NAVAL AFFAIRS.

VOLUME III.

19TH CONGRESS.]

No. 326.

[2D SESSION.

ANNUAL REPORT IN RELATION TO THE NAVY PENSION FUND FOR 1826.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 12, 1827.

NAVY DEPARTMENT, *January 8, 1827.*

SIR: I have the honor to transmit the annual report in relation to the navy pension fund, prepared in compliance with the tenth section of the act of 23d April, 1800, "for the better government of the navy of the United States," and consisting of the following documents, marked—

- A. List of invalid, widow and orphan pensioners in each State, and the amount allowed to each.
- B. Abstract of warrants drawn by the Secretary of the Navy from the 1st January to 31st December, 1826.
- C. Statement of bank stocks belonging to the fund.
- D. Account of the Treasurer of the United States, as agent of the Commissioners.
- E. Statement of the funded debt of the United States belonging to the fund.

I have the honor to be, very respectfully, &c.,

SAMUEL L. SOUTHARD.

The SPEAKER of the *House of Representatives.*

List of naval pensioners on the 1st January, 1827.

* The principal of this stock, although not drawn from the Treasury, was reimbursable on the 1st July, 1826, and the interest ceased on that day.

19TH CONGRESS.]

No. 327.

[2D SESSION.]

CONDITION OF THE NAVAL HOSPITAL FUND ON THE 31ST DECEMBER, 1826.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 16, 1827.

NAVY DEPARTMENT, *January 15, 1827.*

SIR: The commissioners of the navy hospitals have had the honor to receive the resolution of the House of Representatives, of the 6th January, 1827, directing them to report "the amount of the sums which they have received and expended, by virtue of the act entitled 'An act establishing naval hospitals,' the balance remaining in their hands on the 31st December, 1826, designating the sum which has been absorbed in the pay of the navy, and which is due to the 'naval hospital fund,' and what measures they have adopted to carry into effect the provisions of said act," and respectfully make the following report:

That they have received the sum of.....	\$177,207 25
That they have expended.....	58,109 41
That there is now due to the navy hospital fund, from the pay of the navy, the sum of..	72,032 96
And that they have in the hands of the Treasurer of the United States, subject to their order,	119,097 84

Previous to the date of the report made by the commissioners on the 10th March, 1824, and to which they refer, (paper A,) there had been passed, on the books of the Fourth Auditor of the Treasury, to the credit of the navy hospital fund, \$191,701.67. By papers B, C, D, which are copies of statements of the Fourth Auditor, it appears that there was carried to the credit of the fund, in the years 1824, 1825, and 1826, the sum of \$57,538.54, which, added to the sum mentioned in paper A, gives \$249,240.21 as the whole amount with which the fund has been credited up to the 31st December, 1826. This sum is \$72,032.96 greater than that which is stated to have been received by the commissioners. The difference has been absorbed in the pay of the navy.

By the report of 10th March, 1824, (paper A,) it appears that the commissioners had expended, previous to 30th September, 1821, \$10,652.85.

In September, 1823, they purchased a site for a naval hospital at Chelsea, near the Navy yard in Charlestown, Massachusetts, which cost them \$18,223.48.

In May, 1824, they purchased a site for a hospital near the Navy yard at Brooklyn, New York, which cost \$7,911.75.

In June, 1826, they purchased a lot on which to erect an asylum, near Philadelphia, which cost \$16,191.00.

Within the present month they have contracted for some land adjoining Fort Nelson, near Norfolk, Virginia, to add to the ground on which the fort now stands, and which has been transferred from the War Department. On this site they propose, also, to build a hospital.

In addition to these several sums, they have expended, for various purposes incident to the management of the fund, \$5,125.33. The whole being added together, make the amount \$58,109.41, before stated, as expended by them. This amount, deducted from \$249,240.21, the total sum to the credit of the fund, leaves \$191,130.80, which ought now to be at the disposal of the commissioners to enable them to execute the purposes of their appointment. But such is not the fact, as the \$72,032.96, absorbed in the pay of the navy, is not under their control.

The commissioners respectfully ask the attention of Congress to the following statement respecting the history of the fund, the manner in which a portion of it has been absorbed in other objects, and the proper remedy for the grievance.

By the law entitled "An act for the relief of sick and disabled seamen," passed the 16th of July, 1798, it was provided that, after the 1st of September of that year, every master or owner of a vessel, arriving in any port of the United States, should render an account of the number of seamen employed in the vessel, and pay to the collector at the rate of twenty cents per month for the time each of said seamen was so employed, retaining the same out of their wages; that the collector should pay the money so received to the *Secretary of the Treasury*, and that the President of the United States should, out of the same, provide for the temporary relief and maintenance of sick and disabled seamen, in hospitals or other proper institutions; that the surplus, if any remained after this provision was made, should be invested in stock of the United States; and when a sufficient sum was accumulated he should purchase and provide grounds and hospitals for the accommodation of sick and disabled seamen, and appoint directors of the hospitals to govern them, under his instruction. A subsequent law directed the money to be expended, with some exceptions, in the State where it was collected, or in the adjoining State.

These provisions, which were originally designed only for the benefit of seamen employed in merchant vessels, were extended to the navy by "An act in addition to an act for the relief of sick and disabled seamen," passed 2d March, 1799. This law directed the Secretary of the Navy to deduct, after the 1st of September in that year, from the pay of each officer, seaman, and marine, the sum of twenty cents per month, and pay the amount, quarterly, to the Secretary of the Treasury, to be applied to the same purposes to which the money collected under the former act was appropriated; and the officers, seamen, and marines in the navy, to enjoy the same benefits and advantages as were by said law provided for the seamen employed in the merchant vessels of the United States. This last-mentioned law continued in force until the 26th of February, 1811, when Congress thought proper to separate the military from the mercantile marine—the seamen employed in merchant vessels from those employed in the navy, so far as related to this subject; and, therefore, passed the law establishing navy hospitals. By it, the Secretary of the Navy, Secretary of the Treasury, and Secretary of War were appointed a board of commissioners of navy hospitals; the money collected by virtue of the law of 2d March, 1799, to be paid to them, to constitute a fund for naval hospitals.

During the period in which the law of the 2d of March, 1799, was in force, and operated upon the navy, viz: from 1st September in that year, to 26th February, 1811, about twelve years, deductions were regularly made from the pay of the officers, seamen and marines, and the amount carried to the credit of the marine hospital fund in the hands of the Secretary of the Treasury. Upon this fund, therefore,

they had a perfect claim. It had been augmented by their pay, and for their benefit. It was just to them that their proper proportion of it should be handed over to the commissioners of the navy hospitals, for their use. To have denied this would have been manifest injustice. Congress intended to secure their rights in this respect. What precise proportion of the marine hospital fund ought to have been assigned to them, it was probably difficult at that day, and would be impossible at this, to specify. The amount received from them, and the exact portion expended upon them, and for their benefit, were probably both uncertain. It was the will of Congress to decide that \$50,000 was their proper proportion; and by the act of the 26th of February, 1811, separating the two funds, that sum was appropriated out of the unexpended balance of the marine hospital fund and directed to be paid to the commissioners, to form a part of the fund for the navy hospitals. This law, however, never has been executed; the payment never has been made. The sum of \$3,782.86 only has been delivered to the commissioners; the balance remains to this day unsatisfied. The want of funds was the cause of this omission, as was stated in a report of the commissioners, dated January 15, 1818.

It is most respectfully suggested that this injustice ought no longer to exist. The money was taken from the pay necessary to the support and comfort of the officers, seamen, and marines of the navy, by no act of theirs, but by the irresistible operation of a law of Congress; and it was taken under a pledge that it should be used for their benefit. It has not yet been so used; \$46,217.14 remains to be paid for their benefit. The commissioners of navy hospitals, therefore, on their behalf, ask of Congress to make an appropriation to that amount, that it may be restored to a fund in which their comfort and happiness are so deeply interested.

It will also be perceived, by the laws before referred to, that this fund is created solely by the deduction of twenty cents per month. This deduction has been uniformly made in every case since the 1st of September, 1799. The amount arising therefrom previous to the passage of the act of February 26, 1811, was supposed to be provided for in that act by the appropriation of the \$50,000 before mentioned. Since February 26, 1811, the amount deducted was not regularly carried to the hospital fund, and placed in the hands of the commissioners, until January 1, 1824. During the war of 1812, and for several years after it, although it was taken from the officers, seamen and marines, yet it was permitted to remain in the sums appropriated for the pay of the navy, and expended for that or other objects. In this manner, it is seen by paper A, the sum of \$119,712.95 was absorbed previous to January 1, 1824. This operation was considered improper; and the Secretary of the Navy, on the 11th of March in that year, directed the Fourth Auditor to make a statement from the accounts of the disbursing officers, in every quarter, that a requisition might be issued, and the amount carried to the proper fund, (see paper E.) Since that time, and in virtue of that order, the deductions made from the pay have been regularly added to the hospital fund, in the hands of the Treasurer of the United States, as agent of the commissioners.

Since that period, also, various sums have at different times been paid to the hospital fund out of the pay of the navy; so that the latter was, on the first of this month, indebted to the former \$72,032.96, (see paper D.) This debt may possibly, in the course of several years, be satisfied out of the balances which shall remain of the pay of the navy, but the process must be slow and uncertain; and the commissioners, therefore, again respectfully ask that an appropriation may be made, restoring it at once to the hospital fund. It has been heretofore represented to Congress that the want of this money has prevented them from purchasing sites, erecting buildings, and otherwise performing the duties assigned to them by law; and it is a painful fact that although the law, designed to provide hospitals and an asylum for our seamen, has been in operation nearly twenty-eight years, and deductions from their pay constantly made during all that time, yet, in consequence chiefly of the state of the funds, not one building for their accommodation and comfort has been erected. The effect upon the feelings of our officers and seamen may well be imagined. The commissioners are assured that it has been one powerful cause of the difficulties sometimes encountered in procuring seamen for our public vessels.

It is thus shown that the commissioners now have \$119,097.84, which may be immediately used in executing the purposes of the law. If Congress appropriate the two sums, one of which has been expended on the marine hospitals and the other absorbed in the pay of the navy, there will then be \$237,347.94 at their disposal; a sum sufficient to erect all the buildings which they deem necessary in the present state of the naval service.

The measures adopted to carry into effect the provisions of the law, may, in part, be seen in the preceding statement. In addition to which, the commissioners have, during the past year, caused a wharf to be built on the lot near Charlestown, Massachusetts, another on that near Philadelphia, made arrangements to build one at Brooklyn, New York, and caused other slight improvements to be made. They have also procured with great care, from some of the most accomplished architects in our country, plans for the buildings which they suppose necessary at the places mentioned, keeping in view the improvements in such establishments in other countries, and the direction of the law "to regard economy, and give preference to such plans as, with most convenience and least cost, will admit of subsequent additions, as the funds will permit and circumstances require."

They have employed Mr. Strickland, a very skillful and experienced architect, to make the necessary contracts for materials, and superintend the building of a "permanent asylum for disabled and decrepid navy officers, seamen, and marines," at Philadelphia; and Mr. Haviland, another skillful and experienced architect, to make the contracts for and superintend the building of a hospital near Norfolk, Virginia. Both the asylum and the hospital, they hope, will be completed within the next year, in a manner suited to the interesting nature of the works themselves, and to the obligations due to those out of whose funds the cost of their erection is to be defrayed.

They propose, also, to proceed with the hospitals at Charlestown and Brooklyn, as soon as the funds under their control will permit; and if the recommendations which they have suggested, to pay to the fund what is really due to it, be adopted by Congress, they do not doubt that they will be able to complete all the hospitals mentioned in the course of the next two years.

Which is respectfully submitted.

SAMUEL L. SOUTHARD.
RICHARD RUSH.
JAMES BARBOUR.

To the honorable the SPEAKER of the House of Representatives.

A.

NAVY DEPARTMENT, *March 10, 1824*

SIR: In answer to the resolution of the House of Representatives, of the 20th January, "That the commissioners of the navy hospitals be directed to report to this House the amount of the sums which they have received and expended by virtue of the act entitled 'An act establishing navy hospitals;' the balance remaining in their hands on the 31st of December, 1823, designating the sum which has been 'absorbed in the pay of the navy, and which is due to the hospital fund;' and what measures they have adopted to carry into effect the provisions of said act;" we have the honor to enclose a copy of a letter from the Fourth Auditor of the Treasury, marked A, with a statement of the accounts in the Auditor's office, marked B, showing the receipts and disbursements of said fund up to the 31st of December, 1823.

The law separating the naval from the marine hospital fund was passed on the 26th February, 1811. On that day a balance of \$3,782.86, standing to the credit of the marine hospital fund, was carried to the credit of the navy hospital fund. This sum, with the deductions authorized by law from the pay of the officers, seamen, and marines, constitutes the whole of the navy hospital fund. These deductions have been regularly made whenever the officers, seamen, and marines have received their pay, and the sums so deducted have been left in the "pay of the navy," which is of course responsible for them. They were not in the first instance drawn from the "pay of the navy" at the times in which they accrued, in consequence of the war which succeeded the passage of the law, and were left in the same situation for several years afterwards.

By the report made on the 29th October, 1823, it appears that the balance to the credit of the fund at that time was \$117,074.34; since which, the deductions from the pay of the officers, seamen, and marines, and for which the "pay of the navy" is responsible, have amounted to \$2,638.61, making the navy hospital fund, on the 31st December, 1823, amount to \$119,712.95, exclusive of the amount which has been under the control of the commissioners.

After the establishment of the fund, in February, 1811, and before the 30th September, 1821, the expenditures by the commissioners amounted to \$10,652.85; since that time there has been drawn and placed in the hands of the Treasurer of the United States, subject to the orders of the commissioners, \$43,335.87, and in September, 1823, \$18,000 were paid for a site for a naval hospital near the Navy yard at Charlestown, Massachusetts. These three sums added together make \$71,988.72, which added to the sum of \$119,712.95, for which the "pay of the navy" is responsible, make \$191,701.67, being the whole amount of money which has accrued to the fund since its establishment.

From this statement it will be perceived that the only funds, which the commissioners can immediately control for the objects of the law, are those in the hands of the Treasurer, viz.: \$43,335.87. The debt due from the "pay of the navy" can only be paid as balances of the appropriations for that object shall remain at the end of the year; and as these appropriations are founded upon estimates calculated with great care and accuracy, and are barely adequate to accomplish their object, it is manifest that it will be a long time before the fund is repaid, and the commissioners will have the control of all the means which properly belong to it.

The delay will greatly postpone the accomplishment of the benevolent purposes of the law creating the fund, and do injustice to those who have contributed to it, and who by the delay will be deprived of its benefits.

With a view to avoid the difficulties which have heretofore existed on this subject, an order has been given to the Fourth Auditor of the Treasury to make out, at the end of each quarter, from the returns of the disbursing officers, a statement of all moneys accruing to the navy hospital fund during the quarter, and give a regular certificate of the amount, that a warrant may be issued for the same in favor of the agent of the fund. By this means it will, at the end of each quarter, receive all the money to which it is entitled, and the "pay of the navy" will not become any further indebted to it.

In September, 1823, the commissioners purchased a site for a hospital adjoining the Navy yard at Charlestown, Massachusetts, for which they paid \$18,000, and have made a contract for another site near the Navy yard at Brooklyn. These are all the "measures they have adopted to carry into effect the provisions of the act."

Respectfully, &c.,

WM. H. CRAWFORD.
J. C. CALHOUN.
SAM'L L. SOUTHARD.

To the Hon. the SPEAKER of the House of Representatives

TREASURY DEPARTMENT, *Fourth Auditor's Office, January 26, 1824.*

SIR: In obedience to the request contained in your letter of the twenty-first instant, enclosing a resolution of the House of Representatives relative to the "naval hospital fund," I have the honor to report:

That, from the 26th February, 1811, to the 31st December, 1823, there has been passed, to the credit of said fund on the books of this office, and those of the accountant of the navy, the sum of	\$187,918 81
To which must be added a balance standing to the credit of the "marine hospital fund," on the 26th February, 1811, and carried to the credit of the "naval hospital fund"....	3,782 86
	\$191,701 67
From this sum is to be deducted amount of expenditures to 30th Sept., 1821..	\$10,652 85
Moneys drawn and placed in the hands of the Treasurer of the United States..	43,335 87
Moneys drawn in September, 1823, for the payment of land purchased for a naval hospital site at Boston.....	18,000 00
	71,988 72
	\$119,712 95

Leaving a balance to the credit of the "naval hospital fund," on the books of this office, on the 31st December, 1823, of one hundred and nineteen thousand seven hundred and twelve dollars and ninety-

five cents, the whole of which has been absorbed in the "pay of the navy," and for which the appropriation for that object is responsible.

I have the honor to be, sir, with great respect, your obedient servant,

CONSTANT FREEMAN, *Auditor.*

Hon. SAMUEL L. SOUTHWARD, *Secretary of the Navy.*

[19TH CONGRESS.]

No. 328.

[2D SESSION.]

CONCERNING APPOINTMENTS, PROMOTIONS, DUTIES, AND COMPENSATION OF THE SURGEONS AND ASSISTANT SURGEONS IN THE NAVY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 17, 1827.

Mr. BARTLETT, from the Committee on Naval Affairs, who were instructed by a resolution of the 10th of January, 1827, "to inquire into the expediency of making such alterations and improvements, as the public service may require, in the medical department of the navy," reported:

That, early in the last session of Congress, the attention of the committee was directed to the subject of this inquiry, and there was no diversity of opinion as to the importance and necessity of alterations and improvements in the organization of the medical department of the naval service.

The committee were of opinion that further legislative regulations were necessary in relation to the *appointments, the promotions, duties, and compensation* of surgeons and assistant surgeons in the navy. Other improvements in the organization of the naval establishment were deemed by the committee not less important than that which forms the immediate subject of the present inquiry. They therefore reported "a bill concerning the naval establishment," in which, with other provisions that it was believed the service demanded, was embraced the subject of this resolution; in relation to which, that bill provides, generally:

1st. Concerning *appointments, promotions and duties*: That no person shall be appointed *assistant surgeon* in the navy, unless he shall have been examined and approved by a board of three or more surgeons of the navy, designated by the Secretary of the Navy Department; and no person shall be appointed a *surgeon*, until he shall have been commissioned an *assistant surgeon* three years, and have served at least two years, as such, at sea on board a public vessel; and shall also have been examined and approved, as in case of assistant surgeons. It also provided for the appointment, from the surgeons of the navy, to every fleet, or squadron, of an experienced surgeon, to be denominated the surgeon of the fleet; and makes it his duty to examine and approve the requisitions, and inspect the quality of medicines and hospital stores; and, in difficult cases, to consult with the surgeons of the several ships; make records of the character and treatment of diseases, and make particular and periodical reports of the same; and to perform all duty appropriate to his station, under the direction of the Navy Department.

2d. Concerning *compensations*: That the surgeons and assistant surgeons of the navy shall receive one ration a day each; and that the monthly pay of surgeons shall be in proportion to the time they have been in the public service, as surgeons, viz: a surgeon, who shall have served less than five years, as such, sixty dollars a month, which, after the first five years' service, shall be increased at the rate of ten dollars a month for every additional term of five years: *Provided*, that the highest rate of pay shall not exceed one hundred dollars a month and one ration a day, excepting the surgeon of the fleet. That an assistant surgeon, before being passed for promotion, as surgeon, shall, while in service, receive forty dollars a month; and after being so passed, fifty dollars a month; and when serving on board vessels of war, having no other medical officer on board, an assistant surgeon shall be allowed ten dollars a month, in addition to the pay aforesaid. And that a surgeon of the fleet, while in service, as such, shall receive, in addition to the other compensation allowed to surgeons, and *not* subject to the same limitation, an allowance of twenty dollars a month: and prohibits any other allowance, or compensation for any purpose, to be made to either of said grades. The committee, in adopting the provisions embraced in that bill, considered the present law defective, in that it does not require any examination of surgeons and assistant surgeons previous to appointment, or any term of service previous to appointments to the highest grade; nor does it require the duties which are recommended for surgeons of the fleet, or graduate the pay by the time of service, or, in the opinion of the committee, allow a sufficient compensation to those who have spent much of their life in the service of their country; but, as the provisions deemed expedient by the committee are embraced in the bill before the Committee of the Whole House, the committee recommend the following resolution:

Resolved, That the Committee on Naval Affairs be discharged from the further consideration of the resolution, of the 10th of January, respecting the medical department of the navy.

[19TH CONGRESS.]

No. 329.

[2D SESSION.]

ON CLAIM OF A WIDOW, ON ACCOUNT OF THE SUFFERINGS AND LOSSES OF HER HUSBAND, WHILE IN CAPTIVITY AT TRIPOLI, IN 1804.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 19, 1827.

Mr. STORRS, from the Committee on Naval Affairs, to whom was referred the petition of Gratia Ray, widow of William Ray, deceased, reported:

That the memorialist states that her late husband was taken prisoner by the Tripolitans at the capture of the U. S. frigate Philadelphia, and suffered greatly in his health from his captivity, and lost all the property which he had on board the same ship; that he has since deceased, and left her, with several children, destitute of support, and she prays that Congress would make to her and her family some compensation for those sufferings and losses.

The committee are of opinion that it would be inexpedient to grant the prayer of the petition, and establish thereby a precedent which must prove to be very extensive in its application, and which, the committee believe, has never been sanctioned heretofore by Congress. They recommend, therefore, the following resolution:

Resolved, That the petitioner have leave to withdraw her petition.

19TH CONGRESS.]

No. 330.

[2D SESSION.]

ON THE EXPEDIENCY OF ESTABLISHING A LINE OF VESSELS TO PANAMA AND A COMMUNICATION BETWEEN THE ATLANTIC AND PACIFIC OCEANS ACROSS THAT ISTHMUS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 24, 1827.

Mr. STORRS, from the Committee on Naval Affairs, to whom was referred a resolution instructing them to inquire into the expediency of establishing a line of communication, from some port or place in the United States, across the Isthmus of Panama, to some port or ports on the Pacific ocean, reported:

That they have taken the subject under consideration, and are fully convinced of the expediency of establishing the proposed line of communication. The increasing importance of the various nations bordering upon that ocean, and our increased commerce with those nations, are highly interesting to every portion of the Union. Our trade on the northwest coast, our extensive whale fishery, all demand the vigilance of government; and the government, duly estimating the interests of the country, have wisely stationed a portion of our navy in that ocean, to protect our property and preserve our rights. Without entering into a particular consideration of the situation and governments of the various nations in the Pacific, including the islands as well as the main, with whom we have intercourse, it may be proper to say that no navy could be placed in a situation so responsible, and where the officers would so much need the instruction of the government. Indeed, it is desirable at all times that our navy should act under the immediate instruction of the Executive, as far as practicable, and that as little be left to the discretion of the officers as circumstances will allow. Cases may, and will no doubt occur, which will throw great responsibility upon our naval commanders, affecting national interest and honor. Where such responsibility cannot be avoided it must be assumed; and, while we are disposed to place merited confidence in our naval officers, we are disposed to relieve them, as far as possible, from a responsibility which necessity alone would induce them to assume or us to allow. This object can be effected only by affording opportunity to intruct them from time to time, as circumstances and the changes in events may demand.

Our navy in the Pacific usually cruises from Valparaiso, on the south, to Callao, on the north, and sometimes extending much beyond those points. The ordinary length of a passage from the United States to Valparaiso, round Cape Horn, is from eighty to one hundred and twenty days; it therefore requires from six to eight months to send a letter to or from the squadron and receive an answer. From this great delay and circuitous voyage, it is certainly desirable, if practicable, to obtain relief. It is important to the nation that the government should be able to send dispatches and orders to our naval forces in as short a period as practicable, and it is practicable to facilitate and shorten our communication, by the route named across the Isthmus of Panama, so that instead of requiring six or eight months to receive information and give instructions, it may be effected in ninety days.

It is contemplated to establish a line of vessels to run from some port in the United States to the isthmus. A passage from the Chesapeake to the isthmus may be estimated at fifteen or twenty days. The journey across the isthmus, from Chagres to Panama, thirty-six hours; a passage from Panama to Valparaiso, thirty or thirty-five days; and from Valparaiso back again to Panama, about twenty-five; or, should Lima be fixed upon, a passage from Panama to Lima may be estimated at, and return passage to Panama, twenty-four or thirty days. Instructions might ordinarily be sent from the Chesapeake to Lima, or Valparaiso, in forty or fifty days, and a return in about the same period, being much less than half the time at present required, saving more than four months. The time required upon the Pacific in a passage from Panama to Valparaiso, and from the Chesapeake to Panama, would be about the same, so that if a communication were kept up between the United States and Valparaiso, and Panama made the place of departure, there would be little delay; whenever a vessel arrived from the United States to Panama, a vessel would be there ready to sail, and when a vessel returned from Valparaiso to Panama, a vessel would be ready to sail to the United States. To effectuate this object, four vessels would be required; two on this side to communicate with the United States, and two in the Pacific. It is recommended that the vessels employed be schooners of a large class, because the dispatches they might be charged with would be important, and their freight valuable. Such vessels would afford great security, not only to whatever might be entrusted to their charge, but also to our commerce against piracies. Indeed, if protection against piracy be our sole object, the vessels in question would be suitable, and the passage on both sides in the very place where we are most likely to be infested, so that these vessels would effect the double object of protection against piracy, and the carrying dispatches and whatever else might be deemed expedient.

The importance of the measure cannot escape the notice of any one, as affording a direct communication with our ministers and agents in the South American governments.

We may be permitted to add, that the contemplated communication would afford great facilities to our commerce in the Pacific and to our whale fishery; interests of no small value, which we trust are increasing and will continue to increase—interests which affect every part of the country, whether engaged in agriculture, commerce, or manufactures. These valuable interests have been protected by our navy, and the wisdom of such protection has not been questioned: they are not to be overlooked in examining the advantages which may result from the proposed measure, which is intended, primarily and principally, to facilitate our intercourse with the navy.

Nor can we forget that those who are stationed in our navy, as well as those in our whale ships, and others, amounting to thousands, are separated from friends for years. To afford such facilities to send to and receive letters from their friends and owners, would be desirable and beneficial, as it would afford means of information and instruction as well as gratification; and if even a trifle were allowed for such purpose, it would accord with the policy of the country of affording mails in some cases, at a very considerable expense to the government.

But the leading object in view is to improve our navy, by keeping up a connection with the parts; to afford facilities for supplying the wants of the squadron in the Pacific; in making timely and proper

application of funds for its support; in giving instructions and orders. These objects are deemed important in point of economy, as well as conducing to the honor and interest of the nation.

The committee therefore report a bill.

NAVY DEPARTMENT, *January 13, 1826.*

SIR: In your letter of the 22d December, you enclose a resolution of the House of Representatives of the 19th, instructing the Committee on Naval Affairs "to inquire into the expediency of establishing a line of communication between the Atlantic and Pacific oceans, through the Isthmus of Panama;" and you ask the opinion of the Department "as to the utility of the proposed communication, the facility of its establishment, the most advantageous and economical mode of effecting the object."

The opinion of the Department, that this communication should be established, was decidedly expressed in the report to the President, which accompanied his message at the commencement of the session, and to which I refer you.

The usual cruising ground of the American squadron in the Pacific ocean is, from Valparaiso on the south, to Callao on the north; sometimes, however, extending much beyond those points in both directions.

The ordinary length of a passage from the United States to Valparaiso, round Cape Horn, is from eighty to one hundred and twenty days. It therefore requires from six to eight months to send a letter to or from the squadron and receive an answer. If a correspondence between the government and the commanding officer be necessary, it is desirable that this period should be shortened.

It is always of high importance to the nation that the government should possess the means of communicating rapidly its views and orders to those who command its forces abroad, and who are often obliged to act in cases affecting the public honor and interest. Nowhere do such cases arise more frequently than in the Pacific ocean. Our interests there are immense, and everything in the government, the people and the forces, which operate upon these interests, unsettled and subject to rapid and violent changes, producing constant danger and repeated injuries.

Questions of doubt and difficulty, which cannot be foreseen, are incessantly occurring, upon which it is natural that the commanding officer should desire to be instructed, and upon which it is the interest of the government that instructions should be given. But in the present dilatory and uncertain mode of conveyance, they cannot be asked for and received until they are often useless, the officer having been compelled to act in ignorance of the views of the government, and perhaps in violation of its wishes. Communications to and from him are frequently necessary respecting the discipline and economy of the force under his command, which, being impracticable, leave a painful responsibility upon him, and sometimes injury to the service is the result.

Inconveniences also arise in supplying the wants of the squadron, and in making a timely and proper application of funds for its support, which might be avoided by a shorter, more uniform, and periodical mode of conveyance. Many expenses might be saved, and the squadron supplied more economically.

The convenience, also, and comfort of the officers in the squadron are worthy of attention and regard. Separated for years, at such an immense distance from their country and friends, and from the scene of their private interests, it becomes the government to interfere in their favor, and relieve them, as far as possible, from the unpleasantness of their situation, by affording them the means of frequent intercourse by letter, by which many injuries and much uneasiness might be avoided.

Although the considerations be not peculiarly connected with this department, it may be correct to add, that the proposed communication would be extremely useful to the government, by facilitating its intercourse with several of our public political agents, and to the whole mercantile community, by rendering the commercial correspondence with that portion of South America, and the means of transferring funds, of every description, more speedy and certain.

The advantages which would result to the commerce in every part of the Pacific ocean; to our intercourse with the northwest coast, and even with China, by shortening the time of sending and receiving advices three or four months, would be immense. There is no danger that you will value this last-mentioned advantage too highly. Its importance is every hour increasing in magnitude, and will be most sensibly felt in the augmented revenue and commerce which it will occasion. But it does not seem proper in me to pursue this consideration.

The passage from the Chesapeake to the isthmus may be estimated at fifteen to twenty days, and the return passage at fifteen to twenty days. The journey across the Isthmus from Chagres to Panama at thirty-six hours. The passage from Panama to Valparaiso at thirty to thirty-five days, and from Valparaiso to Panama at about twenty-five days. Should Lima be fixed upon as the point of departure in the Pacific, the passage from that place to Panama may be estimated at fifteen, and the return passage at twenty-four to thirty days. Allowing, therefore, for no unusual delays, a package may be sent by this route, from the Chesapeake to Lima and Valparaiso, in between forty and fifty days, and a return made in about the same period, being much less than one-half the time now consumed in the operation.

It will be prudent, in the first instance, to establish this communication between some port in the Chesapeake, say Baltimore or Annapolis, and Lima. Should experience prove it to be advisable, it can hereafter be extended to Valparaiso, the vessel touching, in its passage, at the intermediate towns. The average time which it will take to reach Panama from the points mentioned, will be very nearly the same, and by arranging properly the period of starting, and making that the place of meeting, there will seldom be much delay in effecting an interchange of the letters which may be carried in each direction. The consul, or other agent of the United States, under such instructions as may be given, will furnish the necessary means both of safety and expedition.

It is not believed that any impediment will arise from the government of the country through which the communication is to be made. On the contrary, there is the strongest confidence that every facility will be afforded by it which may be called for by our interests or our wishes.

To execute the proposed plan, it will be necessary to have two vessels on each side of the Isthmus. These may be either small, but fast sailing schooners, of sixty or seventy tons, or schooners of a larger class, carrying twelve guns, like the Shark and Porpoise. My own opinion is decidedly in favor of the latter, for three reasons:

1st. They are safer from all dangers, both common and extraordinary—of the sea and of enemies; against these dangers it is wise to guard. They will always carry dispatches of importance, and sometimes offer temptations to plunder by the value and nature of their freight. Under such circumstances it would not be pleasant to have them rifled and destroyed.

2d. They will be under the direction of this Department; be commanded by naval officers; and form essentially a part of the navy. Like other vessels, they should be useful in training our officers and seamen. But if less than the size proposed, they cannot answer that purpose. Discipline cannot be preserved in them, nor can the officers or men be properly instructed in seamanship and their respective duties. Experience has sufficiently taught us, that smaller vessels are expensive, injurious to correct habits, and destructive of subordination and discipline.

3d. They ought not to be merely packets for carrying dispatches, but vessels-of-war, ready and able to render protection to our interests, when they find them assailed. Their route throughout its whole course in both oceans, but especially in the Pacific, will be where our commerce needs protection; and they will be likely to fall in with pirates and others who interrupt our ships; their force should therefore be competent to any ordinary call which may be made upon it.

The expense of executing the plan will depend in some degree upon the vessels which may be selected.

We have no small schooner suited to this object. But should this class of vessels be selected, they ought to be provided with two competent officers, and six or seven hands, and two or more spare berths to accommodate the messenger, and any passengers to whom the government might see fit to furnish a conveyance to the Pacific. Their original cost may be estimated at \$4,500 each, their annual expense at \$3,500 each, and the expense of the messenger at \$2,000.

Should the opinion which I entertain be considered the best, it will be necessary to build three additional schooners of twelve guns—two to be used in the Atlantic and one in the Pacific, the *Dolphin* which is now there, being ordered on this service.

I wish you to remark, however, that during the past year one of the small schooners attached to the West India squadron was lost, and two others, with the *Decoy*, sold; and the *Nonsuch*, of twelve guns, became too much decayed to be repaired. Another ought to be built to supply her place, whether this communication be established or not. It ought not, therefore, to be charged with the necessity of building more than two of those which are proposed, nor with a large portion of the annual expense which may be found necessary to support the communication after it is established.

The cost of these vessels will be \$17,000 each, and their annual expense \$16,500 each; an expense which would be more than compensated to the nation by one successful commercial enterprise, and by one important dispatch being expedited to a political agent, or the commanding officer of the squadron.

The expense of sending the dispatches across the isthmus would be very small, if large schooners be adopted, as they might be provided with boats which could be sent up the river from Chagres to Cruces, and one of the officers of the vessel be entrusted with the dispatches to Panama.

I am not aware of the necessity of any legislative act on this subject, except to authorize the building or purchasing of the vessels, and such an appropriation as will meet the demands of the year—say \$51,000 for building the vessels, \$49,500 for their support, and \$3,000 for contingent expenses. The annual expense of the vessels which will be employed in this operation may hereafter be embraced in the general appropriation bills.

I have the honor to be, very respectfully, &c.,

SAMUEL L. SOUTHARD.

Hon. HENRY R. STORRS, *Chairman of the Committee on Naval Affairs, House of Representatives.*

19TH CONGRESS.]

No. 331.

[2D SESSION.]

ON THE SUBJECT OF GENERAL AND SPECIFIC ESTIMATES FOR THE NAVY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 29, 1827.

NAVY DEPARTMENT, *January 28, 1827.*

Hon. Daniel P. Cook, chairman Committee Ways and Means, House of Representatives:

SIR: I have had the honor to receive your letter of yesterday's date, making certain inquiries on behalf of the Committee of Ways and Means, and present for your consideration the following answers and explanations:

The reasons for combining the three first items of the estimates of last year in the first item of the estimates of this year have been heretofore presented to the Committee of Ways and Means. They do not affect the amount which is to be expended for the service, for the same is estimated under the one head that would have been under the three; nor can one cent more be expended under one form of appropriation than under the other. They do not affect the responsibility of the disbursing officers, for that responsibility is precisely the same under both forms. But three benefits were supposed to result from combining them together.

1st. The certainty that the appropriation would be expended on the precise object for which it was made. When the items are separated, it is very difficult, sometimes impossible, for the disbursing officers who pay the money, and the Treasury officers who settle the accounts, to decide under which item the payment ought to be made and charged; because it is not easy to say whether an officer or seaman is for the time attached to the service generally—to the navy yard and shore service—or belongs to the civil establishment. Errors are therefore committed, and money paid out of one appropriation, when it ought to be paid out of another. From this unavoidable cause, it often happens that one or more of the appropriations is exhausted before the end of the year; the error cannot be corrected, and we are left without the possibility of making necessary payments, &c.

2d. In the settlement of the accounts, the errors thus committed must as far as possible be corrected; and, hence, confusion and errors constantly arise, both with the officer and at the Department.

3d. The settlement of the accounts becomes much more difficult, expensive and laborious.

From these evils, it was supposed best to place the whole in one item. As all were to be paid, a general appropriation of pay for all was considered sufficient for every purpose. The objection to its being a general, not a specific appropriation, was also supposed to be avoided by the minute statements explanatory of the items which show every officer, man and thing, on and for which it is to be expended. The combination of the whole pay in one item, was formerly the mode of appropriation; and a separation was made with a view, more distinctly if possible, to exhibit the objects of expenditure; but the difficulties resulting from it induced a return to the former mode. As this does not meet the views of the committee, and they desire to keep them separate, the enclosed statement has been made, separating the one item into three. This statement, you will perceive, on examination, is merely copied from the estimates which were sent to you at the beginning of the session. Those estimates are the same, and made in the same mode as those of last year. The difference is not in the estimates, nor in the detail, but simply and alone in the summary which is made of the amount of the estimates. No new estimate, therefore, is sent to you. The object of the committee will be entirely satisfied, by separating the sums which compose the first head, and placing them under the same heads as they were placed in the last year. To examine the accuracy of the statement I enclose, you have only to examine the estimates in pages referred to in the statement.

In reference to the amount of force, I beg leave to suggest that the committee is in error, in supposing that a larger amount is to be employed for the whole year than was employed during a part of the last. I refer you to my letter to Mr. McLane, of January 16, and ask to remind the committee that, after the estimates were presented at the beginning of last year, it became necessary to send a squadron to the coast of Brazil. This squadron, added to the estimated force at the beginning of the present session, is the very same (with the variation of one or two small vessels) as it was last year.

The force estimated for this year, *for the whole year*, is the same, with the exception stated, as was in commission during the last, after the Brazilian squadron sailed.

The only difference between the estimates at the *beginning* of last year and this, are these: 1st. The squadron on the coast of Brazil was not in that of last year, but in this. 2d. There is an estimate for the time necessary for fitting out a squadron to relieve that in the Mediterranean, and bringing it home, discharging the crews, and laying up the ships. This is absolutely necessary, because the ships require some repairs, and the time of the crews has expired, and they cannot be discharged in the Mediterranean. 3d. The estimates for the time the Pacific squadron will probably take to return home and be discharged. This is less than is allowed in the former case, because the relief squadron was prepared during the last year, and probably arrived on the station before the 1st of January. There is good reason to expect that the squadron returning home may be discharged in the four months estimated for.

I enclose copy of a communication from the Navy Commissioners, explanatory of the points stated in your letter. It seems only necessary for me to add to the remarks, that the land which is desired at Norfolk is very important to the convenience and economy of the yard; that it will cost about \$15,000; and that it ought now to be purchased, because it is indispensable to the safety of the public property that a wall be constructed, and the purchase ought to be effected before this is done.

Deducting the \$15,000 for the land, and the estimate for that yard is but little more than for the other yards; and is for objects, the usefulness of which requires no explanation.

Having been compelled to prepare this communication very hastily, no copy has been taken, and you will confer a favor by permitting me to have it for a short time after the committee has examined it.

I am, very respectfully,

S. L. SOUTHARD.

Statement separating the sums estimated for different objects in the first item for the naval service for 1827, so as to correspond with the three first items in the estimates for 1826, taken from the estimates submitted to Congress at the beginning of the present session.

The first item of the last year embraced—

1. Pay, &c., of vessels in commission.
2. Pay, &c., of receiving vessels.
3. Pay, &c., of recruiting stations.
5. Pay, &c., of officers awaiting orders and on furlough.
6. Pay, &c., of ordnance officer.

These several objects are separately estimated for in the estimates of this year, as will be perceived by referring to them, and are as follows:

1. Vessels in commission, see letter B, page 112, at	\$968,544 00
2. Receiving vessels, see letter D, page 122, at	30,381 75
3. Recruiting stations, see letter E, page 122, at	14,918 75
5. Officers awaiting orders, see letter F, page 123, at.....	96,617 75
6. Ordnance officer, see letter E, page 122, at.....	1,930 00

In all.....	\$1,153,549 25
	41,157 00

This, therefore, will be the amount of the first item in the appropriation bill.....	\$1,112,392 25
If the committee determine to make the appropriation in the form it was last year. Last year the first item was.....	908,595 50

Making a difference of.....	\$203,796 75
-----------------------------	--------------

But it did not then embrace—

1. The support of the squadron on the coast of Brazil, which was provided for by a subsequent act.

- 2. The support of the vessels returning from the Mediterranean, for six months.
- 3. The support of the squadron from the Pacific, four months.

The second item last year embraced—

- 1. Pay, &c., at navy yards.
- 2. Pay, &c., at shore stations.
- 3. Hospitals.
- 4. Ordinary.

These are also distinctly estimated for this year, as will be found by reference to pages 114 to 121, inclusive, and are added together in the recapitulation on p. 121, thus:

1. Navy yards, &c.	\$100,149 25
2. Shore stations	10,108 00
3. Hospitals	21,600 00
4. Ordinary.....	41,157 00
	<hr/>
	\$172,924 25
Last year this item amounted to	141,613 25
	<hr/>
	\$31,311 00

This difference is accounted for by the Navy yard at Pensacola, hospital at Boston, and a slight variation in the number of persons at the several navy yards and stations.

The second item in the appropriation, therefore, will be	\$172,924 25
The third item last year embraced pay, &c., of superintendents, naval constructors, and all the civil establishment at the yards and stations, and amounted to.....	52,240 00
This year it amounts to.....	58,031 50
	<hr/>
	\$5,790 50

The difference arises from the establishment at Pensacola.

The third item in the appropriation, therefore, should be

Add these items together, viz: 1.	\$1,112,392 25
2.	172,924 25
3.	58,031 50
	<hr/>
	\$1,343,348 00

And you have the first item of this year's estimates.

ON CLAIM OF THE WIDOW OF A SEAMAN WHO DIED IN DARTMOOR PRISON, IN ENGLAND, TO FIVE YEARS' HALF-PAY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 3, 1827.

Mr. BARTLETT, from the Committee on Naval Affairs, to whom was referred the petition of Abigail Appleton, reported:

That the petitioner represents that she is the widow of Daniel Appleton, late of Ipswich, in Massachusetts; that her late husband was a seaman on board of the United States sloop-of-war Frolic, which sailed from Boston on the 18th of February, 1814, under Captain Bainbridge, and was taken prisoner, carried to Halifax, and thence to England, and committed to the Dartmoor prison, where he died, on the 4th of January, 1815.

The petitioner further represents, that she has made application to the Navy Department, for five years' half-pay, under the provisions of the acts of Congress of January 20, 1813, March 4, 1814, and April 16, 1818, which relate to the subject of pensions to the orphans and widows of persons slain in the public or private armed vessels of the United States; and that the Department has expressed an opinion that her claim does not come within the letter of those statutes. The facts stated in the memorial of the petitioner are fully and distinctly proved; and the committee do not hesitate to express an opinion that her claim is clearly within the spirit and purpose of the laws referred to, and therefore report a bill to give her five years' half-pay from the privateer pension fund.

TREASURY DEPARTMENT, *Fourth Auditor's Office, January 4, 1827.*

SIR: I have the honor to transmit to you, herewith, certificates containing the information requested in your letter of the 2d inst., addressed to Mr. Gilliss, of this office. The act of April 16, 1818, provides, "if any officer, seaman, or marine shall have died since January 18, 1812, in consequence of accident or casualty which occurred while in the line of his duty, on board any public or private armed ship, leaving a widow, she shall be allowed the same monthly pay as if he died of wounds." The only doubt in the mind of the Secretary of the Navy was, whether death in a prison of the enemy was the same as death on board the ship.

I have the honor to be, respectfully, sir, your most obedient servant,

T. WATKINS.

HON. JOHN VARNUM, *House of Representatives.*

I certify that it appears, from documents on file in this office, that Daniel Appleton, a seaman on board the United States ship Frolic, born at Ipswich, Massachusetts, was captured in the said ship, in April, 1814, carried to Dartmoor prison, in England, and there died on the 4th day of January, 1815.

T. WATKINS.

TREASURY DEPARTMENT, *Fourth Auditor's Office, January 5, 1827.*

The United States sloop-of-war Frolic, under the command of Master Commandant Joseph Bainbridge, sailed on a cruise from Boston, on the 18th of February, 1814, and was captured near the coast of Cuba, on the 20th of April following, by the British frigate Orpheus, Captain Hugh Pigot, and the British schooner Shelburne, Lieutenant Hope.

NAVY DEPARTMENT, *January 4, 1827.*

I certify that the truth of the above statement is sustained by documents on file in this Department.
JOHN BOYLE.

19TH CONGRESS.]

No. 333.

[2D SESSION.

ON CLAIM OF THE OFFICERS AND CREW OF THE KETCH INTREPID TO PRIZE MONEY,
FOR THE DESTRUCTION OF THE FRIGATE PHILADELPHIA, IN THE HARBOR OF TRIPOLI,
IN 1804.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 7, 1827.

Mr. SORRS, from the Committee on Naval Affairs, to whom was recommitted the "bill to compensate Susan Decatur, widow and representative of Captain Stephen Decatur, and others," and to whom was also referred the petition of Mary Preble, widow of Captain Edward Preble, reported:

That they have again had the said bill under their consideration, and reviewed its provisions—particularly in that respect which prescribes the rule of distributing the sum granted to the officers and men of the Intrepid, for their good conduct and gallantry in accomplishing the destruction of the frigate Philadelphia.

They have the more carefully re-examined this subject, as the novel principle has been asserted, and attempted to be sustained by argument in the professional opinions submitted to the House at the last session, that the officers and men of the Intrepid are entitled, under the prize act, to receive from the government the full value of the Philadelphia, as a *vested right* in them as her captors. In the report (accompanying the bill) presented to the House on the 21st day of January, 1826, the committee distinctly disavowed the doctrine on which that claim seemed to be founded. As the principles assumed in support of their right to *remuneration*, in the character of captors, for the value of that ship, involve the interests of the navy as well as the government, the committee deem it to be their duty to both to express to the House their opinion more at large on the question of prize property, as between the captors in the public ships and their own government.

If this was a national question between the Government of the United States and a foreign power or its subjects, belligerent or neutral, to be settled by the public law, which has established the rules for determining the transfer of property in prize from one belligerent to another, the principles which must govern the decision of such a case have been correctly stated and well illustrated in the legal opinions offered by the memorialists. The captor, either in a public or private armed vessel, who seizes under the authority of the government for the purpose of bringing the prize into port for adjudication, is deemed, in relation to others, to have such a power over the captured property, that he may be received in maritime tribunals to represent and sustain the belligerent right of the sovereign power under whose commission he acts. His inchoate interest in the prize is also recognized, for many purposes, even before adjudication; and, as between one of two belligerent powers and a third party, it may be conceded that the right of property and possession is perfect, upon capture of an enemy's ship, previous to condemnation in a prize court. The decision of the board of commissioners, under the Florida treaty, that the American captors of British vessels during the late war with Great Britain, whose prizes had been seized or despoiled in Spanish ports, were entitled to demand indemnity from Spain, rests on these principles. The cases of the *Mary Ford* and *L'Invincible*, decided in the Supreme Court of the United States, confirm the same doctrines, and the opinion of the tribunal, in the case of *Josepha Segunda*, is also supported by well established principles: that, in a case of capture, where the prize ship was brought by the belligerent party into a port of the United States, or within its jurisdiction, a forfeiture might be incurred for a violation of the revenue or navigation laws of the country. But, in the opinion of the committee, these principles, which have been so gravely pressed into the question, have no relation, analogy or applicability to the distribution of the "*proceeds*" of prize property, under the prize act, as between the captors and their own government. It is not a question to be solved by the law of nations, but depends on the construction of an act of Congress, and the ascertainment, by its reasonable and fair interpretation, of the nature of the interest in prize property, or its proceeds, which has been granted by the government to the captors, conducting its naval force under its own authority and instructions as the sovereign power.

It has been very justly said in one of these opinions, that "the *specific property* in the prize itself, was not in the contemplation of Congress;" and in the other, that "by the law of nations, and independently of any statutory provision, all captures enure to the exclusive benefit of the government." They are of the nature of reprisals—acquisitions of war, and accrue to the sovereign power by whose authority they are made, and subject to its absolute disposal. This power over these acquisitions is held by all

governments for great public and political purposes, and to be exercised as it shall deem most conducive to the national interests. In granting to others any interest whatever, to be derived directly or remotely from them, it annexes to the gratuity such qualifications as it deems expedient, and any such interest accrues to captors or others, at such times, and on such conditions and contingencies only, as the government shall prescribe at its own pleasure. Seizures, by captors in the public ships particularly, are made on behalf and as acquisitions to the government. In the exercise of its unlimited discretion, and guided by an enlightened policy, it has granted to the officers and men of the navy a contingent interest, which may vest and be perfected in them, as the government may or may not, in the exercise of its absolute control as the sovereign power over prize property, proceed to condemnation. The right of the captors rests altogether on the prize act, and is not to be extended, by artificial implications not justified by its reason and policy, to the support of doctrines which might prove to be highly mischievous in practice to the national interests, and often embarrassing and oppressive to the government itself. The act declares (U. S. Laws, vol. 3, page 360, section 5,) that "the proceeds of all ships and vessels, and the goods taken on board of them, WHICH SHALL BE ADJUDGED GOOD PRIZE, shall, when of equal or superior force to the vessel or vessels making the capture, be the sole property of the captors, and when of inferior force shall be divided equally between the United States and the officers and men making the capture." Independent of this grant there is no well-founded pretence that any others than the government have any interest in prize property; or, if it be asserted that they have, from whence have they derived it? In conferring on the navy this interest, as the reward of valor and enterprise, which admits them to *accede* to the whole or to *share* and participate *with the government itself* in the *proceeds*, only *after condemnation*, it has never intended to divest itself of that essential attribute of sovereignty which secures its own exclusive control over prize property, and its disposition as the great interests of the nation may require. It has therefore qualified this expectant interest, arising from mere seizure under its instructions, and cautiously confined the gratuity to the proceeds after condemnation. The pervading error of the argument which has been offered by the counsel consists in the assumption that, either by the public law or the construction of this act, the mere seizure not only confers but perfects in the captors an indefeasible right, to which the national interests are altogether subordinate and subservient. It is said that "it was never imagined that when the Congress *superadded* the solemnity of condemnation as one of the requisites to the full and *perfect* enjoyment of the *fruits* of prize, it was intended to make it the *preliminary* requisite to the *investiture* of the *right of property*. By the terms of the act it is made necessary for the purpose *only* of *authorizing* the disposal of the prize and the *distribution* of the prize money. The *specific property* in the *prize itself* was in the contemplation of the legislature; they speak only of the proceeds and the distribution of the prize money resulting from the disposal of the prize after condemnation; it is for *this only* that the *captors* are to *await* the process of regular adjudication." This course of reasoning asserts, in terms too unequivocal to be misunderstood, that the right of the captors attaches to them as individuals, on the seizure, and that the only operation of condemnation and the prize act is to come in aid of their vested interest for the mere purpose of distribution among them; that the solemnity of adjudication is rather ceremonial, to guard against irregularities and abuse on matters of prize, than a preliminary requisite to the *investiture* of their right in the *property itself*. If, however, it is not exclusively by the grant of the prize act itself that any interest whatever is conferred, the committee are not aware upon what *dicta*, asserted in any system of law, public or municipal, they can support any personal right at all in prize property. The prize act has not, indeed, any reference to their "*specific property* in the *prize itself*," because it neither assumes or admits its existence. The argument is only justly applicable to the belligerent rights of the government as a sovereign power, and it is true that by the enactment of the prize act "it never entered into the conception of Congress to make any change in the rule or public law by which the transfer of the property of prize from one belligerent to the other had been determined;" but when it is immediately added that "to have placed the *rights of the officers and men* of our own navy upon a footing of equality with *those of other nations* would have been not more injurious to the individuals than a disparagement of the belligerent rights of the United States as a sovereign power," the argument merely protests against an inference drawn from its own error, and confounds the sovereign right of the government over prize property with the contingent interest which it has granted to the captors. If the principles which have been advanced by the counsel could be successfully maintained, the character of the public armed ships, built, equipped and provided from the public treasury, would be converted from some of their most important practical purposes of war into mere instruments of reprisal, for the private benefit of those who, in the regular discharge of duty, were appointed to conduct or employed to navigate them. Any disposition or release whatever of the acquisitions of war, even by treaty before actual condemnation, would create a just claim on the government, which is said to be for "*indemnity*, like that of *insured* upon *insurer*, in which it is utterly *immaterial* whether the *property* be *qualified* and require some ulterior process for its *consummation*, or be consummate to every practical purpose of perfect fruition."

The practice of the government has not conformed to these new doctrines. The acts of June 25, 1798, and July 9, 1798, for the protection of the commerce of the United States against French depredations, and authorizing the capture of French armed vessels and their goods and effects, conferred, in express terms, an interest in the captors quite as indefeasible as that granted by the existing prize act of the 23d of April, 1800. The first prize act, of March 2d, 1799, relating to seizures by the public ships, was not less explicit; and yet, by the treaty with France, of the 30th day of September, 1800, and ratified on the 3d day of February, 1801, it was unconditionally stipulated not only that all captured *public ships* (which, by the prize act of 1799, belonged exclusively to the government,) but that *all property* then *taken*, AND NOT DEFINITELY CONDEMNED, or which *might be captured before the exchange of the ratifications*, should be restored. The prize act of the 23d of April, 1800, had of course been in force for some time before the ratification of the treaty. In exercising this undoubted prerogative of sovereignty, it was not deemed necessary to consult the interests of captors, nor did the government provide them an indemnity. It is true that the United States incurred a responsibility to France, (which was afterwards discharged by a large pecuniary compensation,) chiefly in consequence of *condemnations, made after the date of the treaty*, of property which they had absolutely stipulated to pay for, if not restored. In the various laws authorizing the issuing of letters of marque and reprisal, there has been some occasional though not essential variation of mere phraseology; but the act relating to the Tripolitan war, and authorizing the issuing of commissions to private armed vessels, (being the first act of that kind passed after the French treaty and the accession of Mr. Jefferson to the presidency,) is remarkable for its

accurate expression of the true doctrine on this subject. The 1st section (Laws U. S., vol. 3, page 448,) declares that "any Tripolitan vessel, goods, or effects, *captured and brought into port* by any private armed vessel of the United States, duly commissioned, may be *adjudged good prize*, and *thereupon shall accrue* to the owners, officers and men of the capturing vessel," &c.

The right of captors is of the nature of that acquired, under various statutes, by the officers of the customs on the seizure of property for violation of the revenue laws, and the power which the government has vested in the Treasury Department for the remission of these forfeitures is analogous to that which the government itself holds by the public law over prize property. This power of remission has not only been properly exercised by the Treasury Department, after condemnation, but the government has directly interposed its power in other cases, after seizure and prosecution, and released from forfeiture, by express legislative enactment, property to a vast amount, without regard to any indemnity to the seizing officers.

It seems to have been considered, in the opinions laid before the House, that when the prize vessel is of equal or superior force, there exists, by force of the prize act, a peculiarly exclusive personal right to the property itself, not subject to the control of the government, which in that case takes no share of the proceeds. The nature of these interests, however, is the same. In the one case the *whole* proceeds are granted only in opposition to the *proportional* or *partial* share allowed in the other. In both, it is granted in the proceeds only; and it is because it is no more in either than a grant from the government, that it retains to itself a share of the avails without injustice to others. The property in the prize itself is solely in the government, and it therefore assumes the disposal of its proceeds.

If the committee have not mistaken the fair and reasonable interpretation of the prize act, it is scarcely more than supererogation to say that it confers no claim to remuneration from the government for the destruction of the Philadelphia. The enterprise was undertaken with the sole view to her destruction. The officers voluntarily offered their services to effect that specific object, and acted under orders for that express purpose. These orders were to enter the harbor in the night, "*board the Philadelphia*" and "*burn her*." She was accordingly "*boarded, and after a short contest carried,*" and "*immediately fired.*" The expedition can hardly be said to have been undertaken with a view to *capture*, in the proper sense of the term, although it was contemplated that in effecting the destruction of the ship, the party would obtain possession of her. This possession was merely incidental to the chief object, and no reasonable or plausible construction of the prize act can extend it to such a case. The "*case*" on which one of the counsel has given an opinion is thus stated: "An American man-of-war having succeeded in effecting the capture of an enemy's vessel of superior force; having entirely dispossessed the enemy and obtained undisputed possession, *in obedience to peremptory orders* destroys the prize *without bringing her into port, and before obtaining a decree of condemnation in a prize court*—have such captors any legal claim to the value of the captured property as against the United States?" If to this statement it had been added that the *capture* was made *without any intention* to bring the vessel into port, or to *obtain any decree* of condemnation, and by a party who *volunteered* their services to *destroy her* only, the claim supposed to arise out of the destruction of the Philadelphia would have been more fully and accurately stated. If, in the judgment of Commodore Preble, the interests of the service required this enterprise to be undertaken for her destruction, it was his duty to issue these orders. The prize act is not to be construed in reference to speculations on the probabilities only of any result which might have taken place had the orders not been strictly obeyed. If, on mere capture, the right to the prize property or any share of it, indefeasibly vests in the captors, it might vest in them by force of the prize act, not only collectively but individually. Yet it was not supposed when the rewards were conferred in the cases of the Guerriere and Java, destroyed after capture by order of the commanding officers of the capturing ships, that the claim of the officers and men under their command on the justice of Congress was of the nature of a legal right secured by the prize act. It would be highly injurious to the interests of the country in time of war to admit that "in every case in which the captors have been prevented by the act (*even*) of the *government*, or its lawfully authorized agents, from proceeding to adjudication, the fair and just interpretation of the statute entitles them to remuneration." In answer to such a suggestion, the committee respectfully refer the House to the report on the claim of the officers and men of the brig Argus, for remuneration for vessels and property *destroyed* on the cruise of that vessel under *positive instructions* from the government. If against a powerful enemy on the ocean, the policy or necessities of the country require the destruction of prizes, it is unquestionably the right and duty of the government to qualify its instructions to the navy for that end. Its authority is supreme in adapting its naval power to the exigencies of the country, either for purposes of its own defence or the destruction of the power and means of its enemy. The prize act has not so embarrassed the exercise of this authority as to bind the government to compensation to its navy, if, in the execution of an enterprise under its own peremptory orders for the destruction of an enemy's fleet, an intermediate temporary possession of any of his ships should be acquired during the conflict. The practical operation of such a violent construction of the act might so seriously exhaust the resources of the government as to render success itself more ruinous than defeat.

The committee have more fully offered their views on the subject of this claim, that no misconception or erroneous impressions as to the rights of the officers and men of the navy may be drawn from their recommendation of the bill to the favorable consideration of the House. The history of the legislation of Congress has, however, shown that the government has not evinced an indisposition to recognize the claims which their patriotic and disinterested sacrifices have often imposed on its justice and generosity; and the navy will feel an assurance, in those acknowledgments of the deep sense which it cherishes of their devotion to the interests and honor of their country, that the government will not fail, under any circumstances, to respect its honorary obligations to them.

The destruction of the Philadelphia, as an exploit of distinguished rank among the daring achievements of the navy, presents a powerful appeal to the national gratitude and honor. The reward proposed by the bill is not only recommended by an enlightened policy, but will be the more grateful to the feelings of the House, as it is chiefly dispensed to those who are entitled by their bereavements to the kindest regard and protection of the country.

Though it is clearly within the discretion of the House to distribute the sum granted in any *individual* proportions which it may deem expedient, yet the committee do not recommend a distribution which would deprive any *class* of the officers and men of the full amount which would fall to its share under that equitable rule of apportionment which has been incorporated into the prize act. They have,

therefore, declined any investigation of the comparative individual merit of the officers and men of the *Intrepid* which might lead to such a result. The lapse of time which has intervened since the destruction of the *Philadelphia*, and the decease of many officers entitled to participate in the honor acquired by that enterprise, would alone induce the committee to forbear an inquiry which must necessarily be imperfect; that might, therefore, unintentionally do injustice to some, and which rather pertains, at this late period, to the history of the navy than the duties of the committee.

The tables marked A and B show the classification of the officers and men of the *Intrepid*, and the distribution of \$100,000, apportioned among them, according to the rule adopted by the prize act.

The statement C shows the result of a distribution of that sum among them according to the rule prescribed in the bill, as it now stands. The bill, as recommitted, directs that "each individual shall be entitled to and receive such proportion thereof as was paid to each individual of the same grade, captors of the *Guerriere*, *Macedonian*, and *Java*, of the compensation appropriated to them, as nearly as may be."

The committee further submit to the House, with this report, a statement exhibiting the number of individuals in each class who shared in the amount allowed to the captors of the *Java*, *Macedonian*, and *Guerriere*, respectively. They have not presented the various results of distributions according to the second section of the bill deduced from calculations made from all these cases (which vary from each other in some degree,) because that derived from either of them fully explains the operation of the rule prescribed in the bill. The statement D shows the proportion, however, which would fall to each class, in the first instance, by all these distributions, and from which the ratio is to be deduced for a redistribution of the surplus. The surplus in the calculation made from the case of the *Java* is very nearly a medium between that from the *Macedonian* and *Guerriere*; and the committee have, therefore, completed a distribution in the ratio to each individual in that case, which is presented in the statement C. By the adoption of this artificial rule, the three first classes would gain, in comparison with the distribution of the prize act, more than \$32,500, and of this sum \$26,517 goes to increase the share of the first class to more than \$41,000. The three remaining classes will lose the same amount, of which nearly \$25,000 must be taken from the seamen and marines only, or their representatives. The brilliant success of the enterprise, conducted by its skillful and fearless leader, evinces that in the conflict which secured the destruction of the frigate, every class of the officers and men, inspired by his example, must have been distinguished as well by coolness and intrepidity as their devotion to the service of their country, the honor of their commander and the glory of the navy.

The committee recommend that the distribution of the grant be made among the officers and men of the *Intrepid*, or their representatives, according to the rule of the prize act, including a share to the representatives of Captain Edward Preble, under whose orders and on whose responsibility, as the commanding officer of the squadron, the enterprise was undertaken. Adverse circumstances, beyond the control of the commanding officer of the *Syren*, deprived that vessel of the opportunity which he sought of sharing in the immediate danger and honor of the contest.

If the committee are mistaken in their construction of the prize act, and the House should adopt the opinion of the counsel for the memorialists, that the right to the value of the *Philadelphia* became vested in the captors, this right must have attached to them as individuals in their respective proportions established by the act, and the principle adopted in the second section of the bill would work a violation of the vested rights of all those whose shares fall into the fourth, fifth, and sixth classes. If resort is to be had to the prize act to establish the claim as a matter of right, the House would be bound specifically to carry its distributions into effect.

The committee believing, however, that they have not erred in considering the sum allowed as an honorary gratuity, and that it is not expedient to adopt any rule of distribution which deprives any class of the officers and men of the *Intrepid* of its share according to the rule of the prize act, have directed their chairman to present to the House, for its adoption, the accompanying amendments to the bill, which conform it to the principles contained in this report.

A.

Classification of the officers and men of the Intrepid, under the prize act, for distribution.

First class.—Stephen Decatur, commander. 1.

Second class.—James Lawrence, Joseph Bainbridge, Jonathan Thorn, lieutenants. 3.

Third class.—Lewis Heermann, surgeon; Ralph Izard, master's mate; William Wiley, boatswain; William Hook, gunner; Edward Keller, master's mate. 5.

Fourth class.—Thomas McDonough, Charles Morris, John Davis, John Rowe, Alexander Lawes, Thomas O. Anderson, midshipmen; James Metcalf, Nicholas Brown, boatswain's mates; Joseph Boyd, ship's steward. 9.

Fifth class.—George Crawford, George Brown, John Newman, Paul Frazier, quartermasters; Solomon Wren, sergeant marines; Duncan Mansfield, corporal marines; S. Catelino, pilot; Samuel Endicote, James Wilson, John Ford, Richard Doyle, quartergunners. 11.

Sixth class.—Forty-two seamen and marines. 42.

B.

Distribution of one hundred thousand dollars among the officers and crew of the Intrepid, according to the prize act.

Classes.	Persons in each class.	Amount to each.	Whole class.	Twentieths.
First	1	\$15,000 00	\$15,000	3
Second	3	3,333 33 $\frac{1}{3}$	10,000	2
Third	5	2,000 00	10,000	2
Fourth	9	1,944 44 $\frac{2}{3}$	17,500	3 $\frac{1}{2}$
Fifth	11	1,136 36 $\frac{4}{11}$	12,500	2 $\frac{1}{2}$
Sixth	42	833 33 $\frac{1}{3}$	35,000	7
			\$100,000	20

NOTE.—The commanding officer of the squadron, Captain Preble, takes one-twentieth, being one-third of the amount of the first class—\$5,000.

C.

Distribution of one hundred thousand dollars among the officers and men of the Intrepid, allowing to each the same proportionate share which was allowed to each of the like class of the sum granted for the capture of the Java, by the frigate Constitution, as now prescribed in the bill.

The Constitution had, in the respective classes, the following numbers, who received the following proportions (taking \$100,000 as the sum to be distributed), viz:

	Whole class.	Twentieths.
Class 1. One commander who would receive \$15,000.....	\$15,000	3
Class 2. Six officers who would receive, each \$1,666.66 $\frac{2}{3}$	10,000	2
Class 3. Eleven officers who would receive, each \$909.09 $\frac{1}{11}$	10,000	2
Class 4. Thirty-four persons who would receive, each \$514.70 $\frac{1}{17}$	17,500	3 $\frac{1}{2}$
Class 5. Forty persons who would receive, each \$312.50.....	12,500	2 $\frac{1}{2}$
Class 6. Three hundred and ninety-three persons who would receive, each \$89.00 $\frac{5}{85}$	35,000	7
	\$100,000	20

The Intrepid had, in

	Whole class.
Class 1. One commander (at the above ratio) receives \$15,000.....	\$15,000 00
Class 2. Three officers (at the above ratio) receive, each \$1,666.66 $\frac{2}{3}$	5,000 00
Class 3. Five officers (at the above ratio) receive, each \$909.09 $\frac{1}{11}$	4,545 45
Class 4. Nine persons (at the above ratio) receive, each \$514.70 $\frac{1}{17}$	4,632 35
Class 5. Eleven persons (at the above ratio) receive, each \$322.50.....	3,437 50
Class 6. Forty-two persons (at the above ratio) receive, each \$89.00 $\frac{5}{85}$	3,740 46

Leaving for further distribution

\$36,355 76
63,644 24
\$100,000 00

Or \$175 $\frac{59}{100}$ on \$36,355.76, which per centum, added to each share above, completes the distribution according to the principle of the bill of the last session.

The shares filled out by this addition present the following result:

	Amount to each.	Whole class.
Number of persons, 1st class, 1.....	\$41,258 85	\$41,258 85
Number of persons, 2d class, 3.....	4,584 31 $\frac{2}{3}$	13,752 95
Number of persons, 3d class, 5.....	2,500 53 $\frac{1}{5}$	12,502 66
Number of persons, 4th class, 9.....	1,415 73 $\frac{2}{9}$	12,741 59
Number of persons, 5th class, 11.....	859 55 $\frac{10}{11}$	9,455 15
Number of persons, 6th class, 42.....	244 96 $\frac{2}{3}$	10,288 47
		\$99,999 67
Fractions		33

Comparison of loss and gain of each person and class between this distribution and the prize act.

Classes.	No. of persons.	Am't by prize act.	Am't by the bill.	Gains, each.	Whole class gains.
First	1	\$15,000 00	\$41,258 85	\$26,258 85	\$26,258 85
Second	3	3,333 33	4,584 31	1,250 98	3,752 95
Third.....	5	2,000 00	2,500 53	500 53	2,502 66
				Loses, each.	Whole class loses.
Fourth	9	1,944 44	1,415 73	528 71	4,758 41
Fifth	11	1,136 36	859 55	276 81	3,044 85
Sixth	42	333 33	244 96	588 37	24,711 53

The number of persons in each class entitled to share in the sums allowed, respectively, for the capture of the Guerriere, Macedonian and Java, is as follows:

Constitution—(Guerriere), 1st class, 1; 2d class, 7; 3d class, 9; 4th class, 29; 5th class, 36; 6th class, 390.

Constitution—(Java), 1st class, 1; 2d class, 6; 3d class, 11; 4th class, 34; 5th class, 40; 6th class, 393.

United States—(Macedonian), 1st class, 1; 2d class, 7; 3d class, 12; 4th class, 31; 5th class, 48; 6th class, 381.

The amount of one hundred thousand dollars on the ratio between each person in these cases, respectively is as follows:

Guerriere, first distribution, \$37,860.72; leaving for further distribution	\$62,139 28
Java, first distribution, \$36,355.76; leaving for further distribution	63,644 24
Macedonian, first distribution, \$35,255.58; leaving for further distribution	64,744 42

D.

Distribution according to the ratio to each individual, in the cases of the Guerriere and Macedonian.

GUERRIERE \$100,000.

The Constitution had, in—

	Whole class.
Class 1. One commander who would receive \$15,000.00	\$15,000 00
Class 2. Seven officers who would receive, each \$1,428.57	10,000 00
Class 3. Nine officers who would receive, each \$1,111.11	10,000 00
Class 4. Twenty-nine persons who would receive, each \$603.44	17,500 00
Class 5. Thirty-six persons who would receive, each \$347.22	12,500 00
Class 6. Three hundred and ninety persons who would receive, each \$89.74	35,000 00
	<u>\$100,000 00</u>

The Intrepid had, in—

	Whole class.
Class 1. One commander who would receive \$15,000.00	\$15,000 00
Class 2. Three officers who would receive, each \$1,428.57	4,285 71
Class 3. Five officers who would receive, each \$1,111.11	5,555 55
Class 4. Nine persons who would receive, each \$603.44	5,430 96
Class 5. Eleven persons who would receive, each \$347.22	3,819 42
Class 6. Forty-two persons who would receive, each \$89.74	3,769 08
	<u>\$37,860 72</u>
Leaving for further distribution	<u>62,139 28</u>

MACEDONIAN \$100,000.

The United States had, in—

	Whole class.
Class 1. One person who would receive \$15,000.00	\$15,000 00
Class 2. Seven persons who would receive, each \$1,428.57	10,000 00
Class 3. Twelve persons who would receive, each \$833.33	10,000 00
Class 4. Thirty-one persons who would receive, each \$564.51	17,500 00
Class 5. Forty-eight persons who would receive, each \$260.41	12,500 00
Class 6. Three hundred and eighty-one persons who would receive, each \$91.86	35,000 00
	<u>\$100,000 00</u>

The Intrepid had, in—

	Whole class.
Class 1. One person who would receive \$15,000.00.....	\$15,000 00
Class 2. Three persons who would receive, each \$1,428.57.....	4,285 71
Class 3. Five persons who would receive, each \$833.33.....	4,166 65
Class 4. Nine persons who would receive, each \$564.51.....	5,080 59
Class 5. Eleven persons who would receive, each \$260.41.....	2,864 51
Class 6. Forty-two persons who would receive, each \$91.86.....	3,858 12
	<hr/>
Leaving for further distribution.....	\$35,255 58
	<hr/> <hr/>
	64,744 42

F.

A proposed distribution to the officers and men of the Intrepid of one hundred thousand dollars, in the proportion to each of the share of each in a vessel which, full manned, required one hundred persons.

The classes in such a vessel are as follows:

	Whole class.	Twentieths.
Class 1. One person who would receive \$15,000.00.....	\$15,000	3
Class 2. Three persons who would receive, each \$3,333.33 $\frac{1}{3}$	10,000	2
Class 3. Five persons who would receive, each \$2,000.00	10,000	2
Class 4. Ten persons who would receive, each \$1,750.00.....	17,500	3 $\frac{1}{2}$
Class 5. Fourteen persons who would receive, each \$892.85 $\frac{1}{7}$	12,500	2 $\frac{1}{2}$
Class 6. Sixty-seven persons who would receive, each \$522.38 $\frac{2}{7}$	35,000	7
	<hr/>	
	\$100,000	

On this ratio the officers and men of the Intrepid would receive each, as follows:

	Whole class.
Class 1. One person who would receive \$15,000.00.....	\$15,000 00
Class 2. Three persons who would receive, each \$3,333.33 $\frac{1}{3}$	10,000 00
Class 3. Five persons who would receive, each \$2,000.00.....	10,000 00
Class 4. Nine persons who would receive, each \$1,750.00.....	15,750 00
Class 5. Eleven persons who would receive, each \$892.85 $\frac{1}{7}$	9,821 42
Class 6. Forty-two persons who would receive, each \$522.38 $\frac{2}{7}$	21,930 29
	<hr/>
Leaving for further distribution (21 $\frac{2}{9}$ per cent.).....	\$82,501 71
	<hr/> <hr/>
	17,498 29

The shares filled out by this addition result as follows:

	Whole class.
Class 1. One person at \$18,181.35	\$18,181 35
Class 2. Three persons at \$4,040.30	12,120 90
Class 3. Five persons at \$2,424.18	12,120 90
Class 4. Nine persons at \$2,121.15	19,090 41
Class 5. Eleven persons at \$1,082.22	11,904 44
Class 6. Forty-two persons at \$632.89	26,581 49
	\$99,999 49
Fractions	51

Loss and gain of each by this distribution, compared with the prize act.

Classes.	No. of persons.	Amount by prize act.	Amount by this distribution.	Gains, each.	Whole class gains.
First	1	\$15,000 00	\$18,181 31	\$3,181 35	\$3,181 35
Second	3	3,333 33	4,040 30	706 97	2,120 90
Third	5	2,000 00	2,424 18	424 18	2,120 90
Fourth	9	1,944 44	2,121 15	176 71	1,590 41
				Losses, each.	Whole class losses.
Fifth	11	1,136 36	1,082 22	54 14	595 56
Sixth	42	833 33	632 89	200 44	8,418 51

Remarks upon the claim of Mrs. Decatur, as representative of the late Commodore Decatur, in behalf of herself and of the officers and men of the ketch Intrepid, for compensation in the nature of prize money for the capture of the Philadelphia, in the harbor of Tripoli.

That the captors might, if not peremptorily enjoined to the contrary by their orders, have brought off their prize and reaped the pecuniary reward designed them by the law, is a matter of the highest probability, and approximates certainty as near as any unaccomplished event can do. They found her completely equipped and fitted for sea, and prepared for action even to the loading of her guns. After all the time spent in the action, in preparations to execute the order for the destruction of the ship, in the effectual application of the means of destruction, according to the details of the order, and in waiting to see the progress and effect of the same, and to repel the apprehended attempts of the enemy to retake the ship before her destruction had been placed beyond doubt; after all this lapse of time the captors effected their retreat, in their own vessel, without the loss of a man. I apprehend that the means and the chances of escape in the captured frigate were incalculably greater and more certain, if the captors had been at liberty to cut her cables and hoist sail the instant they had mastered her decks. Two obstacles were to be apprehended and guarded against, whether they retreated in their own vessel or in the prize—recapture and impediments of navigation. Against the first, the superior means of defence in the frigate are too obvious to be insisted on; and, I take it for granted, that her faculties as a sailer, the depth of water, and other circumstances, must have opened her a way to the sea at least as safe and speedy as that of the ketch Intrepid. But the time which would thus have been gained must be held conclusive. The advantage it would have given the captors is incalculable; and even if it were possible to suppose that the intrinsic difficulties opposing their egress in the frigate were greater than what they encountered in the ketch, (an hypothesis deemed wholly inadmissible,) still the advantage of time must more than have compensated them. Commodore Preble framed his order when at a great distance from the scene of action; and, reasoning from probabilities and circumstances in general, he inferred that the enterprise, even to the extent of taking and destroying the frigate, would have been attended with more difficulty and loss than actually occurred. He did not anticipate the consequences, to their full extent, of the panic and terror with which the suddenness of the attack and the heroic bearing of the assailants struck the enemy; he probably anticipated desperate resistance, and a serious sacrifice of life. It was obviously impossible for him, at that distance, to judge of the actual state and condition of the frigate, or of the existing means and facilities for bringing her off, which must have depended on contingencies which he had no possible means of ascertaining; such as the losses to be sustained by the assailants in carrying her; the state of her equipment for defence or for sailing; of the wind, weather, &c. Her destruction, by so well planned and daring an enterprise, was deservedly considered as of the utmost importance to the operations then going on against Tripoli, as well from its moral effect upon the enemy as the abstraction of so much of his positive force. This great object the commodore concluded, from the facts and circumstances then known to him, would have been put in too much hazard by an attempt to push the enterprise to the point of still more signal and glorious success by bringing off the prize in the face of the enemy. But it turned out, in the event, that this would have been far the safer and easier achievement. It is understood, indeed, to be the opinion of the most experienced and skillful naval commanders, that if Commodore Preble had conducted the enterprise in person, he would, upon the spot, and with a full view of all the circumstances, have changed his plan and brought off the frigate. This is well known to have been the decided and clear opinion of the illustrious commander who first suggested and then executed the enterprise with so much glory and advantage to himself and his country. It is well known that while he faithfully and punctually fulfilled the orders of his superior in command, he would gladly have followed the bent of his own genius by taking the course pointed out by the circumstances and the event of the action.

As to one of the questions which have been suggested in this case, whether the captors acquire a

beneficial property and interest in a maritime prize of war, before adjudication, I have, on a former occasion, been called upon to give it full consideration; and the opinion then expressed, and the reasons advanced in the affirmative, I yet adhere to with a confidence corroborated by the success with which they were maintained before a tribunal of pre-eminent learning and talent.

The general principle, deduced from the maritime law of nations, has been settled by repeated decisions of the highest authority in this country, and stands clear of any possible doubt. The transfer of the property of prize, from the one belligerent to the other, at the instant of capture, a property for which the victor's flag is the all-sufficient badge, and which can be divested only by re-capture, or by the sentence of a competent court; the consequent capacity of the captor to vindicate his right of property and possession by every species of possessory action, or other judicial remedy, inherent to every lawful possession coupled with a beneficial interest, have been distinctly and conclusively established by a concurrence of numerous decisions, both in the former federal Court of Appeals, and in the present Supreme Court of the United States. By these the property is held to be so indefeasibly vested in the captor, by the mere capture, without adjudication as prize, that it was not divested by his setting fire to his prize at sea, and giving her up to destruction, for the want of adequate force to bring her into port. This was decided by the federal Court of Appeals, in the *Mary Ford*,* and reconsidered and approved by the Supreme Court in the *L'Invincible*.† An American ship found the *Mary Ford* in this desperate condition at sea, extinguished the fire, and brought her safe into port, where she was claimed both by the original British owner and by the French captor; the claim of the former was rejected, and restoration on salvage decreed to the captor. In the *Joseph Segunda*,‡ it was decided that an adjudicated prize, brought by the captor into a neutral port, might there be absolutely forfeited by a breach of the local laws of trade. A stronger illustration of the rights acquired by mere capture, before condemnation, need not be desired; for here an indefeasible transfer of the property was held to have been operated by the sole act of the captor, and expressly for the reason that his title is vested by virtue of the capture alone, and instantaneously that it is achieved: subject to be divested only by recapture, or by the sentence of a competent tribunal.§

Such are the clear and unquestionable rights of property incident to maritime capture, *jure belli*, as deduced from the maritime law of nations. That there is no distinction, in this respect, between the rights of belligerent captors in general, and those of the officers and men belonging to the public and private armed ships of the United States, under the several acts of Congress by which their respective rights are recognized, has been settled, after full discussion and mature consideration, by the late board of commissioners for the adjudication of claims upon Spain, under the treaty with that power, commonly called the Florida treaty: which was the occasion, before mentioned, which had formerly led me to examine the question. It was there presented in various cases of captures during the late war with Britain, some by our public ships-of-war, some by privateers, whose prizes had been seized or despoiled in Spanish ports, before adjudication. In these cases, it was decided that the captors, in both descriptions of capture, had acquired such an interest in their respective prizes, by the mere capture, without any adjudication, as entitled them to demand indemnity from Spain, just as any other proprietors, who had suffered the like injuries; and, consequently, that they ought to be admitted as claimants under the treaty. It was never imagined that, when the acts of Congress superadded the solemnity of condemnation, as one of the requisites to the full and perfect enjoyment of the fruits of prize, it was intended to make it the preliminary requisite to the investiture of the right of property. By the terms of the act it is made necessary for the purpose only of authorizing the *disposal* of the prize and the *distribution* of the prize money. The specific property in the prize itself was not in the contemplation of the legislature: they speak only of the "proceeds," and the distribution of the "prize money" resulting from the disposal of the prize after condemnation: it is for this only that the captors are to await the process of regular adjudication.|| This precaution of public policy, to prevent the irregularities and abuses that might follow from the unlimited disposal and appropriation of prizes by captors, without any judicial sanction of the capture, has been more distinctly pronounced and emphatically enjoined in the case of privateers, who are expressly forbidden to break bulk, or make any other disposal or conversion of their prizes, before due condemnation by a competent tribunal.¶ It never entered into the conception of Congress to make any change in the rule of public law by which the transfer of the property of prize from the one belligerent to the other had been determined. To have placed the rights of the officers and men of our own navy upon a footing of inequality, in this respect, with those of other nations, would have been not more injurious to the individuals, than a disparagement of the belligerent rights of the United States as a sovereign power. The only office and effect assigned to a sentence of condemnation, by the various acts of Congress on the subject of recapture, salvage, and prize, are merely to annex to the right of property, acquired *jure belli*, the qualities of being disposable; so as to let the captors into the actual fruition of the proceeds, and to bar the right of postliminy in the original owner, as opposed to the rights of recaptors and vendees. Beyond this, the greatest sticklers, elsewhere, for the necessity of adjudication to consummate the property of prize, have not pushed the doctrine in *practice*. As to the case of the *Elsebe*,** decided by Sir William Scott, I do not think that any fault can be found with the decision upon the point directly put in issue by that case: which was simply that the government may, by treaty of peace, lawfully restore a prize before condemnation; and that the question of compensation to the captor rests with the government, and not with the court of prize. I should not have doubted the power of the British government, or of any other government, to do this, in virtue of the *eminent domain* incident to sovereignty, but upon the indispensable condition of making just compensation, for the private rights of property affected by the measure, a condition which public morality and public law have made coextensive with the power, and which has, in express terms, been annexed to it by the Constitution of the United States.†† The principle derogates nothing from the captor's inherent rights of property, in virtue

†† This doctrine has been adverted to, and pretty fully explained in the memorial of Mr. Meade, presented to the President some years ago—and about to become a subject of discussion before the present Congress.

of the mere capture; because it extends to every species and quality of property belonging to the citizens or subjects of the sovereign, without distinction, whether it be qualified in its nature or consummate and perfect. In the argument of the court, however, in the *Elsebe*, some *dicta* are uttered, going rather beyond the principle necessary to be decided in the case. These may be referred to certain peculiar and favorite doctrines of that court, on the general necessity and effect of a sentence of condemnation, which have, in a great measure, resulted from the policy and interest of Britain in her relative condition as a maritime power: but from which to infer a sentence of condemnation to be an indispensable prerequisite to the transfer of the property of prize from one belligerent to another, would be not only to set aside the whole current of decisions in our own courts, sustained by those of the great majority of civilized nations, but would very far transcend any practical decision in England, either of the courts of admiralty or of common law, notwithstanding some certain *dicta* of the former. Their courts of common law have clearly decided that the captor acquires a beneficial interest in the prize, upon which he may effect insurance, "from the moment the victor hoists his flag on board the conquered ship."* The present claim, like that of an insured upon an insurer, is strictly a claim for *indemnity*; in which it is universally held to be utterly immaterial whether the property be qualified, and require some ulterior process for its consummation, or be consummate to every practical purpose of perfect fruition. It has already been shown that, upon general principles, and according to all law and precedent in this country, the property of the captor, in an unadjudicated prize, is consummate to every beneficial purpose but that of being changed into the shape of prize money for distribution; and of being assignable, *ad infinitum*, discharged from the right of postliminy: and when the actual decisions of the English courts of admiralty and common law come to be critically examined and compared, they will be found to give the same practical result.

Whether Congress, when they awarded compensation, in lieu of prize money, to the captors of the *Guerriere* and *Java*, proceeded upon the ground of strict right or of equitable indemnity, cannot, perhaps, be positively asserted. But, either way, these precedents come up fully to the principle of the present claim, if they do not go beyond it. In those cases, the destruction of the prizes necessarily resulted from the action, and from the fortune of war; while, in this, the captors might have preserved their prize and enjoyed the fruits of their toil and danger, but for the intervention of an overruling order positively forbidding it. In other respects, it is submitted with confidence that there can be no defect of merits, either positive or comparative, in the captors of the *Philadelphia*, to exclude them from the benefit of these precedents, whatever the principle upon which they were established.

W. JONES.

DECEMBER 9, 1825.

CASE.

An American man-of-war having succeeded in effecting the capture of an enemy's vessel of superior force, having entirely dispossessed the enemy, and obtained undisputed possession, in obedience to peremptory orders destroys the prize without bringing her into port, and before obtaining a decree of condemnation in a prize court; have such captors any legal claim to the value of the captured property, as against the United States?

OPINION.

The claim of captors to the proceeds of prizes taken by them from the enemy is founded on the 5th section of the act of Congress of April 23, 1800, which enacts that "the proceeds of all ships and vessels, and the goods taken on board of them, which shall be adjudged good prize, shall, when of equal or superior force to the vessel or vessels making the capture, be the sole property of the captors."

By the law of nations, and independently of any statutory provisions, all captures enure to the exclusive benefit of the government. Most nations, however, have, for the purpose of stimulating those in their service to greater vigilance and activity, granted this interest, or a portion of it, under special circumstances, to individuals by whom the prizes are made. The statute to which I have referred contains the terms and conditions upon which this right is transferred in the cases specified under our own law. It operates as a contract between the nation and the captors.

It might be imagined that the language of the statute implies that condemnation, as prize of war, is an essential preliminary to the vesting of this right. I cannot, however, bring my mind to the conclusion that Congress, in this indirect manner, designed to commit the country upon the important and much litigated question, when the right of property is completely vested in the captors. Some writers on public law have held that condemnation is essential; others, of equal authority, have sanctioned the opposite doctrine. From obvious motives of policy, Great Britain has lent her countenance to the former opinion, but it has never yet been absolutely settled in this country; and it cannot easily be believed that Congress designed to determine the question in this collateral manner. Indeed, there seems little necessity for insisting upon it as indispensably requisite, except in the case of neutral property which has become obnoxious to capture by some violation of belligerent rights. The right of the neutral, presumptively unquestionable, ought to be divested only by a judicial decree, fixing upon him the offence which involves as its consequence the forfeiture of his property as prize. Where, however, the property is avowedly and notoriously hostile, condemnation as prize is not universally necessary, and may be regarded as little more than a mere formality. Our own courts have held that simple belligerent possession confers a right, which can be questioned only by superior force of arms on the part of the enemy, or its validity judicially determined in the courts of the captors themselves. At all events, under the strictest decisions of the English courts, an inchoate right vests immediately by the very act of capture, which is recognized as susceptible of transfer, of insurance, and other acts of ownership, and which is distinguishable only in degree from the same rights when perfected by the decree of a prize court.

In this view of the case, I am unable to discriminate between a right of this description and any other species of property, which, by the Constitution of the United States, it is prohibited to take for public purposes without compensation. If a capture has been legally effected; if the captors are in undisputed possession of the prize; and the government, to subserve its own purposes, surrenders it to the

* 1 Marsh on Insur., 107-8.

enemy, relinquishes it to a neutral, employs it in military operations, by which it is lost to those interested in the proceeds, or consigns it to inevitable destruction, it appears to me that it is bound by every principle of equity and of law to compensate the individual captors to the full value of their respective interests. The Constitution equally protects the citizen in the enjoyment of those rights of property which are inchoate, and remain to be perfected by some ulterior proceedings, as of those which are absolute and indispensable.

Upon another ground, I conceive the claim to be equally well founded—even upon the supposition that condemnation by the admiralty was an essential preliminary to the vesting of the right in the captors. If the performance of this condition has been prevented by the act of the government itself, it is by every principle of law precluded from availing itself of the fact of such non-performance. To interpose an insuperable impediment in the way of the performance of a condition, is tantamount to a waiver of it. If, then, by the authority of the government, or of superior officers, who must be considered as the organs of the government, captured property is taken out of the hands of the captors and appropriated to public purposes, and the captors are thus deprived of the power of obtaining a condemnation, they stand in the eye of the law in the same predicament, and their rights are as perfect, as if the decree of condemnation had actually passed. The physical power belongs to the government; and that may as well be exerted after the prize is brought into port, delivered into the custody of the marshal, and the cause is ready for judgment, as at the moment of capture, or at any intermediate period of time. An interposition of this kind, it is usual to put as one of those extreme cases which cannot practically be anticipated, because it would be indecorous even to suppose the government guilty of so gross an act of injustice.

The principles which have been stated seem to have been recognized and sanctioned by the highest authorities in our country, on some memorable occasions. It is necessary to refer only to one, which strikes me as perfectly coincident. In the summer of 1805, a squadron, under the command of Commodore Decatur, captured an Algerine frigate and a brig; they were in possession of the captors. With a view to promote the public interests, the negotiators for peace agreed to restore them to the enemy; not by treaty, but as a voluntary donation, after the treaty was completed, and because of their small value to us, as well as the great impression upon the enemy, as to our resources, which such an act would produce. No condemnation had passed: the prizes had not been sent to the United States: yet Congress considered the rights of the captors as perfect and their interests as sacred, and they were accordingly compensated. The same principle applies with equal strength to the case of a voluntary destruction by order of the government as to that of a voluntary surrender. If any difference exists between the cases, it consists in this single circumstance: that in the one case the surrender was in virtue of a general authority, which subsequently received the sanction of the government; in the other, the destruction was in compliance with previous orders.

The only judicial decision which I am aware of, which can be thought to contravene the principles which I have laid down, is one made by Sir William Scott, in December, 1804. (*The Elsebe*, 5 Rob.) That was the case of a Swedish vessel, which had been captured, and, before condemnation, ordered to be restored; and the captors insisted upon their rights, notwithstanding the order of the government for the restoration of the property. The very distinguished judge, by whom the point was determined, viewed the question as one of great delicacy and difficulty, but he finally decided against the claim. Upon this decision, it is important to remark: 1. That the date of it being subsequent to the destruction of the *Philadelphia*, it cannot, with fairness, be held to govern the case. 2. The principle which rests at the foundation of the judgment, viz: that a decree of condemnation is essential to transfer the property, is not yet established in this country. It has been adopted in England from considerations of policy: the same motives, if they existed to the same extent in the United States, have not yet been permitted to influence the decisions of our judicial tribunals. 3. The prerogative of the sovereign was considered as involved in the question, and influenced the decision of the court: here no such collateral motive exists. 4. The constitutional prohibition, to apply the property of individuals to public purposes, without compensation, does not operate in England to stay the arm of the government in disposing of the interests of its subjects. 5. The language of the grant to the captors in England is much more restricted than that of our own statute: it directs that the prize may be lawfully sold and disposed of, "after the same shall have been to us finally adjudged lawful prize, and not otherwise;" recognizing, in express language, the necessity for a condemnation as an essential prerequisite before any interest vests in the captors.

If, under these circumstances, Sir Wm. Scott felt the difficulty and delicacy of the question before him, it can scarcely be doubted that, had he been sitting in an American instead of an English court, administering justice under our statute, and guiding himself by the principles of our Constitution and government, he could scarcely have hesitated in sanctioning the validity of the claim of the captors.

On the whole, my opinion is, that in every case in which the captors have been prevented by the act of the government, or its lawfully authorized agents, from proceeding to adjudication and obtaining a decree of condemnation, the fair and just interpretation of the statute entitles them to remuneration to the full value of the property captured. As, however, no suit can be sustained against the United States, to enforce any pecuniary claim, the only resource is an application to the justice and equity of Congress.

The foregoing opinion assumes for its basis the two facts, that the vessel might have been brought out of the enemy's port; and that this was not done by order of the commander. The situation of the *Philadelphia* frigate, not more than from two miles to two and a half from the mouth of the harbor; the wind favorable, which would have enabled her to pass over this space within a quarter of an hour, justify to the minds of those who are not skilled in nautical matters, the decided opinion of Captain Jones, than whom no more competent judge can be found, and of the pilot who accompanied the expedition. The orders of Commodore Preble are equally decisive of the other question.

RICHARD S. COXE.

19TH CONGRESS.]

No. 334.

[2D SESSION.]

STATEMENT OF THE FORCE AND DISTRIBUTION OF THE MARINES IN DECEMBER, 1826,
AND SHOWING THE NECESSITY FOR AN INCREASE OF THAT CORPS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 9, 1827.

NAVY DEPARTMENT, *January 30, 1827.*

SIR: I have the honor to enclose copies of papers received from the commandant of the marine corps, containing a statement of its present situation and duties. They confirm the views which have been presented, and the recommendations made heretofore by the Executive, and prove that an increase of the corps is indispensable to the public interests.

I am, very respectfully, &c.,

SAM'L L. SOUTHARD.

HON. HENRY R. STORRS, *Chairman of the Naval Committee, House of Representatives.*HEAD-QUARTERS OF THE MARINE CORPS, *Washington, January 17, 1827.*

SIR: I have the honor to enclose to you four documents, Nos. 1, 2, 3 and 4. No. 1 is the general returns of the corps for the month of December, 1826, showing its force and distributions. No. 2 is an exhibit of the guards now on board the vessels-of-war, and their exact strength. No. 3 shows the number required for the sea service in 1827. No. 4 is a statement of the distributions of that part of the corps stationed at the different navy yards, and the portion of it now at head-quarters.

You will perceive from the general returns of the corps, that there are now in service eleven sergeants, four musicians, and seven privates, more than are allowed by law, to which will be added thirty-nine private servants, making forty-six privates over the legal number. Nos. 2 and 3 will exhibit that the vessels-of-war in commission will require, to complete their guards, in addition to those they have now on board, six corporals, six musicians, and seventy-seven privates; several of the vessels have now more sergeants than they are entitled to, there being now on sea service six more of that grade of non-commissioned officers than will be required in the year 1827.

No. 4 shows the effective and non-effective strength of the guards at the different yards. At the principal yards not more than half the number of lieutenants required by the commandants of those yards are kept up. Nevertheless, the duty is so severe that many of the men desert or go into the hospital, in consequence of the hardship of the service. From the strength of the guard at the Charlestown yard is to be detached the guard of the sloop-of-war Warren. It appears from statement No. 4 that the whole number of privates now on shore, after deducting the guard of the Warren, will amount to two hundred and eighty-three; that there are seventy-two of this number either sick, confined, or on drill, forty-six over the legal number, and seventy-seven required to complete the complement for sea duty in 1827, will reduce the number on shore to one hundred and sixty. If you deduct from this force those who are sick, confined, and on drill, and the fourteen who are learning music at head-quarters, there will remain seventy-four privates to guard the public property at all the navy yards in the United States.

In closing this statement, I take occasion to mention that, under all circumstances, it would be necessary to keep a considerable portion of the marine corps on shore, if for no other purpose than as relief guards for that portion of it which is employed on sea duty. My view in stating this is merely to place before you the fact that any other expense incurred in giving security to the public property in the navy yards would be entirely superfluous, as that duty is performed by a force that would otherwise be idle, and which the necessities of the service require to be kept up.

I have the honor to be, very respectfully, your most obedient servant,

ARCH'D HENDERSON, *Lieutenant Colonel Commandant.*The Hon. SAMUEL L. SOUTHARD, *Secretary of the Navy.*

General return of the officers, non-commissioned officers, musicians, and privates of the United States marine corps, for the month of December, 1826.

Stations, &c.	Lieut. Cols.	Captains.	1st Lieuts.	2d Lieuts.	Non-com'd staff.	Sergeants.	Corporals.	Musicians.	Privates.	Aggregate.	Remarks.
Head-quarters	1	1	3	2	4	10	5	10	39	75	One captain and two first lieutenants in the staff. Lieutenant Hall absent with leave. Fourteen privates learning music. Five sergeants, one corporal, and five privates on daily duty. One sergeant, one corporal, and six privates have been detailed as a guard at night during this month for the capitol. Lieutenant Tyler joined at head-quarters the 5th instant, and absent with leave. Lieutenant Lee absent with leave.
Navy yard, D. C.	1	1	1	3	25	31	Two privates learning music.
Barrancas, West Florida	1	1	1	1	11	15	November 30, 1826.
Gosport, Va.	1	1	3	7	4	2	28	46	Second Lieutenant Neville joined this post the 25th instant. Second Lieutenant Armistead absent with leave.

19TH CONGRESS.]

No. 335.

[2D SESSION.]

ON URIAH BROWN'S SYSTEM OF ANNOYANCE AND DESTRUCTION OF THE VESSELS OF AN ENEMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 9, 1827.

The Committee on Naval Affairs, to which was referred the report of the Secretary of the Navy upon so much of the petition of Uriah Brown as relates to his system of annoyance and destruction of an enemy, to be used in the naval service, reported the following resolution:

Resolved, That it is not expedient at this time to adopt any further legislative measures in relation to the application of Uriah Brown.

19TH CONGRESS.]

No. 336.

[2D SESSION.]

COST OF, AND EXPENDITURES AT, THE SEVERAL NAVY YARDS, FROM 1819 TO 1826.

COMMUNICATED TO THE SENATE FEBRUARY 12, 1827.

NAVY DEPARTMENT, *February* 9, 1827.

In compliance with the resolution of the 17th January, directing the Secretary of the Navy to lay before the Senate—

1. An exhibit of the original price paid by the United States for the sites of each of its navy yards;
2. The gross amount of subsequent expenditures on each;
3. The average cost at each, for ten years past, of the principal kinds of labor per day, on each of the public vessels;
4. The average cost at each, during the same time, of the principal materials for ship building;
5. The average cost of the principal articles in the rations;
6. The sum total, (without details,) of the whole cost of building each vessel at each yard, when any other vessel of a like size has been built at any other yard;

The Secretary of the Navy has the honor to transmit paper marked A, which contains the desired information on the first point. This paper has been prepared from a statement submitted to the House of Representatives on the 16th February, 1826, in answer to a resolution of that body, passed on the 10th of April, 1824; to which statement the Secretary of the Navy respectfully takes leave to refer, if more detailed information should be desired than that now presented.

The information on the second point can only be obtained by an examination, in the Fourth Auditor's office, of every account of every navy agent at every yard, since its purchase; this examination will require so much labor, that there must be a suspension of the duties of the clerks from other objects, if it be furnished within the session. The Secretary of the Navy has, therefore, thought it his duty to apprise the Senate of this fact, and to state that the report on this point cannot be furnished before the next session of Congress, as will appear by the copy of a letter from the Fourth Auditor, marked B.

The copy of a letter from the Commissioners of the Navy, marked C, with the enclosures therein referred to, will give the necessary information on the remaining points of the resolution.

Respectfully submitted,

SAMUEL L. SOUTHARD.

The PRESIDENT of the Senate of the United States.

A.

Exhibit of the original price paid by the United States for the sites of each of its navy yards.

Where situated.	When purchased.	Cost.
Dennet's Island, Maine	June 12, 1800	\$5,500 00
Charlestown, Massachusetts	1800, 1801, and 1817	43,103 50
Brooklyn, New York	February 23, 1801	40,000 00
Sackett's Harbor, New York	1814 and 1815	4,425 00
Southwark, Pennsylvania	January and February, 1801	37,000 00
Washington, District of Columbia	March 17, 1800	4,000 00
Gosport, Virginia	June 15, 1801	12,000 00

B.

Copy of a letter from Tobias Watkins, Esquire, Fourth Auditor, to the Secretary of the Navy, dated—

FOURTH AUDITOR'S OFFICE, *January 24, 1827.*

I have the honor to acknowledge the receipt of your letter of yesterday's date, enclosing a copy of a resolution of the Senate of the United States, passed the 17th instant, requiring certain information respecting the cost of, and expenditures at, the several navy yards, the average price of labor and materials, and the cost of building each vessel, for ten years past.

The labor and time which it will necessarily require to examine the several accounts, for the purpose of obtaining the information called for by the resolution, will render it impracticable to furnish it during the present session of Congress.

NAVY COMMISSIONERS' OFFICE, *February 6, 1827.*

SIR: The Commissioners of the Navy have received your letter of the 23d ult., calling upon them "for such part of the information (required by the resolutions of the Senate, of the 17th ult.,) as can be furnished from this office," and, in reply, have the honor to report:

Paper A, which shows the average cost at each of the navy yards, for the last eight years, of the principal kinds of labor per day on the public vessels, from 1819 to 1826, inclusively. Prior to 1819 the work in building vessels was inconsiderable, the materials not having been collected.

Paper B, which shows the average cost of the principal materials for ship building, and of the principal articles constituting the navy ration, for the last ten years.

Paper C, which shows the sum total of the whole cost of building each vessel at each yard, when any other vessel of a like size has been built at any other yard. The information afforded by this paper is necessarily limited. Since the establishment of this board only two 74 gun ships have been *completely finished*, viz., the Columbus and the North Carolina. The latter was built at Philadelphia, but only so far completed there as to enable her to proceed to Norfolk, at which place she was fitted for sea; hence, expenses were incurred on that vessel, both at Philadelphia and at Norfolk.

The Columbus (the first ship of the line whose keel was laid down under the act for the gradual increase of the navy) was subjected to extraordinary expense from the circumstance of her frame having been selected from various parcels of timber not moulded for such a ship, which involved the necessity of additional labor to shape it to the proper moulds.

The frame of the North Carolina was cut to moulds, and hence an expense in her construction was avoided, which in the Columbus was unavoidably incurred.

The paper C, exhibits the whole cost of building the Columbus and the North Carolina; also, of building the sloops Lexington and Boston, and the schooners Porpoise and Alligator.

There are other vessels partly built at the different navy yards, but the progress on no two of them being equal, their whole cost cannot be seen; neither can a comparison of their relative cost be fairly made.

The frigate Brandywine, being the only vessel of her class which has been completely finished, no comparison can be made of her cost with that of any other vessel of a like size built at any other yard.

As to the cost of the sites of the different navy yards, the Commissioners can afford no information from the files of their office, the yards having been purchased long prior to the establishment of the board. Neither can the Commissioners inform you of the "gross amount of subsequent expenditures" on each yard, no moneys being disbursed or accounts settled in their office.

Upon these points, however, it is presumed that the Fourth Auditor of the Treasury will be able to afford you satisfactory information.

I have the honor to be, with great respect, sir, your most obedient servant,

W. BAINBRIDGE.

HON. SAM'L L. SOUTHARD, *Secretary of the Navy.*

A.

Exhibit of the average per diem pay at the several navy yards of the five principal denominations of mechanics, from the year 1819 to 1826, inclusive, and the general average for the eight years of each class at each yard.

19TH CONGRESS.]

No. 337.

[2D SESSION.]

APPLICATION OF THE CITIZENS OF PORTSMOUTH, NEW HAMPSHIRE, FOR THE CONSTRUCTION OF A DRY DOCK AT THAT PLACE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 12, 1827.

MEMORIAL.

To the honorable the Senate and the House of Representatives of the United States, in Congress assembled:

The memorial of the undersigned, citizens of Portsmouth, in New Hampshire, respectfully sheweth: That, at every period of the history of this country, the harbor of Portsmouth has been considered of great importance for naval purposes. That, under the colonial system, and long before the revolution, the British government, aware of the advantages of this place, were induced to make it a resort for their vessels-of-war, and to establish a yard, where ships, of a large class, were built for the public service.

That, during the war of independence, the Continental Congress, in like manner, duly appreciating its facilities for naval operations, ordered the construction, at this port, of a number of ships for the United States, one of which was the *America*, of seventy-four guns, the first ship of the line ever built in this county; and, through the whole of that struggle, it was the constant resort of armed vessels of different descriptions, both public and private; and of French ships-of-war, including a division of the fleet which had been defeated in the West Indies by Admiral Rodney. This squadron remained here many months, in perfect safety, and underwent a thorough repair.

That the federal government, also, whose early policy it was to lay the foundation of a respectable naval force, pursuing the course already pointed out, determined to make Portsmouth one of the positions whence, in time of war, the means of protection to the citizens and commerce of the United States, and of annoyance to their enemies, should proceed; and, in furtherance of that object, purchased an island in the harbor, and established a navy yard, where a considerable number of vessels-of-war, of all classes, have been built, in a style of naval architecture which, if equalled, is certainly not surpassed by those constructed at any other station.

Your memorialists, in addition to the series of facts herein briefly stated, would further respectfully

represent that the advantages of Portsmouth harbor, as a naval station, are numerous, and some of them, as they believe, peculiar.

This harbor is formed by a cluster of islands, on one of which the navy yard is situated, and through which the river Piscataqua, dividing Maine from New Hampshire, disembogues into the ocean. Several of these islands, on each side of the channel, afford effective raking positions, where such fortifications might be erected, at a comparatively trifling expense, as would render it completely impregnable to the attacks of any naval force that could be brought against it.

There is no bar nor obstruction at the mouth of this harbor; on the contrary, at the lowest tides there are ten fathoms, or sixty feet of water at the entrance, through the main channel to the navy yard, and at the navy yard wharf, where ships of the largest class may lay, and from whence they may proceed to sea at dead low water; a desideratum not to be found at any other naval station in the United States.

It is easy of access, with the wind at any point of the compass from south to west, or from south to east; and ships can beat in on a flood tide with the wind ahead, or they may (the distance being small,) be towed in by steamboats, which, it is presumed, will ere long be an appendage to all the stations.

When in, ships are safe from all storms; the loss of a vessel here by stress of weather being a circumstance wholly unknown.

It is never, even in the most intense cold of winter, obstructed by ice; and the fact is remarkable that, for several weeks past, and at the present time, while all our other naval ports are closed with ice, this is as free and open as at midsummer.

It is difficult, if not impossible, from the peculiar nature of the contiguous coast, to blockade this harbor, as the experience of two wars has abundantly shown; and it is certain that, during the last war, no armed vessel, either public or private, was prevented by the presence of a blockading force of the enemy, from proceeding to sea; which cannot be said of any other port.

Here, ship carpenters in any number, usually wanted, can be readily obtained upon an emergency, either for repairing or building; that description of artisans being more numerous in this, and in the neighboring States of Massachusetts and Maine, than any other class.

The deterioration in the hulls of ships is far less here than at the stations further south. A difference of twenty-five per cent. in this respect may be calculated on; an important and serious consideration, when vessels-of-war are, for a long time, laid up in ordinary.

With these facts and circumstances, strong as they are believed to be, and fully proved by history and experience, your memorialists had no doubt that, whenever the attention of government should be drawn to the construction of dry docks, this would be one of the points assigned for their location; and they have seen, with no small regret, that in the late report from the Navy Department, no appropriation is recommended for that purpose.

As a measure of sound national policy, in reference to the navy, they are of opinion that a dry dock is an indispensably necessary appendage to every naval station, more especially, for obvious reasons, in time of war, with a view to which all preparations of this sort are doubtless made; and it would seem strange that a station possessing so many and such prominent advantages should be overlooked.

The considerable ebb and flow of the sea here, being twelve feet at spring tides, the comparative cheapness of labor, and abundance of granite in the vicinity, are circumstances that would render it, in the opinion of your memorialists, far less expensive to construct a dry dock here than at any other place proposed.

Your memorialists, in expressing their most earnest wishes that an appropriation may be made at the present session of Congress of a sufficient sum to commence the construction of a dry dock at this station, are actuated by no motives of a local character; they consider the object as highly important and desirable, in a national point of view, and for the efficiency and future success of that navy so justly the pride and boast of the country.

19TH CONGRESS.]

No. 338.

[2D SESSION.]

ON THE EXPEDIENCY OF PRESERVING AND REARING OF LIVE OAK TIMBER FOR THE NAVY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 26, 1827.

NAVY DEPARTMENT, *January 29, 1827.*

SIR: I have had the honor to receive your letter of the 18th, in which you enclose the resolution of the House of Representatives, of the 12th January, instructing the Committee on Naval Affairs "to inquire into the expediency of providing, by law, for the more effectual preservation of the live oak timber on the public lands; and further, to inquire into the expediency of forming plantations for the rearing of live oak for the future supply of that timber for the navy of the United States; and also, to inform the House whether any, and, if any, what measures have been taken for the preservation of the same."

Your letter proposes two inquiries:

1. The expediency or necessity of any measures for carrying the object of the resolution into effect.
2. Any information which may exist in the Department, relative to any measures which have been taken for the preservation of the live oak timber on the public lands of the United States.

In 1799, the year succeeding the establishment of this Department, the importance of preserving this timber was so far correctly estimated as to occasion the passage of a law, which authorized the President to direct a sum, "not exceeding \$200,000," to be laid out in the purchase of growing or other timber, or of lands on which timber was growing, suitable for the navy, and to cause the proper measures to be taken to have the same preserved for the future uses of the navy."

At that time, almost the only valuable live oak within the undisputed limits of the Union was growing in the States of South Carolina and Georgia. By the subsequent purchases of Louisiana and Florida, large tracts of land, on which this kind of timber grows, were acquired.

Under the authority of the law before mentioned, the President of the United States, on the 19th December, 1799, purchased Grover's Island, containing 350 acres, for \$7,500; and in April, 1800, Black-beard's Island, containing about 1,600 acres, for \$15,000; both lying on the coast of Georgia. These islands are still in the possession of the government, and have been generally under the care of an agent; but the most valuable part of the timber has been removed, and they are now of very little importance, unless it be for the purpose of hereafter planting and cultivating the live oak.

By a law of the 1st of March, 1817, the Secretary of the Navy was authorized, under the direction of the President, to appoint agents and a surveyor, to explore and select so much of the land, on which live oak and red cedar were produced, as would be sufficient for naval purposes. The President was authorized to reserve the land so selected, and penalties were provided for such as cut and carried away the timber growing upon it or other public lands. The duties of the agents and surveyor were, by the act of 15th May, 1820, assigned to the public surveyors, and by the law of 23d February, 1822, the President was directed to use the land and naval forces, and take other measures, for the protection of the timber on the public lands.

Under the law of March, 1817, two agents and a surveyor were appointed. They examined and surveyed the coasts of Alabama and Louisiana, and made voluminous reports of their proceedings; but it does not seem necessary, nor would it be possible to detail them in this letter. They resulted in a reservation, by the President, on the 29th February, 1820, of several islands in Lake Chitimaches, Louisiana, called Commissioners, Cypress and Six Islands, containing in all about 19,000 acres, and supposed at that time to have upon them about 37,000 live oak trees, of various sizes, fit for naval purposes, a part of them difficult of approach, and some inaccessible. The Commissioner of the General Land Office was directed not to offer these lands for sale. Other tracts were found with similar quantities of timber, fit for use, but not regarded as sufficient to justify a reservation of them.

On the 5th May, 1821, an agent was appointed, with a salary of \$300, to guard the public lands in that quarter from depredations, to ascertain the names of the persons residing on them, procure information of the title by which they pretended to occupy them, make quarterly reports of his proceedings, and take the necessary legal measures to bring to punishment those who committed trespasses. No timber has yet been taken by the government from these reserved lands, or any other in Louisiana.

It is believed that there is much valuable timber, suited to the uses of the navy, on the public lands in that State, but the information in the Department is not sufficient to designate it with precision. The same agents and surveyor recommended the reservation of certain cedar lands in Alabama; but on application to the General Land Office, it was found that they had previously been sold. I have been informed by the Commissioner of the General Land Office that a part of them has since been relinquished by the purchasers; and he has been requested to reserve them from sale until another examination can be made, to decide whether the timber still remains in such a condition as to make their reservation useful and proper.

By the acquisition of Florida, in the beginning of 1821, large tracts of valuable timber were obtained, but the uncertainty which existed about claims, and titles under grants, rendered it difficult to make reservation, or even to prevent the cutting or carrying off the timber, without great hazard of trespass upon individual rights.

Under the law of 23d February, 1822, before mentioned, orders were given on the 9th March, in that year, to Master Commandant Elton, commanding the brig Spark, to proceed to the St. John's river, and prevent the cutting of timber upon the public lands, or transporting it out of the Territory. Similar orders have been directed, from time to time, to the commanders of the few public vessels which have been employed on that coast. On the 19th March, 1824, the commanding officer of the West India squadron, was directed to send frequently one or more of the vessels under his command along the coast of Florida, with a view to this object. The attention of the officers in the revenue cutters has also been called to the execution of this law. Whenever, from any source, information has been received which rendered it probable that trespasses were committed, such measures have been taken as the case seemed to require.

The length of the coast of Florida; the number of inlets, rivers, and harbors, in which vessels, loading with timber, can lie; the sparseness of the population; the small number of the public vessels or other means which could be employed for the object; the difficulty of deciding whether the land from which the wood was cut was public or private, have conspired to prevent the execution of the law from being, in all respects, efficient. Immense quantities of timber have been taken away, probably more than one-half which was growing in positions easily approached, and on which, therefore, it was most valuable. The greater part has, doubtless, been taken from lands claimed by individuals, and no accurate opinion can be formed of the amount which has been removed from the public lands. Still, it is unquestionable that many depredations have been committed, and the timber sold in the West Indies and elsewhere.

When the orders were given to master commandant Elton, an agent was appointed to accompany him, to examine the condition and quality of the timber in the Territory, and report the result of his observations to the Department. After being sometime upon St. John's, and above Lake George, he wrote that he "doubted whether there was an acre of timbered land in the province unclaimed, and, unless information could be afforded him on the subject, he despaired of being able to ascertain the fact of there being any such public lands, until a tribunal should be erected to inquire into the legality of the innumerable grants and patents which were held by individuals." This information could not, from the nature of the case, be afforded by the Department, and his agency was, to a great extent, unsatisfactory and useless. A part of the difficulty was removed by the reports of the commissioners for ascertaining claims and titles to land in Florida, and the laws which have been passed, confirming those reports. With these and other aids, a more satisfactory inquiry could now be made, and better means are now attainable to secure the execution of the law.

In March, 1825, as soon as it was believed that circumstances would permit an examination in some degree more accurate and useful than the former, and that better information could be acquired respecting the quantity and quality of the timber, as well as the depredations committed upon it, the subject was again brought to the notice of the President, and an agent selected, but the purpose was not executed, because, from the form of the appropriations, no money could be used for it, except the general contingent fund of five thousand dollars, and upon this there were unavoidable claims, which so far reduced it as to make it insufficient for this object.

As early, last fall, as a proper regard for health would permit, an agent was selected, and sent to make an examination of the state of the timber on the coasts of South Carolina and Georgia, and in Florida.

Sufficient time has not yet elapsed to receive from him a full report of his examination. He acts under instructions of 23d August last, prepared by the Commissioners of the Navy, and is directed thoroughly to explore and examine the lands on which live oak is growing, ascertain its location, quantities and qualities, and make detailed returns, showing the probable quantity and quality, in each place; the distance from navigable water, suited to coasting vessels; state of roads and water communications; probable expense per cubic foot of putting it on board vessels; names of the owners; probable price per acre at which the land could be bought; price of timber standing; amount fit for the different classes of vessels in the navy; and, particularly, the growth on the public lands, and practicability of increasing it; with other matters, useful in forming opinions on the whole subject.

Partial reports only have yet been received from him. His final report will probably enable the Executive to make such reservations as are proper, under the law before mentioned, and will also embrace other valuable information. Should he fail in procuring all that is desirable, it must be sought by other agents, and from other sources. His letters confirm the fact, that the most valuable part of this kind of timber has been removed from the whole coast, so far as he has proceeded. His last communication, dated on the St. John's, one mile below Jacksonville, states that "the St. John's, up to that point, together with its tributary creeks, 15 miles up, is entirely cleared. Live oak has, in fact, been a staple export. The collector at the Bluff, informed (me) that, for the last six or eight years, the number of vessels that had cleared, loaded with it, had averaged 150, not carrying, each, less than 2,000 feet.

This calculation would make, in the eight years, more than two millions of feet, which have been carried away from that one point of the coast. The estimate is probably much too high, but is sufficiently authentic to justify an inference that more of this timber has probably been consumed abroad than in this country, and to create great anxiety for the future.

The value of this kind of timber is well known, and justly appreciated; it has latterly been used to a great extent, by our own citizens, in building steam and merchant and other vessels, and been sought, at high prices, by individuals and governments in other countries.

It is impossible, with the present light, to calculate, with any approach to accuracy, the amount that has been transported for sale abroad, the amount used in our own country, or the quantities still remaining, which the government can procure and control. Its great importance, however, to the future wants of our navy, justifies the declaration that it is our duty to use all the means in our power to obtain, preserve, and increase it.

In the present state of this important interest, I would respectfully suggest to you the following measures, as proper to be adopted:

1. The purchase of such tracts of land as are particularly valuable. These must be such as have the largest quantity of timber, and of the best quality, on them, and are situated upon or within a short distance of navigable water. It is an extremely heavy wood, and difficult to be managed; and if far from navigable water, the expense of transporting it would be too great to justify the purchase.

2. Reservations in Florida and Louisiana, where the situation of the land and the quantity and quality of the timber are suitable. The power to make these reservations is supposed to be already in the Executive; but the means to make the surveys, and to provide the necessary agencies to protect it from depredations, require legislative provisions.

3. Planting trees upon the lands already owned by the government, or such as may be purchased. It is probable that subsequent inquiry will show that no land need be purchased for that object. Grover's and Blackbeard's Islands, and the land adjoining the Navy yard at Pensacola, with other favorable positions, may be sufficient. The cultivation and growth of this timber are not well understood by any of whom information has been sought; but facts have been acquired which justify the inferences that it may be cultivated both from the seed and by transplanting; that in the early history of Florida it was cultivated both for ornament and use; that its growth, though not very rapid, is hardy; and that, in favorable situations, it will in fifty years be of a sufficient size for many, perhaps most, naval purposes.

These three measures look to the benefit of the service at a distant period; but it is necessary to provide for more immediate wants, and therefore,

4. Provision should be made for the purchase of large quantities of timber, fitted to repair or rebuild each class of our vessels. The owners of the timber will sell to any one who will give the best price for it; and if they do not sell, they will destroy it, for the purpose of promoting their agricultural interest. There is no mode of securing it from this fate but purchasing it by the government.

The reasons in favor of this measure need not be minutely urged. It will secure to us a valuable article, which would otherwise be destroyed, or find its way to other countries, and return to us in a shape most calculated to make us feel the want of the foresight we exhibit. It will lay up an article which may be perfectly preserved for many years, and grow better as it becomes older and more thoroughly seasoned. The timber laid up under the law of 1799 was used long afterwards, and found as permanent and valuable as any ever used in the navy. It will provide in peace an article which it is difficult, and almost impossible, to procure in war, especially in such a war as is most likely to be encountered by us—a war with a nation having a powerful military marine. The transportation of timber at such a time to any of our navy yards, except perhaps that of Pensacola, would be attended with immense hazard and expense. We should be compelled to rely on inferior materials, and suffer severely the consequences of our neglect. This measure, therefore, seems to be justified both by expediency and economy.

The amount which ought to be bought and stored, refers itself to legislative discretion. Any amount short of that which would be sufficient to rebuild the whole navy, might be prudently and wisely authorized, provided the means for purchase are conveniently at hand. There would seem to be no danger of erring on that side, because it may now be bought at cheaper rates than it will be several years hence, and, if properly treated, will not decay or deteriorate.

It requires about 34,000 cubical feet to build a ship of the line, 23,000 to build a frigate of the first class, and 8,000 to build a sloop-of-war, of the size of those now building. It would, therefore, take about 927,000 feet to rebuild twelve ships of the line, seventeen frigates of the first class, and sixteen sloops-of-war; and 12,000 feet for each steam frigate that may be authorized.

What quantity would be required for repairing, until it would be necessary to rebuild them, cannot safely be the subject even of a guess.

Many of the facts detailed, and the remarks made in this letter, apply also to red cedar, and other woods which are used in building our public ships.

The reservations of the lands on which they grow, and the purchase of a quantity of them, to be laid up for future use, would also be proper.

I am, respectfully, &c.,

SAMUEL L. SOUTHARD.

Hon. HENRY R. STORRS, *Chairman of the Naval Committee, House of Representatives.*

IN THE HOUSE OF REPRESENTATIVES, *January 12, 1827.*

On motion of Mr. White,

Resolved, That the Committee on Naval Affairs be instructed to inquire into the expediency of providing, by law, for the more effectual preservation of the live oak timber on the public lands; and further, to inquire into the expediency of forming plantations for the rearing of live oak for the future supply of that timber for the navy of the United States.

And also inform this House whether any, and, if any, what measures have been taken for the preservation of the same.

Attest:

M. ST. CLAIR CLARKE, *Clerk.*

HOUSE OF REPRESENTATIVES, *January 18, 1827.*

SIR: The Committee on Naval Affairs have instructed me to refer to the Department of the Navy the enclosed resolution of the House of Representatives for obtaining the opinion of that Department, on the subject of the said resolution, in respect to the necessity or expediency of any measures which may be suggested by the Department for carrying into effect its object.

They have also instructed me to request the communication of any information, which *may exist in that Department*, relative to any measures which may have been taken for the preservation of the live oak timber on the public lands of the United States; a subject to which the attention of the committee is referred by the latter clause of the resolution.

I am, sir, with great respect, your most obedient servant,

HENRY R. STORRS,

Chairman of the Naval Committee of House of Representatives.

Hon. SAMUEL L. SOUTHARD, *Secretary of the Department of the Navy.*

20TH CONGRESS.]

No. 339.

[1ST SESSION.]

ANNUAL REPORT OF THE SECRETARY OF THE NAVY, SHOWING THE CONDITION OF
THE NAVY IN THE YEAR 1827.

COMMUNICATED, WITH THE PRESIDENT'S MESSAGE, DECEMBER 4, 1827.

The Secretary of the Navy respectfully makes the following report:

The vessels in commission during the past year have been employed in the manner exhibited in the last annual report.

The duties assigned to the officers have been performed to the satisfaction of the Department, and no occurrences on board the ships call for particular notice.

The several squadrons have been as free as usual from disease. Paper A shows the deaths, resignations, and dismissions which have taken place.

Essential service has been rendered to our commercial and our political relations by the squadron in the Mediterranean under the command of Commodore Rodgers. Although the war in the Archipelago continues, with an increasing relaxation of discipline and control over the vessels of one of the contending parties, and difficulties have existed between one or more of the Barbary States and some of the powers of Europe, yet the presence and activity of our vessels of war, under the skillful direction of the commander, have protected our numerous merchant vessels and our growing commerce from serious interruption. The force should not be diminished, and no change is designed by the Department, except in the vessels. The squadron will this year consist of the Delaware, Java, Lexington, Warren and Porpoise, and will be commanded by Captain Crane.

No piracies have been committed in the West Indies. The prudent and active application of our small force has accomplished all that was anticipated from it. Captain Ridgely continues in command there.

The causes which induced the government to order the squadron to the coasts of Brazil and Buenos Ayres, still exist. The Cyane has returned, and a relief for the Macedonian must be sent in the course of next summer, but the force will not be diminished. Some of our merchant vessels on that coast have been captured, and otherwise interrupted, for real or pretended violations of blockades and of the laws of the country. A part of them have been released upon the application and remonstrances of our naval officers, whose skill, industry and zeal have been commendable. Captain Biddle continues in command there.

A number of our seamen have been found in a state of distress on that station, and some in other parts of South America; having been thrown out of the foreign employment into which they had entered. In many cases their distresses have been relieved, and the means afforded of reaching their homes. It

has been the policy of the government, seconded by our officers, to treat them with kindness, and induce them cheerfully to return to this country, where their services are always useful.

In the Pacific, the squadron lately commanded by Captain Hull, and at present by Captain Jones, has afforded all the protection which the smallness of its force, its immense distance from this country, and the nature of the navigation on the western coasts of South America, would permit. Until within the last eighteen months its operations have been confined, almost entirely, to the neighborhood of Chili and Peru, where the war, then existing between those countries and Spain, rendered its presence necessary. That war has terminated, but the necessity for a small force there still continues, and the wants of our commerce in other parts of the Pacific call for its increase.

In the original instructions to Captain Hull, he was directed, when his presence on the coast could be dispensed with, to visit the Sandwich Islands, to protect our interests and acquire information respecting our commerce in that quarter. Subsequent orders to the same effect were given, and particular objects recommended to his attention. His duties not permitting him to be absent, he intrusted to other officers under his command the execution of those orders.

Lieutenant Percival was sent in the *Dolphin* to the Mulgrave Islands in search of the mutineers of the ship *Globe*, with instructions, after accomplishing that specific duty, to visit the Sandwich and Society Islands and the coast of California. He was successful in discovering two of the crew of the *Globe*, who alone remained upon the island, and they were brought to the United States and surrendered to the civil authority, but were probably among the least criminal of the mutineers. He also visited the other places pointed out in his instructions.

At a subsequent period, Master Commandant Jones, in the *Peacock*, passed over a part of the same route, and obtained much valuable information in relation to our commerce, and made arrangements with the governments existing in some of the Society and Sandwich Islands, from which it is hoped security and advantage will result to our vessels visiting them either for refreshment or trade.

These cruises have confirmed the opinion which dictated the original instructions to Captain Hull.

Our commerce in that ocean is augmenting with great rapidity. During the past year not less than five millions of American property and 2,000 seamen were in the single port of Honolulu, being drawn there for traffic, refreshment, or repairs. The multiplied difficulties to which they are subjected by the nature of their employment, and the character of the people and governments of the islands, demand an effort on our part to afford efficient protection to them. At least four vessels of respectable size ought to be constantly in the Pacific, and the distance from the United States renders this impossible, unless six vessels in commission be devoted to that object. With this number, and by a proper arrangement in sending them out, alternately by Cape Horn and the Cape of Good Hope, large benefits would be secured. This number, however, cannot be so employed, unless the vessels in commission be increased.

Master Commandant Jones was instructed to endeavor to relieve these islands from American seamen who had improperly deserted from whaling and other vessels and taken refuge there, to the annoyance not only of the people, but to the injury of our own citizens; to make arrangements by which such desertions might be prevented, and, if possible, to secure certain debts due to our citizens by the people and government. It is hoped that he was successful in these objects, and that many inconveniences to our whaling and other vessels will be hereafter in some degree avoided. The sailors were removed from the islands by being induced to enter either on board the *Peacock* or some other ship which was in want of their services.

The report of Master Commandant Jones, upon the subjects confided to him, is too voluminous to be annexed to this report.

In directing the movements of our squadron in the Pacific, great difficulty is encountered from the immense distance and the impossibility of regular and speedy communication with it. It is, therefore, proper again to advert to the establishment of a regular passage and communication through the Isthmus of Panama, which has heretofore been urged in more than one annual report, and on which a detailed statement was made to the Naval Committee, in January, 1826, in answer to a resolution of the House of Representatives of 22d December preceding. It would produce a saving of money, facility in directing the operations of our force, comfort and convenience to our officers, and its effects on the commerce of the country would be salutary. Cheap as the operation might be made, simple and unostentatious as the plan is, it would go far to effect a change in our commercial transactions with the Pacific ocean and Chinese sea, and be the avenue through which a large amount of the precious metals would find their way to this country.

Lieutenant McKeever, in the schooner *Shark*, left New York on the 24th July for a cruise among the fisheries to the north, and to look after and protect our interests in that quarter. He returned on the 6th October, having accomplished satisfactorily the objects of his cruise. His report is annexed, marked B. The benefits heretofore resulting from the annual visits of our armed vessels to the fisheries indicate clearly the duty of continuing the practice.

Lieutenant Norris, in the schooner *Shark*, visited the agency at Mesurado in January last, to render to it such assistance as its situation should require. His report is annexed, C. Occasional visits of our armed vessels to this agency, while in its present state, will be useful; but as one of those attached to the West India squadron can be spared for that object, no other need be commissioned, unless it should be the will of Congress to devote one or more, exclusively, to cruise in connection with it and the suppression of the slave trade.

The state of the agency is as favorable as could have been anticipated. Buildings and improvements are very nearly completed, which will be sufficient to receive and accommodate 150 Africans, which is as many as will probably be recaptured at any one time. Those who have been sent, previous to the present year, have ceased to be an expense to the government, and are now in a comfortable situation, capable of taking care of themselves, and acquiring property and respectability among those of their own color, and in their native land. During the past summer 142 were sent from Savannah to the agency. They were brought into Georgia in the year 1820, in the *General Ramirez*, and have been, from that time to the last spring, in the course of litigation, and at a great expense to the government. As soon as the Department was authorized to take charge of and remove them, measures were taken for that purpose. They were received at the agency and disposed of in such a way that they will occasion very little expense for the first six months, and none afterwards. It may now be confidently asserted that the principal cost in the establishment of this agency has been encountered, and that whenever, in the execution of the laws, Africans shall be recaptured it will be in the power of the government to place them at the agency at a sum

not exceeding \$25 each. After their arrival the expense will be small, and not continue longer than six, or at most, nine months. The object of the laws for the suppression of the slave trade has been, in this respect, accomplished, and the effects on the trade itself will be salutary. It will be perceived by the report of Lieutenant Norris that it is nearly extinct in the neighborhood of Mesurado; and if the cruisers of our own and other governments are vigilant, a check may be given to it everywhere, and perhaps its existence destroyed.

Annexed are certain papers, marked D, which show the manner in which the agency has been conducted, the amount of money which has been expended upon it during the year, the present state of the appropriation, and an estimate of the funds necessary for its support. The "act in addition to the acts prohibiting the slave trade," and appropriating \$100,000, was passed 3d March, 1819. Subsequent appropriations have been made for the same object, and the whole amount expended upon it is \$185,-140.12.

It has been customary with the Department for two or three years past to direct the attention of our commanding officers abroad to the propriety of adding something to the agricultural, while they were protecting the commercial interest of the nation, by procuring information respecting valuable animals, seeds, and plants, and importing such as they could conveniently, without inattention to their more appropriate duties. Very few of them have returned without some valuable importations of the kind. More precise and detailed instructions have, under your directions and in connection with the Treasury Department, been prepared, and will hereafter be given to each officer who commands a vessel in commission. The most beneficial results are anticipated from this course; and will certainly be produced, so far as they are practicable, by the individual exertions of the officers, there being no appropriation out of which any money can be taken for so desirable an object.

From this rapid review of the employments of our naval force in commission, it will be perceived that it cannot with propriety be diminished, if regard be paid to our commercial and other interests. And when to this consideration is added the necessity of active employment to our officers and men, to prepare them for the duties which a state of unfriendly relations with other powers may impose, it is presumed no objection will be made to the estimates for the year, which have been formed upon the existing state of the service, and are annexed to this report, marked E.

The amount estimated is \$3,043,697.75. Last year it was \$3,014,802.92. In the present estimates, however, there is embraced an item of \$201,350, for the completion and equipment of the ten sloops-of-war authorized to be built by the law of 3d March, 1825, and which will be prepared for sea in the course of this year. This sum is not properly chargeable to the current expenses of the navy, and when it is deducted, the present estimates will be found to be \$172,455.17 less than the 1st. They embrace the support of the several naval establishments on shore, and preservation of the ships in ordinary—of one ship of the line, six frigates, twelve sloops, and four schooners in commission, and, with a small increase, the number of officers now in service.

