The naval reserve shall be organized under the Bureau of Navigation and shall be governed by the Articles for the Government of the Navy and by the Naval Regulations and Instructions. Whenever actively employed with the Navy, or whenever employed in authorized travel to and from prescribed active duty with the Navy, its members shall be employed as members of the naval reserve and shall while so employed be held and considered to be in all respects in the same status as enlisted men of the Navy on active duty, except that they shall not be advanced in rating in time of peace. When not actively employed with the Navy, members of the naval reserve shall not be entitled to any pay, bounty, gratuity, or pension except the pay expressly provided for members of the naval reserve by the provisions of this Act, nor shall they be entitled to retirement by reason of such service in the naval reserve.

Reenlistments in the naval reserve shall be made under such regulations as may be prescribed by the Secretary of the Navy.

Classification of enlistments.

Enlistments in the naval reserve shall be made in two classes. Members of the naval reserve of class one and men transferred to the naval reserve shall be required to keep on hand such part of the uniform clothing outfit as may be prescribed by the Secretary of the Navy, and all members of the naval reserve shall be issued a distinctive badge or button which may be worn with civilian dress.

In time of war they may be required to perform active service with the Navy throughout the war, not to exceed the term of enlistment in the case of those enlisted in the naval reserve. Any pay which may be due any member of the naval reserve shall be forfeited when so ordered by the Secretary of the Navy upon the failure, under such conditions as may be prescribed by the Secretary of the Navy, of such man to report for muster and inspection.

Those members of the naval reserve of class one, and those members who have been transferred to the naval reserve, who reenlist in the Navy within four months from the date of their discharge from the naval reserve, shall not be entitled to a gratuity of four months' pay, but their reenlistment in the Navy shall be held and considered to have been made within four months from the date of discharge from the Navy for the purpose of continuous-service pay. The period of time during which members of the naval reserve were actively employed with the Navy while enlisted in the naval reserve shall, for the purposes of retirement, be counted as active service in the Navy in the case of those who reenlist in the Navy after service in the naval reserve.

The Secretary of the Navy is authorized in time of war, or when, in the opinion of the President, war is threatened, to call any enlisted man on the retired list into active service for such duty as he may be able to perform. While so employed such enlisted men shall receive the same pay and allowances they were receiving when placed on the retired list: *Provided*, That enlisted men on the retired list shall not be eligible for enlistment in or transfer to the naval reserve.

That the Secretary of the Interior may, in his discretion, extend the time within which final proof is required to be submitted upon any lawful pending desert-land entry made prior to July first, nineteen hundred and fourteen, such extension not to exceed three years from the date of allowance thereof: *Provided*, That the entryman or his duly qualified assignee has, in good faith, complied with the requirements of law as to yearly expenditures and proof thereof, and shall show, under rules and regulations to be prescribed by the Secretary of the Interior, that there is a reasonable prospect that, if the extension is granted, he will be able to make the final proof of reclamation, irrigation, and cultivation required by law: *Provided further*, That the foregoing shall apply only to cases wherein an extension or further extension of time may not properly be allowed under existing law.

That where it shall be made to appear to the satisfaction of the Secretary of the Interior, under rules and regulations to be prescribed by him, with reference to any lawful pending desert-land entry made prior to July first, nineteen hundred and fourteen, under which the entryman or his duly qualified assignee under an assignment made prior to the date of this Act, has, in good faith, expended the sum of \$3 per acre in the attempt to effect reclamation of the land, that there is no reasonable prospect that, if the extension allowed by this Act or any existing law were granted, he would be able to secure water sufficient to effect reclamation of the irrigable land in his entry or any legal subdivision thereof, the Secretary of the Interior may, in his discretion, allow such entryman or assignee five years from notice within which to perfect the entry in the manner required of a homestead entryman.

