, a part of these were sent from vessels employed in surveying the coast, and others from the squadron off St. Mary's. Early in the summer of 1813, the corps of the United States marines, successively commanded by Lieutenants Wainwright and Henderson, were marched to Washington; they were antecedently attended and provided for in sick quarters; the greatest number of clinical sick did not exceed, annually, twenty-eight; during the last four years, we have had no United States' marine depot near Charleston.

The annual expense of accommodation for sick seamen, comprehending also officers' expenses at sick quarters, nurses, and other incidental charges at this place, has never exceeded \$1500 per annum, and this, at a period when hospital stores, &c. were at their highest prices; during the last two years, it has not been more than \$500, including stores provided for Blackbeard's island. The expenses, however, of the hospital department here are, during the present reduction only, incurred as circumstances require, with the exception of an apartment for invalids.

The expediency of establishing a permanent naval hospital near Charleston, may be determined by the particulars furnished in the foregoing statement; advantages resulting from such an institution are predicated on an augmentation of naval force, or in time of war. Eligible sites, with a proper extent of ground, may now be obtained on advantageous terms. A suitable lot of land may be purchased, and buildings of durable materials, sufficient to

accommodate fifty patients; also, apartments detached for officers, surgeon, and nurses, &c.; the cost of the whole will not exceed eight thousand dollars. The annual expense cannot be estimated with any degree of precision at present, being subject to much vicissitude, but may be inferred from our report of that in former years.

We have not considered, in our report, the accommodation of sick seamen in the merchant service. In the year 1805, the United States Government entered into an agreement with the city council, by which they were authorized to provide a marine hospital for merchant seamen, to consider the same as a municipal institution, to provide their physician, steward, &c., and, in aid of their funds, a per centage was allowed upon vessels arriving in port. This regulation has continued during a space of thirteen years. I have obtained the most correct information, by which it appears that the number of sick daily provided for in hospital, at present, exceeds twenty-five, which may be the average number in time of peace; in time of war, however, these are so much reduced and inconsiderable as scarcely to render the institution at all necessary, there being but few merchant seamen in port, consequently the reverse of that we have noticed respecting the United States seamen. The expense of the marine hospital at Charleston has been and continues considerable.

I have the honor to be, very respectfully, sir, your obedient, &c.

GEORGE LOGAN.

HON. SECRETARY OF THE NAVY, *Washington.*

A. No. 7.

UNITED STATES' NAVY YARD, CHARLESTOWN, (MASS.,) *June 30, 1818.*

SIR:

In reply to your letter covering a resolve of the House of Representatives of the United States, on the subject of hospitals, I have the honor to make the following report:

The first inquiry in the resolve, is to ascertain "the different places in the United States, in which provision is made for the accommodation of seamen." On this station there is no hospital or other building, under the control of the Navy Department, appropriated to that purpose. Our sick have been placed generally on board the hulk of an old merchant vessel, and are, at present, residing in the frigate *Java*, lying in ordinary. The unsuitableness of these places to accommodate sick men is too apparent to require any comment.

The second part of the resolve has reference to "the number of persons annually accommodated at each place, and the expense attending the same." During the three years that I have resided here, the number has fluctuated exceedingly at different times. It has been as low as 12, and as high as 60. It will average, taking the whole period into account, about 17 or 18. Our bills for medicines and hospital stores average about 400 dollars per year. We have been in the habit of taking, when wanted, these articles from the stores deposited by ships, which at different periods have been laid up here. This has been done in pursuance of orders from the commander of the yard. Rations are also continued to be issued to the invalids, in consequence of the difficulty, in the present situation of the yard, of regulating these matters. There is little doubt if these men were entertained in a hospital, but that the amount of their ration money would furnish the medicines and hospital stores, and the present expense of those articles would be saved by the Government.

I must remark, that the return of the sick at the navy yard is no criterion for estimating the whole number on this station. The commanders and surgeons of ships in the harbor generally prefer retaining their sick, because they can be accommodated better in their own ships.

At the present moment, the Independence, lying here with less than half a complement of men, the *Guerriere* in a state of confusion and bustle in preparing for sea, and the navy yard, muster altogether, about 70 subjects of medical attendance. If there were a regular hospital, these persons would probably all be collected together, be governed by uniform rules, be subsisted more accurately, according to their several infirmities and wants, and with infinitely less expense to the Government, more satisfaction to themselves, and greater ease to their medical attendants. At the same time, places appropriated to business would not be encumbered by them, and duty interrupted. The ships would have the advantage of superior cleanliness, and of air better fitted for the purposes of respiration, between decks; the men would, *cæteris paribus*, be returned in a shorter time fit for duty, and the ships at all moments in a condition to close their air ports, and proceed on a cruise. These are advantages incalculable in their amount, both as respects the service generally, and all the parties concerned.

Small vessels arriving without a surgeon derive their medicines, hospital stores, and medical attendance from the yard, and their sick are detained on board. Hence the men suffer from want of suitable nursing, the stores are liable to be wasted, or improperly used, and surgeons are oppressed with extrinsic labor and fatigue.

From these facts and observations, appears the necessity as regards the comfort of individuals, and the expediency as regards the public interest, of a hospital being established at this place.

The third and last subject contemplated by the resolve relates to an estimate of the costs of erecting a naval hospital at Washington. "sufficiently large for the number of persons usually provided for." This part of the resolve, my experience can throw no light upon, and in deference to the experienced surgeon of that station I shall not hazard any remarks upon it. The nature of the service at that place, and at this, is essentially different; and in estimating the extent of a building, different principles are to be taken into consideration. That may be properly denominated a peace station, and this a war station. But though this station will always be considerably resorted to in peace or war, it is most likely, in case of renewed hostilities with a foreign naval power, ships would very seldom, if ever, visit Washington. I think a hospital on this station, to accommodate less than 250 or 300 patients, would not be sufficient to meet the demands for that purpose, especially in case of active hostilities. In the summer of 1812 not less than 500 men, requiring the advantages of a hospital, arrived at this place within twenty-four hours.

I have the honor to be, respectfully, sir, your obedient servant,

SAMUEL R. TREVETT, JUN.

HON. B. W. CROWNSHIELD, *Secretary of the Navy, Washington.*

A. No. 8.

NEW YORK, *December 12, 1818.*

SIR:

I have been honored with yours of the 6th May last, calling for information as to "the number of sick annually accommodated at the navy hospital on this station, and the expense attending the same."

At all large naval depots, the number of sick sent to hospitals will depend much on the equipments which may be ordered for foreign service, and the number of vessels returning into port. To afford the Department, therefore, any just idea of the number for which it may be necessary to provide, I have been obliged to take the result of several successive years, and by this it appears, that the number of sick annually admitted into the hospital on this station may with safety be estimated from one hundred and eighty to two hundred and thirty. The expense for hospital diet for this number, taking one year with another, will not exceed the amount allowed by law for their rations, say twenty-five cents for each. For the accommodation of the number stated, the building at present occupied is sufficiently large, and should that number be increased, an adjacent building may be procured, adequate to any increase which might occur.

A very tedious and severe indisposition with which I have been afflicted has prevented an earlier reply, and the very debilitated state in which that indisposition has left me, prevents me from making the present communication more full.

With sentiments of the greatest respect, I have the honor to be, sir, your most obedient servant,

SAMUEL R. MARSHALL.

The Hon. the SECRETARY OF THE NAVY.

B.

TREASURY DEPARTMENT, *October 14, 1818.*

Sir:

I have the honor to enclose the report of the Register of the Treasury, of the 13th instant, in relation to the marine hospital; furnishing statements of the number of seamen which have been annually returned, and the places where they have been received, under the provisions of the several acts constituting the Marine Hospital Fund; accompanied by a statement of the receipts and expenditures of that fund from the year 1811 to the year 1817, both inclusive.

I have the honor to be, your most obedient servant,

WM. H. CRAWFORD.

The SECRETARY OF THE NAVY.

TREASURY DEPARTMENT, *Register's Office, October 13, 1818.*

Sir:

I beg leave to transmit "a statement of the different places in the United States, in which provision is made for the accommodation of seamen, under the several laws relating to navy and marine hospitals; the number of persons, as nearly as it can be ascertained, annually accommodated at each, and the expense attending the same," formed in pursuance of the resolution of the House of Representatives, of the 17th April, 1818.

Also a statement of receipts of moneys from the collectors of the customs, under the act of 16th July, 1798; as also, of appropriations of moneys made by law in aid thereof, with the annual expenditures on account of the marine hospital, from the 1st January, 1811, to 31st December, 1817.

I have the honor to be, sir, with great respect, your most obedient servant,

JOSEPH NOURSE.

Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

The following statement of receipts of moneys from the collectors of the customs, under the act of 16th July, 1798, as also of appropriations of moneys made by law in aid thereof, with the annual expenditures on account of the marine hospital, from the 1st January, 1811, to 31st December, 1817, exhibits the funds from which the annual provisions have been made.

Years.	RECEIPTS.		Total receipts.	Expenditures.	Remarks.
	From collectors of customs.	Specific Appropriations.			
Balance on 1st Jan. 1811,	\$112,081 90	- - -	\$112,081 90		
Amount in 1811,	51,587 34	- - -	54,586 34	\$57,109 08	
1812,	42,421 46	- - -	42,421 46	57,723 11	
1813,	21,789 58	20,000 00	41,789 58	53,376 87	
1814,	10,191 97	20,000 00	30,191 97	45,226 50	
1815,	28,374 74	20,000 00	48,374 74	43,651 55	
1816,	43,864 21	- - -	43,864 21	82,555 68	And includes for buildings and repairs, six thousand six hundred and fifty dollars.
1817,	*44,950 27	- - -	44,850 27	84,285 86	And includes for the purchase of a site for building a marine hospital, five thousand five hundred dollars.

*As some of the collector's accounts, from which a part of the above amount has been extracted, have not been finally adjusted at the Treasury, it is possible a small variation may take place.

NAVY DEPARTMENT, *Register's Office, October 13, 1818.*

JOSEPH NOURSE.

A statement of the different places in the United States in which provision is made for the accommodation of seamen, under the several laws relating to navy and marine hospitals; the number of persons, as nearly as it can be ascertained, annually accommodated at each, and the expense attending the same, formed in pursuance of a resolution of the House of Representatives of the United States, dated the 17th April, 1818.

Places in the United States.	Number of persons received in one year.	Annual average number.	Annual expenses.	Remarks.
Portsmouth, -	42	3	363 09½	Boarded in private families, and includes medical attendance.
Boston, -	487	32	8,439 41	Provided for in the United States' marine hospital, and includes for physician, \$1000; and for steward, \$500 per annum.
Portland, -	24	3	744 47	Boarded in private families, and includes medical attendance.
Bath, -	1	1	114 00	Do. - - - - - Do.
Newport, -	21	3	1,058 67½	Provided for in the marine hospital, and includes medical attendance.

15th CONGRESS.]

No. 171.

[2d SESSION.]

ADDITIONAL SLOOPS AND SCHOONERS, AND THE NUMBER FIT FOR SERVICE, OR WORTHY OF REPAIR.

COMMUNICATED TO THE SENATE, FEBRUARY 16, 1819.

NAVY COMMISSIONERS' OFFICE, January 21, 1819.

SIR:

The Board of Navy Commissioners had the honor, yesterday, of receiving your letter of the 18th instant, covering a resolution of the Senate of the 4th instant, and a letter from the chairman of the Naval Committee of the Senate, of the 18th instant, in which the following queries are propounded:—

1st. What is the due proportion of sloops of war, and other small vessels, on an establishment of twelve ships of the line, and twenty frigates, this being the number of those classes of vessels, either afloat, or authorized by law, in the navy of the United States.

In reply to this query, the Navy Commissioners have to state that, in their opinion, twenty sloops of war, and fifteen schooners of 120 to 200 tons each, would be a proper proportion of small vessels, on an establishment of twelve ships of the line, and twenty frigates.

2d. Whether live oak timber has entered into the construction of any of the sloops of war, or other small vessels belonging to the navy, and if so, which are they? and also, what number of vessels, and their rates, below the rate of frigates, are now fit for service; or worthy of repair?

Of the sloops of war, the John Adams and the Hornet have been built of live oak. Of the smaller vessels, none are of live oak.

The number of vessels, and their rates, below the rate of frigates, now fit for service, or worthy of repair, are, the John Adams, Cyane, Erie, Hornet, Peacock, and Ontario.

Of these, the Adams and the Hornet have lately been repaired, and are ready for service; the Cyane requires general repairs. The Erie and Ontario are on foreign service, and, on their return, will require repairs. The Peacock requires repairs.

The number of vessels, and their rates, below the rate of frigates, now fit for home service, but will be unworthy of extensive repairs, are, the brig Spark, schooners Nonesuch, Hornet, Lynx, Asp, Despatch, and Firebrand.

These vessels were bought in from the merchant service, and from the bad materials with which they have been constructed will require extensive repairs in eighteen months.

3d. Would it be expedient, in the opinion of the Department, to build, hereafter, the sloops of war, and other small vessels necessary for the naval service, of live oak, as far as that article generally enters into the construction of ships of war? and if so, at what price can this material be contracted for at this time?

In the opinion of the Navy Commissioners, it would be expedient to build the sloops of war, and other small vessels, hereafter, of live oak.

It is not precisely known on what terms live oak, suitable for the frames of sloops and schooners, could be procured at this time; but it is confidently believed, that it might be purchased and delivered at any of our navy yards at a price not exceeding \$1 20 cents per cubic foot for that required for sloops of war, and \$1 10 per cubic foot for that required for schooners.

I have the honor to be, with high respect, sir, your most obedient servant,

JOHN RODGERS, *President of the Navy Board.*

The Honorable SMITH THOMPSON, *Secretary of the Navy.*

15th CONGRESS.]

No. 172.

[2d SESSION.]

NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 2, 1819.

Mr. PLEASANTS made the following report:

The Committee on Naval Affairs, to whom was referred a report of the commissioners of the Navy Pension Fund, made to the House during the present session, have had the same under consideration, and thereupon report:

That, by the laws of the United States, regulating the distribution of prize money, the proceeds of the sales of all captured vessels and their cargoes, condemned, as good prize, to any of the public armed vessels of the United States, where the captured vessel is of inferior force, shall go, the one half to the captors, and the other to the United States. That by a law passed in April, 1800, it is among other things provided that all money accruing, or which has already accrued to the United States, from the sale of prizes, shall be and remain, forever, a fund for the payment of pensions and half pay, should the same be hereafter granted, to the officers and seamen who may be entitled to receive the same, &c. By the same act, it is further provided, that the fund shall be under the management of the Secretary of the Navy, the Secretary of the Treasury, and the Secretary of War, for the time being, who are authorized to receive the money, invest the same, make report of their proceedings to Congress, &c.

This act of Congress was the origin of the Navy Pension Fund. By an additional act of Congress, passed in March, 1804, some further regulations are made, as to the manner in which the money shall be received and disbursed, which is to be by the Treasurer of the United States; and also, that the comptroller shall be authorized to institute suits against defaulters, as in other cases of public defaulters. That the laws regulating the institution remained in this state until the commencement of the late war with Great Britain. When captures of prizes from the enemy became numerous, and condemnations in the different courts began to take place, it was found that frequent omissions occurred of making the returns of those condemnations necessary to enable the commissioners of the fund to use the proper remedy in recovering the amount due to the United States, and belonging to the fund. This induced the necessity of carrying on an extensive, troublesome, and generally fruitless correspondence, with the officers of the courts, whose duty it was to attend to the interests of the United States. The result of the correspondence carried on at different periods, by order of the Board of Commissioners, with those officers, is particularly detailed in the report of the commissioners referred to this committee, and is too long to be inserted here, and is the less necessary, as the copy of said report is in the hands of each member. (See No. 163.) It is sufficient to say, that the inattention to the calls of the commissioners, and the serious amount of sums due from some of the officers, was such as to induce the commissioners to request the passage of an act, affording additional sanctions to compel a compliance with the various provisions of law on this subject. A draught of the bill, ultimately passed into a law, was forwarded to the proper committee by the commissioners, drawn up, it appears, with much care, and providing, the committee think, every sanction necessary to enforce a compliance with the provisions of the laws on the subject, provided they were carried into effect. It appears, however, that from some cause or other, the committee know not what, unless it be the omission of that attention to the subject to which it is certainly, from its character, most eminently entitled, much remains yet to be done to secure the interests of the fund; a fund bottomed upon benevolence and humanity to a most meritorious and important class of the community, and eminently entitled, not only to justice, but the liberal exertions of all whose duty it is to attend to its interests. Upon a view of all the circumstances of the case, the committee think that no additional legislative provisions are necessary, and that the defects manifested have not been in the laws but in their administration. They recommend to the House the adoption of the following resolution:

Resolved, That the commissioners of the Navy Pension Fund be instructed to use all the means which the laws place within their power, to coerce payment of the balances due to the fund from all persons who may be found indebted to the same; and that they report to the House of Representatives, at an early period of the next session of Congress, a particular statement of the means which have been used, and the success of those means, in accomplishing the objects of this resolution; and also, that they report whether any, and what, additional legislative provisions may be necessary to compel a compliance with the different provisions of the laws on this subject.

No. 173.

[1st SESSION.]

ALTERATIONS IN THE NAVAL RULES AND REGULATIONS.

COMMUNICATED TO THE SENATE, JANUARY 3, 1820.

NAVY DEPARTMENT, *December 29, 1819.*

SIR:

In obedience to a resolution of the honorable the Senate of the 8th of February last, I have the honor to report, that, on examination of the rules, regulations, and instructions for the naval service, prepared and reported under the authority of an act of Congress of the 7th day of February, 1815, they are found to be at variance with existing laws, in the following particulars:

The fourteenth article, under the head of "Navy Yards," places the guard of marines detached for the protection of the yard under the command of the commandant of the yard, in the same manner as if on board a ship of war, and, of course, subjects the marines to the rules and articles for the government of the navy. This is conceived to be contrary to the act of July 11, 1798, establishing and organizing a marine corps, and by which act the corps is considered as being in addition to the military establishment; and, by a fair construction of the fourth section of the act, marines, when doing duty on shore, are to be governed by the rules and articles of war prescribed for the military establishment of the United States. It is, however, respectfully submitted for consideration, whether an amendment of the law, so as to make it conform to the rules and regulations in this respect, will not be expedient. It might contribute to order and due subordination to make the commandant of a yard as independent in his yard, in all respects, as a captain on board his ship. Should this be thought to interfere too much with the command and government of the marine corps, it is suggested, as worthy of consideration, whether it would not be expedient, for the protection of navy yards, to substitute watches, to be composed of sailors selected from the list of pensioners, and such others as have distinguished themselves for integrity, sobriety, and general good conduct, in the place of guards detached from the corps of marines: this would give employment to a very meritorious class of men, who, by their age and disabilities, are rendered unfit for active sea service. It is believed that such protection would be not only more efficient, but might be provided at much less expense than at present. It is not intended by this suggestion to intimate that the present establishment of the marine corps should be reduced; but, on the contrary, if guards for the navy yards are to be detached from this corps, as our ships of war multiply, it will very soon become indispensably necessary to increase its number.

By the 28th article of the regulations under the head of "Pursers," the component parts of the ration are different from those fixed by the act of Congress of the 3d of March, 1801, as will be seen by comparing the third section of the act with the article above referred to. Tea and sugar have been substituted in lieu of suet and half the rice formerly issued. Whether it will be expedient so to alter the law as to make the ration conformable to the regulation is respectfully submitted.

By the act of Congress of the 21st of April, 1806, it is declared that officers, when not under orders for actual service, shall receive no more than half their monthly pay; and by the third article of the rules and regulations under the head of "Full and half pay and rations," it is provided that such officers shall be entitled to only half their pay and half their rations. Doubts have been entertained whether the law authorizes the allowance of half the rations. Although I am of opinion that a just interpretation of the law is in conformity with the regulation as it stands, yet it is submitted whether, for the purpose of removing all doubt, it is not expedient to make the law more explicit.

These are the only instances in which I have discovered the rules and regulations in variance with existing laws. By the resolution of the honorable the Senate, I am also required to report whether, in my opinion, any further legislative provision is necessary to give force and effect to these rules and regulations. By the act of 7th of February, 1815, the Commissioners of the Navy, with the consent of the Secretary of the Navy, were required to prepare such rules and regulations as should be necessary for securing a uniformity in the several classes of vessels and their equipments, and for repairing and refitting them, and for securing responsibility in the subordinate officers and agents; which regulations, when approved by the President, the act declares shall be respected and obeyed, until altered and revoked by the same authority. So far as the rules relate to the subjects upon which they were to be prepared, as specified in the act aforesaid, they may be binding and operative without any further legislative provision. But it will be perceived, from an examination of the rules and regulations, that many of them relate to subjects not enumerated, or coming within the purview of the act under which they were prepared; in which cases, they have not the force and effect of laws, and further legislative provision is necessary to give them such effect. It is believed that some additions to these regulations might be advantageously made; and it is respectfully suggested that they be revised and reported to Congress, and, when adopted, expressly made, by law, rules and regulations for the government of the navy of the United States.

By the resolution I am also required to report any other provisions which I may deem proper for the more perfect administration of the naval service.

Believing it to fall within the scope of the resolution, I would respectfully suggest the propriety of making some additional grades in the rank of naval officers. The rank of captain is now the highest grade in the navy recognised by law; and heretofore, during the infancy of our navy, and whilst we had no vessels of a higher class than frigates, and the number of captains small, it was, perhaps, as high a grade as the good of the service required. It is, however, believed that, from the addition both to the number and class of our public ships, and from what may reasonably be anticipated to be the situation of our navy in the course of a few years, both justice and policy require some higher grades of office. According to the relative rank as now established between the military and naval officers, a captain in the navy only ranks with a colonel in the army: this is thought to be contrary to sound policy and the good of the service. The importance of rank, both in the military and naval service, will readily occur to all in any degree acquainted with either. It is, therefore, respectfully suggested, that the grades of commodore and rear admiral be established by law. This, it is confidently believed, would essentially contribute, if not absolutely necessary, to due subordination and discipline. In a fleet or squadron, when the different vessels may be commanded by officers of the same grade, and their relative rank, and even that of the commander, known only by the dates of their commissions, there will not be that respect and subordination observed that are essential to order and harmony. Should the increased expense be deemed an objection at the present time, let the number of officers to be appointed be few; and, indeed, the establishment of these grades is considered so essential to the prosperity of the navy, that it is an object deserving attention, should there be no additional compensation allowed.

I would further beg leave to suggest the propriety of some amendment of the laws relative to the surgeons in the navy. It would be desirable to establish grades in this class of officers also; at all events, justice and sound policy require a gradation in their pay and emoluments. The compensation ought to be, in some measure, regulated by the importance of the station in which they are placed, and the talents and qualifications required for the due and faithful discharge of the duty imposed. Whether the compensation now allowed is sufficient to call into the service the talents and learning which its importance demands is respectfully submitted. A division of these officers into classes, according to the rate of the vessel in which they shall serve, is thought would be beneficial, and is suggested for consideration; and this would afford a just standard by which to regulate their pay. The designation of some officer to be placed at the head of this class of officers, and who should have the immediate superintendence of this branch of the service, under regulations for that purpose to be established, is believed would contribute much to the benefit of the service.

The rules and regulations recognise and assign particular duties to several officers not known in the law, such as surgeons of the fleet, hospital surgeons, and medical purveyors. Although this is considered as fit and proper and beneficial to the service, yet some legal provision is necessary to give such officers the rank and authority contemplated by the regulations. These, and many other subjects in relation to this class of officers, the details of which could not with propriety be embraced in this report, seem to require attention and legal provision.

All which is respectfully submitted:

SMITH THOMPSON.

The Hon. the PRESIDENT OF THE SENATE.

16th CONGRESS.]No. 174.[1st Session.]

CONTRACTS FOR THE YEAR 1819.

COMMUNICATED TO THE SENATE, ON THE THIRD OF JANUARY, 1820.

NAVY DEPARTMENT, *January 3, 1820.*

SIR:

In pursuance of the act of Congress of the 3d of March, 1809, entitled "An act further to amend the several acts for the establishment and regulation of the Treasury, War, and Navy Departments," I have the honor to transmit to you, herewith, to be laid before the Senate of the United States, a statement of the contracts made by the Commissioners of the Navy during the year 1819.

With the highest respect, I have the honor to be, sir, your most obedient servant,

SMITH THOMPSON.

The Hon. the PRESIDENT OF THE SENATE.

Statement of Contracts made by the Commissioners of the Navy, during the year 1819.

Names of contractors.	Date of contract.	Articles contracted for.	Price of articles.	When to be delivered.	Where to be delivered.
1818.					
William McKenney,	Nov. 23,	125,000 pounds navy bread,	\$6 62½ per 100 pounds,	Before February 1, 1819,	Gibraltar.
William P. Israel,	" 29,	75,690 pounds hoop iron,	\$125 per ton of 2,240 pounds,	Within nine months from date,	Philadelphia.
Louis and John Barney,	" 30,	125,000 pounds navy bread,	7 per 100 pounds,	63,000 lbs. before Feb. 1, 1819, 52,000 do. Mar. 1, 1819,	Gibraltar.
Michael Williamson,	Dec. 9,	107,008 pounds flat and square iron,	115 per ton of 2,240 pounds,	} Within six months from date,	Philadelphia.
		49,490 pounds round iron,	140 do. do.		
Christian Rentgen,	" 10,	17 tons eighty-nine pounds round iron,	140 do. do.	Do. do. do.	Do.
Rufus Ellis,	" 12,	75,690 pounds hoop iron,	130 do. do.	Within eight months from date.	Portsmouth, N. H.
Do.	" 12,	75,690 do.	130 do. do.	Do. do. do.	Charlestown, Mass.
Solomon I. Isaacs,	" 16,	100,631 pounds copper bolt rods,	33 cents per pound,	} On or before September 1, 1819,	Brooklyn, N. Y.
R. S. Reed & G. Sanford,	" 21,	21,926 pounds bread,	5 do.		
		12,133 pounds salt beef,	6½ do.		
		10,733 pounds pork,	9½ do.		
		3,466 pounds flour,	3½ do.		
		1,300 pounds cheese,	12½ do.		
		433 pounds butter,	20 do.		
		433 gallons peas,	25 cents per gallon,		
		216½ gallons molasses,	1 dollar per gallon,		
		216½ gallons vinegar,	50 cents per gallon,		
		1,516½ gallons whiskey,	87½ do.		
		780 pounds tea,	50 cents per pound,		
		1,365 pounds sugar,	16 do.		
Joseph W. Patterson,	" 21,	151,380 pounds hoop iron,	50 tons at \$120 per ton, and \$130 per ton for the remainder.	Within nine months from date,	Baltimore.
Levi Hollingsworth,	" 22,	100,531 pounds copper bolt rods,	33 cents per pound,	Do. do. do.	Do.
1819.					
Christian Rentgen,	Jan. 22,	117,626 pounds round iron.	\$137 per ton of 2,240 pounds,	Within six months from date,	Philadelphia.
Benjamin Van Ness,	" 26,	233,250 superficial feet white oak plank,	\$3 per one hundred superficial feet,	On or before April 15, 1820,	Washington.
C. Ridgely, of Hampton,	" 28,	160,089 pounds round, square and flat, and square iron.	Square iron \$120 per ton; flat and square \$118 per ton; round iron 1½ to 3½ inches diameter \$125 per ton; round iron ½ of an inch to 1½ inch diameter \$140 per ton.	Within 12 months from date,	Do.
Do.	" 28,	289,834 pounds round, square and flat, and square iron.	Same,	Do. do. do.	New York.
Do.	" 28,	324,835 pounds round, square and flat, and square iron.	Same,	Do. do. do.	Gosport, Virginia.
Michael Williamson,	Feb. 4,	33 tons, 18 cwt. 2 qrs. 25 lbs. round iron,	\$137 per ton,	} Within six months from date,	Philadelphia.
Hagan and Mellon,	" 16,	Hyson skin tea,	75 cents per lb.		
		Brown sugar,	12½ do.		
		Rice,	9 do.		
		Molasses,	50 cents per gallon,		
		Vinegar,	25 do.		
		Whiskey,	50 do.		
		Tobacco,	20 cents per pound,		
				} Upon the requisition in writing, from time to time, of the commanding naval officer of the New Orleans station, from Feb. 10 to Dec. 31, 1819,	New Orleans.

79 n	Hagan and Mellon,	Feb. 16,	Loaf sugar, - - - - -	30 cents per pound,	Upon the requisitions in writing, from time to time, of the commanding naval officer of the New Orleans station, from Feb. 10 to Dec. 31, 1819.	New Orleans.
			London porter, - - - - -	\$3 50 per dozen, - - - - -		
			Coffee, - - - - -	35 cents per pound, - - - - -		
			Chocolate, - - - - -	35 do. - - - - -		
			Pepper and allspice, - - - - -	35 do. - - - - -		
			Cogniac brandy, - - - - -	\$2 50 per gallon, - - - - -		
			Madeira wine, - - - - -	4 50 do. - - - - -		
			Teneriffe wine, - - - - -	2 00 do. - - - - -		
			Bordeaux bottled Claret, - - - - -	8 00 per case, - - - - -		
			Port wine, - - - - -	10 00 per dozen, - - - - -		
			White wine vinegar, - - - - -	75 cents per gallon, - - - - -		
			Soap, - - - - -	12½ per pound, - - - - -		
			Imperial or gunpowder tea, - - - - -	2 00 do. - - - - -		
			Hyson or Young Hyson tea, - - - - -	1 50 do. - - - - -		
			Souchong, - - - - -	1 00 do. - - - - -		
Isaac P. Davis,	March 10,	All the cordage required for the Boston and Portsmouth stations, during the year 1819; all the cordage required for the American squadron in the Mediterranean; all the standing rigging required for the ship of the line at Washington.	If Russia hemp in Boston shall be 200, or exceeding 200, yet less than \$220 per ton, the price of the cordage shall be 13 cents per pound; if the price of hemp shall be 220, or exceeding 220, yet less than \$230 per ton, the price shall be 13½ cents per pound; if the price of hemp shall be 230, or exceeding 230, yet less than \$240 per ton, the price shall be 14 cents per pound; if the price of hemp shall be 240, and not exceeding \$250 per ton, the price shall be 14½ cents per pound; if the price of hemp should exceed \$250 per ton, then the price of said cordage shall be 15 cents per pound. For the cordage delivered at Gibraltar, in addition to the prices above regulated, ¼ of a cent per pound additional; for the standing rigging delivered at Washington ½ a cent per pound additional.	The cordage for Boston and Portsmouth, upon requisitions of the commandant of the navy yard, Boston. The rigging for the ship of the line at Washington, without delay.	Boston. Portsmouth. Washington. Gibraltar.	
Timothy Winn,	March 12,	2,400 blue cloth jackets, - - - - -	\$4 84 each, - - - - -	One-half on or before 1st day of August, 1819.	Gibraltar.	
		2,400 blue cloth trowsers, - - - - -	2 91 do. - - - - -

[16th CONGRESS.]

No. 175.

[1st Session.]

APPLICATION TO ABOLISH PRIVATEERING IN TIME OF WAR.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 4, 1820.

Mr. LOWNDES made the following report:

The Committee of Foreign Relations, to whom have been referred two memorials from citizens of the State of Ohio, relating to the practice of privateering, beg leave respectfully to report:

That the language of the memorialists is such as to leave the extent in which they deem it reasonable to expect a mitigation in the laws of maritime warfare in some doubt. They are considered by the committee as recommending such a change in these laws as shall exempt the property of individuals from capture, either by public or private ships of war, at least when it does not consist of contraband articles, and is not destined to a blockaded port. The general benevolence which is expressed, as well as the opinion of Doctor Franklin which is referred to by the memorialists, seem to prove that it is their wish that the property which subserves no purpose of war should be as safe upon the sea as upon the land; not that it should be secured from private cruisers, and be left exposed to public ships, which in the service of some of the European powers are much more numerous than the others, and whose pursuit of plunder is often quite as active and unsparing. It cannot, indeed, be presumed that the memorialists should wish a change in maritime law, which would produce very little diminution in the dangers of our commerce in a conflict with any considerable naval power, while it would wrest from our hands what we have hitherto considered as one of our principal weapons of annoyance. It is the security of fair and harmless commerce from all attack which the memorialists most desire. It is the introduction of a system which shall confine the immediate injuries of war to those whose sex, and age, and occupation, do not unfit them for the struggle. If these are the wishes of the memorialists, the committee express their concurrence in them without hesitation.

The committee think that it will be right in the Government of the United States to renew its attempt to obtain the mitigation of a barbarous code, whenever there shall seem a probability of its success. They do not doubt that it will do so. Its first efforts at negotiation were characterized by an anxiety to limit the evils of war; and if it seem to have desisted from the prosecution of this design, the committee believe that this circumstance must be attributed, not to a change in the policy of the United States, but to the perseverance in their former policy of other nations.

The committee are not unaware that the "United States are better situated than any other nation to profit by privateering;" but they are far from opposing this calculation to a regulation which, if the Powers of the world would adopt it, they too should consider as a happy improvement in the laws of nations.

It is an improvement, however, which cannot be made without the consent of other States. The committee will not flatter the memorialists by expressing the opinion that such consent will probably be given; but as it can be obtained only, if at all, through the Executive Government, to whose discretion the conduct of negotiations has been properly confided by the constitution, they recommend to the House the following resolution:

Resolved, That the Committee of Foreign Relations be discharged from the further consideration of the memorials relating to the practice of privateering, and that they be referred to the Secretary of State.

[16th CONGRESS.]

No. 176.

[1st Session.]

REGISTER OF THE NAVY FOR THE YEAR 1820.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, BY THE SECRETARY OF THE NAVY, JANUARY 6, 1820.

CAPTAINS.

Names.	Dates of commissions.	Where born.	Where stationed.

NAVY PENSION FUND.

COMMUNICATED TO THE SENATE, JANUARY 10, 1820.

NAVY DEPARTMENT, *January 6, 1820.*

SIR:

On behalf of the Commissioners of the Navy Pension Fund, and in obedience to the "act for the better government of the navy of the United States," I have the honor respectfully to report to Congress the following statements in relation to that fund, viz:

- A. Showing the amount of United States' stock belonging to the Navy Pension Fund.
- B. Showing the bank stock belonging to said fund.
- C. The account of the treasurer, Thomas Tudor Tucker, Esq., with the commissioners of the Navy Pension Fund.—[Balance against him, 15,335 06.]
- D. Abstract of warrants drawn by the Secretary of the Navy on the treasurer of the fund.—[Amounting to \$59,597 10.]
- E. List of navy pensioners, with the pensions allowed to each.—[Number, including widows and orphans, four hundred and thirty-eight; sum expended, \$39,340 0½.]

All which is respectfully submitted.

SMITH THOMPSON.

The Hon. PRESIDENT OF THE SENATE.

TREASURY DEPARTMENT, FOURTH AUDITOR'S OFFICE, January 3, 1820.

CONSTANT FREEMAN, Fourth Auditor.

APPLICATION TO ABOLISH PRIVATEERING IN TIME OF WAR.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 11, 1820.

To the honorable the Senate and House of Representatives of the United States in Congress assembled, the memorial of the undersigned citizens of the United States, respectfully represents:

That, while they have rejoiced in the privileges of a free people, they have been deeply affected with the multiplied instances of criminal prosecutions, imprisonments, capital convictions, and public executions, which have recently occurred in several States. Your memorialists are far from imputing to defects in the Government of their country all the crimes of their fellow-citizens, and as far from a disposition to attribute the defects of Government to base and criminal intentions on the part of legislators or magistrates. They believe that the best informed men are but partially enlightened, and that men of the best hearts are necessarily liable to the influence of hereditary opinions, prejudices, and customs. But, while crimes of the deepest die abound in the land, while our courts of justice and our prisons are thronged with malefactors, your memorialists conceive it to be the duty of all well-informed men to search out the causes of these evils, and, when discovered, to represent them for the consideration of their legislators. They also regard it as the duty of legislators to seek the virtue and welfare of their fellow-citizens, and to do all in their power to prevent crimes; not merely by providing for the punishment of criminals, but by the abolition of those customs or practices by which men are naturally led into the paths of vice and ruin.

Among the many atrocious offences of the present day, highway robbery, piracy, and murder, frequently occur. The melancholy scenes of public executions which have been witnessed in several of the United States have justly excited reflection and inquiry; and, in searching for the causes of those crimes for which so many fellow beings have been sentenced to the gallows, your memorialists have been impressed with a belief that much may justly be imputed to the *practice of privateering in time of war*.^{*} They are aware that this practice has long been sanctioned by all the maritime Powers of Christendom; but they cannot on that account regard it as the less to be deplored, or the less to be abhorred. It is in their view of the same character with the practice of the States of Barbary, for which the people of those regions are reproached as piratical barbarians.

In the course of the late war between Great Britain and the United States, many thousands of people were licensed by the two Governments to commit just such acts of injustice, depredation, and violence, as those for which pirates are hanged in time of peace. They were commissioned to capture, rob, or destroy, the property of innocent merchants; and, in case of resistance, to maim or murder innocent seamen while pursuing their lawful occupations. In this way hundreds of merchants in the two countries were unjustly despoiled of their property, many of them ruined, and their families reduced to poverty, wretchedness, and despair. The number of seamen who lost their lives in consequence of these licensed depredations was doubtless very considerable.

It is impossible for your memorialists to conceive how such deeds of rapine and violence can be reconciled to the principles of justice or humanity, when done by privateersmen, any more than when done by unauthorized pirates. The injustice and injury to the innocent sufferers are the same in both cases; and in both the motives and dispositions of the perpetrators may be the same.

As in the business of privateering all the odious passions of human nature are licensed—as the youth of our country become associated with desperate and unprincipled men let loose from every moral restraint—what better can reasonably be expected than that many of them will, after the close of the war, follow the trade to which they had been educated? When *thousands* of our citizens have served an apprenticeship in such an employment, can it be wonderful if *hundreds* of them become pirates or highway robbers? And if they become hardened in iniquity, inured to crime, and ruined by the education which they thus receive, at whose hands will their blood be required? This is a question which, in the opinion of your memorialists, deserves the serious consideration of every legislator, every magistrate, and every citizen of the United States. However necessary it may be, in the present state of society, to inflict capital punishments on piratical offenders, still philanthropy must weep and humanity recoil at the thought of taking the lives of men for crimes to which they have been trained up by the Government, and by the authorized customs of their country.

In this age of improvement, it will generally be admitted in theory, that rulers should ever exercise a tender and parental care towards their subjects, do all in their power to cause them to be educated in the paths of benevolence and virtue, and to preserve them from the snares of vice, and the influence of contaminating customs. Punishments are not the only nor the most effectual means of preventing crimes or saving men from vice. A virtuous education is infinitely preferable to sanguinary laws, as a means of preserving men from those crimes which are usually punished with death; and no laws, however severe, can reasonably be expected to prevent crimes, while such schools of depravity and licentiousness as those of privateering are sanctioned by public authority. It is therefore believed by your memorialists, that the principles of justice, humanity, religion, and sound policy, all unite in demanding the abolition of such seminaries of crime.

It is a gratifying fact, that, in the infancy of the American Government, an attempt was made by our rulers to effect by treaties the very object of the present memorial. As early as 1785, the celebrated philosopher, Dr. Franklin, in a letter to a friend,† observed, that “the United States, though better situated than any other nation to profit by privateering, are, as far as in them lies, endeavoring to abolish the practice, by offering in all their treaties with other Powers an article engaging solemnly that, in case of a future war, no privateer shall be commissioned on either side, and that unarmed merchant ships on both sides shall pursue their voyages unmolested.” This humane effort on the part of the American Government, at so early a period, affords encouragement to your memorialists that Congress will listen with pleasure to a proposition for abolishing a practice which has justly been termed “a remnant of ancient piracy,” and which has for ages been a disgrace to civilized nations, and the abhorrence of good men.

Though the magnanimous proposition formerly made was not generally adopted by other Governments, yet your memorialists are of opinion that the people of Europe are more enlightened than they were thirty-five years ago, and that there is much reason to believe that a similar proposition at this period would meet the approbation of nearly all the Powers of Christendom. To repeat or renew a proposition so philanthropic and humane, will not by enlightened men be regarded as beneath the dignity of any Government on earth; and, as the proposition probably originated in the United States, your memorialists have a strong desire that their own Government should have the honor of reviving it, and of pursuing the object till it shall have been completely accomplished.

Barbarians and unprincipled politicians might find a motive for continuing the practice in the circumstance mentioned by Dr. Franklin, that “the United States are better situated than any other nation to profit by privateering.” But can the enlightened legislators of this country deem it proper to “do evil that good may come?” Can any considerations of profit induce them to continue a practice so palpably unjust in its nature and operations, so ruinous to the morals of their fellow-citizens, and which furnishes such a multitude of convicts for the State prisons and the gallows?

During a time of general peace, it may naturally be expected that the rulers of Christendom will more impartially examine the subject, if proposed to them, than in a time when their passions are excited by war. The present state of the world is therefore deemed favorable for accomplishing the object of this memorial.

In regard to the best course for abolishing the practice in question, your memorialists would not undertake to prescribe, but confide in the wisdom of their Representatives in Congress. They have no fear that any method will be adopted to effect the abolition of privateering, which can more endanger the best interests of the country than a continuance of the custom. They, however, most respectfully and fervently pray that Congress would devise and adopt some plan which shall free our nation from the reproach of being supporters of a practice which every enlightened mind must deprecate and abhor.

The undersigned beg leave to close their memorial to the honorable Legislature of the United States in the words of Dr. Franklin, on the same subject: “This will be a happy improvement in the law of nations. The humane and the just cannot but wish success to the proposition.”

PLAINFIELD, MASSACHUSETTS, *December 27, 1819.*

At an annual meeting of the Plainfield Peace Society, voted unanimously that this memorial be signed by the president and secretary, and presented to the Congress of the United States.

MOSES HALLACK, *President.*
JACOB PORTER, *Secretary.*

* If we may credit the narratives of the four pirates who were executed in Boston, February 18, 1819, they had all been concerned in privateering, or *State piracy*; not all, however, by license from our Government.

† Benjamin Vaughan, Esquire.

16th CONGRESS.]

No. 179.

[1st SESSION.]

NAVY HOSPITAL FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 15, 1820.

SIR:

NAVY DEPARTMENT, February 8, 1820.

In compliance with the resolution of the House of Representatives of the 31st of January last, the Commissioners of Navy Hospitals have the honor to submit the documents herewith marked A and B; the first showing the amount of the annual receipts of hospital money from the 26th of February, 1811, to the 30th of September, 1819; and the second showing an account of the expenditure, so far as the same has been distinctly charged to the Navy Hospital Fund, on the books of the Accountant of the Navy Department; but what has been heretofore deducted from the pay of the officers and seamen has been absorbed in the pay of the navy, as appears by the letter of the Fourth Auditor, a copy of which (marked C,) and of the statement accompanying the same, is herewith transmitted.

No separate and distinct account having been kept of expenditures for the support of navy hospitals, and which were strictly and properly chargeable to the hospital fund, it is not within the power of the Commissioners to say whether the receipts, under the act of 2d of March, 1799, have been since annually absorbed by expenditures for the support of naval hospitals.