It is presumed that the number of naval establishments will not be diminished. Although it is manifestly the true policy, so far as economy and efficiency are concerned, to limit, as far as possible, the number of our large dock yards, at which every species of labor connected with our shipping is to be performed; yet other considerations have heretofore operated, and will doubtless continue to operate, to keep up the number now in existence. They have, therefore, been embraced in the estimates. Of the vessels proposed to be kept in commission, none can with propriety be dispensed with.

The small addition to the number of our officers arises from what is supposed to be the absolute necessity of the service. It is one of absence, privation and exposure. In such a service, it must always be expected that about one-third or one-fourth will be unable to attend to active duty. Sickness, and other causes, will always operate to that extent, and when this deduction is made, it will be found that several of our classes of officers are too small. This is especially the case in the medical branch; for with every exertion which the Department could make, it has sometimes happened, during the past as in former years, that sufficient medical aid could not be afforded to all our vessels while at sea, and to all our establishments on shore.

The form of the estimates is such as the decisions of Congress require. There are one or two points in reference to them, however, which it is proper again to notice, inasmuch as they continue to operate with severity, and occasion not only inconvenience but loss of public money.

1st. The estimates and appropriations are made for the year commencing and ending on the first January. The appropriation laws are never passed until after that period. The Department is, therefore, left, sometimes for six weeks or two months, without funds for the use of the navy. Were our ships, officers, and men within the country, this circumstance, although very injurious, would be less felt; but as they are absent, at great distances, it creates serious inconvenience, and sometimes loss of both credit and money. They must have funds for their support, and must therefore procure them, if they can, by drawing bills upon the Department, and these are sometimes protested for want of the means of payment. The consequences are too palpable to require comment. The remedy is simple: to make the appropriation, in the first instance, for a year and a quarter, and let those for subsequent years commence on the 1st April. Should this plan be approved and adopted by Congress, an addition of one-fourth must be made to the estimates for the quarter ending on the 1st April, 1829. All subsequent appropriations would be for a year only.

2d. Specific sums are appropriated for specific objects, which is undoubtedly the best and safest mode; but the form in which it is done creates difficulty. The estimates are made by the Navy Commissioners, with all the skill and accuracy which experience and intelligence can give, and the amount which will probably be wanted for each object of pay, subsistence, &c., is stated. But it is impossible to estimate these things with the precision which can readily be secured, where the expenditure is to be made in our own country, and under the more immediate control of the Department. Hence it is found that, although the appropriation is sufficient for the general object, there is sometimes a surplus under one head and a deficiency under another. Aware that this difficulty would occur, Congress, by the laws of 3d March, 1809, and 1st May, 1820, authorized the President to make transfers, under a few enumerated items. These items have been since changed in the appropriation laws, and the power of transfer thereby rendered useless. This inconvenience is increased by the fact that a large portion of the money is drawn for and expended by pursers and navy agents abroad, who are often unavoidably ignorant of the terms of the law under which the expenditure is to be made; and therefore draw and expend the money under one item, when they should do it under another. As an example: they draw, under pay of

the navy, whatever is to be paid to the officers and men, although a large portion of it is for their provisions and subsistence, and is estimated for under those heads. The head of pay is consequently exhausted before the end of the year; that of provisions is not: so of other items—and there is no remedy. The President cannot make a transfer, founded on the knowledge that this unavoidable error has been committed, nor can the accounting officer, from the absence of the agent, correct it in season in the settlement of his accounts.

It is respectfully submitted that a remedy may be found, without hazarding the proper expenditures of public money, by one of two modes: 1st. Authorizing the President to make, in writing, transfers from and to certain enumerated items, so as to effect the object which Congress had in passing the laws of 3d March, 1809, and 1st May, 1820: or, 2d. By requiring the estimates to be made, as they now are, for each specific item, so that their propriety can be readily tested by Congress, but embracing the amount of several of them under one head, in the appropriation bills. The annual examination, by the committee of Congress, into the expenditures of the navy, would still be made with equal ease, and afford equal security.

There is another evil which duty requires should be brought to your notice. By a rigid enforcement of the law, the disbursing officers within the United States are compelled to make periodical settlements; and, so far as they expend the public money, the accounting departments can furnish statements, showing whether it has been properly expended, and whether the appropriations have been sufficient for the objects. But this is not the case with the large number of disbursing officers who are out of the United States, and who are often absent two or three years, at the distance of thousands of miles. In their absence their accounts cannot be settled, nor can it be known whether they have expended the money properly, or the appropriations of the year are exhausted. From the same, and other causes, many claims upon the Department, by individuals, are not, and cannot be, presented within the year. It necessarily results that when the accounts of a particular year are settled, there are sometimes deficiencies and sometimes a surplus in those items which are appropriated for certain objects, "and for no other object or purpose whatever." Confusion and want of accuracy, and sometimes want of means for the payment of claims, are the consequences, creating both public and private inconvenience.

The Secretary of the Navy has heretofore proposed to the Committee of Ways and Means, and now respectfully suggests, two plans to obviate the inconvenience. One is, an appropriation for arrearages for the service generally, as was done last year for the navy, and has been done for many years in the War Department. To this end an item of \$15,000 has been added in the estimates. The other is, to incorporate into the appropriation bill a provision, that the balances of the several items, which remain at the end of the year, constitute an aggregate fund for the payment of such arrearages in the naval service as may be due and unsatisfied at that time.

This provision, it is believed, would be sufficient to enable the Department to meet the calls, public and private, upon the service; save great vexation to individuals; secure more precision and certainty in the settlement of accounts, and, at the end of the limitation of the two years required by law, the balance would be passed, as it now is, to the surplus fund.

In the expenditure of the appropriations of the year, so far as the Department is informed, there has been no loss or defalcation. The disbursing officers have exhibited punctuality and faithfulness, and as much accuracy as the circumstances before alluded to would permit.

Under the appropriation made in 1826 for a survey "to ascertain the practical facilities of Baltimore, Savannah, Brunswick, and Beaufort, for naval purposes," that of Baltimore was completed before the last session of Congress, and the result communicated in answer to a resolution of the House of Representatives. Since that time surveys of Brunswick and Savannah have been made by Lieutenant Stockton, and his report is in the Department. The time necessarily occupied in them rendered it impossible to complete that of Beaufort during the spring and summer, without great hazard to the officers and men, the health of several of them having suffered before that of Savannah was ended. It is now in progress, under the superintendence of the same officer, and will be finished without delay, when the whole will be ready to be communicated to Congress. These surveys have been made by competent officers, and will furnish sufficient information to decide how far those places afford "practical facilities for naval purposes." They are, however, unavoidably incomplete. The time within which it was supposed desirable to make them, and the means granted by the appropriation, did not permit them to be so made as to furnish perfect surveys and charts of those harbors. Nor can such surveys be made without the aid of the means contemplated by the act of 10th February, 1807, "to provide for surveying the coasts of the United States."

The report of the Navy Commissioners, under the law for the gradual increase of the navy, is annexed, marked F.

Under the second section of the "act for the gradual improvement of the navy," passed at the last session, contracts have been made for the frames of five ships of the line, five frigates, and five sloops-of-war. (See letter F.)

Under the authority vested in the Executive, reservations of land have been made in Louisiana and Alabama, and of a tract adjoining the Navy yard at Pensacola. Orders have been given to the commandant of the yard to plant live oak on the latter. An examination of the coasts of South Carolina, Georgia, and Florida, as far south as Mosquito inlet, has been made, with a view to the purchase and reservation of land having timber upon it. Much less was found than had been previously hoped for. Orders have also been given, and are in course of execution, for the examination of the west coast of Florida. It is manifest, from the information already obtained, that we shall be obliged to plant extensive tracts of land with the live oak, or that we shall, after a few years, be deprived of this most valuable timber for the uses of the navy.

The fourth section of the act referred to authorizes the President "to cause to be constructed two dry docks for the use of the navy—the one to the south, the other to the north, of the Potomac." The two sites selected are at the Navy yards at Gosport, in Virginia, and Charlestown, in Massachusetts. Loammi Baldwin, Esq., was appointed the engineer to superintend the construction of the docks. Contracts for a large portion of the labor and materials for both have been made, and the work at Charlestown commenced. That at Gosport will be commenced in a short time. Attention has been paid to the direction of the law respecting the marine railway at Pensacola, but the situation of the navy yard and improvements, with other causes, have prevented a decision upon the subject.

In the early part of the last summer, a board of officers, composed of Captains Bainbridge, Chauncey

and Morris, was directed "to examine thoroughly all the navy yards, and prepare plans for their improvement and the preservation of the public property therein," which might be submitted to the President for his sanction. These officers have devoted to this object as large a portion of their time as could be spared from their other urgent duties, and have made some progress. The whole will be completed in the course of the winter, or early in the spring; and, from what has already been done, entire confidence is felt that such plans will be prepared and sanctioned as will greatly promote the public interest, render our navy and dock yards such as the interest of the nation demands, and prevent an unnecessary and wasteful expenditure of the public money. No law which has been passed, since that for the gradual increase of the navy, has had a more salutary influence upon its interests than the one of which this provision forms a part.

A report of the expenditures under this act, and the "measures taken to carry the same into effect," is subjoined.

The discipline, economy, and efficiency of the service are objects of unceasing attention, and it is believed that they are as worthy of commendation as at any former period. But in this, as in preceding years, experience has proved that many of the evils which have been so often noticed, still exist. Some, which are within the competency of the Executive, have been removed; others must await legislative decision.

It would be improper again to present in detail the views which have before been taken on the questions of rank and pay in the navy; of a want of regular organization; of a code of criminal law or regulations; and of a naval school. But the Department would not discharge its obligations to the service, if it failed to express a conviction, that discipline, economy and efficiency would be promoted by judicious legal provisions on these subjects.

In no service, either of the army or navy, in any age or nation, has a force, such as we now send to sea in squadrons, been commanded by captains; and perfect subordination and discipline, without which there can be neither efficiency nor economy, cannot prevail, unless so large a force has commanders of a proper grade. Rank is as indispensable in the navy as in the army; and equal justice to the officers calls for the establishment of a higher grade. Several of those upon our list of captains have been such for more than a quarter of a century; have commanded forces superior to those commanded by generals on land; have borne themselves as gallantly, and done the State as much service as their military rivals on shore; yet they are still captains, and with the compensation of captains; while their patriotic competitors, with a service less protracted, and not more energetic or deserving, are rewarded by a just and wise government with higher rank and fuller compensation.

Promotions are made from the rank of midshipmen. The proper education of this class of officers is, therefore, the best mode by which we can secure talent, information and merit, in the higher grades. The greater part of them enter the service between the ages of 14 and 16, when it is impossible that they should be well informed scholars. Their situation in the service renders it equally impossible that they should there make much literary or scientific acquisition beyond the practical duties of the seaman. Their pay is incompetent to procure the means of instruction, and their employments are too steady and active to afford the time. The science and information requisite for a navy officer are in no respect inferior to those required by army officers and engineers; and the interest as well as honor of the country are not less concerned in the correct performance of their duties. The reason, therefore, for the preference of the army over the navy, in this respect, is not perceived. All that the Department can do has been done to overcome the want of a naval school, which shall unite a practical with a scientific education; but the evils still felt, urge the Department again, respectfully but earnestly, to present it to your consideration.

At the last session of Congress, memorials were presented by many citizens of New York, Pennsylvania, Maine, Virginia and Ohio, proposing an "exploring expedition to the north and south hemispheres," under the patronage of government. The memorial and papers were referred, by order of the House of Representatives, to this Department, but no appropriation was made. It is presumed that the reference was intended to convey the disposition of the House in favor of the expedition, and was to be regarded as expressing a wish that the countenance and support of the Department should be given to it. As no appropriation was made, there was no money which could with propriety be used to carry into execution the object of the reference. The only aid which could, under these circumstances, be afforded, was to grant to those officers of the navy, who chose to join an expedition which should be fitted out by private enterprise, a leave of absence for that object, and to order to it such seamen as were willing and competent to navigate the vessels. This aid would, under the sanction of the reference, have been afforded, if the expedition had been prepared. Since the adjournment of Congress, a large number of respectable citizens of several of the States have signed memorials of the same tenor as those referred by order of the House.

The condition of the marine corps urgently demands that it should be again presented for consideration.

It was "established and organized" in 1798, and consisted of 720 men, besides officers. The design of Congress in creating it was to furnish a proper guard for the navy yards and for ships at sea. This design points out the extent and organization which it ought to possess. It should be numerous enough to afford a sufficient guard for each yard and each ship in commission. It ought to be also so far incorporated into the navy, and subject to navy regulations, as to render the government of the two consistent and uniform. In both these respects it needs amendment.

The statement annexed, marked G, shows the proper number for a guard at each yard, and for each vessel in commission, in the opinion of the commandant of the corps, amounting, in all, to — effective men. The corps now consists of 750 men, besides commissioned and non-commissioned officers; being thirty more than when it was first established, although the service to be performed by it is much more extensive. It is apparent that this number of men cannot furnish the required guards; and our vessels are, therefore, often without the requisite number, and a very insufficient protection is afforded to the public property. Watchmen have, during the past year, been hired at several of the yards to aid the marines, which unavoidably creates confusion and insecurity. It would be better to have the guards composed altogether of one description of persons, either marines or watchmen. The nature of the duties to be performed by this corps, both on land and on water, is such that great danger results from their being insufficiently discharged. The public interest would, therefore, be promoted by augmenting its numbers, or by withdrawing it altogether, either from the navy yards or from the ships, and trusting to other means for protection, which would be regarded as a hazardous experiment.

There is still greater defect in the organization than in the numbers of the corps. By the law of 1793, it is governed "by the same rules and articles of war as are prescribed for the military establishment of the United States, and by the rules for the regulation of the navy, according to the nature of the service in which they shall be employed." By the construction uniformly given to this law, the corps is subject to the naval regulations when at sea, and to the army regulations when on land. The same officers and men are at one moment under one system of rules and discipline, at the next under another. Their compensation is governed by one law at sea, by another on land. The nature of their connection with the navy is unsettled and subject to constant disputation; and when the laws are to be enforced in the punishment of an officer, neither the War nor Navy Department can, in many cases, act without the interference of the other. It is not necessary to detail the consequences which follow. It is, perhaps, matter of surprise that confusion, disorder, and violation of duty have not existed to an extent which might jeopardize the existence of the corps.

The following amendments are respectfully suggested as the proper remedy:

1. That the corps be increased in the number of privates, and that the number and grade of the officers correspond with those which have been established in the army, and approved by experience.
2. That it be placed entirely under the laws and regulations for the government of the navy.
3. That accommodations be afforded to them out of, but adjoining, the navy yard; so that details can be sent, under proper arrangements, by the officer commanding them, into the yards, and while there to be entirely subject to the control and orders of the commandant.
4. That a sufficient number, for the sole purpose of guarding the property at Portsmouth, Philadelphia, Washington, and Pensacola, be assigned to those places, and the remainder be divided between the stations at Boston, New York, and Norfolk, where they can be properly drilled and prepared for sea service, and from which our vessels can obtain the necessary guards, when fitting for sea.
5. That the commandant and staff of the corps remain at this place, as most convenient for communication, both with the Department and the corps, and for the prompt settlement of their accounts.

If these suggestions should be adopted, it is believed that the marine corps would be much more efficient and less expensive to the public. The two first of these propositions would require legal enactments; the others might be effected by regulation.

The naval hospital fund has an intimate connection with the interests and feelings of the officers and seamen who are under the control of this Department. Humanity, justice, and policy require that the diseased and wounded seaman, when brought into port, should have a home, and the means of cure provided; and that the disabled and aged seaman, who has worthily served his country until his strength is exhausted, should have an asylum where a comfortable subsistence may be found for his last days. This truth has been felt in all civilized and commercial nations. It was early felt in ours, and laws were passed upon the subject; but they have, thus far, not accomplished their object. They direct twenty cents per month to be retained out of the pay of the officers, seamen, and marines, and that, from the proceeds, hospitals and an asylum should be erected. As yet, not one building has been completed, although the deduction has been regularly made from the pay since the passage of the law, in 1799. The reasons for the failure were stated in a report by the commissioners of the fund, at the last session of Congress. A part of the fund was absorbed by and expended during the late war in the pay of the navy. This sum has been repaid, under regulations, and by order of this Department, in the course of the last three years. There is another sum, however, of \$50,000, which was declared by law to be due to the fund on the 26th February, 1811, and was directed to be paid out of any moneys in the Treasury, not otherwise appropriated, which has not yet been paid, except \$3,782.86. This sum was, by \$80,000, less than it ought to have been. The sum which had been paid by the navy amounted to at least \$130,000, as is readily shown by calculating the numbers employed in the service. It is most respectfully suggested that the whole sum of \$130,000 should be restored, with interest upon it, now amounting to \$262,600. It is not the money of the government or nation. Not one cent has been paid to the fund by the nation. It has been taken out of the pay of the officers and men, and belongs to them as justly as any portion of their private estates.

It is now mentioned in this report, because their rights and interest are necessarily the object of attention by this Department, and because the money is wanted to meet the buildings for their accommodation. Sites have been purchased for four buildings; at Boston, New York, Philadelphia, and Norfolk; which, with a small one at Pensacola, may be made sufficiently extensive to answer all the necessities of the service at any future period.

Two buildings, an hospital at Norfolk and an asylum at Philadelphia, are progressing very satisfactorily; and if the funds were put in a proper condition, the whole might be completed in two years, and form together an hospital establishment, at least as creditable to the country, and beneficial to the service, as that belonging to any other nation.

The completion of this establishment is demanded by the plainest policy. In this country the services of our seamen are voluntary; no impressment or other mode of compulsion is, or ought to be, applied, to force them to perform the duties of peace, or fight the battles of the country in war. But in proportion to the voluntary character of the service ought to be the effort to render that service pleasant, and to create every inducement to join it. And when it is perfectly understood by all who are acquainted with the character of the seaman, that his foresight is seldom directed to any other object than a place of refuge, when disease and misfortune overtake him, surely that place of refuge ought not to be wanting.

In this view, it is hoped the payment of the debt, before mentioned, will be made; and if something were added to it, it would be justified by the consideration that the nation has not yet given one dollar to so desirable an object.

Respectfully submitted.

SAMUEL L. SOUTHARD.

NAVY DEPARTMENT, *December 1, 1827.*

A.

List of deaths in the navy of the United States since December 2, 1826.

Name and rank.	Date of death.	Cause of death.	Place of death.
MASTER COMMANDANT.			
Sidney Smith	May 17, 1827..	Unknown	Plattsburgh.
LIEUTENANTS.			
Hugh Dulany	January 6, 1827..	Unknown	Delaware Bay.
George M'Cauley	February 20, 1827..	Unknown	Philadelphia.
Charles A. Budd	March 15, 1827..	Unknown	New York.
Pardon M. Whipple	May 11, 1827..	Unknown	Providence.
John P. Tuttle	June 10, 1827..	Yellow fever	Havana.
A. H. Hopkinson	August 11, 1827..	Fever	Off Milo.
Wm. B. Nicholson	October 15, 1827..	Fever	At sea.
SURGEONS.			
Robert L. Thorn	August 18, 1827..	Bilious fever	Portsmouth.
John W. Peaco	May 23, 1827..	Fever	Savannah.
SURGEON'S MATE.			
Thomas J. Bradner	August 23, 1827..	In a duel	Rio de Janeiro.
PURSER.			
Thomas Shields	Unknown	Unknown	Unknown.
CHAPLAIN.			
Burgess Allison	February 20, 1827..	Unknown	Trenton.
MIDSHIPMEN.			
C. E. Wadsworth	May 8, 1827..	Drowned	Tampico.
Alexander F. Porter	February 11, 1827..	Yellow fever	Mesurado.
Edward Worthington	July 18, 1827..	Yellow fever	Norfolk.
SAILINGMASTER.			
S. J. Dusenberry	October 4, 1827..	Unknown	New York.
BOATSWAINS.			
Edward Linscott	May 25, 1827..	Unknown	Norfolk.
William Smith	July 7, 1827..	Unknown	Unknown.
SAILMAKER.			
H. Van Voorhees	August 30, 1827..	Unknown	At sea.
LIEUTENANT OF MARINES.			
G. D. Brewerton	January 31, 1827..	Unknown	Valparaiso.

Copy of a letter from Lieutenant Isaac M'Keever to the Secretary of the Navy, dated—

UNITED STATES SCHOONER SHARK, *Long Island Sound*, October 4, 1827.

After leaving Eastport, on the 3d of August, we proceeded on our cruise, passing through the Straits of Canso, touching at the Magdalen Islands, and nearly all the principal fishing rendezvous on the north coast of Newfoundland, and along the shores of Labrador, from Esquimaux Bay northwardly as far as the Bay of Sandwich, where we arrived the latter part of August; and finding that the few of our vessels that took their fish to the northward of Belle Isle had left, we remained only a few days at Greedy Harbor, and bent our course again to the southward, stopping a second time at some of the principal harbors, and at others we had not visited on our way to the northward. The Black Islands, or Greedy Harbor, was, some years ago, a very considerable resort of our fishermen; this season only one vessel took her fish there, and some five or six others at the neighboring islands; indeed, from the Straits of Belle Isle north, the British occupy the best fishing ports, where they have large permanent establishments for curing fish; and although our countrymen meet with civil treatment at these places, they prefer situations more exclusively their own, and have in consequence, of late years, and this season more especially, confined themselves in a great measure along the coast of Labrador, from Esquimaux Bay to Cape Charles; the far greater number, even of those who do not carry their fish home in salt, cure them at Bradore or the Bay of Ledges, one of the best situations on the whole coast for this purpose; here eight or ten of our merchant vessels took cargoes of cured fish for the Mediterranean and South America.

Not many of our fishermen have frequented the north coast of Newfoundland for some years past, under an impression that they would be expelled by the French. I have, however, not heard of the slightest interruption from any of their national vessels. In one or two instances the French fishermen themselves have evinced some disposition to debar ours from a participation in the fisheries of certain districts where they have fixed establishments; but I could not ascertain that they had ever resorted to force. I speak of this year more particularly. When we reached the coast, the second week in August, the few of our vessels that took their fish there had left, the fishing season commencing and finishing sooner than on the Labrador coast.

At different periods within the last two years the French have suffered severe depredations upon many of their establishments by some British fishermen, to such an extent as to have called forth a proclamation on the subject from his excellency the Lieutenant Governor of Newfoundland. This circum-

stance, perhaps, may have tended to exasperate them against our own fishermen, from a belief that they were concerned in the robberies; but I am happy to say, so far as I have been able to ascertain, they have not been in any instance engaged in these or other trespasses.

A French national schooner was on the coast of Newfoundland a short time before our arrival, and the British brig *Contest* was cruising to the northward of Belle Isle; these were the only foreign vessels of war in those waters, neither of which we met. The season has been uncommonly boisterous, so much so as to have interfered a good deal with taking fish; but as the high winds disperse the usual dense fogs, it was more propitious to curing them. The season in consequence was sooner over, and almost all our vessels were on their return to the United States by or before the middle of September, when we left the Straits of Belle Isle, and those from the Gulf of St. Lawrence, and Chaleur Bay, followed soon after through the Straits of Canso, whence we sailed on the 28th ultimo.

The fisheries have not, upon the whole, proven very abundant this year, but it appears that our countrymen have been generally more successful than either the British or French. The latter, it is supposed, are becoming less active and enterprising than they were some years past, and the former have suffered very severely at many of their establishments from the typhus fever, whilst ours have been comparatively healthy.

It is with regret, sir, I have to add that on our way to the northward, in the Bay of Chedebucto, we got on a dangerous rock, near the harbor of Arichat, the existence of which was unknown to the pilot, or if known, he was entirely mistaken about its position; owing, however, to the weather being moderate, we got off ten hours after we struck, without other damage than roughing the copper a little; and in a heavy gale at Greedy Harbor we parted two cables, lost the stream anchor, and having broken the arm off one of the bowers, it became necessary to procure another anchor, which I did at Anec au Longue, upon moderate terms.

C.

Copy of report by Lieutenant Commandant Otho Norris, of the U. S. schooner Shark.

U. S. SCHOONER SHARK, *St. Thomas*, March 18, 1827.

SIR: I have the honor to announce the arrival of the *Shark* at this place, in thirty-four days from Cape Mesurado, Africa, from whence she sailed on the 13th February.

I sailed from the Chesapeake on the 30th November, 1826, for Mesurado, agreeably to an order of the 3d inst. from the Hon. Secretary of the Navy, and arrived there on the 12th January. I communicated immediately with Mr. Ashmun, the acting agent, and found the colony to be in perfect security. After taking in water I received Mr. Ashmun on board and proceeded to leeward as far as Trade Town, for the purpose of settling a misunderstanding that existed between the people of that place and the American settlements, which was amicably adjusted.

Having heard that a slaver had landed a cargo at Little Bassa, about 40 miles from Mesurado, I proceeded to that place on the 29th January; while off there gave chase to a small schooner, which, after a run of 10 hours, I overhauled; she proved to be the slaver, was under French colors, and armed with one brass pivot gun, and a crew of 17 Frenchmen. Her papers not appearing very regular I detained her during the night in order to examine her more minutely. At daylight next morning fell in with a French brig-of-war, who took possession of the schooner and sent her to Goree. No other slaver has been on that part of the coast, extending from Cape Mount to Trade Town, for a long time. The piratical brig that robbed the American vessel in Mesurado roads, in August last, was captured in December by an English cruiser. From all that I could learn while on the coast, it appears that the slave trade is nearly extinct, at least on that part of the coast between Cape Mount and Trade Town. It gives me pleasure to state that the colony is in a very flourishing condition, the people contented and healthy, and the neighboring tribes friendly.

I have the honor to be, your obedient servant,
(Signed)

OTHO NORRIS.

To Com. CHARLES RIDGELY, *commanding U. S. Naval Forces in the West Indies, Gulf of Mexico, &c.*

D.

J. Ashmun to the Secretary of the Navy.

CAPE MESURADO, February 10, 1827.

SIR: I have the honor to acknowledge the receipt, by the U. S. schooner *Shark*, of letters from the Navy Department, of the 10th and 15th of August, 1826, addressed to Dr. Peaco, and one of the 4th November to myself. Three long twelve-pound guns, with their carriages and fixtures complete, and a quantity of ammunition, all receipted for to Mr. Norris, have also been delivered to us in good order from the same vessel.

Of the communications hereby acknowledged, that of the 10th of August seems to demand of me a few explanatory remarks, in order to present in a clearer light, if not to justify, certain parts of my conduct, to which that letter particularly relates, as having led to the liberation and removal to this place of 173 Africans, found in different slaving establishments in the neighborhood, which, for reasons formerly stated at length, it became necessary, in my judgment, to break up.

These Africans, thrown upon my hands in consequence of events which it may not be necessary here to recapitulate, were, at the date of my letters, without protection or the means of subsistence. It was my impression at the time that the benevolent provisions of the act of Congress of March 3d, 1819, might, by a liberal but just construction, be extended to these unfortunate beings. The first act, therefore, in relation to them, for which, as the U. S. agent, I consider myself accountable, was the placing them on

this provision until the determination of the Executive in regard to their right to it should have been formed and signified to me; and in order to enable the Executive properly to estimate their claims to the protection and aid for which their situation so strongly appealed to the best feelings of humanity, I gave, in my several communications from the 14th October to the 8th December, 1825, inclusive, an exact and circumstantial narrative of all the events concerned in placing them in that situation.

This narrative appears to me plainly to show that the agent of the colony of Liberia, acting for the defence, safety, and welfare of the little community over which he presided, and within the laws of nations and of nature, being assisted by the forces of that colony, and at its expense, had effected the liberation of these people, and offered them for acceptance at the agency for recaptured Africans. And at this period and stage of the transactions, your agent, as already observed, fixes the date of his own responsibility.

In exact accordance with this view of the proper line of conduct to be observed by the U. S. agent, was the part I acted in the liberation and ulterior disposal of the fifty-three slaves who fell into my hands at Trade Town, on the 13th and 14th of April, 1826. Having brought them to Mesurado on the 17th of April, 1826, I found myself relieved of the responsibility of placing them on the funds of the agency by the presence of Dr. Peaco, the U. S. agent, then very recently arrived from America. As agent of the Colonization Society, for their colony, in which capacity I had acted in effecting their liberation, I offered them to the acceptance of the U. S. agent and they were received. Dr. Peaco's responsibility in relation to these fifty-three persons surely could not have commenced previously to his signature of the receipt which took them out of the hands of the colonial agent and placed them on the provisions made for recaptured Africans. But this act was subsequent to and independent of all those transactions which had led to their liberation.

And, were not the three preceding cases, in everything affecting the responsibility of the United States agent, exactly similar? And if it is apparent that Dr. Peaco's responsibility in relation to the Trade Town Africans began when he admitted them to the asylum for recaptured Africans, and is limited to that act and its consequences, do I ask anything unreasonable, or of doubtful justice, when I request that my own responsibility in relation to the Poor river and St. Paul's Africans may be limited and estimated by the same rule?

That this was the view in which I constantly acted, is further evident from another circumstance, which appears not to have sufficiently explained itself in my letters to the Department; I refer to my omission to report to it, in detail, the circumstances of the Trade Town expedition. Having acted in the capacity of colonial agent in that affair, my report was, of consequence, addressed to the board of direction of the colony, who had a right to require it. Had Dr. Peaco required any exposition of those transactions, tending to show under what circumstances the fifty-three Africans came to be offered to his acceptance, as a document which he might transmit to his government in justification of his act in receiving them at the agency, it would most cheerfully have been furnished him; and, if hereafter required by him, it shall still be furnished.

Should the Executive concur in this view of the transactions preceding the admission of these persons to the agency, the only questionable part of my own and Dr. Peaco's official conduct would be that of unfortunately erring in our judgment as to the right of the one hundred and seventy-three Africans, liberated since the 14th, inclusive, of October last, to the provision of the act of Congress of March 3, 1819. But such, in my opinion, was the strength of the palliating, and even justifying inducements to commit this error, which the circumstances of the Africans presented, that should it involve me in any pecuniary loss whatever, I shall apply, so far as I am concerned, to the equity of Congress for relief.

The preceding statement exhibits that simple view of my conduct, as agent for recaptured Africans, by which I desire to have it judged.

There are two other instances of my conduct as United States agent somewhat implicated in those transactions, the mention of which I have reserved to this place, and which, I trust, will not be regarded as affecting materially the view already submitted.

Two of the liberated Africans were, in the latter part of October, 1825, seduced from the agency, and resold to Millot and Poussin, at Mammas, on the St. Paul's. These persons I demanded formally and repeatedly, and they were as peremptorily and often refused to be delivered up. On the 8th of December I therefore, as United States agent, retook them by force.

In the month of December, 1825, and January, 1826, from five to eight of the liberated Africans were resold, and detained under exactly parallel circumstances, by a Spanish slaver, (whose vessel has since been condemned at Goree, as a pirate, for acts committed at the very same time, this act of kidnapping and detaining the Africans making one of those charges,) after being several times exactly identified and demanded. Two of them I also retook by force, on the 13th and 14th of April. The others had been conveyed beyond my reach. These two acts were contemporaneous, and certainly otherwise very closely united with other acts, for the performance of which I derived my authority, not from the instructions of the Government of the United States, but from my situation as agent of the Colonization Society for the colony of Liberia; but they were acts to which I regard myself impelled, in order to a faithful discharge of the trust reposed in me, as agent of the United States for recaptured Africans.

In obedience to your instructions, contained in the same letter of the 10th of August, I have discharged from the agency the whole number of Africans liberated since the month of October, inclusive, 1825.

In discharging this duty, it affords me some satisfaction that I am able to state that, since their connection with the agency commenced, they have been under a system of discipline and instruction which cannot fail to prove to many of them substantially and permanently beneficial. Sixty of the adults have been within that time married, and are realizing the advantages of that institution, as recognized by Christians. Sixty of the children (thirty-five boys and twenty-five girls) have been for six months at an excellent school, and are apprenticed in the same number of the most respectable families of the colony.

The adults form a settlement by themselves, four miles above Monroe, on a tract of excellent land devoted by the colony to persons in their situation, and to the recaptured Africans as they come to be settled within its limits and adopt the usages of civilized life. The union of these people with the American colonists seems to be too strongly cemented ever to be dissolved; and the habits of regular industry to which they have been so many months in constant training, it is hoped, will furnish them with the necessaries, and ultimately with the comforts of life.

All the recaptured Africans sent to this country by the Government of the United States have passed out of the agency, and now sustain the character of colonists, and either actually possess the same quantity of lands and civil rights enjoyed by emigrants from the United States, or are in a state of apprenticeship to colonists, with the same rights and grant of lands in reversion at the expiration of their respective terms.

It has been deemed expedient to construct at Thompson Town no more houses, after the present time, for the reception of recaptured Africans or their agents, and to transfer two of the large frames prepared for that town to the tract of lands already mentioned as permanently appropriated to the agency, situated on the Stockton creek, four miles above Monroe, and three below Caldwell, the two principal settlements of the American colony. The accompanying engraved map will indicate this position. These lands extend half a mile along the southeast bank of the Stockton, and two miles back, and are not exceeded in fertility, or susceptibility of easy cultivation, by any in the colony.

A spacious and well-finished house, of two stories, is erected on the site designated for the village, for the residence of the superintendent or an agent, together with two ranges, of a single story, for the Africans. To these last are now adding the frames originally intended for Thompson Town, all of which together will furnish ample accommodations for 140 to 160 Africans. The people expected from the United States are to be provided with neat log cabins. The whole of these buildings I shall endeavor either to have completed, or in a state of great forwardness, before quitting the coast, on my intended visit in the spring ensuing to the United States.

The construction of these houses, together with the services of a laboring nature, require the constant employment of a large number of native laborers, which, although singly exceedingly moderate, will, in the aggregate prove a charge on the agency of a considerable amount. But I consider it as one that cannot be dispensed with without discontinuing the buildings.

The liberated Africans being discharged from the agency, the services of Anthony D. Williams, in the capacity of their superintendent, can no longer, I am sensible, remain a charge on the United States. But his services as superintendent of the common laborers employed on the buildings and improvements going forward in the new African town are, in my opinion, absolutely necessary. And the propriety of employing him in this service is heightened by the circumstance that all these laborers are selected from the liberated Africans lately discharged from his care as superintendent of recaptured Africans. These people can be better managed, and made much more useful under his direction, than that of any other person in my power to select. This arrangement I conceive to be necessary to keep up, at least during Dr. Peaco's absence.

In the accompanying abstract of the accounts of the agency, from August 10, 1826, I beg leave to explain—

That the schooners, having been framed and sent out, with their sails, equipments, &c., from the United States, by the government, I have supposed were intended to be completed and sailed, for the use and at the expense of the agency.

That the public buildings and fortifications, in the uses and advantages of which the agency directly participates, may also be placed among the objects on which some expense may be incurred on account of the agency, and that, owing to the nature, design, and place of the agency, a large scope of incidental expenses is obliged to be admitted.

One of the two schooners, sent out in frames from the United States, has been completed, and in service since the month of November last. The other, owing to the death of the master boat builder, advances very slowly, and will not be afloat for several months to come. The former, called the Catharine, carries a brass 6-pound gun, on a revolving frame, besides small arms, and proves a formidable means of protection against the little pirates of the coast, besides its utility in transporting rice and other commodities, useful to the agency and settlements, from distant places, and uniting the whole chain of our establishments, situated on the seaboard, into one.

In closing my letter, by this conveyance, it is due to the zeal of Lieut. Norris to acknowledge the important service rendered to the establishment by the vessel under that gentleman's command. I have also to state my determination to return to the United States by the very first opportunity which shall offer after the sailing of the Shark. The state of the agency and settlement, generally, is at present particularly favorable to the accomplishment of this intention. I expect to arrive in Washington early in June.

Dr. George P. Todson, United States agent, to the Secretary of the Navy.

MESURADO, August 29, 1827.

By the schooner Eclipse, which is expected to leave Mesurado this evening for Philadelphia, I have the honor to announce the safe arrival at Mesurado, on the 21st instant, of all the liberated Africans transported in the ship Norfolk, with the exception of three, (two adults and one child,) one afflicted with pulmonary consumption, another with palsy, the child with cholera infantum; all in a hopeless state before the departure of the ship from Savannah; they died on the passage. The others, in number 143, of whom two were born on board of the Norfolk, have all, excepting three, been delivered to Mr. Ashmun; and arrangements have been made, as will be seen from the enclosed copy, to place them for one year in families among the colonists, who are to furnish them with clothing and subsistence, and in some cases with a small compensation for their services; at the expiration of that time they are to receive land, and to be placed in a situation that may enable them to provide for their own future support.

By the charter party it is stipulated that the owners of the Norfolk shall land all the public property at Mesurado; but, in order to overcome the numerous obstacles and dangers which the unfavorable season and the shores of the Mesurado present to the landing of even small boats, and to accelerate and afford greater safety to the landing of the public property, and to prevent the expense of demurrage to the United States, it has been thought advisable to employ, on the part of the agency, some of the natives known here by the appellation of Crownmen, who possess considerable skill in that business. The expense, it is agreed on by Capt Harding, of the Norfolk, and by the agent, Mr. Ashmun, and myself, shall be equally divided between and defrayed by the owners of the vessel and the United States. Every exertion is made, and will be continued on the part of the agency, to place the public property in the safest, the least expensive, and the most speedy manner, on shore; and it is hoped that, with a strict adherence to the arrangement on the part of the captain, the whole of the public property in ten days more will be

landed. It is, however, apprehended that the property shipped by the owners and the captain of the Norfolk, and intended to be disposed of at Mesurado, will cause some delay to the departure of the vessel, and that her return to the United States will be much later than is expected, in consequence of the considerable detention that vessels stopping at the Cape de Verde Islands to take in a cargo of salt, (as is the intention of Captain H.,) are said at this season of the year to experience. When I arrived, Mr. Ashmun was severely afflicted with a catarrhal affection, from which, however, I am happy to state, he is now recovering. From the propriety of the conduct of the liberated Africans while on board, and since their arrival here, I regard their arrival as one of the most fortunate events to themselves and the colony, and one that has already produced the strongest proof how sensible these liberated Africans are of the benefits conferred upon them by the Government of the United States, in breaking their chains and placing them on the shores of their native country, with the blessings of liberty and civilization. Numerous applications for my professional services have been made since my arrival by colonists, as well as by Africans formerly transported. Here and at Stockton, at six miles from Monrovia, I have seen a great number of patients in the most deplorable state, for want of medical and surgical assistance, most of which are chronic affections. Impressed with a belief that this season, however dreaded by the natives and colonists, presents much less danger to passengers arriving from the United States or Europe than the dry season, I have taken great interest and pleasure in endeavoring to be useful to the sick, and the continuance of my own health, and the convalescence of those who placed themselves under my care, have not given me cause to regret what has been repeatedly called great imprudence, viz: visiting at all times those who desired and required my services. Four of the liberated Africans have been constantly employed by the captain, and done ship's duty during the voyage. They have received no compensation excepting a greater allowance of water and provisions, approaching to that of the ship.

Terms on which the recaptured Africans will be placed in the families of colonists, and at service in Monroe and Caldwell.

Class 1. Laboring men having wives, and not mechanics. Man and wife not to be separated; comfortable and sufficient provisions to be found them; quarters to be provided them, dry, and capable of being kept perfectly clean, and they are to receive, as their wants require it, a sufficient supply of decent clothing, suited to the climate and to their employments; one month's provision shall be furnished them, also the materials for one cheap suit of clothing, at the public charge, and no more. Terms of contracting their services on the above conditions: Twelve calendar months' wages for the pair: seven bars of good assorted merchandise, or three and a half dollars in merchantable country produce per month; one-fourth part monthly, three-fourths at the year's end.

Class 2. Mechanics. The above terms and conditions all to hold, except wages, which are to be \$8 per month.

Class 3. Laboring single men. The same terms as the preceding classes, except wages, which are \$2.50 per month.

Class 4. Laboring single women, above eighteen years of age. The same terms, &c., except wages, which are to be \$1 per month.

Class 5. Single girls under eighteen. Same terms, except that the first month is a period of probation; the term of service shall be until eighteen years of age, and no pecuniary compensation allowed; but the girls shall be caused to attend Sunday school and divine worship on Sundays, and treated with the tenderness and care of members of the families they are connected with.

Class 6. Boys not grown. Same terms as the preceding; term of service, say three years, or until twenty-one years of age.

General additions to the preceding.

No recaptured Africans, engaged on the terms above specified, are to be sent into the country to sit down, for trade or other purposes, unless, or longer than, attended by their guardians; nor are they to be permitted to straggle off, and waste their time in idleness among the country people, without suitable means to recover them.

Expenditures under the appropriation for the prohibition of the slave trade, in accounts settled between January 1 and November 24, 1827

Date of settlement.	Account settled.	To whom paid.	Purposes.	Total.
1827.				
Jan. 25..	J. B. Winn, late special agent	Sundries	Rope, duck, cable, guns, repairs on schooner Augusta, provisions, tobacco, charter of a schooner, pay of the Augusta's crew, making clothes, burying dead, &c.....	\$3,348 00
March 14..	J. W. Peaco, special agent	J. W. Peaco	Salary from January 1, 1826, to February 28, 1827, at \$1,600.....	\$1,806 07

	<u>\$4,822 97</u>

Expenditures by Richard Dashiell, lieutenant commanding, and by Midshipman Richard R. McMullin, successor in the command of the schooner Augusta, and in settlement of their accounts, and carried to the debit of pay and contingent expenses, viz:

Paid officers and crew of the schooner Augusta, between the 21st of March and 3d of November, 1823	\$1,850 94
Paid board and lodging, nursing, medicine, &c., for sick; cabin furniture; premium for recruiting; passage of two officers to the United States, and traveling expenses	495 25
	<u>\$2,346 19</u>

Estimate of the sum required for the support of the agency on the coast of Africa, and the prohibition of the slave trade.

For the salaries of the principal and assistant agents	\$2,800
For the medicines and hospital stores	500
For the lumber and other materials to complete the buildings	1,000
For the incidental expenses connected with the agency	5,700
	<u>\$10,000</u>
To provide for any captures which may be made during the year	\$30,000
	<u>\$40,000</u>

E.

NAVY COMMISSIONERS' OFFICE, November 15, 1827.

Sir: The Commissioners of the Navy have the honor to enclose herewith, in compliance with your directions, an estimate for the expenses of the navy for the year 1828, marked A, together with statements explanatory thereof, marked B, C, D, E, F, and G, and an estimate for the expenses of this office for the ensuing year, marked H.

The 8th item of the general estimate, of one hundred and five thousand dollars, will be required to complete the improvements and repairs at the several navy yards, agreeably to the estimate transmitted from this office on the 9th November, 1826, as explained in the paper marked H, which accompanied that estimate, and to which the Commissioners respectfully refer you.

When the commissioners appointed for the improvement, &c., of navy yards, under the act of the last Congress for the gradual improvement of the navy, shall have made their report, a further estimate in detail will accordingly be prepared and submitted. The Commissioners would respectfully recommend that the several balances which may remain on the books of the Treasury on the 1st day of January, 1828, to the credit of the enumerated contingent funds, prior to that date, may be carried to the credit of that fund for the year 1828, to which all claims chargeable thereto may be charged, whether arising during the year 1828 or not. All of which is respectfully submitted.

I have the honor to be, with great respect, sir, your most obedient servant.

HON. SAMUEL L. SOUTHWARD, *Secretary of the Navy.*

A.

General estimate.

There will be required for the navy, during the year 1828, three millions forty-three thousand six hundred and ninety-seven dollars and seventy-five cents, in addition to the unexpended balances that may remain on hand on the 1st January, 1828.

1. For pay and subsistence of officers, and pay of seamen, other than those at navy yards, shore stations, and in ordinary	\$1,176,213 00
2. For pay, subsistence, and allowances of officers, and pay of seamen at navy yards, shore stations, hospitals, and in ordinary	185,032 35
3. For pay of superintendents, naval constructor, and all the civil establishment at the several navy yards and stations	59,102 50
4. For provisions	505,000 00
5. For repairs of vessels in ordinary, and for the wear and tear of vessels in commission	475,000 00
6. For medicines, surgical instruments, and hospital stores	27,000 00
7. For ordnance and ordnance stores	50,000 00
8. For repairs and improvements of navy yards	105,000 00
9. For arrearages prior to 1st January, 1828	15,000 00
10. For completing the construction and equipment of the sloops-of-war authorized by act of Congress of 3d March, 1825	201,350 00
11. For defraying the expenses which may accrue during the year 1828, for the following purposes, viz: for freight and transportation of materials and stores of every description; for wharfage and dockage, storage and rent; for traveling expenses of officers, and transportation of seamen; house rent, chamber money, and fuel and	

candles, to officers, other than those attached to navy yards and shore stations, and for officers in sick quarters where there is no hospital; for commissions, clerk hire, office rent, stationery and fuel to navy agents; for premiums and incidental expenses of recruiting; for apprehending deserters; for compensation of judge advocates; for per diem allowances to persons attending courts-martial and courts of inquiry, and to officers engaged on extra service beyond the limits of their stations; for printing and for stationery of every description; for books, maps, charts, nautical and mathematical instruments, chronometers, models, and drawings; for purchase and repair of steam and fire engines, and for machinery; for purchase and maintenance of oxen and horses, and for carts, wheels, and workmen's tools of every description; for postage of letters on public service; for pilotage; for cabin furniture of vessels in commission; for taxes on navy yards and public property; for assistance rendered to public vessels in distress; for incidental labor at navy yards, not applicable to any other appropriation; for coal and other fuel for forges, foundries, and steam engines; for candles, oil and fuel, for vessels in commission and in ordinary; for repairs of magazines and powder houses; for preparing moulds for ships to be built; and for no other object or purpose whatever \$240,000 00

12. For contingent expenses for objects arising in the year 1828, and not herein enumerated 5,000 00

\$3,043,697 75

Estimate for provisions required for the year 1828.

To vessels in commission, persons	5,033
Mariners on board	749
Receiving vessels	82
	5,864
At one ration per day, is 2,140,360 rations, estimated at 25 cents each, is	\$535,000 00
From which may be deducted, as a balance will probably remain on hand the present year, this sum	30,000 00
Total	\$505,000 00

*Copy of a letter from Lieut. Colonel Archibald Henderson to the Secretary of the Navy, dated—*HEAD-QUARTERS OF THE MARINE CORPS, *Washington, September 26, 1827.*

I transmit to the Department the annual estimate of the marine corps for the year 1828.

The arms of the corps, from long use, are entirely worn out. It has therefore been deemed necessary to include in the estimate the sum of twenty-one thousand dollars for the purchase of fifteen hundred stand of arms.

On a recent visit to fortress Monroe, I made particular inquiries in relation to the utility and efficiency of Hall's rifle, and of its being particularly useful to the soldiers of the marine corps, on the various services on which they were employed. I had the most satisfactory assurance that this description of arms has a decided advantage over the musket, which has been heretofore used.

The principal objection to this rifle has been entirely done away, by a full experiment at that fortress.

It has been fired several thousand times, and not the slightest disorder or difficulty was experienced, though the discharge was as rapid as any service could require.

The price of each stand of arms is fixed at 14 dollars; the cost of this rifle.

I transmit with the estimates letters from the quarter and paymaster.

*Copy of a letter from Lieutenant E. J. Weed, quartermaster of the marine corps, to Lieutenant Colonel Archibald Henderson, dated—*HEAD-QUARTERS OF THE MARINE CORPS, QUARTERMASTER'S OFFICE, }
Washington City, September 24, 1827. }

I have the honor to submit, herewith, an estimate of appropriation required for the quartermaster's department of the marine corps, for the year 1828.

The 3,098 dollars for arrearages for fuel, is rendered necessary, in consequence of this amount having been deducted from the estimate for the present year.

Twenty-one thousand dollars is required for re-arming the corps; the arms now in use having become entirely unfit for service, and unworthy of repair.

*Copy of a letter from Captain Joseph L. Kuhn, paymaster of the marine corps, to Lieutenant Colonel Henderson, dated—*PAYMASTER'S OFFICE, *Marine Corps, Navy Department, September 22, 1827.*

You will herewith receive an estimate for the pay of officers, non-commissioned officers, musicians and privates, and for the subsistence of officers of the United States marine corps, for the year 1828.

Estimate of pay for officers, non-commissioned officers, musicians and privates, and subsistence for the officers of the United States marine corps, for the year 1828.

PAY.

One lieutenant colonel commandant, at \$75 per month	\$900 00
Four lieutenant colonels, at \$60 per month	2,880 00

NAVY COMMISSIONERS' OFFICE, November 30, 1827.

SIR: The Commissioners of the Navy have the honor to hand, enclosed, a statement marked A, showing the present state and condition of the vessels built and building, under laws for the gradual increase of the navy and for building ten sloops-of-war, and of those in ordinary, and that are undergoing repairs at the several navy yards.

A statement, also, marked B, is respectfully submitted, showing, in part, the progress made in executing the law for the gradual improvement of the navy.

I have the honor to be, with great respect, sir, your most obedient servant,

SAMPL L. SOUTHARD, *Secretary of the Navy.*

A.

Statement showing the present state and condition of the United States vessels-of-war now on the stocks, and those in ordinary and repairing, at the several navy yards.

AT PORTSMOUTH, N. H.

Alabama 74. *A*—Hull in good order, except some decay in her planks, masts and spars; nearly finished, and considerable progress made in her inboard works, sails, &c.

Santee 44. *A*—Hull in good order, except some decay in her planks, masts, and spars; nearly got out, and progress made in her inboard works, sails, &c.

Concord, sloop. *B*—Frame complete, and ready for planking; plank, thick stuff, beams, carlings, &c., dressed out; also stanchions, combings, gun carriages, masts, and spars, nearly finished; sails nearly complete.

AT BOSTON.

Virginia 74. *A*—Hull sound and in good order; complete, except the stern to plank; masts and yards nearly complete; gun carriages partly got out; boats built; considerable progress made in inboard works, &c.

Vermont 74. *A*—Hull sound and in good order, and nearly completed; masts and yards, gun carriages, boats, &c., &c., progressed in.

Columbus 74. *A*—Hull sound and in good order; also masts and spars, except some few small spars; armament and sails in good order; her magazines, cabins, &c., require some slight repairs, and her copper requires to be examined before she could prudently be sent to sea.

Independence 74—Her hull in good order; her magazines, platforms, waterways, &c., require some repairs; her masts and spars so defective as to require a new set; spare spars and sails in good order. Before going to sea, her copper should be examined.

Cumberland 44. *A*—Hull sound and in good condition; planked in and outboard up to lower port sills, except eight strakes of bottom plank and of wales; masts and yards nearly got out.

Falmouth, sloop. *B*—In good order; now preparing for sea.

AT NEW YORK.

Ohio 74. *A*—Outside plank much decayed from the rail to the wales, and some spots of decay inside in the plank, across the stern, in the ceiling, and gun deck clamps.

Washington 74—Will require considerable repairs in her planking, top timbers, beams, and floor timbers; the copper should be examined before she goes to sea.

Franklin 74—Will require planking from near water's edge to the rail, and an examination of her copper.

United States 44—Will require considerable repairs in hull, and some repairs in sails, masts and spars; standing and running rigging generally in good order.

Liberator 44. *A*—Frigate of first class, purchased, now in ordinary.

Savannah 44. *A*—Hull sound and in good condition, except the wales and one of the riding-bitt knees; masts and spars considerably advanced; laying the gun, spar, and berth decks, progressed in, &c.

Fairfield, sloop. *B*—Her frame prepared and raised; floors filled in and caulked, with deck beams put in, kneed, and bolted; also wales, keelson, and bilge strakes; progress made in her inboard works.

Sabine 44. *A*—Advanced to the building of the head and stern; masts and spars, &c., progressed in.

Fulton, steam frigate—Used as receiving ship.

Peacock, sloop—Will require new sails, and considerable repairs in hull, and standing and running rigging.

Shark, schooner—Undergoing repairs.

AT PHILADELPHIA.

Pennsylvania, ship of the line. *A*—Planked from floor-heads to upper gun deck ports; lower gun and orlop decks laid; spirketings, ceiling between ports on; stanchions up; middle gun deck beams in; ledge knees fayed and bolted; partners fitted; upper gun decks on, and beams nearly in; also spar deck, and port sills of gun decks; a great portion of her copper and iron work prepared, &c.

Raritan 44. *A*—Planked inside and out, except openings for air; decks completed, except orlop; and progress made in her inboard works.

Vandalia, sloop. *B*—Frame, except counter timbers, up; one-third of the wales on; beams for deck dressed out; knees sided; inboard works and sails considerably progressed in.

Cyane, corvette—Requires very extensive repairs.

AT WASHINGTON.

Potomac 44. *A*—Carpenters' work nearly done. Masts, spars, gun carriages, boats, &c., nearly complete.

Columbia 44. *A*—Wales on; breast hooks, orlops, and berth decks, and spirketings, just in; waterways, knees and breast hooks, for gun and spar decks, hewed out; beams ready; cutwater and channels prepared; masts and spars progressing; gun carriages, skids, and beds roughed out, &c.

Congress 36—Has been thoroughly repaired, and is now ready to fit for sea.

St. Louis, sloop. *B*—Frame complete, except counter timbers; beams for berth and gun decks trimmed out; masts and spars nearly made; gun carriages roughed out, &c.

AT NORFOLK.

Delaware 74. *A*—In good order, and about to proceed to sea.

St. Lawrence 44. *A*—Timbering complete, except the cants, filling in the floors, and fitting kelsons.

North Carolina, 74. *A*—In good order, except her copper, which is somewhat defective, and requires examination.

New York 74. *A*—Required to complete the hull; planking of the upper and spar decks; thirty-six strakes on lower gun, and twenty on orlop, and planking between ports, from rail to string; twenty-four strakes in the bottom, head and galleries, &c.

Guerriere, 44—Has been thoroughly repaired, and is now ready to receive a crew.

Constellation 36—Requires a thorough repair.

John Adams, corvette—Requires extensive repairs in her hull, sails and rigging, and must be hove down to examine her bottom.

Live oak frames for three frigates of the first class, delivering under contract.

[The letters *A* in *italic* denote those vessels built and building, under gradual increase; and *B* those building under the law of March 3, 1825, for building ten sloops of war; five of which have been completed and are now in service at sea.]

B.

Under the act "for the gradual improvement of the navy," the Commissioners have had the necessary moulds prepared, and have contracted for the frames and promiscuous timber, of live oak, for five ships of the line, five frigates and five sloops-of-war of the first class, and part of a frame for a sloop-of-war has been purchased.

Under the same act, scows, anchors and driving machines have been procured; and contracts have been made for timber for a coffer dam, for all the earth, clay, gravel work, and labor for covering two wharves, (one two hundred feet long and sixty feet wide, the other one hundred feet square,) for filling the coffer dam, filling in and backing up the dry stone quay wall; two steam engines, pumps, boilers, machinery, &c., required for a dry dock at Boston, and progress has been made in the construction of a coffer dam, &c.

The civil engineer employed in the construction of the docks has proceeded to Norfolk, where the materials will be procured for constructing a dock, and the work commenced as early as circumstances will admit.

Appropriated by the "act for the gradual improvement of the navy," approved March

3, 1827.....	\$500,000 00
Expended on account of the objects specified in the said act.....	80,978 81

Balance unexpended, December 1, 1827.....	\$419,021 19
---	--------------

G.

HEAD-QUARTERS OF THE MARINE CORPS, *Washington, November 27, 1827.*

SIR: I have the honor to acknowledge receipt of your letter of this day's date, and, in compliance with the direction contained in it, I transmit to you two papers, Nos. 1 and 2, showing the number of officers, non-commissioned officers, musicians, and privates which, in my opinion, are necessary to form a competent guard for each navy yard, and for each vessel now in commission.

In my communications to the Department, I have heretofore assigned a smaller force to the prominent naval establishments at Boston, Norfolk and New York. The docks about to be established at the two former yards lead me to the conclusion that the force I have now allotted to each of them is by no means too large for the protection of the important public interests to be concentrated at them. If there should not be a dock establishment at the New York yard, the number of vessels fitted out there, and the consequent concentration of all the materials necessary for repairing and fitting them out, render it necessary that an effective force should be stationed for its protection. I have included the *Constellation* frigate among the vessels in commission, under the supposition that the flag ship on the West India station would be of her class.

It may be proper to state that, when relief squadrons are fitted out for distant seas, additional calls are made on the corps to a considerable amount, and not provided for in this statement; and which will make a deduction from the force on shore until the return of the relieved force. I have assigned a captain to the flag ship of each squadron.

I have appended to the statement a small force at head-quarters. At some one of the stations there must, necessarily, be an establishment for the preservation and repair of the arms of the corps; and as there is already an armory here, I have thought the public interest would be promoted by the retention of a small force at this post. The only possible way in which the large number of musicians required for the different guards of the corps can be furnished, is by having a number of small boys bound, and educated in music for that purpose. It would be impracticable to supply them in any other mode. This

has hitherto been done at head-quarters, and such an establishment would be required at some other post, in case this station is broken up.

I have deemed it right to recommend a field officer for each of the three large stations, and for the line of battle ship. It rests with the government what rank to assign to the commandant of the corps, in case the views now laid before it should be adopted.

I have the honor to be, very respectfully, your obedient servant,

(Signed)

ARCH. HENDERSON, *Lieut. Col. Commandant.*

The Hon SAMUEL L. SOUTHWARD, *Secretary of the Navy.*

20TH CONGRESS.]

No. 340.

[1ST SESSION.]

EXPENSE ANNUALLY INCURRED UNDER THE ACT FOR PROHIBITING THE SLAVE TRADE.

COMMUNICATED TO THE SENATE DECEMBER 6, 1827.

WASHINGTON, December 6, 1827.

To the Senate of the United States:

In compliance with a resolution of the Senate, of the 19th of February last, requesting a statement of all the expenses annually incurred in carrying into effect the act of March 2, 1819, for prohibiting the slave trade, including the cost of keeping the ships-of-war on the coast of Africa, and all the incidental expenses growing out of the operations of that act, I transmit a report from the Secretary of the Navy, with the statement, so far as it can be made, required by the resolution.

J. Q. ADAMS.

NAVY DEPARTMENT, December 4, 1827.

The Secretary of the Navy has the honor to transmit to the President of the United States copies of three accounts, being statements of the expenditure of the appropriations for the support of the agency on the coast of Africa and the prohibition of the slave trade, since April, 1823, when that fund came under the control of this Department, to the 29th November, 1827, prepared in compliance with a resolution of the Senate, passed 19th February, 1827.

As no vessel-of-war of the United States has been *exclusively* attached to that station, one of those belonging to the West India squadron having been occasionally sent to afford protection to the agency, and for uncertain periods, an accurate statement of what has heretofore been "the cost of keeping ships-of-war on the coast of Africa" cannot be furnished. The annual expense would probably be about the average cost of keeping vessels of the same class in commission on other stations. An estimate is annexed of the expense of the several classes of our ships, for one year.

The original resolution and paper accompanying it are herewith returned.
Respectfully submitted.

SAM'L L. SOUTHARD.

20TH CONGRESS.]

No. 341.

[1ST SESSION.]

APPLICATION FOR AN INCREASE OF THE PAY OF LIEUTENANTS IN THE NAVY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 14, 1827.

MEMORIAL.

To the honorable the Senate and House of Representatives of the United States, in Congress assembled:

The memorial of the undersigned, lieutenants in the navy of the United States, respectfully sheweth: That your memorialists, impressed with a deep sense of the justice of your honorable bodies, and deriving confidence from the care with which your honorable bodies have guarded the interests of the several departments of the service whenever, by proper measures, it has been made manifest that those interests have required the intervention and protection of your honorable bodies; and believing that, while other branches of the service have experienced the benefit of repeated legislation on their behalf, the class to which your memorialists belong has suffered only because their claims upon your consideration have never been properly exhibited;

Your memorialists have, therefore, united for the purpose of presenting, respectfully, to your notice the very great inferiority of their compensation, by comparison with that extended, in other arms of the service, to officers not only of equal, but inferior grades.

The better to illustrate the truth of this proposition, your memorialists would respectfully exhibit the following table to the consideration of your honorable bodies.

In the first place, by the general regulations of the army, adjusting the relative rank of officers of the army and navy, lieutenants in the latter department of service are assigned a rank equal to that of captains in the army. (See "general regulations," page 18, article 6, No. 24.)

By the act of the 24th of April, 1816, the pay and emoluments of captains in the army were fixed as follows:

Yearly pay of captains in the army, at \$40 per month	\$480 00
Yearly amount of rations, three per diem, at 20 cents	219 00
Yearly allowance for pay, clothing, &c., for servant	189 00
	<u>\$888 00</u>

By the act of April 18th, 1814, the pay and emoluments of lieutenants in the navy were fixed as follows:

Yearly pay of lieutenants in the navy, at \$40 per month	\$480 00
Yearly amount of rations, three per diem, at 25 cents	273 75
	<u>\$753 75</u>
Deduct hospital fund, at 20 cents per month	2 40
	<u>\$751 35</u>

Excess in favor of captains in the army, according to the provisions of the above acts, \$136.35.

By the act of April 24th, 1816, the pay and emoluments of first lieutenants in the army were fixed as follows:

Yearly pay of first lieutenants in the army, at \$30 per month	\$360 00
Yearly amount of rations, three per diem, at 20 cents	219 00
Yearly allowance for pay, clothing, &c., for servant	189 00
	<u>\$768 00</u>

Excess in favor of first lieutenants in the army (inferior in rank to lieutenants in the navy), \$16.65.

But, by the act of March, 1827, each captain in the army receives an additional ration, and ten dollars per month additional pay, and each subaltern is allowed an additional ration. Under the provisions of this act, then, each captain in the army receives—

Yearly pay of a captain, at \$50 per month	\$600 00
Yearly amount of rations, four per diem, at 20 cents	292 00
Yearly allowance for pay, clothing, &c., for servant	189 00
	<u>\$1,081 00</u>

Excess of pay in favor of a captain in the army, of equal rank with a lieutenant in the navy, \$329.65.

Under the provisions of the last-mentioned act, the pay and emoluments of a first lieutenant in the army are as follows:

Yearly pay of a first lieutenant, at \$30 per month.....	\$360 00
Yearly amount of rations, four per diem, at 20 cents	292 00
Yearly allowance for pay, clothing, &c., for servant.....	189 00
	<u>\$841 00</u>

Excess of pay in favor of a first lieutenant in the army (inferior in rank to a lieutenant in the navy) \$89.65.

Under the provisions of the same act, the pay and emoluments of a second lieutenant in the army are as follows:

Yearly pay of a second lieutenant, at \$25 per month.....	\$300 00
Yearly amount of rations, four per diem, at 20 cents.....	292 00
Yearly allowance for pay, clothing, &c., for servant.....	189 00
	<u>\$781 00</u>

Excess of pay in favor of a second lieutenant in the army, *two grades* lower than a lieutenant in the navy, \$29.65.

Thus it appears that a brevet second lieutenant in the army, who has but yesterday graduated in the military academy, and who has not yet joined his regiment, receives actually a greater compensation than a lieutenant in the navy, (two grades higher in rank,) who has served in that capacity eleven years, and in the navy altogether eighteen years.

Again, there are in the army one hundred and eleven captains and lieutenants, who are assistant quartermasters, and assistant or acting assistant commissaries of subsistence.

A captain in the army, doing the duty of assistant quartermaster, receives—	
Yearly amount of pay and emoluments in the line	\$1,081 00
Additional pay, as assistant quartermaster, at \$20 per month.....	240 00
	<u>\$1,321 00</u>

A first lieutenant in the army, doing the same duty, receives—	
Yearly amount of pay and emoluments in the line	\$841 20
Additional pay, as assistant quartermaster, at \$20 per month.....	240 00
	<u>\$1,081 00</u>

There are ten captains and ten lieutenants in the army, who receive the above emoluments. (See Army Register, 1827.)

A captain in the army, doing duty as assistant commissary of subsistence, receives—	
Annual amount of pay and emoluments in the line.....	\$1,081 00
Additional pay as assistant commissary of subsistence, if at \$20 per month.....	240 00
	<u>\$1,321 00</u>

A first lieutenant in the army, doing the same duty, receives—	
Yearly pay and emoluments in the line	\$841 00
Additional pay as assistant commissary of subsistence, if at \$20 per month.....	240 00
	<u>\$1,081 01</u>

There are ten captains and eighty-one lieutenants in the army, who receive the above emoluments. (See documents accompanying President's message, December, 1820.)

There are also many captains in the army, commanding what are termed department, or double ration posts. The pay and emoluments of these officers amount, under these circumstances, to the sum of \$1,373.00.

There are in the navy two hundred and twenty-eight lieutenants, ninety-four of whom have served from ten to fourteen years in that capacity. There are four schooners, and seven navy yards, to each of which a lieutenant may be attached, and, with the exception of those thus detailed, every officer of that class is limited to his annual compensation, say \$751.35. (See Navy Register, 1827.)

But from this stipend, certainly small in comparison with the compensation allowed to officers of equal, nay inferior, grades in other departments of service, how much greater are the necessary deductions growing out of the peculiar nature of the sea service. Upon stations abroad, in the daily interchange, with foreign officers, of those courtesies which the usage and comity of nations, in a measure, enjoin upon their several representatives, costly outfits and expensive entertainments are required, which leave them barely the means of sustaining that appearance which their rank and station would demand. Besides, when returning from these long and expensive cruises, they have not the same advantages which belong in every case to officers of the army; for, instead of quarters provided at the expense of government, they are compelled to resort to public lodgings, there to await the period which, in regular routine, may place their services in requisition.

Your memorialists have endeavored, in the foregoing exhibit, to lay before your honorable bodies the pecuniary advantages enjoyed by the officers of the army over those of the navy. But, if your honorable bodies will take into consideration how many and great benefits, of a more important character, are conferred upon one arm of the service, which are denied to the other; when it is considered that the officers in the army are nurtured in one of the first institutions in the world, perfected at the public expense, not only in the principles and practice of their profession, but in the arts and sciences, both useful and ornamental; and, when discharged from that institution, at once admitted to a commission

and a competency; while, on the other, officers in the navy, entering at a tender age upon the duties of their profession, are thrown upon their unaided resources to pursue, slowly and laboriously, in their few and uncertain intervals of leisure, their researches in the sciences peculiar to their profession; that only after a tedious and severe probation they are admitted to a commission, which, while it confers upon them a rank equal to the highest grade below a field officer, in point of emolument, yields them less to support that rank than is allowed the lowest commissioned officer in the line; when it is considered, also, that, slow as is their promotion, they have not the stimulus offered by brevets to the army, the conclusion must be clearly established, that a vast disparity of service and reward, rank and emolument, obtains with regard to the two departments of service.

In conclusion, your memorialists respectfully and earnestly pray your honorable bodies that their motives may be understood, in urging the matters and things in this memorial stated.

Your memorialists yield to none in admiration of the high chivalry, the distinguished talent, and meritorious services, which have given their brother officers of the army such exalted claims upon the gratitude of their countrymen. They ask only of your honorable bodies that due consideration may be bestowed upon the facts and statements foregoing, and if they afford a satisfactory illustration of the reasonableness of this, their memorial, that they may be placed upon the same footing with officers of their grade in other arms of the service; or that such other provision may be made in their behalf as, in the wisdom of your honorable bodies, may seem just and proper.

And your memorialists, as in duty bound, will ever pray, &c.

No. 342.

[1ST SESSION.

EXPERIMENTS ON AMERICAN WATER-ROTTED HEMP, AND COMPARISON OF IT WITH
RUSSIAN HEMP.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 24, 1827.

NAVY DEPARTMENT, *December 20, 1827.*

SIR: In answer to a resolution of the House of Representatives, of the 2d March, 1827, directing the Secretary of the Navy to report "the result of any experiments which have already been made, or are now making, in the navy of the United States, to ascertain the quality of American water-rotted hemp, compared with Russia hemp," the Secretary of the Navy has the honor to enclose a copy of a letter from the Commissioners of the Navy, on the subject. Reference is also respectfully made to a report from this Department to the Senate, on the same subject, dated 5th January, 1825.

The small quantity of water-rotted hemp which has been heretofore prepared has not afforded very extensive opportunities for making experiments upon it; but such as have been made are entirely satisfactory, and importations of hemp will not be necessary when sufficient quantities to answer the demands of the service shall be produced in the country. Cordage of American water-rotted hemp would always be preferred, when found of equal quality.

It is perhaps proper to observe, that there is no establishment connected with the navy in which hemp is manufactured, and, therefore, it is not purchased in its raw state by the Department. It will, however, be the interest and policy of the government to make such establishment whenever it is believed that economy will be promoted by it.

Respectfully submitted.

SAMPL L. SOUTHARD.

The SPEAKER of the House of Representatives.

NAVY COMMISSIONERS' OFFICE, *December 17, 1827.*

SIR: The Commissioners of the Navy duly received your letter enclosing a resolution of the House of Representatives, of the 2d of March last, requiring a report of the result of any experiments to ascertain the quality of American water-rotted hemp compared with Russia hemp, and in reply they have the honor to state that all the experiments heretofore made of these different descriptions of hemp have uniformly tended to establish the opinion that the American hemp loses nothing in the comparison, whether we refer to its strength or its durability, when made up into cordage.

Experiments have been made of these hems in their hatchelled state, before they were spun into yarns, and in that state the American hemp was found to be the strongest, and after being made up into cordage and tested on board of a ship under the command of one of the present Commissioners, its strength and durability were ascertained to be fully equal to cordage made of the best Russia hemp similarly exposed. If there be a difference between the best American and the best Russia water-rotted hemp, when brought to our market, the Commissioners would unhesitatingly say it is in favor of the former. Admitting their staples, in their original state, to be equally good, the Russia hemp is certainly liable to greater injury from transportation; and that it does sustain more or less injury in its transportation from Russia to our ports, is believed to be an unquestionable fact.

At the instance of a gentleman from Pennsylvania, the Commissioners, in the year 1824, agreed to purchase two tons of American water-rotted hemp, with a view of having it made into cordage of various sizes, and tested on board of one of our national ships with the best Russia; under this agreement between seven and eight cwt. only was delivered. This hemp was pronounced by competent judges to be fully equal to the best Russia then in market, and the growers were accordingly paid the full price of the latter for it. It was then made into cordage and sent to Norfolk, to be used in the equipment of one of our national ships, but before it arrived the ship had sailed. A subsequent order was given to use it in reeving the main and main-top, fore and fore-top sail braces of a ship on one side; the other side of the ship to be fitted with cordage made of the best Russia hemp, and the experiment is now in progress; of the result no doubt is entertained by the Commissioners.

The Commissioners are sensible that in the preceding remarks they are only reiterating the opinion heretofore frequently expressed by them. They have never entertained a doubt of American *water-rotted* hemp being equal to Russia, but the great difficulty has been to procure a sufficient quantity of American *water-rotted* hemp to answer the demands of the navy. The habit of dew-rotting has become so fixed that it is apprehended a considerable time will elapse before the American community can be persuaded to change it, and resort to the preferable system of water-rotting; indeed, a disposition has been manifested to experiment upon new theories, rather than adopt the system successfully practiced and confirmed in other countries by long experience. Accordingly, we find that attempts have been made to prepare the hemp by suffering it to remain twelve months in stack, and then exposing it to the action of dews; by breaking it with a machine in its natural state, without any previous rotting; by subjecting it to the operation of pyroligneous acid after being dew-rotted.

The Commissioners have from time to time received hemp prepared in these various modes, and have directed experiments to be made of it. The results of such experiments, although not called for by the resolution, will not, it is presumed, be unacceptable, since their tendency is to establish the opinion entertained as to the properties of American hemp in its original state.

Cordage made of American hemp, stacked one year and then dew-rotted, was fitted on one side of the frigate Constellation as main, main-top, and fore-top sail braces, main-clue garnets, davits, and stern boat falls. The other side of the ship, in corresponding situations, was fitted with cordage of Russia hemp; and after being thus worn for nearly a year it was found, on examination, that the Russia rope in every instance, after being much worn, looked better and wore more equally and evenly than the American; that the yarns of the former were rather stronger, and the number of broken yarns not so great as in the American. But although it thus appeared that the Russia rope was rather preferable, both as to strength and durability, yet, in the opinion of the commander, "the difference between them was not so great as to warrant a declaration that the proof was conclusive in favor of the Russia;" and he recommended further experiments as necessary to decide the question.

Of the same cordage, after being worn nearly two years on board the Constellation, her commander observes: "I have given a fair trial to the Kentucky hemp for rigging. If there is any preference, I would give it in favor of the Russia;" thus making it almost a matter of doubt whether cordage made of American hemp, stacked one year and then exposed to dews, was not equal to cordage made of Russia hemp, when used as *rigging*.

In the year 1825 an experiment was made as to the relative strength of twelve yarns taken from a piece of cordage of Russia hemp, and the same number of yarns taken from cordage made of hemp broke by a machine, without having been either water or dew-rotted, and the following was the result:

<i>Russia.</i>		<i>America.</i>	
No.	Pounds.	No.	Pounds.
1 sustained.....	97	1 sustained.....	97
2 sustained.....	97	2 sustained.....	140
3 sustained.....	83	3 sustained.....	90
4 sustained.....	140	4 sustained.....	123
5 sustained.....	112	5 sustained.....	133
6 sustained.....	119	6 sustained.....	119
7 sustained.....	147	7 sustained.....	175
8 sustained.....	123	8 sustained.....	147
9 sustained.....	126½	9 sustained.....	147
10 sustained.....	137	10 sustained.....	161
11 sustained.....	119	11 sustained.....	175
12 sustained.....	178	12 sustained.....	179
	1,478½		1,686

Thus, the average weight sustained by the American yarns was 140, while that of the Russia yarns was only 123; proving, incontestibly, that the American was superior in point of strength, when newly made.

The same pieces of cordage (10 inch) were then directed to be immersed in water and mud, with a view to test their relative durability in that exposed state. After remaining thus immersed for nearly twelve months, they were taken up, examined, and tried; and the following was the result:

16¾ fathoms of the American rope were stretched until the outer yarns began to give way; remaining two and one-half hours in that state, the purchase was increased until it parted, having stretched

three fathoms five and one-half feet, lost three-eighths of an inch in circumference, and sustained five tons three quarters and six pounds.

The same length of the Russia rope, similarly tested, stretched three fathoms three and a half feet, lost in circumference five-eighths of an inch, and sustained six tons two quarters and twelve pounds.

After these tests, the two remaining pieces of equal length were bent together, and hove until the American parted, sustaining six tons two-quarters and four pounds.

Two pieces of twelve inch cordage, hawser laid, one made of dew-rotted American hemp, prepared with pyroligneous acid, the other made of American hemp, broke by a machine, without any process of rotting, were tested on board the North Carolina, on her late cruise to the Mediterranean. They were found, *when new*, to be as strong or stronger than cordage made of Russian hemp usually is; but, after a lapse of eighteen months, they were found to have lost their strength in an extraordinary degree. Their appearance *then* indicated soundness; but, on unlaying the rope and drawing the yarns, it was found, after trying twenty yarns of each separately, that those of the dew-rotted hemp, prepared with pyroligneous acid, suspended, upon an average, only sixteen pounds, while those of the unrotted hemp sustained only eighteen pounds, although, when new, the yarns of either would have suspended at least 125 pounds.

From these facts the conclusion appears irresistible, that American hemp requires only the same process of preparation practiced in Russia, to render American cordage fully as good for every species of service as cordage made of Russia hemp. For the process practiced in Russia, in preparation of their hemp for market, the Commissioners would respectfully refer to the report which they had the honor to make on the 17th November, 1824.*

I have the honor to be, with great respect, sir, your obedient servant,

JOHN RODGERS.

HON. SAMUEL L. SOUTHARD, *Secretary of the Navy.*

20TH CONGRESS.]

No. 343.

[1ST SESSION.]

SURVEY OF THE HARBOR OF SAVANNAH, GEORGIA, TO ASCERTAIN ITS FACILITIES FOR NAVAL PURPOSES.

COMMUNICATED TO THE SENATE DECEMBER 31, 1827.

NAVY DEPARTMENT, *December 28, 1827.*

SIR: The Secretary of the Navy, in compliance with a resolution of the Senate, of March 3, 1827, directing him "to report to the Senate, at the commencement of the next session of Congress, *the result of the surveys of the harbors of Charleston and Beaufort, South Carolina, and of Savannah and St. Mary's, Georgia,*" has the honor to transmit a copy of so much of the report of Lieutenant Stockton as relates to the survey of Savannah, made under the authority of the appropriation of the 14th of March, 1826. To explain the references to the interrogatories contained in this report, a copy of the instructions to Lieutenant Stockton accompanies it.

The survey of the harbor of Beaufort is in progress, and will be finished without delay. Time has not been afforded to complete the maps and charts which will be added to the report.

The result of the survey of the harbors of Charleston and St. Mary's was communicated at the session of Congress previous to the last, in answer to a resolution of the Senate, of the 17th of January, 1826.

Respectfully submitted.

SAMUEL L. SOUTHARD.

The PRESIDENT of the Senate.

Copy of orders from the Secretary of the Navy to Lieut. Robert F. Stockton, dated—

NAVY DEPARTMENT, *November 8, 1826.*

You have been selected to superintend the "survey of the harbors of Savannah and Brunswick, in Georgia and Beaufort, in South Carolina, with a view to ascertain the practical facilities of those places for naval purposes," as authorized by an appropriation made at the last session of Congress.

The U. S. sloop Florida, under the command of Lieut. Wm. P. Piercy, will be prepared, and a suitable number of officers ordered to report to you, to assist in the operations. Should any officers or instruments be required, upon notifying the Department they will be supplied.

You will make use of the best charts you can procure; and wherever they are deficient, the examination should be very full, in order to ascertain the fitness of the respective places for the establishment of a navy yard.

Your examination and report will be directed to the following points, viz:

The depth of water upon the bar, at the lowest and highest spring tides, and common tides.

Whether the depth of the water upon the bar is affected by any, and what winds, to what extent, and in what manner.

The strength of the current on the bar, and to a safe anchorage within it.

Width of the channel upon the bar, width of the bar, and nature of the bottom, with what wind large vessels can cross the bar, bound inwards and outwards.

* For this report, see State Papers, on Naval Affairs, vol. 1, No. 253; for other reports on the subject, see same volume, Nos. 86 and 242.

The prevailing winds at different seasons of the year.

The extent of safe anchorage for vessels of the largest size which can cross the bar.

The convenience of such anchorage for receiving supplies from the shore.

Facilities of obtaining good fresh water.

What supplies of provisions and stores for a fleet could be obtained from the surrounding country, and to what extent, at short notices.

Whether the harbor has good positions for a dock or navy yard.

How near the present shore of such position, does a channel run, of the same depth as the water on the bar at high spring tides.

Has it good fresh water in its vicinity, and in what quantities.

General health of the position, and quality of the soil.

Whether the worm is destructive in the harbor.

Facilities of wharfing to the channel.

You will specify the points which are determined from personal observation, and those upon which your information is obtained from others, and what sources.

The time when it will be necessary to make the report to Congress, induces me to urge that the duty assigned to you be completed as soon as practicable.

Extract from the report of Lieutenant R. F. Stockton, dated—

SAVANNAH, May 6, 1827.

To the Hon. Samuel L. Southard, Secretary of the Navy:

SIR: I have the honor to make known to you that the survey of the harbors of Savannah and Brunswick, in the State of Georgia, as far as it was necessary "to ascertain the practical facilities of those places for naval purposes," has been completed; and that the results of the observations, made under my "superintendance," at the above-mentioned places, may be found in the following report:

I commence with the harbor of Savannah. To the first interrogatory contained in your instructions to me, I answer: That the depth of the water upon the bar, at low water, during the lowest spring tides, is *nineteen* feet; during the highest spring tides, it is *seventeen* feet; and at common tides it is *eighteen* feet.

To the second interrogatory, I answer: That the situation of that bar is such as to make it almost impossible to determine accurately, by a set of hurried observations, to what extent the water upon it may be affected by the wind: the manner and extent of the operation of the wind, on the water upon that bar, depend on its direction, violence, and duration.

To the third interrogatory, I answer: The strength of the current upon the bar, and to a safe anchorage within it, unaffected by the wind, is two miles and a half an hour.

To the fourth interrogatory, I answer: That the channel upon the bar is three-quarters of a mile wide, with a sandy bottom. The best wind for "large vessels" to cross the bar, bound inwards, is south-east; for those bound to sea, the southwest will be most favorable.

To the fifth interrogatory, I answer: That, during the winter months, the winds from the northward prevail, but vary from east to west; during the summer months, the southeasterly winds are most frequent.

To the sixth interrogatory, I answer: That I think *eight* of the largest class of vessels might safely lay, in what is commonly called Cock Spur Roads; this anchorage is nearly sixteen miles from the city of Savannah, and the supplies for vessels laying there must be sent down the river.

To the seventh interrogatory, I answer: That tolerably good water can be obtained and without much difficulty.

Having answered all the interrogatories concerning the bar at the entrance of the harbor, as well as those appertaining to the first anchorage within the bar, it will be proper, perhaps, here to state the nature and extent of the impediments which lay in the river, between the bar and the city, before I proceed to answer the remaining interrogatories.

The first impediment to the navigation of the river, between the light-house on Cock Spur Island and the city, is called the Knowl. The principal body of this shoal lays about two miles up the river from the light-house; the tail of the Knowl, however, runs down nearly opposite the light-house. The greatest depth of water that can be carried over the Knowl at low water is from ten and a half to eleven feet. Two miles above the Knowl there are other banks, called "The Oyster Beds." On these banks from eleven to twelve feet can be carried over at low water. Five miles above "The Oyster Beds" there is a "mud flat," on which there is, at low water, from ten to eleven feet. There is another mud flat about one mile above the last-mentioned shoal, over which from ten and a half to eleven feet at low water can be carried. About one mile and a half higher up the river there is another mud flat called "Four Mile Point Shoal," on which there is about eight feet at low water. The next difficulty to be encountered is a shoal commonly called the "Wrecks," which is about two miles from the city, and over which from six to six and a half feet at low water may be carried.

Having given a general idea of the shoals in the river, I will proceed to answer the remaining interrogatories.

To the eighth interrogatory, I answer: That although not much dependence is to be placed on the country adjacent to the river for any great quantity of supplies necessary for a "fleet," yet I doubt not that the city of Savannah could, and would, at all times be prepared to furnish most of the necessary supplies. I will take the liberty here to observe that though it may be unnecessary to enter into particulars with regard to this matter, yet perhaps it is my duty to remind you of the advantages which Savannah has in regard to obtaining supplies from abroad. Besides being situated at the outlet of Savannah river, down which the produce of a portion of the most fertile parts of Georgia passes, there is an inland communication between that place and the city of Charleston, which will enable Savannah to draw from Charleston whatever of supplies may be collected at the latter port. It may not be amiss to mention also

that an attempt is making to deepen the water on that shoal called the "Wrecks," which, if successful, will contribute much to the easy and safe navigation of that river.

To the ninth interrogatory, I answer: That the best positions for a navy yard in this harbor are at Cock Spur Island, Four Mile Point, and at Fort Jackson.

To the tenth interrogatory, I answer: That the channel opposite to those positions runs close to the present shore.

To the eleventh interrogatory, I answer: That tolerably good water can be obtained at either of those positions, and in any quantity.

To the twelfth interrogatory, I answer: That as to the health of those positions I can only say that there is amongst the inhabitants a diversity of opinion on that subject. They were healthy whilst I was there. The soil, I think, is good.

To the thirteenth interrogatory, I answer: That I had no opportunity to ascertain, from personal observation, anything conclusive with regard to the destructiveness of the worm.

To the fourteenth interrogatory, I answer: That I do not know of anything to prevent wharfing to the channel. The average summit level of the rise of the tide in Savannah is estimated at six feet.

I believe, sir, that you will find in the foregoing report all the information that is necessary to enable you to form a correct opinion of the "practical facilities" of the harbor of Savannah for "naval purposes."

[20TH CONGRESS.]

No. 344.

[1ST SESSION.]

NAVAL REGISTER FOR 1828.

COMMUNICATED TO THE SENATE JANUARY 3, 1828.

NAVY DEPARTMENT, December 31, 1827.

SIR: I have the honor to transmit to you herewith, for the use of the members of the Senate, fifty copies of the Naval Register for the year 1828, prepared in obedience to a resolution of Congress, passed on the 13th day of December, 1815.

I am, sir, very respectfully, &c.,

SAMPL L. SOUTHARD.

To the PRESIDENT of the Senate of the United States.

Naval register for 1828.

20TH CONGRESS.]

No. 345.

[1ST SESSION.]

ON CLAIM OF THE OFFICERS AND CREW OF THE KETCH INTREPID TO PRIZE MONEY FOR THE DESTRUCTION OF THE FRIGATE PHILADELPHIA, AT TRIPOLI, IN 1804.

COMMUNICATED TO THE SENATE JANUARY 9, 1828.

Mr. HAYNE, from the Committee on Naval Affairs, to whom was referred the memorial of Susan Decatur, praying for compensation to the officers and crew of the United States ketch Intrepid, for the capture of the frigate Philadelphia, reported:

That the claim is founded on the recapture of the Philadelphia frigate, in the harbor of Tripoli, on the night of the 16th of February, 1804. The circumstances attending that gallant achievement are so well known that the committee will content themselves with a very brief recapitulation of them. Soon after the war with Tripoli had commenced, a small squadron under Commodore Preble was dispatched to the Mediterranean, for the purpose of carrying on hostilities. The United States frigate Philadelphia, of forty-four guns, commanded by Commodore Bainbridge, not long after the arrival of the squadron on the Barbary coast, was unfortunately stranded on rocks, and in that situation, resistance being impossible, she was captured by the enemy, and the whole of the officers and crew were made prisoners and thrown into a dungeon. The frigate was got off without material damage, and immediately taken into the Tri-

politan service, and being speedily manned and ready for sea, was moored in the harbor of Tripoli, within pistol shot of the whole of the Tripolitan marine, mounting altogether upwards of one hundred pieces of heavy cannon, and within the immediate protection of formidable land batteries, consisting of one hundred and fifteen pieces of heavy artillery. It is stated that, besides this force, there were encamped at the time, in the city and its vicinity, twenty thousand troops, and that upwards of one thousand seamen were attached to the fleet in the harbor. At this period the force under Commodore Preble was, by the loss of the Philadelphia, so much reduced as to deprive him of the means of prosecuting hostilities on a scale at all commensurate with the magnitude of the service to be performed—the release of the American captives, and a restoration of an honorable peace. In this state of affairs Stephen Decatur, then a lieutenant, commanding the United States schooner Enterprise, of fourteen guns and seventy men, conceived the idea of entering the harbor of Tripoli at night, and of boarding and recapturing the Philadelphia.

He immediately communicated the daring scheme to his commander, and volunteered his services to execute it. After due deliberation on the proposal, Commodore Preble approved of the plan, and accepted the offer of Decatur's services. Fully aware, however, of the extreme hazard of such an undertaking, and that its success would entirely depend on the secrecy, celerity, and gallantry of its execution, and conceiving that any attempt to bring out the frigate, if captured, must be attended with extraordinary danger to the captors, and expose the vessel to the risk of being retaken; and believing, moreover, that the destruction of the Philadelphia would sufficiently restore the superiority of his own fleet, Commodore Preble gave peremptory orders to Lieutenant Decatur not to attempt to bring the frigate out of the harbor, but, in case of success, *to be sure to set fire to the gun room, berths, cock-pit, store rooms forward, berths on the berth deck, and then, after blowing out her bottom, to abandon her.* In the execution of these orders, Lieutenant Decatur manned a small ketch of about sixty tons, (which he had just before taken from the Turks,) with seventy officers and men, all volunteers, and sailed from Syracuse, where the American squadron then lay, on the 3d of February 1804. After several days of very tempestuous weather, he arrived off Tripoli, on the 16th of the same month, and immediately proceeding into the harbor, ran up alongside the Philadelphia, about ten o'clock at night, boarded and carried her in the most gallant style, after a short but severe conflict on the decks of the frigate, in which upwards of twenty Turks were killed on the spot, and the rest driven below or overboard. At this period, and while everything around was in darkness, Lieutenant Decatur found himself in quiet possession of his prize; and it is the opinion of the pilot who conducted the ketch into the harbor, as well as of several naval officers who were acquainted with all the circumstances, and the committee are assured it was the decided opinion of Decatur himself, that he could have brought the Philadelphia out of the harbor in safety. The peremptory orders, however, under which he was acting, precluded the attempt, and having deliberately set fire to the vessel, in the manner prescribed by his commander, and having remained on board until the fire had communicated to the rigging and tops, he finally abandoned her, bringing off the whole of his crew under a heavy fire from the batteries and the shipping, without the loss of a single man. It is the belief of the committee that the gallantry of this achievement has very seldom been equalled, and never surpassed, in the naval history of the world. In the language of Commodore Preble, "its merit can hardly be sufficiently estimated; it is above all praise."

Without dwelling on the circumstances which, in their estimation, distinguish this achievement from almost all others, the committee would remark that, when considered *in its effects*—in inspiring the Turk with a dread of American enterprise and valor, (which neither time nor space have been able to remove,) in elevating the American naval character in the estimation of foreign nations, and in inspiring that confidence in ourselves so essential to success, and which, perhaps, has contributed as much as any other cause to our victories on the ocean and the lakes—the destruction of the Philadelphia cannot fail to be regarded as an event of the highest importance to the government and people of the United States. It was so considered when it occurred, and has never ceased to be so regarded by our naval officers, by the government, and by the country at large; and, perhaps, it is not going too far to assert that it is to the *profound impression* produced by that and other exploits, during the Tripolitan war, that this nation is indebted for a greater exemption from depredations on the part of Turkish cruisers than has been experienced by any other; and that, when difficulties have occurred, they have been adjusted with unexampled celerity, and at an expense of blood and treasure altogether insignificant when compared with that to which the greatest maritime powers of Europe have been subjected under similar circumstances. Without dwelling longer on the merit of the exploit, the committee will come directly to the inquiry whether any and what pecuniary reward ought to be bestowed on the captors of the Philadelphia, according to the practice of our own government in similar cases. At the time of the capture of the Philadelphia the navy was young, and it was the opinion of many, even of our wisest statesmen, that it was not the true policy of the United States to strengthen this arm of the national defence. The system which has since been introduced, and which seems now to unite all suffrages in its favor, had not yet been established, and appropriate rewards for distinguished services had not been provided. Congress, therefore, though appreciating very highly the valor and good conduct of Decatur and his gallant associates, contented themselves with bestowing mere honorary rewards, unless it can be considered as an exception to the remark that they voted *two months' pay* to the officers and men, which, it is understood, the former unanimously declined to receive. When at a later period, however, the people of the United States came to feel and acknowledge the importance of a navy to the national defence, when our officers and men were every day covering themselves and their country with glory, a better and more liberal spirit sprung up and was cherished towards this long neglected department of the public service. Prior to the capture of the Guerriere by the Constitution, we believe, no case had occurred in which a pecuniary reward, for a naval victory, had been paid out of the public treasury. A share in the thing captured was all that the laws or usages of the country allowed; and, if *that* perished in the conflict, the victors went without their reward. When, however, the navy had fought itself into favor, and our naval heroes came to be regarded with the gratitude and affection which could no longer be withheld, the rule was adopted of paying out of the public purse for the vessels destroyed in battle; and the principle is now settled, from the uniform practice of the government for fourteen years, that a reasonable compensation is to be allowed for vessels sunk in battle, or necessarily destroyed in consequence of injuries received in the conflict. The committee beg leave to annex to this report a list of the vessels so destroyed, with the compensation allowed for each. Conceiving, therefore, that it is the established policy and settled practice of the government to allow compensation in all such cases, (although they do not come within the provisions of the prize acts,) the question now presents itself whether the same liberal prin-

ciple ought not to be extended to the case of the Philadelphia, and whether compensation is not as justly due to the captors of that vessel as to the captors of the Guerriere and the Java, or of the gunboat destroyed on Lake Ontario. On this point your committee are clearly and unanimously of opinion that both justice and policy concur in support of the claim. Where all the facts are notorious, and the merit of the claimants is confessedly of the highest order, the government ought not to avail itself of the mere lapse of time; nor can the committee conceive any sound reason why a rule, founded on justice and enlarged principles of public policy, should not be extended to those who have achieved signal victories, before as well as after its adoption. They have, therefore, no hesitation in recommending that reasonable compensation be now granted to the captors of the Philadelphia.

Two other questions still remain to be considered. The first relates to *the amount* which ought to be allowed, and the second to the proper *distribution* of that amount. On the first point the precedents have varied from the grant of the full value of the vessel captured and destroyed, down to a half and even a fourth part of such value. An examination of the annexed list will afford full information on this point.

The petitioner in this case strongly relies on the ground that, as the vessel could have been brought out of the harbor of Tripoli, and was destroyed only in obedience to the orders of Commodore Preble, the captors ought to be remunerated for their loss. And further, that the great disparity of force, making this a case of even higher merit than that of any other frigate ever captured by the American navy, strengthens the claim to a liberal allowance. Viewing the subject in all its bearings, the committee have come to the conclusion to recommend the grant of one hundred thousand dollars, as a reasonable sum to be now paid to the captors of the Philadelphia, being, at the lowest estimate, about one-half of the value of the frigate at the time of her capture.

In relation to *the distribution* of this amount, they have felt some difficulty. The case, not being one of a vessel brought into port and condemned, does not come within the scope of the prize acts, and the committee is well satisfied that the mode of distribution prescribed by those acts cannot be equitably applied to it. The prize acts are obviously founded on the presumption of *capture by a full crew*, and it is manifest that a distribution which would be just and proper in the case of a vessel fully officered and manned, might be extremely unequal and unjust when applied to a mere handful of men, filling up none of the classes arranged in these acts. The capture of a frigate of the first class by a lieutenant and seventy men, in a small ketch of four guns, is so out of the usual course, and so contrary to all reasonable calculations, that the existence of such an extraordinary case seems to produce the necessity of providing a new rule for the case itself; and, in the present instance, this can be the more readily done, as the proposed grant is not founded on the letter of the law, but rests entirely in the liberality, and therefore may be regulated by the sound discretion of Congress. After looking carefully into the subject, and consulting experienced naval officers, your committee cannot discover any more equitable rule of distribution than that recommended by the Navy Commissioners in the letters hereto annexed, viz: That after reserving for the commanding officer of the squadron one-twentieth of the whole sum, the residue be divided among the officers and men, in the same relative proportions which each would receive if the crew of the Intrepid had consisted of the same number as that of the frigate Philadelphia, at the time of her capture by the Tripolitans.

Your committee, in conclusion, beg leave to report a bill granting compensation to the officers and crew of the ketch Intrepid, for the capture of the frigate Philadelphia, on the principles set forth in this report.

List of vessels destroyed, recaptured, or restored, with the amounts allowed by acts of Congress for the same.

To which add the British sloop of war *Hermes*, destroyed by the garrison of Fort Boyer, Mobile Point, in September, 1814, and paid for by act of Congress.

WASHINGTON, *November 15, 1827.*

DEAR MADAM: I have received your communication of the 9th instant, wherein you request my opinion in regard to the provisions contained in the bill reported by the Naval Committee, during the last session of Congress, to compensate yourself as the widow and representative of Captain Stephen Decatur, and the officers and crew of the United States ketch Intrepid, for the capture and destruction of the Tripolitan frigate, late the United States frigate Philadelphia.

With respectful deference for the opinions of the honorable gentlemen who reported that bill, as well as for the opinions of other gentlemen who have expressed to you their views on the same subject, I would take the liberty to suggest a principle of distribution, which, to my mind, would have been equally equitable, and at the same time more likely, I conceive, to have met the views and wishes of the claimants generally. The mode I would suggest is as follows: If the sum appropriated by Congress should be \$100,000, I would recommend the setting apart of \$5,000 as the proper sum for remunerating the heirs of the commanding officer of the squadron, and then divide amongst the officers and crew of the Intrepid, exclusively, the remaining \$95,000, apportioning to each class of the claimants the same relative share as they would have been entitled to receive, had the actual number of officers and men on board the Intrepid, at the time she destroyed the Philadelphia, been precisely the same as is known to have been on board of that ship at the time of her capture by the Tripolitans.

The enclosed exhibit, which corresponds in principle with the mode of distribution suggested, will show, in the division of any amount which might be awarded, the specific sum that each officer and seaman would be entitled to receive.

With great respect and regard, I am, dear madam, your obedient servant,

JOHN RODGERS.

Mrs. SUSAN DECATUR.

NAVY COMMISSIONERS' OFFICE, *November 17, 1827.*

DEAR MADAM: I have had the honor to receive your letter of yesterday, and its enclosure, which is herewith returned. The distribution, as stated in that paper, appears to be equitable, and will, I presume, be satisfactory to those concerned. With my best wishes for a successful termination of the case,

I am, with very great respect, your obedient servant,

L. WARRINGTON.

Mrs. SUSAN DECATUR, *Georgetown.*

Copy of a letter from Commodore Jones, Navy Commissioner, relative to the proper mode of distributing the prize money for the Philadelphia.

WASHINGTON, *November 28, 1825.*

DEAR MADAM: In compliance with your request that I should make known to you my opinion respecting the division of the sum that may be voted to the captors of the frigate Philadelphia, in the harbor of Tripoli, I have to state to you the following as the manner comporting with my idea of equity in that case: First, that there should be made a dividend of the money, in the same legal proportion to each officer and seaman as if the class in which he was comprised was full; and then, that the surplus money should be re-divided in the same manner, until entirely distributed.

I am, very respectfully, yours,

(Signed)

JACOB JONES.

Mrs. DECATUR.

WASHINGTON, *January 5, 1828.*

To Commodores Rodgers and Warrington, Navy Commissioners:

GENTLEMEN: I enclose you a letter of the Secretary of the Navy, transmitted to the House of Representatives on the 8th December, 1826, covering Commodore Decatur's original list of the officers and crew of the ketch Intrepid, at the time of the capture of the frigate Philadelphia; which list, I presume, was not before you at the time your statement was made out, which is annexed to Mrs. Decatur's memorial. I am directed by the Naval Committee of the Senate to request that you will be so good as to make out a statement of the distribution of \$100,000 among the officers and crew of the Intrepid, in conformity with the documents enclosed, (introducing, at the same time, the name of S. Catelino, the pilot, in the 5th class,) according to the principles recommended by you; that is to say, to allow to the commanding officer of the squadron the sum of \$5,000, one-twentieth of the whole, and to divide the residue among the officers and men in the same relative proportions which each would receive if the crew of the Intrepid had consisted of the same number as that of the frigate Philadelphia, at the time of her capture by the Tripolitans.

I am, gentlemen, very respectfully, your most obedient servant,

ROBERT Y. HAYNE,

Chairman of the Naval Committee of the Senate.

NAVY COMMISSIONERS' OFFICE, *January 7, 1828.*

SIR: The Commissioners of the Navy have had the honor to receive your letter of the 5th instant. The statement to which you refer was unofficial, and made in reply to a private communication from Mrs. Decatur, more with a view to express an opinion as to the principle of distribution applicable to the case, than with any expectation of minute accuracy in the calculation, as affected the interests of the individuals concerned; for, in truth, they had not at that time a correct list of the crew of the ketch Intrepid.

Having now received a correct list from you, they have had the paper herewith transmitted, and marked A, prepared, upon the principle stated in its caption, including (agreeably to your request) the name of S. Catelino in the 5th class. A copy of the list of the crew, marked B, showing the classes to which they belong, is also transmitted.

I have the honor to be, sir, very respectfully, your most obedient servant,
 JOHN RODGERS.

HON. ROBERT Y. HAYNE.

A.

The sum of \$100,000 distributed among the crew of the ketch Intrepid, upon the following principle, viz: Consider each person of each class to share as a crew equal in number, &c., to that of the frigate Philadelphia, cruising independently of any superior command, would share; then reserve one-twentieth of the whole sum for the officer who commanded the squadron to which the Intrepid belonged, and divide the remainder among the crew of the Intrepid, in the same relative proportions first assumed.

The crew of the Philadelphia would have shared as follows:

Class.				
First.....	1	3	twentieths.....	\$15,000 00
Second.....	5	2	twentieths, at \$2,000.....	10,000 00
Third.....	7	2	twentieths, at 1,428 57½.....	10,000 00
Fourth.....	27	3½	twentieths, at 648 14½ ² / ₇	17,500 00
Fifth.....	26	2½	twentieths, at 480 76 ² / ₅	12,500 00
Sixth.....	241	7	twentieths, at 145 22½ ⁹ / ₁₁	35,000 00
	<u>307</u>	<u>20</u>		<u>\$100,000 00</u>

The following exhibit shows the number of each class of persons supposed to have constituted the crew of the ketch Intrepid, and the distribution of one hundred thousand dollars upon the principle above stated

Class.				
First.....	1			\$31,412 42
Second.....	3	at \$4,188 32.....		12,564 96
Third.....	5	at 2,991 65 ² / ₅		14,958 28
Fourth.....	9	at 1,357 32 ² / ₃		12,215 93
Fifth.....	11	at 1,006 80 ² / ₁₁		11,074 89
Sixth.....	42	at 304 13 ⁴ / ₂		12,773 50
	<u>71</u>			<u>\$95,000 00</u>
Leaving for the commodore.....				5,000 00
				<u>\$100,000 00</u>

B.

STEPHEN DECATUR, JR.

20TH CONGRESS.]

No. 346.

[1ST SESSION.]

A PLAN FOR A NAVAL PEACE ESTABLISHMENT OF THE UNITED STATES.

COMMUNICATED TO THE SENATE JANUARY 15, 1828.

NAVY DEPARTMENT, *January 12, 1828.*

STR: In answer to a resolution of the Senate, of February 28, 1827, directing the Secretary of the Navy "to report a plan for a naval peace establishment for the United States," paper A, containing the plan called for, is respectfully presented. It is not accompanied with comments, but reference is made to the views expressed in former reports from this Department on the subject, particularly to those of January 24, 1824, and January 1, 1825.

It will be perceived that the present varies in some points from the plans heretofore proposed, and which did not meet the approbation of Congress. The changes, it is hoped, will be found satisfactory. The intention has been to embrace only those objects supposed to be indispensable, and to make the whole plain and simple in its provisions; some of which are suggested by experience, and others are now in operation under the orders of the Department: it would be better to give them legislative sanction.

In connection with this plan, and as an essential part of it, paper B is presented. An examination of our statutes will exhibit great confusion and important omissions on the subject of pay. Several principles have governed in framing this part of the plan.

1. To regard the decision of Congress in the other branch of the public service as the safest and best guide; under the impression that what Congress had sanctioned for the army would meet approbation when applied to the navy, the situation and services of the latter being such as to justify equality with the former. The pay here proposed will be found in no instance to exceed, and in almost all to fall short of that given to the relative grade of army officers.

2. To increase the pay after ten years' faithful services in the same rank. In the army there is an increase of rank by brevet, which uniformly induces a proportionate increase of pay.

3. To add to the pay while at sea, both as an inducement to active service, and to meet the expenses which a separation from their families always creates with officers of the navy; an evil to which those of the army are less subjected. This increase is only in the number of rations.

4. To take away all emoluments and allowances, as far as practicable, and to give in all cases, both on land and at sea, definite and ascertained compensation for the performance of duty.

Under the direction in the other resolution of the same date, the Secretary of the Navy has the honor to present paper C, containing a body of regulations relating to offences, trials and punishments. A comparison of them with the law now in force, "for the better government of the navy," will exhibit the changes proposed in that law. For the views of the Department on this subject, reference is made to the paper C, and to the report dated January 1, 1825.

The Secretary of the Navy would think it his duty, under these resolutions, to present a plan for establishing a naval school, if a bill for that object had not been under consideration, and passed the Senate at the last session, and, if he is correctly informed, is again under consideration. It is respectfully suggested that no plan for a naval establishment, and no regulations, can be perfect, unless a naval school forms a part of them.

Some legal provisions would be useful, in relation to the disbursements made for the navy, but that subject does not seem to be embraced within the scope of these resolutions.

A new body of rules and regulations has been recently prepared under the law of February 7, 1815, but has not been approved and promulgated, under the hope that important changes in the naval establishment would be made during the present session, which would render alterations in them expedient.

If it should be the will of Congress to sanction the proposed plans and regulations, proper rules should be prescribed by the President, and a law passed regulating the disbursement of the public moneys by the official agents; it is most confidently believed that efficiency and economy would be greatly promoted.

Respectfully submitted.

SAM'L L. SOUTHARD.

The PRESIDENT of the Senate of the United States.

A.

Naval establishment.

1. To consist of one vice admiral, two rear admirals, six commodores, thirty-five captains, thirty-five masters and commandants, three hundred lieutenants, sixty surgeons, seventy surgeons' mates, fifty pursers, twelve chaplains, thirty sailingmasters, five hundred masters' mates and midshipmen, thirty-five boatswains, thirty-five gunners, thirty-five carpenters, thirty-five sailmakers, seven navy storekeepers.

2. The relative rank of officers of the navy with those of the army to be: Vice admiral, with major general; rear admiral, with brigadier general; commodore in actual command, with brigadier general; captains of five years, with colonels; under five years, with lieutenant colonels; masters commandant, with majors; lieutenants, with captains; passed midshipmen, with lieutenants; provided that no right to command each other shall arise from the relative rank so arranged between the officers of the army and navy.

3. The President to fix, by regulation, the number and pay of the petty officers, seamen, ordinary seamen, and others, attached to the several vessels in commission, and to navy yards and stations, according as the necessity of the public service may require.

4. The ships of the navy to be classed as follows:
 First rate. Three deckers, mounting one hundred guns and upwards.
 Second rate, first class. Two deckers, mounting seventy-four and under one hundred guns.
 Second rate, second class. Two deckers, mounting seventy-four and under ninety guns.
 Third rate, first class. Frigates, mounting fifty-four and under sixty-four guns.
 Third rate, second class. Frigates, mounting forty and under fifty-four guns.
 Fourth rate, first class. Sloops, mounting twenty-four guns and upwards.
 Fourth rate, second class. Sloops, mounting eighteen guns and under twenty-four.
 Fifth rate. Brigs and schooners.
5. Sailingmasters, boatswains, gunners, carpenters, and sailmakers to be ranked in three grades or classes; the first for service in vessels of the first and second rate; the second in vessels of the third rate and the third in vessels of the fourth and fifth rate.
6. The President is authorized, by and with the advice and consent of the Senate, when the necessity of the service requires it, to increase the number of each grade of officers, not to exceed one-fifth of the respective numbers mentioned in the first section.
7. Masters' mates, midshipmen, boatswains, gunners, carpenters, and sailmakers, shall be appointed by warrant from the President of the United States.
8. Masters and commandants not to be promoted until they have served at sea, as such, for two years.
9. Lieutenants, before promotion, to perform active duty at sea for three years, and submit to an examination of their qualifications and fitness to perform the duties of master commandants, under regulations to be prescribed by direction of the Secretary of the Navy.
10. No person to be appointed an assistant surgeon who has not been examined by a board of navy surgeons, constituted by the Secretary of the Navy for that purpose.
11. No person to be promoted to the office of surgeon who shall not have performed service for two years, at least, on board a public vessel of the United States, and been examined by a board of navy surgeons, constituted by the Secretary of the Navy for that purpose.
12. The President to designate and appoint, when necessary, surgeons of the fleets or squadrons, and purveyors of medicine, and prescribe their compensation and duties.
13. Midshipmen, of the age of 20 years, who have been five years in the service, and have served three years at sea, two and a half of which in an armed vessel of the United States, to be entitled to an examination, at such time as the President shall designate and the convenience of the service will permit, by a board of officers, of a rank not less than captain, nor in number less than three, to be appointed for that purpose.
14. Midshipmen who have passed the examination and been found qualified for promotion, to receive warrants as such, and may be appointed to perform the duties of sailingmaster of the second and third class.
15. Vessels of the first, second and third rate to be commanded by officers of a grade not less than captains. Vessels of the fourth rate by masters and commandants; of the fifth rate by lieutenants, who shall, while in actual command, be styled lieutenants commanding.
16. The President to fix the component parts and amount for the ration, not to exceed, in price, twenty-five cents.
17. The navy yards authorized by law, to be Portsmouth, N. H., Charlestown, Mass., New York, Philadelphia, Washington, Gosport, Va., Pensacola; and the President to designate such navy stations as the circumstances may require.
18. The law of 27th March, 1804, to be repealed, and the Navy yard at Washington placed under the same regulations as the other yards.
19. The President to employ such and so many of the vessels as he may believe the public interest requires, provided that more officers, seamen, &c., be not employed, nor a greater sum expended, than is authorized by law.
20. A teacher shall be appointed to each vessel of the first, second, third, and fourth rate, whose duty it shall be to give instructions, under the direction of the commander of the vessel, to midshipmen and others.
21. The President of the United States to cause to be prepared, regulations for the duties, powers, and conduct of the several officers of the navy, which, when approved by him, shall be laid before Congress at their next session.

B.

Plan of law for pay of the navy.

1. The following to be the pay of the several officers attached to the navy:
 Vice admiral, \$200 per month, and twenty rations per day.
 Rear admiral, \$170 per month, and sixteen rations per day.
 Commodore, \$140 per month, and twelve rations per day.
 Captain, \$100 per month, and eight rations per day.
 Captain, of ten years, \$110 per month, and nine rations per day.
 Captain, of fifteen years, \$120 per month, and ten rations per day.
 Master commandant, \$60 per month, and five rations per day.
 Master commandant, of ten years, \$70 per month, and six rations per day.
 Master commandant, of fifteen years, \$80 per month, and seven rations per day.
 Lieutenants, \$40 per month, and three rations per day.
 Lieutenants, of ten years, \$45 per month, and four rations per day.
 Lieutenants, of fifteen years, \$50 per month, and five rations per day.
 Surgeons, \$60 per month, and two rations per day.
 Surgeons, of ten years, \$80 per month, and three rations per day.

Surgeons, of fifteen years, \$90 per month, and five rations per day.
 Assistant surgeons, \$40 per month, and two rations per day.
 Assistant surgeons, of ten years, \$45 per month, and three rations per day.
 Assistant surgeons, of fifteen years, \$50 per month, and four rations per day.
 Pursers, \$40 per month, and two rations per day.
 Chaplains, \$50 per month, and three rations per day.
 Midshipmen, \$25 per month, and one ration per day.
 Passed midshipmen, \$30 per month, and two rations per day.
 Sailingmaster, third grade, \$40 per month, and two rations per day.
 Sailingmaster, second grade, \$45 per month, and three rations per day.
 Sailingmaster, first grade, \$50 per month, and four rations per day.
 Boatswain, third grade, \$20 per month, and two rations per day.
 Boatswain, second grade, \$30 per month, and three rations per day.
 Boatswain, first grade, \$40 per month, and four rations per day.
 Gunners, third grade, \$20 per month, and two rations per day.
 Gunners, second grade, \$30 per month, and three rations per day.
 Gunners, first grade, \$40 per month, and four rations per day.
 Carpenters, third grade, \$20 per month, and two rations per day.
 Carpenters, second grade, \$30 per month, and three rations per day.
 Carpenters, first grade, \$40 per month, and four rations per day.
 Sailmakers, third grade, \$20 per month, and two rations per day.
 Sailmakers, second grade, \$25 per month, and three rations per day.
 Sailmakers, first grade, \$30 per month, and three rations per day.
 Masters' mates, \$25 per month, and two rations per day.

Provided that no officer, who is required to pass an examination before he is promoted, shall in any case receive the increased pay, unless he shall at the proper time present himself for examination, and be declared fit for promotion.

2. Admirals, commodores, captains, master commandants, lieutenants commanding, first lieutenants, surgeons, sailingmasters, boatswains, gunners, carpenters, and sailmakers, engaged in active service at sea, receive double rations. Other officers on sea service, an addition of one-half to the amount of rations to which they are respectively entitled.

3. Captains and officers of higher grade, traveling under orders on public duty, to receive twenty cents per mile; other commissioned officers fifteen cents per mile; warrant officers twelve cents per mile.

4. Officers attached to navy yards to receive, in lieu of all compensation, except for pay, rations and quarters, as follows:

	Per day.
Captains	\$1.50
Masters commandant.....	1.00
Lieutenants and surgeons.....	75
Other commissioned officers.....	62½
Warrant officers.....	50

5. Commanding officers of stations, the same pay and emolument as those of similar rank attached to navy yards.

6. Pay of officers on furlough, who shall fail to report at the expiration of the furlough, shall cease.

7. Officers performing the duties of any grade higher than their own, to receive the pay and emoluments of the rank next above them.

8. Furlough pay to be one-half the amount of full pay, including rations.

9. The Secretary of the Navy authorized to place officers on furlough pay, when their services are not required.

10. Whenever petty officers, seamen, or ordinary seamen are sent from a ship in commission, on the requisition of a commanding officer of a yard or station, to do duty in such yard or station, other than the vessel to which they belong, each petty officer shall be entitled to and shall receive eighteen cents, and each seaman and ordinary seaman twelve cents for each and every day in which he may be so employed.

11. The pay of deserters to be forfeited, and carried to the naval hospital fund; also fines imposed on all persons in the service.

12. The pay of officers at recruiting stations, and of receiving ships, to be the same as officers of their grade at navy yards, but no premiums for enlistment to be allowed.

13. Officers on special duty to have pay fixed by the Secretary of the Navy, not to exceed the highest rate of pay and emoluments of officers of the same grade when at sea.

14. The pay of storekeepers to be fixed by the President, having regard to their responsibilities and labors.

Acts at variance with this act to be repealed.

20TH CONGRESS.]

No. 347.

[1ST SESSION.]

QUALIFICATION AND ADMISSION OF CANDIDATES FOR APPOINTMENT OF SURGEONS AND ASSISTANT SURGEONS IN THE NAVY, AND INADEQUACY OF THEIR COMPENSATION.

COMMUNICATED TO THE SENATE JANUARY 25, 1828.

U. S. SHIP DELAWARE, off *Annapolis*, January 12, 1828.

Sir: I am deputed by a meeting of the surgeons and assistant surgeons of the navy, recently held in Philadelphia, to present you the accompanying memorial, which I respectfully request may be submitted for the consideration of the honorable body in which you preside.

I am instructed to solicit your attention to a subject, which we hope its importance demands; and while, with deep concern for its success, we appeal to the good sense and sound judgment of the national legislature, we confidently rely on its justice for that relief which we humbly conceive is founded on the most correct views of the service, and in the best policy of the country.

With great respect, I have the honor to be, your obedient servant,

JOHN A. KEARNEY, *Surgeon U. S. Navy.*

To his excellency JOHN C. CALHOUN, *Vice-President of the United States and President of the Senate.*

MEMORIAL.

To the honorable the Senate and House of Representatives of the United States of America, in Congress assembled:

The undersigned, surgeons of the navy of the United States, most respectfully, but earnestly, solicit the attention of your honorable bodies to a frank exposition of the peculiar hardships under which, in common with all of similar grade in the service, they are placed by the existing laws and regulations respecting the navy.

We shall not be accused of attaching undue importance to the medical profession, when we assert that, in its capacity for good or evil, and in the fearfulness of its responsibility, it is not surpassed by any other human agency. Under the administration of divine providence, the health and strength of human beings, even the issues of life and death, are in the hands of such as are, or profess to be, skilled in the medical science. In proportion to the dignity and responsibility of the profession is, or ought to be, in all cases, the degree of preparation with which its members enter upon the discharge of their duties. An uneducated physician is an evil and a nuisance, second only to a pestilence in destructiveness; and in most civilized countries a due regard to the welfare of the people has established periods of probation and discipline for the medical practitioner, the necessity of which all history has confirmed. Years of preparatory education are necessary before the candidate for medical knowledge is fit to commence the peculiar studies of his profession. Years of expensive instruction and laborious diligence are required before he can be prepared to enter upon its practice; and even then years of unremitting study and clinical experience are commonly passed before the educated and admitted physician is generally intrusted with the lives and limbs of his fellow-citizens. Such are the restraints most rightfully, we think, imposed by law and custom, upon the initial operations of medical men, in the *civil* pursuits of their profession. Nor is there anything, we conceive, in the character or situation, physical or moral, of the persons who compose the *naval* force of the United States, to render expedient a different system of medical education, or in any other respect to make it proper that the standard of medical character should be lowered, as regards them. The lives and comforts of our naval officers, and of those intrepid seamen who have carried our banner in triumph over the most distant seas, are, we respectfully submit, as important to them, and perhaps as valuable to their country, as those of any other class of our fellow-citizens. They are subject to like diseases with the rest of mankind, and to casualties and wounds from which persons of other pursuits are mostly exempt. They are necessarily carried, by duty, into remote and unhealthy climates, and become liable to disorders arising from exposure to storms and inclement atmospheres. Added, therefore, to the general training and knowledge of his professional brethren in civil life, the naval surgeon must have studied the constitution and character of seamen, and must be prepared for the various accidents, and different maladies of foreign origin, to which they are constantly exposed. With all this, the naval surgeon must so furnish and provide himself as to maintain a suitable standing with his brother officers, and due estimation with seamen; and on foreign voyages, and in expensive countries, sustain, in his intercourse with foreigners, the character of his profession and the dignity of our republic.

To compensate him for an education so elaborate, for preparations and materials so expensive, for services so severe and laborious, for the exposure of his own health and life, under every variety of danger and suffering, it might be supposed by our fellow-citizens, to whom the laws respecting the navy are not familiar, that a competent annual allowance of pay and rations was made by the government for the present support of a naval surgeon and his family, and to provide a pittance for that season of life when the infirmities of age, or perhaps a constitution prematurely broken down in the public service, forbid his continuance in his country's employment. We approach your honorable bodies in the belief that this impression has prevailed, even in the minds of Congress, and with the conviction that it is only necessary to exhibit a brief view of the operation of the existing laws, to convince the legislature and our fellow-citizens of the striking disproportion that exists between our services and our compensation, and to satisfy them that no class of men under the Government of the United States is so inadequately remunerated.

The pay allowed to surgeons in the navy was established by an act of Congress passed in the year 1799, at a period when the navy was in its cradle, and legislation respecting it was little more than experiment, through want of the necessary knowledge and experience. The law simply enacts that the pay

and subsistence of a *surgeon* in the navy shall be *fifty* dollars per month, and two rations a day; and that a *surgeon's mate* shall receive *thirty* dollars per month, and the same daily amount of rations: a provision which, we think, must at the first glance strike your honorable bodies as deficient, both in respect to the amount of pay, and in the absence of suitable regulations for the apportionment of pay to length of services, and for the due examination of surgical candidates. In the first place, we respectfully submit that the amount of pay provided by this act is utterly insufficient for the necessary wants of a naval surgeon. Whatever may be thought of an allowance of 360 dollars per annum, and rations, for a surgeon's mate—who being, in most cases, unincumbered with a family, may, perhaps, by denying himself all but mere necessaries, be able to subsist upon that sum—yet, certainly, for the surgeon of maturer years, upon whom beings unable to maintain themselves are often dependent, the money allowance of six hundred dollars a year must be acknowledged to be entirely inadequate. Were there no force in the suggestions we have offered respecting the length of necessary apprenticeship to the medical art; if the education of a physician were not expensive, nor the materials of his business costly; yet in reference to the unavoidable personal expenses of the officer, and those of his children or others dependent upon him, living in the most economical manner, in the cheapest parts of our sea coast, we are confident that we need not appeal to the sympathies, but to the sense of justice of your honorable bodies, for evidence of the necessity of a more sufficient remuneration. We are far from intending to complain of the Congress of 1799, by which this act was passed. They doubtless supposed that future legislators would make such amendments to their provisions as experience should prove to be requisite; but while, in some respects, other branches of the service have been advanced with the increasing dignity and prosperity of the republic, the office of naval surgeon remains, in all respects, as it was instituted thirty years ago.

In the next place, we respectfully submit that the existing law is defective in not providing some increase of pay, graduated according to the length of service, and, consequently, the increased experience of the surgical officer. For him the usual incentives to an honorable and useful ambition are totally wanting. No prospect of higher grade or increased compensation animates him to more distinguished exertions. No inducement is held out to him to prolong the employment in the public service of his hard earned knowledge and experience. Before him lies only a life of perpetual struggle with an inadequate income, of abstinence from the necessary and honorable relations of society, or the spectacle of a family without sufficient means of support, and in more remote prospective, perhaps, of a helpless and dependent group of orphans. In every other branch of the service he perceives a regular gradation of rank and pay, tempting the honest ambition and rewarding the faithful services of the officer. The midshipman looks forward, with eagerness, to the period when he shall be promoted to the rank of lieutenant; the lieutenant, to that of master commandant; the master commandant, to that of captain; and the latter has, in most navies, many higher steps before him. Each is animated and invigorated by the prospect; and each, knowing that his success, in reaching the next elevation, depends upon his fidelity and exertions, finds in these circumstances sufficient stimulus and incitement, of which the naval surgeon is deprived. This disproportion will perhaps more strikingly appear, when it is considered that in no other rank in the navy is that expensive professional education, to which we have adverted, required as a preliminary qualification for admission.

We respectfully represent, in the third place, that the existing act is defective, inasmuch as it makes no provision for the due examination of candidates for the post of surgeon's mate, and subsequently for the office of surgeon. We believe that such examination, by a competent board, is required by the regulations of all other governments possessing a naval force; and we conceive that the advantages of the provision are so obvious as to render it unnecessary for us to trespass on the time of Congress by enumerating them.

If the situation of the surgical officers of our navy be compared with that of other nations, we respectfully submit to your honorable bodies that the contrast will be found to be humiliating to the feelings of the former, and derogatory to the national character. In the navy of Great Britain, with which we come most frequently in competition, two classes of medical officers exist, viz: *physicians* and *surgeons*; and in each of them a graduated scale is established, by which compensation is proportioned to services. The British *surgeon* who has served less than *six* years, receives \$2.22 per diem, or upwards of \$800 per annum: when he has served *more than six* years, he receives \$2.44 per diem, or nearly \$900 per annum. After *ten* years' service, he receives \$3.11 per diem, or \$1,135 per annum; and after *twenty* years' service, \$4.33 per diem, or upwards of \$1,580 per annum. The British *physician* of less than *three* years' service receives \$1,700 per annum; of *more than three* and *less than ten* years' service, upwards of \$2,500 per annum; and when *longer than ten* years in the service, he receives more than \$3,566 per annum, or nearly *six* times as much as the oldest medical officer in our service can possibly receive, under the existing laws. In each class, too, half pay is liberally allowed by the British government, when the officer retires from active service, after having served a certain period, or after having contracted ill health in the service. In the *French* navy, the pay and allowances of the medical officers are upon a scale of equal liberality with those of the British, and commensurate with the known learning and ability of the profession in that country. Our neighbor republic of Mexico allows its full surgeons \$135 per month, or \$1,620 a year; *more than thrice* as much as are allowed by the laws of the United States to the same rank. The assistant surgeons are paid, we understand, in full proportion. It is unnecessary for us, we trust, to remark upon the inducements that are thus held out to the medical officers of the United States navy to exchange her service for that of our sister republic, where they carry their valuable experience, and receive a more sufficient support for themselves and their families.

We are not desirous that the Congress of the United States should adopt the regulations of the foreign governments we have mentioned, in their full extent; but we beg leave respectfully to state that, particularly in the case of the British government, the enlarged allowance, above stated, was the result of the lessons of experience, inculcated by years of mismanagement and suffering. About a century ago, the medical officers of the British navy were paid in somewhat of the same proportion with the surgeons of our navy, under the present laws. The consequence was, that the appointment of surgeon was accepted only by very young men, as a school of experiment; and was abandoned whenever an opportunity occurred of entering into private practice. It thus happened that officers and seamen were alike made the subjects, and often the victims, of ignorance and presumption; and many valuable lives were lost to the country, which are now preserved by more skillful treatment. The present European system, therefore, was the offspring of necessity and experience, which have fortunately secured for the medical department of their navies the services of some of the most distinguished surgeons and physicians, from

whose labors not only the subjects of their professional jurisdiction, but the whole community, have derived the most salutary lessons.

The same causes, we most respectfully suggest, will produce similar results upon the medical service in this country. The constitution of human nature is the same on each side of the Atlantic; and if there be any difference in the situation of the American and European medical officer, it will be found that the inducements to remain in the service have been greater in the latter case; because the overstocked professions of Europe afford little opportunity for success in civil life. Unless some change be effected by the wisdom of Congress in the present law, so as to confer a more adequate allowance on naval surgeons, increasing in however small a ratio with increasing years and services, we fear that the navy of the United States is destined to undergo the same lamentable servitude to ignorance and inexperience as history proves to have been endured by other and older countries. The American naval surgeon, who, after years of faithful service, finds a family growing up around him, must either abandon his official station, or attempt to connect it with private practice, which, in most cases, is not feasible without neglect of naval duty. He must, then, however reluctantly, decide to withdraw from the service, and resort to the more lucrative and inviting prospects of civil practice. Such, in all human probability, will be the inevitable but undesirable destiny of the senior medical officers of the navy; and thus will skill and experience be periodically lost to the navy, and a perpetual stream of youth and ignorance will be flowing in upon the station, to whose guardian care will be committed the heavy and responsible trust of the lives and limbs of the gallant defenders of their country.

We are aware that it may be urged, as a reply to our suggestion, that many experienced and skillful men are now enrolled among the navy surgeons; and it may be asked why they should continue in the service, if the emoluments of their office are inadequate for their proper support. To this we respectfully answer, that it is true many surgeons are yet to be found in the service after years of labor and devotion, some of whom have passed through the battles and sufferings of the last war, and begin now to feel the admonitions of increasing years, and the burden of increasing expenses, without that correspondent augmentation of means and prospects which, in other services and professions, is sure to accompany an honest and capable discharge of duty. They have clung to their country's service, however, and may continue to adhere to it under all discouragements; not wisely, perhaps, but ardently; not from reason, it may be, but from a feeling which it is trusted will find rather approbation than censure—a feeling of attachment to their profession, and of reverential devotion to that star-spangled banner with whose glories they feel themselves, however remotely, connected; and to be divorced from which, would be to break up sympathies and attachments, next only in intenseness to those which unite us to our domestic relations. That some of us, therefore, have submitted to privations and restraints, incompatible with the universal desire of competent support, ought not, we conceive, to be urged as invalidating the force of our representations, founded as they are upon reasonings and principles, the general strength of which, we believe, cannot be shaken. If men of capacity and education should still continue to attach themselves to the profession, under existing disadvantages, they will, we fear, be rare and insulated exceptions, upon whose slight and uncertain foundation, we most respectfully submit, no wise and patriotic legislature ought to build up a system intended for permanent usefulness. It is true that vacancies may not remain long unsupplied, and that persons may always be found ready to fill the office of navy surgeon, as of any other appointment. But we again urge that, without skill and experience, especially of that peculiar experience which can be derived only from long practical observation of seamen, no one ought to be intrusted with the medical charge of a vessel. No saving to the public treasury, such as the existing regulations effect, can compensate, we conceive, for the sacrifice of the lives of our officers and seamen, and perhaps the consequent loss of our vessels, which would result from medical ignorance. An enlarged economy, which looks to the future as well as to the present, and embraces consequences and results in its grasp, will always provide such competent maintenance for the office of naval surgeon as will attract to, and continue in it, the highest order of talent and ability.

The subscribers, therefore, with unfeigned deference to the wisdom of Congress, but with an anxiety created by the conviction that they are petitioning, not for themselves alone, but for the interests of the whole navy of the republic, do respectfully request that your honorable bodies will make such alterations in the present acts, in relation to the medical department of the navy, as will provide for a due and sufficient examination of all candidates for a medical or surgical station, and for such graduated augmentation of pay as may furnish a decent subsistence for those surgeons who have passed the prime of their lives in the service of their country.

No. 348.

[1ST SESSION.

COST OF FITTING A FRIGATE FOR SEA, AND ANNUAL EXPENSE OF SUCH VESSEL.

COMMUNICATED TO THE SENATE JANUARY 22, 1828.

NAVY DEPARTMENT, *January 22, 1828.*

SIR: Your letter of the 10th inst., requesting information of the present state of the United States frigate Hudson, the cost of fitting her for sea, and the annual expense of keeping her in service, was inadvertently addressed to the Secretary of the Treasury, and by him referred to this Department.

In reply thereto, I have the honor to submit copy of a letter from the Commissioners of the Navy, with the required estimates, and to observe that there will be no difficulty in employing this vessel for convoy, if Congress make an appropriation sufficient to fit her for sea and to keep her in commission for the year.

I am, very respectfully, &c.,

SAMPL L. SOUTHARD.

Hon. SAMUEL SMITH, *Chairman of the Committee of Finance, Senate.*

NAVY COMMISSIONERS' OFFICE, *January 21, 1858.*

SIR: The Commissioners of the Navy, in reply to your letter of the 19th inst., beg leave to state that the annual expense of such a vessel as the Hudson would be \$125,199.50, exclusive of marines.

The expense of preparing that vessel for service will be found in the subjoined estimate, A, to be \$51,770.71. The letter referred to in yours is herewith returned.

I have the honor to be, with great respect, sir, your obedient servant,
(Signed)

JOHN ROGERS.

Hon. SAM'L L. SOUTHARD, *Secretary of the Navy.*

A.

Estimate of the cost of labor and materials, and the time required, to fit the U. S. ship Liberator, (or the Hudson,) for a three years' cruise, and for her equipment and outfits.

For labor and materials:

Of carpenters	\$3,000 00
Of caulkers	1,100 00
Of blacksmiths	800 00
Of joiners	1,915 00
Of mast makers	1,000 00
Of painters	900 00
Of blockmakers	500 00
Of boat builders.....	500 00
Of plumbers	100 00
Of brass work and magazine copper.....	250 00
Of gun carriages	700 00
Of repairing the air ports.....	160 00
Of fitting to heave out—carpenters, caulkers, blacksmiths, and pump makers.....	425 00
Of recaulking bottom	1,515 00
Of taking off and recoppering.....	1,250 00
Of sheet copper	470 00
Of composition nails	442 00
	\$15,027 00

Time required.....45 days.

MASTER'S DEPARTMENT.

For supplying of deficiencies in cables, anchors, hawsers, &c., having no relation to ballast, tanks or water casks, or other articles in cooper's department..... \$15,234 00

BOATSWAIN'S DEPARTMENT.