**CHAP. 153.**—An Act To promote the welfare of American seamen in the merchant marine of the United States; to abolish arrest and imprisonment as a penalty for desertion and to secure the abrogation of treaty provisions in relation thereto; and to promote safety at sea.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That section forty-five hundred and sixteen of the Revised Statutes of the United States be, and is hereby, amended to read as follows:

"**SEC. 4516.** In case of desertion or casualty resulting in the loss of one or more of the seamen, the master must ship, if obtainable, a number equal to the number of those whose services he has been deprived of by desertion or casualty, who must be of the same or higher grade or rating with those whose places they fill, and report the same to the United States consul at the first port at which he shall arrive, without incurring the penalty prescribed by the two preceding sections. This section shall not apply to fishing or whaling vessels or yachts."

**SEC. 2.** That in all merchant vessels of the United States of more than one hundred tons gross, excepting those navigating rivers, harbors, bays, or sounds exclusively, the sailors shall, while at sea, be divided into at least two, and the firemen, oilers, and water tenders into at least three watches, which shall be kept on duty successively for the performance of ordinary work incident to the sailing and management of the vessel. The seamen shall not be shipped to work alternately in the fireroom and on deck, nor shall those shipped for deck duty be required to work in the fireroom, or vice versa; but these provisions shall not limit either the authority of the master or other officer or the obedience of the seamen when, in the judgment of the master or other officer, the whole or any part of the crew are needed for the maneuvering of the vessel or the performance of work necessary for the safety of the vessel or her cargo, or for the saving of life aboard other vessels in jeopardy, or when in port or at sea from requiring the whole or any part of the crew to participate in the performance of fire, lifeboat, and other drills. While such vessel is in a safe harbor no seaman shall be required to do any unnecessary work on Sundays or the following-named days: New Year's Day, the Fourth of July, Labor Day, Thanksgiving Day, and Christmas Day, but this shall not prevent the dispatch of a vessel on regular schedule or when ready to proceed on her voyage. And at all times while such vessel is in a safe harbor, nine hours, inclusive of the anchor watch, shall constitute a day's work. Whenever the master of any vessel shall fail to comply with this section, the seamen shall be entitled to discharge from such vessel and to receive the wages earned. But this section shall not apply to fishing or whaling vessels, or yachts.

**SEC. 3.** That section forty-five hundred and twenty-nine of the Revised Statutes of the United States be, and is hereby, amended to read as follows:

"**SEC. 4529.** The master or owner of any vessel making coasting voyages shall pay to every seaman his wages within two days after the termination of the agreement under which he was shipped, or at the time such seaman is discharged, whichever first happens; and in case of vessels making foreign voyages, or from a port on the Atlantic to a port on the Pacific, or vice versa, within twenty-four hours after the cargo has been discharged, or within four days after the seaman has been discharged, whichever first happens; and in all cases the seaman shall be entitled to be paid at the time of his discharge on account of wages a sum equal to one-third part of the balance due him. Every master or owner who refuses or neglects to make payment in the manner hereinbefore mentioned without sufficient cause

shall pay to the seaman a sum equal to two days' pay for each and every day during which payment is delayed beyond the respective periods, which sum shall be recoverable as wages in any claim made before the court; but this section shall not apply to masters or owners of any vessel the seamen of which are entitled to share in the profits of the cruise or voyage."

SEC. 4. That section forty-five hundred and thirty of the Revised Statutes of the United States be, and is hereby, amended to read as follows:

"SEC. 4530. Every seaman on a vessel of the United States shall be entitled to receive on demand from the master of the vessel to which he belongs one-half part of the wages which he shall have then earned at every port where such vessel, after the voyage has been commenced, shall load or deliver cargo before the voyage is ended and all stipulations in the contract to the contrary shall be void: *Provided*, Such a demand shall not be made before the expiration of, nor oftener than once in five days. Any failure on the part of the master to comply with this demand shall release the seaman from his contract and he shall be entitled to full payment of wages earned. And when the voyage is ended every such seaman shall be entitled to the remainder of the wages which shall then be due him, as provided in section forty-five hundred and twenty-nine of the Revised Statutes: *Provided further*, That notwithstanding any release signed by any seaman under section forty-five hundred and fifty-two of the Revised Statutes any court having jurisdiction may upon good cause shown set aside such release and take such action as justice shall require: *And provided further*, That this section shall apply to seamen on foreign vessels while in harbors of the United States, and the courts of the United States shall be open to such seamen for its enforcement."