No hospitals have been erected; the temporary buildings occupied as such are hired and paid for out of the naval appropriations, and the sick and disabled seamen provided for to the extent of their wants.

The Commissioners respectfully submit herewith a copy of their last report, of the 14th of January, 1818, (marked D,) together with one from the Secretary of the Navy, of the 15th of January, 1818, (marked E,*) giving a brief sketch of the proceedings heretofore had upon the subject; from which it will appear that the objects contemplated by the act of the 26th of February, 1811, had not been carried into effect for the want of adequate funds.

The Commissioners have recently directed the Fourth Auditor of the Treasury to render, annually, on the 1st day of October, accounts of the hospital money deducted from the pay of officers and seamen, with a view to its investment for the future benefit of the hospital fund.

All which is respectfully submitted.

SMITH THOMPSON,
WM. H. CRAWFORD,
J. C. CALHOUN.

The Hon. the SPEAKER of the House of Representatives.

* See No. 151, page 451.

A.

An account of the annual receipts of hospital money, under the act of March 2, 1799, from 26th February, 1811, to 30th September, 1819, as appear by accounts settled in the office of the Accountant of the Navy and Fourth Auditor of the Treasury.

From 26th February to 30th September, 1811,	- - - - -	1,582 50

CONSTANT FREEMAN, Fourth Auditor.

TREASURY DEPARTMENT, FOURTH AUDITOR'S OFFICE,
February 3, 1820.

C.

TREASURY DEPARTMENT, FOURTH AUDITOR'S OFFICE, *February 8, 1820.*

SIR:

I meant explicitly to state, in the letter I had the honor to write to you on the 4th of the present month, transmitting statements A and B, that the stoppages made from the officers and seamen for the hospital fund were applied to the pay of the navy: not that any formal transfers were made for the purpose, but that the amount now stands credited to the fund, on the books of this office, for which the pay is debtor, as it has had the full benefit. To elucidate this, I herewith transmit a statement exhibiting the amount of moneys appropriated for the "pay and subsistence of officers, and pay of seamen," for the years 1811 to 1819, inclusive; and the amount of warrants drawn on that appropriation; from 1st October, 1810, to 30th September, 1819, by which there appears a surplus of expenditure, beyond the appropriations, of seven hundred and sixty thousand one hundred and sixty dollars and thirty-five cents; and if to this is added the sum of one hundred and eighteen thousand seven hundred and eighty-eight dollars and forty-two cents, being amount of money carried to the credit of the "Navy Hospital Fund," in accounts settled at this office during the same period, as exhibited in statement A, transmitted with my letter of the 4th instant, it would increase the deficit to eight hundred and seventy-eight thousand nine hundred and forty-eight dollars and seventy-seven cents, and which has been covered by transfers made from other appropriations.

I have the honor to be, &c.

CONSTANT FREEMAN, *Fourth Auditor.*The Hon. SMITH THOMPSON, *Secretary of the Navy.*

Statement exhibiting the amount of the annual appropriations for the "pay and subsistence of officers and pay of seamen," and the amount of warrants drawn by the Secretary of the Navy, and expended under said head of appropriation, from the year 1811 to the year 1819, inclusive.

No. 180.

[1st SESSION.]

RETRENCHMENT IN THE EXPENDITURES FOR THE NAVY AND MARINE CORPS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 26, 1820.

HOUSE OF REPRESENTATIVES, *January 13, 1820.*

SIR:

I am directed by the Committee on Naval Expenditures to obtain from you the information called for by the following inquiries:

What disbursements have been made under the several appropriations for the naval service for the year 1819?

Is the annual appropriation for the increase of the navy yearly expended; and, if so, in what manner, particularly stating the expenditure under the appropriation since the passage of the law? Might this appropriation be diminished without detriment to the public service?

Has the payment of moneys due from public defaulters been enforced, as far as the Navy Department may be concerned?

Will the adoption of any measure be necessary to add to the economy of the Navy Department, and the accountability of its officers?

Can a retrenchment in any branch of the public expenditure in the Navy Department be made without injury to the public service?

What is the number of officers and privates of the marine corps? Could the number of this corps be, with propriety, diminished?

Who performs the duties of secretary of the *Navy* and *Privateer* Pension Funds; the sums paid to such secretary; out of what fund paid, and whether his duties could not be performed by one of the clerks of the Navy Department within the hours usually allotted for transacting public business, without rendering an increase of the clerks in the Navy Department necessary?

In presenting, by direction of the committee, the preceding inquiries to you, I cannot fail to accompany them with the hope that every effort will be used, by those who immediately administer the naval affairs of the nation, to introduce, into the Department, in all its branches, a system of rigid economy. This, perhaps, is more peculiarly important at the present period, when the revenue is anticipated to be insufficient to meet the expenditures for the current year. It cannot fail to escape our observation, that the popularity won for the navy, by the valor of our

officers and seamen during the late war, can only be maintained, in time of peace, by exhibiting that branch of our national defence as an example to others of judicious management. Should it become characterized as well for its economy as it is for its efficiency and its bravery, a doubt cannot be entertained but that it would be cherished, and that its growth and prosperity would be commensurate with the increasing population and growing resources of the nation.

I have the honor to be, sir, with the greatest respect, your obedient servant,

STEPHENSON ARCHER.

Hon. SMITH THOMPSON, *Secretary of the Navy.*

NAVY DEPARTMENT, *January 20, 1820.*

SIR:

In reply to your letter of the 13th instant, making several inquiries in relation to the naval expenditures, for the information of the committee of which you are chairman, I have the honor to state that the "disbursements made, under the several appropriations for the naval service for the year 1819," are herewith transmitted in the document marked A, in a report upon that subject from the Fourth Auditor of the Treasury, with statements, marked B and C, showing the amount expended, annually, under the act for the gradual increase of the navy.²

In answer to the inquiry, "whether the appropriation for the gradual increase of the navy might not be diminished without detriment to the public service," I annex the copy of a letter from the commissioners of the navy, marked D, which gives their views of the subject, and reasons why it is not expedient to diminish that appropriation under existing circumstances, and in which I concur.

The inquiry respecting public defaulters is answered in the report of the Fourth Auditor, in the paper marked E.

It may be observed, respecting the inquiry, "will the adoption of any measure be necessary to add to the economy of the Navy Department, and the accountability of its officers," that it is believed the operation of the rules and regulations recently adopted, and now before Congress, will produce economy in the expenditure, by limiting, in various instances, those objects which have heretofore been left too much to the discretion of officers, and by regulating all such allowances, of a contingent nature, as have not previously been fixed by the Department; while, at the same time, it is considered that the pay of officers, as established by law, is as low as is consistent with their respective ranks; and, as it regards the surgeons, is not sufficient to compensate the arduous duties, and respectable talents, indispensable to the safety and preservation of the many valuable lives entrusted to their care. The accountability of pursers is better secured by the increased amount of their bonds, under the act of Congress of March 1, 1817, at which time it was submitted to Congress to increase the bonds of navy agents to double the amount of those of pursers, these being the only disbursing officers under this Department.

In reply to the inquiry, "can a retrenchment, in any branch of the public expenditure in the Navy Department, be made, without injury to the public service," it may be observed that there is no retrenchment in the public expenditure which requires a legislative act; but all such as can be made, in the exercise of my official authority, and in directing the best mode of economy, shall receive every attention and exertion in my power to afford, compatible with the good of the service and the public interest.

As respects the inquiry in relation to the marine corps, I annex the returns made by the lieutenant colonel commandant, with a letter from the adjutant and inspector, stating the strength, and duties required, of that corps, marked F.

With regard to the inquiry respecting the secretaries of the Navy and Privateer Pension Funds, I have to observe that the duties of the secretary of the Navy Pension Fund have been, by order of the commissioners of the fund, always performed by the chief clerk of this Department, who has been paid for his services, out of the said fund, the sum of two hundred and fifty dollars per annum, as authorized by the act of Congress of the 26th of March, 1804. The duties of secretary of the Privateer Pension Fund have been performed by the second clerk, who has been allowed, by the commissioners, out of the Privateer Pension Fund, for his extra services and responsibility, the sum of two hundred and fifty dollars per annum. To guard these funds against fraud, and apply them beneficially to the laudable purposes intended by the Government, much care and vigilance are necessary; the investigation of claims for pensions is laborious, and requires considerable ability; and that these duties may not be suffered to interfere with the general duties of the Department, great part of what relates to the correspondence, claims of pensioners, &c. is done out of the office, before and after the hours usually allotted for the transaction of public business.

I fully coincide with your observations relative to the navy generally, and the means of preserving its popularity, by the prudent management of its fiscal operations; and no effort shall, on my part, be wanting to secure to this branch of the national defence a continuance of the public favor, which its efficiency and bravery obtained for it during the late war. It may not be irrelevant to the subject to observe that, out of the annual appropriations for the support of the navy, since the late peace, large sums have been, and continue still to be paid, in the settlement of claims and accounts for contracts, and expenses incurred during the late war, and for which no additional appropriation has been asked for or made by Congress.

All which is respectfully submitted.

SMITH THOMPSON.

Hon. STEVENSON ARCHER,

Chairman Committee on Naval Affairs, House of Representatives.

D.

Statement of the Commissioners of the Navy, in relation to the policy of diminishing the appropriation for the gradual increase of the navy.

NAVY COMMISSIONERS' OFFICE, *January 17, 1820.*

SIR:

The Board of Navy Commissioners have been honored by your communication of the 14th instant, enclosing an extract of a letter of the 13th instant, from the honorable Stephenson Archer, Chairman of the Committee on Naval Expenditures of the House of Representatives, viz: "might not the appropriation for the gradual increase of the navy be diminished without detriment to the public service?" and requiring their attention to the same.

In reply the Board beg leave to observe that all the live oak necessary for the frames and other parts required for the completion of the ships authorized by law, has been contracted for, and the greater part delivered; the residue is now cut or cutting, and will be delivered during the present, or early in the ensuing year; all of which, by the terms of the contracts, is to be paid for on delivery. That the greater part of the white oak, and pine timber, and plank, necessary for the construction of said ships, has also been contracted for, and a considerable part delivered; the residue to be delivered in the course of the present year. A large proportion of the iron, and nearly all the copper, has been contracted for, and received and paid for. The latter articles, being of an imperishable nature, might be stored and kept for any period, without fear of deterioration. It would, however, be subject to misapplication, which experience has taught that no precaution can effectually prevent. As regards the timber, the Board can, from past experience, speak positively, that a large proportion of it would, in a short time, if exposed, as it

² A states the amount expended for the naval service, including the marine corps in the year ending September 30, 1819, to be \$3,555,411 48.

B states the sums drawn from the Treasury, under the appropriation "for the gradual increase of the navy," from April 29, 1816, to Sept. 30, 1819, to be \$3,300,869 76, and the sums expended to be \$1,287,024 37, an abstract of which is presented in C.

necessarily would be, to the influence of the weather, become altogether unfit for naval purposes. To obviate this difficulty, it would be necessary to erect store-houses for the preservation of the timber, the expense of which would be very considerable; and, for the preservation of the ships now on the stocks, it will be necessary, if the building is suspended, to erect houses over them similar to those erected over the ships at Sackett's Harbor; and this item alone would render an expenditure of one hundred and forty thousand dollars necessary.

Taking into consideration the existing state of preparation; the progress already made; the loss that would actually occur to the Government; the length of time that it would require to reorganize the different yards, for the purpose of carrying into effect the law for the "gradual increase of the navy," if it should hereafter be required, as also the numerous and valuable mechanics in the various branches employed in the different navy yards, that would be dispersed, the commissioners are induced to believe that, on the score of economy alone, the building of the ships should not be suspended; in which case, the sum appropriated will be necessary, and will not bear to be diminished.

I have the honor to be, &c.

HON. SMITH THOMPSON, *Secretary of the Navy.*

JOHN RODGERS.

E.

[EXTRACT.]

"In all cases of public defaulters, transcripts of their accounts have been made, or are now making for the First Comptroller of the Treasury, pursuant to the provision of the act "to provide for the prompt settlement of accounts," passed March 3, 1817."

F states the numerical force of the corps, including officers, required by law, to be 1,175, and the number in service on the 31st of December, 1819, to be 1,009.

16th CONGRESS.]

No. 181.

[1st Session.]

SUSPENSION OF THE STANDING APPROPRIATION FOR THE GRADUAL INCREASE OF THE NAVY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 7, 1830.

Mr. SILSBEE, from the Committee on Naval Affairs, to which was referred the resolution adopted by the House on the 5th of January last, directing an inquiry "into the expediency of suspending, for a limited time, so much of the standing appropriation of \$1,000,000, for the increase of the navy, as may be consistent with the public service; and also inquire whether any other reduction of the expenses of the navy can be made, consistent with the public service," reported:

That they have carefully considered the several important subjects referred to them. They have carefully and diligently investigated the expenditures of the standing appropriation made by the act of the 29th of April, 1816, for the gradual increase of the navy. In prosecuting this investigation, the committee received promptly from the Navy Department every facility and statement necessary to aid them in arriving at a true and rational conclusion. The committee here respectfully refer to the letter of the Secretary of the Navy, dated February 4th, 1830, and the documents therein referred to, all of which accompany this report. They have, also, so far as they deemed it compatible with their duty, inquired into the expenses of the navy, with the view to comply with the second inquiry directed by the resolution above referred to. Without entering into a minute and detailed report of the progress made in building and equipping the ships authorized to be built and equipped by the act above referred to, the necessity of such detailed report being superseded by the statement of the Commissioners of the Navy, (document marked A,) the committee will, in discharge of the duties enjoined on them, present to the view of the House some of the most important facts which have influenced their deliberations, and conducted them to the conclusions at which they have arrived. By the act of the 29th of April, 1816, nine ships are authorized to be built, to rate not less than seventy-four guns each. Of that number, one ship is launched and nearly ready for sea; five are now building, (four of which number it is expected will be launched during the next summer, and one in the course of the next year,) the frames of the other three are contracted for, and nearly all the materials received at the navy yards. And ten ships, to rate not less than forty-four guns each, are also authorized to be built. Of this number one is now building; the frames of the other nine are all contracted for, and most of them received at the navy yards. All the pine plank, and all the oak knees, required for all the ships, have been contracted for. These are large and essential articles in building. Most of the copper for all the ships has been procured. The frames, and other very valuable articles for the three steam batteries, have been contracted for, as appears by statement A. Such arrangements have been made for the completion of the whole number of vessels authorized to be built, by the act above recited, as to leave no doubt that the annual appropriation, if continued, will be amply sufficient to effectuate the great national objects contemplated by Congress, at the passage of the law. Many of the articles now on hand could not be preserved without great expense, such as the erection of sheds and buildings, to protect them from the effects of the weather. Some of the materials, and those the most scarce and valuable, it is believed, could not be effectually preserved, even under sheds. The live oak, it is said, is liable to rents and other injuries from the action of the atmosphere. The Commissioners of the Navy express the fear that it would be impracticable to replace the live oak frames should they receive injury, and make the following communication: "That they have received information from an unquestionable source, that the British Government have now an agent in this country for the purpose of obtaining like oak frames for twenty ships, and should they succeed in obtaining them, the quantity of that timber in our country will be so exhausted that but little of consequence will be left." An efficient and skilful body of men, amounting to sixteen hundred, composed of mechanics, artificers, and laborers, are now engaged at the different building yards. Labor, materials for building, and provisions, are represented to be lower than they have been for a long time past. A suspension of the annual appropriation, or a portion of it, even for a limited time, would produce derangement in the plans already adopted. Workmen of skill and integrity, who are known to the officers of the Government, must necessarily be discharged. It would, on emergency, be difficult to obtain the same, or other workmen of equal skill and integrity. The prudent and judicious arrangements made by the Commissioners of the Navy to obtain ordnance of the best quality, and on reasonable terms, and thereby to guard against the recurrence of those distressing accidents which resulted from defective ordnance prior to the year 1816; their equally judicious arrangements to obtain at all times, either of war or peace, "supplies of canvass of our own manufacture, so that in this essential article of naval equipment we might be at all times independent," would, by a suspension of the annual appropriation, or any portion of it, to a certain extent, be defeated. "The principle of confining the expenditure to the amount appropriated seems to have been invariably observed by the Commissioners of the Navy." The committee are irresistibly led to the conclusion, that true economy, and the best inter-

ests of the nation, are opposed to a suspension, even for a limited time, of any portion of the sum annually appropriated for the gradual increase of the navy of the United States.

In obedience to the second inquiry, directed by the resolution of the 5th of January, viz: "whether any other reduction of the expenses of the navy can be made, consistent with the public service," the committee respectfully remark, that this inquiry appears more peculiarly to fall within the cognizance of the Committee of Ways and Means. This committee, however, turned their attention to the subject. They obtained from the Department of the Navy a statement, showing the class, names, force, and station, of all the public vessels of the United States in active employment, and the number of officers and men attached to each; which statement accompanies this report, marked B. By this statement, it appears that the whole number of officers and men attached to the vessels of the United States, is four thousand three hundred and fifty-four; that of this number, one thousand three hundred and ninety-nine, including officers and men, are employed in the Mediterranean squadron. The committee also obtained from the same department, "a statement of the naval force of the Barbary Powers, copied from a report made by Commodore Isaac Chauncey, dated the 23d of October, 1817." This statement, marked C, accompanies this report.

The committee have not been able to ascertain where any essential reduction can be made in the expenses of the navy, without reducing the establishment.

NAVY DEPARTMENT, February 4, 1820.

SIR:

I have the honor to transmit to you, in compliance with your letter of the 20th ultimo, as chairman of the Naval Committee of the House of Representatives, the documents herewith, marked A, B, and C, which have been prepared with a view to meet all the inquiries suggested by the committee, in relation to the naval affairs of the United States.

Paper A contains a full and explicit statement of facts from the Board of Navy Commissioners, with their opinions upon the most material points, relative to the gradual increase of the navy, in all of which I entirely concur, and believe the best interests of the nation to be inseparably blended with the completion of the original views of Congress, to establish a permanent and respectable naval force.

Papers B and C are statements in answer to the other inquiries, which embrace all those contained in your communication.

In relation to the inquiry concerning the contingent appropriation, I would further respectfully observe, that the charges included under that head of expenditure are numerous, and vary every year in many incidental circumstances, which cannot be foreseen at the time of making the estimates for the general service; in addition to which, more or less is paid every year, in consequence of the settlement of old accounts, even as far back as the commencement of the late war; and, it is apprehended, that this head of appropriation could not be divided, without producing inconvenience to the service, and an inevitable suspension of many claims, the extent and nature of which will be seen by a reference to a report from this department to Congress, made on the 2d instant.

The contingencies of freight, transportation by land and water, and those of the recruiting service, are, in themselves, too precarious to admit of a more specific classification.

I have the honor to be, with great respect, sir, your obedient servant,

SMITH THOMPSON.

HON. NATHANIEL SILSBEE,

Chairman of the Naval Committee, House of Representatives.

A.

NAVY COMMISSIONERS' OFFICE, January 31, 1820.

SIR:

In reply to such of the queries, propounded in the letter of the honorable N. Silsbee, as appear connected with the duties entrusted to the Commissioners of the Navy, they have now the honor to make the following communication:

Query 1st. What number of ships, to rate not less than seventy-four guns each? What number to rate not less than forty-four guns, have, by virtue of the act entitled "An act for the gradual increase of the navy," been commenced?

Answer. Six ships to rate not less than seventy-four guns, and one ship to rate not less than forty-four guns.

Query 2d. What number have been finished?

Answer. One rating not less than seventy-four guns.

Query 3d. What is the state of progress of the ships now building? viz:

Answer. The following is the state of progress of the ships now building, viz:

Ship of the line at Norfolk.—Timbering all complete; planking completed from keel to rail, with the exception of garboard, strake, and shutters; planking, inside or circling, completed from keelson to rail, with the exception of spirketing on orlop, lower and second gun deck; poop deck, six beams in and kneed; spar deck beams, all in and kneed, with the exception of hanging knees; deck framed, and dubbed off for plank; water ways in, and secured; upper gun deck, beams all in, but not kneed; lower gun deck, twenty-five beams in, and six of them kneed; orlop deck beams in, and kneed, deck framed, and dubbed off ready for planking; breast hooks all in and fitted, except two; diagonal riders all in, and partly secured; fore and main steps all in, and fitted; stern plank up; inside and out; cat heads fitted; rail on fore and aft, and secured; bottom bored off, ready for treenails, and now treenailing.

Ship to rate not less than forty-four guns, at Washington.—Keel laid, stern and stern post frame raised; floor timbers bolted; and the remainder of the frame prepared, and preparing to raise.

Ship of the line at Philadelphia.—Timbering all complete, part of the fillings in; has on all the strings, drifts, channel wales, main wales, and twenty-nine strakes of plank on the bottom; ceiled up, and the orlop deck clamps in; beams in; four breast hooks fastened, and the fifth faying; orlop deck, transom rider fayed; all her ports formed, and sills fitted, except the bridle port on the lower gun deck, and the stern chase ports in the poop; lower gun deck, beams in, stern, timbered, and partly planked; carlings for all the decks, mizzen steps, and support underneath, got out; bilge bolts drove; part of the butt bolts, and bolts through thick strakes, on; first futtock heads driven; diagonal riders, more than one third got out.

Ship of the line at New York.—Timbering and planking, inside and out, completed; top side, caulked; orlop, lower gun deck, upper gun deck, and spar deck laid, and partly caulked; galleries and head building; treenailing her bottom, and squaring it ready for the caulkers.

Ship of the line at Boston.—The whole frame up, except the stern timbers, long and short top timbers, and filling in pieces; the plank from the bilge strake up, to the lower port sills, on, except six strakes under the wales; lower port sills, all in; channel wale, fitting; long top timbers over the ports, putting in.

Ship of the line at Portsmouth, N. H.—Keel laid, false keel on; deadwood on, except the forward piece; the main inner and false post, three transoms, and eight timbers of the fashion pieces finished, ready for framing the stern; twenty-nine floor timbers fayed to the keel; and four-fifth parts of the timber sided, moulded, and bevelled, ready to make the frames.

Query 4th. What is the character of the materials now on hand?

Answer. The materials now on hand consist of—

Live oak, White oak, Yellow pine, White pine, Ash, Lignum vitæ, Maple, Locust.	}	Materials of wood.		Cannon, Carronades, Ball, Anchors, Copper, Iron, Lead,	}	Materials of metal.
---	---	--------------------	--	--	---	---------------------

Query 5th. Are the most valuable such as would be liable to injury by keeping? Or are they of that character which would require them to be immediately applied to the purposes of building?

Answer. The cannon, carronades, ball, anchors, copper, iron, and lead, would not be liable to injury by keeping, but all the materials of wood, unquestionably, would be liable to serious injury by keeping, and their immediate application to the purposes of building would certainly be advisable. Were it to be determined not to apply them to this purpose immediately, sheds for their preservation would be indispensably necessary; and even under sheds, the most valuable and durable of this timber, the live oak, is liable to rents and other injuries from the action of the atmosphere. It will be remembered that, out of the six frames provided under the act of 1799, it was found, when we commenced building ships of the line, that we had not timber enough to complete three ships; and it was observed that all the residue of the live oak timber, then provided, was rendered unfit for naval purposes by rents, although it was placed under sheds; and the pine and white oak timber, which had been collected for the same purpose, although placed under sheds, were entirely destroyed.

Query 6th. What are the engagements of the Government by contracts for materials for building, labor, and all necessary expenditures?

Answer. The engagements of the Government by contracts for materials for building are,

For live oak timber, - - - - -	\$791,583 00
For copper, - - - - -	723,956 00
For anchors, - - - - -	27,139 95
For beams, ledges, long combings, keel and keelson pieces, knees, treenails, staves, mast-pieces, &c. - - - - -	473,370 50
For iron, - - - - -	157,355 00
For cannon, carronades, and shot, - - - - -	331,290 00
For canvass, - - - - -	140,298 00
For cordage, - - - - -	50,000 00
For lead, - - - - -	12,000 00
For steam engines and boilers, - - - - -	59,440 00

These engagements are exclusively of purchases made, from time to time, by the navy agents at the different building yards; the amount of which purchases cannot be ascertained at this office, payments of money not coming under its cognizance.

The engagements for labor are as follow: There are now engaged at the different building yards:

458 ship carpenters,
137 ship joiners,
50 caulkers,
181 blacksmiths,
23 mast makers,
32 block makers,
30 painters,
22 boat builders,
25 coopers,
38 riggers,
14 gun carriage makers,
15 sailmakers,
11 yeomen in gunner's department,
26 plumbers,
1 model maker,
1 millwright,
4 steam engine men,
33 sawyers, and
499 laborers of all descriptions.

1,600

Whose monthly wages, at this time, amount to \$31,335; but as the ships now on the stocks progress, additional mechanics in the several departments will be required. It is calculated that when all the requisite materials shall be collected at the different yards, so that men can be advantageously employed in all the various departments, such an addition to the number at present employed will become necessary, that the monthly expense will be very considerably increased.

Query 7th. Have contracts or engagements been entered into by which the Government will be bound to expend, within the present year, a portion of the sum appropriated? If so, what portion of the million appropriated for the current expenditures of the present year has been pledged for existing contracts?

Answer. In reply to this query, the Commissioners of the Navy would respectfully observe, that, in all the contracts or engagements made under the law for the gradual increase of the navy, the principle of confining the expenditures to the amount appropriated has been invariably observed. Hence it will be found that the unexpended balance of the appropriation, on the 1st January, 1820, is amply sufficient to discharge every engagement made up to that period; and that no portion of the million appropriated for the current expenditures of the present year was, at that time, pledged for existing contracts.

It is, however, here due to the proprietors of certain foundries, and factories of canvass, to state the conditional engagements made with them.

Prior to the passage of the act of 29th April, 1816, the ordnance of the navy was very defective; frequent instances of guns bursting in action had occurred. Many of our men had lost their lives, and others had been severely wounded by such accidents; that confidence in the excellence of his arms, so essential to the sailor and soldier, had been, in no inconsiderable degree, impaired. To remedy this serious national evil became an object of the first importance to the preservation of our naval character. The law in question, requiring that a great number of cannon should be procured, and making an annual appropriation for a term of years, afforded the means of accomplishing this important object. The proprietors of foundries, having before them a prospect of employment for eight years, expressed a readiness to place their establishments on the best possible footing, and to deliver such ordnance as might be required of them on reasonable terms. The Government was thus placed in circumstances the most favorable for accomplishing this purpose. Three foundries were accordingly selected to cast the cannon, carronades, and shot, directed by the act referred to; a method of proof, calculated to test effectually the quality of the metal, was established; the price was fixed so as to allow a moderate profit; and the proprietors were, moreover, required to make, at their own expense, any alterations or improvements in their plans and establishments, that might conduce to the improvement of the ordnance. These points being secured by adequate penalties, assurances were, with the approbation of the Government, given to the proprietors of these foundries, that the cannon,

carronades, and shot, authorized by the act for the gradual increase of the navy, should be procured of them, by annual contracts, provided they should continue to furnish such as would stand the proof prescribed, undergo the inspection directed, and conform in all other respects to the stipulations of the contracts.

It was also considered an object of much national importance, to possess the means, in time of war or peace, of procuring supplies of canvass of our own manufacture, so that, in this essential article of naval equipment, we might be at all times independent. Prior to the law of 29th April, 1816, our service was wholly dependent on foreign importations for the canvass necessary in the equipment of our ships of war; that law provided the means of remedying the evil, and they have, with considerable success, been applied. Assurances, similar to those given to the proprietors of the foundries, have brought into operation two respectable factories; one of which, the elder, at this time makes for the navy, at reduced prices, canvass greatly superior in all respects to any ever known to have been imported into the United States from any foreign country. The other has recently been got up, at great expense to the proprietor, and promises to succeed equally well. The competition excited between the two will not, it is hoped and expected, fail to produce the happiest effects upon both; and the commissioners feel a persuasion that perseverance in a system of reasonable encouragement will, in a short time, effectually secure our independence in this essential material of naval equipment.

The proprietors of the cannon foundries and canvass factories have, thus far, faithfully redeemed their engagements to the Government. Under the assurances given to them they have, at great expense, placed their establishments in the most improved state, calculating, with confidence, upon employment and protection from the Government. How far such assurances may be considered as binding the Government to expend, within the present year, a portion of the sum appropriated, you, sir, will decide; but the commissioners beg leave to observe that the effect of withholding employment from these valuable factories would be, there is too much reason to believe, to involve them all in absolute ruin—a consequence to be deprecated as a national, as well as individual, evil.

Query 8. What proportion of the standing appropriation, under the above act, can be suspended for a limited time, consistently with the faith of the Government, in reference to existing contracts, and without material injury to ships now building, and materials on hand?

Answer. Referring to the preceding reply to the seventh query, as answering in part, the first branch of this, the commissioners will further observe that the faith of the Government is in no greater degree pledged than is therein stated; that, if the assurances given to the proprietors of the factories referred to be considered as not pledging the faith of the Government for any expenditure of the appropriation beyond the amount of the contracts actually existing on the 1st of January, 1820, the question of suspension would be unfettered with any consideration other than the expediency of such a measure.

As respects the effect which a suspension of part of the appropriation, for a limited time, would have upon ships now building, and materials on hand, the commissioners, with great deference, offer the following considerations:

As before stated, we have now five ships of the line, and one frigate on the stocks; for the labor in the building of which we are now expending \$31,335 per month, (which sum will necessarily, in a short time, be considerably increased,) exclusively of additional materials, which, as the ships progress, it will become necessary to procure in order to keep the mechanics advantageously employed. To suspend building these ships, at this time, might be seriously injurious to them; to preserve them at all, houses over them, which could not be built but at very great expense, would be indispensable. Neither materials nor labor have, for a long time past, been so low as they are at this time; hence, it would appear, in this view, a peculiarly favorable period for building. Doubts are entertained, whether it would be in the power of the Government, at any future period, to command, as it now can, the best professional talents and the most able mechanics, almost on its own terms; and were we now to discharge the mechanics and laborers, employed in the different navy yards, it would require much time, and be attended with difficulty and expense, to collect again, and re-organise, such valuable corps. But, independently of these considerations, there are others which probably may not be deemed unworthy of attention.

Certain great national objects are contemplated by the act of 29th April, 1816, and the means, deemed sufficient to complete them, are provided. To render the means adequate to the objects, great economy is essential; and this economy assuredly suggests the expediency of progressing, particularly when so great a portion of the means has already been applied, and the possession of a fund applicable to advantageous purchases, as opportunities offer, is a consideration of no little weight in the economical application of means.

As to the materials now on hand, as before stated, those of wood, if the building of the ships were suspended, would subject the Government to great expense, in the erection of sheds for their better preservation; and, even then, as experience has proved, they could not be effectually preserved. The Board fear that it would be found impracticable to replace the live oak frames, should they receive injury: for, in addition to the small quantity of this valuable timber which will be left after the completion of the frames now contracted for, the Commissioners of the Navy have already had the honor of communicating to you that they have received information, from an unquestionable source, that the British Government have now an agent in this country for the purpose of obtaining live oak frames for twenty ships; and, should they succeed in obtaining them, the quantity of that timber, in our country, will be so exhausted that but little of consequence will be left.

Upon the whole, sir, the Commissioners of the Navy, viewing this subject in all its bearings, would beg leave respectfully to decline recommending a suspension, even for a limited time, of any portion of the appropriation for the gradual increase of the navy. They feel a clear conviction, that, if no part of the appropriation be suspended, the sum provided will be sufficient to accomplish all the purposes of the law; but they are equally clear, that the sum provided will not be adequate to those objects, unless managed with great economy; and that suspending any material portion of the appropriation would defeat the economical management of it, and thus render the means inadequate to the end.

Query 9th. Whether the contingent appropriation for freight, transportation, and recruiting expenses, cannot, consistently with the interest of the navy, be less than three hundred thousand dollars?

Answer. The estimate for the contingent expenses of the navy, which embraces a great variety of contingent expenditures, other than those stated in the query, was predicated upon the force intended to be kept in service.

Considering the nature of this appropriation, which is to meet necessary, yet undefinable expenses, fluctuating as the casualties happening in every naval service; expenses which no human foresight can estimate with any degree of precision; and adverting to past experience as the safest guide; the Commissioners would observe, that, although the whole sum of three hundred thousand dollars may possibly not be required, yet it might be injurious to the service to reduce it.

Query 10th. Cannot the expenses for freight, transportation, and recruiting, be provided for by specific appropriation?

Answer. Could these items be estimated with any degree of precision; then they might be provided for by specific appropriation; but it is apprehended, that a satisfactory estimate of the expense of these items could not be formed. To form such an estimate would require a knowledge, at the commencement of the year, of the whole quantity and measurement of the articles to be transported to and from the several depots, and to and from the several ships and vessels in service; the prices that would be asked for freight; the number of men to be discharged, or that might die; and the number to be entered, &c. during the year.

Query 11th. What expenses have been incurred in procuring steam engines, and the imperishable materials necessary for building and equipping three steam batteries?

Answer. The following exhibits a view of the engagements made with regard to steam batteries, viz:

2 complete engines	-	-	-	-	-	-	-	-	43,000
Making boilers, 164,000 lbs. copper,	at 10 cents	-	-	-	-	-	-	-	16,400
82,000 lbs. copper, castings, &c.	33	-	-	-	-	-	-	-	27,060
82,000 do. do.	31	-	-	-	-	-	-	-	25,420
3 live oak frames, 36,000 feet	1 45	-	-	-	-	-	-	-	52,200
90,000 cubic feet yellow pine timber	-	-	-	-	-	-	-	-	34,025
									\$223,525

All which is most respectfully submitted.

I have the honor to be, with great respect, sir, your most obedient servant,

JOHN RODGERS.

Honorable SMITH THOMPSON, *Secretary of the Navy.*

No. 182.

[1st Session.]

NAVY AND MARINE HOSPITALS.

COMMUNICATED TO THE SENATE, MARCH 17, 1820.

NAVY COMMISSIONERS' OFFICE, *March 17, 1820.*

SIR:

The Commissioners of the Navy have had the honor of receiving your letter of yesterday's date, and, agreeably to your request, transmit herewith a copy of their letter to you of the 13th February, 1819, by which their principal reasons for thinking it inexpedient to blend the Navy and Marine Hospitals will be perceived.

They beg leave to add, that subsequent experience and reflection have only tended to confirm them in the correctness of the views then taken. The customs in the different services are so essentially different, arising from different interests, that it does appear impossible to blend the two, without producing injury and injustice to the navy service, or murmur and discontent to the merchant service. The navy retains their seamen on board their ships as long as there exists any hope of curing them. In the merchant service they discharge the sick seaman the first opportunity that occurs. The navy seamen are now subjected in hospital, as well as on ship board, to subordination and discipline, serving under statute laws and rules specifically provided for the government of the navy. It would, on the one hand, be injurious to relax those laws and rules with respect to navy seamen, and, on the other, it would certainly produce murmur among the seamen of the merchant service, to have those restraints imposed upon them, which are indispensable in the navy; and to have two corps of seamen under the same roof, subject to different laws and regulations would obviously produce confusion.

These considerations are independent of another and a very important one, which is, unless you can reconcile the jarring interests of the different services, injury must result to the navy seamen in the degree of benefit arising from an amalgamated fund; because, while he contributes more, he will receive less; hence, a prolific source of discontent between the two classes.

I have the honor to be, with great respect, sir, your obedient servant,

JOHN RODGERS.

Honorable JAMES PLEASANTS, JUN. *Chairman of the Naval Committee of the Senate.*

NAVY COMMISSIONERS' OFFICE, *February 13, 1819.*

SIR:

The Board of Navy Commissioners have had the honor of receiving your letter of the 10th inst. asking their opinion on the subject of the bill relative to sick and disabled seamen, now before the House of Representatives. The Commissioners cannot but feel much diffidence in expressing any objection to a bill which has passed the Senate of the United States, but as you have been pleased to request their opinion, they proceed, with all the respect due to that honorable body, to submit the following observations:

The first section of the bill proposes to constitute a general fund, by amalgamating all the contributions levied and to be levied upon the officers, seamen, and marines, of the navy, and the seamen of the merchant service, for the relief of sick and disabled seamen.

The second, third, fourth, and fifth sections, propose to levy 35 cents per month on each seaman in the merchant service, and provides for the collection of the moneys, and their payment to the commissioners of the Marine Fund.

The sixth section requires of the Secretary of the Navy to deduct from the pay of the officers, seamen, and marines of the navy, 35 cents.

The seventh section authorizes the purchase or acceptance of lands or buildings at such places as may be proper, &c.

The eighth section provides for the appointment of directors to the marine hospitals, and gives them one per cent. upon their expenditure.

The tenth section proposes a deduction of one ration per day from each officer, seaman, or marine, admitted into hospital, and in cases where they may be entitled to pensions, that the amount thereof, accruing during their continuance in the hospital, shall be paid over to the commissioners of marine hospitals.

The Commissioners of the Navy consider the provisions of the first section objectionable on the following grounds:

1st. The seamen of the navy, when sent to hospital under this bill, would be completely withdrawn from the naval service, and from the control of naval subordination and discipline during their continuance in hospital, and experience teaches us, that under such circumstances, many of them would avail themselves of the first moments of convalescence to desert. In proportion to the importance of retaining them in the service, might be their disposition and determination to abandon it by desertion; for instance, if a seaman had offended against the laws of the navy, and subjected himself to a court martial, or if he had received more pay than was due him, the good of the service in either of these cases would imperatively require that he should be retained, while his own mistaken views of his own interest would suggest the expediency of deserting.

2d. Knowing that these effects would result from sending seamen to hospitals, the commanders of vessels would keep them on board ship as long as possible, in the hope of curing them, and, in all probability, might not send them to hospital till all hopes of their recovery had failed.

3d. It is not perceived that the provisions of this section are calculated to afford any relief, or to improve or ameliorate, in any degree, the condition of the sick and disabled seamen of the navy.

As regards the provisions of second, third, fourth, fifth, and sixth section of the bill, it may be observed, that seamen in the merchant service are necessarily engaged for the voyage; that the voyage is long or short, according to the objects which the ship owner or shippers have in view; that the average voyages cannot be calculated to exceed four months; and that seamen, after performing these voyages, remain on shore a considerable time before they engage again; and that they contribute only while they are actually employed on board ship; on the contrary, seamen of the navy never engage for a term less than two years, and very generally, particularly when on foreign service, re-enter at the expiration of the first term of service. Hence it results that the contributions in the merchant service are irregular and uncertain. A seaman in that service does not, on the average, pay his quota to the fund more than eight months in the year, whereas, in the navy, he is certain to pay for the whole year; and the officers of the navy, whether in service or not, pay as long as they remain in commission.

The amount of the contribution proposed appears, so far as respects seamen of the navy, unnecessarily great. At the time the 20 cents per month was first imposed, seamen's wages were \$17 per month; they are now reduced to \$12, and ordinary seamen receive \$8 to \$10; boys \$5 to \$6. The Navy Commissioners are persuaded that 20 cents per month, collected from all the officers, seamen, and marines of the navy, is sufficient to accomplish all the beneficial purposes of the law, so far as it relates to the navy.

As respects the authority proposed by the seventh section to be given to purchase or accept lands or buildings, the Navy Commissioners would only respectfully observe that, in their opinion, naval hospitals ought to be near the naval establishments on shore—their navy yards or depots, where seamen necessarily resort.

The mode of compensating the directors of marine hospitals appears objectionable. It is proposed by the eighth section to allow them a per centage upon their expenditures, so that the greater their expenditures the greater their

compensation. Will persons thus interested in swelling the expenditures to the greatest possible amount be expected to be economical? It is not perceived that this principle of compensation would in any degree improve the present system, which is, to place the hospitals in the charge of surgeons of the navy, whose pay and emoluments are fixed by law.

The tenth section exacts one ration (twenty-five cents) from each officer, seaman, or marine, sent to hospital; and, should he be entitled to a pension, the amount of the pension is to be taken from him while he continues in hospital, and paid over for the benefit of sick and disabled seamen, generally, whether in the navy or in the merchant service. These contributions are in addition to the one common to all, whether merchant or navy seamen. The seamen in the merchant service pay only thirty-five cents per month, while the seamen of the navy must pay thirty-five cents per month, and twenty-five cents per day; and may, in addition to all, be compelled to pay also his pension—the price of his wounds received in fighting the battles of his country. Hence, an obvious inequality in the amount of contributions imposed—an inequality in no degree softened or compensated by any special provision in favor of the navy seamen; for it is to be remembered that the whole of these contributions are to constitute one general fund, the benefits of which are intended to apply as extensively to the seamen in the merchant service as the navy seamen. When, in addition to all this, it is considered that the seamen in the merchant service receive more pay, generally, than those in the public service; that of the thirty-five cents per month they would pay less than the navy seamen; that while they are in hospital, they are but seldom liable to the contribution, while seamen of the navy always are when in hospital; that, from being more constantly on board ship, where they are well taken care of, they do not so frequently, in proportion to their numbers, become subjects for hospitals as seamen in the merchant service do; the inequality of the proposed provisions appear still more striking; and it will probably be conceded that, under such extreme disparity of circumstances, the seamen of the navy would have just grounds of complaint.

The Commissioners of the Navy confess their inability to perceive any beneficial effects likely to result to the navy from withholding, in any case, under any circumstances, the pensions allowed by law. Pensions are granted for wounds or disabilities sustained in the public service. The amount of the pension is within certain limits, proportioned to the nature of the wounds or the degree of disability; and, until the disability is removed, it is presumed the pension ought to continue. In order to exemplify the hardship of withholding a seaman's pension, because, being sick, he is sent to hospital, let us suppose a case, (and by no means an uncommon one,) that he has a wife and children dependent on him for support; that his pension, which cannot exceed half his monthly pay, barely enables him, with the utmost economy, and with all the exertion his palsied limbs will admit, to keep himself, his wife, and children, from actual want—under such circumstances, he is taken sick, and asks admission into a hospital. He is told, you can be admitted, but the law requires of you to give up your pension while you continue in the hospital. The situation of such a man, under such circumstances, is more easily conceived than described. He must choose between two evils, each full of horror.

It may be said that navy seamen, at this time, but seldom derive any benefit from *the fund*: for, when sick, they are sent to our temporary hospitals, where they are supported and nursed by withholding their rations, and applying the amount to the purchase of nourishing diet, suited to their sick and debilitated condition.