120 fathoms 1½ inch rope, 1 qr. 15 lbs., at \$10 per cwt.....	\$3 84
498 fathoms 2 inch rope, 4 cwt., at \$10 per cwt.....	40 00
937 fathoms 2¼ inch rope, 12 cwt., at \$10 per cwt.....	120 00
447 fathoms 2¾ inch rope, 7 cwt. 4 lbs., at \$10 per cwt.....	70 36
710 fathoms 3 inch rope, 13 cwt. 17 lbs., at \$10 per cwt.....	131 52
208 fathoms 3½ inch rope, 4 cwt. 2 qrs. 5 lbs., at \$10 per cwt.....	45 45
799 fathoms 3¾ inch rope, 20 cwt. 26 lbs., at \$10 per cwt.....	202 32
719 fathoms 3¾ inch rope, 20 cwt. 3 qrs. 10 lbs., at \$10 per cwt.....	208 40
606 fathoms 4 inch rope, 20 cwt. 10 lbs., at \$10 per cwt.....	200 89

420 fathoms 4½ inch rope, 15 cwt. 1 qr. 13 lbs., at \$10 per cwt.....	\$153 66

NAVY YARD, *New York*, December 4, 1827.

J. CHAUNCEY.

20TH CONGRESS.]

No. 349.

[1ST SESSION.]

ON CLAIM OF THE WIDOW OF A SEAMAN, LOST ON BOARD THE SHIP INSURGENT, FOR FURTHER RELIEF.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 25, 1828.

Mr. HOFFMAN, from the Committee on Naval Affairs, to whom was referred the petition of Eleanor Wells, reported:

That by the last pay roll and the shipping articles of the frigate *Insurgent*, received from Captain P. Fletcher, her commandant, with his letter, dated Hampton Roads, 7th August, 1800, it appears that Luke Wells, or, as he wrote his name, Wills, shipped as a landsman, at \$10 per month, on the 18th day of July, 1800, for twelve months, to commence from the last time of weighing anchor or departure from Cape Henry. This vessel left the waters of the United States, under instructions dated at the Navy Department, July 14, 1800, to cruise on and near the coast of the United States, to defend our commerce, and especially against the aggressions of the "Guadalupe privateers." The vessel and crew were lost. The Congress of the United States, April 29, 1802, (Laws of the U. S., vol. 3, p. 492,) granted to the widows, if any, and if not, then to the child or children of any officer, seaman and marine in the service of the United States, and took on board that vessel, a sum equal to four months' pay of the person lost. It appears that the petitioner, as the widow of Luke Wells, availed herself of the provisions of this act. It does not appear that her son ever was in the service of the United States; nor that her husband, at the time he left the United States, in any degree contributed to her support, or provided for it; nor is it seen how the proof of these facts could vary the present case. The petitioner is poor, old and infirm.

Your committee have examined the facts in this case, and the laws in force at the time of the loss of the *Insurgent*. At that time there was no law making any provision in any event for the widow of a seaman or marine. In 1802, Congress took the subject into consideration, and made provision for this case—and for the first time extended the bounty of the country to the widow of the seaman and marine.

In this case the committee does not deem it expedient to make any further provision for the widow. Her husband was not killed in battle, or by the enemies of the country—but was lost by the perils of the sea; and against losses from these perils, the committee are of opinion the United States ought not to indemnify the widows and children of seamen or marines; and, therefore, they recommend the following resolution:

Resolved, That the prayer of the petitioner ought not to be granted.

20TH CONGRESS.]

No. 350.

[1ST SESSION.]

ON THE CONSTRUCTION OF DRY DOCKS AT BROOKLYN, NEW YORK, AND PORTSMOUTH, NEW HAMPSHIRE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 25, 1828.

Mr. HOFFMAN, from the Committee on Naval Affairs, who were instructed by a resolution of the House of Representatives, of December 12, 1827, to inquire into the expediency of causing the construction of dry docks to be commenced at the Navy yards at Brooklyn, New York, and Portsmouth, New Hampshire, reported:

That dry docks are, in the opinion of your committee, the best, safest, most economical, as well as a most necessary means for the repair of the public armed vessels. On this part of the subject, the committee will not weaken, by any effort to sustain, the able, conclusive and satisfactory arguments of the Navy Commissioners, in their report to the Secretary of the Navy, of February 17, 1826; and respectfully refer the House to that report, as proving conclusively the strong necessity for and great advantages of dry docks in the repair of our public ships, as well as the great usefulness of such docks as an appendage to building ways.

In the report made by Mr. L. Baldwin to the Secretary of the Navy, December 28, 1826, after due examination and a detailed estimate, the expense of constructing a dry dock is stated to be, at—

Charlestown.....	\$356,364 00
Gosport	398,800 00
Brooklyn	380,116 86
Portsmouth.....	349,571 71

These estimates are believed to be reasonable, and show that the docks at the two last-named yards would cost \$25,975.47 less than at the two first; and that the docks at the last would cost \$49,228.29 less than the most expensive, and \$7,282.33 less than the least expensive of the others. In the report of the Secretary of the Navy to the President of the United States, of December 1, 1827, it is stated that, under the fourth section of the act of March 3, 1827, for the gradual improvement of the navy of the United States, the sites for the two dry docks authorized by that act had been located at Charlestown and Gosport. This location was made in accordance with the intimation contained in the report of the Secretary of the Navy to the President of the United States, of January 10, 1827. The legislative and Executive Government of the United States having thus concurred to the construction of the dry docks

at the two sites above mentioned, it is respectfully submitted that there cannot be found, to the mere comparative *expense* of the two others, any serious objection to their construction.

The committee would respectfully remark, that the Navy Department has been uniform in the expression of an opinion of the necessity and advantages of dry docks; and the legislation above referred to proves conclusively that, in the judgment of the whole government, dry docks were necessary, and would be beneficial over any other mode of repairing our armed vessels. The only remaining duty of your committee seems to be, to ascertain whether those already authorized will, in the growing necessities of the navy, *and in the event of war*, answer all the useful purposes so justly expected from the employment of such docks; and if there is reason to think they will not, then, whether those contemplated by the resolution of the House will essentially contribute to that end.

All measures respecting our navy should be designed to contribute to its efficiency in the defence of the republic and its commerce. This rule most emphatically applies to the location and use of dry docks, as lasting appendages to our naval establishments. In war, a considerable part of our naval force must be employed on our eastern coast, and especially should our enemies possess the country north and east of the United States. The vessels guarding that coast may, by the necessities of weather or the accidents of war, be obliged to refit or repair. Their convenience as well as safety will induce them to seek the nearest port, as the one they may most easily reach and from which they may most speedily return to guard the coast, defend our commerce and annoy the enemy. At such a season, Portsmouth, *always accessible, susceptible of being safely and securely defended, and always open to the sea, and almost impossible to be blockaded*, and having at it an established navy yard, furnished with all the materials and workmen for the most speedy repairs, and hardy seamen, collected by inactive commerce, from which to recruit the crews of armed vessels, will be at once the nearest, safest and most proper resort. But the public vessels, driven into that harbor by stress of weather, or induced to take shelter there for repairs in the accidents of war, or lying there in ordinary, or building there, cannot, if in any considerable degree out of repair, with any safety attempt, while hostile fleets are hovering on that coast, to sail for Boston for repairs. If, then, in time of peace, a dry dock at Charleston may suffice for our navy on that coast, it appears to be wholly inadequate to the wants of the navy in time of war; while a dry dock at Portsmouth, convenient and advantageous in peace, will be indispensable in time of war.

In a considerable degree, the same observations apply to New York and the Navy yard at Brooklyn. A vast commerce is collected in that port. Out of this grows at once the public revenue and the commercial accommodation of almost every part of the Union. To disturb or destroy this commerce, is at once greatly to injure and cripple the government, and to distress our citizens, not only in and near that city, but also in every part of the United States connected with it by the course of trade. The immense value of property afloat in that harbor, the revenue collected there, and the intimate connection of its trade with the general prosperity and accommodation of the country, will always strongly invite the cupidity and assaults of the public enemies. To collect a large part of our naval force at that place can scarcely add any inducement to attack; but the vessels of war prepared for sea, and the crews of those undergoing repair, and the marines attached to them, would constitute a most valuable and efficient portion of the requisite means for the defence of the place, and, in its defence, that of our revenue and commerce. Hence it will at all times, in war, be desirable to draw into that port a very large proportion of the public armed vessels. There, too, it will be found most easy to enlist and recruit the crews of our ships from the great collection of our seamen. The best materials and workmen for the building, repairing and refitting of ships will abound in that harbor; and, on these accounts, it may be considered as among the best places for our ships in ordinary, and as a rendezvous for those in commission requiring repairs, additions to their crews, or supplies. In peace, then, a dry dock at Brooklyn promises every advantage which can be anticipated from one at any place. In peace, too, it would be difficult and expensive to cause the public ships, built or in ordinary, or in commission there, to sail from New York either to Boston or Gosport for repair. In war, it would be impossible, and the attempt would expose to capture all those which needed any considerable repair.

Without giving any opinion as to any further increase than that contemplated by the resolution, the committee are of opinion that the two dry docks now authorized cannot, for the reasons above assigned, even in peace, answer the reasonable wants of the navy, and that in war they will be very inadequate to its proper accommodation; and they believe that dry docks at Portsmouth and Brooklyn will essentially contribute to the economy, safety, and efficiency of the navy.

From the construction and use of these docks in every maritime country of western Europe, the committee cannot consider, as a new undertaking, the construction of them in the United States. Nothing more, during the year, can be done towards any which may be now authorized than to procure the requisite materials. From the progress made, and making, in the construction of those already authorized, it is submitted that the Department and its agents will hereafter, in the construction of such as may be now authorized, proceed in a great degree with the benefits of experience. And by authorizing at this time the construction of these two additional docks, it is not reasonable to suppose that they can be employed in all or for the use of the navy earlier than 1832. In the delays and slow progress unavoidably incident to the construction of these docks, in the best and most durable manner, the committee find a strong inducement to recommend their early commencement. And, inasmuch as the money appropriated by the act for the gradual improvement of the navy, approved March 3, 1827, may, for the year, in the opinion of the committee, be well employed for the purposes therein specified, they recommend an additional appropriation for the commencement of the dry docks in question, and especially as no more than eighty thousand dollars can be well employed in procuring materials for each of these docks this year.

The committee, therefore, report a bill accordingly.

NAVY DEPARTMENT, January 7, 1828.

SIR: I have the honor to state, in answer to your letter of the 2d inst., on the subject of dry docks, that I have no information to communicate in addition to the report of 10th January, 1827.*

* For this report, see antecedent No. 325. For report of Commodore Wm. Bainbridge, dated 17th of February, 1826, with this letter, see No. 307.

If appropriations should be made for building dry docks at Portsmouth and New York, nothing more could be done during the present year than to select the site, and purchase a portion of the materials. Eighty thousand dollars for each dock authorized would be sufficient for this year. Not less than three nor more than four years will be required to complete the n after the work is commenced. Considerable benefits will no doubt be derived from the experience gained in the construction of those already authorized before the others are commenced, by which imperfections may be avoided, and the greatest economy insured.

Should two more docks be directed to be built, the Department will endeavor so to arrange the time of erection and expenditure of the appropriation as to insure the best information, and its most beneficial application.

I am, very respectfully, &c.,

SAMPL L. SOUTHARD.

Hon. MICHAEL HOFFMAN, *Chairman of the Naval Committee, House of Representatives.*

[1ST SESSION.]

ACCOUNT OF DESTRUCTION OF THE TURKISH FLEET BY THE ENGLISH, FRENCH AND RUSSIAN FLEET AT NAVARINO, AND OF PIRACY BY THE GREEKS IN THE MEDITERRANEAN.

COMMUNICATED TO THE SENATE FEBRUARY 4, 1828.

NAVY DEPARTMENT, *February 4, 1828.*

SIR: I had the honor to inform you, in my letter of the 8th January, in reply to yours of the second, that the Department possessed no official information of any depredations upon our commerce.

I now enclose a copy of a letter from Captain D. T. Patterson, commanding the United States frigate Constitution, giving an account of the action at Navarino, and the measures adopted by the allied forces for the suppression of piracy.

I am, very respectfully, &c.,

SAMUEL L. SOUTHARD.

Hon. SAMUEL SMITH, *Chairman of the Committee of Finance.*

Copy of a letter from Captain Daniel T. Patterson to the Secretary of the Navy, dated—

UNITED STATES SHIP CONSTITUTION, *Smyrna, November 12, 1827.*

SIR: I have the honor to inform you that, on the 21st ultimo, an action took place between the allied squadrons of England, France and Russia, and the Ottoman fleets, in the port of Navarino, which resulted in the entire defeat and destruction of the latter.

Enclosed is a plan of the position of the two fleets, obtained from the English.

The intelligence reached this place on the night of the 27th, and produced great consternation and alarm among the Frank population of every description, lest a popular tumult might occur with the Turkish population, when no distinction of nation would be made, but an indiscriminate massacre take place; but I am happy to be able to inform you that the greatest tranquillity and most perfect good order have been preserved, through the active and energetic measures adopted by the public authorities. The Frank merchants generally embarked their goods, and many families moved to the shipping.

The courier from Constantinople, delayed by bad weather, did not arrive till the 5th instant; this unusual delay gave rise to various conjectures, and produced the most fearful anxiety, which was happily relieved by learning that the capital (the movements of which govern this city) remained tranquil upon the receipt of the result of the action, and was likely to continue so.

The English, French, Austrian and Dutch vessels-of-war, immediately upon the receipt of the intelligence of the action, were ranged in line along and close in with the marine, to facilitate the embarkation of their respective subjects. This ship retained her original station. As the United States had given no cause of offence, I wished to avoid even the appearance of supposing that either American citizens or property could possibly be endangered by the event that had occurred. The course pursued by me was immediately remarked by the government here, and gave much satisfaction.

This ship and boats were in a state of readiness to act promptly, as occasion might require, and signals, day and night, were and are established with our consul.

The Turkish fleet amounted in number to one hundred and fourteen vessels of all descriptions, including transport, eighty-four of which were vessels-of-war; that of the allies to twenty-eight, of which ten were of the line, twelve frigates, two sloops and four brigs.

The Russian squadron consisted of four of the line, four frigates and one sloop. All the English and French were engaged, and but few of the Russians, as I am informed by the two former.

Rear Admiral De Régný, upon my asking him if the commanders of the allied forces in the Archipelago intended adopting any measures for the suppression and punishment of piracy, recently becoming so alarmingly extended under the Greek flag, informed me that they had addressed a joint communication to the Greek government, that no Greek cruiser, or armed vessel of any description, would be permitted beyond ten miles from the main land, beginning at Cape Plocoveno, in Eubœa, and extending to Patras; any and every vessel found transgressing this order would be immediately destroyed, and the crew be brought to trial. No vessel or boat to be permitted to depart from any island in possession of the Greeks with a greater number of hands than may be actually necessary to navigate her, and no species of arms whatever permitted in them. Passengers must have passports from the Primate of the island, and who

will be held accountable for any violation of this order. Any boat or vessel found violating this order will be immediately burnt, and the crew brought to trial before a tribunal to be established at Syra, by the allies, and protected by a military force.

Should the allies carry this measure vigorously and rigorously into effect, which I very much doubt, they will soon suppress piracy, which has increased within the last two months beyond anything that could have been imagined.

Supposing that information from this would be particularly interesting at this moment, and an opportunity offering direct for the United States, will, I trust, excuse the irregularity of this communication, in not passing through the commanding officer, to whom I have made a similar report.

Dispatches are hourly expected by the English and French commanders at this place, from their respective ambassadors at Constantinople, with the determination of the Porte as to peace or war.

The following is written upon the envelope:

By courier just arrived from Constantinople, we learn that an embargo has been placed on vessels of these allied powers and their property, but perfect tranquillity exists. D. T. P.

No. 352.

[1ST SESSION.]

ON CLAIM TO FIVE YEARS' HALF PAY OF THE WIDOW OF A SEAMAN WHO WAS CAPTURED WHILE IN THE NAVAL SERVICE, AND DIED IN DARTMOOR PRISON, IN ENGLAND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 18, 1828.

Mr. RIPLEY, from the Committee on Naval Affairs, to whom the petition of Abigail Appleton was referred, reported:

That it appears, by the evidence before the committee, that the memorialist is the widow of Daniel Appleton, late of Ipswich, in the State of Massachusetts; that her late husband was a seaman on board the United States sloop Frolic, which sailed from Boston on the 18th of February, 1814, under Captain Bainbridge, and was taken prisoner, carried into Halifax, and thence to England; committed to the Dartmoor prison, where he was taken with the small-pox, of which he died on the 4th of January, 1815.

The petitioner represents that she made application to the Navy Department for five years' half pay, under the provisions of the acts of Congress of January 20, 1813, March 4, 1814, and April 16, 1818, which relate to the subject of pensions to the orphans and widows of persons slain in the public or private armed vessels of the United States. The Department has expressed an opinion that her claim does not come within the letter of those statutes. The committee do not hesitate to express an opinion that her claim is clearly within the spirit and purpose of the laws referred to, and therefore report a bill to give her five years' half pay, from the privateer pension fund.

TREASURY DEPARTMENT, *Fourth Auditor's Office, January 4, 1827.*

SIR: I have the honor to transmit to you, herewith, certificates containing the information requested in your letter of the 2d instant, addressed to Mr. Gilliss, of this office. The act of April 16, 1818, provides "if any officer, seaman, or marine shall have died, since January 18, 1812, in consequence of accident or casualty which occurred, while in the line of his duty, on board any public or private armed ship, leaving a widow, she shall be allowed the same monthly pay as if he died of wounds." The only doubt, in the mind of the Secretary of the Navy, was, whether death in a prison of the enemy was the same as death on board the ship.

I have the honor to be, respectfully, sir, your obedient servant,

T. WATKINS.

Hon. JOHN VARNUM, *House of Representatives.*

I certify that it appears, from documents on file in this office, that Daniel Appleton, a seaman on board the United States ship Frolic, born at Ipswich, Mass., was captured in the said ship, in April, 1814, carried to Dartmoor prison, in England, and there died, on the 4th day of January, 1815.

T. WATKINS.

TREASURY DEPARTMENT, *Fourth Auditor's Office, January 5, 1827*

The U. S. sloop-of-war Frolic, under the command of Master Commandant Joseph Bainbridge, sailed on a cruise from Boston, on the 18th of February, 1814, and was captured near the coast of Cuba on the 20th of April following, by the British frigate Orpheus, Captain Hugh Pigot, and the British schooner Shelburne, Lieutenant Hope.

NAVY DEPARTMENT, *January 4, 1827.*

I certify that the truth of the above statement is sustained by documents on file in this Department.

JOHN BOYLE.

20TH CONGRESS.]

No. 353.

[1ST SESSION.]

APPLICATION OF URIAH BROWN FOR PATRONAGE TO HIS INVENTION OF A COMPOSITION FOR THE DESTRUCTION OF VESSELS, SIMILAR TO THE "GREEK FIRE."

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 18, 1828.

To the honorable the Senate and House of Representatives of the United States, in Congress assembled:

The invention of the Greek fire, so celebrated among the ancients, and which led to a new revolution in the art of war, by the invention of gunpowder, is ascribed to Callinicus of Heliopolis, a town in Syria, who used it with so much skill and effect during a naval engagement, that he destroyed a whole fleet belonging to the enemy, in which were embarked 30,000 men. It is defined to be a sort of artificial fire, which insinuates itself beyond the surface of the sea, and which burns with increased violence when it mixes with water. Its directions are contrary to the course of natural fire; for the flames, we are told, will spread themselves downwards, to the right or left, agreeably to the moment that is given.

It was used in the year 1679, and was known and used in 1291. It was certainly liquid, and was employed in many different ways, but chiefly on board of ships, being thrown, from large engines, on the ships of the enemy. This fire was sometimes kindled in vessels of a particular description, which might be called fire-ships, and which were introduced among a hostile fleet. Sometimes it was put into jars and other vessels, which were thrown at the enemy by means of projectile machines, and sometimes squirted by the soldiers from hand engines, or, as it appears, blown through pipes. This fire was discharged from the forepart of ships by machines constructed of copper and iron, the extremity of which resembled the open mouth and jaws of a lion or other animal. They were painted and even gilded, and it appears were capable of projecting the fire to a great distance.

Professor Beckman, who examined all the ancient authors respecting the Greek fire, expressly says that "the machines which the ancients employed to throw this fire were spouting engines." He also observes, (*Hist. of Invent.*, p. iv. 85.) "that John Cameniata, speaking of his native city, Thessalonica, which was taken by the Saracens in the year 901, says that the enemy threw fire into the wooden works of the besieged, which was blown into them by means of tubes, and thrown from other vessels." This passage proves that the Greeks, in the beginning of the tenth century, were no longer the only people acquainted with the art of preparing this fire, the precursor of our gunpowder. The emperor Leo, who, about the same period, wrote his *Art of War*, recommends such engines, with a metal covering, to be constructed in the forepart of ships; and he twice afterwards mentions engines for throwing out Greek fire. In the east one may easily have conceived the idea of loading some kind of pump with the Greek fire; as the use of a forcing pump for extinguishing fires was long known there before the invention of Callinicus.

Writers differ considerably as to the composition of Greek fire, properly so called, as there were many preparations, some hundred years after the discovery, which went under the name of Greek fire. Certain it is that the Greeks had a knowledge of a very high combustible preparation, which water could not extinguish, and which, from its nature, must have had the property of decomposing water itself, of converting it into hydrogen, or possessed so much oxygen as to support the combustion of the inflammable substances, even in contact with water. It appears that it could only be extinguished, or its ardor damped, by urine, sand, vinegar, &c., or with undressed leather and green hides.

Porta, (*Magre Naturelle*), in treating of this subject, remarks that "when Constantinople was attacked, the Emperor Leo burnt the vessels or boats of the enemy, to the number of 1,800, by means of the Greek fire." In 1249, at the siege of Damietta, the French experienced the fatal effects of it.

Trevenot (*Travels in the Levant*) says that "in the fifty-second year of the Hegira, (anno Domini 672,) Constantinople was besieged, in the reign of Constantine Prognates, by Yesid, the son of Moavia, the first Caliph of the family of Ammiades, when the Emperor found himself so pressed that he was almost reduced to despair; but the famous engineer, Callinicus, invented a kind of *wild fire*, which would burn under water, and by this means destroyed the whole fleet."

Gibbon (*History of the Decline and Fall of the Roman Empire*, vol. vii, p. 282) speaks also of the Greek fire, and observes that "the deliverance of Constantinople may be chiefly ascribed to it. It appears that Callinicus, the inventor, *deserted* from the service of the Caliph," (in consequence, no doubt, of the *illiberality* and *injustice* which he experienced from the latter,) "to that of the Emperor;" and Gibbon is of opinion that this discovery or improvement in the military art was fortunately reserved for the distressful period, when the degenerate Romans of the east were incapable of contending with the warlike enthusiasm and youthful vigor of the Saracens. He describes the fire to be strong and obstinate, and that it was quickened by water; that sand, urine, and vinegar were the only agents that could damp its fury; that it was used for the annoyance of the enemy, both by sea and land, in battles or in sieges, and was either poured from the rampart in large boilers, or launched in red-hot balls of stone and iron, or darted in arrows or javelins, twisted round with flax and tow, which had deeply imbibed the inflammable matter; that at other times it was deposited in fire ships, or blown through long tubes of copper, fixed on a prow of a galley; that its composition was kept secret at Constantinople, pretending that the knowledge of it came from an angel to the first and greatest of the Constantines, with a sacred injunction not to divulge it under any pretext, &c. He also observes that, "after it was kept secret above 400 years, and to the end of the eleventh century, the method of preparing it was stolen by the Mahometans, who employed it against the Crusaders. A knight, it appears, who despised the swords and lances of the Saracens, relates with heartfelt sincerity his own fears at the sight and sound of the mischievous engine that discharged a torrent of the Greek fire, the *feu Gregeois*, as it is styled by the more early of the French writers. "It came flying through the air," (quoting Joinville, *Histoire de St. Louis*,) "like a winged, long-tailed dragon, about the thickness of a hogshead, with a report of thunder, and the velocity of lightning; and the darkness of the night was dispelled by this deadly illumination."

The use of the Greek, or, as it might now be called, Saracen fire, was continued to the middle of the fourteenth century, when the scientific or casual compound of nitre, sulphur and charcoal effected a new revolution in the art of war and the history of mankind.

Ruggeri (*Pyrotechnie Militaire*, p. 289) states that Pliny mentions, in his time, a combustible substance which was thrown on armed men, and burst and destroyed them in the midst of battle; that

it was employed successfully by the successors of Constantine, and its composition was kept a *state secret*; that the Turks used it, or a composition of a similar nature, at the siege of Damietta, in 1249, forty-five years after the death of Róger Bacon; and finally, that when the composition and effects of gunpowder became known, the Greek fire, although it laid the foundation of the invention of gunpowder, was no longer in use, and the secret of the original preparation became lost.

Such then, it appears, were the terrible effects produced by the Greek fire, at a period when the mechanic arts and sciences were comparatively in their infancy.

This fire, or a composition equal in every respect to it, has been rediscovered in the nineteenth century, by a *native American*, after the secret had been lost for near five hundred years. The exclusive benefits of this composition, together with the *certain* means of rendering it infinitely more formidable and irresistible to an enemy than was ever anticipated by its original inventor, bidding defiance to any known means of attack, and possessing the power of *instantaneous* and *inevitable destruction* to any object subjected to its operation, is now, for the *last* time, respectfully offered by the inventor to the representatives of this republic, for their consideration and adoption. And he indulges the hope—for the honor of the country which gave him birth, for the love he bears that country and its free institutions, for the fond affections which he cherishes for many of his fellow-citizens, and for the sake of unborn millions, who may yet live to deplore and to deprecate the act—that he may not be *forced*, like Callinicus, to seek in a foreign land that consideration and requital for his sacrifices and patriotic zeal which have so long been withheld from him in his own.

Respectfully submitted.

URIAH BROWN.

20TH CONGRESS.]

No 354.

[1ST SESSION.]

ON CLAIM TO PENSION OF THE WIDOW OF A NAVAL OFFICER WHO LOST HIS REASON
WHILE IN COMMAND OF A PUBLIC VESSEL.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 21, 1828.

Mr. MILLER, from the Committee on Naval Affairs, to whom was referred the petition of Jane Baker, reported:

That the petitioner alleges that she is the widow of Thomas Baker, who, while a captain in the navy of the United States, commanding the sloop-of-war Delaware, on the Curaçoa station, was deprived of his reason, the effects of a fever, and that he never recovered his senses; that she is poor, old, and partially helpless by the loss of the sight of her left eye.

The annexed letter of the Secretary of the Navy, of February 12, 1828, proves that the petitioner's husband, Thomas Baker, was a captain, and commanded the sloop-of-war Delaware, and was pensioned on the 20th day of August, 1801, and received a pension of \$37.50 per month until the 8th day of March, 1820, the day of his death, but cannot state the cause why he was placed on the pension roll, but supposes that stated by the petitioner to be the probable one.

The facts that the petitioner is the widow, yet unmarried, of Captain Baker, and that while he was so engaged in the naval service of the United States, by reason of the unhealthiness of the climate where he was cruising, he became sick of a fever which destroyed his reason, are not proved, except by the oath of the applicant as to her history; and if they were proved, the committee are of opinion that the case of the petitioner would not come within the spirit of the provisions heretofore made by law in relation to pensions chargeable on the navy or privateer pension fund, and therefore recommend the following resolution:

Resolved, That the petitioner have leave to withdraw her petition.

NAVY DEPARTMENT, *February 12, 1828.*

SIR: Your letter of this morning, in relation to the petition of Jane Baker, widow of the late Captain Thomas Baker, has been received.

It appears, by reference to the pension roll of this Department, that Thomas Baker, captain of the U. S. ship Delaware, was pensioned on the 20th August, 1801, and received a pension of \$37.50 per month until the 8th March, 1820, the day of his death. It is probable that the cause of pension is correctly stated, but certainty on the subject is unattainable, as most of the papers of the date referred to were destroyed by the British troops in 1814. Under the pension laws now in force no relief can be afforded by this Department.

I have the honor to be, sir, your obedient servant,

SAMUEL L. SOUTHARD.

HON. MICHAEL HOFFMAN, *Chairman of the Committee on Naval Affairs.*

20TH CONGRESS.]

No. 355.

[1ST SESSION.]

ON CLAIM OF ELIZABETH WHITEHEAD TO A PENSION FOR THE LOSS OF HER SON, KILLED ON BOARD OF THE FRIGATE CHESAPEAKE, IN THE WAR OF 1812-'15.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 7, 1828.

Mr. HOFFMAN, from the Committee on Naval Affairs, to whom was referred the petition of Elizabeth Whitehead, reported:

That the petitioner alleges that she is old, poor, unable to maintain herself, a widow, and the mother of Joseph Judy; that the said Joseph entered the naval service at Boston, as a carpenter's mate, on board the Chesapeake, in April, 1813, and that he was killed in the engagement between that vessel and the Shannon.

The age of Joseph Judy, at the time of his enlistment or death, is not certainly ascertained by the proofs, but it is inferable from them that he was not a minor, but over the age of twenty-one years; and there is no proof that he died without leaving a widow, or issue, or had at all in any way appropriated any part of his pay for the support of his mother. This case, therefore, on the present proofs, does not, in the opinion of the committee, come within the most enlarged rule adopted by Congress, in granting pensions to the mothers of persons killed in the naval service of the United States; and, therefore, they recommend the following:

Resolved, That the petitioner have leave to withdraw her petition.

20TH CONGRESS.]

No. 356.

[1ST SESSION.]

ON CLAIM OF ELIZABETH MAYS TO A PENSION FOR THE LOSS OF HER SON, KILLED ON BOARD OF THE LAWRENCE, IN THE WAR OF 1812-'15.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 7, 1828.

Mr. HOFFMAN, from the Committee on Naval Affairs, to whom was referred the petition of Elizabeth Mays, reported:

That, from the proofs in this case, it appears that the petitioner is old, poor, unable to maintain herself, a widow, and the mother of Wilson Mays, deceased; that the said Wilson Mays enlisted in the naval service of the United States, as an ordinary seaman, on the 16th of July, 1812; was promoted to a carpenter's mate, and held that station when he was killed, on the 10th of September, 1813, on board the Lawrence, without leaving a widow or issue, and that his mother received half of his monthly pay, by *allotment*, at the time of his death.

The committee are of opinion that the facts in this case come strictly within the rule adopted by the last Congress, in granting a pension to Penelope Denny; and, therefore, report a bill granting to Mrs. Mays a pension equal to one-half the pay of her son; to be paid out of the navy pension fund, half-yearly, for five years, with the usual limitations.

NAVY DEPARTMENT, *March 5, 1828.*

SIR: In answer to the inquiries contained in your letter of 25th February last, I have the honor to state that Wilson Mays entered the naval service of the United States, as an ordinary seaman, on the 16th of July, 1812; was promoted to carpenter's mate, and held that station when he was killed, on the 10th September, 1813, on board the Lawrence; and that his mother received half his monthly pay, by *allotment*, at the time of his death.

I am, very respectfully,

SAMPL L. SOUTHARD.

HON. MICHAEL HOFFMAN, *Chairman Naval Committee, House of Representatives.*

20TH CONGRESS.]

No. 357.

[1ST SESSION.]

CONDITION AND EXPENSE OF THE UNITED STATES AGENCY FOR RECAPTURED AFRICANS TAKEN TO THE COAST OF AFRICA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 12, 1828.

NAVY DEPARTMENT, *March 11, 1828.*

SIR: In answer to the resolution of the House of Representatives, of the 5th instant, directing the Secretary of the Navy to lay before the House "such intelligence as his Department may supply respecting the present condition and probable annual expense of the United States agency for recaptured Afri-

cans upon the coast of Africa; and to comprehend therein any information, possessed by said Department, illustrative of the present circumstances of the settlement of free colored people at Liberia, and of those liberated Africans who have been restored to that continent in pursuance of the act of Congress of 1819:" the Secretary of the Navy has the honor to lay before the House a copy of two letters from J. Ashmun, who is temporarily the acting agent at Cape Mesurado, one dated August 28, and the other December 22, 1827; a schedule of the public buildings and other property, with their estimated value; a statement of the disposition made of the Africans sent from Georgia by the ship Norfolk; and an extract of a letter from Master Commandant J. B. Nicholson, dated February 20, 1828.

These papers contain all the information, recently received, of the present condition of the agency, which is represented as prosperous and encouraging.

It will be perceived that all the liberated Africans have, by this time, ceased to be a charge to the United States.

Should no farther captures be made, the only expense, under existing regulations, will be for the care of the public property and the salaries of the agents. It may be proper, however, to state that 121 Africans, landed from the wreck of a Spanish vessel, have lately been seized at Key West, and measures adopted by the marshal of East Florida for their removal to St. Augustine, preparatory to a trial. The decision respecting them cannot be anticipated, but it is possible that the case may be considered as coming within the acts of Congress; in which event the duty will devolve upon the Executive of removing them from the United States. Provision was made for such an emergency, in the estimate presented at the commencement of the session.

Accounts of the expenditures at and for the agency have been furnished to the close of the last year; those subsequently received have not yet been settled.

Orders were given on December 10 not to expend any more money on the public buildings, and the agent was directed to prepare a schedule of them and their cost; this was partly anticipated by one of the accompanying papers, but the current estimated value is substituted for the actual cost, which is probably not more than one-half the amount stated.

A map of the country having been engraved, a copy of it is herewith sent, showing the position of the several settlements.

The Department is not in possession of any other information particularly "illustrative of the present circumstances of the settlement of free colored people at Liberia." Reports on that subject are addressed to the Colonization Society; nor has the Department any knowledge, further than what arises from the unavoidable connection existing between the agency and the settlement of free people, and which connection has heretofore been explained in communications to Congress.

All which is respectfully submitted.

SAM'L L. SOUTHARD.

The SPEAKER of the House of Representatives.

U. S. AGENCY FOR RECAPTURED AFRICANS, *Cape Mesurado, August 28, 1827.*

SIR: I have the honor to acknowledge the receipt, through Doct. Todson, per the ship "Norfolk," arrived here on the 20th instant, 41 days from Savannah, of your letter of the 11th of June, and copies of instructions therein referred to; those originally addressed to the late Doct. Peaco, dated April 2, and those given to Doct. Todson, dated the 11th June; all of the present year.

In obedience to those instructions, I have received 142 Africans at the agency, (the number embarked at Savannah having been diminished by two, from the death of a child and an aged paralytic,) and proceeded to dispose of them in the way judged most conducive to their welfare, and most conformable to the views and instructions of the Department. Under this disposition of these people, of which the particulars shall be forwarded by the return of the Norfolk, three-fourths of them will cease to be a charge to the United States at the end of *one month*, and *all* (except the sick) at the end of *six* months. All the adults are to receive lands, and will be admitted to the privileges of colonial settlers at the expiration of 12 months, provided their conduct, within that term, shall not prove them unworthy of the civil rights attaching to landed property in the colony.

Conformably with the same instructions, I have reorganized the service of the agency, with a view to diminish and reduce, to the lowest estimated amount, its future expenses.

W. L. Weaver, the book-keeper and assistant, appointed by the late Doct. Peaco, is discharged after the 31st of the present month.

The storekeeper, E. Johnson, whose services in keeping, distributing, and exchanging the stores and other property belonging to the Norfolk's cargo, *cannot be dispensed with*, is retained at a compensation of \$333 per annum, for six months from the same date.

A. D. Williams, the former superintendent, is also retained at a compensation of \$400, for the same term.

The reason of retaining Mr. Williams is, that his superintendency, and other services, are absolutely necessary to place the Africans in situations, accustom them to such employments, and form them to such habits, as shall enable them, some from the first, *all* at the end of six months, to support themselves.

On the supposition that no more Africans are too sent to the agency, I beg to submit an estimate of its future expenses in this country—anticipating its expiration on the 1st of September, 1828—exclusive of drafts on the Department previous to the present time, some of which appear not to have been received on the 11th of June last, and of the stores, &c., received per the Norfolk.

Estimate.

1. Compensation due to W. L. Weaver, in full for past services up to the time of his discharge, August 31, 1827,.....	\$175 00
2. Compensation due to E. Johnson, storekeeper, in full for services, up to the 31st August, 1827,.....	75 00
3. Compensation due to E. Johnson, storekeeper, in full for services to be rendered the ensuing six months, when they are to terminate.....	166 50

4. Compensation due to Griffin, Steward, and Clarke, associate carpenters, for carpenters' work accomplished and doing on the United States buildings for recaptured Africans and superintendent, at Stocktontown.....	\$200 00
5. Compensation due to the same carpenters, for work done and doing on Fort Norris battery, Cape Mesurado.....	95 00
6. Compensation due Nelson's services as carpenter, Stockton buildings.....	250 00
7. Estimated amount of masons' and painters' bills, for underpinning and painting the Stockton buildings.....	* 275 00
8. Bills of William Draper, employed, in 1826, by Doctor Peaco, to build a very expensive double piazza, with Venetian work, quite round the large agency house, involving alterations in the house.....	2,400 00
9. Bills of masons, carpenters, and painters, for work necessary to complete the new agency house.....	300 00
10. Bills of carpenters and smiths, for completing the large schooner boat, now on the stocks, Materials for the same, and for repairing the Catherine.....	650 00 400 00
11. Bills of painters, and for materials for painting the United States ware, gun, and other remaining houses.....	240 00
12. Expenses incurred about Fort Norris battery, for the protection of the roads, estimated at	165 00
13. Expenses for compensation to A. D. Williams, superintendent recaptured Africans, February 28, 1828.....	400 00
14. Incidentals. Agent's personal expenses during the year, to end August 31, 1828, \$100; for (exclusive of pay) extra services and fixtures about the public stores, \$50; salutes to foreign national vessels, \$50; compensation for military and ordnance storekeeper, \$36,	236 00
15. Amount of draft, for purchases made of the schooner Eclipse, in favor of Wm. De la Roche. <i>Note.</i> The amount of this draft, dated to-day, is \$1,602.97½, comprehending—	
Of the 1st item of the preceding estimate.....	\$72 87½
Of the 4th item of the preceding estimate.....	92 00
Of the 6th item of the preceding estimate.....	120 00
Of the 8th item of the preceding estimate.....	290 00
Of the 13th item of the preceding estimate.....	30 00
	\$604 87½

And leaving, after abating this general estimate, \$604.87½, for purchases properly belonging to item 15..... 998 10

Making, exclusive of my own, or substitute's pay, through the year beginning September 1, 1827, in full, for all future expenses to that date, and supposing the expiration of the agency at that date, six thousand nine hundred and eighty-five dollars and sixty cents, \$6,985 60

In the foregoing estimate I have most anxiously studied economy on the one hand, but I have, also, on the other, not been regardless of the mode of closing a concern of so interesting a nature, situated in a foreign country, which becomes the justice and dignity of the Government of the United States. The actual state of the United States *dwelling, ware, and gun houses*, its fortifications and their armament, *the buildings for the recaptured Africans, and the boats, &c.*, belonging to the agency, (worth, at a moderate estimate, \$14,000,) requires also a large part of the additional expense included in this estimate, in order to furnish and put them in a condition to fit them either for sale or preservation.

Doctor Todson will furnish himself with a properly authenticated schedule of all the permanent property belonging to the United States at this date, attaching to the agency, which probably will not materially vary at the year's end.

Having formed the above estimate in the exercise of my best discretion, I beg leave, in conclusion, to observe that, *until further instructions from the Department, to which I beg most respectfully to submit it for approval, I shall regulate my expenditures by it, and, without the most extraordinary necessity, shall not exceed any one of the items.*

Respectfully, sir, your obedient servant,

J. ASHMUN.

HON. SAMUEL L. SOUTHARD, *Secretary United States Navy, Washington City.*

P. S.—A general statement of my accounts, since the departure of Doctor Peaco, was forwarded by the United States schooner Shark, which sailed from Mesurado for the West Indies, 12th February last; and a full statement of my accounts, up to the 30th of April, 1827, went by the Doris, which sailed hence for Baltimore on the 22d June last. If my health, which has been bad for two months past, proves sufficient, I shall forward by Doctor Todson a further statement of the accounts to the date of the Norfolk's arrival, August 20, (inst.)

J. ASHMUN.

Understanding a vessel, to be chartered by the American Colonization Society, is expected to sail from the United States for Cape Mesurado, some time in autumn, I have to request that twenty-five thousand of juniper, cypress, or yellow pine shingles may be forwarded by that conveyance, in order to cover the most valuable of the United States houses, &c., in this country. The shingles of the country are dear, and too indifferent to last longer than two seasons. Some require to be annually renewed.

J. ASHMUN.

U. S. AGENCY FOR RECAPTURED AFRICANS, *Cape Mesurado, December 22, 1827.*

STR: The United States ship Ontario having arrived in Mesurado Roads, last evening, ten days from Sierra Leone, and forty-one from Gibraltar, on her return to the United States, will be the bearer of this communication.

I have the satisfaction of being able to state that all the recaptured Africans at the agency are, with nearly every individual of the American settlers, in perfect health, with the exception of nine cases (of which two are recaptured Africans) of ulcerated legs. The sufferers from this malady have, however, been convalescent since the termination of the rainy season, which, the present year, was unusually protracted, and had scarcely terminated at the beginning of the present month.

The number of the Africans from Georgia has been diminished by two deaths since the date of my letter per the Norfolk. The first was that of an adult, drowned, or, as there is reason to suppose, destroyed by an alligator while bathing in the Mesurado river, on the 10th of October. The other case is of a child, three years old, carried off by a malignant fever of thirty hours' continuance. About forty of the whole company from Georgia have been slightly affected with intermittents. The worst case continued nearly two months, but, generally, the patient recovered in ten days.

These people have proved, far beyond expectation, orderly, peaceable and industrious. Only a solitary offence deserving corporeal punishment has come to my knowledge, and this grew out of a sudden exasperation of passion. Five marriages have been solemnized; and the irregular connections of the unmarried strictly prohibited, and, as far as is known, prevented entirely. Seven women, having one or more small children each, not obtaining situations in the families of the settlers, have been employed, in the best manner I could situate them, in the public service. Three of them wash and cook for the public laborers, the rest have situations in the colonial *infirmary and orphan house*, where they enjoy the strictest paternal superintendence of the manager of that establishment, and are fully employed without any actual increase of the sum total of the public expense. It has proved a truly auspicious circumstance, when only the temporal lot of these people and their restoration to Africa is considered, that more than forty of their number have brought with them that best of all personal endowments, a simple and imperfect, but serious and practical knowledge of Christianity. The true religion operating on such minds, exists and displays itself only in its influence on the life and character. And this is only salutary; I trust their good conduct during their probationary year will secure them the good wishes and patronage of all in the colony whose friendship can hereafter be most useful to them. A part of them is destined at the end of the year to the newly projected settlement at Grand Bassa; another division I hope to provide for on the Stockton, midway between Caldwell and Monroe. The lands of both districts are good, and *equally* good. The third, or remaining part of the company, consisting of single women and minors, will remain attached to the families of the settlers, and accede, in time, to the privileges of the American emigrants.

The expenditures on account of the agency have been regulated strictly according to the estimate forwarded by the schooner Eclipse, under date of August 28th, 1827—no event having occurred, or appearing likely to happen, requiring me to exceed it. The injury sustained by the schooner boat has been repaired, and she is again in active service. We still keep her armed, but have considerably reduced the expense of her ordinary armament and crew this season; which may be increased at pleasure. It is quite necessary she should occasionally show a gun, but more so that she should fetch good freights of rice and oil for the comfort of the people; and in this service we hope, hereafter, chiefly to employ her.

The other unfinished boat is under shelter, and will be completed at leisure, in the best style which our materials and workmen will permit. The great multiplication of decked coasting craft in the colony, the present season, both delays the completion of the public boats, by engaging the mechanics, and renders that delay the less prejudicial to the common welfare of the establishment.

The accounts of the agency, for the four months ending on the 31st instant, may be expected by the schooner Susan, of and for Baltimore, to sail early in January. The actual state of the slave trade on this coast will, perhaps, be best learnt by the Department from the report of Captain Nicholson, of the Ontario, who remained several days at the centre of intelligence on this subject, Sierra Leone. On this part of the coast it is certainly reviving. The vessels engaged in it carry, a few, the *French*, but most the *Spanish* flag. Most of the adventurers are also Spaniards, many are French, and not a few natives of the *United States*. In one instance, the United States flag has been used to protect a slaving schooner, whose name, place of outfit, and master, I have not been able, satisfactorily, to ascertain.

Respectfully, sir, I have the honor to remain, your obedient servant,

J. ASHMUN.

The Hon. SAMUEL L. SOUTHWARD, *Secretary of the Navy, Washington City.*

Schedule of United States property attached to the agency for recaptured Africans, Cape Mesurado, and not of a convertible nature.

Denomination and description.	Estimated value. Sept. 1, 1827.
1. <i>Large agency house</i> .—Frame, yellow pine. Brought to Africa in 1823. Surrounded with a double piazza 12 feet deep; of which the upper story is now finishing with Venetian work of excellent workmanship and materials. Kitchen attached. The principal dimensions are 64 feet long, 40 wide—stories 11 and 9 feet. Will be finished about the first of January, 1828: and, when completed, valued at	\$7,500 00
2. <i>Granary and storehouse</i> .—This is a small building, of which the uses to which it has hitherto been applied are described by its name: designed to become a storehouse to the new agency house, near which it stands. It is two stories—the lower mason-work, roof hipped, panel doors, and the whole building painted. Value	500 00
3. <i>Old warehouse</i> .—Consists of one ground story, and a capacious loft; has a slight frame, secured in every part by a filling in of logs; clapboarded, and covered with country shingles. Dimensions, 40 feet by 16 feet. Built in 1826. Estimated value	500 00

4. <i>New warehouse, Monroe.</i> —This is a completely finished and secure warehouse and store, of two stories; the lower is strengthened with a filling in of timbers; the upper constructed of a frame brought from the United States. One side of the roof painted. Built in 1826 and 1827. Value	\$1,800 00
5. <i>Magazine.</i> —Stone work, plastered on the outside. The roof, inside, vaulted with mason work, and covered above with a shingled roof. Its strength is what is technically called bomb-proof. Estimated value	200 00
6. <i>Crown Hill fortification.</i> —Commenced only. The foundation is laid for a hexagonal tower of two platforms, each to mount four guns. Its foundation walls are five feet thick; intended for the defence of the eastern extension of the settlement of Monroe, where it stands. Value of foundation and materials collected.....	175 00
7. <i>Central Fort, formerly Fort Stockton.</i> —This work, (building, in part, of the materials of Fort Stockton, which was demolished in 1826, for the purpose,) is in the form of a triangular battery, of which the angles consist of three pentagonal two-story towers, in each of which are 10 port-holes; and these towers joined together by walls 10 feet high, two thick, and each 60 feet in length, pierced with 15 port-holes. The work may mount any number of guns, from 6 to 18: 6 heavy and 6 light pieces are its medial complement. The towers of this work, erected in 1826-7, are the only part yet accomplished. It defends nearly the whole present settlement of Monroe and the mouth of the river. Present value	950 00
8. <i>Fort Norris battery.</i> —Erected on the height of Thompson Town for the protection of the outer roadstead. It stands near the summit of Cape Mesurado, on a shelf strengthened and leveled by means of an expensive and impenetrable bed and abutment of the heaviest stone work. It has two faces, each of 40 feet, furnished with a platform four inches thick, sawed stuff; is housed and roofed, and provided with four long 12-pounders, iron. Built in 1827. Value, exclusive of the armament.....	800 00
9. <i>Ordnance, 21 pieces.</i> —Five long twelves, of which one needs remounting; two eighteen-pound gunnades, well mounted; three nines, one long, one medium, and one carronade, all mounted; six sixes, one carronade, the others mediums, and two need remounting; five smaller medium guns and swivel pieces; of these one is a brass six-pound field piece, mounted on a traveling carriage, and furnished, also, with a revolving carriage to suit either a tower or the deck of a small vessel. Rammers, &c., nearly complete. Value.....	2,000 00
10. <i>Central receptacle for recaptured Africans, Stockton Town.</i> —Of this building the part approaching the rive is two stories, and furnished with Venetian blinds, and in the best style. Intended for the superintendent's residence. The whole consists of American lumber; the length 60 feet, and consists of eight apartments for recaptured Africans, exclusive of the front part described. Built in 1826 and 1827. Value...	850 00
11. <i>Range No. 1.</i> —Situated near the central receptacle; has the form of L; one and a half story, 14 feet wide and 72 feet long, built of the best American materials, and contains a store room and five spacious apartments, each of which has a loft for recaptured Africans; 1827.....	1,000 00
12. <i>Range No. 2.</i> —Situated opposite to range No. 1, Stockton Town. Same dimensions, materials, and construction, except the division of the apartments. Value the same, (built in 1827,).....	1,000 00
13. <i>Two log buildings at Thompson Town.</i> —Each 36 feet long, and one and a half story in height; built in 1824-5, of African materials, 8 rooms	750 00
14. <i>Two schooners.</i> —One finished, but damaged; the other on the stocks. Estimated value of both, one rigged.....	2,200 00
	\$20,225 00

J. ASHMUN.

Statement of the disposition made, and actual situation, (September 14th,) of the one hundred and forty-two recaptured Africans received at the agency for recaptured Africans, Cape Mesurado, from Dr. G. P. Todson, United States agent, by the ship Norfolk, in conformity with instructions communicated to J. Ashmun, from the United States Navy Department.

Description of recaptured Africans.	Where situated.	Terms— years.	Wages per annum.	Business.
One woman and two small children .	In family of E. Johnson.	One	No compensation	General work.
Two women.....	do do	One	Twelve dollars each.....	General work.
Two men	do do	One	Each thirty dollars.....	General work.
Two boys, nearly grown.....	In family of Jos. Blake.	Four	Instruction in.....	Boat building.
One woman	do do	One	Twelve dollars	General work.
One man, one woman	Jas. C. Barbour's family.	Four	Share in.....	Farming.
One man.....	H. S. Nelson's family ..	One	Ninety-six dollars.....	Carpentering.
Two men	do do	One	Each thirty dollars.....	Carpentering.

Statement—Continued.

Description of recaptured Africans.	Where situated.	Terms— years.	Wages per annum.	Business.
One young woman	H. S. Nelson's family..	Three	Instruction in	Housewifery.
Two men	J. J. Barbour's family..	One	Each thirty dollars	Farming.
One young female	do do	One	Instruction in	Sewing, &c.
One man	Geo. R. M'Gills' family.	One	Thirty dollars	Farming.
One female	W. W. Steward's family.	One	Twelve dollars	General work.
One boy	F. S. Deveny's family..	Three	To be taught	Business.
One woman	do do	One	Twelve dollars	General work.
Two men, and the wife of one	do do do	Two	Shares of produce	Of a farm.
One man and one woman	D. Hacokius' family ...	One	Thirty dollars	General work.
One man, his wife and child	Chas. Butler's family..	One	Thirty dollars	General work.
Two boys	do do	Three	Apprenticed to	Carpentering and sawing.
One man and wife	George Mason	One	Forty-two dollars	General work.
Three men	do	One	Thirty dollars each	Sawing.
One boy	Austin Curtis' family..	Four	Instruction in	Blacksmithing.
One female	J. Stewart's family ...	One	Instruction in	Housewifery.
One female	Ch's Brander's family ..	One	Twelve dollars	General work.
Two men and two wives	Lot Cary's family	One	Forty-two dollars each pair.	General work.
One man	do do	One	Thirty dollars	General work.
One girl	do do do	Four	Education	
One man and invalid wife	do do do	One	Thirty dollars the pair	
One woman	J. D. Preston's family..	One	Twelve dollars	General work.
One girl	do do	Eleven	Education	
One man	W. L. Weaver's family.	One	Thirty dollars	General work.
One boy	John Griffin's family ...	Two	Instruction in the	Carpenter's trade.
One boy	John Clark's family	Two	Instruction	Carpenter's trade.
One young man, one girl	Lewis Crook's family...	One and four.	Instruction to the man twelve dollars, the woman	General work.
Two females	James Phillips' family..	One	Twelve dollars	General work.
Two men	do do	One	Each thirty dollars	General work.
One man	Burwell Barbardon	One	Thirty dollars	General work.
Two men	Jno. W. Barbour's family	One	Thirty dollars each	General work.
One young woman	Jonas Cary's family	One	Instruction in	Sewing, &c.
One young woman	David White's family ..	One	Instruction in	Sewing, &c.
One young woman	J. Shaw's family	One	Instruction in	Sewing, &c.
One girl	Richard White's family.	Three	Instruction in sewing	Washing, &c.
Two men, one invalid	A. Edmondson's family.	One	Thirty dollars the able man.	General work.
One boy and his young sister	S. L. Jones' family ...	Till of age.	Instruction	Education.
Two men	D. Hilliard's family	One	Thirty dollars each	General work.
One boy	R. Newport's family ...	One	Instruction in	Boat building.
One man	Mrs. Lawrenies' family.	One	Thirty dollars	General work.
One woman	do	One	Thirty dollars	General work.
One man	Allen James' family....	One	Thirty dollars	General work.
One woman and small child	do do	One	Mother's wages go	For child's support.
One man and wife	Wm. Holanger's family.	One	Thirty dollars the pair	General work.
One dumb man	do do	One	Support	General work.
One diseased woman	do do do	One	Support	General work.
One man	Wm. Draper's family...	One	One hundred and twenty dol's	Carpenter's work.
Two men	do do	One	Thirty dollars each	General work.
One girl	Mrs. Langford's family.	One	Education	
One young woman	Jno. W. Barbour's family	One	Education	General work.
One man and wife	M. Brosier's family....	One	Forty-two dollars the pair	General work.
Two men	A. Harris' family	One	Thirty dollars each	General work.
Man and woman	M. Jordan's family ...	One	Thirty and twelve dollars	General work.
One youth, M	J. James' family	Five	Education and instruction in	Carpenter's work.
One man	L. Fernandes' family ..	One	Thirty dollars	General work.
One man and young woman	John F. Harris' family.	One	Thirty and twelve dollars	General work.
One woman	M. Dongey's family....	One	Twelve dollars	Of seamstress.
One man and wife	J. Palm	One	Thirty dollars the pair	Farming.
One invalid woman	Agnes Barbour's family.	One	Nothing	General work.
One man, wife and child	Jordan Williams' family.	One	Thirty dollars the trio	General work.
One woman and child	Ann Poulson's family...	One	Nothing	General work.
Ten men, three wives, two children.	Government of the colony	One	Each man fifty dollars	General work.
One idiot	do do			

Recapitulation.

Sixty men placed in families on wages, or if invalids to receive their support in part or in whole, or as apprentice to some useful trade; forty-one women and six children similarly situated; ten men, three women, one idiot and two children employed at liberal wages by the government of the colony; nineteen women and children awaiting situations: total one hundred and forty-two.

MONROE, September 14, 1827.

J. ASHMUN.

Extract of a letter from Master Commandant John B. Nicholson to the Secretary of the Navy, dated—

NEW YORK, February 20, 1828.

On the 11th I left Sierra Leone, and arrived at Cape Mesurado on the 21st of December, where I remained until the evening of the 25th. The opinion I had heard expressed at Sierra Leone was confirmed, and I have no doubt that the colony will become of great importance to the benighted natives; for they cannot but perceive the great advantages their American brethren have over them from civilization, and will, I cannot but hope, endeavor to place themselves and children upon the same footing; for they must perceive it is not color alone that gives preponderance, but civilization and the blessings of religion.

I cannot express more strongly the growing prosperity of the colony than that eight of the crew, (colored tradesmen,) after visiting the shore, petitioned to be discharged for the purpose of joining their brethren as permanent settlers. I granted their request, presuming it will meet the approbation of the Department, as they landed with money and clothes to the amount of nearly two thousand dollars, which will enable them to commence their several trades without expense to the colony.

20TH CONGRESS.]

No. 358.

[1ST SESSION.]

ON CLAIM OF AN OFFICER OF THE NAVY TO BE INDEMNIFIED OR RELEASED FROM A JUDGMENT AGAINST HIM FOR CAPTURING A SUPPOSED PIRATICAL VESSEL.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 14, 1828.

Mr. MILLER, from the Committee on Naval Affairs, to whom was referred the memorial of Jesse Wilkinson, reported:

That the said Jesse Wilkinson was, and is, a master commandant in the navy of the United States, and, as such, was appointed to the command of the brig Spark, and was furnished with instructions from the Navy Department, dated August 6, 1822, and August 7, 1822, under the act entitled "An act to protect the commerce of the United States, and to punish the crime of piracy," approved March 3, 1819, directing him to cruise along the coasts of the United States and the Floridas, in the Gulf of Mexico, and among the West India islands; and directing him, that, whenever he should find any boats or vessels, the crews whereof should have committed any actual violence, outrage, or depredation upon any vessels of the United States, or the citizens thereof, or any other vessels, (in the last case, only where the depredations were committed under such gross and aggravated circumstances as to leave little doubt of their piratical character,) he would consider himself authorized to subdue, seize, and take them, and unless, on such capture, he should be satisfied that they were acting under some lawful authority, and not piratically, to send them in for adjudication. In another part of the said instructions, the said Jesse Wilkinson is directed that, whatever well-grounded suspicions he might entertain that a vessel may have been fitted out, and was intended to be employed in piratical depredation, he should not molest her unless he had satisfactory evidence she had either *attempted* or *actually committed* some piratical aggression on some merchant vessel of the United States, or her crew, or on some other vessel, under the circumstances above mentioned: and he was especially instructed, in the execution of these orders, not to infringe on the territorial jurisdiction of any other power. The memorialist alleges that, while he was waiting with the said brig Spark, in the port of Havana, for a fleet of merchantmen which was to sail under his convoy, on or about January 23, 1823, he was informed by one Thomas Howell, a citizen of the United States, and master of one of the vessels belonging to the fleet of merchantmen waiting convoy, that a schooner was then lying in that harbor, from on board of which an act of robbery and piracy had actually been committed on the American schooner Nancy Eleanor, of Baltimore, in the month of October preceding: that the memorialist there refused to act in relation to the said schooner, being within the jurisdiction of Spain, and referred Mr. Howell, with his complaint, to the American consul, at Havana; that he sailed on his accustomed duty on the morning of January 28, 1823, and, while lying to, at the distance of four or five miles from the coast, he was informed by one of his officers, to whom the vessel had been pointed out by Howell, that the piratical schooner was standing out to sea—a circumstance which the memorialist had not expected, nor had he any knowledge of her; that, being thus informed, and the suspected vessel having got beyond the territorial jurisdiction of Spain, he made sail in pursuit of her, and arrested her, and sent for Mr. Howell, and it was proved, by the papers produced, that the said Howell and one Robert Hudgen then came on board the Spark, and made oath before the memorialist that the captured vessel was the same which had committed the above stated act of piracy on the Nancy Eleanor, and they recognized one of the crew of the captured schooner as being one of the pirates.

The memorialist alleges he did believe that the captured schooner and her crew had committed an act of piracy on the Nancy Eleanor, and did, therefore, send her into the United States, under a prize officer, for adjudication, as a piratical vessel.

By the papers, it appears that this schooner is the Ninfa Catalana, Don Pablo Daunes, master; that she was brought into Norfolk, and by the United States, (by Robert Stanard, their attorney for the district of Virginia, who prosecuted in this respect, as well for the United States, as for the officers and crew of the brig Spark,) was, with her tackle, apparel, furniture, and armament, libeled in the district court of the United States for the district of Virginia, on a charge of piracy and robbery, committed by her crew on the Nancy Eleanor, of Baltimore, a vessel of the United States, in October, 1822. By the decree of the court, it appears that a hearing in the cause was had on the libel; the answer of the said Don Pablo Daunes, and his claim exhibited against the cargo; the motion against the memorialist to proceed to adjudication upon the cargo; the protest and answer of the memorialist, and replication thereto, together with the exhibits filed, and deposition, and evidence produced by the parties. The schooner, her

tackle, apparel, furniture, and armament were dismissed from the said libel, with damages to be paid by the memorialist for the unlawful capture and detention of the vessel, and for the personal sufferings of the crew: and, afterwards, on the coming in of the report of damages, and after exceptions thereto, on the 5th day of November, 1827, the said court decreed that the said Jesse Wilkinson should pay to the said Don Pablo Daunes:

On behalf of the owners of the schooner	\$7,171 03
With interest on \$1,183.31, from February 26, 1823, until paid; and, on \$5,987.72, from July 26, 1823, until paid.	
On behalf of the said Don Pablo Daunes, his officers and crew.....	1,900 00
For advances of the said Pablo.....	457 97
On behalf of the owners of the cargo	811 77
With interest thereon, from May 23, 1823, until paid.	
And the costs of the suit not stated.	

It appears that the memorialist, November 19, 1827, wrote to the Secretary of the Navy, informing him of this decree; asked his advice as to the propriety of an appeal, and desired that he might be sustained by the government in the course he should take on such advice; and alleged that it would be utterly impossible for him to give the requisite security to appeal, and that only about fifteen days remained in which to appeal. In the answer of the Secretary of the Navy, of November 22, 1827, he was informed that it did not appear to the Secretary to be proper for the Department to give advice, or make any engagement which would, in the case, create responsibility upon the Department, and referred him to Congress, after a full defence in the judicial tribunals.

Throughout, the memorialist alleges that he acted from a sense of duty, and in the belief that the Ninfa Catalana had actually committed the piracy alleged. At his request to the President, a court of inquiry was appointed, to inquire into the conduct of the memorialist in making this capture. The evidence, in the original papers on file in the Navy Department, is too voluminous to be introduced here, especially as the result is stated in the annexed letter of Secretary of the Navy, of August 13, 1823, that "there was no reason to believe but that he acted in good faith, and under the belief that he was in the due discharge of his duty." The committee assent to the correctness of this opinion, and add their belief of the fact, alleged by the memorialist, that he was unable to procure the bail required to appeal from the said decree. He alleges his person is daily liable to be taken in execution on this demand.

These, the committee believe to be the principal facts in the case, and they report a bill for the relief of the memorialist. They do it upon the ground that the memorialist, at the time of the capture and sending in of the schooner Ninfa Catalana, had good reason to believe, and did believe, that she and her crew had committed an act of piracy and robbery on the Nancy Eleanor, of Baltimore, a merchant vessel of the United States; that he made this capture in good faith, and in the reasonable belief that his instructions, under the law of the United States, required him to do so; and that he was too poor, and unable to procure the bail requisite to enable him to appeal from the said decree; that he used his endeavors to procure an appeal to be prosecuted; and that, as relates to his government, he ought not, where he acted from probable cause and under a sense of duty, to be made responsible for any act of the prize master, towards the captured, which he could neither foresee nor prevent.

The committee, from the nature of the decree, (part of the money bearing interest until paid,) cannot state the exact amount which may be necessary to satisfy the money decreed to be paid. They therefore annex a statement of the amount, supposing the rate of interest to be 6 per cent., and the time of payment to be May 1, 1828.

1. On behalf of the owners of the schooner	\$7,171 03
With interest on \$1,183.31 from the 26th of February, 1823, to May 1, 1828, five years two months and four days.....	\$367 60
Also, on \$5,987.72 from July 26, 1823, until May 1, 1828, four years nine months and four days	1,710 49
2. On behalf of Don Pablo Duanes.....	1,900 00
3. And for his advances	457 97
With interest from November 5, 1827, to May 1, 1828, five months and twenty-five days	68 77
4. On behalf of the owners of the cargo.....	811 77
Interest from May 23, 1823, to May 1, 1828, four years eleven months and seven days.....	240 40
	2,387 26
Amount of decree, including interest to May 1, 1828	\$12,728 03
Add taxed costs, as certified	511 45
	\$13,239 48

To the honorable the Senate and House of Representatives of the United States of America:

The petition of Jesse Wilkinson, a master commandant in the navy of the United States, most respectfully sheweth: That the frequent occurrence of acts of piracy and depredation upon the commerce of the United States, in the West Indies, for several months previously to the third of March, eighteen hundred and nineteen, having occasioned the passage of an act of Congress of that date, by which the President was authorized and requested to employ so many of the public armed vessels as, in his judgment, the service might require, in protecting the merchant vessels of the United States from piratical aggression, several vessels-of-war were accordingly designated for that service, with orders to cruise along the coasts of the United States and the Floridas, in the Gulf of Mexico, and among the West India islands. The brig Spark was one of the public armed vessels thus employed, and, in the month of August,

one thousand eight hundred and twenty-two, your petitioner was appointed to the command of her, and was furnished from the Navy Department with instructions explanatory of the act of Congress above-mentioned, and of the duties which were required of him in carrying it into execution.

By the fourth paragraph of those instructions your petitioner was admonished to subdue, seize, and take such vessels or boats only as should *actually* have attempted or committed some piratical aggression, and not such as he might have even the strongest reason to suspect of having been fitted out or intended to be employed in such depredations.

He was directed to consider this an important and leading regulation in his conduct, and as a strong and almost controlling circumstance in enabling him to determine whether such vessels as he might fall in with were of a piratical character or otherwise. By the concluding part of the same paragraph your petitioner was expressly authorized, and, as he humbly conceived, enjoined, whenever he should find any boats or vessels, the crews of which *had* committed any *actual* violence, outrage, or depredation upon any vessels of the United States, or the citizens thereof, to subdue, seize, and take them, and, unless on such capture he should be satisfied that they had acted under some lawful authority, to send them in for adjudication. And for the better understanding of the object and scope of the said instructions, your petitioner respectfully annexes them hereto. Your petitioner most respectfully represents to your honorable body that the duty specially assigned to him, by the commander of the squadron to which he was attached, rendered it necessary that he should be frequently at Havana; as it required him once a week to convoy all American vessels sailing from that port to such a distance at sea as would remove them from the hazard of the piratical outrages then so frequent on the coast of Cuba. On or about the twenty-third of January, one thousand eight hundred and twenty-three, while your petitioner was in port waiting for the fleet of merchantmen which was to sail under his convoy, he was informed by a certain Thomas Howell, a citizen of the United States, and the master of one of the vessels belonging to the fleet, that a schooner was then lying in the harbor, from on board of which an act of robbery and piracy *had actually* been committed on the American schooner Nancy Eleanor, of Baltimore, in the month of October preceding. Your petitioner, after receiving this information from Howell, advised him to make the same fact known to the American consul at Havana, on whom the duty devolved of attending to such communications in port, and at the same time stated to him that he himself was precluded by his official station, and by his orders, from taking upon himself any agency or concern in relation to the case while within the Spanish territories. On the morning of the twenty-sixth of January your petitioner sailed on his accustomed duty, and while lying to at the distance of some four or five miles from the coast, waiting for the fleet to collect and form under his convoy, he was informed by one of his officers, to whom the vessel had been pointed out by Howell, that the piratical schooner was then standing out to sea. Your petitioner at the time of leaving the port had no information whatever, or suspicion that this vessel would so soon follow him, nor had he himself any knowledge of her so as to be capable of identifying her. Being thus informed, however, and the suspected vessel having then passed beyond the limit which terminated the territorial jurisdiction of Spain, he made sail in pursuit of her, and having arrested her, sent his boat for the captain of the Nancy Eleanor, one of the vessels composing the fleet, and the same which was said to have been plundered as before mentioned, in order to inquire more particularly as to the identity of the schooner thus arrested. Howell soon came on board the Spark, accompanied by his mate, Robert Hudgin, and there both of them made oath that the vessel then detained was the same from on board of which the aforesaid piratical aggression *had actually* been committed, and that they recognized a man then belonging to her crew as one of those who had boarded the Nancy Eleanor on that occasion. And at the same time the said Howell put into the hands of your petitioner an affidavit, made by himself and one Jacob Sheaffer before the American commercial agent at Havana, copies of both of which affidavits are hereto annexed. Under these circumstances, and upon this evidence, your petitioner, conscientiously and faithfully intending to act in obedience to his orders, deemed it to be a duty, imperiously required of him by the instructions to which he has adverted, to capture this vessel and send her into the United States for adjudication. Subsequent events have shown him the hazard at which an officer, with whatever good faith he may design to perform his duty, is sometimes compelled to carry into execution orders and instructions which he is sworn to obey. But he respectfully and confidently trusts that your honorable body will exonerate and protect him from the heavy and overwhelming loss with which he is now threatened, since, situated as he was, if he had not made the capture in question, no apology he could have offered, and no explanation he could have given, would have been considered adequate to exempt him from the severe censure of his government and the just reprobation of his fellow-citizens. Actuated by all these considerations, your petitioner ordered a prizemaster and crew on board the vessel thus detained, which proved to be the Spanish schooner Ninfa Catalana, and sent her into the United States for adjudication. The officer placed in charge of her deemed it necessary for the security of the prize to put some of the men in irons; but your petitioner is perfectly persuaded, from his intimate knowledge of the deportment and character of that officer, that no causeless degree of rigor was practiced by him, and that the prisoners were treated in all respects with as much humanity and kindness as was consistent with the duty imposed upon him. The Ninfa Catalana, with the cargo with which she was laden, arrived at Norfolk about the twelfth of February, eighteen hundred and twenty-three, and was delivered, without breaking bulk, to the marshal of the United States. The district court of the United States for the eastern district of Virginia, the only court in which proceedings could be instituted against her, did not commence its session until the month of May ensuing. At that term the legality of the capture, so far as the then existing evidence could test it, was recognized by the government, and a prosecution commenced by its official agent, the district attorney, for the purpose of enforcing the condemnation of the vessel under the act of Congress before referred to, as will better appear from a copy of the libel hereto annexed. At the same term, a claim was asserted by Don Pablo Daunes, the master, in behalf of the owners of the vessel and cargo, for damages occasioned by the capture; and compensation was sought by the master and crew of the captured vessel for the personal injuries alleged to have been sustained by them. On the part of the United States and your petitioner, the cause was conducted by Robert Stanard, Esquire, district attorney, and Robert B. Taylor, Esquire; but the claimant having procured a great number of depositions from Havana, Campeachy, and Sisal, all of which concurred in proving that the witnesses on the part of the United States had erroneously sworn to the Ninfa Catalana as the same vessel from which the piratical act before mentioned had been committed, the court deemed it incumbent upon itself to pronounce a decree acquitting the vessel, and condemning your petitioner in costs and damages. A copy thereof is hereto respectfully

annexed. The commissioners, under this decree, having made up the report required of them, and submitted it for the ratification of the court, various exceptions were urged against it on the part of your petitioner, some of which were sustained, and the report recommitted to be further acted on. At the late term of the court, held in the month of November last, the report, as amended by the commissioners, was again returned to the court, and exceptions being again filed thereto by your petitioner, the same were argued, and a final decree pronounced in the cause, a copy of which is presented herewith. Your petitioner had leave to appeal from the decree within thirty days after the date thereof, upon his entering into bond, with good and sufficient security, in the sum of twenty thousand dollars. He had already incurred considerable disbursements and expenditures in relation to the cause, and a competent tribunal having thought it right to adjudicate against the legality of the capture, he did not know whether it would be expected that he should appeal from that decision or not. As he was himself unable, however, to give security to the amount required, he wrote to the Secretary of the Navy, apprising him of all the circumstances, and desiring to know what course he ought to pursue, and whether, if he ought to appeal, the Department could render him any aid in procuring the necessary security.

The answer which he received informed him that it was not competent for the Department to afford him the desired assistance, or to contribute, in any way, to enable him to carry up the cause to a superior judicial tribunal.

Your petitioner is therefore compelled to submit his case most respectfully to the consideration of your honorable body. He entered the navy of the United States in the year eighteen hundred and five, and, throughout all the intervening period, he has devoted himself most faithfully to the service of his country. He trusts he may be permitted to say, with honest pride, that his conduct has been approved. In relation to the subject of the present application, the late President of the United States, persuaded of the good faith with which your petitioner acted, was pleased to exempt him from any censure as to the course which he pursued, and he was continued in actual service, and transferred to the command of a ship of the largest class to which an officer of his grade can be assigned. Your petitioner most respectfully represents that he is entirely unable to satisfy the decree which has been rendered against him. A resort to him individually for its payment would expose a wife and five small children to poverty and destitution, and himself to an imprisonment, the duration of which cannot be foreseen. He forbears to obtrude upon you a repetition of the considerations which have, in several similar cases, been received as furnishing an adequate motive for granting the relief he now solicits, and most respectfully prays that a law may be enacted appropriating, out of the public treasury, so much money as may be required to pay and satisfy the said decree so rendered, as aforesaid, against him. And as in duty bound he will ever pray, &c., &c.

J. WILKINSON.

General instructions.

NAVY DEPARTMENT, August 6, 1822.

SIR: Enclosed you have a copy of an act of Congress, by which you will perceive that a high and delicate power is vested in the President, in authorizing him to employ our public armed ships in protecting the merchant vessels of the United States and their crews from piratical aggressions and depredations. It will readily occur to you that, considering the situation in which we stand in relation to Spain and the South American colonies, the authority given under this act must be exercised with the utmost caution and prudence by our public vessels. You have the whole act laid before you, that you may see its general scope and object; but you will observe that the execution of the law is under the direction of the President, so far as respects the employment of our public vessels. Your conduct will, therefore, be regulated by your instructions, although they may not go to the full length the law might possibly warrant.

Under the second section of the act, authority is given to subdue, seize, take, and send into any port of the United States, any armed vessel or boat, or any vessel or boat, the crew whereof shall be armed, and which shall have *attempted or committed* any piratical aggression, search, restraint, depredation, or seizure upon any vessel of the United States, or of the citizens thereof, *or upon any other vessels.*

From the generality of this latter description of vessels, it would seem to embrace those of every nation or country upon which any piratical aggressions may have been committed. Admitting the act might be extended thus far, it does not appear to have been the general object of the law; and it is thought by the President most advisable, at present, not to give it a like indiscriminate practical construction as to all vessels. The great object, as pointed out in the first section of the act, was to protect the merchant vessels of the United States and their crews from piratical aggressions. This will, therefore, be considered your particular and special duty. If, however, you shall discover depredations upon other vessels, committed under such gross and aggravated circumstances as to leave little doubt of their piratical character, it will be your duty to capture and bring in the aggressors. It is thought most advisable thus to distinguish in your instructions, because, among other considerations, it will be seen that under the second section of the act you are only authorized to *retake vessels of the United States or its citizens*, which may have been unlawfully captured upon the high seas. No authority is given to *retake* the vessels of any foreign nation or country.

You will also perceive, under this second section of the act, authority is only given to subdue, seize, and take such vessels or boats, &c., as shall have *attempted or committed* some piratical aggression. Whatever well-grounded suspicions you may entertain that a vessel may have been fitted out, and is intended to be employed in such depredations, you will not molest her, unless you have satisfactory evidence that she has either *attempted or actually committed* some piratical aggression on some merchant vessel of the United States, or her crew, or upon some other vessel under the special circumstances above mentioned. This is to be considered an important and leading regulation in your conduct, as it will be a strong and almost controlling circumstance, (considering we are at peace with all the world,) in making up your judgment, whether you are safe and justifiable in treating them as pirates. Whenever, therefore, you shall find any boats or vessels, the crews whereof have committed any actual violence, outrage, or depredation upon any vessels of the United States, or the citizens thereof, or any

other vessels, as above mentioned, you will consider yourself authorized to subdue, seize and take them, and unless on such capture you shall be satisfied that they were acting under some lawful authority, and not piratically, to send them in for adjudication.

The range of your cruise will be along the coast of the United States and the Floridas, in the Gulf of Mexico, and among the West India islands, changing your position in such manner as shall best answer the object of your cruise; touching at such ports and places as may be necessary and proper to procure supplies, and to obtain information the better to enable you to carry into effect the objects contemplated in the act of Congress. Great reliance is placed on your prudence and sound discretion, that you will so execute the power entrusted to you as to protect the commerce of the United States, without infringing the lawful rights of any other nation or country, their citizens or subjects. All captures made by you will be sent into one of the following ports: Boston, New York, Norfolk, Charleston, Savannah, or New Orleans.

You have also enclosed such parts of several acts of Congress, prohibiting the importation of slaves into any ports or places within the jurisdiction of the United States, as are necessary to point out to you your duty and authority under these laws; and it is expected and required of you by the President that a strict and vigilant attention be paid to the direction therein contained; that if possible this inhuman and disgraceful traffic may be suppressed.

By the act of the 20th of April, 1818, you will perceive that it is made unlawful to import, or bring in any manner whatsoever into the United States or Territories thereof, from any foreign kingdom, place, or country, any negro, mulatto, or person of color, with intent to hold, sell, or dispose of such person as a slave, or to be held to service. By this act it is also made unlawful for any citizen of the United States, or other person, to build, equip, load, fit, or otherwise prepare any ship or vessel in any port or place within the jurisdiction of the United States, or to cause any such ship or vessel to sail from any port or place whatsoever within the jurisdiction of the United States, for the purpose of procuring and transporting any such slaves to any port or place whatever. And any ship or vessel employed in such importation of slaves, or so built, fitted out, or prepared, is liable to be seized and forfeited.

And, by the act of the 3d of March, 1819, the President is authorized to employ any of the armed vessels of the United States to cruise in such places as he may think proper, where he may judge attempts may be made to carry on the slave trade, by citizens of the United States or residents thereof, in contravention of the acts of Congress prohibiting the same; and to instruct such armed vessel to seize, take, and bring into any port of the United States, to be proceeded against according to law, all ships or vessels of the United States, wheresoever found, which may have taken on board, or which may be intended for the purpose of taking on board, or of transporting, or may have transported, any negro, mulatto, or person of color, in violation of any of the provisions of the act of the 20th of April, 1818, above referred to, or in violation of any other act or acts prohibiting the traffic in slaves.

You will perceive, from the generality of the provisions in these laws, you are authorized to take and bring in all ships or vessels of the United States which may have been in any manner employed, or intended to be employed, in the slave trade, or any other vessel offending against the provisions of any of the laws you have enclosed. You will particularly notice the two provisos to the first section of the act of 1819, the first of which directs in what manner you are to keep and dispose of the slaves which may be found on board of any ship or vessel seized by you. If brought within the United States, they are to be delivered to the marshal of the district where brought in; and transmit the evidence of such delivery to this Department. It is the wish of the President, however, that none should be brought into the United States. Upon the capture, therefore, of any vessel having slaves on board, you will immediately proceed to the Island of Sherbro, on the coast of Africa, and deliver such slaves to the agent appointed by the President to receive them, pursuant to the provisions of the act, or to any other agent so appointed at any other place on the coast of Africa. The second proviso relates to the disposition of the officers and crews of such vessels so captured by you. Great vigilance will be expected from you in the safe keeping of all such officers and crews, until they shall be handed over to the civil authority, to be proceeded against according to law.

You will also observe that, by the fifth section of this act, it is made your duty to bring any vessel, and her cargo, you may capture, into some of the ports of the State or Territory to which the captured vessel shall belong, if you can ascertain the same; if not, then into any convenient port of the United States.

The range of your cruising for this purpose will be the same as that pointed out in the former part of your instructions in relation to pirates.

I am, very respectfully, your most obedient servant,
By order of the Secretary of the Navy.

JOHN BOYLE.

Capt JESSE WILKINSON, *commanding U. S. Brig Spark, Norfolk, Va.*

Additional general instructions.

NAVY DEPARTMENT, *August 7, 1822.*

You will not consider your general instructions, under the laws of the United States for the suppression of the slave trade, as authorizing you, at any place out of the waters of the United States, to search, capture, or, in any manner whatever, to interrupt vessels under any other than the American flag. Nor will you, in the execution of your instructions for the suppression of piracy and the protection of our commerce, infringe upon the territorial jurisdiction of any other power.

By order, &c.

JOHN BOYLE.

1.

We do solemnly swear by the Holy Evangelists of Almighty God that the schooner now detained by the United States brig Spark, J. Wilkinson, Esq., commander, is the same, and the man now before us one of the number, who boarded the schooner Nancy Eleanor, of Baltimore, about the 16th of October last, and plundered her of a number of articles, as expressed in a deposition before John Warner, commercial agent at Havana for the United States, dated 25th January, 1823.

THOMAS HOWELL.
ROBERT HUDGEN.

U. S. BRIG SPARK, *January 26, 1823.*

Sworn and signed before

J. WILKINSON, *commanding U. S. Brig Spark.*

2.

Copy of a deposition taken before the commercial agent at Havana.

United States commercial agency:

Personally appeared Thomas Howell, master of the American schooner Nancy Eleanor, of Baltimore, before me, John Warner, commercial agent of the United States of America at the city of Havana, who, being duly sworn on the Holy Evangelists of Almighty God, did depose and say: That he sailed on board the said schooner Nancy Eleanor as a supercargo from the port of Trinidad, in the Island of Cuba, on the 7th day of October last, or thereabouts, said vessel then under the command of John W. Butler, with a cargo of sugar, beans, beeswax, wine, rum, tobacco, segars, &c., &c., bound to the port of Balize, in the Bay of Honduras.

That said vessel was boarded, on or about the 16th of said month of October, by the crew of a schooner, Santissima Trinidad, consisting of nine men, under Colombian colors, and said to be from Santa Martha, bound on a cruise. The said crew, on boarding of us, demanded of Captain Butler his papers, which were accordingly given up, and after examining said papers, they declared to Captain Butler that his vessel and cargo was a good and lawful prize to them; and they immediately commenced tearing up the hatches and taking out of the hold, say ten barrels sugar, ten barrels beans, four bales beeswax, six kegs wine, six kegs rum, two bales tobacco, ten boxes segars, three half barrels filberts, with some other articles not now recollected; all of which were put upon the deck, and the said crew then proceeded to search the cabin, and took from thence eighteen straw hats, one barrel rum, one lump, 40lbs., sugar, one box segars, a part of a bale of tobacco, one barrel Cognac brandy, and some other articles belonging to passengers; which articles they passed into the boat, leaving the aforementioned articles taken out of the hold upon the deck, stating that, notwithstanding said schooner was a good prize to them, yet they did not consider it an object to hold her, and accordingly left us; the wind blowing fresh and the sea running high. This deponent doth further declare, that said schooner is about 190 tons, her stern unusually straight, coppered within two streaks of her bends, a lead colored boot top, her sides painted black with a white streak, her scuttle abaft the companion covered with a wooden grating, with something like a round house or necessary erected on her larboard quarter, armed with one pivot gun situate well forward; which vessel, called the Santissima Trinidad, aforesaid, this deponent doth verily believe is now in this harbor of Havana.

THOMAS HOWELL.

Sworn and signed before me, the commercial agent of the United States of America at Havana, to which I hereby affix my hand and the seal of my office, at the city of Havana aforesaid, this twenty-fifth day of January, 1823, and of the independence of the United States of America the forty-seventh.

JOHN WARNER.

Jacob Shaeffer, seaman on board the aforesaid schooner Nancy Eleanor, having heard the aforesaid deposition read, doth depose to the truth of what is therein set forth.

JACOB SHAEFFER.

Sworn and signed before me.

JOHN WARNER.

3.

Copy of the libel in the case of the United States, &c., against the schooner Ninfa Catalana, &c.

Before you, the honorable Saint George Tucker, judge of the district court of the United States for the district of Virginia, comes Robert Stanard, attorney of the United States for the district of Virginia, who prosecutes in this respect for the said United States, and also for the officers and crew of the brig Spark, a public vessel-of-war of the United States, and, in the name and behalf of the said United States and the officers and crew aforesaid, alleges, propounds, and charges as follows, that is to say:

Firstly. That by an act of the Congress of the United States, passed the _____ day of _____, it is among other things provided and enacted that whenever any vessel or boat, from which any piratical aggression, search, restraint, depredation or seizure shall have been first attempted or made, shall be captured or brought into any port of the United States, the same shall and may be adjudged and condemned to their own use and that of the captors, after due process and trial in any court having admiralty jurisdiction, and which shall be holden for the district into which such captured vessel shall be brought.

Secondly. That on or about the 16th day of October, 1822, on the high and open seas, to wit, in the Gulf of Mexico, a certain vessel called the Santissima Trinidad, and since called the Ninfa Catalana, possessed and owned by certain persons to the said attorney unknown, then and there being, without any lawful authority from any prince, people, government, colony or district, to cruise and make captures or seizures on the high and open seas, and a certain vessel called the Nancy Eleanor, of Baltimore, the property of citizens of the said United States, with a cargo on board, the property also of citizens of the said United States, and engaged in lawful commerce, then and there also being; the said last mentioned vessel was then and there detained by the force and power of the said vessel called the Santissima Trinidad, otherwise called the Ninfa Catalana, and of the persons navigating that vessel and divers persons, the officers and crew of the said vessel called the Santissima Trinidad, otherwise called the Ninfa Catalana, did then and there, with force and arms, from the said vessel called the Santissima Trinidad, otherwise called the Ninfa Catalana, unlawfully and piratically enter upon board, break and search the said vessel called the Nancy Eleanor, of Baltimore, the property as aforesaid of citizens of the United States, and divers articles, to wit: ten barrels of sugar, ten barrels of beans, four barrels of beeswax, six kegs of wine, six kegs of rum, two bales of tobacco, ten boxes segars, eighteen straw hats, one barrel of rum, and one barrel of brandy of the cargo, and other property on board the said vessel called the Nancy Eleanor, of Baltimore, belonging to citizens of the said United States, did then and there unlawfully and piratically rob, take and carry away; whereby an act of piratical aggression, search, restraint, depredation and seizure was then and there committed from the said vessel called the Santissima Trinidad, otherwise called the Ninfa Catalana, on and against the said vessel called the Nancy Eleanor, of Baltimore, and the cargo and property aforesaid on board that vessel, and by force of the before recited act of Congress or otherwise, the said vessel called the Santissima Trinidad, otherwise called the Ninfa Catalana, was and is liable to seizure, capture, forfeiture and condemnation.

Thirdly. That Jesse Wilkinson is, and at the times hereafter mentioned in this libel was, commander of the brig Spark, a public vessel-of-war of the United States.

Fourthly. That after the committing of the said act of piratical aggression, search, restraint, depredation and seizure from the said vessel called the Santissima Trinidad, otherwise called the Ninfa Catalana, to wit, on or about the 26th day of January, 1823, on the high seas, on the Atlantic ocean, the said Jesse Wilkinson, the officers and crew of the said brig Spark, did subdue, seize and capture the said vessel called the Santissima Trinidad, otherwise called the Ninfa Catalana, as liable to capture, forfeiture and condemnation, by reason of the committing of the said act of piratical aggression, search, restraint, depredation and seizure, or otherwise.

Fifthly. That the said vessel called the Santissima Trinidad, otherwise called the Ninfa Catalana, having been so seized and taken as aforesaid, has been brought into the port of Norfolk, a port of the United States, for legal adjudication, and is now in the said port, within the jurisdiction of this honorable court.

Sixthly. That by reason of the premises the said vessel called the Santissima Trinidad, otherwise called the Ninfa Catalana, her tackle, apparel, furniture and armament have become forfeited to the said United States, and to the officers and crew of the said brig called the Spark, a public vessel-of-war of the said United States.

Lastly. That all the premises are and were true, of which proof being made, the said attorney prays the usual process and monition of the honorable court in this behalf to be made, and that all persons interested in the said vessel called the Santissima Trinidad, otherwise called the Ninfa Catalana, her tackle, apparel, furniture, and armament, may be cited, in general and special, to answer the premises; and all due proceedings being had, the said vessel called the Santissima Trinidad, otherwise called the Ninfa Catalana, her tackle, apparel, furniture, and armament, may, for the cause aforesaid, and others appearing, or that may appear, be condemned as forfeited by the definitive sentence and decree of this honorable court; and that the same may be sold, and distribution of the proceeds thereof made according to law.

ROBERT STANARD,

Attorney of United States for the District of Virginia.

4.

At a district court of the United States for the district of Virginia, held at the court house, in the borough of Norfolk, on Monday, the fourteenth day of November, in the year of our Lord one thousand eight hundred and twenty-five:

<p>THE UNITED STATES OF AMERICA, as well on behalf of themselves as of the officers and crew of the United States brig-of-war Spark, Jesse Wilkinson, Esq., commander,</p>	}
<p><i>against</i></p>	
<p>THE SCHOONER NINFA CATALANA, her tackle, apparel, furniture, and armament.</p>	

This court, having had under its consideration the libel filed by the United States, in their own behalf, and in behalf of the officers and crew of the brig-of-war Spark, Jesse Wilkinson, commander, against the schooner Ninfa Catalana, her tackle, apparel, armament, and furniture, and the claim and answer of Don Pablo Daunes, master and commander of the said schooner; and, also, the claim exhibited by the said Don Pablo Daunes against the cargo of the said schooner Ninfa Catalana; the monition, against the said Jesse Wilkinson, to proceed to adjudication upon the said cargo; the protest and answer of the said Jesse Wilkinson, and the replication thereto, together with the several exhibits filed, and depositions and evidence produced, on the part and behalf of the said parties, respectively; doth adjudge, order and decree, that the libel aforesaid, against the said schooner Ninfa Catalana, her tackle, apparel, armament, and furniture, be dismissed, with damages for the unlawful capture and subsequent detention thereof; and, also, damages for the personal sufferings and injuries sustained by the master, officers, and crew of the said schooner Ninfa Catalana, by reason, and in consequence of, the said capture and detention. And it appearing, by a former order of this court, that the cargo aforesaid has been restored to the claimants

aforesaid, without prejudice to the question of damages, the court doth now overrule the protest of the said Jesse Wilkinson to the claim and monition of the said Don Pablo Daunes; and doth further order, adjudge, and decree that the said Jesse Wilkinson pay to the said claimant, for and in behalf of the respective owners of the cargo aforesaid, the damages sustained thereupon by reason of the unlawful capture and detention of the said schooner as aforesaid; and to the end that the said damages hereby decreed may be truly and justly ascertained, the court doth constitute and appoint John Cowper, John Tabb, David Maitland, John R. Howard, and Wright Southgate, commissioners, to estimate and settle the amount thereof, having regard to the several items or principles set forth in the schedule filed by the claimant, in pursuance of the direction heretofore given by the court. And the said commissioners; any three of whom are empowered to act in the premises, shall, before they proceed therein, be sworn before a public notary fairly and impartially to estimate and settle the amount of damages as aforesaid, and are to give reasonable notice to the claimant, and to the said Jesse Wilkinson, respectively, or to their respective agents or attorneys, of the several times of their assembling to hear and receive the testimony upon which this decree is to be carried into effect; and of their doings, by virtue thereof, they are to make report at or before the next meeting of this court.

5.

At a district court of the United States for the eastern district of Virginia, held at the court house, in the borough of Norfolk, on Monday, the fifth day of November, in the year one thousand eight hundred and twenty-seven:

<p>THE UNITED STATES OF AMERICA, as well in behalf of themselves as of the officers and crew of the United States brig-of-war Spark, Jesse Wilkinson, Esq., commander, <i>against</i> THE SCHOONER NINFA CATALANA, her tackle, apparel, armament, and furniture.</p>
--

This cause came on again to be heard upon the papers, exhibits, depositions, and evidence, heretofore filed and produced, and upon the amended report of the commissioners, to whom the former report was recommitted, and upon the exceptions filed in behalf of the captor, Jesse Wilkinson, to the said amended report, and was argued by counsel. On consideration whereof, the court—overruling all the exceptions, as to the first article of the said report, except as relates to the period from which the interest ought to have been calculated; overruling, also, all the exceptions as to the second article of the said report; sustaining the exceptions as to first, second, and fifth sections of the third article of the report; sustaining, also, the exception to the third section of that article, so far as the same embraces charges and expenses upon the cargo, incurred subsequently to the day of the restitution of the cargo, and adopting, in lieu of the said third article, the substitute therefor, appended to the said report, and marked A—doth adjudge, order, and decree, that the aforesaid Jesse Wilkinson pay to Don Pablo Daunes, the claimant in this cause, for and in behalf of the owner of the aforesaid schooner, the Ninfa Catalana, the sum of seven thousand one hundred and seventy-one dollars and three cents; with interest on eleven hundred and eighty-three dollars and thirty-one cents, part thereof, from the twenty-sixth day of February, one thousand eight hundred and twenty-three, until paid; and on five thousand nine hundred and eighty-seven dollars and seventy-two cents, the residue thereof, from the twenty-sixth day of July, one thousand eight hundred and twenty-three, until paid; and, also, that the said Jesse Wilkinson pay to the said claimant, in behalf of himself and of the officers and crew of the said schooner, the sum of nineteen hundred dollars, to be distributed as follows, to wit:

To the claimant, Don Pablo Daunes, \$400; Nicholas Gorgoll, \$400; José Maria Peres, \$100; Pedro Rive-ro, \$100; Tomas de la Santos, \$100; Benita Bertrean, \$100; Juan Medino, \$100; Ines Vicunia, \$100; Francis Menesses, \$100; José Antonio Rodrigues, \$100; Domingo Valetto, \$100; José Maria Pereira, \$100; José Maria Telefort, \$100; and that the said Jesse Wilkinson also pay to said claimant the sum of \$457.97, the sum advanced by him, in behalf of himself, his officers, and crew, as appears from the second article of the report of the commissioners; and, also, that the said Jesse Wilkinson pay to the said claimant, in behalf of the owners of the cargo of the aforesaid schooner, Ninfa Catalana, the sum of \$811.77, according to the aforesaid substitute for the third article of the said report, with interest thereon from the twenty-third day of May, one thousand eight hundred and twenty-three, until paid; and that the said Jesse Wilkinson also pay to the said claimant all the costs of court by him incurred in the course of the prosecution of this cause; in taxing which costs, the clerk is to except therefrom any charge, if any there be, which may have been already allowed by the commissioners in their report.

DISTRICT COURT OF THE UNITED STATES FOR THE EASTERN DISTRICT OF VIRGINIA, }
Clerk's Office, Norfolk, December 22, 1827. }

I, Seth Foster, clerk of the said court, do hereby certify that the foregoing writings, numbered from one to five, inclusive, are true copies of the original affidavits, libel, and decrees, of which they severally purport to be copies; which said originals are filed and of record in the district court aforesaid.

In testimony whereof, I have hereunto set my hand, and affixed the seal of the said court, this
[SEAL.] twenty-second day of December, in the year of our Lord one thousand eight hundred and
twenty-seven.

SETH FOSTER, Clerk.

Schedule of taxed costs, United States of America vs. Schooner Ninfa Catalana.

I, Seth Foster, clerk of the district court of the United States for the district of Virginia, at Norfolk, do hereby certify that the annexed schedule contains a true account of the costs of prosecution allowed in the case of the Ninfa Catalana, to wit:

SCHEDULE.

Attorney's fee.....	\$17 00
Marshal of Virginia, custody and fee.....	53 00
Marshal of Maryland, serving three subpoenas and traveling, &c., at \$10 each.....	31 50
Clerk, his fees, issuing citation, monition, returns, and subpoenas, entering protests, depositions, continuances, entering the order of court, final decree, and records and exemplification thereof...	50 95
Publishing interlocutory order and libel.....	10 00
Commissioners' charge, appointed by the court to estimate the amount of damages, three commissioners, 12 days, at \$6 per day, is \$72 each.....	\$216 00
Clerk to the commissioners, 11 days, at \$3 per day.....	33 00
	249 00
	\$411 45

There is an account, filed by Don Pablo Daunes, of incidental expenses incurred by him in the prosecution of the suit, and which have not yet been submitted to the court, not noticed in the above schedule.

In testimony whereof, I have hereunto set my hand, and affixed my seal of office, at Norfolk, this [SEAL.] twenty-fifth day of February, in the year of our Lord eighteen hundred and twenty-eight.

SETH FOSTER, *Clerk.*

NAVY DEPARTMENT, *February 8, 1828.*

SIR: I have the honor to acknowledge your letter, without date, received on the 6th inst., respecting the case of Master Commandant Jesse Wilkinson, and to make the following answers to inquiries which it contains.

Soon after the Ninfa Catalana was brought into Norfolk, viz: on the 31st of May, 1823, a court of inquiry was ordered, on the application of Master Commandant Wilkinson. The original record of that trial is enclosed as a paper tending to show the grounds of making the capture. The original record is sent because it is not possible to prepare a copy, and I have, respectfully, to request that it may be returned to the Department after the committee have used it. The result of the inquiry, in the opinion of the Executive, at that time, is found in the letter from the Department to Master Commandant Wilkinson, marked A.

Since that letter no correspondence is found between the Department and Master Commandant Wilkinson, on this subject, until that of which papers B and C are copies, and which are referred to in his memorial.

I have not been able to discover any case which approaches so near, in principle, to this, as that of Captain Murray, which was provided for by act of Congress, approved 31st of January, 1805, to which I beg leave to refer you. The papers in the case will probably be found on the files of the House of Representatives.

I am, very respectfully, &c.,

SAM'L L. SOUTHARD.

Hon. MICHAEL HOFFMAN, *Chairman Naval Committee, House of Representatives.*

A.

NAVY DEPARTMENT, *August 13, 1823.*

SIR: I have submitted to the consideration of the President the proceedings of the court of inquiry on your conduct in the capture of the Spanish schooner Ninfa Catalana, who has instructed me to say to you that, considering this vessel was within the jurisdiction of the Spanish authorities of the Island of Cuba when Captain Howell made his application and complaint to you, it would have been more prudent and discreet in you to have turned him over to such authorities for redress. Nevertheless, as there is no reason to believe but that you acted in good faith, and under the belief that you were in the due discharge of your duty, he does not think your conduct deserving of censure.

I am, respectfully, your most obedient servant,

SMITH THOMPSON.

Capt. JESSE WILKINSON, *United States Navy, Norfolk, Va.*

B.

NORFOLK, *November 19, 1827.*

SIR: By the late decision of Judge Hay, in the case of the Spanish schooner Ninfa Catalana, I have been sentenced in damages to the amount of ten thousand dollars and upwards, besides cost and charges, which, included, amount to upwards of thirteen thousand dollars.

I have been advised by my counsel to represent the case to you, and to ask your advice as to the propriety of an appeal, and to request that I might be sustained by the government in the course you may advise, as it would be utterly impossible for me to give security for the amount required.

I herewith enclose you the copy of a letter from your predecessor,* to show the view taken of the subject at that time, and I do assure you, sir, that I was actuated in the whole affair by a sense of duty,

* The enclosure is that marked A.

and I feel confident that it will be conceded, by all parties, that I had no other alternative left me than the course I pursued. I was compelled to act upon ex parte testimony, and could never have convinced the people of the United States that the vessel in question was not a pirate, had I not sent her in for adjudication; and, moreover, I have had the most satisfactory evidence that she was a vessel of that description; but such is the corrupt state of things in Havana that, for money, testimony may be procured to prove anything.

My counsel, General Taylor, is of opinion that to proceed against me was illegal; having acted under the spirit of my orders, it should have been an affair between the Spanish and American governments. I have also been informed by the counsel for the plaintiffs that the President of the United States, in a conversation with General Pegram, the marshal, stated that the government would be bound to sustain whatever damages might be awarded.

There is still about fifteen days to run of the time allowed for an appeal; I should, therefore, be pleased to know your decision within that period.

I have the honor to be, your obedient servant,

J. WILKINSON.

HON. SAMUEL L. SOUTHARD, *Secretary of the Navy.*

C.

NAVY DEPARTMENT, *November 22, 1827.*

SIR: I have received your letter of the 19th instant, upon the subject of damages, costs, and charges in the case of the schooner *Ninfa Catalana*.

It does not appear to me to be proper for this Department to give advice, or make any engagement which would create responsibility upon it, in your case. There is no discretion which it can legally exercise, nor any appropriation out of which it can pay any money for your relief. The appeal must be, as in other cases, to Congress. For success there it is probably indispensable that you should fully defend yourself before the judicial tribunals.

I am, respectfully, &c.,

SAMUEL L. SOUTHARD.

Master Commandant JESSE WILKINSON, *United States Navy, Norfolk.*

20TH CONGRESS.]

No. 359.

[1ST SESSION.]

RULES ADOPTED FOR THE SELECTION OF COMMISSIONED AND WARRANT OFFICERS FOR THE NAVY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 14, 1828.

NAVY DEPARTMENT, *March 12, 1828.*

SIR: The Secretary of the Navy, having had the honor to receive the resolution of the House of Representatives, of the 18th February, 1828, directing him "to inform the House what rule, if any, has been adopted in his Department for the selection of the very numerous list of candidates for commissions or warrants, such as the service of these United States may require from time to time; showing, specifically, how far the honor and advantage likely to result therefrom has been or is equalized among the citizens of each and all the States; also, what additional laws or regulations are, in the judgment of the Department, wanted to enable the country to get rid of such as have been received into the service, and are waiting orders, from a knowledge of their disqualification to be trusted in the service, although their conduct may not have been such as properly to subject them to be court-martialed; also, the number of such officers and midshipmen now known to be in the service; and whether those reported as waiting orders are on whole or half pay," has now the honor to present the following report:

The resolution is understood to make four inquiries:

1st. "What rule has been adopted, in the selection of candidates for commissions or warrants, so as to equalize the honor and advantage of the appointments in the navy among the several States; and how far the same have been equalized?"

2d. "How many officers and midshipmen are now known to be in the service, and are waiting orders, from a knowledge of their disqualification to be trusted in the service, although their conduct may not have been such as properly to subject them to be court-martialed?"

3d. "What additional laws or regulations are, in the judgment of the Department, wanted to enable the country to get rid of such?" And,

4th. "Whether those reported as waiting orders are on whole or half pay?"

Previous to the 3d January, 1826, there were not satisfactory documents to show to which State the several navy officers belonged. At that date a circular letter was addressed to each, requiring him to inform the Department in what State he was born, from which appointed, and of which a citizen. Similar letters are sent with new appointments; and the answers received are the guides in preparing the annual registers, in which those circumstances are stated. To these registers reference is made for the number of officers in the several States and Territories when they were printed. The last register, which was sent to Congress at the commencement of the year, contains an answer to so much of the first inquiry as relates to the *equality* between the States, in the "honor and advantage" of the appointments. There is also added to this report a paper, marked A, which exhibits, at one view, the number of commissioned officers and midshipmen in each State. It shows that the officers of high rank belong principally to the Atlantic States,—Massachusetts, Rhode Island, Connecticut, New York, New Jersey,

Pennsylvania, Delaware, Maryland, Virginia, and South Carolina, which is to be accounted for by two facts: 1st. That several of the States, now in the Union, had not a separate existence when these appointments were made; and 2d. That there were, at that period, very few, and, in some instances, no applications from several of the States. An equality in officers of those ranks, among the States now composing the Union, was therefore impracticable. Such equality can exist only in the lowest grade—that of midshipman. It would neither be just nor expedient now to create it, in the whole number of officers, by making all appointments from States in which there is a deficiency, until each shall have as many as its relative present population would demand.

Such a course would reward those who did not seek the service in times when the navy was a less popular resort for our citizens than it is at this day, and would, when those now appointed have risen to the highest grade, create the same inequality in their favor which now exists against them, an equality which neither policy nor justice requires should be made. It has not been the desire, therefore, to render the States equal in the whole number of officers, but in midshipmen only; and the rule adopted has been to make the appointments in proportion to the representation of the States in the two Houses of Congress. This rule has been adhered to as closely as circumstances would permit. By paper B, which is annexed, it will appear how far the effort has been successful, and which States have more, and which have less, than their proportion.

Several appointments will necessarily be made in a few weeks, which will lessen the inequality, and leave not more than four or five of the States deficient in their number. In a short time entire equality will be created; after which, unless a different rule shall be established by legislative authority, appointments will be made in exact proportion to the representation in the two Houses. But it is probable that this rule will not operate so as to keep up an exact equality in the officers: for experience has proved that those who are appointed from the interior, and far from the Atlantic, do not continue as permanently in the service as those whose residence and friends are on the seaboard; and, therefore, although as many appointments may be made, as many officers will not remain in the service from the interior States.

The consequence, however, will be that those which furnish the most persevering officers will have, eventually, the greatest number.

It is proper to remark that the aggregate number of four hundred was taken as the amount by which the calculation was made. This is greater than the average for several years past, but will, probably, fall somewhat below the number which will be in service hereafter. The remainder, however, it is thought just not to subject to the rule of geographical appointment, but to leave for general distribution, with a view to meet strong and urgent cases, and claims arising from public service and other causes. Such cases every one must be aware will sometimes occur, and it would be an unwise dispensation which would forbid the Executive to gratify them.

It is also proper to state that regard had not been had to congressional districts, so as to give one to each. This was formerly impracticable, because the Department has not been informed from what districts appointments were made; nor is it the case in one of twenty applications now made, that the residence of the applicants, as to congressional districts, is stated. Besides, these divisions of territory are arbitrary and changing, and the individual selected may be in one district this year, and in another the next. All, therefore, that has been desired, is to know the State, and the general portion or division of the State, from which the appointment is made; and it is believed that this is the true rule, both as a matter of justice and policy; that any other would injuriously limit the Executive discretion, and prevent the selection of the best materials for the service; a service which cannot always be well performed by some, who might satisfactorily serve the public on the land.

It is true that in some portions of the several States there are many more naval officers than there are in other portions. This has arisen from various causes: from the want of candidates in some, there being districts from which, it is believed, no application has ever been made; from the character of the candidate—for a person of less, would not be preferred to a person of more promise, merely because he came from a particular district; and also, among other causes, probably from the proximity to the seat of government, by which the citizens were induced to apply when others did not.

The adjoining congressional district, composed of Anne Arundel and Prince George's counties, is an example of this. There are from that district not less than twenty officers of the navy and marine corps, when, by its population, it is not entitled to more than three or four. This great inequality it will be the business of the Department to correct.

The average appointments for the last four years have been a little more than sixty; which would allow one to each congressional district about every four years, or to each State as many, in four years, as it has representatives. In Virginia, for example, twenty-four in four years, or six in each year.

More than this proportion has been given, and will continue to be given, to the States which have less than their share, until they are brought to the same condition as the rest.

From the preceding statement, it appears that the rule of the Department is designed to equalize, as speedily as circumstances will permit, the number of midshipmen in the several States, and then to make appointments from them, in proportion to their representation in Congress, without regard to the number which may remain in the service.

In answer to the second inquiry, it is respectfully suggested that the disqualification of officers to perform duty may arise from sickness, from want of capacity and experience, and from bad habits. Several are now on leave of absence, from the first cause, and in such a service there must be some such at all times; in most instances the sickness being produced by the very duties which they have performed. Want of capacity and experience may operate to prevent the employment of an officer in certain duties, while he is perfectly prepared and competent to discharge others; and he may be unemployed, because the services for which he is best fitted may not be required at the time. This seldom operates so as to prevent the employment of many, and of none for a long period. Bad or intemperate habits are doubtless a decisive disqualification; but of these the Department can be informed only *officially*. It would be an injustice, against which every citizen of the republic would protest, if the Department should act upon rumor in such cases, and punish or dismiss the accused. Whenever information is received, on which reliance can be placed, that an officer is intemperate, or has been intoxicated while on duty, no hesitation is felt in causing him to be tried. On this point great rigor has been manifested, and not a few have been compelled to leave the service within the last three years; more, probably, than at any former period of our naval history. It is due, however, to justice, to declare explicitly, and it is done with more

than ordinary gratification, that no corps of officers of equal extent, in this or any other country, has, probably, ever been more exempt from disqualifying habits than are the navy officers at this moment. Intemperance is regarded not merely as dangerous, but as disgraceful. Nor have there ever been fewer officers incompetent from any cause to discharge their duties. It is not, however, intended to convey the idea that there are none such. They are, nevertheless, few; and it is the duty of the Department, when their incompetency can be established, from any cause which impeaches their character as officers, to remove them as an unnecessary burden on the public; a duty which, it is believed, has not heretofore been neglected. It will readily be perceived that the Department is not able to state how many are disqualified, or to give a more definite answer to this part of the resolution.

It is not to be inferred that all who are noted in the register as waiting orders, or on leave of absence or furlough, at the time it was printed, are unfit to do duty, nor that they are still unemployed. Changes are constantly taking place, and what is true of the occupation of the officers to-day will not be true to-morrow. Of those whose situations and duties are mentioned in the register, four are now under suspension; three have been cashiered; five have resigned; about twenty are sick; two hundred have returned from long cruises in the North Carolina, United States, and other vessels; seventy-five have been ordered to duty; and sixty-eight were waiting for examination, some of whom have been examined and promoted, and others are now in active service. Some of the most useful and valuable officers are occasionally unemployed for short periods. Nor is it possible, in any service of any kind, that this should not be the case. It has always been deemed just that officers, when injured in health by the duties they have performed, should have leave of absence, to seek its restoration; and that those who have been constantly occupied for years, at a distance from their home and friends, should be permitted to see them, and pay some attention to their private interests. These and other causes will uniformly create what is an unavoidable necessity, that one-fourth or one-fifth should not be actively engaged in duty.

In reply to the third inquiry, it is remarked, that the best and safest mode "to get rid of" such officers as are "disqualified" by bad habits, is to render the organization of the navy, and the rules for its government and for the trial of offences, as plain, explicit, and efficient as is practicable. There are many defects in the system, as it now exists, which not only impede rigid discipline, but tempt to incorrect conduct, and render its punishment difficult. It does not seem necessary here to detail the views of the Department respecting the proper organization of the navy, or the code of criminal laws and regulations by which it should be governed. They have been repeatedly suggested in reports, to which reference is respectfully made, and especially to that presented to the Senate on the 12th January, 1828.

With useful rules, and tribunals wisely constituted to enforce them, there can be no serious difficulty in keeping the service free from unworthy members. Without them, no energy, within the pale of the law, can accomplish it fully. When a proper system shall be provided by the wisdom of Congress, it will be the fault of the administration of the Department if any just complaint should exist upon this subject.

It is known to Congress that many regulations have been made, and are now in operation, to prevent as far as possible incompetent and unfit persons from entering the service, or for expelling them after they shall have entered it.

None are appointed midshipmen who are not within 14 and 20 years of age, and in whose favor there is not satisfactory evidence of a sound constitution, correct habits, and good English education. It is contemplated to limit hereafter the age of admission to eighteen.

For the first six months in active service at sea, they are strictly on trial, and, unless their conduct be correct, and they give promise of usefulness, they do not receive warrants, but have permission to retire. This affords the first opportunity of relieving the service of such as are not likely to do it benefit. When appointed, they are mere boys, generally without experience or skill, or well established habits and character. They are not, therefore, regularly commissioned officers, but have warrants. Within the last year, a general regulation was published, which provides that their examination shall take place after they have been three years at sea, and five in the service. This examination is rigid, and those unfit, from their habits or ignorance, cannot pass it. Failing once, a second opportunity is offered, and upon a second failure, they are dismissed or permitted to resign. Having passed, they receive a new warrant, and their pay is increased until the public interest permits their promotion. It may be confidently said, that no general regulation has ever produced better effects upon the industry, habits and intelligence of any class of officers; and the result will be that, in the course of a few months, no midshipman will be in the service of older date of warrant than 1820. This examination affords a second opportunity to relieve the public from those who are unfit for advancement to the higher grades. It is not very probable, under these arrangements, that improper or incompetent persons will pass the ordeal, and become commissioned officers. Thus far, we seem to have all the necessary guards against the admission of such as are described in the resolution. But it may, and sometimes does happen, that officers, once commissioned, become careless, both in regard to their moral character and deportment, and to the acquisition of knowledge and skill in their profession. A man may be eminently qualified to enter the rank of lieutenant, and yet may not be fit for promotion to a higher grade when the service requires it. Another and a rigid test ought to be provided, of which the officers should have full warning, as well as time and opportunity to prepare for it. Such a test will be found in an examination conducted on proper principles, both as to character and skill; and however unpleasant it may be in the first instance, yet, when established, and the officers have had sufficient opportunity to be prepared, it cannot be doubted that it will produce a beneficial effect on the habits and industry of all. It will be more likely, than any other mode, to prevent the exercise of undue partiality and favoritism, both in the officers who are in command, and the Department which recommends for promotion.

The effect of these examinations has been tried, not only in the case of midshipmen, but in another most important class of officers. It was formerly the practice to appoint surgeons and surgeons' mates upon general recommendations. The Executive, as might be supposed, was often grievously deceived in the qualifications of those whom it selected, and consequences of a painful kind not unfrequently resulted to our officers and seamen.

In the month of May, 1824, the Department resolved to establish a board of old and skillful surgeons, for the examination of those who should apply for the appointment of surgeon's mate, or for promotion as surgeon, and to recommend to the President no one who had not submitted to an examination, and been declared, by that board, to be qualified for the place which he sought, by his talents, acquirements, and character. Such a board has, from time to time, been constituted, whenever appointments or promotions

were necessary, and the result has been most gratifying. The character of the corps has been elevated, and now contains men inferior to none of their age in merit and acquirement.

In answer to this third inquiry, then, it may be said that the object will be best attained by providing a proper organization of the navy; a system of rules and regulations, with well constituted tribunals for the trial and punishment of offenders; and by examinations, which will prevent those "disqualified" from being advanced in the service.

In reply to the fourth inquiry, it is observed that all officers on temporary leave of absence from duty, or waiting orders, are regarded as coming within the description in the law, "under orders for actual service," and receive full pay. Those on furlough receive half their monthly pay. This subject, and the reasoning upon it, have been heretofore presented to Congress, and need not now be repeated.

All which is respectfully submitted.

SAMPL L. SOUTHARD.

The SPEAKER of the House of Representatives.

No. 360.

[1ST SESSION.]

ANNUAL REPORT IN RELATION TO THE NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 14, 1828.

NAVY DEPARTMENT, *March 13, 1828.*

Sir: I have the honor to transmit the annual report in relation to the navy pension fund, prepared in compliance with the tenth section of the act of the 23d of April, 1800, "for the better government of the navy of the United States," and consisting of the following documents, marked—

- A. List of invalid, widow, and orphan pensioners, in each State, and the amount allowed to each.
- B. Abstract of warrants drawn by the Secretary of the Navy, from 1st of January to 31st of December, 1827.
- C. Statement of bank stocks belonging to the pension fund.
- D. Account of the Treasurer of the United States as agent for the Commissioners.
- E. Statement of the funded debt of the United States, belonging to the fund.

I have the honor to be, very respectfully, &c.,

SAMUEL L. SOUTHARD.

The SPEAKER of the *House of Representatives.*

A.

List of naval pensioners on the 1st January, 1828.

B.

Abstract of warrants drawn by the Secretary of the Navy on the Treasurer of the United States, on account of the navy pension fund, from the 1st January to the 31st December, 1827.

Date.	No.	In whose favor drawn.	Amount.
March	314	The president of the Branch Bank of the United States, Cincinnati, Ohio, to pay pensioners	\$234 00
April	315	Burwell S. Randolph, late midshipman, for his pension from 1st January, 1821, to 31st December, 1826	396 00
May	316	Benj. Homans, to purchase United States stocks	135,000 00
June	317	The president of the Cumberland Bank, at Portland, Maine, to pay pensioners	600 00
	318	The president of United States Branch Bank, Portsmouth, N. H., to pay pensioners	250 00
	319	The president of United States Branch Bank, Boston, to pay pensioners	3,000 00
	320	The president of United States Branch Bank, New York, to pay pensioners	3,500 00
	321	The president of United States Branch Bank, Philadelphia, to pay pensioners	2,000 00
	322	The president of United States Branch Bank, Baltimore, to pay pensioners	2,000 00
	323	The president Branch Farmers' Bank, of Delaware, New Castle	50 00
	324	The president of United States Branch Bank, Hartford, Conn., to pay pensioners	500 00
	325	The president of United States Branch Bank, Providence, R. I., to pay pensioners	200 00
	326	The president of United States Branch Bank, Cincinnati, Ohio, to pay pensioners	250 00
	327	The president of United States Branch Bank, Norfolk, Va., to pay pensioners	700 00
	328	The president of United States Branch Bank, New Orleans, La., to pay pensioners	250 00
	329	The president of United States Branch Bank, Savannah, Georgia, to pay pensioners	120 00
	330	The president of United States Branch Bank, Charleston, S. C., to pay pensioners	100 00
	331	George Macdaniel, agent, District of Columbia	2,200 00
	332	Thomas Tudor Tucker, for purchase of stock	7,000 00
December . .	333	The president of United States Branch Bank, New York, to pay pensioners	9,000 00
	334	The president of United States Branch Bank, Boston, to pay pensioners	3,000 00
	335	The president of United States Branch Bank, Philadelphia, to pay pensioners	2,000 00
	336	The president of United States Branch Bank, Baltimore, to pay pensioners	2,200 00
	337	The president of United States Branch Bank, Norfolk, to pay pensioners	600 00
	338	The president of Cumberland Bank, Portland, Me., to pay pensioners	600 00
	339	The president of United States Branch Bank, Portsmouth, N. H., to pay pensioners	200 00
	340	The president of United States Branch Bank, Hartford, Conn., to pay pensioners	500 00
	341	The president of United States Branch Bank, Providence, R. I., to pay pensioners	100 00
	342	The president of United States Branch Bank, Savannah, Georgia, to pay pensioners	120 00
	343	The president of United States Branch Bank, Charleston, S. C., to pay pensioners	200 00
	344	The president Farmers' Bank, New Castle, Del., to pay pensioners	50 00
	345	George Macdaniel, agent, District of Columbia	2,075 00
	346	Thomas Tudor Tucker, for the purchase of stock	5,500 00
			\$184,495 00

C.

Statement of bank stocks belonging to the navy pension fund.

	Nominal am't.	Amount of cost.
Eight hundred and ninety shares Columbian Bank stock	\$89,000 00	\$95,902 60
Ninety shares Columbian Bank stock	3,600 00	3,600 00
Seven hundred shares Washington Bank stock	14,000 00	14,260 00
Six hundred shares Union Bank stock	15,000 00	15,340 50
	\$121,600 00	\$129,103 10

The amount of the United States stocks paid off since the last report has been reinvested in United States stock for this fund, as will be seen by the register's report herewith.

JOSEPH NOURSE, Register.

TREASURY DEPARTMENT, Register's Office, February 20, 1828.

* Paid off on the 1st July, 1827.

20TH CONGRESS.]

No. 361.

[1ST SESSION.]

ON THE EXPEDIENCY OF SENDING TWO ADDITIONAL SLOOP-OF-WAR TO THE MEDITERRANEAN SEA, FOR THE SUPPRESSION OF PIRACY BY THE GREEKS.

COMMUNICATED TO THE SENATE MARCH 17, 1828.

SENATE CHAMBER, *March 11, 1828.*

SIR: The Committee of Finance have again had under consideration the subject of appropriations for an addition to the naval force in the Mediterranean. They understood from you that none of the smaller sized vessels-of-war were disposable; and the report of the Commissioners of the Naval Board states that it would require two sloops, in addition, to ensure constant convoy from Malta to Smyrna and other ports, and on their return. That force would create an annual expense for stores and incidental expenses of \$——. The committee did not offer an appropriation in the annual bill, as well because they had not come to any definite conclusion, as that it might have tended to a delay of that bill. They wish, before they finally decide, to know from you whether, under all the circumstances, additional force is *indispensable*. They are informed by you that the whole force for the Mediterranean is one ship of the line, one frigate, and three smaller vessels. They submit whether, with officers of such known activity, those three, and occasionally the frigate, could not give ample convoy for such a short distance, provided the three were employed in that service, and that only. They also submit whether an understanding could not be had with the British admiral on that station, for the employment of two British vessels to grant mutual convoy; you will perceive that the committee wish to avoid any additional expenditure unless indispensably necessary. Your early answer will oblige

Your obedient servant,

S. SMITH.

HON. SAMUEL L. SOUTHARD, *Secretary of the Navy.*NAVY DEPARTMENT, *March 17, 1828.*

SIR: I have had the honor to receive your letter of the 11th instant, on the subject of applying for an addition to the naval force in the Mediterranean.

Since my last note to you, on the 11th instant, I have received public and private letters, from which I enclose short extracts. You will perceive that they relate to the existing state of piracy there, and contain some speculations as to the future. There is, unquestionably, at this time, much danger to our commerce from piratical depredations. The continuance of the danger will depend very much on the course of the allied squadrons, and the diligence and energy of our own vessels. The situation of the Greeks, both on the continent and the islands, is such as to drive many of them to piracy, and to tempt the unprincipled of other nations to seek and use their flag to cover their depredations. Nothing but the presence of a force which they dread can intimidate and control them.

I have no peculiar means of judging of the future purposes of the allied squadrons. I *infer*, however, from the best information which I can procure, that their efforts will not be such as effectually to repress the evil. Our own officers will do all that their power can properly accomplish. Full reliance is placed on their zeal and activity; and renewed instructions on the subject have been given. But the number of our vessels is too small to watch the numerous positions where pirates may resort, and from which they may issue to carry on their work. I do not, therefore, believe that there can be entire safety to our merchant vessels, except by means of convoy. For convoy, the number of our vessels is so small, that the delay in waiting for them, and the danger to be met in reaching their place of rendezvous and departure, would injuriously affect our commercial operations. To entire security from interruption, therefore, an addition is "indispensable."

An understanding for mutual convoy, such as that suggested in your letter, has, in some instances, existed; and, if it be desired, can again be attempted. It will, for many months, however, be unknown and uncertain whether it can be effected; and, in the meantime, uncertainty and anxiety will prevail, and serious losses may be encountered by our merchants. I do not doubt, upon the whole, that it would be a wise and beneficent provision which would enable the Department to send two additional sloops as soon as they could be prepared.

I am, very respectfully, &c.,

SAM'L L. SOUTHARD.

HON. SAM'L SMITH, *Chairman of Committee on Finance, Senate of United States.*

Extract of a letter from Captain D. T. Patterson, commander of the U. S. ship Constitution, to Commodore W. M. Crane, dated—

SMYRNA, *September 27, 1827.*

Herewith I do myself the honor to enclose copy of a letter from Captain Booth, received on the 23d inst., who will, I hope, succeed in recovering the cargo of the Cherub, which vessel, with the brig Rob Roy, of Boston, arrived here on the 23d inst., under convoy of the Porpoise, which vessel I had sent to Milo to look for American vessels, believing from the information received that there would be some there awaiting a convoy, the Lexington having been detained by weather at Tenedos.

The Mystic, mentioned by Captain Booth, foundered while in tow of the Porpoise.

On the 24th, with a fresh northeast wind, the Warren sailed, having under convoy five American brigs; and as I had learnt that suspicious looking vessels had been seen cruising out of sight of land, west

of Mattapan and Cerigo, I directed Captain Kearney to run his convoy one to two hundred miles westward, and not to leave them in a calm or very light airs. As the wind has continued fresh from northeast, he is, no doubt, beyond the Arches. Another convoy of the same number of American vessels, being all now in this port, will sail about the 5th of next month under convoy of the Porpoise, or the Lexington should she arrive; Captain Kearney being directed to relieve Captain Booth after discharging his convoy.

Should the cargo of the Cherub not be restored, I shall feel somewhat at a loss what course to adopt. No impression can be made upon Carabusa by the force I have, except by blockade, and that cannot be rendered effectual from the situation of the place; I shall therefore be much tempted to make reprisals.

Extract of a letter from Commodore W. M. Crane, commanding U. S. naval forces in the Mediterranean, to the Secretary of the Navy, dated—

PORT MAHON, December 5, 1827.

I forward copies of communications made to me by Captain Patterson and Lieutenant Cooper, by which it appears that piracy has not lessened in the Archipelago. The officers and crew of the Porpoise have been successful in destroying a number of pirates who had captured one of Lieutenant Cooper's convoy. The severe chastisement they received may render them more cautious for the future. Several of our merchantmen have been robbed, notwithstanding all the vessels of the squadron (except the Java) were left for their protection; and there are numerous cruisers belonging to other nations.

The islands of the Archipelago afford secure retreats and shelter to the pirates, and in calms they make use of fast rowing boats. It is to be hoped that the victory of the allies at Navarino will secure the emancipation of Greece, and induce the people to resort to honest courses.

Extract of a letter from Lieut. Benj. Cooper, commanding U. S. schooner Porpoise, to Commodore Crane, dated—

MAHON, November 19, 1827.

I have also to inform you that on my way down from Smyrna with a convoy, one of them, an English brig, was attacked in the Doro passage, on the night of the 15th October, in a calm, by 200 Greeks. They fired several rounds of musketry into her, when, seeing it, I immediately hoisted out our boats, manned them with 40 men. Lieutenants Goldsborough, Carr and Manning, and Midshipman Wilson, had each a boat. Owing to the darkness of the night, and the noise made by the pirates in towing the brig towards Andros, they did not discover our boats until they got within half pistol shot, when our men gave three cheers and fired into the caiques. They immediately cast off, and two pulled for Negropont and one for Andros. Three of our boats gave chase to the latter and continued firing into her for three-quarters of an hour, within pistol shot. Lieutenant Carr, with one midshipman and four men, finding he could not keep up, returned to the brig and there found forty pirates. They had jumped overboard when our men cheered, in hopes of reaching their boats, but not succeeding, they then attempted to regain possession of the brig. Nearly all these men were put to death by this boat. The affair was conducted by Lieutenant Goldsborough with great judgment, and the officers and men acted with great spirit on the occasion. Notwithstanding the return fire from the Greeks, I am happy to say none of our men were injured. An Englishman was wounded by the Greeks after they boarded, and two days afterwards died on board this vessel.

Three American brigs parted convoy off Scio, and one was robbed of a large part of her cargo; another was abandoned by her captain and crew before a Greek got on board; the third escaped.

Copy of a letter from Master Commandant B. W. Booth to Captain D. T. Patterson, dated—

MIL0, September 19, 1827.

Sir: On my arrival here, I fell in with the American brig Cherub, that was captured some few days previous by a piratical vessel between Cerigo and Candia, and carried to the latter place, where the whole of the cargo was taken out by boats employed for that purpose, and landed. In consequence of this circumstance, I have been extremely anxious to proceed without delay off Candia, with the hope of yet recovering some part of the cargo, and of being able to destroy the pirate, as he is said to make that place his rendezvous. I have now to report to you that after having communicated with Lieutenant Commandant Cooper, whom I fell in with off this harbor on my way down, and understanding from him that he had been directed to take under convoy for Smyrna any American vessels bound there, I left the Cherub with directions to wait his return from Napoli de Romania. Meeting, however, with head winds and every appearance of thick weather, I determined to run in again and anchor. I have to congratulate myself that I did so, for the next morning I was informed that there was a suspicious-looking boat in the harbor, offering sugar, coffee, and other articles for sale. I immediately ordered her to be boarded and overhauled, and found, as you will perceive by the enclosed papers, that the principal part of the cargo consisted of the identical goods which had been taken from the Cherub. That claimed to be American, together with as many of the crew as we were enabled to apprehend, I have taken on board this ship. The vessel, with the articles not claimed to be American property, with the exception of the arms and ammunition I found on board, I send with the Cherub to await your disposal.

Extract of a letter from Master Commandant Benj. W. Booth, commanding the U. S. ship Lexington, to the Honorable Secretary of the Navy, dated—

SMYRNA, December 11, 1827.

The frigate Constitution, Captain Patterson, sailed on the 17th ultimo for Port Mahon, where he expected to join the commodore, leaving me orders to remain in the Levant, with this ship and the Warren, for the protection of our commerce during the winter, which duty we have been previously engaged in for several months past, and notwithstanding the greatest vigilance, I regret to say, owing to the increased number of pirates, many vessels have been robbed of valuable cargoes.

Extract from the official report of the cruise of the United States ship Warren, under command of Master Commandant Lawrence Kearney.

September 25. Sailed with a convoy of American vessels from Smyrna, which we separated from on the 28th, two hundred miles westward of Cerigo.

October 4. Off Carabusa captured a piratical boat with fourteen men and one boy. Same day captured a brig under the Greek flag, pierced for sixteen guns, bound into Carabusa.

From October 4 to 24. Cruising from Cape Matapan to Carabusa, touching at Milo for convoy occasionally.

October 25. Off Milo; heard of the robbery of American brigs Rob Roy and Cherub. Same day chased a piratical ten-gun brig belonging to Carabusa and sunk her at the Island of Argenteire, crew making their escape into the mountains. Cut away her masts, and stripping them of sails and rigging left her under water.

October 28. At Syra found the Cherub and took possession of her. That evening the U. S. ship Lexington, under the command of Lieutenant Breese, arrived, (Captain Booth being sick in Smyrna;) assumed the duties pointed out in the instructions of Captain Patterson, addressed to Captain Booth, and shown me by Lieutenant Breese; proceeded to Miconi, leaving the Cherub in possession of the Lexington. On the 29th, between Tino and Miconi, fell in with the Austrian brig Silence, robbed of everything; towed her into Syra and left her in charge of the Lexington.

October 30 and 31. Cruising round Miconi captured a large tratta (a piratical boat), capable of rowing forty oars.

November 1. Came to in the harbor of Miconi, and on this and the succeeding day recovered some sails and property taken from the Cherub, and two cases of opium taken from the Rob Roy, also the sails and rigging of the brig Silence, before mentioned. Four men were brought off by the inhabitants and one taken by us in the mountains, accused of piracy. Took possession of a boat belonging to the pirates living in this town, which we afterwards burnt.

November 7. Returned to Syra, and restored the plunder belonging to the Cherub, and the sails and rigging of the Austrian brig Silence. The Lexington and Cherub sailed for Smyrna. Same evening got under way, and sent the boats under Lieut. Hudson round Andros.

November 9. Boats returned, bringing off one piratical boat, and having burnt another in a small bay near the south end of Andros.

Until November 14. Cruising round Jura and Andros; the people of Andros sent off a boat, said to belong to pirates; found on board of her a twelve-pound carronade, and tools with "B. Cherub" marked on the handles; this boat is one of those which robbed the Cherub.

November 18. Arrived at Milo, and on the 27th the American brig Sarah and Esther arrived from Boston.

November 30. Got under way with the Sarah and Esther, and six other vessels, for Smyrna.

December 6. Arrived at Smyrna.

Extract of a private letter, dated—

SMYRNA, December 12, 1827.

The system of piracy here is as well established as any other system or any other pursuit.

Piracy has "Egina," the present seat of the Greek government, for its fountain head. Here, under the authority of a personage who signs himself secretary, or clerk, a great number of commissions are issued to brigs, schooners, and small boats, or anything which presents the *price of the signature* into his hands. Since, however, the destruction of the Turkish fleet, the allied powers have ordered the commissions to be called in and canceled. It, therefore, must reasonably be expected that the great number of Greek sailors who will be thrown by this measure suddenly out of employ and deprived of that commission which has so long legalized their acts of piracy, will now assume the undisguised character of pirates in smaller vessels, in the boats which can with impunity commit depredations, as experience daily informs us.

Syra is one of the principal places of deposit for plunder—a great deal of which is sold openly in the market; from thence it goes to Egina, under the Greek, or Ionian flag; and some, under the latter, goes even to Smyrna, where I have traced the principal pirate agent of Andros.

Each of these Greek isles have a man or two of this kind, an agent, or consul as they sometimes are termed, who owns the pirate boats and disposes of the plunder, holding forth encouragement to the poor Greeks they employ.

How far this system will be carried, it is impossible to conjecture. Cruisers from Carabusa, a piratical place at the west end of Candia, have extended their trespasses to Sicily, and next summer I have no doubt the Greek pirate will be seen off the rock of Gibraltar, if success does not attend him before reaching that distant point.

20TH CONGRESS.]

No. 362.

[1ST SESSION.]