SEC. 5. That section forty-five hundred and fifty-nine of the Revised Statutes of the United States be, and is hereby, amended to read as follows:

"SEC. 4559. Upon a complaint in writing, signed by the first and second officers or a majority of the crew of any vessel, while in a foreign port, that such vessel is in an unsuitable condition to go to sea because she is leaky or insufficiently supplied with sails, rigging, anchors, or any other equipment, or that the crew is insufficient to man her, or that her provisions, stores, and supplies are not or have not been during the voyage sufficient or wholesome, thereupon, in any of these or like cases the consul or a commercial agent who may discharge any of the duties of a consul shall cause to be appointed three persons of like qualifications with those described in section forty-five hundred and fifty-seven, who shall proceed to examine into the cause of complaint and who shall proceed and be governed in all their proceedings as provided by said section."

SEC. 6. That section two of the Act entitled "An Act to amend the laws relating to navigation," approved March third, eighteen hundred and ninety-seven, be, and is hereby, amended to read as follows:

"SEC. 2. That on all merchant vessels of the United States the construction of which shall be begun after the passage of this Act, except yachts, pilot boats, or vessels of less than one hundred tons register, every place appropriated to the crew of the vessel shall have a space of not less than one hundred and twenty cubic feet and not less than sixteen square feet, measured on the floor or deck of that place, for each seaman or apprentice lodged therein, and each seaman shall have a separate berth and not more than one berth shall be placed one above another; such place or lodging shall be securely constructed, properly lighted, drained, heated, and ventilated, properly protected from weather and sea, and, as far as practicable,

competent may be rated as able seaman after having served on deck twelve months at sea, or on the Great Lakes; but seamen examined and rated able seamen under this proviso shall not in any case compose more than one-fourth of the number of able seamen required by this section to be shipped or employed upon any vessel.

Any person may make application to any board of local inspectors for a certificate of service as able seaman, and upon proof being made to said board by affidavit and examination, under rules approved by the Secretary of Commerce, showing the nationality and age of the applicant and the vessel or vessels on which he has had service and that he is entitled to such certificate under the provisions of this section, the board of local inspectors shall issue to said applicant a certificate of service, which shall be retained by him and be accepted as prima facie evidence of his rating as an able seamen.

LIFE-SAVING APPLIANCES.

STANDARD TYPES OF BOATS.

The standard types of boats classified as follows:

Class.	Section.	Type.
I (Entirely rigid sides).	{	A. Open. Internal buoyancy only.
		B. Open. Internal and external buoyancy.
		C. Pontoon. Well deck; fixed water-tight bulwarks.
II (Partially collapsible sides).	{	A. Open. Upper part of sides collapsible.
		B. Pontoon. Well deck, collapsible water-tight bulwarks.
		C. Pontoon. Flush deck; collapsible water-tight bulwarks.

STRENGTH OF BOATS.

Each boat must be of sufficient strength to enable it to be safely lowered into the water when loaded with its full complement of persons and equipment.

ALTERNATIVE TYPES OF BOATS AND RAFTS.

Any type of boat may be accepted as equivalent to a boat of one of the prescribed classes and any type of raft as equivalent to an approved pontoon raft, if the Board of Supervising Inspectors, with the approval of the Secretary of Commerce, is satisfied by suitable trials that it is as effective as the standard types of the class in question, or as the approved type of pontoon raft, as the case may be.

Motor boats may be accepted if they comply with the requirements laid down for boats of the first class, but only to a limited number, which number shall be determined by the Board of Supervising Inspectors, with the approval of the Secretary of Commerce.