These temporary hospitals, situated generally near our navy yards, cheerless and comfortless as they are, are yet preferred to the hospitals provided for seamen in the merchant service. The men sent to them are under the charge of officers amenable to naval law, and who, for misconduct or neglect of duty, are liable to be court-martialed and cashiered. Hence, every possible care is taken of the patients, and they receive every comfort which inconvenient temporary buildings will admit of. The officers of the navy are generally more happily circumstanced: they have either homes of their own, or of their friends, to resort to in case of sickness, and sometimes are able to pay for lodgings in a private house. They will not be found to complain on their own account, although, while they derive no benefit from the fund, they are, whether in service or not, on full or half pay, constantly contributing to it. They may, however, be pardoned their sympathy for those less fortunate, but not less worthy, who are placed under their command, and who partake with them of all the toils and dangers as well as honors incident to the navy service. While the Navy Commissioners would respectfully urge as objections, in their opinion, to the bill, that its provisions are calculated to injure the naval service, by placing the public seamen in a situation where all would have an opportunity to desert, and many might avail themselves of it; or by subjecting to confinement on board our public ships, when they should be removed to hospitals; by withdrawing the restraints of discipline and subordination; by associating two classes rendered entirely distinct by the laws under which they are respectfully serving; by a tax operating with great and obvious inequality to the prejudice of navy seamen, and furnishing comfort in an inverse ratio to the contribution; and thus producing discontent, and rendering the service objectionable, without any equivalent advantage to the navy. They would, on the other hand, with great deference, express the opinion that the provisions of the act entitled "an act establishing navy hospitals," passed February 26, 1811, constitute a fund in itself sufficient to establish hospitals for the use of the navy, and furnish them with every requisite convenience for the comfortable accommodation of the sick and disabled seamen of the navy; that, in hospitals appropriated exclusively for the navy, the existing navy laws and rules would be enforced equally, as on ship board, every useful and necessary restraint would be kept up; no cause of discontent would exist; the sick would be placed in the charge of responsible officers of the navy, receiving only the pay prescribed by law; and, no heterogeneous materials being mixed together, the harmony of the whole navy system might be effectually maintained.

If, contrary to the opinion of the Navy Commissioners, the contributions heretofore made under existing laws, and now making by the officers, seamen, and marines of the navy, should be found insufficient to commence a system of navy hospitals commensurate with the proposed naval establishment, it must become a question of national policy whether it would not be expedient to apply the funds already accumulated, and those which may hereafter be collected, to the purchase of stock, investing the interest, as well as annual contributions, as they shall be received, and thus producing the effect of compound interest, so as to ensure an ample fund in a short period of time; appropriating annually, as heretofore, a small sum to support the present temporary hospitals, till the period shall arrive when the fund will admit of permanent national hospitals.

The annual contribution, at this time, of the officers, seamen, and marines of the navy, arising from the twenty cents per month levied upon them, exceeds ten thousand five hundred dollars.

I have the honor to be, sir, your most obedient servant,

JOHN RODGERS, *President.*

HON. JAMES PLEASANTS, *Chairman of the Naval Committee, House of Representatives.*

16th Congress.]

No. 183.

[1st Session.

APPLICATION OF THE CHILDREN OF THE CARPENTER OF THE FRIGATE CHESAPEAKE, WHO WAS KILLED IN THE ATTACK ON HER BY THE BRITISH SHIP LEOPARD, TO BE PLACED ON THE NAVY PENSION LIST.

COMMUNICATED TO THE SENATE, MARCH 23, 1820.

Mr. PLEASANTS made the following report:

The Committee on Naval Affairs, to whom was referred the petition of Harriet Shackerly, Sarah Shackerly, and Mary Shackerly, children of Peter Shackerly, have had the same under consideration, and submit the following report:

The petitioners state that their father, Peter Shackerly, was acting as a carpenter on board the United States' frigate Chesapeake at the time she was attacked by the British ship of war Leopard, and was killed during said attack; that the British Government, in their offer of reparation for that outrage, among other things, tendered a support to the families of such persons as were killed on board the American frigate in that rencounter; that the American Government, in finally receiving the proffered satisfaction, rejected the offer of a provision for the families of the slain, as being incompatible with the dignity of the Government; that they have made application to the Secretary of the Navy for the benefit of the laws extending half-pay pensions in certain cases to the widows and orphans of persons slain on board the public ships of war; that the Secretary replied that that provision related only to persons slain since the month of June, 1812, the commencement of the late war with Great Britain, but supposes that Congress, on application for that purpose, would extend the provision, so as to make it refer back and comprehend the case of the petitioners. The facts stated in the above petition seem to be sufficiently proved.

The committee, on an examination of the circumstances of this case, are of opinion that it would be improper to extend the provisions of the acts so as to make them refer back to embrace the case of the petitioners. The Navy Pension Fund is constituted in a particular way, and for particular purposes. It had existed some years before the provision for widows and orphans existed; that provision was made and extended during the late war to cases occurring both in the sea and land service; and should it be extended back, so as to take in cases occurring anterior to the war, the committee see no good reason why it should not take in all cases which so occurred since the constitution of the fund, which was very small, they believe, before the captures made during the late war, of the proceeds of which it is made up. The committee have considered their powers on this subject as limited to the Navy Pension Fund. They will not undertake to give an opinion how far the rejected proffer of the British Government to make provision for the families of the persons slain on board the Chesapeake constitutes a claim on our Government; that is a subject proper for the consideration of another committee of this body, when the case comes properly before them. The committee propose to the Senate the adoption of the following resolution:

Resolved, That the petitioners have leave to withdraw their petition and documents.

16th Congress.]

No. 184.

[1st Session.

MARINE HOSPITAL FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 28, 1820.

WASHINGTON, March 28, 1820.

To the House of Representatives:

I transmit to the House of Representatives, in pursuance of their resolution of the 31st January last, a report from the Secretary of the Treasury, with the documents which accompanied it.

JAMES MONROE.

TREASURY DEPARTMENT, February 28, 1820.

SIR:

In obedience to a resolution of the House of Representatives, of the 31st ultimo, referred to this Department, I have the honor to submit the enclosed report and statements, from the offices of the Register, and Fourth Auditor of the Treasury.

I remain, with respect, your most obedient servant,

WM. H. CRAWFORD.

JAMES MONROE, *President of the United States.*

On the resolution of the House of Representatives, of the 31st January, 1820, in relation to the annual Receipts and Expenditures of the Marine Hospital money, collected under the Acts of 16th July, 1798, and 2d March, 1799, the Register has the honor to state to the Secretary of the Treasury,

That the moneys collected under the act of the 16th July, 1798, entitled "An act for the relief of sick and disabled seamen," from the time it was carried into operation by the Collectors of the Customs, to the 30th September, 1819, including the sum of \$38,513 96 paid into the Treasury, by the Secretary of the Navy, pursuant to the act of the 2d March, 1799, amounted as per statement, herewith marked A, to \$910,864 60

That the pay deducted from the officers and men of the navy of the United States, pursuant to the act of the 2d March, 1799, up to the 26th February, 1811, amounted, as per statement B, to \$58,975 47

Deduct amount included in Statement A, as above stated, 38,513 96

20,461 51

Total amount of receipts under the act of the 16th July, 1798, up to the 30th September, 1819; and under the act of the 2d March, 1799, up to the 26th February, 1811; which, by act of the 3d May, 1802, was appropriated as a general fund, for the support of sick and disabled American seamen, 931,326 11

To which, add amount of appropriations, by special acts of Congress in 1804, 1813, 1814, and 1815, 61,000 00

Total amount of appropriations to 30th September, 1819, \$992,326 11

That the amount of expenditures, under the acts for the relief of sick and disabled American seamen, up to the 30th September, 1819, as exhibited in statement C, was - - - - - \$1,033,269 59
 To which, add the amount of warrants drawn by the Secretary of the Navy, on the Treasurer of the United States, in favor of sundry agents of marine hospitals, as per Statement D, being so much on account of the money deducted from the pay of the officers and seamen of the navy, per act of the 2d March, 1799, included in the sum of \$58,975 47 above stated. - - - - - 17,135 33
 Making together, - - - - - \$1,050,404 92
 And being - - - - - (a) 58,078 81

Over the amount of appropriations for that object.

That there is a balance to the credit of Marine Hospital Fund, in the books of the Accountant of the Navy, of \$3,326 18, being the residue of \$58,975 47 above stated, which, pursuant to the act of the 2d March, 1799, should be paid over to the Secretary of the Treasury.

That the expenditures for the relief of sick and disabled American seamen, are under the direction of the collectors of the customs, appointed agents for that purpose, and are, at the small ports, made in payment for boarding, medical attendance, and temporary relief. At Newport, New York, Philadelphia, Alexandria, and New Orleans, seamen are received into the respective hospitals or alms-houses in those cities; at Baltimore they are attended and supplied by contract, with all necessaries, except clothing, at 50 cents per day. Marine Hospitals have been built and are supported by the United States, at Boston and Norfolk; attached to that at Boston is a physician at a salary of \$1,000, and a steward at \$500, with nurses, cooks, &c. at various rates; that at Norfolk has a surgeon at a salary of \$840, and an assistant at \$600, per annum, a steward at \$8, and nurses at \$6 50, per month. The hospital at Boston was repaired in 1818, and a site has been purchased for erecting one at Charleston, South Carolina; sick and disabled seamen are, at the last mentioned port, under the care of the corporation of the city, to whom is paid over the amount of hospital money received by the collector.

Respectfully submitted.

JOSEPH NOURSE, *Register.*

TREASURY DEPARTMENT, REGISTER'S OFFICE, *February 26, 1820.*

HON. WM. H. CRAWFORD, *Secretary of the Treasury.*

(a) Amount brought down,	-	-	-	-	-	\$58,078 81
Add balance to the credit of the Marine Hospital Fund in the books of the Accountant of the Navy, not as yet paid into the treasury,	3,326	18				
And this sum, being the amount of sundry payments to collectors of marine hospital money, to the 31st December, 1818, not covered by the appropriation warrant till after that year,	1,637	67				
Also, the amount carried to the surplus fund in 1804, and 1806, as per statement herewith,	537	32			5,501	17
						\$63,579 98
Deduct excess of expenditures over the receipts, in the three first quarters of 1819,	-	-	-	-	-	23,260 64
Balance against the fund 31st December, 1818, as per statement rendered to Congress during the present session, a copy whereof is annexed, marked E,	-	-	-	-	-	\$40,319 34

A.

JOSEPH NOURSE, Register.

16th CONGRESS.]

No. 185.

[1st Session.]

PRIVATEER PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 28, 1820.

NAVY DEPARTMENT, *March 27, 1820.*

SIR:

In compliance with the resolution of the House of Representatives of the United States, passed on the 15th instant, I have the honor to submit statements, marked A, B, C, D, E, F, and G, which will, it is presumed, be found to contain all the information contemplated by the resolution.

Paper A is an exhibit of the amount of money received under the act of Congress of the 26th June, 1812, entitled "An act concerning letters of marque, prizes, and prize goods," which authorized a deduction of two per centum on the nett amount of prize money arising from captured vessels and their cargoes; and, also, on the salvage of vessels re-captured by the private armed vessels of the United States. The proceeds of these deductions have been regularly, on their receipt into the treasury, invested in six per cent. stock of the United States.

Paper B shows the amount of stock now constituting the Privateer Pension Fund.

Paper C shows the receipts and application of all moneys on account of the fund, as well as the balance remaining in the treasury on the first day of January last.

Papers D, E, F, and G contain lists of the pensioners, as well as of persons disabled, as of the widows of those slain or lost in private armed vessels.

Of those who were disabled on board private armed vessels, specified in paper D, three or four are known to be dead; and a few have not, for some years past, claimed their pensions.

Of the widows, enumerated in paper E, a few have intermarried, without leaving children to receive the remainder of the pensions; the residue will, on furnishing proof of the continuance of their widowhood, be entitled to receive renewed and increased pension certificates for the further term of five years, the same as the widows named in paper F, conformably to the provisions of the act of Congress of the 16th of April, 1818.

The annual interest accruing on the stock invested for the benefit of the Privateer Pension Fund, amounts, at this time, only to eleven thousand seven hundred and ninety-six dollars and twenty-three cents; and the pensions already authorized, under the different acts of Congress, as appears by paper G, require annually a sum exceeding twenty thousand dollars. Notwithstanding this disparity between the productive power of the fund, and the claims chargeable to it, it is presumed that the fund will prove sufficient to satisfy all demands, without requiring from Congress any appropriation to its aid.

The pensions to widows and orphans are limited to ten years, and more than half that term has in most cases expired. The amount of these pensions, as well as to those granted to persons disabled, must, from a variety of contingencies, intermarriages, and the mortality incident to human nature, be constantly diminishing. Stock to the amount of twelve thousand nine hundred and fifty-one dollars and thirty cents, as will appear by paper C, has already been sold; and it is obvious that, until the pensions of the widows shall have expired, to meet the semi-annual payments, which will become due in January and July of each successive year, further sales of part of the principal will be inevitable; after that period, the interest accruing on the remaining stock will, it is believed, be adequate to pay the residue of the pensions.

The act of Congress of the 16th April, 1818, which provides for the widows and orphans of those lost in private armed vessels in consequence of casualties, has introduced a much greater number of cases than had been anticipated, particularly in the States of New Hampshire, Massachusetts, and New York; as several privateers owned in those States were, during the last war with Britain, foundered at sea, and all on board lost.

With the highest respect, I have the honor to be, sir, your most obedient servant,

SMITH THOMPSON.

The Honorable the SPEAKER of the House of Representatives.

[Statements D, E, F, are condensed in G, and therefore omitted.]

A.

Amount received from captors, being two per cent. on the nett proceeds of prize vessels and prize goods.

[1st SESSION.]

DISPOSITION OF A SWORD RECEIVED, AS A PRESENT, BY CAPTAIN BIDDLE FROM THE VICE-KING OF PERU; AND THE TRANSPORTATION OF PASSENGERS, MONEY, OR EFFECTS, IN THE PUBLIC VESSELS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 8, 1820.

NAVY DEPARTMENT, *April 7, 1820.*

SIR:

In obedience to a resolution of the House of Representatives of the United States, passed on the 30th day of March last, I have the honor to report that the documents transmitted herewith, marked A, numbered 1 to 8, and B, numbered 1 to 7, being copies and extracts of letters and orders having relation to the subject, contain the information required; and they will, it is presumed, fully explain the transaction referred to in the said resolution.

The papers marked A will show what present was received by the commander of the Ontario, during the late cruise of that ship in the Pacific Ocean, and the disposition made of the same; what citizens or subjects of foreign Powers, or their money or effects, were transported in the Ontario from one foreign port to another; which of those citizens or subjects were in the military or naval service of a Government engaged in war; and, also, what freight was received for the money or effects so transported.

The papers marked B will explain to the House of Representatives the instructions which have been given by this Department, during the last four years, respecting the transportation in the public vessels of passengers, money, or effects.

All which is respectfully submitted.

SMITH THOMPSON.

The Honorable the SPEAKER of the House of Representatives.

A. No. 1.

Extract of a letter from Captain James Biddle to the President of the United States, dated

WASHINGTON, August 16, 1819.

The Secretary of the Navy showed me yesterday a letter from the Secretary of State of Chili, containing the complaints of that Government against my conduct. I perused the letter in the presence of Mr. Thompson, and replied to it verbally immediately upon perusing it. Mr. Thompson this morning informs me of your wish that I should submit to you, in writing, the substance of my conversation of yesterday with him; and I therefore now have the honor to do so.

The letter complains that I had covered the property of the enemies of Chili. The only property of any kind on board was specie; the amount two hundred and one thousand dollars. Of this, eleven thousand were put on board by the captain of an American brig for his owner in Boston; the remainder was shipped by individual merchants in Lima, and consigned, fifteen thousand of it to Mr. Astor of New York, fifteen thousand of it to Mr. Gracie, of New York, and the balance of it to individual merchants in Rio Janeiro. That this was all private property is indisputable. In fact, the Government of Lima has not remitted a dollar out of the country for several years. The increased expenses consequent upon the war absorbs all the means of that Government, and it is now embarrassed from the want of money. It was this want of money which opposed a great obstacle to the release of the ships *Beaver* and *Canton*, at Lima. Of the propriety of conveying this private property I entertained not a doubt. The law of the United States permits specie to be received on board. The English men of war, with whom the law is the same as with us, do it constantly. Our own ships have done it constantly. Commodore Shaw, who is now in Washington, and who was formerly on the New Orleans station, informs me, what indeed I previously knew, that the *Saranac*, the *Boxer*, and our other vessels in the Gulf of Mexico, have always brought specie from Vera Cruz and the other ports.

The letter complains that the English frigate *Andromache* had received at Lima much property, to be conveyed to England and elsewhere, *in consequence of the precedent set by me*. This is not true. On my first arrival at Valparaiso, in January, 1818, the English frigate *Amphion* was at Valparaiso: she had just come from Lima; had money on board, which was received at Lima, and she sailed with it to Rio Janeiro. That this money was on board the *Amphion* was known to me, and, I believe, to every one else; yet I never heard any remark made respecting it. With respect to the *Andromache*, her commander informed me that, during my absence to the Columbia, he had carried money from Lima to Valparaiso, which was consigned to Rio Janeiro; and that, while at Valparaiso, he had transferred this money from his own ship to the British sloop of war *Tyne*, then at Valparaiso, and that the *Tyne* had carried it to Rio Janeiro. This, also, was before my arrival at Valparaiso with money. When I met the *Andromache* at Lima, money was putting a second time on board of her; and it is this second time of the *Andromache's* conveying money to which the letter alludes. I do not hesitate to assert that, at the time of writing their letter, it must have been known to the Government of Chili that both the *Amphion* and the *Andromache* had arrived at Valparaiso, with money for Rio Janeiro, previously to me. I will add that Commodore Bowles, of the *Amphion*, and Captain Sherriff, of the *Andromache*, are officers highly respectable, and that I associated with them upon frank and intimate terms. Captain Sherriff, personally, and Commodore Bowles, by letter, expressed to me thanks for services I had rendered some British merchantmen, and assured me they would seek opportunities of returning them to my countrymen who might be in need.

The letter complains that I had carried D'Olahaberrigua y Blanco to Chili, as a spy. It is impossible to express sufficiently my astonishment at this complaint. My letter to the Secretary of the Navy, (June 12, 1818,) states the object of my going from Lima to Valparaiso, namely, to convey to the Spanish blockading squadron, off Valparaiso, an order from the Vice-King, which it was important to the American commerce should be conveyed to the Spanish squadron as early as possible. The same letter to the Secretary of the Navy, also my letter to the Vice-King, of April 28, 1818, and my letter to the Governor of Chili, May 29, 1818, explains the object for which I had consented to receive D'Olahaberrigua y Blanco on board, namely, to endeavor to effect an exchange of prisoners between the patriots and royalists. The Governor of Chili had often previously told me of the cruelty of the royalists towards the patriot prisoners, and of their earnest desire to effect an exchange; and, by referring to the letter of the Government of Chili to me, May 30, 1818, it will be seen that they declare they had often solicited an exchange of prisoners, and which had always been opposed by the Government of Lima. Upon arriving at Valparaiso, I notified to the Government of Chili, (letter of May 29, 1818,) my having D'Olahaberrigua y Blanco on board, and for what object; and, by referring to the letter of the Government of Chili, May 30, 1818, it will appear that they compliment me in the highest manner for my disinterested generosity in undertaking such a work of humanity, and inform me that a residence is prepared for me in the capital, by order of the Supreme Director, who will have the pleasure to return me in person his thanks for my good offices. D'Olahaberrigua y Blanco and I, escorted by an officer and some soldiers, accordingly proceeded together from the port to the capital, where, on arriving, I was conducted to the residence prepared for me, and D'Olahaberrigua y Blanco was placed with an officer of the Government, in whose custody he remained during our stay. After the failure of the negotiation between the Chili Government and D'Olahaberrigua y Blanco, it will be perceived, by the letter of the Government of Chili to me, (Mr. Guido's letter, of June 7, 1818,) that they "still appreciate the sentiments of humanity which had animated me in interesting myself in the business." I was frequently with the Supreme Director while I was at the capital, and experienced much civility; and, the day previously to my leaving the capital, the Supreme Director himself paid me a formal visit, and expressed friendship to me in the strongest language. Upon the journey from the capital to the port, we were accompanied by an officer of the Chili Government and some soldiers, who had charge of D'Olahaberrigua y Blanco; and, on the day after reaching the port, I sailed from Valparaiso. In confirmation of the respect with which I had been treated, I quote the following from my letter to the Secretary of the Navy, June 12, 1818, written after my return from the capital: "It is proper I should state that at Santiago I was received and treated with great distinction, and which was the more gratifying as it evinced the high consideration in which our country is held." After these testimonies from their own letters, and of their own conduct towards me, is it credible that the Government of Chili itself seriously believes that I had carried D'Olahaberrigua y Blanco as a spy? What possible motive could have induced me to such improper conduct? Was I not entirely convinced that enough has already been said to satisfy your mind of the purity of my conduct, I would declare, in the most solemn manner, that, in consenting to undertake (at the solicitation of the Government of Lima) to endeavor to effect an exchange of prisoners, (a measure which the Government of Chili had previously informed me they were also anxious to effect,) I was actuated solely by the motives of humanity. Civil wars are always waged with asperity and bitterness; and if I could be the means of introducing a milder system of warfare, I knew I should meet your approbation, and might make impressions with both parties advantageous to our country. I hope, sir, you will pardon my saying that the baseness and injustice of this complaint of the Government of Chili has excited in me feelings of strong indignation.

The letter states that, in consequence of my having brought D'Olahaberrigua y Blanco, as a spy, the Government of Chili had prohibited my entrance into its ports. That this is utterly untrue, is manifest from my having afterwards arrived at Valparaiso, and remained there five days, without hearing a syllable of it. The Governor of Valparaiso received me at my arrival, with the greatest cordiality, and spoke of his own friendship and that of his Government for me. Is it credible, that the Government of Chili had prohibited my entrance? a measure, too, which I think the letter states was adopted to pacify the feelings of the people, indignant at my having brought a spy into the country. Is it credible, that such a prohibition should exist, and the Governor of the only port which I was to enter, as also the commander of the naval forces, know nothing of it? That I myself should know nothing of it during a stay of five days? So far from the people being unfriendly disposed towards me, the reverse is the fact. My ship remained in Valparaiso during the interval of the battles of *Tullo* and of *Maypo*; and during this interval,

when the country was considered as lost to the patriots, the presence of the Ontario was of great importance to the patriot cause, and both the Government and people of Chili felt and acknowledged it.

The letter states that the Government of Chili knew I had received a sword from the Vice-King of Lima. While at Santiago, D'Olhaberriagua y Blanco informed me, that the officer in whose custody he was, had insulted him very grossly, telling him, among other things, that the Government of Chili would not permit him to go away in the Ontario, and that if he had any influence he would have him hanged. I replied, that as he had come to Santiago under my protection, I would protect him from insult; that I would immediately complain to the Supreme Director, who, I was sure, would not allow him to be insulted, and that we would quit Santiago immediately, if these insults were not discontinued. D'Olhaberriagua y Blanco, who was already alarmed at being in the power of the patriots, and doubted my ability to protect him in case any complaints were made, begged me not to say any thing upon the subject. Foreseeing that D'Olhaberriagua y Blanco would complain on his return to Lima, of having been treated with insult at Santiago, I was determined his story should not reflect upon me. I accordingly told him to recollect, that I declined to make any complaint against the officer, solely at his particular request; and that, but for his request, I would feel it my duty to interpose. Afterwards, upon returning to Lima, D'Olhaberriagua y Blanco reported to the Vice-King, that, while on board the Ontario, I had treated him with much civility and politeness, and that at Santiago, when he was insulted, I had very promptly and spiritedly offered to interpose, but was prevented by him. It was this last circumstance that conciliated the Vice-King in the most lively manner. As soon as D'Olhaberriagua y Blanco had had his interview with the Vice-King, the Vice-King sent to the port to invite me to dinner that day. I did not go, as I was occupied on board preparing to sail on the next day; but I went to Lima in the evening, and then visited him. He received me with great civility, as I have already related, and he asked me to dine with him on the next day. I begged him to excuse me, as I wished to sail the next day. He said he would not insist upon my dining with him, as I wished to sail, but he would insist upon my receiving some token of his friendship and gratitude; and calling for his sword, he presented it to me, saying, it had been given to him by a friend of his. It would have been more agreeable to me that this offer, although I did not attach any importance to it, had not been made, but I felt an embarrassment, taken as I was by surprise, about receiving it. At the time of receiving it, which was night, I supposed it to be the Vice-King's common wearing sword, but found, at returning to my lodgings, that the scabbard was of gold. I have related this incident, which I still consider as trivial, as it happened. It just occurs to me while writing, that Captain Sherriff mentioned to me, that the Vice-King, upon some occasion, had given him some pieces of silver plate.

A. No. 2.

UNITED STATES' SHIP ONTARIO, *Valparaiso*, June 12, 1818.

SIR:

I have the honor to enclose copies of two letters I addressed, while at Lima, to his excellency the Vice-King of Peru, together with copies of his excellency's answers. As it was important that the new instructions of the Vice-King should be transmitted as speedily as possible, as well for the sake of the American vessels already in Valparaiso, as for the sake of such others as might be about to enter, I considered it my duty to return hither from Lima, and bring with me the Vice-King's despatch. I have great satisfaction in acquainting you that five American seamen, who were imprisoned in Lima, were released upon my application to the Vice-King, and delivered to me on board this ship. In the war between Chili and Peru there was established no cartel for the exchange of prisoners, nor had prisoners been admitted even to their parole. Such a system of warfare serving to increase individual distress, and to render hostilities between the two countries rancorous, was repugnant to every sentiment of humanity and of generosity, and I considered, therefore, I should render an acceptable service to both parties if I could effect an arrangement for the release of such as were then prisoners, and provide against the imprisonment of prisoners for the future. The offer of my services to effect this object was accepted by the Vice-King, and I brought from Lima Don Felix Olhaberriagua y Blanco, whom he appointed to treat on this subject with the Governor of Chili; but, upon arriving at Santiago, the only document which Don Felix presented was a letter from the Vice-King, addressed to Don Jose San Martin, as an individual, and not recognising him in his public station of General-in-chief of the army of Chili. The Government of Chili, therefore, decided that the credentials of Don Felix were so informal and insufficient that it would not be proper to negotiate with him; and thus the effort to relieve the prisoners has failed of success. I hope the offer of my services, and the using my endeavors to soften the calamities of the war, will meet the approbation of the President. It is proper that I should state that, at Santiago, I was received and treated with great distinction; and which was the more gratifying, as it evinced the high consideration in which our country is held.

I have the honor to be, &c.

J. BIDDLE.

The Honorable the SECRETARY OF THE NAVY.

A. No. 3.

Extract of a letter from Captain James Biddle to His Excellency Don Joaquín de la Pezuela, Vice-King of Peru, dated

UNITED STATES' SHIP ONTARIO, *Callao*, April 28, 1818.

I have learned, with deep regret, that, in the war between this country and Chili, there has not yet been established any exchange of prisoners, although the number of prisoners on both sides has now become considerable. Being animated with a very sincere desire to lessen, as much as possible, to individuals, the inconveniences inseparable from a state of war, I beg leave to offer to your excellency my mediation and good offices towards effecting this object, so desirable for the sake of humanity. It would afford me very great gratification to be instrumental in effecting such an arrangement, with respect to prisoners, as may serve to relieve individuals and their families from the distress in which they are involved, as also in producing between the two countries a termination of the hostilities which at present so unhappily exist.

A. No. 4.

Extract of a letter from Don Joaquín de la Pezuela, Vice-King of Peru, to Captain James Biddle, commanding the United States' sloop of war Ontario, dated

LIMA, April 28, 1818.

I accept, with the highest satisfaction, the mediation to which you invite me, for an exchange of insurgent prisoners, detained within the district under my command, for those of the army of the King, which they have taken. You know well the disposition of my mind: an interest equal to that which you display in favor of humanity will always animate my heart, and render it prompt to accede to whatever proposal may be made to me, tending to diminish the evils of war, since it is not practicable, at present, to terminate them completely. Such is, moreover, the will of the most benign of sovereigns, who is so much affected by the shedding of the blood of his subjects. Whatever, therefore, may be the result of your good offices, you may be assured of my gratitude and consideration for the merit of having even attempted it.

A. No. 5.

U. S. SHIP ONTARIO, VALPARAISO, *May 29, 1818.*

SIR:

I have the honor to acquaint your excellency that, when I was about to sail from Lima for this port, I represented to the Vice-King of Peru that I was deeply concerned at seeing that there did not exist between Chili and Peru any exchange of prisoners, although the number of prisoners, on both sides, had become considerable; and that, animated with a very sincere desire to lessen, as much as possible, to individuals, the inconveniences of the war, I offered to his excellency the Vice-King my mediation and good offices towards establishing between the two countries a cartel for the regular exchange of prisoners. In offering my services towards effecting this object, your excellency will readily believe that I was actuated solely by the motives of humanity, and a very earnest wish to relieve from their long confinement the many brave men who have had the misfortune to be made prisoners. His excellency the Vice-King accepted my offer, and has empowered Don Felix Olhaberrigua y Blanco to treat with your excellency on this subject. As this gentleman, with his secretary, Don Thomas Crompton, have come hither in this ship, and under my protection, I request of your excellency permission for them to land, and to proceed to Santiago; and I also request that your excellency will be pleased to give me assurances that they shall be respected during their stay, and be allowed freely to embark, on their return, at any moment they may desire. Upon receiving this permission, and these assurances, from your excellency, I shall myself accompany Don Felix to Santiago; and shall be very happy to contribute all my endeavors to procure between the two countries such an arrangement, with respect to prisoners, as may alleviate the evils of the war which at present unhappily exists. I have brought with me, from his excellency the Vice-King, the sum of ten thousand dollars, for the relief of the Spanish prisoners in Chili, and which I will cause to be remitted to Santiago, if your excellency will allow it to be distributed. I have great satisfaction in informing your excellency that Lieutenant Colonel Quaesada, and Captains Badennama, Villanema, and Equiro, officers of the Patriot service, who were prisoners at Lima, have arrived here in this ship.

I have the honor to be, &c.

J. BIDDLE.

His Excellency Don BARNARDO O'HIGGINS,
Supreme Director of Chili.

A. No. 6.

DEPARTMENT OF STATE, *May 30, 1818.*

SIR:

His excellency the Supreme Director of the State being informed of the contents of your letter of the 29th instant, has commanded me to present to you, in his name, his most particular thanks for the generous efforts which you have made with the Vice-King of Peru, in obtaining the commencement of an exchange of our prisoners of war, so often solicited by us and opposed by him.

Chili, as well as all the countries of South America, will ever remember your name with feelings of the highest gratitude for having undertaken this work of humanity, as congenial to the American character as it is opposed to the destructive projects of the agents of tyranny. For your disinterested generosity in undertaking it, no less than your success in accomplishing it, you will receive the most sincere proofs of the gratitude of the people, and the Government of this State.

His excellency the Supreme Director also commands me to inform you that he has already given orders to the Governor of this port that the commissary Don Felix Olhaberrigua, and his secretary Don Thomas Crompton, should come to this capital, under the charge of an officer of the State, and that the necessary facilities be furnished for their journey; and, to assure you that they shall be treated with the politeness and generosity characteristic of Chilians, without recollecting the conduct of the Vice-King of Lima towards Lieutenant Colonel Torres, our commissary for this same purpose. These persons will be treated in this capital agreeably to their commission and the laws of war, and may return when they have finished their business, or before if they desire it. You may rely with the same confidence on the distribution of the ten thousand dollars, which you have brought for the relief of the Spanish prisoners.

The Supreme Director, desirous of showing to you a proof of his gratitude, has given orders to prepare a residence for you in this capital, where he will have the pleasure of returning to you, in person, his thanks for your good offices, as soon as he is informed of your arrival, if you will give yourself the trouble of previously announcing the day when it will take place.

God preserve you many years.

ANTONIO JOSE DE IRIFARRI.

JAMES BIDDLE, Esq. *Commander U. S. sloop of war Ontario.*

A. No. 7.

PHILADELPHIA, *December 9, 1819.*

SIR:

I have the honor to enclose a copy of a letter addressed by me to the Secretary of State.

I have the honor to be, &c.

JAMES BIDDLE.

HON. SMITH THOMPSON, *Secretary of the Navy.*PHILADELPHIA, *December 7, 1819.*

SIR:

I have the honor to forward, by my friend Commodore Bainbridge, a sword, presented to me by the Vice-King of Peru, and which, in compliance with what I understand to be the us age in similar cases, it is my wish should be deposited at the Department of State. Although I have already explained to the Secretary of the Navy the circumstances under which this sword came into my possession, allow me to state to you the situation, generally, in which I stood in relation to the Vice-King, and the reasons which induced me not to decline the acceptance of what was presented, as well as received, as an act of mere personal civility.

During my last cruise in the Pacific, the important interests of my countrymen, dependent on the Governments of Chili and Peru, rendered it a matter of obvious propriety for me to cultivate the good will of both, by every act of personal civility not inconsistent with my first duty to my own Government. In my detailed report, I have already stated that my mediation for an exchange of prisoners between the conflicting parties was undertaken, in the first instance, at the desire of the Vice-King. The government of Chili had previously informed me that an exchange of prisoners was an object of great solicitude with it; and, in using my endeavors towards an object which each party had assured me it was anxious to effect, it was reasonable for me to expect that the impressions upon each of them would be alike favorable; and, accordingly, though circumstances afterwards rendered my mediation in a great measure ineffectual, I received the thanks of the Government for it. It so happened that, during the negotiation at Santiago, the commissioner, whom I had brought from Lima, was treated with much insult by the Chili officer, in whose custody he was placed; and, considering it as incumbent upon me to protect him from insulting language, as from any other kind of violence, I was about to take measures for his protection, but abstained at the particular desire of the commissioner, who, already alarmed at being within the power of the Government of Chili, thought it better for him to submit to insulting language, rather than, by resenting it, to incur the risk of not being allowed to depart. The commissioner, at his return to Lima, acquainted the Vice-King that, while on board the Ontario, I had

treated him with much civility and politeness; and that at Santiago, when he was treated with insult, I had promptly offered to interpose, but had been prevented by himself. Excepting the expense incurred by me in conveying the commissioner and his suite, and of some Spanish officers, released in exchange for some Patriot officers I had conveyed to Valparaiso, these are the amount of the favors I had conferred upon the Vice-King—favors which, in my view, did not transcend that courtesy which my duty would exact from me towards the public authorities of every port I might visit. On the other hand, the favors conferred upon me by the Vice-King comprised acts of substantial benefit to my countrymen. He had, at my instance, repealed his orders to the blockading squadron to seize all American vessels bound into Valparaiso; he had ordered the same squadron not to molest any American vessel which might leave Valparaiso in company with my ship; and he had released and delivered to me a number of Americans who had been engaged in the Patriot service.

It was under these circumstances that, just as I was leaving Callao, after landing the commissioner, that I received an invitation to dine with the Vice-King. Being occupied on board, I declined going to dinner; but, in the afternoon, called on the Vice-King. He received me with great civility, and assured me that his obligation for my efforts to effect an exchange of prisoners had lost none of its force for the failure of the negotiation. He again invited me to dine with him on the following day; this I declined, as I was anxious to proceed to sea. He said he would not then insist on my dining with him, but that he must insist upon my receiving from him some token of his regard; and, calling to an officer to bring him his sword, he put it into my hands, adding that it had been a present to him from a particular friend of his. It was by no means agreeable to me to receive it; but, after the services he had, at my request, rendered to my countrymen, I was unwilling to appear to slight his offer of civility; and there was a peculiar awkwardness in refusing, as it was made in the presence of his family, and seemed to me so unpremeditated, that I could consider it only as a mark of private regard from one officer to another. It was towards night, too, and I did not perceive, till afterwards, that the sword, though a present to him from a friend, was of costly materials. It was then equally unpleasant to send it back to him, as it would seem to be attaching too much importance to a circumstance trivial in itself, and altogether of a personal nature.

Since my return to the United States, on reflecting upon one of the provisions of the constitution, I have thought it best not to retain an object which might, perhaps, be construed to be inconsistent with it; and I have therefore considered it most proper to transmit the sword to the Department of State. The possession of such an object is perfectly indifferent to me, and is so little important, that I owe an apology for troubling you on the subject. That apology will be found, I trust, in my desire to conform exactly to the constitution.

I have the honor to be, &c.

JAMES BIDDLE.

Hon. J. Q. ADAMS, *Secretary of State.*

A. No. 8.

Extract of a letter from Captain James Biddle to the Secretary of the Navy, dated

PHILADELPHIA, April 2, 1820.

“During my first visit to Lima, in April, 1818, on examining the prison for the purpose of ascertaining and releasing the Americans confined there, I found a British subject, the surgeon of a British whale ship. He was suffering, and I promised the Vice-King, that if he would release him, I would take him out of the country. He did so, and this British subject went in the Ontario from Lima to Valparaiso; at the same time, also, went a commissioner of the Vice-King, with his secretary, and four military officers, in the Chili service. The commissioner was charged with negotiating an exchange of prisoners, from the Vice-King to the Chili Government; the officers were prisoners in Lima, released in consequence of my offer to give them a passage, and their release was intended as the basis of a general exchange of prisoners. On my return from Valparaiso to Lima, I carried back there the commissioner and his secretary, and four royalist officers, prisoners in Chili, released in exchange for the Chili officers just mentioned. I also carried with me a royalist naval officer, who was a prisoner in Chili, and who was released without exchange, in consequence of his being a relation of an officer of the Chili Government, to whom I promised to furnish his kinsman a passage. I also carried a lady with her three children, a native of Chili, but whose husband was then in Lima; a Spanish merchant, whom I took in consequence of a very pressing request from the *Secretary of State of Chili*; one other Spanish merchant, at the earnest desire of the *Governor of Valparaiso*; and a third Spanish merchant, at the particular wish of a citizen of the United States, then in the service of the Government of Chili.

On my return from the Columbia river I touched at Lima, and when I left that place, in December, 1818, carried with me to Rio Janeiro a Spanish officer, who was a relation of the Vice-King, a Spanish lady with her child, and two Spanish merchants. The two merchants were received at the request of the commissioner of the Government of Lima, whom I had previously carried to Valparaiso. The Spanish officer and the lady were taken on board at the particular desire of the Vice-King; he had, as a personal favor to me, released a number of my unfortunate countrymen imprisoned in Lima for having been taken in arms against the royalists, and I was at that period pressing, with great earnestness, the restoration of the two vessels, the *Beaver* and *Canton*, which were ultimately restored. Their release depended entirely upon the personal disposition of the Vice-King, whom I was therefore desirous of conciliating at so critical a period, when a large amount of property belonging to our citizens was in jeopardy. I considered, indeed, the fate of those two vessels as directly and immediately involved in my decision as to these persons, since, in case of refusal, the trial of the vessels would have ended in condemnation, or been indefinitely postponed. I therefore received them on board. My having done so, and the reasons for it, were communicated to the Navy Department immediately on my arrival in the United States. The transportation of these persons, from whom, of course, I could not think of receiving compensation of any sort, was inconvenient and somewhat expensive to me. It was my fortune to pass between two parties in a civil war, imbittered against each other, and one at least of them prejudiced against the United States. It was also my fortune to claim the rights of our citizens, as they were violated by each party. It was proper, therefore, to mingle with the performance of this duty every act of kindness and courtesy not inconsistent with it. Among these, none were more appreciated than the transportation of persons from the one country to the other, while all intercourse was so precarious. I therefore apprized the Government, both of Chili and of Lima, that as I was unwilling to refuse a passage to all those who applied, I would give the preference to such as the respective Governments felt a desire to oblige; and, accordingly, it will be seen that all the persons named were connected with the relations or friends of members of the respective Governments.

No effects were transported in the Ontario. Money was transported; \$41,000 from Lima to New York, and \$160,000 from Lima to Rio Janeiro. That this was wholly private property I do not entertain the slightest doubt, not only from my knowledge of the persons who shipped it at Lima, and those who received it at Rio Janeiro, but from the fact that the Government of Lima had no money to ship. That Government has not remitted money from the country for several years; the increased expenses of war having absorbed all its means, and left it embarrassed for funds. For the transportation of this money, a freight of two and a half per cent. was received. The receipt of freight is a necessary incident to the transportation. No person would commit money to a stranger without the security of a bill of lading; nor would any officer become responsible for the safe delivery of money belonging to strangers, without some indemnity. This transportation of private property, and the receipt of freight for it, is a thing so common in our own as well as every other public service, that I did not hesitate about receiving this money on board. The laws of the United States expressly authorize it. The twenty-third article of the first section of the act of Congress, (April, 1800,) declares that “if any commander or other officer shall receive, or permit to be received, on board his vessel, any goods or merchandise, other than for the sole use of his vessel, *except gold, silver, or jewels*, and except the goods or merchandise of vessels which may be in distress, or shipwrecked, or in imminent danger of being shipwrecked, in order to preserve them for their owner, without orders from the President of the United States or the Navy Department, he shall, on conviction,” &c. This regulation is borrowed from the British,

with whom the law and the usage is the same as with us. The British regulation even allows freight to the commanders of British national vessels, on the transportation of money belonging to the Government itself. It is authorized, too, by invariable practice; since the establishment of the navy, money and freight have been so received on board, received without hesitation, never refused, distinctly recognised and sanctioned by the Navy Department. I could readily particularize the instances, but I presume it is superfluous to prove a usage of such notoriety. At my first arrival at Valparaiso, in January, 1818, there was a British frigate in that port, with money on board, shipped at Lima, and which she was carrying to Rio Janeiro. This was known at Valparaiso, and never complained of. Another British frigate arrived at Valparaiso with money shipped at Lima, and while at Valparaiso she transferred the money to a British sloop of war, in which it was conveyed to Lima. This, also, was before I had received any money on board."

SIR:

NAVY DEPARTMENT, April 8, 1820.

I have the honor to transmit to you, herewith, three papers marked A, numbered 9, 10, 11, in addition to those accompanying my report of the 7th, in the case of Captain James Biddle, which I request may be annexed to the file marked A, numbered 1 to 8, as showing more distinctly the benefit which has resulted to our trade, and the protection afforded by our public ships in the Pacific ocean, and, also, the estimation in which Captain Biddle was held for the services rendered.

I have the honor to be, respectfully, sir, your obedient servant,

SMITH THOMPSON.

The Honorable the SPEAKER of the House of Representatives.

A. No. 9.

Extracts from the Journal of Captain James Biddle, kept on board the United States' ship Ontario.

"At Lima was the master of the ship Beaver, and the supercargo of the brig Canton, two American vessels which had been seized and condemned in the port of Talcahuana, and whose cases, by appeal, were still pending here. From each of these gentlemen I received a letter, requesting me to stop at Lima on my return from the Northwest Coast, and expressing the opinion that my doing so, and making known my intention of doing so previous to sailing, would have great influence in producing a decision favorable to their claims. This opinion accorded with my own, and, therefore, in a letter which I had occasion to write to the Vice-King, respecting the Beaver, I mentioned that, as it was important to the Government of the United States to be informed as early as possible of the decision respecting the Beaver and Canton, I should touch at Lima on my way from the Northwest Coast, for the purpose of obtaining the information and conveying it home with me."

"I sailed from Monteny on the 30th of August, and arrived on the 22d of October at Lima. Here I found the cases of the Beaver and Canton still undecided, nor had any progress been made towards a decision. I had several conversations with the Vice-King respecting these vessels. I perceive, I said to him, by the late newspapers, that the seizure of the Beaver and Canton, with the circumstances which accompanied it, has produced great sensation in the United States; that I was certain the owners of these vessels had been urgent with the Government of the United States to take decisive measures respecting them; and that I was equally certain the Government would defer taking any measures until my return; that the owners of these vessels, as American citizens, had a right to a prompt decision upon their claims; that the great delay which had already occurred did not comport with the respect which was due from the Government of Spain to the Government of the United States; that the result of these cases would materially affect the relations of the United States with Spain; that it was from my impression of the importance of these cases, and knowing the Government would expect a final decision by the return of this ship, which had induced me to touch at Lima; that the presence of a public vessel of the United States ought to hasten a decision; that a further delay would be equivalent to the worst that might happen; and that if I sailed from Lima, and carried home information that these cases were still undetermined, the most unpleasant consequences might be apprehended."