ON CLAIM OF THE OFFICERS AND CREW OF THE BRIG SYREN TO PRIZE MONEY ON ACCOUNT OF THE DESTRUCTION OF THE FRIGATE PHILADELPHIA, AT TRIPOLI, IN 1804.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 18, 1828.

Mr. HOFFMAN, from the Committee on Naval Affairs, to whom were referred the bill from the Senate, entitled "An act to compensate Susan Decatur, widow and representative of Captain Stephen Decatur, deceased, and others,"* and the memorials of Charles Stewart, Robert Thornton, F. C. De Krafft, and Michael Carrol, reported:

That they have examined the subject, and the several memorials and proofs in support of the claim they assert to a participation in the bounty of the government, to be awarded for the destruction of the frigate Philadelphia, in the harbor of Tripoli, on the 16th day of February, 1804. The committee are of opinion that the officers and crew of the brig Syren, on that expedition, did everything that could be asked or expected of American seamen ardently devoted to the service of their country; but, from the nature of the service, and the time and manner in which the destruction of that frigate was effected, did not so participate in its destruction as to require that the said bill from the Senate should be so amended as to make the memorialists, as officers of the brig Syren, and her crew, participators in that bounty.

The committee, therefore, report that bill, without amendment, and recommend the following resolution:

Resolved, That the prayer of the said memorialists ought not to be granted.

To the honorable the Senate and House of Representatives of the United States of America:

The memorial of Charles Stewart, on behalf of the late officers and crew of the United States brig Syren, respectfully sheweth:

That he has seen, a few days since, for the first time, an act now depending before your honorable body, "for the relief of Susan Decatur and others," the object of which is to make compensation to the officers and crew of the "ketch Intrepid," for the capture and destruction of the frigate Philadelphia, in the harbor of Tripoli, in the month of February, 1804.

Your memorialist, in justice to the officers and crew of seamen and marines under his command on that occasion, on board the United States brig Syren, thinks it to be his duty to lay their claim before you, for a fair and usual participation in the fruits of that enterprise, in which they shared in the toils and dangers, in the stations and manner allotted to them, fully and faithfully, and aided in promoting and obtaining the success which crowned it. Your memorialist, for himself, and those under his command, disclaims every idea of depreciating the gallantry or success of the officers and crew of the "Intrepid," and particularly of their gallant commander, in this daring exploit, nor does he seek to diminish any reward their country may be disposed to confer on them; and he cannot believe that an attempt to obtain justice for others can be attributed to any such unworthy motive. The enterprise against the Tripolitan frigate, in the harbor of Tripoli, the object of which was to destroy her, was an undertaking under the direction of Commodore Preble, the commander-in-chief on that station. It was also in his discretion to order such a force on this service as he thought necessary for its accomplishment, and to assign such duties and stations to the force employed as to him seemed proper; but it is undeniable that every vessel thus employed and directed must be considered, in fact, as a part of the attacking force, whatever the particular part of the service assigned to it may have been, or whatever the station was, for the performance of that service, by the orders of the commander-in-chief. The command of that expedition was placed under the command of your memorialist (then commanding the brig Syren) by the commander-in-chief; and the "Syren" and "Intrepid" embarked together in that enterprise. For reasons, which may be explained, if necessary, the "ketch Intrepid," being rigged in a manner peculiar to the Mediterranean, was the more proper vessel to effect the surprise of the enemy, and the Syren took her part and station, according to the orders given; but, nevertheless, the "Intrepid" was but a part of the force employed and engaged in this service, and the Syren another part, both deemed essential to its success, by the commander-in-chief, and each acting in its assigned sphere and place. It must be admitted that a confidence given to the crew of the "Intrepid" by knowing that a support was at hand, should it be needed, must have contributed to the happy result; and there seems to be an important misunderstanding of the part taken by the officers and crew of the Syren in the affair, as will more fully appear if the facts and circumstances shall be inquired into. It seems not to be known that, although the Syren was herself anchored in the outer harbor, at the point of the rocks, her boats, the launch and cutter, were actually engaged in destroying the enemy, and keeping them off from the "Intrepid" and frigate Philadelphia, while the officers and men were on board, and preparing to fire the frigate, and in which service a number of the enemy were killed by those on board the Syren's boats. Your memorialist thinks he may confidently assert that, if the frigate Philadelphia, instead of being burnt, had been captured and brought out, there would not be a question that the officers and crew of the brig Syren would have been entitled to a share in the distribution of the prize money; and, as the present contemplated grant is a substitute for the prize money, which, in strictness, was lost by the destruction of the prize, he respectfully conceives the rights of the Syren are the same; that the principle of prize money has been adopted in this case by your honorable body, is manifested by the allotment of a part of the

* For documents relating to the claims of those who served on board of the ketch Intrepid and their representatives, see Nos. 281, 320, 333, and 345.

grant to Commodore Preble, which could be done on no other principle, and shows the grant is not confined to those who actually and personally boarded and burnt the frigate.

Your memorialist begs leave to state the reason why this application to your honorable body has not been made before, and why it is now brought forward. It will be recollected that the subject of the destruction of the frigate Philadelphia, and the reward proper to be bestowed by the government, on account thereof, was before Congress in November, 1804; a resolution was then passed, ordering a sword to be presented to Captain Decatur, and two months' pay to the officers and crew under his command; and your memorialist supposed that the whole subject was then disposed of, and everything done that Congress thought was just and expedient in relation thereto; and your memorialist had no intention or expectation to disturb what had been done. The subject, however, having been revived on the floor of Congress, and an appeal made to the justice of the country by the petition of Mrs. Susan Decatur, your memorialist believed this application would bring the whole subject into view, and that the same measure of justice would be given to all who had similar claims upon it; in which case, he supposed it could not be overlooked that the Syren was also engaged in the enterprise, and that the officers and crew were entitled to their proportion of the reward awarded to it. It was, therefore, with surprise that your memorialist discovered that the act now in its passage confines its benefits to the officers and crew of the "Intrepid," (with the exception of Commodore Preble, who was several hundred miles from the scene of action,) and that those on board the Syren are passed by, as if they had no concern or part in the exploit.

Your memorialist most respectfully prays that the act in question may be so amended as to include, in its benefits, the officers and crew of the Syren, in the just and usual proportions of distribution; and your memorialist, as in duty bound, will ever pray, &c., &c.

CHAS. STEWART.

To the honorable the Senate and House of Representatives of the United States in Congress, now in session:

The petition of Robert Thornton, of the city of Philadelphia, respectfully represents:

That your petitioner was a quartermaster with Lieutenant Stephen Decatur, in the recapture of the Philadelphia frigate, in 1804; and prays your honorable body to grant him an equal dividend of the \$100,000 proposed to be granted to Mrs. Decatur and the crew who volunteered and destroyed the Philadelphia, agreeably to the usual mode of sharing prize money, by the existing laws of the United States, or such equitable distribution as will leave the seamen seven-twentieths and the officers and petty officers the usual shares, according to rank. Your petitioner respectfully states that every man did his duty, and prays that, whatever sum Congress may grant, the dividend may be uniform to the *captors*, or their *heirs*, agreeably to the common practice of dividing prize money.

ROBERT THORNTON.

PHILADELPHIA, February 11, 1828.

To the honorable the House of Representatives of the United States:

The memorial of F. C. De Krafft, formerly a midshipman in the navy of the United States, respectfully represents:

That a bill has passed the Senate of the United States, and is now before your honorable body, to remunerate the officers and crew of the ketch Intrepid, for the capture and burning of the frigate Philadelphia, in the harbor of Tripoli, on the 17th February, 1804.

That your memorialist conceives, should the bill pass your honorable body in its present confined and limited shape, injustice will be done to himself and others, who, if not equally entitled to share the splendor of the achievement acquired by the officers of the Intrepid, are, nevertheless, equally entitled to a portion of the prize money, as recognized by the act of Congress of the United States, dated 22d April, 1800.

That the dispatches, too, which were sent by Commodore Preble to the Navy Department, detailing the brilliant affair of the destruction of the frigate Philadelphia, will, doubtless, prove that both the officers and crew of the brig Syren, (in which your memorialist was a midshipman,) and the officers and crew of the Intrepid, were detailed for the *special duty* which was performed with so much renown to our common country; that your memorialist, not having access to the records of the Department, cannot give date for the same, but would refer to Commodore Preble's letter to Lieut. Com. Decatur, dated Syracuse harbor, January 31, 1804, viz: "It is my orders that you proceed to Tripoli, in company with the Syren, Lieutenant Stewart, enter that harbor in the night, board the Philadelphia, burn her, and make good your retreat with the Intrepid, if possible, unless you can make her the means of destroying the enemy's vessels in the harbor, by converting her into a fire ship for that purpose, and retreating in your boats and those of the Syren. You must take fixed ammunition and apparatus for the frigate's eighteen-pounders; and if you can, without risking too much, you may endeavor to make them the instruments of destruction to the shipping and Bashaw's castle. You will provide all necessary combustibles for burning and destroying ships. The destruction of the Philadelphia is an object of great importance, and I rely with confidence on your intrepidity and enterprise to effect it. Lieutenant Stewart will support you with the boats of the Syren, and cover your retreat with that vessel." This extract demonstrably proves that Commodore Preble conceived it an enterprise in which both the Intrepid and Syren were engaged.

That your memorialist had the honor of serving in every attack made on the town of Tripoli in the month of August, 1804; that he is proud of this period of his life; and that he would be the last that would willingly endeavor to defeat the purposes of reward to the heirs of him who so gallantly and so heroically planned and executed this achievement. But a paramount duty is due to his brother officers, himself, and the crew of the brig Syren; and he should conceive himself wanting in common feeling,

whilst he believes them entitled to a portion of this donation from his country, and being here on the spot at the moment this donation is meting out, were he not to make the representation he has done.

F. C. DE KRAFFT.

FEBRUARY 11, 1828.

The following is an extract from the journal of F. C. De Krafft, taken from the log book of the United States brig Syren, while on board:

“On the 3d February, 1804, the brig Syren left the harbor of Syracuse, in company with the ketch Intrepid; at nine P. M. took the Intrepid in tow; at nine A. M. the hands were mustered, and the intention of the expedition, for the destruction of the frigate Philadelphia, was made known; the crew gave three cheers; we then proceeded on the expedition. February 4th, at eight P. M., cast off the Intrepid; at eight A. M. took the Intrepid in tow again. February 5th, at half-past ten P. M., cast off the Intrepid. February 6th, at one P. M., made signal for the Intrepid to heave to; at half-past six, bore away for the Intrepid; at eight, the Intrepid brought to; midnight, made signal for the ketch to wear; at four, made the same signal; at eleven, sent the boat on board the ketch; quarter-past eleven, the boat returned with Lieutenant Decatur. February 8th, at two P. M., sent Lieutenant Decatur on board the ketch; half-past two, proportioned our sails, in order to keep five miles astern of the ketch; at five, made the town of Tripoli; at eight, sounded in thirteen fathoms; at nine, came to in seven fathoms, with the larboard bower; the land supposed to be three-quarters of a mile distant; it being dark and hazy, could not discern an object by which the precise situation of the brig could be ascertained; got the boats out and sounded, astern, some distance, in six, seven and eight fathoms; and in shore, in four, five, six and seven fathoms; the cutter being much injured, hoisted her up astern; at ten, saw a light, bearing west by north, not far distant; at eleven, it bore northwest by north; answered it by a light on the starboard bow; got in the boats, the wind getting to the northward and increasing, the sea also increasing; the brig rolling gunwales under; got purchases, &c., on the cable, but could not weigh the anchor, after five hours' exertion; several of the men were much injured; the wind and sea still increasing, daylight approaching, the cable was cut, to prevent our being discovered by the enemy; made sail, and stood to northward and eastward; at six, the gale still increasing, Tripoli bore south by west five leagues; at seven, spoke the ketch. February 9th and 10th, the ketch in company; at ten A. M., on February 11th, hove to for the ketch; Lieutenant Decatur came on board. At nine P. M., on February 13th, lost sight of the ketch; made signals; at ten, saw the ketch. February 14th, half-past twelve P. M., Lieut. Decatur went on board the ketch. February 14th and 15th, in company with the ketch. February 16th, half-past two P. M., saw the land on the lee bow, shortened the sail; half-past three, hove to for the ketch; at four, sent nine men on board the ketch, with cutlasses and pistols, &c.; half-past four, boat returned, hoisted her up, and made sail for the land; half-past five, Tripoli bore southwest; half-past nine, light winds; set stay-sails; at ten, called all hands to quarters, and run out the guns; half-past ten, spoke the ketch; at one A. M. called all hands to quarters, run in the guns and secured them; between one and four, standing off and on the land; at eight A. M. the high land near Tripoli bore southwest by west seven leagues. February 17th, at four P. M., saw the town of Tripoli; at half-past six, hoisted out the barge and launch; at seven, Tripoli bore south-southwest nine miles; at eight, Tripoli bore south-southwest five miles; at nine, came to with the stream anchor in twenty-two fathoms; Tripoli bore southwest by south one mile distant; nearly calm; sent the launch and barge to Lieutenant Decatur, with officers and men; half-past ten, Lieutenant Decatur made signal for a reinforcement of officers and men, in boats; about ten minutes after which, the Philadelphia burst in flames, fore and aft; the castle and batteries then commenced a fire at the ketch and the Philadelphia, and in every direction; midnight, fine pleasant weather, weighed anchor and stood to the north and east; half-past midnight, the launch and barge returned, hoisted them in; at one, spoke the ketch, and took her in tow; Lieutenant Decatur came on board; made sail, the town of Tripoli bearing south-southwest two leagues distant.”

To the honorable the House of Representatives and the Senate of the United States, in Congress assembled:

The petition of Michael Carrol, of Maryland, humbly sheweth: That he was second lieutenant on board of the Syren, detached by Commodore Preble to co-operate with the ketch Intrepid, in the burning of the frigate Philadelphia. That the Syren approached within a mile of Tripoli, and detached a portion of her crew, under the command of Lieutenant Caldwell and Midshipman Dorsey, to aid the gallant Decatur and his brave crew in achieving that splendid deed. He prays that he and the crew of the Syren may participate, by a fair distribution, in whatever sum Congress may award for the destruction of that frigate; and he, as in duty bound, will ever pray.

MICHAEL CARROL.

To the honorable Senate and House of Representatives, in Congress assembled:

Mary Preble, of Portland, in the State of Maine, in behalf of herself and Edward Deering Preble, respectfully represents that she is the widow, and the said Edward Deering Preble is the only son and child of Edward Preble, late a post captain in the navy of the United States of America; and that they are the sole legal representatives of the said Edward Preble.

That, within a short time, she has been informed of the pendency of a petition before Congress, made by the widow of the late gallant Stephen Decatur, also a post captain in said navy, in her own behalf and that of others interested, claiming compensation for the frigate Philadelphia, recaptured by said Decatur and his brave associates, and burnt by the order of said Preble, in the war with the government of Tripoli, in 1804.

Knowing, as the said Mary does, that the Government of the United States is never backward to

listen to every well-founded demand, and believing, as she does, that the destruction of the frigate Philadelphia, when in the possession of a barbarous enemy, will never cease to be viewed as a most meritorious and gallant achievement, and those engaged in it entitled to the gratitude and rewards of their country, she is emboldened, at the present juncture, to present her claim, in her own behalf and that of her son, to the wisdom and justice of Congress.

In support of this claim, she respectfully suggests that the command of the squadron destined by the Government of the United States for the war against Tripoli was entrusted by this government to her late husband, and that, at the time when said frigate Philadelphia was destroyed, he was actually in command of said squadron, in the frigate Constitution, and the said Captain Decatur, then a lieutenant, was subject to his orders, and the Intrepid one of the vessels comprising said squadron.

It is far from the intention of your petitioner to derogate, in the least degree, from the merits of that distinguished and lamented officer; nor does she believe that, in doing justice to herself or her son, any such unworthy motive will be imputed to her when she suggests that the enterprise, which terminated so gloriously for the nation and those that carried it into execution, was directed and authorized by the express orders of said Captain Preble, dated January 31, 1804; and it is superfluous to remark that, without the sanction of the commander of said squadron, no such expedition would have been undertaken. And, by a reference to the documents relating to said war, it will be found that the Intrepid was fitted under the immediate inspection of Captain Preble, and dispatched from his squadron, then at the harbor of Syracuse.

It is not for your petitioner to arrogate to her late husband the sole merit of planning said expedition; she deems it sufficient for her to refer to his orders under the above-mentioned date of the 31st January, 1804.

Your petitioner has been advised that, by the law and custom regulating the distribution of prizes, her late husband, as commander of the naval force employed against the Tripolitan government, would have been entitled, if alive, to a proportion of such distribution; and, thus instructed, she feels it her imperious duty, as the guardian of his son and the widow of the deceased, to prefer her claim to such share as, under the circumstances, would have been awarded to him.

In the view which your petitioner takes of this subject, as it respects the commander-in-chief, it is not necessary, in order to a participation in the prize, that he should be personally present in the encounter which terminates in a capture effected by any portion of his command, and in compliance with his orders. Considering, therefore, in every point of view, her late husband entitled to a share of any compensation which may be allowed for the recapture and destruction of the frigate Philadelphia, she respectfully, but earnestly, prays Congress to award to her and her son that proportion to which the late Captain Preble, as commander of the squadron employed against the government of Tripoli, is, on every principle of law and justice, entitled.

MARY PREBLE.

Dated this fourth day of January, 1827.

U. S. FRIGATE CONSTITUTION, *Syracuse Harbor, January 31, 1804.*

SIR: You are hereby ordered to take command of the prize ketch, which I have named the Intrepid, and prepare her, with all possible dispatch, for a cruise of thirty days, with full allowance of water, provisions, &c., for seventy-five men. I shall send you five midshipmen from the Constitution; and you will take seventy men, including officers, from the Enterprise, if that number can be found ready to volunteer their services for *boarding and burning the Philadelphia* in the harbor of Tripoli; if not, report to me and I will furnish you with men to complete your complement. It is expected you will be ready to sail to-morrow evening, or some hours sooner if the signal is made for that purpose.

It is my orders that you proceed to Tripoli, in company with the Syren, Lieutenant Stewart, enter that harbor in the night, *board the frigate Philadelphia, burn her*, and make your retreat good with the Intrepid, if possible, unless you can make her the means of destroying the enemy's vessels in the harbor, by converting her into a fire ship for that purpose, and retreating in your boats and those of the Syren. You must take fixed ammunition and apparatus for the frigate's 18-pounders; and, if you can, without risking too much, you may endeavor to make them the instruments of destruction to the shipping and Bashaw's castle. You will provide all the necessary combustibles for burning and destroying ships. *The destruction of the Philadelphia is an object of great importance*; and I rely, with confidence, on your intrepidity and enterprise to effect it. Lieutenant Stewart will support you with the boats of the Syren, and cover your retreat with that vessel. Be sure and set fire in the gun room berths, cockpit, store rooms forward, and berths on the berth deck.

After the ship is well on fire, point two of the 18-pounders, shotted, down the main hatch, and blow her bottom out. I enclose you a memorandum of the articles, arms, ammunition, fireworks, &c., necessary, and which you are to take with you. Return to this place as soon as possible, and report to me your proceedings. On boarding the frigate, it is probable you may meet with resistance; it will be well, in order to *prevent alarm, to carry all by the sword*. May God prosper and succeed you in this enterprise.

I have the honor to be, sir, your obedient servant,

EDWARD PREBLE.

Lieut. Commandant DECATUR, *Intrepid*.

UNITED STATES SHIP CONSTITUTION, *Syracuse Harbor, January 31, 1804.*

SIR: You will prepare the Syren for a cruise, and be ready to sail to-morrow evening, or as soon as the signal is made.

Proceed, with all possible dispatch, for the coast of Tripoli: the ketch Intrepid under the command of Lieutenant Decatur, with seventy volunteers from the squadron, is ordered to accompany you, to endeavor to effect the destruction of the frigate Philadelphia, in the harbor of Tripoli.

Previous to your approaching so near the coast that the Syren can be discovered from the shore, you are to disguise her, by changing the color of her paint, sending topgallant-masts on deck, rigging in flying-jib-boom, housing guns, shutting in ports, raising quarter-cloths, &c., to give the appearance of a merchant vessel.

I conceive the object in view can be best effected in the night; you will, therefore, keep at a distance from Tripoli until the evening, but not so far but that you can reach the harbor by midnight. The Intrepid being rigged in a manner peculiar to the Mediterranean, probably will not be suspected by the enemy; of course, it will be most advisable to send her ahead, in order that she may stand into the harbor and board the frigate.

I have no doubt but Lieutenant Decatur, with the officers and men under his command, will be able to take possession of and destroy her. As soon as the Intrepid has entered the harbor, you will stand in, and anchor in such a position as you, in your judgment, may think best calculated to afford her assistance in the execution of the main object. Cover her retreat, or destroy any of the enemy's cruisers that may be in the harbor, by sending your boats for that purpose.

You will prepare the necessary combustibles for firing vessels, and be sure that your men are provided with the requisites to put them in operation.

It will be most proper for you to enter the harbor with a westerly wind, as it will ensure you a safe retreat. The destruction of the frigate is of national importance; and I rely with confidence on your valor, judgment, and enterprise, in contributing all the means in your power to effect it.

Whatever may be your success, you will return (if possible) directly to this place.
May the Almighty take you under his protection, and prosper you in this enterprise.

I have the honor to be, sir, your obedient servant,

EDWARD PREBLE.

Lieut. Commandant STEWART, *United States Brig Syren*.

ON BOARD THE KETCH INTREPID, at sea, *February 17, 1804.*

SIR: I have the honor to inform you that, in pursuance to your orders of the 31st ultimo, to proceed with this ketch off the harbor of Tripoli, there to endeavor to effect the destruction of the late United States frigate Philadelphia, I arrived there, in company with the United States brig Syren, Lieutenant Commandant Stewart, on the 7th; but, owing to the badness of the weather, was unable to effect anything until last evening, when we had a light breeze from the northeast. At 7 o'clock, I entered the harbor with the Intrepid, the Syren having gained her station without the harbor, in a situation to support us in our retreat. At half-past 9 o'clock, laid her alongside of the Philadelphia, boarded, and, after a short contest, carried her.

I immediately fired her in the store rooms, gun room, cockpit, and berth deck, and remained on board until the flames had issued from the spar deck, hatchways, and ports; and, before I had got from alongside, the fire had communicated to the rigging and tops. Previous to our boarding, they had got their tompons out, and hailed several times, but not a gun fired.

The noise occasioned by boarding and contending for possession, (although no fire-arms were used) gave a general alarm on shore, and on board their cruisers, which lay about a cable and a half's length from us, and many boats, filled with men, lay around, but from whom we received no annoyance. They commenced a fire on us from all their batteries on shore, but with no other effect than one shot passing through our topgallant-sail.

The frigate was moored within half gunshot of the Bashaw's castle and of their principal battery; two of their cruisers lay within two cables' length on the starboard quarter, and their gun boats within half gunshot on the starboard bow. She had all her guns mounted and loaded, which, as they became hot, went off. As she lay with her broadside to the town, I have no doubt but some damage has been done by them. Before I got out of the harbor, her cables had burnt off, and she drifted in under the castle, where she was consumed. *I can form no judgment as to the number of men that were on board, but there were twenty killed. A large boatfull got off, and many leapt into the sea.* We have made one prisoner, and I fear, from the number of bad wounds he has received, he will not recover, although every assistance and comfort has been given him.

I boarded with sixty men and officers, leaving a guard on board the ketch, for her defence; and it is with the greatest pleasure I inform you I had not a man killed in this affair, and but one slightly wounded. Every support that could be given, I received from my officers; and, as each of their conduct was highly meritorious, I beg leave to enclose you a list of their names. Permit me, also, sir, to speak of the brave fellows I have the honor to command, whose coolness and intrepidity was such as, I trust, will ever characterize the American tars.

It would be injustice in me, were I to pass over the important services rendered by Mr. Salvadore, the pilot, on whose good conduct the enterprise, in the greatest degree, depended. He gave me entire satisfaction.

I have the honor to be, sir, &c.,

STEPHEN DECATUR.

Com. EDWARD PREBLE, *commanding U. S. Squadron in the Mediterranean.*

UNITED STATES BRIG SYREN, *Syracuse Harbor, February 19, 1804.*

SIR: Pursuant to your orders of the 31st January, 1804, we sailed, on the 3d February, in company with the Intrepid, Lieut. Commandant Decatur, and arrived off Tripoli, the 8th inst., having employed ourselves, in the intermediate time, in preparing everything for executing the intended object. At 9 P. M. we anchored in six fathoms water, near the rocks, got out the boats, and prepared them for co-operating with the Intrepid. At 11, we observed the Intrepid, by her light, standing off shore—a very heavy sea from the north; and a strong wind hauling to that quarter, obliged us to get our boats in immediately, and get under way. At 4 A. M., finding it impossible to weigh our anchor, having had the men several times knocked down by the capstan-bars and several much injured, daylight approaching to expose our

designs to the enemy, we cut, and got an offing of ten miles, when the gale and sea increased so much that we could scarcely show any sail, which continued until the 11th. It then abated, and I sent for Lieutenant Commandant Decatur, and we fixed on the following plan for the next attempt, viz: He to proceed in the Intrepid, about five miles ahead of the brig, and anchor, at night, abreast of the eastern rocks that form the harbor, until the Syren got into that station, or her boats had joined him. After midnight, he to proceed, in the Intrepid, to the ship; the boats to keep at a considerable distance astern of him, until he effected a lodgment in the frigate; they were then to board the Intrepid, and reinforce him, or proceed on such other service as he might direct.

We were driven so far to the eastward by the gale, that we did not regain our station off Tripoli until the 15th, when, considering the possibility there was of the Tripolitans having some suspicions of our intentions, I reinforced Decatur with an officer and nine volunteers from the Syren—the necessary arrangements of his men not leaving more than fifty to support him in boarding. We stood into eight fathoms water that night, but could not determine our position, not having seen the town; we were, therefore, obliged to stand off again. On the 16th, at 11 A. M., the Intrepid stood in for the harbor, and when she had got her distance, we tacked and stood after her, with a light breeze from the northward and westward; at dark, we hoisted out the boats and prepared them; at 8h. 30m., P. M., the wind left us, and a light air from the land succeeded; we anchored, with our stream in 20 fathoms water, the town of Tripoli bearing southwest about three miles distant. We immediately dispatched the boats, with 30 men and officers, under the command of Lieutenant Caldwell, who was ordered to proceed to the eastern rocks, where he would find the Intrepid, and to place himself under the command of Lieutenant Commandant Decatur. At half-past 10 the frigate Philadelphia was in a blaze, fore and aft, when the batteries commenced a fire on the Intrepid, as she retreated. At 11, the frigate's tops fell; several of her guns going off, the shot made a considerable rattling in the town. Shortly after, her cables parted, and she drifted under the castle. At 1, A. M., the Intrepid and boats joined us; at 6, the light could still be seen from the deck, we being about 40 miles distant from her.

I have the honor to be, &c., &c.,

CHAS. STEWART.

Commodore EDWARD PREBLE, &c.

WASHINGTON, *February 26, 1828.*

I certify the foregoing to be a correct copy, from the letter-book of commodore Preble, now in my possession.

CH. W. GOLDSBOROUGH.

I have carefully examined the letter book, journal, and order book of Commodore Preble, during his command in the Mediterranean, and state, confidently, that there is no letter from Lieutenant Caldwell to Lieutenant Stewart or any other officer upon the subject of the proceedings of the boats of the Syren, under his command, on the occasion of the destruction of the frigate Philadelphia by Lieutenant Commandant Decatur, in the harbor of Tripoli.

CH. W. GOLDSBOROUGH.

FEBRUARY 27, 1828.

BRIG SYREN, *Syracuse Harbor, February 19, 1804.*

SIR: I have the honor to enclose, for your information, the principal occurrences and observations during our late expedition, in company with the ketch Intrepid, Lieutenant Commandant Decatur, to effect the destruction of the frigate Philadelphia in the harbor of Tripoli, and on the happy termination of that enterprise, I heartily congratulate you. I only have to lament that a junction had not been formed with the Intrepid by the boats of the Syren, under the command of Lieutenant Caldwell, as I make no doubt they would have been able to carry and destroy one or both of the cruisers, laying near the frigate. You will observe by my notes that the boats were dispatched in due season, to meet the Intrepid, agreeably to our arrangements, but circumstances rendering it advisable for Lieutenant Commandant Decatur to enter upon the enterprise much earlier than was intended, the junction with the boats was, consequently, defeated, until after the ship was on fire, and the ketch retreating out of the harbor.

I have the honor to be, your obedient servant,

CHARLES STEWART.

Com. EDWARD PREBLE, *Com. of the U. S. Squadron in the Mediterranean.*

WASHINGTON, *February 26, 1828.*

I certify the within to be a correct copy from the letter book of Commodore Preble, now in my possession.

CH. W. GOLDSBOROUGH.

Extracts from Commodore Preble's official dispatches.

UNITED STATES SHIP CONSTITUTION, *Syracuse Harbor, February 19, 1804.*

SIR: I have the honor to inform you that the United States brig Syren, Lieutenant Commandant Stewart, and ketch Intrepid, of four guns, Lieutenant Commandant Decatur, arrived here last evening from a cruise. They left this port the 3d instant, with my orders to proceed to Tripoli, and *burn the frigate*, late the United States frigate, *Philadelphia*, at anchor in that harbor. I was well informed that her situation was such as to render it impossible to bring her out; and her destruction being absolutely necessary to favor my intended operations against that city, I determined the attempt should be made. I enclose you copies of my orders on this occasion, which have been executed in the most gallant and officer-like manner by Lieutenant Commandant Decatur, assisted by the brave officers and crew of the

little ketch Intrepid, under his command. Their conduct in the performance of the dangerous service assigned them cannot be sufficiently estimated. It is beyond all praise. Had Lieutenant Decatur delayed one half hour, for the boats of the Syren to have joined him, he would have failed in the main object, as a gale commenced immediately after the frigate was on fire, and it was with difficulty the ketch was got out of the harbor. The Syren, owing to the lightness of the breeze in the evening, was obliged to anchor at a considerable distance from the city, which prevented her boats from rendering such assistance as they might have done, had they entered the harbor earlier.

Lieutenant Stewart took the best position without the harbor, to cover the retreat of the Intrepid, that the lightness of the breeze would admit of; his conduct through the expedition has been judicious and highly meritorious. But few of the officers of the squadron could be gratified by sharing in the danger and honor of the enterprise.

In justice to them, I beg leave to observe that they all offered to volunteer their services on the occasion; and I am confident, whenever an opportunity offers to distinguish themselves, that they will do honor to the service. I enclose you Lieutenant Commandants Stewart and Decatur's official communications, with the names of the officers on board the ketch.

With the highest respect, I have the honor to be, sir, your most obedient servant,
EDWARD PREBLE.

Statement of the circumstances attending the destruction of the frigate Philadelphia, with the names of the officers and the number of men employed on the occasion, as laid before the President by the Secretary of the Navy.

On January 31, 1804, Commodore Preble, lying with his squadron in the harbor of Syracuse, gave orders to Lieutenant Charles Stewart, commanding the brig Syren, of sixteen guns, and to Lieutenant Stephen Decatur, jr., commanding the ketch Intrepid, of four guns and seventy-five men, to proceed to Tripoli, and to destroy the frigate Philadelphia, of forty-four guns, then lying in the harbor of Tripoli. Lieutenant Decatur had orders to enter the harbor in the night, board and set fire to the Philadelphia, and Lieutenant Stewart was ordered to take the best possible position without the harbor to cover the retreat.

Under these orders they proceeded immediately to the coast of Tripoli; but owing to very heavy gales of wind that usually prevail there in the winter season, the enterprise could not be undertaken until the 16th of February, when, Lieutenant Stewart having taken the best possible position to effect the object of his instructions, Lieutenant Decatur, at seven o'clock in the night, entered the harbor of Tripoli, boarded and took possession of the Philadelphia.

This frigate, at the time she was boarded, had all her guns mounted and charged, and was lying within half gunshot of the Bashaw's castle and of his principal battery. Two Tripolitan cruisers were lying within two cables' length on the starboard quarter, and several gun boats within half gunshot on the starboard bow, and all the batteries on shore were opened upon the assailants. About twenty men of the Philadelphia were killed, a large boatfull got off, and one man was made prisoner.

After having gained possession of the frigate, Lieut. Decatur set fire to her store rooms, gun room, cockpit and berth deck; and with a firmness highly honorable to him, his officers, and men, they remained on board until the flames had issued from the ports of the gun deck and the hatchways of the spar deck, and they continued in the ketch, alongside the frigate, until the fire had communicated to her rigging and tops.

Lieutenant Decatur did not lose a man, and had but one slightly wounded.

The following is a list of the officers and number of men employed in the destruction of the Philadelphia:

Lieutenant Stephen Decatur, jr.; James Lawrence, Joseph Bainbridge, Jonathan Thorn, lieutenants; Lewis Heermann, surgeon; Ralph Izard, John Rowe, Charles Morris, Alexander Laws, John Davis, Thomas McDonough, Thomas Oakley Anderson, midshipmen; Mr. — Salvadore, pilot. Sixty-two men.

Lieut. Decatur has stated that all his officers and men behaved with the greatest coolness and intrepidity, and Commodore Preble has informed me that Lieut. Stewart's conduct was judicious and meritorious.

Respectfully submitted.

R. SMITH.

CLERK'S OFFICE, HOUSE OF REPRESENTATIVES, U. S., March 11, 1828.

I certify that the above is correctly copied from the original now on file in this office, which was communicated to the House of Representatives by the President of the United States, on the 15th of November, 1804.

M. ST. CLAIR CLARKE, *Clerk of the House of Representatives*

U. S. BRIG SYREN, *Syracuse, February 20, 1804.*

SIR: The enclosed report of Lieutenant Caldwell, who commanded the Syren's boats on the night of the 16th instant, will detail to you more fully the operations of the force confided to him on the occasion of burning the frigate Philadelphia, in the harbor of Tripoli. Although the Syren's boats did not join the Intrepid until she was retreating (and then for the purpose of towing her from under the batteries and out of the harbor), yet you will perceive, by his report, that the boats under his command arrived astern of the frigate, immediately after she was boarded by Lieutenant Commandant Decatur, when, in the absence of orders from that officer, Lieutenant Caldwell took a judicious position, for the purpose of preventing any interruption from the enemy's boats while setting fire to the frigate, in the performance of which service a number of the enemy were destroyed.

I have the honour to be, sir, your most obedient servant,
Commodore E. PREBLE, *Commander-in-Chief, &c.* CHARLES STEWART.

PHILADELPHIA, *March 5, 1828.*

DEAR SIR: Your esteemed favor of the 23d ultimo came duly to hand, and I have delayed its acknowledgment, in hopes that I should be able to procure more documentary evidence on the subject of the Syren's claim. With this view I examined all my papers, but find nothing in the shape of Lieutenant Caldwell's report. That document was enclosed to Commodore Preble. I also applied to Mr. David Caldwell, the brother of the lieutenant, and enclose you his reply.

I herewith transmit to you a letter from Dr. Marshall, who was surgeon of the Syren at the time. I have written to Captain Kennedy, at Norfolk, who was a petty officer on board the Syren, and who, I believe, was on board one of her boats employed in that expedition. Should you deem the enclosed papers of any use to the Naval Committee of the House of Representatives, while the subject is before that committee, I will thank you to enclose them to Mr. Hoffman, the chairman.

I have the honor to be, with the greatest consideration and respect,

Your most obedient servant,

CHARLES STEWART.

To the honorable E. F. CHAMBERS, *Senate of the United States, Washington.*

Letter from Commodore Stewart relative to the recapture of the Philadelphia.

BORDENTOWN, N. J., *December 12, 1826.*

MY DEAR MRS. DECATUR: The reassembling of the honorable Congress of the United States renders it necessary to delay no longer answering your esteemed favor of June last, in which you request me to state such information relative to the burning of the Philadelphia in the harbor of Tripoli as I may possess, in aid of your claims on our country, for the success of that gallant enterprise so ably and honorably performed by your late husband.

I regret that my limited abilities disqualify me from portraying in those glowing colors of which that act is susceptible the gallantry and perseverance with which it was performed by my late friend.

You state that your late husband had given you to understand that the project of burning that frigate at her moorings, and thereby removing a serious impediment to the future operations of the squadron against Tripoli, originated with him. This understanding was perfectly correct; it did originate with your late husband, and he first volunteered himself to carry it into effect, and asked the permission of Commodore Preble, off Tripoli, (on first discovering the frigate was lost to the squadron) to effect it with the schooner Enterprise, then under his command. The commander-in-chief thought it too hazardous to be effected in that way, but promised your late husband that the object should be carried into effect on a proper occasion, and that he should be the executive officer when it was done. It was accordingly effected in the ketch Intrepid, by your husband and seventy volunteers from the schooner he commanded, at great hazard, not only of life or liberty, but of reputation, and in the season most perilous in approaching that coast. The recollection of the difficulties and dangers he had to encounter in that expedition, of which I was an eye-witness, excites more and more my admiration of his gallantry and enterprise; and although the result shed a lustre, throughout Europe, over the American character, and excited an unparalleled emulation in the squadron, in our country alone is where it has never been duly estimated or properly understood.

Courage and great force alone could not have effected it. It was necessary not only to put the smallest possible force to the hazard, but its success depended upon a very small force being used. The genius and mental resources of the executive officer could alone compensate for the want of force and numbers. To these demands your late husband was found fully adequate, and hence the brilliant result. The frigate was completely destroyed in the midst of the enemy, and his retreat effected without the loss of a man.

Accept, my dear madam, the assurance of my highest respect and esteem.

CHAS. STEWART.

Extract of a letter from C. W. Goldsborough, Esq., to the Hon. M. Hoffman, House of Representatives.

WASHINGTON, *March 7, 1828.*

SIR: I this morning received your letter of yesterday's date.

Although I had previously and carefully examined the books and papers of the late Commodore Preble, in search of a report alleged to have been made by the late Lieutenant James A. Caldwell to his immediate commanding officer, Lieutenant Commandant Charles Stewart, detailing the proceedings of the boats of the Syren, detached under his command for the purpose of affording aid and assistance to the ketch Intrepid, in the destruction of the frigate Philadelphia, in the harbor of Tripoli in 1804, yet, since receiving your communication, I have judged it proper to re-examine them; and having done this, I am now enabled, sir, to confirm the result of the first search, and to assure you that there is not, either in the letter books, the order books, the journals, or in any of the papers of the late Commodore Preble, now in my possession, (and I believe I have the whole of them, so far as relates to his command in the Mediterranean) any letter from Lieutenant Caldwell to Lieutenant Commandant Stewart, or to Commodore Preble, or from Lieutenant Commandant Stewart to Commodore Preble, having any relation to such a report from Lieutenant Caldwell; that the only report touching the proceedings of the boats of the Syren on the occasion referred to is the one made by Lieutenant Commandant Stewart to Commodore Preble, dated 19th February, 1804, of which I understand you have a copy.

Having been intimately acquainted with Commodore Preble and with Lieutenant Caldwell, and being, at the time Commodore Preble's reports were received in this country, chief clerk in the Navy Department, it may not be considered irrelative to state that Commodore Preble was particularly careful in having all official letters to and from him recorded in books kept for that special purpose; that although

I saw and read every dispatch from Commodore Preble to the Secretary of the Navy, I have no recollection of his having transmitted any such letter or report; that I always felt deeply interested for Lieutenant Caldwell, and could not have forgotten any circumstance so essentially affecting his fame.

WASHINGTON, March 10, 1828.

SIR: I this morning received your communication of the 8th instant, and have hastened to send the extracts of Commodore Preble's letters therein called for. They will, I hope, prove satisfactory.

It may not be amiss in me to inform you, sir, that Commodore Morris (the Midshipman Morris who, in a spirit of gallant emulation, felt by all the Intrepid's crew, *was the first* to board the frigate Philadelphia) is now here, and if called before the committee would, I apprehend, give such precise information as would remove all existing misapprehensions as to the circumstances attending the destruction of the Philadelphia. He intends leaving Washington on Wednesday next in the steamboat for Norfolk.

It is, I understand, known to you that Doctor Heermann, (surgeon of the Intrepid on the occasion) is also now in the city.

I have the honor to be, very respectfully, sir, your most obedient servant,

C. W. GOLDSBOROUGH.

HON. MICHAEL HOFFMAN, *House of Representatives.*

Extracts of various letters from Commodore Preble, relative to the destruction of the Tripolitan frigate, the Philadelphia, in the harbor of Tripoli, in 1804, taken from his letter book No. 2.

FEBRUARY 19, 1804.

To John Gavino, Esq.:

On the third instant, the brig Syren, Capt. Stewart, and the ketch Intrepid of four guns, fitted for the purpose, and commanded by Capt. Decatur, with seventy volunteers from the squadron, sailed for Tripoli, with orders to burn the frigate, late the United States frigate Philadelphia, at anchor in that harbor. On the night of the 16th instant Capt. Decatur entered the harbor of Tripoli with the ketch, laid her alongside the frigate in a gallant and officer-like manner, boarded and carried her against all opposition. He then set fire to her in all her store rooms and officers' berths and left her in a blaze, in which she continued until she was totally consumed. He had none killed and only one wounded. The Tripolitans lost upwards of twenty killed on the decks; one boat load made their escape, and the remainder leaped into the sea. The number on board could not be ascertained, but was considerable. She was moored close to the batteries, with all her guns loaded, and two of their corsairs, full of men, lay within half musket shot of her.

FEBRUARY 19, 1804.

To Tobias Lear, Esq.:

Lieutenant Decatur entered the harbor of Tripoli the evening of the 16th, with the ketch, (Intrepid) and in the most gallant manner laid the frigate alongside, boarded and carried her, notwithstanding the resistance of a large number of armed Tripolines. After having gained complete possession, he proceeded to fire her with success. She was soon in a blaze from her berth deck to her tops, and is totally destroyed, together with all her materials.

FEBRUARY 19, 1804.

To Capt. Wm. Bainbridge:

I am anxious to hear from you since the destruction of the Philadelphia. That business was handsomely accomplished by Capt. Decatur, without the loss of a man.

FEBRUARY 19, 1804.

To James L. Cathcart, Esq.:

I determined, the moment I heard of her (the Philadelphia) capture, to destroy her, to prevent the consequences of her remaining in their possession. This has been effected. On the 3d inst. I sent Capt. Decatur in a small ketch, or bombard, of about sixty tons, and four guns, with seventy volunteers from the squadron, to Tripoli, with orders to burn the frigate; and, as she was so situated that she could not be brought out, Capt. Stewart, in the Syren, was ordered to support him with boats, and cover a retreat with the brig by anchoring off the harbor. In the night of the 16th Capt. Decatur entered the harbor of Tripoli, was hailed by the frigate, he answered from Malta, and the rig of the vessel deceived the Tripolines; however, they were soon undeceived. Capt. Decatur laid the ketch alongside, and, in a gallant and officer-like manner, with his handful of men, boarded against all opposition, and after a conflict of a few minutes carried her by the sword, without firing a musket or pistol. He then set her on fire in every part, and she was totally consumed, with all her materials. Capt. D. and the officers and crew under his command deserve the highest commendation.

FEBRUARY 24, 1804.

To Sir Alexander Ball, Bart., his Britannic Majesty's civil commissioner for the Islands of Malta and Goza:

As it is probable you may have heard various accounts of the capture and destruction of the Tripolitan frigate, late United States frigate Philadelphia, in the harbor of Tripoli, I beg leave to mention the transactions relative to that affair. On the 3d inst. I sent the ketch Intrepid, of four guns, with eleven officers and fifty-nine seamen and marines, under the command of Lieut. Decatur, to Tripoli, with orders to burn the frigate. The Syren brig accompanied her, to anchor off the harbor, send in her boats

to assist, and cover the retreat of the ketch. The weather was unfavorable until the night of the 16th inst., when they arrived. The brig took her position, and the ketch entered the harbor, was hailed from the frigate, answered from Malta, and the rig of the vessel deceived the enemy until she was alongside the frigate—they were then fatally undeceived. Lieut. Decatur boarded with his men, and carried her after a short conflict, in which upwards of twenty Tripolines were killed on the decks; one large boat load made their escape—some ran below and probably perished in the flames, and many jumped overboard. As soon as complete possession was gained she was set on fire and totally destroyed. All her guns were mounted and loaded, and two of their corsairs lay within half musket shot of her. As soon as she was in flames, the batteries, Bashaw's castle, and corsairs commenced firing on the ketch. One cannon shot passed through her topgallant sail, which was all the damage she received. We did not lose a man, and had only one wounded.

MARCH 12, 1804.

To *N. Nissen, Esq., his Danish Majesty's consul at Tripoli:*

I cannot conceive why he (the Bashaw) should deprive Captain B. and his officers of any privileges they enjoyed previous to the burning of the frigate. She was set on fire by my orders. Captain B. and his officers ought not to suffer for an act of which they could have had no sort of previous knowledge or foresight.

MESSINA, *March* 18, 1804.

To *John Broadbent, Esq.:*

You have done well in publishing the account of Decatur's affair at Tripoli.

MARCH, 1804.

To *the Secretary of the Navy:*

I had the honor to forward you two sets of dispatches, by the way of Gibraltar, under date, the 3d and 19th ult., by different vessels, and now forward you triplicates of the same.

NOTE.—The dispatches of the "19th ult." gave an account of the destruction of the Philadelphia, and this letter of March gives no further account.

MARCH 18, 1804.

To *his excellency Robert R. Livingston:*

By the enclosed duplicate of a letter to your excellency, under date the 19th ult., you will be informed of the particulars of the taking and burning of the Tripoline frigate, late the Philadelphia. I determined, from the moment I heard she was in possession of the enemy, to destroy her, and it has been done. This will seriously affect the Bashaw, who is poor, as it has deprived him of the resources which the sale of her to Algiers or Tunis would have afforded; and, at the same time, those powers are deprived of an important addition of strength to their navy.

NOTE.—There is not a word in this letter which corrects the general account given on the 19th February, as to the circumstances attending the destruction of the Philadelphia.

NAVY DEPARTMENT, *March* 3, 1828.

SIR: I have again examined, with much care, the files and records of this Department, and can find nothing which will enable me to give any other answer to the inquiries contained in your letter of the 12th of February, than that which I have heretofore given.

The only "official, authentic, and accredited papers," which relate to the subject, are those which have been already published, and the original letter, and order book of Commodore Preble, which, I am informed, is in the possession of Charles W. Goldsborough, Esq., and which contains the original orders of Commodore Preble to Lieutenant Stewart and Lieutenant Decatur, and their respective reports.

I am not able to state, further than those documents furnish the information, what "was the design or purpose of Commodore Preble, in dispatching the Syren on that cruise, and what duty he intended or ordered that vessel to perform, to aid in, or to effect, the capture or destruction of the frigate Philadelphia.

I am, very respectfully, &c.,

SAM. L. SOUTHARD.

HON. MICHAEL HOFFMAN, *Chairman Naval Committee, House Representatives.*

NORFOLK, *March* 9, 1828.

SIR: I send you the enclosed deposition at the request of Commodore Charles Stewart, of the navy.

I have the honor to be, with great respect, your obedient servant,

EDMUND P. KENNEDY.

To the Hon. Mr. HOFFMAN, *Member of Congress, Washington.*

Virginia, Borough of Norfolk, to wit:

On this tenth day of March, in the year 1828, before me, Walter F. Jones, a notary public in and for the borough of Norfolk, duly commissioned and sworn, personally appeared Edmund P. Kennedy, a master commandant in the navy of the United States, who made oath that, during the years 1803-4, he served, in the capacity of gunner's mate, on board the United States brig-of-war Syren, then under command of Lieutenant Charles Stewart, and one of the squadron in the Mediterranean sea, sailing under the orders of Commodore Preble. That some considerable time after the capture of the frigate Philadelphia, by the Tripolitan gun boats, an expedition was planned and fitted out to destroy that vessel, then lying

nearly equipped, in the harbor of Tripoli. That the brig Syren and the ketch Intrepid sailed for that purpose from the harbor of Syracuse; the day after the departure of these vessels, the crew of the Syren were called aft, and a letter was read, addressed to them by Commodore Preble; as well as affiant remembers, this letter stated the importance of the destruction of the Philadelphia, and set forth, as an inducement to the crew, the large amount of prize money which would be awarded to the vessels composing the expedition. Volunteers were called to fill up the complement of the Intrepid, and for the general purposes of the expedition; the whole crew volunteered, and it became necessary to make a selection among the officers and men. The two vessels proceeded to Tripoli, and it was concerted that, upon a certain signal, to be given from the Syren, the Intrepid, accompanied by two boats, manned and armed from the Syren, should proceed into the harbor, for the accomplishment of their object. The night of the destruction of the Philadelphia, the Syren anchored off the mouth of the harbor, her two boats, manned and armed, alongside. The Intrepid was in shore, and the signal being made, the two boats left the Syren, and proceeded to join the Intrepid. The signal, however, was not answered, and affiant understood Lieutenant Decatur to have said that he was, at the time, so near the batteries, that any exhibition of lights might have caused the discovery of his vessel, and a light and favorable breeze springing up at the moment, he preferred running in without the aid of the boats, to encountering a delay and exposure which might have defeated the object of the expedition. Affiant was in one of the boats which put off from the Syren; the night was very dark, and the Intrepid having exhibited no light to indicate her position, the boats lost their way among the rocks, and were falling in uncertainty, until the Intrepid was seen standing out of the harbor, when they joined her. The crew of the Syren were at quarters nearly the whole night. Affiant further states that all the combustibles and materials, to be used in burning the Philadelphia, were prepared on board the Syren.

EDMUND P. KENNEDY.

Jura attestor:

WALTER F. JONES, *Notary Public.*

Extract from the journal of F. C. De Krafft, midshipman, kept on board the United States brig Syren, Charles Stewart, Esq., commander, on the 17th February, 1804, in the Mediterranean.

Commences with fine breezes and pleasant weather, the Intrepid in company; at half-past one P. M. set jib and maintopmast-staysail; half-past two, hauled them down; at four, made the town of Tripoli; at half-past five, it bore S. W. by S. half S., English Castle S. S. W. twelve miles distant; at half-past six, backed main topsail and hoisted out barge and launch; at seven, turned the reefs out of the topsails and sounded in 38 fathoms, small irregular stones, small shells, and red and white coral, the town of Tripoli bearing S. S. W. nine miles; at half-past seven, sounded in 33 fathoms; set jib and after-mainsail; at eight, sounded in 26 fathoms, fine yellowish coral, small shells and gravel; Tripoli bore S. S. W. five miles distant; at half-past eight, sounded in 20 fathoms, hauled up the foresail, down jib, brailled up after-mainsail; at nine, came to with the stream; anchor in 22 fathoms, fine yellow coral and fine sand, Tripoli bearing S. W. by S. one mile distant; inclining to calm, sent off to Lieutenant Decatur reinforcements in the boats; Lieutenant Caldwell and I. S. Dorsey, midshipman, with 20 men in the launch; Mr. Brook and Mr. Budd, with 8 men in the barge; at half-past ten, Lieutenant Decatur made the signal for a reinforcement of officers and men in boats; answered it; about ten minutes after which, the frigate Philadelphia in the harbor of Tripoli burst into a flame fore and aft; the castle and batteries then commenced their fire on the Intrepid, all around the frigate, and in every direction. Midnight, gentle breezes and pleasant weather, weighed and stood to the northward and eastward under easy sail; at half-past midnight, the launch and barge returned, and were welcomed with repeated cheers; hoisted in the boats; at one A. M. spoke the Intrepid, and took her in tow, when Lieutenant Decatur came on board; got topgallant-masts on end, and made sail, town of Tripoli bearing S. S. W., distant two leagues; at four, housed the guns and shipped the ports; at nine, hauled down maintopmast-staysail, and brailled up after-mainsail, stiff gales from the S. S. E.; at half-past nine, set maintopmast-staysail; at ten, run out the jib boom, bent the standing jib and set it; at half-past eleven, double reefed the after-mainsail and set it. N. B.—About midnight, the frigate burnt her cables and drifted ashore; she was then burnt to the water's edge.

Sworn to before me, on this 7th day of February, 1828.

C. H. W. WHARTON, *J. P.*

Statement of Mr. John Fell, carpenter of the United States brig Syren, in February, 1804, at the time the frigate Philadelphia was destroyed in the harbor of Tripoli, viz:

He states that he was on board of the brig Syren on the night of the 16th February, 1804, when the Syren was anchored under the batteries of Tripoli, for the purpose of destroying the frigate Philadelphia; that, after the Syren's boats (launch and cutter,) were dispatched, the kedge anchor was taken up, and the brig swept into a position under the batteries and anchored; that soon after the night signals (by rockets) were made from the frigate Philadelphia and the brig Syren, the firing commenced from the eastern batteries (Mole Head and Bashaw's castle) on the Syren brig; that several shot from the batteries struck near the Syren, and some water was thrown on board the brig by the shot, and a great many, also, passed over the brig; in consequence of which, he was ordered by Lieutenant Carroll to get up his shot plugs in case the brig should be struck; about one o'clock A. M., February 17, a light breeze sprung up from the southward and eastward, when the Intrepid and Syren took up their anchors and got under way for Syracuse.

Statement of Mr. Robert Thornton, coxswain on board the United States brig Syren, February, 1804, viz:

He states that he served as captain's coxswain and quartermaster in the year 1804, on board the United States brig Syren, of 18 guns, commanded by Charles Stewart; that on the night of the 16th February, 1804, he was sent in one of the Syren's boats (the cutter,) with a number of others, armed, in company with the Syren's launch, also manned and armed, into the harbor of Tripoli, under the command of Lieutenant Caldwell, for the purpose of assisting to destroy the frigate Philadelphia, and reinforcing the party on board the "ketch Intrepid;" that the Syren's boats were under the starboard quarter of the frigate previous to their having set fire to her; that while there, the frigate's launch, coming from the Gallemole, approached the Syren's boats and the frigate, when it was attacked by the boats of the Syren under the command of Lieutenant Caldwell, and the officers and men (upwards of twenty) in the frigate's launch were destroyed, besides a number of the enemy that were endeavoring to escape from the frigate. After the frigate was set on fire, the boats of the Syren took the "ketch Intrepid" in tow (it continuing calm,) and brought her to the anchorage of the brig Syren; that then he received Lieutenant Commandant Decatur on board the Syren's cutter, and brought him on board the brig Syren; that after taking the launch of the Philadelphia, they endeavored to tow her with the "Intrepid" out of the harbor, but they were obliged to set her adrift, as she impeded them very much and detained them in the line of fire from the batteries, which commenced firing immediately after the rocket signals were made; that the calm continued from the time they left the brig in the boats, until they returned with the ketch to the Syren, from burning the frigate, &c., a considerable time afterwards; about one A. M. a light breeze sprung up from the land, or southward and eastward; the Syren and Intrepid got under way; that he was personally engaged in the contest with the frigate's launch.

20TH CONGRESS.]

No. 363.

[1ST SESSION.]

ON THE EXPEDIENCY OF FITTING OUT VESSELS OF THE NAVY FOR AN EXPLORATION OF THE PACIFIC OCEAN AND SOUTH SEAS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 25, 1828.

Mr. RIPLEY from the Committee on Naval Affairs, to whom was referred a great number of memorials from citizens of various sections of the United States, praying aid from the government in fitting out vessels for an exploring expedition to the Pacific seas, reported:

That the number and character of the memorialists, and the opinions they have expressed upon the subject of the memorials, have called the committee to an attentive and careful consideration of the means required for such an expedition, the importance of the interests connected with it, and the immediate as well as ultimate advantages it promises to the nation. The committee do not propose to recapitulate their own views upon these subjects, but to refer the House to documents in their possession, with the general correctness of which they are satisfied.

For information in relation to the means required, they refer to a communication from the Secretary of the Navy, of the 14th of March, 1828, in reply to a note addressed to him by the committee.

In relation to the interests, individual and national, connected with such an expedition, the committee refer to a statement submitted to them by Mr. J. N. Reynolds, on the 10th February, 1828, in answer to inquiries addressed to him by order of the committee. So much of the statement as exhibits the amount of our commerce in the Pacific seas, the committee think is fully sustained by the reports of the officers of our navy, who have, by order of the Secretary, heretofore made reports upon that subject, to which Mr. Reynolds refers, and with which his statement has been compared, as well as with the accounts of others familiar with those branches of our trade.

The dangers to which an immense amount of property is exposed, as well as the hazard to human life, for the want of knowledge, by more accurate surveys, of the regions to which our commerce is extending, and the probable new sources of wealth which may be opened and secured to us, seem, to your committee, not only to justify but to demand the appropriation recommended; they therefore report a bill for the purpose.

Letter from J. N. Reynolds to the speaker of the House of Representatives.

SIR: I have the honor of transmitting to you several memorials, signed by citizens of the United States, recommending to the favorable consideration of Congress the importance of affording some efficient aid in fitting out a small expedition, to explore the immense and unknown regions in the southern hemisphere. They believe that an expedition could scarcely fail in making discoveries of some interest, by finding new islands, or increasing our knowledge of those already laid on the maps; that commerce might be benefited by surveying the coasts frequented by our hardy fishermen, and upon which they frequently suffer shipwreck, with many privations, and loss of property.

It is believed new channels might be opened for commercial pursuits in animal fur—a trade out of which an immense revenue accrues to the government, and which greatly augments our national strength, by increasing the number of our most efficient seamen.

Amongst these memorials, you will find one from Albany, dated October 19, 1827, and signed by his excellency Nathaniel Pitcher, Lieutenant Governor of the State of New York, the Hon. Erastus Root, speaker of the house of representatives, and by nearly all the members of the legislature.

I have also the honor of transmitting to you three other memorials: the first is dated Charleston, South Carolina, May 31, 1827, and signed by the mayor of the city, president of the chamber of commerce, and by a very long list of respectable citizens. The second is dated Raleigh, North Carolina, December 24, 1827, and contains the signatures of his excellency James Iredell, Governor of the State, the Hon. B. Yancy, speaker of the senate, the honorable James Little, speaker of the house of commons, and by a large proportion of the members of each branch of the legislature. The third memorial is dated Richmond, Virginia, January 1, 1828, and is sustained by a number of respectable citizens, by the Hon. Linn Banks, speaker of the house of delegates, and by a large and very respectable number of the members of the legislature.

With the above papers, I send you for reference, in like manner, the following preamble and resolution adopted by the house of delegates of the State of Maryland, which I have had in my possession, but which has never been officially introduced into this House.

"Whereas, foreign nations have long turned their attention towards the acquirement of a more perfect knowledge of the geography of the earth, by means of voyages of discovery, and, by these exertions, have not only acquired reputation, but extended the weight of their influence, opened new channels for commercial enterprise, and benefited the human race, by enlarging and improving the boundaries of knowledge: And whereas, the Government of the United States has attained a high standing among the nations of the earth, the practical result of the most stupendous as well as successful experiment ever made in politics; a population fast increasing; commercial relations and interests coextensive with the civilized world; nautical skill, perseverance, and enterprise, if not unequalled, at least unsurpassed: And whereas, the sending out of one or two vessels on a voyage of discovery would not be attended with any very heavy demands on the public treasury, and would seem to be in strict accordance with the character and liberal policy which ought to be pursued by a government whose political existence is, in a great measure, dependent on the general intelligence of her people: And whereas, a great number of the most enlightened citizens of different sections of our country have memorialized the Senate and House of Representatives of the United States, in Congress assembled, and have set forth in their memorials that, under the patronage of the United States, an expedition should be fitted out, without delay, and proceed to acquire a more correct knowledge of our own continent; or, if possible, to enter the more interesting and extensive field for enterprise in the southern hemisphere, and proceed, for the purpose, with hardy seamen and scientific persons, to bring home to us the result of their labors, for the honor of our country and the benefit of mankind: And whereas, voyages of this kind, even when they fail of making important discoveries, bespeak a liberal policy, and give character to the people who undertake them: Therefore,

"Resolved, by the general assembly of the State of Maryland, That we do highly approve of the views of the said memorialists, believing that a polar expedition, if properly conducted, could scarcely fail in adding something to the general stock of national wealth and knowledge, and to the honor and glory of the United States."

The paper marked A, contains a list of names of individuals who have expressed their interest in the success of an Antarctic expedition by individual aid and voluntary subscription, to aid in carrying it into effect.

It is, perhaps, unnecessary to remark, that this expression of public sentiment, though extensive and deserving the most respectful consideration, is small, when compared with other and similar memorials presented during the last session, and referred to the Secretary of the Navy; to all of which, the committee, of course, can have easy access.

While, sir, I accept with pleasure your proffered kindness, in giving to these memorials their proper direction in the House of Representatives, I beg you to accept the assurance of the high consideration, with which,

I am, sir, your obedient servant,

J. N. REYNOLDS.

HON. ANDREW STEVENSON, *Speaker of the House of Representatives.*

PROCEEDINGS IN RELATION TO AN EXPLORING EXPEDITION, BEFORE THE COMMITTEE ON NAVAL AFFAIRS, IN THE HOUSE OF REPRESENTATIVES OF THE UNITED STATES, 1828.

Letter from the chairman, by order of the committee.

HOUSE OF REPRESENTATIVES, *Committee on Naval Affairs.*

SIR: If it will not be inconvenient for you to furnish, it will be acceptable to the Committee on Naval Affairs to receive, a brief statement, in writing, of the views you submitted to them, and any others you may deem proper, respecting the advantages to commerce of the exploring expedition to the south, for which you are a petitioner.

Such a statement, it is supposed, would contain your reasons for general results, and a reference to authorities for specific facts, as well as a tabular statement of the results and facts, so far as they may be susceptible of being stated in such a form.

With esteem and respect, your humble servant,

MICHAEL HOFFMAN.

J. N. REYNOLDS, Esq.

Answer to the foregoing.

Hon. Michael Hoffman, chairman Committee on Naval Affairs:

SIR: In compliance with your request in writing, I send you a brief statement of my views of the extent, character and advantages of the commerce of this country in the Pacific ocean, with a few calculations, made from the best information I could obtain. As the files of the custom house do not directly

assist us in this investigation, it is but proper that I should state to you distinctly the sources from whence my information has been derived; and, at the same time, my avowal of the full belief that all my statements and calculations fall far short of the amount that the most accurate accounts, with the mention of every item, would swell to, could they be given. I have put my facts into as tabular a form as the nature of the case will permit, and will exhibit my results as succinctly as possible.

The information I have the honor to exhibit was obtained from the following sources:

Firstly. From frequent conversations with intelligent men long acquainted with that trade, several of whom had made frequent voyages in those seas.

Secondly. From the perusal of log books and journals kept by well-informed men, while engaged in the various commerce of the Pacific, covering a space of more than seven years previous to the war, and more than five years since.

Thirdly. From facts that have transpired in several lawsuits between the owners of vessels employed in the northwest coast trade, and their captains, agents and factors.

Fourthly. From such official documents, in the Navy Department, as are open to inspection on the records, being letters, reports, &c., from the several naval commanders who have been sent to protect our commerce in that quarter.

The objects of my inquiries have been:

Firstly. The nature and extent of the whale fishery, and of its importance to the welfare of our country.

Secondly. The extent and character of the sea otter skin trade.

Thirdly. The fur seal skin trade.

Fourthly. The sandal wood trade.

Fifthly. The ivory sea-elephant tooth trade.

Sixthly. The land animal fur trade.

Seventhly. The feather trade.

To these inquiries I have added a few remarks upon the articles of export for this branch of commerce, and the general benefits resulting from it, independent of the wealth it brings into the country.

A full account of the whale fishery, from its earliest history, is to be found in the Massachusetts Historical Collection, brought down to the commencement of the revolutionary war. At this time the whale fishery was confined to Nantucket almost entirely. The last year, previous to the interruption of the business by the British cruisers, the returns and results of these voyages, for the season, were thirty thousand barrels of oil, and one hundred and sixty tons of spermaceti candles. After the close of the conflict, whales becoming scarce on the coast of Brazil, to which place they had, for some years previously, been pursued, the enterprising people of Nantucket ventured into the Pacific ocean, where they understood, from the accounts of Vancouver and Cook, that the whales were to be found in great abundance. This was soon after the year 1790. These adventurous voyages were attended with success, and have been increasing ever since, until it may be stated to have reached the following extent, viz: to vessels of considerable size, sufficiently large, on an average, to carry two thousands barrels of oil, in Nantucket seventy; in New Bedford sixty; in New York, Boston, Stonington, New London, &c., at least twenty more, making in the whole one hundred and fifty.

Nantucket.....	70
New Bedford.....	60
Other places.....	20
	150

Suppose we say eighteen hundred barrels of oil each, with the proportion of candle matter, and allow two years to every voyage, this would furnish a result of hundred and thirty-five thousand barrels a year, or four millions fifty thousand gallons, and the spermaceti candles would amount to eight hundred and thirty-seven tons, or one million six hundred and seventy-four thousand pounds a year.

The crews of these vessels amount to about twenty-five each, men and boys, therefore keeping in employ three thousand seven hundred and fifty seamen, and thereby keeping up also a school for nautical instruction, superior to any other to be found. This is a business in which there has, as yet, been no great uncertainty or fluctuation. Almost all who have engaged in it have grown rich, as the market is great for home consumption, and never glutted abroad.

As the whale fishery decreases in the sea now frequented for this purpose, other places must be found to pursue it in to advantage; and as the demand for less pure oil for the manufacture of gaslight increases, the islands and shoals should be explored for the porpoise and sea elephant, who make their haunt in such places; and there can be no doubt that a sufficient number can be found, by proper search, to answer these demands as they arise. Other fisheries in high latitudes may be enlarged, and also found profitable, the salmon and cod fisheries particularly, as there would be a great demand for them in the South American provinces, a people who would not think of supplying themselves for the present. It may be said of fish, perhaps what cannot be said of any other or most articles of consumption, that the markets increase with the quantity brought to supply them.

This is illustrated by the mackerel fishery, which is principally confined to Massachusetts and Maine. About fifteen years ago, these States, then one State, began to think this branch of business might be made of some importance, and inspectors of this article were accordingly appointed. It was then stated, to the astonishment of most members of the legislature of Massachusetts, that there were twenty thousand barrels of these fish pickled every season. In a few years the returns proved that there were thirty thousand barrels put up for market. This fishery has been gradually increasing, until, by the inspector general's returns, it appears that one hundred and ninety-seven thousand six hundred barrels were inspected last year; and the price has not diminished, but the demand for this food increased, and is enlarging. Deducting all expenses for the sales of this article, more than half a million of dollars is made annually, yea, fished up from the bottom of the ocean, by the industry and enterprise of our people, and that too in a healthy employment.

Suppose, then, we could open a market for these fish in South America, the quantity, however large, would be all wanted, as the great mass of the inhabitants would soon wish to change the vegetable diet of their fast days, for the more satisfactory and nutritious food they would find in the fish market. This is proven from the fact that Spain and Italy, with the West India Islands, have been the great consumers of

our fish from the Grand Banks and the Labradors, and have, in most instances, paid us for them in specie. In 1744, thirty-two thousand quintals of codfish were sent from New England to Europe—this was of a superior quality, and three thousand and twenty hogsheads of *tol-qual* to the West Indies.

That the traffic in sea otter skins has been very profitable, is conceded on all hands; but from the secrecy of the first navigators into that ocean, the precise extent of it cannot be ascertained. These valuable skins were at first bought up from the natives on the northwest, for a mere trifle, in red cloth, glass beads, a piece of cutlery, &c., but not so of late—these skins being from forty to seventy dollars, and more in China. The most experienced men in this trade put the amount of it, since it was first begun, from fifteen to twenty-five millions of dollars, and no one lower than ten millions. These animals have only, as yet, been found in certain latitudes, from 44 deg. to 60 deg. north, and between east longitude from London, 126 deg. to 150 deg.; inhabiting, in great abundance, Behring's Islands, Kamtschatka, the Aleuthian and Fox Islands, between Asia and America; they land also on the Kural Islands. (Shaw's Zoölogy, vol. 2, and page 445.)

Now, naturalists can find no reason why they should not exist on lands that may yet be found in the southern hemisphere. This is a subject to be settled, and that nation which may have the honor of the discovery, will undoubtedly have, as they well deserve, the profits.

The sandal wood trade is not so difficult, perhaps, to estimate, for there has not been quite so much secrecy about it. For many years, this wood has been found in the islands of those seas; but it was not known to have been a growth of the Sandwich Islands, until it was discovered by Captain Davis and Windship, of Boston, about twenty-four years since. The quantity cut on this group of islands is about three hundred thousand dollars' worth a year; and what is found and cut on other islands will make the trade in this article, at this time, amount to near half a million a year. If this wood should become scarce, it will be necessary to find new groves of it on other islands, or we must teach the natives how to grow it; and it is the opinion of many judicious navigators, that this may as well be effected, as to cultivate the oak or ash, or any other tree of our own forests.*

The fur seal skin trade has been very extensive and profitable in the Pacific. It is the general opinion of those conversant with the trade, that more than seven millions of fur seal skins have been taken, by our enterprising seamen, since we commenced business in the Pacific. These skins have generally been sold in Canton for from two to three dollars, and sometimes more, on an average, for each skin: some have been brought to this country, and sold for domestic uses. The Stonington Telegraph mentions the extent of the seal trade in that small place, which shows the enterprise of that industrious people in a very strong light. From November, 1819, to August, 1827, there were seventeen vessels which belonged to this port, and which brought, as an item of their cargo, skins, which were sold at auction, to the amount of three hundred and ten thousand seven hundred and forty-seven dollars and eight cents; and these skins were mostly taken about the Antarctic circle. Let it also be remembered that this is a mere item, made tangible from having been sold at auction; and that this amount of skins, exchanged in Canton for teas, would bring into the public treasury an amount, on the first return, greatly surpassing what would be necessary to send out an efficient exploring expedition.

The demand for this fur is increasing in this country, as the seals are diminishing in the Pacific. New islands must be found, where they have not as yet been disturbed, to furnish a supply for the market. The hunting of the whale and seal, heretofore carried on with so much vigor, has produced the natural and necessary consequence of rendering those animals more timid, and fewer in number, by their destruction, without reference to season. These animals as naturally and instinctively leave the haunts of the whalers and sealers, and retire to more remote regions, as the wild game in the west recede before the advances of the sturdy backwoodsman. They can be followed, and found in greater abundance, and taken with less uncertainty and risk. The result of the late voyages proves that they can be procured with great facility in the remote polar regions. Captain Parry, with great profit to the British nation, opened a new channel for their trade, by transferring their fisheries from East to West Greenland. He says the number of whales in those high latitudes was astonishing; that not less than fifty were seen in the course of a single watch.

Captain Franklin, standing on the shore of the Arctic ocean, describes the seal as sporting in shoals, like porpoises. The discovery of islands of great size to the south is not too much to be hoped for, if we may be allowed to draw any inference from the obvious indications afforded by analogy, the observations of experienced navigators, or the natural indications afforded by ice, currents, &c., already known to exist in those regions. Such discoveries are coupled with the certainty that the profits to be derived from them, in a commercial point of view, may be applied to the great advantage of our common country.

The land animal fur trade has not, as yet, been much encouraged, but several persons are now turning their attention to it. The Hudson Bay Company, which has been chartered for one hundred and fifty-nine years, have made the most grasping, extensive, and successful monopoly of this trade that is known in the annals of commerce; but a few spirited capitalists, with strong and well situated factories on the northwest coast, would soon take no small proportion of this immense trade. In Robson's account of Hudson's Bay, to the first lord commissioner of England, he says: "There are furs, my lord, on this large tract of land, sufficient to supply all Europe, which yet are locked up by a few men."

The ivory trade is becoming important, and will be much more extensive than it now is, when the sea elephant is hunted for oil, as it will be, when the whale becomes less numerous, and more oil is wanted for gas works, as the great cities get more and more in the habit of using it. The porpoises' oil and seal oil will then be worth making, for this purpose. The porpoise fishery, formerly, was not heard of; once in a while, a porpoise was taken by accident; but now, the Indians and others pursue it to a considerable extent, on our own northeasternmost coast.

The feather trade has not as yet been followed in those seas as it might have been; but, from the immense quantity of sea fowl in those regions, it is certain that the best of feathers might be obtained, and in the greatest abundance. Some of the beds brought from the northwest coast are nearly equal in quality to the eider down beds of Russia. The demand for feathers is great and constantly increasing in this country. The finest quills might be obtained in pursuing this trade, and the demand for them is now great and constantly increasing. The manner of preparing them, as the Dutch prepare them, might easily be taught to those engaged in the business; and, instead of paying nearly half a million of dollars

* *Quere.*—Could not this wood be grown in some parts of Florida, and on the coast of Liberia?

a year to Holland, and Russia, and other countries, for quills, we could, by this trade, supply our own market and others.

The articles which we export for this trade are now all within ourselves. Rice, tobacco, rum, whiskey, blankets, coarse woolens, cottons, calicoes, the ordinary kind of cutlery, and trivial jewelry, and agricultural utensils, and some articles of household furniture, will soon find a market at the Sandwich Islands.

It should be taken into consideration that these voyages are in the character of double voyages. The northwest coast cargoes are now, in small vessels, sent to China, and their proceeds furnish cargoes for large vessels sent direct from this country to Canton; and, by these means, we save the precious metals at home which the direct China trade has so long drained us of.

To show the profitableness of this trade, we have only to look to those who have been engaged in it, and we shall find that most of them, who began it early, have made large fortunes, and but very few of them have been unsuccessful. The cry is that the trade, or business, is overdone. This is natural. Those who have enjoyed the profits are not willing to share them with others.

The extent of our commerce in those seas, in the whale, fur, and other trades, may, in some measure, be estimated by a report of Captain Hull, who was sent into the Pacific to protect our commerce there. He says that, from the 30th of March, 1824, to December 1st, 1825, he boarded two hundred and thirty-two vessels, whose tonnage amounted to forty-three thousand five hundred and two tons, and the men to two thousand three hundred and fifty-two, and the guns carried by these vessels to two hundred and ninety-five:

Vessels.....	232
Tonnage.....	43,502
Men.....	2,352
Guns.....	295

And the probability is that he did not fall in with one-half of the number then navigating the Pacific.

When Captain Jones visited the Island of Oahu, on the first of November, 1827, he found nineteen vessels in the port, whose tonnage amounted to five thousand six hundred and fifty, with crews amounting to three hundred and seventy-eight men. Four of these vessels were loaded with skins, &c., and fifteen of them were whalers, and had on board twenty-five thousand and eighty barrels of oil, and only wanted about six thousand three hundred and twenty barrels to make full cargoes.

All is activity and spirit on these voyages; every master of a vessel, and his officers and men, are striving to do better than their fellow-laborers. These long and difficult voyages give a hardihood and enterprise to American seamen which will continue as long as we are engaged in this trade. The length of the voyage, the difficulty of the navigation, the large size of the vessels, the science and care necessary for sailing them in safety, and the vicissitudes of the voyage, make the youngest on board a navigator, a seaman, a pilot, and a gunner.

The opening of the ports in South America has already changed our course of trade in the Pacific greatly for the better, and will more and more benefit us, if we take care of our rights in those seas, and send a sufficient force to protect our commerce, which, no doubt, it will be the policy of our government to pursue.

To look after the merchant there—to offer him every possible facility—to open new channels for his enterprise, and to keep a respectable naval force to protect him—is only paying a debt we owe to the commerce of the country: for millions have flowed into the national treasury from this trade, before one cent was appropriated for its protection.

The naval commanders we have sent into the Pacific have done all that wise, active, and experienced men could do. They have not only taught the natives that we are a powerful people, and could defend ourselves in that distant country as well as other nations, but these new states and empires, which have arisen in South America, have been shown that we could punish wrongs and enforce rights, and had the good of mankind, as well as our own prosperity, at heart. *Power, judiciously exhibited, is the great peace-maker of the world;* and a people whose institutions are not yet thoroughly established, as those in South America, want looking after with a steady eye. In attending to these duties, it is impossible for our naval commanders to explore those seas for the purpose of discovering new places. Their duty is to watch the old; and this is a sufficient task for any force we can send there.

The whale ships, having a specific object in view, and generally under strict orders, cannot waste an hour in the business of discovery; nor can they, consistently with their duties, stop a day to explore and examine what they may accidentally discover. The northwest coast trader has, also, a specific object, and a more direct path than the whaler.

It seems well understood, at this time, that it is for our interest and for our *honor* to be well acquainted with the *capacities* of the globe; to see what resources can be drawn from that great *common* of nations—the *ocean*. The enlightened statesman, therefore, surveys all parts of it, with the view of opening new channels for commerce and trade; and he does not refuse to advance them by a present expense, when coupled with the certainty of a future and a greater good.

And what place is left for us to explore, but this southern polar region? This has never been thoroughly done by any nation. It is almost an unknown region yet, and opens a wide field for enterprise for us, at a most moderate expense. There are more than a million and a half of square miles entirely unknown, and a coast of more than three hundred degrees of longitude, in which the antarctic circle has never been approached; there are immense regions within the comparatively temperate latitudes but partially known, and which deserve further attention; and, for aught we know, countries corresponding to Lapland, Norway, part of Sweden, and the northern parts of Siberia, in Asia, may still exist in the southern hemisphere.

No one who has reflected on the vast resources of the earth, “which is our inheritance,” can doubt, that such a large portion of it contains many things which may be turned to good account, by the enterprise and good management of our people—and these are the true profits of commerce. The great mass of the intelligence of the country is for it, and is calling on the national legislature for aid in the undertaking.

The States whose legislative bodies have sanctioned it, are represented on the floor of Congress by one hundred and twenty-nine members, to say nothing of the memorials from large cities and other places, and the aggregate of citizens of these States near six millions.

It may be asked, if the navy and merchantmen are not to take this upon themselves, how is it to be effected? The answer is obvious to those who have reflected. Send out an exploring expedition, fitted and prepared for the purpose: not one that is to carry the majesty and grandeur of the nation, at a great expense, but one, the expenses of which shall be inconsiderable, but at the same time shall have the protection, aid, honor, and sanction of the nation, to give life, energy, and character to individual enterprise. We have been an industrious, a commercial, and enterprising people, and have taken advantage of the knowledge of others, as well as of their trade: for although our entrance and clearance, without looking at our immense coasting trade, amounted to eight thousand seven hundred and sixty-six vessels, yet not one of these were sailed a mile by a chart made by us, except we may suppose that the chart of George's Banks may have been used by a few of the navigators of these vessels. We are dependent on other nations for all our nautical instruments, as well as charts; and, if we except Bowditch's Navigation, an improvement on Hamilton More's book, of the same kind, we have not a nautical table or book in our navy, or amongst our merchantmen, the product of our own science and skill; and we are now among the three first commercial nations of the world, and have more shipping and commerce than all the nations of Europe had together when Columbus discovered this continent, but a little more than three centuries since, and our navy, young as it is, has more effective force in it than the combined navies of the world could have amounted to at that period. Out of the discovery of this continent, and a passage to the Indies, grew up the naval powers of Europe. On the acquisition of the New World, Spain enlarged her marine; France and England theirs, to hold sway with Spain; and that of the Netherlands sprang from the extent of their trade, connected with the wise policy of enlarging and protecting it.

Our commercial and national importance cannot be supported without a navy, or our navy without commerce, and a nursery for our seamen. The citizens of Maine, of New York, of Georgia, of Ohio, and of the great valley of the Mississippi, are deeply interested in the existence of our gallant navy, and of the extension of our commerce, as they are interested in the perpetuity of our institutions, and the liberty of our country. Indeed, liberty and commerce have been twin sisters, in all past ages and countries and times; they have stood side by side, moved hand in hand; wherever the soil has been congenial to the one, there has flourished the other also: in a word, they have lived, they have flourished, or they have died together.

Commerce has constantly increased with the knowledge of man; yet it has been undergoing perpetual revolutions. These changes and revolutions have often mocked the vigilance of the wary, and the calculations of the sagacious; but there is now a fundamental principle on which commerce is based, which will lead the intelligent merchant and the wise government to foresee and prepare for most of these changes; and that principle consists in an intimate knowledge of all seas, climates, islands, continents, of every river and mountain, and every plain of the globe, and all their productions; and of the nature, habits and character of all races of men: and this information should be corrected and revised with every season.

The commercial nations of the world have done much, and much remains to be accomplished. We stand a solitary instance among those who are considered commercial, as never having put forth a particle of strength, or expended a dollar of our money to add to the accumulated stock of commercial and geographical knowledge, except in partially exploring our own territory.

When our naval commanders and hardy tars have achieved a victory on the deep, they have to seek our harbors, and conduct their prizes into port, by tables and charts furnished, perhaps, by the very people whom they have vanquished.

Is it honorable for the United States to use, forever, the knowledge furnished us by others, to teach us how to shun a rock, escape a shoal, or find a harbor, and add nothing to the great mass of information that previous ages and other nations have brought to our hands?

Tyre, Greece, Carthage, Venice, Florence, whose commerce has ceased, and whose opulence is gone forever, have still left the historic glory of having shown succeeding ages the way to wealth, and honor, and power, by means of knowledge. The ancient commercial and naval monuments are theirs; and every niche of the modern temple of Neptune is filled by others—not ourselves. The exports, and, more emphatically, the imports of the United States, her receipts and expenditures, are written on every pillar erected by commerce, on every sea, and in every clime; but the amount of her subscription stock to erect these pillars, and for the advancement of knowledge, is nowhere to be found.

To open new sources of traffic and of commercial wealth has gratified the pride as well as the avarice of man in every age; and the adventurous deeds by which this has been achieved have been commemorated by every historian, poet, and even fabulist, in all past times: for the Argonautic expedition for the golden fleece, as given us by the poets and mythologists, is only in the form of a generous and munificent commemoration of the voyage of one who ventured much to open a new path to commerce, for the aggrandizement of his own country.

We have been plundered by the English and the French, by Spaniards and Neapolitans, Danes, Norwegians, and the Barbary powers, while our commerce was extended everywhere and protected nowhere. Some of these insults and depredations have been settled for, and others are quietly, but surely, approximating to a day of *restitution* or *retribution*. The spirit of the nation is aroused on these subjects, and can never sleep again; honor, justice, feeling, conscious of physical strength, all forbid it.

Have we not, then, reached a degree of mental strength that will enable us to find our way about the globe without leading strings? And are we forever to take the highway others have laid out for us, and fixed with milestones and guideboards? No: a time of adventure and enterprise must be at hand; it is already here, and its march is onward, as certain as a star approaches its zenith. Permit me to conclude, in humble imitation of the great discoverer of this continent to his patrons: *We fear no storms, no icebergs, no monsters of the deep in any sea; we will conduct ourselves with prudence, and discretion, and judgment; and, if we succeed, the glory and profit will be yours; if we perish in our attempts, we alone shall suffer: for the very inquiry after us will redound to your honor.*

Be pleased to accept for yourself and for the honorable members of your committee the assurance of the respect and esteem with which I am, sir, your obedient servant,

J. N. REYNOLDS.

NOTE.—Since I prepared the above answer to your letter of inquiry, I have examined the clear and impressive memorial from the town of Nantucket, which fully confirms every statement I have made in regard to the extent of the whale fishery, although drawn from different sources.

This memorial is not only clear and conclusive, as to the extent and value of this important business, but presents many other important facts. The memorial speaks the most emphatic language to every patriot and philanthropist, as well as to every legislator in our country, in the following quotation: "The great and increasing extent of the voyages now pursued by the trading and whaling ships into seas but little explored, and into parts of the world before unknown, has increased the cares, the losses and dangers of our merchants and mariners. Within a few years, these cruises have extended from the coast of Peru and Chili to the northward coast, New Zealand, and the isles of Japan. This increase of risk has been attended by an increase in loss. Several vessels have been wrecked on islands and reefs not laid down in any chart; and this acquires a painful interest from the fact that many ships have gone into those seas, and no soul has survived to tell their fate."

This memorial, coming from an intelligent, hardy, and enterprising people, who have, for more than thirty years, carried on this fishery, so profitable to our country, without repining at any difficulties they have encountered, or without soliciting aid until the country was able to afford it, should, and will have its effect on the representatives of the nation in Congress. National and individual interests they are bound to regard at all times; but I trust these claims will be more promptly attended to when the additional facts are made known to them; and they are assured that many of our fearless navigators are now, probably, wasting a wretched existence on some desolate island in these immense seas, waiting, in prayerful hope, that the generosity of the nation will be aroused to send in search of them, and that, in some distant day, they shall see their country and their homes, and be restored to the bosom of their families and friends. They have read or heard that the French government sent expedition after expedition to seek for Perouse and his missing vessels; and can they for a moment imagine that those they had left at home are less generous and philanthropic than the people of France, or of any other nation? They cannot: for they will remember—and who can forget it—that, in our days of small things, the whole country was in agitation by the captivity of a few American citizens by the powers of Barbary, and the expense of liberating them was spontaneously proffered by the American people; and will not this same people be willing that the nation should do something to ascertain the fate of these enterprising navigators, who are, probably, on some reef or island, sustaining life as they can?

In this matter everything conspires to urge us forward at this precise time. The advantages of commerce to science and national glory seem now to be sealed and sanctified by the calls of humanity and imperious duty.

I wish not to be importunate, nor do I fear that I am: for the accumulated weight of circumstances are above all argument or entreaty, for they strike the heart and the understanding at the same time.

As these things came crowding upon my mind, I had nearly forgotten another important fact, which will be supported by the able and experienced representative of the district of which Nantucket makes a part; and that is, that there are more than one hundred and fifty islands, reefs, and shoals, known to our whalers, not laid down in any chart. Around these islands, reefs, and shoals are floating nearly forty thousand tons of shipping, engaged in a trade of great national concern, with an immense amount in property and lives, all of which are at the mercy of the winds and waves.

If this be so, and who can doubt their honesty, should they not be surveyed? The future safety of our mariners demands it. The advancement of commerce and our navigating interests demand it. The people demand it; and our national honor cannot suffer this fact to go abroad, and not carry with it the probability of some effort for future information and security.

J. N. R.

WASHINGTON, February 26, 1828.

To Captain Thos. Ap Catesby Jones, United States navy:

Sir: The Committee on Naval Affairs in the House of Representatives, through their chairman, have recently addressed me a note, requesting my views of the character, value, and extent of our trade in the South seas and Pacific ocean.

A reply to that letter is herewith enclosed for your perusal, and as you have recently been in the Pacific on official duty, and have improved the favorable opportunity you had of acquiring much useful information in relation to our important and growing commerce there, I would thank you to inform me, in writing, how far your own views extend in corroboration of the report I am about to submit to the consideration of the committee.

Be pleased to accept the assurance of high consideration with which,

I am, sir, your obedient servant,

J. N. REYNOLDS.

WASHINGTON, February 28, 1828.

DEAR SIR: I have received and read with great satisfaction the memorial which you did me the honor to submit for my perusal. My recent cruise to the Pacific ocean, in the course of which I spent some time among the Society, Sandwich and other islands, afforded me a good opportunity of seeing, in partial operation, most of the branches of commerce, the advantages of which you so clearly demonstrate in your address to the Committee on Naval Affairs.

That there is a great field open for national enterprise, in the region to which you have invited the attention of the American people, cannot be doubted; and I accord most heartily with you that such a voyage as you contemplate would open to our commercial, and of course, national interests, sources of great wealth, which cannot be brought into action without the protecting aid of government.

That success may crown your most laudible exertions, is the wish of,

Sir, your obedient servant,

THOS. AP CATESBY JONES.

To J. N. REYNOLDS, Esq.

HOUSE OF REPRESENTATIVES, *Committee on Naval Affairs, March, 3, 1828.*

Sir: The House has referred to the Committee on Naval Affairs several petitions, praying that an expedition may be sent into the Pacific and Southern ocean.

I am directed by the committee to ask of your Department your opinion respecting such an expedition, and briefly your reasons for it; and, if you shall be of opinion that such an expedition ought to be sent there, to request of you a project of the law to authorize it, with your reasons for its several provisions, and any other information you may be pleased to give on the subject.

With esteem and respect, I am, sir, your humble servant,

MICHAEL HOFFMAN.

HON. SAMUEL L. SOUTHARD, *Secretary of the Navy.*

NAVY DEPARTMENT, *March 14, 1828.*

Sir: I have had the honor to receive your letter of the 3d of March, in which, on behalf of the Committee of Naval Affairs, you "ask my opinion respecting an exploring expedition into the Pacific and Southern ocean, and briefly my reasons for it."

I entertain the opinion that such an expedition is expedient. My reasons are briefly these:

That we have an immense and increasing commerce in that region, which needs the protecting kindness of the government, and may be greatly extended by such an expedition. Of the extent and nature of this commerce, it is not easy to write briefly, nor is it necessary. It is better known to none than to some of the members of the Naval Committee in the House of Representatives. The estimate of its value has been much augmented, in the view of the Department, by the reports which have been made, *under its orders*, by our naval officers, who have commanded vessels-of-war in the Pacific, and which are now on file

The commercial operations carried on in that quarter are difficult and hazardous. They are correctly represented in the memorial of the inhabitants of Nantucket, to which I would refer, as well as to some of the many other memorials which have been addressed to Congress on this subject. It would seem wise in the government to render these commercial operations less hazardous and less destructive of life and property, if it can be done by a moderate expenditure of money.

The commerce in the Pacific ocean affords one of the best nurseries for our seamen. An expedition such as that proposed would be calculated to increase that class of citizens—an increase in which the government and nation are deeply interested.

We now navigate the ocean, and acquire our knowledge of the globe, its divisions and properties, almost entirely from the contributions of others. By sending an expedition into that immense region, so little known to the civilized world, we shall add something to the common stock of geographical and scientific knowledge, which is not merely useful to commerce, but connects itself with almost all the concerns of society; and while we make our contributions to this common stock, we shall not fail to derive the best advantages to ourselves, and be richly paid, even in a calculation of expenditure and profit.

The expedition ought not to be large or expensive. Other nations have erred on this point. It seems to be the desire of the memorialists that Congress should *afford aid*, not furnish the whole expense. If this mode be preferred by the committee, all that the bill need provide is, "that the sum of \$_____ be appropriated to aid in fitting out an expedition to explore the Pacific ocean and South seas." If it be the intention that the whole expense should be borne by government, the bill ought to provide "that the President of the United States be, and he is hereby, authorized to cause to be fitted out an expedition to explore the Pacific ocean and South seas, and that the sum of \$_____ be, and the same is hereby, appropriated for that object." The blank ought to be filled with \$45,000 or \$50,000.

The bill need not contain any other provisions, as the amount of the appropriation will limit the expenditure; and I do not presume that Congress would desire to prescribe the size of the vessels, their equipage, or the number and character of the persons to be employed.

In either of the plans proposed, whatever is done will be under the direction of this Department, and the expense may be greatly diminished by permitting certain of the naval officers to join the expedition, and by using other facilities which are under its control.

I have the honor to be, very respectfully, &c.,

SAMUEL L. SOUTHARD.

HON. MICHAEL HOFFMAN, *Chairman of Committee of Naval Affairs, House of Representatives.*

To the honorable the Senate and House of Representatives in Congress assembled:

The memorial of the subscribers, citizens of the town of Nantucket, respectfully represents:

That the intercourse maintained between different parts of the nation and the islands and countries of the Pacific ocean has become a matter of public interest, and deserving the protecting care of the national legislature. The fur business, and the trade carried on between the Pacific islands and coast of China, as is known to your honorable body, have afforded rich returns, and increased the wealth of our common country. Besides this employment of national industry and enterprise, they would represent that there are engaged in the whale fishery, from various parts of the country, upward of forty thousand tons of shipping, requiring a capital of three millions of dollars, and the services of more than three thousand seamen. Whether viewed as a nursery of bold and hardy seamen, or as an employment of capital in one of the most productive modes, or as furnishing an article of indispensable necessity to human comfort, it seems to your petitioners to be an object especially deserving the public care. The increased extent of the voyages now pursued by the trading and whaling ships, into seas but little explored, and to parts of the world before unknown, has increased the cares, the dangers, and the losses

of our merchants and mariners. Within a few years their cruises have extended from the coasts of Peru and Chili to the northwest coast, New Zealand and the isles of Japan. This increase of risk has been attended by an increase of loss. Several vessels have been wrecked on islands and reefs not laid down on any chart; and the matter acquires a painful interest, from the fact that many ships have gone into those seas, and no soul has survived to tell their fate. Your petitioners consider it a matter of earnest importance that those seas should be explored; that they should be surveyed in an accurate and authentic manner, and the position of new islands and reefs, and shoals, definitely ascertained. The advancement of science, and not their private interest only, but the general interests of the nation, seem to them imperiously to demand it. They therefore pray that an expedition may be fitted out, under the sanction of the government, to explore and survey the islands and coasts of the Pacific seas; and as in duty bound, will ever pray.

NANTUCKET, *February*, 1828.

20TH CONGRESS.]

No. 364.

[1ST SESSION.

ON THE EXPEDIENCY OF EXTENDING THE ACT ALLOWING PENSIONS FROM THE PRIVATEER PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 15, 1828.

NAVY DEPARTMENT, *February* 21, 1828.

SIR: In reply to the inquiries contained in your letter of the 15th instant, in relation to "the expediency of continuing the act providing for the allowance of pensions from the privateer pension fund," I have the honor to submit the following statement:

1st. As regards "the state of the fund, and its probable productiveness for some years to come."

The fund consists of six per cent. stock of the United States, to the amount of \$70,698.24, yielding an annual interest of \$4,241.89. A portion of this stock has been reimbursable since the 1st day of January, 1827, and the residue since the first day of the present year; so that the whole is now subject to redemption, at the pleasure of the United States.

The stock belonging to this fund at one time amounted to \$209,580.65; but the interest proving insufficient to discharge the claims admitted under the several acts authorizing the issue of pensions, sales of portions of the stock, at various times, became inevitable, to enable the Department to pay the semi-annual allowances granted to the pensioners. Stock to the amount of \$138,882.41 has been sold, on which a premium of \$7,408.69 has been realized; and further sales must take place semi-annually, the interest being inadequate to pay the pensions chargeable to the fund.

2d. As respects "the number and probable expense to the fund, of the officers, seamen, and marines, whose pensions are charged upon it."

Provision was made for persons disabled in private armed vessels, by the acts of Congress of the 13th of February and 2d of August, 1813; and, under these acts, relief has been afforded to 107 persons, who are entitled to pensions so long as their disability continues. Of this number, some are known to have died; others, who have not claimed their pensions for several years, are, also, probably dead, though their death has not been reported to the Department; and new claimants occasionally yet present themselves, and succeed in establishing their right to a participation in the benefits of the fund. The expense occasioned to the fund, by this description of pensioners, may be estimated at about \$5,000 per annum.

3d. As respects "the number of widows yet unmarried, and children under the age of sixteen years, whose pensions are charged on the fund; and the probable future annual expense to the fund, by reason of the continuance of the pensions of such widows and children."

Since the passage of the acts of Congress of the 9th of April, and 26th of May, 1824, authorizing a further renewal for the term of five years, the widows and orphans of 159 persons, slain or lost during the late war, in private armed vessels, have been placed on the pension list, and paid, semi-annually, a sum equal in amount to half the pay to which the deceased persons, whom they respectively represent, were entitled at the time of their death. Some of these have already received the fifteen years' allowance, authorized by law, and their pensions have, of course, been discontinued. The pensions of the others will expire at different periods between the present time and the year 1830, when all will have received an allowance for fifteen years, and the several pensions expire, by the limitation of the term authorized by law, unless Congress shall make provision for a further renewal.

Under the act of 4th of March, 1814, the widows and orphans of 203 persons were placed on the pension list. Under the act of 16th of April, 1818, the widows and orphans of 186 persons had their pensions renewed and increased. Under the acts of 9th of April, and 26th of May, 1824, as before observed, the widows and orphans of 159 persons have had their pensions further renewed. From a comparison of these numbers, the committee will see what decrease has taken place, on account of intermarriages, deaths, children attaining the age of sixteen years, and of the failure of persons entitled to pensions to establish their claims.

It being difficult to estimate, with accuracy, the annual expense chargeable to this fund for any future year, I subjoin a statement, showing the actual amount remitted from the treasury to pay privateer pensioners, for each of the last ten years.

The remittances were as follows:

In 1818	\$17,532 00
In 1819	28,759 00
In 1820	35,065 33
In 1821	37,010 00
In 1822	25,032 20
In 1823	18,042 51

In 1824	\$19,499 00
In 1825	32,066 00
In 1826	20,112 00
In 1827	17,284 00

From the preceding views, it is evident, unless Congress shall make an appropriation to aid the fund, it will, in a few years, be exhausted, and the widows and orphans of those slain, or lost, as well as the persons who were wounded and disabled, in the private armed vessels of the United States, be left without any pension, or allowance, to contribute towards their support and maintenance.

If more particular information respecting this fund be required, permit me to refer you to a detailed report, made by the Secretary of the Navy, to the speaker of the House of Representatives, on the 27th of March, 1820; and to another report from the Department, made to the honorable James Lloyd, chairman of the Naval Committee of the Senate, on the 24th January, 1824, both of which were printed, and will be found among the documents.

I am, very respectfully, &c.,

SAM. L. SOUTHARD.

Honorable MICHAEL HOFFMAN, *Chairman Naval Committee, House of Representatives.*

NAVY DEPARTMENT, *March 19, 1828.*

SIR: In answer to your letter of the 15th February, I have the honor to state that the annual report in relation to the navy pension fund was transmitted to Congress on the 14th inst. That report exhibits the number who, at this time, receive aid from the fund, and the annual expenditure; the amount of stocks of the United States, and stocks of banks, held in the name of the commissioners of the fund.

The act of January 22, 1824, renewing that of 1819, will expire on 22d January, 1829. The pensions renewed under those acts having been granted at different periods, will, of course, cease at different periods, and several of them in the course of 1828.

It is impracticable to form an accurate estimate of the expense which will be occasioned by a renewal of those pensions; but as the income of the fund is now equal to the payment of all the claims upon it, there can be no doubt that it will be sufficient, should the law be renewed.

There are no means in the control of the commissioners which will enable them to state the probabilities as to the marriage of the widows or the age of the children; but the provisions of the laws, and the regulations of the commissioners, require the proof of widowhood, and of the ages of the children, to be given at every payment. The accompanying statement furnishes the information called for in relation to the privateer pension fund.

The laws hitherto enacted have been found sufficient for their object, and will furnish the form of a law, should it be deemed expedient to pass one.

It is, perhaps, proper to remark, that the cases of pensions granted under the law of 3d March, 1817, generally expire in the course of this year, and cannot be renewed, unless provision for that purpose be made by law.

I have the honor to be, your obedient servant,

SAMUEL L. SOUTHARD.

Hon. MICHAEL HOFFMAN, *Chairman Naval Committee.*

20TH CONGRESS.]

No. 365.

[1ST SESSION.]

APPLICATION FOR ESTABLISHMENT OF A NAVAL DEPOT OR STATION AT SAVANNAH, GEORGIA.

COMMUNICATED TO THE SENATE APRIL 28, 1828

MEMORIAL.

To the honorable the Senate and House of Representatives of the United States, in Congress assembled:

The memorial of the citizens of Savannah is respectfully presented: Your memorialists, without preamble, proceed to place before you the objects which have induced them again to appear before your body, having recently called your attention to the same matters, through the medium of the constituted authorities of the city.

Your memorialists acknowledge, with pleasure, the liberal appropriation made by your body for the clearing and deepening of the channel of the Savannah river, and for removing the sunken wrecks, which have for many years been imbedded in sand, and obstructed the navigation.

Your memorialists now design to lay before your honorable body facts and arguments connected with the subject of the second part of our former memorial, viz: the establishment of a naval depot at this point, on this river, at or near the city.

Your memorialists are able to affirm, with confidence, that the entrance to Savannah river is easy and practicable; that there are very few cases in which a ship cannot sail over the bar into safe anchorage.

Your memorialists know that your body has official surveys of the bar and river of Savannah, and on the comparative advantages of this and other ports in the vicinity, examined with the same general objects, your opinions and acts will be founded. We are willing, with deference, to submit the claims of this river, as a naval station of the United States, to the testimony of these documents before you, and will only add, by way of elucidation, the practical information which arises from residence and observation.

In the report of Captain Stockton, now before us, he answers to the 7th interrogatory of the Navy Department: "That tolerably good water can be obtained, and without much difficulty." Your memori-

alists are aware, from long experience, and repeated declarations of shipmasters, that the waters of this river are of the best kind for taking to sea; indeed, that it is preferred to that of many other seaports, on that account. It can be taken in for use, at Four Mile point, the distance from Cockspur roads eight miles by water. But should it appear that the water of the river would not answer the purpose of supplying ships of the United States, there would be no difficulty in procuring the requisite quantity from the city itself—where, with one consent, it is approved, and considered equal to any water that is found in a corresponding latitude.

Your memorialists, in commenting further on the report of Captain Stockton, are led to the expression of the opinion that if his low-water depths be established as correct, and his rise of tide also, then such classes of vessels as do come up to the several points mentioned, and to the city, could not be floated. Still, however, we are willing to concede any preconceived opinion, which has been overthrown by facts, and such his statements are supposed to be, by actual admeasurement. Vessels drawing fourteen feet water come up to the city.

Your memorialists further remark, on the subject of supplies for a fleet, mentioned in Capt. Stockton's answer to the 8th interrogatory, that there could be no doubt of procuring every necessary article, by contract or otherwise, as must be done in other places. Let the arrangements be made here, which require supplies, they can be immediately furnished.

Your memorialists are not competent judges of the best positions for a navy yard; but when a selection is made, it ought to be carefully investigated, not only with reference to general advantages, but to the health of men who labor in naval preparations.

Your memorialists state, in relation to the health of this city and its vicinity, that it has been subject to great changes. They would strongly recommend a location for workmen in the city, or a short distance from the river, during the summer months, especially at night; and there is an elevated point, not far distant from Fort Jackson, or Five Fathom, on the Georgia side of the river, whence there is easy communication with the city. They recommend Fort Jackson, or Five Fathom, as the most eligible point below the city.

Your memorialists affirm that destruction by the worm is not known in this river, within seven miles of the city.

Your memorialists believe that it will be plainly seen that the largest class of vessels cannot use this port, if a naval station were established here by the government; but they are decidedly of opinion, that all the documentary testimony of examination and reports will show it well adapted for medium class vessels, which will be most generally employed in this and contiguous latitudes for the protection of commerce.

Your memorialists desire that this port be placed only in fair competition with others, for an unbiassed choice, by the proper authority, as a naval station.

If it be declared unequal to others in the vicinity, the award must be considered as made by the best judgment of the parties.

Your memorialists, in the memorial formerly alluded to, asked a survey of the port.

The request has been complied with, and the officer executing that duty has fulfilled it. It appears to be a plain, impartial statement of facts, from which all leaning to any peculiar interest has been excluded.

Your memorialists are credibly informed that Gen. Barnard declared this port and river to be very defensible at several points. We know that Com. Bainbridge spoke of it as of extremely easy entrance and navigation, and on that opinion the surest reliance is to be placed, from his experience in such matters, and as he himself came in, in the ship John Adams, Captain Nicholson.

Your memorialists state, that it is a rare occurrence for a ship to lie off and on, outside of the bar, from the entrance being so deep and practicable, and the navigation so plain and simple. The light of the United States, and the beacon erected by the commissioners of pilotage, mark the entrance as well as that of any port in the States.

Your memorialists would suggest, through your body, to the Navy Department, if this river and harbor, or some point in this vicinity, be made a naval station, that a place of deposit for heavy munitions and fitting be established at Five Fathom, or Fort Jackson, and that the ships intended to be thoroughly repaired, be floated light to the city; and if only slightly repaired, that it be done by detachment from the city. And they add, that the motive for this suggestion is the preservation of the health of laborers and mechanics.

Your memorialists believe that a naval station is necessary, somewhere in this vicinity, for several objects:

1. Because of the interests to be protected.
2. The proximity to the West India seas, and the competent protection of our western commerce through them.
3. From the gales which annually occur in August and September, which make it necessary to have an open and accessible port for repairs and supplies for government vessels, which must always be employed in guarding our trade with our western States and our West India neighbors.

Your memorialists think it unwise to attempt to press on your body the general arguments connected with the defence of the country, being satisfied that the common interest of the confederated brethren of these States, weighs with powerful influence on your body. We ask of you to establish a naval station here, because we believe its advantages are greater than other ports under consideration, for the same purposes. But, "our country" is our motto, and we desire to be actuated by it, in this memorial.

Your memorialists believe that Savannah is the next important point on the southern coast to New Orleans. In the late war, our then enemies had so determined it, and had not our armies been led to victory, and our foes discomfited, it is highly probable that the force might have been turned against us, and at that period the opinion received very extensive credence.

Your memorialists beg reference to the maps of the southern coast, and believe it will be found that Savannah is well placed, at the proper point on a river which is one of the finest outlets in the country, and the way by which the produce of this State and part of South Carolina must find their market. The imports and exports of Savannah, have always been extensive. The former have decreased, but in the lapse of a few years they will begin to reach the previous standard. The exports can also be made the subject of investigation.

Your memorialists beg leave to show that Savannah is a point of central importance in time of war,

in consequence of the natural canals or inland passages, north and south of it. It can carry on a trade independently of an exterior enemy, and experience has proved this. Let Savannah be held by an enemy: it may readily be seen how commanding a point it may then become.

Your memorialists can affirm, without fear of contradiction, that several of the superior officers of the John Adams, (when that ship was in our waters, in 1825,) declared Savannah to be the best entrance and harbor south of the Chesapeake. There are but two competitors for equality in this respect: Charleston and St. Mary's. The examination of these ports, compared with that of Savannah, will show its decided superiority. In addition thereto, the water is salt in both those ports.

Your memorialists have before them memorials for extending this document to still greater lengths, on this part of the subject.

But, as your body will most probably be guided by the opinions and calculations of the surveying officers, appointed for that purpose, therefore please remark, in Capt. Stockton's report, "about one mile and a half higher up the river, there is another mud flat, called Four Mile Point shoal, on which there is about eight feet at low water."

The ship John Adams lay for a fortnight, only a mile below this point. Her draft of water can readily be ascertained. The order for her pilotage was for a draught of 17 feet.

Your memorialists, in further prosecution of the objects of this memorial, are unwilling to trespass on the time of your body. But it is needful to present ourselves before you in such a way as to show that we ourselves feel an interest in our own endeavors to procure the object asked for. We ask especial reference to the reports of the examinations made of the bar and harbor of Charleston and St. Mary's, by Capt. Kearney, and to the same document by Capt. Stockton, in relation to this port. On the latter we have commented, and stated some facts, of which we desire notice to be taken; and, in addition to the comments already made upon the report of Captain Stockton, we desire to state, that vessels crossing the bar of the Savannah river, have a free wind when it is either due north or south, or intermediate.

Your memorialists believe that every article of supply for vessels can be procured at any time, provided there be a want of them.

Of timber, any quantity can be delivered here for repairs; and by the aid of a very fine steam mill, at Darien, with that in this city, the best plank can be prepared, allowing the choice of hitherto uncultured materials. As before remarked, establish a necessity for any article, by its purchase for use, and there will be an immediate supply.

Your memorialists cannot assert that the number of mechanics for the repairing of vessels is equal to Charleston, nor shall we enter into the reasons why so many more are required there, but shall say on this part of the subject, if inducements are offered, there will be no difficulty in obtaining the requisite supply of them.

Your memorialists beg leave to state to your body, that sick seamen can be taken care of, at any time, in the public hospital, or by provision made by the government itself, for that object.

Your memorialists are aware that such papers as the present are frequently intruded on your body. In this we have intended to say that which was relevant to the subject before us, and have spared many details which might have been introduced. Our principal object has been to place the matters before your body in a plain, business form, that it might be clearly seen that we understood the grounds of our opinion, by exhibition of which we expect to make an impression on your body, and wish to insist on our advantages, not merely that they may be set forth, but that our confidence in them may be supposed to proceed from the conviction of our minds, founded on substantial evidence.

Your memorialists ask your candid consideration of the subject of their application. We abjure all ideas of favor which is not bottomed on the apparent expediency of complying with this memorial. And we could not honestly ask the government to establish a naval station or depot here, unless we were decidedly of opinion that, besides the local advantages to this city, it was for the public good.

Signed by order of the meeting of citizens.

GEO. JONES, *Chairman.*

[20TH CONGRESS.]

No. 366.

[1ST SESSION.]

ON CLAIM OF A PILOT TO COMPENSATION ON ACCOUNT OF BEING TAKEN PRISONER WHILE IN A PUBLIC VESSEL AND DETAINED BY THE ENEMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MAY 6, 1828.

Mr. MILLER, from the Committee on Naval Affairs, to whom was referred the petition of Michael Lewis, reported:

That the petitioner represents himself to be a pilot of the bay and river Delaware; that he left the port of Wilmington, in the State of North Carolina, on the 20th of December, 1813, in the United States schooner Vixen, then under command of Captain Thomas Hall, bound to Philadelphia; that, while doing duty on board said vessel as a coasting pilot, on the 25th of the same month he was severely wounded by a shot from the British frigate Belvidere, then in chase of the said schooner; that he was taken prisoner and sent to the hospital at Hamilton, in the Island of Bermuda, where he remained eighty-two days, when, his wounds being healed, he was transferred to Halifax, and thence to Salem, Massachusetts. The petition is accompanied by the deposition of the petitioner and sundry other documents, by which it is proven, to the satisfaction of the committee, that the petitioner was, at the time of his capture, in the regular discharge of his duty as a pilot, and that he has at no time received any compensation for his services or detention. It also satisfactorily appears that the wounds of which he complains were received at the time, and in the manner, by him stated. But, by the certificate of the surgeon by whom he was recently examined, it would appear that the disability thereby produced has not been such as to entitle

him to be placed on the list of invalid pensioners. The committee are, however, of opinion that he is justly and fairly entitled to compensation for his services, and for the time he was detained as a prisoner—the severity of his wounds being such as, in all probability, would have prevented him from engaging in his regular pursuits, even if he had been released at an earlier date. The committee propose to fix the compensation to be allowed him at two dollars per day, amounting to three hundred and ninety dollars; and therefore report a bill granting that sum for his relief.

20TH CONGRESS.]

No. 367.

[1ST SESSION.]

ON THE EXPEDIENCY OF TESTING URIAH BROWN'S SYSTEM OF COAST AND HARBOR DEFENCE, BY FIRE SHIPS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MAY 10, 1828.

Mr. DORSEY, from the Committee on Naval Affairs, to whom was referred the memorial and documents of Uriah Brown, relative to a system of harbor and coast defence of the United States, by means of "impregnable and invincible fire ships," reported:

That they have examined, with much interest, the subject referred to them. It appears that, during the late war, the inventor, then a resident of Baltimore, conceived the plan of a ship to be propelled by steam, to be proof against cannon shot, and to throw liquid fire upon the ships of the enemy, by the means of an ejecting fire apparatus of very great force, placed within the vessel.

To test the inflammable properties of the liquid when projected, experiments were made, and proved highly satisfactory. A committee was organized, and subscriptions to a large amount made, to build a vessel upon the plan proposed.

The termination of the war arrested any further progress in the building of the vessel.

It appears to your committee that the invention has been examined by scientific men, and its practicability and utility sustained by the concurrent testimony of enlightened theorists and practical engineers. They, therefore, deem it their duty to submit to the consideration of Congress the expediency of authorizing the President of the United States to cause experiments to be made, under the direction of a board of engineers, to ascertain if the interest of the United States would be promoted by adopting and incorporating this invention with other means of national defence; and for that purpose they beg leave to submit a bill.

DOCUMENTS ACCOMPANYING THE REPORT.

A committee having been requested by Mr. Brown to examine his mode of harbor defence, met at the mayor's office on Saturday, the 1st inst., and made the following report:

Mr. Uriah Brown having made several experiments in the presence of a vast concourse of the citizens of Baltimore, showing *satisfactorily* the practicability of communicating fire to ships-of-war, we, the subscribers, having been requested by Mr. Brown to examine the model of a boat to be propelled by steam, and to resist the fire of an enemy, have accordingly examined the same, and respectfully offer an opinion to the public on the subject.

It is impossible, perhaps, to decide, with absolute certainty, upon the success of any such project before the trial has been made; but it appears to us that both the boat and the mode of applying the fire afford the strongest grounds for believing that it will *effectually* answer the purpose; and we recommend the project to the patronage of the citizens of Baltimore, as presenting, in all probability, the means of insuring the waters of our vicinity an absolute exemption from the hostile visits of the enemy's ships.

NAVY DEPARTMENT, *December 23, 1814.*

Sir: In obedience to an order of the honorable the House of Representatives, of the 6th instant, referring the memorial of Uriah Brown, "and such part thereof as relates to operations on the water," to the Secretary of the Navy, I have the honor to report:

That the system of annoyance presented by Uriah Brown appears to combine principles of science distinct in their nature, and which may be classed under the following heads:

1st. The construction, capacity, and stability of the vessel for the purposes proposed.

2d. The power of the machinery for propelling, and the security of the engine for ejecting the inflammable fluid successfully to its object.

3d. The efficacy of the whole system, and its probable effects on the enemy's vessels in our waters.

First. The construction of the vessel of a sufficient thickness to render it impervious to the shot of an enemy, of a capacity to contain the whole machinery, with men, fuel, &c., and covered with sheet iron to prevent combustion, appears well calculated, upon the principles of an inclined plane, to reflect shot at any possible angle at which they can be fired from a ship to be assailed; and, upon the well-known principles of *Ricochet* firing, if a ball be fired and impinge on a plane of oak timber, at an angle of about forty-five degrees, it will be reflected at nearly the same angle as the angle of incidence, and will continue to rebound until its force is overcome by its gravity and the resistance of the atmosphere.

The guns of a ship-of-war cannot be depressed more than ten, or, at most, twelve degrees, which angle, meeting the approaching vessel at any point, cannot penetrate the mass of wood and iron so as to endanger her safety or impede her progress; and the means of defence are ample to defeat an attempt at boarding with armed boats, and to destroy those who may be in them.

Second. The power of the machinery for propelling, and security of the engine works within the vessel for ejecting the inflammable fluid. The propelling power by steam is practically known. The security from injury by the shot of an enemy's ship is clearly demonstrated in the plan and drawings; while the rapidity of approach by steam, at the rate of five miles an hour, and the low surface presented to the enemy's fire, lessen the chances of any one shot taking effect injuriously: while this vessel, pursuing her course in the night, or approaching an enemy in a calm, and choosing the point of attack, combines more advantages than any other plan, in proportion to the expense, that has been offered to the Navy Department.

Third. The efficacy of the whole system, and probability of success in operating against the enemy's vessels. As respects the security of the machinery, in connection with the power necessary to effectual operation, the care of the artist, the solidity of the workmanship, and a thorough knowledge of its principles, are all so essential, that the operator must combine the talents and mechanical knowledge to direct and decide these important points for self-preservation.

The experiment having recently been made, in the presence of thousands, of the irresistible power of Mr. Brown's liquid fire, to envelope in flames any combustible object at which it is directed, appears to have produced conviction of its efficacy.

I humbly conceive that it may be successfully applied to drive the enemy from our bays and harbors; and more particularly on the lakes, it may be the means of obtaining our absolute ascendancy.

Should Congress, in their wisdom, patronize the attempt, the result would probably justify the means and the expense.

All which is respectfully submitted.

I have the honor to be, very respectfully, sir, your obedient servant,
BENJAMIN HOMANS, *Acting Secretary of the Navy.*

The Hon. the SPEAKER of the House of Representatives.

WASHINGTON CITY, *December 25, 1826.*

I have examined the plan of Mr. Uriah Brown, having for its object to communicate fire to ships-of-war.

It seems to me that this plan combines strength of construction against an enemy's shot, with security to the propelling engine destined to reach within the proper range of the incendiary liquid.

I deem that Mr. Brown's plan offers fair chances of success; and, should experiments prove its efficiency, I believe that it might become a very valuable auxiliary in the defence of our harbors and open bays.

BERNARD, *Brigadier General.*

I fully concur in the foregoing opinion of General Bernard.

A. PARTRIDGE.

On the 29th of December, 1826, Captain Partridge, principal of the American Literary, Scientific, and Military Academy, at Middletown, Connecticut, who was on a visit to this city with his pupils, delivered a lecture on *National Defence*, in the hall of the House of Representatives, to a numerous and highly respectable audience. The following is an extract from his lecture, as published in the *National Intelligencer*:

"In addition, and in connection with land batteries, he recommended floating batteries and fire ships as preferable, in point of utility and economy, for the defence of our bays, rivers and harbors. He said it was impossible to defend every assailable point that an enemy might attack with a movable force; and, therefore, recommended a similar force, calculated to arrest his progress. He remarked that the powerful effects produced by the Greek fire ship upon the Turkish navy had been made apparent by repeated trials: that they are calculated to strike terror into an enemy.

"Connected with fortifications, he said, steam frigates, floating batteries, and fire ships, the latter as lately improved by Mr. Uriah Brown, of Baltimore, constituted a system of defence to be relied on for defensive and offensive operations within our own waters. He had examined Mr. Brown's plan, and had no hesitation in joining his opinion to that of others—men every way qualified to decide on a subject of

so much importance to the nation. This gentleman had submitted a memorial to the House of Representatives, requesting that the subject might be taken into consideration.

"Experiment, the great test of all inventions, had proved that this plan was susceptible of the utmost utility as a means of coast and harbor defence. It had been submitted to the examination and investigation of many scientific men of great repute, who had pronounced an unequivocal opinion in favor of its utility.

"The plan of this vessel was predicated on the principle of inclined planes, and calculated to resist the shot of an enemy by reflecting them at any and every angle at which they might be directed by the ship to be assailed. The size of the vessel was calculated to be 125 feet in length, and 50 in breadth; to be propelled by steam power.

"The inflammable liquid matter, ejected from this machine by means of steam or any other adequate power, was calculated to operate with complete effect upon any combustible material, at a distance of 200 yards, and instantly to envelope in inextinguishable flames any vessel subjected to its operation. A shot striking this body would *ricochet* or rebound so as to do no injury to the machine or vessel; and the probability was that, from the low surface presented to the enemy's fire, not one shot in 300 would take effect.

"Captain Partridge said he felt fully satisfied in his own mind that this system of auxiliary defence was capable of great utility, perhaps of some improvement, and certainly worthy of the notice and attention of those to whom the defence and protection of this nation were entrusted."

ENGINEER DEPARTMENT, *Washington, February 3, 1827.*

Sir: In compliance with your instructions to me, given under the order of the House of Representatives, of the 29th of December last, directing "that so much of the petition of Uriah Brown, this day presented, as relates to his system of annoyance and destruction of an enemy on land be referred to the Secretary of War, to report his opinion thereupon to the House," I have examined Mr. Brown's project of a fire ship, called the "*Navis Conflagrator*," a description of which will be found in the enclosed paper, marked A, and am of opinion that the principles upon which it is founded are correct: but how far it may be practicable to put into operation such a machine, can only be determined by experiment.

Should experiment result in a favorable exhibition of the practical powers of the machine, I have no doubt it would, in the hands of skillful and brave men, prove a very valuable auxiliary in the defence of ports, harbors, anchorages.

As far as I am informed, the invention of Mr. Brown is new; and if an experiment could be made without involving too great expense, of which I have no means of forming an estimate, I would recommend that it should be made.

I return Mr. Brown's petition to Congress, with the drawings and other papers relating to the subject of it, which were referred to me,

And am, with great respect, your obedient servant,

ALEXANDER MACOMB, *Maj. Gen., Chief Engineer.*

Hon. JAMES BARBOUR, *Secretary of War.*

WAR DEPARTMENT, *February 3, 1827.*

Sir: In relation to the subject of the order passed by the House of Representatives, on the 29th of December last, directing "that so much of the petition of Uriah Brown, this day presented, as relates to his system of the annoyance and destruction of an enemy on the land, be referred to the Secretary of War, to report his opinion thereupon to the House," I have the honor to transmit herewith a report of this date from the chief engineer, and another from Brigadier General Bernard, dated the 25th December last,

And am, very respectfully, sir, your obedient servant,

JAMES BARBOUR.

Hon. JOHN W. TAYLOR, *Speaker of the House of Representatives, Washington.*

Estimate of expenses to be incurred in making experiments for the purpose of testing the correctness of the principles involved in the plan invented by Uriah Brown for the structure of an engine of war, adapted to the defence of the coasts and harbors of the United States.

1,200 cubic feet of white oak timber, to construct a plane for a course of experiments in firing, at 25 cents per foot.....	\$300 00
2,800 pounds iron bolt, for the above plane, at 5 cents per pound..	140 00
4,000 pounds quarter-inch rolled iron, for the above plane, at 12½ cents per pound.....	500 00
200 pound spikes, for the above plane.....	20 00
1 cross-barred grating, for the above plane, weight 3,545 pounds, at 12½ cents per pound....	443 12
1,650 pounds powder, (150 rounds of cartridges) at 25 cents per pound.....	412 50
4,800 pounds of thirty-two-pound balls, at 5 cents per pound.....	240 00
2 hollow spheres, (for testing the effect of the inflammable liquid) constructed of the best half-inch rolled iron, contents 1,100 gallons, weight 6,690 pounds, at 25 cents per pound.	1,672 50
4 cast iron flanges, for the above spheres, weight 7,500 pounds, at 6 cents per pound.....	450 00
5,000 pounds of cast iron pipe, at 6 cents per pound.....	300 00
1 adjutage pipe, with ball and socket joint.....	40 00
3 large stop-cocks, at \$20 a piece.....	60 00

1,000 gallons inflammable liquid, at 75 cents per gallon.....	\$750 00
Expenses of making the necessary experiments for testing the principle of propeling vessels upon the plan proposed, including the cost or charter of a vessel suitable for the purpose, condensing pump, propelling wheel, air chamber, packing boxes, fuel, labor, &c.....	2,671 88
Total amount.....	<u>\$8,000 00</u>

URIAH BROWN.

WASHINGTON, *May* 6, 1828.

[1ST SESSION.

DIFFICULTIES IN OBTAINING SEAMEN FOR THE NAVY—THEIR CAUSE, AND MEASURES FOR THEIR REMOVAL.

COMMUNICATED TO THE SENATE MAY 26, 1828.

NAVY DEPARTMENT, *May* 23, 1828.

SIR : The Secretary of the Navy, in answer to the resolution of the Senate, directing him to report "whether any, and what difficulties have occurred in obtaining seamen for the navy, the cause of such difficulties, and what measures may be necessary to remove them," has the honor respectfully to present the following report :

Previous to the time when the resolution passed, great delay had occurred in enlisting seamen for our public vessels. Some of them had been detained in port several months by this cause, and others were permitted to go to sea, with a smaller number of men than was desirable, or than would, perhaps, have been entirely safe in a state of war. An allusion to this inconvenience, in a report from the Department, probably induced the inquiries made by the Senate.

When the resolution was received, some changes had already taken place, and at the time mentioned for making the report, it was not possible to designate with accuracy, or in such way as would communicate useful information, the difficulties to which it referred. Since that time, changes, both favorable and adverse, have been constantly occurring; and even at this moment it is not practicable to do more than to notice the circumstances which, at different periods, have created greater or less delay and trouble in manning our vessels, and to suggest the remedies which seem best fitted to relieve from future embarrassment. These circumstances will be found to differ materially, both as to permanence and influence; but the remedies which will be suggested are believed to be such as will grow in importance as the navy advances in strength.

First inquiry.—"What difficulties have occurred in obtaining seamen for the navy?"

Regular recruiting rendezvous are established at five naval stations: Boston, New York, Philadelphia, Baltimore, and Norfolk. These are opened by officers assigned by the Department to that duty, whenever seamen are wanted, and closed as soon as a supply for the immediate calls of the service is obtained. In a state of war, it has been found expedient, and necessary sometimes, to open them at other places. In peace, none but these are used.

The officers who superintend the rendezvous, are provided with appropriate instructions, and also with

forms for the contract which the seamen are to sign, and for the returns which they have to make each week, and sometimes each day, to the Department. The periods for which enlistments are made cannot exceed three years (law of 15th May, 1820, vol. 6, page 540); and very few are now made for a shorter time.

The pay was fixed by the President of the United States, by authority of the law of 18th April, 1814, (vol. 4, page 704) and since its passage has been invariably at \$12 per month for able seamen, and less in proportion for ordinary seamen, landsmen and boys. It has not been raised even when they were scarce and difficult to be procured, because it would not be easy to reduce it when the necessity had passed by, without creating dissatisfaction.

The President is also authorized to order a bounty to be given on enlistment, and it has sometimes been proposed to give it, in order to fill the vessels more rapidly; but was declined, from a reluctance to commence a system of the kind in time of peace, which could not well be discontinued, and which ought to be reserved for the pressure of war.

The pay, before mentioned, has generally been inferior to that given in the merchants' service, which has varied from twelve to eighteen dollars per month, within the last three or four years.

There are no materials in the Department from which an accurate estimate can be formed of the average numbers enlisted in each month, previous to the year 1824. Since that time, returns and records have been made, which furnish this information. In 1824, the average per month was about 200—in the following years, about 100. In these latter years, it required six months to obtain a crew for a ship of the line, four months for a frigate, and one and a half for a sloop-of-war. The difficulty related principally to good seamen. Ordinary seamen and boys are almost always abundant. It became necessary, therefore, when vessels were to be put in commission, that the rendezvous should be open long before they were to sail; and a considerable portion of the term of enlistment had passed, with many of the men, before the cruise commenced. Thence it was impracticable to keep our vessels out for three years, without creating the necessity of re-entering the men, or discharging them in foreign countries, which has sometimes been done.

These facts will explain the extent and operation of "the difficulties which have occurred in procuring seamen for the navy;" and which will probably augment, if some provision be not made, and some system adopted which will secure to the nation a full and constant supply of native American seamen, sufficient both for the mercantile and military marine.

The following may be enumerated among the causes from which the difficulties have arisen:

1. The higher wages in the merchant service, with the allowance of small stores, have created a temptation not easily to be resisted by sailors, nor overcome by the recruiting officers. The average difference in the wages is believed to have been about one-fourth. The allowance referred to relieves them from some of the inconveniences to which their situation and labors expose them, especially for a short period after their enlistment and entrance on board the vessels.

2. The failure to recall the vessels, so as to effect their discharge in our own ports at the expiration of their enlistment. It is exceedingly unpleasant for them to be detained longer than their contract stipulates; and their discharge in foreign countries exposes them to hardships and losses, which sometimes render them unwilling again to enter into a service which they would otherwise prefer.

3. It is the practice to enlist, not for particular ships, but for the general service—and it is not to be doubted that this has caused delay, at times when sickness or other evils existed, or were supposed to exist, upon some of the stations, and the sailors were unwilling to go to them. They always prefer to enter for particular ships, whose destinations they know; and especially for such ships as are esteemed fortunate. Their partialities and superstitious feelings are very strong. But this objection could not well be obviated by the Department. The number of our vessels in commission is small; it is necessary often to change them from one station or cruising ground to another. Our period of enlistment is definite, and often terminates before the vessel can be brought home. These, and other causes, sometimes occasion a transfer of the crew from one vessel to another. If they were enlisted for particular vessels, we should be compelled to sustain serious inconvenience, or create dissatisfaction, by not adhering rigidly to the terms of the contract. It is believed to be much better to enlist more slowly, and to have entire control as to the place and time of service, and not hazard a violation of the faith of the government.

4. The want of proper hospital establishments, for their comfort and accommodation in sickness and old age. This is almost the only subject on which the forecast of the seamen is exercised. He will trifle with property, disregard health, and leave to-morrow to provide for all the necessities which it may bring upon him—yet he anxiously desires to look forward to a comfortable asylum, when disease and age overtake him; and if there be better hospitals and asylums for him in the merchant service, he will make that a ground of preference. The hospitals connected with the navy establishments have heretofore been unworthy of the naval service and of the country—temporary in their nature, confined in their accommodations, and offering no anticipations of comfort to the sailor, when misfortune shall compel him to resort to them. And he feels the more keenly on the subject, because he is obliged every month to pay his twenty cents for this object, and he knows that the nation has never yielded a dollar of its treasure to furnish him with these necessary means of security and relief, after he shall have faithfully served it, and fought its battles.

5. A slight diminution has been produced by steam navigation in the number of those who are employed in our rivers and bays, and on the coast, and who, after a little experience there, usually find their way to the ocean, to vessels engaged in foreign commerce, and to our public ships. This cause has not yet effected serious results, but will probably augment in importance. The coasting tonnage of the United States, exclusive of steamboats, rose, in the year 1826, from 587,273 to 666,420 tons, and causes are in operation to create a further increase; still its growth will probably be less rapid than if steam were not used at all in our navigation. The employment which it will afford, and the number which it will attract to the ocean, will be proportionably less.

6. A species of commerce has been carried on for some years past, which has drawn away some of our seafaring people, and occasionally produced delay in manning our ships. Not less than two thousand seamen have gone out in vessels which have been built here to be sold in the countries to the south of us. Most of these were men who usually found employment in our public vessels, and the larger part of them have not returned to the country. Some have entered another service—some have perished—others have been restored, through the agency of our consuls and the commanders of our ships-of-war.

7. A number of our seamen, principally those of foreign birth, have entered into privateers and into

the service of Mexico and the South American governments, being tempted by bounties, the promise of higher pay, and the hope of prize money. This evil is passing by. Experience has not, in its full force, continued the temptation under which they acted. They are beginning to return, and will not probably again leave our service for the same objects and in the same quarter.

8. The increase of our shipping has rendered it difficult for the supply to keep pace with the demand. In 1822, our tonnage amounted to 1,324,699; in 1823, to 1,336,565; in 1824, to 1,389,163; in 1825, to 1,425,111; in 1826, to 1,534,191; being an average increase, per year, for four years, of about 52,373 tons, requiring an average annual increase of about 2,700 sailors. If the future augmentation of our tonnage should be proportioned to that which occurred in 1825 and 1826, as it probably will be, the annual increase of seamen to meet its demands must be more than 5,000. The operation of this cause is not diminished, in its effects, by the practice of our merchants. Economy in navigation induces them to take, as far as practicable, able seamen only, and to exclude boys and inexperienced men: hence, while in other countries the average number of hands is about one for fifteen tons, in ours it is about one for nineteen. Our vessels are, therefore, navigated more cheaply. But we do not afford a proportionate opportunity and sufficient nursery for training and educating the young to meet our future wants.

9. The number of foreign seamen in our employ: There have, at all times, been some of these, but they increased with great rapidity during the continuance of those struggles which succeeded the commencement of the French revolution. They sought here the greater security and comfort, and the higher wages which our prosperous commerce afforded. Upon a change of circumstances, many returned to their respective countries, and their places were not promptly supplied. It has been calculated that in the years 1806, '7, and '8, at least one-sixth of all the seamen navigating American vessels were foreigners by birth. This calculation was, probably, then, and would be even yet, too low. In our coasting trade and fisheries, very few but native seamen are employed; but in the different branches of our foreign trade, not less than one-fourth are foreigners. In the navy there are more than that proportion. The effect of this circumstance it is not difficult to estimate. Delays and embarrassments will often be produced in making enlistments, which would not exist if all or nearly all were native American: and it may be added, that, from the same source have arisen much the larger portion of our inconveniences as to discipline, crimes and punishments. It would be fortunate, in every respect, if not one man floated upon an American bottom, either mercantile or military, who did not claim American soil as his birth-place.