No boat may be approved the buoyancy of which depends upon the previous adjustment of one of the principal parts of the hull or which has not a cubic capacity of at least one hundred and twenty-five cubic feet.

BOATS OF THE FIRST CLASS.

The standard types of boats of the first class must satisfy the following conditions:

1A.—OPEN BOATS WITH INTERNAL BUOYANCY ONLY.

The buoyancy of a wooden boat of this type shall be provided by water-tight air cases, the total volume of which shall be at least equal to one-tenth of the cubic capacity of the boat.

The buoyancy of a metal boat of this type shall not be less than that required above for a wooden boat of the same cubic capacity, the volume of water-tight air cases being increased accordingly.

1B.—OPEN BOATS WITH INTERNAL AND EXTERNAL BUOYANCY.

The internal buoyancy of a wooden boat of this type shall be provided by water-tight air cases, the total volume of which is at least

equal to seven and one-half per centum of the cubic capacity of the boat.

**Material required.** The external buoyancy may be of cork or of any other equally efficient material, but such buoyancy shall not be secured by the use of rushes, cork shavings, loose granulated cork, or any other loose granulated substance, or by any means dependent upon inflation by air.

**Capacity.** If the buoyancy is of cork, its volume, for a wooden boat, shall not be less than thirty-three thousandths of the cubic capacity of the boat; if of any material other than cork, its volume and distribution shall be such that the buoyancy and stability of the boat are not less than that of a similar boat provided with buoyancy of cork.

**Metal boats.** The buoyancy of a metal boat shall be not less than that required above for a wooden boat of the same cubic capacity, the volume of the air cases and external buoyancy being increased accordingly.

**Pontoon boats.** 1C.—PONTOON BOATS, IN WHICH PERSONS CAN NOT BE ACCOMMODATED BELOW THE DECK, HAVING A WELL DECK AND FIXED WATER-TIGHT BULWARKS.

**Dimensions, etc.** The area of the well deck of a boat of this type shall be at least thirty per centum of the total deck area. The height of the well deck above the water line at all points shall be at least equal to one-half per centum of the length of the boat, this height being increased to one and one-half per centum of the length of the boat at the ends of the well.

**Reserve buoyancy.** The freeboard of a boat of this type shall be such as to provide for a reserve buoyancy of at least thirty-five per centum.

**Second class boats.** BOATS OF THE SECOND CLASS.

**Conditions.** The standard types of boats of the second class must satisfy the following conditions:

**Collapsible sides.** 2A.—OPEN BOATS HAVING THE UPPER PART OF THE SIDES COLLAPSIBLE.

**Buoyancy.** A boat of this type shall be fitted both with water-tight air cases and with external buoyancy, the volume of which, for each person which the boat is able to accommodate, shall be at least equal to the following amounts: Air cases, one and five-tenths cubic feet; external buoyancy (if of cork), two-tenths cubic foot.

**Measurements.** The minimum freeboard of boats of this type is fixed in relation to their length; it is measured vertically to the top of the solid hull at the side amidships, from the water level when the boat is loaded.

The freeboard in fresh water shall not be less than the following amounts:

Length of the boat.	Minimum freeboard.
<i>Feet.</i>	<i>Inches.</i>
26	8
28	9
30	10

The freeboard of boats of intermediate lengths is to be found by interpolation.

**2B.—PONTOON BOATS HAVING A WELL DECK AND COLLAPSIBLE BULWARKS.**

Well deck pontoons.

All the conditions laid down for boats of type 1C are to be applied to boats of this type, which differ from those of type 1C only in regard to the bulwarks.

Conditions.

**2C.—PONTOON BOATS, IN WHICH THE PERSONS CAN NOT BE ACCOMMODATED BELOW DECK, HAVING A FLUSH DECK AND COLLAPSIBLE BULWARKS.**

Flush deck pontoons.

The minimum freeboard of boats of this type is independent of their lengths and depends only upon their depth. The depth of the boat is to be measured vertically from the underside of the garboard strake to the top of the deck on the side amidships, and the freeboard is to be measured from the top of the deck at the side amidships to the water level when the boat is loaded.