"At length the cases of the Beaver and Canton were taken up for trial, and it resulted in the acquittal of both vessels. From my own opportunities of observing, as also from what I could learn from others, I am of opinion that the acquittal of these vessels is to be attributed to the presence of a public vessel of the United States."

A. No. 10.

We, the undersigned, captains, supercargoes, and agents, of American ships now in the port of Valparaiso, think it incumbent on us to express to you in this manner our warm acknowledgments of the very important services which you have rendered us, in the protection of our persons, and of the property of our constituents, at a moment of uncommon danger.

There can be no doubt that the presence of your ship was the only safeguard we possessed against the attempts of the blockading squadron to take our ships out of the port, while they were under embargo; the consequence of which would have been the total loss of the property under our charge, and the subjection of our persons to imprisonment and every species of outrage.

Nor is this the only advantage which we have derived from your consent to remain here a longer time than you had, perhaps, originally contemplated; for it is notorious, that nothing but the representations of a dignified officer in the service of the United States to the Government of this place, could have prevented the seduction of the seamen from our several ships, which, before your arrival, took place to an extent which left several ships absolutely in a state of distress.

The aid, also, which has always been promptly furnished by you, when required, and which was necessary to the safety of our ships, is a circumstance not to be forgotten; and, although we still hope the same attention to our interest, we feel it incumbent upon us to express our sense of the obligations which the vigilance, activity, and zeal, which has been manifested by yourself, your officers, and ship's company, in affording us protection and assistance, have laid on us.

We flatter ourselves, that when it shall be known in the United States that nearly a million of American property has been saved from certain condemnation, and many American citizens from oppressive imprisonment, by your exertions, both our country and Government will duly appreciate and reward your meritorious services.

With every wish, sir, for your prosperity and happiness, and every sentiment of respect and esteem, we remain, &c. &c.

SOLOMON TOWNSEND,

Master and Supercargo of ship Lion, of Providence.

CHARLES S. CARY, *Master of ship Levant, of Boston.*

J. HIGGINSON, *Supercargo of ditto.*

CHARLES L. HYATT,

Master and joint Supercargo of ship Two Catharines, of Providence.

HORATIO JERAULD, *Joint Supercargo of ditto.*

BENJAMIN VANDERFORD, *Master of ship Indus, of Salem.*

R. PULLEN, *Master of brig Ariel, of Baltimore.*

DANIEL REA, *Master of brig American, of Philadelphia.*

JOHN MILLNOR, *Supercargo of ditto.*

THOMAS ROBINSON, *of the ship Packet.*

HENRY HILL.

JAMES BIDDLE, Esq. *commanding U. S. ship Ontario, Valparaiso.*

A. No. 11.

WASHINGTON, February 26.

Captain Biddle has the honor to submit to the President the enclosed letter, written to-day, by Mr. Worthington; the object is to show, that, on the 6th or 7th of January, (seven or eight days after my departure from Chili,) the Director expressed sentiments of regard and respect towards me, and that, consequently, the complaints of Chili against me, written four and a half months after my departure from Valparaiso, originated in machinations.

SIR:

In some of the last conversations which I had with General O'Higgins, the Supreme Director of the State of Chili, he reported your not having come up to Santiago, on your last visit to Valparaiso. He said you well knew that he had shown you all attentions when you came up before, and that he should still have continued to do so had you have come up. He said that he knew that you were as good a republican as any one, and as for disputing about salutes, or search, his Government was too young to be so captious, and indeed treated it lightly. I must confess I did not believe much in the sincerity of all this; still I have no doubt the Government would have treated you in the manner he says, had you have come up to Santiago. These conversations took place on the sixth or seventh of January last, and a good deal more of this sort, which I do not recollect.

Yours, very respectfully, &c.

W. G. D. WORTHINGTON.

Captain JAMES BIDDLE.

P. S. On parting with the Supreme Director O'Higgins, amongst other things, he requested me particularly to give many expressions of friendship, &c. to you and Judge Bland, as I delivered to you on my first meeting you, after my return to the United States.

Yours, very respectfully, &c.

W. G. D. WORTHINGTON.

B. No. 1.

NEW ORLEANS, November 22, 1815.

SIR:

I do myself the honor to communicate to you a subject which has for some time past attracted and occupied my attention, and which, if practicable to effect under the sanction of the Government, would, I think, tend greatly to the advantage of our country, in a pecuniary point of view, by introducing specie and bullion into it, and thereby lessening the great demand for, and, consequently, high price of it.

It is by affording convoy to specie from the different ports of South America, lying in the Gulf of Mexico, as well those of the independent provinces as of the Spanish Government. Many applications have been made to me for convoy, or what was deemed infinitely preferable, to permit the vessels under my command to touch occasionally at those ports and receive specie, &c. on board, and transport it to this place, but which I have, of course, invariably rejected, not feeling authorized to comply; although some of the applicants are Americans, who, like all others who have property in that distracted country, are anxious to remove it from thence to a place of safety; the royalists apprehend capture from the cruisers of the independent provinces, who, in their turn, fear those of Spain, and both dread the Baratavia association, which they deem much more formidable than it really is, and thus both parties are deterred from attempting to ship specie to this country, which they would do, if to be done with safety. The vessels of this station could very readily, and without leaving our coast or commerce of this port at all exposed, occasionally run down and touch at some of the ports for this purpose; their appearance in that part of the gulf would also have another very good effect, inasmuch as most of the piratical cruisers connected with those of Baratavia, who commit depredations on commerce, and violate our laws, frequent the small ports of the Mexican coast; the appearance, therefore, of our vessels in the neighborhood of their haunts, would alarm them and deter them from coming out, when, if they did, and came on this coast, they would soon find themselves between the force on the coast, and that which they had escaped from, and thus fall into our hands.

I am well assured that a large amount in specie and bullion might by this means be introduced into the United States, which would relieve the public in some measure from the present pressure for want of it.

I had contemplated addressing you on this head for some time past, but the pirates and smugglers were not before sufficiently suppressed to admit of any of my force leaving the coast; the addition about to be made thereto, would enable me to carry this thing into effect, provided it meets the sanction of the Government, and effectually suppress piracies and smuggling within the limits of my command.

I have the honor to be, with great respect, your obedient servant,

DANIEL T. PATTERSON.

HON. BENJAMIN W. CROWNSHIELD, *Secretary of the Navy, Washington.*

B. No. 2.

NAVY DEPARTMENT, January 22, 1816.

SIR:

Your letter of November 22d. has been received, and the subject submitted to the consideration of the President. The plan you propose is objectionable, so far as it might produce a collision with some of the Powers, in the present state of the Spanish colonies; it is therefore desirable to preserve, as far as possible, the most amicable relations with them all, and to be cautious of giving cause of complaint by any interference in their commercial or political affairs. Such arrangements as your prudence may dictate in promoting a friendly intercourse, will be approved by this Department, as well as every precaution for the security of our revenue, and protection from the piratical depredations heretofore practised within the limits of your command.

I am, respectfully, &c.

B. W. CROWNSHIELD.

Commodore D. T. PATTERSON, *Commanding Naval Officer, New Orleans.*

B. No. 3.

Extract from the orders to Captain Charles Morris, commanding the United States' Frigate Congress, dated

NAVY DEPARTMENT, October 19, 1816.

You are not to allow any public vessel of the United States to transport, or receive on board, any private mercantile property, of which description specie and bullion are considered; nor passengers of any kind, without a sanction having been first properly obtained. You will not convoy, or protect against a rightful seizure by belligerent vessels under whatever flag, American or other, bound with contraband of war.

B. No. 4.

Extract of a letter from Captain Charles Morris to the Secretary of the Navy, dated

UNITED STATES' FRIGATE CONGRESS, OFF THE BALIZE, *January 23, 1817.*

Should circumstances authorize the Department to modify my instructions, so as to permit the vessels of this squadron, occasionally, to visit some of the Spanish ports on the main, when it would not interfere with their other duties; and to transport, from thence, to ports of the United States, specie and bullion, agreeably to the provisions of the law for the government of the navy, it might be of considerable pecuniary advantage to the officers, and give them local information, which may hereafter be serviceable.

The British cruisers at present are deriving all the advantages of a similar arrangement, and they are, by no means, inconsiderable. It is openly and publicly done by them, and not considered as impairing, in any degree, their neutral or their national character.

B. No. 5.

NAVY DEPARTMENT, *February 27, 1817.*

SIR:

In reply to your communication, under date of the twenty-third of January last, respecting the transportation of bullion and specie, I have to observe that the situation of affairs between this Government and Spain renders it desirable to obviate all probable causes of complaint. It is therefore deemed inexpedient to vary the former instructions upon that subject, and preferable to forego the benefits which might result to the country, or to individuals, from such employment of our national ships, or other measures tending to produce a collision of interests.

The course pursued by the British cannot be considered a precedent for the United States.

I am, respectfully, &c.

B. W. CROWNINSHIELD.

Captain CHARLES MORRIS, *United States' frigate Congress, Bay of Mexico.*

B. No. 6.

NAVY DEPARTMENT, *October 17, 1818.*

SIR:

The United States' vessels of war will be permitted to touch occasionally at the ports of Kingston and Port Royal, in Jamaica, and at Nassau, in New Providence; and, if permitted by the Government, at those places may receive on board such sums in specie, as shall properly belong to the merchants of the United States, and be due to them in the course of commercial transactions heretofore existing; this permission is, however, positively limited to this specific object. No article of merchandise, of any description, must be put on board any public vessel of the United States; and any officer offending in this instance, in contravention of the laws and regulations for the government of the navy, will incur the severest penalty for such offence, of which you will give due notice, in such orders as you may issue with the permission aforesaid.

I am, very respectfully, your obedient servant,

J. C. CALHOUN, *Acting Secretary of the Navy.*

Commodore D. T. PATTERSON, *Commanding Naval Officer, New Orleans.*

B. No. 7.

Extract of a letter to Captain John Downes, commanding United States' frigate Macedonian, Pacific Ocean, dated

NAVY DEPARTMENT, *August 27, 1819.*

The war continuing between Spain and the Spanish provinces, and the parties, respectively, being entitled to equal rights, as belligerents, the utmost caution should be observed to abstain from any acts that may have a tendency to compromise our neutral character. Acts of kindness to either, although equally extended to the other, may be misconceived or misrepresented, to the prejudice of the United States. You will, therefore, decline taking on board for either party, either men, money, provisions, or supplies, to be carried from such party to any other port or country whatsoever, except specie, which you have permission to bring to the United States.

6th CONGRESS.]

No. 187.

[1st Session.]

APPLICATION FOR INDEMNITY TO A PURSER FOR LOSSES PRODUCED BY DESERTION,
STORES THROWN OVERBOARD BY ORDER OF THE COMMANDING OFFICER, AND THE
DETENTION OF HIS BOOKS BY THE ENEMY AFTER CAPTURE.

COMMUNICATED TO THE SENATE, APRIL 11, 1820.

Mr. PLEASANTS made the following report:

The Committee on Naval Affairs, to whom was referred the petition of John B. Timberlake, have had the same under consideration, and thereupon submit the following report:

The petitioner states that he was appointed a purser in the navy in the year 1809; that, during the late war with Great Britain, he acted in that capacity, first on board the frigate United States, and afterwards on board the frigate President, both under the command of Commodore Decatur; that, after the capture of the Macedonian by the United States, the latter, with her prize, returned into the port of New York, where a dinner was given by the citizens of that place to the officers and crew of the United States, at which nearly the whole of her crew were permitted to attend; that a number of them, taking advantage of the situation, deserted, and did not return to their duty, being considerably indebted to the petitioner at the time for articles furnished them whilst on board, advances made, &c.; that, on settling his accounts at the Department, he has only been allowed the amount due to those who deserted up to the time of such desertion, though the balance due him in many instances was considerably more than the pay due them. The petitioner further states, that, near the end of the war, the President frigate sailed on a cruise, and, soon after leaving port, fell in with a British squadron, by which she was ultimately captured; that, during the chase, a quantity of articles were thrown overboard by order of the commander, to lighten the ship, among which was a quantity of stores, the private property of the petitioner, put on board for the use of the crew, in conformity with

the usage of the naval service; the said property consisting of groceries and other articles. The petitioner further states, that when the President was taken possession of by the enemy, he lost, among a variety of other articles, his books, on which all the entries of articles, &c. furnished to the men were made; that the said books would not be given up by the enemy, and all he could get was a certificate from the purser of the British ship that they were detained by authority; that, on their return to this country, he was ordered by Commodore Decatur to pay off the men as well as he could; but they, knowing he had lost his books, would admit that they had received very few articles; in consequence of which, he has been subjected to considerable loss in settling his accounts at the Department, where no allowance is made on account of such articles furnished the men, though the petitioner has offered to supply the absence of the book by collateral proof of the most respectable character. He concludes by praying the passage of a law authorizing the settlement of his accounts by the proper Department, on principles of liberality and equity, &c. &c.

The committee, having attentively examined this case, observe, that the petition presents three grounds for relief: the first produced by the desertion of the men at New York; the second, by the loss of the private stores thrown overboard during the chase of the President; and the third, by the loss of books on the capture of that ship.

The committee think it reasonable that an allowance, such as is prayed for, should be made, on account of the desertion of the men at New York. It is customary for the pursers of the navy to sell certain articles, at a certain profit, to the seamen; this is allowed by the regulations of the service. The articles which may be thus sold are enumerated, and the profit also stated which the purser is allowed to make. When the purser comes to pay off the men, he retains the amount of account against them out of the pay due them. Permitting the whole of the crew to go on shore was a departure from the usual custom, and could only be justified by the peculiar circumstances of the case, the state of public feeling, &c., which induced the officers to assent to the seamen all going on shore agreeably to invitation. The large desertion is undoubtedly to be ascribed to this cause, and the committee think an allowance ought to be made to the purser for advances made to such men, though he has only been allowed to retain the amount of pay due them up to the time of their desertion. The committee herewith report a bill to afford the relief sought in this part of the petition. As to the private stores lost, and the loss sustained by the retaining the books of the petitioner, the committee are of opinion that no relief can be granted. The private stores of the purser are his own private adventure; he puts them on board for the purpose of selling to the crew, which he does at a limited but liberal profit. This, no doubt, is a considerable object in seeking after the appointment of a purser in the navy with as much eagerness as we know these places are sought. The Government certainly never meant to become insurers in these cases; had this been the case, the records of the Department or the acts of Congress would afford at least one precedent to justify the present application; but the committee believe that there is no case to be found in which indemnity has been made to the purser by the Government for such loss, nor do they think it just that the Government should make good such losses. The pursers might in all instances ensure their property, and would, no doubt, be justified in charging the insurance on the articles retailed, as in all other cases. The petitioner states that insurance was so high, that it would have absorbed all the profits in this particular case. The committee do not think the high rate of insurance changes the principle which ought to govern these cases. The committee are unable to see the justice of the application for relief under the third head, viz. the loss of his books on the capture of the ship. The articles charged to the men were merely private property, the public not being interested in the same; besides, there can hardly be a doubt but copies of these books might have been obtained. It is understood to be the practice to deposit all books and papers which may be conducive to the condemnation of the ship, ascertaining the number of men on board, &c. in the court of admiralty, there to be kept. It is presumable that a copy of this book might have been obtained by the petitioner. Upon the whole, the committee think the petitioner has no claim on the Government for the private stores lost, nor for any loss he may have sustained on account of the books taken from the ship by the enemy in the settlement of his accounts with the men. They recommend to the House the following resolution:

Resolved, That the prayer of the petition, so far as relates to the two last named grounds of relief, ought not to be granted.

16th CONGRESS.]

No. 188.

[1st Session.]

MODIFICATION OF THE ACT CREATING THE BOARD OF COMMISSIONERS OF THE NAVY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MAY 1, 1820.

Mr. SILSBEE made the following report:

The Committee on Naval Affairs have, according to order, had under consideration a resolution directing an inquiry "into the expediency of so modifying the act establishing a Board of Commissioners of the Navy, as to make the Secretary of the Navy, for the time being, the presiding officer of that Board; and, also, of so limiting the tenor of the commissions of the members thereof, as to secure the accumulating experience and talents of our naval commanders in that department, by a periodical rotation in office;" and submit the following report:

The act, entitled "An act to alter and amend the several acts for establishing a Navy Department, by adding thereto a Board of Commissioners," provides that the Board so constituted shall be attached to the office of the Secretary of the Navy, and, under his superintendence, shall discharge all the duties therein specified; and that the record of their proceedings shall, at all times, be subject to his inspection.

As it would be often inconvenient, and sometimes impracticable, for the Secretary of the Navy to meet the Board of Commissioners, as their presiding officer, without neglecting other and more important duties; and, as the Secretary is, by the aforesaid act, already vested with a supervising and controlling power of the acts and proceedings of the Board of Commissioners, the committee do not perceive the necessity of such a modification of the said act as is contemplated by the first inquiry directed by the resolution, or that the public service would be benefited thereby.

The committee are the more disposed to this opinion, from the consideration that the limits of jurisdiction between the Secretary and the Board seem to be perfectly understood by each, and that no conflicting claims exist between them on this subject.

The committee are not advised whether the resolution contemplates the Secretary to be a constituent part of the Board, and at the same time possessed of the control and superintendence of its proceedings, or merely the presiding officer, with a casting vote. In the latter case, the benefit to be derived from the superintendence of one officer over others, under distinct responsibilities, as well as the circumspection naturally resulting from such responsibility, would be entirely lost. In the former case, the Commissioners would be little more than advisory, and, in that proportion, bereft of responsibility.

In relation to the second inquiry directed by the resolution, viz: "of so limiting the tenor of the commissions of the members" of the Board of Commissioners, "as to secure the accumulating experience and talents of our naval commanders in that department, by a periodical rotation in office," the committee beg leave to remark, that the duties of the Commissioners of the Navy Board are not merely such as appertain to a mere naval officer, but

extend to other and important subjects, with which such officers cannot be supposed to be familiarly acquainted; they relate not only to the contracting for, and procurement of, all articles necessary for the armament, equipment, and provisioning of the public ships, but also to the constructing and repairing of those ships; to effectuate which objects, in the cheapest and best manner, requires a full knowledge, not only of the places at which materials and every thing needful for these purposes can most advantageously be procured, but also with persons in different sections of the country, with whom they can, with the greatest reliance, make their contracts. The investigation of the committee has led them to the conclusion, that too much time has not yet been allowed the present Commissioners to obtain that intelligence and experience which is desirable to the most advantageous discharge of these duties, and to perfect such a system in their department as will unfold to their successors all the advantages of their labors, which, in the estimation of the committee, have been such as are honorable to themselves and highly beneficial to the public interest.

The committee would only add, that a periodical *rotation* in office, from a given number, would preclude choice; such a rotation, instead of "securing the accumulating experience and talents of our naval commanders," might possibly endanger the Board with qualifications opposite from those intended.

Under these impressions, the committee are of the opinion, that, although occasional changes in the Board of Commissioners may, and probably would, be productive of public benefit, yet that these changes may with safety be left to the discretion of the Executive; and, therefore, that it is inexpedient at this time to make any modification of the act under which the said Board of Commissioners is established.

16th CONGRESS.]

No. 189.

[2d SESSION.]

INCREASE OF THE NAVY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 5, 1821.

NAVY DEPARTMENT, *December 11, 1820.*

SIR:

I have the honor to acknowledge the receipt of your letter of the 8th instant, on behalf of the Committee on Naval Affairs, and to furnish, in compliance with your request, the following statement, which contains the information required:

Columbus, of 74 guns;

Peacock, sloop of war, 18 guns;

Spark, brig, 14 guns; these vessels are employed for the protection of our commerce in the Mediterranean, to prevent the Barbary States from committing depredations on the persons or property of citizens of the United States. The *Spark* is principally employed as a despatch vessel to and from the ports of Barbary.

Ontario, sloop of war, 18 guns, in readiness to proceed to the Mediterranean to relieve the sloop of war *Peacock*, ordered to the United States.

Constellation, frigate, 36 guns, cruising in the Pacific Ocean for the protection of our trade and whale fisheries.

Macedonian, frigate, 36 guns, returning to the United States from the Pacific, after being relieved by the *Constellation*.

Congress, frigate, 36 guns, cruising in the India seas, and the several straits, to afford convoy and protection to our trade to and from China, and to give security against the native pirates.

Corvette *John Adams*, 24 guns;

Corvette *Cyane*, 24 guns;

Hornet, sloop of war, 18 guns; cruising on the coast of Africa for the suppression of the slave trade and capture of piratical vessels, with instructions to cruise, for the same purpose, on their return to the United States, off the coast of Guiana and among the West India islands.

Enterprise, brig, 14 guns, cruising in the West Indies, Gulf of Mexico, and occasionally round the Bahamas, and along the southern coast of the United States.

Lynx, schooner, 6 guns;

Nonesuch, schooner, 8 guns; cruising as the brig *Enterprise*: all these vessels being employed to carry into effect the several acts of Congress for the suppression of the slave trade and punishment of the crime of piracy.

Gunboats Nos. 158 and 168, cruising for the same objects along the coasts of Georgia, Florida, &c.

Three small vessels, mounting one gun each, are employed off the Mississippi in the protection of the trade and revenue of the United States.

The objects contemplated in the orders to the several ships and vessels of the navy are briefly explained against their names and stations.

As respects the force now employed in the Mediterranean, it is presumed to be not greater than the service and interests of the United States require for the purposes of protection; the other ships and vessels are cruising separately, and are considered necessary for the service to which they have been assigned.

I have the honor to be, with very great respect, sir, your most obedient servant,

SMITH THOMPSON.

HON. PHILIP P. BARBOUR, *Chairman Naval Committee, House of Representatives.*

NAVY DEPARTMENT, *December 18, 1820.*

SIR:

Your letter of the 15th instant has been received, and, as most of the information required was to be furnished by the Navy Commissioners, it was referred to them. A full answer to your inquiries would, however, require much time to make the necessary calculations, and, as I understood from you, in conversation on Saturday evening, that your object was to ascertain whether the time for building the vessels authorized by the act of April 29, 1816, for the gradual increase of the navy, might not be extended, without any material injury to the timber and materials on hand, and contracted for under the act, I have had a conversation with the Commissioners on that subject, and their opinion is, that the time for building might be extended for three years, and only half a million, instead of a million, of dollars expended annually.

I take this opportunity to repeat what I mentioned to you in conversation, that the actual balance on hand of the appropriation for the gradual increase of the navy is a little short of a million of dollars: the reason why a much larger balance appears by the report of the Secretary of the Treasury, is, that requisitions to the amount of the ex-

penditures had not been made on the Secretary, and the treasurer, as agent for the Department, had paid, out of moneys in his hands, for other purposes, expenses for the gradual increase of the navy, and for which that fund was indebted to other appropriations; this has now been rectified by a requisition, and the true balance appears by the books of the treasury.

I have the honor to be, very respectfully, your obedient servant,

SMITH THOMPSON.

Hon. P. P. BARBOUR, *Chairman of the Naval Committee, House of Representatives.*

NAVY COMMISSIONERS' OFFICE, *December 9, 1820.*

SIR:

In reply to the queries propounded by the honorable Mr. Barbour, in his letter to you of the 24th ultimo, which you were pleased to refer to this Board, the Commissioners of the Navy respectfully report:

That the "whole of the materials necessary for the construction and equipment of the vessels authorized by the act of 1816" have not been procured.

That, of the nine ships of the line, and ten frigates, authorized by the act referred to,

One ship of the line has been built, equipped, and sent to sea.

Three other ships of the line have been built and launched.

Two other ships of the line are now on the stocks, and nearly all the materials necessary for their construction have been procured.

Three frigates are now on the stocks, and the materials necessary for their construction are all procured.

That all the materials of wood, iron, copper, lead, &c., required for the other three ships of the line, and seven frigates, with the exception of the following estimated deficiency, have been procured, and are now deposited at the several building yards, viz:

The estimated deficiency is,

30,000 cubic feet of live oak,

140,250 cubic feet of white oak,

2,032 knees,

153,945 cubic feet of yellow pine,

15,000 cubic feet of white pine,

45,000 locust treenails,

136,761 pounds of copper,

56,738 pounds of composition,

89,640 pounds of lead,

655,735 pounds of iron and other articles, the whole cost of which will probably not exceed \$350,000; which sum may be estimated as the probable cost of the materials yet to be procured for the construction of the ships.

The materials for equipment, yet to be procured, will cost not less than \$1,650,000. These materials essentially consist of cannon, carronades, shot, blocks, gun carriages, canvass, cordage, paints, leather, water casks, boats, anchors, kentledge, cabooses, &c.

With respect to preserving "the materials of wood by covering, or by immersion," it is believed that, by immersion, all the materials of wood, used in the construction of ships of war, might be preserved for a great length of time, while in a state of immersion; but, whether immersion does not essentially injure the durability of timber, after it is taken out of the water, is a question upon which the most experienced professional men differ in opinion.

On the one side it is urged that the sap juices of timber possesses certain acescent fermentative qualities, destructive in their nature and tendency; that their removal is indispensable to the preservation of the timber; that water, being more fluid, in its natural state, than air, and most penetrative of all bodies, excepting fire, finds its way through smaller pores, enters the timber, and neutralizes, dissolves, or displaces these sap juices more speedily and effectually than can be done by any other advisable process.

While this hypothesis is, to a certain extent, admitted, that is, so far as to its being necessary that these sap juices should be displaced, it is contended, on the other hand, that their expulsion may be produced by other and more advisable means; less sudden, but more salutary in their operation, and unattended with any of the ills arising from immersion; that a succession of wet and dry divests the fibres of the wood of their natural tenacity, adhesiveness and organization, when exposed in the open air—the wet swelling, and the dry separating, the soft fibres; that one of the tendencies of immersion is, to render the wood porous, and subject it peculiarly to the action of the atmosphere; that, in this porous state, timber, confined, as it must be when brought into use, where there cannot be a free circulation of air, and where a greater or less degree of humidity must prevail, the interstices become filled with putrid, corroding matter, and decay ensues; that timber exposed to intense frosts, after immersion, by which it becomes water soaked, or saturated with water, the pores of the wood become over-distended, and in that state remaining fixed, the elastic adhesiveness of its fibres, and their power of contraction, are destroyed; that a firm, adhesive, consolidated state of fibre is essential to great durability; that this state never can be produced after the timber shall have been saturated with water, and its pores once distended; that, if the timber be not cut while in a vegetating state, and be kept under shelter, exposed neither to rain, to the heat of the sun, nor to the piercing winds, yet having a free circulation of dry air, nature will expel the sap juices, without the aid of any artificial means.

It is further contended that timber of close texture, such as live oak, or the best white oak, when once saturated with water, cannot, by any known process, be dispossessed of its moisture, in any reasonable time; that, when put into a ship, it imparts to the surrounding atmosphere a degree of humidity which damages the provisions and stores, and generates diseases among the crew; that timber, in a dry state, is not subject to the destructive effects of frost, one of the most insinuating and irresistible of all, operating on the texture of bodies.

Water swells and expands the pores of wood; and the fibres, thus expanded, become, when exposed to frost, still more distended. The texture of the wood, by frequent exposure to wet and frosts, loses its natural adhesiveness, and, by remaining saturated, and in a frozen state, the pores become so fixed in an unnatural state of expansion as to lose all power of contraction. This, it is observed, is the condition of the oak and pine imported into England from Canada; and to these causes the best writers attribute the "dry rot," so destructive to British vessels. The Canada timber is brought down the St. Lawrence in large rafts, continues months in water, and in that saturated state is landed and exposed to frost; every attempt to season it, under cover, is unavailing; its pores never close again, and, when used as ship timber, dry rot ensues, which, when once commenced, can never be arrested but by taking out all the pieces in any degree affected.

Experiments have been made to arrest the dry rot in ships, by sinking them for months in salt water, but without success. The texture of the wood was found to be essentially injured by being thus water soaked, and it became more subject to this disease than before it was sunk. The ships were also injured in their fastenings, and the atmosphere within them was kept in a constant state of humidity, whence, among other ill effects, proceeded injury to provisions and stores, and sickness to the crews.

When timber begins to decay it communicates and operates by infection on adjacent pieces, and there are no means of arresting a general decay but by removing every piece affected. Hence, the importance of using none but timber sound, imporous, and well seasoned, in the construction of ships.

Among other considerations the following facts are adduced, as sustaining the objections to immersion:

In the early periods of the British marine, the custom, originating from necessity, was to transport all the navy timber to the dock-yards in vessels; it was taken immediately to the yards and there landed in a dry-state without having been subject to immersion; and no other timber than that grown in Great Britain was used.

In the year 1515 the Great Henry was launched, and, without having sustained any essential repairs, she was fit for service in 1553, thirty-eight years after she was launched, when she was accidentally burnt; after about five years' service she was placed in a "pond" with a covering over her.

In the year 1636 the Sovereign of the Seas, "the first great ship ever built in Great Britain," after having been on the stocks two years, was launched; in the year 1696, it was determined to repair her; the frame was found perfectly sound, and, according to Blackburn, "the timber was so firm and hard as almost to resist the edge of tools." By accident she was burnt in the year 1696, after having been a number of years in service; she also was placed in a pond with a covering over her.

The timber with which these vessels were built having been conveyed to the building yards in vessels, and not in rafts, and having consequently been delivered into the yards in a dry state, has been considered one of the essential causes of their great durability.

Between the years 1636 and 1696, British timber became scarce, and foreign timber was, of necessity, resorted to. This foreign timber was, at that period, it is understood, almost universally rafted down the waters near which it grew, and to its having been thus rafted and exposed to wet, was attributed the very rapid decay of the thirty ships authorized to be built in the year 1677. Charnock observes: "the scarcity of British timber, which was complained of in the loudest terms so early as the reign of Charles I, began to be felt very considerably after the conclusion of the last Dutch war; at the time the vote for building thirty new ships had passed through the Parliament, in 1677, much labor and exertion became necessary to collect as much as proved sufficient for the purpose. The Navy Board, with every effort it could make, was unequal to the task; and, the deficiency being through necessity supplied by foreign plank, in all probability caused the early decay of the vessels in question."

It is a remarkable fact that there are, at this time, but two vessels in the British navy as old as the Sovereign of the Seas was at the time she was burnt, viz: the *Sussex* a ninety and the *Prospero* an eighteen gun vessel.

Blackburn remarks "the Rhine oak brought down that river from the forests in large rafts, remaining for months soaked in water, and afterwards landed and exposed to intense frost, sustains very material injury, the fibres of the wood being expanded in so powerful a degree, lose their natural texture and remain porous; and the water it imbibes, changing its state and becoming corrosive, dry rot ensues." The French ships built at Antwerp, a few years since, with the Rhine oak, were found in a state of decay from the dry rot, some of them even while building.

The oaks of north Europe, naturally porous, absorb much water, and from similar causes incur similar consequences. Hence, neither the Dutch nor the Danish ships are durable.

The oaks of the United States, excepting probably the live oak, are sufficiently porous to become saturated in a short time; and, if exposed in this state to the action of frost or of extreme heat, similar effects would inevitably result. The effect of heat and cold is known to be similar in many respects; they both penetrate into substances in the same manner. A cannon, for instance, filled with water securely confined in it, will burst upon being exposed either to extreme heat or intense frost; and it will be remembered that wood is far less tenacious than iron, and far more liable to the action of heat and cold.

The oaks with which the ships are built at St. Petersburg are brought down the rivers in crafts, from a very long distance in the interior, being sometimes two years on their passage. This method of bringing their ship timber to the building yards is resorted to, it is understood, from the apprehension that rafting it would affect the durability of their ships. The Russians, for greater preservation, char the ends of the beams, and such other timber as is practicable, and cover their ships with painted canvass, to preserve them from the snow and rain, and render them more durable.

Lescallier, a distinguished French writer, on the subject of timber, observes:

"Timber cut in good or bad season preserves a greater or less degree of moisture. Some of it remains, especially in the interior of the logs, although the outside of them appear always dry after they have been kept for some time. This moisture, which derives its origin mostly from the sap, contains a great deal of acid congenial to fermentation, and consequently favorable to produce the rot. It is this moisture which must be attacked and driven from the heart of the timber—dryness alone will make it solid and durable. We think it by no means advantageous to lay it in the water for the purpose of preserving it; water is a dissolvent which in time penetrates, and rots all: sea water possesses this quality in a less degree than fresh water, but it has it in a great measure. The English do not put the timber in the water for the purpose of preserving it. It is the same with several other maritime nations, who use a great quantity of timber, and possess a considerable knowledge respecting it. The best means known to this day, to preserve timber, appears to be that of keeping it in well constructed and airy sheds, in a vertical position, so that the moisture which remains in the interior of the logs, in running along the fibres of the wood, may be enabled to issue from the lower end.

"We perceive that wood used on land for beams in houses, and other purposes, kept dry and under shelter, will preserve itself for ages.

"We see the English construct the frames of their vessels, and leave them to dry for a long time on the stocks, under the shelter of great awnings, before they finish them completely. Moisture destroys the timber, and dryness preserves it. Timber not only rots when it has been exposed to humidity, but it is likewise exposed to injury from the effects of insects which find their way into it.

"Water seems to be favorable for the decomposition of the sap in the timber immersed; but it substitutes in its place another kind of moisture not less destructive, of which the timber, though afterwards exposed to the air, will not easily get clear—it weakens and destroys the grain of the wood."

In reply to that part of the query which calls for information as to the practicability of preserving the materials of wood by immersion, the Commissioners of the Navy beg leave to observe that, although wood, so long as it shall be immersed, may be kept in a sound state for a great length time, yet they are not able to discern any advantage resulting from immersion to wood intended to be used in the open air; that injuries certainly arise from saturating timber, and particularly large pieces intended for use above water; that as regards timber intended for use under water, the bottom of ships for instance, immersion may not be so injurious; but, even in that case, if the timber could be dry seasoned, and rendered hard and imporous, prior to its being used, it would be greatly preferable to immersion. This, however, could not be conveniently practised, particularly with the large massy timber intended for keels and keelson pieces. Immersion, then, may, to a certain extent, be resorted to from necessity, but not from choice in any case.

With respect to preserving materials of wood by covering them the Commissioners would remark, that our live oak is a species of wood particularly subject to rents and warks: that this timber, the strongest, firmest, and most durable of any grown in the United States, is used for the frames of our ships; that, owing to its great weight, (76 pounds the cubic foot,) and the expense of hauling and transporting it to the building yards, it is cut to moulds in the forest; that each piece has its appropriate place in the ship, and will not suit for any other place; that the pieces, if stowed in sheds, will spring out of place, and cannot be again restored to their original mould; that it is of the first importance to preserve the form and shape of each and every piece, which cannot be done, under sheds, where the timber has been cut to mould; that if it were intended to place live oak timber for frames under sheds, it should be got out considerably larger than the moulds, in order to make allowance for its springing, which would involve much additional expense in hauling, transporting, and fashioning, when in a hard dry state, to moulds; that if the principle of immersion be discarded, as it should be to the greatest possible extent, there exists, within the knowledge of the Commissioners, no means by which the form and shape of live oak timber, got to moulds, can be preserved, except by putting the frames together, and bolting, planking, and staying them so effectually, as to prevent the possibility of their springing.

With respect to other materials of wood, the result of the experiments made many years since, would seem to indicate the inefficacy of covering as a means of preservation. The white oak and pine, collected under the act of 1799, and placed under sheds, was, in a few years, found in such a state of decay as to be unfit for use. The Commissioners know but little of the history of the oak and pine collected at that period. Whether the trees had attained their full growth; whether they were not cut in a vegetating state; whether, when stowed, the timber was properly stuck so as to admit a free circulation of air; whether the sheds were of a sufficient width and height to

protect it against the sun, or sufficiently tight to secure it against rains and piercing winds; whether the timber had not been water soaked, prior to its being placed under sheds, are points upon which the Commissioners possess no positive information. Since, however, universal experience affirms the efficacy of this method of preserving ship timber, the commissioners are persuaded that these causes of decay must have existed in a greater or less degree; and, that the result of experiments, so partial and unsatisfactory, should, by no means, deter us from adopting it, as far as circumstances may render it expedient to do so.

White oak and pine, cut in the right season, when in a proper state, and brought to the yards dry and carefully placed under sheds affording protection against the sun, rain, and piercing winds, yet admitting a free circulation of pure dry air, could, if it is confidently believed, be preserved in a perfectly sound state for a great length of time, probably as long as the furniture of a house.

Escalier remarks, "there ought to be built in every yard a sort of great square and flat oven, with several fire places underneath, in order to keep up a sufficient degree of heat, say 45 to 48 degrees, to dry the timber very slow without causing it to crack. This process would expel the air contained in the interior, and extract the acquired moisture, destroy the worms or other insects which might have found their way into the timber, and render it perfectly sound to the very heart. Until it should be thought proper to use it, it should be kept under sheds well aired," &c.

The Commissioners beg leave here to observe, that, if the objections already urged to the practice of immersion, should not be considered as conclusive, still it would be highly improper to resort to it at any of our building yards, where the worm is known to frequent, Norfolk and New York for instance. Again, at some of our building yards, the bottom of the timber docks is so soft that live oak, which is 13½ pounds per cubic foot heavier than water, would sink in the mud in the course of two or three years, if not less time, so far that its recovery would be difficult. We have heard of instances of white oak, which is 20 pounds per cubic foot lighter than live oak, sinking in the mud so far as to be irrecoverably lost.

Those who have heretofore advocated immersion as a means of preserving timber admit that, to be effectual, the timber must be at all times completely covered with water; that to deposit it in water of less depth, at low tide, than its own diameter, would expose it to serious injury from the sun. In constructing a dock, reference must be had to the rise and fall of water; the diameter of navy timber varies from 12 to 28 inches, and the timber must never be placed where there is not, at low water, a depth of water at least equal to these diameters; it should, to cover the timber completely, exceed them two or three inches. Hence, it is obvious, that the expense of constructing suitable docks, even in the most favorable situations, would be no inconsiderable item.

At this time we use docks for timber to a certain extent, but this arises more from necessity than choice; sheds are unquestionably greatly preferable for every species of timber used for navy purposes, excepting, possibly, live oak cut to moulds; but, not having suitable sheds or other means, we are compelled to resort to immersion, as less injurious to the timber than sun, rain, and frost, or an exposure to a succession of wet and dry.

It will, it is presumed, sir, appear obvious that neither immersion nor covering would answer as a system of preservation, applicable to all our building yards; and that both methods combined would not answer at such of our yards as are frequented by the worm. The question then presents itself, What plan would it be most expedient to adopt, in reference to the preservation of the materials of wood, as a system applicable alike to each of our building yards?

This subject has justly commanded every attention which could be bestowed upon it. Considering it as we do, vitally interesting to the present and future prosperity of the navy, of which we have the honor to be members, we have investigated it with an anxiety proportioned to its importance. Every means of information, within our reach, has been resorted to, and, having satisfied our minds upon the subject, we respectfully submit the result with a degree of confidence not usually felt by us on such occasions.

To avoid all the disadvantages of immersion, and secure all the advantages, without any of the ills, of covering timber in pieces, the Commissioners of the Navy are of the opinion that the whole frame should be put together, and planked, bolted, and stayed so firmly that no piece could spring out of its place or shape, and covered so effectually, as to be protected against the sun, moisture, and high piercing winds, yet to admit a free circulation of pure dry air.

In favor of this system innumerable considerations present themselves; among others, the Commissioners beg leave to submit the following:

1st. This is the only method applicable to all our building yards as a system for the preservation of our ship timber.

2d. As to the efficacy of this means of preserving timber, there is, as far as is known to us, but one opinion, and that decidedly in its favor.

3d. The expense of stowing and unstowing under sheds, or of docking and undocking, in either case considerable, would thus be, in a very great measure, avoided.

4th. If put under sheds it is not possible, without incurring great expense, to arrange the pieces of timber in the order in which they would be wanted when required to be put together; they are generally stowed away as they are received from the contractors. Hawse pieces, fashion pieces, knees, floor timbers, counter timbers, &c. &c. are brought together, and necessarily stowed promiscuously; nor could this be otherwise well done, unless we had an extent of shedding far greater than is required by promiscuous stowage. Similar objections, though probably in a less degree, exist to immersion; whereas by framing the pieces together, they are always in place; no expense of removal is incurred; and they are not liable, as they would be, either by shedding or immersion, in a greater or less degree, to be lost or misapplied.

5th. The ships in this state could always, when required, be launched and fitted for service in a short time.

6th. It is the most economical, as well as most effectual mode, for the preservation of ship timber, that can, in our opinion, be devised. The covering, or housing, should be first made, and the ship should be built under this covering. A very great and decided advantage thence results as respects workmanship, as well as materials. The artificers can always make a full day's work at any season, and can perform more work in the same time than they can do when exposed to the weather.

Many instances might be adduced of the great durability of ships thus built and preserved; one, if not more, occurred at Venice. A ship built there remained on the stocks, under cover, for sixty years, when, on being examined, no mark of decay could be discovered in her timbers; they were somewhat shrunk, which was ascribed, no doubt justly, to their having been put in the ship in an unseasoned state. Escalier observes, "we perceive that wood used on land, kept dry and under shelter, will preserve itself for ages." Thus preserved, the wood acquires a close texture, a hard consolidated fibre, which prevents its imbibing moisture, and enables it to resist all the destructive effects thence arising.

As to "the probable difference between the injury to vessels launched, and those which are framed and kept upon the stocks," the Commissioners have to observe:

That, before vessels are launched, they must be caulked and coppered, and, after they are launched, they must be safely moored; the copper and cables would wear, the oakum in a few years would decay, recaulking would become necessary. These are injuries and expenses to which vessels kept on the stocks are not subject.

A vessel afloat, in still water, and well covered, could no doubt be preserved for a great length of time; but if exposed to be agitated by the winds and waves it would be impossible to cover her as effectually as she could be on the stocks, where she would be immovable, and operated upon, as she would be in such a situation, by winds from every point of the compass, her sides, as far as she could be careened by such winds, would be exposed to alternate wet and dry; whence decay would ensue in the parts so exposed, and occasional repairs would become indispensable to the preservation of the ship; repairs which obviously would not be required on vessels kept on the stocks.

"What sum would be sufficient to pay the wages of the workmen at the several navy yards for one year?"

The Commissioners, understanding this question as confined to the wages of the workmen employed on the vessels authorized by the act of 29th April, 1816, have to observe that, at this time, our monthly expenditure, at the several building yards, is—

At Norfolk,	-	-	-	-	-	6,913 39
Washington,	-	-	-	-	-	6,524 18
Philadelphia,	-	-	-	-	-	2,661 22
New York,	-	-	-	-	-	2,779 89
Boston,	-	-	-	-	-	1,712 50
Portsmouth,	-	-	-	-	-	237 44
Making the whole monthly expenditure,	-	-	-	-	-	\$20,828 62
And the annual expenditure,	-	-	-	-	-	\$249,943 44

At some of the building yards, particularly at Portsmouth, the expenditure will shortly be increased, but at others it will be reduced—a reduction of wages being contemplated, and which it is believed can be made without injury to the public service; and our impression is, that the reduction in the one class of cases will be equal to the increase in the other; so that, in the opinion of the Commissioners, the sum of \$250,000, or \$260,000, would be sufficient to pay the wages of the workmen employed on the vessels authorized by the act of 29th April, 1816, at the several navy yards for one year.