The joint operation of these causes, with some others of less influence, will account for the "difficulties which have occurred in enlisting seamen for the navy." "The measures which may be necessary to remove them," should be applied to the nature of these causes, and comport with the character of our institutions. They should be addressed to the interests, and to the freedom of action and choice in the citizen, and not to the exercise of violence or compulsive power. Impressment is the instrument of undelegated authority, and to be tolerated only where the citizen does not feel his right to that equality on which our institutions rest.

1. It is not believed to be expedient to increase the pay. It is already sufficient to procure the necessary numbers, provided other remedies within the power of the government be applied. This one should be reserved for times of greater pressure. The ration, which is fixed by law, and which may be regarded as a part of the pay, and the allowances upon entering on ship-board, might be usefully changed in some respects. Notice has been taken of this point in former reports to Congress to which reference is made.

2. The contract with the seaman should be scrupulously respected, and he should be discharged when it expires, and in his own country. If this be not done he is dissatisfied, and unwilling again to enlist; and his services are often lost forever to his government when he is landed in a foreign country, without the means of comfort and the power to return immediately. It is obviously impracticable in every instance to accomplish this desirable object, because the time of the seamen expires at different periods. It is also difficult to reduce the length of the cruises of our vessels without greatly augmenting the expense of supporting our squadrons abroad. With the number and size of our vessels now in commission on the different stations, a reduction of the length from three to two years would create an annual addition to the expenses of supporting the navy of not less than \$150,000; still the object is so desirable that every effort has been and should continue to be made to secure it. In June, 1827, a general circular letter was sent to the commanding officers at sea, and at the recruiting rendezvous, giving instructions upon the subject, which has already produced a salutary effect upon the feelings of the seamen towards the service, and will eventually lead to great good. A copy of that letter is added to this report. It is not perceived that any other measure is necessary in reference to this point.

3. Hospital establishments suited to the wants of the navy, and calculated to answer the just expectations of our seamen, can only be provided at an early period by legislative aid in appropriating money for that purpose. And the conviction is earnestly but most respectfully expressed, that there is no object on which a portion of the public funds could be bestowed with more advantage to the interest of the naval service, or to the honor and justice of the government and nation.

Heretofore nothing has been expended upon it which was not drawn directly from the meagre pay of our officers and seamen. They have been exclusively taxed to provide establishments which the humanity of the whole nation ought to have erected, and on which a portion of the national pride should have rested. Even that money taken from our seamen has not, until recently, been devoted to its proper destination—but has sometimes been used for other purposes. Reference on this point is made to the reports heretofore presented to Congress. For three years past laborious attention has been paid to secure to the hospital fund all that it was entitled to receive under the law, and to commence and prosecute a system which should in the end furnish the buildings and accommodations which would be necessary or useful. By an order dated 11th March, 1824, all the money deducted from the pay of the officers and seamen is regularly transferred to the fund on the first day of every quarter. Sites have been purchased at Boston, New York, Philadelphia, and Norfolk, and arrangements made for selecting one at Pensacola. An asylum at Philadelphia, and a hospital at Norfolk have been commenced, and are progressing as rapidly as the magnitude of the buildings will justify. With sufficient funds at the control of the commissioners, the hospitals at the places mentioned might be completed in two years, and a system established which would meet the wants of the navy for half a century to come; perhaps forever. And should it be the will of Congress to make a suitable appropriation for this interesting object, a most salutary effect would be wrought upon the inclinations of seamen to enter the service, and upon all its highest and best interests.

For those difficulties which arise from steam navigation—from the commerce in vessels—from enlistments in the service of other governments—from the augmentation of tonnage—from the practice of taking few boys and green hands—and from the number of foreign seamen in our employ, there seems to be but one adequate and appropriate remedy, which is such an increase of native *American seamen* as will answer every demand of our mercantile and naval marine. It will not be easy speedily, if at all, to attain this result. The process must be slow; but it is worth the sacrifice of time, convenience, and money which it will require.

It is peculiarly important that those who navigate our public ships should be *native Americans*. Our seamen are believed to be, at least for our own purposes, better than those of any other nation; economical, vigorous, hardy, skillful; taught in the best schools; bred in the best nurseries; not ignorant of their rights; but governed with ease when governed with justice. It is desirable not to mingle other and worse materials with such men; to injure their habits, create a spirit leading to insubordination and crime, and when the hour of action comes, to have among them those who must contend, not for, but perhaps against their native flag. In peace we can do better without foreign seamen; in war, slight temptations of avarice, and other causes, will lead them from us; and their presence will give us less confidence in battle. Every sailor in our ships should have *located here* all those attachments which bind man to his country. Long and steady service under his native flag will increase fidelity to it, give a more generous courage in its defence, and ensure that devotion which shields the home and the fireside from invasion.

In attaining this condition, so far as the navy is concerned, it is a favorable circumstance that habit induces the sailor to prefer our ships-of-war to the merchant or any other service; that although the discipline is more rigorous, his comforts are greater, his employments and vicissitudes less changing; he will therefore continue in them, even at less wages. If we can procure for and place in our navy as many native American seamen as are required, we shall probably be able to retain them, and thus be prepared for every event which peace or war may produce. The numbers necessary for our merchant vessels and ships-of-war may be readily estimated. Our tonnage, in 1826, amounted to 1,534,191; in 1827, probably to about 1,600,000, which, at the average before mentioned, would require about 85,000 seamen. Our ships-of-war now in commission demand about 4,800 seamen, ordinary seamen, landsmen and boys. To man, in time of war, all the vessels which are authorized to be built, more than 20,000, including petty officers and excluding marines, would be necessary. The average annual increase has been before stated at about 5,000. What is the precise number of our own citizens, whose sole employment is upon the water, and what the number of naturalized foreigners, cannot be precisely stated. There is a great defect in the register of our seamen, a defect which ought to be remedied by legislative enactment.

It is respectfully suggested as proper:

1. That foreign seamen, although naturalized, be as rapidly excluded from our navy as possible. In conformity with this suggestion, an order has been issued to the officers engaged in recruiting, directing them to seek, first, native Americans, and to enlist none others except as matter of necessity. It is believed that this order will accomplish the design to a considerable extent.

2. That a larger proportion of landsmen than heretofore should, while peace continues, be placed in our ships. An order to this effect has also been issued, and a direction given that none be enlisted under eighteen nor over twenty-five years. Good landsmen of the proper age will, after one cruise of two or three years, become good ordinary seamen, and after a second cruise be good seamen, and continue permanently in the service.

3. That landsmen be enlisted in the interior. Such as are picked up in the cities are generally dissipated men, advanced in years, with bad habits and enfeebled constitutions, who never can become useful in any capacity. On the contrary, young men may be enlisted in the country whose constitutions are vigorous, whose habits are good, and who will soon make efficient seamen. By this course, also, a more general feeling will be created in favor of the navy—the right arm of the national defence.

A conviction of the importance of this measure, and a desire to test its practicability, induced the Department, a short time since, to establish a rendezvous in the neighborhood of Carlisle and Harrisburg. Thus far it promises all that was hoped for from it, and should it continue to prosper, it will be used hereafter as necessity shall call for it, and the same plan will be adopted in other places.

4. That legislative provision be made to require merchant vessels, in proportion to their tonnage, to carry boys between the ages of 14 and 18; at least one for every hundred tons. In making this recommendation, it is not forgotten that a slight effect will be produced upon the economy with which our navigation is conducted, nor that the subject has been heretofore presented to the consideration of the Senate, and the proposition resisted by an able report of the Committee on Commerce. But the recommendation is believed to be sustained by the successful practice of other nations; by the absolute necessity of providing a sufficient nursery, and constant supply for our rapidly increasing mercantile and military marine; by the smallness of the burden which the provision would impose upon our navigation, and by the high importance of being supported in our commercial career by our own native citizens. The regulations for this subject do not properly find a place in this report.

5. But 5th. The most important measure connected with this subject is, legal authority to enlist, with the written consent of their parents, boys over 13 and under 16 years, until they arrive at the age of 21; or which would, in many respects, be preferable, authority to take apprentices of the ages and for the period mentioned. There should be from 15 to 30 in every navy yard, and two for every gun, to our vessels in commission, making, in all, in the first instance, about 1,200. Those in the navy yards should be assigned to the various duties performed there, and instructed in them, so as to furnish in a few years most competent workmen in every branch, who, being habituated to their employments, would be a steady and unfailing supply for the public wants in that department. Those in our ships should, according to their capacities, be assigned to the labors of the common sailor, and as assistants to the petty officers, and would, before the expiration of their enlistment or indenture, be perfected in their respective duties. As their terms ended, their places should be constantly supplied, so as to keep, at every moment, the full number of boys in the service. Two years would be sufficient to prepare them to act as ordinary seamen, and three more as seamen. This plan, united to that of enlisting young landsmen, would give us an annual increase of from 300 to 500 good seamen, permanently united to the service, and ultimately secure all that our interest, on this point, can require. These apprentices should be clothed in our own manufactures—denied spirits in their rations until they became men—educated by proper teachers in reading, writing, arithmetic and navigation—be entitled to hospital, pension and prize privileges—have a small

amount of money reserved for them, and paid when their time expires, if their conduct has been good, and a premium on re-entering. They would furnish, within 8 or 10 years from the commencement of the system, all our petty officers of every description, and the best rewards of virtuous effort should be presented to them in proportions to the rank of warrant officers, and if their merits justified, eventually to the highest honors of the profession.

To those who may not have carefully made the calculations, the results of such a system would appear extravagant. When compared with our present plan, it would create a saving of not less than an hundred and fifty thousand dollars annually—would give us, in every department, the greatest efficiency and skill, and, above all, would make the navy what it ought to be, in everything—American.

Respectfully submitted.

SAMUEL L. SOUTHARD.

Hon. SAMUEL SMITH, *President of the Senate of the United States.*

Circular.

NAVY DEPARTMENT.

SIR: Justice to our seamen, as well as the interests of the service, requires that efforts should be made to remedy the inconveniences which have resulted from the time of enlistment expiring, while the men are abroad, and no adequate means afforded for their return home. It will be the object of the Department hereafter, as far as circumstances will permit, so to regulate the manning of our vessels that the time of a majority of the crews shall expire about the same period, and to recall the vessels before that period arrives, so that the men may be in the United States when their contract with the government ends.

It will be obviously impossible that this should be effected in every individual instance. You will therefore consider it your duty, and it is hereby enjoined upon you, when the time of service of seamen, ordinary seamen, &c., expires during your cruise, to induce them, by all proper considerations, to re-enter for the remainder of the cruise, informing them, as nearly as you can, what will be its duration. If they refuse to re-enter, and require their discharge, let it be promptly given to them, unless urgent necessity exists for their services; and you will procure for them, if possible, a passage in some vessel to the United States, on the lowest and best conditions, giving orders on the Department for the passage money. If they refuse to take the passage, and to return home, you will apprise the Department of it, and of what you have done on the subject, and give the like information to the consul of the port nearest which you are, that he may regulate his conduct towards them with a full knowledge of the facts.

In every instance in which any person is discharged abroad, and his passage paid, or he declines accepting the passage, you will state the facts in his discharge.

I am, very respectfully, &c.

20TH CONGRESS.]

No. 370.

[2D SESSION.

ANNUAL REPORT OF THE SECRETARY OF THE NAVY, SHOWING THE CONDITION OF THE NAVY IN THE YEAR 1828.

COMMUNICATED, WITH THE PRESIDENT'S MESSAGE TO CONGRESS, DECEMBER 2, 1828.

NAVY DEPARTMENT, *November 27, 1828.*

The Secretary of the Navy respectfully submits the following report to the consideration of the President of the United States:

The various laws and resolutions, which were passed at the last session of Congress, connected with the duties of this Department, have received attention and been executed, as far as the means within its control would permit.

The act for the relief of William Barton was executed soon after its passage, viz., on the 21st May, 1828, by the payment to him of \$3,357.54.

The second section of the act of the 26th May last, for the relief of Francis H. Gregory and Jesse Wilkinson, was executed on the 4th June following, by the payment of \$13,237.48.

The appropriation of the 24th May last, for the naval hospital fund, has been nearly expended on the erection of buildings mentioned in the last annual report, and on other objects connected with navy hospitals; a detailed report of which will be made by the commissioners of the fund. Those buildings may be completed in the course of the next year, and will be creditable to the country, and eminently useful to the navy. Heretofore no houses have been erected and no system formed for the accommodation and management of sick and disabled seamen. Yielding constantly, through many successive years, a portion of their monthly pay for this object, they have seen no benefit result from it, and have found only temporary and uncomfortable abodes provided for them, in old age, disease, and distress. For the future, they may look forward to accommodations worthy of the service in which they have labored and bled. But much yet remains to be done. More buildings ought to be erected, and further appropriations made, by the justice and humanity of the nation. I beg to refer to the considerations presented in former reports.

Difficulties have arisen in executing the law of the 24th May last, for the better organization of the medical department of the navy, arising from what is supposed to have been an error in the wording of

the law. The first section prescribes the manner of admission to the rank of assistant surgeon, and requires an examination by a board of naval surgeons, of all the candidates for that office, and an approval by the board. It also requires a service at sea of two years, as assistant surgeon, and an examination before promotion to the rank of surgeon. These provisions of the law are in strict conformity with the previous rules and practice of this Department, since May, 1824. The fourth section declares "that every surgeon who shall have received his appointment, as is hereinbefore provided for, shall receive fifty dollars" a month, and two rations a day; after five years' service he shall be entitled to receive fifty-five dollars a month, and an additional ration a day; and after ten years' service," &c. In acting upon this law, the words "as is hereinbefore provided for," have been construed to apply only to those who have received their appointments after the examination prescribed in the first section, which excluded from the increased pay all the surgeons now upon the list. The first examinations were in 1824, and there are none who have been examined previous to their promotions who have been five years in the service. None have, therefore, received the increased pay, except when at sea, and paid under the fifth section. It is confidently believed that Congress did not intend either to require those who were already commissioned surgeons in the navy to undergo an examination, or to deprive those who have faithfully served the public for many years of the additional pay, while it was allowed to younger officers. Legislative explanation will be necessary to insure them the advantages which the law was probably intended to confer.

The act making appropriation for the erection of a breakwater near the mouth of the Delaware Bay received your prompt attention; and the execution of the law, under your supervision, was confided to the Secretary of the Navy. Immediate measures were taken to advance the work. C. C. Biddle, of Philadelphia, was appointed the agent for the disbursement of the money, and instructions were given for his guidance and direction. He has executed a bond, with sufficient sureties, for the faithful performance of his duties, in the penalty required of navy agents, and will receive the compensation allowed by law to them. His accounts will be transmitted to and settled quarterly by the Fourth Auditor of the Treasury. The fund, and the expenditures under it, will be kept separate and distinct from all others.

On the 9th of June Commodore Rodgers, General Bernard, and William Strickland, Esq., were appointed commissioners to select a site and prepare a plan and estimates for the work, for the approval of the Executive; and naval officers placed under their control to make the necessary soundings and surveys. They have been employed in discharge of the duties assigned to them, and their report is daily expected, and will be submitted for approval. William Strickland has been appointed the engineer to superintend the erection of the work. Advertisements have been issued and contracts are now under consideration for a part of the materials. These contracts will, in a few days, be executed. Preparations will be made during the winter, and in the course of the spring and summer materials will be delivered, and the work progress to the extent of the appropriation. An additional appropriation will be required during the ensuing session.

Out of the sum of \$30,000, appropriated by the "act making an appropriation for the suppression of the slave trade," passed 24th May, 1828, \$8,009.20 were paid to the representatives of Taliaferro Livingston, under the authority of the second section of that act. Of the balance, the sum of \$19,903.55 have been expended in the support of the agency on the coast of Africa, and on other objects. (See paper A.) There are claims still pending and unsatisfied, which will probably consume the residue. It was my intention to have annexed to this report a full and minute statement of all the expenditures connected with this agency, from its establishment; but Mr. Ashmun, who has several times been the acting agent, and by whom the greater part of the expenditures have been made, and especially since the death of Dr. Peaco, died during the last summer, on his return to this country. The condition in which his papers were left, and the want of verbal explanations, have created obstacles to the prompt settlement of his accounts, but the Fourth Auditor is now employed in adjusting them; when this is completed, the claims upon the appropriation can be more accurately stated.

The concerns of the agency are believed to be in a prosperous condition. There are few, if any, Africans at it, who occasion expense to the government. The houses and other property are in a good state of preservation, and will hereafter require but small expenditures.

On the death of Mr. Ashmun, Dr. Randall was appointed agent. He sailed from New York for the agency on the 12th of November. So many of the agents had died, and so many difficulties had arisen from that cause, both in the proper care of the business and property of the agency, and in rendering and settling the accounts, that it was thought expedient to appoint an assistant agent, at a small salary, to accompany Dr. Randall. Dr. Mechlin was selected for this purpose.

There are at this time in the United States only two persons coming within the description of our laws, subjecting them to removal to the agency. These were brought into the port of Mobile, in the year 1819, and being very young, were, by the then Secretary of the Treasury, placed under the care of the collector of that port. Orders have recently been given to send them to Baltimore, with a view to their transportation under the law.

On the 30th April last a message was sent by the President of the United States to Congress, giving information that 121 Africans had been landed at Key West, from a Spanish slave-trading vessel, stranded within the jurisdiction of the United States, while pursued by an armed schooner in his Britannic Majesty's service, and to which it was not believed that the law of March 8, 1819, or any of the other acts prohibiting the slave trade, applied. No provision was made by Congress for removing them from the territory of the United States, or disposing of them in any other manner. They still remain in the custody of the marshal of Florida. He was advised to hire them out, or otherwise dispose of them, in such manner as to cause least expense, until legal provision should be made on the subject. It is presumed that he has done so. In the course of the present fall he presented to this Department a claim to the amount of \$———, for their maintenance and support. The amount seemed to be unreasonably large; but no effort was made to adjust and settle it, because the Africans did not come within those provisions of the law which entrust this Department with the direction and control of Africans brought within our jurisdiction, and direct them to be sent to the agency on the coast of Africa. The Secretary of the Navy does not feel authorized to devote to this object any portion of the money appropriated for the suppression of the slave trade. It is important that some authority be given, by law, to dispose of these Africans, and settle the accounts of the marshal.

The law of the last session, for extending the term of certain pensions chargeable to the navy and

privateer pension funds, has created some embarrassments, and rendered it necessary to strike many names from the list of pensioners. In doing this, the only construction has been placed upon the law of which its words seemed naturally susceptible.

For the history and condition of the privateer fund, I beg leave respectfully to refer to a letter from the Secretary of the Navy to the chairman of the Naval Committee of the House of Representatives, dated February 21, 1828, document No. 244, and to the reports referred to in that letter. The laws upon the subject are dated 26th June, 1812, which create the fund; 13th February, 1813; 2d August, 1813; 4th March, 1814; 16th April, 1818; 9th and 26th April, 1824; and 23d May, 1828, which describe the persons to be admitted to pensions; and are the same, in substance, except as relates to children after the age of sixteen years. Numerous pensions were granted and renewed under each of the acts of 1814, 1818, and 1824. There were 203 granted under the acts of 1814, and they generally expired in or before 1820. Under the act of 1818, 186 were granted, and they expired in or before 1825; under the acts of 1824, 159 were granted, which will expire in or before 1830.

It will be perceived by this statement, that at the date of the act of last session (23d May, 1828), and for one year preceding it, there were no persons in the receipt of a pension under the acts of 1814 and 1818, the pensions under those acts having expired two or three years preceding. Now the second section of this law provides for the renewal of pensions only to those who received them under those last-mentioned acts, viz., of 1814 and 1818, and does not provide for those receiving them under the acts of 1824.

The commissioners of the fund have, consequently, refused to renew any pensions which were not received under the acts of 1814 and 1818. By this decision much complaint has been excited. The law holds out the expectation of a renewal of pensions to widows, and by this necessary construction of it, that expectation has been disappointed. It is not known whether the omission to recite the acts of 1824 was intentional or accidental. The effect of the omission is to exclude widows from any further benefit from the fund, and to leave the balance which now remains for the comfort and enjoyment of the seamen who were actually wounded and still survive. For them it would be sufficient. It amounts to \$63,270.50, and there are but 107 of them now surviving. Their situation demands the first attention, and these pensions may be continued probably during their lives, if the omission of the acts of 1824 was intentional, as the commissioners have presumed that it was, and have so constructed the law; although, by this construction no pension to any widow can be renewed. If the omission was accidental, and it was intended to renew the pensions to widows, then the fund would be destroyed within the first and second year, and nothing remain for the surviving seamen, unless Congress make an appropriation for that object. Of the 159 pensions granted under the acts of 1824, 41 expired in 1827; 26, in 1828; 20 will expire in 1829; and 72 in 1830. The effect of renewing them all will be the destruction of so small a fund as \$63,270.30. It may, perhaps, be proper to add that the widows have already received, or will receive under the law, as it is now construed, pensions for fifteen years. It is for Congress to decide whether they will make an appropriation that they may be further renewed.

The usual reports respecting the *navy pension fund* will be made. The laws regulating navy pensions have given rise to some doubts, which it would be satisfactory to have removed. With a view to exhibit the construction which has been placed upon them, that error may be corrected if it exist, the following points of practice on this subject are stated: 1st. The law of 3d March, 1817, provided pensions for the widows and children, under 16 years old, of officers, seamen, and marines, who should die hereafter, or should have died since 18th June, 1812, in consequence of disease contracted, or of casualties or of injuries received while in the line of their duty. This law was repealed by the second section of the act of 22d January, 1824. Since the repeal, deaths by disease, casualty, or injury have not been considered causes for granting pensions to widows and children, except in cases where the deaths occurred during the last war. Applications, which have been numerous, have therefore been uniformly refused, except in the cases specified. 2d. By the terms of the law of the last session (23d May, 1828), pensions are to be renewed "to the widows and children of officers, seamen, and marines who were killed in battle, or who died in the naval service of the United States during the late war," so that they may receive 20 years' pension. The words apply only to the cases of those who died "during the late war." The widows and children of no others can, under it, receive pensions. Under other laws some pensions have been granted and renewed to widows and children of those who have died since the war. These remain in the hope of some expression of legislative opinion on the point. No new ones will be granted. 3d. The pensions to children in all cases terminate when they arrive at the age of 16. The navy pension fund now amounts to about \$900,652.14.

By the 3d section of the act making appropriations for the support of the navy, for the year 1828, the sum of \$10,000 was directed to be taken out of the fund for the gradual improvement of the navy, for the purchase of such lands as the President might think necessary and proper to provide live oak and other timber for the navy. In virtue of this provision purchases have been made of several adjoining tracts of land on Santa Rosa Sound, and in the rear of the Navy yard at Pensacola, amounting, in all, to about 3,650 arpens, and costing about \$9,000. A part of this land has been placed under the care of suitable persons, and arrangements have been made to prosecute the planting and cultivation of the live oak upon it. Inquiries have also been made respecting other tracts, which it might be supposed the interest of the government to retain from sale or purchase. Examinations have also been continued on the western coast of Florida, with a view to the same object.

Trespasses continue, in some extent to be made on the timber on the public lands. Every means has been taken, both by this and the Treasury Department, to repress them, and with some success. But the inlets are so numerous and the coast of Florida so extensive, that the vessels in the navy and revenue service are not competent to watch every part of it without an entire neglect of other duties.

On the 21st of May, 1828, the House of Representatives passed a resolution requesting the President of the United States "to send one of our small vessels to the Pacific ocean and South sea, to examine the coasts, islands, harbors, shoals, and reefs in those seas, and to ascertain their true situation and description;" and authorizing the use of such facilities as could be afforded by the Department, without further appropriation during the year. To this resolution it was your earnest wish that early and full attention should be paid.

There was no vessel belonging to our navy which, in its then condition, was proper to be sent upon this expedition. The *Peacock* was therefore selected and placed at the Navy yard at New York, to be repaired and supplied with conveniences suited to the object. Her repairs and preparation are now nearly completed, and she will be ready to sail in a few weeks.

In looking to the great purpose for which this resolution was passed, and the difficulties and dangers which must necessarily be encountered, it seemed to be both unsafe and inexpedient to send only one vessel. But the Department did not feel that it had the authority, either to purchase another or to detach one more of the small vessels of the navy to be joined with the Peacock. Nor, indeed, is there another in the service suited to this peculiar employment. But the opinion and wish of the Department being known, an offer was made to it of such a vessel as was desired, being of about 200 tons burden, and calculated for cruising in the high southern latitudes, and among the ice islands and reefs which are known to exist there. This vessel has been received and placed at the navy yard, upon express agreement that a recommendation should be made to Congress to authorize its purchase, and if the recommendation was not approved, that it should be returned to its owner. No money has been expended under this arrangement. That satisfactory evidence might be had, both of the fitness of the vessel and its value, directions were given to Mr. Eckford, of New York, and Mr. Hartt, the naval constructor at Brooklyn, to examine it and report on these points. Their report fixes the value at \$10,000. I cheerfully discharged my obligation under the agreement by an earnest recommendation that Congress authorize the price to be paid. Should this not be done the vessel will be returned.

Measures have been taken to procure information of the present state of knowledge in our country, on the subjects pointed out in the resolution, from our citizens who have been employed in the navigation of those seas, and who possess information derived from experience, which is confined very much to themselves and their log books and journals. An agent has been usefully and successfully engaged in this object, and has found few obstacles thrown in his way. Those who have been most acquainted, by business and interest, with that portion of the globe, feel the deepest solicitude for the success of the enterprise. The expedition will be enabled to sail with better guides than are usually possessed by those who embark in similar undertakings.

With a view to give the most useful character to the enterprise, it is important that persons skilled in the various branches of science should partake in it. Correspondence has, therefore, been held with scientific men, and some selections have been made, and others are now making, by the Department, of astronomers, naturalists, and others, who are willing to encounter the toil, and will be able to bring home to us results which will advance the honor and promote the interests of the nation.

Master Commandant Jones will command the Peacock, and other suitable officers have been designated.

The resolution was understood to authorize the use of the naval appropriations to furnish facilities for the expedition; and they have been used for all those objects which come within the terms in the bill of appropriation, as pay, subsistence, instruments, books, &c. But there are indispensable objects which do not come within any of the items of the bill, and for which provision is required. A bill on the subject was reported by the Naval Committee, at the last session of Congress, and placed on the list of business to be acted on, but was not reached before the close of the session. Its passage is necessary to accomplish the purposes designed by the resolution. It does not seem proper to detail the "facilities" which it is the intention of the Department to afford. One of them should be, a vessel to carry provisions, in order that upon the arrival of the expedition at the scene of operation, the exploring vessels may be supplied in such a manner that they may not be driven from their employment at too early a period, and that they may subsequently, from time to time, be further supplied from distant stations, so that no cause, but the elements may arrest their labors, but they may, at all times and seasons, be at liberty to pursue their investigations without interruption. Other and obvious uses may be made of such a vessel, in the relief which it will afford should disease or death make serious inroads on their numbers. A vessel suited to this object is within the control of the Department, and will be either chartered or purchased, as the means furnished by Congress may permit. The importance of the expedition, in all its aspects, and especially in its commercial relations, has augmented, in the view of the Department, by all the inquiries and investigations which have been made; and an anxious desire is felt that nothing should be omitted which can tend to its ultimate success.

Several resolutions have at various times been passed, directing the Department to cause surveys to be made, to ascertain the practical facilities of Charleston, Beaufort, Savannah, and Brunswick, for naval purposes. They have been made during the last three years, and the results communicated to Congress as they were received. They are now completed, and it will be my duty to make a report upon the whole. These surveys, although executed as well as the circumstances in which the officers were placed would allow, and have probably been sufficient to answer the object of the resolution, yet they do not afford materials for an accurate chart of the harbors, and the approaches to them, and assist but little towards a perfect knowledge of our coasts, which can only be acquired by that scientific survey of the whole, the importance of which I have heretofore ventured to urge, and would again respectfully suggest.

All these harbors may, at times, in the future progress of our country, afford protection and comfort to a portion of our cruising vessels; but they are not believed to be places where large naval establishments can advantageously be made. Nor is it believed that it would be wise to increase the number of those establishments which we now have. These are already sufficient for the building, repairs, and equipment of our navy, as authorized by law, and such as it will probably be for many years to come. It would be productive, both of economy and efficient action, if our means were more concentrated at two or three well selected positions. A great error was committed in the early part of our naval history, in selecting, without adequate caution, our numerous navy yards; estimating them rather for temporary and local objects, than as permanent and extensive sources of defence. Immense sums of money have been wasted upon them, and necessarily so, for want of a regular system for their improvement. It will be recollected, that this evil induced an appropriation, on the recommendation of the Department, the object of which was to secure well arranged plans, by which all future improvements should be made.

The board of officers appointed to examine the navy yards, and prepare these plans, have executed their duties at Norfolk, Washington, Philadelphia, Charleston, and Portsmouth. Their work has been examined by the Secretary of the Navy and the Board of Naval Commissioners, and approved by the President. If these plans be well filled up, all of them will promote convenience and economy; some of them will exhibit establishments inferior to none in the world. It is probable experience will show, that some additions and improvements may be made to them, which will add to their value. Among these, it is believed that the one at Gosport may be rendered more important, by the introduction of the water of Lake Drummond, either directly from the lake or from the Dismal Swamp canal. Desirous to ascertain the practicability and expense of doing it, a skillful engineer was requested to make the necessary examin-

ations, surveys, and estimates. His report will be received in a short time. Should it be found practicable, at a moderate expense, and I do not doubt that it will, the use of that water for the docks, the machinery, all the wants of the yard, and for watering our ships, will be a rich remuneration.

In examining the Navy yard at Brooklyn, it was found that the nature of the soil, the confined limits, the narrowness of the channel, and the claims of individual landlords who adjoin it, were such that a plan could not be prepared which promised such usefulness; and that it would be especially difficult to form, at some future period, when Congress should see fit to authorize it, docks suited to the future and growing wants of the navy in that neighborhood. The board was therefore directed to omit forming a plan of that yard; and examinations were instituted for another location. The result was unsatisfactory. Under these circumstances, application was made to the War Department for a transfer of Governor's Island, which was believed not to be, in any respect, essential to the army. This transfer being made, the present navy yard, and that island, will afford all the accommodation which is required. And no further delay will take place, in forming and executing a plan which will promote both convenience and economy.

The Navy yard at Pensacola is the only remaining one for which a permanent plan is to be formed. Its distance from the seat of government, and the state of the yard, have heretofore prevented, not only this, but also the examinations required to decide on the expediency of erecting a railway, which the President has been authorized to cause to be erected, if he considered it proper and expedient. The yard was established only two years ago, and is at the distance of six miles from the town of Pensacola, and from all comfortable accommodation for the officers and others employed at it. It was therefore necessary in the first place to erect buildings for their accommodation, that they might be where their duties called them; and such wharves, &c., as were required by our vessels upon the West India station, when they entered the port for repairs or other objects. The improvements there have not progressed rapidly, but they are now in a state in which it would be proper that the plan should be made. It is the intention of the Department that fit persons shall, in the course of the next month, execute this duty, and make report, both as to the navy yard and the marine railway.

Those parts of the service which are under the direction and control of the Board of Navy Commissioners have been economically and judiciously managed. The reports called for, from them, will be found annexed, marked G. In the building, equipment, and preparation of our vessels for sea, increasing skill and economy are manifested; and although further improvements will no doubt continue to be made, we have the satisfaction of believing that we suffer no disgrace, when our vessels are compared with those of the most maritime and naval nations. Our navy is yet small in numbers, though we hope not feeble in efficiency. Including the vessels built, and building, and for which provision has been made by law, there are twelve ships of the line, twenty frigates, sixteen sloops-of-war, and four schooners. These are sufficient for the present wants and interest of the nation; and their increase, to any great extent, will probably not be required for a long period in our future history. No condition of either our commercial or political relations will permit its diminution. No probable change can demand a large augmentation. Under wise and efficient administration, our coasts and commercial interests may always be protected by an active force, not much, if anything, beyond eighteen ships of the line, twenty frigates, thirty sloops and smaller vessels, and ten or twelve steam batteries. Our safety lies in our peculiar position, and in having our small navy in the most perfect state of efficiency and action. It is gratifying to add, that the best hopes are afforded by its present condition, and that a gradual advance in the improvements now making in the erection of docks, and in other respects, will enable it, with certainty, to reach that state at a period not very distant.

The discipline in the service has generally been commendable, during the past year. In the few instances of a contrary character, the unfitness of the individual officers for the service has been exhibited, rather than a general relaxation or want of energy in the whole. The calls of the navy on this point, consist of a law for its organization; a law for its government, containing a criminal code, as a substitute for that now in force; a law establishing a naval school; and a revised body of rules and regulations. The three former have been presented to Congress in reports enclosing the substance of bills corresponding with the views of the Department; to which reference is now requested. The latter has been prepared, and, after leisure for examination and correction, will be approved.

The disbursing and accounting officers connected with this Department have performed their duties in a satisfactory manner; and, so far as information has been received, there has been no misapplication or squandering of the public money. In the settlement of the accounts, it often occurs that disbursing officers, and others, have claims resulting from the depreciation of Treasury notes during the last war. These claims generally arise from the notes having been placed in their hands as funds to be disbursed, and having been charged to them at their nominal value. When called to disburse them, it could, in many cases, be done only at a reduced amount. They were thus charged by the government with one sum, when, in reality, for all purposes of paying claims, making purchases, &c., they had received another. When their accounts have been presented for settlement, the Department has not felt itself authorized to make the allowances which the plainest evidence proved to be just. They thus stand as debtors on the books, and have been, I believe, in some instances published as defaulters. The records are in this mode encumbered, accounts remain unsettled, and inconvenience is created. Congress have passed acts, declaring that salaries or compensations should not be withheld when the balances against individuals were caused solely by the depreciation of Treasury notes; which has enabled those so situated to receive their salaries or compensations, and thus far afforded relief to them; but it does not relieve the accounting office from the difficulty created by this circumstance. Could authority be given, in some form, to adjust these claims, much benefit would result.

The organization of the disbursing department may be considered good, except, perhaps, in some matters relating to the pursers, in which a change would be useful. These, depending principally on the rules and regulations of the navy, ought to be remedied when they are revised.

In the active operations of the naval force during the year, there has been much to applaud, and but little to give pain. Health has prevailed, with few exceptions, and these not of an uncommon character. On this point, there is very slight, if any difference, in the several stations on which our vessels are employed.

Our squadrons have been kept on the footing indicated in the last annual report. A condensed view of them, both for the past and ensuing year, will be found in paper B. They have all accomplished the purposes for which they have been maintained.

In the Mediterranean, piracy, which excited the fears of our mercantile fellow-citizens, and induced

Congress, at the last session, to increase our force, has been diminished by various causes. The activity of our vessels; the presence of fleets belonging to several of the principal powers of Europe; the restraints of the existing authorities in Greece; and the system of convoy which has been pursued, have all operated to this desirable result. Still there is danger to be apprehended, and our squadron cannot be diminished. This danger does not arise so much from piratical cruisers, as from vessels being becalmed in the night, near the shores of some of the small islands, from which attacks are made in boats by the lawless inhabitants. Against this species of attack, it is impracticable, always, to guard by any assiduity in our naval officers. There is for it but one remedy, that of convoy, which cannot, in every instance, be afforded, and is not always sought by our merchant vessels, on account of the delay which it sometimes occasions. In other respects, our relations in that sea have called for no exercise of force.

Peace has generally prevailed among the nations on the western coast of South America, and no incident has occurred there worthy of particular notice. Our commerce is not molested on the ocean. There are no public ships to interrupt or annoy it. Should this state of things continue, our vessels will have an opportunity to extend their cruises to those portions of the Pacific most occupied by our merchant ships, and be useful to them in their pursuits. A relief squadron is now in preparation for that station, and orders will be sent to one of our vessels to return by the Society and Sandwich Islands and the Cape of Good Hope. Objects of much interest, connected with our seamen and commerce at those islands, call for the frequent presence of a portion of our armed force.

In the West Indies, no piracies have been committed. That scourge of our commerce has been entirely repressed. Occasional rumors of renewed acts of piracy, have created uneasiness; but in almost, if not entirely all the cases, these rumors were founded on misrepresentation. The annexed extracts from the commanding officer, mention some cases of this kind.* The only unpleasant occurrences have arisen from the condition of things on the land, and from vessels wearing an acknowledged and authorized flag. The commanders of two vessels, under Mexican colors, and belonging to the Mexican navy, have used the port of Key West as a place of rendezvous, from which to carry on their belligerent operations; and, in other respects, so conducted that they were ordered to depart, and a call was made on one of our vessels to enforce the order. Subsequent obedience rendered actual force unnecessary.

Another incident created some apprehension of injury to our commerce. In November, 1827, the commander of the Mexican naval forces issued a proclamation inviting those who were disposed to fit out privateers to cruise against the enemies of Mexico, to apply to him for commissions; and that every vessel on board of which might be found effects of the enemy should be conducted to Vera Cruz for condemnation or acquittal. Our commanding officer promptly communicated with this government, and with our minister in Mexico, and adopted efficient means to avoid the evil likely to result from this cause. Fortunately very few commissions were issued; and the treaty subsequently formed with Mexico, by adopting more liberal principles, relieved us from apprehended inconvenience.

The commanding officer of that squadron has expressed an opinion that the reduction of the Spanish naval force at Havana, which was said to be in contemplation, would discharge so many seamen who had been taken into service by impressment, and whose previous occupations had been in many instances those of depredation on the water, that there would be danger of the revival of piracy. Should this reduction be made, renewed zeal must be exercised and thereby serious calamities prevented.

The convulsions, also, in several of the countries bordering on the gulf, and the want of regularly organized governments in many of the ports, offer so many causes of apprehension for the safety of our commerce and property of our citizens, as to forbid any diminution of our force or relaxation in their exertions.

The continuance of the war, until very recently, between Brazil and Buenos Ayres, and the system adopted by the former in sustaining their blockades by a force at times inadequate to the object, and requiring bonds of those who entered their ports that they would not afterwards enter the ports of their enemy, have given unceasing employment to our naval force in the neighborhood of those nations. The commanding officer has been in almost daily correspondence with the existing powers respecting our vessels and seamen. A faithful view of this correspondence could not be presented without transmitting voluminous copies of letters. It is believed to embrace every instance of injustice, oppression and wrong to our citizens which was brought to his notice, and to have been productive of relief almost in every case which was not submitted to the organized tribunals of the country. Upon the ratification of peace between those governments, he returned home; a relief squadron being in preparation for that station. The continuance of our small force there, will be necessary; for, although interruption to our commerce will not arise from a state of war, the numbers who will be thrown out of employment, both on the land and on the water, will probably create injuries of a different character.

The distance from the United States at which all our vessels (except those in the West Indies) cruise, and the difficulty in transmitting money to them, induced the Department to establish a credit in London, so as to enable the commanding officers to draw, either on that city or on the Department, as should be found most advantageous. This provision has, during the present year, prevented any inconvenience to our squadrons on this point, and produced some saving of the public money.

Both in enlisting and discharging seamen, the usual difficulties have been found. The ordinary length of our cruises is three years; but in consequence of the slow manner in which they are enlisted, it is impracticable to send a vessel, especially a large one, to sea, manned with those who all have three years to serve. About one-fourth of all our crews, when they leave the United States, are bound to serve from three months to a year less than that period. The vessel must therefore be recalled before that time expires, or a portion of them be entitled to their discharge before its return. It is unpleasant, both to themselves and the government, to give them a discharge in a foreign country; but when they are entitled to it, our officers have been instructed to give it, if demanded, and there is an unwillingness to enter for the remainder of the cruise. Some are always so discharged, and others enlisted in their places. The only remedies are either enlisting for a longer, or recalling our vessels in a shorter period. The former would violate the law; the latter would create a large expense to the government. It is gratifying to state that no serious evil has, as yet, resulted from this cause, although it has sometimes placed our officers in an unpleasant situation, and should, as far as practicable, be avoided.

When seamen demand their discharges abroad, and their places are to be supplied, foreigners of every nation are taken; and from the manner in which our ordinary enlistments are made, many such

* The case of the Carraboo, of which reports have recently been received, may form an exception to these remarks.

are found among our crews at all times. They are a distinct class of people from those useful citizens who have sought protection under our institutions, and made our country their home. Very few of them have their interest located here, or are bound to us by one of all the ties which connect man with his country. They produce a large proportion of the offences and insubordination of which we have to complain; and, when their time expires abroad, seldom return—for their home is not here. Instructions have been given to avoid them in enlistments; and it is hoped that the time is not distant, when wise *legislative enactments* will raise up an abundance of seamen, acquainted with and attached to the service, whose interests and hopes are centred in our country. I have heretofore submitted my ideas on this subject, and respectfully refer to them. Legislative action upon it is demanded by high and imposing considerations.

The situation of all South America, for several years past, has offered temptations to some of our seamen to leave their country for a time, and adventure in the service of another. They have uniformly had cause to regret the folly of their course. A part of them have been found by our vessels in want and distress. An uniform course of kindness to them has been prescribed to and exercised by our officers, and many have been restored to the country, and will not be likely again to desert it.

A few years since, many complaints, some of them very unjust, found their way to the public, respecting the carrying of specie in our public vessels. The subject attracted the attention of the Department, and instructions were given, in 1824, designed to correct any error or misconduct which might exist in the exercise of the right admitted, and of the duty imposed by law in that matter. It is gratifying to state that, during the past year, no complaint on this point has reached the Department, and it is believed that in the few instances in which specie is now carried in our public ships, it is equally beneficial to the country and fair and legal in our officers.

The marine corps remains in the condition in which former reports represented it; and no new suggestions respecting its organization and interest will now be offered. The number of our navy yards and vessels in commission is so great, that the corps cannot supply full guards for them. An order was therefore prepared to withdraw those from the navy yards at Philadelphia and Portsmouth, and substitute watchmen. This order has been suspended for the present, but it will probably be found necessary to issue it after a short time.

A list of deaths, resignations, and dismissals is added. (Paper C.)

The usual estimates for the navy and marine corps are enclosed. (Papers D, E and F.) They embrace the same number of yards, stations, vessels, officers and men, as those of last year, and vary from them in very few particulars. Explanatory remarks on some of the items are added. In addition to those on the ninth item, it may be proper to suggest that the original estimates, for the number of vessels named in the law for the gradual increase of the navy, were made at a time when less accurate knowledge was possessed of the actual cost of the vessels than subsequent experience has afforded; that from the manner in which our navy yards were arranged, it was not practicable to keep separate the materials procured for different objects, so as always to prevent the incorrect use of them; that the wants of the service often demanded the use of materials on hand, (for whatever purpose procured,) to fit vessels for sea, and avoid an extravagant waste of public money by their detention; and that these materials could not always be promptly and accurately replaced. These inconveniences, it is confidently believed, may hereafter be entirely avoided, under the plans now in existence and the system which is in operation.

The amount of pay estimated is greater than it was last year, which arises from the laws increasing the pay of lieutenants, surgeons and surgeons' mates, and from the number of passed midshipmen. These classes of officers are the most numerous, and a small addition to their pay necessarily swells the estimate more than a like increase to the other grades would do. I would respectfully suggest that these laws, just in themselves, and meeting, as they did, the approbation of a large majority of Congress, have created an inequality which ought to be remedied. The pay of the oldest captain in the service, while in command of the largest squadron, is but \$2,660; of a captain in command of a frigate, but \$1,930; while the surgeon of a squadron, of twenty years' standing, receives \$2,420; and of ten years \$2,300. The youngest lieutenant receives, within a few dollars, as much as a master commandant; a surgeon of ten years more. Other inequalities, not less striking, will be perceived on an examination of the law. This advanced pay of the inferior ranks, though not complained of by others, cannot fail to produce unpleasant and painful feelings. It violates the only true principles upon which compensation is made to public officers—that it should be graduated by length of service, rank and responsibility. A proportionate addition to the pay of the other grades would increase the amount of the appropriations much less than it was increased by these laws, and is called for by justice and propriety. In no nation, not even in our own, has the pay of any officers, civil or military, been so low as that of some of the grades in our navy. It is unequal to their services and responsibilities. No officer can support his family at home and maintain himself upon it, without involving himself in difficulty; to avoid which there is a strong temptation to seek stations on land.

The form of the estimates in one respect is calculated to lead into error, and has heretofore produced some complaint. They embrace the least number of officers actually at sea and engaged at the yards, &c., and all others are stated to be waiting orders or on furlough. It is hence inferred that large numbers of them are idle and unoccupied. Such is not the fact. It almost always happens that more are necessarily employed than are stated in the estimates, even in our vessels at sea; the lowest possible number being named. The item for those waiting orders and on furlough embraces all who are not at sea and at the navy yards; all the sick; those who have returned from cruises of one, two or three years' duration; those who have short leaves of absence to attend to important private business; those who are preparing for active service at sea; those at the naval schools, and those preparing for and attending examinations; of which last number there are at this moment about seventy. It will, on inquiry, be found that in no service are there fewer officers who may be termed idle and unoccupied.

In closing this report, I beg leave again respectfully to call your attention to views heretofore presented, on several topics of deep and increasing interest to the navy. A survey of the coast; an organization both of the navy and marine corps; a criminal code; an increase of rank; a naval school; a change in the form, not the substance, of the appropriation; a suitable provision for naval hospitals; a passage across the isthmus to the Pacific; a system for forming and educating American seamen sufficient for our wants, are all subjects which hourly augment in importance. They have been so repeatedly presented by this Department, that it is feared a repetition of the considerations by which their

importance is sustained, might induce a charge of urgency unbecoming the nature of this report. But the greater part of them are so essential to the naval service, that a sense of duty impels me once more to suggest them; and I must seek in the conviction which I have of their value an apology for the repetition. They embrace interests much too dear not to be urged, even to the verge of importunity. Prudent regulations on those subjects would advance everything that is precious in our naval establishment. Our navy, during the short period of its existence, has rendered incalculable service to the defence, prosperity and glory of the nation, and never fails to find its place in our fondest anticipations of the future. It deserves to be sustained, by devoted attention to its wants, by wise laws and liberal appropriations.

Respectfully submitted,

SAMUEL L. SOUTHARD.

A.

A statement of the expenditures under the appropriation for "the prohibition of the slave trade," since the 1st of December, 1827.

1827.				
Dec.	18.	John W. Peaco—Salary as principal agent, for the month of March, 1857	\$133	33
1828.				
Jan.	29.	Frederick Lewis—Compensation as assistant to the U. S. agent for recaptured Africans, from 11th June to the 18th of December, 1827, six months and eight days, at \$400 per annum	\$208	89
		Traveling expenses, and expenses on shore	85	00
				293 89
Feb.	11.	Miles King, navy agent—Gunpowder, &c.		25 12
March	14.	John Hodges—Balance due for wages as boat builder, from 17th February to 18th August, 1826, at \$75 per month	\$223	17
		Camwood and trade goods	178	05
				501 22
April	14.	J. M. Berrien, proctor for J. Jackson, commander of revenue cutter—Bounty allowed by act of Congress of 3d March, 1819, on 54 Africans imported in the Ramirez, at \$25 each	1,350	00
May	5.	Baring, Brothers & Co.—Commission on drafts at 2½ per cent.	303	61
May	26.	John W. Peaco—Salary as principal agent, from 1st April to 24th May, 1827	\$240	00
		Passage from Monrovia to Holmes' Hole, 1826	100	00
		Traveling from Philadelphia to Washington and back, in November, 1826	41	10
				381 10
June	2.	T. Livingston, formerly marshal of Alabama—Maintenance of fifty-five Africans, (captured in the Constitution, Marino, and Louisa, in 1818,) from 27th February, 1821, to 1st January, 1824, 57,090 days, at 15 cents per day	\$8,563	50
		Deduct received for hire	3,627	15
			\$4,936	35
		Allowance for medicine, clothing, blankets, and hire of guard	3,072	85
				8,009 20
June	17.	George P. Todson—Compensation from 11th June, 1827, to 14th April, 1828, ten months and four days, at \$1,600 per annum	\$1,351	11
		Traveling from Washington to Norfolk, in June, 1827	34	35
				1,385 46
July	5.	Miles King, navy agent—Shingles		89 12
August	2.	Miles King, navy agent—Freight of 1,337 barrels flour, at \$1.50	\$2,004	50
		Passage of 129 grown persons, including provisions, at \$28 each	3,612	00
		Passage of 14, under 10 years, at \$14	196	00
		Passage of Dr. Todsen out and home	200	00
		Passage of assistant	100	00
		Thirty days' demurrage, at \$20	600	00
				6,712 50
Sept.	6.	Freight to Liberia	200	00
Sept.	17.	James Laurie—Medical services rendered by Lott Carey to liberated Africans at Liberia, for 3 years, up to April, 1826, at \$50 per year	150	00
Nov.	5.	George P. Todson—Allowance for stores and expenses on the voyage to Africa	200	00
Nov.	11.	Richard Randall, principal agent—Medicine and instruments	\$150	00
		Stationery	20	00
				170 00
				<u>\$19,904 55</u>

T. WATKINS.

B.

List of vessels of the United States navy, in commission during the year 1828.

MEDITERRANEAN STATION.

Delaware, 74 guns..... Commodore W. M. Crane, since March.
 Java, 44 guns..... Captain J. Downes, the whole year.
 Constitution, 44 guns..... Captain D. T. Patterson, arrived at Boston about the 1st
 July.
 Lexington, 18 guns..... Master Commandant Hunter, the whole year.
 Warren, 18 guns..... Master Commandant Kearny, the whole year.
 Fairfield, 18 guns..... Master Commandant Parker, sailed from New York in
 August.
 Porpoise, 12 guns..... Lieutenant J. H. Bell, the whole year.
 The squadron will remain the same during the next year, with the exception of the Constitution.

PACIFIC STATION.

Brandywine, 44 guns..... Commodore J. Jones, the whole year
 Vincennes, 18 guns..... Master Commandant Finch, the whole year.
 Dolphin, 12 guns..... Master Commandant Rousseau, the whole year.
 During the next year the squadron will consist of the—
 Guerriere, 44 guns..... Captain C. C. B. Thompson.
 St. Louis, 18 guns..... Master Commandant Sloat.
 Dolphin, 12 guns..... Lieutenant Zantlinger.

BRAZIL STATION.

Macedonian, 36 guns..... Commodore J. Biddle, arrived at Norfolk in October.
 Boston, 18 guns..... Master Commandant Hoffman, will return early in the spring.
 The squadron next year will consist of the—
 Hudson, 44 guns..... Commodore J. O. Creighton.
 Vandalia, 18 guns..... Master Commandant Gallagher.

WEST INDIA STATION.

Commodore Charles G. Ridgely.
 Natchez, 18 guns..... Master Commandant Budd, the whole year.
 Erie, 18 guns..... Master Commandant Turner, the whole year.
 Hornet, 18 guns..... Master Commandant Claxton, the whole year.
 Falmouth, 18 guns..... Master Commandant Morgan, sailed in March.
 Grampus, 12 guns..... Lieutenant Latimer, the whole year.
 Shark, 12 guns..... Lieutenant Adams, has lately sailed for the coast of Africa,
 and thence to the West Indies.

The squadron will remain nearly or quite the same during next year.

EXPLORING EXPEDITION.

Peacock, 18 guns..... Master Commandant Jones.

C.

List of deaths in the navy of the United States, since the 1st December, 1827.

Name and rank.	Date.	Cause.	Place.
CAPTAIN.			
Robert Henley	October 7, 1828	Charleston, S. C.
MASTER COMMANDANT.			
Benjamin W. Booth	July 26, 1828	Consumption	Gibraltar.
LIEUTENANTS.			
Frederick W. Smith.....	June 4, 1828.....	New York.
William M. Robins.....	May 18, 1828.....	Baltimore.
Geo. B. McCulloh	December 31, 1827	Mediterranean.
Allen Griffin	September 18, 1828..	Baltimore.
SURGEONS.			
A. M. Montgomery.....	January 3, 1828.....	New York.
Samuel R. Marshall	May 20, 1828	do
Benjamin P. Kissam	October 6, 1828.....	Portsmouth, N. H.
SURGEONS' MATES.			
Henry C. Pratt	March 10, 1828	At sea.
Charles Wayne.....	August 19, 1828.....	Cole's Ferry, Va.

C.—List of deaths—Continued.

Name and rank.	Date.	Cause.	Place.
PURSERS.			
John B. Timberlake	April 2, 1828	Mahon.
Nathaniel Lyde.....	July 7, 1828.....	Fall from a gig.....	Portsmouth, N. H.
CHAPLAIN.			
John Cook.....	August 21, 1828
MIDSHIPMEN.

Charles B. Childs May 1, 1828.
 William S. J. Washington May 1, 1828.
 H. A. N. Morris December 22, 1828.
 Geo. B. Wingerd November 6, 1828.

LIEUTENANT OF MARINES.

William A. Randolph October 17, 1828.
 NAVY DEPARTMENT, December 1, 1828.

D.

General estimate.

There will be required for the navy, during the year 1829, three millions six thousand two hundred and seventy-seven dollars and forty-nine cents, in addition to the unexpended balances that may remain on hand on the 1st day of January, 1829.

1. For pay and subsistence of officers, and pay of seamen, other than those at navy yards, shore stations, and in ordinary.....	\$1,212,592 07	
Less this sum appropriated by act of Congress, of 24th May, 1828..	294,078 00	\$918,514 07
2. For pay, subsistence, and allowances of officers, and pay of seamen at navy yards, shore stations, hospitals, and in ordinary.....	\$209,191 67	
Less this sum appropriated by act of Congress, of 24th May, 1828..	46,258 00	162,933 67
3. For pay of superintendents, naval constructor, and all the civil establishment at the several navy yards and stations.....	\$59,552 50	
Less this sum appropriated by act of Congress, of 24th May, 1828..	14,775 00	44,777 50
4. For provisions.....	\$450,551 87	
Less this sum appropriated by act of Congress, of 24th May, 1828..	126,250 00	324,301 87
5. For repairs of vessels in ordinary, and for wear and tear of vessels in commission.....	\$550,000 00	
Less this sum appropriated by act of Congress, of 24th May, 1828..	118,750 00	431,250 00
6. For medicines, surgical instruments, and hospital stores.....	\$27,000 00	
Less this sum appropriated by act of Congress, of 24th May, 1828..	6,750 00	20,250 00
7. For ordnance and ordnance stores.....	\$50,000 00	
Less this sum appropriated by act of Congress, of 24th May, 1828..	12,500 00	37,500 00
8. For repairs and improvements at navy yards.....	\$429,291 00	
Less this sum appropriated by act of Congress, of 24th May, 1828..	26,250 00	403,041 00
9. For arrearages prior to 1st January, 1829.....	\$468,709 38	
Less this sum appropriated by act of Congress, of 24th May, 1828..	3,750 00	464,959 38
10. For defraying the expenses that may accrue during the year 1829, for the following purposes, viz:		
For freight and transportation of materials and stores of every description; for wharfage and dockage, stores and rent; traveling expenses of officers and transportation of seamen; house rent, chamber money, and fuel, and candles to officers other than those attached to navy yards and stations; and for officers in sick quarters where there is no hospital, and for funeral expenses; for commissions, clerk hire, office rent, stationery, and fuel to navy agents; for premiums and incidental expenses of recruiting; for apprehending deserters; for compensation to judge advocates; for per diem allowance for persons attending courts-martial and courts of inquiry, and to officers engaged on extra service beyond the limits of their stations; for printing and for stationery of every description, and for books, maps, charts, nautical and mathematical instruments, chronometers, models and drawings; for purchase and repair of steam and fire engines, and for machinery; for purchase and maintenance of oxen and horses, and for carts, wheels, and workmen's tools of every description; for postage of letters on public service; for pilotage; for cabin furniture of vessels in commission, and furniture for officers' houses at navy yards; for taxes on navy yard and public property; for assistance rendered to persons in distress; for incidental labor at navy yards, not applicable		

C.

Estimate of the pay, rations, and all other allowances of officers and others, at the navy yards and stations, for the year 1829.

On furlough	2	1	2	2	1	2,549 25
													\$197,684 25

NOTE.—The principal part of these officers have but recently returned from foreign service. Many are now waiting for examination.

Estimate for provisions required in the year 1829.

For vessels in commission..... 4,512 persons.
 Marines on board 651 persons.
 Receiving vessels..... 82 persons.
 5,245 persons.

At one ration per day, is 1,914,425 rations, at 25 cents each, is.....	\$478,606 25
For relief ships for three months	852 persons.
Marines.....	110 persons.
	962 persons,
at one ration each, at 25 cents, for three months, is	21,945 62
	\$500,551 87
From which may be deducted this sum, as a balance will probably remain unexpended of the appropriation for the present year	50,000 00
	\$450,551 87

There will be required for the support of the navy, for the first quarter of the year 1830—

For pay and subsistence of officers, and pay of seamen, employed in the navy, afloat.....	\$303,148 02
For pay, subsistence, and allowances to officers, and pay of seamen at navy yards, shore stations, hospitals, and ordinary.....	52,291 92
For pay of superintendents, naval constructors, and all the civil establishment at the yards and stations	14,888 12
For provisions	112,637 96
For repairs of vessels	137,500 00
For medicines, surgical instruments, and hospital stores	6,750 00
For ordnance and ordnance stores.....	12,500 00
For repairs and improvements of navy yards	107,322 75
For contingent expenses for 1830, embracing the items enumerated for that object in the act of March 2, 1827	63,750 00
For contingent expenses, not enumerated, for 1830	1,250 00
	\$812,044 77

NAVY COMMISSIONERS' OFFICE, *November 24, 1828.*

Sir: In explanation of the 9th item in the estimate, the Commissioners respectfully state that the fund for the gradual increase of the navy, is so far exhausted as to make it necessary to suspend further progress towards completing those vessels, until the sums which have been borrowed from that appropriation be repaid, or some other means provided.

The heavy draft upon it by the purchase of the frigate *Liberator*, now the *Hudson*, amounting to \$41,310, under the act of Congress, of 17th May, 1826; the substitution of iron water tanks for casks, making a difference of rather more than \$200,000, which experience in our navy, and in those of Europe, has shown to be in the end the most economical, and the most conducive to health; with the application, in cases of urgent necessity, by the commandants of navy yards, of materials belonging to it to other objects, have produced this deficiency.

Cotemporaneously with the steps taken by the Commissioners of the Navy to carry into effect the law for the gradual increase, or very soon after, they directed that all materials procured under that law should be kept distinct from those which might be procured for other purposes, and that they should on no account be used for any other than their legitimate object. In a few instances, and only those in which the public service would be essentially promoted, the Commissioners have authorized a departure from these directions; accompanying their authority, however, by an order to replace immediately the articles thus used, and charge the amount to the appropriation under which they were expended. The delay in doing this, occasioned sometimes by inability to procure the materials at the moment, and at others by the low state of the funds to which they were chargeable, makes it necessary that provision should now be made for them, in addition to the above-mentioned items; and the Commissioners have therefore included in the estimates for the ensuing year, under the head of "arrears," the amount for that purpose.

I have the honor to be, with great respect, sir, your obedient servant,
(Signed)

JOHN RODGERS.

HON. SAM'L L. SOUTHARD, *Secretary of the Navy.*

E.

Estimate of pay for officers, non-commissioned officers, musicians, and privates, and subsistence for the officers of the United States marine corps, for the year 1829.

PAY.

One lieutenant colonel commandant, \$75 per month.....	\$900 00
Five lieutenant colonels, \$60 per month	3,600 00
One paymaster, \$50 per month.....	600 00
One quartermaster, \$60 per month	720 00
Nine captains, \$40 per month.....	4,320 00
Sixteen first lieutenants, \$30 per month.....	5,760 00
Sixteen second lieutenants, \$25 per month.....	4,800 00
One surgeon, \$50 per month.....	600 00
One surgeon's mate, \$40 per month	480 00
One sergeant major, \$10 per month	120 00
One quartermaster sergeant, \$10 per month	120 00

One drum major, \$9 per month	\$108 00
One fife major, \$9 per month	108 00
Seventy-one sergeants, \$9 per month	7,668 00
Seventy-three corporals, \$8 per month	7,008 00
Twenty drummers, \$7 per month	1,680 00
Twenty fifers, \$7 per month	1,680 00
Seven hundred and fifty privates, \$6 per month	54,000 00
Extra pay to the adjutant and inspector, \$30 per month	360 00
Pay for five clerks, viz: one for the lieutenant colonel commandant, one for the paymaster, one for the adjutant and inspector, and two for the quartermaster, at \$20 per month for each	1,200 00
Extra pay to Lieut. Colonel William Anderson, from May 24, 1828, to December 31, 1828, at \$20 per month, (not before appropriated)	145 34
Amount paid to 115 marines, from the year 1822 to the year 1828, inclusive; these being extra troops over and above the number allowed by law to the marine corps for that time, and for which no appropriation has been heretofore made, (see report of the adjutant and inspector, for this item, which is herewith submitted)	8,280 00
	<u>\$104,257 34</u>

SUBSISTENCE.

One lieutenant colonel commandant, 12 rations per day, 4,320 rations, 20 cts. . .	\$876 00
Five lieutenant colonels, five rations each, 9,125 rations, 20 cts.	1,825 00
One paymaster, four rations, 1,460 rations, 20 cts.	292 00
One quartermaster, four rations, 1,460 rations, 20 cts.	292 00
Nine captains, three rations each, 9,855 rations, 20 cts.	1,971 00
Sixteen first lieutenants, four rations each, 23,360 rations, 20 cts.	4,672 00
Sixteen second lieutenants, three rations each, 17,520 rations, 20 cts.	3,504 00
One surgeon, two rations, 730 rations, 25 cts.	182 50
One surgeon's mate, two rations, 730 rations, 25 cts.	182 50
Two additional rations per day, allowed to Lieut. Colonel William Anderson, from May 24, 1828, to December 31, 1828, is 222 or 444 rations, at 20 cts. per ration, (this amount not before appropriated)	88 80
	<u>\$13,885 80</u>
	\$118,143 14
Deduct amount already appropriated for the first quarter of 1829	27,341 94
	<u>\$90,801 20</u>

JOS. L. KUHN, *Paymaster Marine Corps.*

Estimate of pay for officers, non-commissioned officers, musicians, and privates; and subsistence for the officers of the United States marine corps, for the first quarter of the year 1830.

PAY.

One lieutenant colonel commandant, \$75 per month	\$225 00
Five lieutenant colonels, \$60 per month	900 00
One paymaster, \$50 per month	150 00
One quartermaster, \$60 per month	180 00
Nine captains, \$40 per month	1,080 00
Sixteen first lieutenants, \$30 per month	1,440 00
Sixteen second lieutenants, \$25 per month	1,200 00
One surgeon, \$50 per month	150 00
One surgeon's mate, \$40 per month	120 00
One sergeant major, \$10 per month	30 00
One quartermaster sergeant, \$10 per month	30 00
One drum major, \$9 per month	27 00
One fife major, \$9 per month	27 00
Seventy-one sergeants, \$9 per month	1,917 00
Seventy-three corporals, \$8 per month	1,752 00
Twenty drummers, \$7 per month	420 00
Twenty fifers, \$7 per month	420 00
Seven hundred and fifty privates, \$6 per month	13,500 00
Extra pay to the adjutant and inspector, \$30 per month	90 00
Pay for five clerks, viz: one for the lieutenant colonel commandant, one for paymaster, one for the adjutant inspector, and two for the quartermaster, at \$20 per month for each ...	300 00

SUBSISTENCE.

One lieutenant colonel commandant, 12 rations per day, 1,080, at 20 cents	216 00
Five lieutenant colonels, 5 rations per day, 2,250, at 20 cents	450 00
One paymaster, 4 rations per day, 360, at 20 cents	72 00
One quartermaster, 4 rations per day, 360, at 20 cents	72 00
Nine captains, 3 rations per day, 2,430, at 20 cents	486 00
Sixteen first lieutenants, 4 rations per day, 5,760, at 20 cents	1,152 00
Sixteen second lieutenants, 3 rations per day, 4,320, at 20 cents	864 00
One surgeon, 2 rations per day, 180, at 25 cents	45 00
One surgeon's mate, 2 rations per day, 180, at 25 cents	45 00
	<u>\$27,360 00</u>

JOS. L. KUHN, *Paymaster Marine Corps.*

Estimate for expenditures in the Quartermaster department of the United States marine corps, for the year 1829.

SUBSISTENCE.

For 370 non-commissioned officers, musicians, privates, and washerwomen, serving on shore, at one ration per day each, is 135,050 rations, at twelve cents per ration, is	\$16,206 00	
Deduct amount appropriated for the first quarter of 1829.....	3,252 15	
	<hr/>	\$12,953 85

CLOTHING.

For 938 non-commissioned officers, musicians, and privates, at \$30 each, is	\$28,140 00	
For 100 watch coats, at \$6 $\frac{2}{8}$ each, is.....	625 00	
	<hr/>	\$28,765 00
Deduct amount appropriated for the first quarter of 1829.....	7,191 25

G.

Statement showing the present state and condition of the United States vessels-of-war now on the stocks, and those in ordinary and repairing at the several yards.

PORTSMOUTH.

Alabama—ship of the line. This ship can be prepared for sea in about three months. Her hull is in good order, and some considerable further progress has been made since the last report, in finishing her masts and spars, and particularly in her inboard works.

Santee—44 of the first class. This ship can also be prepared for sea in three months. Her hull is in good order; her masts and spars have been completed, with the exception of a few spare spars, and considerable progress has been made in her inboard works, &c.

Concord—sloop-of-war of the first class. This ship can be ready for sea in twenty days; has been recently launched, and is progressing in her preparation for sea service.

BOSTON.

Virginia—ship of the line. This ship can be prepared for sea in one hundred and twenty days. Her hull is nearly complete, and in good order. Considerable progress has been made in her gun carriages, and masts and spars; bulkheads and other inboard works advanced; and the square sails, one suit made; tanks, ballast, cannon and anchors provided.

Vermont—ship of the line. This ship may also be prepared for sea in one hundred and twenty days. Her condition and state of advancement nearly the same as the *Virginia*, and the progress made in both alike.

Cumberland—frigate, first class. This ship is planked inside and outside to the spar-deck port sills, except the strakes left out for air; orlop, berth, and gun decks are in, and nearly all laid; spar deck is framed and kneed. The masts and spars have considerably progressed, and one suit of square sails made; boats are under way, and tanks, ballast, cannon, and anchors are provided. This ship can be completed for service in 90 days.

Columbus—ship of the line. The hull of this ship is generally sound, but would require considerable repairs to fit her for sea; a part of her wales should be replaced, her bottom examined, perhaps coppered, and caulking throughout. She may be equipped for sea in 75 days.

Independence—ship of the line. The frame of this ship is believed to be sound, but she will require new decks and planking outside, with stem plank and head, &c. She will require coppering and caulking throughout.

Constitution—frigate, first class. The frame generally is believed to be sound, but will require new planking, from the wales inclusive to the rail; new ceiling in the hold, and new berth deck and orlop decks, beams and knees; spar deck new planked, galleries and head, &c.; caulking and coppering throughout.

PHILADELPHIA.

Pennsylvania—ship of the line. Her state and condition is but little altered from last report; some progress has been made in faying and bolting the riders in the hold, and in the iron work preparing for

her equipment; one suit of sails are made, and the preparation of the timber, for masts and spars, considerably advanced, &c. She may be prepared for sea in 12 months, or less.

Karitan—frigate, of the first class. The hull of this ship is nearly completed. The head, galleries, port shutters, and rudder only to make. Inboard works are in a state of great forwardness. To complete her will require about 12,000 days' work; she may be finished in from 3 to 5 months.

Sea Gull—receiving ship. In good order.

Cyane—corvette, built of British oak. In ordinary; requiring, as in last report, extensive repairs, and to be commenced at an early day.

NEW YORK.

Sabine—frigate, of first class. Is nearly complete in her hull; masts and spars finished, and the joiners' work all prepared for putting up. She can be launched in 60 days.

Savannah—frigate, of first class. Is also nearly complete in her hull. The masts and spars are made, and the joiners' work ready for putting up. It will require 4 months to complete and launch the ship.

Peacock—Has been thoroughly repaired and fitted for special service, and is now ready to be sent to sea immediately.

Ohio—ship of the line; in ordinary. Has never been fitted out. The outside plank, above the water, and inside, a part of the clamps and ceiling, are decayed. She will require considerable repairs.

Washington—ship of the line; in ordinary. The hull of this ship, partly of British oak, is unsound in many places, and will require a thorough repair, and to be new coppered, which will take six months to complete.

Franklin—ship of the line; in ordinary. Is in about the same condition as the *Washington*, and will require about the same repairs, and the same time to complete them.

United States—frigate, first class; in ordinary. Requires very considerable repairs. The ceiling in the magazine, and the clamps below the orlop deck, beams and knees, and the wales, are partially decayed. She will require to be caulked throughout, and her copper repaired. Gun carriages are unfit for service, and masts and spars are defective. Seventy days will be required to complete this ship.

Ontario—sloop of war; now under repair. This ship, built of white oak, will also require extensive repairs in her hull, masts, and spars. Four months will be required to complete her for sea.

Fulton—receiving ship. This ship is known to be much decayed, and although she may answer, for a long time, the purpose for which she is employed now, the cost of repairing her, for any other service, would be attended with more expense than her present condition would warrant.

WASHINGTON.

Potomac—frigate, first class; in ordinary. This ship is complete in her hull, masts, and spars; gun carriages, boats, &c., nearly complete; sails to be made. Can be fitted for sea in about four months.

Congress—frigate, second class. This ship is so far completed in her repairs, that she may be sent to sea in fifty days.

GOSPORT.

New York—ship of the line. To complete the hull of this ship, several strakes of plank, in each of the decks and bottom, are required. In all the other departments of her construction and outfit, some progress has been made. She may be prepared for launching in three months.

St. Lawrence—frigate, first class. The timbering of this ship has been finished since last report, and six strakes of plank and wales put on. She may be launched in five months.

North Carolina—ship of the line. The oakum has been taken out of the seams throughout, and some defects discovered. She will require some repairs.

Constellation—frigate, second class. Is now under repair, and will be completed in all the month of December.

John Adams—corvette. Is now stripped for repair, which will be commenced as soon as those making on the *Constellation* are completed.

Macedonian—frigate, second class; built of British oak. Just returned from foreign service—requiring a thorough and extensive repair.

Statement showing the progress which has been made in executing the law for the gradual improvement of the navy, passed March 3, 1827.

Under the contracts reported by the Commissioners in their letter of the 30th November, 1827, to have been made for the live oak frames of five ships of the line, five frigates, and five sloops-of-war, there has been delivered as follows:

	For 74.	44.	Sloops.
At Boston, cubic feet	11,783	11,841	7,674
At Philadelphia, cubic feet	8,208	5,662
At Washington, cubic feet	5,052	11,678
At Norfolk, cubic feet	13,500	7,992	2,180
There has also been delivered since the 3d March, 1827, under the contracts with Ties & Vanhook, Waller & Taber, and R. F. Scofield, the following live oak timber for the frames of frigates of 44 guns, viz:			
At Boston	16,734	
At New York	13,719	
At Philadelphia	14,197	
Cubic feet	<u>25,283</u>	<u>77,743</u>	<u>27,194</u>

Making together:

	Cubic feet.
Ships of the line	25,283
Frigates	77,743
Sloops	27,194
Total	<u>130,220</u>

For which has been paid the sum of \$156,187.85.

For the preservation of such of this timber as cannot be secured under the sheds heretofore erected at the several navy yards, the construction of one shed at each of the yards at Boston, New York, Philadelphia, and Washington, and of two at the Navy yard, Norfolk, has been directed. The contractors are progressing in the fulfillment of their engagements, and it is hoped that the deliveries of all the timber will be completed within the time stipulated in the contract.

With respect to the dry docks authorized by the fourth section of the act referred to, the Commissioners have to state that contracts have been made for a great part of the materials, &c., required in their construction, and they feel gratified in being able to state that the difficulties which were encountered in the early stage of the work have been happily overcome; the nature of the soil at the yard at Norfolk has not presented obstacles, which, from the same cause, the engineer had to contend with at the Boston yard.

The works at both places are progressing satisfactorily, and with the dispatch consistent with the durability as well as the economy of their construction.

There has been expended for labor and materials on the dock—

At Boston	\$56,904 97	\$64,063 86
And on that at Norfolk	37,638 94	33,511 64
Total	<u>\$94,543 91</u>	<u>\$97,580 50</u>

Making together, on account of the docks, the sum of one hundred and ninety-two thousand one hundred and twenty-four dollars and forty-one cents.

Mr. Baldwin, the engineer, has been active and vigilant in discharging the duties assigned to him; and, so far as the works have progressed, has given entire satisfaction.

H.

Extract of a letter from Commodore Jacob Jones to the Secretary of the Navy, dated—

UNITED STATES SHIP BRANDYWINE, *Callao Roads, December 21, 1827.*

Mr. Cooley, our chargé, has a discussion with this government respecting some American seamen who have been lately impressed in their service. This government claims the right to their services, in consequence of their having become residents by sailing under their flag for a considerable time; and impressment is the principal mode used here to man their navy or to increase their army.

There will, I apprehend, be frequent complaints of this sort, as the number of our seamen in their service is increasing fast, and composes the greater number of hands employed in their coasting trade. The wages given here, in their merchant vessels, is \$17, which is a great temptation to our seamen, and it seldom is the case that a man discharged here will return home, until so disabled by disease that he can no longer obtain employment.

Extract of a letter from Commodore Jacob Jones to the Secretary of the Navy, dated—

U. S. SHIP BRANDYWINE, *Callao Roads, March 17, 1828.*

The complaint of impressment will be removed to-day by the discharge of all the seamen that are in the employment of this government, and their frigates laid up. It is to be hoped that our seamen, sailing under a foreign flag, finding themselves thereby liable to be impressed, will be induced to return home, for three-fourths or more of the sailors employed by Chili and Peru are from the United States. The wages here is a great temptation, being from seventeen to twenty dollars per month, and the voyages of a kind particularly agreeable to them, as they are never more than a month out of port.

Extract of a letter from Commodore Jacob Jones to the Secretary of the Navy, dated—

U. S. SHIP BRANDYWINE, *Callao Roads, June 23, 1828.*

I have the honor to inform you that we arrived here two days since from Panama, having on our passage touched at Payta.

The Vincennes and Dolphin are also now in port with us, and all well. The former will, in a few days, proceed along the coast to the southward, having lately returned from as far north as Payta, and the latter will sail for the northern ports of Peru and Columbia.

The rage for war which violently beset this government a few weeks ago has somewhat abated; but so violent is party spirit, and the desire of office, that I believe in a short time the present administration will be displaced, and the constitution, which was sworn to the other day, declared inoperative.

Extract of a letter from Commodore William M. Crane to the Secretary of the Navy, dated—

U. S. SHIP JAVA, *Port Mahon, January 6, 1828.*

The Java is in excellent order. The crew are expert in their exercises, but the materials are not good. There are many foreigners amongst them, and men with broken constitutions. Every possible attention is paid to their health. We have lost two men by disease.

Extract of a letter from Charles G. Ridgely to the Secretary of the Navy, dated—

PENSACOLA, July 25, 1828.

The public prints, I observe, announce some piracies to have taken place on the south side of Cuba. The one of the French packet ship was not that of a pirate, but of her own crew, having mutinied and murdered their officers and passengers, and after running the ship on Cape Corientes, and dividing the spoil, (a large quantity of specie, between three and four hundred thousand dollars,) they dispersed; two of them went to St. Jago de Cuba, and having a private dispute, one of them informed of all the circumstances. The case of the other, the American being fallen in with a British man-of-war brig, I believe, has no foundation in fact, as Captain Latimer could learn of no such report, either at St. Jago or Kingston, Jamaica, where the British brig-of-war had arrived. I am particular in stating these circumstances, in order to correct any false impressions. There has not been an instance of piracy since I have had this command; and as I am desirous none shall be, the squadron is kept actively and usefully cruising where it is supposed piracies might occur.

I will avail myself of this opportunity to say to you the squadron are in excellent health and discipline; and what may be truly considered an extraordinary fact, out of the great number of men (from twelve to fifteen hundred) that have been and are attached to the squadron, within the last twenty months, only two officers and two men have died.

Copy of a letter from Commodore Charles G. Ridgely to the Secretary of the Navy, dated—

PENSACOLA, August 11, 1828.

I had the honor to address you on the first instant, and advised you of the information I had learned from Capt. Claxton relative to some transactions of a man-of-war brig, called the Hermon, Captain Hawkins, holding a commission in the service of the republic of Mexico, and of the privateer called the Molestadore, commanded by a man named Hopner, also under the Mexican flag. Both these commanders are native citizens of the United States; and as their acts have been of so flagrant a character, particularly when within our waters, as to justify the capture of one of them, and driving from without our jurisdiction the other,—and as it is probable the subject may be matter of negotiation between the Government of the United States and that of Mexico, I take leave to lay before you, in as brief a manner as possible, all the circumstances connected with the transaction.

In the first instance, I will premise by stating that the privateer in question, and her commander, are the same that I called your attention to as far back as the 10th of August, 1827, letter No. 31, marked private, and who was then sailing under Colombian colors, but changed colors and commission for those of Mexico, in sight of Key West, as admitted by Commodore Porter, of the Mexican navy.

In the latter part of June, the Natchez, Captain Budd, arrived at Key West, in conformity with my instructions, for his last cruise, where he found lying at anchor the Mexican brig-of-war Hermon, Capt. C. E. Hawkins, who addressed him letter A. On the receipt of letter B, from the collector, (Mr. Pinkney,) Captain Budd immediately ordered Captain Hawkins to leave our waters. (See letter C.) On the following morning the Hermon sailed, but returned the next day, in consequence of some Spanish vessels-of-war giving him chase. The Spanish vessels-of-war having disappeared, on the receipt of letter D from the collector, Captain Budd caused the Hermon again to sail.

On the 6th of July, the Natchez (having been on a short cruise off Matanzas,) returned to Key West, and on the 7th July, the collector, Mr. Pinkney, addressed him letter E, and on the 10th July, letter F; in consequence of which, Captain Budd dispatched two boats, under charge of Lieutenant Johnson, who returned on the 22d July, bringing with him the private armed schooner Molestadore, and her prize, which were given in charge to the collector. (See letter G.)

A few days after which the Hermon came again off Key West, and the commander came on shore in a boat, when he was arrested by the collector and bound over in the sum of one thousand dollars to appear before the first court to be holden at that place; after which he was permitted to sail, taking with him the officers and crew of the Molestadore.

In giving you the above statement of all the facts having any connection with the result, I take this occasion to say I commend the prudence of Captain Budd in not having put in execution the entire wish of the collector, by capturing the Mexican brig Hermon, although she had forfeited her neutrality.

But I would respectfully suggest that on her commander (Hawkins) there should be exemplary punishment required from his government for his repeated violations of the neutrality of the United States.

A.

Copy of a letter from Charles E. Hawkins, to Master Commandant Budd, commanding the United States ship Natchez, dated—

KEY WEST, June 24, 1828.

I arrived here on the 20th instant much distressed for want of water, having but a few gallons remaining, and very little wood. I have been since that time occupied in filling my water and completing my stores, being in want of many things indispensable to a cruising vessel.

B.

Copy of a letter from William Pinkney, Esq., to George Budd, Esq., commander of the United States ship Natchez, dated—

COLLECTOR'S OFFICE, *District of Key West, June 22, 1828.*

The Mexican brig of war Hermon, Charles E. Hawkins, commander, having repeatedly entered this port in violation of the neutrality of the United States, and having here augmented her force, to the injury of a power with whom the United States are in amity, I beg leave to request that you will be pleased to compel her instantaneous departure from the port, and by the use of force should the same be necessary.

C.

Copy of a letter from Master Commandant George Budd, to Charles E. Hawkins, commanding Mexican brig Hermon, dated—

UNITED STATES SHIP NATCHEZ, *Key West, June 23, 1828.*

The collector of this port, William Pinkney, Esq., has officially informed me that the Mexican brig-of-war Hermon, under your command, has repeatedly entered the port of Key West, in violation of the neutrality of the United States, by augmenting your force to the injury of a power at amity and peace with the Government of the United States.

Your letter of this day states that you arrived here on the 20th instant, in distress for water and some other things indispensably necessary to a cruising vessel. I must now request that, as soon as your supply of water and provisions be obtained, or a sufficiency thereof to enable you to reach one of your own ports in safety, that you will leave the port of Key West without delay.

It is distinctly understood that you will neither receive nor exchange any munitions of war, or any military stores whatever.

D.

Copy of a letter from William Pinkney, Esq., to Captain Budd, United States ship Natchez, dated—

COLLECTOR'S OFFICE, *Key West, June 27, 1828.*

I feel indignant at the renewed insult offered to-day by Mr. Hawkins, commanding the Mexican brig Hermon.

I now call upon you, as the commander of an ample force, to compel the instantaneous departure of the brig Hermon from the waters of the United States, and I consider it highly necessary that Mr. Hawkins should be made to understand that he can no longer trample on our laws with impunity.

E.

Copy of a letter from William Pinkney, Esq., to Captain Budd, commanding the United States ship Natchez, dated—

COLLECTOR'S OFFICE, *Key West, July 7, 1828.*

The Mexican brig-of-war Hermon, Captain Charles E. Hawkins, having violated the revenue laws of the United States, so that she has become forfeited thereby, I have to request of you that you will seize her as she comes within the waters of the United States. It is proper that the seizure should be made *only* within the jurisdiction of the United States.

F.

Copy of a letter from William Pinkney, Esq., to Captain Budd, commanding the United States ship Natchez, dated—

COLLECTOR'S OFFICE, *District of Key West, July 10, 1828.*

Having received information that the Mexican private armed schooner Molestadore and Mexican brig Hermon are now in the neighborhood, with prizes captured on the coast of Cuba, and contrary to the laws of nations brought within the waters of this district, I have to request that you will detach a suitable force from your ship to ascertain the fact, and detain any such vessels, as well as all vessels found violating the laws.

G.

Copy of a letter from Lieutenant Edward S. Johnson, of the U. S. Ship Natchez, to George Budd, Esq., commander of the Natchez, dated,

U. S. SHIP NATCHEZ, KEY WEST, July 22, 1828.

I have the honor to report that, agreeably to your order of the 12th, I took charge of the 1st cutter; Midshipman Thompson, Sailmaker Murphy, eleven men, one boy, and one marine, sixteen in all, made the crew, and proceeded to the westward in search of the vessel by you described, until the weather obliged me to anchor, in company with the 2d cutter of this ship, manned by an officer and ten men from the revenue cutter Florida. We got under sail together on the following morning at daylight, making necessary stay at several of the keys. Monday, made sail for Tortugas Keys, where we arrived about 1.30 A. M. On Tuesday, boarded the schooner Prudence, examined her, found Captain C. C. Hopner, of the Mexican private armed schooner Molestadore, his crew, officers and armament, on board the Prudence; many articles were on shore, such as sails, sweeps, spars, hams, casks, awnings, &c. On examination, found the Molestadore filled with water; at the particular request of Captain Hopner, permitted him to raise his vessel, at the same time requiring him to proceed with the prize to Key West, which he promised to do. When preparing to leave the harbor, a dispute took place; Captain Hopner gave orders for his men to stop their work; I immediately took possession, fitted with all possible dispatch, and left Wednesday morning, at 10 A. M., or about that hour. Our men required rest, which prevented my working them during the night. After discharging the pilot, hauled to the eastward for this port, where I arrived at 3 o'clock Thursday morning, in the Prudence. Mr. Truxton, in charge of the privateer, sailed in company, but lost sight of him in the night.

I took on board with me, Captain Hopner, his 1st lieutenant, and two men; the 2d lieutenant, and remainder of his crew, were put on board the privateer, with Sailmaker Murphy to assist Lieutenant Truxton.

Hoping my duty to have been performed to your satisfaction.

Copy of a letter from Master Commandant Alexander Claxton to Commandant Charles G. Ridgely, dated—

PENSACOLA, October 27, 1828.

I have the honor to report to you my proceedings, since my departure, two months since.

On my arrival at Vera Cruz, I forwarded your dispatch to Mr. Poinsett, and finding the country to be in a very unsettled state, determined to await his answer. In due time it arrived; but, from its tenor, left me no reason for longer delay. In the meantime, the standard of revolution was raised by a distinguished chieftain; the public mind became agitated and alarmed; and the American merchants, partaking in the terror, formally demanded, through our consul, that I should remain to protect their persons and property. I felt it my duty to acquiesce in their wishes. A week had scarcely elapsed before three cases of fever appeared on board; but being mild in its form, excited no alarm. I however decided it most prudent to put to sea; and having waited a day or two longer, by the urgent request of the consul, and favorable intelligence then arriving from the interior, I sailed from Vera Cruz. Encountering a long norther soon after I had got to sea, my crew were necessarily exposed to bad weather; and, as a consequence, the fever then lurking in our systems rapidly developed itself. Many of my officers and crew were taken down; and having, at length, but one lieutenant capable of duty, and being destitute of suitable nourishment for the sick, I anchored off Tampico to procure a supply. Here terror was found at its height; for, in addition to the commotion of the interior, the soldiers of the garrison had threatened to sack the houses of our mercantile establishments. At the strong and repeated solicitation of our consul, I was induced to receive on board all the specie belonging to our countrymen. The imminent jeopardy it was placed in, left me no ground for refusal. It amounted to a fraction less than \$40,000.

Happily we obtained a supply of those articles which had become indispensable, and which have, no doubt, saved many lives. I regret to state, that Midshipmen Bushrod W. Turner, and Terrel M. Crenshaw, died of fever. Five of my crew have also died; four of whom of fever, and the fifth of chronic diarrhœa. Doctors Buchmore and Barrington have been unremitting in their attention to the sick, and have given ample evidence that they may be relied on at any future emergency. It may not be deemed irrelevant to state, that in consenting to receive the specie at Tampico, I was, in a great degree, influenced by the opinion of these gentlemen, who declared to me their conviction that a change of climate had become necessary to restore our numerous invalids, and defend us from future contagion.

P. S.—It is highly gratifying to me to state, that the French packet, said to have been captured and robbed by her crew, and the officers and passengers murdered, arrived in safety at Vera Cruz, during my stay there, and the whole story thus happily ascertained to be a false and criminal fabrication.

20TH CONGRESS.]

No. 371.

[2D SESSION.]

ON CLAIM OF HENRY ECKFORD, FOR RENT OF GROUND NEAR SACKETT'S HARBOR, FOR THE USE OF THE NAVY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 10, 1828.

NAVY DEPARTMENT, December 8, 1828.

The honorable speaker of the House of Representatives:

SIR: A resolution of the House of Representatives, of the 2d May last, referred the petition of Henry Eckford to the Secretary of the Navy, to report thereon at the next session of Congress.

In compliance with that resolution, the Secretary of the Navy has the honor to report, that the claim of Henry Eckford has been examined, and is believed to be just.

During the war with Great Britain, Commodore Chauncey was instructed to build two ships of the line.

An examination of the ground in the vicinity of Sackett's Harbor, for suitable places to build upon, was made, and two sites selected and purchased, to avoid any future difficulties with the owners.

In the settlement of Commodore Chauncey's accounts, the sums paid for this land were rejected, on the plea that there was no authority to purchase land, except by a law of Congress, and it therefore remained in his possession. Not wanting the land, he sold it to Mr. Eckford, at its cost, and Mr. Eckford has charged rent from the date of the original purchase; he having allowed Commodore Chauncey interest on the amount, from the time of purchase.

Rent was paid on one lot to the 1st January, 1823; and no subsequent claim was made until January, 1827, when the debt amounted to \$4,160—a sum which could not be paid out of the funds then at the disposal of the Department, without injury to the objects for which the appropriations were made; the claim was therefore referred to Congress.

There does not appear to have been any agreement with Mr. Eckford, for the rent. He now offers to sell, for ten thousand eight hundred dollars, exclusive of the rent due, all the land which he purchased from Commodore Chauncey; embracing 300 acres with timber growing upon it.

The only course now left is, to pay the rent, and continue to pay it—to purchase the land—or, to remove the vessels or sell them. Should an appropriation be made for the payment of the rent, it is respectfully suggested, that on the 1st January next, it will amount to \$5,240 (five thousand two hundred and forty dollars.)

The papers which accompanied the resolution are herewith returned, as they may be required in the further examination of the case.

Respectfully submitted.

SAMPL. L. SOUTHARD.

20TH CONGRESS.]

No. 372.

[2D SESSION.]

APPLICATION AND STATEMENT RELATIVE TO AN INCREASE OF THE PAY OF CAPTAINS AND MASTERS COMMANDANT IN THE NAVY.

COMMUNICATED TO THE SENATE DECEMBER 11, 1828.

By the general regulations for the government of the army, a master commandant in the navy ranks as a major. A captain in the navy, from the date of his commission, ranks with a lieutenant colonel in the army; five years after the date of his commission, ranks a colonel; ten years after the date of his commission, ranks a brigadier general; fifteen years after the date of his commission, ranks a major general.

In the army of the United States.

	Pay per annum.	Rations.	Quarters.	Fuel.	Servants.	Forage.	Aggregate.
Major general	\$2,400	\$2,190	\$480	\$126	\$644 64	\$672	\$6,512 64
Brigadier general	1,248	1,752	360	99	483 48	480	4,422 48
Colonel	900	876	360	99	322 32	384	2,941 80
Lieutenant colonel.....	720	876	240	72	322 32	288	2,518 32
Major	600	594	240	72	322 32	288	2,106 32

Present pay and emoluments in the navy of the United States afloat.

	Monthly pay.	Daily rations.	Annual aggregate.
A captain commanding a squadron.....	\$100 00	16	\$2,640 00
A captain commanding a ship of the line.....	100 00	8	1,930 00
A captain commanding a vessel of less than thirty-two guns.....	75 00	6	1,447 50
A master commandant.....	60 00	5	1,176 25

Proposed pay and emoluments in the navy afloat.

	Monthly increase of pay.	Increase of daily rations.	Aggregate monthly increase.	Aggregate annual increase.	Aggregate present and proposed per annum.
Captain commanding a squadron.....	\$30 00	2	\$45 00	\$542 50	\$3,102 50
Captain commanding a frigate or ship of the line	30 00	2	45 00	542 50	2,472 50
Captain commanding a vessel of less than 32 guns ..	30 00	2	45 00	542 50	1,990 00
Master commandant.....	30 00	1	37 50	451 25	1,627 50

Extract from Goldsborough's Naval Chronicle, vol. 1, p. 344, note.

In the Dutch navy, the pay of a captain is—
 If commanding a seventy-four, 9,000 guilders per annum, or \$3,600 00
 If commanding a frigate, 8,000 guilders per annum, or 3,200 00
 If commanding a sloop, 5,000 guilders per annum, or 2,000 00

In the British navy, the annual compensation is—
 Admiral of the fleet \$15,624 00
 Admiral 13,831 11
 Vice admiral 11,952 86
 Rear admiral, or commodore, with a captain under him 10,160 00
 Captain of the fleet..... 5,122 67
 Captain of a first-rate, 800 to 900 men..... 3,272 87
 Captain of a second-rate, 650 to 700 men..... 2,864 00
 Captain of a third-rate, 600 to 650 men..... 2,455 11
 Captain of a fourth-rate, 350 to 450 men..... 2,045 33
 Captain of a fifth-rate, 280 to 300 men..... 1,636 44
 Captain of a sixth-rate, 125 to 175 men..... 1,432 00
 Captain of a sloop, 100 or less 1,227 55

All which is exclusive of indulgences and allowances not known in our service.

To the honorable the Senate and House of Representatives of the United States, in Congress assembled:

The memorial of the undersigned, masters commandant in the navy of the United States, respectfully showeth:

That your memorialists, deriving entire confidence from the justice of your honorable bodies, and from the consideration uniformly given to those who have petitioned for legislative interposition, are induced respectfully to present to your notice the great inferiority of their compensation, compared with that of other officers in the public service.

By the regulations establishing the relative rank of officers in the army and navy, masters commandant are assigned a rank equal to that of majors in the army; and by an act of Congress, the pay and emoluments of a major were fixed as follows:

Yearly pay, at \$50 per month	\$600 00
Amount of rations, 4 per diem, at 20 cents.....	292 00
Amount of forage for three horses, at \$8 per month.....	288 00
Amount of pay and rations for two servants.....	266 00
Amount of clothing for two servants	60 00
	\$1,506 00

By an act of Congress, passed 25th February, 1799, the pay and emoluments of a master commandant were fixed as follows:

Yearly pay, at \$60 per month	\$720 00
Amount of rations, five per diem, at 25 cents.....	456 25
	\$1,176 25

Leaving an excess in favor of majors in the army of \$329.75. In addition to which they are allowed 24 cords of fire wood, and, when commanding what are termed department, or double ration posts, (advantages which masters commandant can never enjoy,) their income amounts to \$1,798 annually, exclusive of fire wood and quarters.

There are seven navy yards and five recruiting stations, to each of which a master commandant is allowed; but with the exception of those officers, no one of the rank of your petitioners receives more than the pay and rations before exhibited, even when acting under all the responsibilities and consequent expensiveness of a separate command.

The law fixing the pay of a master commandant was passed in the year 1799, when it may fairly be

presumed that regard was had to the resources of the country, and the cheap rate at which the necessities of life could then be procured. Since that period, the salaries and pay of most of the public officers in the civil and military departments have been repeatedly and greatly increased, while that of your petitioners has remained the same.

Your memorialists would further respectfully represent, that they are a class of officers usually placed in command of sloops-of-war; and, although they may, and do, command vessels carrying more than twenty guns, that, by the construction of the law, and the usage of the service, they are only allowed the pay and rations before stated, while they are subject to the same heavy expenses as commanders of larger vessels, in outfits and entertainments, in the interchange of civilities with foreign officers and strangers, as well as with their own officers.

Your memorialists ask your honorable bodies to take into consideration the great length of time they have to serve in each grade, without any prospect of brevet rank and its advantages. There are thirty-three masters commandant, four of whom have served twenty-three years, five have served twenty-two years, five have served twenty years, and nineteen have served upwards of nineteen years, in the navy. Very few of them are much less than forty years of age, and twenty-six of them have been married, and have families. No person in the navy can by law, leave more than half his monthly pay, when abroad, for the support of his family and the education of his children. The half monthly pay of a master commandant amounts to three hundred and sixty dollars per annum; and, if he have no other resource, his family must retire, during his absence, to obscure and cheap board; and after his return from a long and expensive cruise, must select some frugal residence to await the period in which his services may be required, without any of the allowances for quarters, fuel, and servants, which are provided by the government for their brother officers in the army, of equal and of inferior rank.

Your memorialists have endeavored briefly to lay before your honorable bodies the principal facts in relation to their peculiar situation, confident that their feelings and motives cannot be misunderstood, as none hold in higher estimation the meritorious services, the distinguished characters, and exalted claims of their brother officers in each arm of the public service.

Your memorialists pray your honorable bodies to take into consideration the facts herein stated; and that they may be placed on such footing with their brother officers, as, in your wisdom, will enable them better to maintain the respectability and rank of commanders of men-of-war, and representatives of their country abroad.

And your memorialists, as in duty bound, will ever pray, &c.

20TH CONGRESS.]

No. 373.

[2D SESSION.]

ON THE EXPEDIENCY OF CONNECTING WITH THE NAVY YARDS ESTABLISHMENTS FOR MANUFACTURING CORDAGE AND CANVAS FROM AMERICAN HEMP, FLAX AND COTTON, FOR THE NAVY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 22, 1828.

NAVY DEPARTMENT, December 16, 1828.

Str: In answer to a resolution of the House of Representatives, of the 12th May last, directing the Secretary of the Navy "to prepare and report a plan and estimates for connecting with two or more of the navy yards of the United States as many establishments for purchasing, water-rotting, and preparing for manufacture, American hemp and flax, and also cotton, as well as for manufacturing the same into cordage and canvas, for the use of the navy," the Secretary of the Navy has the honor to enclose a copy of a letter from the Commissioners of the Navy.

A careful consideration has been given to the resolution, and it has been found impracticable, in any view which the Department can take of the subject, to unite the proposed establishments for water-rotting hemp and flax to our navy yards; and therefore a plan for this connection is not and cannot be given.

The whole of our navy yards, with the exception of New York and Pensacola, have recently been examined, and plans formed for their future improvement, which have received the sanction of the Executive, and which would be injuriously deranged by any effort to accomplish that object. Nor, indeed, is it perceived how it would be practicable to do it, if these plans of improvement had not been made. If such establishments are to be formed, the nature of the labor, and the circumstances attending it, would require that they should be at a distance from, and altogether unconnected with the navy yards. Health and comfort would demand that the two should be separated. The buildings to be erected for the reception of hemp and flax, the works necessary for rotting it, in situations such as those of our navy yards, and the individuals to be employed at the labor, are of a character totally distinct from these now at our naval establishments. They would form new and different employments and business. The same difficulties occur, and the same remarks are applicable, as regards the manufacture of canvas.

On the latter part of the resolution, for manufacturing hemp into cordage, no difficulty is felt to exist. The opinion has heretofore been expressed, that establishments for this object ought to be connected with one or more of our navy yards; and additional experience has proved that it would be wise and economical to erect them without delay.

An estimate for this purpose is added. A single establishment, which might be erected with the amount estimated, and which should be placed either in the Norfolk yard, or near to the one in Washington, would be sufficient to supply all wants of the navy, and would secure us the best possible manufacture.

Respectfully submitted.

SAMPL L. SOUTHARD.

The Hon. SPEAKER of the *House of Representatives*.

Copy of a letter from the Board of Navy Commissioners to the Secretary of the Navy, dated—

NAVY COMMISSIONERS' OFFICE, October 31, 1828.

The Commissioners have had the honor of receiving your communication of the 11th instant, calling for a plan and estimates for connecting with two or more of the navy yards as many establishments for purchasing, water-rotting, and preparing for manufacture, American hemp and flax, and also cotton, as well as for manufacturing the same into cordage and canvas, for the use of the navy.

Never having contemplated such establishments as necessary appendages to navy yards, none such having been connected with either ours, or those of any country in Europe, the Commissioners have not extended their inquiries to the subject, and are not prepared to afford satisfactory information upon the various points involved in the call.

To obtain such information, it would be necessary to consult practical men, engaged in the erection of such works, in making the machinery required, and in all the various processes of preparing and manufacturing hemp, flax, and cotton; and would unavoidably occupy a considerable length of time, probably so long as to exclude any report upon the subject during the ensuing session of Congress.

The board would, with great deference, suggest for your consideration, whether the rotting of hemp and flax within or near either of our navy yards, would not have a tendency to render them unhealthy; and they would observe, that the yards, having, under the act of Congress "for the gradual improvement of the navy," been arranged with reference to their future improvement, could not, without deranging the plans adopted, admit of the proposed establishments.

Estimate

For a building of brick, 900 feet long, thirty-five feet wide in the clear, eleven feet high. The walls to be fourteen inches thick, having 120 windows, with ledged shutters, three feet by four, and twenty ledged doors, with frames, &c., complete; the roof to be framed with common rafters, to be laid on wall plates, having two collar beams to each pair, sheeted and covered with slate—

Cost, including all materials.....	\$15,024 16
Add, for machinery and hemp house, &c., &c.....	18,000 00
	\$33,024 16

20TH CONGRESS.]

No. 374.

[2D SESSION.]

NAVAL REGISTER FOR THE YEAR 1829.

COMMUNICATED TO THE SENATE DECEMBER 31, 1828.

NAVY DEPARTMENT, December 31, 1828.

SIR: I have the honor to transmit herewith, for the use of the members of the Senate, fifty copies of the Naval Register for the year 1829, prepared in obedience to a resolution of Congress, passed on the 13th day of December, 1815.

I am, sir, very respectfully, &c.,

SAMPL L. SOUTHARD.

To the PRESIDENT of the *Senate of the United States*.

Naval register for 1829.

† Assistant surgeons, from thirty dollars and two rations, to forty-five dollars and eight rations.

20TH CONGRESS.]

No. 375.

[2D SESSION.]

ON THE EXPEDIENCY OF ESTABLISHING A NAVY YARD OR DEPOT ON THE COAST BETWEEN CAPE HATTERAS AND FLORIDA.

COMMUNICATED TO THE SENATE JANUARY 6, 1829.

NAVY DEPARTMENT, *December 26, 1828.*

SIR: In answer to a resolution of the Senate, of the 20th of May last, "That the Secretary of the Navy be directed to report to Congress, at their next session, whether the establishment of a navy yard for the construction and repair of vessels-of-war, or a depot for the collection of ship timber, at some point on the coast between Cape Hatteras and Florida, would be advantageous to the public service; and that he do also submit to the Senate all the information in the possession of the Department, showing the facilities afforded for such an establishment by Charleston and Beaufort, (South Carolina,) and Savannah, Brunswick, and St. Mary's, (Georgia), together with the expense of creating the same."

The Secretary of the Navy has the honor to refer to the reports from this Department, respecting the surveys of Charleston, St. Mary's, and Savannah, which bear date 19th January, 1826, and 28th December, 1827, and which will be found in the Congressional documents.

He has also the honor to enclose the results of the survey of Brunswick, marked A, and of Beaufort, marked B.

After the passage of the resolution, a letter was directed to the commanding naval officer at Charleston, and the navy agent at Savannah, to send to the Department such information, respecting the facilities of those places for naval purposes, as they could procure, or as should be furnished by others. No report has yet been made from the commanding naval officer at Charleston. A copy of the answer of the navy agent at Savannah will be found with the papers now transmitted, marked C. These papers, with the charts, statistical and other works, relating to that portion of the Union, contain "all the information in possession of the Department, showing the facilities afforded for such establishments" at those places.

Many letters have been received from private individuals, respecting some of the harbors; but such letters are not supposed to be embraced by the resolution, and therefore copies of them have not been made.

No detailed estimate of the expense accompanies this report. There can be no such estimate made, which would be a satisfactory guide to an appropriation, until after a survey of the precise spot on which the navy yard is to be located. It must always depend on the nature of the ground, the length of the piers and wharves, and on a great variety of other circumstances, which can only be understood after a very accurate examination by persons skilled in such examinations.

The Department could not command the means to make these examinations, nor could it select the place without the direction of the legislature, and the designation of the harbor where the establishment was to be made.

It is believed, however, from the result of the surveys, the great difference of expense would be found in favor of any one of the harbors; and it may fairly be calculated, that not less than \$100,000 will be required to make, at either, an establishment on the most moderate, and not more than \$500,000, on an extensive scale.

In addition to the information called for, the resolution is understood to require answers to two inquiries:

1. Whether the establishment of a navy yard, for the construction and repair of vessels-of-war, at some point on the coast, between Cape Hatteras and Florida, would be advantageous to the public service.

2. Whether a depot for the collection of ship timber ought to be made between those points.

On the first question no hesitation is felt. A conviction of the interests of the naval service constrains to the decided expression of an opinion, that it would not be advantageous to the service to establish a navy yard, either for the construction or repair of vessels-of-war, at either of the places named, or at any other, between Cape Hatteras and Florida, which has been presented to the notice of the Department.

It will be perceived, on an examination of the evidence and documents, which are enclosed and referred to, that the nature of the entrance to, and the depth of water at the bars of all the harbors that have been surveyed, are such that a navy yard at either could be used only for building and repairing sloops-of-war, and similar vessels.

The average depth of water over the bars at Charleston, is about 17 feet at high, and 12 at low water; at Beaufort, 22½ at high, and 15 at low; at Savannah, 26 at high, and 18 at low; at Brunswick, 21 at high, and 15 at low; at St. Mary's, 18 at high, and 12 at low.

The average draft of water for ships of the line of the first class, is about 26 feet; of the second class, 25 feet.

Frigates of the first class, 22 feet 6 inches; of the second class, 21 feet.

Sloops of war of the first class, 17 feet; of the second class, 16 feet 6 inches.

Schooners, 13 feet.

The draft of the hulls, without masts, spars, or rigging, is, for ships of the line of the first class, 19 feet 8 inches; of the second class, 18 feet 6 inches.

Frigates of the first class, 17 feet; of the second class, 16 feet 6 inches.

Sloops-of-war of the first class, 14 feet; of the second class, 13 feet.

Schooners, 9 feet.

In considering this subject, no good cause has been perceived for changing the opinion, so often expressed, that a reduction, rather than an extension of the number of establishments, would promote the public interests.

At every navy yard there must be buildings for officers, store houses, timber sheds, shops for workmen, launching ways, wharves, docks, and other erections, which call constantly for the expenditure of large sums of money for repairs. At every yard, too, there must be officers, workmen, and other persons employed in the various duties, whose support is expensive to the government. In this also, as in business of other kinds, concentrated and extensive means, properly managed, always conduce to economy in

producing any given result. At large and well organized establishments, ships can be more cheaply built, and more cheaply repaired, than at lesser ones; and as we must, from necessity, have at other points on our coast extensive establishments for vessels of the larger classes, the smaller ones may be built and repaired at them without inconvenience, and without the cost of establishing others for their separate use. Every one which is created, beyond the number required by the extent of our force, is an unnecessary burden upon the public treasury, and upon the means appropriated for the support of the navy. We have already one yard for every eight vessels. Our error is in having too many; and if other causes, obvious in their character, and arising principally from the nature of our confederation, do not prevent, the time will come, though it is probably yet distant, when two or three naval establishments and depots, extensive and well appointed, will provide for most of our wants. These will be found in the waters of the Chesapeake and Narraganset, while the rest of our yards will be reserved for occasional use only, and for times of pressure from external force.

The Chesapeake and Narraganset must forever afford the points of concentration for our navy, in active warfare, from whence a combination of our naval force can most readily be made, and from whence our fleets and squadrons will assail an enemy, or resist the attacks of any powerful marine which may invade the country, or hover on our coasts.

If a navy yard be hereafter required on the Atlantic coast, south of Cape Hatteras, its location should be at Thompson's Island, or the Dry Tortugas: positions better suited to the object, and more commanding in reference to the commerce of the Mississippi and the gulf, than any other within our territory; positions of incalculable importance, when Havana shall be found in the possession of an enterprising and powerful enemy.

It is then confidently believed that the proposed addition to the number of our navy yards would not, at this time, promote either economy in the disposal of our means, or energy in our naval operations.

The ports to which the inquiry applies, may, in times of war, be useful to our small vessels, pursued by an enemy or seeking refreshment; and may, like other harbors, afford to them both protection and comfort, and should have proper officers stationed at them to meet these calls; but they are not necessary as places of resort in time of peace, nor for building and repairs.

The small number of vessels of all classes, which is now authorized by law, and the increased but not large number which will ever be called for by the true interests of the nation, may more advantageously seek the supply of their wants in other ports, to which nature has been, in some points, more liberal.

The answer to the second inquiry is supposed to depend essentially on the decision of the first.

Where there is a navy yard, it follows, as a necessary consequence, that there should be a depot for the timber to be used at it; and it seems not to be less true, that such a depot is not necessary, except where vessels are to be built or repaired. The argument which seems to operate most strongly in favor of a depot between the points mentioned in the resolution, results from the fact that our most valuable species of ship timber grows there and on the borders of the Gulf of Mexico; and that its collection at such a depot, because at less distance, would be less expensive than at more northern navy yards. But this argument loses its force by the considerations that it would be necessary, wherever it was situated, to carry the timber to it by water; that the expense of procuring this timber depends much upon the difficulty of placing it on shipboard; and that, when there, the distance which the vessel has to go is matter of small moment.

The cost of delivering timber at our northern, is little greater than at our southern yards; and depends less on their distance than on the nature of the navigation by which they are to be approached. But the argument is deprived of all its force, when it is recollected that, if the timber be deposited where it is not to be used, we are subjected to the expense of double freight and transportation—first to the depot, and afterwards to the navy yards. Economy requires that its first place of deposit be as near as possible to the very spot where it is to be used. Even its removal from one part of a navy yard to another, is one of the most troublesome and expensive operations which we have to encounter. Hence, in the plans which have recently been made and approved, for the improvement of the yards, the sheds for its preservation are placed as near to the building-ways as other objects would permit. The navy yards now in existence will afford places of deposit for all the timber which we can procure, and it will be as well protected and preserved in them as it can be in any other location.

Respectfully submitted.

SAM'L L. SOUTHARD.

The President of the Senate of the United States.

A.

Report of the survey of the harbor of Brunswick, &c., &c., State of Georgia.

SIR: By referring to the diagram, which will be forwarded to the Navy Department, you will readily perceive that a part of St. Simon's Sound, and Turtle river, as far up as Blyth's Island, has been necessarily included in the survey of the harbor of Brunswick.

I shall be consequently constrained to deviate in the following report, from the form adopted in the preceding one, and to give you the necessary information, without regard to the order in which the interrogatories have been put.

The principal entrance into St. Simon's Sound, from the Atlantic ocean, is between the islands of Jekyl and St. Simon's. There are extensive sand shoals which run out from both of those islands towards the ocean, in a circular direction, until they meet, at a distance of five miles and a quarter from the light house on St. Simons, and there form what is called "St. Simon's bar." The extent of those shoals, and the general depth of the water upon them, may be seen, and better understood, perhaps, by looking at the diagram. I will, therefore, confine my remarks to what I consider the channel across them, or, in other words, to the deepest water on the bar. The greatest depth of water that can be relied on when crossing the above-mentioned shoals, is from fourteen to sixteen feet, as it is affected by the following circumstances:

At low water, during the spring tides, there is fourteen feet; at low water, during common tides,

there is fifteen feet when the water is not affected by the wind. Sixteen feet may sometimes be brought over at low water, when the wind has been for any time blowing from the eastward. The average summit level of the tide is calculated to be six feet. The depth of the water upon the bar is affected by the wind, to a greater or less degree, according to its violence and duration. The wind from the eastward causes the tide to flow over its usual level, and the west winds sometimes blow it out below the ordinary low water mark. The strength of the current on the bar, and to a safe anchorage within it, unaffected by the wind, is, I judge, about two miles an hour. The width of the channel on the bar is about three hundred yards, and the bottom is hard sand. The usual course over the bar going into port, is W. N. W. I will observe, however, that I do not think that fifteen feet can be carried over that bar, at low water, during common tides, on any one course. To obtain accurately the courses necessary to pass over that bar in the deepest possible water, it will require more time, and much more favorable weather, than was allotted to the survey which I am now reporting; and it is also necessary that it should be marked with permanent buoys.

The most favorable wind to go to sea from this harbor, is the northwest; to sail into the harbor, the southeast is best. From September till November, the wind generally prevails from the northward and eastward; from November till April, from the northward and westward; and from April till September, from the southward and westward. There is safe anchorage for vessels of the largest class that can cross the bar, to almost any extent. The distance from the bar to the light house is five miles and three-quarters; from the light house to the town of Brunswick, the distance is eight miles. In the main channel from the light house, on the Island of St. Simon's to the town of Brunswick, there is water enough for any ship that can cross the bar.

At the entrance of what may be properly called the inner harbor of Brunswick, there is a mud flat, the channel over which is three hundred feet wide, and in length one-half mile. On this shoal nine feet may be found at low water during the spring tides, and ten feet at low water during common tides. The ebb and flow of the highest spring tides in this harbor, is ten feet, and that of the common tides is eight feet; which, (considering that the bottom is soft mud,) will enable any vessel that can cross the outer, or Simon's bar, to go up to the town of Brunswick. The tide at Brunswick is little or not at all affected by the wind.

Brunswick is the chief town in Glynn county, in the State of Georgia; it contains four or five dwelling-houses, and ten or twelve white inhabitants; it is situated six feet above high water mark, on a promontory, which is about one mile and a quarter in width, and two miles long, and it is bounded by extensive salt marshes, and Turtle river.

The land in the vicinity of Brunswick appears to have been of the strongest and very best quality. The town is represented to be quite as healthy, if not more so than the surrounding country. The river opposite to the town is twelve hundred feet wide. That harbor is completely land locked, and there is good anchorage in soft sticky bottom for any vessel that can get up. The convenience of this harbor for receiving supplies from the shore is very great. The fresh water, although not of the very best quality, is tolerable, and can be obtained in any quantity.

There are several good positions for a navy yard, all of which are said to be as healthy as the town.

The channel runs opposite to those positions within two hundred and fifty feet of high water mark, and I have no doubt but that wharves can be run out to it. Supplies of stores and provisions for a fleet cannot be obtained at present, either at Brunswick or the surrounding country.

I have had no opportunity to ascertain anything important with regard to the destructiveness of the worm, but I apprehend that they would be injurious to vessels laying for any length of time in that harbor.

The subject of fortifications necessary for the defence of that harbor, properly belongs to another department, I am aware; but, nevertheless, I ought perhaps to observe, that its situation is exposed, and at present entirely defenceless.

Although it would but needlessly prolong this report to mention every little circumstance which has been brought to my notice as calculated to improve the town of Brunswick; yet, it is doubtless my duty to remind you, that there are certain internal improvements contemplated in the State of Georgia, which are likely to contribute to the prosperity of Brunswick, and to increase the ability of that place to furnish supplies for shipping; and, also, to speak of the probable effect that the completion of the Florida canal will have upon the future prospects of that town. A canal of about eleven miles is to be cut between the Turtle and Alatomaha rivers, which, as I am informed by a letter from Mr. W. B. Davis, of Georgia, will open a communication with a large proportion of the most fertile parts of Georgia, west of the Oconee river, and give to the produce of that section of the country an outlet to the ocean, and a market, by the way of Brunswick.

With regard to the Florida canal, I will observe, that whether it terminates at the mouth of the river St. John's or Amelia harbor, it is probable that a part of the trade which will pass through that canal will centre at Brunswick.

I have the honor, sir, to be, with the greatest possible consideration and respect,

Your obedient and very humble servant,

R. F. STOCKTON, *Lieutenant U. S. Navy.*

To the Hon. SAMUEL L. SOUTHARD, *Secretary of the Navy.*

B.

To the Hon. Samuel L. Southard, *Secretary of the Navy:*

Sir: The survey of the "harbor of Beaufort," as far as was necessary "to ascertain the practical facilities of that place for naval purposes," has been finished; and I have the honor now to place before you the results of the observations made by the officers employed on that service.

Without repeating the interrogatories proposed to me, I will immediately proceed to answer them, in the order in which they have been put.

First. The depth of water on the bar, at low water, during the lowest spring tides, is seventeen feet; during the highest spring tides, it is sixteen feet; and, at common tides, it is sixteen feet and a half.

The average rise of the tide on the bar, is six feet; and the summit level of the water, during spring tides, at high water, is calculated to be from twenty-two to twenty-four feet.

Second. The water on the bar is affected to a greater or less degree, according to the direction and violence of the wind. Strong winds from the northeast or from the southeast cause a heavy swell, and make it dangerous to cross the bar; strong winds from the opposite side of the compass will, perhaps, reduce the depth of the water from one to two feet.

Third. The strength of the current on the bar, &c., &c., depends much upon the wind; it runs at the rate of one and a half to two and a half miles an hour.

Fourth. The channel is one-half of a mile wide. The bar, from three fathoms inside to three fathoms outside, at low spring tides, is one mile wide. The bottom is hard sand, and sandstone. The largest vessels can cross the bar, bound in, with a northeast or southeasterly wind; and a northwest or southwesterly wind will be favorable for them to go to sea.

Fifth. During the winter, the northwest wind prevails; and in the summer, the wind blows most frequently from the south and westward.

Sixth. Port Royal Sound is distant from the bar nine miles, and is about two miles square, between Bay Point and Hilton Head. The soundings vary from three to nine fathoms, at low water. The bottom is made of hard sand, and sandstone; out of which it is difficult to take an anchor. This sound will answer very well for an outer harbor; but, in bad weather, it will be prudent to run four or five miles higher up.

Seventh. There will be but little, if any difficulty, in receiving supplies from the shore.

Eighth. Good water can be obtained without difficulty.

Ninth. Provisions could, no doubt, be obtained from the surrounding country, in any quantity, with proper notice. With regard to other stores, they could not be obtained, in any quantity, at present; but, situated on the inland navigation between Charleston and Savannah, there is but little doubt that Beaufort could, at all times, be supplied with whatever could be collected in those ports.

Tenth. A good position for a navy yard might be selected.

Eleventh. There is no position in the harbor which would answer for a navy yard, where there is, at low water, as great a depth of water as can be found on the bar, during the spring tides.

Twelfth. Good fresh water might be easily obtained, and in any quantity.

Thirteenth. Beaufort is the summer residence of the planters, and is considered healthy. The soil is sandy.

Fourteenth. There may be some difficulty in driving piles; the bottom is hard sand, and sandstone.

Fifteenth. The worm, I apprehend, is not very destructive in the harbor.

The distance from Port Royal Sound, between Bay Point and Hilton Head, to Beaufort, is twelve miles. The width of the river decreases gradually, from one mile to one-fifth of a mile; the channel varying from one-fourth to one-tenth of a mile. The only shoal that can prevent the largest vessel which can cross the bar, from reaching the harbor at high water, is abreast the fort, about two miles below the town; over which, there is at low water, during common tides, only twelve feet.

The highest spring tides in the harbor are from ten to eleven and a half feet; the average rise is eight feet. Neap tides, from six and a half to seven feet.

I hope you will find in this report, all the information required by your instructions to me.

I have the honor to be, sir, with great respect, your obedient and very humble servant,

(Signed) R. F. STOCKTON, *Lieutenant U. S. Navy.*

C.

. SAVANNAH, November 12, 1828.

Hon. Samuel L. Southard, Secretary of the Navy:

SIR: Your instructions of the 10th June last, requiring full information respecting the harbor of Savannah, particularly as to its fitness for naval purposes, I have not been able to comply with until now, in consequence of the absence from the city of those from whom that information could, the most correctly, be obtained.

I have now the honor to submit the result of my inquiries and observations; all of which, I have full reason to believe, are perfectly correct. The answers of the pilots, to a series of questions propounded to them, are herewith annexed. They result in proving:

First. That the depth of water on the bar, at the lowest spring tides, is 18 feet; at common tides, 19 feet; that high water, at common tides, is 26 feet; and at spring tides, 28 feet.

Second. That the depth of water is increased or diminished from one to two feet by the winds, according to their course or duration.

Third. That the current, from the bar to safe anchorage at flood tide, is from one to two knots, and from two to three knots at ebb tide.

Fourth. That the width of the channel upon the bar is three-quarters of a mile; that the width of the bar to safe anchorage, from the sea, is from one-half to three-quarters of a mile; and that vessels drawing the greatest depth of water the bar will admit, may cross it to safe anchorage within, with any wind from north to south, having east in it; and for those bound outwards, with any winds from north to south having westing.

Fifth. That vessels drawing nine and one-half feet may at the lowest tides, and from fifteen to sixteen feet at high water, get to safe anchorage in Cockspur Roads, the distance six or seven miles from the bar, and the bottom good anchorage; depth of water four and one-half fathoms.

Sixth. That in the north channel good anchorage may be found in any part of it after crossing the bar, and abreast of Tybee, five or six fathoms water.

Seventh. That vessels drawing eighteen feet water may with safety at high spring tides reach Four Mile point, at the upper end of Gibbet Island, and from sixteen to seventeen feet at common tides; and to Fort Jackson sixteen and one-half at spring tides, and from thirteen to fourteen and one-half at common tides.

Eighth. The impediments to navigation in the river are six sand banks and mud flats; the first five

miles from the bar, the second six miles, the third seven miles, the fourth twelve miles, the fifth twelve and three-quarters miles, the sixth at Four Mile point. All these shoals and impediments it is believed may be removed, or greatly reduced, by a good dredging machine. Should this prove to be practicable, thirty feet might then be brought with safety from the sea to Fort Jackson.

Ninth. The wrecks lying between Fort Jackson and the city have at low water six and one-half feet, at high water thirteen and one-half feet, and at spring tides from fourteen to fifteen feet. The measures which are now in progress under the direction of the government for the removal of these obstructions, if successful, will very materially improve the navigable facilities of the river, and will enable vessels of much greater draft to reach the city.

Tenth. The worm has never been known above Cockspar, and even there its effects are but slightly injurious.

Eleventh. Fresh water in great plenty may be had at Tybee Island, from several wells now there, and these may be multiplied to any extent; but the river as low down even as Four Mile point, at the distance of only fifteen miles from the bar, at low tide furnishes fresh water of a quality equal to any in the world for shipping, requiring only to be a short time in the casks, like that of the Mississippi, to settle and become clear; the pump water in the city is equally good.

Twelfth. The rise of the tides is from six and one-half to nine feet, according as it may be influenced by the winds.

Thirteenth. Large vessels may get to sea from the city with any wind, from N. W. to S. S. W.; and from Cockspar with those from north to south.

The foregoing, detailed by three of the most intelligent and skillful pilots of the port, one of whom has been upwards of fifteen years engaged exclusively in his profession, is substantiated by the testimony of other nautical men, from whom I have sought for information, or with whom I have conversed. I have every reason, therefore, to be satisfied of its correctness.

In addition to the facts detailed in the foregoing examination, I am enabled to add the following, partly from my own knowledge, but chiefly from inquiries made of intelligent individuals, upon whose judgment and opinions I have the fullest reliance.

The means of supplying a fleet with stores and provisions from the city of Savannah must necessarily depend chiefly upon the probability of there being a demand for those articles; neither naval stores, ship chandlery, barreled pork or beef, are prepared here; but all these could at all times readily be obtained in quantities, by the constant and regular intercourse with the northern cities, through the medium of the persons engaged in such business here, and the probability of a demand would be certain to produce a supply. The inland intercourse between this and Charleston being always open and easy, would afford the means of obtaining all that could be supplied there also.

Ship timber in all its varieties is abundant, and the facilities for obtaining it unquestionable.

Steam saw mills in the city and its neighborhood can at all times supply whatever may be demanded; and the short distance between this and Darien would enable the mills there to add their powers of supply to those here, were it necessary to call them into requisition. In addition to these sources, that of the Ogeechee canal, which is now nearly completed, will, it may be expected, increase greatly the means of supply, by bringing to Savannah the products of an extensive region through which that river flows. In fact, no seaport from the Chesapeake to the Gulf of Mexico presents facilities for the supply of ship timber greater than this. The forests of pitch pine of the best quality on both sides of the Savannah river, for two hundred and fifty miles of its course, are almost inexhaustible. From the same region, oak of different kinds, locust, mulberry, cedar, and other valuable timber, may also be had; and live oak may, in peace or war, be obtained by means of the inland navigation through the regions of its native soil, extending from hence to the St. Johns, in Florida. Should the plan be undertaken by government, sometime since projected, of increasing the quantity of this valuable timber by cultivation, the neighborhood of Savannah, where the tree is indigenous, would afford every desirable facility, and would greatly enhance the value of a naval depot in its neighborhood.

The steamboat navigation to Augusta affords at all times great facilities for obtaining from thence whatever the country in its neighborhoods affords; and, in fact, a greater proportion of what the interior of the State produces—pitch, tar, turpentine, flour, and possibly, even beef and pork may be obtained from thence in moderate quantities, which would increase with the demand.

The packet steamboats require but from twenty to twenty-four hours in their passage from Augusta to Savannah, and consequently the means of transporting men or munitions of war from the United States arsenal there are easy and rapid.

The country in its neighborhood is populous, and daily becoming more so. To embody, equip, and transport a militia force from there might at all times be speedily effected. The fortifications which the government is about to construct on Cockspar Island, indicate it as an important point of defence and protection for the southern section of the Union; a naval station combined with it, necessarily would increase infinitely the advantages of each, and the protection which the works on shore would afford to a fleet immediately under its guns, and in so safe and convenient a harbor, only six miles from the sea, the entrance to which is so easy, need not be commented upon, to make it evident that the harbor is susceptible of very complete defence, so as to make it as secure as any point on our coast, and at a very moderate expense, is, I believe, already made known to government, by a report to the Engineer department, and that opinion will no doubt have its weight in the decision of the question. It is not necessary that I should here dilate upon the advantages of such a harbor as a resort for vessels-of-war in the winter season, or for its proximity to the West Indies, or for the means it affords as a shelter during the hurricane months, or for repairing damages sustained by being exposed to their influence; because it is presumed these are some of the many reasons which must have led to the inquiry by government, of a proper harbor for a naval depot between the Chesapeake and Cape Florida. With respect to the site for the navy yard, there cannot be much diversity of opinion; either the lower end of the city, or Fort Jackson, three miles below it, would probably be the only points between which to choose. The former would be every way preferable, should the measures now in progress under the direction of the commissioners of the United States for the removal of the wrecks, be successful. The chief, and probably the only objection to Fort Jackson is, that it is less healthful than the city; but this evil may be remedied, in a great degree, by erecting the buildings for the residence of the workmen upon the high land at a short distance from the river. Various situations within the distance of a mile from the fort, may easily be obtained, as well for a place of residence as for many of the

workshops; but, as the distance from the city is so short, and the transportation so easy, by means of the river, no difficulty could be encountered in making the city itself the place of residence, as well as for the workshops, spar yards, &c. As to the healthfulness of the city, the facts which I am enabled to furnish, are the best criterion. The paper marked A is a transcript of an official record laid before the corporation at its session last year, by a committee of its own body; it contains, as will be perceived, a table of the number of deaths among the white population, for every month in the year for five years, commencing in 1822. The number of deaths is ascertained by an official register kept by the sexton, an officer appointed and paid by the corporation, whose duty it is to record the name, age, disease, and residence of every person who dies or is buried within the city; its accuracy cannot be doubted. Southern cities, and particularly those upon the seaboard, are certainly not distinguished for their healthfulness; but, with the exception of August, September, and October, there are few Atlantic towns in the Union where the number of deaths, in proportion to the population, are so few as in Savannah; the autumn, however, is uniformly productive of disease, and particularly so among those exposed to the influence of the weather. It will, however, obviously be necessary to compare the healthfulness of Savannah with other *southern* ports which may be looked to as a naval station. I have added to the table the deaths recorded for each month of the present year, which, it will be perceived, are considerably less than some of the previous years. The abandonment of the culture of rice, on the lands immediately in the neighborhood of the city, has, in the opinion of the most intelligent physicians, tended greatly to lessen disease, and its beneficial influence is unquestionably annually extending and increasing. This is more particularly evident among those persons residing near the river, and among the crews of vessels lying in the harbor. For several years past they have been infinitely less liable to disease than formerly; and, as the lands reclaimed from rice culture shall increase in quantity and extent, so may the benefits to health be expected likewise to increase.

The importance of the facts developed in the answers of the pilots, in relation to the shoals in the river, and their opinion of the practicability of removing them, or of so lessening them as to increase the depth of water to enable vessels of the larger class to reach the city, deserve consideration. The sand and soft mud which form these impediments, are susceptible of removal without much difficulty, it is believed, by means of the improved excavating machine, impelled by steam, which has been so successfully applied in many instances for clearing rivers. That about to be put in operation here by the commissioner for removing the wrecks, might possibly be beneficially employed for this purpose. Also, the many advantages which this point would present for the establishment of a naval depot, were these shoals removed, are obvious; and from 25 to 26 feet might be carried to Four Mile point, in fresh water 15 miles from sea, and but five from the city, by removing the shoals in the north channel.

I have thus, sir, complied, as far as it has been in my power, with your requisitions. If the facts I have detailed shall be found of any use in elucidating the question of the fitness of Savannah for a naval station, it will gratify me to have furnished them. I am convinced that much valuable information may yet be obtained on that subject, and that comparatively but little has been given. Should I hereafter be enabled to add to it, I will with great pleasure do so, or promptly comply with any further instructions from you to the extent of my power.

I have the honor to be, sir, very respectfully, your obedient servant,

J. P. HENRY, *Navy Agent.*

Queries respecting the nature of the bar and river of Savannah, as to the facilities for the establishment of a navy yard.

- First.* The depth of water on the bar at the highest and lowest spring tides and common tides?
- Second.* What winds affect the depth of water upon the bar, to what extent, and in what manner?
- Third.* The strength of the current on the bar, and to safe anchorage within it, on the flood tide and ebb?
- Fourth.* Width of the channel upon the bar, width of the bar, and nature of the bottom; with what winds can large vessels cross the bar bound outwards and inwards?
- Fifth.* How many feet can be carried to safe anchorage in Cockspur Roads, at low and high water, and common tides; what is the nature of the bottom, and what is the distance from the bar?
- Sixth.* Where is the best anchorage in the north channel after crossing the bar?
- Seventh.* How many feet can be carried to Four Mile point and to Fort Jackson at low and high water?
- Eighth.* What are the impediments in the river from the bar to Four Mile point and to Fort Jackson, and can they be lessened or removed?
- Ninth.* How many feet can be brought over the wrecks at high and low water?
- Tenth.* Is the worm destructive at Cockspur, at Four Mile point, or Fort Jackson?
- Eleventh.* Is good fresh water to be had at Tybee?
- Twelfth.* What is the rise of the tide on the bar?
- Thirteenth.* With what winds can large vessels go to sea from the city, and from Cockspur Roads?
- Fourteenth.* Did you bring the frigate John Adams from sea?
- Fifteenth.* What are the prevailing winds?
- Sixteenth.* How near the shore is the channel at Cockspur, and at Fort Jackson, and is wharfage easy to it?
- Seventeenth.* How long have you been acting as a pilot for the port of Savannah?

Additional questions.

- Eighteenth.* What water is there at safe anchorage abreast of Tybee?
- Nineteenth.* What are the impediments in running into Cockspur, after crossing the bar, and what the depth of water in the roads?

Answers of John Low, Wright White, and E. C. Hopkins, pilots for the harbor of Savannah.

Answer *First*, by Low:

High water at highest spring tides.....	27 feet.
Low water at highest spring tides	18 feet.
High water at neap tides	26 feet.

Low water at neap tides.....	19 feet.
High water at common tides.....	25 to 26 feet.
Low water at common tides.....	19 feet.

By Wright White and E. C. Hopkins:

High water at highest spring tides.....	full 28 feet.
Low water at highest spring tides.....	19 feet.
High water at neap tides.....	25 feet.
Low water at neap tides.....	18 feet.
High water at common tides.....	26 to 26½ feet.
Low water at common tides.....	19 feet.

Second. Winds from S. S. W. to N. N. W., lessen the depth of the water from 1 to 2 feet, according to their violence and duration; and those from N. to S. S. E. increase it in the same ratio.

Third. At flood tides, from the bar to safe anchorage, from 1 to 2 knots, and from 2 to 3 at ebb tide.