Measurements.

The freeboard in fresh water shall not be less than the following amounts, which are applicable without correction to boats having a mean sheer equal to three per centum of their length:

Depth of boat.	Minimum freeboard.
<i>Inches.</i>	<i>Inches.</i>
12	2 $\frac{1}{4}$
18	3 $\frac{1}{4}$
20	5 $\frac{1}{8}$
30	6 $\frac{1}{2}$

For intermediate depths the freeboard is obtained by interpolation.

If the sheer is less than the standard sheer defined above, the minimum freeboard is obtained by adding to the figures in the table one-seventh of the difference between the standard sheer and the actual mean sheer measured at the stem and sternpost. No deduction is to be made from the freeboard on account of the sheer being greater than the standard sheer or on account of the camber of the deck.

**MOTOR BOATS.**

Motor boats.

When motor boats are accepted, the volume of internal buoyancy and, when fitted, the external buoyancy, must be fixed, having regard to the difference between the weight of the motor and its accessories and the weight of the additional persons which the boat could accommodate if the motor and its accessories were removed.

Buoyancy.

**ARRANGEMENTS FOR CLEARING PONTOON LIFEBOATS OF WATER.**

Clearing pontoons of water.

All pontoon lifeboats shall be fitted with efficient means for quickly clearing the deck of water. The orifices for this purpose shall be such that the water can not enter the boat through them when they are intermittently submerged. The number and size of the orifices shall be determined for each type of boat by a special test.

Means required.

For the purpose of this test the pontoon boat shall be loaded with a weight of iron or bags of sand, equal to that of its complement of persons and equipment.

Tests.

In the case of a boat twenty-eight feet in length two tons of water shall be cleared from the boat in a time not exceeding the following: type 1C, sixty seconds; type 2B, sixty seconds; type 2C, twenty seconds.

In the case of a boat having a length greater or less than twenty-eight feet the weight of water to be cleared in the same time shall be, for each type, directly proportional to the length of the boat.

## Construction.

## CONSTRUCTION OF BOATS.

## Open boats.

Open lifeboats of the first class (types 1A and 1B) must have a mean sheer at least equal to four per centum of their length.

The air cases of open boats of the first class shall be placed along the sides of the boat; they may also be placed at the ends of the boat, but not in the bottom of the boat.

## Pontoons.

Pontoon lifeboats may be built of wood or metal. If constructed of wood, they shall have the bottom and deck made of two thicknesses with textile material between; if of metal, they shall be divided into water-tight compartments with means of access to each compartment.

## Steering oar.

All boats shall be fitted for the use of a steering oar.

## Pontoon rafts.

## PONTOON RAFTS.

## Conditions.

No type of pontoon raft may be approved unless it satisfies the following conditions:

First. It should be reversible and fitted with bulwarks of wood, canvas, or other suitable material on both sides. These bulwarks may be collapsible.

Second. It should be of such size, strength, and weight that it can be handled without mechanical appliances, and, if necessary, be thrown from the vessel's deck.

Third. It should have not less than three cubic feet of air cases or equivalent buoyancy for each person whom it can accommodate.

Fourth. It should have a deck area of not less than four square feet for each person whom it can accommodate and the platform should not be less than six inches above the water level when the raft is loaded.

Fifth. The air cases or equivalent buoyancy should be placed as near as possible to the sides of the raft.

## Capacity.

## CAPACITY OF BOATS AND PONTOON RAFTS.

## Computation.

First. The number of persons which a boat of one of the standard types or a pontoon raft can accommodate is equal to the greatest whole number obtained by dividing the capacity in cubic feet, or the surface in square feet, of the boat or of the raft by the standard unit of capacity, or unit of surface (according to circumstances), defined below for each type.

## Cubic capacity.

Second. The cubic capacity in feet of a boat in which the number of persons is determined by the surface shall be assumed to be ten times the number of persons which it is authorized to carry.