“As to the probable cost at which sheds might be erected,” it is thought that, to place all the timber, (other than the live oak,) now deposited at the several building yards, and that yet to be delivered under existing contracts, under sheds calculated to protect it effectually, would probably involve an expense of 75,000 to 80,000 dollars.

“What is the whole amount of existing engagements in relation to the vessels directed to be built by the act of 1816?”

The Commissioners, on the 31st of January last, had the honor of reporting to you, that the engagements, by contracts, for materials for building (exclusively of purchases made by the navy agents, from time to time, at the different building yards) amounted, at that time, to the sum of \$2,771,392 45.

The engagements since that period are estimated at	-	-	-	-	-	\$490,750 34
Viz: For Iron,	-	-	-	-	-	\$51,960 00
Staves,	-	-	-	-	-	18,343 00
Augers,	-	-	-	-	-	1,500 00
Tanks,	-	-	-	-	-	102,850 00
Cannon,	-	-	-	-	-	188,000 00
Timber,	-	-	-	-	-	73,229 00
Kentledge,	-	-	-	-	-	11,750 00
Blocks,	-	-	-	-	-	9,468 34
Cordage,	-	-	-	-	-	18,450 00
Anchors,	-	-	-	-	-	14,000 00
White lead,	-	-	-	-	-	1,200 00
						\$490,750 34

These engagements are generally by contract, and do not include those made for labor, which, as before stated, amount to \$20,828 per month. How far these contracts have been executed, or what amount will hereafter become payable upon them, cannot be stated with precision, in consequence of some of the returns, made by the agents, not being perfect, and others not having yet been made. The Commissioners have invariably kept one great object in view: that is, to confine the expenditures to the amount of the appropriation; and they have, therefore, no hesitancy in observing that the unexpended balance of the appropriation is abundantly sufficient to meet every engagement made by them.

The engagements for steam batteries have not been increased since the 31st January last. At that period, as the Commissioners had then the honor of stating to you, they amounted to \$223,555. Of which sum there has probably been paid to the contractors \$117,476 49, leaving the sum of \$106,078 51 yet to be paid when the contractors shall have executed their respective contracts.

All which is respectfully submitted.

I have the honor to be, with great respect, sir, your most obedient servant,

JOHN RODGERS.

Hon. SMITH THOMPSON, *Secretary of the Navy.*

16th CONGRESS.]

No. 190.

[2d SESSION.]

NAVY PENSION FUND.

COMMUNICATED TO THE SENATE, JANUARY 10, 1821.

NAVY DEPARTMENT, *January 9, 1821.*

SIR:

On behalf of the commissioners of the Navy Pension Fund, and in obedience to the act for the better government of the navy of the United States, I have the honor respectfully to report to Congress the following statements in relation to that fund:

- A. Showing the amount of United States' stock belonging to the Navy Pension Fund.
- B. Showing the bank stock belonging to the Navy Pension Fund.
- C. Abstract of warrants drawn by the Secretary of the Navy upon the treasurer of the Pension Fund, [Amount, \$66,456 70.]
- D. Account of the treasurer, Thomas T. Tucker, with the commissioners of the Navy Pension Fund. [Balance against him, \$17,761 93.]
- E. List of Navy Pensioners, and pensions allowed to each. [Number, including widows and orphans, four hundred and eighty; and amount expended, \$43,863.]

All which is respectfully submitted.

SMITH THOMPSON.

The Hon. the PRESIDENT OF THE SENATE.

A.

Statement of the Stocks on the books of the Treasury to the credit of the Secretary of the Navy, the Secretary of the Treasury, and the Secretary of War, for the time being Commissioners of the Navy Pension Fund, with interest and reimbursement, which accrued in the year 1820.

Stocks.	Nominal amount.	Commencement of interest.	Interest & reimbursement for the year 1820.	Reimbursement of deferred and Louisiana stocks.	Unredeemed amount, January 1, 1821.
Deferred six per cent. stock, - -	56,532 23	Jan. 1, 1820,	4,522 56	\$42,205 83	14,326 40
Three per cent. stock, - - -	30,895 93	" "	926 88	-	30,895 93
Louisiana six per cent. stock, - -	8,740 00	" "	393 30	8,740 00	-

600 do. Union do. - - -	15,000	15,340 50
	<u>\$121,600</u>	<u>\$129,103 10</u>

TREASURY DEPARTMENT, FOURTH AUDITOR'S OFFICE, January 8, 1821,

CONSTANT FREEMAN, Fourth Auditor.

NOTE.—Of the United States' stocks reported by the Register of the Treasury, \$9,433 96, was purchased of the Privateer Pension Fund in the month of June, 1820, at 106.

C. F.

REVISION OF THE NAVAL RULES AND REGULATIONS.

COMMUNICATED TO THE SENATE, JANUARY 12, 1821.

NAVY DEPARTMENT, January 11, 1821.

SIR:

In obedience to the resolution of the honorable the Senate of the United States of the first of May last, I have, with the assistance of the Navy Commissioners, revised the rules and regulations for the naval service, prepared and reported under the authority of an act of Congress of the 7th of February, 1815; and such alterations and additions as have been deemed necessary to be made will appear by the schedule hereunto annexed.

The present regulations have been found at variance with existing laws in two instances only. The first, relating to the guard of marines detached for the protection of the navy yards; and the second, respecting the component parts of the ration. For the grounds on which the regulations, in these particulars, have been supposed repugnant to existing laws, I would beg leave to refer to my report to the honorable the Senate, of the 29th of December, 1819.* It has been thought expedient, however, to recommend an amendment of the laws, so as to conform to the regulations as they now stand. I would further respectfully beg leave to ask the attention of the honorable the Senate to that report, relative to some additional grades in the rank of naval officers. This would seem to be a subject intimately connected with the rules and regulations under consideration, and the importance and necessity of which, to the preservation of due subordination and discipline in the service, are confirmed by daily experience. I forbear calling the attention of the honorable the Senate to some amendment of the laws relative to the surgeons in the navy, doubting whether the subject comes within the scope of the resolution: the importance of which, however, is no way diminished since my report, already referred to, and which embraces that among other subjects. Many parts of the rules and regulations under consideration, although not directly at variance with existing laws, may nevertheless require the sanction of a law, in order to justify their enforcement; and they have therefore been thrown into that form in the schedule hereunto annexed.

I have the honor to be, with the highest respect, sir, your most obedient servant,

SMITH THOMPSON.

To the HON. the PRESIDENT OF THE SENATE of the United States.

SCHEDULE.

Be it enacted, &c. That, from and after the passing of this act, the following shall be the rules and regulations for the naval service of the United States:

NAVY YARDS.

As in the printed rules to the end of the 14th article: to which add these words, "any thing in the laws relating to the marine corps to the contrary notwithstanding." The residue of rules under this head as in printed copy. [See No. 173.]

The Master of the Yard.—Same as printed copy.

Master Shipwright.—Same as printed copy.

Navy Storekeeper.—Same as printed copy.

The Purser of the Yard.—Same as printed copy.

Superintendent of the rope walk, Gunner, and others.—Same as printed copy.

Navy Agents.—Same as printed copy.

Officers in general.—Same as printed copy.

COMMANDER OF FLEETS OR SQUADRONS.

Article 10th so amended as to read thus: "He shall correspond regularly with the Secretary of the Navy, informing him of all orders he has given relating to the duties connected with his command. It shall also be his duty to inform the Board of Navy Commissioners of all such naval improvements as his observations may enable him to suggest, and such defects and neglects as may come under his notice, and all other matters relating to the equipment and supplies of the fleet or squadron."

Article 18th so altered as to read thus: "He shall obey all orders received from the Secretary of the Navy, and also all orders from the Board of Navy Commissioners, relating to the equipment and supplies of the squadron, and shall exact a strict attention to them respectively, from all persons under his command."

SALUTES.

Article 10th so amended as to read thus: "When the President shall visit a ship of the United States, he shall be saluted with a gun for each State in the Union."

Article 16th so amended as to read thus: "The anniversary of the independence of the United States, and of the birth of General George Washington, are to be celebrated by salutes of a gun for each State, from every vessel in port of the rate of a sloop of war and upwards."

The remainder of the rules the same as in printed copy, except article 28, under the head of Pursers, and the rules relating to recruiting service, and broad pennant, which are amended as follows:

PURSERS.

Article 28th so amended as to read thus: "There shall be allowed every person in the naval service of the United States, who shall be by law entitled to rations, a daily proportion of provisions as specified in the following table:" (printed copy, page 63,) instead of those prescribed by the act of Congress, volume 3, page 427.

REGULATIONS RELATIVE TO THE RECRUITING SERVICE.

Article 1st, lines nine and ten, insert senior officer *on the station*, instead of "commanding officer of the station;" and in the fourteenth line of the same article, insert *shore*, instead of "port;" after which, add to this first article the following:

"The surgeon or surgeon's mate, lieutenant, master's mate, or midshipmen, appointed to attend the rendezvous, as before mentioned, shall be selected, when it can be done without injury to the public service, from the officers belonging to the station; and in the event of their being so selected, they shall, on the certificate of the recruiting officer, stating specifically the number of days they were actually and necessarily employed on the recruiting service, be entitled to receive, each, one dollar per day, for the time they were so employed, and no longer."

In article 2d, strike out the words "except as hereafter excepted."

In article 5th, lines two and three, strike out the words "the sum of four dollars for each man," and insert, "four dollars for every able seaman, three dollars for every ordinary seaman, and two dollars for every boy."

In article 13th, in the twelfth line, insert between the words "taking security," *further*, so as to read "taking further security."

It is believed, with the preceding trifling alterations, and substituting the words senior officer *on the station*, for "commanding officer of the station," in every article containing the words, *commanding officer of the station*, that no further alteration will be found necessary in the recruiting regulations, except that they ought to be made peremptory, instead of recommendatory.

THE BROAD PENNANT.

Article 3d so amended as to read thus: "The senior officer afloat, *if entitled to wear a pennant*, shall wear the one of the first order; and all officers entitled to a broad pennant, shall, when not in the presence, or in the sight of a superior officer, also entitled to a pennant, wear the pennant of the first order."

Article 5th so amended as to read thus: "No officer shall wear a broad pennant of any kind, unless he shall have been appointed by the President, or Secretary of the Navy, to command a squadron of vessels on separate service."

* See No. 173.

16th CONGRESS.]

No. 192.

[2d Session.]

RETRENCHMENT IN THE EXPENDITURES FOR THE NAVY AND MARINE CORPS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 17, 1821.

NAVY DEPARTMENT, *January 12, 1821.*

SIR:

I have the honor to reply to your inquiries, under date of the 5th instant, by enclosing a report from the Commissioners of the Navy, to whom the several subjects were referred. Their report includes all the points of reference, except that relating to the marine corps; and, upon due consideration of which, I am led to believe that no material alteration in its present organization would be beneficial to the naval service, so long as the marines are employed for the protection of the navy yards and public property.

With great respect, I have the honor to be, sir, your most obedient servant,

SMITH THOMPSON.

Honorable PHILIP P. BARBOUR,
Chairman Naval Committee, House of Representatives.

NAVY COMMISSIONERS' OFFICE, *January 10, 1821.*

SIR:

In reply to the queries propounded by the honorable Chairman of the Naval Committee of the House of Representatives, in his letter to you of the 5th instant, which you were pleased to refer to this Board, the Commissioners of the Navy have now the honor to afford such information as they possess.

Query 1st. Cannot the navy ration be probably procured at less than twenty-five cents, and at how much less?

The navy ration can probably be procured for less than twenty-five cents. By the contracts lately made, the first cost will not exceed sixteen cents. At this time provisions are known to be unusually low; and, owing to this circumstance, and the competition produced among the bidders for public contracts, by advertising for all articles required, the ration is procured at a price less, considerably, than at any period since the establishment of our navy.

It should, however, be observed that the component parts of the ration are all of a perishable nature, and that, on board of our ships, they are unavoidably exposed to the vicissitudes of every climate; hence, with every care that can be taken of them, they are, in a greater or less degree, liable to damage before they can be used. The expense of transportation should also be added to the original cost. These considerations render it expedient to prepare the estimates, as to the cost of the rations, so as to make a liberal allowance for the damages to which they are liable: hence, although the first cost of the ration will not exceed sixteen cents, it is calculated at twenty-five cents.

The estimates for 1821 contemplate a provision of 1,526,430 rations, deliverable in kind, for actual consumption, and 376,497 rations to be paid for in money to the officers entitled to them by law. The former is one ration per day for every person in the service. The latter are undrawn rations, which the officers are entitled to, but which, not drawing in kind, (not being provided for them,) are paid for in money.

With respect to the rations coming under the former description, it may be observed that, if they should not, including all the losses which may be sustained, cost the price named in the estimate, no more than their actual cost will be drawn from the treasury. The balance will remain undrawn and unapplied, and subject to such disposition as the Legislature may please to decide.

With respect to the rations which are not drawn by, or provided for, the officers, but to which they are by law entitled, and for which they are paid in money, the price has, since the year 1814, been fixed at twenty-five cents; thirteen years previous experience having satisfied the Government that twenty cents was less than a fair average price.

Prior to 1801 the price of the ration was twenty-eight cents; in 1801 it was reduced to twenty cents; and, as before stated, it was, in 1814, raised to twenty-five cents, and has never since been changed. This price may be more than the present cost of the ration, but next year it may be less. At the time the officers were receiving twenty-eight cents the ration, that price was known to be less than the actual cost. The officers might, at that period, have drawn their rations and sold them to a profit; and, after the price was reduced to twenty cents, although an apparent change in the market seemed to favor the reduction, yet it was fully ascertained that the price, on an average, was considerably higher; and, upon this ground, it was fixed at twenty-five cents, as a fair average price. The officers now consider, and, indeed, have always considered their undrawn rations as a part of their pay, and have made their calculations accordingly.

That the price of undrawn rations should be fixed, is not only essential, as respects the officer, but equally, if not more essential, as respects the public accounts. Were the price to be regulated by the fluctuations of the market, the officer would be kept in a state of constant uncertainty as to the regulation of his own expenses, and great embarrassments would arise in the settlement of his accounts at the treasury: hence it has been found expedient to give to these rations a fixed value; and the Commissioners presume that twenty-five cents is not more than a fair average price for them.

The officers, in providing their own tables, are unavoidably subject to pay the market prices demanded for the articles they require. These markets may be as various as the ports they may proceed to in various parts of the world. It is also the custom of the service to provide, whenever a vessel goes into port, fresh meat for the crew; and, on such occasions, we are subject to pay the market prices demanded for such fresh provisions. This custom could not be dispensed with; the health of the crews requires its observance; and it is obviously proper to consider this contingency also in the estimate.

Query 2d. Is it not a departmental regulation which authorizes the officers to commute all their rations but one into money?

As this is not a regulation directed by any law of Congress, the Commissioners presume that it was made by the Department, and custom has established its convenience. The officers are generally in a situation which would render it inconvenient to them to draw all their rations; if they were to draw them they could not consume them; and, if they do not draw them, it would not seem to comport with the principles of justice to deprive them of their value. They furnish their own tables, from time to time, as they go into port, but must draw one ration, because one ration is actually provided in kind for them, and there is a necessity that it should be provided, in order to guard effectually against events which might arise from the improvidence of any individual in the navy.

The principle of permitting officers to commute their rations into money is universally observed in every service with which the Commissioners are acquainted; it enables the officers, from time to time, to lay in their stores. If this custom were prohibited, and the whole number of rations, to which the officers are by law entitled, were to be provided and delivered in kind to them, the capacity of the ships to receive provisions and stores would be proportionately diminished; under the present regulation the stores of the officers occupy but an inconsiderable space; change it, and you necessarily have to lessen the quantity which would otherwise be provided for the crew.

By a change these inconveniences would arise, without being attended with any conceivable benefit.

Query 3d. How many commissioned officers of each grade will be necessarily wanting for actual service during 1821, if the present naval force should be retained in service?

The Commissioners presume that it was intended to comprehend in this query, not only the commission but the warrant officers; and that the object is to ascertain the number of each indispensably necessary for the ships and vessels intended to be kept in service during the year 1821; and thus construing and understanding the object of the query, they have to state that the ships and vessels intended to be kept in service during the year 1821 could not well be navigated and commanded with less than the following number of officers, viz:

5 Captains of the navy,	1 Schoolmaster,
5 Masters commandants,	20 Sailing-masters,
9 Lieutenants commanding,	142 Midshipmen,
57 Lieutenants,	11 Boatswains,
11 Surgeons,	11 Gunners,
23 Surgeons' mates,	11 Carpenters, and
18 Pursers,	11 Sailmakers.
4 Chaplains,	

This statement, it will be perceived, does not include any of the ships or vessels in ordinary, or any of the navy yards or stations; neither does it include any supernumerary officers of any description, or provide for any casualty. It comprehends only the actual number required to be on board the ships in service.

In officering our vessels in time of peace, it has heretofore been the practice to attach to them an extra number of junior officers, in order to afford them such opportunities of improvement, in their profession, as would fit them for command in time of war; and the Commissioners beg leave, sir, to observe that they would regret extremely if this practice were to be discontinued; as it would be depriving our young officers of the only fit school open to them. In no possible way can a young man be fitted for the command of a vessel of war but by serving a regular apprenticeship on board of one; and, the cheapest possible way of training and qualifying them for the service is assuredly to place extra numbers on board of such vessels as are kept in service. It is not by preparing ships alone that we can hope to render our navy efficient. The experience of our officers must, to render it so, keep pace with the gradual increase. To commit the command of our ships to persons ignorant of any of the departments or duties of command would be to jeopardize the reputation of the navy. Inexperienced unskilful bravery cannot hold the combat against veteran skill with any hope of success.

In the merchant service seamanship may, it is true, be learnt, but that only, and that constitutes but a very small part of the education of a navy officer, whose mind should be early habituated to the duties of obedience and command, of discipline and subordination, to the study of mathematics, gunnery, and the whole theory and practice of naval tactics; and it is on board of ships of war only that such habits and acquirements can be attained.

Query 4th. Are there not more pursers than the public service requires?

There are, it appears, at this time, forty-six pursers on the roll. The vessels in service, in ordinary, and the navy yards and shore stations, are estimated to require thirty-nine, leaving, apparently, seven supernumeraries. The rules of the service require that pursers should settle their accounts at the end of every cruise. It would be very expensive to keep a ship waiting till her purser could settle his accounts, which frequently requires two or three months; other pursers must be ready to take the place of those who are compelled to leave their ships for this purpose: hence, for the good of the service, it appears necessary to have a few supernumerary pursers.

Query 5th. Are there no officers, or others, such as superintendents, storekeepers, &c. who might be dispensed with at the several navy yards and stations, without injury to the public service?

So far as respects the navy yards, the Commissioners of the Navy have to state that, ever since the establishment of their office, their attention has been particularly turned to this subject; and they have, from time to time, curtailed the number of persons employed, and they have reduced it and the expenses as low as, in their opinion, the public service will admit. They can, with confidence, state that they know of no officer that could be dispensed with in any of our navy yards, without dispensing with that principle of checks, and system of accountability, essential to economy. Prior to the establishment of the Board, no property account was kept; at present there is the same accountability for property as for money, and the office of storekeeper is essential to this accountability.

Query 6th. Could any new organization be made in the marine corps, which would promote economy, without injuring its efficiency?

This appears to the Commissioners properly a military question; and, as they have never turned their attention to subjects of that nature, they do not feel themselves competent to form a satisfactory opinion upon it.

Query 7th. What is the estimated average cost per annum of vessels of the following classes, respectively, viz: 12, 16, 20, 32, 36, 44, 74: 1st, on cruise; 2d, in ordinary; 3d, when dismantled?

The Commissioners having had reference to a series of estimates, made at various periods during the existence of the navy, have to state that the following appears to be about the average estimated cost per annum on cruise, viz:

A 12 to 14,	-	-	-	-	-	\$20,595
A 16 to 18,	-	-	-	-	-	37,440
A 20 to 24,	-	-	-	-	-	45,700
A 32 gun frigate,	-	-	-	-	-	74,900
A 36 gun frigate,	-	-	-	-	-	97,500
A 44 gun frigate,	-	-	-	-	-	112,000
A 74 gun ship,	-	-	-	-	-	180,360

The annual expense of vessels in ordinary, exclusively of any repairs to which they may be subject, may be estimated as follows, viz:

A 12 to 14,	-	-	-	-	-	\$2,477 00
A 16 to 18,	-	-	-	-	-	2,664 50
A 20,	-	-	-	-	-	3,279 00
A 32,	-	-	-	-	-	4,205 75
A 36,	-	-	-	-	-	4,604 25
A 44,	-	-	-	-	-	5,002 75
A 74,	-	-	-	-	-	6,432 50

With respect to the annual cost of vessels dismantled, the Commissioners have to observe that they know of no difference in the expense of vessels in that state and when placed in ordinary, as dismantling is a necessary preliminary step to their being placed in ordinary.

I have the honor to be, with great respect, sir, your most obedient servant,

JOHN RODGERS.

Hon. SMITH THOMPSON, *Secretary of the Navy.*

16th CONGRESS.]

No. 193.

[2d Session.]

DEFENCE OF THE SEACOAST.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 17, 1821.

Mr. PHILIP P. BARBOUR, from the Committee on Naval Affairs, to whom was referred the petition and memorial of John Stevens, reported:

That the petitioner suggests a plan for the complete defence and security of the seacoast of the United States, by having in readiness, in each port, all the imperishable materials of the requisite number of steam engines, with magazines furnished with elongated shells; stating that, at the commencement of a war, the requisite number of vessels can always be procured promptly, and fitted for service, upon the plan proposed by him, at less expense, and with more efficiency, than the steam batteries authorized by the act of 1816. For a more detailed statement of the petitioner's plan, with the advantages which he supposes belong to it, your committee refer to his petition. He suggests the propriety of suspending for the present any further expenditure for procuring steam engines and materials for erecting the three steam batteries, and asks that an appropriation may be made of from forty to fifty thousand dollars for procuring the steam engine, and equipping completely a steam vessel of from one hundred and fifty to three hundred tons burthen, upon his plan, by way of experiment. The committee, with a view to procure information as to the practicability and efficiency of this scheme, addressed a letter to the Navy Department; in reply to which, they received an answer from the Navy Commissioners, which accompanies this report. The remarks and reasoning of the Navy Commissioners have induced the committee to think that his scheme is of a character not to justify the expense of the proposed experiment; they, therefore, recommend the following resolution:

Resolved, That John Stevens have leave to withdraw his petition and memorial.

NAVY COMMISSIONERS' OFFICE, January 4, 1821.

Sir:

The Board of Navy Commissioners, in reference to the communication of John Stevens to the Speaker of the House of Representatives, which you did them the honor to submit to them, have the honor to observe:

First, in justification of themselves, their views, and proceedings, which he would appear to impeach, that they have confined themselves strictly to the letter of the law in the procurement of the "steam engines, and all the imperishable materials necessary for building and equipping three steam batteries on the most improved plan," and, in so doing, availed themselves of all the abilities in the United States, by inviting, by publication in the newspapers of the principal seaport towns which publish the laws of the United States, proposals and plans for the same. Few plans were offered, and none that the Commissioners could approve of; among them was one from Mr. R. L. Stevens, a son of J. Stevens, and a man whom the Board believe to be of great mechanical talents. Although none of these plans could be entirely approved of by the Board, they afforded hints which they thought might be turned to the public advantage; and, to obtain one that might be as free from exception as possible, persons known to be of the first abilities in naval architecture and science were employed to form a model, which should unite in it all the improvements within the knowledge of the Board, be free from all the defects which were to be found in the others, and be as complete in every respect as possible. It was particularly enjoined on them to confine themselves to known principles, and to do nothing which would jeopardize the public interests by vain projects and visionary schemes. A plan and model was obtained, which was believed to be every way unexceptionable, and was adopted as the most suitable for the steam batteries contemplated by the law, and the Board proceeded to make preparation for their construction accordingly.

This model is entirely different from the first steam battery, which was built at the suggestion and under the superintendence of Mr. Robert Fulton, as an experiment. It was prepared by the naval constructor who built the steam ship now plying between New York and New Orleans, and is believed to possess all her properties of fleetness and ability to keep the sea; hence it will be perceived, that whatever remarks J. Stevens may have made on the "presumption" that the steam engines now preparing "are to be placed on board of steam batteries of similar construction with one in the harbor of New York," will not apply to the steam vessels now preparing by the Commissioners.

Secondly. The Board have reason to think that they have had it in their power to avail themselves of every improvement that J. Stevens would introduce into the naval service, and that, as far as they might appear to them advantageous, they have introduced them.

Thirdly. The Board think it would be impracticable to place engines on board vessels not prepared for them at so short a period as he mentions; nor could they, when scattered along the coast, be readily assembled for the protection of any place threatened, and, if collected, they have doubts whether their usefulness in attack would be as great as he expects.

Fourthly. He offering no plan for the protection of the machinery in the vessels in which he proposes placing his steam engines, the Board can make no observations as to the practicability of securing them effectually against the effects of shot; they have reason, however, to doubt whether, in vessels of so slender a construction as those he mentions, this is possible.

Fifthly. With regard to their speed, it must greatly depend on their form, and the power of the engines applied to them, which the Board have no doubt might be increased far beyond that stated by John Stevens; and this opinion is founded on the high speed of some of the steam vessels which navigate the waters of the United States; and if the speed of the vessels he mentions cannot be increased beyond what he states, (seven miles per hour,) the Board confidently believe that one of the steam batteries which are contemplated to be built by the Board would destroy the whole fleet which might be equipped according to the plan of John Stevens, as far as his communication makes it known.

Sixthly. In conclusion, the Board take the liberty to state that R. L. Stevens, on his visit to this place a few weeks since, became first informed of his father's schemes of "placing the whole of our extended seacoast in a state of complete defence and perfect security, by having in readiness at each port all the imperishable materials of the requisite number of steam engines," &c. &c., and expressed to the Board his mortification and regret; assuring them that he had no concern in a project so wild, and offered the infirmities of age as an apology for his father. Under these circumstances, the Board conceive it unnecessary to proceed into a further investigation of his principles of maritime protection, or the propriety of his suggestion to suspend all further expenditures on other objects for national defence, with a view to test the efficacy of the plan he recommends.

I have the honor to be, very respectfully, your most obedient servant.

JOHN RODGERS.

Hon. SMITH THOMPSON, *Secretary of the Navy.*

16th CONGRESS.]No. 194.[2d SESSION.]

CONTRACTS FOR THE YEAR 1820.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 19, 1821.

NAVY DEPARTMENT, *January 16, 1821.*

SIR:

I have the honor of transmitting, herewith, a statement of the contracts made by the Commissioners of the Navy during the year 1820, prepared in obedience to the act of the 3d March, 1809, entitled "An act further to amend the several acts for the establishment and regulation of the Treasury, War, and Navy Departments."

I have the honor to be, very respectfully, your obedient servant,

SMITH THOMPSON.

The Hon. the SPEAKER *of the House of Representatives.*

Statement of Contracts made by the Navy Commissioners during the year 1820.

Names of contractors.	Date of contract.	Articles contracted for.	Price of articles.	When to be delivered.	Where to be delivered.
Arthur Butt, - -	1819. Nov. 15,	All the cypress plank, beams, ledges, long combings, and promiscuous timber, required for a frigate.	\$4 per 100 superficial feet for plank, 50 cents per cubic foot for the beams, ledges, long combings, and promiscuous pieces.	In the course of 12 months from date.	Washington.
Russell, Hunt, and Brothers,	Dec. 31,	Five anchors.	18 cents per pound for the anchors weighing 8,000 pounds and upwards.	On or before 1st day of July, 1820.	Navy yard, N. York.
Epenetus Wheeler,	1820. Jan. 1,	Provisions, &c. for lake Champlain, viz:	13 cents per pound for the anchors weighing from 23 to 2,500 pounds.		
		Beef, - - - - -	\$6 per barrel, - - - - -	During the year 1820.	Whitehall, N. York.
		Pork, - - - - -	\$15 per barrel, - - - - -		
		Flour, - - - - -	\$7 50 per barrel, - - - - -		
		Rice, - - - - -	\$4 per cwt. - - - - -		
		Peas or beans, - - - - -	\$1 per bushel, - - - - -		
		Butter, - - - - -	18 cents per pound, - - - - -		
		Bohea tea, - - - - -	30 cents per pound, - - - - -		
		Molasses, - - - - -	55 cents per gallon, - - - - -		
		Whiskey, - - - - -	58 cents per gallon, - - - - -		
		Potatoes, - - - - -	36 cents per bushel, - - - - -		
		Dipped candles, - - - - -	18 cents per pound, - - - - -		
		Vinegar, - - - - -	25 cents per gallon, - - - - -		
		Fresh beef, - - - - -	5½ cents per pound, - - - - -		
		Fire wood, - - - - -	\$1 25 per cord, - - - - -		
John Colt, - -	"	3,033½ yards hammock cloth, - - - - -	81 cents per yard for No. 1, - - - - -	In the course of six months from date.	New York.
Joaquin Jose Vasques, - -	"	3,033½ yards hammock cloth, - - - - -	54 cents per yard for No. 2, - - - - -	In the course of six months from date.	New York.
John Remick, - -	" 2,	17,000 locust treenails, - - - - -	54 cents per yard for No. 1, - - - - -	By the 1st May, 1820.	Portsmouth, N. H.
Charles Porter, - -	" 2,	All the mast pieces and spars for two 74s and one 44 gun ship. All the beams, ledges, long combings, and promiscuous timber logs for plank, required for two 44s.	54 cents per yard for No. 2, - - - - -		
			\$50 per thousand, - - - - -		
			Lower masts of a 74, 4½ pence Virginia currency, per inch; topmast, lower yards, and topsail yards of a 74, 3½ pence Virginia currency, per inch; lower masts of a 44, 60 cents per cubic foot; topmast, lower yards, and topsail yards of a 44, 3½ pence Virginia currency, per inch; 50 cents per cubic foot for the beams, ledges, &c.	Twelve months from date.	Masts and spars at Boston. Beams, &c. at N. York.
			18 cents per pound for the four largest, and 9 cents per pound for the smallest.		
Ezra Hyde, - -	Feb.	Nine anchors, - - - - -	18 cents per pound for the four largest, and 9 cents per pound for the smallest.	Nine months from date.	At such navy yard as the commissioners shall designate.
Giles Sanford, - -	" 10,	10,920 pounds salt beef, - - - - -	6 cents per pound, - - - - -		
		9,360 pounds salt pork, - - - - -	7 cents per pound, - - - - -	Upon the requisition of the commanding officer.	Erie, Pennsylvania.
		3,078 pounds flour, - - - - -	3 cents per pound, - - - - -		
		19,110 pounds bread, - - - - -	4½ cents per pound, - - - - -		
		400 pounds butter, - - - - -	18 cents per pound, - - - - -		
		390 gallons peas, - - - - -	18 cents per gallon, - - - - -		
		195 gallons molasses, - - - - -	\$1 25 per gallon, - - - - -		
		195 gallons cider vinegar, - - - - -	37½ cents per gallon, - - - - -		
		1,365 gallons whiskey, - - - - -	56½ cents per gallon, - - - - -		
		1,170 pounds cheese, - - - - -	12½ cents per pound, - - - - -		

STATEMENT—Continued.

Names of contractors.	Date of contract.	Articles contracted for.	Price of articles.	When to be delivered.	Where to be delivered.
R. Curtis and L. Dwelly,	1820. Feb. 21,	Five anchors,	4 at 18 cents per pound, 1 at 11 cents per pound,	} On or before the 25th day of } October, 1820.	Portsmouth, N. H.

[16th CONGRESS.]

No. 196.

[2d SESSION.]

CONDITION OF THE NAVY AND ITS EXPENSES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 25, 1821.

NAVY DEPARTMENT, *January 25, 1821.*

SIR:

I have the honor to report upon the subjects contained in your letter of the 8th instant, for the information of the Committee of Ways and Means, the accompanying documents, being a letter from the Commissioners of the Navy, and statements numbered 1 to 4, inclusively, which contain, with my letter of the 11th December last, to the honorable Philip P. Barbour, to which reference is made, the whole information required.

I have the honor to be, with the highest respect, sir, your most obedient servant,

SMITH THOMPSON.

The Honorable SAMUEL SMITH,
Chairman Committee Ways and Means, House of Representatives.

NAVY COMMISSIONERS' OFFICE, *January 20, 1821.*

SIR:

The Commissioners of the Navy have had the honor of receiving the letter of the honorable Mr. Smith, Chairman of the Committee of Ways and Means, of the 8th instant, addressed to you, and which you were pleased to refer to them; and they now proceed to submit their report upon the various points on which information has been required.

They beg leave to premise, that their information, with respect to the employment of our public ships and vessels is derived from your communication of the 11th ultimo, to the honorable Mr. Barbour, Chairman of the Naval Committee, of the House of Representatives.

The 1st inquiry is, "What is the present force in the Mediterranean, and its annual expenditures?"

The present force in the Mediterranean appears to be the Columbus, the Peacock, and the Spark, and the annual expenditure may be estimated at \$285,000.

Query 2d. "What would be the annual expenditure of one 44, one 36, and a sloop of war?"

The annual expenditure of one 44, one 36, and a sloop of war, may be estimated at \$256,000.

Query 3d. "What is the annual expenditure of the force employed on the African coast? What is the force, and what would be the annual expense of three of the new schooners?"

The present force cruising on the coast of Africa appears to be, the Cyane, the John Adams, and the Hornet, and the annual expenditure may be estimated at \$165,700.

The annual expenditure of three of the new schooners would be about \$70,500.

Query 4. "What is the annual expense of the ship employed in the Indian seas?"

The annual expense of the Congress, now employed in the Indian seas, may be estimated at \$110,000.

Query 5. "What is the annual expense of the ships employed in the Pacific, allowing for both being under expense when relieving?"

To gain two years service of a ship in the Pacific ocean, and the constant presence of a ship in that ocean, we should estimate the expense to be equal to two years and nine months service of the ship, in order to allow for the expense of relieving, at the expiration of the term of service of the crew. Two years and nine months expense of such a ship as the Constellation, on so distant a station, may be estimated at \$300,000.—Hence "the annual expense of the ships employed in the Pacific, allowing for both being under expense when relieving," may be estimated at \$150,000.

Query 6. "What is the annual expense of the vessels employed in the West Indies and on our coast, to protect against piracies? and what will it be if all the small vessels, except three for Africa, be employed?"

It appears that the Enterprise, the Nonesuch, the Lynx, and gunboats Nos. 158 and 168, are "now employed in the West Indies and on our coast, to protect against piracies, &c." the annual expense of which may be estimated at \$105,000.

As to what the expense would be "if all the small vessels, except three for Africa, be employed," the Commissioners find no little difficulty in forming an estimate, not distinctly understanding the scope of the inquiry—whether it contemplated no exception but the "three for Africa," particularly mentioned. Whether the object was to withdraw from the coast of Africa the vessels now on that station, and include them in the estimate of the expense of the vessels employed, or whether leaving all the smaller vessels now in service, on the service now respectively assigned to them, the object was to add to the vessels now in the West Indies and on our coast, all the smaller vessels belonging to the navy, and not now in actual service, the Commissioners are not able to infer from the terms used in propounding the query. If, however, they can be informed precisely of the object of the inquiry, and the vessels intended to be included in the estimate, they will, with great pleasure, afford every information in their power.

The Commissioners, in reply to the 7th query, beg leave to submit the papers herewith marked No. 1, 2, 3, and 4.

No. 1 exhibits a view of the naval stations in the United States, the navy officers, seamen, and ordinary seamen, attached to each station, and an estimate of the annual expense of each station, exclusively of the mechanics and laborers.

No. 2 shows the number of mechanics and laborers employed at the different navy yards and stations and the total amount of the expenditures, on account of mechanics and laborers, for one month, distinguishing the amount expended for the gradual increase of the navy, and for other objects, such as repairs of vessels building schooners, &c.

The paper No. 3, shows the vessels at the different stations in the United States.

No. 4, gives a general view of the property belonging to the navy, at the several and respective stations. This paper would have been prepared more in detail, but the Commissioners presumed that it was not required by the honorable chairman, and it probably could not have been prepared in less than three or four weeks, so as to give a view of each and every article at each and every station.

Of these stations, Norfolk, Washington, Philadelphia, New York, Boston and Portsmouth, are building yards. New Orleans, and Charleston, S. C. are stations for the rendezvous of our small vessels cruising in those waters. At Sackett's Harbor and at Erie, we have, it will be seen, a considerable amount of public property, which could not be removed to any of the Atlantic stations, without incurring very great expense, and probably injury. The public property at White Hall might be removed to New York, and that station might be dispensed with. The Newport station might also be dispensed with. Baltimore should, in our opinion, be retained as a recruiting station, as that city furnishes its full proportion of the best seamen in our country.

The 8th query of the honorable chairman calls for the following information, viz: "Are any of the vessels of war so far decayed that they are unworthy of repairs? If so, name them." And in reply, the Commissioners beg leave to observe, that, in their opinion, the following vessels are unworthy of repair, viz:

The Confidence,
Detroit,
Eagle,
General Pike,
Ghent,
Jefferson,
Jones,
Lawrence,
Linnet,
Mohawk,

The Madison,
Niagara,
Oneida,
Queen Charlotte,
Ranger,
Raven,
Superior,
Saratoga,
Sylph,
Ticonderoga,

And 15 barges and 6 galleys, all on the lakes: that the schooners Fox and Spitfire, gunboats No. 72, 76, 95, and three barges, on Atlantic stations, are also considered as undeserving of repair; and the frigate, the Java, at Boston, is probably unworthy of repair.

The vessels in ordinary, at stations on the Atlantic board, and incurring expense for their preservation, are,

SHIPS OF THE LINE.

The Washington,
Franklin,
Ohio,

The North Carolina,
Independence,
Delaware.

FRIGATES.

The United States,
Guerriere,

The Java,
Fulton Steam Battery.

Exclusively of supernumerary officers, the number estimated to be attached to each ship of the line is,

1 master,	1 sailmaker,
1 boatswain,	10 able seamen,
1 gunner,	4 ordinary seamen,
1 carpenter,	6 boys.
	Estimated annual expense, \$6,432 50.

To each 44 gun frigate:

1 master,	1 sailmaker,
1 boatswain,	6 able seamen,
1 gunner,	4 ordinary seamen,
1 carpenter,	3 boys.
	Estimated annual expense, \$5,002 75.

To the steam battery:

Same officers as to frigate,	4 ordinary seamen,
5 able seamen,	2 boys.
	Estimated annual expense, \$4,604 25.

All the vessels on Lakes Erie, Ontario, and Champlain, with the exception of two of the smallest class, which are employed in the revenue service, are in a state of ordinary. The expense of preserving them is shown by the paper No. 1, which exhibits the expense annually of the respective stations.

The Alert, the Asp, the Vesuvius, and the Louisiana, are employed as receiving ships.

With respect to that part of the ninth query, which calls for "a detailed view of the ships in actual service," the Commissioners have not presumed to answer it, from a conviction that you possess more precise information upon the subject than they can afford.

The tenth query is in the following words, viz: "The retained ration is now fixed at twenty-five cents each; is there any act for that sum, or is it a regulation? Would the present appropriation of money, and consequent cost of the items of the ration, justify a reduction?"

The law declares what the component parts of the navy ration shall be; but it is understood that the price of the ration is a regulation of the Department. The navy ration can probably be procured for less than twenty-five cents. By the contracts lately made, the first cost will not exceed sixteen cents. At this time provisions are known to be unusually low, and owing to this circumstance, and the competition produced among the bidders for public contracts, by advertising for all articles required, the ration is procured at a price less considerably than at any period since the establishment of our navy. It should, however, be observed, that the component parts of the ration are all of a perishable nature; and that on board of our ships they are unavoidably exposed to the vicissitudes of every climate; hence, with every care that can be taken of them, they are, in a greater or less degree, liable to damage before they can be used. These considerations render it expedient to prepare the estimates, as to the cost of the ration, so as to make a liberal allowance for the damages to which they are liable. Although, therefore, the first cost of the ration will not exceed sixteen cents, the ultimate cost is estimated at twenty-five cents.

The estimates for 1821 contemplate a provision of one million five hundred and twenty-six thousand four hundred and thirty rations, deliverable in kind, for actual consumption; and three hundred and seventy-six thousand four hundred and ninety-seven rations which are not drawn. The former is one ration per day, for every person in the service. The latter are rations which the officers are entitled to, but which, not being provided for them, are not drawn in kind, but paid for in money.

With respect to the rations which are drawn in kind, it may be observed, that, if they should not, including all the losses which may be sustained, cost the price named in the estimate, no more than their actual cost will be drawn from the treasury, the balance will remain unapplied, and subject to such disposition as the Legislature may please to decide.

With respect to the rations which are not drawn in kind, the price has at various times been regulated by the Department. Prior to the year 1801, the price was twenty-eight cents, in 1801, it was fixed at twenty cents, in 1814, thirteen years' experience having satisfied the Government that twenty cents was less than a fair average price, it was raised to twenty-five cents, and has never since been changed. This price may be more than the present cost of the ration, but next year it may be less. At the time the officers were receiving twenty-eight cents the ration, that price was known to be less, frequently, than the actual cost. The officers might, at that period, have drawn their rations and sold them to a profit; and after the price was reduced to twenty cents, although an apparent change in the market seemed to favor the reduction, yet it was fully ascertained that the price of the ration, on an average, was considerably higher; and upon this ground it was fixed at twenty-five cents as a fair average price. The officers now consider, and indeed have always considered, their undrawn rations as a part of their pay, and have made their calculations accordingly.

That there should be a fixed price for undrawn rations is essential, not only as respects the officers, but equally, if not more, essential, as respects the public accounts. Was the price to be regulated by the fluctuation of the markets, the officers would be kept in a state of constant uncertainty as to the regulation of their expenses, and great embarrassments would arise in the settlement of their accounts at the treasury. Hence it has been found expedient to give to these rations a fixed value; and the Commissioners presume that twenty-five cents is not more than a fair average price for them.

The officers, in furnishing their own tables, are unavoidably subject to pay the market prices demanded for the articles they require. These markets may be as various as the ports they may proceed to in the various parts of the world. It is also the custom to provide fresh meat for the crew whenever a vessel goes into port; and, on such occasions, we are subject to pay the market price demanded for such fresh provisions. This custom could not be dispensed with, the health of the crews requires its observance. These are contingencies which should always be considered, in estimating the cost of the navy ration.