Fourth. Width of the channel, three-fourths of a mile; width of the bar, from the sea across to anchorage within, from one-half to three-quarters of a mile; bottom, yellow sand. Vessels drawing the greatest depth can cross the bar with any wind from north to south, and to safe anchorage within Tybee; outward bound, from within Tybee to sea, any winds from west extending from north to south.

Fifth. To safe anchorage in Cockspur Roads, at low water, 9½ feet can be carried, and from 15 to 16 at high water; bottom, soft mud and sand. At low water, vessels may come up four miles from the bar to good anchorage, and at high water, from 6 to 7 miles in 4½ fathoms water.

Sixth. The first safe anchorage is abreast of Tybee, in 5 or 6 fathoms water, and, at high water, vessels may anchor anywhere above, as far as Four Mile point.

Seventh. At low water 11 feet may be carried to Four Mile point, and 8 feet to Fort Jackson; at high common tides from 16 to 17 feet to Four Mile point, and 13 to 14½ to Fort Jackson; at spring tides 18 feet to Four Mile point may be carried with safety, and 15½ to 16 to Fort Jackson.

Eighth. The first is the tail of the knoll, from 4 to 5 miles from the bar, sandy bottom. The next is the head of the knoll, one mile from the tail, soft mud and shells; water, from 4 to 4½ fathoms, may always be found between these two points, at high water. The third shoal is the head of the white oyster bed, one mile further, sandy bottom, and may easily be removed; its extent, in crossing, is not more than 30 feet. Five miles further up is the next shoal, extending from Venus point to the Horse Shoe, about three-eighths of a mile in extent, composed of soft mud, and may easily be removed. The next shoal, at three-quarters of a mile distance, is the lower mud flat; then the upper mud flat, at Four Mile point; the two making about three-quarters of a mile, and of soft mud. Deep water and safe anchorage may be had, at all times of tide, between these shoals; their removal would give a channel of 30 feet and upwards, from the bar to Fort Jackson.

Ninth. At low water on the wrecks, there is from 6½ to 7 feet; at common high tides, 13½ feet, and at spring tides, from 14 to 15 feet.

Tenth. The worm is not felt in any part of the river, above Cockspur, or Long Island; at Cockspur it is but slightly injurious; oak stakes have lasted there four or five years.

Eleventh. Tybee Island furnishes plenty of fresh water, from several wells. The river, at low water, will, as low down as Four Mile point, furnish as good water as ever was taken to sea. The pump water in the city is equally good.

Twelfth. The rise of the tide, at Tybee, varies, with the effect of the wind, from 6½ to 8½ feet; the mean is about 7 feet.

Thirteenth. Large vessels may go to sea, from the city, with winds from N. W. to S. S. W., and from Cockspur, with those from north to south.

Fourteenth. John Low and E. C. Hopkins were the pilots of the John Adams frigate, on her arrival here, in December, 1825. She was brought in over the bar at night, drawing 17 feet; and the next morning, without lightening or tipping, was carried up to Four Mile point, within 5 miles of the city, and 15 from the bar. They also piloted her to sea with the same draft.

Fifteenth. The prevailing winds, from August to October, are easterly; from thence to March, westerly, and from thence to July, southerly.

Sixteenth. The channel, at Cockspur and Fort Jackson, runs close to the shore; wharfage at the latter is easy; good wharves are now there.

Seventeenth. John Low answers, he has been upwards of 15 years a pilot for this harbor; Wright White, upwards of ten years, and E. C. Hopkins, upwards of 6 years.

JOHN LOW.
WRIGHT WHITE.
ELISHA C. HOPKINS.

Sworn to before me, this 29th of October, 1828.

W. T. WILLIAMS, *Mayor City of Savannah.*

Additional answers.

Eighteenth. At safe anchorage abreast of Tybee, there is from 5 to 6 fathoms, at high water, extending one mile.

Nineteenth. The shoal on going into Cockspur Roads commences at about three-fourths of a mile above the light house, and extending nearly a mile to the lower end of Cockspur Island, the distance about two miles, the bottom soft mud; after crossing this shoal there is four and a half fathoms water in the roads at high water, common tides, and nearly three and a half fathoms at low water.

JOHN LOW.
WRIGHT WHITE.
ELISHA C. HOPKINS.

Sworn to before me, this 12th of November, 1828.

W. T. WILLIAMS *Mayor, City of Savannah.*

Table of deaths in Savannah for the last five years, extracted from the register of deaths.

	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.	Total deaths in each year.	Mortality in proportion to the white population, estimated at 5,000.
1822.....	13	19	15	12	11	30	21	31	30	59	33	18	292	One death in 17.12
1823.....	17	13	22	12	13	24	24	28	37	33	29	18	270	do 18.51
1824.....	1	8	11	6	4	7	10	18	21	30	11	11	146	do 34.24

In 1826 there was a considerable addition to the population, arising from the number of Irish laborers who were induced to come here by the prospect of procuring work upon the Savannah, Ogeechee, and Alatamaha canal. But for this circumstance the average of mortality would, probably, not have exceeded one in twenty-five. The whole white population is ascertained to be 5,000. This, it is believed, has been the average population for the last five years; in some years being greater, in others less than 5,000. The proportion of deaths to the white population in 1824 and 1825, in the cities of Philadelphia and New York, was, for Philadelphia in 1824, one in 30.40, in 1825, one in 34.59; for New York, 1824, one in 39.87; 1825, one in 37.05.

See Medical Statistics, by N. Miles, M.D., and J. D. Russ, M.D.
Read, and adopted in Council, 30th August, 1827.

M. MYERS, C. C.

Deaths of 1828, extracted from the official register, January 8, February 5, March 17, April 6, May 8, June 15, July 21, August 14, September 14, October.

20TH CONGRESS.]

No. 376.

[2D SESSION.]

ON CLAIM OF AN OFFICER OF THE NAVY FOR INDEMNITY, ON ACCOUNT OF COSTS IN PROSECUTING A LIBEL ON A VESSEL SAVED FROM SHIPWRECK, AND BROUGHT IN FOR ADJUDICATION.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 16, 1829.

Mr. MILLER, from the Committee on Naval Affairs, to whom was referred the petition of Alexander Claxton, reported:

That the petitioner represents that, while in command of the United States ship Hornet, in the month of June, 1827, and while the said ship was lying in the harbor of Matanzas, his boat, then in search of an American slaver, fell in with the English merchant ship James Mitchell, stranded on the coast of Cuba, her crew in a state of mutiny, and the ship in imminent peril of shipwreck; that he hastened to forward the necessary succor, and, after securing the mutineers, proceeded to lighten the ship by removing a part of the cargo, employing a Spanish droger to assist; and that, after great difficulty, he succeeded in getting the ship off the rocks, though in a very leaky condition; that the ship was then conducted off the Havana, where she was originally bound, and a proposition sent to the consignees, requiring indemnity for the services rendered, otherwise an appeal would be made to the courts of the United States; and the answer not being satisfactory, the ship was carried to Key West, and formally libelled in the district court of St. Augustine. That the court was pleased to dismiss the suit, at the same time burthening the petitioner with the heavy cost of the prosecution; and that, from the want of pecuniary means, he was unable to appeal to the higher courts; and, as a last resort, he feels himself impelled to throw himself on the justice of Congress, in the expectation that he will be awarded a salvage for the officers and crew, out of the amount of duties paid on the cargo, as well as the costs attending the trial.

The proofs of the facts stated are very imperfect. There is no authenticated copy of the libel or decree. There is a certificate by William Pinkney, collector of the district of East Florida, dated July 12, 1828, that there had been paid into the treasury twenty thousand eight hundred and sixty-seven dollars and seventy cents and two-tenths duties on the cargo of the James Mitchell. There is also a printed copy of the opinion of the judge in the case, and some other papers. From all these, the committee are satisfied that the facts in the case are correctly set forth by the petitioner; but as the evidence in the case is not before the committee, they must consider the decree of the court to be correct, without intimating any opinion as to the reasoning by which that decree is sustained by the judge.

The court decided that the salvors would have been entitled to reasonable salvage at the Havana, the original port of destination; but that they were wrong in taking the ship to Key West; and that, by so doing, they injured the owners to an amount at least equal to the salvage, and therefore dismissed the libel with costs. The committee entertain the belief that Captain Claxton acted in good faith, and in the line of his duty, in aiding the James Mitchell; and that he was induced to bring her to a port in the

United States, from an apprehension that justice might otherwise not be awarded to the officers and crew of the *Hornet*; they have therefore reported a bill to indemnify him for the payment of his costs and expenses in prosecuting the suit.

The amount of duties paid on the cargo, as per certificate of the collector, is \$20,867.70²; no bill of the costs of the suit has been exhibited to the committee, but they are estimated not to exceed \$4,000. The expenses incurred by Lieutenant Coxe, under an order from Alexander Claxton, commander of the *Hornet*, to libel the James Mitchell are represented to be..... \$569 75
Less deductions for pay and subsistence..... 247 00

Expense of chartering a sloop to go from Key West to St. Augustine twice..... \$322 75
550 00
\$872 75

No. 377.

[2D SESSION.]

ON CLAIM OF A PENSIONER TO ARREARAGES FROM THE DATE OF HIS DISABILITY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 16, 1829.

Mr. HOFFMAN, from the Committee on Naval Affairs, to whom was referred the petition of William Gillin, reported:

That the petitioner represents that he was an able-bodied seaman on board the *Philadelphia* at the time of her capture by the *Tripolines*; was made and long detained a prisoner, and by severe usage greatly injured and disabled; that by reason of this disability the petitioner was, under the administration of President Monroe, placed on the pension roll, equal to half his pay.

He now asks that there may be granted to him money equal to a pension from the time of his injury up to his being placed on the pension roll. It does not appear that he was prevented from making an earlier application for a pension, or that his application had been delayed. The committee cannot therefore find any sufficient reason for granting the relief sought. He does allege that his pension is not equal to his disability; and if it is, his relief is provided for by law and may be reached by proof of his increased disability.

The committee therefore recommend the following resolution:

Resolved, That the prayer of the petitioner ought not to be granted.

20TH CONGRESS.]

No. 378.

[2D SESSION.]

ON CLAIM OF THE CAPTAIN OF A REVENUE CUTTER TO PRIZE MONEY FOR A VESSEL CAPTURED FOR A VIOLATION OF THE REVENUE LAWS, TO THE EXCLUSION OF A LIEUTENANT OF THE SAME.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 16, 1829.

Mr. HOFFMAN, from the Committee on Naval Affairs, to whom was referred the petition of Augustin Clainborn, executor, &c., of Angus O. Frazer, deceased, reported:

That by the act of Congress, approved May 11, 1820, there was granted to Angus O. Frazer and others, who, at the time of the seizure of the British vessel *Ardent*, in 1811, were officers of the cutter *Louisiana*, the sum of \$5,239.62, to be distributed among them in such proportions as they are entitled to by the act of April 18, 1806, and as specified in the act of Congress, approved March 2, 1799, that is, in proportion to the pay of the officers of the cutter.

By the libel filed in the case, it appears that the seizure was made May 29, 1811. By the duplicate pay roll of the cutter, signed by Captain Frazer, it appears that at the time of the seizure the said Angus O. Frazer was the captain, Philip A. Bush the first lieutenant, and George Smith the second lieutenant of the cutter.

The Secretary of the Treasury has paid to the said Angus O. Frazer \$2,278.09; and to Philip A. Bush \$1,594.67, of the above appropriation, and the residue, \$1,366.86, was carried to the surplus fund, December 31, 1822.

This distribution of the money appears to the committee to be strictly according to the facts in the case and the law applicable to it. On behalf of the petitioner it is alleged that Captain Frazer was the only commissioned officer on board the cutter at the time of the seizure. It appears that Captain Frazer himself had at a late period also asserted this position, and claimed the whole money. But as Captain Frazer has, under his hand, stated in the pay roll that Bush and Smith were lieutenants, and received their pay as such, the committee are of opinion that it cannot be alleged in his behalf that they were not such officers. It is not necessary therefore, in the opinion of the committee, to determine what would have been the share of Captain Frazer if Bush and Smith had not been such officers, or had not had such

commissions, though in that case it would seem just that those who were officers in fact, and acted as such, should be entitled to a share of the money arising from the seizure.

The committee are therefore of opinion that the memorialist takes nothing by his petition, and recommend the following resolution:

Resolved, That the prayer of the petitioner ought not to be granted.

20TH CONGRESS.]

No. 379.

[2D SESSION.]

ON APPLICATION OF AN OFFICER OF THE MARINE CORPS, WHO WAS DISMISSED FROM THE SERVICE, FOR PAY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 27, 1829:

Mr. RIPLEY, from the Committee on Naval Affairs, to whom was referred the petition of Anthony Gale, reported:

That the petitioner sets forth that he served in the marine corps from July 11, 1798, to September, 1820, at which last period he was lieutenant colonel commandant of the corps; that previous to the last date he had become insane, and while insane, was tried by a military court-martial, convicted and dismissed from the service; and he prays that his pay, &c., as if he had continued in command of the corps, be paid to him, amounting to \$14,208, exclusive of forage, not charged.

The offences of which he was convicted are not stated, nor the evidence on which the conviction was founded. It is, therefore, under these circumstances, to be presumed that the conviction rested upon proof of the facts charged. The petitioner does not complain that the court erred in matter of law or fact, but that he was *insane*, and therefore not subject to be tried.

Insanity, to such a degree as to make him an unfit subject of trial and punishment, would doubtless have been regarded by the court before whom he was tried. It is not complained that the court, in any respect, erred as to any question of insanity raised before them, and it would be very dangerous, after the lapse of many years, to permit a person, convicted after punishment, to allege his insanity at the time of trial, for error. Such an allegation cannot be supported by *ex parte* testimony; and the committee do not feel disposed, in this instance, to erect themselves into, or to recommend the erection of, a tribunal to try the question.

If the sentence of the court-martial was reversed and annulled, still, in the opinion of the committee, it was the right and duty of the Executive to judge of the sanity of the petitioner. He himself alleges that he was *insane*, and this was good cause for removing him from the command of the corps; and if the President believed his insanity so great as permanently to disqualify him for the command, then it was his duty to dismiss him from the service. In this instance the committee see no reason to question the correctness of the decision of the President.

They therefore recommend the following resolution:

Resolved, That the prayer of the petitioner ought not to be granted.

20TH CONGRESS.]

No. 380.

[2D SESSION.]

ANNUAL REPORT IN RELATION TO THE NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 27, 1829.

NAVY DEPARTMENT, *January 26, 1829.*

SIR: I have the honor to transmit herewith the annual report of the commissioners of the navy pension fund.

Paper A contains a list of pensioners.

Paper B exhibits an abstract of warrants drawn on the treasurer of the fund.

Paper C, a statement of the stocks standing to the credit of the fund, on the books of the treasury; and—

Paper D, a statement of the bank stocks belonging to the fund.

I am, respectfully,

SAMUEL L. SOUTHARD.

Hon. the SPEAKER of the *House of Representatives.*

A.

List of naval pensioners on the 1st January, 1829.

Names.	Rank.	Monthly pensions.	Annual pensions.
NEW HAMPSHIRE—7.			
Edward Banks	Seaman	\$6 00	\$72 00

20TH CONGRESS.]

No. 381.

[2D SESSION.]

ON THE EXPEDIENCY OF MAKING AN APPROPRIATION TO THE NAVAL HOSPITAL FUND OF THE AMOUNT DUE FROM THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 31, 1829.

Mr. MILLER, from the Committee on Naval Affairs, who were directed by a resolution of the House, of December 17, 1828, to inquire into the expediency of making an appropriation in favor of the navy hospital fund of the amount due to the said fund from the Treasury of the United States, for the purpose of effecting the objects contemplated by the act establishing navy hospitals, reported:

That they have considered the subject; and annexed to this report are papers containing information from the Navy Department relating to it.

The "marine hospital fund" was instituted by the "act for the relief of sick and disabled seamen," passed July 16, 1798. It directed a deduction of twenty cents per month from the *wages* of seamen on board the ships and vessels of the United States, to be employed, under the direction of the President of the United States, for the relief of sick and disabled seamen, and, if sufficient, for the erection of hospitals for their accommodation. By the second section of the act of March 2, 1799, the Secretary of the Navy is authorized to deduct twenty cents per month from the pay of every officer, seaman, and marine, for the use of the marine hospital fund; and by the third section of the said act, they are entitled to receive the same benefits from the funds as were provided for sick and disabled seamen of the merchant vessels.

The act of February 26, 1811, established the "navy hospital fund," and placed it under the direction of commissioners to provide sites and erect navy hospitals, and at one of the establishments to provide a permanent asylum for disabled and decrepid naval officers, seamen and marines. The contributions for this fund are directed to be fifty thousand dollars, appropriated out of the balance of the marine hospital fund, of which there was then paid only \$3,782.86; the residue having been expended by the United States, without ever having relieved any officer, seaman, or marine by any part of it. The residue of the said \$50,000, viz: \$46,217.14, has since been appropriated to the navy hospital fund, by the act of May 24, 1828. The other contributions to this fund were the twenty cents per month to be deducted from the wages of the officers, seamen, and marines, any pension chargeable on the navy pension fund of a person maintained in the hospital, and the fines imposed on officers, seamen, and marines.

This brief history of the fund is given to prove that, with the exception of the two last-mentioned sources of revenue, the entire moneys of the fund are the private property of the officers, seamen, and marines, earned by them on a contract with the United States, and paid by them into the public treasury, to be applied for the sole and exclusive benefit of the donors and actual founders of this sacred charity.

In the case of a corporation, the right of visitation would belong to the "officers, seamen, and marines;" and at its dissolution the property would revert to their legal representatives. In this case, the United States are only trustees, whose duty is so much the more sacred, as it rests upon the inviolability of the public faith. The principal of the money must, by all the moral force of the strongest obligations of the United States, be applied to the purposes declared by the act of February 16, 1811; and if the United States has had the use of any part of the money, the interest, in the opinion of the committee, is a debt due from the United States, secured by the public faith; and the committee will not believe that the United States can, in a trust of this sacred and inviolable nature, refuse to pay interest in a case where equity would decree it against an individual.

The inquiry then is, what has been realized from this fund; how has it been expended; what is in equity due to the fund; and what will be the consequence of withholding the appropriation requisite for the progress of those works of patriotic benevolence?

Including the \$3,792.86, paid by the marine hospital fund, the \$46,217.14 cents, appropriated by the act of May 24, 1828, and \$415.58, the rent of the hospital estate at Chelsea, Massachusetts, the whole amount of money which has been carried to the navy hospital fund, is \$328,597 93

There has been expended prior to October, 1811.	\$10,652 85
Since that time, in purchasing land and the erection of buildings at Philadelphia	162,136 82
At Norfolk.	121,200 00
At Chelsea and Brooklyn.	30,140 23
Contingents.	1,180 49
	\$325,310 39

Remaining \$3,287 54

Looking only to the private contributions of the officers, seamen, and marines, it is believed that the claims of the fund against the United States may be thus stated:

1. The principal moneys deducted from the pay of the officers, seamen, and marines, before the passage of the act of February 16, 1811, over and above the \$50,000 directed by that act to be paid, and which the United States has continued to use, is \$57,762 80
2. Interest on that sum from February, 1811, to February, 1829, eighteen years. 62,383 82
3. Interest on \$46,217.14, from February 26, 1811, to May 24, 1828, when it was appropriated 47,612 75

Making a balance of \$167,759 37

For the appropriation of which sum, a bill is herewith reported.

This claim is rested by the committee upon the facts, apparent from the law itself, that the principal claimed is the private property of the officers, seamen, and marines, to be applied for their sole use and

benefit; and that either the United States had applied the same to some other use than that contemplated by the founders of this charity, and declared in the act creating it; or, since February 16, 1811, when the account of it should have been taken, the United States has kept and retained the money to their own use, and should, therefore, pay the interest thereon. It would be but justice, scarcely rising to the liberal, to pay also to the fund the interest, which before February 16, 1811, had accrued on the moneys paid into the Treasury by the *twenty cent* monthly contributions of the officers, seamen, and marines; and the only reason why the committee do not provide for the payment of it at this time, is the apprehension that doubts might arise whether the moneys previous to that time had been actually used by the United States for other purposes. They have, therefore, only provided for that part of the claim as to which they believe there can be no doubt.

Founding his conjecture upon the past, the Secretary of the Navy estimates the probable income of the fund at between fifteen and twenty thousand dollars a year, for some time to come. The Department is not able, at this time, to state what sums will be required for the hospitals during the present year; still, when the sums already expended are recollected, and when it is understood by his estimates, that to complete the buildings, walls, fences, &c., &c., at Philadelphia, \$75,000 will be required, and at Norfolk \$50,000, it cannot be doubted but that a large sum will be necessary to carry on those several works with that advance towards completion which is necessary to avoid great and destructive waste and decay; and that the whole amount due from the United States to the fund, as well as that which will accrue for some years to come, will be required to complete the buildings already commenced, as well as those contemplated to be erected at those other places where sites have been already purchased. The appropriation, therefore, of the money now proposed will be a mere act of justice to the donors and founders of these hospitals; it will be a payment of a debt long withheld, but paid at a time when it is much needed, and will prove most serviceable.

These reasons, which the committee consider as addressed to the justice of the United States, may be applied most strongly to her interest. In some respects, the course of future events can scarcely be doubted. If our country avoids the calamities of war, it must be because she shall appear, and really be, ready to prosecute it with vigor and success. Our collisions, like our commerce, must be on the ocean; there, also, must be our power to resist oppression and punish injustice. Artists and funds will supply most gallant ships; liberal pay, the rewards in a share of prizes, the honors and respects of office, a love of glory and desire of service to their country, will gather round you flag officers of the greatest worth, patriotism, bravery, and skill, desirous of emulating the glorious achievements of those by whom that flag has been consecrated to victory. But your seamen—they who man your ships, sustain your flag, your honor, your glory, and your interests—what shall reward them? their pay comparatively small, their devotion constant, leading a life which scarce allows them a home, they have little opportunity to provide for sickness or old age; while the duties they perform in sickly climates, amidst storms, in the perils of battle, all expose them to loss of limbs and health, and to premature old age. Any pension which the government can grant will scarcely sustain them in sickness and the tedious decrepitude of old age. Hence it is that a naval hospital is so strongly desired by the seaman. However regardless he may be of toil and danger, he is mindful of this; he looks to it as a home in sickness, infirmity, or old age. To him it is the asylum where he would spend his last days in peace and in hope, surrounded by, and associated with, the companions of his former glory. To the naval service of every other country they have been found indispensable. It is here only, where seamen are free and patriotic, that enlistments can be made without such inducements. If, therefore, the United States owed nothing, as she owes these asylums much; if she only looks to them as the home of her gallant seamen; if she regard the greater ease of enlistment by reason of this humane provision, the committee are of opinion that the appropriation now recommended should be made. To refuse it, the committee believe, would cause great waste and dilapidation in the edifices now erecting, deprive our seamen of a most comfortable hope, and work a serious injury to the naval service.

HOUSE OF REPRESENTATIVES, *Committee on Naval Affairs, December 18, 1828.*

SIR: The House have directed the committee, by a resolution of the 17th instant, to inquire into the expediency of making an appropriation to the navy hospital fund of all money that may be due to the said fund from the Treasury of the United States.

The committee direct me to inquire of your Department what amount of moneys has, and which ought to have been carried to the said fund? what amount of the said moneys has been received and expended by the commissioners, and where expended? any balance of such moneys in the hands of the commissioners; and especially what amount of moneys is now due to the said fund, from what source they have accrued, and for what cause withheld?

With esteem and respect, I am, sir, your humble servant,

MICHAEL HOFFMAN.

Hon. SAMUEL L. SOUTHARD, *Secretary of the Navy.*

NAVY DEPARTMENT, *January 22, 1829.*

SIR: It is proper that I again remind you of the cause which furnishes an apology for the delay in answering your letter on the subject of the hospital fund.

In reference to the whole subject, I beg leave to refer you to the report of the commissioners of the fund to the House of Representatives, of the 15th of January, 1827. It is not supposed necessary to repeat the facts and views contained in that document.

I understand you to inquire:

1. What sums the commissioners have received?
2. What they have expended, and where?
3. What sums have accrued to the fund which ought to have been carried to it, and have not been, but have been otherwise expended?

1. The whole sum which has been credited to the fund, from its establishment, in July, 1798, to 30th September, 1828, is \$328,597.93. This sum embraces the special appropriation in May last, of \$46,217.14, and the rent which has accrued from the hospital estate in Chelsea, Mass.

2. There had been expended prior to October, 1821.	\$10,652 85
Since that time, in purchasing lands, erecting buildings, &c., at Philadelphia.	162,136 82
In purchasing lands, erecting buildings, &c., at Norfolk	121,200 00
In purchasing lands, erecting buildings, &c., at Brooklyn and Chelsea	30,140 23
Contingencies incident to the management of the fund, and the repayments to deserters.	1,180 49

In all	\$325,310 39
Leaving a balance in the hands of the commissioners, on the 20th December, 1828, of.	3,287 54

By these expenditures, lands enough have been procured for hospital establishments at all the stations where they will be required, except at Pensacola. At that place it may not be necessary to purchase any land; if it should become so, it can be procured for less than three thousand dollars.

3. I consider due to the fund from the government all such sums as have been regularly deducted from the pay of the officers, &c., under the law; but which, by not being carried to the fund, have been used by the government for other objects.

By the law of February, 1811, \$50,000 was directed to be paid to the fund, out of the unexpended balance of the marine hospital fund; only \$3,782.86 was paid, leaving due, \$46,217.14. This sum was, by this law, then declared to be due. If paid, it would have been expended in buildings, or brought an interest. The government did not pay it, but kept it from those whom they admitted were entitled to it. The interest, on every principle of justice, is therefore due to the fund, and would now amount to \$47,612.75.

But this law itself was an unjust exercise of power. It did not give all that was due. There was then much more than \$50,000 owing to the fund: much more than that sum had been deducted from the pay of the officers, &c., and they had derived no benefit from the marine hospital fund, in which it had been placed. It is not believed that one man had ever received advantage from that fund; and Congress ought to have given the whole that had been deducted from the pay of the officers, &c., of the navy. What that precise sum was, cannot now be very accurately ascertained, because the muster rolls and papers which show the numbers in service, and of course the number from whose pay the deductions were made, between 1799 and 1811, were burned by the enemy in 1814. The estimates are our most certain guides; but they do not show the whole numbers, for in several of those years, additions were made to our force after the estimates of the year were prepared. Such was the case by the law of 3d March, 1807, by which 500 seamen, &c., were added. But, taking the estimate as the guide, between September, 1799, and February, 1811, it will be found, by adding them up, that there were, of officers, seamen, and marines, in the service during that time, 44,887; the proceeds from whose pay, in favor of the fund, would have been \$107,762.80; which is \$57,762.80 more than the \$50,000 allowed by law. To this sum of \$57,762.80, the fund was as much entitled as it was to the \$50,000. But it was not only entitled to the principal sum, but to interest; for the money had been kept from the use of those whose property it was, and had been expended by the government on other objects. Allowing, then, a year to elapse on each sum deducted, you will find, by calculating it, that there was due of interest, at the time of passing the law, \$27,572.76.

I would state the claim of the fund against the government to be equitably and justly as follows:

The sum of principal due when the law of 1811 passed, beyond that allowed by law.	\$57,762 80
Interest due at that day	27,572 76
Interest from 26th February, 1811, to 26th February, 1829, 18 years, on \$57,762.80	62,403 50
Interest on \$46,217.14, from 26th February, 1811, when it was admitted to be due, to May, 1828, when it was paid, 17 years 3 months	47,612 75
Amount	\$195,351 81

I make no hesitation in adding the interest, because,

1. The government kept and *used the money*, to which it had no possible right. It belonged to the officers, seamen, and marines, from whom it was taken by the power of the law, and who were deprived of its use. The government surely does not need, nor can it wish to receive, a charitable donation of the use of money from a band of poor seamen and marines. It will pay them their due, to the uttermost farthing.

2. This is a charitable or benevolent fund, which the government has undertaken to create and to manage. It will not take advantage of its own power, to lessen and destroy such a fund.

In addition, I beg leave to add, that the government has never given a cent to create hospital establishments for the navy. In no other country, and under no other civilized government, is this the fact. The nation owes it to its own character and reputation, to aid this fund by an appropriation from the treasury—an appropriation which ought to be rendered liberal by the great and good object for which it is made.

I have the honor to be, very respectfully, sir, your obedient servant,

SAMUEL L. SOUTHARD.

HON. M. HOFFMAN, *Chairman Navy Committee, House of Representatives.*

HOUSE OF REPRESENTATIVES, *Committee on Naval Affairs, January 26, 1829.*

SIR: The Committee on Naval Affairs directed me to inquire of you what sum of money will, in the opinion of your Department, be necessary to be expended in the construction of the naval hospitals for the current year, and the share deemed proper to be expended at each station? what delay will be occasioned by relying entirely on the current income of the fund? and what will be the probable inju-

ries from such delay? The probable expense of completing these hospitals may be convenient to satisfy inquiries.

Soliciting an answer as soon as may consist with the convenience of your Department,
I am, sir, your humble servant,

MICHAEL HOFFMAN.

The Hon. the SECRETARY of the Navy.

NAVY DEPARTMENT, January 27, 1829.

SIR: I have had the honor to receive your letter of the 26th instant.

I have not, at this time, such estimates from the architects as will enable me to state what sum will be required for the hospitals during the present year. I presume there will be required at Norfolk about twenty-five thousand dollars, and at Philadelphia about thirty-five thousand, provided the portico and steps are not now finished; if they are, then fifty-seven thousand dollars will be necessary. To complete all the fences, walls, and out-buildings, planting trees, and regulating the grounds, there will be required for the asylum at Philadelphia about seventy-five thousand dollars; and at Norfolk, probably fifty thousand dollars will complete the building, and all the out-houses, grounds, &c.

The amount carried to the credit of the fund will hereafter be between fifteen and twenty thousand dollars per annum; and it will, of course, take several years before these buildings can be completed, if reliance be had on that source alone.

I am, respectfully, &c.,

SAMUEL L. SOUTHARD.

HON. MICHAEL HOFFMAN, Chairman Naval Committee, House of Representatives.

20TH CONGRESS.]

No. 382.

[2D SESSION.]

STATEMENT SHOWING THE RELATIVE RANK OF OFFICERS OF THE ARMY AND NAVY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 31, 1829.

The following is the relative rank between officers of the army and navy, as shown in the regulations for the government of the army, recommended by the Secretary of War, and adopted by Congress, viz:

A captain of the navy, under five years, ranks with a lieutenant colonel.

A captain of the navy, over five years, ranks with a colonel.

A captain of the navy, over ten years, ranks with a brigadier general.

A captain of the navy, over fifteen years, ranks with a major general.

A master commandant ranks with a major.

Neither the pay nor the rations of a navy officer of any grade are affected by duration of service.

A captain, if commanding a squadron, is, by law, entitled to \$1,200 as pay, and \$1,460 for rations; making \$2,660 per annum; if not commanding a squadron, then his pay and rations amount to \$1,930. A master commandant is allowed \$1,176.25 per annum.

The following shows the amount of the pay, &c., of certain officers of the army, considering each as commanding a separate post.

Major general	\$6,512 64
Brigadier general	4,422 48
Colonel	2,941 32
Lieutenant colonel.....	2,372 32
Major	2,106 32

Exhibit showing the relative pay, &c., of officers of the army, and the proposed pay, &c., of officers of the navy, of assimilated rank, agreeably to the above scale.

	Major general.	Brigadier general.	Colonel.	Lieutenant colonel.	Major.
Army.....	\$6,512 64	\$4,422 48	\$2,941 32	\$2,372 32	\$2,106 32
To be proposed as pay for the navy, exclusive of rations, which are not to be drawn, except when officers are in actual service; then they are to commence from the date of their orders for service, and to terminate at the striking of the pendant	3,000 00	2,700 00	2,400 00	2,200 00	1,800 00

Table showing the relative pay of certain officers of the navy, 1828.

Surgeons.				Fleet surgeons.				Surgeons' mates.		Lieutenants.	Masters commandant.	Capt. of a ship of the line.	Com'g officer of a squadron.
Under 5 years.	Over 5 years.	Over 10 years.	Over 20 years.	Under 5 years.	Over 5 years.	Over 10 years.	Over 20 years.	Over 5 years.	Over 10 years.				
\$1,085	\$1,327½	\$1,570	\$1,690	\$1,450	\$1,875	\$2,300	\$2,420	\$1,027½	\$1,270	\$965	\$1,176½	\$1,930	\$2,660

From the above table the following results are deduced.

	More than a lieutenant.	Less than a master commandant.	More than a master commandant.	Less than the commander of a ship of the line.	More than the commander of a ship of the line.	Less than the commanding officer of a squadron.
A surgeon under 5 years receives.....	\$120 00	\$91 25
A surgeon over 5 years receives.....	362 50	\$151 25
A surgeon over 10 years receives.....	605 00	393 75
A surgeon over 20 years receives.....	725 00	513 75	\$240 00
Fleet surgeon under 5 years receives.....	485 00	273 75
Fleet surgeon over 5 years receives.....	910 00	698 75	55 00
Fleet surgeon over 10 years receives.....	1,335 00	1,123 75	\$370 00
Fleet surgeon over 20 years receives.....	1,455 00	1,243 75	490 00	\$240 00

EXPERIMENTS TO TEST THE COMPARATIVE FITNESS OF COTTON AND HEMP FOR SAILS AND CORDAGE FOR THE NAVY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 2, 1829.

NAVY DEPARTMENT, *January 31, 1829.*

SIR: In compliance with a resolution of the House of Representatives, of the 23d instant, I have the honor to transmit a copy of a report from the Commissioners of the Navy, showing the result of experiments which have been made "to test the comparative fitness of cotton and hemp for the use of sails in our public vessels," and "the comparative expense of canvas made of hemp and of cotton."

I am, very respectfully, &c.,

SAM'L L. SOUTHARD.

The Hon. SPEAKER of the *House of Representatives.*

NAVY COMMISSIONERS' OFFICE, *January 27, 1829.*

SIR: Upon the various points embraced in the resolution of the House of Representatives, of the 23d instant, (received on the 26th,) the Board of Navy Commissioners respectfully report:

The only results received by this board of the experiments reported in January, 1826, to be in progress for the purpose of testing "the comparative fitness of cotton and hemp canvas for the use of sails in our public ships," will be found in the following extracts of letters from commanding officers, viz:

From Captain Woolsey, March 8, 1827—"In answer to your letter of 20th December, relating to the cotton maintopsail, I have to remark, that it had lain in store a long time at Key West, before it was received on board the *Constellation*: one or two of the middle cloths, near the head of the sail, were damaged in store and had soon to be mended; but the rest of the sail has had a fair test in all weathers; is now bent and still continues good. For the West India service I think canvas of that description as good as hempen, and for all the light sails, I should think cotton equal in all respects to hempen, in any climate."

From Captain Wilkinson, of the *John Adams*, February 5, 1827—"In reply to your letter of the 21st December, which I this day received, I had only a maintopsail of cotton, that was bent at Norfolk in March last, and has been in constant use nearly the whole time since. My ship has been actually at sea two hundred and forty days, and sailed eighteen thousand five hundred and eighty-seven miles in the above period, including the hurricane months, which were excessively boisterous, and this ship requiring the maintopsail, it was always carried as long as practicable. The injury which topsails sustain from frequent reefing, &c., is well known to the Navy Commissioners. I have had the above-mentioned topsail mill stitched, to strengthen the sewing, which had given way in many places. I now pronounce it as good as ever it was, having this day examined it minutely to enable me to make this report. Cotton sails hold more wind, are much more pliable and easily handled, and upon the whole I think highly of them for square sails."

From Commodore Warrington, October 7, 1826—"From what I have seen of that sail, (the one reported on by Captain Wilkinson,) I am inclined to think favorably of the article for sails, and to believe that we have no cause to fear its greater combustibility than canvass made of hemp. It stands flapping and chafing as well, if not better than sails commonly do of other materials."

Other experiments upon the subject of cotton canvas have been instituted, but the results have not yet been reported.

Upon the subject of "cotton cordage," the Commissioners, in April, 1826, made an experiment to test its relative strength with cordage made of hemp; the latter was tarred, the former not; and the following was the result ascertained by minute attention to all the facts in the case, viz:

	Length of rope—feet.	Circumference. Inches.	Weight. Ounces.	Weight broke with. Pounds.
First experiment, hemp.....	2	1.4 $\frac{3}{4}$	12 $\frac{7}{8}$	1,586
First experiment, cotton.....	2	1.4 $\frac{3}{4}$	9 $\frac{1}{4}$	938
Second experiment, hemp.....	1	1 $\frac{7}{10}$	4 $\frac{1}{2}$	1,187
Second experiment, cotton.....	1	1 $\frac{2}{10}$	4 $\frac{1}{8}$	727

From these experiments, particularly when it was considered that the weight of the hemp cordage was greatly increased by the tar in it, and its size also in some degree enlarged by that fact, it was concluded that the *strength* of cotton cordage was much inferior to that made of hemp.

As to the comparative *expense* of canvas made of hemp and cotton, so far as regards the first cost, that of hemp or flax continues as stated in our letter of 23th January, 1826, while that of cotton has fallen. Their relative prices may now be considered as follows:

No. 1 flax, $47\frac{1}{2}$ cents per yard; cotton 41 cents per yard.
 No. 2 flax, $43\frac{3}{4}$ cents per yard; cotton 39 cents per yard.
 No. 3 flax, $42\frac{1}{2}$ cents per yard; cotton 37 cents per yard.
 No. 4 flax, $41\frac{1}{4}$ cents per yard; cotton . . cents per yard.
 No. 5 flax, 40 cents per yard; cotton 34 cents per yard.
 No. 6 flax, $38\frac{3}{4}$ cents per yard; cotton . . cents per yard.
 No. 7 flax, $37\frac{1}{2}$ cents per yard; cotton 32 cents per yard.
 No. 8 flax, $36\frac{1}{4}$ cents per yard; cotton . . cents per yard.

In this scale no prices are fixed for numbers 4, 6 and 8 of cotton canvas, because we have not recently contracted for any of those numbers. They no doubt bear prices proportionate to those of the other numbers, and may be stated as follows: No. 4, $35\frac{1}{2}$ cents; No. 6, 33 cents; No. 8, 30 cents per yard.

Having thus, and it is hoped satisfactorily, answered the requisition embraced by the resolution, it may not be considered irrelevant to state that the Commissioners some time since instituted a course of experiments with a view to ascertain whether cotton might not be advantageously used for caulking our ships. Directions were given to the commanding officer at New York that "half of a water-way seam on each side of the berth and gun decks of the sloop Vincennes should be caulked with cotton instead of hemp, the other halves with oakum made of new rope; the poop deck to be caulked with cotton, and three seams on each bow, distributed from the load water line up, for about 40 feet in length; the respective seams above and below them to be caulked with oakum made of new rope;" but before these instructions were received the Vincennes had been "entirely caulked with oakum, inside and out, except the poop and forecastle decks." The commanding officer however stated that he would make the experiment upon the poop deck of the Vincennes as directed, and "the other part of the experiment upon sloop No. 3, when built," (the Fairfield.) These vessels have been absent from the United States ever since these experiments were made, and no information has reached us as to the result.

A like experiment was made upon the Natchez; and Commodore Barron reported as to the operation of caulking two seams, one with oakum, the other with cotton; that "the seams were each 30 feet long; the quantity of oakum $3\frac{1}{2}$ pounds, the quantity of cotton $1\frac{1}{4}$ pounds; the time employed on the oakum was three quarters of an hour, on the cotton half an hour."

A sufficient length of time has not elapsed for any of these experiments, as to the value of cotton in caulking our ships, to be brought to a satisfactory result.

The use of cotton canvas for boat sails, awnings, hammocks, hammock cloths, windsails, bags, boat and boom covers, and tarpaulins, is so far approved that it is now generally used for these purposes; and it may be used with advantage, it is believed, for light sails generally; but its use for topsails and courses, particularly of large ships, would be attended with so many hazards to the safety of the ships that the board would not take upon itself the responsibility of substituting it for hemp canvas for such purposes.

I have the honor to be, very respectfully, sir, your obedient servant,

JNO. RODGERS.

Hon. SAMUEL L. SOUTHARD, *Secretary of the Navy.*

20TH CONGRESS.]

No. 384.

[2D SESSION.]

STATEMENT CONCERNING NAVY PENSIONS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 7, 1829.

NAVY DEPARTMENT, February 5, 1829.

SIR: In answer to the resolution of the House of Representatives, of the 30th January, 1829, the Secretary of the Navy has the honor to transmit three statements, marked Nos. 1, 2, and 3, corresponding with the sections of the resolution.

Statement No. 1 exhibits the names of those pensioners to whom pensions have been allowed, since the 22d January, 1824, under the authority of the law of 1817, "the annual amount" to each, and the "time when the pension was granted." They were allowed for the causes mentioned in the law of 1817, the deaths having occurred and the rights having accrued previous to the repeal of that law.

The columns 1, 2, 4, 5, 6 and 7, in statement No. 2, are believed to be accurate—a careful examination of the cases having been made. It is not possible to give a more specific answer in the 3d column. The commissioners of the navy pension fund have no information to enable them to state "whence the causes arose, accrued or happened."

Statement No. 3 affords as full an answer to the 3d section of the resolution as is practicable, from the papers remaining in the Department. When applications are made for pensions, and rejected by the commissioners, the papers are almost uniformly returned to the applicants at their own request. No copies of them are retained. This statement cannot, therefore, be relied upon as furnishing a complete list of the rejected applications, even since the year 1824. Nor, if the whole of the cases could be stated, would the list then furnish a safe guide in forming an opinion of the claims which would be made on the pension fund, should the law of 1817 be revived. Most of the applications under that law were made within two or three years before and since it expired. It is some time after the passage of an act of this nature, before its existence is known to many who think they are entitled to its benefits. The longer it

is in force, the more numerous will be the claims under it; and unless its terms and the construction put upon them by the commissioners are very guarded, and the evidence rigidly scrutinized, they will multiply to a burdensome extent.

It is not intended by this remark to convey an impression unfavorable to the existence of some law of the general character of that of 1817. The other laws relate to cases of wounds and deaths in battle; but there are in the navy cases of peculiar hardship and exposure, out of the ordinary and common operations of the service, in which dangers are encountered and lives lost, where the devotion of the seaman is as great, the results to the nation as beneficial, and the consequences as fatal to his family, as when he dies more gloriously in battle. Such cases seem strongly to demand the favorable regard of the government, and such are some, if not all of those to which the law of 1817 was applied, and in which the pensions have expired in consequence of its repeal.

Respectfully submitted.

SAM'L L. SOUTHARD.

To the SPEAKER of the House of Representatives.

20TH CONGRESS.]

No 385.

[2D SESSION.]

MEMORIAL OF JOHN PERCIVAL RESPECTING THE POWER OF THE EXECUTIVE TO CHANGE THE RELATIVE RANK OF AN OFFICER OF THE NAVY WITHOUT THE CONCURRENCE OF THE SENATE.

COMMUNICATED TO THE SENATE FEBRUARY 10, 1829:

To the honorable the Senate of the United States:

The memorial of John Percival, a lieutenant in the navy of the United States, respectfully showeth:

That your memorialist entered the navy of the United States in the year 1800, and was among the number of those who were disbanded at the reduction of the establishment. He re-entered the service in 1809, in the capacity of sailingmaster. On the 18th November, 1814, he received an appointment as an acting lieutenant, and on the 9th December of the same year he was commissioned as a lieutenant, in which capacity he was continued until the present time. During a very considerable portion of this interval your memorialist has been engaged in active service, and for a length of time has been in actual and an important command.

At the same time that your memorialist was nominated to the Senate for the appointment as a lieutenant, several other individuals, generally his juniors in the service, were nominated to the same grade, as will appear by reference to the original list of nominations among the records of your honorable body. In this list the name of your memorialist occupied the thirteenth place, and the nominations received the approbation of the Senate in the order in which they had been arranged by the Executive. In the naval register, published in the year 1815, the several individuals who had thus been commissioned were placed in the same order in which they had been nominated to and passed the Senate. A note was, however, appended to the list, as your memorialist has been informed, without the knowledge or concurrence of the Executive, or the then head of the Department, intimating that the relative rank of those officers whose commissions are dated on the 9th December, 1814, had not been established. No register appears to have been published in the year 1816; but that of 1817 contains the names of such of the said officers who continued in the service, in their original order, while the note above referred to was omitted. It may here also be remarked, that the nominations in question were made out while Mr. Jones was the Secretary of the Navy, and that the two registers of 1815 and 1817 were published while that office was held by Mr. Crowninshield. Two secretaries had, therefore, concurred in fixing this relative rank. In the register of 1818, your memorialist discovered that this order had been changed, and several individuals, who had before stood lower on the list than himself, were now placed above him. Other changes were at the same time made, one, at least, of which being complained of, the party was restored to his original position. Your memorialist preferred his complaint verbally to the head of the Department, but without success; no reason was ever assigned to him for the preference that had been given, nor was any complaint made of his competency or conduct. In the year 1823, being about to leave the United States on a long cruise, he addressed a memorial to the Secretary of the Navy, setting forth the grounds upon which he claimed that this irregularity might be rectified. In consequence of his long absence no steps were taken by the Department in relation to this matter. Since his return to the United States, he has again called the attention of the Secretary to the subject, who, for the reasons assigned in his communication, has declined to comply with the prayer of your memorialist, who is, therefore, compelled to submit his case to the consideration of your honorable body.

He respectfully submits to the Senate that the relative order which officers holding the same grade of commission occupy, constitutes an important part of the office which is conferred. That as to all the rights of superiority and command, an officer higher on the list is on the same footing as if he held a higher office. This is a well settled principle of military law. The order, then, in which nominations are made, constitutes a part of such nomination, and the order in which they are confirmed by the Senate is an equally important part of the act of that honorable body. If this view be correct, your memorialist was senior in rank and higher in command, by the appointment in 1814, than several of those who have been subsequently elevated over his head. Whether the rights which he then held can be affected by the Department without the concurrence of the Senate; or whether, conceding that such power resides in the Department, it can be executed by simply changing the order in which the names stand in the register, and that after an indefinite lapse of time, he submits with great confidence to the judgment of the Senate.

Your memorialist further submits to your consideration, that no authority to make these changes was reserved on the list of nominations transmitted by the Executive to the Senate, or, as is believed, in any other communication. Nor has your memorialist been able to discover any other evidence of such reservation than that contained in the note above-mentioned, in the register printed several months after the Secretary who prepared the list of nominations had retired from that office.

He also submits that if such right could legally be and actually was reserved, it was to be exercised within a reasonable time, and not to continue for an indefinite period, or to involve the power of repeated changes. The publication of the register of 1817 was, he contends, a final action upon the subject, and the authority to vary the order then promulgated became extinct.

He also submits to the Senate that the exercise of the power to change the relative rank of officers is sanctioned by no law, is unprecedented, and has never since been practiced; that it is dangerous in itself and pregnant with mischief to the service; that if this power was legally exercised in the case of your memorialist, it may with equal justice and propriety be again exercised in relation to every officer in the navy.

Your memorialist disclaims all intention to detract from the reputation or affect the feelings of those of his brother officers whose claims come in conflict with his own. He feels, however, that in submitting this subject to the consideration of the Senate, he is vindicating not only his own rights, but the best interests of that service which all will prefer to their own private advantage.

PERCIVAL, *Lieutenant in the U. S. Navy.*

WASHINGTON, January, 1829.

20TH CONGRESS.]

No. 386.

[2D SESSION.]

APPLICATION OF SUBALTERN OFFICERS OF MARINE CORPS FOR AN INCREASE OF PAY.

COMMUNICATED TO THE SENATE FEBRUARY 11, 1829.

To the honorable the Senate and House of Representatives of the United States of America, in Congress assembled:

The memorial of the subscribers, subaltern officers in the marine corps of the United States, respectfully sets forth: That by the several acts of Congress in relation to the naval establishment and marine corps, the pay and emoluments of a captain of marines, while in the performance of duty on shore, are equal to \$77.21, of a first lieutenant to \$73.21, and of a second lieutenant to \$62.21; but in the same office, in actual service at sea, they receive as follows: a captain \$62.50, a first lieutenant \$60, and a second lieutenant \$47.50 per month respectively, being a difference of nearly twenty-five per cent. in favor of the shore pay, both being subject to the deduction of twenty cents per month hospital funds.

Your memorialists will not now inquire into the origin of the difference thus made in their allowance while on shore and when at sea, but most respectfully proceed to suggest to your honorable bodies that the good of the service requires a change in the existing laws, so far as regards the pay of officers in the marine corps, for the reasons they are about to assign.

While your memorialists are on shore their duties are constant and know of no intermission, except in cases of furlough. A rigid discharge of these duties necessarily creates expenses for the full and undress uniform and other equipments, which require frequent renewals. With all the economy and restriction that can be used in the land service, (and there, as your memorialists would emphatically observe, it can be more fully practiced), it is matter of serious difficulty to subsist with that decency and comfort which the condition of life your memorialists are placed in imperatively requires. The difficulties thus encountered on shore are greatly increased when your memorialists are at sea, while the means of surmounting them are considerably reduced. Many expenses are incurred in this situation inseparable from the dignity of the profession and consequent upon the honor of their commissions. It is scarcely necessary to remark, that much depends upon the appearance of the officer, whether at home or abroad. In the intercourse which is extensively held with the many nations of the earth, and to whom the wealth, power, extent and resources of these United States are becoming every day more fully known, the character of the several branches of their service should be proudly upheld and honorably maintained. To do this, so far as your memorialists are concerned, many sacrifices and deprivations in domestic life have been encountered, and will be most cheerfully submitted to again. All the risk consequent upon absence, such as sickness, accident or death in foreign climes, though now readily endured when duty calls, would be the more willingly encountered under a consciousness that, should the worst befall, by the liberality of the government there would still be something left for the widow and the fatherless. This desirable and happy state of feeling your memorialists cannot now realize; and in looking to your honorable bodies, they trust that the sympathies common and at the same time creditable to our nature, will be among the strongest inducements to grant the relief which is desired, by an increase and equalization of your memorialists' pay, giving to all the same allowance at sea, which, according to rank, they receive on shore.

Your memorialists would further remark that the army and navy branches of the said service have been more liberally provided for; and that, while your memorialists are obliged to encounter the same hazards, and in all cases equal expenses with the officers of the navy, their pay is distressingly reduced. In the article of uniform alone the cost is far greater than in any other branch of the public service; this fact your memorialists trust will be deemed worthy of notice, and hope that the wisdom of your honorable bodies will apply a remedy.

Your memorialists would further respectfully remark that they have borne the evils entailed upon them by an expensive uniform, and a reduction of their pay when at sea, patiently for many years; and as the liberality of Congress has been extended to the army and navy, they continue to indulge in the belief that an additional compensation will not be withheld from the marine corps, and that the reasonableness, as well as the justice in which your memorialists respectfully ask that their pay may be increased and equalized, will be fully admitted by your honorable bodies.

It is peculiarly distressing to your memorialists that at a time when every cent of their small pay becomes doubly valuable, it should be reduced nearly twenty dollars per month. They beg, therefore, that a law may be passed extending to them the relief they so earnestly solicit.

They would also further respectfully remark that in no instance is it a desirable circumstance to be ordered to sea, unless it be as the senior marine officer to a squadron, as that is the only situation which gives a compensation corresponding with the allowance received on shore.

Your memorialists, as they believe, after having respectfully and properly stated the difficulties under which they labor, throw themselves and the justice of their petition upon the liberality of your honorable bodies, and beg that they may have the relief solicited, and they as in duty bound will, &c.

[2D SESSION.]

EXPLORING EXPEDITION TO THE PACIFIC OCEAN AND SOUTH SEAS.

COMMUNICATED TO THE SENATE FEBRUARY 16, 1829.

WASHINGTON, February 16, 1829.

To the Senate of the United States:

In compliance with a resolution of the Senate, of the 5th instant, requesting detailed statements of the expenses incurred, and of those which may be necessary for the expedition proposed for exploring the Pacific ocean and South seas; and also, of the several amounts transferred from the different heads of appropriation for the support of the navy to this object, and the authority by which such transfers have been made, I transmit herewith a report from the Secretary of the Navy, with documents, from which the Senate will perceive that no such transfer has been made, and which contain the other information desired by the resolution.

JOHN QUINCY ADAMS.

NAVY DEPARTMENT, February 15, 1829.

To the President of the United States:

SIR: I have had the honor to receive from you the resolution of the Senate, of the 5th February, 1829, calling for a detailed statement of the expenses incurred in fitting out and preparing an expedition for exploring the Pacific ocean and South seas, together with the additional amounts which will be necessary to cover all the expenses of such an expedition; and also, a detailed statement showing the several amounts transferred from the different heads of appropriation for the support of the navy to this object; and the authority by which such transfers have been made, and respectfully present to you the following report, which contains the information called for, so far as it can be furnished by this Department.

The resolution embraces three objects:

1. The expenses which have been incurred in fitting out and preparing the expedition.
2. The additional amounts which will cover the future expenses of the expedition.
3. The transfers from the different heads of appropriation for the support of the navy for this object, and the authority by which they have been made.

Previous to the date of the resolution, viz: on the 24th of January, 1829, a letter relating to this subject was received from the chairman of the Naval Committee of the Senate, and on the 29th of January an answer was transmitted to him. Copies of these letters, marked A and B, are annexed as a part of this report. They contain a portion of the information called for, and are necessary to explain certain parts of it.

First. Of the expenses incurred.

Paper C, hereto annexed, is a report from the Commissioners of the Navy, of the money expended in the repairs of the Peacock. This report was called for before the letter to the chairman was written, but was not received until the 7th instant. It was impracticable before that day for the Commissioners to procure the accounts from New York to enable them to answer the call.

By this paper C, the expenses of repairing the Peacock are stated at \$64,729.55. Deducting the sum of \$4,008 mentioned by the Commissioners, on account of the guns and gun carriages, the actual cost will be \$60,721.55. It will also be perceived that the only expenditure, in addition to the ordinary repairs of the vessel, has been in making a temporary spar deck. This was designed to add much comfort to the accommodations, and has cost \$1,943.21, which is the only sum that can be justly charged to the expedition.

The resolution of the House of Representatives was passed on the 21st of May last, and directed one of our small public vessels "to be sent to the Pacific ocean and South seas, &c." The Peacock was selected for this object, because it came within the description of this resolution, and was better fitted for that service than any other vessel in the navy. The schooners, from their size and construction, were not adapted to it. The surveys could not have been performed in them. The comfort of those sent would have been sacrificed and their lives hazarded if one of them had been selected. The new sloops-of-war are too large, and in other respects unfit; and they would have been more expensive.

At the time of the passage of this resolution of the House, and also of the passage of the appropriation law for the support of the navy for the year 1828, the Peacock lay in ordinary at New York, and was embraced in the estimates for the year, both for repairs and as a vessel in commission for cruising. In the annual report for this Department, dated 1st December, 1827, she was described in the following words: "Will require new sails, and considerable repairs in her hull and standing and running rigging." (Report of Commissioners, A, page 254.) In the estimate and in the appropriation bill there was an item including the repairs, in the following words: "For repairs of vessels in ordinary, and for wear and tear of vessels in commission, four hundred and seventy-five thousand dollars."

The repairs of this vessel were thus authorized by Congress, and would have been made without reference to the expedition. When she was selected for it, they were ordered to be completed with all practicable dispatch, that she might be ready at the proper time to enter on the enterprise. The expense of them has been or will be charged to and paid out of the sum of \$475,000, before mentioned, as provided by Congress for these and other repairs.

Annexed to the same report of 1st December, 1827, there was an estimate for the vessels in commission, during the year 1828. In this estimate, eight sloops-of-war of the first class, and three sloops-of-war of the second class, are provided for. (Report of Commissioners, B, page 236.) The Peacock was one of the three. It was intended, as soon as her repairs would permit, to send her on a cruising station. No station was designated at that time, nor any special service pointed out for her. Without the resolution of the House, the Department was authorized, under this law, to prepare and put her in commission;

and would have so done, by ordering to her a full complement of officers, enlisting for her a full crew, and preparing provisions, stores, armament, &c. The only effect of the resolution, so far as the Peacock is concerned, was, to change her destination from one cruise to another; and that, without any additional expense on these points. For this change, the resolution was regarded as very ample authority.

It may be added, that the delay in preparing the expedition, since her repairs were completed, has, thus far, occasioned some saving of expense, which would have been incurred if the seamen had been promptly enlisted, and the vessel sent on other service. It was the purpose of the Department to be cautious in enlisting those who should be fitted, by character and experience, for such an enterprise; and not to create an unnecessary waste of money, by procuring and paying them, until their services should be required.

A part of them only, are yet enlisted; but officers are now employed at the proper places, and the whole will probably be enlisted in a few days.

In ordering the officers, care was taken to select such as were believed to be not only good seamen and navigators, but also distinguished for enterprise and science. The design was to make the expedition, (whatever might be the number of vessels sent) as far as practicable, redound to the honor of our navy. To accomplish this design, it was necessary that the officers should not only be able to navigate the vessel, but to superintend and execute the surveys and examinations of the islands, harbors, &c., as directed by the resolution of the House, and partake in all the scientific researches. It is believed that those selected will be competent to do this, and the expedition will be arranged with that view; so that, by the faithful and skillful discharge of their duties, their reputation, individually and collectively, will be promoted.

These officers have been ordered to hold themselves in readiness for this service, but no additional expense has thereby been created. They receive now, precisely what they received before the orders were given, and what they would have continued to receive, if these orders had not been given.

The preceding remarks, respecting the Peacock and her officers and seamen, with the explanations contained in the letter to the chairman, (B,) exhibit the action of the Department, under the resolution of the House, and explain statements D and E, annexed to this report. They are deemed necessary, to show that there is no omission in those statements, of the expense incurred on these points. If the Peacock, from any cause, should not go on the expedition, she will be ready, under the requirements of law and the ordinary arrangements of the service, to sail on any other cruise, without extra expenditures.

The second item in paper D, is the cost of employing an agent to obtain information of the present state of knowledge respecting the objects to be examined. This information could only be procured from those concerned in the navigation of the Pacific and South seas; (for none others possessed it) and principally from conversations, log books, and journals. The agent was engaged for several weeks; and, allowing to him for his time, expenses and labor, what is usually paid to persons examining land offices, and performing other duties of a like kind, which are temporary in their nature, he was entitled to receive \$1,116. The service performed by him, required not less intelligence, zeal and industry, than those usually entrusted to agents who receive per diem compensations. His duties were zealously and skillfully discharged; his expenses in procuring assistance, obtaining copies of journals, condensing and arranging the results of his inquiries, were large; and his report embodies a mass of information, valuable to the Department, and indispensable to the prompt and safe conduct of the expedition. The commanding officer, though highly intelligent and well informed, could not have acquired this knowledge in any mode except that which was pursued; and he could not have conducted the expedition as profitably without, as with it. A copy of a part of the report will be given to him before he sails; and by apprising him of the probable, but not well ascertained situation of about two hundred islands and reefs, which he could learn neither from books nor charts, will assist in guiding his movements, and apprise him of many dangers, for which he will be prepared. It will enable him to be more expeditious in his operations, and to accomplish much more within a given period. It is believed that the employment of this agent was both economical and prudent, and will shorten the labors of the expedition, and be one means of guarding it against the hazards which it has to encounter.

If it shall be the will of Congress that the expedition shall not sail, the information in this report ought to be published, for the benefit of our seafaring people, who may thereby be aided in avoiding perils in which so great an amount of property and human life has perished.

The compensation to the agent has been taken from the item of appropriation of \$5,000, in the law of 19th March, 1828, "for contingent expenses for objects not therein enumerated." The preceding item in that bill enumerates the ordinary, contingent and uncertain expenses, which occur in the naval service. This item has always been understood as intended to provide for those contingencies which do not ordinarily occur; and for those services which it is the duty of the Department to direct, and which are not embraced in the enumeration. Under the resolution of the House, this agency was believed to be peculiarly of this character, and no hesitation was felt in directing payment for it out of that fund.

A copy of the letter of appointment to the agent, Mr. Reynolds, is added, paper F. His account has been settled since the letter to the chairman (B) was written, and amounts to something more than was then estimated.

The next item in paper D is an estimate of the cost of the mathematical and astronomical instruments. It is a mere estimate, which in many cases is a mere guess, and may be below the actual amount. A statement has been called for, from the officer entrusted with the purchase and preparation of them; and when it is received, a list in detail, of the instruments and their prices, shall be laid before you. It is not supposed necessary to detain this report for that purpose.

The appropriation law, before referred to, provided for the purchase of "books, maps, charts, nautical and mathematical instruments, chronometers, models, and drawings," and appropriated for these and other enumerated objects, two hundred and forty thousand dollars, for the year 1828. Purchases for all the vessels in commission, and for the shore stations, are almost daily made of such articles, under the authority of this law. In giving the orders for the purchase of these instruments, the Department regarded the Peacock as a vessel in commission, by express sanction of law; the resolution of the House, as an instruction where it should be employed; and the appropriation for instruments, as authority to provide such as might be required by the service which it had to perform.

Lists of books, charts, and maps have also been prepared, and directions given to find and be ready to purchase them when they should be called for. They are not numerous nor very costly. Most of those which will be necessary on the expedition have before been purchased and placed at the navy yards

for the use of our vessels in commission. It is believed that no expense has yet been incurred on this point.

It may be proper to add, that the instruments, charts, books, and maps, which have been, or will be purchased, are not useful for this expedition alone, but are valuable and necessary for the service generally. They would probably, within a short time, have been purchased for and used in the various operations of the navy, if the expedition had not been contemplated. The public treasury will suffer no loss by them.

The letter to the chairman (B.) states that orders have been given to prepare certain provisions suited to the nature of the service. It is not known that any expense has yet been incurred for them, nor can I furnish a detailed statement of what they will cost. In paper E, there is an estimate for them among the items of expenditures yet to be incurred. They are regarded as a part of the provisions of the vessel on her cruise; and the authority for providing them is found in the fact before stated, that the Peacock is a vessel in commission, which the House of Representatives desired should be sent on a special service, and that they form a necessary part of the provisions of the officers and men on that service.

No other expenditure is recollected. Paper D is, therefore, presented to you as a statement in detail of all the expense which has been incurred; and although much labor has been performed at the Department, and many arrangements made, preparatory to the sailing of the expedition, yet no act has been done, nor has any contract been entered into, which can create an addition to it, if Congress should reverse the decision of the House of Representatives, and prohibit the Department from dispatching the Peacock on this particular service.

On the preceding statement and explanations, I have to report to you, that no expense has been incurred which was not fully authorized by law.

Second. Of the "additional amounts which will be necessary to cover all the expenses of the expedition." Paper E, hereto annexed, is an estimate of the expense of fitting out the Peacock alone. Paper G an estimate of the expense of fitting out two vessels and a store ship.

These estimates are made in this form, because the expense of preparing and sending out the expedition has heretofore been the subject of inquiry, and that on which the opinion of the Department was expressed to the committee of the House of Representatives, who originally reported the bill, for which object the Department has supposed the appropriation was designed, and for it the sum in the bill is still believed to be sufficient, even in the enlarged form which is recommended in the letter to the chairman (B.)

It is not easy to make an estimate which may be depended on of the final cost of the expedition. One is attempted, however, in papers H, I, K. They show the annual expense of supporting each of the vessels, with the annual cost of the persons, other than naval officers, who may be employed. On the latter point the estimate is believed to be large, as it is also for contingencies.

It will be perceived that the annual expense of supporting the Peacock is not included in papers E and G. It is omitted because that vessel has been, for several years, embraced in the estimates and appropriations as one of the vessels in commission, and employed at sea. It is also in those of the present year, and, unless a change of legislative opinion takes place, will be in those of subsequent years. But, in order that this expense may be added, if it be deemed proper to do so, it is furnished in paper I.

The statements in paper K exhibit the cost of the expedition for two years, if it be regulated by the resolution of the House; and also, what it will cost in the form recommended in the letter to the chairman (B.) It is not perceived how, under correct and economical management and control, the Peacock for two years, with every necessary and proper outfit, both material and personal, and with full allowance for wear and tear, books, instruments, &c., &c., can cost more than \$108,507.21; nor how the three vessels, under like management, and with equal preparation, can exceed \$204,344.71. Whether the Peacock, on this service, can render more essential benefits to our commercial and other interests than if employed elsewhere, is a question not embraced by the resolution which you have transmitted. It may be proper, however, to remark, that if the view taken at the Department be correct, the present aspect of our relations and interests, in all places where our vessels in commission are cruising, seems to justify the confident belief that she cannot be more useful anywhere than she would be on this expedition. There has not been a time at which she could be better withdrawn from her ordinary duties, and devoted to an enterprise, the first suggestion of which is, I believe, to be found in the recommendation in your message to Congress, on the 6th December, 1825, and which has been an object of constant and anxious solicitude, both with the Executive and a large part of the nation, since that period.

For some of the reasons which influenced the Department to recommend an enlargement of the expedition, the expense of which is exhibited in statement three of paper K, I respectfully refer to the annual report of 24th November, 1828, and to the letter of the chairman (B.)

Two vessels seem indispensable to avoid delay and ensure safety and success. The scientific persons mentioned are alike indispensable, if the profitable results are desired in the branches of science to which their attention will be directed. It is no reproach to our naval officers to affirm, that they cannot, in those branches, make the investigations and furnish the lights which would do most credit to the enterprise. They are not profound astronomers, nor are they skilled naturalists. Their employments forbid that they should be either. In their own profession, and in what relates essentially to the discharge of its duties, they neither now have, nor have they ever had, their superiors. And the expedition may be so arranged as to give to those of them who partake in it, all the duties which they can desire, and all that have ever been satisfactorily performed by men of their profession; and, at the same time, to dispose of the scientific corps in such manner that their duties may be discharged, and neither deprive the other of their appropriate credit. The Department is aware of the jealousies on this subject which have existed in expeditions fitted out by other governments, and of the unpleasant consequences—consequences against which this ought to be guarded. The obvious and inevitable effect of assigning to naval officers duties which they are not qualified to perform, has been, and must forever continue to be, a failure in useful results. The uniform history of expeditions in all nations establishes this fact; while too much has been sought for them, all has been lost to them. There is, however, no real difficulty on this subject, nor will any be found in this expedition. The commanding officer will direct and control the movements of all under his command and in his vessel; to him will the reports of their labors be made; and through him will the results be known to the government and nation. He will have a responsibility sufficiently weighty, and claims on his intelligence which will

prevent his attention to the more minute inquiries on each subject, but which, if ably answered, will ensure him all of honor and reputation which can be acquired for his rank and station in such an enterprise. The inferior officers will be directed by him to superintend the surveys, and make the charts and drafts, which are called for by the resolution of the House, and the citizens who are intended to aid in this labor will be subject to his and their direction. The commercial agent, astronomer, and naturalist, will perform their appropriate duties, without interference with those of others, and the commanding officer will be too discreet to interfere injuriously with them. The division of labor will expedite and perfect whatever is done, while a complication of duties in any one man would create confusion, and render failure inevitable. In the reports to the government the labors of each, and the merits of each, will be manifested.

Much, almost everything, will depend upon the temper of the persons employed, and on each remaining within his proper sphere; and it is hoped the selections will be such as to ensure concord, and especially that no arrangement of duties will be made, and no orders given, which will tend to lessen the just pride and the deserved honor of the navy, in which every patriot feels a deep and enduring interest.

Third. Of the "amounts transferred from different heads of appropriation, and the authority therefor."

There is but one authority under our laws which can direct a transfer from one appropriation to another, and that is the President of the United States. The Secretary of the Navy has requested from him no transfer on this subject; none has been granted by him, and none has been made. All the expenditures have taken place in the manner explained in this report, under the express sanction of the law, and if error has been committed it has resulted from a misconstruction of its meaning—a misconstruction which has prevailed in the Department for many years.

This report, (with the annexed papers,) which has been delayed since Monday last, by severe indisposition, is now respectfully submitted to your consideration.

Very respectfully, &c.,

SAMUEL L. SOUTHARD.

A.

SENATE CHAMBER, *January 22, 1829.*

SIR: By direction of the Naval Committee of the Senate, to whom was referred your report of the 27th November last, and also a bill from the House of Representatives, "to provide for an exploring expedition to the Pacific ocean and South seas," I have to ask for information on the following points, viz:

What expense has been incurred, under the direction of the Navy Department, in preparing the expedition, and what additional amount will be necessary to carry the contemplated object into effect? Under this head the committee desire to have a statement of the several amounts expended on the different objects connected with the contemplated expedition, such as the building and preparation of the ship to be employed; the number, rank, and compensation of the officers and agents who have been, or are intended to be, employed in the expedition, with the names of such as may not belong to the navy, and the duty which they are severally expected to perform.

In deciding on the expediency of the contemplated expedition, it seems to the committee necessary that they should be informed of its precise objects. The committee therefore request the views of the Department relative to this subject. It is desirable to know whether it is in the contemplation of the Navy Department merely to send out surveyers, or other scientific persons, to examine any *known* "coasts, islands, harbors, shoals, and reefs, in order to ascertain their true situation and description," or whether "the Pacific ocean and South seas" are to be "explored," with a view to the discovery of unknown regions. And, in either case, the committee would be glad to learn the views of the Department as to the particular object to which the expedition is, in the first instance, to be directed, and whether the contemplated objects will probably be attained in the course of a single expedition. Any information it may be in the power of the Department to afford on these points, or on any other connected with the subject, will be acceptable.

I am, very respectfully, your most obedient servant,

ROBERT Y. HAYNE, *Chairman.*

Hon. S. L. SOUTHARD, *Secretary of the Navy.*

B.

NAVY DEPARTMENT, *January 29, 1829.*

SIR: It is probably the simplest mode in which I can answer the inquiries in your letter of the 22d instant, to state—

1. The views of the Department in relation to the exploring expedition.
2. What has been done to prepare for the execution of it.
3. The expense which has been incurred.
4. The expense which will probably be incurred.
5. The time which will be required to accomplish the objects proposed.

These five points, it is believed, will embrace answers to all your inquiries.

First. The "precise object" of the expedition is pointed out by the resolution of the House of Representatives, of 21st May, 1828, and is described in the following words: "To examine the coasts, islands, harbors, shoals, and reefs in those seas, and to ascertain their true situation and description." This has always been regarded by the Department as the *object* to which all its orders and preparations were to be directed, and to which they have been uniformly and steadily directed. The resolution of the House was regarded both as the command which was to be obeyed and the authority which would justify the expenditure of the money which might be found necessary to comply with its terms.

In making the examinations required by the resolution, it will necessarily happen that "coasts, islands," &c., both "known" and "unknown," will fall under observation, and the orders would be to examine *both* as thoroughly as circumstances would permit.

Our best charts and geographical works are extremely defective as to that region of the globe. Very little is accurately known about it. Very few islands, compared with the whole number which exist there, appear upon the charts, and the locations of the few which do appear are in most instances incorrect.

It is well understood, from the experience of those of our citizens who are engaged in whaling and other pursuits in the Pacific, that there are, probably, in the southern portion of it, not less than two hundred islands, reefs and shoals, which do not appear upon any chart. The situation of these is not known to many, and perhaps with strict accuracy as to latitude and longitude, to none. Hence, all our vessels which sail there sail in constant and imminent peril, and an immense destruction of lives and property is the consequence. To discover the true "situation and description of all *these*, as well as those *better known*," is supposed to have been the object of the resolution.

It is not necessary, in answer to an inquiry from the Naval Committee of the Senate, to detail the extent of our commercial interests in the Pacific, the manner in which they are prosecuted, nor their dangers and losses. To protect and promote them, by acquiring correct information, which would render their prosecutions more safe and their extension more easy, would be the effect of executing skillfully the purpose of the resolution.

In executing the resolution, if no further direction should be given by Congress, and no appropriation made, it was the intention of the Department to send out one vessel only, the Peacock, which is one of the smallest sloops-of-war, with proper instructions to make the examinations called for. In this vessel would be sent skillful naval officers, with an astronomer, selected either from among the officers or among the citizens, with proper books and instruments, to fix, by accurate observation, the true situation of the islands, &c., to be examined. The naval officers would be directed to perform, in the best manner in their power, the surveys, drafts, &c., which might be required.

In the instructions, directions would be given to procure information of the present state of our commerce, the difficulties and dangers to which it is subjected, with the best means of protecting and enlarging it, and any other information which might fall in their way, and which would be profitable to the nation.

These would necessarily limit the duties to be performed in a single vessel, but in performing these there would be great *delay* and *hazard*, and the result would be much less satisfactory than is to be desired. To avoid these necessary and inevitable consequences of sending a single vessel, the Department extended its "views" further, and desiring to make the expedition useful as well as safe to those engaged in it, an anxiety was felt that Congress should, by sufficient appropriation, permit the following plan to be adopted:

That a smaller but well appointed vessel should be added to the Peacock; for the purposes of the examination, and a provision ship to carry provisions, &c., to them, and enable them to prosecute their labors at all times, and without the interruption which would arise from leaving their employments to seek them; that the following persons should be added to the naval officers:

1st. A person to examine and report upon the present state of our commerce, and the means of its extension and improvement in that region.

2d. An astronomer, whose observations should not only fix accurately the positions of all places examined, but who should bring home invaluable results of observations and experiments, *in everything connected with his branch of science*, and present them in such form as would demand the assent of scientific men everywhere. To him the naval officers would be assistants, and furnish all necessary aid.

3d. A naturalist, with one or two assistants, and one or two good draftsmen and surveyors. These five or six persons would be all that would be required, in addition to the officers of the vessels.

Should it be the will of Congress to pass an appropriation bill for this object, and the expedition should be fitted out in a proper manner, no doubt is entertained that great good would result to our commerce, and the expedition be found to yield, in the end, a most profitable return to the nation for the expenditure made. While seeking this result, it could not fail to be both gratifying and useful to make an extensive addition to our knowledge of the globe we inhabit, and to other useful and valuable branches of science, an addition to our stock of information, acquired almost without cost, and certainly without the slightest neglect of our commercial interests. The instructions would be so guarded as to secure attention, in the first place, to the objects of the resolution, and other matters be made subservient to them.

I do not know whether your inquiry, as to the intention to attempt a "discovery of unknown regions," may be designed to call for an expression of the views of the Department in reference to sending the expedition as far as practicable towards the pole. On that point it may be answered that the examinations both of the known and unknown islands, &c., will be, in part, in high southern latitudes, and the instructions would naturally and necessarily be to find and describe all which exist there, and as far to the south as circumstances would permit them safely and prudently to go. But they would be limited on this point, as well as others, by the object of the resolution itself, and would be directed to avoid with care the difficulty which has so often occurred to exploring expeditions, of being closed up in ice, and remaining from that cause stationary for several weeks or months. Enough would be found for them to do in the milder latitudes during the winter months.

Second. What has been done?

Orders were given to repair the Peacock for the expedition, and these repairs have been made.

Officers have been ordered to hold themselves in readiness, sufficient, in number and skill, for the vessel and the object.

Orders have been given to enlist seamen, of middle age and good character, and an officer has been to Nantucket, and New Bedford, to enlist a few, who are accustomed to whaling and other employments in the Pacific.

Directions have been given to prepare such mathematical and astronomical instruments and books as would be required.

The proper officer has been ordered to prepare such provisions, &c., as will be required, in addition to the ordinary provisions.

An agent has been sent to procure the best and safest information, respecting the object mentioned

in the resolution, from our fellow-citizens in the east, who have had most experience in the navigation of the Pacific.

An arrangement for a second vessel has been made, in the manner and to the effect described in the annual report to the President.

Correspondence, to a large extent, has been held with scientific men, to procure the best practical guides in selecting persons to be attached to the expedition, and in preparing instructions, should Congress permit two vessels to be sent. Arrangements have been made, on all the important points, which have, however, created no expense, and are altogether dependent on the decision of Congress.

No appointments, in the proposed scientific corps, have been made; but the individuals, who will be selected, hold themselves in readiness, should their appointment be permitted.

The Department is ready to organize the whole expedition, the moment the legislative decision is known.

Third. The expense incurred?

The repairs of the Peacock. What these will amount to is not yet ascertained, because the accounts have not been rendered and settled.

Directions have been given to prepare them, and, if they can be procured in time, will be transmitted to the committee. A very small portion of them will, however, be chargeable to the expedition.

The Peacock was very much decayed, and could not have been sent to sea without thorough repairs. The expense of these is properly chargeable to the ordinary head of repairs of the navy. Very little has been added to the vessel for the purposes of this expedition, and nothing which will be injurious in her future service in the navy.

The expense of sending the agent to the east, which has not yet been settled, but which will amount, probably, to between \$500 and \$1,000.

The expense of the mathematical books, instruments, and charts, which will amount, probably, to about \$2,000; but the greater part of the purchases will be useful and necessary to the navy, in its ordinary operations, and will be charged to contingent, under the head of instruments.

No other expense is, at this moment, recollected.

The orders of the officers have created none; and, should even the decision of the House of Representatives be reversed, and the Peacock itself not sent, whatever else has been done will be useful in the regular operations of the navy.

The number and grade of the officers, who hold themselves in readiness, and will go in the Peacock, are the same as on other services.

Fourth. The expense to be incurred?

1st. If the Peacock only be sent, the expense of that vessel will not be much greater than it would be if employed in any ordinary cruise; the pay of the officers will be received by them, whether engaged in this expedition, on leave of absence, or some other duty. The only additional cost to the government will be, in the books and instruments, in some extra provisions, and in paying an astronomer, should one be added. It is not to be doubted, that the cost of supporting a vessel in that ocean, and engaged in such pursuits, may be somewhat greater than if she were cruising on a cheap station near home; but the augmentation will not be large, and cannot be accurately estimated.

If the Peacock be not sent, she will, doubtless, be ordered on some other service, connected with the protection of our commercial and other interests; and, hence, the difference to the government, as to expense, will be very small. I do not send an estimate of the annual support of such a vessel, at sea, because it has heretofore been repeatedly communicated to Congress.

2d. If another small vessel be sent, it will be officered and manned in the usual mode, and the expense, that which is common to vessels of her size.

3d. If the expedition be prepared, in all respects, in conformity to the views and wishes of the Department, there will be added the cost and expense of the provision ship, an estimate of which is not sent, because the price has not been ascertained. The whole expense of such a vessel, at a safe calculation, will fall short of \$15,000. Like the others, she will be under the command of naval officers, who may, at times, be able to aid in the work of the expedition.

4th. The pay of five or six persons, who will be chosen from civil life, and whose average compensation may be estimated at about \$1,600, some being considerably more, and others less, than that sum.

5th. About two or three thousand dollars, for books and instruments for their use.

The sum of \$50,000, mentioned in the bill which has passed the House of Representatives, will be sufficient to enable the Department to fit out the expedition in a satisfactory manner; and there will be no further expense incurred, except the support of the vessels in subsequent years. Unless, indeed, it shall be the will of Congress, as I do not doubt that it will, to make some small additions to the pay of those employed, when they return, should their services and sufferings have been severe, and the expedition honorable and profitable, in its results to the nation; an issue confidently anticipated by its friends.

Fifth. The time required to accomplish the object?

This must depend on two circumstances:

1st. The extent of the surveys to be made.

2d. The number of vessels employed.

If it be required to fix the true situation and description of all the coasts, islands, &c., in the Pacific and South sea, it cannot be accomplished within several years; certainly not within the period during which one expedition ought to be absent. But a very large, and much the most important portion of the Southern Pacific, (into which our enterprising fellow-citizens go, in pursuit of commercial objects, and which is least correctly known and laid down on our charts, and therefore most important to be examined,) may be thoroughly explored within two or three years, which is the proper period for an expedition to be absent, and that to which the present one would be limited by the Department. Whether another should be sent out after its return, will depend on the result of this, and may well be left to the future for decision.

If one vessel be sent alone, it will not be able to accomplish all that could be desired. If two be sent, and they are so provided that they may be constantly engaged in the higher latitudes when the season will permit, and in the lower latitudes when driven back from the higher, it is believed that accurate charts may be made of many degrees of latitude, within two years and a half, and all scientific

objects connected with the expedition be satisfactorily advanced. It is not to be doubted that the two vessels will perform more than double the amount of actual surveys which could be made by one, independent of all considerations connected with matters of science.

You will perceive that, upon this point of time, no convincing speculation can be presented; it must be in exact proportion to the labor to be performed. The more coasts, islands, &c., there are to examine, the longer will it take to examine them; and as it is believed that these are very numerous, it would be uncandid to pretend that a short period would be sufficient.

But there is a consideration connected with this view, which relieves it from some of its objections: the necessity for the expedition is in exact proportion to the extent of examinations to be made, and to our ignorance of the objects to be examined.

It is believed that two or three years, steadily employed, would accomplish most of the "objects of the resolution."

I am, very respectfully, &c.,
HON. ROBERT Y. HAYNE, *Chairman of the Naval Committee, Senate.*

SAM'L L. SOUTHARD.

C.

Report showing the cost of the materials and labor of every description, used in repairing the United States ship Peacock, at the United States Navy yard, New York.

Whole amount of materials.....	\$52,379 97	
Whole amount of labor	29,410 25	
		\$81,790 22
Deduct—		
Amount of materials and labor in making temporary spar decks, per constructor's estimate, marked B.....	\$1,943 21	
Amount of articles returned into store, viz:

F.

NAVY DEPARTMENT, June 30, 1828.

SIR: Your letter of the 26th is received. It is important to the success of this expedition that the most full and accurate information be procured of the present state of knowledge among our navigating citizens in the eastern States, respecting the portions of the globe to and through which the expedition will sail; and also of the present state of our commerce in them. To both these objects I wish you to direct an earnest attention, and as early as practicable send the results to the Department.

I have stated my views so fully in conversation that it does not seem very necessary here to repeat them, but I will endeavor in a few days to give instructions more in detail, addressed to you at some place through which you pass in the eastern States.

I am, respectfully, &c.,

SAMUEL L. SOUTHARD.

J. N. REYNOLDS, Esq., New York.

G.

Estimate of expense of fitting out two vessels, with a store ship.

20TH CONGRESS.]

No. 388.

[2D SESSION.]

ON THE CLAIM OF HENRY ECKFORD FOR RENT OF LAND AT SACKETT'S HARBOR FOR THE USE OF THE VESSELS OF THE NAVY, AND PURCHASE OF SAME FOR THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 17, 1829.

Mr. HOFFMAN, from the Committee on Naval Affairs, to whom was referred the petition of Henry Eckford, respectfully reported:

By the papers referred to the committee, it appears that Captain Isaac Chauncey, while in command at Sackett's Harbor during the late war, as the agent of the United States, and for the use thereof, and with the public money, purchased three pieces of land at Sackett's Harbor, and which were afterwards conveyed by him to the then Secretary of the Navy.

By the extracts from the records of deeds in the county of Jefferson, it appears that Capt. Chauncey obtained the following conveyances, on the said extracts, numbered—

No. 6. By deed dated December 28, 1814, in consideration of \$3,000, of "Navy Point," so called, and whereon the military establishment of Fort Tompkins is erected.

No. 7. May 10, 1814. Consideration \$193.75, of about three acres three rods and twenty perches, called "hospital ground."

By the papers in the case, these parcels of land appear to have been conveyed by Mr. Eckford for

the original consideration paid therefor by Capt. Chauncey, with interest thereon up to the time of purchase. One moiety was conveyed July 1, 1815, and the residue in 1820, by contract executed in 1822.

The papers in this case contain the most satisfactory proof that the purchase of these two lots was made by Captain Chauncey, as the agent of the United States, for the use of the United States, and were in point of fact paid for by the public money, and the money by him regularly charged in account against them, but which, as is alleged by him and the Secretary of the Navy, was disallowed by the proper accounting officers of the government.

By the report of Captain Woolsey to the Navy Commissioners, of August 24, 1816, it appears that, on *Navy Point*, he erected a small and cheap barrack before the war, and in 1812 the work called Fort Tompkins; that Captain Chauncey purchased the property, in aid of the military and naval operations of the government; that, after this purchase, Captain Chauncey "made some addition to the work, by erecting two flanks to the battery, raised the merlons, erected platforms, built the marine barracks, block-house, and a rigging loft, and had the whole picketed and palisaded in." "On *Navy Point* is the New Orleans, covered with a superior framed building, affording store room enough for whatever this station can possibly require; also, a joiner's and boat builder's shop, a mess house and blacksmith's shop." "All the improvements on *Navy Point* have been made by the Department." "The buildings on the point are valued at not less than \$16,000." "The value of the hospital is \$3,500."

The Secretary of the Navy, in his letter of January 7, 1829, to the chairman of the Committee on Naval Affairs, states that "Mr. Eckford built a house on part of the land, which [house] was purchased of him by Com. Chauncey, to be used as a hospital, for the sum of \$2,478, and paid on the 28th January, 1815." As this is said in answer to an inquiry of the moneys paid by the United States to Mr. Eckford, the committee understand by it that the United States have paid Mr. Eckford for the hospital buildings, with the incidental right to use them as a hospital.

All these facts were well known to Mr. Eckford at the time of his purchase of these two lots. He built the ship standing on *Navy Point*, and was familiarly acquainted with the progress of the public works at Sackett's Harbor. On his application to Congress for relief in the premises, the committee consider Mr. Eckford as a purchaser from the trustee of the United States of the trust estate, with a full knowledge of the trust, bound in equity and good conscience to execute that trust, and secure to the United States the use of the property in question, and entitled to all the benefits of a trustee holding this property for their use. These benefits are, on the execution of a proper conveyance, to receive of the United States the consideration money paid, and remaining unpaid, the interest thereon, and any actual expense which the trustee may have necessarily incurred in the care and preservation of the trust estate.

The information in the possession of the committee may not enable them to ascertain the precise amounts of these moneys. But they can approximate to it, so as not to do injustice to Mr. Eckford.

The original consideration money for *Navy Point* and hospital ground, as above stated, is \$3,193.75; the annual interest on which, at 7 per cent, the legal rate of interest in that State, \$223.56; and by Mr. Eckford's account, it appears that the Secretary of the Navy has paid him, as for the rent of this property, at the rate of \$290 per annum, for eight years, from January 1, 1815, to January 1, 1823, amounting to \$2,320. As this supposed rent greatly exceeds the interest on the consideration for the period specified, it may be considered as a full compensation for such interest, and all reasonable charges for the care of the trust estate, during the period alluded to.

The consideration money will then be.....	\$3,193 75
The interest thereon, from the first day of January, 1823, at 7 per cent. per annum, the legal rate of interest of the State where the estate is situate, to May 1, 1829, six years and four months, will be.....	1,415 88
	\$4,609 63

The committee are not informed that Mr. Eckford has been subject to any charges for the care of this land, since January 1, 1823; and they consider the great rent paid for the then eight preceding years as an ample satisfaction of all prior claims, if any, of that nature. They report a bill to enable the Secretary of the Navy, on the execution of a proper conveyance to the United States, to pay to Mr. Eckford the consideration money for these two lots of land, and the unpaid interest thereon.

The papers laid before the committee do not contain such information as to enable the committee to decide on the subject of the claim for the property at Sackett's Harbor. If, as the committee are informed, one of the public vessels has been built thereon with the consent of the owners, and is standing thereon, it would be just for the United States to pay a ground rent for so much of the land as has been and is actually occupied by the United States. In his letter to the Secretary of the Navy, of January 29, 1828, Mr. Eckford offers to sell his property at Sackett's Harbor for \$5,000, and describes it as three hundred acres of land, covered with heavy timber. At this rate, the land would average \$16 $\frac{2}{3}$ per acre, a high price for wood land in that quarter of the country. The committee have no information of the precise quantity of the land actually occupied by the United States. A few acres would appear to be sufficient; and though they may be of greater than the average value of the lot, it appears that the value of the land occupied by the United States is small, and that, as it is a part of a *wood lot*, the rent would be quite small. The annual appropriations have and will put it in the power of the Secretary of the Navy to pay any such reasonable rent. On the propriety of the United States purchasing this land, the committee have not the information to enable them to judge.

ON THE PRIVATEER PENSION FUND, AND THE PENSIONS CHARGEABLE THEREON.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 17, 1829.

Mr. HOFFMAN, from the Committee on Naval Affairs, to whom was referred the report of the Secretary of the Navy, made to the President of the United States, November 27, 1828, made the following report, on so much thereof as relates to the privateer pension fund, and the pensions chargeable thereon.

That the privateer pension fund was instituted by the 17th section of the act of June 26, 1812. (Vol. 4, p. 453.) Two per centum of the prize money arising from captures and recaptures, by the private armed vessels of the United States, are appropriated "and pledged by the Government of the United States, as a fund for the support and maintenance of the widows and orphans of such persons as may be slain, and for the support and maintenance of such persons as may be wounded and disabled on board of the private armed vessels of the United States, in any engagement with the enemy; to be assigned and distributed in such manner as shall hereafter by law be provided."

The fund was therefore created for two purposes: first, the maintenance of widows and orphans of those slain; and second, of the wounded and disabled. As this is a charitable fund, pledged to these purposes, the committee do not feel at liberty to inquire into the policy of discontinuing the application of it to the "maintenance of the widows and orphans of those slain." The United States, as trustee, stands pledged to apply it to this purpose; and as it is the first set down in favor of the contributors, it is reasonable to judge it was dearest to them. They appear, like husbands and fathers, to have felt more for their wives and children than for themselves, and to have been desirous of first providing for them; and the committee cannot desire to see this manly wish defeated.

The second section of the act of February 13, 1813, (vol. 4, p. 498,) grants pensions to officers, seamen or marines, in the private armed vessels, "who shall have been wounded or otherwise disabled in any engagement with the enemy," and fixes the rates of pension for the greatest disability; a copy of which section is annexed. By the act of August 2, 1813, (vol. 4, p. 631,) this act is explained and extended so as to grant pensions to those "who shall have been wounded or otherwise disabled in the line of their duty," &c. This is perhaps an extension beyond the object declared in the act instituting the fund.

The pensions chargeable on this fund to widows and children are granted by the first section of the act of March 4, 1814, (vol. 4, p. 652,) and extend to all cases where the officer, seaman or marine, in the private armed vessels, "shall die, or shall have died, (since June 18, 1812,) by reason of a wound received in the line of his duty." The term is limited to four years, and also to the widowhood of the pensioner, and to children under 16 years of age, and is charged exclusively on this fund, and is limited to half the monthly pension to which the deceased, if disabled, would have been entitled by law.

These pensions to the widows and children, charged on this fund, were extended by the act of April 16, 1818, sec. 2, (vol. 6, p. 291,) for the further term of five years. And the second section grants a like pension for five years, on the usual limitations, to the widows and children of such "officers, seamen and marines," as "shall have died since, (June 18, 1812,) in consequence of any accident or casualty which occurred while in the line of his duty,"

All these pensions to widows and children are extended by the act of April 9, 1824, (vol. 7, p. 232,) for the "further term" of five years, from and after the period of the expiration of the said pensions respectively. This act grants no new pensions, and only extends the period of those already granted.

The act of May 26, 1824, continues for five years the pensions to widows and orphans charged on this fund, and which before the passage of the act of April 9, 1824, had expired.

The second section of the act of May 23, 1828, (vol. 8, p. 66,) extends the pensions chargeable on the privateer pension fund, granted to all widows, in the words of the act, "who now are, or at any time within one year have been, in the receipt thereof, under the provisions of the following laws," namely, the acts of March 4, 1814, and April 16, 1818.

The Secretary of the Navy, in his report to the President, of November 27, 1828, says: "It will be perceived by this statement that, at the date of the act of the last session, (23d May, 1828,) and for one year preceding it, there were no persons in the receipt of a pension under the acts of 1814 and 1818; the pensions under those acts having expired two or three years preceding."

The committee do not seek to disturb any restraining rule, adopted by any of the executive departments of the government, and think it desirable that each should, as in this case, confine itself within its certain powers.

The state and condition of the fund in 1827, is stated in the annexed letter of the Secretary of the Navy, to the chairman of the committee, of February 21, 1828.

At one time the stocks of the fund amounted to	\$209,580 65
They had, in 1827, been reduced	138,882 41
Leaving only	70,698 24
Yielding an interest of	4,241 89
The probable annual expense to the fund, for the pensions of the disabled officers, seamen and marines, was estimated at	5,000 00

The actual amount of money remitted to pay pensions charged on this fund, from 1818 to 1827, both inclusive, was \$250,402.04, or \$25,040.20 average for each of the ten years. The first of these years required \$17,532; and in 1827 there was required \$17,284. Hence, it appears, that not even the pensions of the invalids can be paid without invading the principal money of the fund; and if the pensions of the widows are also to be paid, a rapid reduction must take place in the money of the fund.

The progress of the fund for 1828 is stated in the letter of the Secretary of the Navy to the chairman of the Committee on Naval Affairs, of February 11, 1829, and is briefly—

1. Amount of its stock at the close of 1828 was	\$68,272 50
2. Income during 1828	4,210 60

3. Pensions chargeable to the the fund for that year were—

To invalids	\$6,220 00	
To widows and orphans	10,830 00	
		\$17,050 00

The invalid pensions, therefore, exceed the income of the fund by \$2,008.40; and the aggregate of invalid widows and orphans' pensions exceed that income by \$13,939.40.

Your committee must remark that the evident design of the act establishing the fund was to place the pensions of the *widows* and orphans on at least as favorable a footing as that of invalids. The orphan children of those *slain* in the private armed vessels of the United States must all, or nearly all, have attained an age when they *can*, by industry, provide for themselves. Humanity may not oblige Congress to burthen the fund with pensions for them; but the widow of the deceased has become aged and enfeebled; she was pensioned when she was younger and more active, and humanity forbids that her pension should be taken from her to enable the fund to support others who, though wounded and disabled, were less unfortunate than the brave men who, slain in our battles, left this fund a legacy, *first* to the widow, and after her to the *invalid*. The committee are of opinion that the pensions allowed should have been so graduated as not to have exceeded the annual product of the fund; or if to have exceeded it at all, yet in so small a sum as to have rendered it certain that the pensions granted to persons when young should not be denied to them under the increase of years and infirmities.

Adopting this principle, and estimating as well as may be the uncertain information obtained on the subject, the committee recommend—

1. The appropriation to the fund of \$50,000.
2. The reduction of the invalid pensions for the highest rate of disability, thus:
 - Of a captain, from \$20 to \$10 per month.
 - Of a lieutenant and sailingmaster, from \$12 to \$8 per month.
 - Of a marine officer, boatswain, gunner, carpenter, master's mate, and prizemaster, from \$10 to \$7 per month.

3. The widows to one-half these rates *proposed* for the greatest disability.

This reduction in the rates of the pensions is forced upon the committee by the exhausted condition of the fund, and the extreme necessities of the pensioners. Such a distribution of the charity appears indispensably necessary to afford to the widows the aid contemplated by the institution of the fund; and the committee do not believe that there is in the proposed measure any breach of the public faith to the invalids. So far from it, they are convinced that *good faith requires that the widows should be made participators in the benefits of the fund*. They believe that no generous but disabled seaman would willingly partake in this fund to the exclusion of the aged and helpless widow of the companion of his toils and dangers; and they think that a past rather improvident exhaustion of the fund ought not to withdraw from the widow, or the wounded, and now aged and enfeebled pensioner, the pension which a more prudent management of the fund would have continued.

All these pensions are by express words limited to the privateer pension fund alone. But the committee believe that public policy requires the appropriation now recommended in aid of it.

The statesman who shall induce the nations to concur in one common judgment to denounce and punish as contrary to the law of nations the right of *warfare on private property* on the high seas, will be the greatest benefactor of mankind. While the right remains, to this country, at least, the *right of private warfare* under letters of marque and reprisal will be of inestimable value. Every act which will make the exercise of this right difficult, slow, and expensive, in so far destroys the common defence. Every act which makes the exercise of this right easy, speedy, and efficient, contributes to the security of peace by the danger it threatens to the public enemy in war. And the exercise of this right, by the destruction of the enemy's commerce, by the rewards it confers on our brave and patriotic fellow-citizens, is among our best, most extensive, and most efficient means of conquering an honorable peace.

The committee, therefore, feel it a strong duty to furnish the relief contemplated by the men whose valor and enterprise collected this fund from the grasp of the public enemy, that in all times coming the citizen may in his own private armed vessel, with the more safety, alacrity, and zeal, engage in the defence of the republic.

Letter from the Secretary of the Navy to the chairman of the Committee on Naval Affairs in the House of Representatives.

NAVY DEPARTMENT, February 21, 1828.

SIR: In reply to the inquiries contained in your letter of the 15th instant, in relation to "the expediency of continuing the act providing for the allowance of pensions from the privateer pension fund," I have the honor to submit the following statement:

First. As regards "the state of the fund, and its probable productiveness for some years to come." The fund consists of six per cent. stock of the United States, to the amount of \$70,698.24, yielding an annual interest of \$4,241.89. A portion of this stock has been reimbursable since the first day of January, 1827, and the residue since the first day of the present year; so that the whole is now subject to redemption at the pleasure of the United States.

The stock belonging to this fund at one time amounted to \$209,580.65; but the interest proving insufficient to discharge the claims admitted under the several acts authorizing the issue of pensions, sales of portions of the stock, at various times, became inevitable, to enable the Department to pay the semi-annual allowances granted to the pensioners. Stock to the amount of \$138,882.41 has been sold, on which a premium of \$7,408.69 has been realized; and further sales must take place semi-annually, the interest being inadequate to pay the pensions chargeable to the fund.

Second. As respects "the number and probable expense to the fund of the officers, seamen, and marines, whose pensions are charged upon it."

Provision was made for persons disabled in private armed vessels, by the acts of Congress of the 13th of February and 2d of August, 1813; and under these acts, relief has been afforded to 107 persons, who are entitled to pensions so long as their disability continues. Of this number, some are known to have died; others, who have not claimed their pension for several years, are also probably dead, though their death has not been reported to the Department; and new claimants occasionally yet present themselves, and succeed in establishing their right to a participation in the benefits of the fund. The expense occasioned to the fund by this description of pensioners may be estimated at about \$5,000 per annum.

Third. As respects "the number of widows yet unmarried, and children under the age of sixteen years, whose pensions are charged on the fund, and the probable future annual expense to the fund by reason of the continuance of the pensions of such widows and children."

Since the passage of the acts of Congress of the 9th of April and 26th of May, 1824, authorizing a further renewal for the term of five years, the widows and orphans of 159 persons, slain or lost during the late war, in private armed vessels, have been placed on the pension list, and paid, semi-annually, a sum equal in amount to half the pay to which the deceased persons, whom they respectively represent, were entitled at the time of their death. Some of these have already received the fifteen years' allowance authorized by law, and their pensions have, of course, been discontinued. The pensions of the others will expire at different periods between the present time and the year 1830, when all will have received an allowance for fifteen years, and the several pensions expire by the limitation of the term authorized by law, unless Congress shall make provision for a further renewal.

Under the act of 4th of March, 1814, the widows and orphans of 203 persons were placed on the pension list. Under the act of 16th of April, 1818, the widows and orphans of 186 persons had their pensions renewed and increased. Under the acts of 9th of April and 26th May, 1824, as before observed, the widows and orphans of 159 persons have had their pensions further renewed. From a comparison of these numbers, the committee will see what decrease has taken place, on account of intermarriages, deaths, children attaining the age of sixteen years, and of the failure of persons entitled to pensions to establish their claims.

It being difficult to estimate with accuracy the annual expense chargeable to this fund for any future year, I subjoin a statement, showing the actual amount remitted from the treasury to pay privateer pensioners, for each of the last ten years.

The remittances were as follows:

In 1818.....	\$17,532 00
In 1819.....	28,759 00
In 1820.....	35,065 33
In 1821.....	37,010 00
In 1822.....	25,032 20
In 1823.....	18,042 51
In 1824.....	19,499 00
In 1825.....	32,066 00
In 1826.....	20,112 00
In 1827.....	17,284 00

From the preceding views, it is evident, unless Congress shall make an appropriation to aid the fund, it will, in a few years, be exhausted, and the widows and orphans of those slain or lost, as well as the persons who were wounded and disabled, in the private armed vessels of the United States, be left without any pension or allowance to contribute towards their support and maintenance.

If more particular information respecting this fund be required, permit me to refer you to a detailed report, made by the Secretary of the Navy to the Speaker of the House of Representatives on the 27th of March, 1820, and to another report from the Department, made to the honorable James Lloyd, chairman of the Naval Committee of the Senate, on the 24th January, 1824, both of which were printed, and will be found among the documents.

I am, very respectfully, &c.,

SAML L. SOUTHARD.

Honorable MICHAEL HOFFMAN, *Chairman Naval Committee, House of Representatives.*

NAVY DEPARTMENT, *February 11, 1829.*

SIR: I have had the honor to receive your letter, dated the 10th instant, making inquiries in relation to the privateer pension fund.

First. As to the amount of its stock at the close of the year 1828.

Second. The income of the stock during that year.

Third. The amount of invalid pensions chargeable on the fund for that year.

Fourth. The amount chargeable on account of pensions granted to widows and orphans.

I enclose you a statement from the Register of the Treasury, which contains solutions to the first two queries, and shows that the amount of stock belonging to the fund, at the close of 1828, was \$63,272.50; and that the stock of the fund, during the year, yielded an income of \$4,210.60.

The amount of invalid pensions chargeable to the fund during that year was \$6,220; and the amount on account of pensions to widows and orphans \$10,830.

All which is respectfully submitted.

SAML L. SOUTHARD.

Hon. MICHAEL HOFFMAN, *Chairman Naval Committee, House of Representatives.*

Extract from an act regulating pensions to persons on board private armed ships. Approved Feb. 13, 1813.

SEC. 2. *And be it further enacted*, That the Secretary of the Navy be authorized and required to place on the pension list, under the like regulations and restrictions as are used in relation to the navy of the United States, any officer, seaman, or marine, who, on board of any private armed ship or vessel bearing a commission or letter of marque, shall have been wounded, or otherwise disabled, in any engagement with the enemy; allowing to the captain a sum not exceeding twenty dollars per month; to lieutenants and sailingmaster a sum not exceeding twelve dollars each per month; to marine officer, boatswain, gunner, carpenter, master's mate, and prizemasters, a sum not exceeding ten dollars each per month; to all other officers a sum not exceeding eight dollars each per month, for the highest rate of disability, and so on in proportion; and to a seaman, or acting as a marine, the sum of six dollars per month, for the highest rate of disability, and so on in proportion: which several pensions shall be paid by direction of the Secretary of the Navy out of the fund above provided, and from no other.

Extract from the letter of the chairman of the Committee on Naval Affairs, of December 15, 1828, to the Secretary of the Navy.

The committee also direct me to ask of your Department information relative to the privateer pension fund, and the pensions of widows charged thereon. Has that fund been reduced by any loss? and if so, when, from what cause, how, and to what amount? Should no addition be made to the fund, would it, in the opinion of your Department, promote the interests of the naval service to renew the expired pensions to widows charged on that fund?

The special inquiries stated in this note are not intended to limit the information sought in the more general statement of the subjects embraced in it.

Extract of a letter of the Secretary of the Navy to the chairman of the Committee on Naval Affairs, dated January 26, 1829, in answer to the above.

I do not perceive that I can, without special inquiry from you, give any information respecting the privateer pension fund, which is not embraced in my report to the President. The fund has not been diminished by any losses. See my letter to you, 21st February, 1828, documents H. R., No. 244.

If no addition is to be made to the fund, I think it would not promote the public interest to renew the pensions of widows. They have already enjoyed considerable benefit from the fund, and if the balance is to be expended either on them or on the seamen who have been actually wounded and still survive, the latter ought to have the benefits: between the two, they ought to be preferred.

20TH CONGRESS.]

No. 390.

[2D SESSION.]

STATEMENT OF THE CONDITION OF THE NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 20, 1829.

NAVY DEPARTMENT, *February 20, 1829.*

SIR: In compliance with the resolution of the House of Representatives, of the 3d instant, I have the honor to transmit, herewith, papers numbered from 1 to 7 inclusive, which contain the information required. Paper 7 contains the annual statement of the commissioners of the fund, for the year ending the 31st December, 1824; in relation to which, it is proper to add, that, at this length of time, it is impossible to assign, with certainty, the exact cause of its omission in the annual reports of that year; but is supposed to have been overlooked in the hurry and pressure of the business of the Department.

I am, respectfully, &c.,

SAM'L L. SOUTHARD.

To the SPEAKER of the House of Representatives.

Resolved, That the Secretary of the Navy be directed to report to this House, in relation to the navy pension fund—

First. A statement of the stocks and money belonging to the fund, and the value of such stocks other than those of the funded debt of the United States, on the 31st day of December, 1828.

Second. And the following statements, giving the aggregate of the last fifteen years, and exhibiting the amount in each year:

1. Of moneys received from the sale of prizes.
2. Of the annual product or income of the fund.
3. Of the losses sustained by the fund, when they accrued, and the cause and amount of each loss; considering the purchase of any stocks above, or the sale thereof below the nominal value as a loss, to the amount of the premium or discount paid, and the commission paid for making such purchase or sale.
4. The amount of pensions actually paid by the fund.
5. The amount of moneys paid other than pensions, and for what purposes.

6. The account of the treasurer of the fund for the year 1828.

7. The annual statement of the commissioners of the fund for the year ending December 31, 1824, and the cause why the same has not been heretofore transmitted to this House.

No. 1.

Statements in relation to the navy pension fund, prepared in obedience to a resolution of the House of Representatives, passed 3d February, 1829.

	Nominal.	Cost.
<i>First.</i> Amount of the stocks belonging to the fund, on the 31st December, 1828, to wit: United States stocks, as appears by the annual report of the Treasury, unredeemed.....		\$613,032 96
Amount of Columbia Bank stock.....	\$92,600 00	99,502 60

20TH CONGRESS.]

No. 391.

[2D SESSION.]

ON THE POLICY AND OBJECTS OF THE EXPLORING EXPEDITION TO THE PACIFIC OCEAN AND SOUTH SEAS.

COMMUNICATED TO THE SENATE FEBRUARY 23, 1829.

Mr. HAYNE, from the Committee on Naval Affairs, to whom was referred a bill from the House of Representatives, "to provide for an exploring expedition to the Pacific ocean and South seas," and also the message of the President on the same subject, reported:

That in discharging the duty assigned to them by the Senate, they found themselves called upon to institute an inquiry into the objects of the contemplated expedition—its probable cost—and the measures necessary for carrying it into effect. This inquiry seemed to be the more indispensable, inasmuch as the subject of an exploring expedition had never been brought before the Senate for their consideration, nor had it received, in any way, their sanction or countenance, and inasmuch as it was now presented without any estimate from the Navy Department, or any documents calculated to afford the information necessary to enable the Senate to make up a correct opinion upon the subject. The committee were well aware that the shape in which this question was presented to them seemed to imply that the sanction of the government had been already given to the expedition, and that therefore no investigation was necessary beyond the adequacy of the sum proposed to be appropriated to enable the vessels to be sent to sea. The President had communicated to Congress, in his message at the commencement of the present session, that the expedition was "nearly ready to depart," and the Secretary of the Navy had also reported that vessels had been prepared for the purpose; that all the preliminary measures had been adopted; and that, to cover the expenses, "the naval appropriations had been used for all those objects which came within the bill of appropriation, as pay, subsistence, instruments, books, &c. The committee were also well aware that a general opinion prevailed throughout the country that the measure had received the deliberate sanction of both Houses of Congress, and that the appropriation of the sum now asked for was therefore considered as a matter of course. But though a majority of the committee indulged a favorable disposition towards an expedition, limited in its extent, and restricted in its objects, and although they were aware that the delay necessarily incident to a thorough examination of the subject in all its bearings might not meet the wishes of those who had taken a lively interest in the success of the enterprise, yet they believed it to be their duty to the Senate and to the country not to act upon the subject without all the lights which the most thorough investigation could afford. Even taking it for granted that an exploring expedition might be undertaken by the United States, with a reasonable prospect of favorable results, and without a departure from the fundamental principles of our policy, the committee was still of opinion that it was safer to delay acting upon the subject, even at the risk of postponing the expedition for another year, than to be hurried into a decision on a question of so much importance, and to which they were now, for the first time, called upon to give their deliberate sanction. The committee did not hesitate therefore to resort to the proper means for obtaining full information on all the points deemed by them important to the formation of an enlightened judgment. Under the direction of the committee, the chairman accordingly addressed a letter to the Secretary of the Navy, calling for information on the following points:

First. The expense already incurred in preparing the expedition.

Second. The additional amount necessary to carry it into effect.

Third. The views of the Department as to the particular objects of the expedition.

From the answer of the Secretary (which has since been submitted to the Senate, and printed by their order) it appeared that the exploring expedition was considered by the Executive as already sufficiently sanctioned by resolutions of the House of Representatives, of the 21st May, 1828;* that these resolutions, though they had never been submitted to the Senate, were regarded, in the language of the Secretary, "both as the *command* which was to be *obeyed* and the *authority* which would *justify the expenditure of the money*, which might be found necessary to comply with its terms."

That the proper measures had therefore been adopted for carrying the expedition into effect, though on a different plan, and a much larger and more expensive scale than was recommended in these resolutions; and for the accomplishment of the plan thus adopted by the Department, the appropriation now called for was deemed necessary. But it was at the same time stated that it was the intention of the Department, "should no further direction be given by Congress, and no appropriation be made," to send out the sloop-of-war Peacock on that service.

The following is the plan of the expedition, as submitted to the committee by the Secretary of the Navy:

That the sloop-of-war Peacock, which had been thoroughly repaired for that purpose, should be sent out under skillful naval officers on an exploring expedition; that she should be accompanied by another "well appointed vessel;" and also "a provision ship;" that, in addition to the officers of the navy, there should be sent out with the expedition a *scientific corps*, to consist of the following persons, viz:

First. A person to examine and report upon the present state of our commerce and the means of its extension and improvement in that region.

Second. An astronomer, whose observations should not only fix accurately the positions of all places examined, but who shall bring home invaluable results of observations, experiments, &c. To him the naval officers would be assistants and furnish all necessary aid.

Third. A naturalist, with one or two assistants, and one or two good draftsmen and surveyors. These five or six persons would be all that would be required in addition to the officers of the vessel. The average compensation of these five or six persons, to be chosen from civil life, is estimated at about \$1,600, some being considerably more and others less than that sum. It was also ascertained by the committee, from

* *Resolved.* That it is expedient that one of our small public vessels be sent to the Pacific ocean and South seas to examine the coasts, islands, harbors, shoals and reefs in those seas, and to ascertain their true situation and description.

Resolved. That the President of the United States be requested to send one of our small public ships into those seas for that purpose, and that he be requested to afford such facilities as may be within the reach of the Navy Department to attain the object proposed, *provided* it can be effected without prejudice to the general interest of the naval service; and *provided* it may be done without further appropriation during the present year.

other sources, that two *pursers* were to go out with the expedition, one of whom, it was understood, was to act as *historiographer*.

For the purpose of carrying this plan into effect, the following measures had been adopted:

Orders were given to repair the *Peacock* for the expedition, and these repairs have been made. Officers have been ordered to hold themselves in readiness, sufficient in number and skill for the vessel and the object. Orders have been given to enlist seamen of middle age, and of good character; and an officer has been sent to Nantucket and New Bedford, to enlist a few who are accustomed to whaling and other employments in the Pacific. Directions have been given to prepare such mathematical and astronomical instruments and books as would be required. The proper officer has been ordered to prepare such provisions, &c., as will be required, in addition to the ordinary provisions. An agent has been sent to procure the best and safest information, respecting the object mentioned in the resolution, from our fellow-citizens in the east, who have had most experience in the navigation of the Pacific. An arrangement for a second vessel has been made in the manner and to the effect described in the annual report of the President. No appointments in the proposed scientific corps have been made, but the individuals, *who will be selected*, hold themselves in readiness, should their appointment be permitted. The Department is ready to organize the whole expedition, the moment the legislative decision is known.

That the following expenses had been already incurred:

The *Peacock* had been thoroughly repaired, at an expense which could not be stated, because the accounts had not yet been received. A second vessel had been conditionally purchased, at an agreed price of \$10,000. The expense of sending an agent to the east, would amount, probably, to between 500 and \$1,000. Mathematical books, instruments, &c., had been purchased to an amount probably of about \$2,000. In relation to the additional amounts necessary for fitting out and supporting the expedition, the letter of the Secretary of the Navy did not afford any satisfactory information. The expense of purchasing a provision ship was, indeed, put down at \$15,000. No information was afforded, of the expense of maintaining these three vessels at sea, because, in relation to the *Peacock*, an estimate of the annual support of such a vessel "had heretofore been repeatedly communicated to Congress," though it was admitted that the cost of supporting her "would, in this instance, be greater than if she were cruising on a cheap station, near home." Of the cost of supporting the other vessels, no estimate was given, except that it was stated in relation to one of them, that "she would be officered and manned in the usual mode, and the expense, that which is common to vessels of her size." "Two years and a half" was assigned by the Secretary as the period necessary for the completion of the expedition. "It was believed that two or three years, steadily employed, would accomplish most of the objects of the expedition," and that "whether another should be sent out after its return, would depend upon the result of this, and might well be left to the future for decision."

With regard to "the object of the expedition," it was stated to be "to examine the coasts, islands, harbors, shoals, and reefs, in the Pacific ocean and South seas, to ascertain their true situation and description;" and it was stated that, in making these examinations, "coasts, islands, &c., both *known* and *unknown*, would fall under observation," and the orders would be "to examine both as thoroughly as circumstances would permit;" "that there was probably in the southern portion of the Pacific not less than two hundred islands, reefs and shoals, which do not appear on any chart," and "to discover the true situation and description of *all these*, as well as those better known, is supposed to have been the object of the resolution." Directions were also to be given for procuring information of "the present state of our commerce, the difficulties and dangers to which it is subjected, and the best means of protecting and enlarging it, and any other information which might fall in their way, and which would be profitable to the nation."

That these examinations were to be made, "both of known and unknown islands, &c., in part, in a high southern latitude, and the instructions would be *to find and describe all which exist there, and as far to the south as circumstances would permit them safely and prudently to go.*"

Looking at the character and objects of the expedition, as disclosed in the Secretary's letter, the committee could not fail to discover that an exploring expedition to the Pacific ocean and South seas was considered, by the Executive, as already determined on; that it had been organized even in its minutest details, and that measures for carrying it into effect had been adopted, involving large expenditures, which had been drawn from the appropriations for the navy; and that the bill, now before the Senate, was considered necessary merely to cover such additional expenses as might not fall under any general head of naval appropriations. It also appeared that the expedition, which it was proposed to send out, was one that must be extremely expensive; and that as a single expedition would not accomplish the object in view, many others of the like kind would hereafter become necessary. In the absence of precise statements from the Navy Department, and adopting the rule given by the Secretary himself, that the expense of preparing and supporting the *Peacock* and the two other vessels would be the same, or even greater than vessels of the same class engaged in ordinary naval service, it was manifest that the cost of rebuilding, repairing and fitting out the expedition, added to the expense of maintaining it for three years, would be very considerable.

The cost of building a sloop-of-war is estimated, in a report made by the Secretary of the Navy, on the 7th January, 1824, at \$85,000 00

And the expense of maintaining such a vessel for one year, at \$61,086.50, for three years, equal to 183,258 50

Making, for fitting out and maintaining a sloop-of-war for three years 268,258 50

Supposing the expense of procuring, supporting and maintaining the two other vessels to be the same as schooners of the first class,* (and the committee were furnished with no other data,) the expense would be, according to official estimates of the expense of such vessels, as follows:

Cost of two vessels ready for sea, about \$25,000 each 50,000 00

Annual support of each, \$20,000 for three years 120,000 00

Making in all 438,258 50

* The actual cost of the schooner *Porpoise*, of 200 tons, exclusive of her guns, has been ascertained to be \$28,873.91, and the expense of maintaining such a vessel, at sea, for one year, \$23,165.25.

What deductions were to be made from this estimate, the committee had no means of determining, but they knew that considerable additions would have to be made for the extraordinary expenses incident to such an expedition; and judging from the imperfect data before them, they suppose it not improbable that the whole cost of this expedition would not fall short of between \$400,000 and \$500,000.

The magnitude of this amount forced upon the committee the conviction that the subject was one altogether of too much importance to be acted upon without full and precise information, and accurate estimates of the whole cost of an expedition, to be organized in the manner contemplated by the Navy Department; the committee considered it to be their duty to the Senate, therefore, not only to bring distinctly to their view the precise objects of the expedition, but also the whole expense, as nearly as the same could be ascertained, in order that their decision might be made with a full knowledge of the whole subject.

Another consideration, still more important in the view of the committee, was connected with this question. The fact that an expedition of such an extraordinary character, and bearing such an interesting relation to the foreign policy of this country, had been already organized; that extensive preparations had been made, and considerable expenses incurred for carrying it into effect, when the subject had not, as yet, been even submitted to the Senate, (one of the co-ordinate branches of the legislature,) for its appropriate action, seemed to render a further investigation necessary. The chairman of the committee was therefore directed to propose to the Senate the following resolution, which was considered and adopted, viz:

Resolved, That the President of the United States be requested to cause to be laid before the Senate a detailed statement of the expenses incurred in fitting out and preparing an expedition for exploring the Pacific ocean and South seas, together with the additional amounts which will be necessary to cover all the expenses of such an expedition; and that he be also requested to cause to be submitted a detailed statement, showing the several amounts transferred from the different heads of appropriations for the support of the navy to this object, and the authority by which such transfers have been made."

In answer to this resolution, a message has been received from the President, covering a report from the Secretary of the Navy; in both of which it is stated, in general terms, that "*no transfers* have been made from the different heads of appropriation for the support of the navy to this object;" and the Secretary of the Navy has also furnished estimates and statements, intended to afford the information called for by the Senate. The documents now before the committee present for consideration the following points, each of which will be briefly noticed, viz:

1. The character and probable expense of the expedition.
2. The measures which have been adopted for carrying it into effect.

First. The character and expense of the expedition:

In examining the character of the proposed expedition, the committee will confine their views to *the plan set forth* in the communications of the Navy Department, as it appears that the passage of the bill now before the Senate will be considered as giving the sanction of Congress to that plan; the naval officers, as well as the scientific corps, "holding themselves (as we are informed,) now in readiness," and the Department being also "ready to organize the whole expedition the moment the legislative decision is known." According to the plan of the Secretary of the Navy, it appears to the committee that the proposed expedition can only be considered as the first of a series of explorations, having for their object the examination of all the "known islands" &c., in the Pacific ocean and South seas, and the discovery of such as may be "unknown." The expedition now about to be dispatched, is to be directed towards the south pole; which it is designed to "approach as nearly as circumstances will permit," in order to examine, in the language of the Secretary, "*all that exists there*." The attention of the commander of the expedition, as well as of the scientific corps which is to accompany it, is to be specially directed to the survey of about "two hundred islands," &c., of the existence of which some information was obtained by the Navy Department, from the agent employed under its direction during the last summer, and which, it is supposed, are not to be found on any chart: and these explorations, it is to be presumed, must be continued until the whole Pacific ocean and South seas shall be thoroughly explored, and all the "islands" &c., which exist there, accurately surveyed and examined.

So far as this plan embraces what may be properly regarded as *a voyage of discovery*, the committee can perceive nothing in the present condition of this country to recommend it to the favor of Congress. With immense unsettled and unexplored regions at home, they should consider it altogether superfluous to attempt the discovery of unknown lands, however rich they may be in resources, however inviting to the enterprise of individuals, or the ambition of rulers. Supposing such an expedition to result (as seems to be confidently expected by its sanguine advocates,) in the discovery of countless islands, or even of new continents—such discovery would, in the estimation of the committee, be of no substantial benefit to the United States; but, on the contrary, would be fraught with the most serious evils. The honor that might be considered as properly belonging to a successful enterprise of such an imposing character—the spirit of adventure to which it would give rise among our countrymen—the visionary hopes which it could not fail to excite, and the emigrations to which it must lead—would all combine in urging us "to plant the American standard on the soil discovered by American enterprise;" and a colony would probably be soon built up, in a distant region, which could only be defended at an expense not to be estimated, and which could not be taken under the protection of the United States, without an abandonment of the fundamental principles of our policy, and a departure from those wise and prudent maxims which have hitherto restrained us from forming unnecessary connections abroad.

The committee feel no hesitation, therefore, in unequivocally expressing their opinion, that no expedition ought to receive the sanction of this government, the object of which may be, either to approach the south pole as "near as circumstances will permit," or to discover "unknown lands;" whether such lands are to be sought for (according to the opinions of the earliest projectors of such an enterprise) within the opening which they have confidently asserted "to exist there," or anywhere else in the vast expanse of the Pacific ocean and South seas; the thorough examination of which, for such purposes, would certainly constitute a permanent charge on the treasury of several hundred thousand dollars per annum.

Supposing the object of the expedition to be restricted to the examination and survey of the "two hundred islands," &c., mentioned by the Secretary, it appears to a portion of the committee that the work to be performed would still be of so great extent, that there would be no reasonable prospect of its being speedily accomplished, and that no probable advantage to result to the United States would, in any

adequate degree, compensate for the sacrifice of lives and of treasure which must inevitably take place in the prosecution of such an enterprise. The accurate survey, even of those islands, would, in the opinion of the committee, consume a great many years, and require many successive expeditions.

They much doubt whether an intelligent and scientific naval officer, employed under the direction of the Navy Department, for a single season, in collecting and arranging the information to be derived from the whalermen of Nantucket, would not be able to furnish better guides for the navigation of those seas, than could probably be afforded by an exploring expedition in a cruise of three years. The making scientific surveys of coasts, harbors, &c., is a work of time, and can only be well performed by officers who proceed with the utmost care, caution, and deliberation. A survey of the sea coast of the United States was commenced many years ago, under the most favorable auspices, and though much time has been devoted to it by the corps of topographical engineers, and others, it still remains unfinished. It is known to the committee that the examination of a single harbor has occupied a surveying party for near two years; and so great has been the magnitude and difficulty of these undertakings, that the survey of the sea coast has, of late years, been abandoned. Six years ago an act was passed appropriating \$50,000 for "the survey of the routes of such roads and canals as were deemed by the President of national importance;" and, though the same appropriation has been annually made ever since, very little progress has been made towards the completion of the work, notwithstanding a large corps of civil and military engineers have been constantly and assiduously employed in it, with all the advantages to be derived from carrying on their operations at home, under the eye of the government, and aided by the zealous co-operation of their fellow-citizens. It appears to a portion of the committee, therefore, that in the present condition of the United States, while the interior of our own country is yet unexplored—while the charts of our maritime frontier are imperfect—while the islands, shoals, reefs, &c., along our own coasts have not been accurately surveyed and examined—while the northwest coast, and especially the mouth of the Columbia river, remain almost unknown—it is altogether premature on the part of the American Government to enter upon the exploration of the Pacific ocean and South seas, or even to attempt to survey all the islands, &c., which may exist there.

However desirable it may be "to open new sources to our commerce," or to give greater security to those who navigate those seas, the committee cannot perceive why those objects should be deemed of more value than "to open new sources" to agriculture, or to give security to those who may be engaged in other branches of industry—objects which may be safely left to the enterprise of individuals, which, with an instinctive sagacity that puts to shame the assumed wisdom of governments, is invariably directed to the pursuits most profitable to themselves, and most to the welfare and honor of the country. A majority of the committee, however, though they concur generally in these views, are inclined to believe that an expedition, on a small scale, and strictly confined to the examination and survey of the islands, reefs, and shoals which lie in the track of our vessels engaged in the whale and other fisheries in the South seas, would amply remunerate the expense which should be incurred in its prosecution, and they have accordingly directed the chairman to report an amendment to the bill, having this object in view.

In calculating the probable expense of an expedition, organized in the manner proposed by the Secretary of the Navy, the committee will, in the first place, refer to the estimate submitted by the Secretary himself. The following is the statement, taken from the report which accompanies the late message of the President:

Estimate from the report of the Secretary of the Navy.

Cost of fitting out the Peacock. (See the Secretary's report, paper C.)		
Whole amount of materials.....	\$52,379 97	
Whole amount of labor.....	29,410 25	
	81,790 22	
Deduct value of articles returned into store		17,060 69
		64,729 53
Deduct guns, estimated at.....		4,008 00
		60,729 53
Cost of purchasing and fitting out "the second vessel," and the store ship, and additional expenses, (see report, paper G,).....		42,059 21
		102,780 74
Whole expense of preparing the expedition.....		\$102,780 74
Expense for supporting the expedition for one year, \$88,892.75. For two years, the Secretary's estimate, (see report, paper H,).....		177,785 24
		280,565 24
Add for the third year.....		88,892 75
		369,457 99
Making the whole expense of fitting out and maintaining an exploring expedition for three years		\$369,457 99

It appears to the committee that three years, instead of two, ought to be allowed for the completion of the expedition. Vessels sent on ordinary cruises in the Pacific are usually employed for that period; and from the nature of this expedition, it will not probably return to the United States in less than three years.

This appears to have been the opinion of the Secretary himself, as disclosed in his letter to the chairman, in which he says, that the expedition will be completed in "between two and three years." But the committee are further inclined to think that the Secretary's estimate is in some other respects too low, and that a cautious and provident foresight would require a more liberal allowance for the extraordinary expenses of a new and untried enterprise. The second vessel, for instance, is put down at \$10,000, being *her first cost*, without including the repairs which will be indispensable to convert her from an ordi-

nary merchant ship into "a well appointed vessel," to be engaged in a peculiar and hazardous service. The number of *able seamen* to be employed in the three ships is estimated at only thirty-three, while the number of such seamen usually employed in a single sloop-of-war is sixty-two. There are many other items which seem to the committee to be estimated too low, and making reasonable allowances for the extra expenses incident to all novel enterprises, the committee should not be disposed to put down the whole cost of this expedition, supposing it to continue for three years, at less than four hundred thousand dollars. The Secretary of the Navy, however, suggests that the repairs of the Peacock, as well as the expense of supporting her at sea, cannot properly be considered as chargeable to this expedition, inasmuch as she would be employed on other service if not sent out on the exploring expedition. The committee, however, cannot recognize the correctness of this view of the subject, because they cannot suppose that the Peacock or any other vessel-of-war could be rebuilt and put into commission, unless her services were actually required on some one of the cruising stations, at which our ships are employed for the protection of American commerce. Congress has certainly been, heretofore, induced to believe, that in receiving estimates of the number of vessels to be kept in commission during the year, none were included which were not considered necessary to be employed on the different established stations abroad. The Peacock, therefore, if not sent on the exploring expedition, would certainly not be sent to the West Indies, or anywhere else, unless her services be necessary there; and if, notwithstanding such necessity, she shall be detached on a separate and distant service, her place must of course be supplied by some other vessel. The Peacock having been included as one of the — sloops-of-war estimated for last year by no means proves that she would have been repaired and employed during the present year, without any reference to the exploring expedition, inasmuch as it is understood that she was included in the estimates of the preceding years, and yet she was not repaired or put in commission, simply, it is presumed, because her services were not found to be necessary. In any view of the subject, however, it appears to the committee that the true cost of the expedition, to the United States, must be *the whole expense of preparing the vessels for sea, and supporting them while there*, and that, to consider the expense as consisting merely of the additional cost of such an expedition over an ordinary cruise, is a view of the subject altogether erroneous. By the same reasoning it may be made to appear that if, instead of purchasing vessels, we should build them at our own navy yards, and fit them out and support them in the usual way, that the expedition would not cost the United States a single cent. The committee will admit, however, that so far as a vessel employed at any particular cruising station may be temporarily detached, without interfering with her ordinary duties as a cruising ship, this view of the subject may be supported; but it is wholly untenable when applied to an expedition entirely out of the course of ordinary service, and in no way connected with the protection of our commerce from the aggression of foreign powers. The question of the true probable expense of such an expedition as that in the contemplation of the Navy Department, is, however, one on which any member of the Senate can make his own calculations on the data now afforded by the documents submitted.

Second. The measures which have been adopted for carrying the expedition into effect.

From the documents which accompany the late message of the President on this subject, it appears that the Secretary of the Navy has considered the exploring expedition as sanctioned by the authority of the House of Representatives, and has therefore conceived himself authorized to apply the appropriations made for the navy to this object. The Peacock has accordingly been repaired, at an expenditure of \$81,790.22, (drawn from the funds appropriated by Congress for "the repairs of vessels in ordinary.") an amount which most assuredly could not have been necessary for the repair of a sloop-of-war destined for any ordinary service.

Provisions, peculiarly adapted to this service, have been ordered, (and, as the committee understand, been purchased,) at an expense of about three thousand dollars, drawn from the appropriations for "provisions" for the navy.

A special agent has been employed, to collect information for the guidance of this expedition "respecting the objects to be examined," at an expense of \$1,116, which has been charged to the "contingent expenses" of the navy.

Seamen and others, peculiarly fitted for this particular service, have been engaged, and, in short, every measure has been adopted deemed necessary for the preparation of the expedition, and the Secretary has believed himself to be authorized to use the money necessary for these purposes. Before the explanations here received were furnished, it did not seem to the committee to be susceptible of doubt or controversy, that in preparing an exploring expedition of the character of that now under consideration, where no appropriation had been made for such an object, the necessary expenses could only have been discharged by "a transfer of appropriations." It appeared from the message of the President, as well as the report of the Secretary at the opening of the session, that the expedition was considered as having already received a legal sanction, and that all preparatory measures had been adopted; and it was expressly stated by the Secretary that a sufficient authority was conceived to be derived from this source, to "justify the expenditure of the money."

Believing that the resolution relied on afforded no authority for fitting out an exploring expedition, or for applying a cent of the public money towards any such object, the committee had no hesitation in coming to the conclusion, from the statement of the Secretary himself, that there had been to some extent at least (though to what extent was unknown to them) an unauthorized application of the public funds, and after a careful examination of the documents since submitted, they are confirmed in the opinion. They believe it to be susceptible of the clearest proof, and consequently that the President, as well as the Secretary, are mistaken, when they say that "no transfers, from the different heads of appropriation for the *support of the navy*, to this object, have been made." If, by the "transfer of appropriations," it is to be understood that money has been drawn from one head of *appropriation*, and applied to another, (as for instance, that moneys appropriated for "repairs," have been applied to "provisions,") then indeed it may be contended that no such *transfers* have been made in this case; but, if the application of money appropriated for one purpose to another and a different purpose; if the application of money appropriated for the "repairs," "provisions," &c., of the navy, towards an *exploring expedition* not sanctioned by law; if the use of money appropriated for the "contingent expenses of the navy," towards the payment of a special agent, employed in collecting information for an exploring expedition, are to be considered as "transfers of appropriations," then such transfers have certainly been made. But the committee do not desire to engage in verbal criticisms, nor to take a merely technical view of this matter. The substantial objection to the proceeding arises out of the fact that, without any lawful sanction

having been given by Congress to an exploring expedition of any description, and without the appropriation of a single dollar to any such object, such an expedition has been organized, and an unlimited discretion has been used in applying the public money towards it, just as if the bill which failed last year, and is now again before Congress, had actually passed both Houses, been approved by the President, and become a law. Neither the amount applied to this object, nor the motives which may have produced the application, form any part of the considerations which have caused the committee to express their decided disapprobation of a proceeding which they believe to be of dangerous tendency, and at variance with the principles which ought to control the appropriation and expenditure of the public money. Nor does it make any difference in principle, that a large portion of these expenditures has been made on objects which may hereafter be converted to the use of the navy, should the expedition not receive the sanction of Congress. But it is not denied that a portion of these expenditures has been applied to objects not necessary for the ordinary service of the navy, and wholly inapplicable to that service. The Peacock has been fitted out in a manner different from, and at a cost greatly beyond, what would have been necessary in preparing her for an ordinary cruise. We are expressly informed that, among other things, a "temporary spar deck" has been provided, at an expense of \$1,943.21, which will have to be removed before she can again be used as a cruising ship. The compensation of the agent, and many other expenses, (some of which are given by the Secretary in paper D, amounting to \$5,059.21,) are clearly of this character; and it appears to the committee that, whether the amount expended without authority be great or small, the proceeding is equally objectionable in principle, and equally sustains the view they have heretofore taken of this subject. The committee forbear to press this branch of the subject further.