## Standard units.

Third. The standard units of capacity and surface are as follows:

Units of capacity, open boats, type 1A, ten cubic feet; open boats, type 1B, nine cubic feet.

Unit of surface, open boats, type 2A, three and one-half square feet; pontoon boats, type 2C, three and one-half square feet; pontoon boats, type 1C, three and one-fourth square feet; pontoon boats, type 2B, three and one-fourth square feet.

## Acceptance of smaller dimensions.

Fourth. The board of supervising inspectors, with the approval of the Secretary of Commerce, may accept, in place of three and one-fourth, a smaller divisor, if it is satisfied after trial that the number of persons for whom there is seating accommodation in the pontoon boat in question is greater than the number obtained by applying the above divisor, provided always that the divisor adopted in place of three and one-fourth may never be less than three.

CAPACITY LIMITS.

Pontoon boats and pontoon rafts shall never be marked with a number of persons greater than that obtained in the manner specified in this section.

This number shall be reduced—

First. When it is greater than the number of persons for which there is proper seating accommodation, the latter number being determined in such a way that the persons when seated do not interfere in any way with the use of the oars.

Second. When in the case of boats other than those of the first two sections of the first class, the freeboard, when the boat is fully loaded, is less than the freeboard laid down for each type respectively. In such circumstances the number shall be reduced until the freeboard, when the boat is fully loaded, is at least equal to the standard freeboard laid down above.

In boats of types 1C and 2B the raised part of the deck at the sides may be regarded as affording seating accommodation.

EQUIVALENTS FOR AND WEIGHT OF THE PERSONS.

In test for determining the number of persons which a boat or pontoon raft can accommodate each person shall be assumed to be an adult person wearing a life jacket.

In verifications of freeboard the pontoon boats shall be loaded with a weight of at least one hundred and sixty-five pounds for each adult person that the pontoon boat is authorized to carry.

In all cases two children under twelve years of age shall be reckoned as one person.

CUBIC CAPACITY OF OPEN BOATS OF THE FIRST CLASS.

First. The cubic capacity of an open boat of type 1A or 1B shall be determined by Stirling's (Simpson's) rule or by any other method, approved by the Board of Supervising Inspectors, giving the same degree of accuracy. The capacity of a square-sterned boat shall be calculated as if the boat had a pointed stern.

Second. For example, the capacity in cubic feet of a boat, calculated by the aid of Stirling's rule, may be considered as given by the following formula:

$$\text{Capacity} = \frac{1}{12}(4A + 2B + 4C)$$

l being the length of the boat in meters (or feet) from the inside of the planking or plating at the stem to the corresponding point at the stern post; in the case of a boat with a square stern, the length is measured to the inside of the transom.

A, B, C denote, respectively, the areas of the cross sections at the quarter length forward, amidships, and the quarter length aft, which correspond to the three points obtained by dividing l into four equal parts. (The areas corresponding to the two ends of the boat are considered negligible.)

The areas A, B, C shall be deemed to be given in square feet by the successive application of the following formula to each of the three cross sections:

$$\text{Area} = \frac{h}{12}(a + 4b + 2c + 4d + e).$$

h being the depth measured in meters (or in feet) inside the planking or plating from the keel to the level of the gunwale, or, in certain cases, to a lower level, as determined hereafter.

First class open boats.

a, b, c, d, e denote the horizontal breadths of the boat measured in feet at the upper and lower points of the depth and at the three points obtained by dividing h into four equal parts (a and e being the breadths at the extreme points, and c at the middle point, of h).

Third. If the sheer of the gunwale, measured at the two points situated at a quarter of the length of the boat from the ends, exceeds one per centum of the length of the boat, the depth employed in calculating the area of the cross sections A or C shall be deemed to be the depth amidships plus one per centum of the length of the boat.

Fourth. If the depth of the boat amidships exceeds forty-five per centum of the breadth, the depth employed in calculating the area of the midship cross section B shall be deemed to be equal to forty-five per centum of the breadth; and the depth employed in calculating the areas of the quarter-length sections A and C is obtained by increasing this last figure by an amount equal to one per centum of the length of the boat, provided that in no case shall the depths employed in the calculation exceed the actual depths at these points.