The principle of permitting officers to commute their rations into money is universally practised in every service with which the Commissioners are acquainted; it enables the officers, from time to time, to provide their own stores. If this custom were prohibited, and the whole number of rations, to which the officers are by law entitled, were to be provided and delivered in kind to them, the capacity of the ships to receive provisions and stores, for the crew generally, would be proportionately diminished. Under the present regulation the stores of the officers occupy but an inconsiderable space, change it and you necessarily have to lessen the quantity which would otherwise be provided for the crew. By a change, these inconveniences would arise, without being attended with any conceivable benefit.

"Are not the improvements of navy yards complete? Can any thing be spared from that item?"

The improvements of navy yards are not complete. It would require a much larger sum than is estimated for this year to make them as complete as is desired, with regard to both economy and convenience. The present appropriation is not more than sufficient to keep the yards with their buildings, enclosures, building ships, launching ways, building stages, machinery, boats, lighters, mooring chains, mooring anchors, &c. in repair; and to pay officers whose services are indispensable for the preservation of the public stores.

In answer to the inquiry relative to the amount estimated for repairs; and "whether any thing can be spared from that item," the Commissioners beg leave to observe that the estimate for repairs embraces not only the repairs required to the hulls of our ships, but every object of equipment, cordage, sails, anchors, ship chandlery, &c. and it also embraces the wear and tear of the ships in-service. Hence it will be acknowledged that there are insuperable difficulties to forming any precise estimate, with respect to the cost of repairs, the amount depending measureably upon wind and weather. If, however, it should be determined to break up the Java, and not to rebuild her, the Commissioners think it highly probable, judging from past experience, that the estimate for repairs might be reduced one hundred thousand dollars, without injury to the public service.

I have the honor to be, with great respect, sir, your most obedient servant,

JOHN RODGERS.

Honorable SMITH THOMPSON, *Secretary of the Navy.*

2 grindstones.
6,201 pounds of block tin.
1,752 pounds of zinc.
24 escutcheons.
15 brass headed screws.
250 files, assorted.
150 feet of glass lights.
19,158 pounds of junk.
268 gallons of oil.
70 kegs of white lead in oil.
29 kegs of yellow ochre.
2 kegs of ground verdigris.
40½ gallons of spirits of turpentine.
799 pounds of steel.
48 quires of paper.

Provisions.

185 pounds of bread.
8 gallons of peas.
16 barrels of beef.
12 barrels of pork.
50 pounds of cheese.
276½ gallons of whiskey.
544½ pounds of tallow candles.

Slops.

24 mattresses.
44 blankets.

AT ERIE.

5 anchors.

Canvass and duck.

17½ yards.

Copper.

38 pounds sheathing nails.

Cordage.

1 cable.

1,149 pounds bolt rope.

764 pounds purchase falls.

1,057 pounds rigging.

4½ inch rope, 50½ pounds.

Ordnance.

60 iron cannon.

63 carronades.

7 howitzers.

724 round shot.

794 double shot.

1,058 canister shot.

596 stands of grape.

12,048 pounds of loose grape shot.

431 shells.

31 hand grenades.

1,260 loose canister shot.

209 quires cannon cartridge paper.

15,020 quires musket cartridge paper.

3 reams do do.

Powder and materials.

6,444 pounds cannon powder.

787 pounds priming.

25 port fires.

85 false fires.

249 pounds of sulphur.

Lead.

5 tons 4 cwt. 6 lbs.

Iron.

1 ton 8 cwt. 12 lbs. of iron assorted.

8 tons 3 qrs. 16 lbs. of kentledge.

Small arms.

147 muskets.

14 pistols.

161 cutlasses.

104 battle axes.

75 pikes.

1 blunderbuss.

3 rifles.

Sundries.

2,636 flannel cylinders.

218 paper cylinders.

39 field carriages.

15 caps for elevating screws.

276 dead eyes.

40 iron fore locks.

4,941 flints.

121½ gun tackles.

448 hooks assorted.

5,471 pounds of lignum vitæ.

10 leager heads.

2 barrels of tar.

39 copper ladles.

23 linchpins.

45 monkey tails.

4 mortars and pestles.

66 gunner's mallets.

55 ports.

699 stands for grape shots.

91 rammers and sponges.

96 stanchions.

2,604 gun wads.

405 blocks.

AT WHITEHALL.

13 anchors.

Canvass.

6 bolts of canvass.

Copper.

150 pounds spikes.

1,430 pounds old copper.

1,380 pounds copper in casks.

Cordage.

40 cables.

1,200 pounds of running rigging.

Ordnance.

133 iron cannon.

76 carronades.

14,243 round shot.

130 double shot.

818 canister shot.

1,059 stands of grape.

64 shells.

9,000 quires of cartridge paper.

48 swivels.

Powder.

23,809 pounds of cannon.

351½ pounds of priming.

Lead.

150 pounds.

Iron.

5 tons 3 cwt. 22 lbs. iron assorted.

120 tons 1 cwt. 3 qrs. 6 lbs. Pig iron ore ballast.

Provisions.

1,023 pounds 8 oz. of beef.

892 pounds pork.

564 pounds flour.

6 pounds cheese.

194 pounds 12 oz. sugar.

150 pounds 8 oz. tea.

12 bushels potatoes.

1,394 pounds rice.

4 gallons vinegar.

101 gallons whiskey.

11 pounds candles.

Small arms.

687 musket bayonets.

70 bayonets for pistols.

464 cutlasses.

108 boarding axes.

473 boarding pikes.

328 leaden balls.

Sundries.

26 augers.

86 aprons for guns.

36 boring fitts.

8 boats.

1½ pieces bunting.

300 blocks.

4 axes.

6 lanterns.

9 saws.

7 cambooses.

12 chairs.

2 coffee mills.

2 dark lanterns.

624 flannel cylinders.

2 ensigns.

50 fire buckets.

145 hand spikes.

400 hooks and thimbles.

90 yards flannel for cylinders.

6 hammers.

6 cases surgeon's amputating instruments.

6 kettles.

28 lint stocks.

3½ pounds tar, and a few other similar articles.

16th CONGRESS.]

No. 197.

[2d SESSION.]

APPLICATION TO ABOLISH PRIVATEERING IN TIME OF WAR.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 26, 1821.

To the Senate and House of Representatives of the United States in Congress assembled, the undersigned inhabitants of the State of Massachusetts respectfully represent:

That, in common with many of their fellow-citizens in different parts of the United States, they consider it due to natural justice, and to the honor of christian nations, that the capturing of private property should no longer be authorized by the laws of maritime warfare. Many practices once allowed in war have disappeared, as civilization and christianity have advanced; the same benign spirit calls for this further reform. It seems to be the design and scope of the modern laws of war to exempt, as far as possible, from the effects of hostilities, all persons who bear no voluntary part in the contest. On the land, public possessions alone become a prize to the conqueror. The common consent of nations has attached a deep disgrace to the plunder of an unresisting foe. On the sea, too, certain trades deemed necessary to human subsistence are privileged from capture. Why should not the same immunities be extended to all ships engaged in carrying on the commerce of nations, without agency in the war?

There is a striking inconsistency between the usages of war on the land and on the sea. Goods landed and stored are preserved to the owner, while those which remain on shipboard, though, perhaps, a part of the same cargo, are seized and confiscated. To rifle shops and dwelling-houses in a captured city would excite a general disapprobation, but it is otherwise when the same wealth is intercepted in its passage over the ocean. Why the same acts which on the land are pronounced disgraceful should on the sea escape reproach, it would be difficult to explain.

In exempting commercial property from capture, it would not be necessary to authorize a direct commercial intercourse between the belligerent Powers; this may, perhaps, be incompatible with a state of war. With this exception, the entire neutrality of trade would be far more beneficial to the parties, and to the world, than a mutual exposure to attack and capture. Commerce is the interest of the world; it connects distant regions, multiplies and distributes the fruits of every climate, and makes every country a sharer in the natural, intellectual, and moral wealth, of all others. To facilitate commercial intercourse, and multiply the incitements to industry, should be the wish of all nations. Confine any considerable part of the world to the consumption of its own products within itself, and you diminish the resources of all the other parts. Every cause, therefore, which embarrasses and restricts commerce, operates unfavorably to the progress and welfare of the human race.

And what are the effects of maritime war, as it is now carried on, upon commerce? Are they not to render trade unsettled and insecure; to destroy confidence and credit; to build up the fortunes of some, and to ruin others, with equal suddenness; to involve the rich in bankruptcy by unforeseen misfortune, and to load the adventurer who hazards nothing, with a wealth which he can only abuse? Agriculture is depressed and discouraged; idleness is forced upon many who would willingly be employed in useful labor, and the sufferings of war are increased without any apparent benefit. But your memorialists forbear to insist on the advantages which would arise to commerce from the abolition of this practice. The measure is recommended by other and more powerful reasons. They believe that they speak a language justified by past and recent experience, when they say that the custom of making prize of private property at sea has been a source of great moral depravation, and of individual suffering, the measure and extent of which it would be impossible to calculate. The habit of preying on the possessions of others, and of growing rich by a violent appropriation of their wealth, can hardly fail to engender, in those who are engaged in this pursuit, a rapacious and avaricious spirit, eager for riches, and little solicitous about the means by which they are acquired; negligent of others' rights, and ready to raise a specious pretext for invading them. This spirit will continue when the war has ceased; and there is too much reason to fear, that those who have plundered under the sanction of the laws, may continue to plunder in defiance of their prohibitions.

In the navy, perhaps, the character and education of the officers, and the elevated generous feelings they regard as the ornaments of their profession, may, in a good degree, secure them from the dominion of a sordid avarice; but seamen, with no better means of instruction than they ordinarily enjoy, are exposed to these bad influences, on

board of public, as well as private ships. They are not used to nice and accurate distinctions. Once taught to acquire by violence, there is danger of employing the same means, with little reluctance, whenever it can be done, under the color, however fallacious, of a lawful authority. It is true, that the practice of privateering is far more pernicious than the predatory warfare carried on by public ships. The private cruiser has no motive but the thirst of gain. He may indirectly contribute to the success of the war, but this is not his principal object. With public ships, the taking of commercial prizes is but accessory; with private cruisers it is the moving cause and chief design of the enterprise. Your memorialists therefore admit, that, though they are unable to distinguish, in principle, between captures by public and private ships of war, it is from the latter they apprehend the most serious and extensive mischiefs. They deem the abolition of all captures of commercial property desirable, and they fear, that to take away privateering alone, would leave much of the evil incurred; but even were the measure thus limited, they believe that an additional provision, that all captures by public ships should be for public use, much would be gained to humanity and peace.

Your memorialists feel, and gladly acknowledge, that the legal sanction given to privateering has concealed from multitudes its real and detestable nature; and that this, like other barbarous customs, has been followed by men who have respected the general and undoubted principles of humanity. But they conceive that the time of this ignorance is past. Christianity and civilization have advanced too far to leave any who reverence moral distinctions blind to the guilt of this flagrant violation of social duty. The voice of religion and humanity has gone forth distinctly, and leaves, without excuses, the man who prowls the ocean to plunder unoffending strangers, to prey upon the weak, to grow rich on the spoils of those who are following a useful and honorable trade, to shed blood for no other ends than private gain. That men calling themselves christians, and civilized, should ever have justified themselves in a practice so akin to robbery and murder, and should have held, without remorse, what they had extorted from an innocent fellow being with the sword, is indeed wonderful. But the darkness is gone, and the plunderer on the ocean, however sheltered from punishment by law, cannot escape the reproaches of all the friends of public and private virtue.

If war cannot be abolished, your memorialists desire that its evils may, as far as possible, be mitigated; and they rejoice at the general recognition of the principle, that a nation is bound to abstain from inflicting any evils on its enemy, except such as is necessary to the assertion of its just claims. That this humane principle may be more and more infused into national hostilities, it is of great and obvious importance that private passions, and the selfishness of individuals, should be enlisted as little as possible in the prosecution of the war, that its inevitable sufferings should be inflicted by public instruments for public ends.

Your memorialists conceive, that the peculiar facilities for privateering afforded by our maritime situation and habits, will give weight to whatever efforts our Government may employ for the abolition of the practice, and that at the same time they impose on us a peculiar obligation to resist it. The fact that, in the event of war, privateering will be the resource of multitudes of our citizens, ought to alarm us. We are, perhaps, more than any other people exposed to deprivation of manners from this source; and a worse evil cannot menace a community. Good morals are the strength of a State, especially of a free one; and policy joins with principle in denouncing a practice which whets the thirst for pillage, and weakens the obligations of humanity in the mass of the people.

The experience of the present moment gives great force to the arguments against the usage of subjecting to capture private property on the ocean: for we see how easily and naturally it becomes a cover for piracy and unauthorized depredation. We learn from the dreadful abuses to which this practice is liable, and which cannot be separated from it, that property at sea should ever be made more sacred, and be guarded by more rigid laws, than on land. We say nothing of the sufferings of the present moment, from the capture and destruction of neutral ships. The injury to commerce and to society, from the depravation of seamen, is a wider and more lasting evil. The confidence once placed in that useful class of men is shaken, and with it the intercourse of nations, and the security of property at home are impaired.

The time has been when an application like the present to a Government would have been hopeless; when the civil power was the last resource for the friends of humanity. But we trust that we live in better and brighter times, when Government, instead of being a monopoly for the few, is regarded as a provision for the general good; and when that greatest of all political truths begins to be felt, that the interests of each country are bound up with the general interests of humanity, and that each country owes a debt to the world. A ruler is no longer considered as false to his own country, when he seeks its prosperity in connexion with the progress and welfare of the race, and may be honored as a patriot, without ceasing to be a man. We earnestly desire that our Government, founded as it is on the broad principle of the equal rights of men, may lay an early claim to what will hereafter be esteemed the highest glory of a country—that of having introduced into the intercourse of nations, those principles of equity and humanity which are now acknowledged to be binding upon individuals.

The practice of granting commissions to privateers is comparatively of modern date, and writers of the highest eminence and authority have concurred in lamenting its introduction. The opinion of Franklin has been quoted by other memorialists; and we would refer to an excellent precedent and guide to the article on this subject, introduced at the suggestion of that distinguished philosopher and statesman, into the treaty concluded with Prussia, in 1785.

The present state of the world is favorable to the proposed reform. No reasonable objection, it is believed, can be offered, on the part of any nation, if the laws concerning goods contraband of war, and those relating to blockades, are permitted to remain. The memorialists leave to the wisdom of their Government the course best adapted to attain the proposed end. Mutual stipulations by treaty seem to be the most obvious means, and for this reason your memorialists would have applied to the Executive, had it not seemed to them that the legislative powers may also be properly and usefully exercised upon a subject so nearly connected with commerce, and with public morals. The passing of a law, conditional as to its operations, and referring to future stipulations by treaty, may produce the happiest effects, and would be an immediate recognition of this great and humane principle.

Your memorialists therefore pray that Congress may consider the subject, and adopt such measures as may seem to them most wise and expedient.

PRIVATEERING.

1. An Appeal to the Government and Congress of the United States against the depredations committed by American privateers on the commerce of nations at peace with us. By an American Citizen. New York, pp. 100. 1819.
2. A proposed Memorial to the Congress of the United States. Boston, pp. 8. 1819.

The writers on national law distinguish between rules deduced by just reasoning from certain principles, and those which derive their force from common usage and consent. The former are of universal obligation, and are properly the law of nature applied to communities of men. The latter "are fitted, not so much to the goodness of an uncorrupted nature, as to the wants of one that is depraved;"* they are neither binding upon all, nor at all times; they are brought gradually into use, are received by some sooner than by others, and may be changed without any violation of natural justice.

There is not much difficulty in defining the rights of property and the obligations of contracts, as they exist between nations. Public justice differs not essentially in these respects from private. The facts once settled, it is as easy to decide by what acts one nation has injured another in a state of peace, as to determine when the rights of one individual have been invaded or withheld by another; as easy to pronounce what is a just cause of war, if we allow war for any cause to be lawful, as to judge of the grounds of a lawsuit. In most cases, indeed, it will be found that neither party in a war is entirely right nor entirely wrong, and through the mist of mutual crimination and defence, manifestoes, answers, insults, and aggressions, it will be difficult to discern the first offence. But this is a difficulty not attributable to any defect or uncertainty in the code of public law.

But there is also a law of war, and it forms by far the most important branch of the *jus gentium*. Whence is this to be deduced? How far are the reciprocal rights and duties of nations at peace destroyed by a state of war, and what are the new obligations that grow out of this state? What are the limits to the right of destruction, and how are they to be known? Who shall say to mad revenge, "It is enough—stay thy hand?" Where is the precise boundary, on one side of which are glory, and honor, and victory; on the other, rapine and murder? It will be obvious that there must be great uncertainty as to the extent of the power given to enemies over the persons and goods of each other, and that wars will be carried on with more or less cruelty, as nations are more or less advanced in humanity. Reason will afford little aid, and the restraint will be rather the effect of milder feelings than of more correct judgment. The conqueror will be deterred from a passionate and vindictive abuse of his power, more by the fear of being disgraced as a barbarian, than of being condemned as a violator of public law. What was once a theme of applause will in time be followed by reproach and shame. What is fit and right to be done towards an enemy will depend more on usage, varying at different times and among different people, than on any conclusions of reason. We would be understood to speak, as most writers on national law have done, without reference to the commands or the counsels of religion, whether natural or revealed. These writers seem to have adopted as a truth the poetic declaration, "nulla fides, pietasque viris qui castra sequuntur." They have proceeded upon false principles. As some political sophists have derived the principles of the social compact from a supposed natural state of men, when every one stood single and independent, free to give or retain that entire sovereignty which he enjoyed over himself; so jurists have sought in the condition of savage nature for the rights and relations of political societies. They have therefore considered a state of hostility as a dissolution of all ties, and a license to all mischief. An enemy, in their view, cannot be injured. Charity and humanity may be offended; the atonement exacted may be greater than would consist with that generosity and tenderness which we esteem men the more for possessing; but the sufferer cannot consider himself wronged, nor is any positive and binding law broken. "It stands to reason," says Heineccius, "that against an enemy all things are permitted."† And Puffendorf thus explains both the rights of belligerents, and the restraints which humanity would impose upon the exercise of them: "From the moment that any one declares himself our enemy, since we have every thing to fear on his part, we are authorized, as far as in us lies, to use acts of violence against him to any extent,‡ and with no other limit than our will;§ but humanity requires, that, as far as the rules of military art allow, we do no more injury to an enemy than is necessary for our defence, for the vindication of our rights, and for our future safety."—"Non id solum considerari vult, quid hostis citra injuriam possit pati, sed et quid humanum, adde et generosum victorem facere deceat." Grotius, indeed, limits the rights of war to what is necessary for attaining the end proposed, whether of self-preservation, just reparation, or merited punishment.—*Lib. 3. cap. 1.* But this, however just in theory, is too indefinite to afford any practical rule; especially when it is considered that hostilities are allowed to be continued until satisfaction is obtained, not only for the original wrong which was the cause of the war, but for all the expense and injury sustained in prosecuting it. And we learn from the same enlightened and benevolent jurist, that, "by the laws of nations, the possessions of one party in a war are to the other, in all respects, as things without a proprietor,"|| and that "all are accounted slaves who are made prisoners in solemn public war,"—"nor is an offence necessary, but the lot of all is the same, even of those who, on the sudden breaking out of war, may be so unfortunate as to be found in the enemy's country."¶ Cocceius, the commentator of Grotius, goes somewhat further, and maintains that "an enemy is to be regarded as a criminal deserving of death: hence, when the Government declares war against any one, by that very act it gives to every citizen the right to inflict on him any degree of evil, to lay waste and plunder his possessions," &c. Let us not, however, forget what we owe to Grotius. The lessons of moderation and humanity which he gave as admonitions, have so approved themselves to the reason of mankind, that they have acquired the force, if not the character, of laws; and cruelties, of which he contented himself with saying, "certe omittantur sanctius, et cum majori apud bonos laude," would now cover with disgrace the conqueror who should practise them.

Thus have the rights of war been deduced from the assumed position that an enemy cannot be injured; that, by the injustice or violence which gave occasion to the war, he has forfeited all rights and become as an outlaw; that his life, liberty, and property, are at the mercy of the conqueror; that to spare may, indeed, be praiseworthy, but cannot be enjoined as an act of justice. And, as between nations there is no arbiter, each party in the war has all the rights of the injured, and is subject to all the penalties of the guilty. Justice must always be presumed to reside with good fortune or superior strength. Every subject, too, of the warring state, however ignorant he may be of the causes of the war, however peaceful and unoffending, has incurred a deadly guilt in the acts of his superiors, and is the object of unsparing vengeance and unlimited punishment. Whatever temperaments have been admitted in the conduct of wars, have been the result of feelings and notions of humanity more or less refined, and views of policy more or less enlightened, as different degrees of knowledge and improvement have prevailed. "Every people have a law of nations. The Mohawks even have theirs. They eat their prisoners, it is true, but they send and receive embassies, and acknowledge the rights of war and peace; the mischief is, that their law of nations is not founded upon true principles."—*Montesq. Esp. des Loix, liv. 1. ch. ii.* What Barbeyrac, in his eloquent and beautiful discourse on what the laws only permit or allow, has said of civil laws applies with still greater force to national jurisprudence: "We learn from the monuments of antiquity, that the first laws had scarcely any other origin than custom, which is often a wretched master: Rules thus introduced are commonly established with little examination or reflection. Ignorance, prejudice, passion, example, authority, caprice, have manifestly a greater share in producing them than reason. It is rather the opinion and decision of a blind multitude than that of the wise and virtuous."

Had religion and the morality of the gospel been made the foundation of the rights and duties of States, in war as well as in peace, it is probable that many customs derived to us from ruder ages, perhaps even war itself, would long since have disappeared. But rights have been sought for in another source, and religion has been permitted to interpose her counsels, not her authority, to moderate the use of that power, which reason and nature have been thought to bestow. Is it not probable that some usages yet remain, which habit and prejudice, and an imaginary interest alone, prevent our regarding with the same abhorrence with which we should now look upon the reducing of captives and their posterity to perpetual and irredeemable slavery? Have we yet confined the license of war within those bounds which the law of charity would assign to it? Do we not even receive as principles of justice some things which have no better support than the practice of earlier and less enlightened times, justified by an artificial reasoning, which, taking things as they are found, invents a plausible defence for whatever custom allows?

We have made these remarks more especially with a view to the practice of privateering. It is matter of just astonishment that a species of warfare so repugnant to all our better feelings, so estranged from all that is deemed noble and honorable among men, should so long have prevailed. It is a practice which can boast nothing of the chivalrous spirit which we have been taught to admire in the warrior. It begins and ends in pure unmixed selfishness. It seeks neither fame nor power, but wealth—wealth, not the fruits of patient industry or honest skill, but wrested by the hand of violence, or stolen by surprise and stratagem. It makes every other consideration yield to a sordid avarice. In its greediness it hardly distinguishes between friend and foe, and is ever ready to pounce upon its prey, whether it be the property of an enemy, or that of a fellow-citizen, which, by the rigid rules of war, has become the subject of confiscation as prize. The means which it employs are not less cruel and disgraceful than its purpose is unworthy. It can make its way through blood to the treasure it goats upon, lure by false smiles to destruction, advance securely to its object under the guise of friendship, ensnare by treachery, deceive by perfidy, and secure its unrighteous gains by shameless perjury. Not that every one who engages in this practice is under the influence of the vilest passions, insensible to shame, or stained with the blackest crimes. Many, we doubt not, whose lives prove them to be friends to religion and humanity, and who would scorn to enrich themselves by fraud or dishonesty, have adventured in privateering without reflecting upon its nature and tendency. They have been deceived by the legality of the practice. Perhaps, even they have persuaded themselves that, while they improved their own fortunes, they were displaying a patriotic zeal for the service of their country. As long as privateering is countenanced and encouraged by public authority, there will be many estimable men, who, looking no further than to what the law allows or forbids, are blind to the immorality of preying upon their fellow creatures. A solemn responsibility, then, rests upon those who govern. Nations, by a common consent, should relinquish a custom so inseparable from abuse and licentiousness; so vexatious to commerce; and so little under the control of wholesome laws.

There is no doubt that great antiquity may be pleaded for the practice of plundering. For several ages after the irruption of the Northern barbarians, war and plunder might almost be considered as individual rights. Every petty baron enjoyed the privilege of taking up arms, and every vassal was free to seek his fortune in predatory incursions upon the enemy, whether by land or sea. The infidel powers, which bordered the Mediterranean, covered that sea with small piratical vessels; and the Christian states, whose commerce suffered from their depredations, partly in self-defence and partly in the hope of gain, fitted out small cruisers, or armed their merchant ships. It was most common for many persons to unite for this purpose in a sort of partnership. No public commission was required. Against infidels it was the right and duty of every Christian to wage incessant hostility, and to do them all possible injury.* At the same time the inhabitants of the North sent their fleets to make descents upon the coasts, and enrich themselves with the wealth and luxuries of the South.† They were most often conducted by private adventurers, whose bravery or skill caused them to be selected as chieftains. Piracy was a common trade, and the word was far from carrying with it the ideas of criminality and disgrace which we now attach to it. Selden cites a passage from Asserius, who was the preceptor of King Alfred, in which he says that this "prince caused long ships to be built for the purpose of defence against enemies approaching by sea—*impositisque piratus in illis vias maris custodiendas commisit*;" on which Selden remarks, that "this word 'pirates' is not here used for robbers, as it now commonly is, but for such as attacked the enemy's fleets in naval warfare."‡ So the term "corsair," from the Italian *Corsò*, is the generic term of pirates and privateers. (*Martens on Privateers, page 2, note.*) The truth is, that in an age when the obligations of humanity were neither acknowledged nor understood, and every person might make such use of his strength, or his cunning, as seemed to him best, so as he did not invade the property of those to whom he was bound by the tie of a common allegiance; and when the sanction of the prince was not necessary to enable private persons to attack and plunder the enemy, there could be no distinction between authorized and unauthorized depredations on the ocean. "The Gauls," says Cleirac, "*regarded all strangers as enemies, and not only robbed them of their goods, but put them cruelly to death, offering them, as bloody sacrifices, to their false gods.*"§ And Boucher: "In the height of the feudal anarchy, that is to say in the ninth century, every person might act the part both of judge and executioner, without any incompatibility in the two conditions, and without disgrace. *At that period mariners were a set of robbers.*"—*Consulat. de Mer. vol. 1. p. 74.* The inhuman law of wreck, first relaxed in England by the act of Henry I, providing that the property should be saved from forfeiture, if any person escaped alive from the ship, is a memorable instance of the same savage state of manners.—*See Hume, reign of Henry II. Black. Com. chap. 8. book i. Boucher, Consulat. de Mer. vol. 1, p. 490.*

It is in vain, then, for the apologists of privateering to have recourse to these remote ages in support of the assertion that the practice has long or always existed.¶ Even were antiquity a less doubtful plea than it is, the argument proves nothing, but that in those benighted ages men robbed of their own heads, and that, in these more civilized times, we have so far improved, as to sanction the proceeding by public authority. The modern practice is better than the ancient, inasmuch as some excesses may now and then be prevented by the control of the Government over privateers, and it is convenient to be able to denote piracy by the absence of a lawful commission: but the question remains, whether it is morally right, or politically expedient, for Governments to grant such commissions, or for individuals to act under them? And this question can never be answered by saying that men were accustomed to rob for a long time, before it began to be necessary to have a public commission for doing it. It was found necessary to impose restraint upon private and unauthorized violence, even between the subjects of hostile powers. This was a declaration, that the ancient practice was only fit for a state of society as barbarous as that in which it existed. Something, doubtless, has been gained by the restrictions of acts of war to those whose hands are armed by the sovereign power; but whether this gain has been great, or the most essential evils connected with private plunder have been remedied, let history speak. We appeal to the loud and incessant complaints of neutrals, of whose commerce privateers have been justly called the scourge; and to the tortures and cruelties inflicted by these "judges and executioners," of which the annals of privateering, ancient and modern, afford so many examples.

It is probable that the practice of nations, in the disputes arising between them or their subjects, has followed the same course of improvement with their municipal laws. Every one, who has attended to the history of criminal jurisprudence, knows that, not many ages since, every individual possessed the power of punishing, and the aveng-

¶ See note to Martens on Privateers, page 20. Willenberg derives privateers from Theute, Queen of Illyria, and Valin maintains that they have existed at all times.

ing of wrongs was left to the injured party or his friends.* But as the world grew wiser and more inclined to peace, a check was put on the right of private revenge, and tribunals began to inquire into the fact, and to measure the punishment in proportion to the guilt. So, among nations, the frequent broils occasioned by the hostile attempts of individuals, gave rise, by degrees, to the custom of granting letters of reprisals. At first, doubtless, they were only given in a few instances, and subjects continued to attack and plunder without asking the permission of the sovereign. The *Consolato del Mare* contains an entire chapter regulating, with great precision, the conduct of armed cruisers, and the division of their plunder. Not a syllable appears of any public commission being necessary, or even a judicial condemnation of prizes. The publication of the first Catalan edition of this collection is supposed by Boucher to have been about 1494, and he carries the compilation as far back as the beginning of the tenth century. But its origin is fixed with more probability between the years 1250 and 1266.† This code is commonly supposed to have been first compiled in Barcelona; and it is in the Mediterranean, where commerce was preyed upon by the Barbary corsairs, that we should expect to find the practice of private cruising most prevalent. Letters of marque and reprisals were issued upon the petition of a subject, who complained of injustice done to him by some foreign prince or subject, and they empowered the party receiving them, whether an individual or a community, to obtain satisfaction by seizing the goods of any subject of the offending state. They were limited to the restitution of what had been unjustly taken or withheld, or compensation in damages for the injury suffered. Reprisals are sometimes spoken of, as a means of preserving peace, because wrongs were thus remedied by a sort of violence, which is compared to that used in the execution of legal sentences between subjects of the same state, without the extreme resort of war.‡ The earliest instance of reprisals recorded in England, was in 1295, when Edward I. granted to a subject, "licentiam mercandi homines et subditos de regno Portugallie et bona eorum per terram et mare."—*Rymer, vol. 2, page 691. Anderson, vol. 1, page 136.* It does not seem to have been considered necessary to be provided with letters of reprisals until the fourteenth century, and no mention is made of them in treaties prior to that time.—*Martens, note, page 10.* The right of making reprisals is said to have belonged to every magistrate, and even to private subjects, until the reign of Charles VII., in France.—*Puffendorf, de Jure Nat., &c., lib. 8. chap. 9. sec. 13. note 2.* A law was made in France concerning them, in 1345.—*Martens.* There are frequent instances in *Rymer*, in the fourteenth and fifteenth centuries.¶ An act of the English Parliament, of the year 1353, 27 Edward III., provides, "that no foreign merchant shall be troubled or impleaded, &c. provided, that if any of our liege subjects, merchants, or others, be injured by any lords of foreign lands, or their subjects, and the said lords, upon due request, refuse to do justice, we shall have the right of mark and reprisals, as has been used in time past."—*Martens, page 12, note.* An ordinance of Charles VI. of France, of December 7, 1400, forbids any subject to fit out ships at his own expense, for carrying on war against enemies, without license first obtained from the admiral or his lieutenant.—*Code des Prises, tome 1, page 1. Robinson, Coll. Mar. 75. Martens, page 18.** From this ordinance, and from other documents, it is probable, that in the fifteenth century commissions began to be issued to private subjects, in the time of war, similar to those which were granted for making reprisals in time of peace. They retained and still retain the name of "letters of marque and reprisal;" and, at this day, the issuing of them is often the first declaration of war. It is, however, very certain, that the practice of granting commissions to privateers did not become general before the end of the sixteenth century. The first instance, in which their aid appears to have been considered important in carrying on the war, was in the contest between Spain and her revolted provinces of the Low Countries, which began in 1569. In 1570, the Prince of Orange, in the hope of replenishing his impoverished finances by seizing on the money sent from Spain to the Netherlands, issued commissions to many of his adherents, authorizing them to cruise against the ships of Spain. A considerable fleet was equipped, and, increasing daily in number, they soon became terrible by their depredations, not only on the commerce of Spain and the Netherlands, but on that of their own and of other countries. It is said, that their country suffered from them not less than from the despotism and cruelty of Alva. As the confederated reformists had themselves been called in derision *gueux*, or beggars, † these free-booters were called *gueux de mer*, or sea-beggars.—*Eng. Univ. Hist. vol. xxvii, page 388.* Many of them were punished by Spain and other nations as pirates, not so much, it is said, on account of their excesses, as of the supposed illegality of their commissions.—*Martens, chap. 1. sec. 7.* The French, however, may probably claim the distinction of having first sent out, in any considerable numbers, these scourges of the sea. Their code exhibits the most ancient regulations concerning privateers; and, it is well known, that their maritime laws have always been the most severe against the commerce of neutrals. De Thou relates, ‡ that, in 1555, the French King, having received advice that several Dutch ships of great burden were returning from Spain, laden with every sort of valuable India goods, gave orders to the inhabitants of Dieppe, unquestionably the most experienced mariners in France, to equip such vessels as they could find in the ports on the coast of Normandy, and seize this rich fleet. The privateersmen of Dieppe, § having fitted out for cruising nineteen ships and six brigantines, under the command of Epineville, a celebrated mariner, met the Dutch opposite to Dover. A most obstinate battle ensued, which lasted six hours. Many ships on both sides were burned; the flames drove the French from their own ships into those of the enemy, and, having more men, they made many of them prizes. The Dutch lost a thousand men, and the French four hundred.

The English seem not to have been slow in imitating the example set them by the French and Dutch. In the year 1586, we are told by the author last quoted, ¶ before war had been declared between England and Spain, Philip II. seized and confiscated the goods of the English merchants. The English, under pretence of reprisals, set themselves to pirating over the whole ocean, harassing the navigation not only of the Spanish and their allies, but even of the people of the Low Countries, whom they robbed without distinction. The merchants of the United Provinces in vain sought redress in the English admiralty. But the Queen, Elizabeth, wearied by the complaints which came to her from all quarters, made severe regulations, requiring cruisers to give security not to meddle with any ships but those of Spain, and not to dispose of their prizes till they had been regularly condemned in the admiralty. "The piracies," says De Thou, "were checked for a time by these decrees; but means were soon found to

evade them, under pretence of privileges, or by means of subtleties, which persons in power connived at."* Spain and England, shortly after the depredations committed under the commissions of the Prince of Orange, issued commissions to great numbers of privateers. The expeditions of Drake and Frobisher are said to have been of this nature. † In 1625, James I. found it necessary to issue letters patent addressed to the High Admiral, reciting the great losses and damages sustained by many of his subjects, by the surprising and taking of their ships and goods by the subjects of Spain in the Low Countries, and by those of the States General, and that justice having been demanded in vain, his subjects had made humble suit to him for letters of reprisals. He therefore requires the admiral to grant commissions for taking the ships of the Low Countries and States General to such of his subjects as had been so damaged. ‡ In 1627, Charles I. granted reprisals against the French to such of his subjects as had had ships or goods taken by the French, and a war followed in the same year.—*Anderson, vol. ii. p. 27.* In that same year, too, we are told that Charles was obliged to fit out an armament to protect the coal trade against privateers from the Spanish Netherlands.—*Anderson, vol. ii. p. 29.* The Dutch war for independence ended in 1648. Towards the close of it, in 1643 and 1645, the *placarts* or decrees of the States General held out great encouragements to privateers.—*Martens, 26.* In that long continued contest, the use of these instruments had become familiar. Treaties and laws were made for defining their rights, and preventing the abuses to which they were found to have so strong a tendency.§ But new discords kept alive the spirit of plunder, and privateers still found favor, as a cheap means of carrying on war through the instigation of private avarice. In 1634, disputes began between the English and Dutch. The northern fishing, and the sovereignty claimed by the British in the narrow seas, were the chief subjects of contention. England, in the mean while, was disturbed by civil wars, and the parliament party was not likely to omit any means of annoyance which had heretofore been employed with success. In 1643, exasperated by the cessation of arms in Ireland, "they forbade all masters of ships to bring over any officers or soldiers, on penalty of the forfeiture of their vessels, and gave letters of marque to merchants and others who would fit out ships at their own expense, empowering them to take to their own profit all such ships and goods as they should meet coming over with soldiers or warlike stores for the King."|| The friends of the King were not slow in retaliating this measure, for in 1644 the goods of the merchants trading in France were seized, and letters of marque granted against all that adhered to the Parliament.—*Whitelocke, p. 130.* Of the activity of private cruisers in the hostilities which ensued, the reader may satisfy himself by referring to the book last quoted, where he will find instances of mutual depredation more numerous than we have any disposition to record. Doubtless, the practice was attended with much abuse and licentiousness. In the year 1650, April 16, "an act passed for preventing wrongs and abuses done to merchants at sea, and prohibiting mariners from serving foreign princes or states without license."—*Whitelocke, p. 451.* Soon after this, in 1652, the Parliament and the Dutch came to open hostilities, and an active course of privateering commenced between them.¶ From their near neighborhood and their former habits, there can be no doubt that during this two years' contest they kept up this sort of warfare in its worst form. The restoration of the King made no alteration in the policy of the English, as it respected their rivals, the Dutch. The scheme of maritime superiority was carried on in the same spirit which had dictated the navigation act. Privateers found great favor in the eyes of the court,* and the passage we are about to quote from the Life of Clarendon will show that this is an important epoch in the history of the practice. It is the more remarkable, as it is from the pen of that virtuous chancellor himself. It relates to the period, 1664, when the ministers of Charles II. provoked a new war with the Dutch, in the prosecution of their great design of becoming the exclusive masters of commerce.

"It was resolved, that all possible encouragement should be given to privateers, that is, to as many as would take commissions from the admiral to set out vessels of war, as they call them, to take prizes from the enemy; which no articles or obligations can restrain from all the villany they can act, and are a people, how countenanced soever, or thought necessary, that do bring an unavoidable scandal, and it is to be feared a curse upon the justest war that was ever made at sea. Besides the horrible scandal and clamor that this class of men brought upon the King and the whole Government for defect of justice, the prejudice which resulted from thence to the public, and to the carrying on the service, is unspeakable. All seamen run to them, and though the King now assigned an ample share of all prizes taken by his own ships to the seamen, over and above their wages, yet there was a great difference between the condition of the one and the other. In the King's fleet they might gain well, but they were sure of blows; nothing could be got there without fighting. With the privateers there was rarely fighting. They took all who could make little resistance, and fled from all who were too strong for them. And so these fellows were always well manned, when the King's ships were compelled to stay many days for want of men, who were raised by pressing, and with great difficulty."—*p. 242.* From this time privateers have been common in all wars between maritime countries, and Governments have endeavored, by the most liberal encouragements, to increase their number and whet their thirst of plunder. At the same time, the evils suffered from them, and the loud complaints of neutrals, have caused various expedients to be resorted to for checking their excesses, while their use has been continued. The great increase and wider extent of commerce have added to the opportunities and the temptations

* See in Robinson's Coll. Mar. a proclamation of Elizabeth, of the year 1602, reciting the great extent of the piracies complained of, and forbidding any man of war to be fitted out without license and surety. The preamble refers to other laws and orders lately published, "upon the growing on of these fowl crimes and piracies colored by other voyages." And in the Statuta Admiraltatis of Master Rowghton, printed in Clerke's Praxis, p. 161, we have an ordinance of 1591, requiring presentment to be made of all those that *since the late proclamation* have had traffic with the leaguers in France, and of all who have set out ships without commission, and to inquire what ships and goods have been taken at sea without commissions, and of breaking bulk and disposing of prizes before sentence of the admiralty, and what captains, &c. under color of commissions of reprisal, have boarded, taken, &c. ships of England, France, &c. Holland, Zealand, &c.

† *Martens, p. 26.* And in the debate upon Pulteney's act for encouraging privateers, 1739, Pulteney argues from this, as an instance of the spirit and power with which private adventurers could act. "It was," he says, "to private adventurers that all the success of Sir Francis Drake was owing."—*Parl. Deb. vol. xvii. p. 415.* We have great doubts, however, whether these expeditions are to be classed with cruises of privateers. Drake's was an expedition fitted out for the purpose of attacking Spain in her home dominions. Elizabeth furnished about £30,000 and several ships, and Drake and his associates supplied the residue. The spoils were to be equally divided between the Queen and the fleet.—*De Thou, vol. x. p. 693.* There is an important difference between the employment of ships equipped at private expense, but hired by the public, and sailing in fleets with the public forces, under the government of naval officers, and cruises performed by one or more ships under the orders of private adventurers.—*See also Lee on Captures, p. 199.* It seems to have been an ancient practice to use in warlike expeditions ships under the wages of the King, and to give them a part of the prizes. See the ancient articles of the admiralty subjoined to Clerke's Praxis, p. 163, A. 19.

‡ *Rymer, Fr. Ed. vol. vii. part 4. p. 185.*

§ *Martens, p. 26.* Voet ad Pand. vol. ii. p. 602, speaks of the "naves privatorum prædatorias permissione ordinum instructas," and cites the Admiralty instructions of 13th August, 1597, and decrees of 1st April, 1602, and 28th January, 1631, and he adds, that the decrees of the 9th August, 1624, and 22d October, 1627, required all prizes to be brought into port before breaking bulk, "that the republic and others might not be defrauded of their due portion of the plunder."

|| Neal's History of the Puritans, ch. 12. *Whitelocke* says, "they granted letters of marque against all such as had taken up arms against the Parliament, or assisted the Irish rebels."—*Memorials, p. 76, year 1643.*

¶ July 19. New letters of marque granted by the states against the English. 12th August. A Dutch private man of war taken and sunk by two English ketches.—*Whitelocke, p. 539—541, and see pages 545—547.*

* This may be inferred from the treaty made between the Dutch and Charles II. in 1674, which *Postlethwait [Dict. Art. Privateer]* says "is fit to be a standard to all nations." The preamble runs thus: "and whereas the masters of merchant ships, and likewise the mariners and passengers, do sometimes suffer many cruelties and barbarous usages when they are brought under the power of ships which take prizes in time of war, the takers in an inhuman manner tormenting them, thereby to extort from them such confessions as they would have to be made, it is agreed that both his Majesty and the Lords, the States General, shall, by the severest proclamations or placarts, forbid all such heinous and inhuman offences, &c." There was an article with France to the same purport, in the treaty of Utrecht.

for growing rich by this sort of authorized violence; and it has hitherto been found impossible to impose any effectual restraints upon forces of so low a character, and called into action by motives so unworthy and sordid.*

From this historical deduction, it appears, 1st. That the practice of privateering is truly what it has been called, "a remnant of the ancient piracy," and has its root and origin in the general licence of plundering, which we justly regard as the vice of a barbarous and lawless age. 2d. That the public commissions, under which it is now carried on, were expedients adopted when the world began to assume a more regular and settled form; the first step towards a state of society more consistent with reason and humanity. 3d. That at first, letters of reprisals authorized the seizing of goods on the land, as well as at sea.† 4. That the first notice we have of privateering to any considerable extent, is the measure to which, in the outset of the war of the Netherlands, poverty and revenge drove the Prince of Orange; and that these privateers became notorious for their piratical depredations. If, before that it was practised by the French, it was not under circumstances more honorable, nor with less cruelty. 5th. That the practice has always continued to answer well to its original; privateers having been, in earlier and later times, the 'scourges of neutral commerce,' a continual theme of complaint to neutral powers, the causes of new wars, subjects of negotiation in treaties, and of frequent restrictive laws; but still eluding all attempts to put a stop to their abuses, and reverting to their primitive character.