The only remaining part, to which they would call the attention of the Senate, is the *authority* under which the Navy Department has proceeded in preparing and organizing the expedition. The Secretary of the Navy refers to a resolution of the House of Representatives, of the 21st May, 1828, and relies upon it as "the command to be obeyed" and "the authority to justify the expenditure of the money," &c. Before this resolution was adopted, viz: on the 25th March, 1828, a bill had been reported by the Naval Committee of the House of Representatives, authorizing the President to prepare and send out an exploring expedition, and appropriating \$50,000 for that object. This bill, for some cause unknown to your committee, not having been acted on by the House, the resolution above mentioned was proposed and adopted, a day or two only before the close of the session, but it was not sent to the Senate, nor presented to the President for his approbation.

The failure of the bill which had been introduced for the express purpose of giving the sanction of the legislature to an expedition (justly considered to involve high considerations of public policy) obviously put an end, for that session at least, to the whole scheme; nor will any one pretend that a simple resolution, adopted by one branch of the legislature, could give a lawful sanction to any object depending on the legislative will, much less that it could justify the use of the public money for carrying it into effect. The 7th section of the 1st article of the Constitution is perfectly explicit on this subject, and requires the same sanctions to every "order, resolution, or vote" of the two Houses, which are requisite to give validity to the most important laws. In both cases they must be agreed to by the Senate and House of Representatives, be presented to the President of the United States, and be approved of by him, before they can take effect. The only known exception to this rule is in favor of orders or resolutions which concern the separate action of each House, and which, like the rules of its own proceeding, do not require the sanction of the other. But when, as in the case before us, the question was one involving delicate and interesting considerations of national policy, requiring large expenditures of money, it is too obvious to admit of argument, or to need illustration, that such a resolution could have no binding force or efficacy whatever. This committee will not enlarge on the importance of preserving to each branch of the national legislature, as well as to the Executive, all the powers conferred by the Constitution, in order to enable them to serve as checks upon each other. They know of no practice that would be more mischievous in its effects than that either branch of Congress should be induced to avoid the delay and difficulty of passing laws on important subjects, by substituting the resolutions of one House; a practice that would become extremely dangerous, if such resolutions should ever come to be considered as affording a warrant to executive officers to apply the public money to the purposes designated by such resolutions. The committee deem it unnecessary, on the present occasion, to do more than merely to bring this subject to the notice of the Senate. They have no reason to doubt that, in adopting the resolution of the House of Representatives, in relation to an exploring expedition, as an *authority for his acts*, the Secretary of the Navy believed himself to be fully justified by the resolution itself, and that he was actuated by an ardent desire to promote an enterprise which he supposed would be conducive to the welfare and honor of the country. And the committee are well satisfied that this expression of a different opinion on their part, calling the attention of Congress and the Departments to this subject, will be sufficient to prevent the recurrence of any similar transaction.

B.

Estimate of the cost of constructing and completing a temporary spar deck, to connect the poop and fore-castle decks of the United States sloop-of-war Peacock, repaired at the United States Navy yard, New York, in 1828, including the cost of all extra work arising from the same.

Labor	\$1,038 75
Materials	904 46
	<hr/>
	\$1,943 21

Respectfully submitted.

S. HART, N. C.

J. CHAUNCEY, *United States Navy Yard, New York, January 30, 1829.*

C.

Report showing the cost of the materials and labor of every description, used in repairing the United States ship Peacock, at the United States Navy yard, New York.

Whole amount of materials.....	\$52,379 97	
Whole amount of labor.....	29,410 25	
		\$81,790 21
Deduct—		
Amount of materials and labor in making temporary spar deck, per constructor's estimate, marked B.....	\$1,943 21	
Amount of articles returned into store, viz:		
In master's department.....	\$2,165 24	
In sailmaker's department.....	2,313 11	
In boatswain's department.....	516 76	
In carpenter's department.....	168 30	
In gunner's department.....	3,814 85	
Old copper.....	1,275 60	
Ten gun carriages.....	590 00	
One boat.....	80 00	
		10,923 86
Materials for spar sails.....	\$3,611 61	
Labor on spar sails.....	582 01	
		4,193 62
		17,060 69
Amount properly chargeable to repairs of United States ship Peacock.....		<u>\$64,729 53</u>

The cost of six medium eighteen-pounder cannon and carriages, now on board, is included in the above report; and she has not been credited for her original armament, twenty thirty-two-pounder carronades, and two long twelve-pounders with carriages, which are in the yard reserved for her future use. Estimated worth \$4,008.

TUNIS CRAVEN.

Commodore ISAAC CHAUNCEY, *Commandant United States Navy Yard and Station, New York.*

UNITED STATES NAVY YARD, *New York, January 31, 1829.*

D.

Expense incurred in fitting out the Peacock for the exploring expedition.

1. Extra expenditure in the repairs of the Peacock, (paper C).....	\$1,943 51
2. Compensation to agent.....	1,116 00
3. Cost of mathematical and astronomical instruments, estimated at.....	2,000 00
	<u>\$5,059 21</u>

E.

Estimate of expense which will probably be incurred in fitting out the Peacock.

1. Amount already incurred, (D).....	\$5,059 21
2. Extra provisions.....	3,000 00
3. Books, maps, &c.....	1,000 00
4. Contingencies.....	2,000 00
	<u>\$11,059 21</u>

NOTE.—The expenses of persons other than naval officers is included in the estimate of annual expense of supporting the vessel.

G.

Estimate of expense of fitting out two vessels, with a store ship.

1. Amount of paper E.....	\$11,059 21
2. Cost of second ship.....	10,000 00
3. Cost of store ship.....	15,000 00
4. Additional instruments, books, &c.....	3,000 00
5. Contingencies.....	3,000 00
	<u>\$42,059 21</u>

NOTE.—The scientific corps is estimated in the annual expense, the pay not commencing until the vessels are put in commission.

H.

Estimate of the annual expense of supporting the Peacock and two other vessels while on an exploring expedition.

1. Expense of the Peacock	\$39,724 00
2. Expense of second vessel.....	17,365 75
3. Expense of third vessel.....	11,813 00
4. Pay to scientific corps	10,000 00
5. Contingencies	10,000 00
	\$88,892 75

20TH CONGRESS.]

No. 392.

[2D SESSION.]

ON THE CONDITIONS FOR ALLOWING PENSIONS OUT OF THE NAVY PENSION FUND.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 2, 1829.

Mr. HOFFMAN, from the Committee on Naval Affairs, to whom petitions from widows, &c., had been referred, reported:

That they have examined the cases referred to them of widows claiming to be placed on the roll of navy pensioners.

The committee have made use of every reasonable exertion to ascertain the past progress of the navy pension fund, and the practical operation of the act of March 3, 1817, which provided pensions in these several cases; but principally from the illness of the Secretary of the Navy, and, in part, from the difficulty in making out the desired statements on the subject of the fund and the pensions charged on it, that information is not yet obtained. But the committee are enabled to make the following statements:

The classes of cases referred to the committee have been provided for by no law, save that of March 3, 1817, which granted a pension on the usual conditions, when the husband or father "*died in consequence of disease contracted, or casualties or injuries received, while in the line of his duty, &c.*" This act was repealed by the 2d section of the act of January 22, 1824, with a proviso.

The practical effect of this repeal is thus stated by the Secretary of the Navy, in his report to the President, of November 27, 1823: "Since the repeal, deaths by disease, casualty or injury have not been considered causes for granting pensions to widows and children, except in cases where the death occurred during the last war. Applications, which have been numerous, have therefore been uniformly refused, except in the cases specified."

The committee are unable to find any law, except the repealed act of 1817, which ever did grant a pension for such causes, whether the death happened during or since the war; and they believe there never has been any. If the term of any of the pensions granted by that act had, before its repeal (January 22, 1824,) expired, it was extended for an additional term of five years by the act of March 3, 1819, if the husband or father "*died in the naval service during the last war.*"

Contrary, however, to the above rule of construction, as quoted from the report, the committee find that six pensions, to the annual amount of \$582, have, since the repeal, been granted, *because the deaths had occurred before the repeal*, and one where the death happened *after the repeal*. At the drawing of this report, the committee are not possessed of the facts which would enable them to state what rules have been adopted in granting and renewing these pensions.

Although the information on this subject, obtained by the committee, is quite imperfect, they are satisfied that *if any one of the cases referred to them, and all others resting on the same principles*, were provided for at the present rates, the income of the fund would be *wholly inadequate* to pay the pensions charged upon it: its *principal moneys would be rapidly destroyed*. It is difficult, perhaps impossible, to make a just distinction in principle between one of these cases and another. Each petitioner alleges, and, if required, can prove the most devoted services of the deceased, and very great suffering on the part of his widow and children. A provision for some, and the exclusion of others of equal merit, and supported by the same principles, would be unjust and impolitic.

Nothing but the fullest and most perfect information of the past annual income of the fund and the pensions it has paid, its profits and losses, and correct information of the practical operation of the several acts granting these pensions, and especially of the act of 1817, could justify the recommendation of the re-enactment of that act. This information the committee have not been able to obtain.

They therefore ask to be discharged from the further consideration of these petitions.

20TH CONGRESS.]

No. 393.

[2D SESSION.]

ON THE CONDITION OF THE NAVY PENSION FUND AND THE PENSIONS CHARGEABLE THEREON.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 2, 1829.

Mr. HOFFMAN, from the Committee on Naval affairs, to whom the subject had been referred, reported:

That they have had under consideration the subject of the navy pension fund, and the pensions to widows and orphans charged thereon. If the committee had obtained the desired information on these subjects, it was their design to make a detailed report in relation to them.

In order to judge of the probable future capacity of the fund to pay pensions, the committee deem it necessary to know, for each of several past years, on the one hand, the prize moneys, the dividends on bank stocks, the interest on United States stocks, and every other source of profit accrued to the fund; and, on the other hand, for corresponding years, the pension money paid by the fund, designating the amount of such pensions granted under each particular act of Congress, and also the commissions and premiums paid on the purchase of stocks, and every other loss or charge to the fund. To this should be added a statement of the moneys of the fund, and the stocks belonging to it, and their value, except in the case of United States stocks. Without this information the committee are now persuaded they could not recommend, for the adoption of the House, such measures as may be necessary to increase the revenue of the fund or save it from losses, or to judge of its probable income for succeeding years. The amount of the pension money paid in each year, under any one act of Congress, is clearly necessary to enable the House to judge of the probable effect of repealing, or re-enacting, or extending any such act.

In search of so much of this information as the committee then supposed necessary to their action, they caused their chairman to write his letter to the Secretary of the Navy, of December 15, 1828, which was sent at that time. Owing to some misapprehensions on the subject, that letter was not as full and precise as the committee since find it should have been. A full answer to it would have been of great service to the committee. Their chairman shortly after, in company with one of the committee, called on the Secretary at his office, and explained the wishes of the committee, and the nature and purpose of the information they desired. Subsequently he made a like call at the Department, and made several additional explanations to the chief clerk. The Secretary was then reputed to be ill, and confined to his house.

A reply to this note was received on the 27th January, 1829, dated the preceding day. The delay the committee are informed and believe was attributable to the preceding protracted bad health of the Secretary; and perhaps the same circumstance may be considered the cause of the great defects in this reply. The committee submit that it contains almost literally none of the information asked.

To ascertain the past income accrued to and the pensions paid by the fund, the reply refers the committee to the annual report of the commissioners of the fund. The committee have looked there in vain for the desired information. Its defects are partially pointed out in the letter of the chairman of the committee to the Secretary of the Navy, of February 19, 1829. The committee are of opinion that the annual report ought clearly to exhibit—

1st. The money accrued to the fund from sales of prizes, dividends on bank stocks, interest on United States stocks; from all other sources of profit, such as the purchase of good stocks below par.

2d. All moneys paid by the fund for pensions, designating the amount paid for pensions granted under each particular act of Congress; for premiums and commissions on the purchases of stocks; for other charges, specifying them.

3d. A statement of all losses by reason that any of the moneys of the fund had been uninvested, and the causes of the delay to invest.

4th. A list of the pensioners, and the amount actually accrued to each during the year for which it is rendered, designating, in the case of each granted within the year, the act under which it is granted; and in the case of a pension to a widow or orphans, the time of the death of the husband or father, the cause of the death, and when that cause arose, accrued or happened.

By this enumeration of the requisites of this report, the committee do not mean to designate its form, or to dispense with any facts usually reported. The requisites above designated appear essential to judge of the future probable income of the fund, and the practical operation on it of any one act of Congress.

To obtain the information necessary to ascertain the practical operation of the act of March 3, 1817, and whether any error had taken place in granting or refusing navy pensions to widows and orphans, the chairman of the committee moved the resolution calling on the Secretary of the Navy, adopted by the House January 30, 1829. The Secretary's letter, in answer to this call, was received February 7, 1829, and the papers accompanying it contain useful information. Two causes rendered the reply less useful than it would otherwise have been: first, a mistake in the copy sent, purely accidental, of the word *whence* instead of *when*; and second, the fact that many of the applicants for pensions, refused under the act of 1817, had withdrawn their papers; and many more, whose cases, it is believed by the Secretary, would come within the provisions of that act, have not made their applications. To make this call as perfect as possible in the answer to be given, the chairman submitted a resolution on the 9th of February, which was adopted on the 11th, and to which no answer had been received when this report was drawn. The committee are informed that it will contain all, or nearly all, the particulars for which it calls.

In order to remove the difficulties experienced by the committee in relation to the income, charges, stocks and moneys of the fund, one of their number (Mr. Miller) submitted a resolution, calling on the Secretary of the Navy for information, which was adopted by the House on the 3d of February, 1829, the answer to which, from the ill health of the Secretary, and multiplied engagements of the clerks in the offices, was not received until the 28th of that month. The information it contains will be found in the statements prepared by the Fourth Auditor. Its defects are pointed out, in two particulars, by the letter

of Mr. Miller, of the committee, to the Secretary of the Navy, of February 20, 1829, and in another particular, (the moneys of the fund) in the letter of the chairman of the committee to the Secretary of the Navy, of February 21, 1829. This last error would have shown a deficit in the fund of about \$281,384.72, which, by the letter of the Secretary of the Treasury, of the 25th February, 1829, in answer to one of the chairman of the committee to him, of February 23, 1829, appears to have been in the treasury, in funds placed in the Branch Bank of Washington for the payment of that amount of stocks, on the 1st of July last. No information as to the two other particulars had been received at the writing of this report, but is expected, as the chief clerk of the Navy Department, to whom the statement containing the object was shown by the chairman of the committee, promised to procure and furnish them. When these shall be received, the committee will be able to ascertain the present state of the fund, and its fiscal progress for the last fifteen years; and it is believed the expected answer to the resolution of the 11th of February, 1829, will show the effect, in practice, of the pension act of 1817, and any error which may have been committed in refusing, or granting, or renewing navy pensions to widows and orphans. Without such information the committee believe they ought not to recommend a renewal of the act of 1817.

This brief history of the efforts made by the committee to obtain the information necessary to enable them to act is stated to show the cause why they do not now report definitely on the subject. The delay has arisen, probably, from the sickness of the Secretary of the Navy. The note of their chairman, of December 15, 1828, it is believed, found him considerably indisposed. Hence, too, his reply was not received until the 27th of January. On the receipt of this followed the resolutions of January 30th, February 3d and 11th, and the notes explanatory of the errors and defects in the answers, given almost as soon as they were received, the dates of some of which have not been given. It is understood that the Secretary of the Navy has for several days been extremely ill, and to that cause the committee attribute much of the late delays in answering the calls.

The committee give no opinion on the subject of the construction given to the laws granting these pensions. They are of opinion that a well digested report on the whole subject of the finances of the fund, and of the laws affecting it by grant of pensions or otherwise, and their operation, should be made by the Department.

They therefore recommend the following resolution:

Resolved, That the foregoing report, and the papers and documents accompanying the same, be referred to the Secretary of the Navy, to report thereon at the next session of Congress.

NAVY DEPARTMENT, *February*, 1829.

SIR: In answer to the resolution of the House of Representatives, of the 11th February, 1829, the Secretary of the Navy has the honor to enclose three statements, marked 1, 2, 3, corresponding to the sections of the resolution, and which are intended to convey all the information called for by the resolution, so far as it can be furnished from the files and records of the commissioners of the navy pension fund. It will be found defective in some of the points embraced within the resolution. This has arisen from the nature of the claims for pensions, and the situation of the applicants. They are often friendless, and almost always indigent and distressed, and cannot, therefore, be expected to afford the full and systematic evidence which would be required in other cases. The commissioners have only demanded of them proof of such matters as are indispensable to establish their rights.

Respectfully submitted, by order of the Secretary of the Navy.

CHARLES HAY, *Chief Clerk*.

To the SPEAKER of the House of Representatives.

No. 1.

Statement of pensions granted to the widows and children of officers, seamen, and marines, for death by disease, casualties, or injuries, under other laws than that of March 3, 1817.

	To whom granted.	Time of the death of the officer, &c.	Cause of death.	Time when the cause arose, occurred, or happened.	When granted.	Under what law granted.	Annual amount.	When renewed.	By virtue of what law renewed.	When expired.	If suspended, then when suspended, and the cause why suspended.
1	Catharine Badger..	June 18, 1824	Accidentally knocked overboard from the Franklin.	June 18, 1824	June 30, 1825	Laws of 1813 and 1814.	\$114	June 19, 1829	
2	Anne Maria Clunet	Nov. 26, 1825	Shot by a marine..	Nov. 26, 1825	Dec. 23, 1826	do	54	June 1, 1831	
3	Susannah Lippincott	Feb. 7, 1816	Killed by a fall.....	Feb., 1816	Jan. 15, 1827	do	60	Sept. 23, 1830	
4	Susannah Longiel..	Feb. 11, 1824	Lost in a boat.....	Feb. 11, 1824	July 15, 1824	do	120	Feb. 12, 1829	No application for renewal.

The case of Susannah Lippincott is added to this list because it was granted after the repeal of the law of 1817, and the cause of death did not happen during the existence of that law; it is, therefore doubtful whether the right was saved by the proviso in the law of 1824. It is, perhaps, also doubtful whether the cases of Mrs. Madison, and one or two others, in the second statement, ought not to be added to this list: they appear on the corresponding list in the former report.

No. 2.

List of pensions granted (since the repeal of the act of March 3, 1817, by the 2d section of the act of January 22, 1824) to the widows and children of officers, seamen, and marines, who, since the war, have died in the naval service of diseases contracted, or of casualties or injuries received, while in the line of their duty.

	To whom granted.	Time of the death of the officer, &c.	Cause of death.	Time when the cause arose, occurred, or happened.	When granted.	Under what law granted.	Annual amount.	When expired.	If suspended, then when suspended, and the cause why suspended.
1	Catharine Badger....	June 18, 1821	Accidentally knock- ed overboard from the Franklin.	June 18, 1824	June 30, 1825	1817. March 3	\$114	June 19, 1829	
2	Eliza Cooper	July 12, 1822	Yellow fever.....	July, 1822	Oct. 15, 1825	54	July 13, 1827	Under law of 1823.
3	Anne Maria Clunet ..	Nov. 26, 1825	Shot by a marine....	Nov. 26, 1825	Dec. 28, 1826	54	June 1, 1831

[21ST CONGRESS.]

No. 394.

[1ST SESSION.]

ANNUAL REPORT OF THE SECRETARY OF THE NAVY, SHOWING THE CONDITION OF THE NAVY IN THE YEAR 1829.

COMMUNICATED WITH THE PRESIDENT'S MESSAGE OF DECEMBER 8, 1829.

NAVY DEPARTMENT, *December 1, 1829.**To the President of the United States:*

The Secretary of the Navy respectfully presents the following report:

The naval force of the United States, which has been kept in active service during the present year, has been composed of the different squadrons employed in cruising on the stations heretofore assigned them.

The squadron in the Mediterranean has been continued in that service, with the exception of the Delaware seventy-four gun ship, and the schooner Porpoise, which have been withdrawn, the latter having been represented by the commanding officer to require extensive repairs. The return of the Delaware was decided on under a belief that the present state of our political and commercial relations in the Mediterranean did not require the employment of a ship of this class in that sea; that all the necessary protection could be given to our commerce by frigates and smaller vessels; that these promised to be more efficient, in the pursuit and capture of such vessels as might be expected to assail it, and were less liable to suffer from the danger of the Mediterranean navigation. The Constellation frigate and the sloop Ontario were accordingly ordered to join the squadron; the former conveying to England and France the newly appointed ministers to those countries. Information has been received of the favorable execution of these duties. Our ministers have been landed at their respective points of destination; and these vessels, it is presumed, have, before this, assumed their stations in the Mediterranean squadron.

It is to be regretted that instances of insubordination have been manifested among the officers of this squadron. Courts-martial have been necessarily resorted to, and some of the refractory have been sentenced to temporary, and others to permanent dismissal from the service. It is gratifying, on the other hand, to know, from authority entitled to confidence, that the general conduct of the officers of this squadron has been such as to preserve, among the states and sovereignties on the Barbary coast, the favorable opinion of the American character which has been earned by the gallantry and honorable deportment of their predecessors.

The naval force under the command of Commodore Ridgley, and ordered to cruise on the West Indian station, consisted, in the early part of the year, of the sloops Falmouth, Hornet, Erie, and Natchez, and the schooners Grampus and Shark.

Several acts of piracy having been reported to have been committed in the month of February last, the Natchez, which had returned to the United States for repairs, was ordered to rejoin the squadron. After cruising a few weeks, and there being no reason to apprehend a recurrence of these depredations, she again returned to the United States, and has since sailed to Colombia, taking out Mr. Moore, the United States minister to that government, whence she was ordered to proceed to Rio Janeiro, to convey to the United States, Commodore Creighton, whose command had been transferred to Commodore Cassin. This vessel was also required to afford a passage to Mr. Harrison, the late minister to Colombia, on his return to the United States.

The recent invasion of the maritime frontier of the Mexican States by the forces of Spain having led to apprehensions that our commerce, in that quarter, might suffer by the encroachments which belligerents are so ready to make on neutral unprotected rights, the Peacock was equipped, and, taking out Commodore Elliott, to relieve Commodore Ridgley, was ordered to repair to the scene of these renewed hostilities. The Erie, which had also returned for repairs, sailed soon after to rejoin this squadron.

It is due to the late commander, Commodore Ridgley, to say, that, as far as the means had been afforded him, he has kept his little squadron employed with vigilance and activity; and, on a late occasion, this has been gallantly demonstrated at Tampico, in the firm and prompt course pursued by Master Commandant Norris in the rescue of the property of one of our countrymen from the grasp of unjust power.

For the last few months, except in the case just referred to, no information has been given to this Department of any new act of piracy or aggression on the commercial rights of the nation; but there can be no doubt that a relaxation, in the policy lately pursued, would be followed by an immediate repetition of these depredations.

The squadron on the coast of Brazil and Buenos Ayres has been maintained to its usual extent, and has been varied only by the interchange of relief ships for those which had performed the ordinary routine of duty. The presence of this squadron, small as it has been, has probably obtained for the commercial interests of our country a security which would not have been granted to defenceless merchantmen. Peace having taken place between these two nations, nothing is to be dreaded by our merchant ships from an interference with belligerent privileges. Yet many reasons forbid the diminution of our naval force on these coasts. The annually increasing commercial intercourse between the United States and these countries, calls upon the government to be prepared to multiply the means of its protection. Many complaints have been made by certain officers of this squadron against each other, of oppression on the one side, and of insubordination and neglect of duty on the other. The parties charging each other have been ordered to repair to the United States. Immediately after their return, a tribunal will be established to investigate these complaints, and to render justice alike to the aggressors and the aggrieved.

The squadron on the Pacific coast of South America consists of the frigate Guerriere, the sloop St. Louis, and the schooner Dolphin. No changes have been made in the *forces* of this squadron. Commodore Thompson has succeeded Commodore Jones in the command; and the Guerriere and St. Louis have taken the places of the Brandywine and Vincennes. Commodore Jones has returned to the United States in the former, and the latter, acting under orders from the late Executive, after touching at the Friendly and Sandwich Islands, will return by the way of the Cape of Good Hope. No information has been presented to the Department inducing a belief that an increase of this force is necessary; though doubtless good

policy forbids that any portion of it be withdrawn. Annexed is a statement, marked A, showing the disposition of the public vessels now in commission.

The report of the Commissioners of the Navy, which is herewith transmitted, marked B, furnishes a detailed statement of the number of ships-of-war in ordinary, their present condition, and the amount which will be required to fit them for service. These ships are represented to be in a state of premature and rapid decay, and, when the manner in which they have been disposed of at the stations is considered, this ceases to be a matter of surprise, how much soever it may be of regret. It has been the practice, when ships-of-war were to be laid up in ordinary, to place them under the general superintendence of the commandant of the yard, whose avocations have been so multiplied by the Department that he has but little time to devote to this duty. Thus, they remain exposed to the wasting agencies of the seasons, rain, and sunshine, and to all other causes which favor the decomposition of the materials of which they have been built. This sudden destruction of a fabric, upon the construction of which so much skill has been exercised, so much money expended, and upon the preservation of which so much of the commercial and national security depends, cannot but demand that immediate and effectual means be adopted to arrest its progress. The impolicy of cutting down the best timber in the country, and converting it into ships, which are to be subjected to this process of rapid destruction, would seem to be too glaring not to have been noticed, and too ruinously wasteful not to have been discontinued as soon as perceived. Within the last few years, the vessels which were in preparation on the stocks have been allowed to remain, under the protection of houses erected over them. In the report marked C, the Commissioners have offered suggestions as to the measures necessary for preventing the progress of an evil, which threatens to render abortive all the efforts of a nation for the establishment of an effective naval force. The attention of the President is respectfully invited to this branch of the concerns of the navy, as a matter of minor importance to no one which can be presented to his consideration.

In addition to the measures proposed by the Commissioners for the accomplishment of the objects to which their report refers, it is proper that some remarks be offered on points connected with this subject, and on which their opinions were not required to be expressed. It is believed that the true policy of the government will be to discontinue, for the present, the building of ships-of-war, unless for some specific object or immediate emergency; to provide for the thorough repair of the ships in ordinary; for the erection of the necessary sheds for their protection; and for the establishment of a police at each of the naval stations, to superintend and enforce the employment of the means recommended by the Board of Navy Commissioners for their preservation, and such other as the experience of the navy may have shown applicable to this purpose. To carry the latter objects into execution, an additional appropriation will be required; but their completion must result in an important saving in the naval expenditure, and would give to the nation, instead of the decaying fabrics of which the ships in ordinary now consist, a marine force which could be made to act promptly and efficiently for its defence.

The duty of preparing ships for service is, by the established regulations, committed to the commandants of the yards, whose great object seems to be to hurry the equipment, and to incur as little expense as possible. Thus their preparation is imperfect, and the nation has to encounter a considerable expense in foreign ports to obtain the requisite supplies and repairs. The materials for effecting these are sometimes not to be procured, and the ship, being through the whole crew in a crippled state, performs the service out and home at the risk of her loss, and perhaps that of her crew. Such a system, in peace, is hazardous; and in time of war, dangerous in the extreme. Some cases have been brought to the notice of the Department, in which ships ordered on voyages of two or three years have been so carelessly equipped, that the whole cruise might be said to be a series of dangers and escapes, and their safe return a matter rather to be wondered at than expected. In every instance in which it can be conveniently done, the officer who is to command should attend to the equipment of his ship for sea. No one is so much interested in the proper discharge of this duty; no one will perform it so well.

It has been usual to discharge seamen at some foreign port, whenever the period of their enlistment expired, or to pay the expenses of their return to the United States. Both these plans are objectionable; the first, because it often leaves the seaman a wanderer on a foreign shore, where he either must suffer from want, or go into the service of other nations; thereby diminishing the number of this useful body of men, or inflicting a heavy burden upon the funds provided for the support of the navy. To guard against both these inconveniences, the practice is proposed to be adopted, of making the cruises of the ships-of-war shorter than has been customary, and enlisting the crews for such a term as certainly to allow of their return to the United States before the expiration of the period of enlistment.

The navy yards established and now in operation in the United States are located at the following places: Portsmouth, New Hampshire, Brooklyn, New York, Pensacola, Boston, Philadelphia, Washington, and Norfolk. There is scarcely any part of the expenditure for the establishment of a navy which has contributed so much to exhaust the general fund intended for its support, as that which has been applied to objects connected with the building and maintaining of navy yards. It appears from the report made to Congress by the Secretary of the Navy, for 1828, that the permanent expenses under this head, including naval, ordinary, hospital, and civil, amount, annually, to \$268,744. The great expense incurred in the support of these numerous establishments, makes it proper to inquire whether it may not be materially diminished by a reduction of their number, without affecting, injuriously, other important interests of the navy. The opinion entertained by those most conversant with such subjects, seems to be, that the number now in operation is greater than the public service demands; that the reduction of them would effect an important diminution of expenditure; and that by concentrating the means and materials for building, repairing, &c., at two or three points most favorable for such purposes, it would tend greatly to promote the general objects of these establishments.

The Commissioners of the Navy Board were directed, on their late visit of inspection into the condition of the navy yards, to examine them with a view to this reduction of their number, and to ascertain, as far as practicable, whether there may not be selected, on the numerous bays and harbors of the United States, other sites, embracing greater facilities and advantages than those which have heretofore been employed for those objects.

The report made by the board, marked C, is herewith transmitted. It affords much interesting information on the points referred to them and connected therewith, and is especially entitled to commendation for the independence of its views on a subject which, from its effects on local interests, is calculated to excite local jealousy and opposition. The document is earnestly recommended to your consideration.

Various representations have been made to the Department, of the advantages offered by the harbors of the small keys in the Gulf of Mexico, called the "Dry Tortugas," as a naval rendezvous and depot of supplies. Should these representations be correct, and the harbor found susceptible of defence, the importance of the position would be equal to that of any other on our southern coasts. In the month of May last, Commodores Rodgers and Patterson were instructed to visit them, and make such general examination as would lead to a just estimate of their value and aptitude for the purposes contemplated. This service was performed by Commodore Rodgers—Commodore Patterson having unfortunately been prevented, by disease contracted on the journey, from joining in this examination.

The report made by Commodore Rodgers, marked D, is herewith transmitted. The result of his observations was so favorable as to justify a full and minute survey. Accordingly, Lieutenants Tattall and Gedney, experienced officers, and well qualified for this service, were ordered to repair to the point designated, and have, for some weeks, been engaged in the performance of this duty. Their return is daily expected; and, when the information obtained by them shall have been received, it will be duly presented to your notice.

The value of the live oak growing on the public lands, on the southern coasts of the United States, as a source of supply of the best timber for the purposes of the navy, has been long properly estimated by the public, and various laws have been enacted by Congress with a view to its preservation. This has been found to be a task of no ordinary difficulty. The great value of this material for the building of vessels of every description, and the high estimation in which it is held, make it an object of pillage to the unprincipled of all nations; and this is not likely to be restrained but by the adoption of measures more coercive in their character than those which have been hitherto employed. It has been the practice to rely on the vigilance of agents, distributed over different districts on the coasts. These agents have been required to guard the public interest, and to bring to justice such as should be found trespassing on its rights. Hitherto their efforts have been unsuccessful. In a few instances only have the agents been able to detect the depredators, or obtain restitution of the property. From the nature of the country in which this timber is found, it must often happen that agents on the land can afford but a very imperfect protection against these violators of the public rights. The whole coast presents a series of bays and creeks, readily accessible to such boats as can bring off the timber; while the adjacent district may consist of impervious forests, or morasses and swamps, which forbid the approach of a superintending force.

It is respectfully proposed that these agencies be discontinued, and that the protection of the public interest in this timber be confided to a marine force, adapted to the navigation of the bays and inlets on which it is produced.

Other important services might be rendered by the vessels employed on this duty. They might, if required, aid in the enforcement of the revenue laws, and, if competent officers were attached to them, afford facilities for the collection of materials for charts of these hitherto almost unexplored coasts.

Sundry testimonials have been presented to the Department (see copies and extracts marked E) showing that canvas, made of cotton, had been successfully employed in the merchant service of this and other countries, and partially in the navy; all favoring the presumption that this article might be advantageously used in the navy of the United States. It was determined, therefore, that some experiments should be made, to test the accuracy of these statements. The execution of this duty has, for the present, been committed to the superintendence of Commodore Elliott, and the experiments are now in progress.

Some trials will, also, be made of cordage prepared from this material.

It is, also, proposed to institute a course of experiments on the canvas and cordage made of American water-rotted hemp, which has been represented as possessing durability and strength at least equal to the same qualities of the imported article. The importance of being relieved from a dependence on foreign supply, for materials essential to the very existence of a navy, justifies a full and decided trial of the products of our own country.

The practice has, for some years past, prevailed in the Department, to make allowances, or extra compensation, to officers who have been required to perform services not strictly within the line of their professional duty.

It is presumed that this practice had its origin in the belief that the compensation allowed these officers was insufficient for their necessary support, and an inadequate return for their merits and services. Congress has not only yielded to, but indirectly sanctioned the procedure, by adopting estimates for the appropriations founded on these anticipated allowances; and the officers themselves now view it as a source of emolument, which ought not to be denied to them. This state of things is irregular and unequal in its operation, and not a little embarrassing to the officer having the administration of the Department. If the compensation now allowed by law is too small, it should be increased; but let it be fixed, and not left to be dispensed at the pleasure, or by the favoritism of any one.

The compensation now made to the officers of the higher grades in the navy, is probably far below what their distinguished talents and services entitle them to receive; and compared with the amount given to officers of the same, or correspondent rank in the army, is remarkable for its inequality and insufficiency. Annexed is an exhibit, marked F, of the relative rank of the two classes of officers, and of the amount of compensation made to each under the existing laws. It is difficult to understand on what principle of justice, or good policy, is founded this difference in the compensation made to officers in the same service, and of the same established rank. Is not the same eminent talent required for the command of a squadron as for the conduct of an army? An equal share of professional skill? Is the naval officer less exposed to personal danger? Is his responsibility lighter, or are his labors less arduous? Does he contribute less to guard the interest, or sustain the rights and honor of his country?

The establishment of schools for the instruction of the junior officers of the navy, in the various branches of science appertaining to their profession, has so often been recommended to the favorable consideration of Congress, and has so uniformly been passed by, without obtaining their sanction, that it is with reluctance the subject is again introduced to their notice. A firm belief, however, that its tendency would be to qualify them for a better discharge of the high trust which may, at some future day, devolve upon them, in their capacities of commanders, forms a sufficient motive for renewing the recommendation, and submitting some views on the subject, which have not been so much insisted on, and which may be entitled to consideration. It has been remarked by a naval officer of much experience and observation, that no inconvenience in the navy is more sensibly felt than the general ignorance, of the officers, of foreign languages. In addition to which, there is often great difficulty in procuring competent and proper

persons to act in our ships-of-war as interpreters and linguists; nor has any allowance ever been made by Congress for the pay and subsistence of such persons. The perplexities and disadvantages under which our officers are placed by these circumstances, may readily be conceived. They are brought in contact, during their cruises, with nations speaking different languages; subject to be drawn into correspondence with the authorities of different places; under the necessity, often, to board vessels of other nations for the purpose of examining their papers and documents; and often without the ability to understand their import and tendency. In time of war, valuable prizes are lost from an inability to translate their papers, and to detect covered property and simulated documents; unnecessary and illegal detentions of vessels are made, and consequent damages obtained from the government.

The schools which have been employed at New York and Norfolk, in the instruction of midshipmen in the elementary branches of mathematics, have been mere temporary arrangements made by the Department, and have never been fostered or recognized by law. Their introduction into use has not been effected by means very regular or direct, but they have been tolerated by government, having been found useful, notwithstanding the very limited range of instruction afforded by them. It is respectfully proposed that, until some better system can be matured, these schools be authorized by law; and that such appropriation be made for their extension and support, as will enable the young officers to acquire a knowledge of such foreign languages as may be important for them to possess in the future pursuit of their profession.

The laws relating to pursers in the navy are believed to be defective in some of their provisions. At present they do not provide a limitation to the periods of their continuance in office, nor for the renewal of their official bonds. Many advantages would probably result from their being appointed for stated periods, and made to renew their bonds, as is now required of navy agents, collectors of the customs, &c.

The mode of compensating them is not such as to lead to a correct discharge of their duties, nor such as is likely to advance the public interests. The profits of these officers arise principally from a percentage, which they are authorized to charge on the articles they sell to the crews of ships. A part of these is furnished from the stores of the government, and the remainder by an advance made to them, to be sold at their risk, and for their own advantage. The temptation to increase their profits by improper demands, upon a class of persons little qualified to detect imposition, may sometimes be difficult to be resisted, and ought not to be presented to them. When their dealings are conducted upon principles of the utmost fairness, the income of pursers, in ships of the largest class, amounts to two or three times the compensation of the commander—an extent of remuneration which their services cannot merit, and which is the more odious, when it is known to be drawn from the pockets of men, who, of all others in the employ of government, earn their scanty wages with the most unremitted toil, and incessant personal danger.

In lieu of their present emoluments, it is proposed that they receive an annual salary, varied according to the responsibility imposed on them, by having a larger or smaller amount of stock entrusted to their care, and the degree of labor required for its disposition and preservation. Under a system of regulations which would enable the seaman to obtain his little supplies of nautical comforts at rates fixed, known and moderate, and without dread of imposition, the naval service would acquire a popularity with them it has never enjoyed; and the present difficulty of recruiting seamen would be diminished to an extent important as to time and expenditure.

In conformity to an act of the last session of Congress, in relation to the Africans stranded on the coast of Florida, a vessel was chartered, and has sailed with them for Liberia, with the exception of two, who were unavoidably detained by sickness. They were placed under the direction of an agent and an assistant surgeon of the navy, with a liberal supply of hospital and other stores. An effort was made to send to their native country, by the same vessel, two Africans who had been introduced into Alabama, a few years since; but, so strong had their attachment become to this country, that they availed themselves of an opportunity, while preparing for the voyage, to make their escape; since which time they have not been recovered by the agent of the government. No cases of importation of this description of persons have come to the knowledge of the Department within the present year.

It may be proper to remark, that drafts have been lately presented by the agent at Liberia, for the purchase of munitions of war, to enable the colonists to defend themselves against the attacks of the neighboring tribes, with which they were threatened. These claims were rejected, on the ground that no law was known to exist which authorized their payment, or which justified any expenditure beyond a temporary support to the restored captives.

The present confused and unsettled condition of the fiscal concerns of the Navy Department, makes it proper that the subject be brought to the notice of Congress; since it is believed that their interposition alone can lead to an equitable and final adjustment. In the month of March last, when it was discovered that these derangements in the finances existed, reference was made to the Board of Navy Commissioners, for such explanations as they might be enabled to give. Their communication in reply accompanies this report, marked G. From a desire to present such minute and detailed information on this subject, as may be necessary for its proper illustration, the Fourth Auditor of the Treasury was requested by letter, (copy of which is annexed, marked H,) to report on the present condition of the accounts of his office, showing the probable origin of these embarrassments, and to suggest such measures as he might think necessary to correct the evil. His answer is annexed, marked I.

The vacancy created in the command of the Navy yard at Washington, by the death of the venerable and highly esteemed Commodore Tingey, in February last, has been supplied by the appointment of Commodore Isaac Hull. In April, this officer commenced the discharge of the duties of the station, and has since, by great industry and judicious arrangement, reduced the chaos of materials accumulated there to good order, and introduced a system of discipline and economy favorable to the general operations of the establishment.

The laws concerning the marine corps, and the act of 1800, establishing regulations for the government of the navy, are recommended for revision. The papers marked K and L, contain the estimates for the navy and marine corps; and those marked M, N, O, are lists of deaths, dismissals, and resignations.

The annual reports on the navy pension and hospital fund, &c., will be presented at the usual time.

The act of Congress, authorizing the establishment of the Board of Navy Commissioners, appears to have been designed to provide auxiliaries to the Secretary of the Navy, in the discharge of the ministerial duties of the Department. This body was required to be selected from amongst the most experienced of

the naval commanders; to whom, a knowledge of those duties was presumed to be familiar, and by whom they might be expected to be most correctly discharged.

The subjects placed under the superintendence of the board, by this distribution of the duties of the Department, are numerous, and of almost unlimited variety.

It may be justly questioned, whether the present organization of this body is such as to secure the necessary attention to the diversified subjects placed under its direction; and whether a judicious division of its duties would not facilitate the proper execution of the objects proposed by the institution of this branch of the Department.

Respectful reference is made to a communication from the Navy Board, in answer to inquiries having relation to this subject, herewith transmitted, marked P.

The present naval corps of the United States is believed to be more numerous than is required for the wants of the service; and more than can be advantageously employed, with reference to their own advancement in the knowledge and practice of their profession.

"There can be no national establishment," says a distinguished naval character, "like that of the navy of the United States, which will not, in the course of years, receive into its ranks some who are illy calculated to uphold its character, much less to contribute thereto by their talents and subordination.

"There may exist, also, some who, when received into the service, were calculated to become its ornaments, but who may, through various concurring causes, have degenerated into a reproach. Happily for this institution, the government retains in its hands the corrective for any defects in the corps.

"It is now twenty-eight years since a judicious pruning was given to the navy; a period sufficient to admit some useless suckers to repose under the shade of its virtues and its valor. The time would, therefore, seem to have arrived, to correct some of the evils of the service, by a peace establishment; and which it would go far to effect, by ridding it of the useless and insubordinate portion of its materials. The remainder would be preserved in more correct views of the service, and their management become more easy to the Executive Department."

If, in pruning these excrescences from the too luxuriant growth of the navy, some branches should be lopped off, which, in their day, have borne good fruit, let it be remembered that the navy pension fund, with its ample stores, is open for their sustenance and support; and, it may be added, that the navy asylum, on the Schuylkill, is now so near its completion as to promise, at an early day, to afford a permanent and comfortable residence to its disabled founders, and to such as, though not disabled, may have merited by their bravery, or long and faithful services, the gratitude of their country.

All which is respectfully submitted.

JOHN BRANCH.

Schedule of papers accompanying the report of the Secretary of the Navy, December 1, 1829.

- A. Statement of the United States vessels-of-war now in commission, their disposition, &c.
- B. Statement showing the present state and condition of the United States vessels-of-war on the stocks, and those in ordinary, and repairing at the several navy yards.
- C. Report of the Commissioners of the Navy, dated October 19, 1829, in answer to inquiries of the Secretary of the Navy.
- D. Report of Commodore John Rodgers, dated July 3, 1829.
- E. Copies of papers in relation to cotton canvas.
- F. Statement showing the relative rank, pay, &c., of officers of the army and navy.
- G. Report of the Commissioners of the Navy, dated March 31, 1829, respecting appropriations for the navy.
- H. Letter from the Secretary of the Navy, dated November 10, 1829, on the state of the accounts of the navy.
- I. Report of the Fourth Auditor of the Treasury in reply to the Secretary of the Navy.
- K. Estimates for the navy for the year 1830, and first quarter of 1831.
- L. Estimates for the marine corps for the same period.
- M. List of deaths in the navy since December 1, 1828.
- N. List of dismissals from the navy during same period.
- O. List of resignations in the navy during same period.
- P. Letter from the Secretary of the Navy, dated November 13, 1829, to the Commissioners of the Navy, and their reply, dated 23d of the same month.

A.

Statement of the United States vessels of war now in commission, their disposition, &c.

IN THE MEDITERRANEAN.

Delaware, 74 guns.....	Commodore W. M. Crane, sailed on the 19th February, 1828; ordered home.
Java, 44 guns.....	Commodore James Biddle, sailed on the 7th June, 1827.
Constellation, 36 guns.....	Captain A. S. Wadsworth, sailed on the 12th August, 1829.
Warren, 18 guns.....	Master Commandant Charles W. Skinner, sailed on the 22d February, 1827.
Lexington, 18 guns.....	Master Commandant Wm. M. Hunter, sailed 19th May, 1827.
Ontario, 18 guns.....	Master Commandant Thomas Holdup Stevens, sailed 21st August, 1829.
Fairfield, 18 guns.....	Master Commandant Foxhall A. Parker, sailed 20th August, 1828.

IN THE PACIFIC.

Guerriere, 44 guns.....	Commodore Charles C. B. Thompson, sailed 14th February, 1829.
Vincennes, 18 guns.....	Master Commandant Wm. B. Finch, sailed 31st August, 1826.
St. Louis, 18 guns.....	Master Commandant John D. Sloat, sailed 14th February, 1829.
Dolphin, 12 guns.....	Lieutenant Commandant John P. Zantzinger, sailed in 1821.

IN THE WEST INDIES.

Hornet, 18 guns.....	Master Commandant Otho Norris, sailed 5th February, 1829.
Erie, 18 guns.....	Master Commandant David Conner, sailed 2d November, 1829.
Peacock, 18 guns.....	Master Commandant Edward R. McCall, sailed 26th September, 1829.
Natchez, 18 guns.....	Master Commandant Alexander Claxton, sailed 9th July, 1829.
Falmouth, 18 guns.....	Master Commandant C. W. Morgan, sailed 20th January, 1828.
Grampus, 12 guns.....	Lieutenant Commandant Wm. K. Latimer, sailed 24th May, 1828.
Shark, 12 guns.....	Lieutenant Commandant Thomas T. Webb, sailed 5th November, 1828.

ON THE COAST OF BRAZIL.

Hudson, 44 guns.....	Commodore Stephen Cassin, sailed 27th September, 1828.
Vandalia, 18 guns.....	Master Commandant John Gallagher, sailed 16th December, 1828.

NAVY DEPARTMENT, *December 1, 1829.*

B.

Statement showing the present state and condition of the United States vessels-of-war now on the stocks, and those in ordinary and repairing, at the several navy yards.

PORTSMOUTH, NEW HAMPSHIRE.

Alabama—ship of the line. This ship requires thirty strakes of plank, on each side, to complete the carpenters' work of the hull. Masts and spars nearly finished. Progress has been made in finishing her inboard works. She can be prepared for sea in about three months.

Santee—frigate of the first class. This ship requires twenty-three strakes of plank, on each side, to complete the carpenters' work of the hull. Masts and spars complete, excepting a few spare spars. Progress has been made in her inboard works. She can be prepared for sea in about three months.

Concord—sloop of the first class. This ship is finished, and has her lower masts in. She can be ready for sea in ten days.

BOSTON.

Virginia—ship of the line. This ship can be prepared for sea in four months. Her hull is nearly complete. Progress has been made in her gun carriages, masts, spars, and inboard works. One suit of square-sails made. Tanks, ballast, cannon, and anchors provided.

Vermont—ship of the line. This ship can also be prepared for sea in four months. Her state and condition is nearly the same as the Virginia.

Cumberland—frigate of the first class. This ship is planked, inside and outside, to the spar deck sills, excepting a few strakes left out for the circulation of air. Orlop, berth, and gun decks nearly laid. Spar deck framed and kneed. Progress has been made in the masts and spars; one suit of square-sails made; boats partly built; tanks, cannon, ballast, and anchors provided. This ship can be completed in three months.

Columbus—ship of the line. The hull of this ship requires considerable repairs to fit her for use. Her bottom requires examination, and, perhaps, coppering: to be caulked throughout. She may be equipped for sea in seventy-five days.

Independence—ship of the line. The frame of this ship is believed to be sound, but she will require new decks, outside plank, galleries, head, and part of inside plank, new spars, caulking, and coppering.

Constitution—frigate of the first class. The frame, generally, is believed to be sound; but she requires new outside plank, from the wales, inclusive, to the rail, new ceiling in the hold, new berth and orlop decks, beams, and knees, spar deck plank, galleries, head, caulking and coppering.

NEW YORK.

Sabine—frigate of the first class. Is nearly complete in her hull; masts and spars made; joiners' work ready for putting up. It will require four months to complete this ship.

Savannah—frigate of the first class. Is nearly complete in her hull; masts and spars nearly finished; joiners' work ready for putting up. It will require four months to complete this ship.

Ohio—ship of the line. The outside plank of this ship, from the water to the rail, and part of the inside plank, are decayed. She requires considerable repairs. It will take five months to repair this ship.

Washington—ship of the line. A part of the frame of this ship, being white oak, is decayed. The

outside plank, from the water to the rail, and nearly all the inside plank, are decayed. She will require caulking throughout, and coppering. Six months will be required to repair this ship.

Franklin—ship of the line. The plank on this ship is nearly in the same state as that on the *Washington*. She will require caulking throughout, and coppering. Five months will be required to repair this ship.

United States—frigate of the first class. Part of the ceiling, orlop deck beams, knees, and wales, are decayed. She requires caulking, and her copper to be repaired; masts and spars defective. Seventy days will be required to repair this ship.

Boston—sloop-of-war of the first class. Some decay has been discovered in the wales of this ship; she requires caulking, and to have the copper examined. Thirty days will be required to repair this ship.

PHILADELPHIA.

Pennsylvania—ship of the line. This ship is planked to the spar deck port sill, excepting a few strakes left out for air. The orlop, lower, and middle gun decks are laid; the upper gun deck and spar decks are partly laid. The laying of the decks, planking between the spar deck ports, building the head and galleries, making the port shutters and rudder, is the principal work to be done, excepting the caulking and coppering. This ship may be launched in six months.

Raritan—frigate of the first class. The hull of this ship is nearly completed; the head, galleries, port shutters, and rudder, is the principal work now to be done, excepting caulking and coppering. She may be launched in three months.

Cyane—sloop-of-war. This ship requires heavy repairs, inside and outside.

Sea Gull—receiving ship. In good order.

WASHINGTON.

Potomac—frigate of the first class. This ship is complete in her hull, masts, and spars; gun carriages and boats nearly complete. Some decay has been discovered in the wales of this ship, and it may be necessary to renew a part of them. Can be fitted out for sea in three months.

Columbia—frigate of the first class. This ship has fourteen strakes of plank on each side; orlop and berth decks laid, and gun deck partly laid.

NORFOLK.

New York—ship of the line. To complete the hull of this ship, several strakes of plank, in each of the decks and bottom, are required. In all the other departments of her construction and outfit, progress has been made. She may be prepared for launching in three months.

St. Lawrence—frigate of the first class. Has her gun deck beams in, wales on, and other plank. She may be launched in four months.

North Carolina—ship of the line. A part of the outside plank of this ship, and decks, are decayed. She will require repairs, and to have her copper examined.

John Adams.—Is now stripped for repair, and some progress has been made in the preparation of materials.

Macedonian—frigate of the second class. This ship requires a thorough and extensive repair.

Congress—frigate of the second class. This ship is so far completed in her repairs, that she may be sent to sea in fifty days.

C.

NAVY COMMISSIONERS' OFFICE, *October 19, 1829.*

SIR: The Commissioners of the Navy have given to the subjects to which, by your letter of the 13th ult., you were pleased to direct their inquiries, all the attention and consideration which their limited opportunity and time admitted, and they now respectfully submit the result.

The plans of the several navy yards indicate the improvements made in each, consisting of officers' quarters, store houses, ship houses, blacksmiths' shops, timber sheds, timber docks, spar sheds, boat sheds, &c., with the dry docks in progress at Norfolk and at Boston; and the paper A will show the number and description of ships in ordinary, and the state and condition of each.

The query, as to the number of navy yards now established and in operation, is one of such importance as to command the most earnest attention and investigation. The commissioners are fully sensible that its discussion may excite strong local feeling, and they are aware of the responsibility of any opinion they may express upon the subject; but, referring exclusively to the unbiassed dictates of their judgment in the performance of an important official duty, and claiming the indulgence which a liberal community will not fail to extend to honest efforts, looking solely to the advancement of the public good, they approach the question with a confidence proportioned to the sincerity of their convictions.

"Is not the number of navy yards greater than is consistent either with economy or the wants of the service?"

To maintain any one yard beyond the number necessary for building and equipping our ships with the utmost dispatch, can, in no view, be considered as consistent either with economy or the wants of the service.

It is obvious that the greater the number of navy yards, the greater must necessarily be the expense. A yard used for general purposes, that is, for building, repairing, equipping and victualling a navy, requires nearly a full set of officers to superintend it, although it may be only occasionally used for such purposes. The principle of accountability in each yard being necessarily the same, the same system of checks must be maintained, whether the amount of expenditure be large or otherwise. In yards not constantly used for general purposes, some of the subaltern officers might probably be dispensed with, but not in sufficient number to affect materially the aggregate amount of expenses, if we keep in view the preservation of system.

Were we to disregard economy, plausible reasons might be assigned even for an increased number

of yards. It might be urged that multiplying their number would multiply the chances of reaching one of them in cases of emergency, such as distress in storms or disasters in battle; but when we look to the localities of our present yards, there are but few of them that can claim a decided preference, even in this, the most favorable, but certainly fallacious, view of the subject. The harbor of Boston can be entered only when the wind shall happen to be fair; its snow storms in winter, its fogs in spring and fall, present serious and frequently insuperable difficulties. The same objections apply with considerable force to Portsmouth, N. H. New York, Philadelphia, and Pensacola, are all objectionable, as neither of them is easily accessible, and the two latter cannot be entered by ships of great draft, even at high water.

If the number of navy yards were confined to the number necessary for the service, in peace or in war, many advantages would result. The expenses would be reduced, and efficiency greatly promoted; system and uniformity might be more easily preserved, and the accountability of those having the direction rendered more certain and precise. By reducing the number of yards more work would necessarily have to be done at each. This would enable the government to concentrate artificers, ship carpenters, and other necessary mechanics, and give them constant employment, and the government would have it in its power to select and retain in its service the most valuable, at fixed and moderate wages. We should escape the inconveniences to which we are now exposed, by employing mechanics at so many different points to execute the public works, and discharging them when such works are done. This state of things not only compels us frequently to pay high wages, but to accept the services of inferior men; those possessing the most skill become discontented when discharged, and will never return unless from necessity. By having few yards, and those judiciously arranged, and provided with the necessary conveniences, much might be gained in the amount of daily labor performed. Ship carpenters and other mechanics, working under cover, can not only do more work per day, but lose no time from rainy or other inclement weather—a consideration important to the government, and calculated to render employment in its service an object of competition with the best men. While no time would be lost when working under cover, without a cover it is believed that, for six months of the year, the work per week would not average more than $4\frac{1}{2}$ days, thus occasioning a loss of one-fourth of the time, to save which mechanics would readily agree to probably ten per cent. less wages; while a ship built under cover is worth, probably, twenty-five per cent. more than when built in the open air, constantly exposed to sun and rain.

It would be difficult to estimate fully the value of chosen bodies of mechanics, selected for their skill and industry, and prepared with every necessary convenience, faithfully to execute the public works in the best manner and in the shortest time. In peace, economy would be greatly promoted; in war, the highest interests of our country would be subserved.

Among other considerations claiming attention it may be observed that, by reducing the number of navy yards, many materials suitable for the construction of small vessels would, in the building of large ships, be saved. In the present state of things such materials are distributed among so many yards that the expense and difficulty of collecting them at any one point frequently exceed their value.

Viewing this question, then, in reference to the expense and to the efficiency of our naval establishment, the Commissioners are decidedly of the opinion that the present number of navy yards is "greater than is consistent either with economy or the wants of the service."

The question here arises, what number of navy yards does the navy, viewed in its present and probable future state, require, to secure to it all the advantages and facilities necessary to render it in the highest degree efficient?

To form a satisfactory opinion upon this important point, we must look to our seaboard and consider well the localities of our harbors. It will be found that, although numerous, there are but few of them which can be safely entered by ships of the line, or even large frigates; and surely it will be conceded that none other should be selected as a general rendezvous for our navy.

Our maritime frontier presents two prominent positions, of which a skillful invading enemy would endeavor to gain possession, as enabling him more effectually than any other to harass our coasting and foreign trade, and cut off our internal communication by water, while they would also enable him, with but a small military force, comparatively, to compel us to maintain more than ten times his number of troops to protect points in the very heart of our country which he might be continually threatening, although he might never seriously design to attack. These positions are precisely those which we should most vigilantly preserve from his grasp. The very reasons which render them objects of great interest to him, render them doubly important to us. If he, possessing them, could thus seriously annoy us, we, having them in possession, could then most effectually protect our line of coast, and assail him, should he attempt a blockade. An enemy, excluded from these positions, can nowhere upon our coast find more than temporary shelter for his ships. It is, indeed, confidently believed that, if we had these two points well secured, (and we surely possess amply the means of rendering them so) the inducements to maintain a squadron upon our coast would be so diminished, the difficulties, inconveniences, and hazards would be so numerous and so serious, that an enemy, even one physically and numerically our superior in force of ships; would find it his interest to avoid such an attempt.

The history of our revolutionary war, and our experience during the last war with Great Britain, indicate these two positions too clearly for them to be mistaken. Our past sufferings admonish us that the Chesapeake Bay and the waters near Rhode Island are our most vulnerable points; but while this is admitted, there is great satisfaction in the reflection that they are known to be susceptible of perfect defence; and, from their relative positions to each other, their accessibility at all times to ships of the greatest draft of water, and their greater range of anchoring grounds than are afforded by any other harbors in our whole line of coast, they form, in the opinion of the Commissioners, the two most important and desirable points for the general rendezvous of our navy, in peace as well as in war; and these, they think, would, in every view, be the most judicious locations for our chief naval depots.

The central position, the mildness and salubrity of the climate, the facilities of ingress and egress, and the almost inexhaustible supplies of ship timber afforded by the Chesapeake and its tributary streams, render it superior to any other place on our whole line of coast for a great naval station and depot; and next in the order of importance, for such purposes, is Newport, Rhode Island, or some other spot in Narraganset Bay.

Aside of all the considerations which recommend these as the most important positions for naval depots and stations, in reference to the local advantages and facilities they afford for the rendezvous of

ships, there are other views which strike our minds with increased force and interest, and conduct us to similar conclusions.

Let us, sir, for a moment, contemplate a state of war, and suppose these to be the general rendezvous of our guarda costa, consisting of the line-of-battle ships, aided by steam batteries. These, co-operating with the permanent fortifications now in progress, would place these points in a state of security, and enable us to protect extensively, if not effectually, our inland and coasting trade, and to render invasion difficult and hazardous at any point, and probably impracticable at most; while our frigates, sloops-of-war, and smaller vessels sailing thence, as they would be able to do at all times, and returning, as they might, in all winds, would annoy the commerce of the enemy in distant seas, even on his own coasts and at the mouths of his harbors; to protect which he would necessarily be obliged to draw the larger part of his force from our coast (if stationed there.) We might thus compel him to act on the defensive, while the chances of our merchant and other vessels returning safely into port would be greatly increased. The importance of a navy does not depend so much upon the number of ships, as upon their size and efficiency, and a judicious disposition of them, in reference to our own protection and the annoyance of an enemy to the greatest possible extent.

In time of peace our ships, particularly those of the line and frigates, ought to be laid up in situations where they could most easily be united, and their services most readily commanded, in defensive operations against an enemy coming suddenly upon our coast, and bringing with him, as it might happen, the first intelligence of his having declared war against us. In this view of the subject the two positions referred to again present themselves as being more desirable than any other for the rendezvous of our navy between the Chesapeake and Newport; each being so accessible, so easy of egress and ingress, that a junction of forces, stationed at them, might generally, if not all times, be effected in less than forty hours. This is an advantage of vast importance, not possessed by any other two posts fit for the rendezvous of our ships-of-war on our whole maritime frontier. Between Boston and the Chesapeake, to form such a conjunction under ordinary circumstances, it might take ten days, or even a longer time; but, with adverse winds and other causes not unlikely to occur, the detention would be incalculable; for, so long as they should continue, a ship-of-war might not be able to get out of the harbor of Boston.

But we have incurred great expense in establishing other yards, and what shall be done with them?

At Boston, the buildings and improvements are highly valuable, and the dock now in progress at that yard makes it desirable that it should be retained as an auxiliary establishment. Its dense and active population, its numerous artificers and mechanics, and other resources it affords, give it facilities in the building and repairing of ships. It is understood that a canal is in contemplation between Massachusetts Bay and the waters of Rhode Island; and should this work be completed upon a scale sufficiently extensive to admit the passage of steam batteries and sloops-of-war, it would become highly important as presenting the means of affording additional protection to our whole line of coast east of Cape Cod and Nantucket South shoal, by a direct, safe, and speedy communication between Boston and Newport; while merchant vessels bound to Boston would often, particularly in time of war, avail themselves of this channel to reach their destined port. For our ships rendezvousing at or near Newport, Boston might thus be relied upon as furnishing many of the necessary supplies that may be required, either during peace or war.

As has heretofore been observed, Portsmouth, N. H., is liable to particular objection; and its remote position, and Boston intervening, deprive it of any advantages it might otherwise possess as an auxiliary establishment. New York, Philadelphia, and Pensacola are neither of them easily accessible; the two latter cannot be entered by ships of great draft of water at any time.

The yard at Washington has been established at great expense; it possesses factories of chain cables, anchors, cambooses, blocks, castings, and laboratory stores generally; and advantages attach to these valuable factories being conducted under the immediate eye of government; and although, like Philadelphia, it does not afford a sufficient depth of water to admit the passage of ships of heavy draft, with their guns and stores on board, yet still, considering its connection with the Chesapeake Bay, and the facility with which the hulls of ships of the largest class may be towed to Hampton Roads or Norfolk, by common steamboats, it will be seen that it is not destitute of advantages, even as a building yard, if viewed in the light of an auxiliary to a larger and more important establishment in the lower waters of the Chesapeake.

Upon the whole, with respect to the number of yards, viewing the question in all its aspects, the Commissioners of the Navy, with great deference, submit the opinion, that with the exception of the yards at Boston, Washington, and Norfolk, and another near the Gulf of Mexico, (principally as a place for the deposit of stores) all of our other yards might, in the course of a few years, (allowing time to remove the ships, &c.) be dispensed with, without injury to the naval service, provided an establishment be made near Newport, R. I.; that the places of general rendezvous, in peace and in war, should be the Chesapeake Bay and the waters at or near Newport; that the yard at Washington should be retained as an auxiliary to the one, and that at Boston as an auxiliary to the other. And the opinion is confidently entertained that economy and efficiency would be greatly promoted by such an arrangement.

As to the most advisable position near Newport, a satisfactory judgment cannot be formed until a thorough and minute examination shall have been made. It is known that there are several suitable places, but it is not known which is entitled to a preference.

With regard to "the preservation of ships in ordinary from the injuries arising from climate," much has been said and written by men of practical information, and many theories still exist upon the subject. It is believed, however, that the climate from the Chesapeake eastward, does not differ so much as to affect materially the preservation of ships at any one of our yards more than another; that, if a ship be originally built of the best materials, and be in sound condition and well caulked, when placed in ordinary, she may, by excluding the sun and rain, keeping her thoroughly clean, dry, and well ventilated, and winding her occasionally, be preserved in that state in either of the yards. The great cause of early decay in our ships is confidently believed to be, in their having been planked with timber, sometimes cut in the wrong season, (although always endeavored to be guarded against in the contracts) most generally not well seasoned, and not unfrequently to the union of both causes. The frames being of live oak, may almost be considered as imperishable.

These observations apply to all ships placed in ordinary, whether they have been in actual service or not prior to their being placed there. While in actual service, it is found that ships do not decay as rapidly as they do when lying in ordinary unprotected from the weather; but if protected in the way

above suggested, they may be preserved much longer in ordinary than while in service at sea, as they are not subject to the wear and tear, and vicissitudes of climate, which vessels in service are exposed to. It would be a difficult task indeed to "estimate the losses sustained under the present system of management, with reference to the quality and condition of the materials used in the construction of our ships." From necessity, ever since the creation of our navy, we have been compelled to use, to a great extent, unseasoned timber in the construction and repair of our ships; hence immense expenditures and great loss of time (invaluable in war) arising from the necessity of frequently repairing them.

The remedy for this evil consists in providing extensive supplies of ship timber, and placing it in a state to be well seasoned before it shall be used, and by never using, either in the construction or repairs of our ships, timber that shall not be perfectly seasoned. The Commissioners earnestly recommend this subject to your consideration; and they would also respectfully recommend that our vessels in ordinary be all placed in the state previously indicated as necessary to preserve them from decay. They cannot be so preserved without being well protected by close coverings or roofs over them. It was, indeed, hoped that this point, often heretofore urged, would have so far claimed the favorable attention of Congress as to have induced that honorable body to have made the necessary appropriations.

It may be proper here to submit the result of our observations and inquiries with respect to the modes of seasoning ship timber. As to the best methods, many opinions exist, and it is yet an unsettled point among the most experienced and intelligent. Weighing all these opinions, and referring to our own past experience, we incline to the conclusion that the following would be found as effectual, if not more so, than any other that could be adopted, viz:

Live oak timber. Let it be immersed in water for twelve months, then taken up and placed under cover to protect it against the sun, rain, and high winds; its immersion is recommended by the fact, that it renders it less liable to split or rent.

White oak timber. Let it be docked about eighteen months in fresh, or two years in salt water, then taken up and sawed into such sizes as may be required, then placed under cover for two or three years, when it will be fit for use.

Yellow pine. Let it be docked for about twelve months, then taken up and sawed to proper sizes for use, then placed under cover for about two years.

Mast timber. Let it be immersed in water and covered in mud, and continued in that state until it shall be required for use.

All timber ought to be cut, if practicable, when the greatest portion of the sap is arrested in its circulation, (say from the first of November to the last of February,) and after being immersed in water, ought never to be taken out at any other season than early in the spring, if to be avoided, and it should then, as early as may be practicable, after being sawed or reduced to proper sizes required in ship building, be put under sheds so constructed as to admit a free circulation of air, but at the same time to shield it from too much exposure to the sun and strong currents of air. It is believed, if the timber used in the construction of our ships was to undergo a process like this, that their durability would be increased twofold.

The Commissioners entertain no doubt that much loss has been sustained by "launching ships before they are required for service." On the stocks, well protected, a ship can be preserved almost without expense for a great number of years—probably as long as the furniture of a house, particularly if built of the best materials and properly ventilated.

Launched, and not protected *while building* by a house or other covering from the weather, as has, from necessity, been the case with many of our ships, and *continuing unprotected*, their decay soon commences and becomes destructive, particularly in their planking.

As to the effect of different kinds of water upon copper on ships lying in ordinary, salt water is, doubtless, more corrosive than fresh. In fresh water, where there is not a strong current, such copper as is used for our ships (32 oz.) would probably last twenty to twenty-five years. In salt water the effects upon copper, depending probably upon the degree of saltness, differ at different places. The bottoms of our ships, in some situations, soon become barnacled, and even muscles and oysters attach themselves to the copper and prove very injurious. In other situations, when the water is only a little brackish, a crust is formed on the external surface of the copper, which some suppose protects the interior copper, and it may do so in a small degree. But the fact admitted, that copper can be preserved longer in fresh than in salt water, still the contrary is, no doubt, the case with regard to the timber of ships, which is universally believed to be more durable in salt than in fresh water; and this is a far more important material than copper in the construction of our ships, whether we refer to the cost or the difficulty of providing it.

Suitable copper may be readily obtained at all times and seasons; but it requires years to procure suitable ship timber. And it may be remarked, as worthy of consideration, that the water is salt in all of our harbors in any way calculated as rendezvous for our navy.

I have the honor to be, with great respect, sir, your obedient servant,

JOHN RODGERS.

Hon. JOHN BRANCH, *Secretary of the Navy.*

D.

WASHINGTON, July 3, 1829.

SIR: I have the honor to inform you that, in compliance with your instructions of the 6th of April last, I left this city on the 12th of the same month, accompanied by Commodore Patterson, L. Baldwin, Esq., civil engineer, and Mr. George Baldwin, his assistant, but that, owing to unavoidable delays in descending the Ohio and Mississippi rivers, and seven days' detention at New Orleans, we were prevented from reaching Pensacola until the 14th of June.

Commodore Patterson was unfortunately taken ill on our passage down the Ohio, and such became his prostration of strength, occasioned by the severity of his disease, said to be inflammatory rheumatism, that, by the time we arrived at New Orleans, all hopes of a speedy recovery, likely to enable him to accompany us further, had entirely vanished. The untoward event, I can assure you, sir, occasioned me much pain and regret, as well on account of his own sufferings, and those, too, under circumstances of

the most aggravated character, as that it deprived me of the many advantages I had promised myself to derive from his advice and assistance.

Arriving at Pensacola, as before mentioned, and having made the necessary preliminary arrangements, our operations were commenced the next day: the engineers, on an examination and survey of the navy yard and adjacent waters, in reference to their suitability for the erection of wharves and the construction of a marine railway for the repairs of sloops-of-war and smaller vessels; whilst, at the same time, my own attention was directed to a general examination of the whole establishment with regard to its police, its expenditures, the number, size, and character of its buildings, and other improvements, &c.; and I now have the honor of submitting to you, for the consideration of the President, a report upon those and upon all other matters to which your letter of instructions directed my attention.

Plan No. 1 will, on examination, be found to contain a correct and minute delineation of the Pensacola Navy yard, with all the improvements which have been made therein up to this time, showing the depth of water at different distances from the shore, including the number and description of houses, and every other appendage now belonging to that establishment. But before venturing further on the subject of additional improvements, I would respectfully suggest to the President and yourself the propriety of entering more fully than seems to have been hitherto done, into an investigation and analysis of the geographical position, in regard to the protection of our commerce and the suppression of piracy in the Gulf of Mexico and the West Indies: bearing in mind the small depth of water on *Pensacola bar* (22 feet 6 inches at high water), the difficulty of ingress and egress at all times: the sterility of the soil in the vicinity of the yard and for forty miles in every direction; the impossibility of preserving salted provisions and bread for any great length of time; and more particularly the high prices of labor and provisions, and the uncertainty and difficulty of obtaining mechanics and laborers from time to time, as the exigencies and nature of the service to be performed may render expedient. These circumstances being considered, and their consequences duly weighed and understood, lead to the conclusion that the President and yourself will, on a closer examination of the subject, perceive that Pensacola, as a naval station, neither possesses by nature nor can be made by artificial means to supply, in an essential degree, any of the requisites called for in an establishment, the object of which is to afford succor and give efficiency to the operations of a naval force, such as it would be found necessary to employ in giving anything like efficient protection to so important and extensive a commerce as is constantly to be found passing to and from the Gulf of Mexico and adjacent seas, from every part of our extensive seaboard, from the Mississippi to Maine.

Whether the view I have taken of this subject, in relation to the obstacles attendant on Pensacola being made a principal naval station, even admitting it to be intended only for the security and protection of the immense amount of commercial products to which the Ohio, the Mississippi, the Missouri, and their almost numberless tributary streams are constantly giving vent, has anything of correctness in it, no person is better capable of deciding than the President himself: for, in addition to his ability to understand the subject fully in all its relations, he is known to be familiarly acquainted with the position, properties, and localities of the country to which the preceding remarks are intended to have reference.

In addition to the plan No. 1, herewith handed you, I shall, in a few days, receive from Mr. Baldwin, another plan of the navy yard; such as will serve as a guide in the direction and application of all future expenditures in the erection of quarters for officers, warehouses, blacksmiths' shops, timber sheds, sail lofts, rigging lofts, joiners' shops, and wharves; also, a report on the practicability and cost of constructing a marine railway, suitable for the repair of sloops-of-war and other vessels. These, when received, I shall also have the honor to lay before you.

With respect to the most eligible site that could be found for the erection of a naval hospital, at a convenient distance from the navy yard, permit me to refer you to paper B, of which the following is a copy:

B.

The undersigned, with the advice and assistance of L. Baldwin, Esq., civil engineer, examined the lands in the neighborhood of the Pensacola Navy yard, with a view, in conformity with your instructions, to the selection of a suitable site for the erection of a naval hospital, and has the honor to report that—whatever kind of building it may be deemed expedient to construct for this purpose, between the village of Barrancas and the navy yard, distant from the former a little more than a fourth, and from the latter about half a mile—a suitable spot, on land already belonging to the government, for the location of such establishment, is to be found, containing nearly, if not all the advantages most desirable in such an institution, viz:

1. The site herein recommended is such as to ensure to it complete protection from two forts, intended to be erected to the eastward of it, one of which is already commenced; the other, preparations are making to commence; the first, on the west end of Santa Rosa Island; the other, on an eminence in advance of the Barrancas.

2. It has the advantage of easier access than any other place, by land as well as by water; not only with the navy yard, but with the shipping in the harbor.

3. It stands on a high, airy, and commanding position; affordin a fine view of Pensacola Bay, and of the sea, to the utmost extent of human vision.

4. It lies within forty yards of a never-failing spring of as good water as any to be found in the neighborhood.

5. It is situated in the midst of an extensive grove of young thrifty live oaks, pine, black oak, magnolia, and red bay trees.

6. Being upon the highest part of a hammock, the land, although not rich, may be made, with but little labor and expense, to produce vegetables in as great abundance as any other spot in the vicinity.

It is believed that a frame building, the cost of which not exceeding \$8,000, would be found amply sufficient for the accommodation and comfort of any number of officers, seamen, and marines, that our squadron, cruising in the West Indies, would ever find it necessary to send to an establishment of this kind. Such a building, if constructed of good materials, would last, it is thought, twenty-five or thirty years, without further expense than occasionally a coat of paint, and such trifling repairs as the invalids of the institution could, from time to time, be able to make.

The site recommended has already on it the sills of a building; the dimensions of which, and the cost of completing it, you will find described on paper H. This building, if completed, would, it is thought, answer sufficiently well for the present.

Upon the subject of the land sold to the Navy Department by Colonel Joseph M. White, on his own account, and as agent for Judge Henry M. Brackenridge, and for Francisco and Ferdinando Morino, I spent five days in examining the four tracts. The two first consist of 1,600 arpents: 1,200, the property of Col. White, cost the Department \$2,700; 400, belonging to Judge Brackenridge, cost \$2,200. These two tracts are bounded on the south by Santa Rosa Sound, and on the east and west by lands belonging to the United States; the eastern boundary of the first (1,200 arpents) being six, and the last (400) about four miles distant from the extreme end of Deer Point.

On the tract purchased of Judge Brackenridge, (see plat No.—) I should suppose, from the best examination I was enabled to make, that one-fourth of the whole may be considered what is commonly denominated hammock land—the soil from twelve to eighteen inches deep, consisting of decomposed vegetable substances and oyster shells, intermixed with the fine white sand, forming by nature so large a portion of the soil of Florida, particularly that part bordering on the Gulf of Mexico. On one part of these hammocks, one hundred or more live oak trees, of large growth, are to be seen, and on the other, large stumps of the same tree are found; thus furnishing, if not conclusive, strong presumptive evidence that a soil that had once given growth to such timber, might, with care and proper management, be made to produce it again; if not by transplanting young and thrifty trees, at least by sowing acorns taken from trees of large growth while in a sound healthy state. On the adjoining 1,200 arpents, purchased of Colonel White, (see plat No. —) I am led to believe, taking the whole together, that not more than one-sixth part can properly be called hammock lands; this, particularly the hammock land, is similar in quality to that purchased of Judge Brackenridge; and from the number of large stumps to be met with, it is inferred that large live oak trees had once grown on it. At present, however, it has but few, if any, of this description, although it contained several thousand young trees, twelve to twenty and twenty-five feet in height, and two, three, and four inches in diameter. The timber on the easternmost part of this tract consists principally of a stunted growth of pitch pine, intermixed with scrub, black jack, and water oaks.

The improvements on the two tracts are as follows: On that purchased of Judge Brackenridge, a frame dwelling, one story high, (not plastered) containing two large, and four small rooms, with a large passage running through the centre, having a portico in front and another in the rear of the house; a log kitchen, a stable, and other small out-houses; two gardens—the large one having in it several hundred small orange and peach trees; the other, used principally as a vegetable garden, has some small fruit trees and shrubbery. In addition to these, there are two new rough log buildings, sufficiently capacious to accommodate twenty negroes. On the tract purchased of Colonel White, there are no improvements, other than the remains of two small log buildings, said to have been built by General Call.

At the time I visited these lands, there were twenty hands employed in cutting down, and clearing out from among the young live oaks, all the undergrowth and other trees, such as white bay, black jack, scrub, black and water oaks, magnolia, &c.; and, in this way, it was judged by Mr. Davis, the overseer, who accompanied me, that nearly or quite 200 arpents had already been cleared; in addition to two avenues in a north and south direction, and another in the centre, running east and west, that had been cut through the woods to give free circulation to the air, and prevent injurious effects from fires, such as these lands had previously been subjected to from Indian hunters and others. On the lands thus cleared, the overseer assured me that there were now growing 173 full grown trees; 426 of six inches and over in diameter; 11,635 between two and six inches; and 9,965 of two inches and under; making in the whole 22,202, which he had already counted.

From the limited examination I was enabled to make of these lands, it is impossible for me to say with precision how many acres had been cleared, or how many live oak trees they contained; but from what I did observe, (and my whole attention was given to the subject,) I am strongly inclined to believe that the overseer's statement is nearly if not quite correct.

Colonel White I found was at Tallahassee, and as it would have required twenty days for a letter to reach him by due course of mail, I was under the necessity of giving up the expectation of seeing him before my departure; and Judge Brackenridge having left Pensacola for Philadelphia before my arrival, precluded my obtaining from him an account of the expense that had already been incurred, or of the sums necessary to satisfy existing claims against the lands, for the improvement of which he had been appointed the superintendent.

I now come to the two tracts, one consisting of 1,250 arpents, purchased of Colonel White for the sum of \$2,361.11; the other of 800 arpents, purchased through him, as the agent of Francisco and Ferdinando Morino, for the sum of \$3,000. In the examination of these lands I spent two days, and was assisted in my researches by Captain Woolsey of the navy, and a respectable Spaniard, a native of the village of Barrancas, named Cummings or Cummin.

The 1,250 arpents (see plat No. —), are bounded on the north by the Grand Bayou, south by the Grand Lagoon, east by the Gulf of Mexico. On this tract, which lies about three miles west of the Barrancas, there is a large hammock of about 150 arpents, that contains some large live oaks, and a considerable number of others of recent growth, from three to six inches in diameter, intermixed with pitch pine, red bay, black oak, magnolia, and other trees of a small size. This hammock does not appear to differ in the quality of its soil from those inspected on Santa Rosa Sound; and from what I was able to observe by passing around it and into it in two places, as far as the undergrowth would permit me to penetrate, I am led to believe that the number of arpents of hammock it was said to contain does not differ essentially from what has been stated. The remainder of this tract consists of one-third, perhaps, of impenetrable swamp, covered with juniper, white bay, and other trees peculiar to such land; the remaining two-thirds of sand, in most places thinly covered by pitch pine, none of which are large enough for spars.

The tract of 800 arpents is bounded on the north by the Grand Bayou, on the west by the village of Barrancas, and on the east by the navy yard. This tract has on it two hammocks, one containing perhaps thirty-five or forty, the other twenty or twenty-five arpents; but although it has, like the other hammocks, a large number of small live oak trees, and some large stumps of the same kind of timber, I saw none of large growth. The soil, like all the rest, is generally very sandy, and unfit for cultivation. It is, however, pretty well clothed with small trees, such as pine, red bay, black jack, water oak, and other wood suitable for fuel. Its chief value consists in its vicinity to the Great Bayou—the number of springs of good water it supplies, and the fine elevated prospect that part bordering on the Bay of Pensacola affords of the sea. It is on this ground that the erection of a hospital is recommended, should one be thought expedient.

On my return from Pensacola in the Erie, sloop-of-war, (which ship, owing to the bad state and condition of her bottom and standing rigging, it was deemed advisable to send to the United States for repairs) I called at the *Dry Tortugas*, where I spent four days in the examination of its singular harbor; and this I was enabled to do effectually by the assistance of Mr. Baldwin and Captain Turner, with the boats of the Erie.

The Tortugas, so called, consist of eleven small islands, or keys, encircled by an immense reef or bank, formed of coral, which breaks off the sea in every direction, and contains within its embrace an outer and an inner harbor; the first of which, besides affording a safe anchorage at all seasons of the year, is sufficiently capacious to ride in security all the navies of Europe; but what is most singular, there is within this harbor another still more secure, which in its character may be said to be unique; uniting as it does sufficient depth of water for ships of the largest class to a narrow entrance, not more than 120 yards wide; ease of ingress and egress; and may be entered or departed from at all times, let the wind be from what point of the compass it may.

This singular harbor, when considered in reference to its geographical position and the defence of our southwestern coast, may justly be looked upon as the advance post of that portion of our maritime frontier, and in this light must strike every one as possessing peculiar advantages, lying, as it does, directly in the track of all vessels passing to and fro, not only between it and the Mississippi, but between every part of West Florida and our eastern States; whilst at the same time there is no one spot on our whole line, from north to south, that presents the same facilities in communicating with the several ports in the Island of Cuba, as well as those in the Gulf of Mexico, even as far south as the Bay of Honduras on the Spanish main.

These, however, are not all its advantages; for on referring to the chart, it will be seen that not only the commerce of Havana and of the Island of Cuba generally, but even the homeward bound trade of Jamaica, would be subjected to its grasp, were its natural advantages to be aided by the erection of suitable works for the protection and convenience of a competent naval force.

With all these advantages, it must be confessed that nature has not supplied it with every essential necessary to the perfectibility of such an establishment, inasmuch as no fresh water or firewood of any consequence is to be found on either of the keys; water, however, might be supplied by the erection of cisterns, and wood from Key West and the eastern part of the peninsula of Florida, without much inconvenience or expense.

The base of the whole of these keys is formed of concrete rock, composed of coral and shells, giving to each a foundation of the most solid and permanent kind; seven of them are clothed with a rich grove of mangrove trees of small size, and various shrubbery; but the other four contain little or no vegetable productions, although turtle and fish in the greatest abundance are to be met with everywhere. For a minute delineation of all that relates to these islands or keys, permit me to refer you to the accompanying charts.

All the papers received by me, having any relation to the lands purchased of Colonel White and others, are herewith transmitted. It would be difficult to determine the value of these lands; for, notwithstanding they all contain considerable quantities of timber, suitable for firewood, and those parts called hammocks might be made to produce live oak, it is believed, still, for the purposes of cultivation there is but a small part, I should think, that is of any value whatever.

All which is respectfully submitted.

I have the honor to be, with great respect, sir, your most obedient servant,

JOHN RODGERS.

Honorable JOHN BRANCH, *Secretary of the Navy*.

The drawings, plans, &c., connected with this report will, when received from the engineer, be transmitted.

E.

Copy of a letter from Warren R. Davis, Esquire, to the Secretary of the Navy, dated—

WASHINGTON, August 12, 1829.

I take the liberty, partly based on some personal intimacy, but chiefly as one of the representatives of a neglected portion of this confederacy, of addressing you on a subject that I consider of public interest.

I respectfully request that you will cause an experiment to be made in the naval service of the United States, for the purpose of ascertaining the fitness and utility of cotton as the principal element of sails, rigging, &c., and of its comparative cost, strength, durability, advantages and disadvantages. This request is predicated on information I have received of the results of some partial experiments recently made in the United States sloop-of-war the Boston, lately returned from a South American Atlantic station, and on other facts and experiments in the merchant service. That sails, rigging, &c., of cotton fabric, have been long used in the navigation of the Grecian Archipelago, is well known; and the fact that the Austrian as well as the Greek ships in the Levant are clothed entirely with that material, is amply sufficient to prove that cotton is there used, not as a substitute, but in preference to hemp. Hemp is one of the staple productions of that country, and forms an important item in the list of her exports; cotton is not, but is imported from other countries. I am informed that the superior celerity of the Greek ships, and what are usually called the Baltimore clippers, is attributed in part to their use of cotton canvas.

The maintopsail of the Boston, which I understand was mostly used and relied on during the long voyage from which she has just returned, was of cotton canvas; and that experiment was abundantly satisfactory to the officers on board of its strength, durability and usefulness. An officer of that ship, of skill, science, and the most scrupulous accuracy, has promised me a written statement of the facts referred to, as well also of some experiments in the merchant service; these shall be furnished you as soon as received. These facts, together with the certificates subjoined, I hope will be considered sufficient to

authorize a full and fair experiment; especially as the cost of an extra set of sails, &c., would be but little, and repay that little by their service. This application is justified not only by its probable important results, but by frequent and recent precedents.

The Navy Department has been repeatedly and pressingly importuned to test the comparative merits of American hemp, sail duck, &c.; and in 1828 the Naval Board of Commissioners made a full report on the subject, which was immediately followed by a law imposing the heavy and oppressive duty of \$45 per ton on unmanufactured hemp until the 30th June, 1829, and \$5 per ton annually, until the duty shall be \$60 per ton. A similar call was made in 1827, and responded to in 1828 by the Secretary of the Treasury, on the culture of silk. If I mistake not, a resolution was adopted by the House of Representatives at the last session of Congress, directing the Secretary of the Treasury to digest a plan for supplying the American navy with cordage and canvas of domestic produce and manufacture. The request I make is at least as humble; it is only to use an article already within your reach, to test its usefulness and importance.

If the result of the experiment should be as I most confidently expect, its importance to the nation will be vast indeed. It would increase the demand for almost double the amount of cotton now annually produced in the United States. If successful here it would be speedily adopted by the navigating interests of other countries, and increase the demand, and open a market for that product to an amount beyond the reach of calculation.

Hemp can be profitably cultivated only on a few rich alluvial spots, or veins of land; but cotton (not unequally burthened as it now is) would yield to honest industry wealth and comfort from the 36th deg. of north latitude to the utmost verge of our southern and southwestern limits. The wealth added to the general stock of national riches by the cultivation of hemp is small indeed, according to the Treasury reports, from 1818 to 1827 inclusive.

During the latter year, the exports of hemp and canvas amounted only to \$63,074; but the exports of cotton during the same year, from seven States only, amounted to \$29,359,545; that article alone being of greater value than all other exports of all the other States together, and yielding, by the duties imposed upon its returning exchanged value, more than half the revenue of this government. But, however advantageous the experiment may prove to a particular section of our country, I admit that it can be properly asked for or expected on the ground alone of national interest.

In the present case the result can be of no local or sectional interest, unless it proves useful and beneficial to the nation. The former will depend upon, and be the consequence alone of the latter. Its success and future triumph will require no aid from legislation, no exclusive privileges for itself, or burthens upon the industry or encroachments upon the rights of others.

I herewith enclose you a part of the testimony I have received, and have the honor, &c., &c.

NAVY DEPARTMENT, *August 24, 1829.*

Str: I have received your communication of the 12th instant, containing your views of the expediency of introducing into our navy the use of cotton canvas.

The testimonials presented by you from highly respectable sources, of the result of various experiments in the merchant service, added to the trial made of a topsail of that material, during the late cruise of the sloop-of-war *Boston*, are sufficiently satisfactory to authorize a more extended experiment.

The fitness of this great staple of our country for the manufacture of canvas, suitable for naval purposes, shall, as it deserves, be fully and fairly tested. I have accordingly, with the approbation of the President, ordered a full suit of sails for the sloop-of-war *Peacock*, now fitting for sea, to be made of cotton canvas.

I am, very respectfully, your obedient servant,
HON. WARREN R. DAVIS.

JNO. BRANCH.

Copy of a letter from Isaac McKim, Esq., to Warren R. Davis, Esq., dated—

BALTIMORE, August 15, 1829.

I received, this morning, your letter of the thirteenth instant, requesting my experience and opinion respecting cotton duck, which I shall give with great candor, as I have no interest in the use of cotton duck farther than the general interest of the country. Having been constantly engaged in the shipping business as owner for about thirty years past, and particularly in fast sailing Baltimore schooners, my attention has been constantly applied to whatever would improve their speed in sailing, as those vessels are generally employed in such voyages where everything depends on fast sailing, and, when the British orders in council were in force, France was principally supplied with colonial produce by this description of vessels, under French imperial permits, and sometimes I have been under the necessity of standing my own underwriter to the amount of \$100,000 on a single vessel. Thus situated, every attention was bestowed on the outfit of the vessel; but at this time I was not acquainted with the great value of cotton duck. It was during our late war with Great Britain that it began to be introduced, and my first knowledge of it was in about 1813, by being used on a Baltimore schooner called the *Tuckahoe*, and which vessel, in consequence, had the reputation of outsailing all the other Baltimore schooners. In 1815 I built two fine schooners, burthen about two hundred tons each, the one called the *Tropic* and the other the *Plattsburgh*; both those vessels' principal sails were made of cotton duck, and fully answered expectation as far as heard from, both being uncommonly fast sailing vessels, and in which I consider the cotton duck had a principal share. In the year 1823 I built the fast sailing schooner *Yellot*, burthen about one hundred and eighty tons, and this vessel's sails are entirely made of cotton, both light and heavy sails; her reputation for fast sailing is not exceeded, if equaled, by any vessel of her class. She has made two voyages round Cape Horn, with cotton duck, and two to Smyrna. None but cotton duck has ever been used during these voyages; and so fully satisfied am I with cotton duck that I shall never permit any other to be used on board my vessels, as I am fully convinced that it is far superior to all other duck, without exception.

In the first place the cost is rather *under* the best Holland duck; second, that it will outlast any other duck, as it never mildews; that a vessel, with a suit of cotton duck sails, will sail nearly a mile per hour faster than with sails of any other description. This fact is so well established that all the fast sailing boats in the Chesapeake Bay, as Mr. Hooper, a respectable sailmaker of this place, has just informed me, have no other sails than cotton duck. Mr. James Cooper, a highly respectable pilot for the

port of Charleston, has informed me, in a conversation respecting cotton duck, within a few days past, that he was obliged to use cotton duck in self-defence, as he found the other pilot boats laid *nearer* to the wind with *cotton duck* sails, and outsailed his boat, but when he put the cotton duck on her he outsailed them. Captain Kelly's fine ship *Peruvian*, built in this port, has made four voyages round Cape Horn with no other sails than cotton duck; he prefers it to all other canvas, as to its lasting, and increasing the sailing of his ship. I saw a sail on board the other day, which had made the above voyages, and looked quite well; he has promised me a certificate respecting the wear of the *Peruvian's* sails, which, when received, I will send to you.

I am much pleased to hear that the Secretary of the Navy has it in contemplation to make an experiment of cotton duck. I am fully persuaded that it will succeed if attempted, and that it will be a great step for the country, the navy, and all concerned. As it respects the navy, it will give them the capacity of outsailing or catching their enemies, as may best suit the occasion; but I hope the experiment will be fairly made; that is, let a sloop-of-war or frigate have an entire suit of sails, (both light and heavy sails) made of cotton duck, and go out in company with another sloop-of-war, or frigate, with the canvas now in use in the navy, and have a trial of sailing; after this has been done, let the vessel with the cotton duck sails unbend them, and put to the yards the canvas now in use, when the difference in point of sailing will be perceived. As for the cost of the experiment, it is not worth mentioning; the sails will not be lost, and, in justice to the country, the experiment ought to be made without delay. There is only one objection to the use of cotton duck, which requires consideration; and that is, whether it is more likely to take fire, in time of action, than other canvas; in answer to this, I say let a fair experiment be made at the Navy yard, Washington, under the inspection of the President, Secretary, and all concerned. My plan would be to have an old mast rigged with shrouds, &c., with a foreyard and cotton duck sail affixed thereto, and a similar mast and foreyard, with foresail affixed of the canvas now in use by the navy; then let as many 24-pounders be fired at those sails, at such distance as the wad would strike, and see which sail caught fire first. The only way to meet objections is to have the experiment made to test them. As to the strength of yarns by weight, I am not acquainted with *that* manner of trying; but, if a principal sail will make two voyages round Cape Horn or the Cape of Good Hope, I want no further wear out of it, as it has then more than done its full duty. The mere fact that a vessel, with cotton duck sails, will sail faster than with any other canvas, is sufficient to cover a great many objections; but I maintain it is cheaper and better in every other respect, besides the price of the cloths:

Best cotton duck, No. 1, 40 cents per yard, 22 inches wide.
 Best cotton duck, No. 2, 38 cents per yard, 22 inches wide.
 Best cotton duck, No. 3, 36 cents per yard, 22 inches wide.
 Best cotton duck, No. 4, 34 cents per yard, 22 inches wide.
 Best cotton duck, No. 5, 33 cents per yard, 22 inches wide.
 Best cotton duck, No. 6, 32 cents per yard, 22 inches wide.
 Best cotton duck, No. 7, 31 cents per yard, 22 inches wide.
 Best cotton duck, No. 8, 29 cents per yard, 22 inches wide.
 Best cotton duck, No. 9, 28 cents per yard, 22 inches wide.
 Best cotton duck, No. 10, 27 cents per yard, 22 inches wide.

I think No. 1 rather too heavy for the navy, as it weighs nearly a pound to the yard, of 22 inches wide. I, however, make use of this number for the schooner *Yellot's* three lower sails. As for cotton rope, I am sorry that it is not in my power to give you any information respecting it, as I have never seen any of it used. As for cotton rope or yarn that is exposed to the air for a length of time, I should think it would do it great injury. Plenty of the first quality cotton duck can be had here. With the best wishes for your success and a tender of any further information in my power,

I am, &c., &c.

Copy of a letter from J. Edward Calhoun, lieutenant United States navy, to Mr. Charles Crook, junior, of Baltimore, dated—

AUGUST 13, 1829.

In reply to your inquiry concerning the maintopsail, made of cotton duck, which was used by the Boston sloop-of-war during her late cruise on the coast of Brazil for a period of more than three years, I have to state that it was bent oftener than any other maintopsail in every kind of weather, and that at the termination of the cruise it was the best sail in the ship. I know that the commander of the Boston, judging from that single specimen of cotton canvas on board, agrees with me in opinion that it is stronger, holds wind better, lasts longer, and is not more liable to mildew than the canvas made of hemp.

I am, &c., &c.

U. S. SHIP JOHN ADAMS, *Pensacola Bay*, February 5, 1827.

SIR: In reply to your letter of the 21st December, which I this day received immediately on my arrival here, I had only a maintopsail of cotton that was bent at Norfolk in March last, and has been in constant use nearly the whole time since; my ship has been actually at sea two hundred and forty days, and sailed eighteen thousand five hundred and eighty-seven miles in the above period, including the hurricane months, which were excessively boisterous; and this ship requiring the maintopsail, it was always carried as long as practicable.

The injuries which topsails sustain from frequent reefing, &c., is well known by the Navy Commissioners. I have had the above-mentioned topsail middle stitched to strengthen the sewing, which had given way in several places, and I now pronounce it as good as it ever was, having this day examined it minutely to enable me to make this report.

Cotton sails hold more wind, are much more pliable and easily handled, and, upon the whole, I think highly of them for square sails.

J. WILKINSON.

BALTIMORE, *March 26, 1827.*

The ship *Peruvian*, built at this port in 1824, burthen upwards of 5,000 barrels, of which I was (until lately) part owner, was fitted, as regards sails, with cotton canvas, manufactured at your establishment in this city, with which she made two voyages to the Pacific ocean, and is now on her third voyage, to Gibraltar and South America, with her original sails except a few light ones. It is the opinion of the captain, who is part owner, and mine also, that cotton canvas is far preferable and much more durable than any other heretofore used. I am the better convinced of this fact from having another ship (the *Hope*) in the same trade, which was fitted with Holland and Russia duck sails, which, although nearly new previous to her departure from home on her last voyage, scarcely lasted to the Pacific and back.

Being so entirely convinced from experience of the decided superiority of cotton duck, I give it the preference in all cases, and should be highly gratified if the government could be prevailed on to use it on our ships-of-war, as they would unquestionably find it much to their advantage.

ELISHA TYSON.

BALTIMORE, *January 10, 1828.*

I hereby certify that the ship *Galen*, under my command, performed a voyage to Batavia, Amsterdam, and back to Baltimore, with an entire new suit of cotton duck sails, which duck was manufactured by Mr. Charles Crook, jr., of the city of Baltimore. I was ordered to the Pacific and back to Baltimore; I was again ordered to Matanzas, Amsterdam, and back to Baltimore. The *Galen* was again ordered to Matanzas; from thence to St. Petersburg, Russia, and home, and is now on her second voyage to the Pacific; and I am of opinion that the original cotton duck sails are quite sufficient for the said second voyage to the Pacific, and will now wear longer than a new suit of Holland duck.

THOMAS BEVAN.

BALTIMORE, *February 1, 1825.*

In compliance with your request to give you information respecting cotton duck, I have to inform you that I have used that article on vessels, from the year 1812 up to this time, when it could be obtained in this market.

In 1812 I got as much from Massachusetts as made two suit of sails; although it was not well manufactured, I found it to wear extremely well, and to hav every valuable qualities, that hempen canvas had not.

I found it much less liable to chafe; it was more even, and keeps close in its texture, until it is entirely worn out. A sail of cotton duck will hold the wind quite as well when it is two-thirds worn, as when it is new.

In hempen canvas it is well known that after it is half worn the most of the wind escapes. I have lately obtained some cotton duck, manufactured by you, which is far superior, in my opinion, to anything I have ever seen of the kind. Although I have not had it a sufficient time to prove entirely the wear of it, I am fully persuaded that it will be found equal, if not superior, to hempen canvas made in any country.

I am extremely anxious to hear of the cotton canvas having a trial by our experienced officers in the navy, who would be much better able to judge of its quality.

Some persons will say that it is more liable to mildew than hemp; but I am of a different opinion, from the experience I have had.

B. MEZICK.

BALTIMORE, *January 28, 1825.*

This is to certify, that for two voyages, one of which to Smyrna, in the schooner *Yellot*, I have used the cotton canvas, and prefer it decidedly to any other; it wears better and holds wind better, whereby a vessel will sail much faster, and it does not mildew more than any other canvas.

H. S. CURTIS.

*Extract from a letter of Captain Woolsey, dated—*PENSACOLA, *March 8, 1828.*

In answer to your letter of 20th December, relating to the cotton maintopsail, I have to remark that it had lain in store a long time in Key West, before it was received on board the *Constellation*; one or two of the middle cloths, near the head of the sail, were damaged in store, and had soon to be mended, but the rest of the sail has had a fair test, in all weathers; is now bent, and still continues good. For the West India service, I think canvas of that description as good as hempen, and for all the high sails, I think cotton equal in all respects to hempen in any climate.

NORFOLK, *October 7, 1826.*

I have directed Captain Wilkinson to report fully and particularly the strength and durability of the cotton *maintopsail*, furnished that ship last year. It was bent on the first of November, worn seven weeks in very stormy, wet weather, (four of them at sea,) and was then handled in the Gosport Navy yard, where it remained about the same length of time, and was again bent on her preparation for sea in February. When I last saw the ship, (in June,) it was then in use and reported to be in good condition.

From the whole I have seen of that sail, I am inclined to think favorably of the article for sails, and to believe that we have *no cause* to fear its greater combustibility than canvas made of hemp; it stands flapping and chafing as well, if not better, than sails commonly do of other materials.

L. WARRINGTON.

BALTIMORE, *March 22, 1828.*

We, the undersigned, owners, masters and sailmakers, of the city of Baltimore, certify that the ship *Peruvian*, of this port, was completely clothed with cotton duck, manufactured by Charles Crook, jr., of Baltimore, and that it is now upwards of three years in service, during which time the *Peruvian* has been

three voyages to the Pacific ocean, and back to this port; notwithstanding, it is our unanimous opinion that the said clothing is quite sufficient for a voyage to South America.

MATTHEW KELLY.
THOMAS A. LANE.
EDWARD HOLBROOK.
WILLIAM GRAY.
B. MEZIC.

BALTIMORE, August 24, 1829.

Isaac McKim, Esq., Baltimore:

SIR: I take the liberty of recommending to you Crook's cotton canvas. I had a suit of sails made of it for my ship Peruvian, in 1824, which were in constant use for three years; and at the end of that period, after making three voyages to Lima and back, the sails would, in my opinion, last a voyage to South America. From thirty-five years' experience, I have never found canvas to equal it, as to durability, and the propelling of vessels.

I am, respectfully, sir, your obedient servant,

MATTHEW KELLY.

BALTIMORE, August 25, 1829.

DEAR SIR: I received yours of the 22d inst., relative to the use of cotton duck. I have made use of cotton duck for the last ten years, and am confident that it is the best duck for sails of any description. It will last much longer, and retain its thickness to the last, and cost less than either Russia or Holland. It is used by three-fourths of the ships owned at this port. My brig Pacific has a suit of cotton duck, a part of which is now on her, of Nos. 3, 4, 7 and 8, now on a voyage to Rio Janeiro; which has been in constant use (except the little time she has been in port) for thirty-four months, without a shift sail, or in other words, one to supply their places. Had I forty sail of ships, I should use it for them in preference to any other duck.

I am, respectfully, your obedient servant,

WM. H. CONKLIN.

Lieutenant THOMAS R. GEDNEY, *Washington.*

PATERSON, N. J., September 7, 1829.

SIR: From the interest you manifest in the subject of cotton, as a suitable material for sail cloth, I have thought the following communication might be acceptable to you, though coming from an entire stranger. Few persons, I believe, are acquainted with the extent of the present use of cotton duck in the merchant service, though but a trifle compared with the use of other duck.

I have been engaged, since 1822, in manufacturing of cotton sail cloth. The first two or three years to a small extent; subsequently, the consumption of it increased yearly, so that, for the last two years, I have made and sold from 2,500 to 3,000 bolts, of 50 yards each, per annum.

From 1822 to 1st May, 1828, say six years, I made 10,300 bolts of 50 yards each; from 1st May, 1828, to the first instant, I have made 9,600. How much has been made at the Baltimore factory, I do not know; I presume, however, from what I hear, that they do not make as much as I do, perhaps 1,500 to 2,000 per annum. There is a small establishment near Boston, but not much done, nor is it of a good quality.

From the time I have been in the business, and the quantity which I have sold, the conclusion may be safely drawn that cotton duck is approved of, and that it is gradually forcing itself into more general use.

My principal sales have been in Philadelphia and Baltimore, but principally in Philadelphia, where it is purchased by the same persons, year after year; not only for coasters and bay craft, but also for ships in the India trade, and those round Cape Horn. There are ships which have had it, and no other, in use for three years.

There is a prejudice against it, drawn from the frail texture of cotton *shirting*, which "gives all at once;" but this does not apply to cloth of the strong texture of my sail cloth; and wherever it has been used long enough to require repairs, it is as susceptible of repairs as any other duck. In the navy, I believe, the objection hitherto has been its liability to take fire, or rather the presumption that it was more liable to take fire than flaxen or hempen cloth. This I believe to be as ill-founded as the other objection above mentioned; and this prejudice, I rather think, is giving way. I am confident that it is not more liable to be set on fire, or, if on fire, that it would burn with more rapidity, than the same texture of flaxen or hempen sail cloth, for this reason, that the duck is made of three and four fine yarns twisted together; the warp and the filling is therefore a solid twine; it is as compact as the flax, and instead of being only two threads, it is three, four and five finer threads. Besides, I have for some years past furnished the *steamboats* on the Delaware with cotton cloth for awnings; as passage boats, they have them up at all times, and if more combustible than flax duck, would not be used. As my duck is made of double and twisted threads, no starch or sizing is required in the operation of weaving, and, of course, it is not so liable to mildew.

In fact, I could produce numerous certificates as to its durability, &c., if it was required. But the cotton sail cloth used in the Mediterranean sea and in the Levant, as also in the East Indies, is made of two or more *single threads*, laid and kept together by a thick coat of starch, which causes mildew, and when washed out, leaves the duck more open and of a loose texture, consequently, more exposed to fire.

Several officers of the navy, however, do not object to it on this account, and I am happy to learn that it is to be tried in the navy. It will stand the test, and I am confident will go far to remove existing prejudices to its more general use in the merchant service, and thus be affording a new demand for cotton in this country, for the supply of our own ships, as also giving an article for export.

If my memory is correct, at least 30,000 bolts of heavy sail cloth is annually imported from Russia alone; besides much more from England and Holland, and a great amount of raven's duck. I have, within a few days, sent samples of my duck to the Navy Commissioners at Washington, where you can see it, if so disposed.

Graving your indulgence for this long communication, I remain,

Very respectfully, your obedient servant,

JNO. COLT.

Hon. WARREN R. DAVIS, *Washington.*

PHILADELPHIA, *August 18, 1829.*

SIR: In answer to your inquiries respecting cotton canvas, I can state, from three years' experience, I would give it a decided preference over linen, for the following reasons: it wears better, is much closer, and retains its closeness until worn out. We have tried it for sails to our packets for three years past, and have found it less liable to mildew.

For awnings to our steamboats, which occasionally throw out a good many sparks from the chimneys, we think it less combustible; feeling confident that linen would burn out much more quickly.

We occasionally make a strong pickle, with a small quantity of lime slacked into it, and wet the sails and awnings with it, and always make a practice of doing so when new, to take sizing out of the canvas.

M. C. JENKINS, *Steamboat Newcastle, of the Union Line.*

W. A. SLACUM, Esq.

Extract of a letter from Commodore J. D. Elliott to the Secretary of the Navy.

NEW YORK, *September 9, 1829.*

Prejudice existing in the minds of some against the introduction of cotton canvas, (but with whom I am disposed to differ) I do most earnestly solicit that, for each of the ships attached to the squadron under my command, you will cause to be made a mainsail, a maintopsail, a maintopgallantsail, a main royal, two maintopgallant studdingsails, a main stormstaysail, a mizen staysail, a lower studdingsail, two foretopmast studdingsails, a fore and maintopmast staysail, and a jib; and that a foresail, a square-sail, a foretopsail, and a jib, with hammock cloths, hammocks and bags properly sewed and fitted, be sent out for each of the schooners. The kinds of sails just mentioned have been enumerated because most worn.

By complying with my solicitation, you will be enabled to obtain the united information of all the officers of the different grades, attached to the squadron, and who are supposed to represent different sections of the Union, being natives of the different States.

The enclosed copy of a letter which I had occasion to address to the Marquis of Parangua, minister of marine of Brazil, and in which my views touching the utility of cotton canvas for the purpose alluded to, are fully explained, is herewith submitted to your consideration.

Extract of a letter from Com. Jesse D. Elliott to the Marquis of Parangua, minister of marine of Brazil, dated—

U. S. SHIP CYANE, *Harbor of Rio de Janeiro, November 27, 1826.*

With a disposition to interchange specimens of such materials, the product of our own continent, of which you possess the most bounteous part, I beg leave to tender you two specimens of the kind of canvas of the staple of both Brazil and North America. One is new, and is a facsimile of the maintopsail of several heavy sloops-of-war, which we have recently constructed, launched and equipped for sea; one of which, the Boston, now in this port, has had the maintopsail in constant use for nine months, and the officer in command of the vessel unhesitatingly declares it infinitely superior to the European hempen canvas. The second is a piece of a lighter sail, and condemned after having been in constant use four years.

Extract of a letter from the Hon. John Branch, Secretary of the Navy, to Commodore Jesse D. Elliott, dated—

SEPTEMBER 15, 1829.

SIR: Your favor of the 9th instant has been received, and, duly appreciating the importance of the subject to which it refers, I have not neglected to bestow the most deliberate consideration on its contents.

That prejudices should exist against the introduction into the naval service of an article, the practical importance of which has not been fully tested by experience, is not to be wondered at. If, however, the contemplated innovation be an improvement, these prejudices must necessarily give way to experiments, which shall demonstrate the value and importance of the discovery.

I am much pleased, on this occasion, to have the benefit of your aid in giving a fair trial to the merits of the proposed substitute for the canvas now used in the United States navy.

You may rely upon the best efforts of the Department to afford you an opportunity of making this trial, under circumstances the most favorable to their success; and that your requisitions for the cotton sails, hammocks, &c., shall be complied with as speedily as they can be prepared, and if not ready to put on board the Peacock before her necessary departure from the United States, they shall be forwarded to the squadron by the Erie, or by some other safe conveyance.

Wishing you a successful cruise and safe return,

I remain, very respectfully, &c.,

JOHN BRANCH.

Com. JESSE D. ELLIOTT, *New York.*

F.

The following is the relative rank between officers of the army and officers of the navy:

A captain of the navy, under five years, ranks with a lieutenant colonel; a captain of the navy, over five years, ranks with a colonel; a captain of the navy, over ten years, ranks with a brigadier general; a captain of the navy, over fifteen years, ranks with a major general; a master commandant ranks with a major.

Neither the pay nor the rations of a navy officer of any grade are affected by duration of service; a captain, if commanding a squadron, is, by law, entitled to \$1,200 as pay, and \$1,460 for rations, making

\$2,660 per annum; if not commanding a squadron, then his pay and rations amount to \$1,930. A master commandant is allowed \$1,176.25 per annum.

The following shows the amount of the pay, &c., of certain officers of the army, considering each as commanding a separate post:

Major general.....	\$6,512 64
Brigadier general.....	4,422 48
Lieutenant colonel.....	2,372 32
Colonel.....	2,941 32
Major.....	2,106 32

The following shows the relative pay, &c., of officers of the army, and the proposed pay of officers of the navy, of assimilated rank, agreeably to the above scale:

	Maj. Gen.	Brig. Gen.	Colonel.	Lieut. Col.	Major
Army.....	\$6,512 64	\$4,422 48	\$2,941 32	\$2,372 32	\$2,106 32
Proposed pay for the navy.....	3,000 00	2,700 00	2,400 00	2,200 00	1,800 00

Exclusive of rations, which are not to be drawn except when officers are in actual service; then they are to commence from the date of their orders for service, and to terminate at the striking of the pennant.

G.

NAVY COMMISSIONERS' OFFICE, *March 31, 1829.*

SIR: The Commissioners of the Navy have had the honor of receiving your letter of yesterday's date, with the statements therein referred to, which enable them to reply to your previous letter of the 17th, and to comply, they hope, with its requisitions, in a manner satisfactory to you.

The statements now respectfully submitted, and marked A, B, C, D, present every view of the state of the appropriations to which they refer, deemed essential to a thorough and perfect understanding of the subject.

The paper A exhibits the sums appropriated for the year 1828; the balances in the Treasury on the 1st of June, 1828, when the arrangement A, No. 2, took effect, and the board began to approve requisitions under the heads of appropriation therein set forth; the whole amount of the requisitions approved by the board, from the 1st June, 1828, to the 21st March, 1829, and the balances thence deducted, to which is added the amount accruing from the sale of various articles, thus giving a general view of the proceedings of the board with respect to the appropriations in question.

The paper B shows the state of these appropriations at the several agencies in the United States, on the 1st of June, 1828, and 1st March, 1829, (except that at Pensacola, which has not been received.) To this paper the Commissioners respectfully invite your particular attention. It shows that, while agents have ostensibly large balances in their hands, under certain heads of appropriation, they have made overpayments under others, nearly counterbalancing them. The last returns from the navy agent at Philadelphia, (which embrace all the navy appropriations) exhibit balances on hand, \$69,761.58; overpayments under other heads of appropriation, \$69,230.13; thus making the actual balance of money in his hands \$531.45. The agent at Norfolk had, by his last return, balances on hand, \$103,248.33; but he had overpaid, under other heads of appropriation, \$92,259.41, thus making the actual balance of money only \$10,988.92.

The Commissioners beg leave to observe that while this state of things continues the fiscal system of the Department will remain confused and imperfect. Early after the organization of the board it was foreseen that, unless some precise and correct system should be adopted and persevered in, the navy appropriations would get into a confused and unintelligible state; and the board, on numerous occasions, expressed that opinion to the Secretary of the Navy; finally they decided to address to him an official letter upon the subject (copy of which, marked B, No. 2, they submit herewith), but the propositions then made were not concurred in; and it was not till the board were apprised of the actual state of the appropriations, in May, 1828, that they ventured to renew the subject, at which time the arrangement A, No. 2, was entered into. This arrangement, if carried fully into effect, would, with but slight improvement, keep the Department in possession of every information as to its fiscal concerns.

The great defect in the fiscal branch of the Department, remitting moneys without a *perfect* knowledge of the objects upon which they are to be expended, and the cost of those objects, has existed in a greater or less degree ever since the establishment of the Navy Department, yet it has ever appeared to the board to be susceptible of remedy.

If we know the amount of the appropriations, the objects of expenditure, their probable cost, the particular items chargeable to each appropriation before remittances are made, and see that no moneys are issued but for authorized objects and under the appropriate heads, and positively instruct the disbursing agents not to apply moneys under one head of appropriation to objects chargeable to another, and require of them prompt settlements at the treasury, every desirable check would exist.

These objects were in view at the time the Commissioners addressed their circular of May 28, 1828, to the navy agents, but they have not been enabled to enforce the principles laid down in that circular, because of orders given, unknown to them, to apply moneys to other than their legitimate objects. Under such orders the agent at Philadelphia applied a sum in his hands belonging to "gradual increase," amounting to more than \$30,000, to five other distinct appropriations, viz., sloops-of-war, navy yards, five schooners, contingent prior to 1824, and contingent for 1826. This is mentioned merely as an example of the difficulties the board has experienced in enforcing the principles of their circular of 23th May, and to show existing defects in practice. It is far from the intention of the board to throw the slightest shade of censure upon any one in any way concerned in administering the affairs of the Department; but evils, to be remedied, must be known, and the board has felt itself bound to make them known to you, sir, solely with a view to their remedy.

The board is sensible that, until Congress adopted the practice of appropriating for the first quarter

of a succeeding year, it was frequently unavoidable to authorize the application of moneys, *for the time*, to other than their legitimate objects. The moneys, however, thus applied, ought to have been refunded to the appropriations to which they belonged, as soon as the general appropriations were passed. But now, and so long as Congress shall adhere to the practice of appropriating in anticipation for the first quarter of the succeeding year, the necessity of taking moneys from one appropriation and applying them to another no longer exists, and need never be resorted to except in cases of emergency.

The paper C, shows the requisitions approved by the board under each appropriation, for each agent, and the aggregate amount at each agency. By comparing this with the preceding paper B, it will be perceived that there were balances on hand at some of the agencies on the 1st June, 1828, and that they continued on hand on the 1st March, 1829; that no requisitions were made by those agents, or none approved under those heads, and, consequently, that those balances were not required at those agencies; instance, \$900 at Portsmouth, belonging to "gradual improvement;" \$2,532.39 at Baltimore, belonging to "gradual increase." It will also be perceived that, at the Norfolk, New York, and Boston agencies, large balances belonging to "ten sloops" were on hand on the 1st of June. More than a moiety of these balances was unnecessary at those places, and has since been drawn from them, and remitted to other places where the moneys were needed.

Upon examining the general returns made to this office, it was found that in one case \$20,920.68 had been paid out of the appropriation for "sloops-of-war," instead of being paid out of that for "repairs," and in another case that \$9,183.23 had been paid out of the same appropriation instead of being paid as follows: \$5,266.12 out of "repairs," and \$3,917.11 out of "navy yards," and they recommended the proper transfers in the cases, so as to restore the amount to "sloops-of-war."

It will be seen (paper B) that the appropriation for sloops-of-war owed, on the 1st of March, 1829—	
To the agent at Norfolk	\$1,173 53
To the agent at Baltimore	359 87
To the agent at Philadelphia.....	34,113 18
To the agent at Portsmouth	1,343 30
Making an aggregate of	<u>\$36,989 88</u>

This appropriation appears to be exhausted, and the sloop Concord is not yet completed.

The appropriations made by Congress for building ten sloops-of-war were as follows:

Act of 3d March, 1825, appropriates.....	\$500,000 00
and the proceeds of the sale of vessels, &c., on the lakes, "to the repair and building of sloops-of-war."	
Act of 18th May, 1826, appropriates.....	350,000 00
Act of 19th March, 1828, appropriates.....	201,350 00
	<u>\$1,051,350 00</u>

Of the ten sloops thus provided for we have ascertained, by a minute examination of the returns made to this office, that *seven* of them have cost as follows:

The sloop Boston	\$108,849 02
The sloop Lexington	112,080 08
The sloop Vincennes	115,889 77
The sloop Warren	104,368 00
The sloop Natchez	112,729 18
The sloop Falmouth	106,717 70
The sloop Vandalia	98,669 17
	<u>\$759,302 92</u>

Making the average cost of each \$108,471.844.

The returns with respect to the *three* other sloops-of-war, viz: Fairfield, St. Louis, and Concord, are not complete. It is known, indeed, that the Concord is not yet entirely finished. As far, however, as these returns have been received, they make their cost to be:

Fairfield	\$91,199 37
St. Louis	57,800 00
Concord	102,000 00
	<u>\$250,999 37</u>

If we estimate the cost of these three at the average cost of the seven, it would make the aggregate cost of the whole ten sloops, \$1,084,718.45, or \$33,368.45 more than the amount specifically appropriated; but this excess is more than covered by the proceeds of the sale of vessels, &c., on the lakes, which on the 1st October, 1825, amounted \$52,150.27.

The paper D has been prepared with a view to show the amount of unpledged funds under each of the specific heads of appropriation referred to, and as a guide to future operations. It assumes the balances in the treasury, on the 21st March, 1829; adds thereto the balances in the hands of the agents not required for any authorized purpose, and deducts the amount of existing contracts and engagements, and the amounts due at the several agencies arising from overpayments, and exhibits the following result, viz:

Balances in favor of	
1. Provisions.....	\$493,514 64
2. Repairs of vessels.....	82,430 84
3. Pay of superintendents, &c.....	51,876 86
4. Ordnance and ordnance stores	51,775 56
5. Medicine and hospital stores	23,353 24
6. Navy yards	164,133 04
7. Gradual improvement.....	330,740 38

8. Gradual increase	\$103,296 73
9. Contingent expenses.....	130,261 15
And a balance against—	
10. Ten sloops-of-war, of.....	36,989 88

The contracts on account of "repairs of vessels" and "gradual improvements of the navy" are, as will be seen by this paper, extensive. Those for the former are for timber and canvas, &c., to be used in the repairs of vessels. They should all be completed in the course of the present year, agreeably to their respective stipulations. Those for the latter are for the live oak frames of ships of the line, frigates, and sloops-of-war, and for timber and stone, &c., for the docks now erecting at Norfolk and at Boston. The contractors for live oak frames may or may not, at their own option, complete their contracts within the present year, as they are allowed nearly the whole of the year 1830 to deliver the timber. It is quite probable that most of them will avail themselves of this stipulation in their contracts to a considerable extent, and although the contracts amount, for "gradual improvement," to \$536,475.80, we may not have to pay, *this year*, more than \$300,000.

The large balance due to the agency at Norfolk, under the head of contingent expenses, is deducted from the balance on hand, so as to show what the balance of that appropriation would be if that debt were paid out of it. This debt has, it is believed, been accumulating for years, and the appropriation for this year cannot legally be applied towards discharging it, because it is by law confined to expenditures arising within the year.

The actual balance of the contingent appropriation, applicable to expenses arising within the present year, is \$184,520.20.

With these explanations, the paper D indicates, as nearly as they can be ascertained, the balances of the several appropriations now to be disposed of as the government may think advisable.

All which is respectfully submitted.

I have the honor to be, with great respect, sir, your most obedient servant,

JOHN RODGERS.

Honorable JOHN BRANCH, *Secretary of the Navy.*

State of the navy appropriations.

For provisions; repairs of vessels in ordinary, wear and tear, &c.; pay of superintendents, storekeepers, &c.; ordnance and ordnance stores; medicines and hospital stores, &c.; navy yards—their improvement and repairs; ten sloops-of-war; gradual improvement of the navy; gradual increase of the navy; contingent expenses, defined, 1828, 1829.

MARCH 21, 1829.

A.

Statement showing the amounts appropriated under certain heads, (those committed to the board,) of expenditure for the year 1828; the balances in the treasury on the first of June, 1828, (when the Commissioners began to approve requisitions;) the sums appropriated for 1829; the amount of requisitions approved by the board to the 21st of March, 1829, &c., being a general view of the proceedings of the board with respect to the appropriations.

VOL. II—471

	Provisions.	Repairs of vessels.	Pay of superintendents, &c.	Ordnance, &c.	Medicines, &c.	Navy yards.	Ten sloops.	Gradual improvement.	Gradual increase.	Contingent expenses.

The difference between A and B show the respective balances in this view of the appropriations, to be	\$712,724 65	\$333,700 02	\$53,994 32	\$56,048 30	\$30,570 66	\$191,918 63	\$71,538 35	\$947,476 61	\$85,866 01	\$270,049 13
Add proceeds of sales of various articles	125 51	3,936 68	491 50	1,108 22	727 95	923 39
	\$712,850 16	\$337,636 70	\$53,994 32	\$56,539 80	\$30,570 66	\$193,026 85	\$71,538 35	\$947,476 61	\$86,613 96	\$270,972 52

NOTE.—The “transfers” entered on this sheet are those known to the board. There are others, not sufficiently known to be entered. Money requisitions, also unknown to the board, have been issued, and there have been deviations between requisitions approved by the board and those issued by the Secretary. All these items must be added to, or deducted from, (as the case may be,) the respective amounts exhibited on the last line, to make them correspond with the balances in the treasury, as received from the Secretary of the Navy, 30th March, 1829.

A, No. 2.

CIRCULAR.

NAVY COMMISSIONERS' OFFICE, *May 28, 1828.*

SIR: It has been arranged, with the approbation of the Secretary of the Navy, that all requisitions for money, coming under either of the following heads, shall, instead of being made upon him, as heretofore, be made directly upon the Board of Navy Commissioners, and, if approved by them, they will be transmitted to the Secretary of the Navy, who will order the remittances to be made accordingly, viz:

"Pay of superintendents, naval constructors, and all the civil establishments at the several navy yards and stations."

"Provisions."

"Repairs of vessels."

"Ordnance, and ordnance stores."

"Repairs and improvements of navy yards."

"Completing ten sloops-of-war."

"Gradual improvement of the navy."

"Gradual increase of the navy."

"Medicines, surgical instruments, and hospital stores."

"Contingent expenses, defined"—so far as to embrace the following items, chargeable under that head, viz:

Freight, and transportation of materials and stores of every description; wharfage, dockage, storage, and rent; for printing, and for stationery of every description, and for books, maps, charts, nautical and mathematical instruments, chronometers, models and drawings; for purchase and repair of steam and fire engines, and for machinery; for purchase and maintenance of oxen and horses, and for carts, wheels, and workmen's tools of every description; for pilotage; for cabin furniture of vessels in commission; for taxes on navy yards and public property; for assistance rendered to public vessels in distress; for incidental labor at navy yards, not applicable to any other appropriation; for coal and other fuel for forges, foundries, and steam engines; for candles, oil, and fuel, for vessels in commission and in ordinary; for repairs of magazines and powder houses; for repairing moulds for ships to be built. All the remaining items chargeable under this head, are under the exclusive direction of the Secretary of the Navy, upon whom, for them, or any of them, requisitions must, as heretofore, be made.

Every requisition upon this board must be accompanied by a statement, showing how the moneys previously received under the same heads of appropriation have been applied, and the balance on hand.

Every requisition must be made in triplicate, and the whole sent to this office; if approved by the board, one will be delivered to the Secretary of the Navy, who will then act upon it, one to the Fourth Auditor of the Treasury, and the other will be retained in this office.

No expenditure whatever, under either of the previously recited heads of appropriation, must be incurred without the previous written authority of the board, except such as come under special contracts, made or authorized to be made by the board; and the board will never authorize an expenditure without the previous exhibit of a satisfactory estimate by the proper authority, showing the amount of the expense of completing the object proposed.

No moneys belonging to one appropriation must be used for another, without the special previous authority of the Secretary of the Navy.

So far as depends upon the board, they are determined to bring the funds committed to their management into a state perfectly intelligible; nor will they be deterred by any temporary inconvenience that may, in any way, arise from preferring what they conceive to be the injunctions of the law upon the subject of navy appropriations.

To your monthly returns of money you will add a column for moneys which you may receive for articles sold, stating in such column the kind of articles sold, their net amount, the bank into which you may have paid the amount, and to what appropriation you have credited it.

I am, &c.,

JOHN RODGERS.

E. G. PARROTT, *Navy Agent, Portsmouth.*

JAMES BIDDLE, *Navy Agent, New Castle, Del.*

JAMES BEATTY, *Navy Agent, Baltimore.*

THOMAS TINGEY, *Navy Agent, Washington.*

WM. SINCLAIR, *Navy Agent, Charleston, S. C.*

NATHANIEL AMORY, *Navy Agent, Pensacola.*

J. K. PAULDING, *Navy Agent, New York.*

RICHARD D. HARRIS, *Navy Agent, Boston.*

GEORGE HARRISON, *Navy Agent, Philadelphia.*

MILES KING, *Navy Agent, Norfolk.*

J. P. HENRY, *Navy Agent, Savannah, Geo.*

NATHANIEL COX, *Navy Agent, New Orleans.*

B.

Exhibit showing the state of the navy appropriations committed to the management of the Navy Commissioners, at the time they were committed and at the dates of the last returns, at the several navy agencies in the United States; taken from the returns of the respective navy agents made to the Board of Navy Commissioners.

B, No. 2.

NAVY COMMISSIONERS' OFFICE, August 27, 1821.

SIR: The Commissioners of the Navy beg leave to state that they find themselves frequently at a loss on the subject of contracts and expenditures, for want of precise information as to the state of the appropriations by which the extent of the contracts and expenditures must necessarily be governed; and, in expressing their opinion upon requisitions for money made by the different disbursing officers, a duty you have been pleased to enjoin upon them for some months past, they have felt much embarrassed for want of information as to the sums of money advanced under the different heads of appropriation to the respective agents for specific objects.

The Commissioners are fully apprised of your intention to confine the expenditures so that their amount shall not exceed the sums appropriated by law, and they are desirous of contributing every exertion in their power to the accomplishment of your views upon the subject. In this spirit, and with this view, they beg leave, respectfully, to submit to your consideration the following observations:

To carry your views into effect it appears to the Commissioners—

1st. That the objects of expenditures and their amount should be ascertained with as much precision as may be practicable, prior to any expenditure being authorized, so that by comparing the sums respectively appropriated with the cost of the objects considered of the first importance to be accomplished, the authorized expenditures may be kept within the limits of the law.

To explain our meaning more particularly, we will suppose that \$490,000 dollars have been appropriated for repairs; the question arises, how shall this sum be applied? It is found on estimate, after careful survey, that there are vessels in ordinary requiring repairs to the amount of \$370,000; say frigate A, \$100,000; B, \$60,000; C, \$70,000; D, \$140,000, leaving only \$30,000 for the vessels in actual commission, consisting of one 74, three frigates, and three sloops-of-war. It would be desirable to repair all the vessels, but the appropriation will not admit of it, since \$30,000 would be obviously insufficient for the vessels in commission. The repair of one or more of the frigates must thus be suspended, in order to retain out of the appropriation a sum sufficient for the vessels in commission. A decision upon this point can thus be satisfactorily made, and such expenditures only authorized as will confine them to the sum appropriated.

2d. That the disbursing officers, in their requisitions for money, should state distinctly, not only the appropriation to which the amount required is chargeable, but the specific object to which it may be intended to apply it, the contract under which, and the particular contractor to whom the payment is to be made.

3d. That no requisition for money should be attended to that may be deficient in any of these essential particulars.

4th. That all disbursing officers should be instructed never to make a money requisition until the amount actually due, or very nearly the amount actually becoming due, shall have been satisfactorily ascertained, and then to confine the amount of the requisition to the amount due or becoming due, including their legal commission; and if the amount of the requisition should afterwards be found to exceed or fall short of the sum actually required, such excess or deficiency to be specially noticed in the requisition next to be made under the same head, and a corresponding deduction from or addition to such requisition be made.

5th. That all agents charged with the disbursements of moneys be instructed not to apply any moneys in their hands to any object or objects whatever, other than such as may be known to be legally chargeable to the appropriation out of which such moneys were remitted to them.

6th. That a special book be kept, showing, at all times, not only the general state of the funds, but the amount of the respective warrants drawn upon the respective appropriations, and the objects arising under those appropriations for which moneys are from time to time required and remitted, and to which they are to be applied, so that, by comparing the amounts of the warrants with the estimated amounts of the various contracts and authorized expenditures, and the progress made in the execution of the contracts, a satisfactory judgment may be formed as to the propriety of making the remittances that may from time to time be required by the respective agents, and the precise state of the funds be known.

Thus, for instance, it has been estimated that the repairs of the frigate A will cost \$100,000, and you have authorized her repair. Let this sum, then, be stated on the books as the cost of this object, and let all the warrants remitted to the disbursing agents for this object be entered on the same page, so that the whole amount applicable to the object, and the sums remitted from time to time, shall appear, and the balance at any moment accurately ascertained; thus, receiving, as we do, weekly accounts of all the work performed in the several building yards, and monthly reports as to the progress made in the execution of contracts, and the expenditures under all the various heads at the several yards, a check will be established which will enable the Department to decide, in the most satisfactory manner, as to the expediency of making remittances.

If you will be pleased to direct the Commissioners to be furnished with a transcript, weekly, of all the warrants thus drawn, the Commissioners of the Navy will be at all times possessed of the requisite information to enable them to discharge that branch of the duties confided to them which relates to contracts and expenditures. They will keep such a book as has been recommended, which may be compared monthly, or oftener, with the one kept in your office, and thus the one be a check upon the other.

Our contracts embrace the great mass of the expenditures under the heads of repairs, provisions, navy yards, gradual increase, and ordnance, and they are specific as to prices, so that, if the quantities of the articles required be ascertained, the amount of any proposed expenditure may be stated with all possible accuracy prior to its being authorized. This can be done in all cases, excepting, probably, on pressing emergencies that may occur within the United States; and as regards our vessels on foreign service, estimates of their probable expenditure may always be made with sufficient accuracy, and such sums could be retained out of the general expenditure for their use as they would probably require.