Fifth. If the depth of the boat is greater than four feet, the number of persons given by the application of this rule shall be reduced in proportion to the ratio of four feet to the actual depth, until the boat has been satisfactorily tested afloat with that number of persons on board all wearing life jackets.

Sixth. The Board of Supervising Inspectors shall impose, by suitable formulæ, a limit for the number of persons allowed in boats with very fine ends and in boats very full in form.

Alternative computations.

Seventh. The Board of Supervising Inspectors may by regulation assign to a boat a capacity equal to the product of the length, the breadth, and the depth multiplied by six-tenths if it is evident that this formula does not give a greater capacity than that obtained by the above method. The dimensions shall then be measured in the following manner:

Length. From the intersection of the outside of the planking with the stem to the corresponding point at the sternpost or, in the case of a square-sterned boat, to the afterside of the transom.

Breadth. From the outside of the planking at the point where the breadth of the boat is greatest.

Depth. Amidships inside the planking from the keel to the level of the gunwale, but the depth used in calculating the cubic capacity may not in any case exceed forty-five per centum of the breadth.

In all cases the vessel owner has the right to require that the cubic capacity of the boat shall be determined by exact measurement.

Eighth. The cubic capacity of a motor boat is obtained from the gross capacity by deducting a volume equal to that occupied by the motor and its accessories.

Deck area.

#### DECK AREA OF PONTOON BOATS AND OPEN BOATS OF THE SECOND CLASS.

Pontoon boats.

First. The area of the deck of a pontoon boat of type 1C, 2B, or 2C shall be determined by the method indicated below or by any other method giving the same degree of accuracy. The same rule is to be applied in determining the area within the fixed bulwarks of a boat of type 2A.

Second. For example, the surface in square feet of a boat may be deemed to be given by the following formula:

$$\text{Area} = \frac{1}{12}(2a + 1.5b + 4c + 1.5d + 2e),$$

l being the length in feet from the intersection of the outside of the planking with the stem to the corresponding point at the sternpost. a, b, c, d, e denote the horizontal breadths in feet outside the planking at the points obtained by dividing l into four equal parts and subdividing the foremost and aftermost parts into two equal parts (a and e being the breadths at the extreme subdivisions, c at the middle point of the length, and b and d at the intermediate points).

MARKING OF BOATS AND PONTOON RAFTS.

Marking required.

The dimensions of the boat and the number of persons which it is authorized to carry shall be marked on it in clear, permanent characters, according to regulations by the Board of Supervising Inspectors, approved by the Secretary of Commerce. These marks shall be specifically approved by the officers appointed to inspect the ship.

Boats.

Pontoon rafts shall be marked with the number of persons in the same manner.

Pontoons.

EQUIPMENT OF BOATS AND PONTOON RAFTS.

Equipment.

First. The normal equipment of every boat shall consist of—

Boats.

(a) A single banked complement of oars and two spare oars; one set and a half of thole pins or crutches; a boat hook.

(b) Two plugs for each plug hole (plugs are not required when proper automatic valves are fitted); a bailer and a galvanized-iron bucket.

(c) A tiller or yoke and yoke lines.

(d) Two hatchets.

(e) A lamp filled with oil and trimmed.

(f) A mast or masts with one good sail at least, and proper gear for each. (This does not apply to motor lifeboats or lifeboats on the Great Lakes or other inland waters.)

(g) A suitable compass.

Pontoon lifeboats will have no plug hole, but shall be provided with at least two bilge pumps.

In the case of a steamer which carries passengers in the North Atlantic, all the boats need not be equipped with masts, sails, and compasses, if the ship is provided with a radiotelegraph installation.

North Atlantic passenger steamers.

Second. The normal equipment of every approved pontoon raft shall consist of—

Pontoon rafts.