It is now time to turn our attention for a moment to the practice of war upon land, and here we are at once struck with a strange difference in conduct and opinions. It would seem, that while we have been growing more refined and generous in hostilities by land, we have certainly not improved, and it is to be feared, have even become less attentive to considerations of equity and humanity, in our maritime warfare. We can claim, in this respect, no superiority over the men of two centuries ago. Like them, we set upon the peaceful merchant to rob him of his property, and if those to whom he has entrusted it defend it faithfully, we suffer no tenderness for life to keep us from our booty. On the land, do we ever hear of an honorable commander's delivering up to pillage a captured city, unless induced by some extraordinary violation of the rules of honorable warfare in the enemy? Does he ever seize the merchandise of the inhabitants, or disturb them in the exercise of their trades? Why, then, on the sea should captured ships and the goods they are freighted with, pursuing peacefully their course, and engaged in the useful interchange of the products of different lands, become a prey to the rapacious cruiser? The most that is allowed upon the land, is the exaction of a tribute, and even of this we suspect the instances are becoming rare, and it is regarded as somewhat disgraceful. But even if the commander of an invading army forbears to touch any property, but that of the sovereign, what should we say if bands of private adventurers were commissioned to enter the enemy's borders to rob and pillage for their own profit? Should we not regard it much in the same light as we should the use of poison, or assassination, or infernal machines?‡

How, then, shall we reconcile this inconsistency? A late writer has, we think, given the true account of it. The jealousy of commerce has entered much into all the wars between maritime countries from the time of Cromwell's war with the Dutch. To exhaust the commercial resources of the enemy, and so to cripple his trade, that he may not be able to resume it upon fair terms of competition, when peace shall be restored, has been one of the objects proposed by one or the other of the belligerent Powers. Privateers, as the most destructive assailants of commerce, have, for this cause, been encouraged and protected, and the exemption granted upon the land to the property of peaceful subjects has been denied at sea. "From thence arises that striking inconclusiveness, § [inconsistency] which has been so frequently declaimed against, that whilst in wars on the continent, the civilized nations of Europe (so long as they do not betray that character) endeavor to make the burden of it fall as lightly as possible on the peaceable subjects of the enemy, and that they respect their property in consideration of a contribution levied by authorizing pillage only in some extraordinary cases, the barbarous practice has been retained, in maritime wars, of depriving hostile subjects of their ships and their cargoes by prohibiting now, almost universally, the acceptance of a ransom."||

—*Martens on Privateers*, p. 22.

That some cause, like that here suggested, has retarded the progress of civilization in the customs of maritime war, can hardly be doubted, when we consider how many of the most distinguished writers, ancient and modern, have declared their disapprobation of the practice of privateering. To begin with Albericus Gentilis, who was professor of law in one of the English universities, from the year 1582 to his death in 1608. Privateers, as we have seen, had then first begun to be used to any considerable extent, and to be recognized by stipulations in treaties.* Gentilis, in his book *De Advocacione Hispanica*, speaks of them under no other name than 'pirates', and will not admit them to be entitled to any better consideration. Grotius says, it is worth inquiring how far the right of private captures may be carried, without violating internal justice or charity.† And after showing that, by the law of nature, no injustice is done to the enemy, if the plunder be confined to a compensation for the injury which caused the war, he adds, that, "although justice, strictly speaking, may not be violated, yet there may be an offence against that moral duty which consists in loving others, as by the law of christianity we are especially commanded; as if it should appear that such depredation will fall, not upon the hostile commonwealth, or the sovereign, or those who are in themselves guilty, but upon the innocent, and that it will reduce them to such a measure of distress as it would not be lawful for us to inflict even upon our private debtors. But if, in addition to this, such depredation will neither be of great effect in putting an end to the war, nor in cutting off the enemy's strength, then, indeed, an honest man, and more especially a christian, will scorn to profit by the calamity of the times."—*Lib. 3, cap. xviii. § 4.* From this and other passages of Grotius it cannot be doubted in what light he regarded privateering as in fact carried on. We have already quoted the opinion of Clarendon, than which none can be entitled to greater respect. The treatise of Molloy, *De Jure Maritimo*, was first published in 1676; many editions have been published since that time, and its reputation is deservedly great. "Most certain," says this writer, "these sorts of capers, or privateers, being instruments found out but of later ages, and it is well known by whom, it were well they were restrained by consent of all princes; since all good men account them but one remove from pirates, who, without any respect to the cause, or having any injury done them, or so much as hired for the service, spoil men and goods, making even a trade and calling of it, amidst the calamities of war."—*Book 1. chap. iii. § 15.* The compilation, entitled "Sea Laws," was published early in the last century. We find in it this passage: "Our laws take not much notice of these privateers, because the manner of warring is new and not very honorable, but the diligence of our enemies in this piratical way obliges us to be also as diligent for the preservation of our commerce"—p. 472. So Beawes, whose *Lex Mercatoria* was compiled in 1750, "The use of these sort of vessels we were taught by our neighbors, and obliged by their example, to encourage them," &c. p. 207. Loccenius, who was professor at Upsal in 1670, seems, like Gentilis, to have known no distinction between privateering and piracy.

* Immediately after the war of 1756 had commenced, the English privateers began to swarm in the channel, and to commit depredations upon the commerce of friendly nations. The Dutch complained, and in 1759 an act was passed, prohibiting commissions to any vessel under one hundred tons burden and forty men.—*Snollett's Contin. vol. vi. p. 151—294.*

† See letters granted by Edward I. ante, p. 175, and the form in Rymer, vol. iv. part 1. p. 161, French ed.

‡ As to what are unlawful arms, see Martens, *Précis du Droit des Gens*, t. ii. p. 351. and also as to the difference in the rules respecting property on land and at sea.

§ We copy from the English translation, published in 1801.

|| It appears that in Holland, by an edict of the Earl of Leicester, of 4th April, 1586, all captures, whether by land or sea, were brought before one tribunal, and the counsellors of the States of Holland formerly, as appears from their ancient forms in 1590, adjudged upon the plunder obtained by the soldiers on the land. But, says Bynkershoek, 'I do not find this in their new form, 4th October, 1670, nor is it observed in practice.'—*Quest. Jur. Pub. lib. i. cap. 18.*

* Bynkershoek, Q. J. P. lib. i. cap. 18. seems to refer the origin of privateering to the war of the United Provinces with Spain, for he mentions no earlier instance. "Olim in Belgio federato fuerunt privati, qui ipsi naves bellicas exercebant, quibusque, præter premia, ex captis et recuperatis navibus redacta, ex publico arario numerabatur certa pecunia pro modo expensarum, et pro modo temporis, quo operam bellicam præstabant. Illa naves privatourum dicebantur *Kruyssers*, iisque adversus Hispanos cum maxime usi sunt Ordines Generales."

† "Id vero quatenus procedat, illa sua justitia interna et charitate, non immerito quaritur."—*Lib. 3. cap. xviii. § 2.*

His words are, "When a naval war is unavoidable, it is far better to assail the enemy with domestic levies or hired marines, under officers and discipline, or to depend on the aid of allies, than to give license to pirates, the vilest of mankind, who, once authorized to plunder, soon forget all restraint, and spare not even friends, nor those who have never injured them or their employers."* If we come down to more modern times, we find Mably and Galliani,† supporting the justice and expediency of exempting commerce from the calamities of war. But especially Linguet, whose essay we would quote entire, if it were possible, has exposed, in the clearest manner, the absurd contradiction in practice, to which we have already referred.‡ "It is," to use his words, "one among a thousand proofs of the confusion, barbarism, and extravagance of all our principles, of every sort. Whence comes this difference between fleets and armies, squadrons and regiments, corsairs and hussars?" He thus concludes a glowing description of the circumstances which principally give a character to privateering: "It is cowardly, for its object is to attack the unarmed; it is odious, for it has no other principle than a base self-interest; it is barbarous, for the flying merchant ship is compelled to submit by murderous broadsides; nor is it uncommon for a part of the crew, at the moment of striking the flag, to be slaughtered by the balls that brought the order for striking." Martens has expressed himself in language not less clear and decisive. "Glory and duty call an officer to fight the enemy, whenever the interest of his sovereign is concerned, and honor is the best reward for his labors and his dangers; it is not so with the privateer. Indifferent to the fate of the war, and often of his country, he has no other inducement but the love of gain, no other recompense but his captures and the prizes conferred by the state on his privileged piracies. To encourage individuals to fit out privateers at considerable expense, it is necessary to present them the allurements of a rich booty, and, by prescribing them a moderation, which they are fully determined not to observe, not to intimidate them by imposing on them too many restrictions."—p. 24. The opinion of Dr. Franklin we shall have occasion to quote hereafter. The apologists of privateering have, we believe, rested its defence on the sanction given to it by law, and have contented themselves with showing that there is a real and substantial distinction between privateers and pirates. Azuni, one of the latest and most distinguished of these apologists, after mentioning the opinions of Galliani and Mably, adds, that he respects their opinion, and would adopt it "if he were speaking as a mere philosopher."

It is wonderful, when we consider how much the commerce of neutrals has suffered from privateers, that more frequent efforts have not been made to put a stop to the practice by the general consent of nations. Our own history furnishes indeed a fact which cannot fail to gratify the feelings of an American. "As early," says the Memorial before us, "as 1785, the celebrated philosopher, Doctor Franklin, in a letter to a friend, observed that the 'United States, though better situated than any other nation to profit by privateering, are, as far as in them lies, endeavoring to abolish the practice, by offering, in all their treaties with other Powers, an article engaging solemnly that, in case of a future war, no privateer shall be commissioned on either side, and that unarmed merchant ships on both sides shall pursue their voyages unmolested.'"—page 6.¶ It was accordingly stipulated in the twenty-third article of the treaty with Prussia, in 1785, as follows:

"And all merchant and trading vessels employed in exchanging the products of different places, and thereby rendering the necessaries, conveniences, and comforts of human life more easy to be obtained, and more general, shall be allowed to pass free and unmolested; and neither of the contracting powers shall grant or issue any commission to any private armed vessels, empowering them to take or destroy such trading vessels, or interrupt such commerce."

Martens* has taken notice of this article, adding that this "example, worthy of imitation, has not been hitherto followed by other States." Doctor Franklin, to whom, doubtless, the credit of this humane scheme belongs, has elsewhere expressed his opinion in emphatic terms. The author of the Appeal, mentioned at the head of this article, quotes a passage from the propositions relative to privateering, communicated by Doctor Franklin to Mr. Oswald, January 14, 1783, in which the principal reasons of policy for abolishing the practice are forcibly stated.

"It is for the interest of humanity in general that the occasions of war, and the inducements to it, should be diminished. If rapine is abolished, one of the encouragements to war is taken away, and peace, therefore, more likely to continue and be lasting. The practice of robbing merchants on the high seas, a remnant of the ancient piracy, though it may be accidentally beneficial to particular persons, is far from being profitable to all engaged in it, or to the nation that authorizes it. In the beginning of a war some rich ships, not upon their guard, are surprised and taken. This encourages the first adventurers to fit out more armed vessels, and many others to do the same. But the enemy, at the same time, become more careful, arm their merchant ships better, and render them not so easy to be taken; they go also more under the protection of convoys; thus, while the privateers to take them are multiplied, the vessels subject to be taken, and the chances of profit, are diminished, so that many cruisers are made wherein the expenses overgo the gains; and, as is the case in other lotteries, though particulars have got prizes, the mass of adventurers are losers, the whole expense of fitting out all the privateers, during a war, being much greater than the whole amount of goods taken. Then there is the national loss of all the labor of so many men during the time they have been employed in robbing, who, besides spending what they get in riot, drunkenness, and debauchery, lose their habits of industry, are rarely fit for any sober business after peace, and serve only to increase the number of highwaymen and housebreakers. Even the undertakers, who have been fortunate, are, by sudden wealth, led into expensive living; the habit of which continues when the means of supporting it cease, and finally ruins them; a just punishment for their having wantonly and unfeelingly ruined many honest, innocent traders and families, whose subsistence was obtained in serving the common interests of mankind."

And in a letter to David Hartley, Esq. May 8, 1783—

"I do not wish to see a new Barbary rising in America, and our long extended coast occupied by piratical States. I fear lest our privateering success in the two last wars should already have given our people too strong a relish for that most mischievous kind of gaming mixed with blood."—*Private Correspondence*, p. 530. *Appeal*, p. 9.

The motives for abolishing this practice are so many that we hardly know where to begin stating them. If it were not in itself unjust and immoral, we would urge upon nations its inconsistency even with an enlightened policy; we would show that it can never be productive of any real advantage to either party in the war; we would call to mind the many seamen who are thrown by it into prisons, and thus taken from the service of their country;† we would speak of the difficulty of procuring sailors to man the fleets, or defend the coasts from invasion, when they are lured by the hope of plunder to embark in long and distant cruises; we would insist upon the discouragement of the naval service by the higher privileges which are granted to privateers; we would bring into view the loss of life, and the distress and poverty brought upon the families of seamen; we would ask for an instance in which privateers can be fairly said to have given essential aid in the prosecution of the war, or to have produced any serious impression upon the enemy's resources and strength; we would refer to the ill-will and jealousy excited in neutral nations by the vexation to which their commerce is exposed, from the eagerness of these marauders, and their unwillingness to return from a cruise without some evidence of vigilance and success. Lastly, we would leave it to his-

* "Sed et si belli maritimi necessitas incumbat, prastat delectis domesticis, aut militibus nauticis mercenariis, qui sub duce et disciplina degant, aut sociorum ope, quam colluvie pessimorum hominum, piratis, adversus hostes uti, qui licentiam spoliandi nacti, facile prescriptos fines excedunt; ut ne quidem amicis aut aliis, a quibus vel ipsi, vel eorum patroni nunquam lesi sunt, parcant."—*De Jure Mar. et Nav. lib. 2. cap. iii. § 4.*

§ See this able paper in *Annales Politiques*, tom. v. p. 518.

¶ Letter to B. Vaughan, Esq. Franklin's works, vol. ii. p. 448.

* *Essay on Privateers*, p. 31, note. The only instance of a similar attempt, mentioned by him, is that of the agreement between Sweden and the United Provinces, when at war in 1675, that neither they nor their allies should make use of privateers, but the agreement was not performed.

† It is said that, at the close of the war ending by the peace of Amiens in 1801, there were 30,000 French sailors in English prisons. (Bonnemant's *D'Abreu*, note, page 27.) It is well known what numbers of our seamen were thus lost to us for the time in the late war with England.

tory to decide, and challenge the experience of every nation, that has employed privateers in war, whether, on the whole, the national strength has not been impaired, and its resources diminished, by this expense of its treasure and force in the pursuit of pillage.*

Let these considerations be duly weighed by those, who allow of no rule for the conduct of nations, but the greater or less profit to themselves, or injury to their enemies, which this conduct may seem likely to produce. Let them reflect upon the words of Franklin, and remember that his opinion and his remarks were founded on experience acquired in a war, in which perhaps, if ever, privateering was a powerful means of annoyance in the hands of one of the parties. With those, who believe that the true interests of a nation can never be separated from a strict regard to religion and moral duty, there are other arguments of greater weight, than any which terminate in mere policy. With them it is enough to determine any action to be impolitic, to know that it is unjust.

What judgment, then, must we pass upon privateering, if we test it by the rules of a sound morality? We ask not, what will be its fate if judged of by the dictates of high and honorable feeling, of that elevated morality, which rises far above the ordinary sense of right and wrong, as it is found in the mass of men; we ask not that it should be condemned or absolved by the sentence of a nice and scrupulous conscience; we are ready to put the question fairly to the grossest and least reflecting of mankind, be they only honest and unperverted; and we doubt not, that when brought to view the subject in its proper light, stripped of the cloak which law and custom may have lent to it, the most uncultivated conscience will pronounce it unjust and disgraceful to grow rich upon the spoils of the innocent, to gather by violence the fruits of another's industry. If upon the breaking out of a war, every debtor should be declared released from debts due to the subjects of the hostile state, would that man be thought to possess common honesty, who would profit by such an advantage? But how much more palpable is the injustice of attacking, and bearing away as prize, the property of that enemy, not found in our own territory, but upon the ocean, the common highway of nations? Let it not, then, be said that the law of war has made it yours, and annulled the rights of its former possessor. This law is not the law of reason or conscience. It is a custom which has grown out of the selfish and revengeful passions of men, and has been handed down from age to age, receiving now and then some mitigations, by which it has approached nearer to what is suited to a rational nature, but still it is founded in violence, and only one of the few remains of the right of the strongest. Grant, that war is not in itself unlawful. Yet, in a ruder age than the present, it was said by one, who admitted the lawfulness of war, 'militare non est delictum, sed propter prædam militare, peccatum est.†' Of the justness of this distinction, who can doubt? It is the motive which determines the character of the action. And what motive has the privateersman but plunder?‡

Let us once more try this question by the principles of national law, as they are stated by Grotius and others, whose works are of acknowledged authority. It is in the first place to be observed, that there is no pretence of justice to support the practice of capturing private property in war, but what is founded on one or the other of the following principles: 1. That the wrong done extends to every subject of the injured state, and vests in him the same rights, as if that wrong were personal, and that every subject of the offending state is equally responsible in person and property for the injury done by his Government, or a fellow-subject, as if he were personally guilty. 2. That each party in the war is to be considered, as it respects other nations, to have a just cause of war. 3. That the war being just, every subject, having the authority of his Government, may pursue the enemy in all the modes of lawful warfare, and, if he do it at his own expense, may acquire property to his own use.§

But it is not, nor was it in the age of Grotius, pretended, that the right over the person and property of the enemy is unlimited. And, if we mistake not, these limitations will be found to be established as a part of the national code: 1. That the right to kill is limited to cases of extreme necessity, for the preservation of life and property, "and even this last," says Grotius, "to put men to death for the sake of perishable and uncertain possessions, though in strictness it may stand with justice, is irreconcilable with the law of charity." 2. That even in a just war, if more is taken than an equivalent for the debt, or the injury is either unjust, or else it is to be kept by way of pledge or security, without any change of property, and to be restored when justice has been obtained.—*Grot. lib. 3. cap. xiii. § 1.* 3. That certain classes of persons, among whom are cultivators of the earth and *merchants*, are to be spared.—*Lib. 3. cap. xi. § 10. and cap. xiii. § 4.* 4. That where the object of the war is to obtain restitution of what belongs to us, all the subjects are to be considered as sureties one for another; but where the object is to punish, none but the magistrates, who have refused to inflict punishment themselves, and the actual offenders, can justly be made to suffer.—*Lib. 3. cap. xiii. § 1.* 5. That the right of recourse to the goods of the innocent is only subsidiary, and humanity requires that we should not make use of it as long as there is a hope of obtaining justice without it.—*Lib. 3. cap. xiii. § 4.* 6. That we have no right to lay waste or destroy, unless with the design and reasonable hope of thereby promoting peace; and that if the same purpose can be otherwise effected, we have no longer this right.||

Now all these principles are violated by the practice of privateering; it assumes a right to kill, not for defending, but to obtain property; it has no regard to the injury done, but seizes whatever falls in its way, and that, not for the use of those who may have suffered from the depredations of the enemy, but for the profit of those concerned in the cruise; it has nothing to do with restitution, but takes with no other intent, than to enjoy a *plenum dominium* over the thing taken, be its value ever so great; it spares no class, much less the merchant, against whom all its attacks are directed; it regards all the enemy's subjects as game to be hunted, without any concern, who may have been the authors of the war; it hears to no distinctions between innocent and guilty, debtors and sureties, primary or subsidiary rights; it understands nothing, but that as much wealth is to be gotten as can be with impunity.

It would be easy to enlarge upon some of these topics, but the unexpected length of this article obliges us to abridge the argument. The distinction between those who bear arms and those who are engaged in peaceful occupations, and the principle that the latter are to suffer no more of the evils of the war than may be absolutely unavoidable, are now universally recognised. It is only in maritime warfare that they are not adopted in practice. The exemption, as it prevails in hostilities by land, comprehends all those whose occupations are of a peaceful sort: "quorum quæstus pacem amat, non bellum." It extends, of course, to those whose business it is to supply, by a mutual interchange, the wants of different countries. How it should happen that, the moment the merchant embarks his property upon the ocean—the moment he begins to exercise his trade in the very way in which it yields most benefit to the world, he loses the protection of all laws, and meets the same treatment, as to his property, with the pirate, whose ship is loaded with the gains of violence and treachery, is indeed unaccountable upon any supposition consistent with fairness and equity. "The canon," says Grotius, in enumerating the exempted classes, "adds also merchants; not merely those who have a temporary residence in the enemy's country, but those who owe him perpetual allegiance, 'nam et horum vita ab armis aliena est.'" Many of the opinions we have quoted go to the entire neutrality of commerce; and this would be only extending to the sea the humane principles long since

* The French editor of D'Abreu's treatise on Prize Law has strongly expressed the opinion that it is a mistake to ascribe great efficacy to privateers in war. See note, p. 27, Bonneman's translation.

† St. Augustin. Canon. Militare, 59, 1. "It is not a crime to war, but to war for plunder is sinful."

‡ In the letter before quoted of Dr. Franklin to B. Vaughan, Esq. (Works, vol. ii. p. 448,) are two instances of the judgment of an impartial conscience upon this subject: one of a Quaker gentleman, who was part owner of a ship, which the other owners thought proper to fit out as a letter of marque, and which took several French prizes. He took his share of booty, but employed an agent to find out by advertisement who were the sufferers, that he might restore what had come to him. The other is of the Scotch presbyterians, who, soon after the reformation, made an ordinance of the town council of Edinburgh, which is still extant, "forbidding the purchase of prize goods, under pain of losing the freedom of his burgh forever, with other punishment at the will of the magistrates, the practice of making prizes being contrary to good conscience, and the rule of treating christian brethren as we would wish to be treated, and such goods are not to be sold by any christian men within this burgh." This, it will be remarked, extends to all captures.

§ Grotius, lib. 3. cap. vi. Puffendorf, lib. 8. cap. vi. De Jure Nat. et Gent. lib. 2. cap. xvi. § 10. et seq. De Officio Hom. &c. Martens, Droit des Gens, liv. 8. chap. iii.

|| Martens, Précis, &c. tome ii. p. 349.

adopted on the land. The article already cited from our treaty with Prussia has been understood as giving protection against public as well as private ships.* Many of the evils connected with privateering are equally to be feared from public captures: the effects upon the habits and morals of seamen will be nearly the same; the cruelty and injustice are the same. A French writer, of the year 1744, has asked "would it not, then, be possible to revive the ancient custom of commercial truces, and to make war without involving in it commerce and mercantile navigation?" † It may be objected that, the greater the sufferings connected with wars the less ready will nations be to enter into them, and the sooner will they be disposed to return to a state of peace. But surely the experience of the world is against this. Wars were not less frequent, nor less obstinate, when it was thought lawful to enslave prisoners, to sack towns, and to put to the sword a garrison which defended itself to the last extremity. The argument would justify every degree of cruelty; it would justify the poisoning of streams, and the employment of assassins; it would introduce a law of war no better than that of the Mohawks. But if to make prize of the property of the innocent is in itself opposed to equity and good conscience, it deserves a double reproach when it is allowed to be done by privateers. Powers, in their nature oppressive, ought not to be committed to instruments so certain to make them more odious by abuse. ‡ A Russian treaty, of 1801, § prohibits to privateers the right of searching ships sailing under convoy. This cures some part of the evil, and it shows the light in which privateers are viewed. But the same reason should induce the entire suppression of them.

In all that we have hitherto said, we have gone upon the supposition that there is a just cause of war. But in every war, one party or the other must be fighting in support of an unjust cause. Terrible, indeed, is the guilt of the subject who, with no other end than private gain, attacks, kills, and robs the enemy, if, in doing this, he is at the same time abetting injustice and fraud. Grotius holds to complete restitution every general and soldier, who, in an unjust war, has assisted in the work of destruction.—*Lib. 3. cap. 10. § 3. &c.* Who, then, in any war, can feel so assured that his country is in no respect chargeable with injustice or rashness as to be willing, for the sake of plunder, to incur the hazard of so great a guilt? What Government can be excused in encouraging its subjects to put their integrity to so perilous a trial? And if there is guilt in fighting for a cause which we know to be unjust, is there not also guilt in plundering in one which we are not sure is just?

We had something to say of the effects of privateering upon the morals of the community, and more especially of seamen; of the taste which it gives for violence and bloodshed; of its breaking down the barriers by which property is defended; of its tendency to annihilate the distinction of mine and thine. But these consequences are too obvious, and have been proved by too recent experience, to need that we should labor to enforce them. They spring up in our path; they meet our view wherever we go; the land and the sea send forth their reports of murders and piracies, and daring robberies, as if the outcasts of society had become emulous of glory, and resolved to hide the disgrace in the magnitude and boldness of their crimes.

It is the laudable purpose of the writer of the Appeal to call the attention of the proper authorities in the United States to the numberless depredations committed upon the ocean by ships fitted out in our own ports, and sometimes, it is to be feared, by our own citizens. He has diligently collected the statements of writers on the laws of nations, and the provisions of the British and French laws in relation to piracies, and the accepting of commissions from foreign Powers; and he has reviewed our own laws for preventing armaments against nations at peace with us, pointed out their insufficiency, and endeavored to awaken attention to the importance of new restraints and prohibitions, and a more vigilant and thorough execution of those already existing. For all this he deserves the thanks of the public. Whatever may be thought of cruising against the enemies of our own country, there are few, we trust, who will not agree with Vattel, "that for strangers it is a shameful trade to take commissions from a foreign Government, for cruising against a nation perfectly innocent in regard to them. The thirst of gold is their only motive; and the commission they receive, however it may screen them from punishment, cannot wipe off their infamy." § It is agreed by all nations that a cruiser furnished with commissions from two different sovereigns is to be treated as a pirate. Much of the reasoning in support of this principle would extend equally to the acceptance of any commission from a foreign belligerent against a nation at peace with us.*

The Memorial, of which we have also spoken, contains a concise and impressive view of the character and consequences of the practice of privateering. It was our intention to avail ourselves of one or two extracts from it, but we have already exceeded our limits.

It may be expected that we should say something of the practicability of the measure proposed. We must, however, content ourselves with remarking that there cannot be reason to despair of what all commercial nations must feel it to be their interest, by mutual stipulations, to effect. The United States, as a great commercial people, disposed by habit and interest to peace, have every inducement, however great may be their local advantages for carrying on a predatory warfare, to enter into such an arrangement. Great Britain can expect no benefit from the continuance of the practice of privateering. Holland, France, and Spain have too much interest in the revival of their fallen commerce not to acquiesce cheerfully in a proposal which takes away one of its greatest vexations. Russia, Sweden, and Denmark are friends to the freedom of commerce; and it is a remarkable and encouraging fact, that Russia made no use of privateers in the Archipelago in her war with Turkey, 1767—1774.

We are disposed to think well enough of mankind to believe that there is something in this practice too harsh and illiberal to be much longer borne in the present improved state of knowledge and manners. We trust the time is coming when the greater part of the civilized world will feel the truth of these words of Clarendon: "Indeed, it must be a very savage appetite that engages men to take so much pains, and to run so many and great hazards, only to be cruel to those whom they are able to oppress." †

REDUCTION OF THE NUMBER OF SEAMEN IN THE NAVY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 29, 1821.

Mr. PHILIP P. BARBOUR, from the Committee on Naval Affairs, to whom was referred a resolution of the House of Representatives of the 11th of January, 1821, instucting them to inquire into the expediency of limiting by law the number of seamen, ordinary seamen, and boys, to be annually employed in the service of the United States, and, also, into the expediency of reducing the number now in actual service," reported:

That, by an act of Congress, approved the 3d of March, 1801, a naval peace establishment was fixed by law, providing the number of ships which should be kept in constant service, in time of peace, and that the residue should be laid up in ordinary, with a sailing-master, certain petty officers, seamen, and marines, attached to each

vessel thus laid up; authorizing the President to officer and man the vessels to be retained in actual service, as he might direct, limiting him, however, to two-thirds of the then present complement of seamen and ordinary seamen, (by which the committee understand the two-thirds of the then full crews of the ships retained,) limiting the number of captains, lieutenants, and midshipmen, to be retained in the navy service in time of peace, and authorizing the President to discharge all the other officers in the navy service of the United States. That, by another act of Congress, approved April 21st, 1806, the President was authorized to keep in actual service, in time of peace, as many of the frigates and other armed vessels of the United States, as, in his judgment, the nature of the service might require, and to cause the residue to be laid up in ordinary in convenient ports; and the President was authorized to officer and man the public armed vessels, in actual service in time of peace, as he might direct; but the act just referred to limited the number of captains, masters commandant, lieutenants, and midshipmen; it limited, too, the number of able seamen, ordinary seamen, and boys, to nine hundred and twenty-five, and authorized the President to appoint, for the vessels in actual service, as many officers of the grades therein mentioned as might, in his opinion, be necessary and proper; that, by another act, approved March 3d, 1807, the President was authorized, in addition to the then present naval peace establishment, to employ a number of able seamen, ordinary seamen, and boys, not exceeding five hundred, should the exigency of the public service require it; that, by another act, approved Jan. 21st, 1809, it was provided that; in addition to the frigates then employed in actual service, there should be fitted out, officered, and manned, four other frigates by name; and that the President might equip, man, and employ, in actual service, as many of the public armed vessels, then laid up in ordinary, and gunboats, as, in his judgment, the public service might require; and, for the purpose of carrying the provisions of the said act into effect, the President was authorized, in addition to the number of petty officers, able seamen, ordinary seamen, and boys, then authorized by law, to appoint, and cause to be employed, three hundred midshipmen, three thousand six hundred able seamen, ordinary seamen, and boys, to be engaged to serve for a period not exceeding two years; but subject to be sooner discharged. That, by another act, passed June 28th, 1809, the President was authorized, in the event of a favorable change in the foreign relations of the country, to cause to be discharged from actual service, and laid up in ordinary, such of the frigates and public armed vessels as, in his judgment, a due regard to the public security and interest would permit. That, by another act of Congress, passed March 30th, 1812, the President was authorized to cause to be immediately repaired, equipped, and put into actual service, three frigates by name; and it was provided that the officers and seamen of the navy might be increased so far as was necessary to officer, man, and equip the vessels so to be put into service. That, by another act of Congress, passed January 2d, 1813, it was provided that the President should cause to be built, equipped, and employed, four ships to rate not less than seventy-four guns, and six to rate forty-four guns each; and the number of commissioned and warrant officers, petty officers, able seamen, ordinary seamen, and boys, to be employed on board each of the said ships of seventy-four guns, was fixed by that act; the crew, so far as it consisted of seamen and boys, was limited to two hundred able seamen, and three hundred ordinary seamen and boys. That, by another act, passed March 3d, 1813, the President was authorized to have built, manned, equipped, and commissioned, for service, six sloops of war, and also to have built, or procured, as many sloops, to be employed on the lakes, as the public service might require; and, by the second section of the last mentioned act, the President was authorized to appoint such officers, and to employ such number of seamen, as might be necessary for such vessels as were authorized by law to be put in commission, any law to the contrary notwithstanding.

The committee have thought it proper to give to the House a brief view of the progress of legislation in relation to this subject, and they believe the foregoing sketch substantially to present it. Upon a reference to the various acts of Congress before referred to, it will be found that, both in the years 1801 and 1806, there was a naval peace establishment fixed by law, limiting not only the number of seamen and boys, but of officers also. It will be found, too, as your committee believe, by reference to dates, compared with the history of the country, and, indeed, to the language of some of the acts of Congress themselves, that the subsequent provisions, in relation to the naval establishment of the United States, had reference directly to what either *then was*, or probably *soon would be*, the relation of the country to foreign governments; in short, that they looked directly to a state either of actual or probable war.

Your committee understand the resolution referred to them to relate to the number of seamen and boys necessary to be employed in time of peace, and whether that shall be fixed by law. In the present state of things the only limitation upon the number of seamen is to be found in the appropriation bill, which, in effect, annually limits the number to be employed by the amount of the appropriation annually made for that object. Your committee believe that the proper office of the appropriation bill is, as far as practicable, to provide means for objects authorized by existing laws; there are, indeed, cases which, on account of the contingent or uncertain character of the expenditure, constitute exceptions to this rule; but, in general, the rule is considered as a sound one. Your committee would further remark that, in investigating this subject, they have extended their inquiries, beyond the mere scope of the resolution, into the propriety of fixing a naval peace establishment, embracing as well the number of officers as ships to be kept in the service of the United States in time of peace; and they beg leave shortly to submit some of their reasons for thinking that there should be a peace establishment in the navy as well as the army. Although, by the constitution of the United States, the President is commander-in-chief of the army and navy, yet it belongs to Congress to "raise and support" the one, and "to provide and maintain" the other; the power to provide and maintain implies that of determining the quantum; a question the decision of which ought not to be left, in the opinion of your committee, to the Executive Department; and yet, in practice, it is in effect left to Executive decision: for, as has been before remarked, there being no permanent law in force limiting the number of officers, ships, or men, to be kept in service, the only limitation is in the amount of appropriation; and your committee believe that, in practice, the amount of the estimates has generally been appropriated without any discussion in Congress as to the necessity of them. Whatever confidence we may have in the Executive it seems not to be right, in principle, to leave to its discretion, in effect, the decision of a question which belongs to the Legislature. Your committee believe that in Great Britain, though the number of seamen is not fixed by a permanent law, yet it is settled by the annual vote of Parliament. If there were probable danger of war, or difficulty in our foreign relations, it might not be expedient to fix the number of seamen by a permanent law, but, in the present circumstances of the country, it seems to your committee it may be done; it will be remembered it is a peace establishment which is contemplated; when war shall come, or even upon its probable approach, both the army and navy will doubtless be placed upon a footing suited to the then altered state of the country.

Your committee would further remark that an additional reason with them for inclining to a peace establishment is to fix the number of officers, who, they believe, in many grades, are too numerous, and yet for all whom, unless their number shall be reduced by law, an appropriation must be made. Your committee are aware that this is a difficult and delicate subject; the officers of the navy in the recent war not only distinguished themselves, but, by breaking the charm of invincibility belonging to the British navy, contributed much both to our glory, and our solid strength as a nation. The committee are also aware that many of them have devoted some of their best years to their profession; yet, if the interest of the country requires a reduction, painful as the duty is, it is one which ought to be performed. In relation to the number of ships to be retained in service, the reasons which would prove the propriety of fixing the number of seamen, would apply with full force to them; indeed, it is another state of the same question in substance, since, if the number of seamen be fixed, no more vessels will be employed than they can man; and the fixing a certain maximum of seamen is considered a more judicious course than to fix the number of ships, inasmuch as the President will then be left at liberty to use such classes of vessels as may, in his opinion, be best adapted to the nature of the service; the aggregate of the guns, however, being limited by the number of men allowed to man them. Your committee have said that they consider the officers of many of the grades as too numerous; they will now proceed to state the grounds of their opinion. They have not for a moment entertained the idea of paring down the officers of the navy to any thing like a mere sufficiency to officer the ships to be actually retained in service in time of peace; it is obviously impossible upon this subject to select any given number, and show that it is precisely the right one: some reasonable rule must be adopted. Your committee have acted upon

the principle that, whilst, on the one hand, the mere number of officers necessary for the vessels in actual service is not sufficient with a view to the future progress and prosperity of the navy, on the other, it would be entirely out of the question to employ, in time of peace, as many as would officer our whole navy, built and to be built, in time of war. They have, therefore, selected what they consider a medium between these extremes; it appears, by the Naval Register of 1821, that the total number of guns of our ships, which are built, equipped, and launched, (which description excludes the three line-of-battle ships Ohio, North Carolina, and Delaware, which are believed not to be equipped,) amounts to seven hundred and ninety-seven, of all classes of vessels, gunboats included. Your committee have thought that if we retained in service, in time of peace, a sufficient number of commissioned and warrant officers to officer all these upon the war establishment, it would afford a liberal peace establishment. Bringing the number of officers to this standard, the committee find that there are various ranks in which the present number considerably exceeds that which would be required by the rule just stated: they will descend to particulars in a few grades, in which the excess is relatively most considerable; thus, upon this scale, there is an excess of fifteen post captains; of twenty masters commandant; of seventy lieutenants; of twenty-seven surgeons; of more than forty sailing-masters. There, are, perhaps, two or three grades in which an allowance of a few more than even this scale would produce, might be judicious; amongst them, probably, might be placed the midshipmen, who may be considered as constituting the nursery of the future commanders of our ships; this, however, would only vary the result in an inconsiderable degree. The committee forbear to go into further detail upon this subject, because, if the House should adopt the principle, the detail could be presented in a bill.

As to the seamen, if it should be decided to fix the number by law, the resolution then directs the committee to inquire into the expediency of reducing the number now in actual service. Upon this subject the committee would remark, that it will be seen, by adverting to a letter from the Navy Department, under date of the 11th of December, 1820, amongst the printed documents, that the whole force of the vessels of war in the actual service of the United States amounts to about three hundred and thirty-five guns, distributed as is mentioned in the same letter. Your committee incline to the opinion that the following diminution of that force may be made without injury to the public service, viz: instead of two corvettes and a sloop on the coast of Africa, whose object is the suppression of piracy and the slave trade, three of the schooners authorized by an act of the last session would be sufficient, making a deduction of thirty-four guns; instead of a thirty-six gun frigate in the Indian seas, the corvette Cyane of twenty-eight would be sufficient, making a deduction of eight; if to these deductions be added the force of the Macedonian and Ontario, of which the one is returning after being replaced by the Constellation, and the other is proceeding to take the place of the Peacock, amounting together to fifty-four guns, the whole force which would remain after these deductions, from that now in service, would be two hundred and thirty-nine guns; but suppose an additional number of thirty-six guns to be included for any contingent service, such, for example, as the replacing of a vessel returning from a cruise, then the whole force which, according to the views before presented, would be necessary, would be two hundred and seventy-five guns: to man this force upon a war establishment, if the committee have not erred in calculation, would require eight hundred and fifty-six able seamen, eight hundred and two ordinary seamen, and one hundred and ninety-five boys; to this add, according to a document of the last session, for the ships in ordinary, navy yards, and navy stations, two hundred and eighty-seven able seamen, three hundred and fourteen ordinary seamen, and sixty-seven boys, and the aggregate is, of able seamen one thousand one hundred and forty-three, of ordinary seamen one thousand one hundred and sixteen, and of boys two hundred and sixty-two; total of able seamen, ordinary seamen, and boys, two thousand five hundred and twenty-one. The estimate from the Navy Department for the service of the year 1821, embraces one thousand three hundred and thirty-two able seamen, one thousand three hundred and seven ordinary seamen, and two hundred and ninety-three boys, making an aggregate of two thousand nine hundred and thirty-two; from which it would seem that if the force suggested by the committee be retained in service, there might be a reduction of about four hundred and eleven, viz: one hundred and eighty-seven able seamen, one hundred and ninety-one ordinary seamen, and thirty-one boys.

Upon the whole view of the subject, the committee beg leave to recommend to the House the following resolution:
Resolved, That a naval peace establishment ought to be fixed by law.

NAVY DEPARTMENT, January 22, 1821.

SIR:

Your letter of the 15th instant has been submitted to the Board of Navy Commissioners, and I transmit to you, herewith, their answer to some of the inquiries.

With respect to the resolution which proposes a reduction of the number of seamen now in service, I would beg leave to add to the observations made by the Commissioners on that subject, that I am persuaded it would be unwise and impolitic to reduce the number of men on board our public vessels now in service. And the propriety of diminishing the aggregate number for the service must depend entirely on the question, whether a less naval force is to be employed? It has already been particularly communicated to Congress, the number and service in which our public vessels are employed; and whether the great and permanent interest of the country will be promoted by withdrawing any of them, is submitted to the wisdom and discretion of Congress, by granting, or withholding the means of employment. If the object is to reduce the naval force which is to be kept in service, I should incline to think limiting the aggregate number of seamen is the most advisable course to be adopted, leaving it to the President to employ vessels of such class as he shall think best calculated to promote the public good, within the means placed at his disposal.

With respect to the number of officers in our public vessels I would observe, that I have always put on board as many as could be accommodated. This occasioned no additional expense to the Government, and was deemed highly important to the officers themselves, both for the purpose of improving them in their profession, and keeping them out of idleness.

The report of the Fourth Auditor, of the balances due from so many officers of the navy, excited in my mind, as it has in yours, a little surprise, which induced me to make some inquiry on the subject, as I knew, according to the present course of the Department, money was put into the hands of so many officers of inferior grade for disbursement. On examination I find that most of the balances which appear on the list arise from transactions during the late war. At that time it was found necessary to put money into the hands of officers of inferior grades for the recruiting service, and to pay the expenses of transporting recruits, stores, and public property. Our gunboats, and other small vessels, being commanded by officers of this class, it became necessary to make advances to them for the pay and subsistence of the crews. Few, if any, of these balances from inferior officers, have arisen since the year 1816; and measures are daily taking to procure the settlement of these accounts, and to put in suit those where a prosecution shall become necessary.

I have the honor to be, with very great respect, sir, your most obedient servant,

SMITH THOMPSON.

HON. PHILIP P. BARBOUR,
Chairman Naval Committee, House of Representatives.

NAVY COMMISSIONERS' OFFICE, January 18, 1821.

SIR:

In reply to the letter of the honorable the chairman of the Naval Committee of the House of Representatives to you, of the 15th instant, which you were pleased to refer to this Board; the Commissioners of the Navy have now the honor of submitting their report.

As to the "expediency of fixing by law the number of able seamen, ordinary seamen, and boys, and of reducing the number below what it is at present," the Commissioners, with great deference, observe, that the number of able seamen, ordinary seamen, and boys necessary for the service, depends essentially upon the number and class of the ships intended to be kept in commission; that the number heretofore attached to our ships in service has not, in their opinion, been greater than the safety and proper government of the ships required.

It appears, on referring to the statute books, that the subject of limiting the number of seamen for the navy service has, at various periods, employed the deliberations of Congress: In the year 1806 a special act was passed on the subject; the following year, however, the number was greatly increased by another law, and, in the year 1809, the number was still further increased, till in the year 1812, when every restriction was removed. It is understood that the principle was found to be very inconvenient in practice, with respect to the number of which the crews of the different ships shall consist; we find acts of Congress passed upon the subject, 27th March, 1794, 1st July, 1797, and 2d January, 1813, the two first acts were, however, virtually repealed by the act of 27th April, 1798, which commits the number of the crews of the ships then authorized to be employed to the decision of the President of the United States; and since that period, the number of officers and men employed on board of frigates, and smaller vessels, has, from time to time, been decided by the Executive.

The act of the 2d January, 1813, above referred to, declares the number of which the crew of a ship of the line shall consist; but the number estimated was for a size far inferior to the actual force and dimensions of the ships when built, their force amounting to eighty-six instead of seventy-four guns; and the law for the gradual increase of the navy not limiting the size of the ships of the line, and only requiring that they should not be less than seventy-four guns, the commissioners believed that, if in their construction they confined themselves within the limits of the sum appropriated, they should best effect the wishes of the country by extending their force and dimensions to the size of this class of ships most approved in older maritime nations; and, although they are built on the usual plan of two deck ships, their force and dimensions exceed even those of 1813. Hence, it will readily be perceived that no existing law, which limits the numbers of the crews of seventy-four gun ships, is applicable to the ships of the line recently launched, and now building.