It appears, sir, to the Commissioners of the Navy, that such rules and restrictions, if punctually observed, would produce essential benefits to the service; moneys remitted under such checks would, it is presumed, be applied to their legitimate objects. The necessity now daily occurring in the Auditor's Department, of transferring sums of money from one head of appropriation to another, in consequence of moneys either having been required or remitted under wrong heads, or having been applied by disbursing officers to objects to which they were not legally applicable, would cease to exist so soon as all the accounts now outstanding should be settled, and the Department would be enabled, at all times, to form a satisfactory estimate as to the actual state of its fiscal concerns, and regulate the expenditures so as to prevent their exceeding the sums appropriated by law.

In submitting these observations to your consideration, the Commissioners beg leave to remark that, should you concur in opinion with them, and determine to adopt these or similar suggestions, they will most cheerfully take upon themselves any portion of the additional trouble arising that you may be pleased to assign unto them.

I have the honor to be, &c.,

JOHN RODGERS.

HON. SMITH THOMPSON, *Secretary of the Navy.*

C.

Exhibit showing the amount of the requisitions from navy agents, approved by the Board of Navy Commissioners, during the year 1828 (from 1st of June), and to the 21st of March, 1829, under the several heads of appropriation committed to the direction of the board; also the amount at each agency, and the aggregate amount of the whole.

	Year.	Provisions.	Repairs of vessels.	Pay of superintendents, &c.	Ordnance.	Medicines, &c.	Navy Yards.	10 sloops.	Gradual improvement.	Gradual increase.	Contingent expenses.	Aggregate amount at each agency, and of the whole.

And the appropriation for ten sloops is <i>indebted</i>	\$36,089 88

H.

Copy of a letter from the Secretary of the Navy to the Fourth Auditor of the Treasury, dated—

NAVY DEPARTMENT, November 10, 1820.

The present confused and unsettled state of the fiscal accounts and concerns of the Navy Department makes it proper that its cause be made the subject of inquiry; and that measures be adopted for the correction of the existing evil, and the prevention of its future occurrence.

You are requested to make a statement of your views of the causes which have led to this state of things, and to express your opinion particularly on the following points:

1. Have these embarrassments in the public accounts arisen from the complexity or intricacy of the act of Congress of 1809, which declares "that the sums appropriated by law, for each branch of expenditure in the several Departments, shall be solely applied to the objects to which they are respectively appropriated, and to no other?"

2. Are the provisions of that law so difficult of execution as necessarily to lead to this perplexed condition of the general accounts of the Department; or are they to be ascribed to the ignorance, or any particular misconduct on the part of the officers who have had the management of its concerns?

3. Does the law of 1809, in relation to specific appropriations, afford any peculiar salutary check upon the officers employed in its execution, so as to ensure the proper application of the appropriations to the objects for which they have been granted? or, may it not, by its intricacy and complexity, favor the concealment of irregular and illicit practices, by the difficulty of detecting them?

4. Could not a system be devised which would afford all the restraints imposed by this law, which would be simple in its principles, intelligible in practice, and which would be free from the disorder and confusion attendant upon the one now in operation?

5. Can this unsettled state of the accounts of the Navy Department be adjusted by any means within the power of its officers; or will it be necessary to appeal to Congress, for the purpose of effecting this object?

I.

TREASURY DEPARTMENT, *Fourth Auditor's Office, November 30, 1829.*

SIR: Your letter of the 10th instant, propounding to me certain inquiries relative to the accounts of the Navy Department, has been considered with the attention due to the importance of the subject. With the application I have bestowed upon the duties of this office, I cannot yet speak with that entire confidence of its condition, which would justify important changes, without further lights. The results of my observation, and the opinions I have formed, will, however, be communicated to you with the utmost frankness.

Money is the sinews of power and the source of corruption. English liberty has been considered safe only so long as the power of granting supplies to the King resides in the representatives of the people. Our institutions have gone further. Here the representatives of the people not only grant supplies, but prescribe the objects to which they shall be applied, and the manner in which the accounts shall be kept.

It is a safe, and, I think, a correct principle, that the Executive cannot, rightfully, increase or diminish the emoluments of public officers, whose compensation has been fixed by law. When they are subjected to unusual expenses in the public service, he may grant them allowances sufficient to cover those expenses, but no more. He cannot, rightfully, under pretence of paying their expenses, or under cover of commutation, or any other device, increase their lawful emoluments. Yet, the pay and emoluments of our naval officers are chiefly of Executive creation; and, where the representatives of the people have fixed them by law, the Executive has, by various expedients, much increased them.

In a former report, I stated to you, in detail, the course which had been pursued in relation to the marine corps. To that communication I refer you for all I could now say, in relation to that branch of the subject.

But Executive legislation, in relation to the navy proper, has been even more extensive, and not less in violation, as I conceive, of the true principles of our government.

An act of Congress, passed 25th February, 1799, fixes the pay and emoluments of captains, commanding ships of thirty-two guns and upwards, at \$100 per month, and eight rations per day, and allows the commander of a squadron eight rations in addition. The ration has been commuted at twenty-five cents. Hence, the lawful allowance of a commander of a squadron is \$1,930 per year. To increase their income, the Executive formally allowed them a commission of 2½ per cent. on all bills drawn for the support of their squadron; and, more recently, \$2,000 per year, in lieu of commissions, with \$30 per month, or \$360 per year, for cabin furniture. Here are \$1,930 allowed by law, and \$2,360 by the Executive, making their whole emoluments, deducting only what they actually pay for furniture, \$4,290. I do not say this is too much, considering the expenses they necessarily incur in supporting the honor of our navy in distant seas and foreign ports; but might not the Executive, with equal right, increase it to \$10,000? Would it not be better—would not the commander feel better in receiving it, and the Executive in paying it, were it an allowance made by law?

The commutation price of the officer's ration is twenty-five cents; the contract price not over fifteen. The commutation is not fixed by law, but by the Executive will. In speaking of rations, the law knows no distinction between the seaman's ration and the officer's ration. Yet, by Executive regulation, the officer is allowed sixty-six per cent. more for his ration than the value of the seaman's ration. The money paid the officer for sixteen rations would purchase twenty-six seamen's rations. Under color of commutation, therefore, the Executive allows the officer more than his lawful rations, and thus increases his emoluments. These remarks apply to every officer of the navy.

The Executive also allows a captain, commanding a line of battle ship, \$25 per month, or \$300 per year for furniture; a captain, commanding a frigate, \$20, or \$240 per year; a master commandant, commanding a sloop-of-war, \$15, or \$180 per year, and a lieutenant commanding, the same sum.

These allowances are, unquestionably, designed to increase the emoluments of those officers.

As strange as it may seem, there is no act of Congress giving any compensation whatever o

captains of the navy, when on shore, whether unemployed or stationed at the various navy yards; excepting only the Navy yard at Washington. The act of 1799 only provides a monthly pay for captains *commanding ships*: "one hundred dollars per month and eight rations per day to captains commanding ships of thirty-two guns and upwards; and seventy-five dollars per month and six rations per day" to captains commanding ships of twenty and under thirty-two guns. All the pay and emoluments of captains on shore, and at shore stations, originated in Executive legislation. On furlough, they are allowed half the highest grade of pay; under orders, or waiting orders, they have full pay. But the most extensive Executive legislation, in relation to them, consists in the pay and emoluments allowed them at the navy yards. In Philadelphia, for instance, the captain is allowed \$100 per month, 16 rations per day, \$600 house rent, \$65 for candles, 30 cords of wood (now commuted at \$6 per cord), and three servants, at \$8 per month; amounting in all to \$4,066.75. With the exception of the monthly pay and rations of a few of the officers, *all* the allowances, made to *all* those stationed *at* and employed *in* navy yards, are of the Executive creation. Take, for instance, the estimates of last year, for the Navy yard at Norfolk, in which all the following items are authorized only by Executive regulation:

	Pay.	Rations.	Rent.	Candles.	Wood, cords.	Servants, \$8.	Servants, \$6.
<i>Yard.</i>							
Captain	\$100	16	65	30	3	
Master commandant.....	60	5	\$300	40	20	2	
Lieutenant			200	20	20	1	
Lieutenant

<i>Hospital.</i>							
Surgeon.....			200	20	20	1	
Surgeon's mate			145	16	14	1
Steward	18	1	
Nurses.....	10	1	
Washers	8	1	
Cook	12	1	

Civil.

Storekeeper	\$1,700
Clerk to storekeeper.....	450
Clerk to yard.....	900
Clerk to commandant.....	750
Clerk to commandant.....	360
Master builder.....	2,300
Clerk to master builder.....	420
Inspector and measurer of timber	1,050
Keeper of magazine.....	480
Porter.....	300

In addition to the foregoing allowances, there are also the following in connection with navy yards, viz:

Allowance to furnish commandant's house.....	\$696
Allowance to furnish master commandant's house	319
Allowance to furnish surgeon's and purser's house	224
With oil-cloth carpets in addition.	

The pursers, stationed at several of the yards, have, for many years, presented claims for a commission on money paid to mechanics and laborers; but it was repeatedly decided that no such allowance could be made, because such payments were a portion of their regular duties. Within the last two or three years, however, an allowance of \$600, under the name of clerk hire, has been made, with the avowed object of covering this claim.

By law, the navy agents are limited to one per cent. on their disbursements, provided that the amount

shall, in no instance, exceed \$2,000 per annum. The language of the law is tantamount to a prohibition upon the Executive. Yet, foreign navy agents have been allowed 2½ per cent. upon disbursements, besides large sums for office and incidental expenses; and, in some instances, their compensation has been increased to \$4,000 or \$6,000 per annum. Domestic agents have been allowed round sums, for contingent expenses, without being required to produce vouchers, with the evident intent of swelling their emoluments beyond \$2,000. Some of the principal agents have received the round sum of \$1,800 for clerk hire; \$150 for office rent; \$240 for porter hire, and \$60 for fuel and candles. Others have been allowed less sums. To one agent, at least, a commission of 2½ per cent., and ¼ per cent. over \$2,000, has been allowed on vast sums of money, swelling his emoluments to many thousands.

Let me not be understood to mean, that the compensation allowed by law is, in all cases, adequate. I design, only, to show that the Navy Department has disregarded the law, and taken the liberty to increase the emoluments of these agents, according to its own discretion. If the compensation of agents was found inadequate, it was the duty of the Secretary to represent the case to Congress, and obtain a change in the law, rather than attempt to remedy the defect by indirection.

To certain surgeons, until recently, there has been a stated annual allowance, as purveyors of medicines, &c., in effect increasing their emoluments.

To all officers, a commission of 15 cents per mile has been allowed, for traveling expenses, when, on many routes, their actual expenses are scarcely one-third of that sum, and, by this means, their emoluments are increased.

A commutation for wood, at \$6 per cord, has been adopted. At some places, this exceeds the actual cost, and the excess goes to swell the officer's emoluments. At others, it falls short, and the officers complain. At one place, by express direction of the late Fourth Auditor, the purser was instructed to pay the officers the value of their allowance for wood, according to the market price, and take their receipts for so much wood, and not for money. Upon vouchers, thus made false by official authority, the officers have claimed \$8 to \$8.50 for their wood.

The commissioners of navy yards have been allowed \$450, in addition to their regular pay as captains of the navy, while employed in the business of navy yards, and their traveling expenses.

The Commissioners of the Navy have been allowed \$3 per day, when absent from duty, and traveling expenses.

Officers engaged in the examination of midshipmen and surgeons have the same allowances.

Assistant surgeons, and midshipmen attending examination, are allowed \$1.50 per day, and traveling expenses on returning.

Captains acting on courts of inquiry and courts-martial are allowed \$3 per day, and master commandants and midshipmen \$1.50, with their traveling expenses.

Officers attending as witnesses are allowed \$1.50, and traveling expenses; citizens are allowed \$3, and traveling expenses.

Officers employed in surveying harbors have been allowed from \$1.50 to \$3 per day.

Officers ordered home from foreign stations, or returning on a sick ticket, are allowed their passage money.

Seamen discharged in foreign countries are sent home at the expense of government.

Officers necessarily traveling to the city, for the settlements of their accounts, are allowed traveling expenses, and \$1.50 per day, for expenses while detained.

Officers taking the place of their superiors, in the temporary command of ships or stations, have been allowed the pay and emoluments of those superiors.

The expenses of officers, when sick, have been paid, deducting, formerly, their whole pay and rations, and recently, one-half.

In addition to all these allowances, by Executive authority, we have a variety of offices and agencies emanating from the same source.

Under the law authorizing the establishment of dry docks, the Secretary of the Navy has created the office of engineer, with a salary of \$4,000 per annum, \$80 per month for board, when absent from home, 15 cents per mile for his traveling expenses, and all his incidental expenses paid besides.

There is an assistant engineer, appointed by the principal, at \$4 per day, with traveling and other expenses.

We have had a superintendent of live oak plantations in Florida, with a salary of \$400, and an overseer, appointed by him, with a salary of \$500.

We have had agents for surveying live oak lands in Florida, at \$4 to \$5 per day, in addition to their expenses.

A custody fee of fifteen cents per day has been allowed to the sheriff of Florida, for keeping Africans landed from slave ships.

We have an agent at Liberia for receiving Africans, at a salary of \$1,600, and an outfit of \$500.

We have architects of navy hospitals, who receive salaries of \$2,000 per year.

Until recently, the Navy Department employed a special agent, who was a clerk in this office, and allowed him one per cent. on heavy disbursements, when the law expressly provides that all disbursing officers shall be appointed by the President, and nominated to the Senate.

Many other special agents have been employed for particular services, and many thousand dollars paid to them by way of compensation.

The original authority for most of these allowances exists only in letters from the Secretary of the Navy to the Fourth Auditor. For some of them not even that authority, or any other, except precedent, can be found. An account has been allowed by the Secretary; another one like it is allowed on the same principles; the precedent becomes a law, and even its origin is forgotten. This kind of legislation has been as fluctuating as it has been loose. Sometimes more is allowed, and sometimes less; the navy is full of complaints of partiality; and almost every man thinks that he has a right to some allowance, because a similar claim has been allowed to others. The Auditor is harassed with arguments drawn from expediency; the hardship of the case; its similarity to some allowance heretofore made; and because some have procured improper allowances, he is censured because he does not put all upon an equality, by making improper allowances to others. Everything is dark and uncertain; and, instead of being able at once to turn to some law or lawful regulation, by which to test every claim which is presented, he is compelled to spend hours and days in hunting for old letters, and looking into precedents.

Some boldly claim allowances without law or authority, because their cases, or others like them,

were embraced in the estimates on which the appropriations were founded. In their view, an estimate authorizes an expenditure. So far has this impression gone, that men, employed by contract, at prices less than the estimates placed upon similar services, have advanced serious claims to the whole amount estimated. It is in vain to urge that the estimates are, or ought to be, based on some existing law; that they form no part of the appropriation law; that Congress, almost uniformly, appropriates less than is estimated, without leaving any record explaining what part they disapprove; no arguments avail with those who consider custom as law, or find their own convenience or their interest in setting their own rules above those of the legislative power. Congress have confidence that the Executive officers will be governed by law in their estimates; they never scrutinize them with an impression that they are to be taken as law after their adjournment; and instances are not wanting where they have been deceived into appropriations for objects other than those which the estimates seemed to present. Next to allowing the Executive to make appropriations by his own authority, is the danger of considering an appropriation, based on an estimate without shadow of law to authorize the estimate or make the appropriation necessary, as sufficient authority for expending the money. Yet, such has been the practice of the government; and from this practice have sprung many abuses.

It may be well supposed, that almost an entire want of legal and fixed system in the allowances made (for the Department has not obeyed its own estimates) must materially affect the accounts of this office, and the appropriations made by Congress. By some new rule, or upon some unknown reason, many thousand dollars have been suddenly and unexpectedly allowed. By a repetition of these allowances, means to pay which have always been found, the state of the appropriations, and consequently, the accounts of the Department, have been miserably deranged.

This leads me to speak of the manner in which the public moneys are drawn from the treasury, and the accounts kept.

By acts of Congress it is declared that all moneys appropriated shall be applied to the purposes for which they are appropriated, and no other, except that transfers in certain cases may be made, by the President, from one appropriation to another. In the Navy Department, the power of transfer extends only to pay of the navy, provisions, medicines and hospital stores, repairs of vessels, and clothing. From either of these to any other, transfers may be made within the year for which the appropriations are made; and an account of such transfers is required to be laid before Congress within the first week of their next succeeding session. On the first of February of each year the Secretary of the Navy is required to lay before Congress a statement, under each specific head of appropriation, of the amounts appropriated for the service of the preceding year, of the amounts expended, and of the balance remaining on hand at the close of the year.

When a navy agent or other disbursing officer wants money, he writes to the Secretary, stating the heads of appropriations under which it is wanted. The Secretary issues a requisition upon the Secretary of the Treasury for a warrant for the amount, stating each item under its proper head of appropriation. The Comptroller countersigns it, and charges each item to the proper appropriation. The Auditor registers it, and charges the items to the disbursing officer, also under the proper heads. The officer renders his accounts for disbursements under each head, and receives a credit under each.

There are now unclosed accounts on the Fourth Auditor's books, under upwards of forty heads of appropriation. Many disbursing officers have accounts under ten or fifteen different heads, which are precisely like ten or fifteen separate accounts. Did every person receiving money from the Navy Department ask for it under the proper heads, expend it under the proper heads, and render his accounts under the proper heads, and had no transfers ever been made, or, when made, had they been reported to Congress, and the deficiency immediately supplied, there would have been little or no irregularity in the accounts of the Department. But the irregular and unlawful practice of the Department, encouraging and producing similar irregularity among all its fiscal officers, has defeated the object of specific appropriations, and involved its accounts in almost inextricable confusion.

When agents have called for money under heads of appropriation which were exhausted, former Secretaries have not hesitated to send them money under other heads. This is a virtual transfer from one appropriation to another, and a violation of law. When the officers account for this money it stands charged to them on the Auditor's books under one head, and they obtain credit under another. The money has in fact been applied to purposes other than those for which it was appropriated. But, when another appropriation is obtained under the deficient head, the amount borrowed is refunded. This is another virtual transfer, and a double violation of law, because it is a transfer from one year to another.

When the Auditor and Comptroller have settled an account belonging to a head of appropriation which is exhausted, the practice has been to pay it by an advance out of another appropriation. This is also a palpable invasion of the law; the money is applied to purposes for which it was not appropriated; the account can never be closed on the books of this office unless Congress make another appropriation under the deficient head; and, even then, it must come out of another year's appropriation.

Millions of money have been expended by the Navy Department for purposes other than those for which it was appropriated. The accounts now unadjusted, arising solely from these irregularities, probably embrace more than a million of dollars. Many of them are as much creditor under one head as debtor under another; but the Auditor has no power to transfer the amounts and close them. It is probable that \$30,000 would pay all that is really due upon these accounts, and an appropriation of that sum, with power to make the necessary transfers, would furnish the means to close them. No talents or skill can adjust them without the interposition of Congress.

In every case where a transfer is made from one appropriation to another, or where money has been forwarded under one head to be expended under another, or where an advance is made under one head to pay a debt due under another, the Comptroller's books do not represent truly the purposes for which the money is expended. For instance: an agent asks for \$10,000 under "pay of the navy;" it is sent to him under "provisions;" it is intended to be applied, and actually is applied to "pay;" yet on the Second Comptroller's books it is charged to "provisions," and, under that head, is reported to Congress. Hence, there has not been for many years a correct report made to Congress of the purposes to which the money appropriated has been applied.

On recurrence to the Comptroller's report for 1828, you will find the first column headed "balances of appropriations on the first day of January, 1828;" the second, "appropriated in 1828;" the third, "repayments in 1828;" these three added together form the fourth, headed "amount applicable to the service of 1828;" the fifth is headed, "amount drawn by requisition from the Treasury during the year 1828;"

and this subtracted from the fourth, forms the sixth, headed "balances of appropriations on the 31st of December, 1828." The first column gives the amount standing to the credit of each appropriation on the Comptroller's books on the first day of January, 1828; but as all transfers made during the preceding year are debited to the appropriation from which the money was taken, and credited to that in aid of which the transfer is made, those balances are far from a true representation of the actual state of the several appropriations at that time. None of the principal appropriations *appear* to have been exhausted; yet some of them were exhausted, and had borrowed large amounts from others. The amounts, so borrowed, were repaid out of the appropriations for 1828. Before the expiration of that year some of the appropriations were again exhausted, and sums of money again borrowed from others. All sums thus refunded are borrowed, as well as all sums transferred from one head of appropriation to another for the purpose of adjusting accounts, are included in the column of "repayments." It is obvious that none of these sums can at all increase the "amount applicable to the service of the year 1828;" yet they are all added in to make up the items of the columns thus headed. The *bona fide* repayments are small in amount. Of the \$369,909.94 under the head of "repayments in 1828," it is not believed that the actual repayments amount to \$60,000. The report, therefore, represents that there were upwards of \$300,000 applicable to the service of 1828 more than actually were so applicable.

Indeed the system of borrowing from one appropriation to make up deficiencies in another is nothing more nor less than anticipating the appropriations of the next year. For instance: "pay afloat" is deficient; to make up the deficiency the Secretary borrows \$10,000 out of "provisions;" this \$10,000 is refunded out of the sum appropriated for "pay afloat" for the next year. Thus, \$10,000 of the appropriation for "pay afloat" in 1828 is actually anticipated, and spent in 1827, and the amount applicable to the service of 1828 is reduced in that sum. Yet, by representing the payment of this debt as a *repayment*, the Comptroller's report represents it as increasing that amount.

The fifth column is not a true representation of the "amount drawn from the Treasury during the year 1828," because it includes all transfer requisitions which take nothing from the Treasury, but merely transpose the money from one appropriation to another. In some cases that column represents the same sum of money as drawn from the Treasury twice over. It is represented as drawn from the Treasury by the requisition which transfers it from one appropriation to another; and it is represented as drawn again by the requisitions which take it from the latter appropriation and pay it out to public officers or agents. Hence that column represents the amounts drawn from the Treasury as much greater than they really are.

The "balances of appropriations on the 31st day of December, 1828," are made up in the same manner as the balances in the first column. They are far from conveying to Congress any correct idea of the state of the appropriations.

In fine, from the Comptroller's reports neither Congress nor anybody else can obtain any accurate information in relation to the amounts expended under each head of appropriation, or of the actual condition of the appropriations. As a system of book-keeping, exhibiting the amounts debited and credited to each appropriation, the mode of keeping these accounts in the Comptroller's office is, doubtless, correct; but it does not enable the head of the Navy Department to give to Congress that information which the law requires. From inspection of the Comptroller's books, and conversations with those who keep them, I am satisfied that to obtain from them correct information of the state of the appropriations is now wholly impracticable. So many and so complicated have been the transfers, the refundings, the advances under wrong heads, &c., &c., that the skein can never be unraveled, and the only remedy for the past is to cut the knot.

It is just to the present Comptroller to state that he is devising means to change the mode of keeping his books and make them present the truth of every transaction.

Though appropriations are made for specific years, no effort has been made, except in relation to contingencies, to confine payments, out of the appropriations for any one year, to the accounts accruing within that year. With the exception above stated, accounts accruing ten years ago are paid out of the appropriations for the current year. The comptroller's books do not profess to give the *expenses* of each year, but only the *payments*. Large sums have been taken out of the appropriations, within a few years past, to satisfy old claims. This is, doubtless, one cause of the deficiency in some of them, which has in fact existed, and has been known in the public offices for several years. It may be doubted whether there was money enough, under any one of the *principal* heads of appropriation, in 1828, to pay up all accounts, accruing before the 1st of January, 1829; and it is probable that there was an aggregate deficiency, exceeding half a million of dollars.

It is difficult to ascertain fully, and detail accurately, all the practices which have embarrassed the accounts of the Navy Department; and perhaps it is more difficult to point out a remedy. But the result of my reflections shall be freely given.

As a first step to an effectual reform in the business of the Department, I would suggest the propriety of an appeal to Congress, to remodel the whole system of pay and emoluments of the naval officers, leaving as little as possible to the discretion of the Executive. Every indirect and covert allowance should be discontinued and forbidden; and the pay of all the officers made so certain as to leave no room for construction, and so liberal as to remove present inducements to seek an increase by indirect means. The regular pay of officers of the navy is far below that of officers of the army, in similar grades. Certainly, their services and dangers are not less. Bearing their country's flag to every clime, they are exposed to dangers, disease and death, in a degree far beyond anything encountered in time of peace by the officers of the army. By the feeble health and broken constitutions of many, returning from distant cruises, who present themselves to me for a settlement of their accounts, I am constantly admonished of the hardships these brave men have to encounter. Let not the country be unjust to them.

The lawful compensation to commanders of squadrons is peculiarly inadequate. By their skill and valor they have made our flag glorious, and attracted to our ships the attention of the world. When they enter foreign ports, or meet foreign squadrons, they are obliged to receive and return the visits of those whom curiosity or admiration attracts on board their vessels. As unwilling to be outdone in courtesy as to be conquered in battle, they are compelled to incur expenses which their regular pay and emoluments are inadequate to meet. Let them no longer be subjected to the humiliation of begging indirect and unauthorized allowances from the Executive, when an ample compensation ought to be accorded to them by the representatives of the American people.

It is more important that Congress should give us a *system* of pay and emoluments, because discretionary allowances by the Executive tend to injustice, corruption and endless jealousies. While the officer

of nice feelings stands aloof, and relies upon his country to provide for him, the less scrupulous make themselves the assiduous flatterers of those in power. Their success operates as a premium for subserviency, and disheartens those of honest principles and lofty minds. The supple and corrupt may monopolize the favors of the government, while the independent and honest are kept in obscurity, or driven from the public service. The minds of officers, instead of being devoted to the interests and glory of the navy, are employed upon the means of persuading the Secretary or accounting officers to eke out their emoluments by additional allowances. If every claim is not allowed which bears a resemblance to such as have been allowed to others, they are dissatisfied, and complain of partiality and injustice. If an accounting officer be corrupt, and it be understood that claims will be favorably considered in proportion as claimants minister to his passions, his partizan feelings, or his necessities, it is fearful to think how far the poison might spread in this essential arm of the national defence!

How vastly important is it, therefore, not only to the safety of the Treasury, but to the character and efficiency of our navy, that all discretion, in making pecuniary allowances, should be taken from the Executive officers. To its moral character, I verily believe, does our navy owe all its glories. By preserving that character we shall make it invincible. Give the officers liberal pay; make it fixed and certain; place them in a situation to claim it as a matter of right; teach them to consider themselves dependent on no Executive officer for their emoluments, but on their country only; they will then devote themselves, not to this or that man who may chance to hold the office of President, Secretary or Auditor, but to the glory of their flag and the interests of the republic. The navy will become as remarkable for its high honor and strict morals, as it is now distinguished for its valor.

I doubt whether the present system of supplying seamen on board ships with comforts, is not injurious to the morals of the navy. It affords an over-active temptation to pursers to cheat the seamen; and that they are sometimes overcome by it, we have ample proof. But I am not prepared to suggest a remedy.

Public economy, no less than the character of the navy, demands a well-defined system. Although the pay of every officer might be nominally much increased, the aggregate amount paid them would not be greater than it is. Perhaps it would be less; at least the increasing profusion which always attends a loose system, would be checked, and the ultimate effect would be a saving of public money.

One of the most important results of a well-defined system would be, the restoration of confidence to the public officers, and of truth to their records. Truth is the basis of all morals, of all useful religion, of society itself. Yet, our public books and records have been filled with systematic falsehood. Does any one suppose that a commission has been allowed to the commanders of squadrons, for the purpose of paying them for *the trouble of drawing bills*? The trouble is nothing; the *name* given to the allowance is a mere pretence. Lately \$2,000 has been allowed them in *lieu of commissions*. This is one step nearer a direct allowance without pretence. The *truth* is, the allowance is made to *increase their emoluments*, and nothing else. Who, on finding from the books of this office, that \$600 has been allowed to pursers for clerk hire, would doubt that this money has been paid for clerks? Yet, such is not the fact. The allowance has been made *solely* to cover a charge of commission on moneys paid to mechanics and laborers, and to increase the purser's lawful emoluments. Who would doubt that the navy agents paid out for house rent, clerk hire, &c., &c., the sums which have been allowed under these names? Yet, such is not the fact—at least in many instances. It is designed as an expedient to increase their allowances beyond one per cent. on their disbursements, or to make it exceed \$2,000. The public books are full of such pretences and falsehoods. Sometimes, it is believed, vouchers, false in substance as well as form, have been used to draw money from the Treasury. So familiar has the mode of doing business under fictitious names become to many honest men long in office, that it is difficult to convince them of its evil tendencies and intrinsic wrong. Is it not important to correct this? Where is the security for the faithful application of the public money, when the records of its distribution are permitted to be falsified? There is no safety, unless even the *appearance* of falsehood be rooted out. Indulgence in one untruth, blunts the moral sense, and leads to another. A falsehood in *form* leads to falsehood in *substance*. By degrees the evil creeps on, until the sluices of the Treasury are opened, and the people look in vain to their public books to see for what purposes their money has been paid.

You will perceive by the facts herein stated, that the whole object of specific appropriations has been defeated by the irregular and unlawful practices of the Navy Department. The annual reports to Congress give no correct information of the expenditures under each head, and for any purpose of that kind are no better than blank paper. They are worse: for they mislead and deceive. I find that most of those experienced in the public accounts attribute their present condition in the Navy Department to the system of specific appropriations. I am not prepared to admit that it is so much the fault of the system, as of its administration. The system is difficult, but certainly not impracticable. All will admit that it ought to be enforced or abolished. I know of but one mode of enforcing it. Let Congress give us an appropriation to meet all arrearages, under every head of appropriation, prior to the first day of January, 1830. Let every account in the Navy Department be settled up to that day, and all balances due, paid out of that appropriation. Let careful estimates be made for expenses accruing in 1830, and no part of the money appropriated for that year be paid on any account accruing prior to that year. Compel every disbursing officer to make careful estimates of the amounts needed by him under each head; forbid his paying out money for other purposes than those for which it is sent to him; and refuse him credits for all overpayments. Let no transfers be made, except in the emergency and in the manner prescribed by law; and let such as may be made be reported to Congress, as the law requires, that the deficiency may be supplied.

With strictness and severity in executing the law, I think the present system *practicable*. But it is complicated and difficult, and in some respects unsafe. Let any member of Congress or other person, however talented and intelligent, enter this office and attempt to ascertain for what purpose the public money has been paid during the last four years. Where will he look for the information? Will he turn to the books? They will give him none. The entries are all in general terms, under each head, and give no clue to the real character of the vouchers. Will he ask the clerks? Their recollections are indistinct and unsatisfactory. He can procure what he wants only by a personal inspection of the ten thousands of vouchers in thousands of accounts, which it would take months to examine. I have been in this office about six months, and all I know of past transactions has been obtained by accident, in the necessary routine of business, or in tedious investigations. What there may be concealed in the numerous boxes and piles of papers which fill the passage, the shelves, and the pigeon holes of the office, I know not, nor can

I ever know, without opening and carefully inspecting the contents of every bundle. Without a long research we cannot tell what the building or fitting out of any ship has cost, or anything else of those hundred items of information which are always interesting, and often useful. The various items are scattered through the books of the office under various heads of appropriation, from which it is always difficult and sometimes impossible to cull and collate them. These heads of appropriation, as they appear in the books of this office, are like splendid abstractions, more beautiful in theory than useful in practice.

It appears to me all the benefits now derived from specific appropriations might be realized without their inconveniences, by requiring the Department to present *specific estimates*, by appropriating a sum in gross for the support of the navy, and by requiring the Secretary to account annually for the sums expended under each head of his estimates. To enforce the present system, liberal estimates must be made under each head to meet unexpected emergencies, because one head cannot depend for relief on another; but upon the plan suggested, a general allowance for emergencies would be sufficient, and the aggregate amount of appropriations need not be so great. To enforce the present system, it will also be necessary to keep a balance under each head in the hands of every disbursing officer, thereby magnifying the aggregate at his disposition and multiplying the chances for fraud and defalcation. Under the plan suggested, the money in their hands would constitute a general fund, applicable to all naval purposes, and the whole sum continually entrusted to them need not be so large.

Whether the system be changed or not, the interposition of Congress is *absolutely necessary*. Without it, that which is now confused, must become worse confounded. If they will but give us the means of paying up arrearages, and not compel us to draw upon the appropriations of 1830, to pay debts accruing in all preceding years, we can do much ourselves towards extricating the accounts of the Department from their present embarrassment. Without that, we can do nothing, unless, indeed, we cease to pay all such accounts, and refer them to Congress, which would be great injustice to the creditors of the public.

My solicitude on this subject is great. None appears to me more to need or deserve the consideration of Congress. A system of pay and emoluments, and a reform in the mode of keeping the accounts, would place it on high ground. I want no discretion. I wish to be able to turn to some law or lawful regulation for every allowance I am called on to make. I wish to make every transaction of this office so plain that every member of Congress, and any man of common capacity in the country, can understand it. There are no mysteries in good government. To manage the affairs of the American people, it is not necessary to deceive and blind them. Honesty in official duties, and truth in disclosing all that is done, will rivet the government in the affections of the people, and make our Union as firm as our mountains.

From my want of experience, I do not flatter myself that any great value ought to be attached to my suggestions. If they shall lead to investigations which shall give efficiency to the navy, and place the administration of its affairs on the basis of the Constitution, I shall be more than compensated for the trouble of making them.

Very respectfully, your obedient servant,
 JOHN BRANCH, Esq., *Secretary of the Navy.*

AMOS KENDALL.

K.

General estimate.

There will be required for the support of the navy, during the year 1830, three millions five hundred and fifty-six thousand five hundred and forty-seven dollars and thirty-four cents, in addition to the unexpended balances that may remain on hand on the 1st day of January, 1830.

1. For pay and subsistence of officers, and pay of seamen, other than those at navy yards, shore stations, and in ordinary	\$1,239,220 47
2. For pay, subsistence, and allowances of officers, and pay of seamen at navy yards, shore stations, hospitals, and in ordinary.....	224,229 25
3. For pay of superintendents, naval constructors, and all the civil establishments at the several navy yards and stations.....	57,680 00
4. For provisions.....	457,537 50
5. For repairs of vessels in ordinary, and for wear and tear of vessels in commission..	590,000 00
6. For medicines, surgical instruments, and hospital stores, and all other expenses on account of the sick	30,500 00
7. For ordnance and ordnance stores.....	30,000 00
8. For repairs and improvements of navy yards, and for the covering and preservation of ships in ordinary.....	450,000 00
9. For gradual increase, to be applied to that appropriation, being the amount expended in the substitution of iron water tanks for casks, making the sum of..	\$200,000 00
From which may be deducted this sum, restored to gradual increase from the surplus fund, by act of 2d March, 1829	47,619 88
	152,380 12
10. For defraying the expenses that may accrue during the year 1830, for the following purposes, viz:	
For freight and transportation of materials and stores of every description; for wharfage and dockage, storage and rent; traveling expenses of officers, and transportation of seamen; house rent, chamber money, fuel, and candles, to officers other than those attached to navy yards and stations; and for officers in such quarters where there is no hospital, and for funeral expenses; for commissions, clerk hire and office rent; stationery and fuel to navy agents; for premiums and incidental expenses of recruiting; for apprehending deserters; for compensation to judge advocates; for per diem allowance for persons attending courts-martial and courts of inquiry, and for officers engaged on extra service beyond the limits of their stations; for printing and for stationery of every description, and for books, maps, charts, nautical and mathematical instruments, chronometers, models and drawings; for purchase and repair of steam and fire engines, and for machinery;	

for purchase and maintenance of oxen and horses, and for carts, timber wheels, and workmen's tools of every description; for postage of letters on public service; for pilotage; for cabin furniture of vessels in commission, and furniture for officers' houses at navy yards; for taxes on navy yards and public property; for assistance rendered to vessels in distress; for incidental labor at navy yards, not applicable to any other appropriation; for coal and other fuel for forges, foundries and steam engines; for candles, oil, and fuel for vessels in commission and in ordinary; for repairs of magazines and powder houses; for preparing moulds for ships to be built, and for no other object or purpose whatsoever.....

11. For contingent expenses for objects arising during the year 1830, and not hereinbefore enumerated	\$320,000 00
	\$5,000 00
Total.....	\$3,556,547 34

JOS. L. KUHN, Paymaster Marine Corps.

Estimate for expenditures in the Quartermaster department of the United States marine corps, for the year 1830.

SUBSISTENCE.

For 400 non-commissioned officers, musicians, privates, and washerwomen, serving on shore, at one ration per day each, is 146,000 rations, at twelve cents per ration, is.....	\$17,520 00
For deficiency of appropriation for pay and subsistence last year, being the amount less than estimated for.....	*11,973 05
	<u>*\$29,493 05</u>

CLOTHING.

For 938 non-commissioned officers, musicians, and privates, at \$30 each, is.....	\$28,140 00
For 100 watch coats, at \$6 $\frac{2}{3}$ each, is.....	625 00
	<u>28,765 00</u>

FUEL.

For the officers, non-commissioned officers, musicians, privates, and washerwomen, and for public offices, hospitals, and armory.....	9,098 00
---	----------

* The alteration of items opposite to which asterisks are placed, was made at this Department, the explanations offered in support of them not being deemed satisfactory.

NAVY DEPARTMENT, November 27, 1829.

CONTINGENCIES.

For traveling expenses of officers, and transportation for men; freight of stores from one station to another; toll, ferriage, wharfage, and cartage; expenses of recruiting; per diem allowance for attending courts-martial and courts of inquiry, and for officers on extra duty; compensation to judge advocates; house rent and chamber money, where there are no public quarters assigned; incidental labor in the Quartermaster's department; expenses of burying deceased persons belonging to the marine corps; printing and stationery; postage on public letters; forage; expenses in pursuing deserters; keeping in repair the barracks at the different stations; straw for the men; barrack furniture; spades, axes, shovels, picks, and carpenters' tools; *\$14,000 00

MILITARY STORES.

For the purchase of 1,500 set of accoutrements, at \$2.75 per set. \$4,125 00
 For the pay of armorers, keeping arms in repair, armorer's tools, drums, fifes, flags, and ordnance stores. 2,000 00
 6,125 00

MEDICINES.

For medicines, hospital stores, and surgical instruments for officers and marines, serving on shore. 2,369 71

BARRACKS.

For completing the officers' quarters at head-quarters. 3,000 00
 *\$92,850 76

Appropriation required for the first quarter of the year 1831, agreeably to the foregoing estimate.

For subsistence \$4,380 00
 For clothing 7,191 25
 For fuel 2,274 50
 For contingencies *3,500 00
 For military stores. 500 00
 For medicines 592 25
 *\$18,438 00

NAVY DEPARTMENT, *December 1, 1829.*

P.

Copy of a letter from the Secretary of the Navy to the Board of Commissioners of the Navy, dated—

NAVY DEPARTMENT, November 13, 1829.

From the reflection I have been able to bestow upon the present organization of the Navy Department, I incline to the opinion that it is susceptible of improvement, particularly in its fiscal branch, its forms of administration, and the distribution of its duties.

Should further inquiry confirm this opinion, it will be proper for me to submit an improved system for the consideration of the President, and with this view I wish to avail myself of your information and experience.

I request, therefore, that you will lay before me your opinion whether the present organization of the Department may not be improved, and, if so, how? with such observations as may appear to you to belong to the occasion.

NAVY COMMISSIONERS' OFFICE, November 23, 1829.

SIR: The Navy Commissioners have had the honor of receiving your letter of the 13th inst., requiring of them to lay before you their opinion of the present organization of the Navy Department—whether it may not be improved, and, if so, how? with such observations as may appear to them to belong to the occasion.

The duties of the Navy Department are various and complicated: so much so, indeed, that no one individual, however gifted, would be competent even to their *general* superintendence.

We may be assisted in forming judicious conclusions, by classing these duties under general heads, and considering them in their separate, distinct nature; and by referring to the practices which have obtained in the administration of them, since the first organization of the Department.

The general heads by which these duties are distinguished, and under which they may be classed, are:

1. Administrative or Executive.
2. Ministerial.
3. Financial.

Those of an administrative character consist, essentially, in dispensing the various offices created by law; issuing orders and instructions to officers for service; employing the national marine; convening courts-martial; and generally in seeing that the laws in relation to the navy are duly and faithfully executed. In discharging these high functions, consultations with the President of the United States become necessary; the officer vested with these responsible trusts is the medium through which the President makes known his will to the navy.

Those of a *ministerial* character: such as the construction, building, and equipment of vessels of war; their armament; their classification; the procurement of naval stores and materials; the preservation of ships in ordinary; the construction of docks, arsenals, ship houses, storehouses, timber sheds, shears, shops, &c.; the victualing and clothing of the navy; and which involve the necessity of having experienced professional men to perform them.

Those of a *fiscal* character, which embrace the expenditures of the service, in all its numerous branches, and under all its various heads of appropriation. This branch of the Department requires, in the performance of its ordinary duties, a thorough knowledge of accounts, and of all the laws and regulations of the service in any way affecting its expenditures; and it would be greatly improved by a practical knowledge as to all the various stores, munitions, and materials essential in the different departments of the service.

The duties which relate to the execution of the laws in reference to sick and disabled seamen discharged from the service, the apportionment of pensions, the necessary regulations for the government and support of hospitals, the naval asylum, &c., have been assigned by law to special boards, consisting of the Secretary of the Navy, the Secretary of the Treasury, and the Secretary of War.

The office of Secretary of the Navy was established in the year 1798. He was charged with the multifarious duties here classed under the administrative and ministerial heads; and an Accountant of the Navy was charged with the fiscal duties, subject to the revision of the Treasury.

Under this arrangement, although the navy, at that time, had not attained one-fourth of its present magnitude, it was found that these duties were burthensome in the extreme; and although it was very generally admitted that the Secretary of the Navy was remarkable for his capacity and industry, and that the office of Accountant was well filled, yet, it is known that the duties were very imperfectly performed—unavoidably so—and that the public interest greatly suffered. This arose from a multitude of mixed duties, pressing upon each other, each requiring to be done at one and the same time.

While the Department continued thus organized, great losses of treasure and of time were not unfrequently occasioned by a single order; among other instances, one might be cited in which it became absolutely necessary to expend upwards of \$60,000 to correct an error in the structure and internal arrangements of a ship; an error arising, solely, from the absence of *professional* knowledge.

Cases of this kind, with other considerations, contributed, no doubt, to the existing modification, which assigns all the *ministerial* duties to a Board of Navy Commissioners, leaving a general superintending direction to the Secretary of the Navy.

By a subsequent law, Congress abolished the office of Accountant of the Navy, and created that of Fourth Auditor, as a substitute, attaching it to the Treasury, and subjecting its statements to the strict revision of a Comptroller.

Prior to the act of Congress, of 3d March, 1809, (an act further to amend the several acts for the establishment and regulation of the Treasury, War, and Navy Departments,) it was the practice in the office of Accountant of the Navy so to keep the accounts of the navy as to show the cost of *objects*—the building of a ship, for instance; but that law declares that money warrants shall be charged to the specific *appropriation* under which the money is to be disbursed. This produced a change in the form of keeping the accounts; *objects* are lost sight of, and *specific appropriations* seem to claim exclusive attention.

The act of 1809 declares that all money warrants "shall specify the particular appropriation or appropriations to which the same shall be charged," and that the moneys paid in virtue of such warrants shall "be charged to such appropriation or appropriations;" that "the sums appropriated by law, for each branch of expenditure, shall be *solely* applied to the objects for which they are respectively appro-

priated, and to no other." But it authorized the President, on the application of the Secretary, to direct "that a portion of the moneys appropriated for a particular branch of expenditure be applied to another branch of expenditure in the same department."

Thus, under the law of 1809, the President might transfer from any one appropriation to another; but this authority of the President was, by act of 1st May, 1820, confined to three appropriations, viz: "provisions;" "medicines and hospital stores;" "repairs of vessels;" so that, from none of the other appropriations can a transfer be made.

Is the existing organization susceptible of any improvement; and, if any, what?

The administrative or executive branch of the Department, of which the Secretary of the Navy is the immediate chief, needs not, it is presumed, the interposition of law to render it more efficient. It is not improbable, however, that improvements might be introduced in the arrangement of its detail duties, which would have a tendency to secure more prompt information upon various subjects, that would greatly aid the Secretary in the discharge of his duties. The books of his office should show the extent of the means at his disposal, and the state and condition of every branch of the service, that he may be prepared, not only to act upon all subjects claiming his personal attention, but to answer any call from the President, or from Congress, without delay.

The duties assigned to the Board of Navy Commissioners are far too extensive to be committed to the management of any one individual; yet, one individual, acting without consultation, and trusting entirely to his own resources, could certainly perform more of any particular business than two or three could perform: for instance, a special report, of importance to the interests of the navy, is called for; an individual, having no one to consult in making such report, might probably prepare it in a few hours; but, when associated with two other individuals, each possessing the same rights, each charged with the same duty, each equally responsible, consultation becomes indispensable; disagreement in opinion may exist; argument on both sides is adduced; and finally, the decision is made, but not, possibly, till one, two, or more days, shall have elapsed. The decision, when thus made, will probably be more correct than if it had been made by one member; yet it is very obvious that the consumption of time would be much greater in the one case than in the other.

But there are many, very many cases, of too much importance to the national interest to be committed to any one person, however eminent in his profession, however extensive his experience. These cases involve *principles*, essentially bearing upon the vital interests of the navy; where an erroneous decision might seriously affect the efficiency of our vessels-of-war, or occasion great and unnecessary expenditures of money; numerous cases might be cited, in which it would be certainly unwise to trust the decision to any one person.

The decision of a fundamental principle is one thing; the carrying that principle into effect, is another; the latter duty may be safely trusted, where it would be highly dangerous to confide the former. The function of designing the dimensions and form of a ship, her armament, her outboard and inboard works, her masting, sparring, &c., requires, in its performance, the exertion of the highest professional attainments; and when the designs shall be matured, and distinctly indicated by drawings, models, and instructions, their execution, involving the minutest details, requires vigilant and laborious attention, to see them faithfully executed in all their parts.

From these premises, we are led to infer that, in the present organization of the Board of Navy Commissioners, defects exist; that they consist, essentially, in grouping together too great a variety of duties to be performed in the best manner by the board itself, collectively acting upon each case; but which might be subdivided, so that each member, giving particular attention to the branch confided to him, might perform his own part in the most satisfactory manner.

We have seen that, as now organized, the Board of Commissioners is charged, to speak in general terms—

- 1st. With the building, repair, and equipment of our vessels-of-war.
- 2d. With the construction of docks, arsenals, storehouses, wharves, &c.
- 3d. With the victualling and clothing of the navy.

Under these three general heads, the duties of the board may be classed; but it may be useful to present a brief view of the detailed duties arising under each head.

First. The building, repair, and equipment of vessels-of-war involve, 1st. The designs as to their forms; their length, breadth of beam, depth of hold; their internal arrangements; the sizes and position of their masts, and the manner of making them; the dimensions of their spars; the quantity and dimensions of their rigging; their sails; their armament, including the form, size, weights, and calibre of their guns; their small arms of every description, powder, ball, &c.; their gun carriages, the sizes of their timbers, with the lengths and thicknesses of their planks; their boats; their chain cables, &c.; and such a classification of the whole, that every article of equipment, belonging to any vessel of a particular class, shall answer for every other vessel of the same class. 2d. The procurement, by contract or otherwise, of all the various materials and munitions necessary to build and equip them agreeably to the designs. 3d. The operative part, which combines all these materials, and renders the ships complete in their construction, their numerous internal arrangements, and their equipment generally.

The repairing of ships, while it involves most of the duties to be performed in building them, imposes other duties, not included in building. The *state* of the ship to be repaired, is one, and this can only be done by a thorough examination of all her parts; inspecting all her stores, remedying deficiencies that may be found in her structure, introducing improvements that may have been suggested by experience, &c., are other duties.

The numerous estimates, and the voluminous correspondence, indispensable in discharging the duties arising under this head, with the mass of other business connected with them, would give full employment to any one individual, however competent. We mean for the *superintendence* of any one individual; for no man living could, in his own person, go through the drudgery of all its details. He would require several subordinates, which we will presently consider.

Second. The construction of docks, arsenals, storehouses, and general attention to navy yards. Under this head, numerous and important duties arise: the planning of all the various improvements; the procurement, by contract or otherwise, of all the materials required in making them; the regulation of labor appertaining to this branch, and the preservation of stores; supervising the various factories of anchors, chain cables, blocks, cambooses; the procurement, preservation, and distribution of books, maps, charts, chronometers, and other nautical instruments; stationery, fuel, and candles, &c., are among these duties.

Any one individual, to give them that vigilant, careful attention, which the faithful performance of them would require, would find constant employment; several subordinates would be essentially necessary in discharging these duties.

Third. The victualing and clothing of the navy. Under this head the duties are numerous: the quantity of the various articles forming the rations, the quantity of slop clothing, medicines, and hospital stores required for the several ships and squadrons in service, and the several stations on shore, must be ascertained and procured, by contract or otherwise, and transported to the ships and stations needing them; the ordering of surveys, when necessary, upon any of the articles belonging to his department; the receiving of surveys ordered by the commanding officers of squadrons; the regulation of labor appertaining to this particular branch; the preservation of its stores and issuing the necessary instructions, will form a mass of business abundantly sufficient to occupy the time of any individual. Subordinates in this, as in other branches, would be indispensably necessary.

Under these three general heads the *present* duties of the board might be classed; each member taking the superintendence of one; each carrying into effect the designs and decisions of the whole; each responsible for the execution of such designs and decisions.

As now organized, each member of the board has to give his attention to all the duties arising under the previously recited heads; and it is out of the question to suppose that any one can give that careful attention which the public interests at all times require. The mind of man is not so constituted as to be able to embrace, digest, and thoroughly understand such an infinite variety of subjects; many of them pressing for decision at one and the same moment; many of them being complex in their nature and requiring great research, calculation, and consideration to enable even the most experienced and intelligent to comprehend them so far as to be able to pronounce a satisfactory opinion upon them.

To general principles, and to new principles and improvement, each member might give such attention as would, with his professional experience, enable him to meet others in discussion and assist in forming the best possible conclusions. The board, enlightened by the observations of each of its members, thus prepared for the examination of any question arising, might reasonably be expected to decide judiciously; while each member would proceed to execute the particular part assigned to him with all the advantages afforded by a general consultation. A spirit of emulation would naturally arise among all the members; each would be ambitious to excel in the discharge of his appropriate duties; and the happiest results might be confidently anticipated and felt in the precision, dispatch, intelligence, and economy, which it is to be hoped would distinguish each branch.

The necessity, 1st, of a board to decide upon general principles, and upon all new principles and improvements; 2d, of a subdivision of duties, to be executed in conformity with the decisions of the board, is deemed to have been sufficiently illustrated and established by the preceding remarks. We will now, sir, attempt an arrangement of the duties of the board, and of its branches, upon the most efficient and economical basis.

The board, to perform the general duties reserved to it as a board, will require a secretary and a copying clerk; a secretary to keep a journal of all its proceedings; stating the time of meeting, the objects, the decisions; whether they relate to the introduction of a new principle, improvement in the mode of building, equipping, or repairing of ships, improvement or alteration in any of the buildings, docks, wharves, shears, factories, &c., in the navy yards, changes in the manner of putting up, procuring, or preserving provisions and other supplies, with the reasons at large for such decisions, and the results of all the experiments in all the various branches of service. Also, to draw up, under the direction of the Navy Commissioners, when convened as a board, all reports of a general nature relating to the duties of this branch of the Navy Department; to give to each member of the board a copy of any of the decisions of the board affecting his branch of duties, and to aid, as far as may be in his power, the chief of each branch in the execution of his duties. He would have the special charge of all papers and communications suggesting improvement in any branch of the service, or relating to any discovery at sea having a tendency to improve the science of navigation. He would also be charged with the safe keeping of all journals describing coasts and harbors, and of all reports showing the properties of our ships, their best trim of sailing, &c. To assist in the performance of these various services a copying clerk would be required.

Whenever required by the Secretary of the Navy, or by either of the members, the board would convene and proceed to decide upon the questions presented for consideration. It would also have stated meetings as the public service might render necessary. In particular it would convene, at some stated time, to receive from the Secretary of the Navy the determination of the Executive, as to the number and classes of ships intended to be kept in the service during the ensuing year, and their stations, that they might proceed and prepare the estimates for the service, with a full understanding of the will of the Executive upon the subject.

The building, repairing, and equipping department would require, besides its chief, a naval architect and a draftsman, an ordnance officer, three able clerks, and one copying clerk.

A naval architect would be required in supervising the building and repairing of ships, and in devising drafts, models, moulds, &c.; and a draftsman would have, as at present, full employment in making the various drafts, which are very numerous, extending, as they do, to all parts of a ship, their armament, gun carriages, &c., &c.

An ordnance officer is essential to the inspection and proving of all guns, arms, and ammunition, and making returns, showing their state and condition.

A first clerk, to assist the correspondence, examine all money requisitions, keeping accurate accounts thereof, to assist in preparing the annual estimates, to have the charge of all papers connected with money requisitions, or relating to experiments made in this branch of service.

A second clerk and assistant to keep an account of all the stores coming under the cognizance of their chief; of all labor employed in his department; to receive all returns and pay-rolls, showing the cost of new ships, the repairs of old ships, the state of contracts, &c., keeping accurate accounts thereof; to file all offers for contracts; prepare scales, showing the various bids; to draw up, under the direction of their chief, all contracts and agreements; to file all letters relating to the duties with which they are charged, and keep them so arranged that reference may, at any time, be had to them without delay, and to do such other business as may be required of them.

A fourth clerk, to keep the letter books, and do such copying and other business as may be required of him.

Other officers would act under the directions of the chief of this branch: officers to attend particularly to the preservation of ships in ordinary, and carry into effect instructions upon that important subject; timber masters, to inspect, measure, and receive all timber, keeping special accounts thereof, showing when it was received, when cut, when immersed in water, when placed under cover, when and for what vessel used, &c., always taking care that the best seasoned timber shall be first used; surveyors, (to be selected from the officers of the yard) to take special accounts of all the stores of a vessel about to be received in ordinary; to have all their stores, their rigging, their sails, boats, &c., minutely examined, and their state and condition accurately reported, that such disposition may be made of them as the public interest may require.

The department of docks, navy yards, &c., would require, besides its chief, a civil engineer, two able clerks, and one copying clerk.

A civil engineer, in the construction of docks, wharves, arsenals, &c., is obviously required.

A first clerk, to assist in the correspondence, examine all money requisitions, keeping accounts thereof, to assist in preparing the general estimates, to prepare all signal books for distribution, keeping precise accounts, showing to whom signals were issued, charging such persons with them, and holding them specially accountable therefor, on their return from a cruise, or on leaving the ship they may have commanded, and to have the charge of all papers relating to experiments in this branch of the service.

The second clerk to keep accounts of all stores; all returns, as to the cost of docks, arsenals, shears, &c.; the employment of labor attached to this branch; the state of contracts, keeping accounts thereof; to file all offers for supplies, and to prepare scales as to the bids to furnish them; to draw up, under the direction of his chief, all contracts and agreements; to file all letters and papers, not specially assigned to any other clerk, and keep them so arranged that reference may, at any time, be had to them without delay; and to do such other business as his chief may require of him.

A copying clerk, to keep the letter books and do such copying and other business as may be required of him.

Other officers would act under the special direction of the chief of this branch. He would, for instance, require a special officer to take charge of all the nautical instruments, books, and charts, not on board of ship, to keep them in order for use when required. Among other duties, he would be required to attend particularly to the time-pieces, or chronometers, to ascertain precisely their character, such as their rate of deviation from true time, whether they are affected by changes of weather, &c., &c., for the information of those who may have to use them at sea. The character of each chronometer, thus ascertained, should be delivered to the officer receiving the chronometer itself.

The victualing and clothing department would require, besides its chief, a surgeon, as medical assistant; two able clerks and one copying clerk.

The surgeon would be required to assist in procuring medicines and hospital stores and surgical instruments, and in distributing them as the service may require. It would be his duty to examine all accounts for medicines, &c., and all requisitions for money to pay such accounts.

A first clerk, to assist in the correspondence, examine all money requisitions (other than those assigned to the surgeon), keeping accounts thereof; to assist in preparing the general estimates, to draw up all contracts and charter parties under the direction of his chief, and to keep all papers connected with experiments in this branch of the service.

A second clerk, to keep an account of all provisions and slop clothing procured for the service, where deposited, from whom obtained, the prices of each article, to whom delivered for use; receiving, examining, and filing all returns, showing the various issues, the quantities left on hand, surveys, &c.; to file all offers for supplies, and scale them for decision, keep all the papers connected with such supplies, the state of each and every station as to supplies, all the shipments made, &c., &c.; and to do all such other business as may be required of him.

A copying clerk, to keep the letter books, and do such other copying as may be required of him.

Other officers would also be required, to act under the immediate direction of the chief of this branch: for instance, officers to inspect provisions and slop clothing, to hold surveys upon them, to attend particularly to all shipments, and guard against all impositions in the quality and condition of articles delivered under contracts, &c.

It will be seen that this arrangement proposes that money requisitions shall pass the special examination of the branch under which they are to be expended; the reason is obvious—that branch will possess precise knowledge upon the subject, and will be enabled to decide promptly and correctly whether the requisition should be approved or not: for instance, should money be required under the head of "repairs," the requisition would be sent to the officer having charge of "the building, repairing, and equipping department," who would cause it to be examined minutely, and, if found correct, he would approve it, and submit it in that state to the Secretary of the Navy, who would cause a warrant for the amount to be issued, and placed in the hands of the disbursing agent, to be applied by him in conformity with his instructions; thus, in its incipiency, using every precaution to ensure its faithful application and expenditure.

But, with these precautions, which would, unquestionably, greatly improve the existing practice, we should still be uncertain as to the *application* of money, according to *instructions*; none but the officer giving the instructions can decide, to a certainty, whether the moneys are expended according to those *instructions*; and this he ascertains by comparing the one with the other on his records. It is, moreover, to be presumed that his professional knowledge, which enables him to judge correctly as to the kind, quality, quantity, and prices of the articles required in the department of the service specially committed to him, would be of particular value in the examination of all accounts originating in expenditures directed by himself. This admitted, it results that every account of expenditure should be examined and approved by the officer having the superintendency of the branch which approved the money requisitions, and from which the instructions for its expenditure were issued. Accounts, thus examined and certified, might be sent to the Fourth Auditor of the Treasury, and there undergo such further examination as to their calculations as would ensure their correctness. Such an arrangement would impose auditorial duties upon each branch of the Department, and, in that case, additional clerks would be required, *viz.*, *two* for the first-mentioned branch, and *one* for each of the others.

Under such an arrangement, disbursing agents, residing in the United States, might be required to forward their accounts *weekly*; that is, to send, at the termination of every week, their vouchers for disbursements during that week. Upon being received, they would be immediately examined, and, if found

correct, the amount would be passed to their credit, and they would be so informed; if incorrect, the error would be corrected, while all the circumstances are fresh in the memory of all parties. This course would be attended with advantages both to the government and to the individuals concerned, to whom the prompt settlements of accounts should always be desirable; and it is not perceived that it would occasion much, if any, additional trouble to either party. It would require the constant and vigilant attention of both; and these are duties which every public agent should be desirous of rendering.

Disbursing agents, out of the United States, should be required to take quadruple vouchers for their expenditures, so as to enable them to send two in each case, and retain *two* in case of accidents. They should then be required to forward one set of their accounts by the first opportunity, and another set by the next earliest; we should thus, much earlier than at present, possess a knowledge of the foreign accounts of the Department.

With regard to the principle upon which navy appropriations are made by Congress, and the forms and rules observed in their administration, by the Department, it is hoped that a reference to the communication which the Commissioners had the honor of submitting on the 31st March last, will repay for the trouble of making it. There are numerous facts exhibited in that communication, which will assist us in forming satisfactory conclusions. But it may be sufficient, on this occasion, to select from among them the following, viz:

The returns of one of the disbursing agents exhibited balances on hand	\$69,761 58
Overpayments, that is, expenditures exceeding the sums remitted, under certain specific heads of appropriation.....	69,230 13
Actual balance of money in his hands.....	\$531 45
The returns of another disbursing agent showed balances on hand	\$103,248 33
Overpayments	92,259 41
Actual balance of moneys in his hands.....	\$10,988 92

One of the agents, having upwards of thirty thousand dollars in his hands, belonging to, and remitted to him out of the appropriation for "*gradual increase*," applied the amount to the payment of accounts arising under five other distinct heads of appropriation, viz: sloop-of-war, navy yards, five schooners, contingent prior to 1824, and contingent for 1826.

The principle which confines the application of navy appropriations to the particular objects for which they are made, or which, in other phrase, declares that "the sums appropriated by law for each branch of expenditure shall be solely applied to the objects for which they are respectively appropriated, and no other," has thus, in numerous instances, been violated in practice. The inquiries of the Commissioners lead them to believe that this has been done sometimes intentionally, as the least of two evils; at other times, unintentionally, arising from misapprehension on the part of disbursing agents and others, as to the proper head of appropriation to which disbursements should be charged.

The cases particularly cited, are principally, it is believed, of the former class. The agents were *instructed*, it is understood, to apply moneys in their hands, under certain heads, to the payment of accounts arising and due under other heads. Such accounts were, it is said, of such a nature, that payment of them could not be postponed without violating the public faith; to preserve which, it became necessary to violate the law.

Of the latter class, cases are cited in our communication of the 31st March last, to which we beg leave to refer you.

The Commissioners, not having been charged with the duty of adjusting and settling navy accounts, can give no precise information respecting them; but the deep interest they have taken upon all subjects affecting the service in which they have the honor of holding commissions, has induced them from time to time to make inquiries; from which they are fully satisfied that the intention of the law of 1809, in its provisions as to the application of the specific appropriations, has never been carried into full effect, in any one year since its enactment. The theory of specific appropriations would seem to embrace exact and precise accountability; and this consideration, no doubt, had some weight in producing its adoption. But the test which has been applied, in the expenditure of millions of dollars, during the last twenty years, has certainly not confirmed the anticipations of its advocates.

The Commissioners will not say that it is utterly impracticable to carry this system literally into effect. If Congress were to make the appropriations sufficiently large to guard against every *possible* contingency, and to ensure an adequate amount, under each head, to meet every *possible* expense arising under that head; and if all the agents were so thoroughly acquainted with their duties, as to be able at all times to decide correctly as to the specific heads of appropriation to which each and all of the numerous articles required should be charged; then, if the Department would take care to keep in the hands of all the disbursing agents a balance under each and every head of appropriation, so as to enable them promptly, and in good faith, to redeem all the public engagements at their respective agencies, a literal execution of the law might be expected. But would Congress make excessive appropriations? No enlightened friend of the navy would make such a proposition. And experience fully shows that disbursing agents, even those most accustomed to navy business, will occasionally misapprehend instructions, and unintentionally pay accounts out of the wrong appropriation. And we would observe, that the absolute necessity of keeping balances in the hands of the agents, under each appropriation, would make the aggregate of balances so large as to form a serious objection. In no case would it be expedient; in some cases it might be unsafe to entrust such balances even to bonded agents, for they would generally far exceed the amount of their bonds.

The estimates upon which the appropriations are founded are prepared with all the care and accuracy of which the fallible judgment of man will admit. Yet, after all, they are but *estimates*; and until it shall be given to us to foresee the events of futurity, the fluctuations in the markets of the world, and the casualties of the ocean, we shall never arrive at precise accuracy in our calculations as to the expense of a navy employed in every known sea, and experiencing the vicissitudes of every known climate. A degree of accuracy, sufficient for practical purposes, may be gained; and this is all that can be reasonably expected. Yet, even in this case, it will be found that some items in the estimate are too low, others too high; but take the whole together, and they may prove sufficient. The item of "pay of

the navy"—the expense of which may be approximated nearer than that of any other item of naval expenditure—is liable to be affected in its amount by unforeseen contingencies. For instance, seamen's wages may rise, and it may become necessary to give them a *bounty* to induce them to enter into the public service. A few more seamen, or a few less, than the number estimated for, would produce a variation between the expenditures and the estimates.

Besides, it has not always been the pleasure of Congress to appropriate the whole amount of the estimates, which has frequently occasioned embarrassment; instance, the estimate for "repairs of vessels," for the year 1829, was curtailed in the appropriation \$75,000, and that for "navy yards," was reduced \$225,000. The reductions occasioned the suspension of important measures, contemplated when the estimates were made; the postponement of which, must ultimately create additional expense.

But nearer views of the existing system of naval appropriations may be required for its thorough comprehension. Let us see it in practice.

If a single dollar be taken, *intentionally or otherwise*, from one appropriation, and applied to another, it is a violation of law. Suppose a ship is about to be equipped for important service, and there should be large balances under all the appropriations, excepting that for ordnance, which is exhausted; under the law, however urgent the necessity, not a cent could be drawn from either of the redundant appropriations for the purchase of arms. It was surely never the intention of Congress that a vessel-of-war should be sent to sea without being, in all respects, thoroughly prepared to defend the honor of her flag; yet, in the case supposed, she could not be properly prepared, without violating the law of appropriations. Similar embarrassments would arise from a deficiency in either of the appropriations, from or to which transfers are forbidden. Thus the law, in gaining an object of diminutive value, when contrasted with its main design, (*the employment of ships of war*,) would, if literally observed, defeat the intentions of Congress.

Towards the close of every year some of the specific appropriations are found to be deficient. The ships, probably, whose expenditures occasioned this deficiency, are abroad in distant seas. Bills are drawn upon the government for their support, and under this very head of appropriation whose deficiency has just been discovered. These bills cannot be protested; they must be paid; and, under such circumstances, the Secretary of the Navy has generally directed them to be paid out of some of the redundant appropriations. Demands are made from other parts of the world, and by disbursing agents in the United States, upon the same deficient appropriation, and moneys are remitted under other heads to enable them to meet pressing engagements. When the accounts of disbursing agents are received for settlement, if all the appropriations under which their disbursements have been made should *then* be sufficient to enable the Auditor to settle them, it is done by *warrants of payment and repayment*; the former purporting to be warrants authorizing the payment, to the disbursing officer, of specific sums, corresponding, in their respective amounts, to his overpayments; the latter purporting to be drafts upon him, requiring him to pay into the treasury certain unexpended balances in his hands, under those heads of appropriation where his expenditures were short of the remittances made to him. By these warrants not a cent is taken out of the treasury or paid into it; the disbursing officer, in whose favor or upon whom they are drawn, is wholly ignorant of them. They result from a Treasury arrangement, and are said to be indispensably necessary in adjusting the accounts of the *appropriation*. If, however, any of the appropriations should be insufficient, so that these warrants of fictitious payment could not be drawn upon them without showing that the expenditures under them had exceeded the sum total of the appropriation, then the accounts of the disbursing agents must remain unsettled. It is believed that there are numerous accounts precisely in this situation, at this time, that have been so for some years past, and that such accounts can never be settled without the interposition of Congress.

These complex, fictitious operations, in the settlement of navy accounts, were unknown till the year 1809, and until then accounts could always be settled by the plain and simple rule of charging individuals with the amount of moneys placed in their hands for disbursement, and crediting them with the amount of their disbursements when properly vouched. The law of 1809, requiring that accounts shall be kept so as to be charged to the *appropriations*, renders these operations necessary in their adjustment, while it has greatly multiplied the forms, and increased the labor, without any advantage that the Commissioners can perceive.

That all disbursing agents should be required to account satisfactorily and promptly for all the moneys placed in their hands; that the forms of keeping, rendering, and settling their accounts should be so plain and intelligible as to be clearly understood, not by able accountants only, but by every member of the community (for every member has an interest in them,) are propositions which no one, it is presumed, will attempt to controvert. It has, we hope, been satisfactorily shown that the act of 1809 has not produced these effects; and a modification of that law, and of the act of the 1st May, 1820, heretofore recited, appears to be necessary in the accomplishment of results so desirable.

The Commissioners would recommend that the accounts be kept so as to show the cost of building ships, of repairing them, their annual cost in the service, and the cost of every authorized object or improvement; that the estimates be made so specific as to be distinctly understood, so that every appropriation shall be made with a thorough understanding as to the amount required for each object; that the power of transferring from one appropriation to another, as the exigencies of the service may render necessary, be committed to the President; that, at the commencement of every session of Congress, reports be made, showing the expenditures of the year, and the various objects to which the moneys appropriated shall have been applied.

If these suggestions, and those heretofore presented in this communication, relative to the organization of the different branches of the Department, and the duties appropriate to each branch, be approved, the board would further respectfully recommend that the appropriations for the navy be, hereafter, made under the following general heads, viz:

For pay and subsistence of the navy.

For building, repairing, and equipping vessels, including their wear and tear at sea, and ordnance, and ordnance stores.

For navy yards, docks, wharves, and all improvements therein.

For provisions, medicines, and hospital stores.

For contingent expenses, such as transportation, traveling expenses, the purchase of books, maps, charts, chronometers, nautical instruments, and other articles necessary for the service, and not specifically provided for.

This arrangement would leave the first item, viz.: pay and subsistence of the navy, under the immediate direction of the Secretary of the Navy; the second, third, and fourth items would come under the immediate direction of the respective branches heretofore proposed; and the last item, viz: "contingent expenses," to be drawn upon by each, as such expenses should arise in each branch, until experience should inform us as to the probable amount required under each branch, when the appropriation might be divided into specific sums for each.

I have the honor to be, with great respect, sir, your most obedient servant,

JOHN RODGERS.

Honorable JOHN BRANCH, *Secretary of the Navy.*

21ST CONGRESS.]

No. 395.

[1ST SESSION.]

ON THE CLAIM OF THE WIDOW OF A SEAMAN OF THE NAVY, WHO DIED IN DARTMOOR PRISON, IN ENGLAND, FOR A PENSION.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 21, 1829.

Mr. RIPLEY, from the committee on Naval Affairs, to whom the petition of Abigail Appleton was referred, reported:

That it appears, by the evidence before the committee, that the memorialist is the widow of Daniel Appleton, late of Ipswich, in the State of Massachusetts; that her late husband was a seaman on board the United States sloop Frolic, which sailed from Boston on the 18th of February, 1814, under Captain Bainbridge, and was taken prisoner, carried into Halifax, and thence to England, and committed to the Dartmoor prison, where he was taken with the small-pox, of which he died on the 4th of January, 1815.

The petitioner represents that she made application to the Navy Department for five years' half pay, under the provisions of the acts of Congress of January 20, 1813, March 4, 1814, and April 16, 1818, which relate to the subject of pensions to the orphans and widows of persons slain in the public or private armed vessels of the United States. The Department has expressed an opinion that her claim does not come within the letter of those statutes. The committee do not hesitate to express an opinion that her claim is clearly within the spirit and purpose of the laws referred to, and therefore report a bill to give her five years' half pay, from the navy pension fund.

TREASURY DEPARTMENT, *Fourth Auditor's Office, January 4, 1827.*

SIR: I have the honor to transmit to you, herewith, certificates, containing the information requested in your letter of the 2d instant, addressed to Mr. Gillis, of this office. The act of April 16, 1818, provides "if any officer, seaman, or marine shall have died, since January 18, 1812, in consequence of accident or casualty, which occurred while in the line of his duty, on board any public or private armed ship, leaving a widow, she shall be allowed the same monthly pay as if he died of wounds." The only doubt, in the mind of the Secretary of the Navy, was, whether death in a prison of the enemy was the same as death on board the ship.

I have the honor to be, respectfully, sir, your obedient servant,

T. WATKINS.

Hon. JOHN VARNUM, *House of Representatives.*

I certify that it appears, from documents on file in this office, that Daniel Appleton, a seaman on board the United States ship Frolic, born at Ipswich, Massachusetts, was captured in the said ship, in April, 1814, carried to Dartmoor prison, in England, and there died on the 4th day of January, 1815.

T. WATKINS.

TREASURY DEPARTMENT, *Fourth Auditor's Office, January 5, 1827.*

The United States sloop-of-war Frolic, under the command of Master Commandant Joseph Bainbridge, sailed on a cruise from Boston, on the 18th of February, 1814, and was captured near the coast of Cuba, on the 20th of April following, by the British frigate Orpheus, Captain Hugh Pigot, and the British schooner Shelburne, Lieut. Hope.

NAVY DEPARTMENT, *January 4, 1827.*

I certify that the truth of the above statement is sustained by documents on file in this Department.

JOHN BOYLE.

21ST CONGRESS.]

No. 396.

[1ST SESSION.]

NAVAL REGISTER FOR THE YEAR 1830.

COMMUNICATED TO THE SENATE JANUARY 4, 1830.

NAVY DEPARTMENT, *January 4, 1830.*

SIR: I have the honor to transmit to you herewith, for the use of the members of the Senate, fifty copies of the Naval Register for 1830, prepared in pursuance of a resolution of Congress, passed on the 13th December, 1815.

I am, respectfully, &c.,

JOHN BRANCH.

The PRESIDENT of the Senate of the United States.

Naval register for 1830.
CAPTAINS.

21ST CONGRESS.]

No. 397.

[1ST SESSION.]

CLAIM OF A MIDSHIPMAN, CASHIERED BY THE SENTENCE OF A COURT-MARTIAL, TO RESTORATION TO HIS RANK IN THE NAVY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 6, 1830.

To the honorable the Senate and House of Representatives of the United States of America:

The petitioner, Farnifold Green, late of the United States navy, respectfully sets forth:

That in the year 1822 he entered the service of the United States, as a midshipman, and continued in the said service until the 7th of December, 1827, when he was cashiered by the sentence of a court-martial, held at Philadelphia.

The petitioner, conscious of his perfect innocence of the charges made against him, and insisting upon the entire want of proof, sufficient to convict him, and having ascertained that power over his case resides in the legislative department of the government exclusively, prays that Congress will interfere in his behalf, and for his relief, by authorizing the President to restore him to his rank in the navy, or such other relief as they may deem proper.

* The pay of surgeons has been fixed, by a recent law, at from fifty dollars per month and two rations per day, to eighty dollars a month and sixteen rations, according to date of commission.

† Assistant surgeons, from thirty dollars and two rations, to forty-five dollars and eight rations.

The petitioner charges, in the first place, that the conviction was not sustained by the proof. Without urging any of the just causes of complaint, hereinafter specified against the witnesses who testified on the trial, he insists that, upon the record, he was entitled to a verdict of acquittal. The records of that court, on file in the Navy Department, a copy whereof accompanies this petition, is respectfully cited in proof of this point. In the second place, the petitioner claims that the sentence of the court, upon the charges which they found proved, was disproportioned to the offence, and excessive. The offences of which they convicted him, (even if truly charged) were not of so aggravated a nature as to call for a sentence of such extreme severity. They were not alleged to have been habitual, or even of common occurrence; they are only charged (however untrue) as occasional departures from decorum, and sudden ebullitions of resentment and temper. It is respectfully urged that, to punish such offences, even if proved, with the highest punishment known to the service, is grossly unjust to the individual, and injurious to the service; confounding offences of the most different degrees of guilt, and disregarding all the gradations of naval punishment. The petitioner, upon this ground, would have a right to urge, in favor of his claim for restoration, the disgrace already sustained, and the heavy punishment which the sentence has inflicted upon him, of two years of suffering and suspense.

In the third place, the petitioner would most especially solicit the attention of this honorable body to the character of the testimony upon which the conviction was had against him. By the records of the court, and the other proofs which the petitioner presents, together with this petition to this honorable body, it will be made manifest that all the testimony upon which he was convicted was tainted by party prejudices and personal animosity. Upon the record it appears that the language and conduct of the prosecutor, Lieutenant John White, towards the petitioner was so offensive and unbecoming, that the court-martial expressly certified it as ungentlemanly and unofficerlike, at the same time that *they condemned* this petitioner, upon his testimony, for feeling himself insulted by such treatment. This manner of treatment was so general and frequent that the petitioner found it his duty to report the said White to the Navy Department, and to prefer charges against him, which are now on file, for gross, tyrannical, and insulting deportment to the officers and men under his command. These facts, corroborated by the files of the Navy Department, serve to weaken the credit, by impeaching the disinterestedness of Lieut. White's testimony. This petitioner could expect from Lieutenant White, as the prosecutor, under all these circumstances, only what he received—a most persevering personal hostility.

The second witness in order is David Trusty, the negro servant of the prosecutor, and, as such, sharing his resentments, and under his influence. After the evidences upon which this trial was brought, he was discharged from the service of Lieutenant White, but afterwards, and previous to the trial, again taken into his protection, and continued there during the time in which he was attending as a witness. Besides these impeaching circumstances, his evidence is so strongly contradicted by other witnesses as to entitle him to no credit.

Between the third witness, Midshipman Mark Hale, and the petitioner, there had existed for a long time, as is shown by the accompanying papers, a personal controversy, which had not been, at the time of the trial, nor has been since, adjusted. Being on terms of such decided hostility, he must naturally be considered as a prejudiced witness, coloring his statement highly in accordance with his own feelings of resentment. So, also, with Dr. Kearney, of the navy, the fourth witness against this petitioner. Before the trial, this petitioner had with Dr. Kearney an angry personal controversy, arising out of the discussion of political subjects. This petitioner, irritated at the abusive manner in which the character of distinguished public men was treated by Dr. Kearney, expressed himself so indignantly as to provoke his personal resentment. The disgraceful method which Dr. Kearney took immediately thereon, in searching for some pretence upon which to do this petitioner injury, is fully shown in the correspondence herewith submitted, between this petitioner and C. W. Aphorp, Esq., of Charlestown, Massachusetts. He would simply remark, that a man capable of such petty malice, cannot be considered a fair and unimpeachable witness. The four individuals whose personal relations towards the petitioner have been thus briefly reviewed, are the only witnesses who speak against him to any material fact; and any intelligent man will not fail to perceive that most of these allegations are clothed in general terms, without specification to which he might reply.

Opposed to this prejudicial testimony, the petitioner produced officers and citizens who had known him, and messed with him for years, who bear a testimony, of which he is proud, to the uniform correctness of his conduct, as an officer and a gentleman, and who acquit him, with a weight of evidence which is irresistible, of any quarrelsome, insubordinate, or offensive conduct. To their testimony he has added the voluntary evidence of many citizens of the highest standing in his native State, many of whom are well known, as among the purest and best men in the country, who have known the petitioner from infancy, before, during, and since this unhappy affair, and who unanimously refute the unjust inferences drawn from the vague and unproved accusations of his enemies.

These testimonials, now in the hands of the Secretary of the Navy, will, he is sure, do much to remove any unfavorable impressions towards the petitioner, who is proud in the proof which they afford: That, with the exception of the unjust stigma of this sentence, for the removal of which he is now an urgent applicant, his life and character have been unimpeached and unimpeachable. It will also be perceived from these papers, that the petitioner went to trial under heavy disadvantages. A number of his most important witnesses were absent, having been sent abroad on the public service, contrary to his remonstrance, and to his great injury. He, however, confident of his innocence, went to trial, the unhappy result of which is before this honorable body.

It is for the correction of these errors, and the establishment of justice, for the vindication of his character, and the restoration of his rank in the service of his country, that this petitioner is now an applicant to the justice of Congress.

Respectfully,

FARNIFOLD GREEN.

Charges and specifications prepared against Farnifold Green, a midshipman in the navy of the United States.

CHARGE FIRST.—CONDUCT UNBECOMING A GENTLEMAN AND AN OFFICER.

Specification first. In this, that he, the said Midshipman Green, between the first day of December, in the year one thousand eight hundred and twenty-six, and the first day of June, in the year one thousand eight hundred and twenty-seven, on board the United States ship Independence, and at Charlestown and Boston, Massachusetts, has been repeatedly intoxicated, and has exposed himself in that situation.

Specification second. In this, that he, the said Midshipman Green, on the evening of the sixteenth day of December, in the year one thousand eight hundred and twenty-six, on board the United States ship Independence, was in a state of intoxication, making great disturbance in the ship, using violent and abusive language to the mess boy, and employing reproachful, provoking, and disrespectful language of and to his superior officer, Lieutenant John White.

Specification third. In this, that he, the said Midshipman Green, on the evening of the twenty-third day of December, in the year last aforesaid, was in a state of intoxication, and made great disturbance on board of the said ship Independence.

Specification fourth. In this, that he, the said Midshipman Green, on the evening of the thirtieth day of December, in the year last aforesaid, was in a state of intoxication, and employed towards his superior officer, Lieutenant John White, reproachful, provoking, and disrespectful language.

Specification fifth. In this, to wit: that, on the evening of the twenty-sixth day of December, in the year last aforesaid, he, the said Midshipman Green, then on the sick list, did leave the said ship Independence, and did continue absent all night, without the permission of his commanding officer; and did, upon his return, falsely state that he had the permission of the surgeon for such absence.

Specification sixth. In this, that he, the said Midshipman Green, on the morning of the twentieth day of January, 1827, on board the said ship Independence, did violently assault and strike one David Trusty, servant to said Lieutenant John White, with a club or bludgeon, without any cause or provocation.

Specification seventh. In this, that he, the said Midshipman Green, on or about the nineteenth day of January, in the year aforesaid, on board the said ship, the Independence, did prepare a club or bludgeon, for the purpose of assaulting and striking the said Lieutenant John White, and did post himself at the door of the mess room for the purpose of so assaulting and striking the said Lieutenant White, whom he expected would enter thereat.

Specification eighth. That, at the time and place mentioned in the sixth specification, he, the said Midshipman Green, did use towards the said Lieutenant White, his superior officer, provoking and reproachful words, gestures and menaces, placing himself in an attitude for boxing, shaking his fist in the face of said Lieutenant White, and threatening to crush him to hell.

Specification ninth. In this, that he, the said Midshipman Green, at the time and place aforesaid, after the said Lieutenant White had retired from the mess room, endeavored to procure a dirk from some of the other midshipmen, employing at the same time violent and threatening language in relation to said White.

Specification tenth. In this, that, at the time and place last mentioned, when he, the said Lieutenant White, had taken from the said Midshipman Green a jug of brandy in the mess room, he, the said Green, in an insolent and insubordinate manner, demanded of him, the said White, what right he had to come into the mess room at all, and what right he had to take his brandy away, and did continue to use towards said White, mutinous, provoking, and reproachful words.

Specification eleventh. In this, that he, the said Midshipman Green, on the night of the nineteenth of December, in the year one thousand eight hundred and twenty-six, on board the said ship, the Independence, did, without any authority, and without any sufficient reason therefor, take a sentinel from his post, and keep him on the spar deck for half an hour as a punishment.

Specification twelfth. In this, that the said Midshipman Green, on the second day of April, in the year one thousand eight hundred and twenty-seven, on board the said ship Independence, he, the said Green, in a mutinous and insubordinate manner, did advise and urge his brother officers to disregard the orders of Lieutenant White, their superior and commanding officer, by saying, "By God, go, don't mind him; I'll be damned if I would not go, and you are fools if you don't."

Specification thirteenth. In this, that he, the said Midshipman Green, on the third day of April, in the year aforesaid, on board the ship aforesaid, did use to Midshipman Hale provoking and reproachful words and gestures.

CHARGE SECOND.—DISOBEDIENCE OF ORDERS.

Specification first. In this, that, on the evening of the twenty-ninth day of December, in the year one thousand eight hundred and twenty-six, on board the Independence, when the said Lieutenant John White, the commanding officer, did send to him, the said Midshipman Green, an order to go on duty on board the United States ship Warren, he, the said Green, did refuse, omit, and neglect to comply with said order.

Specification second. In this, that on the night of the sixteenth day of December, in the year last aforesaid, when in consequence of the outrageous and insubordinate conduct of him, the said Midshipman Green, the said Lieutenant John White, his superior and commanding officer, did order him, the said Green, to desist from such improper conduct, and go quietly to his hammock, he, the said Green, refused, omitted, and neglected to comply with said order.

Specification third. In this, that on the night of the thirtieth day of December, in the year last aforesaid, on board the said ship, the Independence, when the said Lieutenant John White, his superior and commanding officer, did order the said Midshipman Green, then making a great disturbance in the ship, to be quiet and go to his hammock, the said Green did omit, neglect, and refuse to comply with such order.

Specification fourth. In this, that in violation of the express orders of the said John White, commanding officer of the said ship Independence, and of a general regulation of the said ship, he, the said Midshipman Green, caused and permitted a fire to be lighted in the mess room, after the officer of the deck had reported it to be out, to wit: on the thirty-first of December, in the year one thousand eight hundred and twenty-six; on the night of the eleventh day of January, in the year one thousand eight hundred and twenty-seven, and on the night of the nineteenth day of January, in the year aforesaid.

Specification fifth. In this, that on the second day of April, in the year one thousand eight hundred

and twenty-seven, he, the said Midshipman Green, in contempt of the order of his commanding officer, did leave the said ship Independence, without permission, and did continue absent during the whole night.

Minutes of the proceedings of a general naval court-martial, convened at the Navy yard at Philadelphia, on Thursday, the 1st day of November, 1827, pursuant to the warrant of the Hon. Samuel L. Southard, Secretary of the Navy, bearing date the 16th day of October, in the year aforesaid, and continued by adjournment, from day to day, till this 5th day of December, in the same year.

Present: Captain William Bainbridge, president; Captains Charles Morris, John Orde Creighton, Stephen Cassin, James Renshaw, Alexander S. Wadsworth, Henry E. Ballard, Master Commandants William B. Shubrick, David Connor, members; and Richard S. Cox, judge advocate.

Farnifold Green, a midshipman in the navy of the United States, appeared in court to answer the charges exhibited against him; and being asked whether he had any objection to any of the members of the court, replied that he had none. He also requested permission to have the aid of counsel in the progress of the trial; to which the court acceded, subject to the usual restrictions.

The charges were then read by the judge advocate, annexed to the record, and marked A; to which the accused pleaded not guilty.

John White, a lieutenant in the navy of the United States, being duly sworn according to law, deposes and says:

Question. State if you please the circumstances referred to in the specifications, so far as they occurred within your knowledge.

Answer. On the 16th day of December, 1826, in consequence of its being reported to me that there was a disturbance on board the Independence, I went to the midshipmen's mess room, and inquired what the disturbance was. I was answered by some one whom I did not then know, "Who are you? you are the ghost; avaunt! thou ghost!" He followed me out on the main deck; it was Mr. Green; and said, "I'll let you know who I am; my name is Green, Farnifold Green, of North Carolina, and care for no northern officer." He said, "Who are you?" I answered, I would let him know to-morrow. I advised him to go to bed. Finding he was going on with abusive language, I quit him and went to the cabin; he appeared to me to be in a state of intoxication, which was the cause of my forbearance. The next morning, on my way to the office to report Mr. Green's conduct to Captain Crane, commandant of the station, I was overtaken by Mr. Green, who apologized for his conduct the evening before; in consequence of which I forgave him, on condition that nothing of the kind should again occur. We both returned on board the ship; I then directed Midshipman Justin, the executive officer, to make known to the midshipmen's mess that I had overlooked Mr. Green's conduct, on condition of his not offending again.

On the 23d of December I had company in the cabin, and heard a great disturbance in the mess room. I went into the mess room to ascertain the cause of the disturbance; I was accosted by Mr. Green with, "Who are you, and what right have you in my room?" I expostulated with him on his conduct, and directed him to be quiet, threatening to make use of coercive measures if he were not. He followed me out from the mess room, repeating a great deal of abusive language; I could scarcely understand what he did say. He then said, "I am Green, Farnifold Green, and ready to see you or any northern officer." I asked him in what way; he replied, "In any way;" and, after a pause, "in any way regarding duty; but, remember, I am Farnifold Green." I told him I thought he was blue Green; I believe he was then intoxicated.

On the night of the 19th of January I had company on board, who quit the ship about twelve o'clock; at about half-past twelve I was partly undressed, going to bed; my servant came in to me; in consequence of what he said, I went into the mess room. Mr. Green was up when I first went in; I told him his conduct had been of such a nature that he deserved a thrashing, but that his insignificance protected him. He answered, "You thrash me!" and threw himself into an attitude for boxing, and said, "now come on." He shook his fist in my face, and said, "I'll crush you to hell, by G—d!" I directed him to be quiet and go to his hammock; he refused, and made use of a great deal of ill language which I do not recollect; as I was in ill health and not dressed, I returned to the cabin to put on my clothes; I directly returned to the mess room, ordered him to dress and follow me. He opened two or three drawers, and was a long time poking about; after waiting some time he announced himself ready to follow me, which he did, upon the spar deck. When I came to the gangway, the usual post of the sentry, there was no sentry there. Finding no sentry there I returned with him, and saw him into the mess room; I then proceeded to the marine barracks, and requested Captain Harris to furnish me with a file of marines; he sent down a file of men, and Mr. Green was put under charge of one of them. I made my report the next morning, of the circumstances, to Captain Crane, who ordered me to suspend him; to confine him to his room; to keep a sentry constantly over him, and not to allow the sentry to quit him for a moment, and to see that he had no improper communication with any person. The orders were carried into execution. I thought Mr. Green intoxicated on this occasion.

On the evening of the 26th of December, I was sitting in the cabin writing. Mr. Green came in, and requested permission to go on shore, which I refused; told him he was on the sick list; he answered, then I can't go sir; I said, no sir, you cannot; he replied, in a very supercilious manner, it's very well sir. I answered, it is very well sir, and you cannot go; he then quit the cabin. I sent for him, the next morning, and inquired how he came to go out of the ship last night; and if he had the permission of the surgeon. He said he had. I told him Dr. Kearney told me he had no permission from him. He then said, he had reported his having been out to the surgeon's mate, when he returned.

I have not a distinct recollection of what occurred on the 30th December; I believe it was on that day I left the ship in charge of Lieut. Grant.

On the morning of the 20th January, after the orders of Captain Crane had been carried into execution, I found a jug of brandy on the table, in the mess room. I took the brandy; Midshipman Green, then under charge of a sentinel, abused me with insulting language, and asked me what right I had to take his brandy; told me I had no right in the mess room; it was his room; the next morning, I sent and intercepted a jug of brandy and cider.

On the 2d day of April, 1827, two of the midshipmen requested permission to go on shore, which I refused; on their return to the mess room, they stated that they had been refused permission to go on shore. I heard Mr. Green say, "Don't you mind him; go, by G—d! go; you are fools, if you don't go." I do not recollect which of the midshipmen it was; I believe Mr. Young was one of them; there were a great many midshipmen there at the time.

On the evening of the 29th day of December, as Mr. Green's name did not appear on the sick list, I inquired of the surgeon, if Mr. Green was fit to go to duty, who answered in the affirmative. I sent him a written order to go the next day on board the Warren; gave the letter to my servant. Mr. Green did not go.

There were written regulations, in respect to fires, on board the ship; but I have not them with me. I gave verbal orders to Mr. Justin, the executive officer of the ship, to have the fire put out, in the mess room, at nine o'clock; sometimes I would allow particular individuals to have a fire until ten, the officer to whom the privilege was given being responsible for its being extinguished at that time. On the morning of the 20th January, at half-past twelve in the morning, I found a fire burning in the mess room; nobody up in the mess, none but Mr. Green: I had it extinguished about two o'clock.

Cross-examined on behalf of the accused:

Question. You say that, on the morning of the 20th January, you reported to Capt. Crane the conduct of Mr. Green on the preceding night; repeat what you did report to Capt. Crane.

Answer. I reported the facts that occurred, and which I have here stated; but cannot recollect the particular language used.

Lieutenant White requested permission to remain in court during the trial, as the prosecutor of the charges; which the court allowed.

Mark Hale, a midshipman in the navy of the United States, being duly sworn according to law, deposes and says:

Question. State the circumstances connected with the specifications.

Answer. I cannot remember the particular dates of the transactions; I remember one night Mr. White came into the door of the mess room, and asked what the noise or disturbance was. Mr. Green asked, "Who are you sir.—are you the ghost?" Mr. White replied, "I will let you know to-morrow morning, by God." I do not remember anything more that passed on that occasion. I do not recollect whether there was a light burning in the mess room; I should think there was light enough to distinguish the person of one coming in, unless the hammocks should prevent it. On one previous evening Mr. White came into the mess room, and asked what the disturbance was. Mr. Green was sitting near the door in a chair. Mr. Green told Jack, the mess boy, to rub his feet. Some conversation passed. Mr. White, I think, asked Mr. Green what was the matter. He replied that his foot was cramped: presently he got up, and they both went out on the gun deck. On one night subsequent, I had been on deck till 12 o'clock, having the watch from 8 till 12 P. M. I was relieved, went below, and turned in on a settee, near the mess room door. Mr. Green was sitting near the stove when I went in: there was fire in the stove. Mr. Green had a stick in his hand, about a foot or two in length; presently some one came to the door and knocked. No one bid him walk in. Mr. Green was then standing near the door. The person opened the door, and Mr. Green threw the club towards the door. I soon discovered, by the voice, that it was David Trusty, Mr. White's servant. He said, "Take care, sir," and turned and went away. Mr. Green immediately turned into the cot, which was swung on the other side of the door, with Midshipman Justin. Mr. White and Trusty came into the mess room immediately after. Mr. White had a lamp in his hand, and asked where is he? Trusty pointed to the cot where Mr. Justin and Mr. Green were, and said, that is the man, I would take my oath of it. Mr. White asked if it was Mr. Green, and Trusty replied, yes sir. Mr. Green raised himself in the cot and said, prodigious! Mr. White then, I think, told him to prepare for a watch. Mr. Green got up and begun to put on his clothes. While putting them on, Mr. White said, I came in for the purpose of giving you a damned thrashing—but look upon you with too much contempt to do it. Mr. Green replied, you dare not do it, and, I think, placed himself in an attitude of defence for boxing: told him if he did it he would crush him to hell, by God. Some little conversation passed, which I do not particularly recollect. I think, Mr. Green asked Mr. White, if he had to stay on deck, he wished to know what dress to put on. Mr. White told him to prepare himself for a long watch on deck. The night was cold. They went together out of the room, and in a few minutes Mr. Green returned, and, I think, then turned in. The first night that I have spoken of, in point of time, when the boy was rubbing Mr. Green's leg, Mr. Green went to some one, I think Mr. Key, and asked him for a dirk; he did not state for what purpose—nor do I know whether he obtained one. The night that Mr. White came with Trusty, there was a jug of brandy on the table, which Mr. White took, and either carried out or sent by Trusty. After he had done this, Mr. Green asked him what right he had to come into his room and carry off his brandy. Mr. White told him, that did not concern him, or gave him some indifferent answer. He then went on, as I have stated before, dressing, and went on deck. Nothing, I think, was said that night about a dirk. I remember Mr. Green's being arrested, and put under charge of sentry. There was no sentry in the room when the jug of brandy was taken. I cannot say whether there had been any one over him.

The fires were required to be put out in the mess room at nine o'clock in the evening, unless by special permission of the commanding officer; whenever this was not done, Mr. White would remark, that such were his orders. The night that I saw Midshipman Green sitting by the stove, I had reported to Mr. White the fires out at nine o'clock. I know of no other evening when Mr. Green had fire without permission. On the 3d of April, a messenger had been sent to me from the spar deck. Mr. Green stopped the boy at the door, and directed him to get a chair for him. He said he had a message for Mr. Hale. Mr. Green repeated his order for him to go below and get him a chair. I was sitting at the table, eating dinner. Presently the boy returned with the chair, and told me Lieutenant Bruce, officer of the deck, wished to see me on deck. I asked him why he did not deliver the message earlier; he said Mr. Green would not let him. I turned to Mr. Green, and told him I would thank him not to intercept messages when they were sent to me by any person. He replied that if he had offended me he would give me any satisfaction I chose. I told him he had not offended me in the least; and repeated that I would thank him not to intercept messages that were sent to me. Mr. Green rose from the table, advanced towards me, and said: None of your damned presumption—your damned Yankee *Varmount* presumption. I told him that I had presumed nothing, and that he must not think of frightening me, for he would have

more than he could do. He then advanced still nearer to me, shook his finger very near my face, and said, you are a fool, then turned away, and I think, repeated the same expression. I then told him I should report him, as it was the only satisfaction I could obtain, and did report him. Mr. Green left the ship; the next day he received a communication from the Secretary of the Navy, which he said was a permission to leave the ship.

Cross-examined, on behalf of the accused:

Question. Do you recollect any verbal order to Mr. Green, or any general verbal order, that the fires should be put out at a particular hour?

Answer. I do not know of any general verbal order, or that they were ever given to Mr. Green.

Ques. (By the court.) Was the general written order relating to fires hung up in any public part of the ship?

Ans. Yes; it was put up with wafers in the mess room.

Ques. On any of these occasions you have specified, was Mr. Green sober or intoxicated?

Ans. On the first occasion in point of time, I thought him very much intoxicated; on the other occasion, I cannot say that he was. The day following the first occasion, I cannot say he was sober.

Ques. When you returned from the deck, on the night you mention, finding a fire in the mess room, who was in the mess room at the time?

Ans. I do not recollect the names of the officers who were present, except Mr. Justin. There was no one sitting up but Mr. Green. There were others in the room, but they had all turned in. On the first occasion I have spoken of, when the boy was rubbing Mr. Green's feet, the mess boy was frightened by Mr. Green, and went out on the gun deck and hid himself. Mr. Green called him, but obtained no answer; he then called the master-at-arms; told him to find Jack. The master-at-arms found Jack, and brought him in. Jack came in and said to me that Mr. Green wanted to kill him, and wished me to take care of him. I told him no one would hurt him; to keep still. After the boy had come in, Mr. Green told him, if he did not stay by him, he would dirk him. On this evening, I saw Mr. Green drink very freely, and, as I have already mentioned, I believed him to be intoxicated. The boy's name was John Van Dreest, a black boy.

Ques. (By the accused.) Was the threat to dirk the boy before or after Mr. White came in?

Ans. I think it was before.

Ques. Had the boy been rubbing Mr. Green's feet before or after the threat to dirk him?

Ans. I think before.

David Trusty, a black man, servant of Lieutenant White, being duly sworn, according to law, deposes and says:

Question. Do you remember going, one night last winter, into the mess room of the Independence, by orders of Lieutenant White? State what occurred.

Answer. One night Mr. White sent me into the room to carry a letter for Mr. Green. Mr. F. Green asked me who the letter was for. I said it was for big Mr. Green—there were two Mr. Greens on board; I had forgotten his first name at the time. He told me to hand it to him. I did so. The next thing was, he inquired what my name was. I told him my name was David Trusty. He asked what Mr. White sent that letter for. I said I did not know what was in it. He said I guess your name is Mr. Black; and then I went out.

On another time, I was sent by Mr. White to the mess room, to get Charles Green's hammock. I rapped at the door twice or three times. No person answered me. I shoved the door open to go in; Mr. Farnifold Green was standing partly aside of the door. There was a light in the room so that I could see; I saw him making a blow at me—raised my arm, and received the blow on the arm; it was with a stick. The stick broke over my arm; part of it flew over my shoulder. Mr. Green then walked among the hammocks which were hanging in the mess room. I looked at him, to be satisfied who he was, and went into the cabin to tell Mr. White. I went back with Mr. White to the room; we looked around when we first got in, and did not see any person, but presently found Mr. Green lying aside of Mr. Justin on a cot. He had no bed-clothes over him. Mr. White asked me if I would swear he was the person that struck me. I told him I would. Mr. White asked him what he was doing there. One word brought on another; after a while Mr. White told Mr. Green he had been tempted to thrash him, but that he would not condescend to do it. Mr. Green made answer, to thrash me—to thrash me, repeating it two or three times, and at the same time, raising his hand, said, I'll crush you to hell, by God. Mr. Green had got up out of the cot, and was standing in the room; he was not dressing himself, or doing anything. I cannot recollect what occurred after that—I went into the cabin, leaving Mr. White behind.

I was, at the time, the servant of Mr. White, in the service of the United States, whom I left on the 3d of June. I met Mr. White on the 7th or 8th of November, in New York, and am now with him in his service.

John L. Spencer, a midshipman in the navy of the United States, being duly sworn, according to law, deposes and says:

Question. Were you on board the United States ship Independence, under the command of Lieutenant White, during the last winter?

Answer. Yes, as a midshipman.

Ques. State what you know of the circumstances referred to in the present specifications.

Ans. I do not recollect to have seen Mr. Green intoxicated within the period mentioned in the first specification. On one occasion I had been asleep and was waked. Mr. White was speaking, and said he had come with the intention of giving Mr. Green a thrashing, or had a mind to do so, or something of that kind. Mr. Green made some reply; what it was I do not recollect. Mr. White said afterwards he would not commit himself. Mr. White ordered Mr. Green immediately on deck. I do not recollect of anything further. The sentry was not placed over Mr. Green till next morning.

I heard Mr. Green on the same night ask Mr. White what he took out of the room. Mr. White replied, a bottle of brandy—heard nothing more. It was about twelve o'clock that the brandy was taken.

Samuel Penballow, a midshipman in the navy of the United States, being duly sworn, according to law, deposes and says:

Question. Were you attached to the Independence last winter?

Answer. Yes.

Ques. State such circumstances as you know of connected with the specifications.

Ans. I cannot remember what passed when Mr. White came into the mess room. I was not there when Trusty was struck. I was present at the time of the conversation between Mr. Hale and Mr. Green—cannot say what passed. When off duty I was generally reading. I do not know anything of the first specification.

The court adjourned till 2 o'clock to-morrow morning.

THURSDAY, December 6.

The court met pursuant to the adjournment of yesterday. Present: as before. The proceedings of yesterday were read.

Mark Hale again called:

Question. Did Mr. Green throw the stick at Trusty, or strike him with it?

Answer. I thought he threw it; whether it hit him I cannot tell.

Ques. Do you remember anything of the stick before Trusty came to the door, and what Mr. Green said about it?

Ans. I remember seeing Mr. Green pounding upon the deck with it before Trusty came. He said if the ghost came again he would beat his brains out. Who he meant by the ghost I do not know—I never knew him to apply the term to any one.

Ques. Were you on board the Independence one evening when Mr. Cornwall expostulated with Mr. Green about having a fire after 9 o'clock? State what passed, and, as nearly as you can, when it occurred.

Ans. I remember one evening when Mr. Cornwall, Mr. Key, and myself had been at a wedding; I think it was the 11th of January; we came on board, I think, between 11 and 12 at night; found on deck Mr. Green and a midshipman, the officer of the deck, and I think we all turned in excepting Mr. Green. There was a fire in the stove when we came on board. Mr. Green presently went to put more wood in the stove. Mr. Cornwall, who was the executive officer at the time, told him it was against the orders of the ship to make a fire, and said something about the other midshipmen taking advantage of him while in the execution of his duty; and told Mr. Green that no gentleman would take that advantage. Mr. Green replied, "If you say I am no gentleman you lie, sir." Some other conversation occurred which I do not particularly recollect, and I believe the fire was extinguished.

Cross-examined:

Ques. Where was Mr. Green standing when Trusty came in, and when he threw the stick?

Ans. As nearly as I can recollect he was standing about six or eight feet from the door, and in front of it.

Dr. John A. Kearney, surgeon in the navy of the United States, being duly sworn according to law, deposes and says:

Question. Were you attached to the station at Charlestown, Massachusetts, during the last winter, as the surgeon?

Answer. I was.

Ques. Do you recollect Mr. Farnifold Green's being on the sick list on or about the 26th of December last?

Ans. I do not remember particularly the date, but about that time he was on the sick list.

Ques. Did he apply to you for, and obtain permission from you, to go on shore on the 26th of December?

Ans. No.

Ques. Did you see Mr. Green repeatedly, during the last winter and spring, on board the Independence and at Charlestown and Boston?

Ans. I have seen him on board the ship and at Charlestown repeatedly.

Ques. What do you know in relation to the first specification of the first charge?

Ans. I know nothing personally of the transactions on board the Independence; I lived in the same house at Charlestown with Mr. Green, but in a different mess. I have seen him intoxicated during the period embraced in the specification. Once I saw him carried, by the servant, by the room where I messed with some other officers, to bed. We were attracted by the noise made in taking him.

Cross-examined on behalf of the accused:

Ques. Did you go out of your room when Mr. Green was taken by?

Ans. I went to the door, opened it with the other gentlemen, saw what I have stated, and returned.

Ques. Do you know how Mr. Green had been engaged; whether dining with company, or not?

Ans. I do not know.

Charles F. Kiander, a private in the marine corps, being duly sworn according to law, deposes and says:

Question. Were you on board the Independence, as a sentry, on the 19th of December last?

Answer. I was, on some night in December, near Christmas.

Ques. Were you taken from your post; by whom, and what occurred?

Ans. I was posted at the cabin door, from 12 midnight. At half-past 12, a boy was passing up the ladder; I beckoned him to come to me; I asked him if he could have the goodness to give me a drink of water. He went upon deck, and presently a midshipman came to me, asked me where the corporal of the guard was. I told him he was somewhere forward in the ship, and I could not call him loud. I suppose the midshipman himself found out the corporal, for when he came to me, he asked what I had been doing; he was ordered to relieve me. I answered, I asked the boy, as he was passing by, for a drink of water. I was then relieved, and brought upon the spar deck, before the officer of the deck. I do not know who

the midshipman was that came down to me; it was not Mr. Green. I stood at the fife rail till 2 o'clock; when I was taken, by order of Mr. Green, to be put on post at the larboard gangway, on the spar deck.

Lieutenant White, again called:

Question. Look at the papers shown you; were you present when these depositions were taken? State how they were taken, and where was Mr. Green?

Answer. The one I hold in my hand, (the deposition of Van Driest) was taken in the cabin of the Independence. I was present.

The accused submitted a paper, which he stated he had drawn up in the presence of the justice of the peace, at the time of taking the various depositions, which the judge advocate had stated his intention to offer in evidence; which was read, annexed, and marked (1.)

The judge advocate stated to the court, that, under the circumstances which now presented themselves, he should withdraw all the depositions, and rest the testimony.

The defendant offered in evidence the depositions of Midshipmen M'Kinstry, Hooe, and Justin; the same having been taken by an order of the Secretary of the Navy, dated 18th February, 1827, and severally taken in the presence of Lieutenant J. White, the prosecutor, and by him cross-examined. The said order of the Secretary is herewith offered to the court; read, annexed, and marked (1 A.)

The judge advocate stated that the depositions of witnesses, taken in this manner, can only be received in evidence by consent; and the paper just presented by the accused, amounts, according to his view of it, to a protest against all such depositions, and cannot be considered as consenting to the introduction of any of them. And although the accused has, so far, availed himself of the right which he reserved, as to object to the depositions of other witnesses, taken at the same time, and when he was duly notified of the intention to take such evidence; yet, the judge advocate will waive all objection to their introduction, and consent to their being read.

The court decided to receive the depositions under the suggestions that had been made.

The accused then read in evidence the deposition of Midshipman Justin, annexed, and marked (2); of Midshipman M'Kinstry, annexed, and marked (3); of Midshipman Hooe, (4); of John Tufts, (5); of Leonard M. Parker, (6); of Dr. Kennon, (7).

Francis S. Key, a witness, produced, sworn, and examined, on behalf the accused, deposes and says:

Question. Were you on board the ship Independence, lying at Charlestown, during the last winter and spring, and in what capacity?

Answer. I was on board for three or four weeks, as a midshipman. I joined the ship early in January.

Ques. Relate your knowledge of the circumstances set forth in the charges and specifications against Mr. Green, and of his general conduct and character on board the ship?

Ans. I have known Mr. Green for a number of years, and never knew him to be intoxicated. I knew nothing of the circumstances of Trusty being struck, further than that there was a stick thrown, which fell inside of the steerage, against the bulk-head. I was in my hammock, and cannot say who threw it, or at whom it was thrown. I know nothing of Mr. Green's preparing himself with a club, or posting himself at the door, for the purpose of striking Mr. White. I remember one night Mr. White came into the room; he told Mr. Green he came there for the purpose of giving him a damned thrashing. Mr. Green posted himself in an attitude for defending himself; as for putting his fist near Mr. White's face, I did not see it. Mr. Green said, as nearly as I can recollect his words, "By heaven, sir, you dare not thrash me." There was some conversation passed; I do not recollect whether or not Mr. Green used the expression that he would crush him to hell; I laid down in my hammock, and took but little notice of what passed. I was asleep when Mr. White came in, and the first words which I particularly remember, were what I have stated. Mr. Green came to my hammock, and asked me if I thought him intoxicated? Mr. White had accused him of being intoxicated. I said no. Whether this was before or after what I have stated, I do not recollect. I also recollect Mr. White directing Mr. Green to go on deck. Mr. Green asked him what he was to go on deck for? how he was to dress himself? I do not recollect the language used by Mr. White in reply; the substance of it was, that he was to prepare himself to spend a cold night on the spar deck. Mr. Green went on deck with Mr. White, and after a few minutes, returned to the steerage. I think a guard of marines was then sent for, and one of them posted near the mess room on the gun deck. I do not know of Mr. Green saying anything about a dirk, after his return to the room; he made no noise, and what he did say was in a low voice. I do not remember anything of the taking of the jug of brandy. On one evening I had been to a wedding; on my return it was very cold, and I made a fire. Mr. Cornwall jumped up, ordered Mr. Green to put it out, and threw water on it. I told him I made the fire. It was a general habit on board the ship to make fires, and I do not know that one of the officers did it more frequently than another. I have no particular recollection of any officer making a fire except in the instance I have mentioned, when I made it.

Ques. After Mr. White threatened to thrash Mr. Green, did you hear him say he would not commit himself?

Ans. I think he remarked to Mr. Green, he was trying to get him to commit himself; but that he would not commit himself.

Ques. (By the court.) How long before the conversation between Mr. White and Mr. Green, which you have related, had the stick been thrown?

Ans. I do not recollect whether it was that night or not.

Ques. When you returned from the wedding the night you have spoken of, where did you see Mr. Green on your first getting on board?

Ans. I cannot positively say; I think it was below.

Ques. Are you certain that you saw a stick thrown at the time you have mentioned, or did you hear one had been thrown?

Ans. I did not see the stick thrown. I distinctly remember hearing it strike the bulkhead, and fall inside of the mess room.

Ques. Did you hear any one at the door at the time?

Ans. I do not recollect.

George W. Palmer, a surgeon's mate in the army of the United States, being duly sworn according to law, deposes and says:

Question. Were you on board the ship Independence, at Charlestown, during the late winter or spring, and in what capacity?

Answer. I was on board in the capacity of assistant surgeon from December 20th till June. I lived on shore.

Ques. Relate what you know of the matters in the charges and specifications of Mr. Green.

Ans. I do not know of his being intoxicated; he may have been excited. I remember two instances when I thought him excited; once was an evening when I was on board the ship, with a good many officers. Something was said about a ghost. I do not know how far the term intoxicated extended. He conversed regularly—he had the use of his reason and limbs. There was company on board; we had all been drinking more or less. The other occasion was in Boston, when we met Mr. Jones, from New York, when I think Mr. Green might have been excited by wine. It was at the Exchange Coffee House. I think we did not dine there. There was several of us there, and we drank some wine. Mr. Green walked to the boarding-house, a distance of from half to three-quarters of a mile, or more. It was in a public sitting-room attached to the dining-room. There was no riotous or disorderly conduct. On the first occasion I have mentioned, Mr. White came into the room—I think it was after ten o'clock—the room was somewhat dark—Mr. Green was still up. As Mr. White came in Mr. Green said, Who are you? and perhaps repeated the question. I believe I was not in bed yet. Mr. White, if I recollect right, then advanced a little, and said, "Damn you, sir, I'll let you know," or something to that effect, and left the room. Mr. Green, I think, said, "Avaunt, thou ghost!" whether as Mr. White came in, or as he left the room, I cannot recollect.

Cross-examined:

Ques. You have mentioned that Mr. Green walked from the Exchange Coffee House to the boarding-house on that occasion; did he walk without assistance, and how did he get to bed?

Ans. We walked home together, arm in arm. I gave him no assistance, because I had been drinking as much wine as he had. He went to bed with me without assistance; it was about 11 P. M. when we went home.

Ques. You have said something was said about the ghost on board the ship; was there anything more said than you have mentioned?

Ans. I do not remember.

Ques. Do you know who was alluded to by the term ghost?

Ans. I do not remember ever hearing Mr. Green say, or any other person in Mr. Green's presence say, who was alluded to.

Ques. (By the court.) How came you to remain on board the ship the night you have spoken of?

Ans. I was invited to do so by some one of the gentlemen on board.

Joseph S. Cornwall, late a midshipman in the navy of the United States, a witness, produced, sworn, and examined on behalf of the accused, deposes and says:

Question. Were you on board of, or attached to the ship Independence, during the last winter and spring? How long, and in what capacity? Relate all you know of the matters mentioned in the charges and specifications against Mr. Green.

Answer. I was there during the last winter, a midshipman, as executive officer under Mr. White. I went on board the Independence during the months of December and January. I cannot say whether during the whole time, I knew Mr. Green, and did not know him to be intoxicated and expose himself during the time mentioned. On one occasion, in the month of December, when Dr. Palmer was there, I thought Mr. Green somewhat excited, but by no means intoxicated. That was the only instance I know of. I saw very little of Mr. Green on shore. We messed in the same room until the midshipmen of the Java came on board. I was a messmate of Mr. Green about three or four months. About the middle of December we had a number of gentlemen on board the ship—it was the same evening I have already spoken of. Mr. White allowed us lights and fires after the usual hour; whether ten or eleven o'clock I do not remember. He requested me to see them out at the hour mentioned. I saw them out, and turned into my hammock. As I was dozing, was awakened by the voice of Mr. Green, saying, "What ghost is that?" He again said, "Avaunt, thou ghost!" Mr. White stepped forward to the stove; seeing him step forward I rose in my hammock, and said, "Mr. White, the fire is out." Mr. Green asked him, "Who are you, sir?" (Mr. White had a cloak wrapped around him.) "Are you the ghost that has been cruising about the ship for some time past?" Mr. White then said, "By God, I will let you know to-morrow morning." This he said as he was going out of the door, which he slammed to as he went out. Mr. White left the room in a great rage. I was not on board when Trusty was struck. On one occasion, in January, I had been to a wedding. After I returned I turned into my hammock; partly asleep, I awoke up, and found a fire burning in the stove. I saw Mr. Green and Mr. Key standing near the stove. I supposed Mr. Green had made the fire, as Mr. Key was a stranger on board the ship, having joined her but a few days before. I said, Mr. Green, what do you mean by kindling a fire at this hour of the night? Put it out immediately. He told me he did not think proper to put it out. I jumped out of my hammock, seized a basin of water, and extinguished the fire myself. Mr. Key then told me I was mistaken, that it was not Mr. Green, but himself who had kindled the fire.

Ques. (By the court.) Did you ever hear Mr. Green, or any other person in his presence, say who was alluded to by the name ghost?

Ans. I never did. There was a common saying in the steerage there was a ghost. I do not know who was meant. I once thought, when I first joined the ship, it was meant for me.

Ques. Did Mr. Green follow Mr. White out of the mess room after he had said, "Avaunt, thou ghost?"

Ans. No.

The accused stated that he had no further evidence to lay before the court.

The court adjourned till one o'clock to-morrow.

FRIDAY, December 7.

The court met, pursuant to the adjournment of yesterday. Present: as before.

The proceedings in the case were read.

The accused presented his defence, which was read, annexed, and marked B.

The court was cleared to deliberate upon the case; and, having maturely considered the charges, the evidence, and the defence, is of opinion that the first specification of the first charge is proved, with the exception of the word "Boston;" that the second, third, fifth, sixth, eighth, eleventh and thirteenth specifications are fully proved; and that the tenth specification is proved, with the exception of the word "mutinous;" that the fourth, seventh, ninth and twelfth specifications are not proved. The court does adjudge and declare that the accused is guilty of the first charge. The court is also of opinion that the second specification of the second charge is proved, and that the other specifications thereof are not proved; and it does therefore adjudge and declare the accused guilty of the second charge.

The court does sentence and adjudge the said Midshipman Farnifold Green to be cashiered.

Remarks.

The court considers itself as in duty bound to express its marked disapprobation of the language used by Lieutenant White towards the accused, particularly that which he is proved to have employed on the night of the 19th January, 1827, which the court considers to have been exceedingly unofficer-like and improper.

CHARLES MORRIS.
JOHN ORDE CREIGHTON.
STEPHEN CASSIN.
JAMES RENSHAW.
ALEX. S. WADSWORTH.
HENRY E. BALLARD.
W. B. SHUBRICK.
D. CONNOR.

RICHARD S. COXE, *Judge Advocate.*

The sentence of the court is approved.

DECEMBER 17, 1827.

The court adjourned until ten o'clock to-morrow morning.

J. Q. ADAMS.

WM. BAINBRIDGE, *President.*

B.

Defence of Midshipman Farnifold Green.

The charges, with their specifications, exhibited against the accused, are of a character to inspire him with the most painful anxiety. They would disgrace him as an officer and degrade him as a man; and, however conscious of innocence, he well knew his case must be here decided by the evidence: and he could not anticipate what the enmity and industry of his prosecutors might procure to be testified against him. The evidence is now closed, and everything has been seen and heard which could be obtained to fix guilt and dishonor on the accused; and he trusts he has not fallen into self-delusion in confidently adopting the belief that the proofs have fallen far short of the accusations, and that the charges stand disproved, or unsupported, with perhaps one exception of comparative insignificance.

Being now called upon to make his formal defence before this honorable court, he will endeavor to do it with as much perspicuity and brevity as the variety and number of the charges, and the complication of the testimony will admit. The better to accomplish this design, the accused will not make his answer to the several specifications in the manner and order in which they are exhibited—for it will be found the same charge is repeated in many of them—but will take up the offences of which he is accused separately, and apply the evidence to each in turn.

He begins with the charge of *intemperance*, as being that which most interests his character and feelings. The man who is the slave of this base and odious vice is unfit for public confidence, for private respect, or for social intercourse. For many other offences we may plead the power of our passions, sometimes too strongly tempted or provoked: but habitual drunkenness is voluntary and deliberate brutality, and founded on the grossest moral depravity, and an utter extinction of honor and shame. Against such a charge the accused will be permitted to defend himself with uncompromising pertinacity; and he trusts the court, viewing its enormity as he does, will require the most unequivocal and irresistible evidence before they will irrevocably fix it upon him.

The charge of drunkenness appears in the following forms; each shall be distinctly noticed:

First. It is a charge that the accused, "between the first day of December, 1826, and the first day of June, 1827, on board the United States ship Independence, and at Charlestown and Boston, Massachusetts, has been repeatedly intoxicated, and has exposed himself in that situation."

Second. That, on the 16th of December, 1826, on board of the Independence, he was in a state of intoxication, making a great disturbance.

Third. That, on the evening of the 23d of December, 1826, he was in a state of intoxication, and made a great disturbance, without saying where.

Fourth. That, on the evening of the 30th December, he was in a state of intoxication, without saying where.

It must be observed that the three specified instances of intoxication are all included within the period mentioned in the first and general charge, and we may, therefore, conclude that these three instances were all that were in the contemplation of the prosecutor, or expected or intended to be proved by him. The court then have a period of six months, during which three instances only of intemperance are asserted.

A question here arises of no inconsiderable importance to the officers of our navy, and the decision of which may deeply affect many worthy men and meritorious officers. What is the meaning—the just, practical, adopted meaning—of the article which declares that any officer who shall be guilty of *drunk-*

ness shall be cashiered, or suffer such other punishment as a court-martial shall adjudge? Has anybody ever imagined that this heavy penalty was to be inflicted for an occasional act of indiscretion, under the excitement and example of a convivial company of friends, before whom an *exposure*, in the proper sense of the term, could not be made; that is, such an exposure as would disgrace the service? Let the man throw the first stone who has done no more than this. If the officers of our navy were to be degraded and cashiered for an exhilaration of spirits of this description, who would have escaped? I fear that many a one, whose high deportment and dauntless valor have given victory and imperishable honor to our country, would have been nipped and blasted in the bud, and sacrificed, together with all their usefulness, to the indiscretion of a youthful frolic. Such is not the true meaning and understanding of the law; nor do the words justify such a construction. The offender must be guilty, not of having *been drunk*, but of *drunkenness*, as a confirmed vice; an habitual practice; by which he exposes himself and the service of his country to public contumely and dishonor. In the same sentence of the same article, *profane swearing* is forbidden, and the same punishment inflicted on it. But, would not the prosecutor in this case think himself most unjustly dealt with if he were cashiered for the occasional oaths proved upon him in the course of the evidence in the case, or on any other occasion?

Another remark offers itself here, which I will take the liberty to utter. The court have seen with how little moderation; with how little command of temper; with how little of the dignity of an officer, or the refinement of a gentleman, the prosecutor has conducted himself throughout this business. His violence of passion, his coarseness of language, his insufferable menaces, are testified by every witness. And do they afford no apology, no palliation for the corresponding emotions they excited in a young, and perhaps, rash mind? When officers, high in rank, and advanced in years, fail in the respect which is due to themselves and their stations—what will you require of the hastiness and inexperience of youth? Does the superior officer believe he is to support his authority and respect by his power alone, while he violates the duties he exacts from his inferiors? If I read the law of Congress right, the commanders of ships are strictly enjoined and required to show in *themselves a good example*. The highest officer as well as the lowest, is denounced if he is guilty of oppression or profane swearing; or if he shall quarrel or use provoking or reproachful words, gestures, or menaces. How has Lieutenant White answered to these demands of the laws of his country?

While I have endeavored to put a reasonable and practicable construction to the article prohibiting drunkenness, I by no means admit any limitation of it was necessary to the defence of the accused. In no sense of the word *drunkenness* has it been proved. It may be material to remark, that this is the term used in the law, and not *intoxication*, the word introduced into the charges.

Has drunkenness been proved? This will be decided by the evidence taken altogether. It is needless to say that the general charge of repeated intoxication on board the Independence, and at Charlestown and Boston, has not had the shadow of support. But was the accused *drunk* at the times specified, that is, on the 16th, 23d, and 30th of December? The first witness was Lieutenant John White, and I may say that if he had shown as much coolness and propriety on board his ship as he did here, the court never would have been troubled with this trial.

I mean now to refer to the evidence of Mr. White, only as it relates to this charge.

I hope it did not escape the observation of the court, that when Mr. White had finished his account of the transaction of the night of the 16th December, he had informed the court that he had quitted Mr. Green, and gone to his cabin, without saying a word of Mr. Green's having been in a state of intoxication; when, on a question from the judge advocate, he went on to say, that he *presumed* he was in a state of intoxication; that he appeared so to the witness. I mention this to show that this intoxication was not so strong or clear in his recollection as it would have been, had it been of a very decided character. If Mr. Green had been absolutely drunk on that occasion, it could not have required a pointed question to remind the witness of it. But when his attention is, very properly I admit, called to it, what does he say? Assuredly he speaks in doubtful, equivocal language, not of a fact, but of appearances, which, in his irritation, may have deceived him; and this is rendered the more equivocal, from the darkness of the room at the time, as testified by several witnesses. What the appearances were that induced Mr. White to think Mr. Green was intoxicated, he has not explained. His color and countenance certainly could not be discerned; and no conversation passed between them, from which any such inference can be drawn. Taking then the testimony of Mr. White by itself, without now adverting to the negative proof, will the court feel justified in convicting the accused of drunkenness? or of having been drunk on the occasion, on evidence so entirely loose, conjectural, and unsatisfactory? Has Mr. White sworn he was drunk? Has he so sworn it, that if Mr. Green could prove by a thousand witnesses he was sober and untouched with liquor, Mr. White could be accused of perjury? Certainly not. Mr. White would triumphantly reply to such an accusation, I never said he was drunk. I spoke of presumption—of an opinion drawn from appearances; and who can say such was not my opinion?

We now come to the second specific charge of intoxication, to wit: on the 23d of December. (This is Mr. White's account of it.) He is here still weaker than on the former occasion; merely saying at the end of his narrative, "I believe he was intoxicated." From what facts or circumstances this belief was derived, was not explained; and the whole charge rests merely and solely on the expression of the belief of a witness, certainly not disposed to put the kindest construction on the conduct of Mr. Green. Perhaps, as Mr. White had been entertaining his own friends in his cabin, on this evening, he felt a little more charity for the excitement of Mr. Green than at other times. Such, however, is all that is said by Mr. White in support of the charge of being drunk on the night of the 23d of December. I should insult the court were I to suppose for a moment they could consider this alleged instance of intoxication to be proved. No evidence is recollected to support the charge in the fourth specification. Mr. White says he has no distinct recollection of that night; and he stated nothing. Thus, of the three specified instances of intoxication, two only are attempted to be supported; the third is abandoned; and we trust the others will be equally disregarded.

After narrating the transactions of the night of the 19th of January, Mr. White, on a question from the judge advocate, at the very close of his transaction, added, in the same cautious language, "I thought him intoxicated." It is proper here to remark that, although the occurrences of the night of the 19th, or the morning of the 20th of January, form the subject matter of the specification, yet in neither of them is intoxication alleged or charged. There is no specification, under any of the charges, of intoxication on that night; and it is presumed it will not be attempted to introduce it under the general specification, which charges *repeated* intoxication, between the 1st of December and the 1st of January

following. This specification cannot be taken to be proved by a single instance on a certain night, even if the proof were ever so direct of the fact. To what specification will this evidence be applied? Here we leave Mr. White for the present, and turn to the evidence of Midshipman Mark Hale, upon this part of the case.

Although this witness does not recollect dates, we can fix the night of the sixteenth December, by the mention of the ghost who makes such a figure in the history of the ship. This witness was in the same room with Mr. Green during the night, both before and after the lights were extinguished, and had the fullest and best opportunity of judging whether he was intoxicated or not; but he is so far from affirming Mr. White's opinion on the subject, formed with no means, or very imperfect ones, of judging, that he expressly negatives it. Mr. Hale, in reply to a question from the court, says, that on the first occasion that occurred, that is, the night when the boy was rubbing Mr. Green's foot, and which was previous to that of the ghost, he thought Mr. Green was intoxicated, but that, on the other occasion, he did not think so.

The court will here remember, that no specific charge of intoxication is laid previous to the sixteenth of December, and of course none applying to the evidence on this point of Mr. Hale, unless it can hardly be presumed it supports the general specifications of repeated acts of drunkenness. The two remaining witnesses on the part of the prosecution are Midshipmen Spencer and Penhallow, neither of whom ever saw Mr. Green intoxicated within the period specified, and we could not inquire of any other time; but from the first of December to the first of June, they saw and knew no such thing.

Here let me ask of this honorable court, whether this charge of drunkenness has now any support or countenance? The prosecutor fails to prove or assert it, although he ventures such a conjecture on two occasions. The three midshipmen who lived in the same mess room with him, who saw and associated with him daily and hourly, all witnesses for the prosecution, and one of them certainly not friendly to him, all disclaim the charge, with the sole exception of a single instance mentioned by Mr. Hale, but not specified in the charges. We can, however, although it must be unnecessary on this point, go further, and recall the recollection of the court to the testimony of Mr. Key, who has known Mr. Green for many years, and never saw him intoxicated. Of Mr. Palmer, a surgeon in the service of the United States, who says he knew of two instances in which Mr. Green was excited by wine, but never intoxicated—both of them in convivial intercourse with his friends; one of them on board the ship, in company with some officers, when Mr. Green conversed regularly, and had the command of his reason and limbs; all the company had been drinking more or less. The other instance occurred in Boston, also in company with brother officers, when, says the witness, Mr. Green might have been excited by wine, but he walked home, about three-quarters of a mile, and went, himself, to bed, making no exposure of himself at any period.

Is Mr. Green, under such evidence, to be branded by the sentence of the court as a drunkard, a solitary sot, who drinks for the love of liquor, and disgraces himself and his profession by habits of intemperance?

Mr. Cornwall was his messmate for three or four mouths; never saw him intoxicated, but he was excited on the night spoken of by Mr. Palmer, when there was company on board the ship.

But I have omitted to notice the testimony of Dr. Kearney, and it is scarcely necessary to go back to it. He lived at Charlestown, in the house with Mr. Green, but not in the same mess. He saw Mr. Green intoxicated there once. The witness was sitting in his room, the door shut; heard a noise, opened his door, and saw Mr. Green taken to bed by his servant. How taken to bed he does not say. Did he walk? Was he carried? In what manner he was attended by his servant we know not, nor why or wherefore he did attend him. The amount of this evidence is, that Dr. Kearney saw Mr. Green pass his door with his servant, and he infers or presumes all the rest; that is, that he was taking him to bed, and that he was intoxicated, and needed this assistance. Nor does the witness know where or with whom Mr. Green had been engaged below, nor whether he had been in company or not.

On the other side, we wish the attention of the court to the deposition of Mr. Justin, Mr. McKinstry, and Mr. Hooe, all in possession of the court; and we forbear to repeat what they have said. We know also that the evidence of Mr. Tufts and Mr. Parker, respectable citizens of Boston, will weigh heavily on the minds of the court. Their opportunities of knowing the character, manners, and habits of Mr. Green, were long, continued, and ample; and more honorable testimonials of intelligence and sobriety, refined manners, and the most correct habits, could not be produced by any young gentleman in or out of the service.

We conclude our remarks on this part of the case with the deposition of Dr. Richard Kennon. His acquaintance with Mr. Green began in 1823, and continued down to the time when he left Boston. He saw him, and was with him for long periods on different occasions; and he bears the most decisive and satisfactory testimony in his behalf on the question of his general manners and habits, and particularly on this charge of intoxication, which the doctor, with these observations, and under the tenor of the whole evidence given upon this charge, the accused submits himself to the judgment of the court, assured they will be mindful how deeply his future life and character will be affected by that judgment.

The next charge in importance, against which the accused is called upon to defend himself, is that of using disrespectful language and gestures to his superior officer, Lieutenant J. White.

Before the accused enters upon a particular examination of the evidence applicable to this charge, he will premise that it consists of two kinds: 1st. The general assertions of Mr. White, that Mr. Green did, on several occasions, use towards him abusive and disrespectful language. 2d. Evidence of the expressions said to be used by Mr. Green.

Against all the testimony of the first description, the accused protests as proving nothing on which the court can judge or act. Thus, in relation to the occurrences of the sixteenth December, Mr. White says: "Finding Mr. Green was going on with abusive language, I quitted him;" but not a word of the language which Mr. White thinks abusive was given. So, on the twenty-third of December, Mr. White says Mr. Green "followed me out of the mess room, repeating a great deal of abusive language, which I cannot repeat—I could scarcely understand what he did say." And so in several other instances. The objection to such evidence is at once obvious; it is not the evidence of the *fact*, but of Mr. White's *opinion* of the fact. How can the court adjudge that this language was abusive, when they do not know what it was? Will they take the judgment of an angry witness for it, who thought himself insulted, and would give the harshest construction to it? We know that men would differ very much on such a question. The language a man of delicate refinement and fastidious sensibility would deem

coarse and disrespectful, another, of stronger nerves and coarser habits, would consider the common currency of conversation. The court cannot adopt the impressions or opinions of any witness on such a subject; before they can adudge any man guilty of using disrespectful language, they must be confirmed of what he did say, and judge of it for themselves. It would be very easy in this way for a designing witness to convict an innocent man, without at all committing himself.