(a) Four oars.

(b) Five rowlocks.

(c) A self-igniting life-buoy light.

Third. In addition, every boat and every pontoon raft shall be equipped with—

For all boats and pontoons.

(a) A life line becketed around the outside.

(b) A sea anchor.

(c) A painter.

(d) A vessel containing one gallon of vegetable or animal oil. The vessel shall be so constructed that the oil can be easily distributed on the water and so arranged that it can be attached to the sea anchor.

(e) A water-tight receptacle containing two pounds avoirdupois of provisions for each person, except on vessels navigating fresh water.

(f) A water-tight receptacle containing one quart for each person, except on vessels navigating fresh water.

(g) A number of self-igniting "red lights" and a water-tight box of matches.

Fourth. All loose equipment must be securely attached to the boat or pontoon raft to which it belongs.

Secure attachments.

## Davits.

## STOWAGE OF BOATS—NUMBER OF DAVITS.

## Number required.

The minimum number of sets of davits is fixed in relation to the length of the vessel; provided that a number of sets of davits greater than the number of boats necessary for the accommodation of all the persons on board may not be required.

## Handling.

## HANDLING OF THE BOATS AND RAFTS.

## Facilities required.

All the boats and rafts must be stowed in such a way that they can be launched in the shortest possible time and that, even under unfavorable conditions of list and trim from the point of view of the handling of the boats and rafts, it may be possible to embark in them as large a number of persons as possible.

The arrangements must be such that it may be possible to launch on either side of the vessel as large a number of boats and rafts as possible.

## STRENGTH AND OPERATION OF THE DAVITS.

## Strength.

The davits shall be of such strength that the boats can be lowered with their full complement of persons and equipment, the vessel being assumed to have a list of fifteen degrees.

## Operation.

The davits must be fitted with a gear of sufficient power to insure that the boat can be turned out against the maximum list under which the lowering of the boats is possible on the vessel in question.

## OTHER APPLIANCES EQUIVALENT TO DAVITS.

## Equivalent appliances.

Any appliance may be accepted in lieu of davits or sets of davits if the Board of Supervising Inspectors, with the approval of the Secretary of Commerce, is satisfied after proper trials that the appliance in question is as effective as davits for placing the boats in the water.

## DAVITS.

## Attachment of boats.

Each set of davits shall have a boat of the first class attached to it, provided that the number of open boats of the first class attached to davits shall not be less than the minimum number fixed by the table which follows.

## Reduction of minimum number.

If it is neither practicable nor reasonable to place on a vessel the minimum number of sets of davits required by the rules, the Board of Supervising Inspectors, with the approval of the Secretary of Commerce, may authorize a smaller number of sets of davits to be fitted, provided always that this number shall never be less than the minimum number of open boats of the first class required by the rules.

## Restriction.

## In case of long boats.

If a large proportion of the persons on board are accommodated in boats whose length is greater than fifty feet, a further reduction in the number of sets of davits may be allowed exceptionally, if the Board of Supervising Inspectors, with the approval of the Secretary of Commerce, is satisfied that the arrangements are in all respects satisfactory.

## Tests required.

In all cases in which a reduction in the minimum number of sets of davits or other equivalent appliances required by the rules is allowed, the owner of the vessel in question shall be required to prove, by a test made in the presence of an officer designated by the Supervising Inspector General, that all the boats can be efficiently launched in a minimum time.

## Conditions.

The conditions of this test shall be as follows:

First. The vessel is to be upright and in smooth water.

Second. The time is the time required from the beginning of the removal of the boat covers, or any other operation necessary to prepare the boats for lowering, until the last boat or pontoon raft is afloat.

Third. The number of men employed in the whole operation must not exceed the total number of boat hands that will be carried on the vessel under normal service conditions.

Fourth. Each boat when being lowered must have on board at least two men and its full equipment as required by the rules.

The time allowed for putting all the boats into the water shall be fixed by the Board of Supervising Inspectors, with the approval of the Secretary of Commerce.