Our ships might, undoubtedly, be navigated with fewer men; but their effective force would be reduced in full proportion to the reduction of the number of men. Reduce the number of the crew, and you in effect reduce in an equal, if not greater degree, the power of the ship.

The crew of a forty-four would be sufficient to navigate in safety a ship of the line; but, if the crew was not to exceed the number allowed to a forty-four, a ship of the line would not be able to fight as many guns as a forty-four, because she requires more men to manage her sails, &c. Under such circumstances a frigate might capture a ship of the line; and the same principle might place a frigate in the power of a sloop of war, or a sloop of war in the power of a gunboat.

The commissioners forbear, sir, to present to your view a picture of the situation of an officer *nominally* commanding a ship of the line, but in fact a force not equal to a frigate. No officer having a due regard to his own reputation, or to that of the service, ought to consent to be placed in such a situation.

Independently of other considerations in favor of keeping our ships full manned in time of peace, it may be remarked, that no nation is in the habit of informing its enemies of its intentions to declare war; that it is a custom universally observed, on meeting with any vessel of war at sea, to beat to quarters and prepare the ship for action. Such a state of preparation has, in many instances, saved our national flag from dishonor; and a contrary condition, on another occasion, put it out of the power of the commander to prevent the impressment of several of our seamen from on board one of our men-of-war. Our own experience has confirmed the necessity of keeping our ships of war, whenever in service, in a state of constant preparation to repel aggression, or any attempt, from any quarter, to dishonor our flag.

It is the invariable custom of the nations of Europe, when they reduce the number of officers and men on board of a ship, to make a correspondent reduction in the number of her guns. A ship in that state is said to be armed *en flûte*, and is not considered in the light of a vessel of war; being always commanded by an officer of inferior grade, and generally employed as a transport, store-ship, the conveyance of ambassadors, and such like service. We have ourselves occasionally employed ships of this character in this way.

Ships are rated by the number of guns they mount, and the number of men must be in proportion to the number of guns; a ship of war should never carry guns, without being prepared, at all times, in peace or in war, to fight them with effect. If there are not men enough to work all the guns, or, in other words, to sustain the character of the ship, it would, as alike respects individual and national honor, be better to reduce the number of guns; for the number that cannot be fought with full effect, for want of men, is surely worse than useless on board of ship.

With respect to the machine for hauling up ships, it is believed to possess many advantages over dry docks, both for repairing and for building of ships, and for preserving them after they are built. Dry docks, however well constructed, are always damp, and it is necessary to keep a number of men constantly employed for the special purpose of removing the water that unavoidably finds its way through the gates and other parts. The machine is calculated to admit of a vessel, however large, being hauled up and placed under cover, where she will be perfectly dry; where the artificers can work to the greatest possible advantage, and where a ship, when completed, may, if not required for service, be kept in a state of perfect safety and preservation for a long period of time, at a very inconsiderable expense.

Its original cost will bear no comparison with that of a dry dock. It would certainly not require more than one-fifth, probably not more than one-sixth of the sum necessary to build a dry dock.

The Commissioners have been informed by one of the gentlemen now employed in the investigation, that the chief engineer associated with him has said that it would take the most expert civil engineer six months to calculate the cost of a dry dock. The Commissioners cannot, of themselves, form a satisfactory judgment upon this point; but they are already in possession of information which justifies the inference that a dock, suitable for the present state of the service, and calculated only for a single ship, could not be constructed, even on the cheapest plan, for less than \$250,000. The cost of the machine for hauling up ships, including the house and every necessary apparatus, would not, it is believed, exceed \$45,000. The estimates heretofore made, place it at about \$40,000.

Hence it would appear that the first cost and the annual expense of the proposed machine, would be greatly less than that of a dry dock, while it is confidently believed that it possesses all the facilities and conveniences of a dry dock, and the special and very important advantage of being at all times perfectly dry. The situation it provides for the frame and other materials of a ship, while building, is, of all others, the best calculated to season and preserve them. It seems almost superfluous to remark that building ships in such situations would add greatly to their durability.

The principle of building ships under shelter is recognized by all the maritime nations of Europe; and universal experience, both in public and private yards, approves its correctness and confirms its advantages, both as respects workmanship and the durability of the materials.

Docks can be used for repairing and building only, whereas the proposed plan, at infinitely less expense, is calculated, it is confidently believed, not only for repairing and for building, but, if necessary, preserving ships after they are built. Indeed, in every view which can be taken of it, it appears to claim a decided preference over docks.

The Commissioners avail themselves of this occasion to express to you, sir, their opinion that the present state of the service calls imperiously, either for the erection of docks, or some other means by which our ships of the line and frigates may be repaired without incurring the enormous expense, the serious risks and injuries attendant on careening ships for the purpose of repairing.

It is believed that there is none of the maritime nations of Europe, having a navy of equal extent with ours, who are compelled to resort to this tedious, hazardous, and expensive method of repairing their ships.

The paper herewith, marked A, shows the number of commission, warrant, and petty officers, able seamen, ordinary seamen, and boys, required for each class of our public vessels now in commission.

I have the honor to be, with great respect, sir, your obedient servant,

JOHN RODGERS.

HOL. SMITH THOMPSON, *Secretary of the Navy.*

16th CONGRESS.]

No. 199.

[2d Session.

MARINE CORPS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 12, 1821.

NAVY DEPARTMENT, February 10, 1821.

SIR:

In obedience to a resolution of the honorable the House of Representatives, passed on the 5th instant, in relation to that portion of the Marine Corps performing duty in the city of Washington, I have the honor to transmit to you, herewith, copy of a letter from the Commandant of Marines, accompanied by statements numbered 1, 2, and 3, which will, it is believed, afford all the information required by the aforesaid resolution.

I have the honor to be, with the highest respect, sir, your most obedient servant,

SMITH THOMPSON.

The Honorable the SPEAKER of the House of Representatives.

HEAD-QUARTERS OF THE MARINE CORPS,

WASHINGTON, February 7, 1821.

SIR:

I have the honor to transmit the accompanying documents, illustrative of the resolution of the honorable House of Representatives of the 5th instant. No. 1 is a return of the strength of that portion of the corps stationed at the city of Washington; No. 2, a statement of the annual expenditures in the quartermaster's department; No. 3, the annual expenditures in the paymaster's department, showing the pay and emoluments of all the officers. The annual expenditures in the pay and quartermaster's returns, Nos. 2 and 3, are calculated from the number of officers, non-commissioned officers, musicians, and privates, now actually at head-quarters. The number increases and diminishes, as occasion requires, but the variations are trivial.

It now remains to state the duties of the officers that come within the purview of that resolution.

I. The lieutenant colonel commandant of the corps has the following duties to perform:

1st. The distribution of the corps in guards, at the various navy yards in the United States, and on board the different armed vessels.

2d. The general superintendence over those guards, and a responsibility for the faithful performance of the duties respectively appertaining to them.

3d. Attention to the reports of the officers having command of those guards.

4th. The general superintendence of the duties of the staff. These are the principal military duties of the commanding officer of the corps. In addition to these he has other highly responsible duties to attend to in the economical and faithful expenditure of the appropriation for the corps.

1st. In entering into contracts for furnishing the clothing and rations for the corps, both of which have to pass under his immediate inspection; and for the proper performance of which duty he is immediately responsible.

2d. In the attention he has to bestow on the expenditure of the contingent fund; and he is also responsible for all the applications of that fund.

Besides these prominent duties, the lieutenant colonel commandant has to attend to all the minutiae of the duty of his command.

II. The adjutant and inspector of the corps has various duties to come under his attention.

1st. He keeps an exact detail of the number and distribution of all the officers, non-commissioned officers, musicians, and privates in the corps.

2d. He keeps the size-roll book of the corps, in which are entered the names, age, place of birth, time and term of enlistment of every non-commissioned officer and private in the corps; in which he notes all reductions and promotions of non-commissioned officers; all desertions, deaths, and all apprehensions of deserters. He attends to all the various discharges from the corps, and notes down the circumstances of such discharges in this book.

3d. He receives monthly muster-rolls from the commanding officers of the different guards, and takes due note of them. These are his office duties. He has, also, important military duties to receive his attention.

1st. He attends and forms all parades, both battalion and the ordinary morning ones.

2d. He inspects weekly the arms, accoutrements, and military appearance of the soldiers at head-quarters. It is also his duty to inspect the guards at the various stations on shore, when he is ordered to do so.

3d. He instructs all officers who join the corps in the manual and battalion exercise. He has also to attend to other duties of a less important nature, and which occupy a considerable portion of his time and attention.

III. The duties of the quartermaster of the corps are—

1st. To receive from the contractors the clothing for the corps.

2d. The distribution of that clothing to the guards at the various stations, and to those on board the armed vessels, as the exigencies of the service may require, and to keep accounts with the commanding officers of those guards relative to the distribution thereof to the soldiers under their command.

3d. He issues to each non-commissioned officer, musician, and private, at head-quarters, the allowance of clothing made him, and keeps an account thereof. He inspects, weekly, the clothing of the men, and reports accordingly to the commanding officer.

4th. He makes daily requisitions for provisions for the guard in barracks and at the magazine, and sees that those provisions are agreeable to the contract. He furnishes fuel for both guards, and, by vigilance, prevents the waste thereof.

5th. He adjusts and settles all accounts for repairs of the barracks at the different navy yards, and all accounts for freight and transportation.

6th. He examines all provision returns from the different stations.

7th. He attends to the particular disbursements of the contingent fund, and makes semi-annual settlements with the Fourth Auditor.

IV. The duties of the paymaster of the corps are—

1st. To keep the accounts of all the officers of the corps, and to settle with them the amount of their pay and emoluments.

2d. To pay off the guards at the various navy yards, personally, if required; if not personally, to forward funds to the different commanding officers, and to receive and enter the pay-rolls when they have been forwarded to him.

Various other accounts of a less important nature are examined, paid, and entered, by the paymaster of the corps. Having thus stated the duties of the commanding officer of the corps, and the staff officers, it only remains to state the duties of the officers and soldiers of every kind at head-quarters.

From the earliest establishment of the corps, a larger number of men have been kept at head-quarters than at any other station. The number has been gradually decreasing, as the exigencies of the service required that they

should be sent elsewhere. The distribution of the portion of the Marine Corps at present at head-quarters is stated in the adjutant and inspector's report, marked No. 1.

The guard at the navy yard, under the charge of a first lieutenant, is detached for the preservation of the public property in the yard.

The guard at the magazine is detached, under the command of a sergeant, for the safe-keeping of the powder in it, and for the preservation of the buildings there.

The duties performed within the marine barracks at head-quarters, particularly under the superintendence of the commandant of the corps, are various.

1st. An armorer's shop is kept up, in which are repaired the arms from all the separate posts, and from the armed vessels, which are unfit for use.

2d. Carpenters are kept, who make all repairs required for the preservation of the barracks.

3d. The musicians for all the ramifications of the corps are instructed at head-quarters, and distributed as the exigencies of the service require. They are essentially required on board the vessels of war under all circumstances, but more particularly in action, where all the varieties of a naval engagement are directed by the beat of the drum. Under such circumstances, a school for the instruction of musicians cannot fail to be useful. The one here is conducted with every attention to economy and to practical usefulness.

4th. All officers appointed in the corps are ordered here in order to receive instruction, that they may be capable of performing the duties assigned them, which may be always, in some degree, called active, as they are ordered on board ships of war in distant seas, for the protection of our widely extended commerce. With this object in view, it has been deemed expedient to keep up the skeleton of a battalion, as, without it, the necessary instructions could not be given to newly appointed officers. One captain and three or four subaltern officers are generally kept here to superintend the performance of the above duties, and for the execution of the ordinary military and police duties of the barracks. When new appointments take place, the number of subalterns is increased until they are instructed in their duties, when they are detached.

In concluding this report, which I have endeavored to make as nearly as possible coincident with the resolution of the House of Representatives, I will take the opportunity to observe that the military and practical efficiency of the Marine Corps was fully tested during the late war with Great Britain. It co-operated with the navy in all the maritime achievements of that eventful period with honor to itself, and, I trust, with usefulness and reputation to our country.

I have the honor to be, very respectfully, your obedient servant,

ARCHIBALD HENDERSON, *Lieut. Col. Commandant.*

Hon. SMITH THOMPSON, *Secretary of the Navy.*

There are a number of contingent accounts which are paid by the paymaster.

R. M. DESHA, Paymaster.

16th CONGRESS.]

No. 200.

[2d SESSION.

MARINE CORPS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 28, 1821.

Mr. STEVENSON ARCHER made the following report:

The Committee of Expenditures in the Navy Department beg leave to report, that the performance of their duty in conformity with, and to the extent required by, the rules of the House, has been found impracticable. To investigate the various subjects referred to them, to inquire minutely into the expenditure of all public moneys appropriated for the naval service, and to ascertain whether these expenditures have been made with economy, and in strict conformity with the objects of Congress in making them, would require greater time and research than could be bestowed by any committee, without a total abandonment of all legislative duties. Indeed, the investigation of any considerable item of expenditure, when pursued in all its details, would be a work of time and labor. It was hoped, when the Committee of Expenditures was subdivided, and one appointed to examine into the faithful application of the public moneys in each great department of the Government, that results the most beneficial would grow out of the measure; and that unauthorized expenditure and wasteful extravagance, whether existing with the higher or subordinate agents of the Government, from the certainty of detection, would be impeded in their secret march. The experience, however, of six years, the length of time since which these committees have been organized, has given abundant proof that they are inefficient for the purposes of their creation. Your committee respectfully suggests, that a satisfactory examination whether the expenditures of the respective Departments, in every particular, are justified by law; whether the claims from time to time satisfied and charged by the respective Departments, are supported by sufficient vouchers, establishing their justice both as it regards their character and amount, could only be made by a committee of Congress, who should be authorized to sit during the recess. After the adjournment of Congress, they could uninterruptedly pursue their investigations under every head of appropriation, in all the various branches of expenditure. And it cannot be doubted, but that, if abuses do exist, they would be able to detect them, and, by information thus elicited, would have it in their power to propose such measures as might be necessary to add to the economy of the Departments and the accountability of their officers. It is confidently believed that much money might be saved annually to the public coffers by the labors of a faithful and zealous committee, who would examine minutely for themselves, and who, without favor, fear, or affection, would expose to public view and public indignation the peculators of the treasury, if any such there be.

Your committee have attempted nothing like an examination of all the expenditures in the Navy Department, but have only turned their attention to such as are passing under the immediate view of Congress, or to such as by accident they have been directed; and as it is within their duty to report whether any and what retrenchments in the expenditures of the Department may be made without detriment to the public service, they respectfully ask leave to call the attention of the House to the Marine Corps, as at present established by law. The investigations given to this subject have induced a belief that its expenses might be lessened and its organization improved. The communications which have been held with the Secretary of the Navy, upon this subject, are herewith submitted. They will very briefly explain the views entertained by the committee, and the reasons submitted by the Department against the plan of reduction and re-organization contemplated. The benefits resulting from it will chiefly be found in the saving of the expenditure of public money. The expenses of the Marine Corps for the present year, as estimated by the Secretary of the Treasury, will be as follows:

For pay of officers and men, - - - - -	\$92,232 00
Subsistence, - - - - -	77,161 00
Clothing, - - - - -	30,686 31
Fuel, - - - - -	6,857 50
Contingent expenses, - - - - -	14,000 00
	<hr/>
	\$220,936 81

When it is considered that the Marine Corps, in the number of its officers and men, only exceeds a regiment of infantry by one hundred and fifty-seven, and that the estimate for a regiment of infantry is only \$73,594, it is apparent that the expenses of the establishment may and ought to be reduced.

To effectuate this object, your committee propose reducing the pay of the corps to that of the army. They also contemplate reducing the number of privates from seven hundred and fifty to six hundred and fifty. Connected with this object of economy, and to improve the organization of the corps, it is proposed to abolish the offices of lieutenant colonel commandant and quartermaster. The following would be the estimated expense of the corps, if reduced as proposed:

For pay of officers and men, including subsistence of officers, - - - - -	\$82,011 00
Subsistence for 820 non-commissioned officers, musicians, and privates, - - - - -	53,470 00
Clothing, - - - - -	29,858 00
Fuel, - - - - -	6,095 00
Contingencies, - - - - -	14,000 00
	<hr/>
	\$185,434 00

Making a difference in favor of the measure proposed, of \$35,502 81.

Against this reduction no weighty objections seem to interpose.

It is urged, that by depriving the corps of a military head, its due discipline would not be so well preserved as by the present organization. In answer to this, the committee will observe that the duties of the colonel commandant are altogether of a *civil character*. His troops are never together, but are either at sea or are dispersed over the United States, at the various posts, for the preservation of the public property, while that portion of the corps stationed at the city of Washington, under the immediate eye of the colonel, scarcely ever exceeds a captain's command. An examination of the duties, in detail, of the colonel commandant, as given by himself in a letter to the Secretary of the Navy, dated 7th February, 1821, and communicated to the House, will satisfactorily demonstrate they are of such a character that they might and ought to be performed by an officer attached to the civil department of the Government; and that, in addition to these duties, he could perform all those which are at present assigned to the quartermaster. Every thing connected with the military character and the administration of the corps being placed immediately under the view of the Secretary of the Navy, information could at all times be had of its state and condition, and its government would in all probability be benefited by its being brought nearer to the source of power.

It has been doubted whether the number of privates could be reduced without injury to the service; but your committee beg leave to say that it is not contemplated, as they apprehend, to increase the number of vessels in service, and the number of marines now at sea in our various ships of war are only two hundred and sixty-four; the remainder are employed as guards to our public property, at the various naval stations, in different sections of the Union, except that portion of them which remains at head-quarters. A greater number for sea service will consequently not be wanted, unless in the event of war, and as guards merely for the naval stations; and for disciplining and preparing the men for sea a less number will be amply sufficient. In illustration of this idea, they beg leave to present to the House papers marked C and D, which will show that a sufficient number of men will be retained for all necessary purposes. The paper marked C will show the distribution and strength of the corps at present; that marked D will show the distribution which might be made under the organization proposed. In furtherance of these views, your committee ask leave to report a bill "providing for the pay and re-organization of the Marine Corps."

The attention of your committee, in the course of their investigations, has been turned upon a subject which, although, as it regards the amount of the claims in controversy, is but very trivial, yet the principle involved is of considerable importance. They had been induced to call for information in relation to the accounts of judge advocates on the trials of sundry officers of the marine corps. These accounts, together with the reasons by which they are attempted to be vindicated, are presented in the papers which accompany this report. It appears, that in the case of Colonel Wharton, the judge advocate was allowed the sum of five hundred dollars. In the trial of Colonel Gale, the judge advocate, Lieutenant Gardner, charges in his account for twenty-two days, at the rate of ten dollars per day. Both these accounts are approved by a clerk in the Navy Department, in the name of the Secretary of the Navy. In the former case, the judge advocate was a citizen; in the latter, he was an officer of the army. The expenditures in these two cases, to the extent of the claims, appear not to be justified by any law of which your committee are aware; the only circumstance urged in vindication of the allowance of these claims, is that it was sanctioned by precedent; and this furnishes but a feeble justification where payments and allowances are made, not only without law, but against the acts of Congress, as far as any can be found which have any application to the subject. These accounts may not be unreasonable in their amounts; a fair equivalent may have been rendered for them in the labor and services of these gentlemen. Of this, however, the committee know nothing, except what appears from the accounts themselves; but although these claims may, by possibility, have been equitable, it does not follow, that unless their payment has been provided for by law, that they should be paid; still less does it follow, that a clerk can assume powers vested in the head of a Department, and can allow and disallow claims; at pleasure, against the nation. For although he is said only to act upon claims, so as to allow them when they are sanctioned by precedent, yet is he made the judge fully of the analogy of such cases as may be presented to him. The toleration of such proceedings by an individual who, from his appointment and situation, has no just responsibility, might lead to consequences of a serious character in our expenditures. In the case of Lieutenant Gardner, he has been allowed ten dollars per day. The act of Congress, fixing the military peace establishment, provided that an allowance should be made to judge advocates of \$1 25, in addition to their other pay; it is true, this act was solely applicable to the army; yet the laws in relation to the Marine Corps being silent on the subject, it would be doing no injustice to the officer to allow him the same compensation which he would have had for his services on the court martial of an officer of the army, where his duties could be in no way less irksome or laborious; and the Department would have been justified in applying the provisions of this law to his case, for although he did not come within the letter of the law, by a just analogy he came within its spirit.

The court for the trial of Colonel Gale convened on the 18th, and adjourned *sine die* on the 27th of September last, having been in session eleven days; yet is Lieutenant Gardner allowed for twenty-two days. If the customary mode had been pursued, the certificate of the president of the court would have been required as to the time the Judge Advocate had been employed; yet it does not appear that this had been obtained before the approval of the account, and he was accordingly allowed ten dollars a day from the date of the order, Sunday excepted. As far as appears, no evidence was required of the number of days he was necessarily employed in the duties of the court, although the law expressly declares (if it can be considered as having applicability to this subject) that he shall have an allowance only for such days. The laws appear to make no provision for copies of records and proceedings, nor does it seem necessary that they should. It is certainly a part of the duty of a Judge Advocate to keep a record of the proceedings of the court, and to file these proceedings in the proper Department: for this, with his other duties, a *per diem* allowance is made. Your committee conceive the extra allowance not to be justified. Upon this subject it seems the practice had been somewhat variant. The decision, then, of the clerk was not mere matter of form, but of substance; and it may be fairly inferred that it was not according to the usual allowance, because it is said, in the communication of the Secretary of the Navy, that, since his appointment to preside over the Department, no instance of the kind had occurred which had come within his knowledge. In the case of Colonel Wharton, the Judge Advocate appears to have had no such allowance. Mr. Wilcock's account against the Government for five hundred dollars was passed and approved by the same clerk. He, as far as appears from his account, claimed no daily allowance, but demanded a sum in gross for his services. If he obtained any certificate from the president of the court martial of the number of days he was necessarily employed, it is unknown to your committee. They presume none such was obtained, as, in that event, it would probably have appeared on the face of the account. Your committee conclude with observing that these allowances, whether we regard the manner of their approval, or the character of the claims themselves, are not justified by law.

C.

COMMITTEE ROOM, February 16, 1821.

SIR:

The Committee on Naval Expenditures have it in contemplation to report a bill, (a copy of which is herewith enclosed, marked A,) entitled "A bill providing for the pay and organization of the marine corps."

They transmit you herewith a statement, (marked B,) to show that, although reduced as proposed, the corps will retain its efficiency; that the same number of men may still be stationed at every post, except at head-quarters; and that there will still be the same number for sea service. From this statement it will be perceived that it is not con-

templated to have any of the corps stationed at head-quarters. We are not aware fully of what has heretofore been the practice, but presume that privates have generally been enlisted, drilled, and prepared for sea service, at head-quarters; but as it is always known to the Department of the Navy at what time any vessel will sail from a particular port for a considerable time before she actually sails, we conceive that the enlistment of men at the port from whence the vessel is to sail, or at the nearest naval station, would be a saving of the expenses resulting from the transportation of the privates from head-quarters to New York, Boston, Portsmouth, or New Orleans.

The offices of colonel and quartermaster are proposed to be abolished, and their duties transferred to an office proposed to be created in the civil department of the Government. The necessity for the former cannot be perceived, as there is not a colonel's command, even if the whole corps were collected at one station, and as his services are never required at sea. The duties of quartermaster may with facility be performed by the officer proposed to be appointed by the bill. In the corps as at present organized, the duties of quartermaster, as the committee believe, at every post, except at head-quarters, are performed by quartermaster-sergeants, under the control of the commanding officer, who is responsible to the quartermaster here. These duties can all be performed as heretofore, and the accountability of officers commanding at each station may be to the adjutant and inspector under this bill, as it has heretofore been to the quartermaster. Such an officer will be the less necessary, as, in the proposed arrangement, few, if any, of the corps would be stationed at this city.

The above are the views of the committee; but they are unwilling to report the bill to the House without presenting it to the head of the Department, who is presumed to be particularly conversant with the subject. They respectfully request that you will suggest any modification of its details which may be better calculated to carry into effect their intentions; and I am directed to say that it would be gratifying to the committee to receive your views of the expediency of the proposed reorganization of the marine corps. Their impressions are strong that it would operate as a saving to the Government of thirty or forty thousand dollars annually, without diminishing the efficiency of the corps.

I have the honor to be, sir, your obedient servant,

STEVENSON ARCHER.

HON. SMITH THOMPSON.

NAVY DEPARTMENT, *February 22, 1821.*

SIR:

I have received your letter of the 16th instant, accompanied with a draught of a bill providing for the pay and organization of the marine corps, which the committee, of which you are chairman, purpose reporting to the House. From the little time I have had to spare from other avocations, and to bestow on this subject, I am not able to discover the real benefit which the proposed alteration, as to the organization of the corps, is calculated to effect. The only material amendment appears to be, abolishing the offices of lieutenant colonel and quartermaster, and substituting an adjutant and inspector, whose office is to be attached to the Department of the Navy, and who is to perform the duties at present performed by the adjutant and inspector, and the quartermaster, thus leaving the corps without any military head, which, I should think, was not so well calculated to promote due discipline as the present organization.

It appears to me there must be some mistake as to the saving you mention this measure would produce. The number and pay of the commissioned officers, except the quartermaster, are the same as in the present organization; all the saving, therefore, must be in the reduction of the non-commissioned officers and privates.

If the only object is saving expense to the Government, and it should be thought by the committee that the present number of privates is greater than the service requires, the best mode, it appears to me, to effect the object, would be simply to reduce the number of privates; though I should much doubt whether this could be done with propriety, to any considerable extent, if the same number of vessels as at present are kept in service, and guards for the protection of our navy yards are to be furnished from this corps.

I have the honor to be, very respectfully, your obedient servant,

SMITH THOMPSON.

HON. STEVENSON ARCHER, *Chairman Committee on Naval Expenditures, House of Representatives.*

NAVY DEPARTMENT, *February 13, 1821.*

SIR:

In answer to the inquiries made by your letter of the 8th instant, I would beg leave to state, that there is no express provision by law for the allowance to be made to a judge advocate attending a court martial.

The regular and established compensation, according to the practice of this Department for some years past, has been ten dollars per day; never, I believe, under that sum, and many times, in important cases, much higher.

The usual course is to require the certificate of the president of the court as to the time the Judge Advocate has been employed. In some cases, I understand, the Advocate has had an allowance made for making out the record: I am not aware of any instance of the kind since I have been in the Department. But if he has a per diem allowance, and is necessarily engaged some time in making out a fair copy of the record to be filed, I see no reasonable objection to such an allowance; and the same rule would seem justly to apply to all time necessarily spent in and about the business of the court.

The chief clerk in the Department has no authority, by any express law, to approve accounts; this, according to the course of the Department, is done by the Secretary. In his absence, however, and when the account is according to the usual allowance made, so that the approval is mere matter of form, the chief clerk sometimes approves, purporting to be done by order of the Secretary.

Mr. Homans, in the case referred to in your letter, has allowed ten dollars per day to the Judge Advocate, according to the time presented by him in his account, and thirty dollars for the record. This he conceived himself justified in doing by the precedent in the case of the late Colonel Wharton, in which a much larger sum was allowed.

I transmit to you, herewith, a letter addressed to me by the Judge Advocate, explaining the grounds upon which he claimed the compensation allowed him.

I have the honor to be, with great respect, sir, your obedient servant,

SMITH THOMPSON.

HON. STEVENSON ARCHER, *Chairman of the Committee on Naval Expenditures, House of Representatives.*

WASHINGTON, *February 1, 1821.*

SIR:

Some inquiries having, I understand, been made by the Committee on Navy Expenditures, respecting the amount of my compensation as Judge Advocate in the trial of Lieutenant Colonel Gale, commandant of marines, I beg leave to submit to you the following remarks in explanation of the account which I rendered for that service:

The date of the order by which this duty devolved on me was the 7th of September last, and the close of the trial was on the 29th of the same month. The number of days for which I charged is twenty-two; one Sunday during the actual session of the court being deducted. The rate of compensation, the lowest I apprehend on record for the services of a Special Judge Advocate, was ten dollars per diem. The amount of this item was two hundred and twenty dollars, to which is added the customary charge of thirty dollars for the record and proceedings.

When it is considered that the Judge Advocate is the administrative officer of the court, its legal adviser, its sheriff, and its clerk, and that he acts also in the duplicate capacity of counsellor for the prosecution and the prisoner,

it will be perceived that much time and actual labor are indispensable in making the necessary preparations for the trial; in draughting the charges and specifications in the most legal form; in collecting the documents for the proceedings; in arranging evidence, summoning numerous witnesses, consulting with the prosecutor and the prisoner, &c. And further time and labor it will be perceived are requisite, after the court has terminated its session, in the task of making up the proceedings for the approving authority. As his labors, therefore, are not measurable by the commencement and termination of the trial, so it would obviously be unreasonable to limit his daily compensation to that term. And, accordingly, in the charges which I made for my services, I embraced the whole period during which my services in this capacity were actually bestowed on this duty.

The chief clerk of the Navy Department, who, from his situation, is well qualified to estimate the nature and extent of the duties, thought my claim a reasonable one, and, during your absence from the city, and in your behalf, approved the account.

In the trial of Lieutenant Colonel Wharton, an officer of the same grade and department of the service, and holding precisely the same post as the prisoner in this, the compensation of the Judge Advocate was five hundred dollars; and in the court of inquiry previously held in that officer's case, in reference to the very charges investigated on his trial, the legal adviser of the court received a larger amount in compensation for his services. But I conceive it unnecessary to adduce more precedents, or make further comment on the subject, and with full confidence remit it to your judgment.

I have the honor to be, sir, most respectfully, your obedient servant,

JOHN L. GARDNER.

Hon. SMITH THOMPSON, *Secretary of the Navy.*

NAVY DEPARTMENT, *February 1, 1821.*

SIR:

In compliance with your communication of 28th January, in behalf of the committee of which you are chairman, I have the honor to enclose to you the copies of the papers required, numbered 1, 2, and 3.

I am, very respectfully, sir, your obedient servant,

SMITH THOMPSON.

Hon. STEVENSON ARCHER, *Chairman of the Committee on Expenditures in the Navy Department.*

No. 1.

ADJUTANT AND INSPECTOR GENERAL'S OFFICE, *September 7, 1820.*

GENERAL ORDER.

A general court martial will convene at the marine barracks in Washington, on Monday the 18th day of September, 1820, for the trial of Lieutenant Colonel Anthony Gale, of the marine corps, and such other prisoners as may be brought before it: of which court,

Brigadier General T. S. Jesup is President; and
Lieutenant J. L. Gardner, corps of artillery, Special Judge Advocate.

Members.

Colonel George Gibson, commissary general of subsistence.
Lieutenant Colonel George Bomford, ordnance.
Captain J. S. Nelson, ordnance.
Captain J. H. Hook, 4th infantry.
Captain W. Anderson, marine corps.
Captain S. E. Watson, marine corps.

Supernumeraries.

First Lieutenant B. Richardson, marine corps.
First Lieutenant R. M. Desha, marine corps.
Second Lieutenant S. Cooper, light artillery.

More officers cannot be detailed, nor more rank designated, without manifest injury to the service.

Brevet Major S. Miller, of the marine corps, has been detailed as prosecutor, and will report to the Judge Advocate charges and materials for specifications, and designate evidence in support of the same, preparatory to the trial of Lieutenant Colonel Gale.

By order:

D. PARKER,
Adjutant and Inspector General.

No. 2.

The UNITED STATES,

To JOHN L. GARDNER, Dr.

For my services as Judge Advocate on the general court martial convened under general orders of the 7th instant, at this city, for the trial of Lieutenant Colonel Anthony Gale, commandant of marines, from the date of the order to the close of the proceedings in the case on the 29th instant, except one Sunday, being twenty-two days, at \$10 per day,

Record and copy of proceedings,	-	-	-	-	-	\$220
						30
						<u>\$250</u>

Approved:

For the Secretary of the Navy,

BENJAMIN HOMANS.

WASHINGTON CITY, *September 30, 1820.*

Received, September 30th, 1820, of Lieutenant R. M. Desha, paymaster of the marine corps, two hundred and fifty dollars in full of the above account.

A true copy.

JOHN L. GARDNER.
R. M. DESHA, *P. M. M. C.*

No. 3.

The court martial convened for the trial of Lieutenant Colonel Anthony Gale, assembled at the marine barracks in the city of Washington on the 18th day of September, 1820, and adjourned *sine die* on the 29th day of the same month.

NAVY DEPARTMENT, *February 14, 1821.*

SIR: In reply to your letter, dated the 13th instant, I have the honor to inform you that Samuel Wilcocks, Esq. of Philadelphia, was appointed by the War Department to officiate at the trial of the late Colonel Wharton, as Special Judge Advocate, and that he did not, at that period, belong either to the army or navy.
Enclosed is a copy of the account presented by the Judge Advocate, which shows the amount allowed to him for his services.

I am, very respectfully, sir, your obedient servant,

SMITH THOMPSON.

HON. STEVENSON ARCHER, *Chairman Committee Naval Expenditures,*
House of Representatives.

WASHINGTON, *September 23, 1817.*

The UNITED STATES,

TO SAMUEL WILCOCKS, DR.

To services as Special Judge Advocate on the trial of Lieutenant-Colonel F. Wharton, of the marine corps, \$500.

NAVY DEPARTMENT, *September 23, 1817.*

Approved:

By order of the Secretary of the Navy,

BENJAMIN HOMANS.

Received, September 23, 1817, a warrant, No. 461, drawn by the Secretary of the Navy, in my favor, for five hundred dollars, in full of this account.

SAMUEL WILCOCKS.

TREASURY DEPARTMENT, *FOURTH AUDITOR'S OFFICE, February 14, 1821.*

A true copy of the account on file in this office.

CONSTANT FREEMAN.

NAVY DEPARTMENT, *February 16, 1821.*

SIR: In reply to your letter, dated the 15th instant, inquiring "how many days the court martial for the trial of Colonel Wharton held its sessions," I have the honor to state, for the information of the committee of which you are chairman, that the court martial for the trial of Colonel Wharton, of which Samuel Wilcocks, Esq. was Judge Advocate, assembled on the 10th September, 1817, and adjourned, *sine die*, on the 12th of said month, having previously determined that they had no jurisdiction of the case. On the 20th of September, 1817, the court reassembled under a new order, being augmented by the addition of four other members, Mr. Wilcocks still continuing the Judge Advocate, and adjourned, *sine die*, on the 22d of September, 1817.

With great respect, I have the honor to be, sir, your most obedient servant,

SMITH THOMPSON.

HON. STEVENSON ARCHER, *Chairman Committee Naval Expenditures,*
House of Representatives.

No. 201.

[1st SESSION.]

NAVY HOSPITAL FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 26, 1821.

NAVY DEPARTMENT, *December 21, 1821.*

SIR: In obedience to a resolution of the House of Representatives of the 15th instant, the Commissioners of Naval Hospitals have the honor to report a statement showing the annual receipts of the Naval Hospital Fund, and the balance of said fund which remains to be applied in conformity to the provisions of the act of Congress, approved on the 26th day of February, 1811, entitled "An act establishing navy hospitals."

For further information relative to the state of this fund, the Commissioners beg leave to refer to their several reports of the 14th of January, 1818, 8th of February, 1820, and 15th of January, 1821; and, also, to a report of the Secretary of the Navy, dated 15th of January, 1818, made to the honorable the House of Representatives; and they would likewise add, that, although for the want of adequate means they have not been able as yet to carry into effect the provisions of the act of 1811, they have, however, commenced forming a separate and distinct fund for that purpose, by drawing from the appropriation of pay of the navy such sums as may from time to time be spared, until the amount of the Naval Hospital Fund shall be completely reimbursed, and they are taking measures to carry into effect the wise and humane system contemplated by the act establishing naval hospitals.

All which is respectfully submitted.

SMITH THOMPSON, *Secretary of the Navy.*
WM. H. CRAWFORD, *Secretary of the Treasury.*
J. C. CALHOUN, *Secretary of War.*

To the HON. SPEAKER of the House of Representatives.

TREASURY DEPARTMENT, FOURTH AUDITOR'S OFFICE, Dec. 19, 1821.

Statement of the annual receipts of the Navy Hospital Fund since the passage of the act of Congress, the 26th February, 1811, entitled "An act establishing Navy Hospitals," exhibiting the balance remaining unexpended, viz:

From 26th February to 31st December, 1811,	-	-	-	-	-	-	\$1,628 41
1st January to 31st December, 1812,	-	-	-	-	-	-	6,984 61
Do. do. 1813,	-	-	-	-	-	-	9,026 75
Do. do. 1814,	-	-	-	-	-	-	13,772 40
Do. do. 1815,	-	-	-	-	-	-	16,795 37
Do. do. 1816,	-	-	-	-	-	-	21,165 72
Do. do. 1817,	-	-	-	-	-	-	16,126 25
Do. do. 1818,	-	-	-	-	-	-	15,442 34
Do. do. 1819,	-	-	-	-	-	-	21,026 16
Do. do. 1820,	-	-	-	-	-	-	8,756 08
Do. to 31st September, 1821,	-	-	-	-	-	-	20,961 07
							<hr/>
							\$151,685 16
To which add this sum, standing to the credit of "Marine Hospital Fund," being a balance of the moneys deducted from the pay of officers, seamen, and marines, prior to the 26th of February, 1811,							3,782 86
							<hr/>
							\$155,468 02
From which deduct amount of expenditures debited to said fund, from the 26th February, 1811, to 30th September, 1821,							10,652 85
							<hr/>
							Leaving a balance unexpended of
							<hr/>
							\$144,815 17

It appears, from the above statement, that there is a difference in the receipts of the several years. This arises from the circumstance that, in those years in which the receipts are largest, more accounts were settled from which hospital money was deducted, than in those in which there appears less. But the true amount of the hospital money is ascertained by calculating the number of officers, seamen, and marines, actually in service in each year.

It also appears, that, on the 1st of October, 1821, the unexpended balance of this fund was one hundred and forty-four thousand eight hundred and fifteen dollars and seventeen cents, of which, however, there is only nineteen thousand two hundred and four dollars and forty-seven cents at the immediate disposal of the Commissioners; this sum having been drawn on the 29th November, 1821, in favor of Thomas Tudor Tucker, Esq. as agent of the Commissioners. The residue, one hundred and twenty-five thousand six hundred and ten dollars and seventy cents, is absorbed in the pay of the navy, to which that expenditure has been debited in the settlement of accounts at this office; therefore, the appropriation for pay is responsible.

CONSTANT FREEMAN, *Fourth Auditor.*

17th CONGRESS.]

No. 202.

[1st SESSION.]

EXAMINATION OF HARBORS ON THE PACIFIC.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 31, 1821.

NAVY DEPARTMENT, December 27, 1821.

Sir:

In compliance with the request contained in the resolution of the House of Representatives, passed on the 18th instant, I have the honor to transmit the copy of a report from the Commissioners of the Navy, which estimates the sum of twenty-five thousand dollars as the probable increase of expense in causing an examination to be made of the different harbors belonging to the United States on the Pacific Ocean, and of transporting one hundred and fifty tons weight of artillery to the mouth of the Columbia river; and it is believed that a less sum would prove inadequate to the accomplishment of the objects contemplated, as the United States' schooner *Dolphin*, now in the Pacific, cannot, consistently with the public interest, be detached from the service in which that vessel is engaged.

I have the honor to be, with the highest respect, sir, your most obedient servant,

SMITH THOMPSON.

The Hon. the SPEAKER of the House of Representatives.

NAVY COMMISSIONERS' OFFICE, December 22, 1821.

Sir:

In reply to your inquiry upon the subject of the resolution of the House of Representatives of the 18th instant, requiring information as to the probable increase of expense in causing an examination to be made of the different harbors belonging to the United States on the Pacific Ocean, and of transporting artillery to the mouth of Columbia river, the Commissioners beg leave to observe, that, from the information at this time in their possession upon the subject, it appears to them that these objects might be accomplished by engaging a suitable merchant vessel by the month, and sending with her one of the schooners now in service; and that this would be the least expensive mode that could be devised.

If the *Dolphin* could be spared from Commodore Stewart's command, the transport might join her at Valparaiso, and thence proceed in company to the mouth of Columbia river; there land the artillery, and then commence the examination of the harbors. This would be less expensive than the sending a schooner with the transport from one of our Atlantic ports, as to equip a schooner specially for such service would unavoidably involve additional expense. But, as it is probable that it might not be convenient for the *Dolphin* to be detached from the command of Commodore Stewart, the commissioners have made their estimate of the increase of expense attending the execution of

these objects, upon the supposition that one of our schooners now cruising in the Atlantic will be equipped specially for this service, and sent with the transport from one of our Atlantic ports, direct to the mouth of Columbia river.

The resolution does not mention any definite number of artillery; but supposing the whole weight to be transported to be equal to one hundred and fifty tons, then it would require a vessel of about two hundred tons to transport. Such a vessel might probably be engaged at one thousand dollars per month, and eighteen months would, it is presumed, be sufficient time to accomplish the objects contemplated by the resolution.

The extra expense to which the navy would be subject in performing these services would then probably be, for the transportation of one hundred and fifty tons of artillery to the mouth of Columbia river, and a general examination of our harbors on the Pacific:

Eighteen months service of a vessel of 200 tons, at \$1,000 per month,	-	-	-	\$18,000
Equipment of a schooner for this service, including the necessary instruments,	-	-	-	7,000
				<u>\$25,000</u>

I have the honor to be, with great respect, sir, your most obedient servant,

JOHN RODGERS.

Hon. SMITH THOMPSON, *Secretary of the Navy.*

17th CONGRESS.]

No. 204.

[1st SESSION.]

NAVY PENSION FUND.

COMMUNICATED TO THE SENATE, JANUARY 9, 1822.

NAVY DEPARTMENT, January 8, 1822.

Sir: On behalf of the Commissioners of the Navy Pension Fund, and in obedience to the act for the better government of the navy of the United States, I have the honor respectfully to report to Congress the following statements in relation to that fund:

- A. Showing the amount of United States' stock belonging to the Navy Pension Fund.
- B. Showing the bank stock belonging to the Navy Pension Fund.
- C. Abstract of warrants drawn by the Secretary of the Navy upon the Treasurer of the Pension Fund. [Amounting to \$64,881.]
- D. Account of the Treasurer, Thomas T. Tucker, with the Commissioners of the Navy Pension Fund. [Balance in his hands, \$7,349 84.]
- E. List of navy pensioners, and pensions allowed to each. [Number of pensioners, including widows, 491, and the amount paid, \$44,488.]

All of which is respectfully submitted.

SMITH THOMPSON.

The Hon. the PRESIDENT of the Senate of the United States.

A.

Statement of the stocks on the books of the treasury to the credit of the Secretary of the Navy, the Secretary of the Treasury, and the Secretary of War, for the time being, Commissioners of the Navy Pension Fund, with interest and reimbursement which accrued in the year 1821.
